

Hardware Comparison

The Netgate® hardware comparison chart is designed to give visitors a quick side-by-side comparison of Netgate appliances running pfSense® Plus software against one another. While most of this data (and more) exists on individual product pages, we believe the chart makes it fast and easy for viewers to quickly determine which appliance is best for their needs.

The comparison matrix has two critical dimensions:

1. Packet Sizes: iPerf3 and IMIX
2. Secure Networking Function: Routing (Forwarding), Firewall, VPN

This provides a very clear manner by which products can be compared - and under different levels of user-experienced traffic conditions. We see this as crucial given our user base varies, literally, from home consumers (with relatively light bandwidth and firewall needs) all the way to sophisticated enterprises (who demand predictable performance under the most strenuous encryption and packet mix conditions)

			iPerf3 ² Basic Traffic (Primarily Data Download)	IMIX ³ Complex Traffic (Voice, Data, and Video)	CPU	Storage	Memory	Network Ports
Netgate 8300 Rack  BASE MAX TAA*	Medium Business	-Rack Mount	L3 Forwarding: 36.7 Gbps		Intel Xeon D-1733NT	512 GB M.2 NVMe SSD	32 GB ECC DDR4	(11) network ports total: (4) 10G SFP+ cage ports (4) 1G SFP cage ports (3) 2.5G RJ-45 "direct" (unswitched) ethernet ports via intel i226 (Additional network port expansion available via multi-port 25G and 100G PCIe cards)
	Large Business	-2x Internal PSU slots. One 500W PSU (hot-swappable) included with BASE (2) PSUs included with MAX and TAA	Firewall: 26.8 Gbps (10k ACLs)		8-core @ 2.0 GHz			
	Data Center	-Expandable memory	IPsec VPN: 14.6 Gbps (AES-GCM-128 w/AES-NI)					
	Service Provider	-Network expandable -High Availability -Runs pfSense Plus or TNSR -TAA model adds TAA compliance*						

Footnotes:

1. Current pricing is available via Netgate's online store, official Netgate partner sites, and by contacting Netgate's sales department.
2. All performance tests are based on maximum memory configuration and base model port configuration (no port expansion).
3. Throughput measurements are based on maximum bidirectional traffic across all available ports.
4. iPerf3 traffic is TCP - 1460 byte payload and TCP framing.
5. Simple IMIX traffic is sets of 7 (40) byte packets, (4) 576 byte packets, 1 (1500) byte packets, plus ethernet framing overhead.
6. Performance tests for all appliances were performed using the latest pfSense Plus version.
