EDITORIAL NOTICE

The Minor Planet Center is taking the unusual step of changing the discovery date for (69) Hesperia from 1861 Apr. 26 to 1861 Apr. 29, following examination of the literature of the time and after consultation with L. Schmadel, editor of the *Dictionary of Minor Planet Names*. This change is not being made lightly. The discovery announcement for (69) Hesperia appeared in *Astron. Nach.* **55**, 207), authored by G. Schiaperellii and titled "Entdeckung eines neuen Planeten (68)" ["Discovery of a new planet (68)"]. (The original (67) and (68) became (68) and (69), respectively, shortly thereafter following the delayed reporting of the discovery of the object now known as (67) Asia.) The Hesperia announcement states "Am 26^{sten} April, während ich diejenige Gegend des Himmels untersuchte, wo nach Krüger's Ephemeride der Planet [(63)] Ausonia sich finden solle, wurde meine Aufmerksamkeit auf einen kleinen Stern 11^{ter} Grösse gelenkt, welcher nur etwa $10'$ von der Ausonia entfernt war, und welchen ich Anfangs sogar mit diesem Planeten verwechselt hatte. Am 28^{sten} war dieser Stern verschwunden." ["On April 26^{th}, while I examined the area of the sky where the planet [(63)] Ausonia should be found according to Krüger's ephemeris, my attention was drawn to a small star of 11^{th} magnitude, which was only about $10'$ away from Ausonia, and which at first I had even confused with the planet. On the 28^{th} this star was gone."] On the assumption that the "star" was actually another minor planet, Schiaparelli searched the region the following night and located a moving object. An editorial note at the end of the announcement, signed "P." (presumably the editor C. A. F. Peters), states the AN's opinion of the discovery date quite clearly: "Da die Entdeckung dieses Planeten am 29^{sten} April constatirt ist," ["Since the discovery of this planet is ascertained to be April 29^{th},"].

NEW OBSERVATORY CODES

The following listing is a continuation to that on *MPC* 94395. The longitudes λ are measured in degrees eastward from Greenwich, and the parallax constants $\rho\cos\phi'$ and $\rho\sin\phi'$ are the product of the geocentric distance (in earth equatorial radii) and the cosine and sine, respectively, of the geocentric latitude.
