Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from www.ams.org/journals/. For subscription information, please visit <https://www.ams.org/publications/journals/subscriberinfo>. Subscription renewals are subject to late fees. See www.ams.org/journal-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2213 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Requests for permission to reuse portions of AMS publication content are handled by the Copyright Clearance Center. For more information, please visit www.ams.org/publications/pubpermissions.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 95, No. 362

November 2026

M. Deiml and D. Peterseim, Quantum realization of the finite element method	2637
Xu Li and Jie Shen, Unconditionally stable consistent splitting schemes for the Navier–Stokes equations with C^0 finite elements	2669
Jie Ding, Cheng Wang, and Shenggao Zhou, A second-order accurate, original energy dissipative numerical scheme for chemotaxis and its convergence analysis	2695
Shumo Cui, Kailiang Wu, and Linfeng Xu, On local minimum entropy principle of high-order schemes for relativistic Euler equations	2739
Fukeng Huang and Jie Shen, Stability and error analysis of a new class of higher-order consistent splitting schemes for the Navier-Stokes equations	2789
Shuai Pan, Gang Bao, Tao Yin, and Oscar P. Bruno, Multi-patch/multiple-scattering frequency-time hybrid solver for interior and exterior wave equation problems	2817
Alessandro Oneto and Nick Vannieuwenhoven, Hadamard–Hitchcock decompositions: Identifiability and computation	2849
Haiyong Wang and Lun Zhang, Convergence analysis of Hermite approximations for analytic functions	2891
Alexey Kuznetsov, On series expansions of zeros of the deformed exponential function	2917
Terence Tao, Tim Trudgian, and Andrew Yang, New exponent pairs, zero density estimates, and zero additive energy estimates: A systematic approach	2941
Neelam Kandhil, Alessandro Languasco, Pieter Moree, Sumaia Saad Eddin, and Alisa Sedunova, Relative class numbers and Euler–Kronecker constants of maximal real cyclotomic subfields	2991
Yifan Luo and Haigang Zhou, The classification and representations of positive definite ternary quadratic forms of level $4N$	3041
Mara Belotti and Marta Panizzut, Discrete geometry of Cox rings of blow-ups of $\mathbb{P}^3$	3081
Marina Anagnostopoulou-Merkouri, Reinis Cirpons, James D. Mitchell, and Maria Tsalakou, Computing finite index congruences of finitely presented semigroups and monoids	3101

INDEX TO VOLUME 95 (2026)

- Anagnostopoulou-Merkouri, Marina, Reinis Cirpons, James D. Mitchell, and Maria Tsalakou. *Computing finite index congruences of finitely presented semigroups and monoids*, 3101
- Bai, Jinhui, and Lei Shi. *Truncated kernel stochastic gradient descent on spheres*, 2409
- Balakrishnan, Jennifer S., Mirela Çiperiani, Barry Mazur, and Karl Rubin. *Shadow line distributions*, 2539
- Bao, Gang. *See* Pan, Shuai
- Bel-Afia, Zaïneb, Chiara Meroni, and Simon Telen. *Chebyshev varieties*, 2061
- Bellavia, Stefania, Greta Malaspina, and Benedetta Morini. *Inexact Gauss-Newton methods with matrix approximation by sampling for nonlinear least-squares and systems*, 897
- Belotti, Mara, and Marta Panizzut. *Discrete geometry of Cox rings of blow-ups of $\mathbb{P}^3$* , 3081
- Berthon, Christophe, Victor Michel-Dansac, and Andrea Thomann. *Towards a fully well-balanced and entropy-stable scheme for the Euler equations with gravity: preserving isentropic steady solutions*, 1251
- Bian, Wei. *See* Qu, Xin
- Botti, Lorenzo, Michele Botti, Daniele A. Di Pietro, and Francesco Carlo Massa. *Stability, convergence, and pressure-robustness of numerical schemes for incompressible flows with hybrid velocity and pressure*, 1
- Botti, Michele. *See* Botti, Lorenzo
- Bright, Curtis. *See* Lumsden, Tyler
- Bruno, Oscar P. *See* Pan, Shuai
- Buffa, Annalisa. *See* Voet, Yannis
- Camaño, Jessika, Ricardo Oyarzúa, Miguel Serón, and Manuel Solano. *A conforming finite element method for a nonisothermal fluid-membrane interaction*, 29
- de Camargo, André Pierro. *Sharp estimates for the Möbius function with coprimality restrictions*, 2515
- Cambie, Stijn, and Jorik Jooker. *Counterexamples to conjectures on the occupancy fraction of graphs*, 2091
- Cao, Waixiang, Chi-Wang Shu, and Zhimin Zhang. *Unified analysis of the semidiscrete discontinuous Galerkin methods for 2-D hyperbolic equations on Cartesian meshes using $\mathbb{P}^k$ elements: optimal error estimates and superconvergence*, 1225
- Carstensen, Carsten, and Benedikt Gräßle. *Adaptive Morley FEM for 2D stationary Navier-Stokes*, 613
- Carstensen, Carsten, and Benedikt Gräßle. *Optimal convergence rates of adaptive WOPSIP from superclose nonconforming FEM*, 1187
- Caruso, Xavier, and Antoine Leudière. *Algorithms for computing norms and characteristic polynomials on general Drinfeld modules*, 415
- Chaumont-Frelet, T., and A. Ern. *A priori and a posteriori analysis of the discontinuous Galerkin approximation of the time-harmonic Maxwell's equations under minimal regularity assumptions*, 1573
- Chaumont-Frelet, Théophile, Joscha Gedicke, and Lorenzo Mascotto. *Generalised gradients for virtual elements and applications to a posteriori error analysis*, 1603
- Chen, Huangxin. *See* Leng, Haitao
- Chen, Long, and Xuehai Huang. *Complexes from complexes: Finite element complexes in three dimensions*, 1083
- Chen, Rizeng. *A geometric approach to cylindrical algebraic decomposition*, 2025
- Chen, Xiaojun. *See* Qu, Xin
- Chen, Yuewen, Chi-Wang Shu, and Shing-Tung Yau. *On the convergence of the discontinuous Galerkin scheme for Einstein-scalar equations*, 557
- Cheng, Yao, Xuesong Wang, and Martin Stynes. *Optimal balanced-norm error estimate of the LDG method for reaction-diffusion problems II: The two-dimensional case with layer-upwind flux*, 73
- Çiperiani, Mirela. *See* Balakrishnan, Jennifer S.
- Cirpons, Reinis. *See* Anagnostopoulou-Merkouri, Marina
- Combot, Thierry. *Computing linear relations between polynomial roots*, 999
- Corso, Thiago Carvalho, Gaspard Kemlin, Christof Melcher, and Benjamin Stamm. *Numerical simulation of the Gross-Pitaevskii equation via vortex tracking*, 227
- Cui, Shumo, Kailiang Wu, and Linfeng Xu. *On local minimum entropy principle of high-order schemes for relativistic Euler equations*, 2739

- Dajani, Karma, Cor Kraaikamp, and Slade Sanderson. *Corrigendum to “A unifying theory for metrical results on regular continued fraction convergents and mediantes”*, 1569
- Darrow, David, and Jeffrey S. Owall. *Detecting eigenvectors of an operator that are near a specified subspace*, 2387
- De Marinis, Arturo. *See* Guglielmi, Nicola
- Deiml, M., and D. Peterseim. *Quantum realization of the finite element method*, 2637
- Di Pietro, Daniele A. *See* Botti, Lorenzo
- Di Rocco, Sandra, Lukas Gustafsson, and Luca Sodomaco. *Conditional Euclidean distance optimization via relative tangency*, 477
- Diening, Lars, Johannes Storn, and Tabea Tscherpel. *Grading of triangulations generated by bisection*, 1631
- Ding, Jie, Cheng Wang, and Shenggao Zhou. *A second-order accurate, original energy dissipative numerical scheme for chemotaxis and its convergence analysis*, 2695
- Du, Qiang, James M. Scott, and Xiaochuan Tian. *Asymptotically compatible schemes for nonlinear variational models via Gamma-convergence and applications to nonlocal problems*, 589
- Duan, Huoyuan, Ziliang Li, and Roger C. E. Tan. *A least-squares augmented Lagrangian virtual element method for Reissner-Mindlin plates*, 721
- Eddargani, Salah, Carla Manni, and Hendrik Speleers. *Quadrature rules for splines of high smoothness on uniformly refined triangles*, 321
- Eddin, Sumaia Saad. *See* Kandhil, Neelam
- Elliott, Luna, and Alex Levine. *The Diophantine problem in Thompson’s group F* , 2013
- Enge, Andreas, and Marco Streng. *Schertz style class invariants for higher degree CM fields*, 2595
- Ern, A. *See* Chaumont-Frelet, T.
- Ferrari, Matteo, and Sara Fraschini. *Stability of conforming space-time isogeometric methods for the wave equation*, 683
- Fraschini, Sara. *See* Ferrari, Matteo
- Gallistl, D. *The Adini finite element on locally refined meshes*, 2129
- Gao, Xiao-Shan. *See* Huang, Qiao-Long
- Garcke, Harald, Robert Nürnberg, and Quan Zhao. *A variational front-tracking method for multiphase flow with triple junctions*, 647
- Garrett, Samuel, and Steven Robertson. *Counterexamples to the $p(t)$ -adic Littlewood conjecture over small finite fields*, 1961
- Gedicke, Joscha. *See* Chaumont-Frelet, Théophile
- Gerber, Mathieu. *See* Hu, Feifei
- Giannelli, Carlotta, Lorenzo Sacco, Alessandra Sestini, and Zbyněk Šír. *Piecewise rational rotation-minimizing motions via data stream interpolation*, 1927
- Giesselmann, Jan, and Sam G. Krupa. *Theory of shifts, shocks, and the intimate connections to L^2 -type A posteriori error analysis of numerical schemes for hyperbolic problems*, 147
- Goda, Takashi. *A randomized lattice rule without component-by-component construction*, 339
- Gräßle, Benedikt. *See* Carstensen, Carsten
- Gräßle, Benedikt. *See* Carstensen, Carsten
- Güçlü, Yaman. *See* Pinto, Martin Campos
- Gudi, Thirupathi. *See* Pal, Arnab
- Guglielmi, Nicola, Arturo De Marinis, Anton Savostianov, and Francesco Tudisco. *Contractivity of neural ODEs: An eigenvalue optimization problem*, 293
- Gustafsson, Lukas. *See* Di Rocco, Sandra
- Harrington, Heather A., Hal Schenck, and Mike Stillman. *Algebraic aspects of homogeneous Kuramoto oscillators*, 1023
- Hege, Paul, Massimo Moscolari, and Stefan Teufel. *Computing the spectrum and pseudospectrum of infinite-volume operators from local patches*, 833
- Hu, Feifei, and Mathieu Gerber. *Gradient descent for convex and smooth noisy optimization*, 1887
- Hu, Jianyu, Juan-Pablo Ortega, and Daiying Yin. *A structure-preserving kernel method for learning Hamiltonian systems*, 1719
- Hu, Jun, and Pengzhan Jin. *A hybrid iterative method based on MIONet for PDEs: Theory and numerical examples*, 1327

- Hu, Jun, Ting Lin, Qingyu Wu, and Beihui Yuan. *The sharpness condition for constructing a finite element from a superspline*, 2185
- Hu, Shulan. *See* Moral, Pierre Del
- Huang, Fukeng, and Jie Shen. *Stability and error analysis of a new class of higher-order consistent splitting schemes for the Navier-Stokes equations*, 2789
- Huang, Juntao. *See* Ma, Zhiting
- Huang, Qiao-Long, and Xiao-Shan Gao. *Bit complexity of polynomial GCD on sparse representation*, 389
- Huang, Xuehai. *See* Chen, Long
- Hwang, Hsien-Kuei, Svante Janson, and Tsung-Hsi Tsai. *Periodic minimum in the count of binomial coefficients not divisible by a prime*, 1987
- Hyvönen, Nuutti. *See* Suzuki, Yuya
- Janson, Svante. *See* Hwang, Hsien-Kuei
- Jasra, Ajay. *See* Moral, Pierre Del
- Jin, Pengzhan. *See* Hu, Jun
- Jookan, Jorik. *See* Cambie, Stijn
- Ju, Lili. *See* Lan, Rihui

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from www.ams.org/journals/. For subscription information, please visit <https://www.ams.org/publications/journals/subscriberinfo>. Subscription renewals are subject to late fees. See www.ams.org/journal-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2213 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Requests for permission to reuse portions of AMS publication content are handled by the Copyright Clearance Center. For more information, please visit www.ams.org/publications/pubpermissions.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 95, No. 357

January 2026

Lorenzo Botti, Michele Botti, Daniele A. Di Pietro, and Francesco Carlo Massa , Stability, convergence, and pressure-robustness of numerical schemes for incompressible flows with hybrid velocity and pressure	1
Jessika Camaño, Ricardo Oyarzúa, Miguel Serón, and Manuel Solano , A conforming finite element method for a nonisothermal fluid-membrane interaction	29
Yao Cheng, Xuesong Wang, and Martin Stynes , Optimal balanced-norm error estimate of the LDG method for reaction-diffusion problems II: The two-dimensional case with layer-upwind flux	73
Yannis Voet, Espen Sande, and Annalisa Buffa , Mass lumping and outlier removal strategies for complex geometries in isogeometric analysis	105
Jan Giesselmann and Sam G. Krupa , Theory of shifts, shocks, and the intimate connections to L^2-type A posteriori error analysis of numerical schemes for hyperbolic problems	147
Thiago Carvalho Corso, Gaspard Kemlin, Christof Melcher, and Benjamin Stamm , Numerical simulation of the Gross–Pitaevskii equation via vortex tracking	227
Changtao Sheng, Bihao Su, and Chenglong Xu , An implicit-explicit Monte Carlo method for semi-linear PDEs driven by α-stable Lévy process and its error estimates	263
Nicola Guglielmi, Arturo De Marinis, Anton Savostianov, and Francesco Tudisco , Contractivity of neural ODEs: An eigenvalue optimization problem	293
Salah Eddargani, Carla Manni, and Hendrik Speleers , Quadrature rules for splines of high smoothness on uniformly refined triangles	321
Takashi Goda , A randomized lattice rule without component-by-component construction	339
Alessandro Languasco and Pieter Moree , Euler constants from primes in arithmetic progression	363
Qiao-Long Huang and Xiao-Shan Gao , Bit complexity of polynomial GCD on sparse representation	389
Xavier Caruso and Antoine Leudière , Algorithms for computing norms and characteristic polynomials on general Drinfeld modules	415
Marc Masdeu and Xavier Xarles , Efficient computation of non-archimedean theta functions	457
Sandra Di Rocco, Lukas Gustafsson, and Luca Sodomaco , Conditional Euclidean distance optimization via relative tangency	477

Yohance A. P. Osborne and Iain Smears, Near and full quasi-optimality of finite element approximations of stationary second-order mean field games	525
Yuewen Chen, Chi-Wang Shu, and Shing-Tung Yau, On the convergence of the discontinuous Galerkin scheme for Einstein-scalar equations	557
Qiang Du, James M. Scott, and Xiaochuan Tian, Asymptotically compatible schemes for nonlinear variational models via Gamma-convergence and applications to nonlocal problems	589
Carsten Carstensen and Benedikt Gräßle, Adaptive Morley FEM for 2D stationary Navier-Stokes	613
Harald Garcke, Robert Nürnberg, and Quan Zhao, A variational front-tracking method for multiphase flow with triple junctions	647
Matteo Ferrari and Sara Fraschini, Stability of conforming space-time isogeometric methods for the wave equation	683
Huoyuan Duan, Ziliang Li, and Roger C. E. Tan, A least-squares augmented Lagrangian virtual element method for Reissner-Mindlin plates	721
Xiaolong Zhang and Li-Lian Wang, Low regularity estimates of the Lie-Trotter time-splitting Fourier spectral method for the logarithmic Schrödinger equation	773
Xiao Li, Zhonghua Qiao, Cheng Wang, and Nan Zheng, Global-in-time energy stability analysis for a second-order accurate exponential time differencing Runge–Kutta scheme for the phase field crystal equation ..	803
Paul Hege, Massimo Moscolari, and Stefan Teufel, Computing the spectrum and pseudospectrum of infinite-volume operators from local patches	833
Tao Li and Qing-Wen Wang, QQMR: A structure preserving quaternion quasi-minimal residual method	867
Stefania Bellavia, Greta Malaspina, and Benedetta Morini, Inexact Gauss-Newton methods with matrix approximation by sampling for nonlinear least-squares and systems	897
Angelos Mantzaflaris, Bernard Mourrain, Nelly Villamizar, and Beihui Yuan, An algebraic framework for geometrically continuous splines ..	925
Shao-Bo Lin, Xingping Sun, and Di Wang, Distributed uncertainty quantification of kernel interpolation on spheres	969
Thierry Combot, Computing linear relations between polynomial roots ..	999
Heather A. Harrington, Hal Schenck, and Mike Stillman, Algebraic aspects of homogeneous Kuramoto oscillators	1023

Martin Campos Pinto and Yaman Güçlü, Broken-FEEC discretizations and Hodge Laplace problems	1049
--	------

Long Chen and Xuehai Huang , Complexes from complexes: Finite element complexes in three dimensions	1083
Rihui Lan, Mengyao Liu, and Lili Ju , Robust error analysis of stabilized linear EMAC-ESAV finite element schemes for the incompressible Navier-Stokes equations	1143
Carsten Carstensen and Benedikt Gräßle , Optimal convergence rates of adaptive WOPSIP from superclose nonconforming FEM	1187
Waixiang Cao, Chi-Wang Shu, and Zhimin Zhang , Unified analysis of the semidiscrete discontinuous Galerkin methods for 2-D hyperbolic equations on Cartesian meshes using $\mathbb{P}^k$ elements: optimal error estimates and superconvergence	1225
Christophe Berthon, Victor Michel-Dansac, and Andrea Thomann , Towards a fully well-balanced and entropy-stable scheme for the Euler equations with gravity: preserving isentropic steady solutions	1251
Hong-lin Liao, Tao Tang, Xuping Wang, and Tao Zhou , A class of refined implicit-explicit Runge-Kutta methods with robust time adaptability and unconditional convergence for the Cahn-Hilliard model	1293
Jun Hu and Pengzhan Jin , A hybrid iterative method based on MIONet for PDEs: Theory and numerical examples	1327
Xin Qu, Wei Bian, and Xiaojun Chen , An extra gradient Anderson-accelerated algorithm for pseudomonotone variational inequalities	1361
Tizian Wenzel , Sharp inverse statements for kernel interpolation	1389
Zexin Pan , Automatic optimal-rate convergence of randomized nets using median-of-means	1415
Shuhuang Xiang, Shunfeng Yang, and Yanghao Wu , On the best convergence rate of lightning plus polynomial approximations	1447
Yuya Suzuki, Nuutti Hyvönen, and Toni Karvonen , Möbius-transformed trapezoidal rule	1491
Tyler Lumsden, Ilias Kotsireas, and Curtis Bright , New results on periodic Golay pairs	1517
Przemysław Koprowski , Isotropic vectors over global fields	1541
Karma Dajani, Cor Kraaikamp, and Slade Sanderson , Corrigendum to “A unifying theory for metrical results on regular continued fraction convergents and mediants”	1569

T. Chaumont-Frelet and A. Ern , A priori and a posteriori analysis of the discontinuous Galerkin approximation of the time-harmonic Maxwell's equations under minimal regularity assumptions	1573
Théophile Chaumont-Frelet, Joscha Gedicke, and Lorenzo Mascotto , Generalised gradients for virtual elements and applications to a posteriori error analysis	1603
Lars Diening, Johannes Storn, and Tabea Tscherpel , Grading of triangulations generated by bisection	1631

Arnab Pal, Thirupathi Gudi, and Pratibha Shakya, A C^0 -IP method for distributed optimal control problem governed by a non-divergent form PDE with Cordes coefficients	1679
Jianyu Hu, Juan-Pablo Ortega, and Daiying Yin, A structure-preserving kernel method for learning Hamiltonian systems	1719
Shu Liu, Xinzhe Zuo, Stanley Osher, and Wuchen Li, Numerical analysis of a first-order computational algorithm for reaction-diffusion equations via the primal-dual hybrid gradient method	1775
T. Lelièvre, G. A. Pavliotis, G. Robin, R. Santet, and G. Stoltz, Optimizing the diffusion coefficient of overdamped Langevin dynamics	1829
Feifei Hu and Mathieu Gerber, Gradient descent for convex and smooth noisy optimization	1887
Carlotta Giannelli, Lorenzo Sacco, Alessandra Sestini, and Zbyněk Šír, Piecewise rational rotation-minimizing motions via data stream interpolation	1927
Samuel Garrett and Steven Robertson, Counterexamples to the $p(t)$ -adic Littlewood conjecture over small finite fields	1961
Hsien-Kuei Hwang, Svante Janson, and Tsung-Hsi Tsai, Periodic minimum in the count of binomial coefficients not divisible by a prime	1987
Luna Elliott and Alex Levine, The Diophantine problem in Thompson's group F	2013
Rizeng Chen, A geometric approach to cylindrical algebraic decomposition	2025
Zaïneb Bel-Afia, Chiara Meroni, and Simon Telen, Chebyshev varieties	2061
Stijn Cambie and Jorik Jooken, Counterexamples to conjectures on the occupancy fraction of graphs	2091

André Pierro de Camargo, Sharp estimates for the Möbius function with coprimality restrictions	2515
Jennifer S. Balakrishnan, Mirela Çiperiani, Barry Mazur, and Karl Rubin, Shadow line distributions	2539
Sabrina Kunzweiler and Stefan Wewers, Integral differential forms for superelliptic curves	2559
Andreas Enge and Marco Streng, Schertz style class invariants for higher degree CM fields	2595

Vol. 95, No. 362

November 2026

M. Deiml and D. Peterseim, Quantum realization of the finite element method	2637
Xu Li and Jie Shen, Unconditionally stable consistent splitting schemes for the Navier–Stokes equations with C^0 finite elements	2669
Jie Ding, Cheng Wang, and Shenggao Zhou, A second-order accurate, original energy dissipative numerical scheme for chemotaxis and its convergence analysis	2695
Shumo Cui, Kailiang Wu, and Linfeng Xu, On local minimum entropy principle of high-order schemes for relativistic Euler equations	2739
Fukeng Huang and Jie Shen, Stability and error analysis of a new class of higher-order consistent splitting schemes for the Navier-Stokes equations	2789
Shuai Pan, Gang Bao, Tao Yin, and Oscar P. Bruno, Multi-patch/multiple-scattering frequency-time hybrid solver for interior and exterior wave equation problems	2817
Alessandro Oneto and Nick Vannieuwenhoven, Hadamard–Hitchcock decompositions: Identifiability and computation	2849
Haiyong Wang and Lun Zhang, Convergence analysis of Hermite approximations for analytic functions	2891
Alexey Kuznetsov, On series expansions of zeros of the deformed exponential function	2917
Terence Tao, Tim Trudgian, and Andrew Yang, New exponent pairs, zero density estimates, and zero additive energy estimates: A systematic approach	2941

Neelam Kandhil, Alessandro Languasco, Pieter Moree, Sumaia Saad Eddin, and Alisa Sedunova,	Relative class numbers and Euler–Kronecker constants of maximal real cyclotomic subfields	2991
Yifan Luo and Haigang Zhou,	The classification and representations of positive definite ternary quadratic forms of level $4N$	3041
Mara Belotti and Marta Panizzut,	Discrete geometry of Cox rings of blow-ups of $\mathbb{P}^3$	3081
Marina Anagnostopoulou-Merkouri, Reinis Cirpons, James D. Mitchell, and Maria Tsalakou,	Computing finite index congruences of finitely presented semigroups and monoids	3101

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer-reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/mcom, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2213 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2020 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Mathematics of Computation* from www.ams.org/mcom/mcomauthorpac.html. The *AMS Author Handbook* is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.
