You May Be Oxygen-Rich, Yet Oxygen-Starved: Here's Why

Let's understand this !

↓

flip over

Ever feel drained even after 8 hours of sleep?
Short of breath while climbing stairs?
Struggle to focus, stay calm, or recover from fatigue?
And then your health report says:
“Oxygen saturation: Normal.”

But inside your body, something’s off.
The truth is: you may have oxygen – but your cells may not be able to use it.

Let’s explain it in the simplest way:

Think of oxygen like money.

Your Body Has Two Types of Oxygen – Just Like Money in Two Forms

1. SPO_2 = OXYGEN IN THE BANK (HEMOGLOBIN-BOUND OXYGEN)

This is the oxygen **stored safely** inside your red blood cells.
It’s bound to a molecule called **hemoglobin,** which carries it from your lungs to every corner of your body.
Think of this like your **bank account:**

- The balance **looks great.**
- It gives you a sense of security.
- But to use the money, you need to **withdraw it** – through cash or **digital access.**

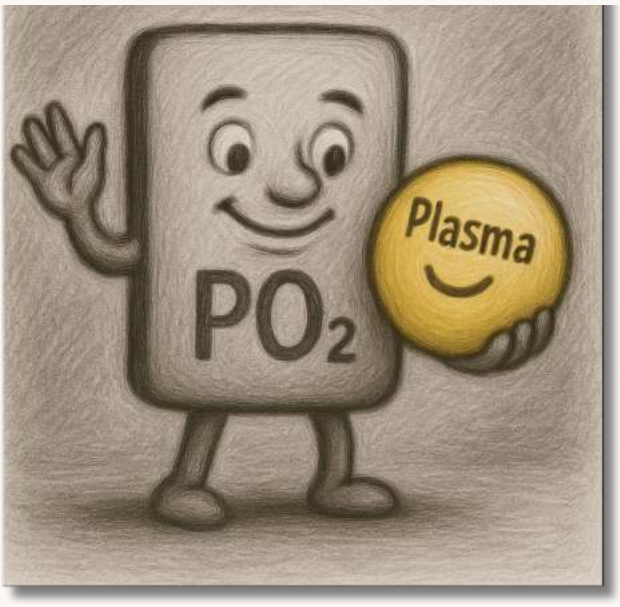

Doctors measure this oxygen using a **pulse oximeter** (the finger clip), and it shows a percentage:

- **95%–100%** is considered **normal.**
- It tells you **how full your oxygen bank is.**

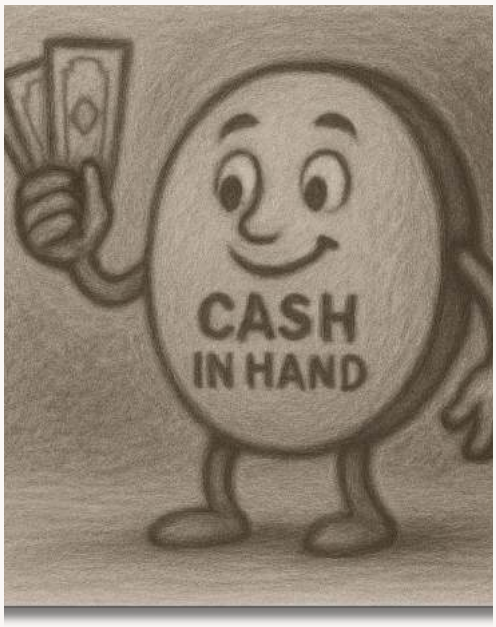

But what happens if your body **can’t withdraw** that oxygen when it’s needed?

2. PO_2 = CASH IN HAND (PLASMA OXYGEN)

flip over

This is the **real-time** oxygen dissolved in your blood plasma – not bound to any protein.

It's the **only form your cells can instantly use** for:

- Energy production (ATP)
- Brain function
- Muscle movement
- Immune defense
- Wound healing
- Detoxification

It's like **cash in your pocket** – instantly spendable. You use this oxygen **every second** to fuel your life.

The Problem: You Can Have Full Oxygen in the Bank… But No Cash in Hand.

This is what doctors **often miss.**

Even with SpO_2 at 98% (full bank), your PO_2 (cash in hand) may be low.

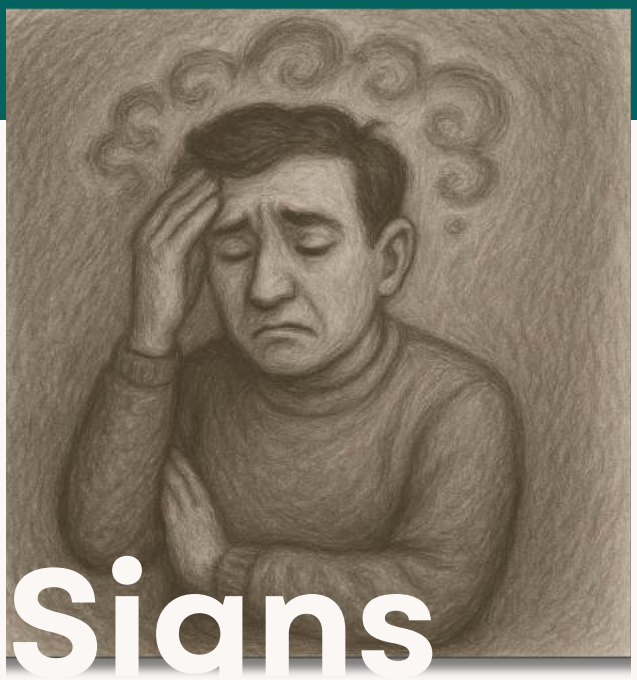

This condition is called:

✅ Functional Oxygen Deficiency
✅ Silent Hypoxia
✅ Hidden Hypoxia

It's invisible to pulse oximeters but felt in your body every day.

flip over

Signs

You May Have Low PO_2 (Plasma Oxygen Deficiency):

- Brain fog, forgetfulness, or trouble focusing
- Frequent yawning or feeling out of breath without exertion
- Anxiety, panic, or restlessness
- Chronic fatigue or low energy
- Cold hands and feet (poor circulation)
- Slower recovery after illness, injury, or exercise
- Trouble sleeping or waking up unrefreshed
- Dry skin, dull complexion, or slow wound healing

These aren't "just lifestyle issues" – they could be **your cells gasping for oxygen.**

Why PO_2 Drops in So Many People Today:

- **Urban Pollution**: Reduces oxygen levels in the air.
- **Indoor Lifestyle**: Less fresh air, less oxygen intake.
- **Stress & Inflammation**: Increase cellular oxygen demand.
- **Aging**: Decreases lung efficiency and blood oxygen exchange.
- **Chronic Illness**: Diabetes, heart disease, lung conditions all impair oxygen delivery.
- **High Altitude Living**: Naturally lower oxygen pressure in the air.
- **Overtraining**: In athletes, oxygen gets depleted faster than replenished.

flip over

Why Your Body Struggles Without PO_2:

Oxygen isn't just fuel – it's the **engine of life.**
Your body makes energy through **aerobic respiration** in your cells.
Without enough PO_2:

- You produce **less energy**
- Toxins **accumulate**
- Healing **slows down**
- Infections **thrive**
- Organs **age faster**

Even if your oxygen "bank" is full (SpO_2), without PO_2, your **system is stuck.**

That's Where Ox66® Changes Everything

Ox66® = Your Oxygen ATM Card

- **World's first oxygen in powder form**
- Directly delivers bioavailable oxygen to your bloodstream
- Increases PO_2 – the form your cells actually need
- Restores the pressure gradient so oxygen flows from your bank (SpO_2) to your tissues

What Ox66® Does That No Other Oxygen Therapy Can:

1. **Boosts Plasma Oxygen (PO_2)**
   - Directly increases usable oxygen in the blood
   - Helps tissues "breathe" again – even in hidden hypoxia

2.Improves Brain, Heart, Muscle Performance

- More oxygen = more ATP = more stamina
- Supports focus, energy, and mental clarity

Real Oxygen
Real Impact

With Ox66®, you're not just storing oxygen –
You're using it, moving it, and thriving with it.

Oxygen is Currency. Don't Just Store It – Spend It Wisely.

- **SpO_2 = Your Savings Account** (looks full)
- **PO_2 = Your Cash Flow** (keeps you alive)

You need both to **survive and thrive.**
Ox66® bridges the gap – giving your body the oxygen **access it truly needs.**
Reclaim your energy. Cleanse your system. Fuel your life.

3. Accelerates Recovery & Detox

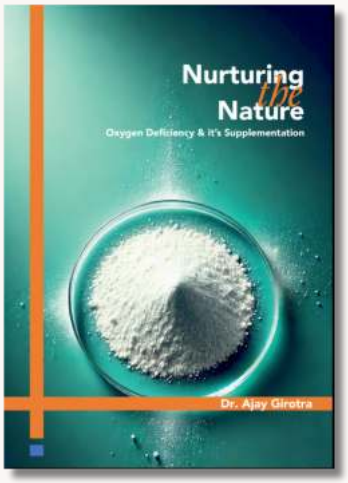

- Oxygen flushes out lactic acid, metabolic waste, and inflammation
- Aids in faster post-illness or post-exercise recovery

4. Kills Harmful Microbes

- Oxygen is the body's natural antiseptic
- Fights anaerobic bacteria and helps immune function

5. No Cylinders. No Masks. No Side Effects.

- Available in **capsule, spray, or topical** formats
- Portable. Powerful. Perfectly safe.

Ox66®
Your Oxygen,
Finally Delivered.
