4018. Koss, Mayburn. 1958. Food: From Japan. Store on the Upper West Side offers wide variety of Far East delicacies. *New York Times*. March 12. p. 37.

• **Summary:** About the Oriental Food Shop at Amsterdam Ave. and 124th St., run by Joseph Oyama.

“Soy sauce from Japan, lighter and less sweet than the American and Chinese varieties, comes in bottles and tins in a wide range of sizes. The most popular brand is Kikko Man” [Kikkoman].

“The foods most frequently requested at the Oriental Food Shop are those that go into Sukiyaki, probably the best known Japanese dish among foreigners.” It can be cooked quickly, and at the table. Ingredients called for in a recipe

include: “1 Tofu (fresh bean curd)... ½ cup soy sauce... ½ teaspoon Aji-No-Moto (monosodium glutamate).”

4019. *Washington Post, Times Herald*. 1958. Spicy Japanese sauce gives character to meats: Discovered in Hawaii. March 14. p. C9.

• **Summary:** The “spicy Japanese sauce” is teriyaki sauce, which is featured in this article. Contains recipes for Teriyaki sauce (with “3 tablespoons brown sugar, ¼ teaspoon ginger, 2 cloves garlic cut, ¾ cup soy sauce, 1 tablespoon whisky or brandy, optional, and 1¼ cups of water”), Beef teriyaki (with 1 cup soy sauce, 1 clove garlic, 1/3 cup sake [sake] or sherry, 1 inch piece fresh ginger or 1 teaspoon powdered ginger, 4 tablespoons dark brown sugar, 3 tablespoons grated onion; the beef is always cut into very thin strips, and each strip then skewered), and a variation on the latter—Liver or beef teriyaki (with “2 tablespoons shoyu {Japanese soy sauce}”).

4022. Sakurada, Seiichi; Yamaguchi, Mitsuo. Assignors to Hohnen Oil Manufacturing Company. 1958. [Molded raw material for brewing]. *Japanese Patent* 1598. March 7. (Chem. Abst. 53:2534a). [Jap]*

• **Summary:** Defatted soybean flour (20 mesh, and containing 10-12% water) is mixed with 15% of its weight of water, pressed between iron plates at 100°C to form a sheet 3 mm in thickness, cut into 3 mm cubes, heated with steam for 5-30 minutes, and dried. The product is suitable for use as a raw material (in place of whole soybeans) in fermented soy sauce.

4023. Spier, Robert F.G. 1958. Food habits of nineteenth-

century California Chinese. *California Historical Society Quarterly* 37(1):79-84. March; 37(2) 129-36. June. [40 ref]

• **Summary:** Large-scale immigration of Chinese to California began in 1850, shortly after gold was discovered. In California, the Chinese continued to eat their customary foods, which were imported from China. In 1857 J.D. Borthwick wrote, with reference to the period 1851-1854 (when he traveled in California), that Chinese stores were stocked with Chinese foods. Spier examined the records of the U.S. Custom House at San Francisco and found that “As early as 1852, substantial shipments of foods arrived from Hongkong, consigned to Chinese firms” in San Francisco. Items listed on the invoices included “salt beans” [probably fermented black soybeans], “dry bean curd,” “shrimp soy” [soy sauce with shrimp], “bean sauce,” as well as dried seaweed, oranges, bamboo shoots, plus staples such as rice, noodles, sugar, tea, and vinegar. “A check of invoices in this collection covering the years 1850 through 1854 reveals that the majority of the shipments from the Far East contained food or potables (tea, brandy, etc.). Specifically, food or drink appeared on 79 of 118 invoices.”

Within 2 decades of their landing in force, the Chinese on the West Coast were growing considerable amounts of food. “By 1872 Nordhoff wrote that the Chinese were producing two-thirds of all vegetables eaten in California... Seaweed was collected by members of the Monterey fishing colony before the turn of the century...”

“One receives the general impression... that during the 1850’s and 1860’s, the Chinese laborers ate a better diet than did whites in substantially the same lines of work.” A Caucasian schooner captain in southern California told Nordhoff that, in his estimation, the Chinese fishermen he knew lived “far better, and at any rate have a more varied bill of fare, than most of the ranchmen in California.” On the railroads, the Chinese drank mostly tea, while their white counterparts drank large amounts of alcoholic beverages. “Virtually every western town had its ‘Chinatown,’ large or small, which was essentially a self-contained separate entity.”

Note 1. This is the earliest document seen (March 2011) concerning soybean products (soy sauce, and probably fermented black soybeans) in California. This document contains the earliest date seen for soybean products in California (1852); soybeans as such had not yet been reported by that date.

Note 2. Most of these Custom House records were destroyed by fire. Spier is no longer living. Address: California Historical Society, 2090 Jackson Street, San Francisco, California.

4024. Manners, Marian. 1958. Japanese have diversified menus typical of place, season, occasion. *Los Angeles Times*. April 17. p. A7.

• **Summary:** A recipe for Beef sukiyaki calls for: “1 block

tofu (bean curd), cut into cubes... 2 cups shoyu (soy sauce).” One dish eaten by Japanese families every day is “bean-curd soup.”

Note: “Bean-curd soup” probably refers to miso soup with many small cubes of fresh tofu in it.

4025. Wood, Morrison. 1958. Hamburgers with that magic touch! These recipes here are sure to intrigue you. *Chicago Daily Tribune*. April 18. p. B10.

• **Summary:** Contains a recipe for oriental-style hamburgers that calls for “1½ teaspoons Japanese soy sauce,” which is mixed with 1 teaspoon each of ground ginger and hot Chinese mustard, then spread thinly on both sides of two patties.

4029. Smith, Allan K. 1958. Use of United States soybeans in Japan. *USDA Agricultural Research Service*. ARS-71-12. iii + 36 p. April. April. Illust. 28 cm. Typewritten.

• **Summary:** An extremely well researched, interesting document based on a survey conducted in 1957 in Japan. Contents: Definitions of Japanese food products. Introduction. 1. Problems of Japanese food processors in using U.S. soybeans: Food production problems, foreign material, broken and dark-colored soybeans in exports. 2.

Analysis of the problems. 3. Research proposals. 4. Miso: Processing, uses, production, composition. 5. Tofu and its modifications: Processing fresh tofu and frozen tofu, aburage. 6. Natto. 7. Hamanatto. 8. Kinako. 9. New products research: Soybean “milk,” fermented cheese, soybean flour and isolated protein for foods, isolated soybean protein. Acknowledgments.

A graph on the front cover (and on p. 6) shows soybean production in the USA from 1938 to 1957 (in millions of acres harvested). Photos show: (1) Drying soybeans before threshing in Japan. (2) Manually operated threshing machine. (3) Power operated threshing machine. (4) Modern small-scale equipment for cleaning soybeans and grading for size. (5) Straw weaving equipment. Straw bags are used for soybeans, rice, and other farm products. (6) Cooling roasted soybeans and hand cleaning for making kinako. (7) Soybean varieties: Lincoln, White Hilum Iwate, and Acadian (six photos, showing each variety wet and dry). (8) Wooden vats used for fermenting miso; each stands a little taller than a man, and is bound with 4 bamboo hoops. (9) Miso in wooden tubs [kegs] ready for market. (10) Hand assembly of wooden tubs for shipping miso and shoyu. (11) Stone mill for wet grinding of soybeans to make tofu. (12) A modern tofu shop, with boiler, pressure cooker, filter, and precipitation vat. Photos 11 and 12 courtesy of Sugiyama Chemical Research Inst., Tokyo. (13) Deep fat frying of tofu for making aburage. (14) Wooden kegs used for fermenting hamanatto. Stone weights are used to compact the beans during fermentation.

Other figures: (1) Flow diagram of the miso manufacturing process (incl. koji). (2) Table showing total production of miso in Japan (about 1957) as reported by All Japan Miso Industrial Association. Factory made miso consists of: Rice miso 379,000 tonnes (metric tons), barley miso 146,000 tonnes, soybean miso 58,000 tonnes, total factory made 583,000 tonnes. Homemade miso of all types is 391,000 tonnes (67% of factory made). Total factory and home made: 974,000 tonnes. Ingredients used in this grand total: Soybeans 361,000 tonnes, rice 115,000 tonnes, barley 58,000 tonnes, salt 159,000 tonnes. (3) Table showing nutritional composition of rice miso, barley miso, and soybean miso. (4) Table showing composition of sweet miso, salty miso, and enriched miso. (5) Diagrammatic sketch of equipment used in making fresh tofu. (6) Flow diagram of a frozen tofu factory.

Note: The author was in Japan from Oct. 24 to Dec. 24, 1957. The principal localities visited were: Tokyo, Yokohama, Tochigi City, Nagano, Matsumoto, Suwa, Hamamatsu, Nagoya, Kyoto, Osaka, Fukuoka, Kumamoto, Nagasaki, and Sendai. His trip was sponsored by the Agricultural Research Service and the Foreign Agricultural Service of the USDA, and the American Soybean Association (Hudson, Iowa).

Note: This is the earliest document seen (July 2000) that mentions “barley miso”—a type of miso made with barley

koji, soybeans, and salt. Address: Head of Meal Products Investigations, Oilseed Crops Lab., NRRL, Peoria, Illinois.

4030. *Washington Post*. 1958. Menu boasts Far East flavor: Anne's reader exchange. May 9. p. C6.

• **Summary:** A reader sends in a recipe for Sukiyaki, which calls for "1 cake bean curd (tofu), cut in small squares." It should be cooked in "cooking soy sauce," which includes "½ pint Japanese soy sauce."

4031. Hori, Shinichi; Motosaki, S.; Yoshida, T.; Hino, T.; Ito, K. Assignors to Ajinomoto Company. 1958. [Decolorization of amino acid soy sauce and simultaneous separation of aromatic amino acids]. *Japanese Patent* 3789. May 16. (Chem. Abst. 53:5586g). [Jap]*

• **Summary:** A hydrochloric acid hydrolyzate of protein is treated for separation of glutamic acid. The mother liquor (1000 ml) is treated by passing it through 300 gm of a non-ion-exchanging decolorizing resin at a rate of 10 ml/minute to obtain 85% decolorized soy sauce. The resin is washed with 300 gm water and the effluent concentrated to 30 ml to separate 0.7 gm tyrosine. Further concentration of the mother liquor gave 2.7 gm phenylalanine-hydrochloride.

Address: 1. Nagano Junior College; 2. Tohoku Univ., Sendai; 3. Quartermaster Section, General Staff Office, Japanese Self-Defense Force.

4033. Subrahmanyam, V.; Bhagavan, R.K.; Swaminathan, M. 1958. The place of processed foods in the treatment and prevention of protein malnutrition in children. *Indian J. of Pediatrics* 25(123):216-27. May. [57 ref]

• **Summary:** Contents: Introduction. Treatment of kwashiorkor: Vitamin therapy, the use of dried stomach preparations (e.g., hog's stomach), the use of protein hydrolysate, human serum, plasma and blood, treatment with skim milk powder and proprietary casein foods, treatment with plant protein diets, soybean-banana mixture (Dean 1952), Bengal gram and banana diet mixture, low-fat groundnut flour-Bengal gram-skim milk diet mixture, possible sources of processed protein rich foods for the prevention of protein malnutrition, better utilization of soya and groundnut products, soya and groundnut milks (7 studies are summarized briefly), low-fat oilseed flours, balanced malt food containing soya flour and groundnut flour, Multipurpose food based on low-fat soya flour and groundnut flour,

predigested foods, fish flour. Conclusion.

"Introduction: It is now well recognized that protein malnutrition is widely prevalent among children in many tropical and subtropical countries (Trowell et al. 1954) (p. 216).

"The foods that have been most extensively used in the treatment of kwashiorkor, are skimmed milk powder and calcium caseinate" (p. 217).

"Treatment with plant protein diets: Of late it is being increasingly recognised that skim milk powder, though the cheapest protein food available so far for the treatment of protein malnutrition, cannot provide the basis for a large scale solution of the problem in underdeveloped countries, where skim milk powder is not available in sufficient quantities and has to be imported" (p. 218).

"Better utilization of soya and groundnut products:... Both these foods are by themselves highly concentrated and difficult to be cooked properly. Consequently children may experience difficulty in digesting cooked [whole] soyabean or roasted groundnut (Aykroyd and Krishnan 1937). Recent investigations carried out in India and other countries have shown that both soyabean and groundnut could be suitably processed into milk which is highly nutritious and can be readily digested by young children (Dean 1953; Indian Council of Medical Research 1955). Low-fat flours obtained from soyabean and groundnut are also highly nutritious and can be incorporated in various ways in the diet of children (Autret and Van Veen 1955).

"Predigested foods" [fermented]: Mentions soy sauce, and tempeh in Southern Rhodesia.

"Conclusion: It is evident from the foregoing account that besides cereals and pulses which form important sources of protein in the diet of the low income groups in tropical countries, oilseeds and oilseed meals represent an abundant and a most important source of proteins which have not been fully utilised so far for supplementing human diet." Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4034. Hori, Shinichi; Matsumi, M.; Yoshida, T. Assignors to Ajinomoto Company. 1958. [Removal of iron from amino-acid soy sauce]. *Japanese Patent* 4546. June 9. (Chem. Abst. 53:9567c). [Jap]*

• **Summary:** A solution of 84 gm pyrogallol, 36.7 gm resorcinol in 363 ml water, and 50 ml 1 normal sodium hydroxide at 60°C is treated with 25.4 ml of 35.5% formalin and let stand for 15 minutes to obtain a precipitate. This precipitate is mixed with water, heated for 2 hours at 180°C in an autoclave, and the product ground to 20-30 mesh. Then 250 ml amino-acid soybean sauce (containing 9.51 mg iron/100 ml and 2.85 mg nitrogen/100 ml) of pH 7 is treated by passing through a glass tube containing 50 ml of the ground product to obtain an effluent containing 1.23 mg iron/100 ml. The resin can be regenerated by washing with

0.1 normal hydrochloric acid and water.

4035. *Life*. 1958. Have a Cantoneasy kitchen holiday. Hurry to your grocer's for special values on Chun King. Special savings now on Chun King frozen foods (Ad). 44(25):56. June 23. *

• **Summary:** A full-page color ad featuring Chun King frozen foods. Color photos show the front panels of packages of Chun King Chicken Chow Mein, Chun King Egg Rolls, and Chun King Sweet & Sour Pork. In the lower right corner is a can of Chun King Chicken Chow Mein.

"We've coined a new word—Cantoneasy. Right now you'll see signs in your food store that say Chun King Cantoneasy Kitchen Holiday." "The royalty of American-Oriental Foods—Canned and frozen."

4037. Hayashi, Shizuka. 1958. Hold 1-day meeting for Tokyo teachers. *Soybean Digest*. July. p. 24.

• **Summary:** The Japan Shoyu Association and the Japanese American Soybean Institute jointly sponsored a 1-day meeting to promote shoyu consumption. Attended by approximately 250 high school teachers who specialize in cooking courses, it was held in the Shoyu Association's hall. Mr. Shoda, president of the Shoyu Association, gave the opening speech. He was followed by Mr. Komiya, managing director of the Association, who explained that the Association is always working to improve shoyu quality and to produce shoyu that will be welcomed by housewives. "Mr. Komiya said a poor quality shoyu, which is produced in a few days time by a simple method, is by no means comparable to naturally produced shoyu in quality and flavor. The Association is discouraging the production of such low quality shoyu. He suggested that housewives learn to distinguish good quality from inferior shoyu. Low quality shoyu spoils the appetite while high quality shoyu which has a pleasant flavor and a bright scarlet color, enhances the appetite and gives better taste to food prepared from shoyu." Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome, Yuraku-cho, Chiyoda-ku, Tokyo, Japan.

4038. Fukushima, D.; Mogi, M. 1958. [Treatment of soybeans]. *Japanese Patent* 6817. Aug. 19. [Jap]*

Address: Noda Soy Sauce Co., Ltd., Noda, Japan.

4041. **Product Name:** Hydrolyzed Vegetable Proteins.

Manufacturer's Name: Hercules Powder Co. (Huron Milling Co.).

Manufacturer's Address: Harbor Beach, Michigan.

Date of Introduction: 1958. September.

New Product—Documentation: Jenks. 1958. *Chemurgic Digest*. Sept. p. 9-10.

4042. Jenks, J.V. 1958. Wheat is raw material for Huron's chemurgic output. *Chemurgic Digest*. Sept. p. 9-10.

• **Summary:** "In recent years Hercules Powder Company, producer of some 800 chemical products, has become increasingly interested in the utilization of the inexhaustible raw materials derived from the soil. For this reason, in December, 1956, it acquired the plant of the Huron Milling Company, a firm that had been doing business in the 'Thumb' of Michigan since 1902.

"The operations of the Huron Milling Division are in every sense chemurgic since the principal raw material is wheat flour and chemistry is involved in nearly all the steps of manufacturing the finished products." Wheat gluten, extracted from wheat, is dried in either of two ways to denature the proteins. It is then used for the manufacture of monosodium glutamate (MSG) and hydrolyzed vegetable proteins (HVP). The process for making both products begins by "boiling the gluten in hydrochloric acid for several hours. The gluten goes into solution and the protein is hydrolyzed or split into its individual amino acids, some twenty-two in number. Wheat gluten is unique in that it contains a much higher percentage of glutamic acid, one of the amino acids, than any other protein that has thus far been analyzed. It contains about 38% while corn gluten, for example, contains only 30%.

"Glutamic acid contains two carboxyl groups and one amino group, and therefore, like all amino acids, is amphoteric and forms salts with both acids and bases. As soon as it is split from the protein it reacts with the hydrochloric acid to form the hydrochloride." This salt

crystallizes and is removed by filtration to become MSG, which is used as a flavor enhancer in many food products.

“The filtrate from the glutamic acid hydrochloride crystals contains all the other amino acids originally present in the gluten protein. Some glutamic acid is also present. The filtrate is neutralized and forms a solution similar to the familiar soy sauces produced in the orient. The latter are usually made from a mixture of soy beans and wheat, and the hydrolysis, instead of being carried out by the use of hydrochloric acid, is effected by enzymes produced by a mold. The Huron sauce in the liquid form is sold principally as an ingredient in table and cooking sauces. It is also condensed into a paste, which is used in bouillon cubes, and is dried to a powder, used as an ingredient, along with M.S.G., in the manufacture of dried soups.” Address: Consultant, Research Dep., Hercules Powder Co.

4043. *Journal Star (Peoria, Illinois)*.1958. Two Japanese scientists here to study soybean processing. Oct. 30. p. A-5.

• **Summary:** A large photo shows C.W. Hesseltine and A.K. Smith of the USDA Northern Utilization Research and Development Division [NRRL], and visiting Japanese scientists Tokuji Watanabe and Kazuo Shibasaki. The two Japanese scientists have arrived in Peoria to start a year’s search for ways to increase the use of U.S. soybeans in Japanese foods—especially tofu and miso. The studies will be conducted under an agreement between the Agricultural Research Service (ARS), the USDA’s Foreign Agricultural Service, and the American Soybean Association. The research is part of USDA’s research and development program to find new outlets for U.S. farm crops.

Dr. A.K. Smith of the Northern Division spent several months in Japan last year studying soybean utilization. He found that Japanese prefer U.S. soybeans for oil-mill processing, which accounts for about half of all Japanese soybeans. The other half is used to make traditional foods, and only a limited quantity of U.S. soybeans are used in this way.

“Dr. Shibasaki is an associate professor in the department of agriculture chemistry at Tohoku University, Sendai, Japan, and an adviser of Miyagi Prefecture Miso and Shoyu Industry Association.

“Mr. Watanabe is chief of the grain processing section of the Food Research Institute, Ministry of Agriculture and Forestry.”

Note: Soyfoods Center owns a copy of this black-and-white photo (8½ by 11 inches); it was a gift of the USDA National Center for Agricultural Utilization Research (Peoria, Illinois), which owns the photo.

4044. *Hercules Mixer (Hercules Powder Co., Wilmington, Delaware)*.1958. This is Harbor Beach, Michigan, where more than 400 Herculites turn millions of pounds of flour into protein for food supplements, natural food flavoring,

wheat starch, and adhesives. 40(9):1-11. Oct.

• **Summary:** About the Hercules Powder Co. (formerly Huron Milling Co.) which is the only industrial plant in Harbor Beach. Many of the townspeople work at the plant. The plant makes Hercules MSG, HVP, and vital wheat gluten. An aerial photo taken from over Lake Huron shows the Huron Milling Co. with the town of Harbor Beach in the background. A coal dock juts out into the harbor. A large pond, probably for starch disposal, appears at the far right.

4045. *Life*.1958. From Chun King’s frozen food bazaar... you come up with meals as excitingly different as this (Ad). 45(19):92. Nov. 10. *

• **Summary:** A full-page color ad featuring Chun King frozen foods. Color photos show the front panels of packages of Chun King Fried Rice, Chun King Egg Rolls, and Chun King Chicken Chow Mein.

“You can do it... Canton-easy (R). You can discover all sorts of ways to make meals sparkle, your meal-planning fresh and new. The place to look is your grocer’s frozen food cabinet.” “The royalty of American-Oriental Foods—Canned and frozen.” In the lower right is a small cartoon of a Chinaman on snow shoes, with outstretched arms, wearing a pink robe and a yellow crown.

4046. Mogi, Masatoshi. 1958. [Shoyu, a Japanese sauce]. *Japanese Patent* 10,199. Nov. 25. (Chem. Abst. 53:4650a). [Jap]*

• **Summary:** Koji is prepared from 550 gm soybeans, 129 gm wheat, and 66 gm soy wheat. Then 660 cc of 7.5% sodium chloride solution is added, and the mixture is inoculated with the enzyme glutaminase obtained from the natto bacterium, *Bacillus subtilis*. After 7 days, sodium chloride is added to 18% concentration. The mixture is kept at 30°C for 3 months to give shoyu containing 23.5 mg/cc glutamic acid. Address: Noda, Japan.

4047. *Hercules Mixer (Hercules Powder Co., Wilmington, Delaware)*.1958. Come in for a visit with Herculites at Harbor Beach plant. Part II. 40(10):14-23. Nov.

• **Summary:** Harbor Beach is in Michigan. Flowcharts show how each Huron Milling product is made. From wheat protein is made vital gluten and Vicrum. Devital gluten is digested in an acidic solution, filtered, decolorized, and crystallized. From glutamic acid is made MSG. From the rest of the crystallized substance is made HVP liquid, which ends up as HVP pastes (Dee-S, Luxor, Jarvis), blended “with enzyme” to make Age-It, used in sauces (Prozate, E-610, L-625), or spray dried to make HVP powders (5-SD Seasoning, HVP-A). From the wheat starch are made laundry starches, edible wheat starches, Starbake, etc.

The proteinases and the existence of *Bacilli* spores in the soy mash (moromi). *Bulletin of the Agricultural Chemical Society of Japan* 22(6):345-52. Nov. Bound in the back of Nippon Noigei Kagaku Kaishi (J. of the Agricultural Chemical Society of Japan). [22 ref. Eng]

• **Summary:** The activity of proteinases [enzymes that break down / hydrolyze protein] in soy mash [*moromi*] juice was measured. “Compared to proteinases of purely cultured soy koji digest which consisted of only *Aspergillus* proteinases, no difference was observed with the proteinases of usual soy mash through the studies of pH-proteinase activity curves, the inhibition test, and inactivation by acid and alkali treatment. It is supposed, therefore, that the proteinases in soy mash are mostly of *Aspergillus* origin.”

Very few *Bacilli* vegetative cells were found in the soy mash. Therefore the researcher “assumed that *Bacilli* mainly grow in the koji and survive in the soy mash mostly in the form of spores. This work also suggested that the so-called ‘*Aspergillus* alkaline proteinase’ consists of two distinct proteinases, and further the existence of an inhibitor which only acts at pH 8.” Address: Noda Inst. for Scientific Research, Noda City, Chiba prefecture, Japan.

• **Summary:** “Two Japanese scientists, Kazuo Shibasaki and Tokuji Watanabe, have arrived at the Northern Utilization Research and Development Division, Peoria, Illinois, to start a year’s search for ways to increase the use of U.S. soybeans in Japanese foods...”

“Dr. Shibasaki and Mr. Watanabe will study the use of U.S. whole soybeans in making tofu and miso, traditional Japanese foods... Dr. Shibasaki is an associate professor in the department of agricultural chemistry at Tohoku University, Sendai, Japan, and an adviser of Miyagi Prefecture Miso and Shoyu Industry Association. Mr. Watanabe is chief of the grain processing section of the Food Research Institute, Ministry of Agriculture and Forestry.”

4054. Choi, S.H.; Haw, K. 1958. [Biochemical studies on Korean fermented foods. VII. A study on biochemical process during the fermentation of “kanjang”]. *Report of the National Chemical Laboratory, Seoul, Korea* 7:11. [Kor; eng]*

4055. Choi, S.H.; Haw, K. 1958. [Biochemical studies on Korean fermented foods. VII. A study on biochemical process during the fermentation of kanjang]. *Report of National Chemistry Laboratories (Korea)* 7:11-13. [Kor]*

• **Summary:** In order to confirm the biochemical process of the fermentation from soybean to Maiju [Meju; soybean koji] and of the fermentation from Maiju to Kanjang and Dainjang [Doenjang], the nitrogen distributions of soybean, Maiju, Kanjang, and Dainjang are studied on protein nitrogen, peptide nitrogen, amino nitrogen and volatile nitrogen. And the contents of amino nitrogen, peptide nitrogen, and true protein nitrogen to the total nitrogen of soybean, Maiju, Kanjang, and Dainjang are shown in table I and the ratios are shown in table 2 and the figure. According to the results

indicated in the tables and figure, the following conclusions are summarized:

1. The main biochemical process at the fermentation from soybean to Maiju would be the degradation from protein in soybean to peptide compounds in Maiju.
2. The main biochemical process at the fermentation from Maiju to Kanjang and Dainjang would be the degradation from peptide compounds in Maiju to amino nitrogen compounds in Kanjang and Dainjang.
3. However, because the protein nitrogen indicated as the ratio of protein nitrogen to total nitrogen content is higher in Dainjang, it is assumed that there might be two kinds of proteins in soybean; one is the protein which could be converted to peptides at the Maiju fermentation and to amino nitrogen compounds lastly at the Kanjang fermentation. The other is the protein which would not be affected at these fermentations at all, remaining as the protein nitrogen in Dainjang, one of the finished products.
4. It can be indicated that the process from Maiju to Kanjang and Dainjang would be due to the fermentation as indicated by Haw and Choi. Address: National Chemistry Laboratories, Seoul, Korea.

4056. Hahn, Y.S.; Park, B.D. 1958. [Studies on the manufacture of soy sauce. II. On *Aspergillus oryzae* in Korean soybean meju and wine kokja mould]. *Report of the National Industrial Research Institute (Seoul, Korea)* 8:75-82. [Kor]*

• **Summary:** In a previous paper, pioneer work with the genus *Aspergillus* in Meju [Korean soybean koji] and wine Kokja was reported. This is a continuation of that work. 24 kinds of long-type conidia head and 21 kinds of round-type conidia head were isolated in the genus *Aspergillus* from Kokja. Five results are given.

1. The long type has longer sporangiophores and smaller vesicles than the round type, and the former's sterigmata is in a single line, while the latter is in a double line.

2. The propagative velocity of the round type is faster than the long type, and spore formative velocity of the long type is faster than the round type.

4. In general, the amylolytic power of the long type is stronger than the round type, therefore the researchers the molds distributed in Kokja consist of almost entirely the long type. They obtained 4 superior round types and 6 superior long types.

5. The proteolytic power of the round type is generally stronger than that of the long type. They obtained superior round types. Address: National Industrial Research Institute, Seoul, Korea.

• **Summary:** Edible soy products manufactured by the Noda Shoyu Company of Japan.

4059. **Product Name:** [Flower Brand Sweet Soy Sauce].

Foreign Name: Ketjap Benteng Manis.

Manufacturer's Name: Vanka-Kawat.

Manufacturer's Address: Dr. Augustijnlaan 40, 2283 CH Rijswijk Z.H., Netherlands.

Date of Introduction: 1958.

Ingredients: Extract of soy beans, sugar, salt.

Wt/Vol., Packaging, Price: 115 ml, 250 ml, 500 ml, 1 liter bottle.

How Stored: Shelf stable.

New Product–Documentation: Form filled out and labels sent by Marianne Westra of Vanka Kawat. 1990. July 2. Ketjap Benteng Manis was introduced in 1958. Labels: 4 sizes. Red, yellow, black, and white. In Dutch: Soja Saus Zoet. In German: Soja Sosse Gesuesst. "Superior quality. Used as seasoning and also as ingredients by Chinese / Indonesian cooking."

Note: This is the earliest English-language document seen (April 2012) that uses the term "Ketjap Benteng Manis" to refer to a type of Indonesian soy sauce.

4060. **Product Name:** [Flower Brand Salted Soy Sauce].

Foreign Name: Ketjap Benteng Asin.

Manufacturer's Name: Vanka-Kawat.

Manufacturer's Address: Dr. Augustijnlaan 40, 2283 CH Rijswijk Z.H., Netherlands.

Date of Introduction: 1958.

Ingredients: Extract of soy beans, salt.

Wt/Vol., Packaging, Price: 115 ml, 250 ml, and 500 ml bottle.

How Stored: Shelf stable.

New Product–Documentation: See next page. Form filled out and labels sent by Marianne Westra of Vanka Kawat. 1990. July 2. This product was introduced in 1958. Labels: 3 sizes. Red, yellow, black, and white. In Dutch: Soja Saus Zoet. In German: Soja Sosse Gesuesst. "Superior quality. Used as seasoning and also as ingredients by Chinese/ Indonesian cooking."

4061. **Product Name:** [Flower Brand Yellow Label Black Soy No. 1: Soy Sauce Salt].

Foreign Name: Soja Saus Zout: Pikante Saus.

Manufacturer's Name: Vanka-Kawat.

Manufacturer's Address: Dr. Augustijnlaan 40, 2283 CH Rijswijk Z.H., Netherlands.

Date of Introduction: 1958.

Ingredients: Soybean extract, salt, water, sugar.

Wt/Vol., Packaging, Price: 1 liter (33 oz) bottle.

How Stored: Shelf stable.

New Product–Documentation: See previous page. Form filled out and label sent by Marianne Westra of Vanka Kawat. 1990. July 2. This product was introduced in 1958. Label: Green and yellow. In German: Soja Sosse Salz.

4062. **Product Name:** [Tiger Brand Soy Sauce: Black Soy, Salt].

Foreign Name: Tiger Brand Soja Saus, Zout.

Manufacturer's Name: Vanka-Kawat.

Manufacturer's Address: Dr. Augustijnlaan 40, 2283 CH Rijswijk Z.H., Netherlands.

Date of Introduction: 1958.

Ingredients: Extract of soy beans, salt, spices.

Wt/Vol., Packaging, Price: 250 ml and 500 ml bottle.

How Stored: Shelf stable.

New Product–Documentation: Form filled out and labels sent by Marianne Westra of Vanka Kawat. 1990. July 2. This product was introduced in 1958. Labels: 2 sizes. Black on yellow. Originally this spiced soy sauce was apparently made by Vanka Kawat, but now it is imported from Chuen Cheong Sauce Factory in Singapore and bottled by Vanka-Kawat in the Netherlands.

4063. Asai, Toshinobu; Arima, Kei. 1958. Summaries of papers presented by Prof. Teizo Takahashi and Prof. Kin-ichiro Sakaguchi. Tokyo: Kasai Publishing. 206 p. The lengthy front matter is unnumbered. [584 ref. Eng; jap]
• Summary: This work was compiled and published by “The Committee of Commemorative Meeting of 35 Year’s Anniversary of Professor Kin-ichiro Sakaguchi.” Contents: Foreword, by T. Asai. Chronology of the professional career of Teizo Takahashi (1875-1952; he was Prof. Sakaguchi’s teacher). Chronology of the professional career of Kin-ichiro Sakaguchi (1897-1958). A brief review of the researches of Prof. Teizo Takahashi (mainly with saké). A brief review of the researches of Prof. Kin-ichiro Sakaguchi. Prof. Takahashi has 190 references, and Sakaguchi has 394 references. Address: Tokyo, Japan.

4064. Caleva, Harry. 1958. Chinese cookbook for quantity service: Authentic professional recipes. New York, NY: Ahrens Publishing Co., Inc. 169 p. See p. 150-53. Index. 24 cm.

• Summary: This is basically a Cantonese cookbook; the Chinese words are written in Cantonese.

The chapter titled “Sauces” (p. 150-53) includes recipes for the following: Soy sauce (light) (*Yuen You*). With 1½ lbs. soy beans (crushed). Soy bean jam (*Mien-Shee Ding*).

With 1½ lbs. soy beans. Rice jam (*Dow-Ding*). With 1¼ lbs. roasted soy beans (mashed). Subgum sauce (Sweet and sour) (*Sub Gum Tien-Soon Wu*). With “1 tsp. soy sauce (heavy).” Oyster sauce (*Hoo You*). With ¼ cup soy sauce (light). Chinese brown gravy. With 1 tsp. soy sauce (heavy). Onion sauce, Cantonese style. With ¾ cup soy sauce (light).

Black soy sauce (*Chow You*). With soy bean 1½ lbs. Salt 2 tbs. [tablespoons]. Water 3 quarts. Molasses 1 pint. Rice wine ½ cup.

“1. Combine soy beans, salt, and water; bring to a boil and simmer for five hours; remove and strain. Pour into a jar and seal airtight, then age in the sun for six months.

“2. At the end of six months, add remaining ingredients, reseal and let age in the sun another six months.

“Note: This sauce is used for seasoning food. Not used in cooking.”

Note: None of the many recipes that call for months of aging in the sun will work; they do not contain koji (*Qu*). Glossary of Chinese terms [Cantonese] (p. 161-64): *Dow Foo*—Bean curd. *Dow Ngaah*—Bean sprouts. *Dow See*—Black bean sauce [sic, fermented black soybeans]. *Foo Jook*—Soy bean cream [dried yuba sticks]. *Foo Yu*—Chinese cheese [fermented tofu]. *Gee Yeou*—Black sauce. *Gna choy*—Bean sprouts. *Jeung*—Sauces. *Jeung Yow (you)*—Soy sauce. *Jook*—Congee. *Mien See*—Brown bean sauce. *Naam Yu*—Red bean curd cheese in red sauce. *Nom Yu*—Red cheese. *Saang Se Jeung*—Red bean sauce (thick). *See Yeou (you)*—Soy sauce [fermented black soybean sauce]. *Tiem Jook*—Dried bean curd [sweet dried yuba]. *Woo Dow*—Dried black [soy] beans.

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term *Foo Jook* to refer to dried yuba sticks.

Note: This is the earliest English-language document seen (April 2012) that contains the term “Soy sauce (light)” plus its Cantonese name (*Yuen You*) or the term “Black soy sauce” plus its Cantonese name (*Chow You*).

4065. Chicago Shimpō, Inc. 1958. Chicago Japanese American directory. Chicago, Illinois: The Chicago Shimpō, Inc. 30 cm. [Eng; jap]

• Summary: In Japanese characters at the top left of the cover: *Nikkei-jin Shikago Jushoroku*. This directory, which sells for \$1.00, also contains many space ads. On the cover is a photo of the Chicago skyline behind a public park in which there is a white band shell (a bandstand having at the rear a sounding board shaped like a huge concave seashell) and in the distance a fountain.

Page 14: Half-page ad for: “Pacific Trading Co. General importer and exporter. 884 W. Erie St., Chicago 22, Illinois. They also have offices in Los Angeles (119 S. Central Ave.) and New York City (57-10 38th Ave.). Items they import include Kikkoman shoyu, Ajinomoto, and rice.

Page 15: Half page ad for Aji-no-moto (Tokyo, Japan) titled “Mother knows best.” “When it comes to cooking

food with hearty, old-fashioned flavor, mother knows best—she always seasons with Aji-no-Moto.” “99+% pure monosodium glutamate.”

Page 19: 1/8 page ad for: “Tanaka Tofu Mfg. Co., 1358 N. Clark (rear). WH 4-3938.” The top 30% of the ad is in English; the rest is in Japanese. Same page: ¼ page ad for Fujimoto & Company, 302 South 4th West, Salt Lake City, Utah. Tel. EMpire 4-8279. Illustrations show: (1) The company’s Kanesho brand; (2) A Japanese woman kneeling behind a porcelain mortar (*suribachi*), holding a wooden pestle (*surikogi*), and using it to grind miso until it is smooth. The top 25% of the ad is in English; the rest is in Japanese. The company also makes and sells koji.

Page 46: Under “Food manufacturers” and again under “Food markets and groceries” are listings (entirely in English) for Tanaka Tofu Mfg. Co. at the address and phone shown above. Plus: “After 2 pm call DI 8-9703.”

Talk with Karl Matsushita, director, Japanese-American National Library in San Francisco. 2008. Feb. 1. He thinks these directories were first published after World War II. His library has only one volume of this periodical published in 1985; he does not know when the first volume was published. The War Relocation Authority (WRA), after World War II, pushed Japanese to relocate in Chicago and the Midwest, where they felt there would be less anti-Japanese sentiment. Address: 1310 N. Wells St., Chicago 10, Illinois. Phone: WHitehall 3-2326.

4067. La Choy Food Products, Inc. 1958. The art and secrets of Chinese cookery. Archbold, Ohio: La Choy Food Products. 31 p. Illust. (some color). 10 x 16 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

4068. Motoyama, Tekishu. 1958. Inshoku jiten [Encyclopedia of food and drink]. Tokyo: Heibonsha. 604 p. Illust. 27 cm. [Jap]

• **Summary:** Includes listings for the following soy-related terms: Aburage (deep-fried tofu pouches), aemono (Japanese-style salads), agedashi-dofu, daizu (soybeans), dengaku, fu (wheat gluten; but the term “seitan” is not listed in this book), ganmodoki (tofu burgers), gisei-dofu, goma-dofu (sesame tofu), goma-miso (sesame miso), inari-zushi, iri-dofu (scrambled tofu), kenchin-jiru, miso, namemiso, natto, oboro-dofu (soymilk curds), oden (stew), okara, shirae (tofu salad), shoyu, sukiyaki, tekka, teriyaki, tofu, tonyu (soymilk), tsuto-dofu, unohana (okara), yakimiso (broiled

miso), yuba.

Separate entries, with detailed information, are given for some of the above words or terms.

4069. Motoyama, Tekishu. 1958. Inshoku jiten: Shōyu [Encyclopedia of food and drink: Shoyu (Document part)]. Tokyo: Heibonsha. 604 p. See p. 278-80. [Jap]

• **Summary:** Contents: Ways of using soy sauce. Brewing soy sauce. Chemical soy sauce.

“Ways of using soy sauce (*shoyu*): It goes without saying that the spread and development of soy sauce is due to its ability to enhance the flavors of foods and create new combinations of flavors. The fact that *namasu*, a dish of raw fish and vegetables seasoned with rice vinegar and soy sauce, is a favorite and representative way of serving sashimi is due largely to the flavor contributed by the soy sauce. On the whole, it cannot be denied that soy sauce tantalizes the palate. The basic significance of soy sauce lies in its ability to supplement the rather simple flavor given food when only salt is used as a seasoning. It is generally thought that the true flavor of soy sauce can best be enjoyed in *kijoyu* or plain, fresh unpasteurized soy sauce. Shoyu surpasses other seasonings in its ability to make each dish unique by evoking complex and delicate flavors inherent in the food itself.

“It is important that its users recognize this point from the beginning. Simply speaking, to experience the quintessence of the flavor of soy sauce, try serving it plain as *kijoyu* over fresh sashimi. In some cases the flavor of fish broiled lightly with salt (*shio-yaki*) or salted pickles can be improved by the addition of a very small amount of soy sauce, however basically these are esteemed for the flavor imparted by the salt. And if high-quality *koikuchi* is heated above a certain temperature—as is the case in broiling—a strong and unpleasant flavor will result. In order to compensate for this, *usukuchi* was created. Although pale in color, it contains a relatively large amount of salt. Able to harmonize well with other seasonings, it has a simple flavor and dissolves easily in water. It is used for soups and *nimono* (dishes simmered in liquids) since there are considered best when their flavors are light and simple. Used by itself it is too salty, and its flavor is inferior to that of regular shoyu. Unless used with liquids in broths, it does not harmonize well with other flavors.

“In broiled eels (*kabayaki*), in the mirin soy sauce (*mirin-joyu*) used with teriyaki, in tsukudani (preserved foods simmered in soy sauce), even in foods simmered in liquids (*nimono*) and especially in cooking where water is not used, *koikuchi* is preferred to *usukuchi* since it was originally developed for its rich, distinct flavor, slightly heavier consistency and darker color. The reason it is heated in *mirin-joyu* is to help unite both ingredients. It is also said that the longer-lasting the seasoning soy sauce (*tare*) used for broiled eels, the better; after several years of use, the oil from the eels and fish becomes mixed with the soy seasoning

sauce. Each time the sauce is used afresh in broiling, the heat helps the soy, mirin, and oils to “marry.” If the sauce is reheated in a pot, the fire should be turned off just before the liquid comes to a boil. Most fish are first broiled without seasoning sauce, and the sauce then applied later. In the case of tsukudani, it is more important that it last well than that it have a fine flavor so the problem is slightly different.

“Usukuchi is used largely in the Kyoto area and koikuchi in the Tokyo area. However Kyoto cooks use both types of soy sauce in restaurants and at home whereas Tokyo cooks use koikuchi almost exclusively, especially at home. When seasoning foods, if they are too bland or weak, we usually add shoyu, and if they are too salty we usually add sugar. Flavors in which sugar and soy sauce are combined have never been considered high class. Throughout most of Japan’s culinary history, seasonings, herbs and spices have been used to a very limited extent. Shoyu and salt have been used to evoke the flavors inherent in foods, and the people have come to a deep appreciation for salt from the point of view of both economy and flavor. If you are well versed in the way of using salt in foods, there is no need to use *usukuchi*, and the efficiency of regular shoyu will rise.

“In recent years, for the sake of portability and preservation, soy sauce has been spray dried to make soy sauce powder and crystals. These of course, have a flavor and fragrance which is inferior to that of regular soy sauce. Since a small amount of mold often forms on the surface of shoyu during the warm summer months, this is often removed by heating the shoyu to 50-60°C or straining it through cotton cloth. It can also be prevented by adding a small amount of mustard oil to the shoyu.

Note: This is the earliest document seen (April 1912) that mentions spray-dried or dehydrated soy sauce. After instant noodles were first marketed in Japan in Aug. 1958, sales of spray-dried increased as a seasoning for the noodles.

“Brewing soy sauce: Soy sauce is made from a fermented mixture of soybeans and wheat to which water and salt are added. The three basic varieties are *koikuchi* (literally: dark mouth) or regular dark soy sauce, *usukuchi* (literally: light mouth) or the lighter, milder, less common soy sauce used in the Kyoto area and *tamari*. Each of these is made by a somewhat different process. However in the case of the most common soy sauce, it is said that the finest flavor is attained if the koji is prepared from equal quantities of soy and wheat. The amount of salt ranges from 90-110% of the combined amounts of the soybeans and wheat. Thus the amount of water is generally twice the amount of salt. The finest soy sauce contains a relatively small percentage of both salt and water. Inferior grades contain 110% salt or water, as measured above.

“It is not absolutely necessary that soybeans contain all of their natural oils in order to use them in soy sauce. Although a certain percentage of the beans may be defatted soybeans, this percentage is very delicate. When a large

percentage of defatted soybean meal is used, it is necessary to use a chemical process for adding amino acids to the soy sauce in order to obtain satisfactory fragrance in the soy sauce.

“Ordinarily, the wheat is roasted until golden brown and cracked into small pieces. The soybeans are rinsed, soaked overnight in water and then either boiled or steamed. After they have cooled somewhat, they are mixed with the cracked roasted wheat, koji spores (*tane koji*) are added and the mixture placed in a warm incubation room (*muro*). By the fourth day the mixture will have turned into *koji* and be covered with a bloom of fragrant white mold. At this time the salt and water solution are added in order to make *moromi*, the mash of soy sauce, wheat and soybeans. This mixture is stirred from time to time and allowed to ferment and age for at least one year.

“It is commonly said that one-year-old *moromi* has only fragrance, two-year *moromi* also has flavor and three-year-old *moromi* has fine color as well. In order to attain the perfect blend of fine qualities, these three different types of *moromi* are often mixed in the following proportions: 5 parts 1-year *moromi*, 2 parts 2-year and 1 part 3-year *moromi*. When the mixture is placed in a cotton sack and pressed, about 70-80% of the weight can be extracted as soy sauce liquid. This is allowed to settle and become clear for 2-3 days. After removing the oil which floats to the surface and the dregs on the bottom, the remainder—called *nama-tamari* (fresh-tamari)—is heated to 60-70°C to sterilize or pasteurize it. It is then known as *Hi-ire* (put into fire), and is ordinary soy sauce made in Japan” (Continued).

4070. Motoyama, Tekishu. 1958. *Inshoku jiten: Shōyu* [Encyclopedia of food and drink: Shoyu (Document part II)]. Tokyo: Heibonsha. 604 p. See p. 278-80. [Jap]

• **Summary:** Continued: “In recent times, in order to maximize profits and employ capital most efficiently, various methods of high-speed brewing and processing have begun to be used. And due to the relationship between supply and demand, substitute varieties of each of the main types of soy sauce have been developed and are now being produced.

“*Usukuchi* soy sauce is made to have a light color due to the way it is used in cooking. The basic method of manufacture is the same as for regular soy sauce, however to give it a lighter color, the water in which the soybeans are cooked is changed during cooking and then drained off as soon as the beans come to a boil. The wheat is also roasted for a shorter time than for regular soy sauce to give it a lighter color and prevent scorching. The koji is prepared in more or less the same way as for regular soy sauce however the koji is removed from incubation when the mold is in the state called *shimofuri* or ‘salt and pepper’ so that there is less (?) mold than for regular soy sauce koji. A larger amount of brine is mixed with the koji and the mixture is allowed to age for 6-12 months. Before pressing, sweet sake (*amazake*) is

added as a natural sweetener. The liquid is heated to a lower temperature (60°C) for a shorter time (20-30 minutes) during sterilization. Therefore usukuchi cannot be kept as long as regular soy sauce without spoiling.

"In regular soy sauce—which is generally seen as a slightly lower quality product than tamari—salt water is also added to the pressed moromi and the mixture re-pressed to yield a liquid called *bansui*. This is used as one of the raw materials in the even lower quality chemical soy sauce. The main areas which have produced *koikuchi shoyu* since ancient times are Choshi and Noda in Chiba prefecture and Shozushima in Kanagawa prefecture. The main area producing *usukuchi shoyu* is Tatsuno in Hyogo prefecture, however it is also brewed in large quantities in farmhouses for home use. *Kanro shoyu* is a product originally developed in Yanaitu in Yamaguchi prefecture. Made by reprocessing *koikuchi shoyu* into a thick, sweet liquid, it is prized in the Kyoto area where it is served with *sashimi* from white fish meat.

"Chemical *shoyu* (*daiyô* {substitute} *shoyu*): Ordinarily, at least one year is required to brew regular soy sauce so that at the large breweries, huge aging cellars or warehouses are necessary. Since this ties up a large amount of capital and reduces profits, studies were first made of ways to speed up the traditional process and then of ways to make soy sauce using chemicals and new raw materials. Soon a large number of varieties of 'amino acid shoyu' appeared on the market. Inexpensive defatted soybean meal began to be used in place of whole, natural soybeans. The meal is first broken down by hydrochloric acid and then neutralized by soda ash to produce crude amino acid. If this product is mixed with brine, the resulting liquid has much the same color and flavor as natural soy sauce. However since the fragrance is poor, ready-made moromi is then added and the mixture reheated. The amino acids in the protein break down into starches which are also added to produce sugars.

"By the discovery of sugar-containing amino acids, it became possible to devise soy sauce which had both sweetness and viscosity. After experiencing some difficulty with using low-priced defatted soybean meal, research began in the use of fish whose level of freshness had fallen, fish meal, viscera, chrysalis dregs, sesame seed dregs [defatted sesame meal left the oil was removed], and cotton seed dregs. Products were also developed by placing the pressed dregs of regular soy sauce in a liquid made by simmering fish, shell fish and seaweeds in order to impart their flavor to the soy sauce. Another variety of chemical soy sauce was developed for kidney disease patients who are unable to use salt in their food. Malic acid soda made from apples was used to simulate a salty flavor."

4071. Motoyama, Tekishu. 1958. *Inshoku jiten: Teriyaki* [Encyclopedia of food and drink: Teriyaki (Document part)]. Tokyo: Heibonsha. 604 p. See p. 397. [Jap]

• **Summary:** This is a Japanese cooking method used to make grilled dishes (*yakimono ryori*). Fish meat is brushed or dipped in Mirin-shoyu then grilled.

Use the following types of fish: *Tai* (a sea bream, a red snapper, a porgy), *sawara* (a Spanish / spotted mackerel), *buri* (a yellowtail), or fresh salmon (*nama sake*).

Mirin is used as the final touch to give a glossy or shinier appearance. In Japanese, the term *teri o dasu* is used to mean "bring out the gloss / luster" or "to make it shine." Therefore it is called *teriyaki* (glossy / shiny grill).

Note: The meaning of "Mirin-shoyu" is unclear. Are the only two ingredients mirin (sweetened sake for cooking / seasoning) and shoyu (regular Japanese-style soy sauce)? If yes, in what proportions are they used? If no, what are the other ingredients and the proportions of each?

4072. Richards, Janet; Richards, Charles. 1958. *Basic Chinese and Japanese recipes*. 3rd ed. rev. and expanded. San Francisco, California: City Lights Books. 75 p. Index of recipes. 17 cm.

• **Summary:** Contents: Introduction (General. For epicures, vegetarians, and dieters). Chinese recipes. Japanese recipes. General information: Buffet, party foods & hors d'oeuvres. To brew tea. Special imported ingredients. Where to get ingredients & equipment.

Introduction: "Most of the recipes in this book appear constantly on the menus of the Chinese and Japanese restaurants of San Francisco, New York, and a few other cities that have a population segment with Chinese or Japanese ancestry." Many recipes call for "soy sauce" and up to 1 teaspoon "MSG powder."

The section "For epicures, vegetarians, and dieters" states: "Of the special foods of the Orient, the most versatile is the soy bean. The number of widely differing foods made from soy beans is very large, including bean thread, noodles, soy sauce, soy milk with its derivatives such as dofu, the fermented nam yu and fu yu of China and miso of Japan. Western food technology has also added to the list."

Soy-related recipes—Chinese: Lo han chai (with dofu and seaweed, p. 19-21). Dofu with oyster sauce ("1 block of Japanese tofu, or 2 cakes of Chinese tofu," p. 22). Steamed fish with dofu (p. 29-30). Chicken in soy (with 1 cup soy sauce, p. 31-32). Chinese sauce [commercial]: Foo yü (sharp thick sauce [fermented tofu]). Jeung yow (soy sauce).

Note: This is the earliest English-language document seen (Oct. 2011) that uses the terms "nam yu" or "fermented nam yu" or "Foo yü" to refer to fermented tofu.

Japanese recipes: Miso soup (with tofu. Miso is "fermented soy beans," p. 48). Konbu salad (with soy sauce, p. 49). Egg plant with miso (p. 50). Turnips in soy (soy sauce, p. 50). Misoyaki (p. 54-55). Joints of chicken teriyaki (with Teriyaki sauce, p. 56). Beef sukiyaki (with tofu, p. 59-60). Beef teriyaki (cook on a hibachi, p. 60). Teriyaki sauce (p. 61; Ingredients: ½ cup table syrup {light cane molasses},

1 quart shoyu {high quality Japanese soy sauce}, 3/4 lb. sugar, 2 pieces dashi konbu {dried kelp} 6 inches long, ½ teaspoon MSG powder, 2 tablespoons sake). Quick teriyaki sauce (p. 61; Ingredients: 3/4 cup soy sauce, 3 tablespoons sake {or sherry}, ¼ cup sugar, 1 teaspoon grated ginger, ½ tsp. MSG powder). Buta dofu (with “soy bean curd,” p. 63).

Special imported ingredients (p. 68-71): Japanese—Canned foods: Bean curd, prepared black soy beans. Packaged foods: Miso (the light variety, fermented soy bean paste). Bottled foods: Fuyū (Chinese bean cake; Order top quality such as Quong Hop brand). Shoyu (soy sauce; Order top quality such as Kikkoman, Higeta, or Marukin). Chinese—Bottled foods: Soy sauce. Black beans (Dow Shee; for black bean sauce).

4073. Smith, Allan K. 1958. Vegetable protein isolates. In: A.M. Altschul, ed. 1958. *Processed Plant Protein Foodstuffs*. New York: Academic Press. xv + 955 p. See p. 249-76. Chap. 10. [143 ref]

• **Summary:** Contents: Introduction. Source materials for protein isolates: Oilseeds, cereal grains. Processing meal for protein isolation. Preparation and properties of isolated protein: Native proteins, commercial protein isolates, isolated proteins for food uses. The hull problem. Uses of protein isolates: Industrial applications, food uses. Selected oilseed protein isolates: Soybean (properties, soybean whey, commercial isolation, industrial and food uses), peanut (properties, utilization), cottonseed (properties, utilization), flaxseed, sunflower seed (source materials, isolation and properties). Cereal grain proteins: Corn protein (corn fractions, zein isolation, utilization), wheat proteins (gluten isolation, utilization).

The most important uses for wheat gluten “are for manufacture of monosodium glutamate and fortification of weak flours to produce high-protein bread... The monosodium salt of the L-form of glutamic acid has the unique power... of enhancing the flavor of many foods. Also, it is this salt which is largely responsible for the flavoring quality of soy sauce. Monosodium glutamate was developed to a commercial stage in Japan during the 1920’s under the name Ajinomoto and was first produced in the United States in 1934.” Five companies in the United States are now producing glutamate with an estimated annual capacity of 18 million pounds.

“The raw materials for glutamate in order of their importance are Steffen’s waste (Manning 1948), a by-product of beet sugar refining, wheat gluten, and corn gluten; soybean meal has been used extensively in the Orient. The so-called Steffen’s waste... is now the cheapest raw-material source for glutamic acid and accounts for an estimated 50% of production.” Address: USDA NRRL, Peoria, Illinois.

4074. *Chicago Daily Tribune*. 1959. Costly gospels. Jan. 21. p. 16.

• **Summary:** Sotheby’s of London held a notable auction in October, 1958. “This time some books and manuscripts collected by the late C.W. Dyson Perrins [of Lee {sic, Lea} & Perrins’ Worcestershire sauce] were for sale. Fifty lots brought almost a million dollars, said to be the largest amount ever realized in a single auction of literary property.”

Later a 12th century Latin gospel on vellum was sold for £39,000 (about \$109,200). Note: 1 British pound sterling is worth about \$2.80.

4075. *Life*. 1959. Most happy Chinese New Year from Chun King frozen foods (Ad). 54(4):11. Jan. 25. *

• **Summary:** A full-page color ad featuring Chun King frozen foods. Color photos show (from top to bottom): A baby wearing black silk top hat and a banner across his chest with the numbers “4661” on it. A white bowl heaped with fried rice. Caption: “(Who needs potatoes?).” A serving tray of chow mein. Caption: “If you don’t like chicken chow mein, we have shrimp chow mein too.” Four party tooters: “Go on a Chinese food toot tonight.”

“With the most scrumptious array of Chinese food to ever come out of a freezer, Chun King frozen is the great new way to enjoy authentic Chinese delicacies—flash-frozen to arrive in your kitchen as fresh as they leave our stoves. And that’s very fresh. So join the frozen Chun King celebration and have yourself a New Year’s Eve party.” In the lower right are chopsticks and firecrackers.

4076. Fukushima, Danji. 1959. Studies on soybean proteins. I. Water dispersibility of protein of defatted soybean flour as a criterion for degree of denaturation. *Bulletin of the Agricultural Chemical Society of Japan* 23(1):7-14. Jan. [19 ref. Eng]

• **Summary:** Denaturation was measured by a change in the susceptibility of the protein (in a water extract of the flour) to the action of protease from *Aspergillus oryzae* before and after heat treatment. “It was found that the decrease of water dispersibility did not always run parallel with denaturation.” Address: Noda Inst. for Scientific Research, Noda-Shi, Chiba-Ken, Japan.

4077. Fukushima, Danji. 1959. Studies on soybean proteins. II. A new method for quantitative determination of the degree of denaturation of protein in soybean flour. *Bulletin of the Agricultural Chemical Society of Japan* 23(1):15-21. Jan. [2 ref. Eng]

Address: Noda Inst. for Scientific Research, Noda-Shi, Chiba-Ken, Japan.

4078. Sakaguchi, Kenji. 1959. Studies on the activities of bacteria in soy sauce brewing. IV. Proteases, transaminases of *Pediococcus soyae* nov. sp. and its numerical transition in soy mash [shoyu moromi]. *Bulletin of the Agricultural Chemical Society of Japan* 23(1):22-28. Jan. [20 ref. Eng]

• **Summary:** Figure 2, a graph titled “Change of viable counts of lactic acid bacteria in soy mash,” shows the numbers of two bacteria (in counts per ml) during a 12-month fermentation period. The number of salt-sensitive lactic acid bacteria plummets from 150 million on day 1 to zero shortly before 2 months. The number of *Pediococcus soyae* rises rapidly for zero on day 1 to a peak of 150 million after 4 months, then decreases to about 10,000 after 9 months.

The pH decreases steadily from about 6.0 on day 1 to about 5.0 (more acidic) after 6 months. Address: Noda Inst. for Scientific Research [Noda City, Chiba-ken, Japan].

4079. Claiborne, Craig. 1959. Expert suggests dishes for Oriental celebration. *New York Times*. Feb. 5. p. 34.

• **Summary:** Enjoying a New Year’s feast is an old Chinese custom. This is the year 4,657 according to the ancient Chinese calendar. Calvin Lee has suggested the menu and recipes. The excellent book *Chinese Cooking for American Kitchens*, by Calvin Lee was recently published by Putnam. One of the four recipes given is Bean curd soup (Dow foo tong), whose ingredients include “1 brick bean curd (dow foo)” and “½ teaspoon monosodium glutamate (Ac’cent),” plus chicken gizzard, liver, and heart, pork, bok choy, and canned bamboo shoots. Two other recipes call for “soy sauce.”

4080. Mogi, Masatoshi. 1959. Shōyu jōzō ni okeru saikin no kenkyū [Recent studies on soy-sauce brewing]. *Hakko Kyokashii (J. of the Fermentation Association)* 17(2):78-86. Feb. [58 ref. Jap]

• **Summary:** A review with 58 references. Address: Noda Sangyo Kagaku Kenkyu-jo, Noshi.

4081. Nakano, Masahiro. 1959. Miso to shōyu [Miso and shoyu]. *Shokuhin Kogyo (Food Industry)*. Feb. p. 45-57. [19 ref. Jap]

• **Summary:** One graph shows miso production in Japanese factories from 1930 to 1955, and total and total supply in Japan from 1950-55. The difference between factory production and total supply would be accounted for by home production or imports. Factory production was about 590,000 tonnes (metric tons) from 1930 to 1940. It dropped during World War II, reaching a low of 200,000 tonnes in 1947. By 1955 it had recovered to about 500,000, but total supply was about 900,000 tonnes.

A second graph shows shoyu production in Japanese factories from 1930 to 1955 and total supply in Japan from 1950 to 1955. Factory production was about 1,040,000 tonnes from 1930 to 1940. It dropped during World War II, hitting a low of about 400,000 tons in 1947. By 1955 it had risen to about 1,180,000, surpassing the pre-war high of about 1,080,000. Total supply in 1955 was about 1,350,000. Thus in 1955 total miso supply was about 180% of factory

production, whereas total shoyu supply was about 14% more than factory production. Miso factory production never surpassed its pre-war high. After the war, 35% of the miso and 15% of the shoyu was homemade, but thereafter it has decreased steadily. The rest of this article is mostly about the nutritional benefits of miso and shoyu.

Miso and shoyu were developed because of our need for salt. In the West, salt was also important. The Latin word for salt is salsa [actually, sal], and this word is the origin of the word salary, the payment for workers. The word sauce also stemmed from sal. Address: Shokuryo Kenkyujo Hakko Shokuhin Bucho.

4082. Walley, Ersel. 1959. India a logical protein market: Soybean Council of America, Inc. *Soybean Digest*. Feb. p. 20.

• **Summary:** “From an address before the Delhi Rotary Club, New Delhi, India, Jan. 8. Mr. Walley of Fort Wayne, Indiana, chairman of the market development committee of the American Soybean Association, and Howard L. Roach, president of the Soybean Council of America, Inc., were in charge of the soybean exhibit at the U.S. Trade Fair in New Delhi, Dec. 10 to Jan. 10.

“The soybean crop, introduced into the United States from the Orient at the turn of the century, did not assume commercial importance until after World War I. The estimated production for 1958 was 574 million bushels, and increase of 70-fold in 30 years.

“As a pioneer grower it was my privilege to be identified with this very important and significant development in American agriculture.”

“In 1935 your own Mr. Gandhi said, ‘The soybean stands at the top of all known articles of diet...’

“My personal enthusiasm for the extended use of soybean products for direct human consumption began in Germany in 1948 when I saw the remarkable results secured from adding full fat soy flakes to the diet of emaciated men being returned as released war prisoners from the slave labor camps of Siberia. This interest in promoting the use of soybeans as an economic and valuable source of protein and fat for those whose diets are deficient in these essential elements has continued since that time.

“In the past 3 years it has been our privilege to cooperate with the Japanese soybean industries in promote the use of soybeans as food in Japan through increased use of such foods as tofu, miso, soya sauce and many other soya products more generally known. Hundreds of nutritionists have been trained to carry the story of soy proteins and fats to Japanese households.”

In Europe, the Soybean Council of America, Inc. is teaching processors how to blend “soybean oil with olive oil to produce an acceptable and cheaper cooking oil which will be available in larger quantities to more people.”

“Another important achievement in Europe is the

increased use of soy flour in bread. Adding 5% soy flour greatly increases bread's protein content and value.

"You may ask why we came to India. India is important. Here you have one-seventh of the world's population and one-fifth of the free people of the world. Your future holds great promise. As you industrialize we feel you can and will need to import additional proteins and fats for food." Address: American Soybean Assoc.

4083. Sakaguchi, Kenji. 1959. Studies on the activities of bacteria in soy sauce brewing. V. The effects of *Aspergillus sojae*, *Pediococcus soyae*, *Bacillus subtilis*, and *Saccharomyces rouxii* in purely cultured soy sauce brewing. *Bulletin of the Agricultural Chemical Society of Japan* 23(2):100-106. March. Bound in the back of Nippon Nogei Kagaku Kaishi (J. of the Agricultural Chemical Society of Japan). [20 ref. Eng]

• **Summary:** This research found that the "The soy koji mold *Aspergillus oryzae* was undoubtedly the most important organism for soy sauce brewing. By its biochemical actions during the koji making stage, and by its enzymatic actions in soy mash, the mother body of soy sauce was produced." Most of the proteinases in soy mash come from *A. oryzae* (p. 103).

The salt tolerant yeast *Saccharomyces rouxii*, the former name of which was *Zygosaccharomyces major*, grows well in soy mash if it sufficiently aerated. This yeast consumes reducing sugars and produces ethanol (ethyl alcohol). The mixed inoculation of *Pediococcus soyae* (a bacterium) with *Saccharomyces rouxii* (a yeast) gave the best aroma and flavor, most closely approximating those of normal soy sauce.

Note: This is the earliest document seen (June 1999) that mentions the yeast *Saccharomyces rouxii* in connection with soy sauce fermentation. Address: Noda Inst. for Scientific Research, Noda city, Chiba-ken, Japan.

4090. *Times (London)*. 1959. No U.S. transit for Chinese shrimps: Canadian lorries held up. Customs ruling. May 4. p. 10, col. 5.

• **Summary:** "From a correspondent in Ottawa, Canada." The United States Customs office prohibited Canadian lorries carrying Chinese goods (including "soya sauce and

herbs”) from Vancouver, B.C., from using U.S. roads due to American legislation concerning trade with China. There are no roads yet in British Columbia or Alberta suitable for shipping huge refrigerated vehicles.

4091. Motosaki, Shinichi; Ogasahara, T.; Ito, K.; Adachi, S. Assignors to Ajinomoto Company. 1959. [Iron-free amino acid solution for flavoring purposes]. *Japanese Patent* 4387. May 9. (Chem. Abst. 53:20618b). [Jap]*

• **Summary:** Soybean cake is hydrolyzed with hydrochloric acid. Then to 100 liters of the resulting amino acid solution, 3 kg magnesium chloride is added, brought to pH 12 with sodium hydroxide solution, kept overnight at room temperature, and filtered to give an iron-free product.

4092. **Product Name:** Amoy Soy Sauce.

Manufacturer's Name: Amoy Canning Corp. (Hong Kong) Ltd.

Manufacturer's Address: 51 Bonham Strand East, Hong Kong.

Date of Introduction: 1959. May.

Wt/Vol., Packaging, Price: Bottle.

New Product–Documentation: Francis Kalnay. 1959. *House Beautiful*. May. p. 174-75. “Soybean has all the answers.” A photo shows the bottle and label. Company name is given as Amoy Canning Corp. (Hong Kong) Ltd. No address is visible.

U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. “Southeast Asia as a market for U.S. soybeans and vegetable oils.” Lists 7 soybean sauce manufacturers in Hong Kong. Amoy Canning Factory (which also manufactures soybean cheese) is at 51 Bonham Strand East.

4093. Kalnay, Francis. 1959. Soybean has all the answers (or nearly all). *House Beautiful* 101:174-75, 207-12. May.

• **Summary:** The opening 2-page spread contains photos of many commercial soyfood products available in America at the time: Dr. Fearn’s Soy-O pancake flour (one with whole wheat and soya, and the other with just wheat and soya), Pure soya bean powder, and Soya bean granules, Wuest’s soya-protein bread, Wuest’s cookies, Wel-Pac kinako [roasted soy flour], Yamasa shoyu, Kikkoman shoyu, Oliver Tonkatsu Sauce (Tonkatsu are breaded pork cutlets), Hain soy oil (cold pressed), Amoy soy sauce, Prosperity soy sauce, Golden Sang Chan soy sauce, Madison Zoy-Koff, Hime aka-miso (Pacific Trading Co.), Hime yakidofu, Hime frozen bean curds, Delicious Edamame (Packed by Tokai Kanzume Co. Ltd., Nagoya, Japan), Quong Hop & Co. bean cake [tofu], Schiff soy lecithin, Oriental food shop black soybeans, Climax wheat and soy pure egg noodles (The Pfaffman Co., Cleveland, Ohio), and Prince Veta-Roni (Mezzani or Spaghetti; Prince Macaroni Co.).

The subtitle reads: It’s a choice gourmet food. It’s as nutritious as vitamin pills. It comes in a dozen forms and

makes a hundred dishes.

The author uses soy-related words in a very modern way: “Have you ever noticed the way people who know food pronounce the simple word ‘soy’? Their facial expression changes instantly, and their tone of voice turns positively lyric. There are two serious reasons for their extraordinary respect for a bean so little and so innocent. The soybean is enormously rich in protein. This wealth of protein is apparent in both quality and quantity... And because soy oil is high in unsaturated fatty acids, it fits well into today’s popular low-cholesterol diets.

“In our country soy is relatively new... Soy is the most versatile legume imaginable... The glittering star in soy’s troupe of players is soy sauce (also called soya and shoyu)... The soy food industry is still in its infancy in the U.S. Yet the variety of soy products available is impressive.”

Note 1. This is the earliest publication seen (April 2001) that mentions Quong Hop & Co. in connection with tofu.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term “soya-protein” (or “soya-proteins”).

4094. **Product Name:** [Oliver Breaded Pork Cutlet Sauce].

Foreign Name: Oribaa Tonkatsu Soosu.

Manufacturer's Name: Oliver. Made in Japan.

Manufacturer's Address: Japan.

Date of Introduction: 1959. May.

Wt/Vol., Packaging, Price: Bottle.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Francis Kalnay. 1959. *House Beautiful*. May. p. 174-75. “Soybean has all the answers.” Photo of the bottle and label. The bottle is wrapped in paper.

4095. Tanaka, Shigetaka; Ueda, Ryuzo. 1959. [Studies on the inorganic components in shoyu. III. On the phosphorus and potassium contents]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 37(5):203-07. May English-language summary on p. 20 of this issue. [15 ref. Jap; eng] Address: Osaka Univ., Japan.

4096. Manners, Marian. 1959. What shall I cook? Menu ideas. *Los Angeles Times*. June 11. p. A5.

• **Summary:** Wednesday’s dinner has a recipe for Mandarin meat balls, that calls for “¼ cup Japanese soy sauce.”

Note: Suddenly, starting at about this time, the term “Japanese soy sauce” starts to be used in place of the term “soy sauce”—especially in the *Los Angeles Times*. Is this a coincidence or a commercial “pay for coverage” deal? We suspect the latter—a deal between Kikkoman and the Times. Consider the following timeline:

1957 June—Kikkoman International Inc. (KII) is established in San Francisco, California—Kikkoman’s first overseas office in the United States or the Western World.

1958—The first KII branch is established in Los Angeles.

1960—The second KII branch is established in New York.

4097. Manners, Marian. 1959. Guests cook their own fare at Japanese table. *Los Angeles Times*. June 18. p. A8.

• **Summary:** A dinner party was given by Mr. and Mrs. George Nakatsuka of Pasadena, California; he is vice-president of the Japan Food Corp. Co-hosts included three West Coast executives with the firm and Kikkoman International, Inc.

“An honored guest was Gunzo Sugihara [age 76], board chairman with the Pacific Trading Co., which he founded in San Francisco in 1906, and a director of the Kikkoman firm.” In 1899 he made his first journey to the USA. Each guest cooked his own food using an *okariba yaki*. Imported Japanese soy sauce, made from an ancient formula, requires 18 months to process, age and filter, so as to attain its “smooth flavor, deep, rich color, and freedom from sedimentation.” The Kikkoman firm imports soybeans and wheat from the USA for the sauce it makes in Japan, and “only 1% of the 45 million gallons made annually is exported; the major portion is used by the Japanese.” A recipe for Barbecue sauce, featuring “1 cup imported Japanese soy sauce” is given. A photo shows Marian Manners and Gunzo Sugihara—both having fun. Address: Times home economics director.

4098. Manners, Marian. 1959. What shall I cook? Menu ideas. *Los Angeles Times*. June 18. p. A9.

• **Summary:** Tomorrow’s dinner includes “cucumbers in vinegar soy sauce (use Japanese soy sauce).”

4099. Claiborne, Craig. 1959. Food: Oriental fare. Another Chinese restaurant opens—Menu lists cellophane-wrapped fowl. *New York Times*. June 19. p. 16.

• **Summary:** This is a review of the Chinese restaurant Esther Eng (1085 Second Ave., near 57th St., Manhattan, New York City). One appetizer is listed on the menu “as cellophane wrapped chicken. To prepare it, small bits of chicken are marinated in a mixture of hoisin sauce and peanut butter, wrapped in cellophane and deep-fried. Hoisin sauce is an inscrutable mixture of spices and plums.”

Note: This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest that uses the term “hoisin sauce,” which is typically sold in bottles or cans and has soybeans as its main ingredient. The new term appears in 805 documents between 1959 and the present, including this three in 1939, 17 in the 1960s, etc.

4100. Manners, Marian. 1959. What shall I cook? Menu ideas. *Los Angeles Times*. June 25. p. A8.

• **Summary:** Tuesday’s dinner includes “mixed Chinese vegetables with imported Japanese soy sauce,...

4101. Davis, R.N. 1959. The soyabean deserves to be grown. *Indian Farming* 9(3):35, 37, 38. June. Series 2.

• **Summary:** Contents: Introduction. Food value. Many uses (soyabean flour, milk, and sauce). Dependable crop. Yeotmal trials. Nine [maturity] groups. Soyabean vs. groundnut.

Trials with 28 varieties of soyabeans were conducted at Yeotmal, Vidarbha, in eastern Maharashtra state in central India, from 1953 to 1958, under the direction of Dr. Jackson Cartter of the University of Illinois. Of the 28 varieties, 23 were from the USA and 5 were from India. He also sent soyabean inoculum.

A table shows the results of the trials. Five columns show variety name, number of years raised, seed spacing in rows (in inches), percentage of germination, average yield per acre in maunds (1 maund = 37.3242 kg). The best yields by far came from Mamotan (24.19), followed by Acadian (19.31) Improved Pelican (16.32), and Biloxi (16.50).

4102. Williams, Robert R.; McGanity, William J.; Combs, Gerald F.; Kertesz, Z.I. 1959. A nutrition survey of the armed forces of the Republic of Korea. *J. of Nutrition* 68(Supplement 1):1-80. June. See p. 12-13. [42 ref]

• **Summary:** An endless variety of soups (which are thick like U.S. stews) are served, mostly in winter; they usually contain some soy products. Seaweed is a delicacy, used in cooking or served with soy sauce. A recent survey based on food disappearance, conducted by the USDA Foreign Agricultural Service, calculated average civilian calorie intake at about 2,058 per day, of which 81% comes from cereals, 5% from meat, fish, eggs, and milk, 4% from oilseeds, oils and fats, 4% from white and sweet potatoes, 2% from fruits and nuts, 1.6% from vegetables and seaweed, and 1% from sugar (p. 8).

The typical formula for Korean Army soup, in grams per man for one meal, is: Cabbage 70, soybean curd [tofu] 30, soybean mash [probably soybean paste, doen jang] 30, large white radishes [*daikon*, *Raphanus sativus*] 30, red pepper mash [kochu jang] 10, salt 10, onion 3, melchi (small dried fish) 2, and red pepper powder 1 (p. 9).

The section titled “Soybeans and soybean products” (p. 12-13) states: “Soybean products are extensively used in the Korean diet and by the ROK Armed Forces.” Soybean curd (Japanese: tofu), which is precipitated with calcium or magnesium salts, is used almost daily in making thick soups. It is also “fried in deep fat and used in a composite ROK Army food called ‘seasoned vegetable and bean curd’ containing small fish (12%), soy sauce (23%), bean curd (25%), seaweed (16%), dry radish (14%), and red pepper, sugar, and cottonseed oil. This latter product was observed in one ROK Army mess only.”

Soybean sprouts are a favorite and very nutritious civilian food in Korea, but their “use in troop feeding is limited, presumably because of the low germination of the

soybeans available at the time of our visit.”

Fermented soybean sauce is a widely used and nutritious seasoning.

“Seasoned soybeans are a delicacy much liked by Koreans and obtained by boiling soybeans in sweetened soybean sauce. The weight proportions used in the preparation are said to be cooked and roasted soybeans 70%, soybean sauce 25%, and sugar 5%.

“Soybean mash [*doen jang*] and pepper mash [*kochu jang*] are fermented foods popular in this part of East Asia. Barley is cooked, allowed to cool and then treated at about 90°F for one day with a commercially prepared enzyme made from *Aspergillus oryzae*. [i.e., barley koji is made]. The barley is then milled together with cooked soybeans and salt, and fermented in concrete tanks for about 3 months. The finished paste-like product is rich in amino acids and protein and is extensively used directly and in cooking. Pepper mash is a similar preparation which contains in addition 10% powdered red pepper.” Address: National Institutes of Health, Bethesda, Maryland.

4103. Manners, Marian. 1959. Backyard barbecue: New glory for July 4 picnic. *Los Angeles Times*. July 2. p. A7.

• **Summary:** Contains a recipe for Spicy barbecued spareribs, which calls for “1 tablespoon Japanese soy sauce.”

4104. Manners, Marian. 1959. What shall I cook? Menu ideas. *Los Angeles Times*. July 9. p. A5.

• **Summary:** Monday’s dinner includes “Pepper steak (use round steak, green pepper strips and Japanese soy sauce).”

4105. Manners, Marian. 1959. What shall I cook? Menu ideas. *Los Angeles Times*. July 16. p. A9.

• **Summary:** Sunday’s dinner includes “barbecued turkey breast teriyaki style (use Japanese soy sauce, white wine, ginger, garlic).”

4106. Onishi, Hiroshi. 1959. Studies on osmophilic yeasts. IV. Changes in permeability of cell membranes of the osmophilic yeasts and the maintenance of their viability in the saline medium. *Bulletin of the Agricultural Chemical Society of Japan* 23(4):332-39. July. [10 ref. Eng]

• **Summary:** “A striking increase in the permeability of cell membranes of *Saccharomyces rouxii*, a typical salt-tolerant yeast, occurred when they were cultivated in the saline medium.” Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4107. **Product Name:** Sona Soy Sauce.

Manufacturer’s Name: Sona Food Products Co.

Manufacturer’s Address: Los Alamitos, California.

Date of Introduction: 1959. July.

Ingredients: Hydrolyzed vegetable protein, water, salt, soy bean, caramel color.

Wt/Vol., Packaging, Price: 8 oz (pint) bottle for \$0.49 (1959, Los Angeles).

New Product–Documentation: Ad (full page) in *Let’s Live*. 1959. July. p. 17. “Free offer to introduce Sona Soy Sauce.” “Special amino enriched formula. All vegetable ingredients. High in protein values. Contains 13 life-sustaining amino acids. Excellent for meatless dishes. Use freely in broths on meats. Full strength and flavor. Adds zest to your food. Now! Free. Sona Soy Sauce. With your purchase of a pint size of Sona Saf-Flower [Safflower] Seed Oil.” Two photos show 1-pint bottles of both the soy sauce and the saf-flower seed oil.

4108. Claiborne, Craig. 1959. Fit for a Kentucky colonel. *New York Times*. Aug. 2. p. SM35.

• **Summary:** Bourbon is so named because it was first distilled from corn in Bourbon County, Kentucky. Contains five recipes that call for Bourbon as an ingredient. One of the recipes, titled “Lamb kebabs hoisin” calls for “½ cup hoisin sauce,... 1 teaspoon soy sauce,” etc. The two sauces are used in a marinade for the meat.

4109. Davies, Lawrence E. 1959. Women’s world: Hawaii. Mainlander shopping in Honolulu market likely to think she is on the mainland. *New York Times*. Aug. 13. p. 31.

• **Summary:** Hawaii’s population of 645,000 is composed racially of 32% Japanese (persons of Japanese ancestry), 30% Caucasian, 17% Hawaiian or part Hawaiian, 11% Filipino, 6% Chinese, and 4% other races.

The shelves of Honolulu food markets are stocked with a mixture of mainland, East Asian, and local Hawaiian foods, including (from Japan) seaweed, jars of pickled gingerroot, “prepared seaweed seasoned with soy sauce and sugar,” and “broiled eels canned with sugar, soy sauce, and sweet sake.”

Note: The term “sweet sake” probably refers to *mirin*, but it might possibly refer to *amazake*.

4110. Hayashi, Shizuka. 1959. Japanese users react to U.S. beans. *Soybean Digest*. Aug. p. 34.

• **Summary:** “The fact that soybean in Japan are used 100% as food should by now be well realized by those in the soybean industry as well as by the growers. It has been repeatedly emphasized that soybean trade between the United States and Japan is to be based on the complete understanding of this fact.”

One of the first projects of JASI “was to find out the causes of the unpopularity of U.S. soybeans among the Japanese users, especially the manufacturers of soybean products.” The major complaints concern excessive “foreign material, broken beans, irregularity of sizes, and mixture of different varieties received. All these problems have been time and again called to the attention of interested parties in the United States.” Considerable improvement has been made but there is still work to do. “The writer believes in the

very near future specific varieties can be chosen for different food manufacturers and business will be done on the basis of [those] specific varieties.”

A list gives the specifications for soybeans desired by Japanese oil processors (6 specs), miso manufacturers (3 specs), shoyu makers (3), tofu makers (2), frozen tofu makers (1), kinako makers (3), and natto makers (3). For example, for miso: (1) Soybeans with white hilum with rich protein content and of big size are preferred. (2) Soybeans should be stored separately by varieties [identity preserved]. (3) Foreign material, especially seeds of other plants, sand and stones should be eliminated.

And for tofu: (1) Soybeans should be rich in protein content with thin seedcoat. (2) Soybeans should be free from foreign material, especially that of poisonous seeds of other plants.

A photo shows Shizuka Hayashi tasting miso made from the U.S. soybean varieties Dorman, Mamloxi, and Jackson at the Inamari miso factory in Shizuoka city. Arthur Rollefson, U.S. assistant agricultural attache, is also shown.

Note: This is the earliest document seen (Feb. 2010) that introduces the concept of “identity preserved” (“Soybeans should be stored separately by varieties”). Address: Japanese-American Soybean Inst., Tokyo.

4111. Nakano, Masahiro. 1959. Traditional methods of food processing. Paper presented at Regional Seminar on Food Technology for Asia and the Far East. 15 p. Held 1-8 Aug. 1959 at Mysore, India. [Eng]

• **Summary:** Contents: General. Soybean foods: Miso, syoyu (soy sauce), aspects on the miso and syoyu, natto, tofu, koridofu. Technological methods of food processing: Koji, miso, syoyu [shoyu] (soy sauce), natto, tofu. Conclusion.

Note: This paper was sent as a gift, with note and autograph, to Dr. A.K. Smith of the Northern Regional Research Lab., Peoria, Illinois. Address: Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan.

4112. Sapin, P. 1959. Le soja dans le monde [The soybean in various countries of the world]. *Bulletin Agricole du Congo Belge et du Ruanda-Urundi* 50(4):897-948. Aug. [39 ref. Fre; dut]

• **Summary:** This articles focus on soya at Yangambi in the Belgian Congo. Content: Introduction. Climatic adaptation: Comparison of the climates in Harbin (central Manchuria) and Yangambi (near the equator), photoperiodic and thermal characteristics of soybeans, comparative study of the behavior of soya at Yangambi and its main zones of cultivation, eco-climatic chart of soya, classification of soybeans (*des sojas*) into fundamental climatic types and directives for the realization of their introduction to Yangambi. Selection: Classification of the soybean varieties, genetics, and selection. The cultivation of soya. Characteristics of the seed and its utilization: Composition of

the seed, Oriental preparations based on soya (soy sprouts, soymilk, tofu, natto, Hamanatto, yuba, miso, soy sauce or shoyu), soy oil and by-products, soybean cake, use of soya in the West. A glance at soybean production. The situation in the Belgian Congo.

The author identified a number of soybean varieties adapted to different ecological zones in the tropics, which helped soybeans spread to tropical countries, especially in Africa. Address: Assistant à la Division des Plantes Vivrières de l'INÉAC, à Yangambi [Belgian Congo].

4113. Onishi, Hiroshi. 1959. Studies on osmophilic yeasts. V. Factors affecting growth of soy yeasts and others in the environment of a high concentration of sodium chloride. (II). *Bulletin of the Agricultural Chemical Society of Japan* 23(5):351-58. Sept. [14 ref. Eng]

• **Summary:** It was found that many osmophilic yeasts were able to grow in a saline medium at a high temperature such as 40°C, whereas in a “NaCl-free medium no growth occurred at the same temperature.” Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4114. Onishi, Hiroshi. 1959. Studies on osmophilic yeasts. VI. Glycerol production by the salt-tolerant yeast in the medium with high concentrations of sodium chloride. *Bulletin of the Agricultural Chemical Society of Japan* 23(5):359-63. Sept. [15 ref. Eng]

• **Summary:** “*Saccharomyces rouxii*, which is a typical salt-tolerant yeast and plays an important sole in ‘soy-brewing’ [soy sauce fermentation], was found to ferment glucose giving high yields of glycerol in a high saline medium under aerobic conditions. However, only a small amount of glycerol was produced in the ordinary medium.” Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4115. Claiborne, Craig. 1959. Use of native spices adds interest to unusual cuisine of Balinese: Variations of native dishes possible. Rare ingredients are available here. *New York Times*. Oct. 8. p. 46.

• **Summary:** “One of the most fascinating of the many Far Eastern restaurants here is A Bit of Bali, 242 East Fifty-eighth Street.” Describes a visit with four recipes. The recipe for Sate kambing Madura (Skewered broiled lamb) calls for ½ cup soy sauce. A note at the bottom of this recipe states: “Indonesian soy sauce is available at A Bit of Bali.”

4116. Manners, Marian. 1959. Teahouse perfect setting for serving Japanese meals. *Los Angeles Times*. Oct. 22. p. A1.

• **Summary:** A stylish, real Japanese Teahouse is one of the main attractions at the 10th annual Southern California Decorators Show.

The section titled “Soy sauce tops” notes that Japan exports to the United States nearly 100 different kinds of

canned foods. The most popular among these is “Japanese soy sauce.”

Recipes are given for: Shrimp and vegetables (with soy sauce). Kyuri aka-nasu sarada goma-shi (Cucumber tomato salad with sesame seeds; with “¼ cake fried bean curd”). Tamago-yaki (Japanese egg roll, with soy sauce). Chawan mushi (Steamed chicken and egg custard; with soy sauce).

A photo shows the approach to and exterior of the Teahouse. Address: Times Home Economics Director.

4117. *New York Times*. 1959. Food news: No tipping allowed in Red China. Oct. 26. p. 32.

• **Summary:** Mr. Gerald Clark, a Canadian, and author, and a correspondent for the Montreal Star, has just returned from China. He said that his favorite dish was Peking duck, a specialty of that city.

“‘It’s really something,’ he said. The ducks are specially fed and spend the latter part of their short lives tethered. It seems cruel, but the result is an unusually tender and succulent dish. After roasting, the duck is carved into very thin slices covered with wonderfully crisp skin. The pieces are wrapped pancake fashion in a ‘doily’ made of wheat flour, and dipped in hoisin sauce and scallions.”

4118. Kikkoman International Inc. 1959. Kikkoman soy sauce: Turkey more tantalizing than you’ve ever tasted! (Ad). *Los Angeles Times*. Nov. 25. p. A2.

• **Summary:** A large black and white ad (see next page). “Simply baste with a marinade of: 1 cup Kikkoman soy sauce*, ½ cup sherry wine, 1 tbsp. [tablespoon] sugar (brown preferred), ½ tsp. [teaspoon] ground pepper. Gives that beautiful golden-brown color! Marvelous for left-overs, too! * = Recommended by Gene Beals, manager of the California Turkey Promotion Advisory Board.”

Photos show: (1) A turkey with tail feathers fanned. (2) A bottle of Kikkoman soy sauce. “All-purpose seasoning. Since 1630. Made by Noda Shoyu Co., Ltd. Made in Japan.” (3) A small portrait photo of Gene Beals wearing a white chef’s top hat. (4) The Kikkoman logo with the stylized character meaning ten thousand inside of a hexagon, the symbol for a turtle.

Note: This is the earliest ad seen (July 2011) for Kikkoman soy sauce in a major American newspaper.

4119. Onishi, Hiroshi; Saito, Narimasa. 1959. [Studies on the polyalcohols in soy sauce]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 37(11):457-61. English-language summary on p. 43 of this issue. [30 ref. Jap; eng] Address: Noda Inst. for Scientific Research, Japan.

4120. Kamada, Hidemoto; Sakurai, Yoshito. 1959. Daizu seihin no chakushoku ni kansuru kenkyū. IV. [Browning reaction of soybean products. IV. Relationship between amino-carbonyl reaction and the color formation of miso

or shoyu (Abstract)]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 14. p. 126. Dec. [1 ref. Jap]

• **Summary:** Reprinted from *Nosan Kako Gijutsu Kenkyu Kaishi (J. for the Utilization of Agricultural Products)* 6(3):104+ (1958). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4121. Nakano, Masahiro. 1959. FAO Ajia chiiki shokuhin kakō kaigi ni shusseki shite [Attending the FAO Asian food processing conference]. *Nosan Kakko Gijutsu Kenkyu Kaishi (J. for the Utilization of Agricultural Products)* 6(6):292-302. Dec. [Jap]

• **Summary:** Discusses Korean meju and soy sauce, Indonesian tempeh (tenpe), ontyom (onchom) and pongrek [sic, bongkrek], and Vietnamese nuoc-mam. Address: National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4122. *Soybean Digest*. 1959. Soybean recipe book issued by Institute. Dec. p. 25.

• **Summary:** The Japanese-American Soybean Institute (JASI) recently issued a “Book of Recipes Using Soybeans.” Edited by the Japan Nutrition Association (JNA), this booklet includes 108 recipes which have been introduced by the JNA at 2,200 “short courses in dietary improvement” held last year at the 800 Japanese health centers. Attendance at these courses (which were partly sponsored by JASI) was 220,000 people! The booklet, which is available at the health centers, contains articles on frozen and bagged tofu, shoyu, miso, natto, and “golden ajinomoto” (a seasoning made by the Ajinomoto Company).

4123. Hahn, Y.S.; Park, B.D. 1959. [Studies on the manufacture of soy sauce. III. On the genus *Rhizopus* and *Mucor* in Korean wine kokja]. *Report of the National Industrial Research Institute (Seoul, Korea)* 9:147-61. [Kor]*

• **Summary:** Fourteen kinds of genus *Rhizopus* (G.R.) and 16 from the genus *Mucor* (G.M.) were isolated from Korean wine Kokja; their properties were examined morphologically and physiologically.

1. Extinctive temperature: The G.R. was 65°C to 75°C. The G.M. was 65°C to 70°C.

2. Propagative optimum pH. The G.R. was 4.0 to 6.6. The G.M. was 3.5 to 6.6. Address: National Industrial Research Institute, Seoul, Korea.

4124. **Product Name:** [Tamari (but actually shoyu)].

Foreign Name: Tamari.

Manufacturer’s Name: Lima Foods.

Manufacturer’s Address: Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.

Date of Introduction: 1959.

New Product–Documentation: Letter from Pierre Gevaert.

TURKEY
more
tantalizing
than you've
ever
tasted!

*Simply baste with
marinade of:*

- 1 cup Kikkoman soy sauce *
- 1/2 cup sherry wine
- 1-tbsp. sugar (brown preferred)
- 1/2 tsp. ground pepper

*Gives that beautiful golden-brown color!
Marvelous for left-overs, too!*

*Recommended by Gene Beals, manager of
the California Turkey Promotion Advisory Board.

KIKKOMAN SOY SAUCE

Available at leading grocers' everywhere

1981. Nov. 19. Note: This appears to be the first commercial soy sauce named “tamari” sold in the Western world.

4125. Park, T.W.; Whang, K.S.; Lim, S.U.; et al. 1959. [Studies on the soybean moromi (mash). III. Studies on the variation of the free amino acids content in soybean moromi during its fermentation]. *Kwayon Huibo (Bulletin of the Scientific Research Institute, Korea)* 4(1):31-34. [Kor]*

4126. Bush, Lewis William. 1959. *Land of the dragonfly*. London: Robert Hale. 224 p. Illust. Index. 23 cm.

• **Summary:** Chapter 20, titled “Mainly About Food,” notes (p. 162-63) that sukiyaki is “cooked with soy, water, sugar, vegetables, bean curd...” And sashimi is “dipped in soy...”

“Miso is indispensable in Japanese cookery and is a paste made from beans and fermented rice, used for soups—particularly at breakfast, for preserving, and also as a condiment.”

Buddhism was well established in China and Korea by the fourth century and was introduced into Japan between A.D. 500 and 600. Note: It may very well be that the cultivation of soybeans and their use in food, including fermented foods, were then introduced into Japan.

4127. Cai Tinglan. 1959. *Hainan zazhu* [Miscellaneous notes from the southern seas]. Taipei, Taiwan: Taiwan Yinhang Yinshuaso. See p. 55. [Chi]

• **Summary:** Cai Tinglan was director of an academy on the island of Penghu in the Taiwan Straits. In 1835, while returning to the Island from the port of Xiamen in Fujian province, China, he was blown off course by a typhoon. After landing in central Vietnam, he traveled overland to China, recording everything of interest to him along the way.

Commenting on what was lacking in Vietnamese culinary habits, he stated: “They do not have soy sauce. Instead they use ‘fish sauce,’ which has a real stench to it.”

Note: Cited in “Batavia Through the Eyes of Vietnamese Envoys,” at www.hawaii.edu.

4128. Egami, Tomi. 1959. *Typical Japanese cooking*. 1st ed. Translated by V.A. McKenzie Skillman. Tokyo: Shibata Publishing Co. Ltd. Exclusive distributors: Japan Publications Trading Co., Ltd (Tokyo). [viii] + 146 p. Illust. (incl. color photos by Yoshikatsu Saeki). Index. 27 cm.

• **Summary:** Foods marked with an asterisk (*) are exported from Japan to the USA. Many recipes include “soy sauce” and monosodium glutamate (Ajinomoto). Soy related recipes include: Aburage * (“fried soy bean curd”—4 recipes). Broiled soy bean curd [*yakidofu*] (3 recipes). Suki-yaki, Yasainabe, Osechi). Chu-miso paste * (“made from soy beans, salt and rice malt [koji], seasoning for miso soup”—2 recipes). Ganmodoki * (“fried soy bean curd and vegetables”—Nikomi oden). Nama-age (“half fried soy bean curd”—Boiled vegetables).

Note: This is the earliest English-language document seen (May 2012) that contains the term “fried soy bean curd” or the term “half fried soy bean curd.”

Okara (“soy bean curd leftovers”—Yoshino sushi). Red miso paste * (“made from soy beans, salt and rice malt [koji], seasoning for miso soup”—2 recipes). Soy bean (3 recipes). Soy bean curd * (14 recipes, incl. Gizeidofu / Gisei-dofu, p. 39). Soy bean powder * [kinako] (2 recipes; Kinakomochi, Kushi dango). Soy sauce (“Kikkoman”). White miso paste (“made from soy bean, salt and rice malt [koji], seasoning for miso soup”—2 recipes). Worcestershire sauce (Skewer nibblers).

Other interesting recipes include: Amazake. Azuki-sarashian (“red bean powder”—7 recipes). Black sesame seed (in Sekihan). Mochi rice. Red bean [azuki] (Sekihan). Rice cake (“made of mochi rice”). Seaweeds (kanten / agar-agar, kombu / konbu, nori / green laver & purple laver, wakame). White sesame seed. Yamaimo (“Japanese yam”). Tomi Egami was born in 1899. Address: [Japan].

4129. Inoue, Takashi; Tsuge, Yoshimi. 1959. [Studies on tamari. IV. On the precipitate separated from tamari by heating]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 37(4):152-55. English-language summary on p. 15 of this issue. [10 ref. Jap; eng]

Address: Nagoya Miso and Tamari Co., Ltd., Japan.

4130. Keys, Ancel; Keys, Margaret. 1959. *Eat well and stay well*. Garden City, New York: Doubleday. 359 p. Foreword by Dr. Paul Dudley White. 2nd ed. 1963. [80* ref]

• **Summary:** Note: In 1936, Ancel Keys became a professor at the University of Minnesota, where he established the Laboratory of Physiological Hygiene. Keys directed the laboratory from 1939 until his retirement in 1975. After that he moved to Pioppi, a small village of fishermen in southern Italy where he lived until 2003 (for 28 years) studying food habits of the locals, leading to the foundation of health evidence for the Mediterranean Diet.

Ancel Keys died on 20 Nov. 2004, two months before his 101st birthday. Address: Univ. of Minnesota.

4131. Kirkbride, Ronald. 1959. *Tamiko*. London: Cassell & Co. Ltd. 197 p. See Chap. 7, p. 54. 21 cm.

• **Summary:** A novel about war-torn Japan shortly after World War II by an author who knows the country well. Ivan takes his friends to Donzoko’s, a high-class, expensive Geisha house in Tokyo. “They had hors d’oeuvres of raw wild vegetables, sashimi, thin slices of raw tuna and sea bream with soy sauce, fried honey-bees and salted thrush hearts served with turtle-dove soup... The food was endless.”

4132. La Choy Food Products. 1959. *The art and secrets of Chinese cookery*. Archbold, Ohio: La Choy Food Products. 31 p. Illust. (some color). 11 x 16 cm. *

4133. Lee, Calvin. 1959. Chinese cooking for American kitchens. New York, NY: G.P. Putnam's Sons. 190 p. Illust. by Mabel Wong Lilienstein. Index. 22 cm.

• **Summary:** An excellent book, says Craig Claiborne. The many styles and forms of Chinese cooking “can be grouped into five schools: Canton, Fukien, Honan, Shantung [incl. Peking], and Szechuan. Cantonese cooking is the most popular, even in China itself.” This is a Cantonese cookbook. “Fukien probably produces the best soy sauce in China” (p. 20). Canton is known for its steamed bass with black bean sauce (*Jing yu*) (p. 22).

Soy related recipes: Steak à la Lee (with “2 tablespoons Worcestershire sauce,” p. 33). Pork chops à la Lee (with “2 tablespoons Worcestershire sauce,” p. 35).

“Perhaps the most interesting of the condiments used in authentic Chinese cooking is the lowly soy bean.” It is a rich source of oil. “The pulp of the bean is ground to make a curd extremely high in protein content. These bean curds (*dow foo*) look somewhat like little rectangles of white custard and can be boiled, stir-fried, or baked. Some of the fresh bean curd is permitted to ferment, making a richly aromatic and tangy cheese. Commonly called Chinese cheese, *foo yu* [fermented tofu] is sold in bottles and does not require any cooking.” “*Dow see* [fermented black soybeans] are small fermented [soy] beans which are used commonly for seafoods such as strong-smelling fish, shrimps or lobsters. They have a delightful spicy flavor and should be rinsed in water and crushed before using” (p. 46-47).

Vegetables: “Bean sprouts (*ngar choy*). Sold fresh by the pound. Also sold in supermarkets canned.” Used in many recipes (p. 50). Note 1. It is unclear what type of bean is used to make these sprouts.

“Black beans (*dow see*).” Sold by the ounce. Wash and soak for 10 minutes before using. Recipes: Lobster Cantonese (*Chow lung har*). Beef with green peppers and tomatoes (*Fon care lot tzu ngow*). Pork with tomatoes (*Fon care gee*) (p. 50).

Seasonings and sauces: Bean curds (*dow foo*). Sold fresh or canned in Chinese or Japanese groceries. Recipes: Beef with bean curds (*Dow food ngow*). Steamed fish with bean curds (*Dow foo jung yu*). Bean curd soup (*Dow foo tong*) (p. 52). Brown bean sauce (*mien see*). Sold canned in groceries (p. 52). Haisien sauce [*Hoisin sauce*]. Sold canned or bottled in Chinese groceries. Used chiefly as a condiment.

Fried fish with bean curds (*Dow foo jeen yu*, p. 106). Steamed fish with bean curds (*Dow foo jing yu*, p. 107). Soy sauce cooked chicken (*See yow gai*, p. 116). Beef with bean curds (*Dow foo ngow*, p. 135). Roast pork with bean curds (*Dow foo char shu*, p. 145).

Note 1. Most recipes call for ½ to 2 teaspoons “monosodium glutamate.”

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “See yow” to refer to a

type of Cantonese soy sauce. Address: [New York City].

4134. National Canners Association. 1959. Canners directory. Washington, DC: National Canners Association. 125 p. See p. 47. Commodity index. 24 cm.

• **Summary:** Under “Indiana” (p. 47): “Oriental Show-You Company, Columbia City, Products—Bean sprouts [*mung*], chow-mein noodles, assorted vegetables, mixed vegetables, bamboo shoots, water chestnuts, meatless chop-suey...”

4135. Nippon Shoyu Kyokai. 1959. Nippon shōyu gyōkai-shi [History of the Japanese shoyu industry]. Tokyo: Nippon Shoyu Kyokai. 613 p. [Jap]

• **Summary:** Contains good histories of Kikkoman, Yamasa, Choshi/Choshu, Marukin. Address: Tokyo.

4136. Obata, Yataro. 1959. Miei [Miei (Leaflet)]. Tokyo: Aji-no-moto Co. Ltd. 2 p. [Jap; eng+]

• **Summary:** “It was no other than shoyu which was shipped exclusively by Dutch merchants from Japan to Europe, where it was called the essence or flower of the cuisine at the palace of Louis XIV [in France]. These Dutchmen exported the shoyu in bottles or earthen jars, sealed with pine resin and sterilized [pasteurized] by boiling in hot water. From Japan, they sailed southwards into the Indian Ocean, then northwards into the Atlantic Ocean, finally arriving in Europe with the shoyu. It as very expensive but the quality was good. At parties held by the Bourbon kings of France [incl. Louis XIV and Louis XV], shoyu was loved. Shoyu was praised by Thunberg, who came to Japan in 1774 and later became head of Uppsala University in Sweden. The reason that this well-like shoyu was not served in the first-class dining rooms of European boats later in the Meiji period (1868-1912) was that the flavor was no longer as good, primarily because the moromi mash was no longer fermented for three years, but also because the second pressing (*niban shibori*) with water.

Note 1. This is the earliest document seen (April 2012) that mentions the use of shoyu by Louis XIV [who reigned from 1643 to 1715]. But the author is wrong! In a June 1983 discussion with William Shurtleff in Japan, Obata admitted that this is his speculation with no documentary evidence whatsoever to support it.

Note 2. Miei is a type of HVP made by the Ajinomoto Co. Address: Ajinomoto Co., Ltd.

4137. Prescott, Samuel Cate; Dunn, Cecil Gordon. ed. 1959. Industrial microbiology. 3rd ed. Revised by Cecil Gordon Dunn. New York, NY: McGraw-Hill Book Co., Inc. 942 p. Illust. Index. 23 cm.

• **Summary:** Chap. 41, titled “Mold enzyme preparations: Uses and products” (p. 666-83) discusses: Mold enzymes: Submerged culture method, continuous tray method for producing mold enzymes, rotating drum method for

producing mold enzymes (described by Underkofler et al. 1947), glucose oxidase, uses of mold enzymes (proteases, fungal enzymes). Some mold products: Use in Japan and China, soy sauce (koji from *Aspergillus flavus-oryzae*, Chinese soy sauce, preparation of the “kojies,” chemical soy sauce), soy sauce yeasts, tamari, miso, koji. The section on patents (p. 682) cites 15 patents by J. Takamine yet (amazingly) Takamine’s name does not appear in the extensive index at the end of the book—though he is considered by some to be the father of industrial microbiology.

The amylo process and a modified amylo process are discussed on pages 864-66. The amylo process is used primarily for converting starch to sugar by the use of selected molds (*Mucor*, *Rhizopus*), some of which have the ability to produce small quantities of alcohol from sugar.

Soy is also discussed on the following pages: Soybean oil and meal are used in the production of vitamin B-12 by *Streptomyces olivaceus* (p. 485-86). In the production of pentonic acids, several drops of soybean oil were used as an antifoam agent (p. 508). In the production of sodium gluconate, small amounts of soybean oil could be used as an antifoam agent, though they decreased the sugar utilization to an impractical value. (p. 594). L-Glutamic acid can be produced in a number of ways. One is by the hydrolysis of wheat gluten, soybean cake, or other protein-rich food material (p. 713-16). The commercial process now being used in Japan employs sweet potatoes as the chief raw material in a one-stage fermentation process with a strain of *Micrococcus* (p. 712-13).

In the chapter on Saccharifying Agents, Takamine is discussed in the section on “Mold bran” (p. 844). “Takamine, in 1914, advocated the use of mold enzymes (from *A. oryzae*) in the distilling industry. Studies were carried out in distilleries in Canada using his mold-bran preparation (*Taka-koji*) in place of malt to saccharify grains. Although the yields of alcohol obtained through the use of mold bran were reported to be higher than those obtained through the use of malt, the process was not adopted.”

A table (p. 857) lists 19 sources of microbial amylase, including Taka-Diastase, made by Parke, Davis & Co., and Alase, made by Takamine Lab. Also in this chapter, in the section on submerged culture of mold amylases, a table (p. 859) shows that soybean meal is used as a protein source in the production of dextrinizing enzyme by *Aspergillus niger* NRRL 337. Address: 1. Sc.D., Prof. of Industrial Biology (Emeritus), Former Head of the Dep. of Biology and Public Health and Dean of the School of Science, MIT; 2. Assoc. Prof. of Industrial Microbiology in the Dep. of Food Technology, MIT (Massachusetts).

4138. Tamura, Zenta. 1959. Tatsuno shôyu kenkyû shiryô [Tatsuno shoyu research materials]. Tatsuno city: Tatsuno Shoyu Kyodo Kumiai. 254 p. [Jap]

Address: Tatsuno city, Japan.

4139. Thompson, Edna. 1959. The yoga cook book. New York, NY: Philosophical Library. 156 p. Index. 19 cm.

• **Summary:** The Yoga diet, as presented here, is not vegetarian. This book contains recipes for meat (liver, heart), fish, and shellfish. “Yogans” are said to eat at least some food each day which carries the life principle (fresh, raw food), to prefer whole foods in modest amounts, to avoid inert demineralized foods (such as white flour and white sugar), and alcohol. Yoga is not a religious movement; its followers practice self discipline in eating, without fasting. The rear dust jacket states: “This book banishes the idea that the modern Yogin as an ascetic with caveman dietary habits.” The true Yogin regards his food as sacred and has heightened powers.

Soy-related recipes include: Soybean soup (p. 18). Shoyu sauce (soy sauce, p. 26). “Auxin” salad (freshly sprouted mung beans sprinkled with soy oil, etc., p. 48). Eggs foo yung (with bean sprouts, water chestnuts, green onion, celery, 4 beaten eggs, salt to taste. “Brown desired size patties of the mixture in soy oil.” Serve with a brown sauce made with cornstarch, soy sauce, monosodium glutamate, sugar, and salt. p. 58-59). Vegetable sukiyaki (with Tofu {bean curd} and shoyu sauce, p. 65). Soyburgers (with mashed cooked soybeans, p. 66). Vegetable chop suey (with soy oil, bean sprouts, and soy sauce, p. 68). Korean soybean noodles (made with soybean flour, p. 72). Soy spoon bread (with soy flour and soy oil, p. 97-98). Making soy bean cheese (tofu, coagulated with vinegar, p. 104). Yoga puddings and desserts (white flour is replaced by soy flour and lard is replaced by soy oil, p. 114). Chinese sweet soy beans (p. 122). Manchurian soy bean milk drinks (p. 136).

Also discusses: Japan yokan cakes (with red beans [azuki], p. 116-17). Oat peanut butter wafers (p. 123). Red bean cake (Korea, with red kidney beans [azuki], p. 131-32).

Note: This is the earliest document seen (Jan. 2009) that describes the use of soy ingredients in Korean-style recipes outside Korea.

4140. Kikkoman International Inc. 1960. Kikkoman soy sauce: “All-purpose” seasoning (Ad). *Los Angeles Times*. Jan. 12. p. 84.

• **Summary:** A small black and white ad. “Taste-tantalizing flavor!—Imported. Since 1630. Delicious for Sukiyaki, tempura, meats, poultry, fish, basting, gravies, soups, vegetables, rice, noodles, salad dressings.”

Photos show: (1) A bottle of Kikkoman soy sauce. (2) The Kikkoman logo.

Note: This is the earliest ad seen (Oct. 2006) for Kikkoman soy sauce in the *New York Times*. Address: Importer. Head office: 900 Marin St., San Francisco 4, California. New York Office: 33-59 Vernon Blvd., Long Island City 6, N.Y.

4141. Winkel, Johanna G. 1960. Recipes from Asia: Indonesian rijsttafel favorite dinner. *Christian Science Monitor*. Jan. 25. p. 4.

• **Summary:** Have ready beforehand: “Babi ketjap: This is made by dicing pork and rolling it in a mixture of asem (tamarind), garlic, salt, and *ketjap benteng* (concentrated sweet soy sauce).”

Note 1. This is the earliest document seen (April 2012) in all major U.S. newspapers digitized by ProQuest that uses the term “ketjap” to refer to Indonesian-style soy sauce. The new term appears in 43 articles between 1960 and the present, including five in the 1960s, 16 in the 1970s, etc.

Note 2. This is the earliest English-language document seen (April 2012) that uses the word *benteng* or the term *ketjap benteng* to refer to an Indonesian-style soy sauce.

Note 3. It is also the earliest document seen (April 2012) that uses the term “sweet soy sauce” or the term “concentrated sweet soy sauce” to refer to *ketjap benteng*, an Indonesian-style soy sauce.

An illustration shows a “wadjan,” a Javanese frying pan, which looks exactly like a Chinese wok.

4142. Kikkoman International Inc. 1960. Lose five pounds in six days with “No Hunger” diet: Kikkoman soy sauce at leading grocers (Ad). *Los Angeles Times*. Jan. 26. p. 4.

• **Summary:** A small black-and-white ad. “See the January 1960 issue of *Coronet* magazine... citing health and reducing values of rice and soy sauce.” A photo shows a bottle of Kikkoman soy sauce.

Note: This ad also appeared in the Jan. 27 and 29 issues.

4143. Hino, Tetsuo; Ito, K.; Hayashi, K.; Abe, N. 1960. Shōyu oyobi chōmi eki-chū no enki-sei amino-san ni tsuite no kenkyū. I. Address: Ajinomoto Co. Ltd.

4144. Kropotkin, Alexandra. 1960. Lose 5 lbs. in 6 days with “No hunger” rice diet. *Coronet* 47(3):74-78. Jan.

• **Summary:** Cites the health and reducing values of rice and soy sauce. Dr. Walter Kempner, of Duke Univ. [Durham, North Carolina], believes in the health value of rice, since it “contains no cholesterol—which many doctors believe dangerous to the heart, kidneys and blood circulation.” Note: All plant foods are free of cholesterol.

The writer prefers long grain brown rice, with long grain polished as a 2nd choice. She enjoys “a bowl of room-temperature rice with nothing but soy sauce, cold spinach and a small helping of ‘pickled’ vegetables”—in short a

Japanese peasant diet. She seasons 3/4 cup cooked rice with 1 teaspoonful soy sauce: total 100 calories. She also uses 1 teaspoon soy sauce in her “geisha girl” salad dressing. Address: Princess.

4152. Ando, Seiichi. 1960. Yuasa shōyu [Yuasa shoyu]. In: Chihō-shi Kenkyū Kyōgi-kai, ed. 1960. Nihon sangyo-shi taikei. Vol. 6: Kinki Chihō-hen. Tokyo: Tokyo Daigaku Shuppan-kai. [Jap]*

• **Summary:** In this book titled "Outline of Japanese Industry," there is one volume on the Osaka-Kyoto (Kinki) area. In that volume is a discussion of Yuasa shoyu from an economic history viewpoint. Address: Osaka Sangyo Daigaku, Osaka, Japan.

4153. Hayashi, Shizuka. 1960. Public relations seminar by JASI. *Soybean Digest*. March. p. 20.

• **Summary:** At this seminar JASI taught Japanese manufacturers of soybean [food] products how sales of these products can be much increased through the use of public relations, including marketing research. "This is particularly true of marketing new products." Previously, these very manufacturers have lacked interest in public relations because they "have been enjoying a reasonably profitable business under the funds allocation system, which has afforded them a sort of protection."

At JASI's first seminar on PR [public relations] and marketing, held recently in Tokyo, about 40 companies and organizations from various parts of Japan participated. "There were two lectures. The first was by Professor Naoyoshi Horikawa on public relations and top management. The other, by T. Shimizu, was on sales promotion. Never in the history of the soybean industry [in Japan] has there been a gathering like this where the so-called 'big shots' of leading organizations sat side by side at the table."

A table shows estimated consumption of soybeans (S) and soybean meal (SM) during 1961 as planned by the Japanese government (tonnes = metric tons). The totals are 1.467 million tonnes of soybeans and 707,000 tonnes of soybean meal. Details: Oil processing: 928,000 S. Livestock feed: 303,000 SM. Tofu and fried tofu: 280,000 S + 20,000 SM. Shoyu: 29,000 S + 200,000 SM. Miso: 130,000 S + 50,000 SM. MSG: 73,000 SM. Other miscellaneous foods: 20,000 S + 40,000 SM. Frozen tofu: 40,000 S. Natto: 30,000 S. Other uses: 21,000 SM. Kinako: 10,000 S.

Note: This is the earliest document seen (Jan. 2012) that contains industry or market statistics for natto by geographical region.

A large photo shows about 13 Japanese men seated at a long table at JASI's recent public relations seminar. The name and position of each man is given. They represented the following organizations: Miso Association. Tatsuno Shoyu. Shoyu Association. Frozen Tofu Association. Masuko Miso. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1-Chome Yurakucho Chiyoda-Ku, Tokyo, Japan.

4154. Ohsawa, George S. 1960. Zen macrobiotics. New

York, NY: Ohsawa Foundation. 103 p. Undated. 28 cm.

• **Summary:** This bound, hardcover book was owned by Herman Aihara, and is now (April 2011) in the library of the George Ohsawa Macrobiotic Foundation in Chico, California (President: Carl Ferre). The size is 8½ by 11 inches. The cloth cover is pea green and on it, near the top, is written (on two lines): “Zen macrobiotics” with the word “Zen” in large bold capital letters. In the middle: “George S. Ohsawa,” the author. And near the bottom (on two lines): “Ohsawa Foundation: New York–Paris–Brussels–Tokyo.”

The book consists of leaves and the text is typewritten. All of the leaves in this edition are edited, some heavily, in two colors of ink: red edits by George Ohsawa, and blue by Lou Oles (According to Herman Aihara). There is no table of contents or copyright page. On the first leaf, near the top, the title is typewritten again on two lines: “Zen Macrobiotics.” Then the book begins: “Two ways to happiness through health. Happiness is the goal of everyone in the world. But what is happiness?... In the Orient happiness was defined by sages some thousands of years ago as consisting of five factors, as follows: 1. The first fundamental factor of happiness is joyfulness, an amusing, interesting, brilliant and healthy longevity. 2. The second, not to be worried about money. 3. The third, instinctive capacity to avoid accidents and difficulties that would cause premature death. 4. A loving realization of the order of the infinite universe at all levels. 5. Not to become the first as you will become the last. But try to become the last so that you will become the first forever.

“... School education is completely unnecessary, and even detested. All great men are autonomous and self-made...”

Note 1. This section (two leaves) becomes the Forward in the next edition, which was printed in Japan.

The third leaf is a title page: Like the cover, it has text on 3 levels, but is typewritten. Title: “Macrobiotics: The Biological and Physiological Foundation of Zen Buddhism.” Author: George Ohsawa. Publisher: Ohsawa Foundation: New York–Paris–Brussels–Tokyo.

Note 2. The relationship between this title page, the title page of the mimeographed edition, and the cover is unknown.

The next two leaves, are titled “Health to Peace” and numbered “i” and “ii.” Note 3. They become the Preface in the next edition, which was printed in Japan.

Next is “iii” which is the Foreword in this mimeograph edition but becomes Chapter 1 in the next edition, printed in Japan.

Next are leaves “iv” through “xxii” which are the Introduction in this edition, but become Chapter 1-3 in the next edition printed in Japan. After leave xxii, the leaves are numbered “8” through “86,” and after that is the back cover. The last section of the book is titled “The Case of Mr. E” (leaves 77-86). Note 4. It becomes the first appendix in next edition printed in Japan, which also contains a second

appendix titled “The Pro-Forma Death Certificate...”

The mimeograph edition is thus missing pages 3-7. Moreover, all the pages are renumbered by Ohsawa by hand in the upper right corner. In Ohsawa’s numbering there are no pages numbered 1, 2, 5, 6, 7, 8, 10, 33 and 34 (a total of 9) and thus his page is numbered 112.

Because the mimeograph edition is bound, it appears that the pages were rearranged after typing but before publication and distribution.

Page 19: “With the conception of Principal Food and that of secondary food clearly distinguished, people of the Orient could live a happy, free and peaceful life from the beginning up to the importation of the brilliant Occidental civilization, more or less violent, with its industrial and scientific instruments... The Principal Food should occupy at least 60% of your eating.”

This bound, mimeograph book contains many recipes, all of which are numbered. Soy-related recipes include the following: In the section titled “Beans”: 117. Boiled soy beans with miso (the soy beans are first roasted until they pop). 118. Boiled beans (“Boil soy beans until tender. Seasoned with soy sauce and salt. Boil until liquid is gone. Prepare black beans in the same way).” Note 5. Later writings by Ohsawa show that by “black beans” he meant black soy beans, *Kuro mame* in Japanese. 119. Gomoku beans (boiled soy beans with vegetables). 120. Gozu soup (Gôjiru; ground soaked soybeans with vegetables). 121 and 122. “Aduki” beans. 159. Hiziji with age (seasoned with “soyu” [sic, shoyu]). 160. Hiziki [Hijiki] and soyabean (seasoned with syoyu [shoyu]).

In the section titled “Miso and syoyu preparation”: “Both miso and syoyu should be of traditional make.” 201. Sauce miso (miso-tahini sauce). 202. Miso cream. 203. “Muso” (miso and tahini with minced orange peel). 204. “Miso” soup (5 persons). 205. Carrot and onion au “miso” (15 persons). 206. Vegetable au miso. 207. “Oden” au miso. 208. Buckwheat “dango” au “miso.” 209. “Miso-ae.” 210. “Tekka” no. 1 (miso with minced yang vegetables–lotus root, burdock root, ginger–fried in sesame oil until very dry. Good for all yin diseases).

In the section titled “Syoyu”: Recipes 212-221 are seasoned with “syoyu” (shoyu, traditional fermented soy sauce). “Use the traditional syoyu in all cooking (vegetables and fish). Syoyu diluted with a little water is very good for ‘Sasimi’ [sashimi] and fried oyster, ‘Tempura’, fish ‘Sukiyaki’, ‘Tohu’ ([tofu] vegetable cheese of soya beans), etc.”

803. “‘Tohu’ plaster. Squeeze ‘tohu’ (white soya bean cheese) add 10% of flour; stretch this directly on the front or any part painful with inflammation. All pain or inflammation will go away soon.” Note 6. This book does not use tofu in any recipes, probably because Ohsawa considered it too yin. However Ohsawa was the one person most responsible for introducing the word “tofu” to popular American culture; his

later writings and especially his students and admirers spread the word to the four corners of the United States.

Note 7. This is the earliest macrobiotic document seen that mentions tofu.

Note 8. This is the earliest English-language document seen (July 2000) that mentions “Tekka” (spelled that way, which is now the proper romanization) or that gives a recipe for making it.

Note 9. This is the earliest English-language document seen (March 2006) that uses the word “aduki” beans to refer to azuki beans. This spelling was subsequently widely used, but only in macrobiotic publications.

Note 10. This is the earliest macrobiotic cookbook seen (Jan. 2012).

Also discusses: In the section on “Egyptian beans” (p. 30): Pois “chiche” (chickpeas, basic preparation by boiling). “Beignet” pois chiche (deep-fried balls of mashed chickpeas mixed with flour). Pois chiche croquette (chickpea croquettes).

Publication: “Published by Ohsawa Foundation, 331 Riverside Drive, New York City, U.S.A. (Secretary Aihara, 44 W. 96th St., New York City, U.S.A.).” Underneath this is “Printed in Japan.”

Note 11: Concerning the date of publication, we read: “My first two books in English will arrive beginning of November: *Zen Macrobiotics* and *The Philosophy of Oriental Medicine*.” (Source: G.O. [George Ohsawa]. 1960/09. “Letter from the editor.” *Macrobiotic News* (New York, NY). No. 6. Sept. p. [7]). Address: New York, USA.

4155. Ohsawa, George. 1960. *Zen macrobiotics* [Continued, Part II]. New York, NY: Ohsawa Foundation. 103 p. Undated. 28 cm.

• **Summary:** This mimeograph bound book with the pea green cover, the only known copy of which is owned by the George Ohsawa Macrobiotic Foundation in Chico, California, raises many interesting questions about the publication history of this and closely related titles.

Carl Ferré, an expert on this subject, believes: (1) That there were several “printings” of mimeographed edition and that “printings” may vary. (2) There is a strong possibility that the first editions were sold in Jan., Feb., and March of 1960, before there was any editing on them. (3) It is unlikely that any books were sold with only Ohsawa’s red edits on them. (4) It is probable that no books were sold with both Lou Oles’ blue editing and George Ohsawa’s red editing on them.

Was there a printed edition prior to and different from this edition?

Does anyone own such a copy?

How many pages did it contain and how were the pages arranged? For example, did the original book start with the title page, followed by ages i, ii, iii, etc?

Were the original pages reshuffled to create this bound

edition? In this edition, why are there xxi pages of front matter numbered in roman numerals followed by pages 8 through 86 in Arabic numerals.

Why do some pages seem to be missing from this edition. Carl Ferre believes that someone typed the entire book, then Ohsawa decided to move some of the pages around, which they did before they bound and sold the books (for \$0.50 each) at Ohsawa’s lectures.

How did they bind the books? Did they bind the books by themselves or send them out to a professional bookbinder? Or did a person (who attended the lectures) who was in the bookbinding business offer to bind the books free of charge so they could be sold for only \$0.50 each. Was it originally hardcover or paperback? Is the pea green book in Chico simply an example of all the books sold in 1960 at Ohsawa’s lectures? Or is it unique—one of a kind? When and where did Ohsawa make all this handwritten changes in red? Was someone suggesting the changes to him? If yes, who?

Why is the title on the cover different from the title on the title page.

Why was the original title page numbered “9” in Ohsawa’s handwriting.

What do the Japanese characters under the handwritten “9” mean?

Why is there content before the title page?

We are told the original mimeograph edition was duplicated and bound in the Aihara’s apartment in New York City; how was it bound?

Carl Ferre reminds us (e-mail of 2 May 2011): Lou Oles took the recipes out of *Zen Macrobiotics* to create a separate book, *Zen Cookery*. “The problem that has always existed is that *Zen Macrobiotics* has numbers in it that refer to numbers in *Zen Cookery* and they have never corresponded. For example *Zen Macrobiotics* says “See *Zen Cookery* No. 103” and you go to *Zen Cookery*, find that number, and its something totally different—or even nonexistent.” Address: New York, USA.

• **Summary:** “When baking salmon, drizzle the fish with lemon juice, Japanese soy sauce and sprinkle with rosemary.”

4159. **Product Name:** Vegetarian Burger.

Manufacturer's Name: Worthington Foods, Inc.

Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.

Date of Introduction: 1960. April.

Ingredients: In 1971: Wheat protein [wheat gluten], water, yeast extract, salt, soy sauce, Brewer's yeast, MSG, seasonings, algin, caramel color.

Wt/Vol., Packaging, Price: 20 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: *Chopletter* (Worthington Foods, Ohio). 1960. “What you should know about Worthington Foods.” April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Vegetarian Burger.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 162. Lists the ingredients in “Vegetarian Burger (Worthington).”

Ad in Whole Foods. 1983. Sept. p. 45. in 20 oz. cans. This product and Vegetable Skallops are being promoted as “Salt Shakers.” Both are available in versions with and without salt and MSG. For the hypertensive and sodium-conscious. A black-and-white photo shows the can and label. The text reads: “Contains no meat. A vegetable protein product. No added salt or MSG.”

Worthington Yesterday and Today. 1984. p. 11. Nutrition Action Healthletter. 1987. Oct. p. 13. Critical treatment of this product which contains 790 mg of sodium vs. only 65 mg for lean beef. Much of the sodium comes from MSG. The “no salt added” label is highly misleading though technically legal. It also contains caramel coloring. Thus it is not necessarily more healthful than beef.

4160. Kikkoman International Inc. 1960. Barbecue fun and

better eating begin with Kikkoman (Ad). *Los Angeles Times*. May 11. p. 17.

• **Summary:** “Easy does it with this magic marinade! ½ cup Kikkoman soy sauce. 1 tbsp. sugar (to taste). ½ cup sherry wine. 1 clove garlic crushed. Marinate the ribs, steak, lamb, halved chicken or turkey about 20 minutes. Place on the grill, turn occasionally and baste with Kikkoman marinade until a deep golden brown. Simple—but sensational! All-purpose Kikkoman soy sauce: basic for better barbecue.”

• **Summary:** “A chef's salad with shrimp: Marinate cooked shrimp or prawns in California rose wine with some finely chopped green onion, and Japanese soy sauce...”

4163. **Product Name:** Loma Linda Dinner Cuts (Meatless Cutlets) [With Salt, or with No Salt Added].

Manufacturer's Name: Loma Linda Foods.

Manufacturer's Address: 11503 Pierce St., Arlington, CA 92505.

Date of Introduction: 1960. May.

Ingredients: In 1971: Wheat protein [wheat gluten], water, soy sauce, yeast extract, salt, MSG, dextrose, powdered onion, celery and parsley extracts.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 2 dinner cuts (3.5 oz–100 gm): Calories 110, protein 21 gm, carbohydrate 4 gm, fat 1 gm, cholesterol 0 mg, sodium 30 mg, potassium 75 mg.

New Product–Documentation: *Today's Food* (Loma Linda Foods, Arlington, California). 1960. Spring. p. 4. *Today's Food*. 1964. Autumn. p. 7. 20 oz. can retails for \$0.74, serves 5, and provides 65 gm of protein; Ad. 1981, undated. “Try improved Dinner Cuts. Its no longer a tough choice. Let's face it, our old Dinner Cuts—as delicious as they were—took a lot of chewing. We took a lot of kidding... Dip in batter and wheat germ and brown in a skillet.”

Seventh-day Adventist Dietetic Assoc. 1965. *Diet Manual*. 2nd ed. p. 104. Dinner Cuts contain 18.79% protein, 1.00% fat, and 3.49% carbohydrate. One serving, 1 patty, weighs 125 gm.

Loma Linda Food Co. 1969. “Wholesale Price List.” Dinner Cuts are now sold in 14 oz, 19 oz, 28 oz, and 48 oz cans. A version with no salt added is sold in 20 oz cans.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet*

Manual, Utilizing a Vegetarian Diet Plan. 3rd ed. p. 161. Lists the ingredients in “Dinner Cuts (Loma Linda).”

It’s Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned steak or burger-like product based on wheat protein.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 4th ed. p. 175. The ingredients in “Dinner Cuts (Loma Linda)” are “wheat protein, soy sauce, yeast extract, MSG, salt, powdered onion, L-lysine, dextrose, celery, parsley extract.”

Label sent by Loma Linda Foods. 1988. Oct. 5. The ingredients are now, for “No salt added”: Wheat gluten, water, oat flour, wheat flour, soy protein isolate, caramel color. Broth: Water, natural (vegetable) flavors, onion powder, mono potassium glutamate, dextrose, L-lysine, spice. This product was introduced in 1963.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27.

4164. Onishi, Hiroshi. 1960. Studies on osmophilic yeasts. VIII. Isolation of a new obligate halophilic yeast and some considerations on halophilism. *Bulletin of the Agricultural Chemical Society of Japan* 24(3):226-30. May. [10 ref. Eng]

• **Summary:** The writer has isolated this yeast from year-old “soy mash and named it *Torulopsis halonitratophila* nov. sp.” Although it is an obligate halophile at 30°C, “it exhibits facultative halophilism when tested at a lower temperature such as 20°C. This observation suggests that cultural temperature is one of the most important factors for halophilism.” Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4165. *Los Angeles Times*. 1960. Soy sauce gains favor here. June 9. p. A9.

• **Summary:** Soy sauce, long a favorite in the Orient, is increasing in popularity in California with the return of travelers [and of military personnel] who have experienced the charms of Japanese cooking.

Soy sauce has come to be used in barbecuing, which is similar to preparing the famous Japanese teriyaki. “Soy sauce is also an indispensable ingredient in some marinade recipes. It adds sweet-tart piquancy, deep color, and distinctive flavor.”

A recipe for Marinated shrimp calls for “½ cup Japanese soy sauce.” A recipe for Teriyaki marinade for kebabs calls for “1 cup Japanese soy sauce.”

4166. All American. 1960. Sunday is father’s day and pop’s the tops! (Ad). *Los Angeles Times*. June 16. p. D13.

• **Summary:** A full-page ad for many foods sold at this supermarket—including: “Kikkoman Soy Sauce. 6-oz. bottle 29¢. 12-oz. bottle 39¢.” Address: Ten locations in the greater Los Angeles area].

4167. Masiluñgan, Victoria A.; Ramos, Milagros A.; Palo, Macario A. 1960. Studies on some important factors involved in the mold process of making soy sauce.

Philippine J. of Science 89(2):149-62. June. [16 ref]

• **Summary:** The Chinese introduced soy sauce into the Philippines as a seasoning for their various dishes, and it was readily accepted by Filipinos. It is rapidly becoming an important condiment as shown by yearly increases in its use since 1951. Consumption in 1956 was valued at 2,667,025 pesos compared with only 327,112 pesos in 1951—an 8-fold increase in only 5 years. Local production of soy sauce has also expanded, from an estimated 93,120 pesos in 1953 to 2,573,977 pesos in 1956.

Three major methods of making soy sauce are described.

The summary describes the various important factors studied in the mold process of making soy sauce. These include the strain of *Aspergillus oryzae* mold used. The ratio of soybeans to wheat. The concentration of salt (20%) in the salt solution “for brining the molded beans” [soybean koji]. “6. The temperature considered to be optimum for brewing molded beans [koji] in 20 per cent salt solution into quality soy sauce” ranged from 40-45°C.

“7. A molding period of 4 days was found to be sufficient to induce maximum proteolysis in molded beans in subsequent fermentation in the brine.”

The total fermentation time for the molded beans [koji] was found to be complete after 4 weeks. Address: National Inst. of Science and Technology (NIST), Manila, Philippines.

4168. Onishi, Hiroshi. 1960. Studies on osmophilic yeasts. X. Influence of the environmental factors on the change of microflora during the ripening process of soy-mash. *Bulletin of the Agricultural Chemical Society of Japan* 24(4):386-96. June. Supplement. [10 ref. Eng]

• **Summary:** “Soy-mash” means “soy sauce mash” or moromi. Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4169. Siqueira & Son. 1960. Classified ad: Toms Chinese Soya Sauce... *Times of India (The) (Bombay)*. July 7. p. 2.

• **Summary:** “... makes good cooking even better. A wonderful seasoning sauce with zestful flavour. Agents Siqueira & Son.” Address: Post Box 437, Bombay.

4170. McLendon, Winzola. 1960. He steers true culinary course now: Gourmet Marshall. *Washington Post*. July 28. p. C10.

• **Summary:** Vice Admiral William Marshall, who divides his time between New York City and Virginia, loves gourmet cooking. He went to cooking school in Yokohama, and today his favorite recipes have Oriental overtones. “He has learned the culinary value of a dash of soya or a bit of hoisin.”

He gives several of his favorite recipes including:

“Hoisin sauce, a venison marinade.” This recipe for the marinade calls for “½ cup Hoisin sauce (comes from Hong Kong, may be purchased in any oriental specialty shop...),... 1 dash Soy Sauce.” Mix all seven ingredients to make the marinade.

“Venison in hoisin sauce: Marinate venison in Hoisin sauce [mixture] for 48 hours, turning occasionally.”

4171. Hayashi, Shizuka. 1960. Discuss problems of soybean usage. *Soybean Digest*. July. p. 26.

• **Summary:** Japanese “soy food manufacturers” were addressed by Charles Elkinton, U.S. agricultural attache. During fiscal year 1959 the total quantity of soybeans used by Japanese crushers and food manufacturers amounted to 1.2 million metric tons or 46.7 million bushels, up 12% over the previous year. Japan’s total imports during fiscal 1959 were 1,073,477 metric tons of which 1,010,444 metric tons came from the USA.

The total amount of soybeans used by Japanese food manufacturers is as follows, in metric tons. Makers of tofu and frozen tofu used 340,000 tons in 1959/60 rising to 370,000 tons in 1960/61. Shoyu makers used 218,400 tons in 1959/60 rising to 220,537 tons in 1960/61. Miso makers used 186,400 tons in 1959/60 rising to 177,180 tons in 1960/61.

Oil processors crushed 768,870 metric tons or 28,218,000 bushels in 1958/59. A photo shows “Japanese soy food manufacturers,” seated on cushions on tatami mats at two long tables, as they are addressed by Charles Elkinton. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building No. 1, 1-Chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

4172. *Macrobiotic News* (New York, NY). 1960. Our activities in July. No. 4. July. p. 4.

• **Summary:** (1) Live with Mr. & Mrs. Ohsawa joyful and happy summer time at the New Horizon Camp, Southampton, L.I. [Long Island, New York City].

(2) Lecture on Macrobiotics by Mr. G. Ohsawa. Thurs, Fri, Sat, & Sun at 8:30 p.m. Fee: \$2 for one. Macrobiotic meal cooked by Mrs. G. Ohsawa—Three meals a day.

Fee: special reduction has been done by Mr. G. Ohsawa. Lectures, meals:

\$40.00 per week & other activities without sleeping accommodations.

\$75.00 per week with sleeping accommodations.

\$6 per day.

(3) Distribution of Macrobiotic Foods: (Unrefined Rice [Brown Rice], Yannoh [Ohsawa coffee], Kokko [Kokkoh; grain milk], Azuki, Goma [sesame seeds], Sea Salt, Miso, Tamari—Ohsawa Sauce, Mu-Tea, Sesame Oil, Tahin [Tahini] and Umeboshi, etc.): sold at Azuma Inc. & Ginza Inc.

(4) Presents to Mr. & Mrs. Ohsawa—Smith-Corona Portable Electric Typewriter—has been done by the attendants of the Welcome Party at Am. Buddhist Academy [American

Buddhist Academy, founded in 1951, later renamed American Buddhist Study Center] on June 30.

Note 1. This is the earliest document seen (March 2012) that mentions “Tamari” in connection with macrobiotics.

Note 2. This is the earliest document seen (May 2011) that mentions “Kokko” (or “Kokkoh”), a milk alternative containing soy, developed and used by macrobiotics. Address: Ohsawa Foundation, 331 Riverside Dr., New York 25, NY.

4173. Mathews (Mr.). 1960. Imported fine foods (Ad). *Los Angeles Times*. Aug. 7. p. GB10.

• **Summary:** Among these foods are “Kikko-man Soy Sauce, 4/5 qt. [quart]—75¢. Whale meat, 7 oz.—45¢. Aji-no-moto super seasoning, 7 oz.—\$1.75.” An illustration shows a bottle of KikkoMan soy sauce. Address: 600 San Fernando Road, L.A.

4174. Shapiro, Lorraine. 1960. Barbecued turkey spells good eating. *Los Angeles Times*. Aug. 11. p. F4.

• **Summary:** A recipe for Summer marinade and basting sauce calls for “1 cup Japanese soy sauce.” Address: Marian Manners’ staff.

4175. Kawashima, Robert. 1960. Here’s the way to prepare sukiyaki, the hottest item in the trade. *Los Angeles Times*. Sept. 18. p. K18.

• **Summary:** “The trade” refers to Japanese restaurant food in the USA. “The three big dishes, both in Japan and in the United States, are sukiyaki, tempura, and beef or chicken teriyaki.” Each requires the use of soy sauce.

A recipe for Sukiyaki cooking sauce calls for “½ cup Japanese soy sauce.”

A recipe for Teriyaki sauce calls for “1 cup Japanese soy sauce.”

4176. Hayashi, Shizuka. 1960. The Japanese American Soybean Institute: We can supply the Japanese market with another 26 million bushels of soybeans if we seriously desire it. *Soybean Digest*. Sept. p. 31-32, 34.

• **Summary:** Contents: Introduction. Severe criticism (of U.S. soybeans by soybean users in Japan, and work to overcome this bad impression). Next on the consumption and import of soybeans. Now about the future outlook. Possibility of cutting down cost of oil prices. Price of soybean oil can be reduced. Soybean meal as a mixed feed has a big potential market. Soy flour expected to increase.

Before World War II “the soybean requirements of Japan were taken care of mostly by soybeans from Manchuria and China. Soybean oil and low-quality soybean meal were imported into Japan from Manchuria for use mostly as fertilizer.” Whole soybeans were used for make shoyu and miso, and for crushing.

“The Japanese soybean industry has stepped into a new

era since the war. The crushing industry has been shifted from Manchuria to Japan and it has developed quickly to the present important and prosperous stage. With expanded crushing capacity, the need for soybeans has increased and the major part of the requirements has been supplied by soybeans from the United States, with only a limited quantity from China.”

“The break in trade between China and Japan since 1957 has given a chance for U.S. soybeans” to overcome their bad image in Japan.

“Consumption of various soy foods has shown substantial increase” and so have total soybeans imports into Japan, and the U.S. percentage share of total imports. Table show: (1) Consumption of soybeans and oils in Japan (metric tons), annually from 1955-56 to 1960-61, for tofu and frozen tofu (increased from 319,000 to 370,000), miscellaneous (increased from 167,000 to 214,000), shoyu (increased from 248,000 to 272,000), oil mills (increased from 505,000 to 760,000), and per capita daily (increased from 7.52 gm to 10.80 gm). (2) Imports of soybeans to Japan (metric tons) annually from 1955-56 to 1959-60. In 1955-56: Total 767,099. From USA 571,612. U.S. share of total 74.5%. In 1959-60: Total 1,073,477. From USA 1,010,444. U.S. share of total 94.1%.

“Soybeans have now become the largest item volumewise of all U.S. agricultural products imported into Japan.” They now top cotton, which had been the largest. Of all U.S. imports to Japan, soybeans are the second largest after scrap iron. This shows that the market development for U.S. soybeans in Japan has been successful—even under the present controlled currency allocation system which limits imports.

Four years ago the expression “P.R.” [public relations] was known by very few people and there was little investment in P.R. in Japan. Today almost everyone in Japan knows what P.R. means. As an example of this change among soybean groups, the Miso Association had no budget for P.R. activities 3 years ago. Today its budget for fiscal year 1960 contains approximately 32 million yen or \$90,000 for this purpose. “The same can be said of shoyu, tofu, and other groups.” The “Shoyu Association has decided to send a team of 7 top executives of the leading shoyu makes to the United States in October 1960 to study the soybean industry. They are doing this at their own expense but with the cooperation of American Soybean Association.

The total investment in the soybean market development program in Japan over the past 4 years by Foreign Agricultural Service has been \$425,000 and the contribution by various Japanese groups has been about \$257,000 in cash and services combined.

A 1958 survey showed that the 1,368 oil mills in Japan were operating at 36.8% of capacity. This low percentage is due to the fact that 1,210 oil mills (about 90% of the total) are small factories with a daily processing capacity averaging

10 metric tons; they produce oil mainly from domestic rapeseed at low efficiency.

“If the import of soybean becomes free under the “Automatic Allocation system it is obvious that soybean oil production will be concentrated in the larger oil mills (61 crushers) occupying 85% of the nation’s total daily extraction capacity of 8,289 tons. This will bring down the price of edible oil for Japanese consumers. A table shows that 159,000 tons of oil are made in Japan from domestic materials as follows: Rapeseed oil 65%. Fish and whale oil 25%. Rice bran oil 6%. Hog grease 4%. Since Japan has little possibility of increasing oil production from domestic raw materials, it must rely on imports. The price of domestic rapeseed is supported by Japan’s government.

Another table shows the rapid growth in production of “concentrated feed” in response to the government’s policy to encourage livestock production and the dairy industry. In 1955 it was 509,279 metric tons, rising to 1,310,098 tons in 1958, with 2,000,000 projected for 1960. The percentage of soybean meal used in mixed feeds has been about 4.5% because of the priority given to miso, shoyu and other food industries. However the Livestock Bureau has been requesting an increase in the import of soybeans for feed. Hayashi ends by estimating potential import growth of 700,000 metric tons or 26 million bushels, and by urging U.S. soybean growers to seize the opportunity. “If more funds for market development become available, first preference should be given to soybeans to meet the need for more oil, for more soy flour in bread, and for soybean meal as animal feed.”

• **Summary:** The U.S. Federal Trade Commission has just issued stringent regulations regarding use of the word “guarantee” in advertisements.

The section “Accounts” states: “Kikkoman International, Inc., to Gotham-Vladimir Advertising, Inc. for advertising of Kikkoman Soy Sauce in the New York area.”

4184. Kikkoman International Inc. 1960. Kikkoman all-purpose soy sauce: Recipe of the week (Ad). *Los Angeles Times*. Oct. 27. p. A14.

• **Summary:** The recipe is Fish fancier's delight. This is Kikkoman's first “Recipe of the week” ad. For the first time there appears a tiny cartoon of the head of a cute little girl (like Shirley Temple) wearing a chef's hat; it becomes Kikkoman symbol in this series of recipes. This cartoon and a bottle of Kikkoman soy sauce appear as graphics in subsequent ads in this series.

4185. Hayashi, Shizuka. 1960. Japanese soy sauce team in United States. *Soybean Digest*. Oct. p. 22.

• **Summary:** “A group of top executives of the Japan Soy Sauce Brewers Association is making a 36-day tour of the U.S. soybean industry as guests of the American Soybean Association. The trip was arranged by the Japanese American Soybean Institute. The soy sauce manufacturers are traveling at their own expense, however.”

They arrived in Waterloo, Iowa, Sept. 25. They plan to “visit farms where soybeans are grown and harvested, U.S. elevators, and soybean processing [crushing] plants; the Northern Regional Research Laboratory at Peoria, Illinois; grain grading and export facilities; and the U.S. Department of Agriculture in Washington, D.C.

The team from Japan includes Keizaburo Mogi, managing director, Noda Shoyu Co., Ltd.; Yoshiro Hamaguchi, managing director, Yamasa Shoyu Co., Ltd.; Kichiemon Hamaguchi, president, Choshi Shoyu Co., Ltd., and Mrs. Michiko Hamaguchi; Motoyashi Kinoshita, president, Marukin Shoyu Co., Ltd.; Heibei Yamashita, president, Kinoeno Shoyu Co., Ltd.; Chujiro Yamanouchi, vice president, Japan Shoyu Association, and president, Kyushu Shoyu Association; and Akira Komiya, managing director, Japan Shoyu Association.

“The team will be accompanied on their tour by David R. Farlow, assistant to the executive vice president of the American Soybean Association.” Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome Yurakucho, Chiyoda-Ku, Tokyo, Japan.

4186. Strayer, George M. 1960. Entertain Japanese trade teams [Editorial]. *Soybean Digest*. Oct. p. 4.

• **Summary:** “Japan is our No. 1 customer for U.S. soybeans. Out of total exports now estimated at nearly 140 million bushels during the 1959 crop year closed on Sept. 30, Japan took over 40 million bushels [i.e., more than 28%].

“Very significant is the tour of the soybean industry of the United States now being made by the team representing the Japan Soy Sauce Brewers Association.” Shoyu manufacturers are the largest users of soybean meal; they also use some whole soybeans.

“This type of activity is obviously a means of creating more markets for U.S. soybeans.” Address: American Soybean Assoc.

4187. Kikkoman International Inc. 1960. Kikkoman all-purpose soy sauce: Recipe of the week (Ad). *Los Angeles Times*. Nov. 3. p. A10.

• **Summary:** The recipe, Savory cream vegetable sauce, includes ¼ cup Kikkoman soy sauce.

4188. Kikkoman International Inc. 1960. Kikkoman all-

purpose soy sauce: Recipe of the week (Ad). *Los Angeles Times*. Nov. 10. p. A13.

• **Summary:** The recipe, Family-favorite teriyaki meatballs, features a sauce which calls for ½ cup Kikkoman soy sauce, 1½ tsp. brown sugar, ½ clove chopped garlic, ½ tsp. fresh or powdered ginger, and ½ cup water. The sauce is poured over meatballs, which are then baked.

4189. Caviarteria. 1960. So—What’s a Caviarteria? (Ad). *New York Times*. Nov. 12. p. 9.

• **Summary:** “Its a place where you can browse freely among 2,000 exciting packaged foods from 28 countries.”

The section titled “Sauces & condiments” includes “Chin. [Chinese] or Japanese Soy Sauce, 6 oz.—39¢.”

4190. UPI Telephoto. 1960. A pointed reminder (Photo with caption). *Chicago Daily Defender*. Nov. 15. p. 16.

• **Summary:** This is an excellent, large photo of Shinzo Ohki, founder of Oriental Show-You Co. The caption reads: “Shinzo Ohki holds a Samurai sword estimated at more than 300 years old, from the collection of William Jones of Columbia City, Indiana. Tedious search has resulted in identifying the owners of two other swords which have been sent back to the families in Japan who prized them so highly.”

The same photo, but smaller, appeared in the Nov. 26 issue (p. 8).

4191. Kikkoman International Inc. 1960. Kikkoman all-purpose soy sauce: Recipe of the week (Ad). *Los Angeles Times*. Nov. 17. p. 11.

• **Summary:** The recipe, Paradise island broiled chicken, calls for ½ cup Kikkoman soy sauce. “A super-surpriser—do it tonight!”

4192. Kikkoman International Inc. 1960. Kikkoman: Recipe of the week (Ad). *Los Angeles Times*. Nov. 21. p. A4.

• **Summary:** The recipe, Famous encore salad dressing, calls for 2 tbsp. Kikkoman soy sauce. “Shake well before using. Kikkoman soy sauce makes the lively difference!” The word “Kikkoman” is written in a bigger, bolder typeface. Across the bottom of the ad: “All-purpose Kikkoman Soy Sauce.”

4193. Aljat, -. 1960. Food & utilization of food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean Science Congress. Section G. Human Ecology. See p. 65-68. Held 14-24 Nov. 1960 at Karachi, Pakistan.

• **Summary:** Gives detailed instructions for making the following soybean products: tempeh (tempe, soya-cake, moulded), tofu (tahu, soya curd, coagulated with gypsum / sakow powder), miso (taotjo), and sweet Indonesian soy sauce (Ketjap [perhaps ketjap manis], made with black soybeans). Also describes how to make onchom (ontjom) from peanuts, plus krupuk, and lempers. Table 1 compares

the nutritional composition of powdered Saridele and cow’s milk. Table 2 compares the amino acid composition of various mixtures containing soy.

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term “soya curd” or the word “tahu” to refer to tofu.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “sweet Indonesia soy sauce” to refer to what is probably *kecap manis*. Address: Nutritional Inst. Labs., Djakarta, Indonesia.

4194. Hayashi, Shizuka. 1960. The tour of the soy sauce team. *Soybean Digest*. Nov. p. 24-25.

• **Summary:** “Shown on the opposite page are some of the pictures taken of the Japan Soy Sauce visiting team during their tour of the U.S. soybean industry in September and October.” A list of many of the places visited is given.

Ten photos of the group and of individual members are shown; each has a detailed caption. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome Yurakucho, Chiyoda-Ku, Tokyo, Japan.

4195. Ohsawa, G. 1960 Zen macrobiotics: The art of longevity and rejuvenation. New York, NY: Ohsawa Foundation. Printed in Japan. 218 p. Undated. Index. 17 cm.

• **Summary:** This is the first printed edition of Zen Macrobiotics. The cover is gray. The author is George Ohsawa. The content is basically the same as the original mimeograph edition, however it has been edited and several of the parts have been rearranged and renamed to create a Forward [sic] (p. 3-5), a Preface (p. 6-8), and Chapters 1-3 (p. 15-43). At the end are two appendixes: One, which was titled “The Case of Mr. E,” appeared at the end of the mimeograph edition. The second, which has been added is titled “The Pro-Forma Death Certificate of the American World Empire and its Gold Dynasty.”

Concerning the date of publication: Although the date is not given in or on the book, the periodical *Macrobiotic News* announced it as being available in November 1960.

Distinguishing marks of this printing: Page 3: “Forward” is misspelled. Page 7: “... hundreds of ways of cookin [sic] and eating. They are all aim [sic] to create...” Page 62: “The yellow part is most yound [sic],...”

These four errors were corrected in the next printing.

Both printings have 218 pages. However, pages 217 and 218 are different in the two books.

At least two printings were done in Japan. As of April 2011, Carl Ferré, President, George Ohsawa Macrobiotic Foundation (Chico, California) has one original of each.

Carl adds (e-mail of 30 April 2011): “Page 218 of the book you have (*Macrobiotics: The Art of Longevity and Rejuvenation*, by G. Ohsawa) appears to be exactly the same as the second Japan printing. It seems to confirm my

hypothesis of a first printing in Japan in 1960, a second printing in Japan around 1962, and a third printing of the same edition in the U.S. after the 1962 Japan printing (and might even be the 1964 book referred to in Yin Yang). I believe the first reference in Macrobiotic News to a printed book is November 1960. Because editions of *Zen Macrobiotics* may have been printed at the same time as *Philosophy of Oriental Medicine*, we may need to look into that title as well in order to determine the full story.” Address: Ohsawa Foundation: 331 Riverside Dr., New York City. Secretary Aihara, 44 W. 96th St., New York City, U.S.A.

4196. *Soybean Digest*. 1960. The cover picture: Mrs. Michiko Hamaguchi. Nov. p. 23.

• **Summary:** Mrs. Hamaguchi was the guest of Mrs. George Strayer in Hudson, Iowa. She is a member of the Japan Soy Sauce Brewers Association visiting team which toured the USA in September and October.

“Mrs. Hamaguchi is not only the wife of K. Hamaguchi, a director of the Soy Sauce Association and president of the Choshi Soysauce Co., but she is also a well-known soprano singer in Japan.”

4197. Kikkoman International Inc. 1960. Kikkoman all-purpose soy sauce: Recipe of the week (Ad). *Los Angeles Times*. Dec. 1. p. 21.

• **Summary:** The recipe, Easy does it steak superb, calls for ½ cup Kikkoman soy sauce.

4198. Kikkoman International Inc. 1960. Kikkoman all-purpose soy sauce: Recipe of the week (Ad). *Los Angeles Times*. Dec. 8. p. 28.

• **Summary:** The recipe, Fish fancier’s delight, calls for a marinade containing ¼ cup Kikkoman soy sauce.

4199. USDA ARS Northern Utilization Research and Development Division, Peoria, Illinois. 1960. Definitions of foreign foods of current interest (Brochure). Peoria, Illinois. 4 p. Dec. 13. 28 cm.

• **Summary:** The first section, titled “Japanese foods from soybeans” (p. 1-2) includes: Aburage, frozen tofu, Hamanatto (Hamananatto), kinako (A form of full-fat soy flour made by grinding roasted soybeans), koji (A culture prepared by growing *Aspergillus oryzae* on cooked rice, wheat or other cereal for a few days. Serves as a source of enzymes for making miso, soy sauce, saki [saké, sake] and other fermented foods), kori tofu, miso, monosodium glutamate (a seasoning compound first isolated from soy sauce), nama-age, natto, satsumage [satsuma age], soybean milk or tonyu, soy sauce or shoyu, tofu, yaki-dofu, yuba.

The second section, titled “Indonesian fermented foods” (p. 3-4) includes: Arak, ketjap (soy sauce made with black soybeans), ontjom, ragi, sajur asin, tapé ketan (fermented

glutinous rice), tapé katella (fermented arrowroot), tempeh (or témpé or témpé kedelé), tuwak. Address: Peoria, Illinois.

4200. Jones, Stacy V. 1960. Variety of ideas in new patents: Japanese trade-mark. *New York Times*. Dec. 24. p. 19, 25.

• **Summary:** Yamasa Shoyu Company of Japan wishes to register with the “Patent Office an arrangement of Japanese characters, as a trade mark for soy sauces.” On top of the Yamasa logo is an inverted “v,” meaning “high mountain.” Underneath it is a “character designating Kihei Hiroya, the founder of the business.”

4201. **Product Name:** [Ajieki (HVP Soy Sauce)].

Foreign Name: Ajieki.

Manufacturer’s Name: Ajinomoto K.K.

Manufacturer’s Address: Tokyo, Japan.

Date of Introduction: 1960.

New Product–Documentation: Ogasawara. 1960. Jozo Kogyo Rinji Zokan (Brewing Industry, Special Edition). p. 207-16; Ajinomoto K.K. 1978. Ajieki (Leaflet). 8 p. Soya Bluebook. 1984. p. 76. Ajinomoto Co., Inc., Kyobashi 1-5-8, Chuo-ku, Tokyo, Japan.

4202. Aoyama, Torahiko. 1960. Amino-san eki [Liquid hydrolyzed vegetable protein (HVP)]. *Jozo Kogyo Rinji Zokan (Brewing Industry, Special Edition)* p. 225-30. [6 ref. Jap]

Address: Professor, Ibaraki Univ., Ibaraki-ken, Japan.

4203. Choe, C.E.; Song, P.S. 1960. [Fermented soybeans of Korea]. *Kwayon Huibo (Bulletin of the Scientific Research Institute, Korea)* 5(1):29. [Kor]*

• **Summary:** Mentions *meju*–fermented soybeans of Korea.

4204. **Product Name:** Diamond Shoyu Lower Salt Soy Sauce.

Manufacturer’s Name: Honolulu Sake Brewery & Ice Co. Ltd.

Manufacturer’s Address: 2150 Booth Rd., Honolulu, Oahu, Hawaii.

Date of Introduction: 1960.

Ingredients: Water, soybeans, wheat, salt, malic acid, disodium 5-inosinate, caramel, sodium benzoate, a preservative.

Wt/Vol., Packaging, Price: 16 fluid oz (1 pint) bottle.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows a label and gives the address. The company is still in business. Label. Received Feb. 1988 from Honolulu Sake Brewery Co. Ltd. 5 by 3 inches. Red and black on white. “Lower Salt. Salt content: approximately 5.0%. Sodium 2055 mg/100 gm, 111 mg/teaspoon (5 cc). Refrigerate after opening.” Letter from Takao Nihei. 1988.

July 19. Gives date of introduction as 1960.

4205. Kanno, Masaaki? 1960. Shinshiki 2-gô shôyu [Shinshiki No. 2 soy sauce, semi-fermented]. *Jozo Kogyo Rinji Zokan (Brewing Industry, Special Edition)* p. 217-24. [4 ref. Jap]

Address: Noda Sangyo Kagaku Kenkyusho, Noda, Japan.

4206. Ogasawara, Takeshi. 1960. Ajieki ni tsuite [On Ajieki, HVP soy sauce]. *Jozo Kogyo Rinji Zokan (Brewing Industry, Special Edition)* p. 207-16. [7 ref. Jap; eng+]

Address: Prof., Ibaraki Univ., Japan.

4207. **Product Name:** Cutlets.

Manufacturer's Name: Worthington Foods, Inc.

Manufacturer's Address: 900 Proprietors Road, Worthington, OH 43085. Phone: 800-628-3003.

Date of Introduction: 1960.

Ingredients: In 1971: Wheat protein [wheat gluten], extract of Brewer's yeast, hydrolyzed vegetable proteins, MSG, salt, caramel coloring, water to process.

Wt/Vol., Packaging, Price: 50 oz (1417 gm) can. Retail for \$6.25 (7/90, California).

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual*. 1st ed. p. 95. Cutlets plus their liquid contain 15.50% protein, 0.62% fat, and 4.94% carbohydrate. Not listed in the 1965 *Diet Manual*.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 161. Lists the ingredients in "Cutlets (Worthington)."

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 4th ed. p. 175. The ingredients in "Cutlets (Worthington)" are "wheat protein, yeast extract, HVP, soy sauce, mushrooms, MSG, salt, lysine, dextrose, corn oil."

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27.

By 1990 this product had been reformulated with textured soy protein concentrates.

4208. Chiang, T'ien-chiang. 1960. Ta tou ying yang yu chia kung [Soybeans and soyfoods?]. China. 183 p. [10+ ref. Chi] Address: China.

4209. Doi, Tadao. ed. 1960. Nippo Jisho: Vocabulario da lingua de Iapam [Vocabulary of the language of Japan]. Tokyo: Iwanami Shoten. 822 p. 22 cm. [Por; Jap]

• **Summary:** This is facsimile edition of the original 1603 edition, the second earliest dictionary of the Japanese language compiled by Europeans.

Soy-related terms in this dictionary include: Abura ague [Abura-agé]. Aburidôfu. Amazaqe [Amazake]. Cabe

[Tofu]. Côji [Koji]. Daizzu [Daizu]. Dengacu [Dengaku]. Fanben [Hanben]. Icchô. Mame. Graos, ou feijoes de Iapao [Soybeans]. Miso [made with rice]. Misocoxi [Misokoshi, a miso strainer]. Misoya [A shop which sells miso]. Misoyaqijiru [Miso-yaki-jiru, a soup made with grilled miso and diced tofu]. Misôzzu [probably a soup seasoned with miso resembling Zosui]. Nattô. Nattôjiru. Tofu. Tofuya [A shop which makes and sells tofu]. Tamari. Vdondôfu [Udon-dôfu]. Xôyu [Shoyu, or soy sauce]. Yudôfu. Address: Nagasaki College of Japan.

4210. Hayward, Helena. ed. 1960. The connoisseur's handbook of antique collecting: A dictionary of furniture, silver, ceramics, glass, fine art, etc. New York, NY: Hawthorn Books Inc. 320 p. See p. 261. Illust. 22 cm. [110* ref]

• **Summary:** The purpose of this book is to provide a glossary of terms used by antique collectors. On page 261 we read: "Soy frame: silver or plated oblong or oval stand with ring frame for holding soy or sauce bottles. Introduced in the late 18th century. Found *en suite* with larger cruet (q.v.) frames."

At "Cruets" (p. 89) we read: "(1) the vessels containing the wine and water for use at the Eucharist... (2) bottles for condiments, contained in cruet frames." They typically held fine glass bottles containing oil and vinegar. An illustration shows two cruets (glass bottles) in a cruet frame.

4211. Huang, Lin. 1960. Seni bunga Tionghoa [Chinese flower arrangement]. Djakarta, Indonesia: Keng Po. xiv + 97 p. See p. 99. Illust. 22 cm. [Ind]*

• **Summary:** Mentions *ketjap manis* and *ketjap asin* as ingredients in one recipe (XIX. Tambahan, p. 99).

Note: This is the earliest document seen (Oct. 2010) and the earliest Indonesian-language document seen (Oct. 2010) that contains the term *ketjap manis*. Indonesians have been making a sweet, thick soy sauce since at least the early 1800s (see Titsingh 1824 and Prinsen Geerligs 1895). Traditionally, it was typically sweetened with a dark sugar from the areng palm and flavored with star anise and other seasonings and herbs.

4212. Joya, Mock. 1960. Things Japanese. Tokyo: Tokyo News Service, Ltd. [vi] + 782 + xlv p. Index. 21 cm.

• **Summary:** In Chapter 7, titled "Food, 'Sake' and Tobacco" (p. 275-331) the following may be of interest: Asakusa-nori (includes shoyu), azuki (incl. soybeans, tofu, miso, shoyu, natto), bento and kashi, cattle, chameshi, chawan-mushi ("somewhat similar to Western custards." Make katsuoobushi {shaved dried bonito} soup stock, cool, pour into individual *chawan-mushi* bowls {each has a cover}. Mix in an equal quantity of beaten eggs. Add additional flavoring ingredients, cover, and steam until set. "One of the few Japanese dishes that resemble Western dishes in taste").

Chazuke, cooking (incl. sukiyaki and tempura), daikon

(incl. miso), drinking cups and customs, eel-eating day (eels are broiled, steamed, then put in a specially prepared shoyu and broiled again), ginnan (ginkgo nuts), gobo (burdock, incl. miso soup and shoyu), gohan (boiled rice), kabayaki (eel), kamaboko, kashi (confections and sugar), katsuo-bushi (incl. shoyu), kawara-senbei (incl. miso), konnyaku (its shredded form, called shirataki, is used in sukiyaki), manju, matsutake mushrooms (widely used in sukiyaki in the fall), menrui (noodles, incl. soba, udon, shoyu), mikan (mandarin oranges), misoshiru (miso soup, incl. tofu, shoyu, tekka-miso, tai-miso, yuzu-miso, wakame), mochi, mochi-tsuki (pounding), myoga (*Zingiber mioga*), oden (with tofu, miso, and shoyu), one-sided fish, red rice (*sekihan*, made with azuki = red beans), ringo (apples), sakana (fish, incl. shoyu and tofu), sake drinking, sake eating, sashimi (incl. shoyu and mirin), satsuma-imo, seaweeds (sea vegetables), shinchu (new tea), shoyu (Japanese-style soy sauce; per capita consumption is nearly 4 gallons a year), snake eaters, soba (incl. shoyu), souvenir cakes, sugar, suimono (clear soup, incl. miso and shoyu), sukiyaki (incl. tofu and shoyu), sushi (incl. Inari-zushi made with fried tofu), sweets in season, tea varieties, tea water, tempura (incl. sesame oil and shoyu), tobacco tradition, tofu (incl. bitter/nigari, yaki-dofu, aburage, ganmodoki, Koya-dofu, fried tofu, hiyayakko, sukiyaki, dengaku, miso, miso-shiru, shoyu), tokoroten (kanten, tengusa), tsukemono (pickles, incl. miso), umeboshi, wasabi (incl. shoyu), yasai (vegetables), yokan, and yonaki-soba. Note: Different types of yokan (*yōkan*, a paste made of azuki beans and sugar) include: mizu-yokan (soft azuki-bean jelly) and mushi-yokan (steamed yokan). Yokan-iro is a liver or rusty color.

Other subjects related to soy: Home cures (p. 66-67, for burns, apply the white of an egg or shoyu). Setsubun (p. 119, incl. mame-maki or throwing roasted soybeans). Brother mountains (p. 192, the most loved one, Fudo-iwa, was fed azuki or red beans but the unloved Gongen-yama was fed soya beans). Fox messengers (p. 207-08, aburage or fried tofu). Kuyo (p. 373-74, incl. hari-kuyo or mass for broken needles—but tofu is not mentioned). Azuki (p. 276-77). Red rice (*sekihan*, p. 303). Lunar calendar (p. 400, setsubun and bean throwing). Bamboo (p. 410, incl. bamboo shoots served with shoyu). Hi-no-kami (p. 474, incl. amazake). Sacred rice (p. 504, incl. setsubun and throwing roasted soybeans). Shoulder-chipped Jizo (p. 517, concerns the stone statue of Jozo at the Kiunji Temple, Tozaki-machi, Bunkyo-ku, Tokyo, and foxes and a tofu shop). Inari-san (p. 616-17, Inari-sushi and aburage). Address: Japan.

4213. Joya, Mock. 1960. Sukiyaki (Document part). In: Mock Joya. 1960. Things Japanese. Tokyo: Tokyo News Service, Ltd. [vi] + 782 + xlv p. See p. 316-17.

• **Summary:** Sukiyaki is mentioned throughout this book, on pages 281 (Cooking, Japanese), p. 293-94 (Konnyaku, incl. shirataki), p. 295-96 (Matsutake, a mushroom used in

sukiyaki in the fall), and p. 325-26 (Tofu, a typical ingredient in sukiyaki).

The main entry for sukiyaki (p. 316) states: “Sukiyaki is a modern addition to the Japanese menu, and although it is only about 80 years old, it has become one of the most popular dishes of the people. Furthermore, sukiyaki has now become famous all over the world. Sukiyaki and tempura are pointed out by foreign visitors as the two outstanding dishes of Japan.

“There are a few controversies over the origin of the name, and the most commonly accepted theory is that formerly it was cooked on blades of plows, and therefore this way of cooking was called sukiyaki or plows, roasting. However, there is no proof that this story is authentic.

“Sukiyaki is the cooking of sliced beef, pork, chicken or duck meats over thick iron pans. Beef is the most common meat used for sukiyaki, but chicken and pork are equally good.

“In making sukiyaki, the first requirement is the flat thick iron pan, as when the pan is thin, it is impossible to make good sukiyaki. In the Imperial duck hunting party, small individual thick iron pans are used in cooking the duck meat. This pan is oblong in shape and extremely thick, and its top is almost level with only a slight depression to hold the meat. This pan reminds one of the shape of the Japanese plow, and there might be some relation between sukiyaki and plow (*suki*) as generally believed.

“There are different ways of cooking sukiyaki. The method used in cooking duck meat at the Imperial hunting parties may be the original one. Slices of duck meat are put into a mixture of *shoyu* and *mirin* (sweet sake), and then put on the heavy iron pan placed over a charcoal fire, when the pan becomes hot. The meat is almost instantly cooked, and it is turned over swiftly and eaten. It is extremely delicious. This method is believed to be the original way of cooking sukiyaki. The same method can be used in cooking the ordinary sukiyaki at home in the common sukiyaki pan with beef or pork.

“Then, the next method is to melt the fat of meat or butter on the hot pan, and then cook the meat on the pan. The cooked slices of meat are eaten with *shoyu* or salt. This method is quite new, but yet it is liked by many persons. This method, however, enables the people to eat enormous quantities of meat, as the thin slices will just melt in their mouths.

“The third method is the most common one. In the sukiyaki pan is first put a specially prepared sauce made with *shoyu*, *mirin*, *kombu* or *katsuo-bushi*. Then sliced Japanese onions, *tofu*, *shirataki* (kneaded devil’s tongue and root), other vegetables, and sliced beef are added to be cooked. When they are cooked, the people sitting around eat from the pan. In autumn, *matsutake* and other mushrooms are also cooked together with meats. Beef, pork, duck meat, and other kinds of meat are cooked in the same manner.

“The last-mentioned is the most popular way of cooking sukiyaki, but originally perhaps, slices of meat were merely cooked on heated iron pans.

“There is no other new dish that has become so popular throughout the country within such a short period. At present, sukiyaki is a national dish, and particularly preferred by foreigners to other dishes of the country.” Address: Japan.

4214. Kihara, Yoshijiro; Takeuchi, Etsuko. 1960. [Organic acids in food products. I. Estimation of organic acids in food products by column chromatography]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 13(4):253-57. (Chem. Abst. 59:12077). [3 ref. Jap]*

• **Summary:** The organic acids in the food products such as soy sauce, soybean paste (miso), natto, pickle, vinegar, tea, coffee, bread etc. were estimated by the silica gel column chromatography. The kinds of the raw materials and the processing methods gave remarkable effects on the distribution of organic acids in each food product.

Soy sauces which were suspected to contain the acid-hydrolysate of soybean showed the presence of levulinic acid.

The miso varieties, fermented for a longer time, contained valeric [pentanoic], butyric and propionic acid, while only acetic acid was detected in the other products as volatile acid. (From journal@rchive).

4215. Korea: Its land people, and culture of all ages. 1960. Seoul, Korea: Hakwon-Sa, Ltd. 718 p. See p. 114, 602. Illust. (part color). No index. 26 cm.

• **Summary:** This large book contains a comprehensive view of Korean history and culture, with each chapter written by one or more Korean specialists and illustrated by hundreds of photos. Unfortunately, the book has no index.

A photo on an unnumbered page inserted 2 pages after p. 112, titled “Jars for food storage” shows a Korean woman with several of these jars. The caption reads: “Every home prepares such various earthenware jars for storing food such as soy-bean-sauce, doenjang (soy-bean-paste), kochujang (pepper sauce) and kimchi.

Note 1. This is the earliest English-language document seen (March 2009) that uses the word “doenjang” to refer to Korean-style soybean jang (miso).

In the section on “Agricultural products,” table 3 (p. 246), titled “Food supply and demand schedule for Fiscal 1959 throughout South Korea” gives the requirement for “Soybean sauce and cakes” as 768,000 *sok*. Under supplies, the “Bean crops of 1958, estimate, were 1,291,000 *sok*. An Appendix, (p. 714) shows that 1 *sok* (a unit of capacity) = 180.391 liters or 47.600 gallons.

Title 12, “Manners and customs” notes (p. 600): “... the farmers’ wives in the country still know nothing more than the traditional *kimchi* and rice with some inexpensive fish cooked with home-made soybean sauce... The unique

Korean foods—the *kimchi*,... soybean sauce and soybean mash are still the most important diets of both the rural and urban people and they are still prepared at home by the housewives despite the possibility of more efficient factory mass production.”

The section titled “Food and dwelling,” under “The main and side dishes” states (p. 602): “Other essential foods are bean paste and soybean sauce, both of which are used to make soup and flavor other side dishes of all kinds. The bean paste and the soybean sauce are as a rule prepared at each home. The beans are first cooked, then mashed and rolled into balls about 5 inches in diameter. The balls are then fermented for several days, finally to be immersed in salt water, to turn the salt water into soybean sauce. The residue balls of the fermented beans, on the other hand, become the soybean paste. Being for the most part prepared at home, rather than mass produced in factories on a commercial basis, the soybean sauce and bean paste of each house taste different. Since the two home-made foods find their way into almost all kinds of side-dishes, to be mixed with meat, seafoods, and vegetables, the soybean sauce and [soy] bean paste have a decisive say in the taste of all the foods prepared at each particular home.”

Kong-namul and bean sprouts are mentioned on p. 606. Nori (*kim*) is called “paper food.”

Chapter 17, “Literature: An outline of Korean literature, its heritage,” includes a discussion of many early works.

An excellent “Chronology chart of Korean history compared with world history” appears on pages 715-18. At the rear is a color fold-out map of Korea.

In the section on “Proverbs” we read (p. 660): In Korea, “reservation is more frequently encouraged, and especially volubility is strictly warned against as in the sayings: ‘Talkative families turn their sweet soybean sauce into bitters.’ ‘Go to the home of sweet soybean sauce, but not to the home of sweet words.’”

Note 2. This is the earliest English-language document seen (April 2012) that contains the term “sweet soybean sauce.”

4216. Leach, Bernard. 1960. A potter in Japan, 1952-1954. London: Faber and Faber Ltd. 246 p. Portrait. Illust. Index. 22 cm.

• **Summary:** The author is as fine a writer as he is a potter and artist. June 15, 1953 (p. 98). Near the great extinct volcano of Daisen on the borders of Tottori Province, the author and friends climbed up the old rough stone-paved pilgrims’ way to the Kongoin temple. “There we were served the best meal I have eaten in Japan, vegetarian priests’ food, over which infinite pains had been taken... mountain potatoes, crisp fried bean curd and some soft curd mixed into a paste with crushed sesame seed.”

July 1, 1953 (p. 105): “A great feed of Continental sausages and Chinese riceballs stuffed with mincemeat and

'Funiu.' The last is a strange and fascinating decoction of fermented bean curd something like a smoky Camembert in taste and texture."

August 19, 1953 (p. 132). In Nagano, Japan, the author and friends visited the very large and famous temple of Zenkoji. They noted "all the commercialized signs of Buddhist decadence, as far from Sakya Muni [Shakyamuni, the Buddha] as Rome from Christ... the vulgarized business of popular religion is equally sickening, East or West.

After that they made their way to a soba shop and the author ordered Soba Gaki which was not on the menu. "This was a kind of porridge no longer in fashion... We ate it first with shoyu sauce and then with sweet adzuki beans."

Oct. 22, 1953 (p. 166). In Toyama the author and his friends had "lunch at a Buddhist vegetarian restaurant [probably serving *shojin ryōri*] which made me wish once again that I could share the meal and its setting with artist and craftsman friends in the West. The manner of serving surpassed all, it was the service of the heart. There is a saying that the Chinese eat with their stomachs and the Japanese with their eyes. The sheer beauty of each tray or dish of food, the quiet discretion. This represents a peak of culture and its home is in Japan." Address: Japan.

4217. Lin, Tsuifeng Liao; Lin, Hsiangju. 1960. *Secrets of Chinese cooking*. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. xviii + 238 p. With an essay by Lin Yutang. Illust. (line drawings by Siu Lan Loh). 21 cm.

• **Summary:** Lin Tsuifeng is married to the well-known author Lin Yutang, and Lin Hsiangju is their daughter. Both worked to popularize Chinese cuisine in the United States. "This book is the result of many years spent away from China,..." The introductory essay by Li Yutang is titled "The art of cooking and dining in Chinese" (p. ix-xviii). In it he says (xvi-xvii): "Soya sauce is pretty well known; its quality and its possibilities in combination with sugar, wine, vinegar or sesame oil is not yet known." "There are other important ingredients which a good Chinese cook cannot do without. Among these are the pickled black beans (*toushi*), essential in preparing sea bass... They just fit in like a perfect match. This *toushi* appears as tiny black spots in the sauce of 'lobster Cantonese style' and is essential to its peculiar flavor. There is wine bean curd (*fujū*, or *toufujū*), tasting like an exotic cheese, but unlike any other flavor known before... There is the seafood sauce (*haishientsiang*) [hoisin sauce] which strengthens the flavor of any food that takes sweet and sour well... But above all I place the greatest importance on *toushi*, pickled black beans, one of the greatest creations of Chinese cuisine. It helps digestion to the extent that it takes away all feeling of heaviness after a sumptuous dinner. Given a bit of this crushed black bean, the stomach has a feeling of positive happiness in doing its duties."

Soy related recipes: Soy sauce fish (with "3 tablespoons soy sauce," p. 41-42). Soy sauce chicken (with "1 cup soy

sauce," p. 92). Soy sauce eggs (p. 111-12). Fried eggs with soy sauce (p. 113).

Chapter 9, "Seasonings and sauces," notes (p. 135, 137): "Monosodium glutamate is a marvelous discovery which has recently been introduced to America from the Orient. In the United States, it is sold under such trade-mark names as Accent, Enhance. Unlike salt or sugar, it has no individual or original taste, but it enhances the flavor of the food it seasons... This will do much to restore the taste of frozen foods, or foods otherwise altered by new methods of packaging..."

Soy sauce contains both salt and monosodium glutamate... Soy sauce has been for years an ingredient of Worcestershire Sauce, but it has only recently come into its own in America. The soy sauces available in Chinese groceries are on the whole more full-bodied than those sold elsewhere.

"The Chinese way of making soy sauce is to boil soybeans, mix the beans with roasted wheat and introduce a mold. Three kinds of mold may be used. When the molds have developed sufficiently, the mixture is placed in a salt solution,..."

Black beans [fermented black soybeans] are sold in cans. They are very salty and have a pungent odor. Use only about 2 tablespoons to season 2 or more cups of food. "Bean Cheese or Bean Cakes [Fermented tofu] are a kind of vegetable cheese made from the fermentation of boiled soybeans and crushed rice or barley. The cakes are sold in jars in a semi-liquid form. The taste closely resembles that of Camembert cheese, being strong and pungent. This is a ready-to-eat condiment which is often served in a little dish along with salted peanuts, pickles, scrambled eggs, or as an accompaniment to congee" [rice gruel].

More recipes: Bean curd soup (with "1 or 2 cakes bean curd," p. 153-54). Fried bean curd ("Drain on absorbent paper, 4 cakes bean curd," p. 171-72). Bean curd salad (p. 172). Pressed bean curd (How to make at home from regular bean curd, p. 173). Spinach or watercress with bean cheese [fermented tofu] (with "1 tablespoon bean cheese mixed with 1 tablespoon water," p. 173). Sea bass with bean cheese [fermented tofu] (and bean curd [tofu], p. 174). Fish with black beans [fermented black soybeans] (p. 174-75). Address: USA.

4218. Ma, Nancy Chih. 1960. *Mrs. Ma's Chinese cookbook*. Rutland, Vermont; Tokyo, Japan: Charles E. Tuttle, Publishers. 178 p. Illust. 27 cm. [1 ref]

• **Summary:** About the author: Because she was born in a Manchurian banker's family, she never had the opportunity to prepare even a single Chinese dish while in China. Only after her arrival in Japan did she become enthusiastic about learning how to prepare Chinese dishes. She did most of her study in Hong Kong. In 1957 her first Chinese cookbook, *Chugoku no Katei Ryori* [Chinese Home Cookery] was

published in Japan by Fujin no Tomo. This book is a translation of the Japanese edition.

The section “Sizes and amounts of ingredients” (p. 15-16) mentions “Bean curd,” which is called *tou fu* in Chinese and *tôfu* in Japanese.

The section “Spices and flavourings” (p. 17-18) mentions: “Bean paste (*mien chiang* in Chinese, *miso* in Japanese): Thick, syrupy paste made from soy beans and used for added flavor in such dishes as Pancake Rolls.” Monosodium glutamate (and its many names). Soy sauce.

Recipes include: Braised salmon with soy beans (soak 1 cup dry soy beans overnight, p. 49). Fish with bean curd (with 2 cakes bean curd, cut into 1-inch squares, p. 49). Chilled bean curd with shrimp (p. 56). Braised shrimp with bean curd (p. 58). Bean curd with ground beef and chili peppers (and soy sauce, p. 76). Bean curd with sliced pork and chili pepper sauce (and bean paste {*mien chiang*}, p. 85). Molded steamed bean curd (p. 90). Pressed bean curd with assorted meat (p. 112-13). Braised bean curd (p. 116).

Note 1. This is the earliest English-language document seen (May 2012) that uses the term “braised bean curd” but it does *not* refer to grilled tofu. To make the recipe: 1. Wrap 2 cakes “bean curd in cheesecloth and press gently to drain off liquid. Cut each cake into 8 square pieces. Mix flour, eggs and salt to form batter. 3. Heat 6 tablespoons oil. Coat bean curd squares with batter and fry on both sides to light brown. Remove to plate...

Bean curd paper sheet rolls (with 3 rolls dried bean curd {*tou fu pei chüan*} in Chinese, dried yuba in Japanese, p. 118). Spiced soy beans (with 3 cups green soy beans, unshelled [edamamé], p. 126). Pancake rolls (with bean paste {*mien chiang* in Chinese, *miso* in Japanese}, p. 133. Note 2. These rolls are used in many different recipes).

The section titled “Foodstuffs” (p. 171-72) is a glossary of major Chinese ingredients, with the name of each given first in English (they are arranged in alphabetical order), then in Mandarin (Wade-Giles), then in Chinese characters. These foods include: Bean curd, *Tou fu*. Bean paste, sweet, *Tou sa* (“bean + sand.” Note 3. This appears to be azuki bean paste). Oil, soybean, *Tou yu*. Soy bean paste *Chiang*. Soy beans, green *Mou tou* [*Mao tou*]. Soy beans, dried *Ta tou*. Soy sauce *Chiang yu*. Address: [Japan].

4219. Ouei, Mimie. 1960. The art of Chinese cooking. New York, NY: Random House. x + 242 p. Illust. by Jeanyee Wong. Index. 21 cm.

• **Summary:** The author was the daughter of a diplomat and she learned how to cook from the family’s chief cook (*Ta Shih Fu*) who always traveled with them—and from whom she learned the recipes in this book.

“There were no recorded recipes of the Chinese cuisine until the twentieth century, and even then only in Western countries. In China, cooking was done by feel and taste, and its secrets were passed on from one generation to another”

(p. 4).

One chapter titled “Soy beans and bean curd” (p. 171-83) begins: “The story of the soy bean: This miracle bean is a legume...” Tells the legend of how, 2,000 years ago a party of explorers sailing up the Yangtze in a flat-bottomed boat, discovered accidentally how to sprout soybeans, when they found that some beans in a damp bag in the bottom of the boat had sprouted. “The soy bean is so nutritious it is known as the cow of China.”

The next brief section, “How to sprout the soy bean,” begins: “Mung beans are used to grow bean sprouts.” No instructions are given for soy beans! And only “bean sprouts” are called for in the following recipes. Recipes are given for: Roasted soy bean nuts (Ts’an tou). Beef with bean sprouts (Tou ya niu jo). Bean sprouts and celery. Bean sprouts and pork. Soy bean milk (homemade; To fu chiang). Soy bean curd (homemade; Tou fu). Fried bean curd (Cha tou fu). Bean curd cheese (homemade; Fu ju). Stuffed bean curd (Tou fu chen jo, with “3 squares bean curd”). Bean curd with sea bass. Bean curd with flounder. Stewed bean curd. Braised pork with bean curd. Bean curd with braised pork. Bean curd with shrimps. Bean curd with scallions. Bean curd with mushrooms. Bean curd with eggs. Bean curd soup. Mushrooms and bean curd soup. Pork with red bean curd cheese (Nan ju jo, with “2 tablespoons red bean curd cheese in sauce {nan yu}”).

Note 1. This is the earliest English-language document seen (May 2012) that contains the term *Cha tou fu*, a type of deep-fried tofu.

Also: Soy paste noodles (Cha chiang mien, with “6 tablespoons vegetable paste (Hoisin), p. 189).

The Glossary (p. 223-30) includes entries for: Beans, black [black beans] (*Hei tou*). Beans, black, fermented [fermented black beans] [fermented black soybeans] (*Tou shih*). Bean, yellow paste [yellow bean paste] (*Tou chiang*). Bean curd (*Tou fu*). Bean curd cheese (*Tou fu ju*). Bean curd cheese in sauce (*Nan ju*). Beans, red [red beans] (*Tou sha; Hung dow*; “For making sweet black bean fillings”). Bean sprouts (*Tou ya; Da dow ngah*; “Specially grown soy bean sprouts, gold in color”). Monosodium glutamate (*Wei ching; Mei ching*; “Brings out food flavors”). Soy jam (*Chu yu*; “A thick sweet and salty soy paste. Residue of soy sauce”). Soy bean skin (*Fu tsu; Foo jook*; “Creamy-colored dried bean curd skin”).

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the term “fermented black beans” to refer to fermented black soybeans.

Note 3. This is the earliest English-language document seen (July 2011) that uses the term “Soy bean skin” to refer to yuba, or to Dried yuba sticks or rolls.

Soy sauce, light (*Chiang yu; pronounced jeung yow*; Used for cooking). Soy sauce, thick [thick soy sauce] (*Chiang yu; pronounced jeung yow*; “Imported and suited for table condiment or for special cooking”). Vegetable paste

(*Hai hsien chiang*; pronounced *hoi sin*). Address: New York City, New York.

4220. Tatsuno Shoyu Kyodo Kumiai. 1960. *Tatsuno shôyu no ayumi* [History of Tatsuno Shoyu]. Tatsuno city. 8 p. 11 x 18 cm. [Jap; eng+]

• **Summary:** Name of company with diacritics is: Tatsuno Shôyu Kyôdo Kumiai. It is written that in 1857 shoyu making started in Tatsuno. They made a little bit of sake and shoyu there and in 1590 the number of manufacturers increased. In 1595 among sake and shoyu makers, sake production became very strong and popular. Around 1666 one shoyu maker invented a unique light-color shoyu and began selling it. They received an unexpected positive response from the people who used it, so they were encouraged, improved the product, and established the base of today's Tatsuno Usukuchi Shoyu.

During the period 1714-1740, with the rising popularity of sake production, many new sake makers opened new shops. Some 100 shops sake on a scale of 20 to 300 koku (1 koku = 180 liters or 47.6 gallons) per year. But for some reason, later, sake gradually lost its popularity and the shoyu industry became more popular. The climate of this place was suited for making shoyu. They had the advantages of easy access to good quality wheat, soybeans, and salt. Also there was a river for transportation of their products to Kyoto and Osaka. These were the reasons that Tatsuno was started.

In 1672 Wakizaka Yasumasa-ko of Shinshu Iida became Lord of that place and grew interested in making shoyu. He thought it was a promising industry and encouraged it. It is told in 1741, that as a result of that, exports of shoyu to Kyoto and Osaka grew to over several thousand kegs (*taru*) per year.

In 1809 the idea of adding amazake to shoyu (*Tatsuno usukuchi shoyu*) was invented. The new product became popular among a wide range of people. At about this same time they invented the idea of using the liquid from cooking soybeans when they age (*shikomu*) shoyu.

In 1830 records show that there were 35 shoyu producers in Tatsuno; they made about 20,000 *koku* (1 koku = 47.6 gallons or 180 liters; so 952,000 gallons or 3,600,000 liters) a year. Of this they exported 49,400 *taru* (kegs) to the Kyoto and Osaka areas. Note: 1 *taru* = 3 *to* and 6 *sho* = 3.6 *to* = 17.1 gallons or 64.8 liters. So 49,400 kegs would be 844,740 gallons or 3,201,120 liters, i.e. they exported about 88.7% of their shoyu to Osaka and Kyoto.

In 1848 Lord Wakizaka became a very important position of the *Kyoto Shoshi Dai* and further encouraged shoyu production. He gave low-interest loans, helped expand the market, and gave the name *oshiire-dokoro* to shoyu manufacturers. Therefore the name of Tatsuno usukuchi shoyu became more widely known.

During 1869-70 the number of companies making Tatsuno shoyu grew very rapidly, and with the intensive

competition, the quality of the product fell drastically as output increased. Many companies went bankrupt. In June 1871 (Meiji 4) the Tatsuno Han Seisankyoku (Tatsuno feudal domain production office) was established to try to sell Tatsuno shoyu nationwide and treat sale of this shoyu as the work of the Han. But the next year the Han system was changed, largely ended—unfortunately for Tatsuno. At this difficult time, one shoyu maker named Shôzo Yokoyama (he was the first head of the Tatsuno shoyu union) became worried about the future of their industry, and met with other local shoyu makers to discuss this problem. In May 1897 (Meiji 9) they established regulations and worked hard to improve their business. As a result they laid the groundwork for today's Tatsuno usukuchi shoyu, which has become the most famous type of usukuchi shoyu. By 1882-83 the Tatsuno Shoyu Association had 65 members who produced over 200,000 koku/year (9,520,000 gallons or 36 million liters/year). Tatsuno proudly became one of Japan's top 3 shoyu manufacturing places.

All went well until 1937, when a war unexpectedly broke out between Japan and China. Things got worse during World War II, and from 1945 the lack of raw materials and workers caused major declines in both quality and quantity. Production dropped to 50,000 koku/year of regular shoyu; a decade of government economic controls (from late 1941 until March 1950) prohibited the production of usukuchi shoyu.

In Dec. 1949 the Tatsuno Shoyu Association was re-established with about 40 members, and in July 1950 the regulations concerning production and distribution of miso and shoyu were cancelled. The members had a lot of ideas and energy to rebuild their industry making Tatsuno usukuchi (light-colored) shoyu. Production and quality increased steadily, soon reaching 250,000 koku/year. In April 1952 the trade Association established the Tatsuno Shoyu Technical Training Center, where people can learn how to make better shoyu. In 1953 they cooperatively built a place to burn amino acid presscake. They found a way to reuse the salt with good results, so the government supported the project with one million yen.

Since there are few documents available to study the history of Tatsuno shoyu, in 1959 the members worked to collect this information and published it in October 1959. Since then, more interesting materials have been found, and the union is planning to publish a second volume. Address: Tatsuno city, Japan.

4222. Yokotsuka, Tamotsu. 1960. Aroma and flavor of Japanese soy sauce. *Advances in Food Research* 10:75-134. [236 ref]

• **Summary:** The best review of the literature on soy sauce up to this time, this is Dr. Yokotsuka's first major publication in English. He was born on 25 March 1917. Contents: Introduction. Composition: Analysis, nitrogen containing compounds, carbohydrates, sugar, alcohols, and extractive, acids, salts, and related compounds, color. Chemical components of flavor: Fraction I, fraction II (b.p. < 78°), fraction III (b.p. > 78°), fraction IV (the acetal fraction), fraction VI. Sources of aroma and flavor development: Raw materials, processing, koji, mash (moromi), pasteurization. Flavor ingredients as natural preservatives: Natural yeast-static and bactericidal compounds, artificial preservatives for soy sauce. Summary: Acknowledgements, references. Address: Noda Inst. for Scientific Research, and Research Inst. of Noda Soy Sauce Co., Ltd., Noda-shi, Chiba-ken, Japan.

4223. Shapiro, Lorraine. 1961. Spareribs offer dinnertime treat. *Los Angeles Times*. Jan. 15. p. WS_A14.

• **Summary:** A recipe for Spareribs with broiled peaches calls for "¼ cup Japanese soy sauce." Address: Times Home Economist.

4224. Hayashi, Shizuka. 1961. A visit to two Choshi shoyu plants. *Soybean Digest*. Jan. p. 18.

• **Summary:** Each year Japan produces about 1,200,000 metric tons (tonnes) of shoyu (soy sauce), using approximately 150,000 tonnes of soybean meal and 23,900 tonnes of whole soybeans, or the equivalent of 195,000 tonnes of whole soybeans.

Before World War II, shoyu manufacturers in Japan used only whole soybeans, and no soybean meal. The use of meal has been encouraged by the Japanese government under the allocation system. Japan's shoyu industry is the largest consumer of soybean meal for edible purposes, taking about 35% of the meal produced by the processing mills.

There are seven large manufacturers among some 5,000 shoyu makers in Japan. The shoyu production of these larger factories constitutes about 30% of Japan's total shoyu production. The author recently visited the two largest plants in Choshi City: "the Yamasa Shoyu Co., and the Choshi Shoyu Factory." The Choshi factory is the only shoyu company in Japan with oil processing equipment. This equipment is used to crush approximately 15,000 tons of soybeans annually. The meal is used exclusively for making shoyu but is insufficient to take care of the company's needs.

"According to the report of the six-member Japanese shoyu team that recently visited the United States the amino acid soy sauce made in the United States is altogether different from the shoyu produced in Japan."

"With a little promotion it will not take long before a bottle of naturally brewed shoyu will be found on the table of every family on the globe."

A photo shows David Harlow of the American Soybean

Assoc. in the factory of the Yamasa Shoyu Co. with the two Hamaguchi brothers who own the plant. Y. Hamaguchi was a member of the Japanese shoyu team that recently visited the USA. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Bldg, No. 1-Chome, Yurakucho, Chiyoda-ku, Tokyo, Japan.

polyalcohol production by *Pichia miso*. *Agricultural and Biological Chemistry* 25(2):124-30. Feb. [13 ref. Eng]

• **Summary:** *Pichia miso* is a highly osmophilic yeast (one that thrives in high osmotic pressure); it is not a type of miso, although it was isolated from miso (soybean paste). A polyalcohol (also known as a polyol, sugar alcohol, or polyhydric alcohol) is a hydrogenated form of carbohydrate, whose carbonyl group (aldehyde or ketone, reducing sugar) has been reduced to a primary or secondary hydroxyl group (hence the alcohol). Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4230. *SoyaScan Notes*. 1961. Official figures for per capita annual consumption of shoyu in Japan (1952-1961) (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1952–12.9 kg/year = 35.3 gm/day = 5.934 sho/year.

1953–13.1 kg/year = 35.8 gm/day = 6.026 sho/year.

1954–14.1 kg/year = 38.5 gm/day = 6.486 sho/year.

1955–14.3 kg/year = 39.1 gm/day = 6.578 sho/year.

1956–14.6 kg/year = 39.9 gm/day = 6.716 sho/year.

1957–13.7 kg/year = 37.5 gm/day = 6.302 sho/year.

1958–13.4 kg/year = 36.8 gm/day = 6.164 sho/year.

1959–13.7 kg/year = 37.4 gm/day = 6.302 sho/year.

1960–13.6 kg/year = 37.3 gm/day = 6.256 sho/year.

1961–13.0 kg/year = 35.6 gm/day = 5.980 sho/year.

Note: The peak year during this early postwar period was 1956. A *sho* is the traditional unit for measuring capacity / volume. 1 *sho* = 1.800 liters = 1.903 quarts = 0.476 gallons.

4231. Diser, Gleason M. comp. 1961. Glossary of soybean terms. *Soybean Blue Book*. p. 61-64.

• **Summary:** This is the first glossary with this title in the *Soybean Blue Book*. However in the first *Blue Book* (1947, p. 17-19) there was a somewhat similar section titled “Terminology: Definitions and product descriptions for the soybean industry.”

The following terms are defined in this glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical pressing, hydraulic pressing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, soybean hay meal, soybean flakes, 44% protein soybean oil meal, dehulled soybean flakes, 50% protein solvent extracted soybean oil meal, soybean proteins, soy flour, soy grits, soybean oil meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting. Oriental soy foods: Soy sauce (shoyu), soy milk,

miso, frozen tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts). Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

4232. Shurpalekar, S.R.; Chandrasekhara, M.R.; Swaminathan, M.; Subrahmanyam, V. 1961. Chemical composition and nutritive value of soyabean and soyabean products. *Food Science (Mysore, India)* 10(3):52-64. March. Published in 1961 as a 32-page book by the Soybean Council of America in Hamburg, Germany. [178 ref]

• **Summary:** Contents: Introduction. Chemical composition and nutritive value. Soyabean oil. Carbohydrate in soyabean. Minerals in soyabean. Vitamins in soyabean. Factors affecting nutritive value: Trypsin and growth inhibitors, heat processing, other factors. Digestibility and biological value: Animal experiments, supplementation with sulphur amino acids, human feeding experiments. Supplementary value to other food proteins. Processed foods from soyabean: Soyabean milk, dried milk substitutes from soyabean, malt foods containing soyabean, soyabean flour, multipurpose food (fortified soyaflour), dehydrated soup mixture, balanced food, soyabean protein isolate. Fermented soyabean products: Soy sauce, tofu or soyabean curd, miso, natto, tempeh. Conclusion.

Note 1. This is the earliest document seen (Jan. 2001) from India that mentions tempeh.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term “soyabean protein” (or “soyabean proteins”).

Note 3. This is the earliest English-language document seen (Aug. 2003) that contains the term “soyabean protein isolate” (or “soyabean protein isolates”). Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4233. *Hartford Courant (Connecticut)*. 1961. La Choy offers chopsticks premium. April 16. p. 30A.

• **Summary:** La Choy will offer four pairs of chop-sticks, made of choice hardwood. lacquered Mandarin red, free of charge, in return for a label from one can of its shrimp chop suey or chow mein.

La Choy now sells 20 products. “The George Wm. Bentley Co. represents La Choy in New England.”

4234. Hayashi, Shizuka. 1961. Favor U.S. soybeans for shoyu. *Soybean Digest*. April. p. 22.

• **Summary:** Gives the results of laboratory tests, conducted by the Soy Sauce Research Institute, comparing Japanese-grown soybeans (No. 2 grade Hokkaido Takachi small size variety) with U.S. soybeans (Illinois No. 2 yellow). The U.S. soybeans scored higher in the amount of soy sauce produced, and the taste and nitrogen content of that soy sauce.

An analysis of a sample of U.S. soybeans shows: Perfect beans 85.88%. Broken beans 11.81%. Damaged beans 0.84%. Foreign material 0.69%. Soybean hulls 0.61%.

Morning glory seeds 0.15%.

The lab tests must be confirmed by large-scale experiments on a commercial basis before final conclusions can be made. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome Yurakucho, Chiyoda-Ku, Tokyo, Japan.

Changes in amounts of organic acids during miso brewing]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(4):351-54. April. [5 ref. Jap]
Address: Aichi-ken Shokuhin Kogyo Shikenjo (Aichi Inst. of Food Technology).

4238. Onishi, Hiroshi. 1961. Studies on osmophilic yeasts. XII. Characteristic aspects on the assimilation and fermentation of sugars by osmophilic yeasts in the environment of a high concentration of sodium chloride. *Agricultural and Biological Chemistry* 25(5):341-49. May. [14 ref. Eng]

• **Summary:** "Sugar assimilability and fermentability are the most important criteria in the taxonomy of yeasts." The researchers found that "these properties of the salt-tolerant [halophilic] yeasts can be drastically altered by changing the concentration of NaCl [common salt] in the medium,..."

Assimilation of galactose and maltose by *Saccharomyces rouxii*, a typical salt tolerant yeast that plays an "important role in soy-brewing" [soy sauce fermentation], was negligible or extremely poor in a medium containing 18% NaCl, even though the assimilation was vigorous in

the ordinary (NaCl-free) medium. Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4239. Smith, Allan K.; Wolf, Walter J. 1961. Food uses and properties of soybean protein. I. Food uses. *Food Technology* 15(5):4-6, 8, 10. May. [34 ref]

• **Summary:** Contents: Summary. Introduction. Commercial soybean protein fractions. Soybean foods: Soybean varieties (garden varieties vs. field varieties, main differences between them, U.S. soybean breeding program). Trends in protein requirements (worldwide protein shortage). Soybeans and fractions used in food: Whole soybeans, defatted soybean meal, isolated proteins, protein concentrate (called "protein concentrate 70" in the summary), Gelsoy.

Whole soybeans may be baked or boiled, or used to make sprouts, fresh or dried tofu, vegetable milk (or "soybean milk"), yuba, and many fermented food products, including "miso or soy paste, natto, hamanatto, shoyu (soy sauce), tempeh, and some less important foods."

"Protein concentrate: Extraction of dehulled and defatted meal with dilute acid (pH 4.5) removes soluble sugars, nonprotein nitrogen, and other low-molecular weight components and a small amount of protein. The flavors are also mostly removed in the extract or in drying. The dried concentrate contains about 70% protein unless soybeans containing above-average protein are used.

"This product, having a manufacturing cost between that of soy flour and isolated protein, has been introduced recently into the food industry. This protein concentrate is a combination of the acid-precipitated protein plus the residue normally obtained in isolating the acid-precipitated protein... A protein concentrate can also be made by extraction of SOM [soybean oil meal] with about 70% ethanol at 50°C or higher. This type of product is finding its place in the food industry."

Note: This is the earliest English-language document seen (Dec. 2005) that uses the term "protein concentrate 70" or the term "protein concentrate" to refer to a product containing 70% protein on a dry-weight basis. Address: NRRL, Peoria, Illinois.

4240. Kikkoman International Inc. 1961. Wonderful flavor: Excitement imported from Japan. Kikkoman all-purpose soy sauce (Ad). *New York Times*. June 29. p. 23.

• **Summary:** This is Kikkoman's first large ad in the *New York Times*. "Try these taste-tempting recipes—So easy and so good!" Recipes are given for: Shishkebab! [Shish kebab]. Steak superb! Heavenly hamburger! Chicken exotique! Fish favorite!

A sidebar across the bottom of the ad states: "Kikkoman soy sauce now on sale at these leading markets: A&P Food Stores, Acme Super Markets, Associated Food Stores, Big Apple, Cracker Barrell, D'Agostino Supers, Daitch-Shopwell Super Markets, Davidson Super Markets, Einhorn Super

Markets, Fair-Mart Supers, Felco Food Stores, Food Farm, Food King Super Markets, Food Queen Stores, Food Town, Garden Markets, Grand Union Stores, Gristede Stores, Hill's Super Markets, Key Food Stores, Korvelle's Lou-Mac Stores, Mayfair Super Markets, Mutual Super Markets, Olinsky Markets, Packard-Bamburger, Peter Reeves Stores, Royal Farms, Sloan's Super Markets, Smilen Foods, Sunrise Super Markets, Supreme Food Stores, 2 Guys, Valley Fair Super Markets (Many additional markets are currently being supplied and will have Kikkoman on display shortly.)"

"So superior. It's sensational." Photos show the Kikkoman bottle and each of the dishes prepared from the recipes. An illustration (line drawing) shows an American man wearing a white chef's hat (with the Kikkoman logo on the front) and a white barbecue apron.

4241. *Washington Post*. 1961. Add zest to summer salads with special dressings: Anne's reader exchange. June 29. p. C4.

• **Summary:** In the section titled "Lobster Cantonese," Anne offers this recipe in reply to a request. "The black beans and fresh ginger" in Chinese grocery stores. The ingredients include: "2 tablespoons black fermented beans" [fermented black soybeans]. These beans are crushed, then mixed with soy sauce and other ingredients.

4242. Hayashi, Shizuka. 1961. Soybeans in the nutrition of Japan. *Soybean Digest*. June. p. 31.

• **Summary:** "Japan, with a population of 95 million people on a land area smaller than that of the state of California, is confronted with the problem of how best to feed its population. With the population increasing at a rate of 1 million annually, the problem perhaps will become permanent. According to 1959 government statistics, the following amounts of soybeans (in tonnes or metric tons) were used to produce oil and soyfoods in Japan: Crushed for oil 840,583, tofu 318,150, shoyu (soysauce) 217,686, miso 173,933, frozen tofu 40,000, natto 35,000, kinako [roasted soy flour] 13,000.

Japan uses 420,000 tonnes of soybeans that are grown domestically and 1 million tonnes imported from the U.S. Of the 26.7 gm of fats and oils available to each Japanese daily, 7.6 gm (28%) is supplied by soybeans. Of the 67.7 gm of protein available to each Japanese daily, soybeans provide 10.6 gm (15.7%).

"Meat is not only scarce but the price is too high to meet the daily needs of average people. Annual per capita meat consumption in the United States is 237 pounds while in Japan it is only 2.3 pounds." "The Japanese intake of fats and oils is less than 10 pounds per capita in comparison with about 50 pounds in western countries."

"The Japanese live too much on carbohydrate foods. Rice eating must be minimized and more protein foods eaten. The obvious conclusion is the increased consumption of

soybeans."

Note: This is the 2nd earliest document seen (Jan. 2012) that contains industry or market statistics for natto by geographical region. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1-chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

4243. Namiki, Mitsuo; Okazawa, Y.; Matsuyama, A. 1961. Miso oyobi shōyu no gamma-sen shōsha. I. Miso no waki ni taisuru shōsha kōka [Gamma irradiation of miso and soy sauce. I. Radiation effects on "waki" (generation of gasses) of miso]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(6):528-33. June. [5 ref. Jap]
• **Summary:** Miso generates gasses during storage at high temperatures. This phenomenon called "Waki" is a disadvantage for commercial packaging. Irradiation reduces this gas generation. Address: 1-2. Inst. of Physical and Chemical Research; 3. Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

4244. Okazawa, Yoshishige; Namiki, M.; Matsuyama, A. 1961. Miso oyobi shōyu no gamma-sen shōsha. II. Bisei-buttsu ni taisuru shōsha kōka [Gamma irradiation of miso and soy sauce. II. Radiation effects on microorganisms]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(6):533-40. June. [16 ref. Jap]
Address: 1-2. Inst. of Physical and Chemical Research; 3. Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

4245. Nakamura, Hiroshi. 1961. The Japanese soybean market. *Illinois Agricultural Economics* 1(2):7-13. July.
• **Summary:** Contents: Introduction. Soybeans in the Japanese diet. Patterns of soybean consumption. Changes in tastes and preferences. Preferences for types of soybeans. Supply of soybeans to Japanese market. Soybean production in Japan. Future of soybean consumption in Japan. Japanese government import policy.

Table 1 shows "Soybean supply and consumption in Japan, 1934-1936 average and 1950-1959." Vertical columns show domestic production, imports, crushings, used as whole soybeans, and percent of imports from United States. By 1951, 95% of imports were coming from the USA.

Table 2 shows total and per capita consumption (in kg and lb) of miso, shoyu, and edible oils (all types) in Japan, 1934-1936 average and 1950-1959. In 1957, compared with the 1934-36 average, per capita consumption of miso is 19.62 lb (down 14.4%), shoyu is 30.20 lb (down 0.8%), and edible oils is 7.05 lb (up 350% from 1.98 lb).

"In Japan, soybeans are considered a food grain like rice and wheat and, in fact, serve as an important source of protein supply in the Japanese diet. Total annual consumption exceeds 1,500,000 metric tons; but as production in Japan is only 400,000 tons, more than a million tons of soybeans are

imported each year, mostly from the United States. Of all the agricultural exports of the United States to Japan, soybeans today occupy the most important position, amounting to nearly 100 million dollars per year.”

4246. Smith, Allan K. 1961. Oriental methods of using soybeans as food. With special attention to fermented products and notes on Oriental farming practices. *USDA Agricultural Research Service*. ARS-71-17. 65 p. July. Illust. 27 cm.

• **Summary:** Contents: Part I: China. Introduction. Farming conditions in China. Oilseed production. Soy sauce in China. Sweet flour paste—Tien mien chang [chiang]. Soybean or vegetable milk (incl. Willis Miller and the Henningsen Produce Co. in Shanghai). Yuba. Soybean curd or tofu. Soybean cheese [fermented tofu]: Chee-fan (“cheese” + “small cube”), tsüe-fan (“drunken cheese”), hon-fan (“red cheese”). Fen-T’iao from mung beans. Fermented soybeans [fermented black soybeans]. Vinegar fermentation process.

Note: This is the earliest document seen (Oct. 2011) that uses the term “tsüe-fan” (“drunken cheese”) to refer to a type fermented tofu.

Part II. China—Chinese Institutions. Henry Lester Institute (in Shanghai; Dr. Bernard Read). Academia Sinica (headquarters in Nanking). China Vegetable Oil Corporation (CVOC, Shanghai). The China Oils and Fat Industries Ltd. (Shanghai). National Bureau of Industrial Research. Catholic University (Fu Jen, at Peiping). Yen Ching University (Peiping). Agriculture Experiment Station (Peiping).

Part III: Japan. Introduction. Production of miso in Japan. Soy sauce in Japan. Trends in soy sauce production. Part IV: With Raymond E. Culbertson. Korea. Introduction. Breeding work. Soybean varieties. Climatic relations. Soils of Korea. Topography. Land use. Cultural practices. Marketing. Soybeans as foodstuff. Soy sauce. Acknowledgment.

Page 19 states: “The China National Government has taken an active interest in soybean milk for use by its army. Mr. Willis Miller, with offices and business connections with the Henningsen Produce Company in the Dollar Building (7th Floor) at 51 Canton Road, Shanghai, had just completed, at the time of my visit, the building of a soybean milk plant for the Chinese Government. The process is patterned after that of the International Nutritional Laboratories at Mt. Vernon, Ohio, for making a powdered or spray-dried milk. Mr. Miller also was supervising the installation of a vegetable canning plant for the same purpose.”

The text of this bulletin was previously published, serially, with slight revisions, in *Soybean Digest*, from Feb. to June 1949. Address: Northern Utilization Research and Development Div., Peoria, Illinois.

4247. Yamamoto, Kishiro. 1961. Studies on the mechanism of mold protease production. III. Activating factors of

inactive protease in cell-free extracts of *Aspergillus sojae* KS. *Agricultural and Biological Chemistry* 25(7):519-26. July. [16 ref. Eng]

• **Summary:** Several kinds of metals were found to be involved in activation. “The velocity of the activation was maximal around pH 10 as well as around pH 5. It was proved that a kinase (enzyme) capable of activating the inactive protease in alkaline solutions does exist in the cell-free extract.” Address: Noda Inst. for Scientific Research, Noda, Japan.

4248. Kikkoman International Inc. 1961. Kikkoman: Recipe of the week (Ad). *New York Times*. Aug. 10. p. 30.

• **Summary:** The recipe, Chef’s choice chuck, calls for ½ cup Kikkoman soy sauce. Across the bottom of the ad: “All-purpose Kikkoman Soy Sauce.” A photo shows the Kikkoman bottle. A small illustration (cartoon) shows the cute little girl in the chef’s hat.

4249. Claiborne, Craig. 1961. Chinese cook will teach ancient art: Mrs. Chu, chef who taught herself, to conduct course. *New York Times*. Sept. 14. p. 25.

• **Summary:** Her recipe for Cucumber sliced pork soup (Hwang Kua Jo Tang) calls for “1 teaspoon salt. 1 tablespoon light soy sauce. ¼ teaspoon monosodium glutamate.”

Her recipe for Steamed dumplings (Cheng Chiao-tzu) calls for “2 tablespoons dark soy sauce. 1 tablespoon sesame seed oil.” A photo shows Mrs. Grace Chu standing behind a traditional wok and bamboo steamer.

4250. *Washington Post*. 1961. Some good books for the ladies: Leafing through. Sept. 17. p. F16.

• **Summary:** A brief review of the book *Best Recipes from Home and Abroad* (Hearstside Press, Inc., \$2.95), submitted by Navy wives worldwide; a project of the Navy Wives Club of America. Gives a recipe for Chinese roast chicken with lemon, which calls for “1 tablespoon dark soy sauce.” The first step in making the recipe is to “Rub outside of chicken with soy sauce.”

4251. Kikkoman International Inc. 1961. Kikkoman (Ad). *New York Times*. Sept. 24. p. 111.

• **Summary:** “Teriyaki sauce: 2/3 cup Kikkoman [i.e., soy sauce]. 2 tbsps sugar, ¼ cup white wine, ½ tbsp. ginger... Marinate [meat] 1 hour in Teriyaki sauce.”

Note 1. This is the earliest English-language document seen (March 2006) that contains the term “teriyaki sauce.” The Oxford English Dictionary Online (Draft additions March 2004) defines teriyaki as: “A mixture of soy sauce and various other flavourings (typically including mirin, sake, and sugar) used as the marinade or glaze for teriyaki dishes, and often sold ready-made. Also: teriyaki marinade, teriyaki sauce.”

Address: Noda Soy Sauce Co., Ltd., Noda, Japan.

4255. Lee, Dorothy. 1961. House & Garden's Chinese cook book part 2. *House and Garden* 120(4):179, 181-86. Oct.

• **Summary:** Bean curd [tofu] is used in two of the recipes, and soy sauce also is used in several.

4256. Onishi, Hiroshi; Saito, Narimasa. 1961. Studies on osmophilic yeasts. XIII. Conversion of polyalcohol fermentation to ethanol fermentation. *Agricultural and Biological Chemistry* 25(10):768-72. Oct. [Eng]

• **Summary:** In a medium containing a high concentration

of yeast extract, researchers observed aerobic formation of a large amount of ethanol by various yeasts of non-fermenting or extremely poor fermenting types such as *Torulopsis famata*, *Candida polymorpha* and *Pichia membranaefaciens* etc.

"Acetaldehyde formed as a metabolic intermediate leading to ethanol formation was trapped by the addition of sulfite and was identified as 2,4-dinitrophenylhydrazone." Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4257. Spilsbury, Calvin A. 1961. Japan's oilseed and fats and oils industry. *USDA Foreign Agricultural Service*. FAS M-120. iv + 52 p. Oct. Illust. 28 cm. [9 ref]

• **Summary:** Contents: Introduction. Summary. The fats and oils industry: Total supply of fats and oils, edible fats and oils industries (oilseed crushing and refining industry, rice bran processing, margarine and shortening, oilseed food industries), industrial fats and oils (the soap industry, paint and protective coating industry). Domestic production of oilseeds and oil-bearing materials: Soybeans (farm income and management, research), rapeseed, other oilseeds, rice bran, marine oils, including whale, animal fats. Foreign trade: Soybeans, other oilseeds, marine oils, animal fats, oilcake and meal, trade controls. Demand and price: Price supports. Consumption. Marketing and market development: Marketing vegetable oils, marketing oilseeds (storage, inspection, soybeans, rapeseed), market development. Bibliography. No names of Asian crushers are given.

Japan's margarine and shortening production in 1960 was 88,600 metric tons, nearly 4½ times that of 1950... Margarine production in 1960 was 43,000 tons. Shortening production was only 41,600 tons in 1960. The margarine and shortening industry in Japan consists of 26 manufacturers, but a large percent of plant capacity is found in only a few plants: 4 plants have one-third of the industry capacity, which is around 400 metric tons per 8-hour day... 67% of the oils used to make margarine and shortening in Japan are animal and marine oils, with whale oil being the most widely used (26% of the total) followed by tallow and lard (21%), then fish oil (20.0%). Palm oils comprise 19.0% of the total and vegetable oils 14.0%.

Concerning oilseed food industries (p. 17-20), in 1960 some 532,218 tonnes (metric tons) of soybeans were used directly as foods or manufactured into foods in Japan. Substantial amounts of peanuts and sesame seeds were also so used. "The Japanese American Soybean Institute in Tokyo is actively promoting U.S. soybeans for food uses and has promoted soybeans as the meat of the field because of the excellence of their amino acids."

Note: This is the earliest document seen (Jan. 2005) containing the phrase "the meat of the field." Notice that it refers to soybeans and was apparently coined by an American organization in Japan.

“More soybeans are used directly for food than are grown in Japan, and the cake and meal from an additional 420,000 tons of soybeans are now used each year. The main soybean foods are: Miso, shoyu, tofu, aburaage (fried tofu), frozen tofu, natto, kinako, monosodium glutamate (extract of fermented soybeans and rice used as a seasoning compound; a low-grade shoyu is a by-product), tonyu (soybean milk, cooked water-extract of soybeans, not widely produced in Japan at the present time).

Miso: There are about 3,200 to 3,800 miso plants in Japan, and a large amount of home-made miso is also produced. “About 117,600 tons of soybeans and 52,300 tons of defatted soybean meal (expeller cake is thought to be the best) are required by this industry. Miso consumption is estimated at 28.9 grams per capita per day.” Domestic Japanese soybeans, such as white hilum soybeans from Aomori are preferred to U.S. beans, which cook unevenly because of their hard seed coats.

Shoyu: There are about 5,000 producers; some have very large plants but many are small. Per capita consumption is about 3 gallons per year. This requires about 18,500 tonnes of soybeans and 155,000 tonnes of defatted soybean meal per year. A small amount of soybean oil (about 1,000 tonnes/year) is skimmed off the top of shoyu and used for a cutting oil. The cake that remains after pressing out the shoyu contains 4% salt, but it is an ideal hog feed as well as a fertilizer. Around 80,000 to 100,000 tonnes a year are produced. A taru (4½ gallons) of shoyu wholesales for about \$3.60. A large volume of soy sauce is now being exported to the USA.

Tofu: There are around 50,000 small tofu plants in Japan. Their demand for soybeans is large and increasing. In 1960 production of tofu and aburaage required 254,800 tonnes of soybeans and 20,000 tonnes of defatted soybean meal. More soybeans and meal are used to make tofu than any other food in Japan, followed by shoyu, then miso. About three-fifths of the soybeans used are imported. In 1960 production of frozen tofu required 27,100 tonnes of soybeans.

In 1960 about 22,800 tonnes of soybeans were required to make natto, 6,200 tonnes to make kinako, 64,800 tonnes of defatted soybean meal were required to make monosodium glutamate, and 10,000 tonnes of soybeans plus 30,000 tonnes of defatted meal were required to make other soybean food products [such as whole soybeans, soybean milk, etc.]. Address: USDA Fats and Oils Div.

Address: Central Research Lab., Noda Soy Sauce Co. Ltd., Noda, Japan.

4263. Cho, H.O. 1961. [Studies on the increased production of amylases and proteases by combination of raw materials of koji for soy sauce and soy bean paste]. MSc thesis, Graduate School, Seoul National University. [Kor]*

• **Summary:** Previous studies of the koji starter for soy-sauce and soybean paste, which are the main condiments in Korea, indicated that the amylases and protease activities of the koji

differ by that kind of substrate, whether soybean or barley.

In order to try to increase those enzyme activities, koji was prepared by various combinations of soybeans and barley with the following results.

1. Koji prepared from the combination of soybean, barley and wheat at the ratio 4-6 to 6-4 to 2 was greatly superior to that prepared from a single substrate with respect to alpha-amylase, saccharifying and protease activities.

2. Variation of alpha-amylase, saccharifying and protease activities depending on the combination of raw materials, showed similar tendencies on the whole.

3. The possibility of improving the processing of soysauce, and soybean paste by the use of koji prepared from different substrates was discussed. Address: Seoul, Korea.

4264. Kobayashi, Kojin. 1961. Iida no miso shôyu shi [History of miso and shoyu in Iida City]. Iida: Shinano Kyodo Shuppansha. 120 p. [Jap]

4265. Mendoza, Jose M. 1961. Philippine foods, their processing and manufacture. Manila: Published by the author. 421 p. See p. 152-59. Chap. XV, Sauces and Similar Products. [7 soy ref]

• **Summary:** Contents of Chapter 15 titled "Sauces and similar products" (p. 152-58): Soybean sauce (*toyo*). Japanese soya sauce: Preparation of the starter, preparation of the material, inoculation, fermentation. Modified Chinese soya sauce. Coco sauce or coprameal sauce (The taste compares favorably with Chinese soy sauce and Japanese soy sauce). Hints and suggestions. Philippine bean sauces. The tao-si [fermented black soybeans], tokua [tofu, not fermented], tahore [taori, taore; probably fermented tofu], the tajo (unpressed tofu curds, usually served with medium brown sugar), mongo [mung bean] sprouts, soybean sprouts, Vetsin (contains 1 part monosodium glutamate, 7 parts lactose, and 3 parts salt). Includes a formula for Worcestershire sauce (which contains no soy sauce).

Note 1. This is the earliest document seen (May 2003) that contains any Filipino word (*tajo*) for unpressed tofu curds, usually served with medium brown sugar.

Note 2. The section titled "Tahore" (p. 157) states: "This product is simply taori whereby the already prepared taore is macerated to mass. Tokua [tofu] is used frequently with tahore. They are both popular food [sic, foods] among Chinese. The Chinese eat them with soft-boiled rice called 'barabasa.'" Address: Lecturer in Food Technology and Fermentation Technology, Manuel L. Quezon Univ., Manila.

4266. Mendoza, Jose M. 1961. Philippine foods, their processing and manufacture. Manila, Philippines: Philippine Educational Co. 524 p. See p. 186-93. Chap. XV, Sauces and Similar Products. [7 soy ref]

• **Summary:** The contents of this edition is basically identical to that of the other 1961 edition published by the author.

However the typesetting and the page numbers are different. Address: Lecturer in Food Technology and Fermentation Technology, Manuel L. Quezon Univ., Manila.

4267. Montagné, Prosper. 1961. Larousse gastronomique: The encyclopedia of food, wine & cookery. New York, NY: Crown Publishers, Inc. 1101 p. See p. 925. Illust. Index. 26 cm. [Eng]

• **Summary:** The following are defined under "Soya Bean. Soja" (p. 925): Introduction. The soya bean is "the richest and cheapest source of vegetable protein." 1. Soya bean curd. *Fromage de soja*. Gives a completely inaccurate and useless description of how to make tofu at home. 2. Soya meat. *Viande de soja*. This "vegetarian meat," which resembles cooked ham, is said to be too complicated to make at home, but requires industrial equipment. 3. Soya milk. *Lait de soja*. 4. Soya sauce or extract. *Sauce, Extrait de soja*.

Note: This English-language edition is a translation from the original 1938 French-language edition by Nina Froud, Patience Gray, Maud Murdoch, and Barbara Macrae Taylor. Address: France.

Address: Tokyo.

4270. *SoyaScan Notes*. 1961. Overview of total miso production in Japan (1934-36, 1952-61). Source: *Shokuin Kanri Tôkei Nenpo* (Food Industry Statistics Annual Report). [1 ref]

• **Summary:** These statistics are from a bundle of documents found in the Kikkoman *kura* in Noda, Japan. Mark Fruin donated a photocopy of all the documents to Soyfoods Center. Statistics are given each year for miso, vinegar,

sauce, tomato ketchup, monosodium glutamate, and mayonnaise (from 1952 -1961).

Miso production grew from 596,996 tonnes (metric tons) in 1934 to a peak of 600,750 tons in both 1935 and 1936. No statistics are given from 1937 to 1951, years of disaster for Japan, ending with defeat in World War II.

Starting again, production grew from 381,713 tonnes in 1952, to a peak of 530,078 in 1956, then decreased slowly to 482,357 tonnes in 1961.

4271. *SoyaScan Notes*.1961. Overview of factory production of miso in Japan (1930-1961). [1 ref]

• **Summary:** These statistics are from a bundle of documents found in the Kikkoman *kura* in Noda, Japan. Mark Fruin donated a photocopy of all the documents to Soyfoods Center. Statistics are given each year for miso in 1,000 *kan*, where 1,000 *kan* = 3,750 kg. Farmhouse and home production are not included. Miso production grew from 157,196 in 1930 to a peak of 160,200 in both 1935 and 1936, then fell gradually to 150,221 in 1940, 128,60 in 1942, 140,226 in 1943, and 129,679 in 1944. Then, as Japan was clearly losing the war, it plunged to 77,495 in 1945, 69,887 in 1946, and a low of 50,264 in 1947. In the postwar years, as Japan began to recover, it increased to 94,468 in 1948, dropped to 66,510 in 1950, then began steady growth—101,790 in 1952, rising to a peak of 198,779 in 1956. Then it began to decrease slowly to 180,884 in 1961.

4272. *SoyaScan Notes*.1961. Chronology of Chico-San, Inc. (Chico, California). 24 March 2011. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1955 Dec.—Herman Aihara and Chiiko (Cornellia) Yokota are married in New York. Cornellia arrived in the United States from Japan in Oct. 1955.

1961 summer—George Ohsawa, fearing that a nuclear war might be near, urges his followers to leave New York and find a place that was safer from radioactive fallout and good for growing rice. After extensive research, they chose Chico, California.

1961 Oct. 1—Thirty two people (11 families) arrive in Chico (in the Sacramento Valley of northern California) from New York City in a caravan of vans, buses, and station wagons. It is an area of fertile farmland where rice is already being grown. Among the people in the group who remained active in work with macrobiotic foods were Bob Kennedy, Herman and Cornellia Aihara, Teal Ames, and Dick Smith.

1961 Dec. 8—The group in Chico has started a bakery named “Chico-San” (Shumway 1961).

1962 March 6—The group in Chico incorporates a new food company named Chico-San, Inc.; it consists of a retail store and an import and wholesale business. It is capitalized with \$10,000. In addition to a line of whole-grain products, they soon began to import a variety of macrobiotic foods from Ohsawa in Japan. The first store and food plant (they

made sesame salt or *gomashio* and repackaged foods) was in the basement of a small hearing aid shop in Chico. The address was apparently 64, 5th Ave., Chico, California. It became the first macrobiotic food manufacturing company in the USA. Note: Infinity Foods in New York City was apparently the first macrobiotic import and wholesale company.

1962 Christmas—George Ohsawa visits Chico and lectures on macrobiotics.

1963—Ohsawa lectures in Boston (Massachusetts), New York City, and at the fourth macrobiotic summer camp in Chico. Lima Ohsawa and Cornellia Aihara give cooking classes. In Chico, Ohsawa suggests that the group try making rice cakes. He sends them a rice cake machine from Japan and production began in the fall of 1963. Rice cakes soon became Chico-San’s first really popular and successful product.

1963—Junsei Yamazaki emigrates to Chico, California, from Japan.

1964—Yamazaki starts to make miso and shoyo for Chico-San.

1966 April 24—George Ohsawa dies. The Ohsawa Foundation now has offices in Los Angeles, New York, Paris and Tokyo.

1968 fall—Bob Kennedy of Chico-San signs a contract with the Lundberg brothers of Wehah Farm (Richvale, California) to grow short-grain brown rice organically, exclusively for Chico-San. Chico-San agrees to buy all brown rice planted in 1969.

1969—Lundberg brothers plant 78 acres of brown rice, which is harvested in the fall. Because of Chico-San’s successful advertising campaign, one third of this crop as sold in advance and all was sold before the next year’s crop was available. The rice

1969 fall—Wendell Lundberg visits Erewhon.

1970—Chico-San contracts for 200 acres of brown rice this year with Lundberg.

1970—Spiral Foods is organized by Chico-San and Peter Milbury to distribute Chico-San products directly to retail stores in the greater San Francisco Bay Area.

1970—Herman Aihara and Bob Kennedy establish the George Ohsawa Macrobiotic Foundation (GOMF). Junsei Yamazaki makes his first big batch of miso. First summer camp at French Meadows. Herman and Cornellia make their first nationwide teaching tour.

1971—Noboru [not Naboru] Muramoto sensei arrives.

1972—The book *Miso and Tamari*, by Herman Aihara published.

1972 Sept. 14.—Fire destroys the Chico-San plant. It started as a short in a rice-cake machine. Chico-San is out of business for several months. The company resumed business at another location across town. But Chico-San lost its exclusive right to distribute Lundberg organically grown brown rice as the company had been unable to package and

ship rice and rice products for several key months during the peak sales season.

1973—Herman Aihara establishes the Vega Institute in San Francisco. Noboru Muramoto lectures and his first book, *Healing Ourselves*, is published.

1974—Herman Aihara moves GOMF to Oroville from San Francisco. *Soybean Diet*, by Herman published.

1976. Muramoto moves to Glen Ellen.

1984 Nov. 19—Heinz U.S.A. acquires Chico-San Inc. a manufacturer and marketer of rice cakes and related products. Privately held Chico-San (headquartered in Chico, California) operates rice-cake production facilities in California, Mississippi, and New Jersey. Founded in 1962, the company has about 340 employees.

1985 Jan.—The Quaker Oats Company acquires the Arden Rice Cakes business. The natural foods portion of the business is incorporated under the Mother's brand. Chico-San is based in Chico, California; Arden in North Carolina.

• **Summary:** *Foo Jook* [dried yuba sticks] and “red bean curd” are mentioned.

4275. Yokoyama, Yohan. 1961. *Shôyu no jôzô to gôseihô; fu sôsu seizô-hô* [Shoyu: Fermentation and synthetic methods, with a supplement on the manufacture of Worcestershire style sauce]. Tokyo: Meibundo. 435 p. [Jap]

4276. Binsted, Raymond; Devey, James D.; Dakin, John C. 1962. *Pickle and sauce making*. 2nd ed. Revised. London: Food Trade Press. viii + 274 p. Jan. Illust. Index. 22 cm.

• **Summary:** Soya is discussed only in chapter 5, titled “Thick and Thin Sauces.” “Worcester sauce is traditionally a thin sauce, very spicy in flavour and made so that a sediment is present in the bottle” (p. 88). Many of these sauces use 20's vinegar as the main ingredient. In England, this means normal malt vinegar. “The vinegar should be of approximately 20's strength, i.e., contain about 5 per cent of acetic acid” (p. 89). Soy (i.e. soy sauce) is used as a relatively minor ingredient in various thick fruits sauces which also contain many other minor ingredients: With mango chutney and dates (p. 96). With tomato puree, mango chutney and dates (p. 97). With tomato puree (p. 98). As a major ingredient with garlic and sugar (p. 99). With vinegar, molasses and onions (p. 99). With syrup and tomato puree (p. 105). In Mushroom Ketchup, soy [sauce] is the second most

predominant ingredient after mushrooms in brine. In Walnut Ketchup, soy [sauce] is the third ingredient after walnuts in brine and 20's vinegar.

Concerning thin sauces (p. 108-23), “By far the most popular of thin sauces on the market is Worcester sauce, so much so that when a reference is made to thin sauce it is often assumed that Worcester sauce is referred to” (p. 108). “Recipes are legion and are jealously guarded by the leading manufacturers of the product, but general principles may be considered. Soy [sauce] tamarinds, anchovies, garlic and spices are basic ingredients, while some sauces contain, in addition, citrus juices, wines and meat extract” (p. 111).

Four recipes for Worcester Sauce are given, with the leading ingredients (in descending order of predominance) as follows: Good quality: Vinegar 17 gallons, walnut catsup 11 gallons, mushroom catsup 10 gallons, sherry wine 5 gallons, soy sauce 4½ gallons, ground hogs livers 21 lb, salt 11 lb, tamarinds 10 lb, plus ground cayenne pepper, black pepper, allspice, and coriander, plus mace and brandy. Medium quality: Vinegar 198 gallons, walnut catsup 1¼ gallons, soy sauce 1 gallon, sugar 25 lb, salt 7½ lb... Cheap quality: Vinegar 15 gallons, soy sauce 3½ gallons, water 2½ gallons, salt 2 lb... Basic Worcestershire Sauce: 20's vinegar 35 gallons, tamarinds 30 lb, walnut ketchup 6 gallons, soy 3 gallons, lemon pulp 2 gallons, anchovies 10 lb, sugar 10 lb, etc. The complex method is then given.

The section on flavorings in sauces (p. 121) lists “Soy, a fermented soya bean and wheat liquor produced in the Far East, is a dark brown liquid with a piquant and salty flavor.” Address: 2. A former pickle and sauce factory chief chemist; 3. Head of Dep. of Pickle and Sauce Products, British Food Manufacturing Industries Research Assoc., Leatherhead, Surrey, England.

Dasshi daizu ensan kasui bunkai eki-chū no tansosū 5 no chūsei karuboniiru kagō-butsu ni tsuite [Preparation of seasonings by the hydrolysis of proteins. VI. Neutral C₅ carbonyl compounds in the hydrochloric acid hydrolysate of soybean meal]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 36(2):120-23. Feb. [6 ref. Jap]
Address: Ajinomoto Co., Inc.

4292. Kamada, Hidemoto; Nakano, Masahiro; Higurashi, Yasuo. 1962. Daizu seihin no chakushoku ni kansuru kenkyū. IX. [Browning reaction of soybean products. IX. Color formation of shoyu during brewing (Abstract)]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 16. p. 114. Feb. [1 ref. Jap; eng]

• **Summary:** Color formation of shōyu (soy sauce) and of an

amino acid-sugar system during browning were investigated.

Color formation in shoyu was caused by the reaction between amino acids and sugar, especially pentose (a monosaccharide sugar with five carbon atoms). It was found to be unlikely that the reaction between amino acids and reductone or active carbonyl compound would be significant in color formation of shoyu during brewing (fermentation).

Color formation during fermentation of the mash (*moromi*) and pasteurization (at 82°C for 30 minutes) of shoyu obtained from the mash were accompanied by a decrease in the pentose content.

Concentration of pentose had a significant effect on the rate and extent of browning of an amino acid-sugar system.

The presence of oxygen had a marked effect on color formation in the mash, but no effect on color formation during pasteurization of shoyu.

Reprinted from *Nosan Kako Gijutsu Kenkyu Kaishi (J. for the Utilization of Agricultural Products)* 8(1):6+ (1961). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4293. Kamada, Hidemoto; Nakano, Masahiro. 1962. Daizu seihin no chakushoku ni kansuru kenkyū. X. [Browning reaction of soybean products. X. Characteristics of color of mieki [HVP soy sauce] (Abstract)]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 16. p. 115. Feb. [1 ref. Jap; eng]

• **Summary:** The majority of color constituents of Mieki (HVP soy sauce launched by Ajinomoto in 1950) was precipitated by mixing with an equal volume of ethanol (ethyl alcohol).

The color intensity of Mieki stored at 38°C for 30 days developed slightly, but never developed in the absence of oxygen.

The addition of amino acids had no effect on the color intensity of Mieki stored at 38°C for 30 days.

Addition of the sugars xylose, galactose, and glucose caused significant browning in Mieki stored at 38°C, however sodium bisulfite, sodium sulfite, and sodium cyanide inhibited browning.

Sunlight caused browning of Mieki, but not in the absence of oxygen.

Manufacturer's Name: Ko Sang Yick Ching Kee Co.
Manufacturer's Address: 135 Second St., Ground Floor, Hong Kong.
Date of Introduction: 1962. February.
How Stored: Shelf stable.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce manufacturers in Hong Kong.

4298. **Product Name:** Soy Sauce.
Manufacturer's Name: Kong Chang.
Manufacturer's Address: 226 Jelutong Road, Penang, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4299. **Product Name:** Soy Sauce.
Manufacturer's Name: Kong Guan Tong Kee.
Manufacturer's Address: 232 Bagan Ajam, Butterworth, Province Wellesley, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4300. **Product Name:** Soy Sauce.
Manufacturer's Name: Kum Cheong.
Manufacturer's Address: 202 Jelutong Road, Penang, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4301. **Product Name:** Soy Sauce.
Manufacturer's Name: Kwan Loong & Co.
Manufacturer's Address: 214 Jelutong Road, Penang, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4302. **Product Name:** Soy Sauce.
Manufacturer's Name: Kwong Ban Wah Factory.
Manufacturer's Address: 6 MacCallum Street, Penang, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4303. **Product Name:** Soy Sauce.
Manufacturer's Name: Kwong Bee Chun Sauce Factory.
Manufacturer's Address: P.O. Box No. 20, Taiping, Perak, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4304. **Product Name:** Soy Sauce.
Manufacturer's Name: Kwong Bee Woh Sauce Factory.
Manufacturer's Address: 19 Chinese Club Road, Taiping, Perak, Malaysia.
Date of Introduction: 1962. February.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4305. **Product Name:** Soy sauce.
Manufacturer's Name: Lung Chun Co.
Manufacturer's Address: 68 Fook Lo Tsun Rd., Kowloon, Hong Kong.
Date of Introduction: 1962. February.
How Stored: Shelf stable.
New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce

manufacturers in Hong Kong.

4306. **Product Name:** Soy Sauce.

Manufacturer's Name: Man Sang Sauce Manufacturer.

Manufacturer's Address: 39 Patani Road, Penang, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4307. **Product Name:** Soy sauce.

Manufacturer's Name: Mee Chun Canning Co.

Manufacturer's Address: 128 Queen's Road, C. 2nd floor, Hong Kong.

Date of Introduction: 1962. February.

How Stored: Shelf stable.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce manufacturers in Hong Kong.

4308. **Product Name:** Soy sauce.

Manufacturer's Name: Mui Lam Yuen Sauce Factory.

Manufacturer's Address: 42 Yeung Oak Village, Tsun Wan, Kowloon, Hong Kong.

Date of Introduction: 1962. February.

How Stored: Shelf stable.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce manufacturers in Hong Kong.

4309. **Product Name:** Soy Sauce.

Manufacturer's Name: Nanyang Sauce Co.

Manufacturer's Address: Lot 6774 Tambun Road, Ipoh, Perak, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4310. **Product Name:** Soy sauce.

Manufacturer's Name: Plum Garden Soy Sauce & Canning Mft.

Manufacturer's Address: 6 Yeund Uk Village, N.T., Hong Kong.

Date of Introduction: 1962. February.

How Stored: Shelf stable.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce manufacturers in Hong Kong.

4311. **Product Name:** Soy Sauce.

Manufacturer's Name: Sin Hin Leong.

Manufacturer's Address: 6A Jalan Kampong Perak, Alor Star, Kedah, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4312. **Product Name:** Soy Sauce.

Manufacturer's Name: Soon Cheong Co.

Manufacturer's Address: 4076 Bagan Ajam, Butterworth, Province Wellesley, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4313. **Product Name:** Soy Sauce.

Manufacturer's Name: Soon Hing Sauce Factory.

Manufacturer's Address: 191 Burmah Road, Penang, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4314. Spilsbury, Calvin C. 1962. Southeast Asia as a market for U.S. soybeans and vegetable oils. *USDA Foreign Agricultural Service*. FAS-M-126. 41 p. Feb. Summarized in *Soybean Digest*, March 1962, p. 26.

• **Summary:** Gives an excellent, detailed discussion, with many statistics, of the soybean markets in Hong Kong, Singapore, Malaysia, Indonesia, British Borneo (Sarawak, Brunei, and North Borneo [Sabah]), and Burma.

"The 350,000 Chinese of British Borneo are large consumers of soybean food products and fats and oils, but this market is small. Domestic production of soybeans in North Borneo is more than sufficient to supply domestic demand for that country, and some exports are made each year. Imports of soybeans into Sarawak and Brunei, though small, have been growing each year. In 1960 Sarawak's imports were 608 long tons, compared with 526 tons in 1959 and 403 tons in 1958. Thailand, Mainland China, Vietnam, and Cambodia are the main suppliers, as U.S. soybeans have been scarce in this market."

Burma: "The domestic production of soybeans in Burma has been small, but output is large enough to provide demands of the Burmese people in the Shan State, population approximately 500,000, who use soybeans for food." The peanut is the main oilseed crushed in Burma. The majority of peanut crushing mills are located in Rangoon, Insein, Mandalay, and Myingyan.

Table 6 (p. 29) shows imports (in piculs; 1 picul = 133

lb) of soybeans to Sarawak, by country of origin, annually 1958-1960. The main source countries are Thailand, Mainland China, and Indochina. Imports increased from 6,853 piculs in 1958 to 10,343 piculs in 1960.

Appendix: Hong Kong: Importers of U.S. soybeans, manufacturers of wet and dried bean curd for export to U.S., soybean sauce manufacturers. Singapore: Importers of U.S. soybeans, importers agents providing services to soybean importers, manufacturers of soybean curd, largest soybean sauce manufacturers, soybean milk companies. Federation of Malaya: Importers of soybeans, soybean sauce factories (Penang, Province Wellesley, Kedah, Perak, Selangor, Malacca, Negri Sembilan). Sarawak: Soybean importers and dealers (all of Kuching). Burma: Fats and oils importers (Rangoon), vegetable oil mills (Rangoon).

Note 1. Sarawak became part of Malaysia in 1963. Note 2. This is the earliest document seen (May 2010) concerning soybeans in Brunei. This document contains the earliest date seen for soybeans in Brunei (Feb. 1962). Address: Fats and Oils Div.

4315. **Product Name:** Soy Sauce.

Manufacturer's Name: Swee On Woh Sauce Pty Ltd.

Manufacturer's Address: 52/4 Bridge Street, Penang, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4316. **Product Name:** Soy Sauce.

Manufacturer's Name: Tai Tong.

Manufacturer's Address: 20 Sungei Rambai, Bukit Mertajam, Province Wellesley, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4317. **Product Name:** Soy Sauce.

Manufacturer's Name: Thye Woh.

Manufacturer's Address: 33C Kampong Perak, Alor Star, Kedah, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4318. **Product Name:** Soy Sauce.

Manufacturer's Name: Tin Chan Sauce Factory.

Manufacturer's Address: Chan Sow Lin Road, Kuala Lumpur, Selangor, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural

Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4319. **Product Name:** Soy Sauce.

Manufacturer's Name: Tong Fong.

Manufacturer's Address: 2 Kajang Road, Penang, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4320. **Product Name:** Soy Sauce.

Manufacturer's Name: Woh Chun.

Manufacturer's Address: 21-H Kampong Perak, Alor Star, Kedah, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 39. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4321. **Product Name:** Soy sauce.

Manufacturer's Name: Yee Chun Soy Factory.

Manufacturer's Address: 29 Sheung Sha Po., Kowloon, Hong Kong.

Date of Introduction: 1962. February.

How Stored: Shelf stable.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce manufacturers in Hong Kong.

4322. **Product Name:** Soy Sauce.

Manufacturer's Name: Yee Yuen.

Manufacturer's Address: 840 Perak Lane, Penang, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4323. **Product Name:** Soy Sauce.

Manufacturer's Name: Yeo Hiap Seng Canning & Sauce Factories.

Manufacturer's Address: 23, 7 M.S. Bukit Timah Rd., Singapore.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 37. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Yeo Hiap Seng Canning and Sauce Factories is one of the two largest manufacturers of soybean sauce in Singapore. The address appears to be at 23, 7 M.S. Bukit Timah Rd.

Soya Bluebook. 1981. p. 69. Yeo Hiap Seng Ltd., 950

Dunearn Rd., Singapore 21.

4324. **Product Name:** Soy Sauce.

Manufacturer's Name: Yip Heong.

Manufacturer's Address: 3 Lines Road, Penang, Malaysia.

Date of Introduction: 1962. February.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 38. "Southeast Asia as a market for U.S. soybeans and vegetable oils."

4325. **Product Name:** Soy sauce.

Manufacturer's Name: Yuet Heung Yuen.

Manufacturer's Address: 175 Main St., Apleichau [Apleichau], Hong Kong.

Date of Introduction: 1962. February.

How Stored: Shelf stable.

New Product–Documentation: U.S. Foreign Agricultural Service. FAS-M126. Feb. p. 36. "Southeast Asia as a market for U.S. soybeans and vegetable oils." Lists 7 soybean sauce manufacturers in Hong Kong. Note: Apleichau is a small island southwest of Hong Kong Island.

4326. Lee, Elinor. 1962. Goodwill grows in climate of culture: Food promotes friendship. *Washington Post*. March 22. p. C7, 20.

• **Summary:** In Washington, DC, the "Cultural Evenings in Asian Embassies" is a flavor venture, sponsored by the Buddhist Center of the U.S.A. to help promote international goodwill and understanding. The dinner menu at the Royal Thai Embassy on Saturday night will include "Kung Lon (Boiled coconut cream with shrimp and soya bean sauce)." The recipe is given. A second recipe, Mee Krob, which contains "3 tablespoons finely cut bean curd" and "soya bean sauce" to season, is also given. A third recipe, Yam Yai, includes ½ cup bean curd (cut fine). "Thailand's top recipes aren't in any cookbooks."

4327. Onishi, Hiroshi; Saito, Narimasa. 1962. Studies on osmophilic yeasts. XIV. Partial purification of polyol dehydrogenase from *Pichia miso* and the properties of this enzyme. *Agricultural and Biological Chemistry* 26(4):245-51. April. [37 ref. Eng]

Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4328. Claiborne, Craig. 1962. Food news from Tokyo: Cuisines of virtually every country offered at all prices in restaurants. *New York Times*. May 30. p. 7.

• **Summary:** The article begins: "There is probably no city in the world today with a more fascinating and varied cuisine than Tokyo." The Imperial, perhaps the city's most famous hotel, offers a wide selection, including sukiyaki.

In Tokyo, the typical Japanese restaurant is small and does not offer a menu. It will often specialize on one or two

full-course "dinners built around one particular food. That food may be game, for example, or raw fish, or tofu, which is soy bean curd, or beef."

Tofu is typically found in sukiyaki. For "batayaki, slices of matsuzaka beef, spectacularly marbled," are served with a dipping sauce, which includes "grated long radish [*daikon*] in shoyu (soy sauce), mustard and seven spices, including Japanese pepper, ground poppy seed, cayenne pepper, sesame seeds, seaweed, dried orange peel and hemp seed."

In recent years, "beer seems to have replaced sake as Japan's national drink." Address: Special to the *New York Times*.

4329. Claiborne, Craig. 1962. Food news from Noda: Soy sauces. *New York Times*. June 4. p. 24.

• **Summary:** The writer, on a trip to Japan, is now visiting Noda and Kikkoman, maker of one of Japan's finest soy sauces, "which, within recent months, has become widely distributed in the United States."

There are two Kikkoman soy sauce plants in Noda. One, which covers several acres, is equipped with the most modern processing and bottling equipment. The other is a picturesque, ancient building at the edge of a lake encircled by iris. Here, "soy sauce for the imperial household is made almost entirely by hand." The soy sauce is fermented in wooden vats, whose outside is painted vivid tangerine red and bamboo green.

Behind the soy sauce made in Noda stands a wealth of tradition, for here (as family records show) the Mogi family has supervised the production of soy sauce for three centuries. The current president of the company is Keizaburo Mogi, a tall gentleman, who takes pride in showing the writer around the premises. Yuzaburo Mogi, his son, age 27, also a company officer, earned his master's degree last June in business administration at Columbia University (New York City).

The company now makes 55 million gallons per year of soy sauce, of which about 3% is shipped to the USA, and much of that to Texas, where it is popular at barbecues.

The process for making soy sauce is described. The moromi mash is fermented for 12-18 months, until it has fully matured.

Soy sauce is believed to have originated in China and to have been introduced into Japan in 552 A.D. together with Buddhism. At that time, the seasoning was named *hishio*, "and like salt in ancient Rome, was supplied to civil and military officials of the Imperial Court as part of their salary."

It was not until about 1532 that the word shoyu, the present name for soy sauce in Japan, came to be used. The soy sauce plant at Noda was started about 100 years later.

Formerly, China was the chief supplier of soy beans to Japan. Today the great majority of soy beans used at Noda are imported from Illinois and Iowa. Address: Special to the

Times.

4330. Fukushima, D. Assignor to Noda Industrial Science Research Institute. 1962. [Modification of alcohol treatment of soybeans for fermented products]. *Japanese Patent* 6313. June 28. [Jap]*

• **Summary:** Describes solvent extraction using ethyl alcohol. Address: Kikkoman.

4331. Shibasaki, K.; Hesseltine, C.W. 1962. Miso fermentation. *Economic Botany* 16(2):180-95. June. [32 ref]
• **Summary:** The role of miso in the Japanese diet is reported. The *Aspergillus oryzae* strain used for miso and sake has high amylolytic as well as proteolytic action. (That used for soy sauce has high proteolytic action). In miso fermentation, the koji starter is prepared by inoculating trays of cooked rice and vegetable ash. After good growth, the fungus is dried without killing its spores. Cooked soybeans are mixed with rice, salt and the koji starter. Chemical changes during fermentation are reported. Many microorganisms are present in miso. Address: 1. College of Agriculture, Tohoku Univ., Japan; 2. NRRL, Peoria, Illinois.

4332. Fujiwara, Kozo; Tokuda, M.; Nanba, A. 1962. Shôyu chû no amino-san ni kansuru kenkyû. II. Tennen jôzô moromi ni okeru shuyô amino-san no shôchô [Studies on amino acids in Japanese soy sauce. II. Changes in the amounts of the main amino acids during the ordinary moromi (mash) process]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 40(7):327-32. July. [6 ref. Jap; eng]
• **Summary:** The term "ordinary moromi (mash) process" refers to the natural fermentation process. Changes in free amino acids were studied by microbioassay. Considerable amounts of free arginine disappeared during maturation of the mash. The amounts of free isoleucine, leucine, methionine and phenylalanine steadily increased in the course of maturation from the beginning of the mash process to the 396th day, while free glutamic acid, glycine, lysine and valine showed maxima. Address: 1. Dep. of Fermentation Technology, Faculty of Engineering, Osaka Univ.; 2-3. Osaka Joshigakuen Junior College, Japan.

4333. Fujiwara, Kozo; Tanaka, S.; Fujita, E. 1962. Shôyu-chû no amino-san ni kansuru kenkyû. I. Kakushu shôyu no amino-san genryô ni tsuite [Studies on amino acids in Japanese soy sauce. I. The contents of amino acids in soy sauces of various types]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 40(7):321-27. July. [13 ref. Jap; eng]

• **Summary:** "The contents of 10 amino acids (arginine, glutamic acid, glycine, isoleucine, leucine, lysine, methionine, phenylalanine, threonine, valine) in soy sauces of various types were determined by microbiological assay methods. Each amino acid content was expressed in mg/

ml of soy sauce whose total nitrogen content was converted into 1%. Arginine contents in fermented soy sauces and 'aminosan-eki' (chemical hydrolyzate of protein-containing materials) were 0.7 mg/ml and 3 mg/ml, respectively. Glutamic acid contents in 'kiage' (fermented soy sauce), 'tamari' (ditto) and 'sokujo' (quickly fermented soy sauce) were about 8.5 mg/ml, 6.5 mg/ml and about 4.7 mg/ml, respectively. 'Aminosan-eki' contained 8.5 mg/ml or more of glutamic acid, while 'II go aminosan-eki' about 5 mg/ml." Address: 1-2. Osaka Univ., Japan; 3. Osaka Joshigakuen Junior College.

• **Summary:** n-Butyl p-hydroxy benzoate is widely used as a preservative for soy sauce, but this material is enzymatically decomposed in raw soy sauce. This enzyme is produced by *Asp. sojae* and has the following characteristics: It is a kind of esterase and its optimal pH is 6.0. It is almost inactivated after heating at 50°C for 10 minutes, but in the presence of sodium chloride this enzyme inactivation is altered. The longer the period of aging of soy sauce mash, the more the enzyme activity is depressed. Address: Central Research Inst. of Noda Shoyu Co., Ltd., Noda, Japan.

4342. Olson, Harvey Stuart. 1962. Olson's Orient guide [1st ed.]. Philadelphia, Pennsylvania and New York: J.B. Lippincott Co. 1008 p. Illust. (by Cy Ferring). Maps. Index. 20 cm. 1st ed., 1962 [1963].

• **Summary:** In Chapter 5, "On dining out in the Orient," we read (p. 229): In Japan, much loved and widely consumed items include "bean sprouts and pastes [miso] and sauces made from soy beans." The Japanese, like many "foreign visitors are fond of sukiyaki made of thin beef strips simmered in a tasty soy sauce garnished with fresh vegetables, served with a raw egg, and accompanied by rice. They enjoy tempura, too,..." The dip is made of finely grated radish [daikon] "and spicy soy sauce."

The section on "Chinese cuisine" states (p. 236): "Cantonese which is the blandest, most subtle, and least greasy of the varieties of Chinese cooking..." Features "bean curd and minced pork."

The section titled "Japanese specialties" (p. 245+) starts

with Suki-yaki (One "bowl contains small pieces of lotus root, scallions, bamboo shoots, bean curds, mushrooms, and other greens," p. 246). Also (p. 249) "Batayaki is the first cousin to sukiyaki," but with the difference that "batayaki is prepared with a sauce less pungent than that used for sukiyaki." This sauce has "a soybean base, but mixed liberally with butter" [bata].

The entry for "Soy sauce" (p. 252) taken from the Random House *American College Dictionary* "defines soy sauce as 'a salty fermented sauce much used on fish and other dishes in the Orient, prepared from soy beans.' I cannot emphasize too strongly how important a part this sauce plays in the Japanese cuisine. It is not only used in connection with fish but as a sauce for sukiyaki. It is also used generously in preparing chicken and steak and is utilized as a garnish as well as an ingredient.

"As a matter of fact I can think of no place where this tasty bit is not likely to appear. I, for one, like soy sauce." However, if you wish, you can ask your waiter to omit it.

The section on Thailand (p. 278-79) notes: "*Haw Mok*, a flaming hot Thai specialty, is made by pounding dry chili peppers, shrimp paste, lemon grass, onions, garlic and salt, and blending them with steamed coconut milk and soy sauce decorated with egg and slices of raw fish. It is served in a large banana leaf."

The section on night clubs in Osaka, Japan says of Yen Kyo (p. 312). "Another quality Chinese restaurant... Taste the spring rolls, the chicken in papers, and the vegetable bean curd dishes."

In Chapter 12, "Japan," the section on Tokyo states (p. 692): "One can eat squid, lotus roots, roasted sparrows (head, claws and all), raw lobster, embryonic eggs on a stick, cuttlefish painted with soy sauce, blowfish, mud eel, mock turtle, fermented bean curd, bamboo shoots, and quail's eggs,..."

Note: The 1st, 2nd, and 3rd editions all contain 1008 p.

4343. Vieira, Clibas. 1962. A soja e sua cultura [The soybean and its culture]. *Boletim de Agricultura (Belo Horizonte, Brazil)* 11(7-12):16-33. July/Dec. [19 ref. Por]

• **Summary:** A large chart (p. 18-19) lists the various ways of using the soybean plant and its seeds, including many foods and non-food industrial uses. From the cake or meal (*torta*) one can make adhesive materials, fertilizers, animal feeds, glue (*cola*), and plastics. Also food products: Flour, sauce (*môlho*), milk, etc. And industrial protein (*proteína industrial*).

From soy oil one can make various food products including margarine (*margarina*), salad oil (*óleo para salada*), cooking oil (*óleo para cozinha*). The green seeds can be used to make conserves or canned foods (*conservas*), salad (*salada*), or cooked dishes (*cozida*). The dry seeds can be cooked, sprouted, or used to make flour, milk, or animal feeds.

Note 1. This is the earliest Portuguese-language document seen (Aug. 2003) that uses the term *proteína industrial* to refer to isolated soy protein for industrial uses.

Note 2. This is the earliest Portuguese-language document seen that uses the term *margarina* to refer to margarine.

Note 3. This is the earliest Portuguese-language document seen (June 2009) that uses the term *graos verdes* to refer to green vegetable soybeans. Address: Prof. de Agricultura Geral–E.S.A. da U.R.E.M.G.–Vicos, Brazil.

4344. Chang, K.H.; Lee, K.H.; Park, S.O. 1962. [Studies on koji for soy sauce brewing. I. Isolation of *Aspergillus* species]. *Report of the Army Research and Testing Laboratory (Seoul, Korea)* 1:40-45. [Kor]*

• **Summary:** 1. Four hundred eighty species of *Aspergillus* were isolated from koji, Meju (fermented soy bean) and soil which were collected from 56 sources / locations in South Korea.

2. Four hundred eighty strains of *Aspergillus* were screened for protease, saccharogenic amylase, and dextrinogenic amylase productivity and activity.

3. Three strains of *Aspergillus oryzae*, S56-9, S-10, and M17-2, were selected as having the best enzyme activity among all of these. Address: Army Research and Testing Laboratory, Seoul, Korea.

4345. **Product Name:** Lima Tamari Soy Sauce.

Manufacturer's Name: Chico-San Inc. (Importer). Made in Japan.

Manufacturer's Address: P.O. Box 1004, Chico, CA 95927.

Date of Introduction: 1962.

New Product–Documentation: Note: This is the earliest known soyfood product imported to the USA from Japan by a Caucasian-run U.S. company. The product is actually shoyu, named after Lima Ohsawa.

Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list. Nov. 1. Ann Arbor, Michigan. 58 p. See p. 7. "Lima Tamari Soy Sauce." Sold in 8 fl. oz, pints, and quarts.

Chico-San Products. 1973. July. p. 4, 13. "Made in a little rustic factory in Northern Japan operated by the same family for more than ten generations. Aged for two years." Same publication, 1981. Jan. p. 13. Ad by Chico-San Inc. in *Macrobiotic Review* (Towson, Maryland). 1980. 2(2):2. "The soy sauce story. For almost twenty years Chico-San, Inc. has imported the very best natural, traditional soy sauce. Our Lima Soy Sauce is made with handcrafted techniques, using only natural ingredients... It is aged through two yearly cycles of seasonal changes in large wooden casks." Leaflet. 8½ by 11 inches, color. Reprinted in *Soyfoods Marketing*. Lafayette, CA: Soyfoods Center. "Taste the difference. Only Chico-San's Lima Soy and Tamari Sauces bring you the real taste of traditional Japanese preparation."

4346. Chung, Y.S. 1962. [Microbiological studies on soysauce: Isolation and identification of bacteria from soysauce brewed by the conventional process]. *Misaengmul Hakhoe Chi (Korean J. of Microbiology)* 1:30-37. [Kor]*

• **Summary:** Ten strains of aerobic bacteria and two strains of microaerobic bacteria were isolated from soy sauce which had been brewed by the conventional process. The following bacteria were identified by studying their morphological and physiological characters. *Bacillus punillus* R-2; *Bacillus subtilis* var., *aterimus* S-1, *Bacillus licheriformis* var-S-2, *Bacillus subtilis* T-1, *Sarcina maxima* T-2, *Pediococcus acidi lactici* Z-2, *Bacillus citreus* var., *soya B* Z-5, T-2 and Z-5 of the isolated bacteria were found to grow well even in the 24% salt medium, and Z-5 was more vigorous than T-2 though stinking. S-1 produced black-brown pigment from the medium containing various kinds of carbohydrates and the medium of soysauce which are available to S-1. Address: Army Research and Testing Laboratory, Seoul, Korea.

4347. Hahn, Y.S.; Park, B.D.; Chun, K.S. 1962. [Studies on the manufacture of soy sauce. IV. On the genus *Rhizopus* and *Mucor* in Korean wine kokja]. *Report of the National Industrial Research Institute (Seoul, Korea)* 11:52. [Kor]*

• **Summary:** As part of these ongoing studies on Korean wine kokja, the researchers isolated 15 kinds of the genus *Mucor* and 16 kinds of the genus *Rhizopus* from other regional wine kokja by the same methods used previously. A detailed discussion of similar variables is given. Address: National Industrial Research Institute, Seoul, Korea.

4348. Hahn, Y.S.; Kim, K.J. 1962. [Studies on the manufacture of soy sauce. V. On the genus *Rhizopus* and *Mucor* in Korean soybean Meju]. *Report of the National Industrial Research Institute (Seoul, Korea)* 11:140-52. [Kor]*

• **Summary:** As part of these ongoing studies on the same subject, the researchers isolated 8 kinds of the genus *Rhizopus* 25 kinds of the genus *Mucor* from Korean soybean Meju. Their properties were examined morphologically and physiologically.

1. Extinctive temperature: Most of the genus *Rhizopus* were 60 to 70°C and most of the genus *Mucor* were 70 to 75°C.

2. Propagative optimum pH: The genus *Rhizopus* were 2.5 to 7.0 and the genus *Mucor* were 4.0 to 6.5.

3. The multiplication of the genus *Mucor* in carbohydrates as a nutrient source was weak or did not occur, but the genus *Rhizopus* were good in all kinds of carbohydrates and R-32 [*Rhizopus*], R-36, and R-37 were especially superior. On many nitrogen compounds, genus *Rhizopus* multiplied well, and always better than the genus *Mucor*.

4. Liquefied action of gelatin: M-37 [*Mucor*], M-38,

and M-52 finished the reaction in the short time of 25-30 minutes. Address: National Industrial Research Institute, Seoul, Korea.

4349. Doi, Masaru. 1962. The art of Japanese cookery. Tokyo, Japan: Shibata Publishing Co., Ltd. [x] + 110 p. Illust. (some color). No index. 22 cm. [Eng]

• **Summary:** Soy-related recipes include: Tempura sauce (*Tentsuyu*, with soy sauce, p. 5). Miso soup with soy bean curd (p. 5). *Kuya-mushi* (Egg custard with tofu, p. 13). *Kenchin-mushi of Kodai* (Sea bream steamed with tofu filling, p. 17). *Kayaku-gohan* (With aburaage, fried soy bean curd, p. 24). *Koya-dofu* (Dry frozen bean curd as an ingredient in sushi, p. 39). *Chirashi-sushi* (With Koya-dofu, p. 46). *Sukiyaki* (With tofu, and shoyu in warishita, p. 50-52). *Mizutaki* (With tofu, and shoyu in tsuke-jiru dipping sauce, p. 58-61). *Yudofu* (With tofu, and shoyu in tsuke-jiru, p. 62-63). *Dote-nabe* of oysters with white miso paste (p. 63-64). *Shigiyaki* of eggplants (With tsuke-miso, p. 66-69). *Teri-yaki* (Meat, fish, with *tare* of 2 parts soy sauce and 3 parts mirin, p. 73-73). Miso soup (with akamiso, shiro-miso, soy bean curd, wakame, etc., p. 94, 96-99). Ohagi (with kinako {soy bean powder} and sesame seeds, p. 106). *Shoyu-sashi*—A small soy sauce dispenser (p. 110).

Also discusses: *Sekihan* (Rice with azuki beans and gomashio, p. 24-25). *Sushi with nori* (p. 37). Toasted *fu*—Light wheat gluten cake (p. 77). “How to make red bean paste. Red beans, 1½ c[ups], Sugar, 9 oz.”(p. 106).

Note 1. This is the 2nd earliest English-language document seen (May 2001) that contains the word “Teri-yaki” (or “Teriyaki”). The text reads: “In *Teri-yaki* rich sauce which gives a sheen to ingredients is used as seasoning. *Teri-yaki* is preferred for fatty ingredients.”

Note 2. This is the earliest English-language document seen (July 2003) that uses the Japanese word “gomashio” to refer to “sesame salt.”

Note 3. This is the earliest English-language document seen (March 2006) that uses the term “red bean paste” to refer to sweet azuki bean paste [*azuki-an*].

4350. Gernet, Jacques. 1962. Daily life in China on the eve of the Mongol Invasion 1250-1276 (trans. by H.M. Wright from French original ed. of 1959). New York, NY: Macmillan Co. 254 p. Series: Daily Life Series #7. 23 cm. Published by Stanford University Press in 1970. *

• **Summary:** This is a translation of *La vie quotidienne en Chine, a la veille de l'invasion mongole, 1250-1276*. Paris: Hachette (1959).

Note: The Mongol's takeover of China took more than a generation. By 1279, the Yuan forces had successfully annihilated the last resistance of the Southern Song Dynasty, and Kublai thus became the first non-Chinese Emperor who conquered all of China. The takeover ended with the announcement of the Yüan dynasty. In 1271 Kublai Khan

(ruled 1260-1294) adopted the Chinese dynastic name Yüan, meaning “The First Beginning” or “The Origin,” the first dynastic name not derived from a place name.

4351. Harris, Sara. 1962. House of 10,000 pleasures: a modern study of the geisha and of the streetwalker of Japan. New York, NY: E.P. Dutton & Co., Inc. 273 p. See p. 26. No index. 21 cm.

• **Summary:** This is a book about *geisha*, *pan-pans* or streetwalkers, maikos and *shikoni* (young geisha in training). It is equally a book about self-sacrifice—at times almost spiritual.

Page 26: “All these are either raw or cooked with bamboo sprouts, mushrooms, and persimmons in a heavy soy sauce. Sueko sits beside me all through the meal and feeds me with her chopsticks. Kazuko, dividing her time between them, does the same...”

Note: This is the earliest English-language document seen (April 2012) that uses the term “heavy soy sauce” to refer to a type of Japanese soy sauce.

Page 53: “Laying awake in the darkness, Kimiko heard the sounds of a winter night in Kyoto... The howling of the *oinarisans* peddling pickled rice wrapped in fried bean curd” [*inari-zushi*].

Kyoto's Gion, with its narrow streets, is a geisha section well known throughout Japan.

Pages 55-56: For Kimiko, on ordinary days like this, breakfast “consisted of two pickled plums, a bit of raw fish with soy sauce, and green tea. A small breakfast,...”

Page 60: “For Kimiko's first afternoon at Plum Tree House, lunch consisted of bean soup [miso soup] and hot tea.”

Page 67: “Next to the days when she could prove her worth at games of skill, Kimiko loved the days when the peddlers came round to Gion. There was first the *tofu*, the bean-curd man. He walked with his bucket precariously balanced on bamboo poles on his back. How Kimiko enjoyed him whenever she was in possession of *sen* enough to buy some curd for herself and perhaps for Sumiko too! It was fun to eat the curd, and even better fun to treat your best friend. On the days when the *tofu* man stayed away from Gion, the *chindonya* couples were likely to come...” selling candy and lollipops.

Page 71: The long-awaited New Year's morning meal included “*mochi*-cake symbolizing ‘happy congratulations,... the crisp seaweed, the fried bean curd,...”

4352. Hayashi, Shizuka. 1962. Problems involved in increasing world-wide use of soybean products as foods in Japan. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 200-06.

• **Summary:** Contents: Price. Quality. Margarine and

shortening. Mayonnaise. Miso, shoyu, tofu. Soybean meal. Soy flour. Soy milk. Frozen tofu. Food sources of Japan.

The 400,000 tons of soybeans produced in Japan are used for foods. From approximately 1 million tons of imported soybeans, Japan produces 150,000 tons of oil and 700,000 tons of meal. "Japanese oil consumption is the poorest [i.e. lowest = best] among the world nations. We need to consume oil at more than 5 times the present quantity to reach the level of the western countries." In 1952 Japanese consumption of edible oils was 7.52 gm per person per day, increasing to 11.52 gm in 1960. Soybean oil supplies about 30% of Japan's total oil supply. The main obstacles to greater consumption are price and quality (due to flavor reversion). The leading oil is rapeseed oil. The main oils used in margarine and shortening are fish oil (35.8% of total), beef tallow (25.4%), whale oil (10.0%), and coconut oil (8.0%).

New developments with traditional Japanese soy foods include: Dried, powdered miso in instant form is now available. Soybean meal is now the main ingredient in shoyu, rather than whole soybeans. A few soy milk plants have been erected and bottled soy milk is now sold in the market in limited areas. A certain culture is used to eliminate the beany flavor. Today, soybeans and soybean products provide the average Japanese with 10.6 gm/day of protein (16% of total protein consumption of 67.7 gm), and 7.6 gm/day of fat (28% of total fat consumption of 26.7 gm). During the period 1934-38, average Japanese protein consumption was 54.9 gm per person per day and fat consumption was 13.2 gm (less than half what it is today). Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, Room 410, No. 1, 1-Chomo Yurakucho, Chiyoda-Ku, Tokyo, Japan.

4353. Hesseltine, C.W. 1962. Research at Northern Regional Research Laboratory on fermented foods. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 74-82. [9 ref]

• **Summary:** "Three types of fermented foods have been investigated at the Northern Regional Research Laboratory, namely, soya sauce, miso, and tempeh. The first was studied shortly after World War II and the others have been studied within the last 2 or 3 years. The three fermentations have in common a mold fermentation of soybeans, with the soybeans being altered by the enzymes produced microbiologically."

"A third fermentation of soybeans which we have studied most recently is the Indonesian fermented soybean food called tempeh or tempe. We were fortunate in having Mr. Ko Swan Djien from the Laboratory of Microbiology, Institute of Technology, Bandung, spend part of last year with us in the study of this fermentation. Since he was acquainted with this food and we had cultures available, we began with a study of the pure culture fermentation

paralleling the actual process carried out in Indonesia. The flowsheet of the process on a laboratory scale shown in Figure 4 is as follows:" Each step is described. The mold culture used is *Rhizopus* sp. NRRL 2710.

Note: This is the earliest document seen (Oct. 2011) that mentions the *Rhizopus* strain "NRRL 2710." Address: Head, ARS Culture Collection Investigations, Fermentation Lab., Northern Utilization R&D Div., Peoria, Illinois.

4354. Hrdlicka, Jiri. 1962. Príspevek k Hodnocení Bilkovinnych, zejména sojových proteolysátů [Contribution of evaluation of protein, especially soybean proteolysates]. Prague. Vysoká škola chemicko-technologická. Sborník... Oddíl Fakulty Potravinářská Technologie (Scientific Papers from Institute of Chemical Technology, Prague. Food Technology) 6(3):145-51. [27 ref. Cze; eng]

• **Summary:** Foreign products of the type "shoyu" were analyzed and organoleptic properties were evaluated in order to compare them with Czechoslovak products. "The Czechoslovak product 'Vitana' differed substantially from all other samples analyzed and appeared more favourable." Address: Katedra chemie a zkoušení potravin, fakulta potravinářské technologie, Vysoká škola chemicko-technologická, Prague.

4355. La Choy Food Products, Inc. 1962. The art and secrets of Chinese cookery. Archbold, Ohio: La Choy Food Products. 31 p. Illust. (some color). 10 x 16 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

4356. **Product Name:** [Seitan].

Foreign Name: Seitan.

Manufacturer's Name: Marushima Shoyu K.K.

Manufacturer's Address: Kamigata-dori Ko 881, Uchiumi-cho, Shodo-gun, Kagawa-ken, Japan.

Date of Introduction: 1962. January.

Wt/Vol., Packaging, Price: 3.5 oz jar.

How Stored: Shelf stable.

New Product-Documentation: Note: This is the world's earliest known commercial seitan product. It was first imported to the USA by Erewon Trading Co. in 1969.

Talk with Aveline Kushi. 1992. April 9. The first seitan imported to America was made by Marushima Shoyu Co. on Shodoshima in Japan. George Ohsawa went to visit the company, talked with Mr. Mokutani (who is still the chairman, and a close friend of the Kushis, and a great admirer of Ohsawa), and showed him how to make it. Marushima began to make seitan commercially in the late 1960s. It was imported to America by Muso Shokuhin at about the same time the first miso and shoyu were imported. She thinks it came in small jars, and was so salty that she used it as a seasoning in place of soy sauce in stews (such as soybean stews) or cooked it with vegetables; this cooking

made it softer. This seitan probably started to be imported to America in about 1969.

Letter (fax) from Yuko Okada of Muso Co. Ltd., Japan. 1992. July 2. "I remember the term 'seitan' since I was a kid; it was probably coined by George Ohsawa. *Sei* means 'is' and *tan* is the first character in the Japanese term *tanpaku*, which means 'protein.' So *seitan* means something like 'right protein substitute.' Marushima Shoyu Co. developed seitan commercially in Japan and Muso has carried their seitan since Feb. 1966 when we started. We shipped seitan to Erewhon on a regular basis from 1968. [Note: Kotzsch. 1984, Dec. *East West Journal* p. 14-21 states that Muso began to export foods in 1969.] We also exported it to Chico-San [in the USA]. In Europe, we exported seitan to Paris, France." This seitan went to Institut Tenryu, which had a little macrobiotic food shop in Paris run by Madame Francoise Riviere. The first seitan Muso exported to Australia went to Spiral Foods.

Muso Shokuhin. Pure Heart–Muso general catalogue. 1990 July. p. 41. A color photo shows a 180-gm jar of Seitan. The product name is written in English (i.e., in roman letters). Under that, it is written smaller in katakana. Above the company name and address is written: "Sakurazawa Nyoichi shido" which means, "Made under the guidance of George Ohsawa."

Talk with Mr. Kiyoshi Mokutani, president of Marushima Shoyu K.K. in Japan. 1992. July 12. "The invention and development of seitan in Japan." He invented seitan in 1961-62 and took a sample to George Ohsawa, who coined the term "seitan" upon seeing it. Commercial production began in 1962. For details, see interview.

4357. Muljokusumo, E. Sudigdo. 1962. Ketjap, kedelai, bungkil katjang, ikan [Soy sauce, soybeans, peanut flakes, fish]. Bandung, Indonesia: Penerbit Tarate. 44 p. Illust. No index. 21 cm. Kita membuat sendiri (3) [Series: We make these foods ourselves No. 3]. No. 131. [Ind]

• **Summary:** Describes how to make Indonesian-style soy sauce from soybeans, peanut press-cake, or fish. Contains many excellent illustrations (line drawings). Address: Science specialist [Indonesia].

4358. Obata, Yataro. 1962. Shôyu no shôrai [The future of shoyu]. In: 1962. Nihonjin no Tabemono [Foods of the Japanese People]. Tokyo: Kawade Shobo. See p. 316-22. [Jap; eng+]

4359. Griffith Laboratories, Inc. 1962? Griffith's Vegamine: And other hydrolyzed plant proteins—for high flavor satisfaction. Chicago, Illinois. 4 p. Undated. 28 cm.

• **Summary:** This undated glossy brochure has two black-and-white photos on the cover below an orange band with white letters. On the left is a sliced ham; on the right are various foods in bowls and on trays and dishes.

The two inside panels contain many photos. The company makes four types of hydrolysates; a typical analysis is given for all 8 products: (1) Spray-dried light-colored acid hydrolysates: Vegamine (from soy and wheat), and C.W. Hydrolysate (from casein and wheat). Vegamine has long been famous. (2) Spray-dried non-decolored hydrolysates: Hy Veg and Hy-C.W. Hydrolysate. (3) Hydrolysate pastes: Vegamine Paste and Hy-Vegamine Paste. (4) (1) Liquid hydrolysates: Liquid Vegamine (since 1940), and Vegetol No. 1.

The top of the inside two panels folds up and we read: "Griffith's unique flavor experience began with spice blending in the early 1920s... the Griffith Research and Experimental Kitchen was established in 1938." "Griffith's extensive experience in hydrolyzing soy and wheat proteins, and casein and wheat gluten dates back to 1940. Even then, Griffith had a background of twenty-one years in flavor formulation." The back panel gives details on labeling and packaging. Five of the products which contain no casein may be "Declared as: A hydrolyzed plant protein (Amino Acid Salts) from which none of the Mono Sodium Glutamate has been removed."

Griffith also has facilities at: (1) 4900 Gifford Ave., Los Angeles 58, California. (2) 855 Rahway Ave., Union, New Jersey. Note: Since these addresses have no Zip codes, which were introduced in the USA in 1963, this booklet was probably published before that year. Address: 1415 W. 37th St., Chicago 9, Illinois.

4360. Ohsawa, G. 1962? Zen macrobiotics: The art of longevity and rejuvenation. New York, NY: Ohsawa Foundation. Printed in Japan. 218 p. Undated. Index. 17 cm.

• **Summary:** This is the second printed edition of Zen Macrobiotics. The cover is gray. The author is George Ohsawa. The content is basically the same as the first printed edition, except that (1) Typographical errors on pages 3, 7, and 62 have been corrected; (2) A folded, undated insert, titled "Dictionary of Macrobiotic Terms" was found in this printing between pages 216 and 217 (for details, see below). The insert is 17.0 cm / 6.69 inches high by 30.0 cm / 11.81 inches wide. Folded crosswise into thirds, it fits perfectly into these books; (3) The information on pages 217 and 218 is different and updated. The following appears on page 218: Brazil (Casa Longavida, Sao Paulo), Sweden (Miss Ilse Clausnitzer, Stockholm), U.S.A. (Ohsawa Foundation, 61, W. 56th St., New York; Ohsawa Foundation, P.O. Box 238, Chico, California; Chico-San, Inc., 64, 5th Ave., Chico, California; Musubi, 61, W. 56th St., New York–Macrobiotic Restaurant).

Concerning the date of publication: Although the date is not given in or on the book, Carl Ferré (who owns an original of this 2nd Japan printing) notes (8 May 2011): "Chico-San is listed. This means it was after Nov. 1961 at the earliest and most likely very early in 1962. I say this because the address

given is not the Mangrove Ave. one.” “There is no ‘Printed in Japan’ in this book either but it is so similar to the earlier one that it has to be printed in Japan. It is also undated. It is not ‘revised’...”

In the 3-column “Dictionary of Macrobiotic Terms” (insert), for each entry there is the word or term, its definition, and one page number on which that word appears. Because the page numbers refer to pages in this edition, the dictionary was probably published at about the same time as this book—or at the time of the previous edition in 1960. The following is a selection from the Dictionary, with pages given for soy-related words: Aduki: Japanese red bean. Ae: Dressing (vegetables) with soy bean paste [miso], orange juice, etc. (p. 96). Aemono: Japanese salad (p. 88). Age: Fried bean curd. An: Red [aduki] bean jam. Ankake: Pouring [aduki] jam. Bancha: Coarse green roasted a few minutes. Bansho: Bancha with soy sauce (p. 152). Daikon: Long, white Japanese radish. Dango: A dumpling. Dentie: Head of eggplant salted, kept, dried and then burned into a powder. Egoma: A type of sesame seed—most yang. Gobo: Burdock. Gomashio: Sesame salt. Goma Tofu: Sesame curds (p. 87). Goziru [gôjiru, gojiru]: Soup made of grated soy beans and vegetables (“Ziru” means soup in Japanese) (p. 84). Gyoza: A Chinese food—vegetable mixture wrapped in pieces of thin dough. Hako: A mold or box in Japanese. Haru Tea: A very yang herb beverage. Hiziki [Hijiki]: Spindle-shaped, small, black seaweed. Jinenjo: A wild potato or a Japanese yam. Karinto: A kind of deep-fried cookie. Kasha: Russian buckwheat grain preparation. Kayu: Thin rice preparation [porridge]. Kinpira: Burdock and carrots preparation. Kitune [Kitsune]: Boiled rice or noodles cooked with thin fried bean curds [*agê*] (p. 68). Kobu (or Konbu): A (sea) tangle coming from deep ocean waters. Kobu Maki: Kobu stuffed with vegetables. Koi-Koku: A special carp and miso soup (p. 109). Kokkoh: A creamed blended cereal. Konnyaku: A paste made from flour of this Japanese tuberose [tuber]. Kuzu: Powdered plant-gelatine obtained from kuzu plant. M.U. tea: A tea made of 15 blended herb’s roots. Matuba [Matsuba]: Pine leaves. Miso: Soy bean paste (p. 65). Miso Ae: Boiled vegetables served with miso cream (p. 96). Misoni: Carrots and onions cooked with miso (p. 129). Mochigome: Glutinous rice. Moti [Mochi]: Rice cake. Musubi: A knot. Nisime [Nishime]: Same as Nituke. Nituke [Nitsuke]: Vegetables sauteed. Nori: Laver or sloke—a kind of seaweed. Ogura: Aduki (red bean) preparation. Omedato: Dessert made of roasted rice and red beans. Originally Japanese word for congratulation. Oshitashi: Boiled vegetables, served with Tamari (p. 97). Ransho: Egg—Tamari preparation. Renkon: Lotus root. Sashimi: Sliced raw fish. Sarashina: A kind of buckwheat dish. Originally it means the name of a place famous for producing good buckwheat. Siitake [Shiitake]: A kind of Japanese mushroom. Sio [Shio]: Salt. Sio Kobu [Shio Kombu]: A kobu (seaweed) preparation. Soba: Buckwheat. Sukiyaki: Fish (or beef) and

vegetables cooked a la japonaise. Sushi: A rice preparation. Syo-ban [Sho-ban]: Coarse green tea with soy sauce (p. 101). Tahini: Sesame butter. Tai: A red snapper [fish]. Tamari: Traditional soy sauce (p. 62). Tekka: A preparation of minced lotus root, burdock root, carrot, ginger, and miso (p. 96). Tempura: Japanese process of deep-frying in oil. Tofu: White soya bean cheese (p. 134). Tororo: Wild potato [wild yam]. Udon: Wheat vermicelli or noodle or macaroni. Umeboshi: Japanese plum salted and conserved for years. Ume-sho-ban: Medicinal beverage [containing umeboshi and shoyu] (p. 156). Yannoh (Ohsawa coffee): A cereal coffee made of roasted rice, wheat, aduki, chick peas and chicory. Yomogi: Mugwort (or wormwood). Yuba: Soybean protein prepared into transparent paper-like sheets (p. 77). Zosui: A rice preparation. Zaru: A bamboo basket. Address: Ohsawa Foundation: 331 Riverside Dr., New York City. Secretary Aihara, 44 W. 96th St., New York City, U.S.A.

4361. Ontario Soya-Bean Growers’ Marketing Board. 1962? About soybeans: “A know your industry presentation.” Chatham, Ontario, Canada. 12 p. Undated. 23 x 11 cm. • **Summary:** Contents: A message from Dick Smith, Chairman, OSGMB. The big three: Soybeans, soybean oil, and soybean meal. Other soybean products: Soybean flour, milk, cheese (tofu), sauce, and sprouts. Where soybeans are grown worldwide. The position of soybeans in world fats and oils production. The import and export pictures in 1961. Production of soybeans by county in Ontario. Marketing the crop. Soybean grades. Activities of OSGMB.

In 1961 Canadian soybean production accounted for only 30.5% of Canada’s need for soybean oil, and 31% of the country’s needs for soybean meal; the rest had to be imported. In 1954, in order to establish a healthy market situation, OSGMB initiated a soybean export program. “The establishment of this ‘second market’ has proven its intended worth in helping to maintain price levels in Canada. In 1961, Canadian exports of soybeans and the bushel equivalent of meal and oil totalled 11.7 million bushels.” Address: Box 668, 143 Wellington St. West, Chatham, Ontario, Canada.

4362. Brandemuhl, William. 1963. Soybean history: Aspects of Buddhist influence. Anthropology Dept., University of Wisconsin, Madison. 15 p. Jan. Unpublished manuscript. 28 cm. Summarized as “Early Soybeans Were Spread by Buddhists” in Soybean Digest, July 1963, p. 21. [52 ref] • **Summary:** This research paper (which is not a thesis) was prepared for Anthropology 150a, taught by Dr. R.J. Miller. Contents: Purpose of study. Method of study. Botanical history: Naming the soybean, the *Glycine ussuriensis* case, other genetic evidence, claim on the origin of the soybean. Initial utilization. Botanical dissemination. Soybean history—non-botanical: Legend, recorded Chinese soybean history, concluding notes on soybean origin and cultivation history. Buddhist influence on the development of the soybean:

Soy sauce or shōyu, miso, tofu, natto, ancient soybean food products, the soybean grows.

“Another principal concern of this paper is the Buddhist connection to soybean development. The introduction of soybeans, although an approximation at the very best, coincides quite closely with the spread of Buddhism in Japan. As shown later, Buddhism has a very close connection with soybean history and in many product sectors of soybean development, may have created or at least popularized them” (p. 1).

“Contrary to the above statement I submit the following data which I believe can easily be documented: 1. Emperor Sheng-nung is a mythical character (letter from Herbert W. Johnson, Research Agronomist, USDA / ARS Crops Research Div., Beltsville, Maryland, 30 Aug. 1962). 2. Emperor Shen-nung was a legendary character who cannot be pinpointed to a date of 2838 B.C. (letter from Jung-pang Lo, Research Asst. Prof., Far Eastern and Russian Inst., Univ. of Washington, 6 Sept. 1962). 3. Shen-nung is a mythical ruler, never living at the date attributed to him or at any other date (letter from Edward H. Schaefer, Professor of Oriental Languages, Univ. of California, Berkeley, 6 Sept. 1962). 4. A work attributed to Shen-nung is called *Shen nung pen Ts'ao Ching* but since it contains many Han Period facts (around the beginning of the Christian era) it is believed to be a Post-Han work. This work is first mentioned by T'ao Hung-ching (who edited it) early in the 6th century A.D. (Jung-pang Lo). 5-6. The *Pen Ts'ao Kang Mu* was written by L. Shih-chen (1518-1593) in A.D. 1596 or 1597 (Jung-pang Lo, Schaefer)... 9. The word ‘Shiyu’ cannot be found in Chinese dictionaries. The name for the soybean in China being ‘Ta-tou,’ meaning big bean (Jung-pang Lo).”

“Concluding notes on soybean origin and cultivation history: *The Book of Poetry* (Shih-ching) mentions boiling shu (pulse) and the *Erh-ya* (a Chou period lexicon, authorship attributed to Confucius or his disciples) mentions Jung-shu. Kao yu, the commentator, remarked that the Jung-shu (pulse of the Hu people) which was also known as Ta-tou (the soybean). Jung was a term used by the Chinese in the Chou period for the non-Chinese people of the North and Ju was a term used by the Chinese people of the North and West. This would seem to indicate that the soybean was introduced to China from the non-Chinese people of the North. Also supporting this is the *Chou-shu* by Hsi meng, in which there is a reference to Shan-jung shu (pulse of the Jung people of the mountains). A commentator explains that the Shan-jung were tribes in the Northeast (Manchuria).

“The Kuang-Tzu contains a passage saying that after Duke Huan of Chi (7 B.C.) defeated the Shan-jung the Jung-shu came to be known throughout China. Chia su-hsieh (5 A.D.) in his book *Ch'i-min Yao-shu* (Ts'tung-shu Chi-ch'eng, editor) quoted the *Shen-nung pen Ts'ao* as saying that Ta-tou (the big bean) was the Hu-Tou (Hu peoples' bean) which Chang Ch'ien brought back from his exploration of central

Asia in the first century B.C., there being two varieties. In the Han period both Ts'ui shih and Fansheng in their books on farming techniques mention cultivation of the Ta-tou and its use in famine relief. The *Pen Ts'ao Kang Mu* (1596), mentioned earlier, has a long discourse on the medical properties of the Ta-tou (Jung-pang Lo).”

“Buddhist influence on the development of the soybean: Although references to the Buddhist influence on soybean development are particularly sparse I believe Buddhism deserves credit for initiating the spectacular expansion of soybean utilization in Japan which triggered utilization in the rest of the world. The Buddhist connection is certainly true if oil utilization is excluded. Below lie the reasons for my belief.

“Buddhism was introduced into Japan around 500-600 A.D. (Bush 1959, p. 28-29). Among the priests the traditional hate of flesh was present and agriculture of the field type was encouraged by the government (Tezuka 1936, p. 13). The introduction of soybeans fits well into this historical development. The recent finding of soybean seed in *Shōso In* (Japan) which was established in the Nara era for the storing of legumes of that era that were introduced from China (Nagata 1960, p. 97) proves as does the record of ceremony and taxation system of the Nara era (Nagata, p. 75) that soybeans did exist in Japan at that time.

“Soy sauce or more properly shōyu, the now renowned Japanese flavoring, is said to have originated during the Chou dynasty (1134-246 B.C.) (Komiya 1955, p. 14) and was introduced into Japan when Buddhism was being established although not becoming popular until 1300 (Joya 1951, p. 31-33).

“Miso, soybean paste, is a much used breakfast and soup dish in Japan that was introduced to Japan from China or Korea (Horvath 1927, p. 83). It was definitely used by the priests when they first entered Japan, in fact they popularized it among their new vegetarian converts (Joya, p. 21-23).

“An ancient Chinese book states that the Philosopher Hamintze, a prince of the Han dynasty, was the inventor of Tofu or soybean curd (Horvath, p. 6) while another source attributes the tofu innovation to the Chinese Philosopher Whai Nain Tze (Piper & Morse 1923, p. 234). The manufacture of soybean curd (tofu) was started in China in 164 B.C. during Emperor Hwai Wen's reign by Liu An, duke of Hwai Nan. Liu An was a great friend of the Buddhist monks and it seems quite likely that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration.” Note: Whai Nain = Huainan. Liu An was the duke (tze) of Huainan. So all of these people are one and the same person.

“Tofu was introduced into Japan from Korea for the first time during the Toyotomi government (Horvath, p. 73) and was undoubtedly introduced into Japan from China by the Buddhists (Piper & Morse, p. 234) being used for their daily food before it was generally used (Horvath, p. 73).

"The true Buddhist monk was carried through the period of childhood growth on a rather heavy diet of bean curd (Horvath, p. 17). Even the naming of soybean curd has its esoteric connotations as the Classical Chinese name for tofu is Li chi which probably means morning prayer (Horvath, p. 72).

"Natto, a sort of vegetable cheese prepared from soybeans has long been used by the Buddhists and is now used extensively by the Japanese (Piper & Morse, p. 224).

"Buddhism seems to have been a major reason for the development of Japan for main soybean products. With the existence of these products Japan opened the world to soybeans." Address: Univ. of Wisconsin, Madison, Wisconsin.

• **Summary:** Continuous steaming of soybeans and wheat in a screw conveyer was tested using rotary valves. Address: Nihon Shoyu Kenkyujo (Japan Soy Sauce Laboratory, Tokyo).

4367. *Times (London)*. 1963. Japan seeks expansion of trade with China: Five-year programme in full-swing. May 17. p. 20, cols. 4-5.

• **Summary:** From a correspondent in Tokyo. "With extreme caution, the Japanese Government has begun to tiptoe

through the door that leads to expansion of trade with Communist China... with many anxious backward glances toward Washington" [DC]. Last year Japan concluded a £36 million trade agreement with China, and the programme is now in full swing.

But there is not much that the Japanese want to buy. "American soya beans are of better quality than China's, and the demand for Chinese soya beans is not likely to go beyond what is needed for purely culinary purposes."

4368. Senti, Frederic R. 1963. Current status of soybean utilization research under P.L. 480. *Soybean Digest*. May. p. 28, 30-34.

• **Summary:** This is the third in a series of USDA research reports under the P.L. 480 program. Discusses progress on active projects: Soybean oil in Seville, Spain; Chemical changes in sterols during refining of soy oil by Prof. H. Niewiadomski in Gdansk, Poland; Flavor stability of soy oil in by Prof. Y. Toyama at Toyo Univ. in Japan; Improving the frying quality of soybean oil by Prof. G. Varela at Univ. of Granada, Spain; Meal constituents.

Oriental foods: Production of shoyu (soy sauce) using U.S. vs. Japanese soybeans, use of dehulled soybean grits for making miso, miso-type food in Israel, use of U.S. soybeans in making tofu, or soybean curd, by the Japan Tofu Association, Tokyo.

Industrial applications: Polymerization studied in Milan, Italy. Soybean constituents. Oriental foods #2: Dried tofu in Japan, *Saccharomyces rouxii* yeast in shoyu and miso, development of fermented products from soybean milk in Japan, fermented soybean cheese in Taiwan, fermented soyfoods (tempeh, ontjom, ragi) in Indonesia.

Domestic research for increasing imports: Work with soy oil, UNICEF trainees from Brazil studying tempeh, projects saponins, protein complexes, and isolated protein quality in Israel.

A small portrait photo shows F.R. Senti. Address: Director, Northern Utilization Research and Development Div. (also known as the Northern Regional Research Lab.), Agricultural Research Service, USDA, Peoria, Illinois.

Demonstration and extension of field crops and pest control. In: Annual Work Progress Report on Crop Improvement Program of Rice, Sugarcane, Vegetable and Field Crops (for the period July 1962 to June 1963). Vietnam: Directorate of Rural Affairs. 266 p. July. See p. 234-49. [Eng; vie]

• **Summary:** At bottom of cover page: "A cooperative project between the Directorate of Rural Affairs (DRA), and the Chinese Technical Mission to Vietnam on Crop Improvement (CIM)."

Soybean is a minor crop in Vietnam. Unlike China, Vietnam uses coconut oil instead of soybean oil, and fish sauce (*Nuoc-Mam*) instead of soysauce. Vietnam does not use soybean as a food or vegetable (bean-sprouts, bean curd, bean milk, etc.) and does not use it as a feed for pigs (soybean cakes, after extraction of the oil). Taiwan, with about the same population as Vietnam, grows about 50,000 hectares of soybean, but still has to import more than 60,000–75,000 metric tons (tonnes) every year to meet its demand.

In Vietnam the total acreage of two crops of soybean (planted in mid-May, and mid-July to mid-August) is only 5,940 ha, 80% of which grows in Long-Khanh Province, concentrated in the 3 villages of Xuan-Loc, Gia-Kiem, and Phuong-Tho. The yield averages 664 kg/ha. This low yield could be increased to 2,000 kg/ha or more based on tests at the Hung-Loc Experiment Station.

In order to promote economic cooperation between Vietnam and China, the export of soybean to Taiwan will play an important role to balance the trade between the two nations.

A regional trial planting of soybean was conducted, and based on it recommendations were made concerning soybean planting, fertilization, weeding, pest control, harvest, and disease control.

4374. Smith, Allan K. 1963. Foreign uses of soybean protein foods. *Cereal Science Today* 8(6):196, 198, 200, 210. July. [28 ref]

• **Summary:** Contents: Introduction (world food shortages). Technological assistance (by NRRL). Oriental traditional foods: Tofu, shoyu or soy sauce, miso or soy paste, monosodium glutamate, natto and kinako, soy beverage, tempeh (tempe). Recent food developments. Address: NRRL, Peoria, Illinois.

4375. Baker, Lois. 1963. 'Round the food stores: For a look at the latest ideas. *Chicago Tribune*. Aug. 2. p. B2.

• **Summary:** La Choy Bead Molasses is now being imported from the orient and sold here in 5½ oz jars. "As you may know, bead molasses was first used by the ancient Chinese, who called it a thick soy sauce and served it as a condiment along with regular soy sauce." The pungent, dark molasses can be used to flavor such oriental dishes as chow mein and chop suey.

4376. Mitani, Kazuma. 1963. Edo shôbai zu-e [Illustrations of merchants, artisans and peddlers during the Edo period in Japan]. Tokyo: Seiabo. 271 p. Illust. No index. 20 x 27 cm. [Jap]

• **Summary:** A stunning book, filled with large, lovely illustrations (mostly wood-block prints or line drawings) from the Edo period (1600-1867) in Japan. Soy-related illustrations:

(1) A tofu shop (p. 18), showing a man sitting on a wooden lever-press pressing the soymilk out of cloth straining bag while his wife, with a baby on her back, turns a hand-turned stone mill that grinds soaked soybeans into a smooth puree, which falls into a wooden tub. Large blocks of tofu are shown immersed in cold water in a sort of wooden sink, with a tofu knife on top. In the background, up a step inside the house, an elderly person is deep-frying tofu.

(2) A tofu seller (p. 19), walking in the street with two wooden tubs of tofu at both ends of a shoulder pole. He is wearing getas on his feet and a large round straw hat.

(3) A shoyu seller (p. 23), walking in the street from door to door with several layers of wooden tubs at both ends of a shoulder pole and a kerchief over the head (see next page).

(4) A man in a shop with Kinzanji hishio in wooden vats of various sizes, each bound by braided bamboo hoops (p.

醤油
売

26).

(5) A woman in a kimono (p. 26), serving two cups of amazake.

(6) A man selling dengaku (p. 28), skewered tofu above hot coals in a brazier. He is fanning the coals and hunkering behind the brazier.

(7) A seller of oden (p. 29). He is standing, resting on the shoulder pole, which rests atop two tall boxes.

いなり
ずし
屋

(8) A man making Inari-zushi (p. 49) at a street stall. An illustration below the roof shows a fox running.

(9) A man selling woven bamboo baskets and miso strainers (*zaru ya miso-koshi*) (p. 210).

(10) A woman (*edamamé uri*) with a child on her back as she walks (p. 239), selling edamamé (green vegetable soybeans) in a basket under her right arm.

The author collected these illustrations from many sources; the source of each is given in an “accompanying source book”—which we have been unable to locate. He re-drew each of the old originals, but tried to be true to the original. He eliminated a few things that he felt were not needed in some illustrations and added a few more things to others to make them clearer for today’s readers. There are no illustrations that he created. Most of the originals are from the mid-Edo period, especially the Kansei, Bunka, and Bunsei eras (1789-1830), with 2-3 things from the Kyoho period (1716-1735).

To make this book he went to many libraries, archives, and other places where historical documents are kept; he was helped by many other people. He was born on 15 March 1912 (Meiji 45). He graduated from Tokyo Bijutsu Daigaku. *Nihon ga-ka* (Tokyo Fine-Arts Univ., Japanese Art Dept.). He is a member of the Bijutsu Shuppan Renmei (Art Related Publishing Bureau). He presently lives at Setagaya-ku, Tokyo. The book has a detailed table of contents, but no index. Address: Japan.

4377. Nelson, Kay Shaw. 1963. Humble vegetable with a glorious past: In praise of the lowly pumpkin. *Christian Science Monitor*. Oct. 25. p. 17.

• **Summary:** In the USA we think of pumpkins in connection with Halloween jack-o’-lanterns, pumpkin pie, and Cinderella. “In Japan the whole pumpkin, scooped out

and filled with a mixture of minced chicken, sliced carrot, mushrooms, soy sauce, sugar, tofu, green peas, and eggs, is steamed.” Address: Washington, DC.

4378. *Foreign Agriculture*. 1963. Japanese marketing toasted soybean meal. 1(47):13. Nov. 25.

• **Summary:** A large oilseed processor in Japan is scheduled to start marketing toasted soybean meal this month. This will be the first time that roasted soybean meal has been placed on the domestic market. It is expected that toasting will be widely adopted, because of the additional nutritive value of meal so treated. Each of the plants will continue to produce some untoasted meal for soy-sauce production.

4379. Standal, Bluebell R. 1963. Nutritional value of proteins of Oriental soybean foods. *J. of Nutrition* 81(3):279-85. Nov. [18 ref]

• **Summary:** Hawaii imports 680-907 metric tons/year of soybeans from the United States mainland and most of it is used for food. “Oriental soybean products are used daily by all nationalities in Hawaii. They constitute important items in the diet. All soybean products used in these islands, e.g., tofu, natto, miso, shoyu, and sprouts, are prepared from the matured beans by the methods used in Japan and China. A certain amount of the beans is grown locally and picked green for use as will be described later” (p. 279).

The commercial process for making each product is described. Concerning natto: “The preparation had a characteristic cheesy odor which attracted flies and apparently stimulated the appetite of rats. Agar smears of the preparation show that it contained an almost pure culture of gram-positive rods in long chains, without spore formation for 2 days at 31°C. Three brands of natto were available.”

The Net Protein Utilization (NPU) values, at 10% protein in the diet for rats, were determined to be: powdered whole egg (control) 90.4, *edamame* (green soybeans; “picked green and used as a vegetable”) 72.2 (the highest of any soyfood in this study), tofu 65.0, [soy] bean sprouts 56.0, natto 44.4, and mung bean sprouts (*Phaseolus aureus* Roxb.) 35.6.

“Natto, which was prepared from matured soybeans, gave NPU and PER values below reported values for the matured beans. It is possible that a substance or substances were formed during the incubation process which contributed to lower values of NPU” (p. 283-85). Address: Dep. of Nutrition, Hawaii Agric. Exp. Station, Univ. of Hawaii, Honolulu.

4380. Chang, C.H. 1963. [Free sugars in ordinary Korean soysauce]. *Theses Seoul Municipal College of Agriculture*. p. 35-37. [Kor]*

• **Summary:** Ordinary Korean soysauce samples obtained from several homes in Seoul were analysed for free sugars by the paper partition chromatography method.

Galactose, glucose, arabinose and xylose were detected in ordinary soysauce.

In descending order of abundance of free sugars: Galactose, arabinose, xylose, and glucose. Address: Seoul Agricultural College, Seoul, Korea.

4381. Chang, C.H. 1963. [Studies on chemical composition and free amino acids in ordinary and improved Korean soysauce]. *Theses Seoul Municipal College of Agriculture*. p. 212-23. [Kor]*

• **Summary:** Korean soysauces were prepared by the ordinary and improved method; analysis indicated the following results:

(1) Substances influencing taste, such as amino acids, organic acids, and reducing sugars, were found more in improved soy sauce than in ordinary soy sauce.

(2) The fact that much ammonia nitrogen is contained in ordinary soy sauce was one of the most important elements. Therefore, it is necessary for *meju* [Korean soybean koji] to be improved.

(3) Amino acids in ordinary soy sauce, which were identified by two-dimensional paper chromatography and colorimetric methods, were found to be aspartic acid, glutamic acid, serin, alanine, tyrosine, valine, phenylalanine, leucin, lysine, histidine, proline, cystine, and methionine.

(4) Amino acids in improved soy sauce, which were identified by two-dimensional paper chromatography and colorimetric methods, were found to be aspartic acid, glutamic acid, serin, alanine, tyrosine, valine, phenylalanine, leucin, lysine, histidine, proline, cystine, methionine, and threonine.

(5) The total free amino acids were not different from each other, especially in quantity, but methionine and histidine are found more in improved soy sauce than in ordinary soy sauce. Address: Seoul Agricultural College, Seoul, Korea.

4382. Cheng, Hsu. 1963. [Comparative studies on the mixing fermentation of soy sauce prepared from different cultures of *Aspergillus*]. *Chung-hua Nung Hsueh Hui Pao (J. of the Agricultural Association of China, Taipei)* 43:52-57. New Series. [4 ref. Chi; eng]

Address: Formerly Associate Chemist, Joint Industrial Research Institute, Taiwan.

4383. Chung, Y.S.; Lee, K.H.; Song, S.H.; Kim, C.H.; Chang, K.H. 1963. [Studies on microbiological standards of foods. I. The occurrence of coliform organisms in several samples of soybean mash, soy sauce, and red pepper mash]. *Report of the Army Research and Testing Laboratory (Seoul, Korea)* 2:47-50. [Kor]*

• **Summary:** The presence of coliform bacteria in or on foods depends on many environmental factors, each of which must be determined separately for each food item. When a

correlation is found to exist between unsanitary methods of food production and the presence of *Escherichia coli* in the finished product, the presence of confirmed fecal strains of coliform organisms can be interpreted as having sanitary significance. Address: Food Div., Army Research and Testing Laboratory, Seoul, Korea.

4384. Kim, Y.H.; Kim, Z.U. 1963. [Effects of the ratio of raw materials on the quality and taste of soy sauce. I. Studies on the changes of enzymatic activities and chemical components during koji preparation with various ratios of raw materials]. *Han'guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 4:17-22. [Kor]*

• **Summary:** Changes of enzymatic activities and chemical components during koji preparation of soy sauce with various ratios of soy beans and wheat were studied as the first step in checking the current ratio of raw materials for improved soy sauce and determining the proper ratio for them with respect to its quality and taste. The following results were obtained.

(1) The protease in the dried koji were mainly composed of one part which was active at the neutral pH (about 6.0) range, while other parts that were active at acid and alkaline pHs were inferior. The more wheat in the koji, the stronger the protease activities at acid and neutral pH and the weaker at alkaline pH.

(2) The activity of enzymes increased rapidly in early stages, then gradually in later stages protease and beta-amylase rapidly throughout except the drying of alpha-amylase during the course of koji preparation. The greater the amount of wheat as a raw material, the stronger the protease and the beta-amylase activity.

(3) Reducing sugars, amino nitrogen, and total nitrogen were increased, while total sugar was decreased during the course of koji preparation.

(4) The more wheat used as a material, the more reducing sugar and total sugar there was. While the total nitrogen was decreased, no noticeable differences were observed in the amino nitrogen among the dried kojies. Address: College of Agriculture, Seoul National University, Suweon, Korea.

4385. Lee, K.H.; Chang, K.H. 1963. [Studies on koji for soy sauce brewing. II. On the optimum conditions of growth and identification of *Aspergillus* species]. *Report of the Army Research and Testing Laboratory (Seoul, Korea)* 2:24-25. [Kor]*

• **Summary:** These experiments concern the identification, growth conditions, and lethal temperatures of three previously-identified superior strains of *Aspergillus* species, which were isolated from the soils and Meju (fermented soy bean [koji]) in Korea.

The results obtained in light of the manual of Raper and Thom for identification of the *Aspergilli* show that the three

strains of *Aspergillus* species all pertain to the *Aspergillus flavus oryzae* group.

The optimum temperature, pH and the lethal temperatures of the three species have been measured. Address: Army Research and Testing Laboratory, Seoul, Korea.

4386. Song, S.H.; Kim, J.H.; Lee, K.H.; Chung, Y.S.; Chang, K.H. 1963. [Studies on the preservation of soy sauce. I. Isolation of the pellicle forming yeasts from soy sauce]. *Report of the Army Research and Testing Laboratory (Seoul, Korea)* 2:32-37. [Kor]*

• **Summary:** Soy sauce is one of the most widely used seasonings for Korean foods. About 4.5 million liters per year is consumed by the military alone. The quality of soy sauce is often made to deteriorate by harmful microorganisms, especially yeasts which form a film or pellicle on the surface of the sauce during long-term storage. At the end of deterioration, the sauce gives off an offensive odor and a thick pellicle grows on the entire surface of the sauce; then it goes bad and rots. Many investigators have reported on this problem. In this study, the harmful yeasts are isolated from soy sauce in military storage and their microbiological characteristics are identified. Such yeasts have been identified as *Hansenula anomala* group, *Zygosaccharomyces japonicus* group, and another group of *Zygosaccharomyces*. Address: Food Div., Army Research and Testing Laboratory, Seoul, Korea.

4387. Song, S.H. 1963. [Studies on the preservation of soy sauce. II. The pellicle forming yeasts as influenced by fungicides]. *Report of the Army Research and Testing Laboratory (Seoul, Korea)* 2:38-42. [Kor]*

• **Summary:** The quality of soy sauce is often made to deteriorate by harmful microorganisms, especially by yeasts which form a film or pellicle on the surface of the sauce during long-term storage. At the end of deterioration, the sauce gives off an offensive odor and a thick pellicle grows on the entire surface of the sauce; then it goes bad and rots.

Heretofore many fungicides such as capric acid [decanoic acid], benzoic acid, esters of benzoic acid, vitamin K compounds, sorbic acid and surface active agents (Tweens and Emulgens) have been applied in order to prevent growth of the yeasts—regardless of their effects on human health.

These experiments found the following fungicides (and their minimum concentrations) to be effective against pellicle forming yeasts: Vitamin K group (0.05%). Esters of p-hydroxy benzoic acid (0.007%). Sorbic acid (0.05%). Emulgen-106 (0.1%). Capric acid (0.003%).

In addition, the following mixtures are effective: Emulgen-106 + p-hydroxybutyl benzoate; Vitamin-K3 + Emulgen-106; and sorbic acid + benzoic acid. Address: Food Div., Army Research and Testing Laboratory, Seoul, Korea.

4388. Chao, Buwei Yang. 1963. How to cook and eat in Chinese. 3rd ed. New York, NY: Random House. xxvi + 249 p. Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index. 21 cm.

• **Summary:** This edition is quite similar to the original 1945 edition, except that it has some new front matter (such as introductions to the second [1949] and third revised editions), new pages added here and there plus 16 pages of recipes added between pages 228 and 229, and new cooking techniques. The page layout is basically unchanged, but when new pages were added, they were numbered 160a, etc; thus the contents of page 203 is identical in all editions.

However, among the new pages added, there is a nice new chapter 22 titled “Soybean Foods” (p. 228c-228h). Its contents: Introduction and Buddhist mock meats. Homemade tofu: Equipment needed (electric blender, form for setting), ingredients (curded with gypsum), grinding and straining, heating and setting, forming, bean curd recipes. Homemade soybean milk. Using soybean lees (okara; dregs are the leftovers you throw away and lees are those you keep). Frozen bean curd. Soy sauce beans [Soybeans baked in soy sauce]. Preserved soybeans: Homemade fermented black soybeans with salt, ginger, and optional hot chili powder or hot red pepper.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term “Preserved soybeans” to refer to fermented black soybeans.

The introduction (p. 228c) states: “Under various guises the soybean is used in vegetarian restaurants, often under Buddhist auspices, to produce sumptuous dinners, featuring “sliced chicken breast,” “roast duck,” “baked ham,” that not only fool the eye, but also the tongue, almost, but as always, I want to concentrate on the important, everyday things and de-emphasize the fancy and elaborate. Dishes with bean curd are cheap and easy to prepare. Those who can afford fancy dishes can combine it with meat, etc., but just plain cabbage and bean curd connotes home sweet home.”

Pages 158-59 contain 3 new soy-related recipes: Fried bean curd. Oyster sauce fried bean curd. Sweet-sour fried bean curd.

Recipe 14.27 (p. 155-56), titled “Red-in-snow stirs fava beans” begins: “Horse beans look like lima beans but are not. They are also called Fava beans and frequently sold by Italians. In China they are known as ‘silkworm beans.’” Address: Berkeley, California.

4389. Chaves, Nelson. 1963. Proteínas vegetais e trópicos [Vegetarian and tropical proteins]. Recife, Brazil: Imprensa Universitária. 151 + 5 p. Illust. Series: Coleção nordestina, 2. [75+* ref. Por]

• **Summary:** Soyfoods and their nutritional value are discussed on pages 65-67, incl. soymilk (*leite de soja*), tempeh, miso, tofu, shoyu, and natto.

Note: This is the earliest Portuguese-language document

seen (Sept. 2011) that mentions tempeh, which it calls “tempeh.” Address: Universidade do Recife, Instituto de Fisiologia e Nutricao.

4390. Cruz, N.B. 1963. Determination of the protein content of soy sauce from different local materials. Thesis, Araneta University, Philippines. *

• **Summary:** The author studied the protein content of soy sauce in different mixtures prepared by mold-enzyme hydrolysis. Address: Araneta Univ., Philippines.

4391. Kagawa, Aya. 1963. Japanese cookbook: 100 favorite Japanese recipes for Western cooks. [14th & rev. ed.]. Tokyo: Japan Travel Bureau. 198 p. Illust. (some color). Index. 19 cm. Series: Tourist Library No. 11.

• **Summary:** The first edition was published in 1949. This is actually the 2nd ed., which is 36 pages longer. Most of the information about soyfoods in the 1st edition is also in this 2nd edition, but often on different pages: Several examples: Long passage about soybeans and soyfoods (p. 16). Glossary (soy entries, p. 40-42). Nameko miso soup (p. 81). Miso-shiru (introduction, p. 82). Tofu and Japanese leek soup (p. 89). Four kinds of miso soup (p. 90-92).

The last two pages in the 1963 printing are devoted to full-page ads: (1) “Zest that’s best with Kikkoman.” “Brewed by Noda Shoyu Co., Ltd., Tokyo, Japan. Sole agent in U.S.A.: Kikkoman International Inc., 900 Marin St., San Francisco 24, California. 930 San Mateo St., Los Angeles, Calif. 11-31 31st. Ave., Long Island City 2, New York.” Photos show a can and a bottle of Kikkoman All-Purpose Soy Sauce.

(2) “Try Aji-no-Moto: The super seasoning.” “Just add a pinch of Aji-no-Moto before, during, or after cooking and see how it unlocks those hidden flavors in all foods—raw, cooked, dried, canned, or frozen.” A illustration show an Italian chef with a white chef’s hat (*toque blanche*), moustache, kerchief, and upward pointing right index finger. Illustrations show a small glass shaker and a metal can of Aji-no-Moto.

Aya Kagawa was born in 1899. Address: M.D. and president of Joshi Eiyô Tanki Daigaku (Women’s Nutrition College), Tokyo, Japan.

4392. Kan, Johnny; Leong, Charles L. 1963. Eight immortal flavors. Berkeley, California: Howell-North Books. 246 p. Illust. (by Jake Lee). Index. 24 cm. 2nd edition 1980.

• **Summary:** An interesting book, by a master cook and an excellent researcher and writer. Full of new and useful information.

From the publisher’s description: “This is the first cookbook—written by a Chinese-American to emanate from San Francisco’s Chinatown—the mecca for both Oriental and Occidental gourmets. It is the only cookbook dealing strictly with Cantonese cookery.” The Foreword, written by the famous food writer James Beard (of New York City) in

Oct. 1963. notes that he grew up in Portland, Oregon, and was a close childhood friend of the Kan family and of their cousin Johnny Kan, who came to visit from San Francisco's Chinatown [in California]—a “city within a city.” Kan's mother was an excellent and ingenious cook. Beard considers Kan's Restaurant “the outstanding Chinese restaurant today.”

The “Eight Immortal Flavors” of Chinese cookery are *Hom*—salty. *Tom*—bland (like rice). *Teem*—sweet. *Seen*—sour. *Foo*—bitter. *Lot*—hot (as in chili peppers). *Heong*—fragrant (smell more than taste). *Gum*—golden (as in citrus peel or kumquat). They are always referred to in this order. Note: In Western cookery there are only four traditional flavors—sweet, sour, salty, and bitter. The Japanese add a 5th, “umami.”

The chefs and cuisine of Kwangchow (the ancient name for Canton, now spelled Guangzhou) are considered the finest in all of China (p. 28).

The chapter titled “Native condiments, sauces, and ingredients” (p. 43-55) includes: Bean curd (*Dow Fu*): “One of the most useful of Chinese ingredients,” it is usually pressed into ½-inch by 3-inch squares. Bland in flavor, it is a great mixer for highly flavored foods. “It is even delicious in its fresh state with spicy condiments and is known as ‘the meat without bones.’”

Black [soy] bean, Dried (*Woo Dow*).

“Soybean skin (*Foo Jook*): Dried skin of soybean milk. Sold in packages, it is flat and thin, with a creamy-glaze appearance. Soak it before using in soups, or in smother-cooking recipes.” It has an enjoyable chewy texture and slightly nut-like flavor.

“Soybean skin, sweet (*Teem Jook*): Similar but thicker than *Foo Jook*, its taste is slightly sweeter.”

Illustrations (p. 46-47) show: Soy bean skin (*foo jook*). Bean curd (*dow foo*).

Condiments (p. 51-54)—“Black beans, salted (*Dow see*): Cured, fermented small black beans... Should be soaked briefly and washed before use. A common use is to mash beans with garlic, creating a seasoning popular for both seafood and meats.”

Monosodium glutamate (*Mei Jing*): This flavor accent powder had its origin centuries ago in old China. “A charming story, which we like to believe, involved a contest in which several monks with gourmet tastes competed with each other to produce the most delicious batch of *Loh Han Jai*, the standard monks' food consisting of a variety of various vegetarian ingredients... The winner had added one precious secret ingredient the others did not have—a powdered dried seaweed [*konbu*, *Laminaria japonica*] which was later discovered to be the first crude source of monosodium glutamate. It was not until 1908 that Dr. Kikunae Ikeda, the great Japanese scientist successfully extracted Glutamic Acid from edible seaweed and from it crystallized monosodium glutamate and marketed it under the name of *Aji-no-Moto*. Then in 1921 Chinese

scientist Poo-Nien Wu of Shanghai developed a process for extracting monosodium glutamate from wheat protein and was marketing his discovery, Ve-Tsin, in China, Singapore, Malaya, and the Philippines to the amount of 350,000 pounds a year. Other raw material sources are corn, soybean protein, and desugared beet molasses.

Sauces (p. 54-55)—Bean sauce (*Min See Jeung*):

A brown salty bean paste. Oyster sauce (*Ho Yow*). Red seasoning sauce (*Hoy Sin Jeung* [*Hoisin Sauce*]): A thick red sauce that contains soybeans as an ingredient. “A table condiment for Peking duck.”

Spiced red bean curd (*Nom Yee*): “A variation of bean cake fermented.” It has a slightly harder consistency, a brick-red color, and a pungent, aromatic flavor.

Soy sauce (*See Yow*): “For Chinese cooking, soy sauce is the great all-purpose and most indispensable of all sauce.” There are many grades and types. “For the ‘red cooking’ method, ingredients are incarnadined by the dark sauce. It may be used as a table dip, by itself, or mixed with mustard.” Unlike salt, it has “the taste of a beef essence.” It is made by the fermentation of cooked soybeans, roasted wheat, a yeast mold and salt. The best grades of Chinese soy sauce are still made by the old-fashioned, aged, natural fermentation process, rather than by the quickly made chemical hydrolysis method [HVP soy sauce]. The type known as *Sang Chau*, light and color and density, is the premier kind for flavoring and dipping.” But unless you ask for it by name, “you will get the darker soy sauce or *See Yow*. There is no definitive record of the origin of soy sauce. “Reference to the sauce has been made as early as the Chou Dynasty [1045-256 BC], some 200 years before Christ!... Undoubtedly since its very origin soy sauce has been made in the home or as a village industry. As a manufactured product it started in 1688. With its long condimentary life, no wonder that, to the Chinese, soy sauce is the Sauce of Life.”

Note: This is the earliest English-language document seen (April 2012) that uses the term “*Sang Chau*” to refer to light Cantonese soy sauce.”

Vegetables (p. 81-87): Bean sprouts (*Ngah Choy*): This common and inexpensive little vegetable is overused in some Chinese restaurants as a “filler.” The name “literally means ‘vegetable for the teeth,’ implying a crunchy sensation. Bean sprouts are tiny shoots which grow from the soy bean. They are one of the trio of basic Chinese foodstuffs—bean sprouts, bean curd and soy sauce—derived from the wonder bean. The sprouts average two inches long, are opaque white and the bean head is yellow... Another variety of bean sprouts, germinated from a larger type of bean, is the *Dow Ngah*, or Big Bean Sprout. This variety grows a little longer, with a larger golden head, and the sprout is crunchier, but has a more raw ‘beany’ flavor. This variety is not used in Chinese restaurants.”

Soy-related recipes: Spinach with foo yee sauce (Baw choy foo yee, with “2 preserved bean cakes (*Foo Yee*)

mashed with 2 teaspoons juice from jar,” p. 89). Shows how “any commonplace vegetable can be turned into an epicurean dish by simply adding preserved bean cake” [fermented tofu] and a touch of garlic. Try it “and you will discover why Foo Yee is often referred to as the miracle ingredient among Chinese condiments.”

Bean cake sauteed with meat (Dow foo yuke, with “8 bean cakes (*Dow foo*). Slice each bean cake into 6 pieces,” p. 99). Fresh asparagus chicken with black bean sauce (Lei soon gai kow, with “1 full tablespoon mashed fermented black beans (*Dow see*), combined with 1 clove mashed garlic and 1 tablespoon soy sauce, with a dash of monosodium glutamate,” p. 100).

Note: This is the earliest document seen (Nov. 2011) that uses the term “black bean sauce” and clearly shows how to make it in the kitchen as part of preparing the dish.

Chinese cabbage with foo yee sauce (Siew choy foo yee, with “2 fermented bean cakes (*Foo Yee*) with 2 teaspoons juice from the jar,” p. 107). Mustard greens with foo yee sauce (Gai choy chow foo yee, with “2 fermented bean cakes (*Foo Yee*) mashed with 2 teaspoons juice from the jar,” and 1 teaspoon soy sauce, p. 109).

Steamed salmon with black bean sauce (Dow see jing sah-mon yee, with “2 tablespoons fermented Black Beans (*Dow See*), crushed to paste,” p. 131). Prawns with black bean sauce (See jup hah kow, with “2 tablespoons Black Bean Paste (*Dow see*), p. 133). Steamed fish with black bean sauce (Dow see seen gee jing yee, with “2 tablespoons fermented Black Beans (*Dow see*), crushed to a paste,” p. 141).

Dried oysters with bean curd skim (Ho see munn foo jook, with “6 sheets Bean Curd Skim (*Foo jook*) pre-soaked in cold water for 2 hours. Drain thoroughly. Cut in 2 to 3-inch pieces.” p. 143).

Note: This is the earliest document seen (Dec. 2010) that uses the term “Bean Curd Skim” to refer to dried yuba sticks. Continued. Address: 1. Chef, Chinatown; 2. Historian of Chinese life in America.

4393. Kan, Johnny; Leong, Charles L. 1963. Eight immortal flavors (Continued—Part II). Berkeley, California: Howell-North Books. 246 p. Illust. (by Jake Lee). Index. 24 cm. 2nd edition 1980.

• **Summary:** Continued from page 146. Fish stuffed in bean cake (Jow yeong dow foo, with “8 square Bean Cakes (*Dow Foo*),” p. 146). Chicken wings with black bean sauce (See jup gai yik, with “¼ cup fermented black beans (*Dow See*). Rinse, drain and crush,” p. 158). Soy sauce chicken (See yow gai, with “10 cups soy sauce,” p. 170). Red bean curd chicken (Nom yee gai, with “2 tablespoons spiced red bean curd (*Nom Yee*),... 3 tablespoons soy sauce,” p. 171). Soy squab red fried (Hoong siew bok opp, with “2 quarts soy sauce,” p. 174). Taro root duck with nom yee sauce (Nom yee woo tow opp, with “1 square red bean cake (*Nom Yee*),

mashed,” p. 184).

Spareribs with black bean sauce (See jup pai gwut, with “2 teaspoons fermented Black Beans (*Dow See*), crushed into paste, p. 192). Spareribs with red bean cake sauce (Nom yee pai gwut, with “2 tablespoons Red Bean Cake (*Nom Yee*),” p. 193).

Winter chafing dish (Dah bin lo, with “Pure soy sauce (*Sin Cho*) devoid of caramel coloring {soy sauce, (*See Yow*), contains caramel coloring} and with “2 squares of bean cake [tofu] cut in cubes, p. 212-13).

Note: In 1953 Johnny Kan opened his de luxe Kan’s Restaurant at 708 Grant Ave. in San Francisco, California. Address: 1. Chef, Chinatown; 2. Historian of Chinese life in America.

4394. Keys, John D. 1963. Food for the emperor: recipes of Imperial China with a dictionary of Chinese cuisine. New York, NY: Gramercy Publishing Co. xxii + 121 p. Introduction by Kee Joon. Illust. Index. 18 x 17 cm.

• **Summary:** This book is about the Mandarin or Peking school of Chinese cooking. Contents: Introduction, by Kee Joon. Food for the emperor (recipes; for each recipe is given the name written vertically in large Chinese characters, the Cantonese transliteration of that name, and the English translation of that name. On some left-hand pages are short translations from old books related to food). A dictionary of Chinese cuisine (arranged alphabetically by English name of food). Index to the recipes (by recipe type, and within that by English recipe name).

Almost all recipes in this book are based on meat, fish, or poultry. There are no soy-related recipes in this part of the book, although many recipes call for “soya sauce.”

The Dictionary includes: Bean curd (dou foo, with 2 recipes). Bean curd cheese [fermented tofu] (the two varieties are white bean curd cheese {foo yoo} and red bean curd cheese {narm yoo}). Bean curd, dried (tim jook [sweet dried yuba; also spelled tiem jook]).

Note: This is the earliest English-language document seen (May 2012) that uses the term *tim jook* to refer to sweet dried yuba.

Bean filling, sweet (*doe sha*, made from black soya beans, sugar, and a little oil. “This paste is available in Chinese bakeries, and is used in New Year’s cakes and other sweet pastries”).

Note: This is the earliest document seen (March 2011) that uses the term “Bean filling, sweet” to refer to a sweet paste, made of black soybeans, that is used as a filling like for cakes, like sweet red bean paste [azuki bean paste].

Bean sauce—see Soya bean condiment. Black bean sauce—see Soya beans, black fermented. Black beans—see Soya beans, black fermented. Brown bean sauce—see Soya bean condiment. Cheese, red—see Bean curd cheese. Fermented black beans—see Soya beans, black fermented. Red bean sauce (sharng she jerng; a popular canned cooking

sauce consisting of mashed red soya {or often azuki} beans). Red cheese—see Bean curd cheese. Seaweed (purple laver, hair seaweed). Sesame oil (jee ma yo). Sesame seeds (jee ma).

Soya bean condiment (yewn she jerng. “Variously called soy jam and brown bean sauce, this condiment is prepared from the residue left when making soya sauce. Wheat is sometimes added to the condiment, which is fermented and then called Meen She Jerng. These condiments are most commonly use in cooking fowl; also in meat dishes).

Soya beans, fermented black (doe she. “Tiny fermented beans which are washed, crushed, and used to add a pleasant spiciness to dishes. They are often used in fish dishes to alleviate any strong smell. It is a prime ingredient in Cantonese lobster”).

Note: “Black bean sauce” is not explained here, as expected.

Soy jam—see Soya bean condiment. Soya sauce. “The general term in Cantonese for soya sauce is She Yo. There are three main subdivisions: (1) Shang cho: Light brown, fine taste, light color. Used in cooking delicate foods were a heavy soya flavor is not desired. (2) Cho yo: Dark and thick, containing molasses, yet not too strong a taste. Used mostly in restaurants. (3) Jew yo: Most suitable for general cooking purposes and for use at the table. Also: Japanese soya sauce, which is prepared with the addition of malt [koji], is much respected by the Chinese.”

Sweet-sour sauce: The recipe, which is given, contains 1 teaspoon soya sauce.

Sweet vegetable sauce (hoi seen jerg [hoisin sauce]). “A canned red sauce prepared from soya beans, red rice, and garlic. It is used in preparing Peking Roast Duck, fish and shellfish dishes.”

“Tomato Catsup: Tomato catsup originated in China, as can be seen from the pronunciation of the Cantonese (Kair = tomato; Jup = sauce). Used in some braised dishes such as Shrimp Braised in Tomato Sauce.” Address: San Francisco.

4395. Lager, Mildred; Jones, Dorothea Van Gundy. 1963. *The soybean cookbook: Adventures in zestful eating*. New York, NY: Devin-Adair Co. xiv + 240 p. Foreword by Ruth Stout. Index. 22 cm.

• **Summary:** The copyright page states: “Note: This is a revised and updated version of a privately printed book, *How to Use the Soybean*, by Mildred Lager which was first printed in 1955 and reprinted in 1959.” This lacto-ovo-vegetarian cookbook contains over 350 recipes, including 72 tofu recipes.

Contents: Preface to 1955 edition. Preface to 1963 edition. Part I: The versatile soybean. History of the soybean. Nutritional value. Abbreviations and special terms. Soup to nuts: Introduction, green soybeans [green vegetable soybeans], dry soybeans, roasted soybeans, sprouted soybeans, the cow of China—soy milk (kinds of soy milk),

“the meat without a bone”—tofu or soy cheese, the little giant among protein foods—soy flour, soy grits and bits (puffed grits), soy oil and soy butter, meat replacement foods, sandwich spreads, malts, coffee substitutes, soy sauce, other soy products (soy albumen, Glidden’s product that contains on a dry basis 96.6% protein [soy protein isolate]).

Part II: Soybean recipes. Green soybeans. Dry soybeans. Roasted or toasted soybeans. Sprouted soybeans. Meat replacement dishes. Soy noodles, macaroni, and spaghetti. Sauces and gravies. Soy soups. Salads. Soy spreads and soy butter [“a butter resembling peanut butter may be made from finely ground soybeans or soy flour... Roasted soy butter is made from the roasted beans that have been ground into a fine flour.”]. Soy milk. Tofu or soy cheese. Soy cereals and breakfast dishes. Soy desserts. Soy candies. Soy flour breads: Full-fat soy flour, low-fat or fat-free soy flour. Pastry. Cookies. Cakes. Extra tips. Appendix. Menus.

The chapter titled “History of the Soybean” (p. 3-7) discusses: W.J. Morse and the U.S. Department of Agriculture, Dr. J.A. LeClerc, the American Soybean Association (which has held a national convention every year since it was founded in 1920), its publication *Soybean Digest*, Henry Ford and his work with both industrial and edible soy products, T.A. Van Gundy, Harry W. Miller, M.D., Dr. Clive McCay of Cornell University (Ithaca, New York), and the Sept. 1961 Conference on Soybean Products for Protein in Human Foods (held at Peoria, Illinois).

Concerning T.A. Van Gundy we read (p. 5): “The father of one of the authors, T.A. Van Gundy, became interested in the nutritional value of soybeans while attending the World’s Fair in San Francisco in 1915, where they were featured in the Oriental exhibits. Upon going home he purchased some soybeans and began experimenting in them. As far as we know he was the first person on the Pacific Coast to develop a line of commercial foods from this wonder bean. By 1927 he had developed a number of palatable products which he manufactured and sold through health food stores. Soybean foods were virtually unknown at this time, and it took courage and perseverance to put them across.”

Recipes for “Soy Ice Cream” (p. 175-76) now include vanilla, maple nut, orange, and strawberry flavors. A recipe for “Granola” (p. 161) calls for 1 cup soy flour. The rest of the ingredients (such as wheat and barley flour) appear to be similar to those found in the earliest granola recipes of the mid-1800s. Address: Southern California.

4396. Mei, Yu Wen; Adams, Charlotte. 1963. 100 most honorable Chinese recipes. New York, NY: Thomas Y. Crowell Company. xi + 140 p. Illust. by Wen Mei. Index. 24 cm.

• **Summary:** Contents: Introduction. Chinese ingredients. Chinese cooking utensils and Western equivalents. Some tips on Chinese cookery. Menu for a Chinese dinner party. Daily dishes. Cold wine dishes. Hot wine dishes. Main dishes.

Soups. Rice dishes. Desserts. General recipes. Mail order shops. Geographical locations of honorable recipes.

This is a collection of the greatest classical recipes of China. All five major “schools” of Chinese cooking are represented: Shanghai, Peking, Yang Chow (120 miles northwest of Shanghai; pinyin: Yangzhou; Wade-Giles: Yang-chou), Szechuan, and Canton. Yu Lin Chuan, one of Old China’s most renowned restaurateurs, has selected these recipes, all of which were translated by his daughter, Yu Wen Mei, and carefully tested by Charlotte Adams—to ensure ease of preparation by American homemakers.

The chapter on “Chinese ingredients” describes the following soy-related ingredients: Agar-agar, bean curd (fresh, or fermented), Hoisin sauce, laver (seaweed), red beans [azuki] (tiny beans used for making sweet bean paste), sesame oil, soy bean paste (very salty, or lightly salted). Hoisin sauce is “A delicious, thick, dark-brownish-red condiment, often used as an ingredient in cooked dishes, also as a side-dish sauce for dipping” (p. 2).

The chapter titled “Some tips on Chinese cookery” states (p. 7). Peanut oil is the preferred type of oil. If food is truly fine, “there is no reason whatsoever to add monosodium glutamate to it, and you will note that it is required in none of the recipes.” “We strongly suggest that you buy imported soy sauce by the quart. The soy sauce made here is much saltier than that which comes from Hong Kong, and its use therefore alters the recipes.” Many recipes are seasoned with soy sauce or soy bean paste

Soy-related recipes: Shrimp and bean curd (Yang Chow; p. 24). Crabmeat and bean curd soup (p. 94). Shrimp ball, ham, and bean curd soup (p. 103). Red roast pork (Yang Chow, with soy sauce; p. 113). Almond bean curd (Peking; p. 121). Red bean paste I and II (p. 127-28). Address: New York City.

4397. Onishi, Hiroshi. 1963. Osmophilic yeasts. *Advances in Food Research* 12:53-94. [150+* ref]

• **Summary:** Since the word “osmophilic” was first used by von Richter (1912) for the group of yeasts that can grow well in an environment of high osmotic pressures, a large number of yeasts showing sugar- and salt-tolerant properties have been described.

Soy sauce mashers differ significantly from other brew mashers in their high content of sodium chloride (about 18%) and nitrogen (1.0 to 1.5% as total nitrogen). Thus, in Japan, osmophilic yeasts have been investigated mainly for “effective utilization in the soy sauce and miso paste industry.”

Soy [sauce] yeasts and miso yeasts: The first report on soy [sauce] yeasts appeared in 1906, when Saito isolated 5 strains of salt-tolerant yeasts from soy sauce mashers in the Choshi district and classified them into *Saccharomyces soya*, *Zygosaccharomyces japonicus*, *Pichia farinosa*, *Mycoderma* sp., and *Torula* sp. Subsequently, many taxonomic studies

were carried out on soy yeasts (Mitsuda, 1910; Nishimura, 1910; Kita, 1911; Ishimaru, 1935). However, none of these observations explained which yeast played an important role in the ripening of soy mashers. Takahashi and Yukawa (1911) showed that *Zygosaccharomyces major* and *Zygosaccharomyces soja* were useful in ripening soy mashers, giving the characteristic taste and flavor through their fermentation. *Zygosaccharomyces japonicus* and *Zygosaccharomyces salsus* were shown to be harmful because they were the main cause of the formation of pellicles leading to deterioration of the commercial quality. This work has been believed to give the most reliable information on both microbiological and applied aspects of soy yeasts.

“As for miso yeasts, extensive and detailed studies were conducted by Mogi (1938-1942). Unlike soy sauce, miso pastes were commercially produced in great variety with different raw materials and various contents of NaCl. Mogi described many new species of miso yeasts belonging to *Saccharomyces*, *Zygosaccharomyces*, *Debaryomyces*, *Hanseluna*, *Pseudohanseluna*, *Pseudohanseluna*, *Pichia*, *Zygopichia*, *Torulopsis*, *Pseudomycoderma*, and *Pseudomonilia*. Among them, the dominants were *Saccharomyces*, *Torulopsis*, *Zygosaccharomyces*, and *Zygopichia*, and the last two were found chiefly in miso paste of relatively high salt content.”

Salt tolerant yeasts, especially *Saccharomyces rouxii*, play an important role in soy sauce and miso fermentation in Japan. They play a key role in creating the characteristic flavor and taste, and when added, can shorten the ripening period of the mash while improving its quality. Especially with semichemical soy sauce, involving acid hydrolysis of the soybeans, it is very important to add yeasts that cause vigorous fermentation of the mash, which improves the flavor and taste.

But osmophilic yeasts can also cause food spoilage—especially the dry white pellicles or films that form on the surface of (usually raw) soy sauce, and may cause gaseous fermentation. These pellicles are caused by the growth of film-forming yeasts such as *Saccharomyces rouxii* var. *halomembranis* and *Pichia*; the result is deterioration of soy sauce quality. “This spoilage cannot be seen in well-matured soy sauce of good quality, because it contains yeast-static compounds.”

Note: This is the earliest document seen (June 1999) that mentions the yeast *Zygosaccharomyces rouxii* in connection with soy sauce or miso. Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4398. Rombauer, Irma S.; Becker, Marion Rombauer. 1963. Joy of cooking. Indianapolis/New York: Bobbs-Merrill Co. [x] + 849 p. Illust. by Ginnie Hofmann and Ikki Matsumoto. Index. 24 cm.

• **Summary:** One of the great American cookbooks. A classic

and an all-purpose cookbook, this is the first authorized edition prepared by Marion Rombauer Becker—who transformed the book. Irma, her mother, died in 1962.

Soy-related recipes: Chop suey or Chow mein (with soy sauce, p. 229-30). Soybeans, green (p. 260). Shrimp teriyaki (with “½ cup pineapple juice” and “2 to 4 tablespoons soy sauce”—but no recipe for teriyaki sauce, p. 377). Sukiyaki (with “½ cup 3/4-inch squares bean curd: Tofu” and “2 cups bean sprouts or cooked, drained Shirataki,” p. 402).

Vegetable milks (incl. soy bean milk, almond milk, p. 487-88). About non-wheat flours (incl. soy flour, corn meal, rice flour, rye flour, potato flour, tapioca and sago flour, arrowroot flour or starch, barley flour, cotton seed flour, peanut flour, oat flour and oatmeal, bean flour, p. 498-501). About commercial sauces (incl. soy sauce and Worcestershire sauce, p. 542. Note: Soy sauce is not mentioned as an ingredient in Worcestershire sauce). Cornell Triple-Rich flour formula (with 1 tablespoon soya flour, p. 556).

Also discusses Whole-grain or Graham flour (p. 498). And how to make “coconut milk” and coconut cream. “Coconut milk and cream are very sensitive to high heat. For this reason they are added to hot sauces at the last minute or are cooked over hot water.” They are prized in curries [and many Indonesian tempeh recipes].

4399. Sato, Makoto. ed. 1963. Kuki, hishio, miso, shōyu nado ni kansuru shiryō [Historical documents about kuki (fermented black soybeans), hishio or chiang, miso, miso and shoyu]. Noda: Noda Kofukai Toshokan. 230 p. Illust. No index. 28 cm. [189 ref. Jap]

• **Summary:** Reprints of 189 old documents on shoyu and miso, and their progenitors, in chronological sequence. The alternate title is “Shoyu miso shiryō shusei.” Makoto Sato was born in 1907. Address: Head, Kofukai Library (Kofukai Toshokan Cho).

4400. Sato, Makoto. ed. 1963. Shōyu miso shiryō shūsei [Collected historical documents about shoyu and miso]. Noda: Okikazekai Toshokan. 230 p. 22 cm. [Jap]*

• **Summary:** See the other entry for Sato 1963. Address: Japan.

4401. Tanaka, Heihachi; Nicholas, Betty. 1963. The pleasures of Japanese cooking. Englewood Cliffs, New Jersey: Prentice Hall, Inc. viii + 247 p. Illust. Index. 22 cm.

• **Summary:** Contents: Introduction. 1. A chat about Japanese food: Seasonings and flavorings, table settings and utensils, kitchen utensils, etiquette, cooking and serving a Japanese meal. 2. Appetizers. 3. Soups. 4. Broiled dishes. 5. Steamed dishes. 6. Saucepan foods. 7. Fried foods. 8. Salads. 9. Vegetables. 10. Rice and noodle dishes. 11. Thirst-quenchers. 12. Desserts. 13. Festival foods. Glossary [of Japanese foods and utensils]. List of retail outlets for Japanese food products

(national chains and alphabetically by state in the USA).

The book begins (p. 1): “To many Westerners, the cuisine of Japan consists almost entirely of *sukiyaki*, *tempura*, rice and soy sauce. Nothing could be further from the truth.”

Vegetables “are harvested at the height of their season,” when tender and full of flavor, then cooked lightly and used (for example) “as an ingredient in *misoshiru* (thick soup [miso soup]) or pickled” (p. 3).

“If one were to single out the most important vegetable cultivated in Japan it would be the soybean. For this legume,... is such a versatile food that it is served in some manner at practically every Japanese meal.

“In the hilly interior of the country where fish is scarce, or in the vegetarian menus of the Buddhists, soybeans are called the ‘fish of the field’ and relied upon as a valuable source of protein. A favored way of preparing the green soybean is simply to boil and hull it. Dried soybeans are ground [sic], soaked in water, cooked and mashed, sieved through silk, and finally cooked again to produce bean curd or *tofu*.

“Steamed and fermented beans become *natto*. *Miso*, a bean paste made by boiling soybeans, mashing them, adding wheat ferment [sic] and salt and allowing this mixture to ferment for several months, lends itself to use in countless dishes. *Moyashi*, the tender young sprouts of the soybean, are cultivated on indoor racks to conserve precious space in the fields.” In a few days, a single cup of soybeans will produce 3-4 pounds of succulent sprouts (p. 3-4).

“Queen of Japanese seasonings is *shoyu* or soy sauce, a dark, red-brown, thirst-provoking liquid made from wheat or barley, soybeans, salt and water. *Shoyu* is loved by the Japanese for its piquant flavor and its use is so extensive that almost no dish is conceivable without it.” A brief history of shoyu and its forerunner, *hishio*, and the process for making shoyu are given. Shoyu “mash is allowed to ferment and mature naturally for a full eighteen months when it is pressed and the sauce obtained pasteurized to become refined *shoyu*.

“Another multi-purpose seasoning and foodstuff is *miso*, a paste made from fermented rice and soybeans.” Most miso “lasts for years without spoiling or deteriorating. There are two types of *miso*—red and white. Both are widely used in Japan but western palates seem to prefer the white type. Both are highly nutritious and are used in literally hundreds of ways: as a seasoning, a main dish and the basis of many hearty, potage-type soups” (p. 5-6).

“For centuries [sic] Japanese cooks have used a dashi of *aji-no-moto*, a seaweed or vegetable protein derivative, to intensify the natural flavors of the foods they cooked. Translated, *aji-no-moto* means ‘essence of taste’ (it is often referred to as taste powder) because the minute white crystals heighten the inherent flavors of foods,... but lending no flavor of their own” (p. 6).

Yakimono are broiled foods. “Flavor broiling includes

yakitori (broiled chicken), *teriyaki* (fish marinated in a sauce containing shoyu and then broiled),... Miso-broiling is used for such vegetables as eggplant as well as for fish or meat” (p. 13).

“Inasmuch as *shoyu*, or soy sauce, is such an all-important seasoning and is called for in almost every Japanese recipe, it should be noted that the use of genuine *shoyu* is quite essential. Most other soy sauces, while excellent for other types of cuisine, really don’t do justice to Japanese cooking” (p. 19). Also discusses wasabi, sesame seeds, sesame oil, katsuobushi, konbu, sake, and various mushrooms (p. 20-22).

“*Tofu*, or soybean curd, is such a versatile foodstuff—it may be boiled, fried, steamed, sautéed or marinated—that it is included as an ingredient in many recipes in this cookbook. Fresh *tofu* is sold in cakes; refrigerated, it will keep about one week. It is also available in cans and, while the processed product is not quite as tender as the fresh, it does make a satisfactory substitute. The consistence of *tofu* resembles thick custard and it should be handled carefully to avoid breaking and crumbling. Western taste buds seem to find *tofu* bland and a bit flavorless, but when deftly sauced it is very delicious—and also nutritious. Note: *tofu* must not be overcooked or it will toughen and develop a rubbery texture” (p. 24).

Recipes include: Norimaki-Sushi (with nori, shoyu, and sashimi). Tiny teriyaki (ingredients: 2 pounds beef tenderloin, 1 cup shoyu, 3/4 cup water, 1/2 cup mirin, 3/4 cup honey, 1 clove garlic, crushed, and 1 one-inch piece fresh gingerroot, grated; p. 46). Liver tsukudani (with shoyu; p. 55). Fish and tofu stew (p. 69). Oyster miso (p. 71). Vegetable and noodle miso (p. 72). Shrimp or prawn miso (p. 73).

Chapter 4 is titled “Broiled foods.” “... almost all cooking in Japan is done over a charcoal fire,...” “Without a doubt, the most popular of all broiled dishes with the Japanese people is *yakitori*, or broiled chicken... Almost as popular as *yakitori* is *teriyaki*, usually fish marinated in a *shoyu* sauce, arranged on long skewers, and then broiled over charcoal. *Teriyaki* means ‘glaze broiled’—*teri* meaning ‘shiny’ and *yaki* ‘broiled’ or ‘roasted.’ Actually any meat may be *teriyaki*,” but all have in common “the marinade of shoyu, sake, and sugar” (p. 75-76). Recipes include: Salmon teriyaki. Shrimp teriyaki. Stuffed beef teriyaki (p. 88-90). Shoyu marinade basting sauce (p. 93). Sukiyaki (with tofu and shoyu; p. 110). Tempura sauce (with shoyu, p. 121). Fried tofu with sauce (p. 127). Pickled seaweed (with konbu and shoyu, p. 140). Sesame-shoyu dressing (p. 151). Vegetables with tofu sauce (p. 154). Cabbage with mustard-miso sauce (p. 157). Eggplant with miso sauce (p. 164). Azuki meshi (red beans and rice; p. 181). Domburi soboro (with tofu; p. 182-83). “Red bean paste (sweetened).” Ingredients: “2 cups red beans (azuki). 2 cups sugar. 2 teaspoons salt.” (p. 203.) Also called “sweetened

red bean paste” (p. 200; Jap. *azuki an*; p. 200-203). Yokan (with “1½ cups strained red bean paste”—*koshi-an*; p. 204). Hikishamanju (Bean jam buns with strained red bean paste; p. 207). Shiruko (Red bean soup [azuki] with rice cakes {mochi}; p. 209). Zoni (Rice cake soup, with mochi; p. 215-16). Sweetened soybeans (for New Year’s, p. 217-18).

The glossary includes abura-age, azuki (“red beans”), azuki-an (“red bean paste”), daizu (soybean), ganmodoki, kanten, konbu, konnyaku, miso (aka miso, shiro miso), misoshiru, mochi, mochigome, mochiko, nori, shiru-miso, shoyu, teriyaki, tofu, wakame, yakidofu.

Note: This is the earliest English-language document seen (March 2006) that uses the term “sweetened red bean paste” to refer to sweet azuki bean paste [*azuki-an*] or that uses the term “strained red bean paste” to refer to strained azuki bean paste [*koshi-an*]. Address: 1. Head Chef, Japanese Cuisine, Japan Airlines.

4402. Teriyaki and sushi: Selected 72 recipes. 1963. Elmsford, New York: Japan Publications Trading Co. 58 p. Illust. Index. 21 cm.

• **Summary:** On title page: “Compiled by the Japanese cooking companions.” The 12th printing was Jan. 1976. Contents: Rice dishes (incl. How to cook delicious sushi rice, oshi zushi, norimaki). Vermicelli dishes (incl. tsukejiru, kakejiru, somen, soba, udon). Soups. Broiled dishes (incl. teriyaki). Marinated dishes. Boiled dishes. Steamed dishes. Fried dishes. Casseroles. Tart dishes. Pickles. Confectionery. Glossary. Note: Brands promoted in the recipes throughout this book, by appearing in large boldface type, are: Kikkoman soy sauce. Aji-no-Moto, Manjo mirin (sweet rice wine).

Soy-related recipes include: Kenchin-jiru (with “½ tofu (bean curd) (1/3 lb),” p. 17). Miso soup (with 4 tbsp. bean paste (miso)” and “2 aburage,” p. 19). Konnyaku (devil’s tongue) and carrots with white bean curd paste dressing (with tofu, p. 29-30). Bean curd with liquid starch (with tofu, p. 32). Meat and vegetables in aburage-bags (with “2 large aburage, p. 34). Bonito cooked with bean paste (with miso, p. 35). Steamed squid (“stuffed with tofu and vegetables,” with “1 tofu (bean curd),” p. 38-39). Sukiyaki (with “2/3 lb. broiled bean curd,” p. 46). Yudofu (with “1 lb. bean curd,” p. 47). Yosenabe (with “1/3 lb bean curd,” p. 47).

Note 1. This is the earliest English-language document seen (May 2012) that uses the term “broiled bean curd” to refer to grilled tofu.

Note 2. This is the earliest document seen (May 2012) that calls for the use of grilled tofu (“broiled bean curd”) in sukiyaki. That is the standard way of making sukiyaki in Japan.

The recipe titled simply “Teriyaki” (p. 22) states: “Teriyaki is fish or meat marinated in a mixture of mirin and saké, sugar and soy sauce and roasted directly over fire. This method of roasting is most suited for oily fish, fish with

thick meat, chicken and beef.” The sauce contains: “2 tbsp. Kikkoman soy sauce, 2 tbsp. Manjo mirin, 1 oz. ginger, and sweetened vinegar (mixture of 1 tsp. vinegar, 1 tsp. sugar, and a few shakes of salt)” (p. 22-23).

The Glossary (p. 47) includes: “Aburage—fried soy bean curd. An—[azuki] bean jam [also called ‘red bean jam’ in index]. Miso—bean paste. Misozuke—pickles in bean paste. Tofu—bean curd. Yudofu—boiled soy bean curd.”

4403. Umeda, Isao. 1963. *Shōyu* [Soy-bean sauce]. Tokyo: Sankyo Shuppan K.K. 232 p. Index. 28 cm. Final technical report. USDA P.L. 480. Project UR-A11-(40)-C. [95 ref. Jap]
• Summary: Contents: Part I. 1. Raw materials. 2. Treatment of raw materials. 3. Making koji. 4. Moromi: Fermentation (*shikomi*), methods of fermentation, mixing, ripening (*jukusei*), research on ripening, microorganisms in moromi. 5. Pressing out the shoyu. 6. Refining (*seisei*): Method of heat treatment (or pasteurization; *hiire*), changes during heat treatment, flavor, composition (*seibun*) of regular shoyu and of special shoyu [*tokushu*], methods of analyzing shoyu.

Part II: Special subjects. 1. Substitute raw materials: Substitutes for soybeans, for wheat, for both soybeans and wheat (copra meal, wheat bran [*fusuma*]). 2. Tamari shoyu and usukuchi shoyu: Tamari and soybean miso, usukuchi shoyu. 3. Secondary products (*fukuseihin*): Shoyu presscake (*shoyu kasu*), shoyu oil, soybean soak water, ? eki, use of koji spores. 4. Kegs (*taru*). 5. Semi-fermented shoyu #2 (*Shinshiki nigo*): Research on its production. Address: Nōgaku Hakase, Tokyo Daigaku Nōgaku-bu, Tokyo, Japan.

4404. Yang, Hao-jan. 1963. The development and rational utilization of soybean. *U.S. Joint Publications Research Service. Translations from Communist China's Agriculture, Animal Husbandry and Materials* 41:39-51. Translated from *Ta Kung Pao* (Peiping), 11 March 1963, p. 3. [Eng]

• Summary: A general article about the problems connected with the utilization of soybeans as food, feed and for industrial purposes. Contents: Introduction. The functions of soybeans on the development of agricultural production. Several problems of the development of soybeans. The rational utilization of soybean resources.

Note: This “is a translation of an article by Yang Hao-jan (2799 3185 3544) in *Ta Kung Pao*, Peiping, 11 March 1963, p. 3.” Address: China.

4405. Yang, Pyong-yong. 1963. Chang saengsan solbi [Soy sauce production equipment]. South Korea. 195 p. 21 cm. [Kor]
 Address: South Korea.

4406. La Choy Food Products. 1963? La Choy operates the world's largest Chinese food plant. 1 p. Undated. Unpublished manuscript.

• Summary: A large photo in the middle of the page

shows an aerial view of the expanded La Choy food plant in Archbold, Ohio. This multimillion dollar facility was expanded in 1958, leading to a doubling of La Choy production. “No other Chinese food processing plant anywhere production. No other Chinese food processing plant anywhere approaches it in output.” The plant is situated on 25 acres.

“La Choy became a division of Beatrice Foods Company in 1943, a year after it moved to Archbold, Ohio, from Detroit, Michigan, where the company was started in 1920.” Since it became a Beatrice unit, sales have increased more than 700%...

A portrait photo shows Gordon E. Swaney, who was named general manager of La Choy Food Products in 1962. Address: Archbold, Ohio.

4407. Claiborne, Craig. 1964. How to solve an Oriental eating puzzle: Learn Chinese, adopt a relative, or get to know the waiter. *New York Times*. Jan. 21. p. 20.

• Summary: New York City is probably home to more Chinese restaurants than any city in the world outside of China, Formosa and Hong Kong. Yet knowing what to order in a previously undiscovered Chinese restaurant remains a daunting problem. Two recent visits to the Harbin Inn (2637 Broadway, at 10th St.) proved the point. His second visit, in the company of Mrs. Grace Chu, the expert on Chinese cuisine and cookbook author, was a vastly better experience. He enjoyed “chicken splendidly complemented with crisp walnuts and flavored with hoisin sauce,...” Mrs. Chu explained the above lessons to be learned—and added the importance of ordering in advance.

4408. André, Émile. 1964. Sur l'utilisation des graines de soja dans l'alimentation humaine par les populations d'Extrême-Orient [On the dietary utilization of soya beans in the Far East]. *Oleagineux* 19(1):37-39. Jan. English-language summary p. XXVIII. [1 ref. Fre; eng]

• Summary: The author gives the results of his research on lipoxidase, initially inspired in early 1931 by a young Chinese student M. Kiawo Hou. He also discusses soymilk (lait de soja or téou-jou), tofu (fromage de soja or téou-fou), yuba (téou-fi), soy oil (huile de soja), soy sauce (tsing yeou [sic, tsiang yeou?]), miso (miso de soja), and soy sprouts (germes de soja). The residue from making tofu and soymilk (okara) is fed to poultry and pigs. Soya oil is made by an archaic process that is very inefficient. “The residue, not perfectly separated from the oil, is consumed by the poorer classes.” Address: France.

4409. James, Isabel. 1964. Domestic science bureau. *British Vegetarian*. Jan/Feb. p. 37-39.

• Summary: The article begins with a question from a reader: “Can you please tell me something about the value and use of soya bean and soya flour?” The author gives a Bircher

Benner recipe for Soya Pancakes (with soya flour), and notes that Soyolk and Hi-Soy soya flours are sold in Health Food Stores. The latter product is made by The British Arkady Co. Ltd. and is good for use in confectionery.

She then discusses soya milk and tofu. In the UK, Dr. Frank Wokes, of the Nutritional Research Centre, has done a great deal of work on the “preparation of a soya based vegetable “milk” that would be a suitable substitute for cow’s milk and acceptable to children who could not take cow’s milk. Largely as a result of this work *Velactin* is now available from Health Food Stores, made by Messrs. A. Wander Ltd.” She then gives a recipe for home-made Soya Cheese (also known as Soybean Curd or Tofu), made from full-fat soya flour and coagulated with lemon juice.

She also mentions soya sauce and gives details on growing soya beans in England. “If the crop matures some of the green beans may be used in salads or as green vegetables.” Address: B.A.

4410. Sun (Baltimore, Maryland). 1964. International buffet for your next party. March 22. p. TW16-17.

• **Summary:** Recipe No. 6 in the international buffet is *Sate Manis* (beef on skewers) from Indonesia. It includes a special sauce, *Saos Sate Ketjap* (Soy sauce with butter), which includes ½ cup soy sauce.

4411. Ito, Hiroshi; Ebine, Hideo; Kosaka, Shokichi. 1964. Shihan jôzô-yô nyûsan-kin no seijô [On the properties of lactic acid bacteria in commercially available starter for making miso and soy sauce]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 18. p. 28-35. March. [14 ref. Jap; eng]
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4412. Kamada, Hideomoto; Ebine, Hideo; Nakano, Masahiro. 1964. Daizu seihin no chakushoku ni kansuru kenkyû. XVI. [Browning reaction of soybean products. XVI. Browning of bottled soy sauce during storage]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 18. p. 154-57. March. [8 ref. Jap; eng]
• **Summary:** The color of pasteurized soy sauce was relatively stable compared with that of raw (unpasteurized) soy sauce, and it was protected from browning at 38°C for 1 month by bottling and storing in an oxygen-free environment.

Bottled soy sauce can be prevented from browning by storing it at a temperature below 20°C [68°F, or by refrigerating it].

Reprinted from *Nihon Shokuhin Kogyo Gakkai Shi* 10(3):99-101 (1963). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4413. Hewitt, Jean. 1964. Food news: The flavors of

Indonesia. *New York Times*. April 29. p. 44.

• **Summary:** Food will be a major part of the forthcoming Indonesian Pavilion at the World’s Fair to be held in New York (1964/1965). Defines several terms: Sambals are hot sauces; atjars are relishes. A recipe for Sates [skewered ingredients] calls for “¼ cup ketjap bentang [benteng] (sweet Java soy sauce).”

Note: This is the earliest document seen (April 2012) that uses the word “bentang” or the term “ketjap bentang” (or “kecap bentang”) to refer to a type of sweet Indonesian soy sauce. However “bentang” may is not an Indonesian word, and probably should be written “benteng.”

4414. Hercules Powder Co. 1964. 12 ways Hercules HVP can beef up flavor (Ad). *Food Processing (Chicago)* 25(4):28-29. April.

• **Summary:** “Hercules is the largest producer of Hydrolyzed Vegetable Proteins—and the most economical source of these low-cost flavoring agents, reminiscent of well-browned beef.” The ad describes 12 popular types of HVP that come in the form of liquids (38-52% solids), pastes (85-89% solids), or powders (97% solids). Hercules also makes Vicrum vital wheat gluten, Huron MSG (monosodium glutamate), etc. Address: Cellulose & Protein Products Dep., 910 Market St., Wilmington, Delaware 19899.

4415. Komiya, Akira. 1964. The shoyu industry in Japan. *Soybean Digest*. May. p. 43-44.

• **Summary:** Table 1 (which does not include data from farm villages) shows the average yearly expenses for seasonings per household in Japan: 1. Refined sugar 19.7% of total expenses. 2. Shoyu 18.3%. 3. Miso 14.3%. 4. Luxury items 13.1%. 5. Edible oils 9.4%. 10. Margarine 2.3%. 11. Salt 2.0%.

Table 2 shows the quantity and value of shoyu produced in Japan from 1958 to 1962 (according to 3 different sets of data). According to the Japan Shoyu Association, the amount has increased from 1,117,800 kl in 1958 to 1,160,750 kl in 1962, an increase of 4%.

Shoyu has been used daily as a seasoning in Japanese for 800 years [i.e. since about 1164]. Five reasons are given to explain why it is “now becoming a daily necessity.” Foreigners like to use shoyu for barbecue and Sukiyaki. Address: Managing Director, Japan Shoyu Assoc.

4416. Yokotsuka, Tamotsu. 1964. Shoyu. Paper presented at International Symposium on Oilseed Protein Foods, Institute of Food Technologists, USA. See p. 31-48. Held 11-15 May 1964 at Lake Yamanaka, Japan.

• **Summary:** Contents: General situation of shoyu in the Orient with emphasis on Japan: The 3 types of shoyu now available in Japan (*koikuchi*, *usukuchi*, and *tamari*; about 90% of Japanese shoyu is of the *koikuchi* type, whose color is between that *usukuchi* [light] and *tamari* [dark]).

Note: This is the earliest English-language document seen (April 2012) that contains the word *koikuchi* (it refers to the type of shoyu / soy sauce most widely used in Japan) or the word *usukuchi* (it refers to light-colored shoyu made and used mostly in the Kyoto-Osaka area).

Government regulation of the quality of shoyu in Japan. History of shoyu in the Orient. Development of technology and research in recent years, and problems for the future: Utilization ratio of the total nitrogen, use of defatted soybeans instead of whole ones, reduction of fermentation period, technical aspects (growing koji 50 cm deep without the use of small wooden trays, reducing the two major production costs of growing koji and pressing the mash, pressing once with great pressure for a long time to avoid water washing which causes oxidation), three keys to shoyu production (culturing the mold, stirring the mash, and pasteurization), academic research on microbes in and flavorful compounds of shoyu problems for the future.

The total production of shoyu in Japan is about one million kiloliters, and per capita consumption is about 10 liters/year; this has been decreasing. Japanese get about 50% of their daily salt intake from shoyu, plus about 2 grams of protein. There are more than 5,000 commercial shoyu manufacturers in Japan. They produce about 95% of all Japanese shoyu; the remaining 5% is produced by farmers in the countryside. The biggest manufacturer's market share [Kikkoman's] is about 20%. About 50% of the total output is produced by 35 factories. As is the case with many industries, there has been a growing concentration of shoyu production among the larger companies.

It takes one year or more to finish shoyu fermentation at the natural (ambient) temperature. One-year mash [moromi] has the best flavor, two-year mash has the best taste, and three-year mash has the best color. Up until World War II, these three kinds of mash were blended to produce the highest grade shoyu.

The by-products of the shoyu industry are soy cake and soy oil [shoyu cake and shoyu oil]. Soy cake usually contains about 3.5% of total nitrogen and about 10% of carbohydrate; it is used chiefly for animal feeds. The oil layer, which rises to the top of shoyu, is ethylesters of higher fatty acids, including 30 to 40 free fatty acids. It is removed before pasteurization and utilized for cutting oil, as a raw material in lower grades of soap, as a source of linoleic acid, etc.

The glycerol content of shoyu produced from whole soybeans and wheat is about 1.0 to 1.2%, while that of shoyu produced from defatted soybeans and wheat is about 0.3 to 0.5%.

In Japan, shoyu is sold in two types and sizes of containers: wooden kegs (72 liters and 18 liters), and glass bottles (2 liters, 1.8 liters, and 1 liter). The most popular of these in Japan is the 2 liter glass bottle, which presently costs 100 to 250 yen.

All shoyu exported from Japan has been regulated by

government law since 1950. The inspection consists of both organoleptic and analytical tests involving baumé, sodium chloride content, extract, and total nitrogen. Wartime circumstances gave rise to very diluted shoyu which still contained 18% salt, but got its dark brown color from caramel and had a nitrogen content of only 0.1 to 0.2%. These circumstances also led to the chemical hydrolysis of oilseed protein such as defatted soybean meal, copra meal, peanut meal, and sometimes cottonseed meal in order to get shoyu-like substances. MSG manufacturers were chemically hydrolyzing soybean and wheat protein. They succeeded in refining and processing the mother liquor of glutamic acid [HVP] to be used as a very inexpensive way of increasing the quantity of shoyu. Even today this accounts for about 30% of Japanese shoyu.

All of these circumstances delayed the restoration of the quality of Japanese shoyu for a long time after World War II. In 1963 new quality standards were implemented by the Japanese government, supported by the Japanese Shoyu Association and many technicians. The law of the Netherlands forbids the use of the name "soy sauce" for all products except those made from soybeans by fermentation, and with a nitrogen content more than a certain amount. This law excludes most Japanese soy sauce, and Japanese shoyu makers would like to see the law changed.

History: The word shoyu first appeared in Japan in 1596, and in China in 1618, as far as is known in Japan. "Years ago several kinds of beans and corn were used as raw materials; nowadays, however, only soybeans and wheat are used in Japan." Soybeans were first introduced into Europe in 1723 by Thunberg, later president of Upsalla University. In 1723, the population of Tokyo was one million and there were nine associations of shoyu makers in Japan, including the Noda association, which consisted of 19 manufacturers.

Export history: "Japanese shoyu was exported to European countries by the Dutch about 300 years ago. According to old records shoyu was presented to Louis XIV, and it was kept as a secret ingredient by the cooks of the court; the same period when coffee from Ethiopia was first brought to him." For 200 years after that time, export of shoyu was not widely permitted by the Japanese government. Meanwhile Chinese soy sauce became popular all over the world. Though the export of Japanese shoyu was reopened in the Meiji period (1868-1912), the market share of Japanese shoyu worldwide is still very small. Only about 0.2% of the shoyu made in Japan is presently exported, but the amount is increasing year after year. Note: This is the second earliest document seen stating that Louis XIV used shoyu; the first was by Obata (1959). However Obata admitted in 1983 that his statement was pure speculation, with no document to support it.

Defatted soybeans: "The advantages of the use of defatted soybeans are lower cost per unit weight of nitrogen and the reduction of fermentation period. The period to get

the highest content of glutamic acid in mash is 10 to 12 months for defatted soybean mash, while it is 18 months for whole-soybean mash at one natural temperature. The disadvantages of defatted soybeans are inferior stability of the final product with respect to oxidation and heating, lower glycerol content and higher acidity, and a little difficulty in alcoholic fermentation. This higher acidity is caused by higher lactic acid content.

To reduce the fermentation period: Use defatted soybeans, treat the soybeans adequately, make koji with high enzymatic activity, and warm the mash. Several years ago a warming temperature of 40°C (104°F) was used, but nowadays there is a trend toward the use of lower warming temperatures (30-35°C maximum) in order to avoid inferior odor and a decrease in the amino acid content. A lower temperature during the beginning stage of fermentation is widely believed to be preferable to promote high nitrogen yield, especially higher content of glutamic acid, and to promote alcoholic fermentation.

Since ancient times the 3 most difficult processes have been culturing the mold, stirring the mash, and pasteurization. The various functions of pasteurization are examined. During and after World War II, when the quality of shoyu declined sharply, and it was easily damaged by filmforming surface yeasts, the pasteurization temperature was raised to more than 80°C and butyl-parahydroxybenzoate, an artificial preservative approved by the government, was added. Nowadays, however, since the quality has been restored, this pasteurization temperature cannot be lowered, because consumers are accustomed to the flavor from the higher temperature.

Future problems: Concentration and dehydration of shoyu, more economical containers, new methods of pressing the mash for higher efficiency, further reduction of the fermentation period, export of shoyu, development of highly processed secondary products, etc. Address: Noda Shoyu Co., Ltd.

4417. Will, Joanne. 1964. He puts on a show in the kitchen. *Chicago Tribune*. June 26. p. B1.

• **Summary:** "Dick Kallman, star of the musical 'How to Succeed in Business Without Really Trying,' is a bachelor and a cook. His recipe for Veal piccata calls for soy sauce and monosodium glutamate. He says that 'soy sauce gives the veal a nice tang. It's my favorite and poultry seasoning.'" Four photos show Kallman cooking.

4418. Norin Suisan-sho, Nosan Engei Kyoku, Hatasaku Shinko-ka. 1964. *Daizu ni kansuru shiryō* [Statistics concerning soybeans]. Tokyo, Japan. 26 cm. [Jap]

• **Summary:** This yearly report, published by Japan's Ministry of Agriculture, Forestry, and Fisheries (MAFF), is packed with detailed statistics on soybean production, trade, and utilization in Japan. Address: Tokyo, Japan.

4419. Lerner, Michael D. 1964. Sliver of a shop has big trade in its stock of 700 exotic foods. *Washington Post, Times Herald*. Aug. 15. p. A3.

• **Summary:** Irving Karabell owns the 4½ foot wide specialty foods store at 1749-A Pennsylvania Ave. One of his "fastest moving items is a soja sauce favored by Indonesians that is called ketjap benteng."

Karabell says of Indonesians that if they don't have this sauce, "they have to go back to their country."

4420. **Product Name:** Emsoy Sauce.

Manufacturer's Name: Eustace Miles Foods Co., Ltd. (Marketer).

Manufacturer's Address: Colnbrook, Bucks. [Buckinghamshire], England.

Date of Introduction: 1964. August.

Ingredients: HVP, sea salt.

Wt/Vol., Packaging, Price: Bottle.

How Stored: Shelf stable.

New Product–Documentation: Ad in *The British Vegetarian*. 1964. July/Aug. p. xv. "Eustace Miles: Specialists in Foods." This is a "piquant liquid seasoning made from hydrolised vegetable protein, extract of soya beans, and genuine sea salt." Add to stews, pies, and savouries.

4421. Smith, A.K. 1964. The Mount Fuji meeting. An international symposium on oilseed protein foods. *Soybean Digest*. Aug. p. 18-20.

• **Summary:** The symposium, sponsored by the International Institute of Food Technology, was held on May 11-15 at the Mt. Fuji Hotel, Lake Yamanaka, Japan. "The 85 technologists participating in the program represented 20 countries and included 30 from Japan and 20 from the United States. An additional 26 technical observers represented the Japanese food industry." "The Mount Fuji symposium was a historic occasion for the advancement of oilseed protein foods, being the first time an international conference was devoted solely to this subject."

"Dr. Y. Sakurai of Tokyo University and George F. Stewart of the University of California, Davis, were co-chairman for the meeting. Dr. T.M. Anson, assisted by others, developed the program. Dr. Masahiro Nakano was chairman of a committee to collect and display oilseed protein foods."

"Soybeans, peanuts, cottonseed, sesame, and coconut were the five oilseeds included in the program as sources of food proteins. Because of their long history and extensive use for food, soybeans were the topics of a major part of the papers and discussion."

"Among the newer developments in the Orient, K.S. Lo of Hong Kong reported on his successful commercial operation in the daily production of 24,000 cases of soybean milk in his two plants. His milk is made from well-washed

and dehulled soybeans. It contains about 3% protein, 2-3% fat, and 5-7% carbohydrates, with added vitamins and calcium. Mr. Lo's methods for marketing soymilk are unique; he is also a large dealer in bottled soft drinks, and he markets soy milk as a soft drink. His milk competes with soft drinks rather than with other forms of milk or other health foods. Regardless of his method of marketing, he feels that the product is serving an important nutritional function in the Hong Kong area." Note: Vitasoy is once again being fortified with vitamins and calcium.

Dr. Tokuji Watanabe of the Food Research Institute reported on new ways of making tofu, such as "packed or bagged tofu" which is increasing in popularity. The soymilk is coagulated with calcium sulfate inside a polyethylene or vinylidene chloride plastic bag followed by heating in a water bath. This new process saves time and labor. Several plants are now producing 20,000 bags per day. Tofu is now also being freshly prepared in the home from spray-dried soy milk, coagulated with calcium. "More than 285,000 metric tons of soybeans and 65,000 metric tons of soybean meal are consumed annually for making fresh tofu in Japan, and because of low cost and high food quality, its consumption is said to be increasing.

Concerning miso, koji is now being made by a continuous method in 20-inch deep metal trays. Miso soup is now sold in a dried form. Shoyu production consumes 250,000 metric tons of soybeans of the equivalent as meal.

"The use of soy flour and grits in the United States for edible purposes was estimated at 200 million pounds and in England at 40 million pounds. The largest use of soy flour in the United States was estimated at 50 million pounds for bread and other baked products. In England, most soy flour is the full fat, enzymatic active type and is used at about 0.75% for improving color and flavor of baked goods."

"While isolated soybean protein for industrial uses has been produced since 1937, the production for food protein dates only from 1959. The production of industrial protein is carried on by two U.S. producers and annual production was estimated to be in the range of 40-50 million pounds. Four U.S. companies were reported to be producing or engaged in extensive research on isolated protein for food uses. The newest to be manufactured is referred to as a protein concentrate. It is prepared by washing soy flakes either with 80% alcohol or with water at the isoelectric point of the protein (pH 4.5). The concentrates must contain 70% protein whereas the isolate is 95% or more. The largest use of the isolate and concentrate is in comminuted or ground meat products, also referred to as sausage-type meats. Soy protein concentrate can be legally used in sausage-type meats up to 3.5% of the finished product." Address: NRRL, Peoria, Illinois.

4422. Sim, K.S. 1964. [Studies on the antifungal activity of capsaicin for Ganjang soy sauce]. *Yakhakhoe Chi (J. of the*

Pharmaceutical Society of Korea) 8(3):69-73. Sept. [Kor]*

• **Summary:** Cayenne pepper has been used traditionally as a hot seasoning and an antifungal agent in Ganjang soysauce in Korea. However the correlation between its components and antifungal activity has been unknown. Capsaicin is known as a hot component of cayenne pepper. Antifungal activity of capsaicin in Ganjang soy sauce was studied and the results are as follows: (1) In Ganjang soy sauce, antifungal activity of capsaicin is as strong as butyl-p-hydroxybenzoate.

(2) Antifungal activity of capsaicin was intensified by the addition of sodium chloride.

(3) The antifungal activity of capsaicin was increased by the lower pH (pH 5.5-4.5) of Ganjang soy sauce.

Note: This is the earliest English-language document seen (Jan. 2012) that contains the word "Ganjang." It appears in the English-language summary of the article. Address: College of Pharmacy, Seoul National Univ., Seoul, Korea.

4423. Hardjo, Suhadi. 1964. Pengolahan dan pengawetan kedelai untuk bahan makanan manusia [Soybean processing and preservation for human consumption]. Paper presented at Seminar Kedelai (Soybean Seminar, Rapat Kerdja Kedelai). 14 p. Held 28-30 Sept. 1964 at Bogor, Indonesia. [Ind]*

• **Summary:** Describes several methods of processing and preserving soybeans in Indonesia, including the production of tempeh, tofu (tahu), soy sauce (kecap), tauco (soybean paste), koji, and soybean flour.

Note: This is the earliest document seen (March. 2009) uses the word "tauco" (spelled in that way) to refer to Indonesian-style miso.

4424. Poorwo, Soedarmo. 1964. Kedudukan katjang kedelai sebagai makanan di Indonesia [Soybeans as a food for Indonesians]. In: Seminar Kedelai, Bogor. (Soybean Seminar, Rapat Kedelai Kerdja, Bogor). See p. 5. Held 28-30 Sept. 1964. [Ind]*

4425. Prawiranegara, Dradjat D. 1964. Pentingnja kedelai dalam menu Indonesia [The importance of soybeans in the Indonesian menu]. In: Seminar Kedelai, Bogor. (Rapat Kedelai Kerdja, Bogor). See p. 5. Held 28-30 Sept. 1964. [Ind]*

4426. Kikkoman Shoyu Co., Ltd. 1964. Kikkoman Shoyu Co., Ltd. (Leaflet). Noda City, Chiba prefecture, Japan. 2 p. Oct. Front and back. 17 x 18 cm.

• **Summary:** On one side of this leaflet are many facts about the company, including capital (¥2,700 million), yearly output (66 million gallons of shoyu), products, plants in Japan, offices in Japan, top management team, international offices in USA (San Francisco, Los Angeles, New York), Japan Calpak Co. Ltd (Del Monte), other divisions.

On the other side is a map of Japan showing the locations of Kikkoman plants and offices, and a map

showing how to get from Tokyo to Noda by train or road.
Address: Noda City, Chiba prefecture, Japan.

4427. *Foreign Agriculture*. 1964. Japan now using U.S. soybeans in food. 2(46):7. Nov. 16.

• **Summary:** More than 10% of the nearly 49 million bushels of U.S. soybeans exported to Japan during the 1963 marketing year went into the production of three staple foods—shoyu, tofu, and miso. Until 6 years ago, Japan imported no soybeans from the U.S. for food manufacture—all U.S. imports were processed into oil and meal.

4428. New Ginza. 1964. The finest in Japanese cuisine: Japanese theatre restaurant (Ad). *Los Angeles Times*. Nov. 20. p. D11.

• **Summary:** “Traditional turkey dinner... Roast turkey with rice and chestnut soysauce. Dressing and cranberry sauce.

Or: Baked ham \$3.25, including “Japanese style soybean cake [tofu] turkey roll, Chestnut soysauce rice.”

Or. Japanese teriyaki ham. Address: 254 E. 1st St., Los Angeles. Phone: MA. 5-2444.

4429. Jones, Dorothea Van Gundy. 1964. Soybean magic. *Today's Food (Loma Linda Foods, Riverside, California)* 9(3):4-6. Autumn.

• **Summary:** The author is on her way to Tokyo, Japan, where the American Soybean Association has asked her to participate in a soybean seminar and fair; she will lecture and demonstrate the use of soybeans in human nutrition.

“My interest in soybeans goes back many years when our family came in contact with them at the world's fair in San Francisco. They were featured in one of the Oriental displays. My father became so enthusiastic, he promptly bought a hundred pound sack of soybeans and we began experimenting. We discovered they were hard to cook and had a peculiar flavor. It was some time before we found a way to mask their beany taste and prepare them properly... My father [T.A. Van Gundy] became a real pioneer in introducing this king of the legume family and often was referred to as ‘Soybean Van Gundy.’

“Many years ago, Loma Linda Foods became aware of the nutritional value of soybeans and began manufacturing a few products. Today there are twenty-five soybean foods under the famous Loma Linda label—some made entirely from soybeans and others incorporating them in some form. One of the latest additions to the Loma Linda line is Boston Style Baked Soybeans.

A photo shows Dorothea Van Gundy Jones with Miss Kojima, assistant manager of the Japanese Soybean Association [sic, Japanese American Soybean Institute], who is visiting the USA as part of her world tour to study uses of the soy bean.

Page 5 shows that the following Loma Linda brand soy products are now available: Soy Flour, Soyagen (All Purpose

or Malt), Sandwich Spread, VegeChee, Smokeene, Boston Baked Soybeans, and Soy Sauce. A photo on the cover of this issue of Loma Linda's quarterly magazine shows a can of Loma Linda VegeBits. Address: Nutritionist, Loma Linda Foods, 11503 Pierce Place, Riverside, California.

4430. Nichols, Teal. ed. 1964. Zen cookery. Chico, California: The Ohsawa Foundation. 83 p. Index. 22 cm. A second edition appeared in 1965.

• **Summary:** This is the first macrobiotic cookbook written by an American, and its influence was profound.

Note 1. The Nov. 1964 edition of *Yin Yang* magazine, published in Chico, California, announced that the book had been published that month (Nov.).

“Acknowledgements: Our heartfelt gratitude goes to Lima Ohsawa, the foremost authority on Macrobiotic Cookery, without whose patient assistance and teaching this book would not have been possible. Many of the recipes appearing in Zen Cookery are from her collection in an earlier edition of Zen Macrobiotics. The Editor wishes further to thank the following people for recipes, suggestions, and invaluable comments: Joanne Hirsh, Dorothy Salant, Nina Bauman, Cornelia Aihara, Penny Smith, Shayne Oles, Betty Kennedy, and Jane Andrews.”

“Zen Cookery is a collection of recipes gleaned from the files of many people, all of whom have adjusted their salt intake to suit their own needs. Their recipes reflect this.”

Contents: 1. Grains. 2. Noodles. 3. Vegetables. 4. Soups. 5. Sauces. 6. Salads. 7. Inspirations from around the world. 8. Special dishes. 9. Miso soy bean paste. 10. Tamari soy sauce. 11. Breads. 12. Pancakes and crepes. 13. Pie doughs. 14. Desserts. 15. Beverages.

Note 2. This is the earliest English-language document seen (March 2012) that contains the term “tamari soy sauce.” It is also the earliest English-language cook book seen that contains the word “tamari” or the term “tamari soy sauce.”

Each recipe is numbered. Recipes mentioning soy in recipe name (and a few other recipes introducing foods new to the USA): 2. Rice with tamari soy sauce. 3. Rice with aduki beans. 4. Rice & aduki pudding. 7. Sesame rice. 9. Rice with chick peas (garbanzo). 21-28. Buckwheat recipes. 34. Bulghur. 48. Buckwheat noodles in soup (Soba with kombu). 50. Buckwheat noodles with fried bean curds [tofu]. 54. Buckwheat noodles with miso sauce. 55-56. Buckwheat noodles in kuzu sauce. 61. Udon with aduki. 62. Carrot sesame nituke [nitsuke]. 75. Scallion nituke with miso (soybean paste). 76. Carrot and onion nituke with miso. 77. Onion nituke with miso. 78. Vegetable miso stew. 79. Boiled pumpkin with miso. 80. Vegetable sauces with kuzu arrowroot (and tamari soy sauce).

81. Vegetables with tamari soy sauce and tahini. 98. Jinenjo (5 recipes). 101. Miso-vegetable relish. 102. Aduki beans, black [soy] beans, chick peas. 105. Baked chick peas. 106. Buckwheat-aduki pancakes. 107. Udon with

aduki beans. 108. Chestnut-aduki gelatine. 109. Chick pea party dip (with tahini and tamari). 110-118. Sea vegetables (kombu, nori, hiziki, wakame, most with tamari). 119. Clear broth (with tamari). 122. Tamari-vegetable broth. or stock. 123. Miso soup (2 types). 124. Creamed miso soup. 125. Root vegetable soup with miso. 131. Soybean soup. 134. Wakame soup (with miso). 149. Sesame sauce. 150. Miso sauce. 151. Miso salad dressing. 152. Thick tamari soy sauce. 153. Tahini tamari soy sauce. 154. Onion tahini sauce (with tamari). 172. Wakame salad.

189. Clam miso. 190. Scallop miso-lemon. 203 Miso spread [with tahini]. 204. Miso sauce [with tahini and orange rind]. 205. Sauce for vegetables [with black sesame and miso]. 206. Scallion miso. 207. Miso salad dressing. 208. Miso-vegetable relish. 209. Miso soup. 210. Udon with miso sauce. 211. Rice porridge with miso. 212. Deep fried miso balls. 213. Carrots and onions miso. 214. Vegetables miso. 215. Tekka (2 types). 216. Tea with tamari soy sauce. 217. Tamari broth. 218. Stringbeans. 219. Dried radish (daikon). 220. Shredded sea vegetables (hiziki). 221. Thick tamari soy sauce. 222. Tahini-tamari sauce. 223. Vegetables with tahini-tamari soy sauce. 234. Aduki muffins. 238. Miso spread (for sandwiches). 239. Tahini-tamari spread. 246. Buckwheat aduki pancakes. 272. Aduki pudding. 273. Chestnut-aduki gelatine. 274. Kanten jello (with agar).

291. Grain Milk (Kokkoh [Kokoh]; a finely ground combination of roasted rice, glutinous rice, oatmeal, soybeans, and sesame seeds). 294. Tea with tamari soy sauce (syo-ban).

Note 3. This is the earliest document seen (Feb. 2005) that mentions Kokkoh (or Kokoh), a grain milk introduced by macrobiotics.

Note 4. Tofu, amazake, and seitan are not mentioned in this book. 287 is Ohsawa Coffee (Yannoh) and 288 is Dandelion Coffee.

Note 5. This is the earliest document seen (June 2000) that mentions the use of miso in a salad dressing (Nos. 151 and 207).

Note 6. In 1985, when writing a revised edition of this book titled *The First Macrobiotic Cookbook*, Herman Aihara wrote (p. v) that this 1964 edition, published by the Ohsawa Foundation of Chico, California, was first the edition of the various subsequent and very influential books with this title.

Note 7. This is the earliest document seen (March 2011) concerning Herman or Cornelia Aihara and macrobiotics (or soyfoods).

Note 8. Along with soyfoods, this cookbook (and its many successors) also introduced numerous other basic Japanese foods such as aduki [azuki] beans (3-4, 102, 106-08, 234, 272-73), sea vegetables of all types, and soba. Address: Chico, California.

4431. Sakurai, K. 1964. The role and significance of soy bean foods in Japan. University of Tokyo. Unpublished

manuscript. *
Address: Tokyo, Japan.

4432. **Product Name:** Sovex Flavoring Concentrate (Thick, Dark Brown Paste).

Manufacturer's Name: Sovex Natural Foods, Inc.

Manufacturer's Address: Basement of Goodbrad home, Collegedale, Tennessee. Later-9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.

Date of Introduction: 1964.

Ingredients: Soy sauce (water, salt, hydrolyzed vegetable protein, corn syrup, caramel coloring), primary grown yeast, lecithin, vegetable flavorings. In 1971: Pure dry yeast, water, salt, soybean protein derivations [hydrolyzed vegetable protein], corn syrup, coloring, vegetable flavoring.

Wt/Vol., Packaging, Price: 9 oz plastic jar. Retail for \$2.44 (7/90, California).

How Stored: Shelf stable.

Nutrition: Per 1 teaspoon (6 gm): Calories 11, protein 1 gm, carbohydrate 1 gm, fat 0 gm, cholesterol 0 mg, sodium 300 mg, potassium 50 mg.

New Product-Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 160. Lists the ingredients in "Sovex (Sovex Inc.)."

Talk with John Goodbrad, president of Sovex. 1980. Nov. 26. Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company's original product was Sovex, a flavor concentrate paste, made from a mixture of brewer's yeast and soy sauce. In 1964 John bought the business [actually the formula and brand name] and moved it to Collegedale, Tennessee. Note: Ruth Goodbrad, John's wife, made the product in the basement of their home.

Talk with Glen Fuller, President and CEO of Fuller Life Inc. 1998. Oct. 28. Glen is interested in the history of Sovex, which is now named Fuller Foods, Inc. John Goodbrad did not buy any business from the Hurlingers in Michigan. Rather, he bought their formula for making Sovex spread and the brand name. The word "Sovex" is derived from the words "soy vegetable extract." The soy part of it was real soy sauce, and still is. Glen has heard of the Hurlingers in Holly, Michigan, but they didn't call their company Sovex. Glen does not know the name of the Hurlinger's company, but he thinks he could find it in the company archives. In about 1961 Ruth Goodbrad, John's wife, began making Sovex in their basement in Collegedale, Tennessee. In the early years, Sovex was basically Ruth's business.

4433. Tat, P.V. 1964. Nuoc mam [Nuoc mam fish sauce]. *Vietnamese Bulletin of Science and Technology* No. 45. [Vie]*

4434. Tat, P.V. 1964. [Soyabean sauce]. *Vietnamese Bulletin of Science and Technology* No. 45. [Vie]*

4435. Aykroyd, Wallace R.; Doughty, Joyce. 1964. Legumes in human nutrition. *FAO Nutritional Studies* No. 19. xi + 138 p. Reissued by FAO in 1982 (152 p.). [119 ref]

• **Summary:** Contents: Preface. Introduction. History of legumes. Production and consumption. Composition and nutritive value. Methods of processing and cooking: Soybean preparations in East Asia (p. 48-52)—Germination (sprouted soybeans), soybean curd (tofu, incl. *chou tofu* or “stinking soybean curd”), soy sauce (shoyu), soybean paste (miso), tempeh, natto, hamanatto, soybean “milk,” fermented preparations from groundnuts. Groundnut flour.

Effects of processing on nutritive value: Soaking, decortication, heating, germination, fermentation (mentions tempeh), effects of storage.

Toxic substances. Legume proteins. Observations on the value of legumes in human feeding. The place of legumes in human diets. Appendixes: (1) Legumes eaten by man. (2) Nutritive value of important legumes. (3) Amino acid content of legumes. (4) Account of lathyrism in central India by General Sleeman. (5) Bibliography of soybean (11 references). Some legume recipes. References.

Soybeans are also mentioned on pages 15 (Table 1, “Important legumes”), 23 (Indonesia, soybean curd, soy sauce, tempeh), 23-24 (Japan, miso, shoyu, natto, tofu, Korea, Taiwan), 39-40 (carbohydrates in soybeans include “galactans, pentoses, and hemicelluloses which are poorly utilized.” Fats: only the groundnut and soybean are important sources of it), 55 (heating and trypsin inhibitor, methionine and cystine, raw unheated soybean meal, saridele), 58 (fermentation, tempeh, PER), 75-76 (protein values), 81 (Dean used soybeans to treat a protein deficiency), 84 (soybeans in India), 97 (soybean curd).

Appendix 1, titled “Legumes eaten by man” (p. 101-14), lists the various legumes by their Latin names. The entry for *Psophocarpus tetragonolobus* gives its vernacular names as “Goa bean, asparagus pea, winged pea, winged bean, sesquidillas.”

Note: This is the earliest English-language document seen (Aug. 2007) that uses the word “sesquidillas” to refer to the winged bean. Address: 1. Dep. of Human Nutrition, London School of Hygiene and Tropical Medicine; Former Director, Nutrition Div., FAO, Rome, Italy.

4436. Jones, Dorothea Van Gundy. 1964. The soybean cookbook: Adventures in zestful eating. New York, NY: Gramercy Publishing Co., a division of Crown Publishers Inc. Paperback published by Arco Publishing Co. Inc. xii + 240 p. Foreword by Ruth Stout. Index. 21 cm.

• **Summary:** This lacto-ovo-vegetarian cookbook is identical to the 1963 edition published by Devin-Adair except: (1) Mildred Lager, who died in Aug. 1960, is no longer listed as the author. Note: Mildred’s husband, Ed Jones, married Dorothea Van Gundy, the present author. (2) The dust jacket

is white, yellow, green and black on a blue background. A face, made of yellow and green soybeans, is wearing a chef’s hat. (3) The publisher of the hardcover edition is now Gramercy rather than Devin-Adair. The copyright date (written in hard-to-read Roman numerals) is 1963, the same as the Devin-Adair edition. The date of publication is not given, but it must have been after 1963. We have taken the liberty of giving it as 1964. (4) The title of the second preface has been changed to “Preface to the revised edition” from “Preface to the 1963 edition.” Both were written by Dorothea Van Gundy Jones of Arlington, California. Address: Arlington, California.

4437. Ohsawa, George. 1964. *Le Zen macrobiotique; ou, L’art du rajeunissement et de la longévité* [Zen macrobiotics, or the art of rejuvenation and longevity]. Paris: Librairie Philosophique J. Vrin. 212 p. [Fre]*

• **Summary:** The author (lived 1893-1966) lists his name on the title page as “Georges Ohsawa (Nyoiti Sakurazawa).”

4438. Watanabe, Minoru. 1964. *Nihon shokuseikatsu-shi* [History of Japanese food culture]. Tokyo: Kichikawa Kobunkan. 330 p. Illust. Index. 21 cm. [Jap]

• **Summary:** Amazake (p. 43), tofu (p. 3, 129), natto (p. 147), miso (p. 3, 88, 102, 130, 149, 203-05, 241, 288, 301, 314), shoyu (3, 149, 202, 241, 301).

Amazake: There were two types of fermented foods in Japan prior to the 8th century A.D.: The sake line and the hishio (*chiang*) line. The sake line used mainly rice as an ingredient but barley (*mugi*), broomcorn millet (*kibi*), glutinous mountain yam (*yama imo*), and fruits were also used. The hishio line led to miso and soy sauce. Both the early Japanese classics *Kojiki* (A.D. 712) and the *Nihon Shoki* (A.D. 720) mention sake. From burial mound tombs created during the period A.D. 300 to 600 have been excavated groups of stone burial objects which are thought to be sake making implements. The earliest sake was made from glutinous rice (*mochi-gome*); it was quite sweet, thick, and glutinous/sticky, and was called “one night sake” (*hitoyo-zake*). It was thick like today’s amazake base before it has been diluted, and was probably served on tree leaves and eaten, rather than being drunk as a beverage. After the arrival of foreigners in Japan bringing brewing methods, regular rice started to be used to make drinks with a high alcohol content. Salty and/or pungent condiments (*karami*) were also added. Japanese cedar or cryptomeria (*sugi*) or bamboo leaves may have been used as preservatives. All of these beverages were thick grogs, not clarified sake. Moreover, unlike in later eras, they were not used to add color/pleasure to people’s daily life. Rather they were used mainly at religious festivals and ceremonies.

4439. *Daizu ni Kansuru Shiryō* (Statistics on Soybeans and Soyfoods in Japan). 1964-- . Serial/periodical. Tokyo: Norin-

sho, Engei Kyoku, Tokusan-ka (Japan Dep. of Agriculture, Forestry, and Fisheries). Annual. 26 cm. [30 ref. Jap]

• **Summary:** This annual publication of the Ministry of Agriculture, all in Japanese, is the single best unified source of statistical information on soybeans and soyfoods in Japan. By the 1970s the name of the publishing organization had changed to Norin Suisan-sho, Nosan Engei Kyoku, Hatasaku Shinkoka. The average length of a volume was 146 pages in the 1960s, increasing to 170 pages in the 1980s.

Table of Contents for the 1984 Edition reads: I. Finding where soybeans fit (in Japanese agriculture) (p. 1). 1. Changes in the size of area of the cultivated fields (p. 1). 2. Changes in usage of land (p. 2). 3. Changes in the rate of usage of cultivated fields (p. 6). 4. Converting rice fields to other crops (p. 7).

II. Production trends (p. 14). 1. Results of production (p. 14). 2. Present status of management (p. 28).

III. Grant money system (p. 56). 1. Outline of grant money system for soybeans and rapeseeds (p. 56). 2. Changes in the standard price of soybeans and the amount of soybeans subject to the grant money (p. 58). 3. Results of the regulated sales of soybeans (p. 59). 4. Monthly changes in the price of soybeans (p. 60). 5. Standards of inspection of soybeans (p. 62). 6. The present status of inspecting and ranking soybeans (p. 66).

IV. Outlines of the budget of the countermeasure of promoting the production of soybeans (p. 70). 1. Changes in the budget (p. 70). 2. Outline of budget of soy-related items in 1984 (p. 72). 3. The present status of enforcement of the enterprises (p. 82).

V. Varieties of soybeans (p. 86). 1. Table of the soybean varieties which were registered as Norin Bango (agriculture & forestry number) (p. 86). 2. Table listing the main existing varieties (p. 96). 3. Table of the varieties which each prefecture recommends (p. 102). 4. The status of planting different varieties of soybeans (p. 104).

VI. The present status of management techniques of cultivation (p. 109). 1. The season of soybeans in the main producing prefectures (p. 109). 2. Outline of the national association of promoting the improvement of management of beans in 1983 (p. 112).

VII. Trend of demand for soybeans (p. 132). 1. Changes in the demand for and the rate of self supply of soybeans (p. 132). 2. The status of demand for soybeans by year (p. 133). 3. Changes in the amount of soybeans imported for food use and the amount of soybeans used in various items (p. 133). 4. The results of production, shipping, and the usage of raw materials of miso and shoyu (p. 136). 5. The status of consumption of processed soybean products (p. 140). 6. Nutrients of soybeans and soybean products (= soyfoods) (p. 144). 7. Long term view (p. 150). 8. Changes in the rate of making soybeans as merchandise (p. 150). 9. The status of the production of soybeans in main producing countries (p. 151). 10. Changes in the amount of soybean production in

the USA (p. 152). 11. The amount and the price of exported soybeans of main exporting countries, by countries (p. 153). 12. The amount and the price of imported soybeans of the main importing countries, by countries (p. 154). 13. The Japanese import situation for soybeans, by years and countries (p. 156). 14. The imported amounts, exported amounts, and the domestic prices by years (p. 162). 15. Changes in the soybean tax (p. 164).

4440. Kikkoman International Inc. 1964? The Japanese way with food and flowers (Brochure). San Francisco, California. 16 p. Undated. 12 x 17 cm.

• **Summary:** On the cover of this color brochure is a red flower with green leaves hanging from a aged board, against a light gray background. In the lower right is the red Kikkoman logo. The first six pages contain text and photos related to the Japanese way with flowers—flower arranging. The rest of the brochure concerns the Japanese way with food, including recipes and color photos of the dishes prepared from those recipes. All the recipes except two feature meat, fish, or poultry. These two are: Kikko-cream vegetable sauce (for asparagus, cauliflower, or cabbage), and Shoyu corn on the cob. This brochure is printed in Japan. Kikkoman soy sauce is “Brewed by Noda Shoyu Co., Ltd, Japan.”

4441. Kikkoman International Inc. 1964? Delicious sukiyaki, tempura, teriyaki made by Kikkoman way (Leaflet). San Francisco, California. 4 panels. Each side. Undated. 21 x 8 cm each panel.

• **Summary:** On the cover of this color leaflet (see next page) is a large bottle of Kikkoman of Kikkoman All-purpose Soy Sauce to the left and in front of some red meat—on a pink background. The first two inside folds show color photos of Kikkoman soy sauce in 7 different sizes and containers (from 5 fl oz glass dispenser to 4.75 gallon wooden keg, all “Brewed by Noda Shoyu Co., Ltd., Japan”), the addresses of Kikkoman’s offices in San Francisco, Los Angeles, and New York, a blue and white aerial view illustration of a huge Kikkoman plant in Japan, a half-page article about Kikkoman and Japanese cooking, and the bold statement that Kikkoman is “The purveyor to the Imperial Household.” The next 4 inside panels contain definitions of sukiyaki, tempura, and teriyaki, and their corresponding recipes—all using beef, seafood, or chicken. There are short recipes for steak sauce, salad dressing, vegetable sauce, and seafood sauce. On the back panel are black-and-white photos of Japanese table utensils, with their names.

Note: This leaflet was published before 1966 because in 1965 Kikkoman opened a branch office in Chicago, Illinois. That office is not mentioned in this leaflet. Address: 900 Marin [Main] St., San Francisco 24, California.

A PLANT OF KIKKOMAN

and rejuvenation. New York, Paris, Brussel [sic], Tokyo: Ohsawa Foundation. Printed in the U.S.A. by Eastern Technical Publications (Boston & New York). 218 p. Undated. Index. 17 cm.

• **Summary:** This is the first American printing of “Zen Macrobiotics.” The word “Zen” was removed from the title at Michio Kushi’s suggestion. The cover is yellowish tan. The author is George Ohsawa.

Contents: Foreword: Two ways to happiness through health. Preface: Health to peace. Books by the same author (7 in French, 9 in Japanese, one in English, plus 4 periodicals). Table of contents. 1. Macrobiotics and Oriental medicine. Why I have written this book. What is the philosophy of the Far East? 2. What is my therapy? Unhappiness, illness, crime. Incurable disease. Three categories of cure. What we must not cure. Satori. Courage, honesty justice. Tolerance. 3. The six main conditions of health and happiness. 4. Nothing shall be impossible to you. You should have infinite freedom. You must be your own doctor. 5. Ohsawa’s macrobiotic cuisine. 6. Principal foods: Rice, buckwheat, udon etc., millet, raw rice etc. (p. 62-71, with recipes). 7. Secondary foods (p. 72-103, with recipes): Nituke, soup (lotus root ankake, kuzu gruel, cracknel yuba), pie, gyoza (piroshiki), chapati, jinenjo (wild potato, tororo). Egyptian beans (chick peas, *pois chiche*), beans (boiled soy beans with miso, gomoku beans, goziru [gojiru] soup, aduki beans), corn, aduki (ogura vermicelli), goma-tohu [sesame tofu], aemono (salads), varieties (chou farci, buckwheat crepe), wild vegetables, seaweeds (shi kobu [shio kombu], kobu maki, fried kobu, musubi kobu, kobu soup, matsuba kobu, salmon head kobu-maki, hiziki with lotus root, hiziki nitsuke, hiziki with “age,” hiziki and soyabean, gomoku hiziki, hiziki rice), wild plants (dandelion leaves or root, aozu {wild spinach}, fuki), miso and tamari preparation (sauce miso, miso cream, muso [miso with tahini and orange peel], miso soup, carrot and onion au miso, vegetable au miso, oden au miso, buckwheat dango au miso, miso ae, tekka no. 1 and 2), syoyu [shoyu] (sakura rice, sauce au shoyu, sauce au sesame, bouillon au shoyu, ositashi [ohitashi], oatmeal cream, potage oatmeal, sauce bechamel a la sauce shoyu, mayonnaise a la sauce shoyu, sauce Lyonnaise; “Shoyu diluted with a little water is very good for Sasimi [Sashimi = raw fish] and fried oyster, tempura, fish Sukiyaki, tofu {vegetable cheese of soya beans}, etc.”), beverages (rice tea, wheat tea, dandelion coffee, Ohsawa Coffee [Yannoh; incl. roasted and ground rice, wheat, aduki, chick peas, and chicory], Kokkoh {incl. roasted rice, glutinous rice, oatmeal, soya beans, and sesame seeds}, Mu tea, syo-ban {coarse green tea with soy sauce}, kuzu [cream, with shoyu] {“A good drink for everyone”}, aduki juice, radish [daikon] drink no. 1 and 2, ransyo {one beaten egg + 50% of traditional Ohsawa shoyu}, soba tea, umeboshi juice, ume-syo-kuzu, special rice cream).

8. Special dishes. Desserts. 9. Yin and Yang. 10. Macrobiotic suggestions for various symptoms of disease

(p. 131-36, with recipes): General suggestions (by disease), macrobiotic external treatment (tofu plaster, soya bean plaster, Dentine). 11. Specific curative dietary suggestions: Examples of diseases and their macrobiotic treatments. 12. Kokkoh: Macrobiotic food for baby. 13. On cooking. Salt. Folk medicine. Your history. Appendix: The case of Mr. E. (Cure in 10 hours). “Pro-forma death certificate of the American World Empire and its Gold Dynasty.”

Ohsawa centers and friends (p. 217-18): England (Trustin Foods, London; Mrs. R. Takagi, London), France (Centre Ignoramus, Longue Vie, Guenmai [Genmai = brown rice], Yamato, Ohsawa-France; all in Paris). Germany (Miss M. Arnoldi, Heidelberg; Dr. P. Martin, Munich; Dr. Henning, Hamburg), Italy (Miss H. Onoda, Rome; Mrs. Baccolis, Rome), Japan (Nippon Centre Ignoramus, 8 Kasumi-cho, Minato-ku, Tokyo; Shinsekai, Osaka), Brazil (Casa Longavida, Sao Paulo), Sweden (Miss Ilse Clausnitzer, Stockholm), U.S.A. (Ohsawa Foundation, 61, W. 56th St., New York; Ohsawa Foundation, P.O. Box 238, Chico, California; Chico-San, Inc., 64, 5th Ave., Chico, California; Musubi, 61, W. 56th St., New York—Macrobiotic Restaurant).

This book is undated, but it contains clues as to when it was published. On page 190 is reference to an article in *Time* magazine dated 7 March 1960 about the sad state of health in the United States. Then on page 189, Ohsawa states: “Upon my arrival in the United States last November, I began my lectures on the philosophy and medicine of the Orient. I gave some in Los Angeles and San Francisco [California], but mostly in New York institutes and schools such as the Universalist Church, The New School for Social Research, Columbia University, New York City College, and the American Buddhist Academy. I have postponed my departure twice. But I am very happy as I have confirmed my assumption: marriage between paradoxical philosophy of the Orient and the materialistic techniques of precision of American science, which must be realized for the infinite freedom of Man and for world peace” (p. 189).

Concerning the date of publication, which is not given in or on the book. One guess is about 1964, because when you do a printing of a book, you want to print enough to last for at least two years. This $1962 + 2 = 1964$. A pretty weak reason! Carl Ferré (6 and 8 May 2011) states: I’ve done enough printing to know that the book printed in the USA uses the same plates as the second printing in Japan except for two changes. They added “Printed in the USA by...” (in a different type face) to the back side of the first page, which is blank; and, they whited out “Zen” and the smaller “Macrobiotics” on the cover and title page and replaced both with one word: “Macrobiotics” (again, in a different type face). The rest of the book appears to be exactly the same as the second printing from Japan.”

“My thinking is that 1964 is a pretty good guess because I believe it may have been arranged by the East Coast Group—thus, the word ‘Zen’ was off the title and it

was printed by a printer in Boston and New York. This would be about the time Michio Kushi was getting settled in Massachusetts.”

Note 1. These lines almost certainly describe Ohsawa's first visit to the United States. He arrived in November 1959 and stayed well into 1960.

Note 2. All recipes in this book are numbered, from No. 1 (Unpolished rice, p. 162) to No. 816 (Rice plaster, p. 136). The recipe numbers are identical to those published in the mimeograph edition of *Zen Macrobiotics* (also titled *Macrobiotics—The Biological and Physiological Foundation of Zen Buddhism*), published in early 1960.

Note 3. The contents of this book is very similar to that of the earliest published edition of *Zen Macrobiotics*, which was printed in Japan and was 218 pages long.

• **Summary:** This is probably the 3rd English-language edition of *Zen Macrobiotics*. The 1st edition was published in Nov. 1960 in New York. Address: Los Angeles, California.

4449. Chang, C.H. 1965. [Chemical changes during the fermentation of Korean soy sauce, in connection with its fermentative period]. *Han'guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 6:8-13. April. [12 ref. Kor; eng]*

• **Summary:** Korean Mejues

Mejues were prepared by means of ordinary, improved, and compromised methods, and analysis of the changes in various chemical compositions of the soy sauces throughout the fermentation period of 10 weeks. Now, their results are as follows:

(1) In all of the soy sauces under study, the content of organic acids showed a slight increase for several weeks, followed by a marked increase after this period.

(2) In all of the soy sauces the total nitrogenous content indicated a rapid increase for the first four weeks, followed by a slower increase.

(4) In all of the soy sauces the content of reducing sugars indicated a slight increase for the first four weeks, followed by a rapid decrease until 8 weeks in the improved soy sauce. Then, it maintained an almost flat curve. In the ordinary and compromised soy sauces, there was a rapid decrease in reducing sugars for the first six weeks, followed by an almost flat curve.

(5) In the ordinary soy sauces, the *Samwol-zang-bub* (soy sauce prepared in March) is considered to be based on a comparatively scientific ground during the fermentative period.

(6) In order to improve the taste in ordinary soy sauce it is favorable to delay the period of preparation. The adequate period of waiting appears to be at least 8 weeks. It is recommended to mix the materials with carbohydrate sources.

(7) According to the *Samwol-zang-bub*, in the improved soy sauce it is thought that 8 weeks were adequate for fermentation.

(8) The compromised method may be recommended for the improvement of homemade soy sauce, and it may also be superior in quality to the ordinary soy sauce. Address: Seoul Municipal College of Agriculture.

4450. Hesseltine, C.W. 1965. A millennium of fungi, food,

and fermentation. *Mycologia* 57(2):149-97. March/April. [38 ref]

• **Summary:** A landmark, widely cited work on indigenous fermented foods. Interestingly, it makes no mention of amazake, or kanjang (Korean soy sauce). Contents: Tempeh. Ragi. Sufu (describes process, mentions pehtzes and the mold *Actinomucor elegans* NRRL 3104).

Color photos (sent by Dr. Clifford Hesseltine) show:

(1) Luxuriant growth of *Actinomucor elegans* mold on some skewered cubes of tofu in an incubator; on the top row are uninoculated cubes. (2) Cubes of sufu in their final form after removal from brine.

Thamnidium (meat tenderizer and flavor enhancer from the mold *Thamnidium elegans*). Miso. Shoyu (incl. tamari. "In China, shoyu is more of the tamari type, that is, more soybeans are used and less wheat,..."). Tea fungus. Ang-Kak (p. 179-81). Advantages of fermenting foods. The future of food fermentations.

The glossary gives brief descriptions of aga-koji, akakoji, amylo process, anchu, angkak, angkhak, ang-quac, anka, ankak, arack, arak, arrack, atsumandie, awamori, bagoong, bakhar, beni-koji, benikoji, braga, brem, busa, chao, ch'au yau (Chinese name for shoyu), chee-fan (a type of Chinese cheese or sufu), chiang (Chinese equivalent of miso), chicha, Chinese cheese (sufu), Chinese red rice (ang-kak), chiu-chu (Chinese yeast), chiu-niang (Chinese term for koji), chou [ch'ü] (Chinese equivalent of koji), dahi, dawadawa (made from African locust bean—*Parkia filicoidea*; soy is not mentioned), dhokla, dosai, fermentation of citron, fermented fish, fermentation of maize, fermented minchin (wheat gluten), fermented soybeans ("a Chinese food prepared from small black soybeans." See A.K. Smith 1961 [fermented black soybeans]), fish paste, fish sauce, fish soy, fu-yu, fu-yue, fuyu (see sufu [fermented tofu] for all 3), ginger beer plant, grib, hamanatto, hon-fan [fermented tofu], hongo, hung-chu, idli, injera, jamin-bang, java yeast, jotkal, kaffir beer, kanji, katsuobushi, katyk, kefir, ketjap, kimchi, kishk, kisselo mleko, koji, kombucha (tea fungus fermentation), kome-miso, kuban, kumiss, kumys, kushik, kushuk, kvass, kwass, kyoku-shi, lao-chao, leben, lebeny, levain of khasia, levain of sikkin, lontjom (ontjom), magou, mahewu, maize fermentation of the maoris, mazun, medusen tee, meen, meitauza, meju (fermented soybeans of Korea), mén, mien (Chinese yeast), mirin, mish, miso, moromi, mugi miso, murcha, nappi, nata, natto, ngapi, nuoc-mam, nukamiso, ontjom, patis, paw tsay, peh-khak, pehtze, peujeum, peyem, poi, prahoc, pulque, raggi, ragi, ranu, red pepper sauce, red rice, red sufu, sajur asin, saraimandie, sekihan, shiro koji, shottsuru, shoyou, sho-yu, shoyu, soja japonais (shoyu), sonti (a rice beer wine of India), South African fermented corn, soy, soybean cheese [fermented tofu], soy sauce, sufu, su fu [both fermented tofu], sweet flour paste, taette, tahuli, tahuri [both "Philippine fermented soybean curd"], takuwan, tamari, tane koji, tao-cho [taotjo],

taokoan [pressed or firm tofu, not fermented], tao dji (see taotjo {sic}), tao-si ([fermented black soybeans]; see Handbook of Philippine Agriculture. 1939. p. 132-43), tao-tjung, tao-yu, taotjo, tapej, tape ketan, tape ketella, tarhana, tea beer, tea cider, tea fungus, teekwass, teeschwamm, tempe, tempeh, tempeh bongkreng, tempeh kedelee, thamnidium, thumba, tibi, tien mien chang [chiang], tojo, tokua, torani, tosufu, toyo, trassi, tsue fan, tuwak, uri, u-t-iat, wunder pilz, yen-tsai.

Note 1. This is the earliest document seen (Oct. 2011) that mentions *Actinomucor elegans* in connection with sufu [fermented tofu]. In 1966 Hesseltine describes it as the best mold for use in making this fermented food.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the terms "fuyu" or "fu-yue" or "chao" to refer to fermented tofu.

Note 3. This is the earliest document seen (July 2000) that mentions "mugi miso"—a type of miso made with barley koji. By the mid- to late-1960s, macrobiotic companies in the USA were importing barley miso from Japan and labeling it "Mugi Miso."

Photos show: (0) Clifford W. Hesseltine (portrait). (1-3) *Rhizopus oligosporus* mold, used to make tempeh (3 views). (4) Skewered cubes of sufu in an incubator, with one skewer of uninoculated tofu cubes and three rows of tofu inoculated with *Actinomucor elegans* showing luxuriant growth of mold. (5) Cubes of Chinese cheese [fermented tofu] removed from brine. (6) Dilution plate of tane koji showing different types of *Aspergillus oryzae*. Address: NRRL, Peoria, Illinois.

4451. Manners, Marian. 1965. Thundering herd: U.S. stampedes for beef. *Los Angeles Times*. May 6. p. G1.

• **Summary:** Includes a recipe for Sukiyaki, with "3 or 4 cubes soy bean curd, optional" and ½ cup soy sauce. A large photo bears this caption: "Culinary adventure—Sukiyaki is an exciting dish to prepare in the patio or dining room. Ingredients to be assembled in advance include slices of beef, mushrooms, spinach, bamboo shoots, soy bean curd."

4452. Jones, Dorothea Van Gundy. 1965. Nutritionist Jones praises low-fat foods of Japan: To Tokyo for tofu. *Today's Food (Loma Linda Foods, Riverside, California)* 10(1):4-6. Spring.

• **Summary:** In the fall of 1964 Dorothea was invited by the American Soybean Association to travel to Tokyo, Japan, to participate in a soybean seminar and fair. It was held in August and sponsored jointly by the U.S. Government and the American Soybean Association. She also lectured and demonstrated the use of soybeans in human nutrition. This article describes the trip. Part of her time was taken up with television, radio, and newspaper interviews. Miss Kojima went along to interpret. On a side trip to rural Japan, they had the privilege to stay in a Japanese Inn. Photos show: (1) Nutritionist Dorothea Van Gundy Jones demonstrates

Western cookery at a stove while Soybean Institute Vice-President Miss Kojima translates for the audience. (2) Ingredients for making sukiyaki (incl. Loma Linda Tender-Bits and Loma Linda Soy Sauce). (3) Dorothea Jones and her husband standing behind ace carvings at a banquet.

4453. Fukushima, D. 1965. Internal structure of soybean protein molecule (11S protein) in aqueous solution. *J. of Biochemistry (Tokyo)* 57(6):822. June. [6 ref]
Address: Central Research Lab., Kikkoman Shoyu Co. Ltd., Noda-shi, Chiba-ken.

4454. *Soybean Digest*. 1965. Research leads to a new food market for soybeans. June. p. 16.

4455. Claiborne, Craig. 1965. Saga of Jim Lee: From Vienna sausage omelet to Chinese woks. *New York Times*. July 22. p. 20.

• **Summary:** His recipe for Foh opp (Chinese roast duck) calls for “¼ cup mein seen diung (yellow bean paste, available in Chinese grocery stores), ¼ cup hoi seen diung (black bean paste [hoisin sauce; hai hsien chiang], available in Chinese grocery stores)... 2 tablespoons dark soy sauce (available in Chinese grocery stores).”

His recipe for Bok sui ngui (Poached sea bass, Chinese style) calls for “1 tablespoon dark soy sauce, 1 tablespoon light soy sauce.”

A photo shows Jim Lee, a ceramist, teacher and cookbook author, standing by a wok in his kitchen.

4456. *Times (London)*. 1965. Eating Japanese. July 26. p. 13, cols. 6-7.

• **Summary:** From a correspondent. Interest in things Japanese is waxing strong in Britain, “stimulated, perhaps, by last year’s Tokyo Olympics. Several small shops selling solely Japanese goods have opened in London... On the subject of Japanese food, however, most people would confess their complete ignorance. In the whole of Britain there is not one restaurant specializing in Japanese meals, compared with thousands of Indian and Chinese establishments that have shot up since the war.”

Contains 3 recipes. For sushi: “Brush each one lightly with *shoyu* (soy bean sauce), using a pastry brush.” Mizutaki calls for 1 teaspoon of *shoyu* as an ingredient.

4457. Kushi, Michio; Fulton, Robert E.; Blum, Cecil. eds. 1965. Macrobiotics study report: The way of life according to the order of the universe. Vol. 1. Cambridge, Massachusetts. East-West Institute. 41 p. 27 cm. [4 ref]

• **Summary:** Contents: Seven principles of the order of the universe. Twelve theorems of the unifying principle (both inside front cover). Editorial, by the 3 editors. Cigarettes and cancer, by George Ohsawa (age 73), founder, world macrobiotic movement [Conclusion: smoking cures cancer].

The new discovery of the transmutation of the atom, by Michio Kushi, Director, East West Institute [he has given numerous lectures for the past 8 years in New York, Boston, Philadelphia [Pennsylvania], and Washington, DC; discusses Louis Kervran and Sanehide Komaki]. My conclusions in biological research, by Kikuo Chishima, M.D., Prof., Gifu Univ., Japan. Thoughts of man, by Michio Kushi. Love, by George Ohsawa.

What is macrobiotics?, by Roger E. Fulton, Cambridge, Massachusetts. Order of the macrobiotic diet (from No. 7 to No. -3). One week’s menu (No. 7) for health and happiness, by Aveline Kushi (p. 29-30); includes miso soup, azuki beans, bulgur with tahini sauce, and sesame rice. Sakura meshi (rice with tamari). “1. Grain: Brown rice, whole wheat, buckwheat,... azuki beans. “2. Seasoning: Sea salt, tamari (soy sauce), miso (soy bean paste), gomashio (roasted sea salt and sesame seeds mixed), kuzu, umeboshi (salted plums), sesame oil, corn oil. 3. Beverage: Grain coffee, bancha tea, mu tea, dandelion tea, etc.” Note 1. This is a vegan menu. Note 2. This is the earliest English-language document seen (Dec. 2006) that uses the term “salted plums” to refer umeboshi salt plums.

EWI news (a chronology of events from Sept. 1964 to the present). Miraculous events [and cures]. Leprosy cured in Argentina. Testimonials. Open letter to Dr. Frederick Stare, Harvard School of Public Health, by Simone Billaudeau. George Ohsawa’s schedule (May to Aug. 1965). Literary contributions. Financial contribution and subscription. Announcement: 1965 Macrobiotic summer camp. Useful addresses: USA, Brazil, Argentina, Sweden, Belgium, France, Germany, England, Spain, Italy, India, Japan. Key CI = Centre Ignoramus. E = Editor. R = Restaurant. MC = Macrobiotic Camp. MF = Macrobiotic Foods. MFF = Macrobiotic Foods Factory. OC = Ohsawa Center. OF = Ohsawa Foundation. Classification of yin and yang (inside rear cover). Poem titled “Wind chimes” by Cecil Blum on rear cover (11 June 1965).

EWI News: 1964 Sept.—After the Macrobiotic Summer Camp on Martha’s Vineyard, Michio Kushi and his family moved from the Island to Cambridge, Mass. For the previous year, Mr. Kushi’s lectures were conducted almost every month in Boston at the Mattson Academy of Karate. George Ohsawa was also in Boston and Martha’s Vineyard in 1964. In Sept. 1964, East-West Institute was incorporated as a non-profit educational establishment. Mr. David Levin and Mr. Ramsay Wood initiated it with several others. Address: East-West Institute, 101 Walden St., Cambridge, Massachusetts.

4458. *Christian Science Monitor*. 1965. Just cook it all at table. Aug. 19. p. 6.

• **Summary:** Gives recipes for Sukiyaki and for rice. Sukiyaki calls for: “1 tofu (optional) (This is a bean curd made fresh daily of soya). 1 cup shoyu sauce.”

4459. Findlay, W.P.K. 1965. Fermented foods. *British Vegetarian*. July/Aug. p. 282-83. [1 ref]

• **Summary:** In 1964 at the Botanical Congress in Edinburgh, Scotland, an American mycologist, Dr. C.W. Hesseltine, gave a fascinating account of the studies he has made of foods fermented with molds. A full account of his work has just been published in *Mycologia*. 1965. 57(2): March/April. This is a summary of that article, focusing on tempeh, sufu or Chinese cheese, miso, and shoyu or soy sauce. Address: D.Sc.

4460. Koshiyama, Ikunori. 1965. Purification of the 7S component of soybean proteins. *Agricultural and Biological Chemistry* 29(9):885-87. Sept. [12 ref]

• **Summary:** Describes the earliest isolation, in 1965, of the 7S protein of soybean in its ultracentrifugally pure state. Address: Noda Inst. for Scientific Research, Noda City, Chiba-ken, Japan.

4461. *Foreign Agriculture*. 1965. Japanese soybean study. 3(42):12. Oct. 11.

• **Summary:** The Japan Shoyu Research Institute, Tokyo, will compare Japanese and U.S. soybean meals for making shoyu (soy sauce), under a grant awarded by the U.S. Dep. of Agriculture. Previous research at the Institute showed that whole soybeans from the United States yielded slightly higher quantities of shoyu than Japanese beans, and that the quality of shoyu was about equal. In recent years, defatted soybean meal has replaced whole beans as the foremost raw material for making soy sauce.

4462. Cannon, Poppy. 1965. The fast gourmet. *Chicago Daily Defender*. Oct. 25. p. 17.

• **Summary:** A recipe for Five minute beef with pea pods states: "Add 4 tablespoons light soy sauce (preferably Chinese)."

4463. Ohsawa, George. 1965. Zen macrobiotics: The art of rejuvenation and longevity. Revised, edited and annotated by Lou Oles and Shayne Oles Suehle. Los Angeles, California: Ohsawa Foundation, Inc. xiv + 128 p. No index. 17 cm. Series: The Philosophy of Oriental Medicine, Vol. 1. [20 ref]

• **Summary:** Note: This book was probably published after July 1970, even though the copyright date is 1965. This is probably the 4th English-language edition of *Zen Macrobiotics*. The 1st edition was published in Nov. 1960 in New York and the 2nd edition in 1965 in Los Angeles, revised by Lou Oles.

Note 1. Shayne's maiden name was apparently Shirley S. Federbush. The California marriage records state that she married Ferdinand E. Suehle on 24 July 1970. So this book was almost certainly published after their marriage date.

Note 2. The date on this book is too early, as explained by Carl Ferre (e-mail of 15 April 2011), president of the

George Ohsawa Macrobiotic Foundation. "The libraries are going by copyright dates and do not correspond to when they were printed and made available to people. The second one was printed after Lou Oles had died, which was in 1967 if I recall correctly, and she had remarried! It should have had a new copyright date, but didn't.

"From the early magazines, it appears Lou and Shayne Oles moved to Los Angeles in December, 1965. He announced the move in the January 1966 issue of the magazine and there is nothing about an intended move in the November 1964 issue... Note also that they used 'Ignoramus Press' for some of their books." Address: Los Angeles, California.

Address: Kikkoman.

4465. Han, P.J.; Min, B.Y.; Kim, K.S. 1965. [Studies on the manufacturing of fermented soybean paste and soy sauce using defatted soybeans]. *Research Reports of the Office of Rural Development* 8:333-46. [Kor]*

• **Summary:** To ensure better utilization of soybean, comparative trials were conducted pertaining to the manufacturing of Korean condiments, bean paste, and soy sauce using the defatted soybean and whole soybean.

As a starter of fermentation, some elite microbes were cultured in carbohydrate resources such as barley, wheat, and sweet potato flour, which may be an important subsidiary material for well-flavored final products.

(1) From wild strains of microbes, 2 strains were preliminarily pure cultured to select an excellent strain, which is referred to as *Aspergillus oryzae* A.

(2) Through the comparative test among four strains already identified (*Aspergillus* original, *Aspergillus oryzae* #612, *Aspergillus sojae*, *Aspergillus oryzae* E209 E2 and *Aspergillus oryzae* A) the *Aspergillus oryzae* A was selected as an available strain for this purpose, and this strain has revealed conspicuously high activities of enzyme, amylase, and protease 2.5-3 days after culture.

(3) With the progress of bean paste fermentation, the sugars were decreased, while the total acid and amino-nitrogen were decreased by the relatively higher degree of defatted soybean plot. There was a possibility of manufacturing fairly good bean paste utilizing the defatted soybean within the shorter time requested, though the product has shown slightly inferior quality compared to bean paste made from whole bean.

(4) In the soy fermentation there was no marked difference between whole bean and defatted plot with regards to progressive sugar decrease and total acid and

amino-nitrogen increase. However, total nitrogen value was higher in the defatted plot. It was found that within the relatively shorter time requested to reach full maturity of soy sauce, quality of soy could be as good when made from defatted soy beans as when it was made from whole beans.

(5) The paper chromatographic analysis of soy sauce gave no difference between the whole bean and defatted plot in the features of amino acid pattern, of which more than 12 kinds of amino acids were identified. This data implies the precise relevance of the availability of the defatted soybean.

(6) Costs of defatted soybean are calculated to 10.90 won to produce 1 kilogram of bean paste and 18.25 won to produce 1 liter of soy sauce. These are comparatively reduced costs compared to 14.60 won and 25.75 won for the cost of the soybean required. Address: Inst. of Agriculture & Engineering Utilization, Ministry of Agriculture & Forestry, Suwon, Korea.

4466. Product Name: Diamond Teriyaki Sauce. Hawaiian Barbecue Marinade.

Manufacturer's Name: Honolulu Sake Brewery & Ice Co., Ltd.

Manufacturer's Address: Honolulu, Oahu, HI 96813.

Date of Introduction: 1965.

Ingredients: Water, soy beans, wheat, salt, sugar, spices, mirin (sweet rice wine for cooking), disodium 5'-inosinate, and sodium benzoate, a preservative.

Wt/Vol., Packaging, Price: 16 fluid oz (1 pint) bottle.

How Stored: Shelf stable.

New Product–Documentation: Label. Received Feb. 1988 from Honolulu Sake Brewery Co. Ltd. 8.25 by 3.25 inches. Black, white, and pink on yellow, with color illustration of a skewer being barbecued. "Our 'Original' Teriyaki Sauce from Hawaii." Suggestions for using on steak, chicken, pork, lamb, spareribs, fish, hamburger, meatballs. Letter from Takao Nihei. 1988. July 19. Gives year of introduction as 1965.

Note: This is the earliest known commercial teriyaki sauce; it is made in Hawaii. The first four ingredients are for the soy sauce.

4467. Lee, K.H.; Chang, K.H. 1965. [Studies on koji for soy sauce brewing. III. On the abilities of UV-induced mutants of *Aspergillus oryzae* to produce protease, amylase, and vitamins]. *Misaengmul Hakhoe Chi (Korean J. of Microbiology)* 3:9-14. [Kor]*

• **Summary:** The enzyme producing potential of industrially important strains of *Aspergillus* was studied. Irradiation of three original isolates of *Aspergillus oryzae* to ultra-violet rays resulted in the production of mutants that differed from the parent riboflavin and vitamin B-12 in culture media.

(1) Irradiation of three strains of *Aspergillus oryzae* to ultra-violet light produced mutants. Two of these strains were selected for soy sauce brewing.

(2) The two strains are the physiological mutants of *Aspergillus oryzae*. Both were found to have superior enzyme activity to their relatives.

(3) *Aspergillus oryzae* UV-induced mutants 172-722 and 569-713 were more powerful than others in the production of riboflavin and vitamin B-12. The enzyme activity of these strains was high and decreased only slightly even in a 20 percent solution of NaCl.

(4) *Aspergillus oryzae* UV-induced mutant 172-722 had more powerful protease producibility in wheat bran media than in modified Czapek's solution. On the contrary, *Aspergillus oryzae* UV-induced mutant 569-713 had more powerful producibility for saccharogenic and dextrinogenic amylase in modified Czapek's solution than in mold bran.

(5) *Aspergillus oryzae* UV-induced mutant 172-722 formed the spore rapidly and *Aspergillus oryzae* UV-induced mutant 569-713 did so ordinarily.

(6) *Aspergillus oryzae* UV-induced mutant 172-722 is valuable material for the manufacture of soy sauce because of its high protease activity in 20 percent solutions of NaCl. *Aspergillus oryzae* UV-induced mutant 569-713 is suitable for soybean mash and for fermented red pepper sauce because of its high saccharogenic and dextrinogenic amylase activity in 20 percent solutions of NaCl. Address: Army Research and Testing Laboratory, Seoul, Korea.

4468. [Report on the present status of the shoyu industry]. 1965. Norinsho (Japanese Ministry of Agriculture and Forestry). [Jap]*

4469. Arimoto, Kinitaro; Sakurai, Yoshito. 1965. Food and nutrition in Japan. In: Martin S. Peterson and Donald K. Tressler, eds. 1965. Food Technology the World Over. Vol. II. South America, Africa and the Middle East, Asia. Westport, Connecticut: AVI Publishing Co., Inc. ix + 414 p. See p. 359-94. Illust. Index. 24 cm. [13 ref]

• **Summary:** This chapter, after the Introduction, is divided into two parts: 1, titled "Nutrition (p. 360-74)" by Arimoto, and 2, titled "Food technology" (p. 374-94)" by Yoshito [Yoshito] Sakurai. In Part 1, table 110, "Food supply in Japan" includes average statistics on soybeans, miso, and shoyu in kg/year and gm/day for 1944-1948, 1961, and 1961. in kg/year for the three periods: Soybeans: 3.5, 5.4, and 5.0. Miso: 10.6, 8.1, and 7.7. Shoyu: 15.9, 13.0, and 11.1. Source: Ministry of Agriculture and Forestry, Balance Sheets. Surprisingly, supplies were greater for each during and immediately after World War II than in the early 1960s.

Table 116, "Intake of foods classified into food groups and type of work (gm per capita per day), 1963" gives statistics for the entire nation, agricultural households, and non-agricultural households, as follows: Soybeans: 1.3, 1.7, 1.0. Miso: 25.1, 30.1, 22.5. Soybean products: 37.3, 29.9, 41.5. Seaweeds: 4.6, 4.2, 4.7. Shoyu: 26.2, 30.0, 23.6. Soybean products as a source of high quality protein are

discussed (p. 366).

Part 2 begins with a section on “Rice” (p. 374-77) which notes that rice supplies half the calories in the Japanese diet. Japan produces all of the rice it needs—about 13 million tons. Imported rice (about 150,000 tons) is used only as a raw material in confections and miso. Japan imports most of its soybean from the USA and China, and these soybeans are processed by characteristically Japanese methods to make tofu, miso, and shoyu (p. 377).

Animal husbandry is not widely practiced in Japan, largely because the land is hilly with few grazing lands. Thus most beef, pork, and chicken are imported. The production of cow’s milk is gradually increasing; it is now 27 million hectoliters.

Packaging of foods has changed greatly during the past decade. Packaged foods are now common. Shoyu and miso, once sold by the measure, are now sold in bottles and plastic bags, respectively. Table 128 (p. 378), titled “Supply of raw materials and food consumption of their products in 1959 (Japan)” shows the following for soybeans (in metric tons = tonnes). Soybeans—Domestic supply: 410,000 tonnes. Imports: 1,000,000 tonnes. Miso consumption: 850,000 tonnes. Shoyu: 1,280,000 tonnes. Tofu: 640,000 tonnes. Aburaage 170,000 tonnes. Natto 60,000 tonnes. Meat 330,000 tonnes. Fishery products: 6,170,000 tonnes.

The section titled “Soybeans” (p. 380-86) has the following contents: Introduction. Miso, shoyu, natto, tofu, koritofu (dried tofu) [dried-frozen tofu], yuba. Photos show: (1) Shoyu brewing in tanks in a large factory. (2) Pressing and washing of tofu in koritofu manufacture in a large, modern factory. (3) Aerial view of a large, modern plant for koritofu production. (4) The thawing operation in making koritofu. (5) The drying operation in making koritofu. Address: 1. PhD, Director, National Inst. of Nutrition, Tokyo, Japan; 2. PhD, Prof., Dep. of Agricultural Chemistry, Faculty of Agriculture, Tokyo Univ., Tokyo, Japan.

4470. Brandemuhl, William. 1965. Soybean utilization in Japan. San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• **Summary:** A superb, in-depth, pioneering study, based on extensive original field research in Japan. It is carefully documented with hundreds of original interviews and published sources properly cited in two different lists of sources (numerical and alphabetical) Contains 30 tables and 190 excellent photos—including 7 of the author.

Table of contents: Preface. Notes. List of tables. List of figures. Map. Part I: Background. 1. The soybean: Birth and spread (legend, botanical inception, Nagata’s theory of origin, spread to Japan and beyond, the American story).

Part II: Japan’s production and supply of soybeans. 1. Japan the country and supply of domestic soybeans (Japan the country, domestic soybean production, planting and harvesting, marketing domestic soybean). 2. Importation of

Red Chinese soybeans (background, mechanics, advantages, and prospects). 3. Importation of U.S. soybeans (history, method and mechanics of importation, the American shippers, concluding comments on importation). 4. Distribution (use in brief, super-wholesaler, wholesaler, retailer wholesaler, Japan’s grain exchange).

Part III: Soybean utilization in Japan. 1. Utilization of soybeans for oil and meal (oil crushing history, soybean source, delivery of soybeans, the crushing industry, liberalization of soybean oil and meal, oil utilization in Japan, meal utilization in Japan). 2. Tofu (history, use of soybeans, manufacture, the tofu factory, marketing tofu products, recently developed tofu products, tofu as food, concluding comments). 3. Miso (importation, home production of miso, quantity of miso produced, soybean used for producing miso, kinds of miso, fermentation time, comparison of miso firms, manufacturing, packing and marketing, price, instant miso, use of miso, miso consumption outlook). 4. Shoyu (introduction, production and manufacturers, manufacture, raw materials, preparation of raw materials for natural shoyu, preparation of materials for chemical method shoyu, preparation of materials for mixed method shoyu, fermentation, filtering and pressing, sterilization, bottling, price, use of shoyu, miscellaneous shoyu products, concluding comments). 5. Natto (description, history, Daitokuji natto, the natto industry, consumption, natto soybeans, processing, making cost and price, marketing, use of natto, problems, new ideas and natto products). 6. Frozen tofu (history, development, frozen tofu soybeans, processing, freezing, defrosting, drying, treatment with ammonia and packing, marketing, preservation, use). 7. Kinako. 8. Yuba (history and development, the plight of the yuba industry, soybeans for yuba, manufacture, classification of yuba, use). 9. Tsukudani and nimame (description, soybean tsukudani, nimame). 10. Hamanatto (history, manufacture, use). 11. Edamame. 12. Moyashi (manufacture, use). 11. Miscellaneous products (fermented soybean curd, MSG, confectionary products, other products). Conclusion. Sources (numerically arranged). Sources (alphabetically arranged).

Tables: 1. U.S. soybean production, 1924-1963. 2. United States, Red China, and world production of soybeans (bushels), 1950-1963. 3. U.S. soybean importation, exportation and amount processed for oil and meal, 1924-1963. 4. U.S. exportation of soybeans (1,000 bushels) total, by continent, and to six largest importing countries, 1958-1962. 5. Japan’s soybean acreage, production, and merchandising rate. 6. Japan’s importation of soybeans, total, and Red China’s portion, 1945-1963. 7. Japan’s total importation of soybeans and U.S. portion, 1945-1963. 8. Soybean usage in Japan, 1963. 9. Japan’s processing of oilseeds, 1963. 10. Crushing capacity of selected Japanese oilseed crushers. 11. Eight largest crushers of soybeans and amount of soybeans crushed per month in 1963. 12.

Total quantity of soybeans crushed in Japan, 1950-1963. 13. Japan's daily per capita intake of edible fats and oils. 14. Japan's consumption of edible fats and oils, 1945-1961. 15. Use of soybean meal. 16. Chemical composition of tofu and aburaage. 17. Quantity of soybeans and soybean meal used for tofu-aburaage productions (all Japan), 1950-1963. 18. Miso production and quantity of soybeans and soybean meal used, 1950-1963. 19. Composition of miso. 20. Daily per capita consumption of miso in Japan, 1950-1963. 21. All Japan production of shoyu and use of soybeans and soybean meal, 1950-1963. 22. Composition of shoyu. 23. Yearly per capita consumption of shoyu, 1950-1963. 24. Composition of natto. 25. Production of frozen tofu and use of soybeans. 26. Composition of frozen tofu. 27. Yearly per capita consumption of frozen tofu. 28. Composition of kinako. 29. Composition of yuba. 30. Monosodium glutamate production and use of soybeans and soybean meal. Continued.

This typed manuscript was sent to Soyfoods Center in July 2004 by Tomoko Brandemuhl, the wife of the author. About the author (based on several interviews with Tomoko, July 2004): William Victor Brandemuhl was born on 30 Nov. 1940 at Iron Mountain, Michigan. He grew up in Florence, Wisconsin, then attended the University of Wisconsin at Madison. He roomed for 3-4 years with various Japanese cancer researchers at the university. He also became close to Tomoko Arai (born 12 Dec. 1937 in Tokyo), a Japanese woman, who was doing graduate studies in social work there as a Rotary International Fellowship student. William initially intended to graduate in June 1962, but stayed an extra year in order to pursue independent studies in Japanese language and soybeans. He became interested in the soybean and its history in an anthropology class taught by Dr. R.J. Miller; William finished his excellent research paper on soybeans in Jan. 1963. He also took one year of Japanese language instruction (night classes). William graduated in Jan. 1963 with a BSc degree in economics.

William obtained a grant (no strings attached) from Honeymead Products Co. of Mankato, Minnesota, to study soybean utilization in Japan. Only one American had studied this subject in Japan after World War II—Alan K. Smith of the USDA, who visited Japan and wrote short but detailed reports in 1948-49 and 1958. In Jan. 1963 Brandemuhl arrived in Japan and became a research fellow at the Department of Agricultural Economics, Kyoto University, Kyoto, Japan. Between Feb. 1963 and May 1964 (15 months) he conducted field research on soybean utilization in Japan. In June 1963 (after William had been in Japan for 4 months), Tomoko completed her graduate studies, graduated from the University of Wisconsin, and (since her scholarship was finished), returned to Japan—to be with William and to help him with his research in Japanese, which he spoke only moderately well. She traveled with him throughout Japan and translated for him during the many interviews he conducted. At each destination, she spoke about America to

the local Rotary club—which paid her transportation, room, and board. William's monthly check from Honeymead paid for his room and board—but not for his travel and research, so he had to work part time doing English translation for a Japanese company. On trips, he took many photos using his expensive Nikon camera. Tomoko's family lived near Kobe, where she and William were married on 8 Aug. 1964—three months after he finished his field research. Several days after the marriage, they returned to the USA to visit his parents in Florence, Wisconsin, and enjoy a wedding party there.

William now knew he wanted to pursue a career in international business. He was soon offered a job at Crocker Citizen National Bank (International Division) in San Francisco, California. They drove to San Francisco and got an apartment at 1701 21st Avenue; he began work that fall, and was soon learning the basics of international business. Every evening after work at the bank he returned home to work on transforming his field notes into a manuscript. As he wrote the rough draft, Tomoko (a skilled pianist but not a skilled typist) typed it on a manual typewriter. The next day he would correct any mistakes and she would retype each page into final form. In 1965 he had the best carbon copy bound and sent it to Honeymead; he kept the original. It was never published and he received no academic credit for it.

On 26 May 1966 their first son and only child, Konrad Victor Brandemuhl, was born in San Francisco. They bought a house in Pacifica. In 1967 he was offered a job with Caterpillar Tractor Co. (International Div.) in Peoria, Illinois. In 1968 he moved with his boss to work at Allis-Chalmers Manufacturing Co., West Allis, Wisconsin. In 1969 he was transferred to Tokyo, Japan, as Far East Representative of the company. In 1970 he was transferred to Singapore as Far East Manager of the company.

William and Tomoko later lived for about 10 years near Tokyo, Japan (mostly in Mitaka), and for a while in Singapore. Over the years he showed his typescript on "Soybean Utilization in Japan" to many people, but nobody was interested. In 1986 he started his own trading company, specializing in textiles, natural rubber, latex thread, and various machine mechanisms. Tragically, William died on 2 April 1998 in Bangkok, Thailand, of pneumonia, during a business trip. He loved the excitement of international business and interaction with people of different cultural backgrounds. Address: San Francisco, California.

4471. Brandemuhl, William. 1965. Soybean utilization in Japan: Figures (Document part). San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• **Summary:** 1. Black soybeans from Japan's Tanba region and American Harosoy soybeans. 2. Soybeans growing on a dike. 3. Soybean plants drying on rack. 4. Soybean plants drying just prior to harvesting. 5. Soybean plants drying just prior to harvesting. 6. Soybean harvester. 7. Depodding rack and pod filled stalk. 8. Depodding soybeans. 9. Entrance

to the Red Chinese Trade Fair held in Tokyo, during April, 1964. 10. One of the agricultural exhibits at the Chinese Trade Fair (corn and soybeans). 11. Soybeans and soybean plants exhibited at the Chinese Trade Fair. 12. Soybeans and other bean products that Red China is capable of exporting (exhibition at the Red Chinese Trade Fair). 13. Soybeans on display at retail store. 14. Soybeans on display at retail store. 15. Barge unloading of soybeans at oil mill. 16. Barge unloading of soybeans at oil mill. 17 Soybean tank receiver at oil mill. 18. Multi-spout soybean feeder at barge side. 19. An oil gift assortment.

20. Selling oil at a small oil retail shop. 21. Dispensing oil. 22. Selection of oil at oil retail shop (notice birds in cage at right). 23. Vegetable oil displayed with petroleum products. 24. Vegetable oil displayed with petroleum products. 25. Bottling facilities at oil wholesaler's. 26. Bottling facilities at oil wholesaler's. 27. Prepackaged oil products displayed at wholesaler's. 28. 4472. Brandemuhl, William. 1965. Soybean utilization in Japan: List of interviews (Document part). San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• **Summary:** Between Feb. 1963 and May 1964 the author interviewed people from the following organizations (listed alphabetically) related to soybean utilization in Japan. In many cases he interviewed the owner, president, or managing director.

1. Agricultural Experimental Farm, Kamigori, Hyogo-ken. 2. Akutagawa Candle Co., Kyoto. 3. Aoki Miso Co., Nagano-ken. 4. Aoki Umbrella Co., Kyoto. 5. Aoyama Candy Co., Kyoto. 6. Bunge Far East Agent, Osaka. 7. Choko Shoyu Miso Co., Nagasaki. 8. Continental Overseas Corp., Tokyo. 9. Daiichi Trade Co., Kobe. 10. Dainihon Ink and Chemical Co., Osaka. 11. Dainihon Pharmaceutical Co., Osaka. 12. Daiya Frozen Tofu Co., Suwako-gun, Nagano-ken. 13. Daizu Yuryo Wholesale and Broker, Kobe. 14. Franceya Chocolate Co., Kyoto. 15. Fuji Oil Co., Osaka. Note: This is the earliest document seen (June 2009) concerning the work of Fuji Oil Co. (Osaka, Japan) with soy.

16. Genroku Brewing Co., Kyoto. 17. Gion Mameheto Candy Co., Kyoto. 18. Hamamoto Tofu Co., Kyoto. 19. Hamano Tofu Co., Kyoto. 20. Hanamura Bread Co., Kobe. 21. Harada Miso Co., Kyoto. 22. Hasegawa Oil Co., Kyoto. 23. Hashizume Tsukudani Co., Kyoto. 24. Hirota Sauce Co., Kyoto. 25. Hohnen Oil Co., Osaka. 26. Honda Miso Co., Kyoto. 27. Ishino Miso Co., Kyoto. 28. Itoh Trade Co., Osaka. 29. Itoh Trade Co., Kyoto.

30. Iwai Trade Co., Osaka. 31. Kaihara Natto Co., Kyoto. 32. Kamejirushi Shinshu Miso Co., Nagano-ken. 33. Kanegabuchi Chemical Co., Takasago-shi, Hyogo-ken. 34. Kanemasu Grain Wholesaling Co., Osaka. 35. Kanematsu Trade Co., Osaka. 36. Kansai Paint Co., Osaka. 37. Kansai Shoji Wholesale Co., Kyoto. 38. Kanto Miso Co., Kyoto. 39. Kasakura Natto Co., Tokyo. 40. Kato Kinako Co., Tokyo. 41. Kido Tofu Co., Tokyo. 42. Kobata Farm, Kyoto. 43. Kobayashi, Michiharu, Kyoto University, Kyoto. 44. Koya-san Frozen Tofu Co., Ito-gun, Wakayam-ken.

45. Kurosawa Miso Co., Nagano-ken. 46. Kyoto Prefectural Agricultural Cooperative, Kyoto. 47. Louis Dreyfus and Co., Tokyo. 48. Mame Masa Candy Co., Kyoto. 49. Marubeni Iida Trade Co., Osaka. 50. Meiji Chocolate Co., Osaka. 51. Midori Natto Co., Tokyo. 52. Mitsui Trade Co., Osaka. 53. Mitsui Trade Co., Tokyo. 54. Moriguchi Natto Co., Kyoto. 55. Morita Frozen Tofu Co., Sasayama, Hyogo-ken. 56. Moriwaki frozen Tofu Co., Taka-gun, Hyogo-ken. 57. Nagata, T., Dept. of Plant Breeding, Hyogo University of Agriculture, Sasayama, Hyogo-ken. 58.

Nagoya Miso Co., Nagoya. 59. Nakai Wholesale Co., Osaka. 60. Nakamura Yuba Co., Kyoto. 61. Nakayama Farm, Kamigori-cho, Hyogo-ken. 62. Nakazawa Soap Co., Kyoto. 63. Namikawa Tofu Co., Kyoto. 64. Naruse Natto Bacteria Co., Tokyo. 65. National Agricultural Cooperative Assoc., Osaka. 66. Nihon Paint Co., Osaka. 67. Nikka Oil Co., Tokyo. 68. Nisshin Meal Co., Kobe. 69. Nisshin Oil Co., Yokohama. 70. Noda Shoyu Co., Takasago-shi, Hyogo-ken. 71. Nomura Meal Co., Kyoto. 72. Nomura Tsukudani Co., Kyoto. 73. Nunoura, Hiroshi, Kyoto Women's University, Kyoto. 74. Oguchi, K., Nagano-ken Shinshu Miso Assoc., Nagano-ken.

75. Ohashi, Taiji, Japan Soap Assoc., Tokyo. 76. Okazaki Natto, Tokyo. 77. O-mame Candy Co., Kyoto. 78. Osaka Grain Exchange, Osaka. 79. Osaka Prefectural Miso Assoc., Osaka. 80. Otsuya Agricultural Brokers, Kyoto. 81. Ryo Tofu Co., Kyoto. 82. Sawai Wholesale Co., Kyoto. 83. Senmaru Yuba, Kyoto. 84. Shimamoto Tofu Co., Kyoto. 85. Shinseimame Candy Co., Kyoto. 86. Sugimori, T., Marukin Shoyu Brewing Co., Kyoto. 87. Tada, H., Kyoto Prefectural College, Kyoto. 88. Taiyozakoku Wholesale Co., Kyoto. 89. Takeya Miso Co., Suwako-shi, Nagano-ken.

90. Tanaka Narazuke, Kyoto. 91. Tatsuno Higashimaru Shoyu Co., Tatsuno-shi, Hyogo-ken. 92. Tawa Chicken Farm, Kyoto. 93. Tofu Aburaage Assoc., Kyoto. 94. Toyo Menka Trade Co., Osaka. 95. Uchida Tsukemono, Kyoto. 96. Ueda Miso Assoc., Ueda-shi, Nagano-ken. 97. Uemura Suhamu Candy Co., Kyoto. 98. Uno Tofu Co., Kyoto. 99. Yamajirushi Miso Co., Nagano-ken. 100. Yamamoto Farm, Taki-gun, Hyogo-ken. 101. Yamanaka Oil Wholesale Co., Kyoto. 102. Yamato Bean Sprout Co., Kyoto. 103. Yamaya Hamanatto Co., Shizuoka-ken. 104. Yazura Yahata, Kyoto Textile University, Kyoto.

105. Yoshihara Oil Co., Osaka. 106. Yoshimura, Hyogo

University of Agriculture, Sasayama-shi, Hyogo-ken. 107. Yoshizabaru Retail Co., Kyoto. 108. Yubahan Co., Kyoto. 109. Yubakichi Co., Kyoto. Address: San Francisco, California.

4473. Burke, Helen; Tong, Fu. 1965. Chinese cooking for pleasure. London: Paul Hamlyn Ltd. 151 + 5] p. Illust. (some color). Index. 29 cm.

• **Summary:** Preface, by Fu Tong ("Food is my whole life"). Introduction, by Helen Burke. The recipes are largely Cantonese, and fermented black soybeans (*dow see*) appear in quite a few: Pacific prawns and black soya beans (with "2 tablespoons canned black soya beans," p. 40). Duck with black beans (with "1 tablespoon canned black [soya] beans," p. 65). Chicken and black beans (with "1 tablespoon canned black beans," p. 73). Soya eggs (with "2 tablespoons dark soy sauce," p. 138).

The "Glossary" (p. 150-51) includes: "Red bean curd;" comes in 6-oz cans. "Yellow and black soya beans;" sold in 6-oz. cans.

Note: Many recipes call for "Ve-Tsin or monosodium glutamate." It is known under many brand names; Accent (made in USA), Aji no Moto (made in Japan). Mei Yen (made by the Spice Islands Co. of California), Stress (made in Great Britain) and Ve-Tsin (made in Hong Kong). "Home cooks, in the wake of food manufacturers, are realising, more and more, the virtue of 'M.S.G.' under whatever name it is bought and it is growing in popularity. Like all seasonings and flavourings, 'a little goes a long way.'" Address: 1. Food writer, London, England, and, British Columbia, Canada; 2. Owner of four Chinese restaurants in Europe.

4474. David-Perez, Enriqueta. comp. and ed. 1965. Recipes of the Philippines. Philippines: Published by the author. Printed by Capitol Publishing House, Inc. (Quezon City). 86 + [14] p. Illust. No index. 22 cm.

• **Summary:** This is an expanded edition of the author's 1953 book of the same title. Almost all the recipes in this book have Filipino names, with no English translation of those names. A surprisingly large number contain soyfoods (See Glossary at end). Miso is "a paste made of fermented rice and soy beans" [miso]. Tajure is "fermented soy beans, caked" (fermented tofu). Tausi is "fermented soy beans" [fermented black soybeans or fermented black soybeans with salt]. Tokua is "soy bean curd" (tofu). Toyo is Filipino-style soy sauce.

Soy-related recipes include: Chicken pastel (with toyo, p. 26). Arroz caldo with chicken (with 3 tbsp. patis or toyo, p. 45). Bañus en tocho-2 (with 2 tbsp. each tajure and tausi, and 1 cake tokua, cut into pieces 3/4 inch long and 1/8 inch wide, p. 54). Bañus in soy sauce (with 2 tbsp. soy sauce, p. 54). Bulanglang-1 (with 1 cup tokua, cubed and fried, p. 57). Burong isda (with 1 tbsp. angkak-fermented red rice, p. 59). Escabecheng apahap (with 4 pieces tokua, p. 71).

Escabeche-Macao style (with 3 tbsp. toyo sauce, p. 71).

Kari-karing pata (with ground toasted peanuts or peanut butter, p. 79). Lumpia labong (with 5 bean cakes-tokua, p. 83). Lumpia sauce (with ½ cup toyo sauce, p. 84). Lumpia with peanuts (with 2 squares tokua-diced, 2 tbsp. toyo-soy sauce, and 1 cup ground peanuts, p. 85). Lumpia with ubod-2 (with 2 cakes tokua, and toyo to taste, p. 87). Miso-tomato sauce (with 2 tbsp. misu-soy bean paste, p. 92). Pancit "luglug" (with ½ cup soy bean cake-tokua-cut into small cubes, p. 97). Umba (with 2 tbsp. toyo and 1 heaping tbsp. tausi, p. 118). Pastillas de mani (with 1 can ground peanuts, p. 133).

On the page facing p. 186 is a full page ad for Suki Soy Sauce, made by the Philippine Shoyu Co., Liloan, Cebu, Philippines. It is "Pure and fully aged."

Seven unnumbered pages later is a full-page ad for "Aji-no-Moto super seasoning... The purest vetsin ever."

A glossary at the end contains brief definitions of uncommon ingredients. Definitions of the soy-related ingredients above are taken from this glossary. Angkak is "red-colored grains of rice used as coloring for fermented fish."

Note: On the title page is printed "10th printing-1965" but no original publication date is given. Address: Philippines.

4475. Li, Shih-chen. comp. 1965. Pen-ts'ao kang-mu [Collected essentials of herbs and trees. Illustrated compendium of pharmacopoeia with commentaries]. Hong Kong: Commercial Press. [Chi]*

• **Summary:** This 1965 edition of the classical work incorporates the following works on plants by earlier authors, now largely unpreserved, which were cited extensively by Schafer (1977) in his chapter: Chen, Ch'üan. *Yao hsing pên ts'ao*.

Ch'en, Ts-ang-ch'i. *Pên ts'ao shih i*.

Hsiao, Ping. *Ssu sheng pên ts'ao*.

Li, Hsün. *Hai yao pên ts'ao*.

Meng, Shen. *Shih liao pên ts'ao*.

Su, Kung. *T'ang pên ts'ao chu*.

Sun, Ssu-mo. *Ch'ien chin shih chih*.

4476. Ochse, J.J.; Soule, M.J., Jr.; Dijkman, M.J.; Wehlburg, C. 1965. Cultivos y mejoramientos de plantas tropicales y subtropicales [Cultivation and improvement of tropical and subtropical plants. 2 vols.]. Mexico: Wiley. See vol. II, p. 1162-63. [Spa]*

• **Summary:** The section titled "Soybean" discusses the following: Vernacular names in various languages. Overview of world production. Botany. Varieties. Breeding and selection. Climatic and soil requirements. Culture. Harvesting. Uses (incl. soy sauce, tempeh, and tofu). Future possibilities. Diseases. Ochse was born in 1891.

Note: This book was originally published in English

in 1961 by Macmillan Co. in New York. Address: 1. Consultant, Tropical and Subtropical Agriculture, Research Consultant in Economic Botany, Univ. of Miami, Coral Gables; 2. Assoc. Prof. of Fruit Crops, Univ. of Florida, Gainesville; 3. Prof. of Applied Tropical Botany and Genetics, Univ. of Miami, Coral Gables; 4. Asst. Plant Pathologist, Univ. of Florida, Everglades Experiment Station, Belle Glade. All: Florida.

4477. Raper, Kenneth B.; Fennell, Dorothy I. 1965. The genus *Aspergillus*. Baltimore, Maryland: The Williams & Wilkins Co. 686 p. Illust. Index. 24 cm. [400+* ref]

• **Summary:** The authors discuss the koji molds in Chapter 18 titled “*Aspergillus flavus* group.” Contents: Outstanding characters. General considerations (incl. *A. oryzae*, *A. oryzae* var. *effusus*, *A. flavus*, *A. tamarii*, and *A. flavo-furcatis*). Occurrence and significance: Introduction, enzymes (amylolytic, proteolytic, lipolytic). “Members of this group are widely distributed in nature. They are regularly isolated from soils, particularly those from tropical and subtropical areas, from forage and decaying vegetation, from stored seeds and grains, and from various types of food products. They contribute to decomposition processes... Except for *A. Niger* and allied species, they have been used more widely in industry than any other group of molds, particularly for the production of enzymes.

“Members of the *Aspergillus flavus* group produce diastatic and proteolytic enzymes abundantly. In large measure the alcoholic and soy food industries of the Far East are based upon these molds and their enzymes. In the soy industries, closely related molds, or even the same strains, are used as a source of proteolytic enzymes. In 1894 Takamine secured a series of U.S. patents covering the production of diastatic enzymes and the making of alcoholic liquors. Subsequent to this, other investigators, mostly Japanese, published a number of papers in this field. Oshima, in 1922 and 1928, reported on the production of protease by members of the *A. flavus-oryzae* group. Today, considerable quantities of diastatic enzymes, proteolytic enzymes, and mixed diastatic and proteolytic preparations are being manufactured from these molds for use in the food, textile, and tanning industries.” Address: Dep. of Bacteriology, Univ. of Wisconsin, Madison, Wisconsin.

4478. Sakurazawa, Nyoiti [Ohsawa, George]. 1965. You are all sanpaku. English version by William Dufty. Secaucus, New Jersey: University Books. 224 p. Index. 22 cm. First paperback edition published in 1980 by Citadel Press, Secaucus, NJ.

• **Summary:** Contents: Introduction. The divine ritual. A land of sanpaku. Faith and medicine. The cause. The cure. The daily check-up. Food and sex. Prayer and fasting. The sacred act. About salt. About sugar. About milk. About liquids. About chewing. About principal foods. Soulfood: Brown

rice, rice cream, buckwheat, buckwheat cream, wheat, cous cous, chapati, millet, raw rice, bread, gomasio [gomashio] (sesame salt), umeboshi plums, miso and shoyu, tahini, miso cream, about tea, coarse green tea (bancha), soya ban (coarse green bancha tea with soy sauce), mu tea, lotus tea, lotus tea, mint tea, thyme tea, Ohsawa coffee (Yannoh; made of rice, wheat, aduki beans, chick peas, chicory, and a little oil), Dandelio (dandelion coffee substitute), kokoh, kuzu, umeboshi juice, ume syo kuzu (umeboshi + shoyu + kuzu), aduki juice, radish drink (daikon #1 and #2), special rice cream, brown rice tea, wheat tea. The oneness of the universe [Ohsawa’s profound and beautiful credo]. Tables: 1. Macrobiotic table of daily food in order of yin to yang. Note: The most yin foods are indicated by 3 downward-pointing triangles; the most yang foods by 3 upward-pointing triangles. Beans (except aduki) are quite yin, being symbolized by 2 downward-pointing triangles. Eggplant, tomato, and potato are the most yin vegetables. The most yang cereal is buckwheat, followed by rice. 2. Physical phenomena—Yin/yang table. Biographical note on Ohsawa (p. 213-18).

This was the first popular book in English to explain the principles of macrobiotics. “*Sanpaku* describes a condition in which the white of the eye can be seen between the pupil and the lower lid as the subject gazes directly forward. This, we quickly learn, connotes a grave state of physical and spiritual imbalance.” It is the Oriental sign of impending disaster.

Soy-related recipes and information include: Soya bean plaster (p. 140). Tofu plaster (p. 141; tofu is called “white soya bean cheese”). Tekka [miso] for anemia and general weakness (p. 143). Miso and shoyu (p. 190). Miso cream (with tahini, p. 190-91). Soya ban: Coarse green bancha tea with soy sauce (p. 194). Ume syo kuzu (p. 199; a proven medicinal beverage [made from umeboshi, shoyu, and kuzu]).

About sugar (p. 165): “I am confident that Western medicine will one day admit what has been known in the Orient for years: sugar is without question the number one murderer in the history of humanity—much more lethal than opium or radioactive atomic fallout—especially for those people who eat rice as their principal food.”

About milk (p. 169): “There is no reason for man to live on the milk of an animal—especially an animal inferior to him biologically and intellectually.” People of the Orient avoid milk “because they respect the biological natural laws of the Order of the Universe... Once the young offspring of animals have their teeth and are weaned from nursing, they no longer drink milk... No animal ever does.” “The quality and quantity of a mother’s milk controls her child’s destiny. In cases where the mother’s milk is not available, babies can be fed with *Kokoh*—a macrobiotic cereal milk made with roasted rice, glutinous rice, oatmeal, soya beans and sesame seeds reduced to powered form” (see recipe p. 198).

Miscellanea: The Ohsawa Foundation at 317 Second Avenue in New York City, located on the first floor of an old tenement, had a 4-table restaurant in the front and a kitchen in the rear. There were several macrobiotic restaurants in Paris, plus a tiny macrobiotic food store named Les Trois Epis and the Librarie Ohsawa, both on Rue Lamartine Guy Massat was editor of the French monthly journal *Yin/Yang*. The author: "I could not remember a single doctor, out of dozens who treated me, who had ever shown the slightest curiosity about what I ate and drank."

"The stark facts presented to the President of the U.S. by his Special Commission on the Nation's Health in December of 1964 are staggering: In 1963 heart-artery disease caused 55% of all U.S. deaths, and cancer 16%. Strokes 210,000; diseases of arteries outside the brain combined with diseases of the heart to kill 793,000. Cancer killed 285,000" (p. 66). Occidental medicine is symptomatic medicine; it does not seek to cure the basic causes. And it is microscopic/analytical. It seeks the truth in a maze of details; but the "truth is whole." The "ultimate cause of every illness is violation of the order of the universe through ignorance or through arrogance,..." (p. 80-81). "Disease is a divine warning, a message from nature seeking to guide us to the correct path" (p. 98). The essential factor in the proper nutrition of the human body is the proper proportion of Yin and Yang. The best proportion of Yin/Yang or Potassium/Sodium is 5 to 1. All those foods whose K/Na ratio is greater than 5 to 1 are Yin. The book ends with a "Biographical Note: Sakurazawa-Ohsawa" who is said to have "published some 300 works in Japanese and more than 20 books in Western languages, principally French." His wife, Lima, is a professor of traditional Japanese music. There is a selected bibliography of Ohsawa's books, especially those published in French. Address: New York.

4479. van Veen, A.G. 1965. Fermented and dried seafood products in Southeast Asia. In: G. Borgstrom, ed. 1965. *Fish as Food*. Vol. 3. New York: Academic Press. See p. 227-38, 247-50. [78 ref]

• **Summary:** Contents: Introduction. Fish sauces: Nuoc-mam, other types (incl. patis, nam-pla). Fish pastes. Salted fish not (or partially) dried. Miscellaneous. Summary and conclusions. Soy is not mentioned. Address: Graduate School of Nutrition, Cornell Univ., Ithaca, New York.

4480. Kikkoman International Inc. 1965? Kikkoman's wonderful world of flavor (Brochure). San Francisco, California. 16 p. Undated. 10 x 7 cm.

• **Summary:** A small (1/8 inch diameter) hole in the upper left corner of this tiny brochure indicates that it is a "neckhanger," designed to be tied to a string or elastic loop and hung around the neck of each bottle of Kikkoman soy sauce. On the cover of this color brochure is a photo of a bottle of Kikkoman all-purpose soy sauce above

five prepared meat dishes. On the rear cover, on a yellow background, we read: "Kikkoman—delicious directly on meats! A hand is holding a bottle of Kikkoman soy sauce and pouring it onto a hamburger. Above of the Kikkoman logo is written "Since 1630."

On the inside front cover we read: "Eighteen months maturing of select quality soy beans and wheat are required to achieve Kikkoman's distinctive quality—the winner of *thirty major international awards*." On each little page inside is a half-page recipe and a half-page color photo. The recipes are: Kikkoburgers. Paradise isles fried chicken. "Best ever" beef short ribs. Pork roast royale. Savory fish sauce. Beef teriyaki. Kikko-qued chicken. Salad dressing. How to make delicious fried rice. Tuna pilaf. Lamb stew superb. Meat loaf.

This brochure is printed in Japan.

Note: This brochure must have been printed after 1964 because in 1965 Kikkoman International opened a branch office in Chicago, and that office is listed on the back of the brochure. Address: San Francisco, Los Angeles, New York, Chicago.

4481. Hoffman, Marilyn. 1966. A taste of China in old Manhattan. *Christian Science Monitor*. Jan. 20. p. 6.

• **Summary:** A recipe for Chicken wrapped in paper calls for: "2 tablespoons light soy sauce. 1 teaspoon salt." Then: "Marinate chicken in soy sauce, salt, sugar, ginger, and scallion for 30 minutes."

4482. Kamada, Hidemoto; Ebine, Hideo; Nakano, Masahiro; Chiba, Akira. 1966. [Effect of manufacturing method on the properties of shoyu koji]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 21. p. 141-44. Jan. [3 ref. Jap; eng]

• **Summary:** Reprinted from *Nihon Shokuhin Kogyo Gakkai Shi* 12(6):242-45 (1965). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4483. Claiborne, Craig. 1966. New Yorkers take to tempura and chopsticks with gusto. *New York Times*. March 10. p. 22.

• **Summary:** "But gastronomically there has been no phenomenon in recent years to equal the proliferation of Japanese restaurants [in Manhattan], East Side, West Side and up and down the town."

There have been Japanese restaurants in New York for many years but in the early days, unless one spoke Japanese, the choice was between tempura and sukiyaki. Today the choice of dishes is almost unlimited.

The first of the "grand luxe Japanese restaurants" in Manhattan was the Saito; it offered tatami mat rooms (*ozashiki*). Next came the Kabuki, then the Nippon.

Mizutaki is "boiled chicken and vegetables served with soy and lemon sauce." Appetizers include "bits of tuna with soy [sauce] and ginger, and stashi, the traditional dish with

soy and ginger.” Kabayaki is [eels] “glazed with a light soy sand sugar sauce.” Three recipes are given: Shabu-shabu calls for “2 pieces tofu (bean curd), each cut into four pieces.” Ponzu sauce (Soy and lemon sauce) calls for ½ cup each lemon juice and “Japanese soy sauce, ¼ teaspoon ajinomoto (monosodium glutamate)...” Gomazu sauce (sesame sauce) calls for “4 ounces sesame seeds or one-half cup tahini (sesame paste...), ½ cup Japanese soy sauce. ¼ teaspoon ajinomoto (monosodium glutamate)...”

4484. Watanabe, Tokuji; Ebine, H.; Ohta, T. 1966. Daizu shokuhin no kakô gijutsu [Technology of soybean processing]. *Shokuryo Kenkyujo, Shokuryo Gijutsu Fukyu Shirizu (National Food Research Institute, Extension Series of Food Technology)* No. 4. 61 p. March. [Jap]
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan (Norinsho Shokuryo Kenkyujo).

4485. Meade, Mary. 1966. Raw chicken best in many oriental dishes. *Chicago Tribune*. April 4. p. C13.

• **Summary:** Japan Air Lines says there is much interest in authentic Japanese sukiyaki, but adds that it would be almost impossible to duplicate the dish as it is served in Japan.

“Tofu is bean curd.” If not available, it may be omitted. “Shoyu is Japanese soy sauce. It is important to use this instead of American or Chinese soy sauce because it is less salty.

The recipe for Suki-yaki includes “12 1-inch cubes of tofu” and “½ cup shoyu.”

4486. McCormick, Sally. 1966. Azuma Suki-yaki House: For leisurely dining in the Japanese manner—5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune*. April 7. p. H12.

• **Summary:** Next came the Suki-yaki. “Chieko glided in once more with an hibachi stove, large frying pan, and an attractive tray full of appetizing, fresh vegetables, thinly sliced prime rib, and soy cakes... She removed the suet and added generous slices of beef, fresh mushrooms, bamboo shoots, Tofu (soy bean cakes), Shiratake [Shirataki] (yam noodles) and assorted fresh vegetables.” The restaurant also serves Beef Teriyaki, Chicken Teriyaki, and Salmon Teriyaki. Three photos show Azuma.

Note 1. This might be called an “advertorial.” This ad also appeared in the 29 Sept. 1966 issue of this newspaper (p. J9).

Note 2. Shirataki are thin noodles of konnyaku, a gelatinous paste made from the root of the devil’s tongue plant, *Amorphophallus konjac*. Konnyaku has no flavor, and no nutritional value, because its starch is not digestible by the human body. However it is an excellent source of dietary fiber and is appreciated for its chewy texture.

4487. *SoyaScan Notes*. 1966. Chronology of Erewhon. Renamed Erewhon Trading Co. in 1967. 12 Dec. 1991.

Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1966 April 9—Erewhon opens as a small (10- by 20-foot) macrobiotic and natural foods retail store at 303-B Newbury Street (below street level) in Boston. Aveline and Michio Kushi are the founders, but Aveline is the sole owner. Evan Root is the first retail store manager. The origin of the natural foods industry and movement in America can be traced to this date. Erewhon is the first store of its kind in America and it soon serves as a model for many other similar natural food stores across the nation. Erewhon sells several soyfoods, mainly miso and shoyu purchased from Howard Rower’s Infinity Foods or Japan Foods Corp., both in New York.

1967 Aug.—Paul Hawken takes over the management of Erewhon (one small retail store) from Evan Root. He changes the name to Erewhon Trading Co. (from simply “Erewhon”) and starts to expand the business.

1968 May—Paul Hawken incorporates Erewhon Trading Company. Paul later states that he and Aveline Kushi each own 50% of the stock. However Aveline Kushi and her attorney, Morris Kirsner, agree that they offered him 50% of the Erewhon stock shortly before he left for Japan (in March 1969) but he did not accept it. To this day (Feb. 1999) Aveline has no idea why Paul did not accept such a generous offer.

1968 June—Hawken establishes his first supplier of organically grown grains, Ted Whitmer, a wheat farmer in Montana. By 1973 Erewhon had established and contracted with 57 farms in 35 states to provide the company directly with organically-grown foods.

1968 Aug.—Erewhon starts to import foods from Japan, initially from Muso Shokuhin, later by correspondence with Mr. Akiyoshi Kazama, who worked for an import/export company named Mitoku, which sold no food at the time. The initial orders contained red miso (made by Sendai Miso Shoyu Co.) and natural shoyu (made by Marushima).

1968 Nov.—On Thanksgiving day, Erewhon moves up and across the street to a much bigger and nicer location at 342 Newbury St. Paul had hired Bruce Macdonald, a carpenter, to remodel this store. The company now has 6 employees: Paul Hawken, Roger Hillyard, Bruce Macdonald, Bill Tara, Jim Docker, and Jean Allison. One day later, Bill Tara leaves to start a macrobiotic East West Center in Chicago. The original downstairs room is taken over by Tao Books, then Redwing Books. Tofu, curdled with calcium sulfate and made by a Chinese company in Boston, starts to be sold.

1969 March—Paul Hawken and Evan Root leave for Japan. Bruce Macdonald takes over as general manager of Erewhon. Paul stays in Japan for 9 months, arranging for individual packaging of products that were formerly imported in bulk, and finding new items for Erewhon to import. He visits suppliers, works with Mitoku and Muso, and studies Japanese language and culture.

1969 spring—Erewhon starts wholesaling foods, under the direction of Bruce Macdonald. Their first wholesale product is natural sesame oil.

1969 Aug.—Aveline Kushi moves to Los Angeles where her youngest son, Hisao, undergoes traditional Japanese bone massage therapy. In Los Angeles, she establishes the first macrobiotic study house at 7511 Franklin Ave. Bill Tara arrives about a month later to set up a retail store, Erewhon West, which opens on 8001 Beverly Blvd. in about September.

1969 Oct. (early)—Bruce Macdonald leaves for Los Angeles with his new bride, Maureen Traill, to run the new Erewhon West retail store there. Roger Hillyard takes over as general manager of Erewhon in Boston.

1970 Jan. 1—Erewhon's earliest existing catalogue seen (wholesale and retail) lists 7 pages of natural food products—most of them imported from Japan. By March 1970 Erewhon lists 96 products in its catalog.

1970 July—Erewhon's rapidly expanding distribution business moves into a large (20,000 square feet) fifth-floor leased brick warehouse at 33 Farnsworth St., on the docks in South Boston. *East West Journal* and Tao Books soon move to the same area.

1970 fall—Erewhon receives its first shipment of brown rice from the Lundberg brothers in Richvale, California; it is "unsprayed" but not organic. Chico-San has exclusive rights to all Lundberg's organic brown rice.

1971 Jan.—*East West Journal* begins publication in Boston, Massachusetts.

1971—Erewhon Trading Company of Los Angeles has expanded and is now at 8001 and 8003 Beverly Blvd., Los Angeles, CA 90048.

1971 March—Roger Hillyard is replaced as general manager of Erewhon—Boston.

1971 March—Paul Hawken finalizes a contract with Carl Garrich of Lone Pine, Arkansas, to grow short-grain brown rice organically and exclusively for Erewhon. 330 acres are planted in April. That fall, Erewhon starts to retail and wholesale its first organic brown rice.

1971 May—Bruce Macdonald leaves Erewhon in a dispute over ownership of the company.

1972—John W. Deming Jr. plans to invest \$150,000 in Erewhon in exchange for stock, and Advest Co. plans to conduct Erewhon's first public stock offering—but neither happens after Michio Kushi nixes the plans.

1972 fall—Erewhon first buys organic brown rice from Lundberg brothers of California; a fire that destroyed Chico-San's plant in early Aug. 1972 rendered their exclusive contract with the Lundbergs null and void.

1973 Aug.—Paul Hawken writes a critical history of Erewhon and its problems. Published in *East West Journal* it is titled "Erewhon: A Biography. The View Within." Shortly thereafter Paul Hawken resigns, saying that running Erewhon was a nightmare. Some say he sells his 25% ownership back

to the company, which was subsequently managed by Bill Garrison, Tyler Smith, Jeff Flasher, and Tom Williams, in that sequence.

1974 July to 1977—Erewhon becomes the exclusive representative and agent for both the Muso and Mitoku companies in North America. The labels of all products imported from these companies must bear the Erewhon label.

Starting in late 1969 a number of macrobiotic and/or natural foods companies grew into distributors following the models established by and with help from Erewhon: Eden Organic Foods in Ann Arbor (started by Bill Bolduc on 4 Nov. 1969), Food for Life (started in 1970 by Bill Tara as a retail store on the 10th floor of a Chicago office building), Janus in Seattle, Washington (Jan. 1972, by George Gearhart and Blake Rankin, formerly of Spiral Foods), Essene in Philadelphia, Pennsylvania (by Feb. 1971), Laurelbrook in Maryland (Aug. 1971), Ceres in Colorado Springs (1973), and The Well in San Jose, California (1973, by Phil Parenti). These macrobiotic distributors had a strong influence on the numerous other non-macrobiotic natural food distributors, such as Lifestream (started in 1969 as a retail store), Westbrae in Berkeley, California (wholesale distribution: July 1970, by Bob Gerner; retail: Feb. 1971, Gerner). Shadowfax (New York, 1971), and Tree of Life in St. Augustine, Florida (retail: May 1971; wholesale distribution: Feb. 1972, by Irwin Carasso).

1975 Aug. 1—Erewhon sells all of its West Coast Division in California (Los Angeles and Culver City) to John Fountain and John Deming for cash and notes, realizing a net gain of \$86,872.

1977 March 23—Erewhon sues natural foods retail stores in several states for boycotting Erewhon for selling to co-ops. Erewhon eventually wins the case, but its legal bills are something like \$250,000. There was not enough money to pay these fees and Erewhon never recovered.

1978 (early)—Erewhon moves into a huge warehouse and office complex at 3 East St., Cambridge, Massachusetts 02141.

1979 April 27—The workers in Erewhon's production, trucking, shipping, and kitchen departments vote 42-19 to form a union affiliated with Local 925, the Service Employees International Union.

1979—John Deming steps in to liquidate all the assets of financially failing Erewhon—Los Angeles. Tom DeSilva, Tyler Smith, and Jeff Flasher buy the retail store at 8001 Beverly Blvd.

1981 Feb.—Erewhon currently lists 4,000 products in its catalog—in its bid to become a full-line distributor. It services 2,000 customers and provides jobs for 175 people in its warehouse and retail stores.

1981 Nov. 10—Erewhon files for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act because of debts totaling \$4.3 million. At this time, Aveline Kushi is the sole owner of Erewhon. Stow Mills picked up the lion's

share of the Erewhon business, with Westbrae also getting a significant part of it.

1982 May—A \$1.3 million offer by Ronald Rossetti, president of Nature Food Centres, is accepted as the reorganization plan in the Erewhon, Inc. bankruptcy. Rossetti purchased Erewhon as an individual; it was never part of Nature Food Centres.

1986—Erewhon acquires U.S. Mills, which had been founded in 1908. In effect U.S. Mills and Erewhon were merged, and U.S. Mills was chosen as the corporate name, largely since it had been around longer.

1988 May—Chuck Verde (who was the president of Erewhon) and Cynthia Davis acquired the U.S. Mills / Erewhon business. They became the main joint shareholders. Address: 303-B Newbury St., Boston, Massachusetts.

4488. James, Isabel. 1966. The use of whole foods. *British Vegetarian*. March/April. p. 141-48.

• **Summary:** This is the revised text of a lecture given by the author at the 18th International Vegetarian Union Congress at Swanwick in 1965. After defining whole foods she discusses vegetarian protein foods, including nuts, pulses, and yeast. Under Pulses, the main variety discussed is the soya bean. "This is truly a Wonder Bean!" It can be used to make flour, milk, curds and cheese [tofu], and soy sauce. Or the beans themselves can be soaked and cooked for a long time. "The by-products of the bean are also valuable for pasturage, dry fodder and silage. It seems a pity that such a valuable food should also be used for the production of soap, paint and high explosives!" Address: B.A.

4489. Hayashi, Shizuka. 1966. There's an increasing trend to soybean oil in Japan. *Soybean Digest*. May. p. 68-69.

• **Summary:** In 1965-66 some 1,852,000 tonnes of soybeans were used in Japan. Of this, 1,341,000 tons (74.5%) were crushed, 297,000 tons (16.0%) were made into tofu and frozen tofu, 150,000 tons (8.1%) were made into miso, 32,000 tons (1.7%) were made into natto, and 32,000 tons were made into soy sauce and other soy products.

Crushing the soybeans yielded 1,073,000 tons of soybean meal. Of this, 736,000 tons (68.6%) was used for animal feeds (largely as a component of mixed feeds), 174,000 tons (16.2%) to make shoyu, 65,000 tons to make tofu, 63,000 tons for other food uses, and 35,000 tons for other non-food uses. Thus, a little over 50% of all soybeans used in Japan in 1965 were used to make foods—not including soy oil.

Per capita consumption of edible oil in Japan has increased dramatically, from 7.52 grams per day in 1956 to 18.44 grams in 1965. During the same period, total soybean oil consumption has risen from 74,010 tonnes to 219,967 tonnes. In recent years a number of the large soybean crushing companies, such as Hohnen, Nikkoh, Nisshin, Showa, and Yoshiwara have expanded their extraction plants.

"The various soybean food processors including soy sauce, miso, and tofu are consolidating into fewer large-scale plants with financial support from the government for improvement and better efficiency." Address: Japanese American Soybean Inst.

4490. Baens-Arcega, Luz. 1966. Feasibility of mold-process production of sauce from copra and soybean mixture with authentic Philippine strain of *Aspergillus oryzae* (Ahlburg Cohn). *Araneta J. of Agriculture* 12(2):80-105. June. [21 ref]

• **Summary:** People in various countries have developed a preference for the sauce produced in their native countries. "The Filipinos relish 'patis'; the Thailanders, 'nam-pla'; and the Vietnamese and Cambodians, 'nuoc-mam.' These sauces are prepared by the natural fermentation and hydrolysis of fish which is salted with a suitable proportion of salt, usually 25 to 30 per cent, to prevent the growth of undesirable bacterial contaminants... In Europe the favorite sauce is 'maggi,' a food seasoning prepared from meat.

"Perhaps the most popular sauce is 'toyo,' or shoyu,' a condiment made from the highly nutritive soybean... In the United States this typical oriental soy sauce is used as an important condiment and a basic constituent of quality Worcestershire sauce, a compound spicy food seasoning."

"Figures obtained from the Bureau of Census and Statistics and the Department of Agriculture and Natural Resources" show that local Filipino production of soy sauce, which may roughly represent home consumption of soy sauce, from 12 selected establishments alone amounted to 3,031,957 pesos in 1959. "It may be reasonably estimated that should all manufacturers of soy sauce submit reports on their production, the amount could easily be doubled." Since soybean, a major "raw material for the production of soy sauce, is not yet commercially produced in the Philippines," importation of these protein-rich beans amounts to thousands of pesos annually.

The experimental work described in this article was conducted from Nov. 1962 to Sept. 1963 in the laboratory of the Biological Research Center, National Institute of Science and Technology, covering a period of ten months. Different proportions of molded copra meal (a coconut by-product containing 25% protein) were used to supplement the regular soy sauce koji. The sauces were harvested after 2 months of brine fermentation.

"A supplementation of 50 parts copra meal to 50 parts soybean was selected as the ideal combination of proteinous substrate which yielded, after 2 months of fermentative brining, a clear, yellow-red, appetizing sauce containing 5.51 per cent of protein..."

Table 7 gives the names of 8 commercial soy sauces sold in the Philippines (2 imported, 6 made locally) together with their content of protein and of sodium chloride.

Contains 7 tables, 3 graphs (incubation time vs. proteolytic activity, etc) and two photos. Address: Araneta

Univ.

4491. Bharath, Sam. 1966. A note on the cultivation of soyabeans and groundnuts with special reference to Trinidad and Tobago. *J. of the Agricultural Society of Trinidad and Tobago* 66(2):171-82. June.

• **Summary:** Contents: Introduction to soyabean. Varieties. Climatic requirements. Soils. Culture. History of production in Trinidad. Possibilities of increasing production in Trinidad and Tobago. Summary. Groundnuts.

The soyabean is not a tropical species. "Except for Indonesia, there is no important producing country in the tropics. Attempts have been made to develop the crop in tropical Africa but these have been only moderately successful. Nigeria produced 27,000 tons and Tanganyika 2,000 tons in 1962. In the latter country soyabeans have been found to be a more economic crop than groundnuts, chiefly because of the ease of mechanisation and consequent lower labour requirement."

"History of production in Trinidad: In order to increase local food production during the War [World War II], several varieties were imported and released to farmers and school gardens. Some of the varieties formed pods but the crop did not become popular since the flavour of both green beans and dried seeds are not as attractive as other legumes already grown, such as red salad beans or black-eyed peas [cowpeas]. These locally grown legumes also give higher yields."

"In 1948 R. Moosai-Maharaj introduced a Venezuelan variety to the farmers of the Oropouche Lagoon and some crops were grown in the dry season but again the crop never caught on. The author compared a black-seeded variety with the Venezuelan cream variety at the St. Augustine Station in 1957 and 1958 and yields of 1,000 lbs. per acre of dried beans were obtained from the black-seeded variety but only 500 lbs. per acre from the cream variety. The seeds have since been lost at the St. Augustine Station but Darsan at the U.W.I. has maintained these varieties in a museum plot. Incidentally the black-seeded varieties are used for the preparation by fermentation of soy sauce (*Se-ow*) and yields of these varieties are generally lower than cream or yellow seeded varieties."

Conclusion: Soyabeans can be grown in Trinidad and Tobago, but it is unlikely that Trinidadians will ever find the soyabean an attractive addition to their diet. Varieties better adapted to Trinidad and better information on cultivation are needed before farmers can be asked to grow the crop commercially. Address: M.Sc.

4492. Kilpatrick, James J. 1966. Right to be let alone is the most precious of all. *Los Angeles Times*. July 12. p. A5.

• **Summary:** Benevolent paternalism has become rampant in the USA; Big Brother is watching you—and is sure he knows what's best for you. "Nowhere is this arrogance of power

less restrained, or more abused, than in the Food and Drug Administration" [FDA]. "For example, in New York City, on the complaint of the FDA, marshals recently swooped down upon the Ohsawa Foundation at 317 Second Ave., and there confiscated a large quantity of 'macrobiotic foods,' and a large quantity of books and pamphlets on Zen cookery."

The confiscated foods were not mislabeled, not contaminated in any way, and not adulterated. The Azuki beans were pure and natural—as were the soy sauce, rice cakes, millet, and sesame oil.

It was the ideas behind the food that were bad. The Zen philosophy holds that a certain type of diet is good and that certain of these foods will cure certain diseases. "Such diets are dangerous," says the FDA in a press release. Four persons are known to have died in New Jersey and one in California for following strictly these dietary precepts.

If a handful of Zen Buddhists think they will enter nirvana by eating soybean paste [miso], why should the FDA care? Is this a major threat to public health? Judge Brandeis once said that the most precious of all rights is the right to be left alone. Note: Supreme Court Justice Louis Brandeis said this in 1928, invoking a right to privacy.

4493. *Los Angeles Times*. 1966. Patio show-stopper in a Japanese mood. July 31. p. 16.

• **Summary:** Sukiyaki is a shining example of the eye appeal for which Japanese food—Nipponese cuisine—in famous. Although it is cooked at the table, the most impressive feature is the flower-like arrangement of the uncooked ingredients.

One of the ingredients is "cubed soy bean curd (tofu)." A key ingredient in the pungent sauce is "½ cup soy sauce." Suet is normally used, but vegetable oil can be substituted.

Note: Suet is raw beef or mutton fat, especially the hard fat found around the loins and kidneys. Suet is usually made into tallow in a process called rendering, which involves melting and extended simmering, followed by straining, cooling and usually a repetition of the entire process.

Several large photos show the arrangement of the uncooked ingredients like petals on flowers.

4497. Chong, Y.H.; Beng, C.G.; Ponnampalam, J.T.; Lim, R.K.H. 1966. Moulded soy beans as a potential source of aflatoxin contamination. *Far East Medical Journal* 2(9):298-300. Sept. [14 ref]

• **Summary:** The authors isolated *Aspergillus flavus* from moulded soybeans obtained from local soy sauce factories. However these strains of *A. flavus* did not produce aflatoxins in laboratory cultures. Neither were the authors able to detect the presence of aflatoxins in the moulded material or their products by the method of thin-layer chromatography. However the authors were able to demonstrate aflatoxin production with *A. parasiticus* NRRL 2999.

Note: This is the earliest document seen (March 2002) that uses the word “aflatoxins” in connection with soybeans. Address: Inst. for Medical Research, Kuala Lumpur, Malaysia.

4498. *Los Angeles Times*. 1966. Fish dish with flavor of Orient. Oct. 13. p. D2.

• **Summary:** “Ginger root, black beans (a flavoring) and soy sauce are responsible for the distinctive flavor of Chinese steamed fish.” A recipe for “Chinese steamed fish” calls for “½ tsp. [teaspoon] fermented black beans or salt.”

4499. Swaminathan, M. 1966. The use of soyabean and its products in feeding infants and in the prevention of protein malnutrition in weaned infants and pre-school children in developing countries. *Indian J. of Nutrition and Dietetics* 3(4):138-50. Oct. [63 ref]

• **Summary:** Contents: Introduction. Chemical composition: Carbohydrates, fat, minerals, vitamins, proteins. Factors affecting the nutritive value of soya proteins: Trypsin and growth inhibitors, heat processing, other factors. Nutritive value of soya proteins (with or without methionine supplementation): Experiments with animals, experiments with human beings, supplementary value to other food proteins. Processed foods from soyabean for feeding infants and preschool children: Milk substitutes and infant foods, processed protein foods based on soya (soya flour, Multipurpose Food or MPF, soup powder). Foods based on soyabean and other oilseed meals: Precooked roller dried foods, extrusion-cooked full-fat soybean flour. Other soya products (soy protein isolate, tofu, natto, miso, tempeh, soy sauce). Conclusion. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4500. Tonery, Susan J. 1966. Miss Tachibana will entertain at concert. *Hartford Courant (Connecticut)*. Nov. 24. p. 48.

• **Summary:** Miss Tachibana is a superb dancer. She agreed to share two of her favorite recipes. Yosenabe calls for “2 cakes soy bean curd cut in 1 inch cubes.” Sukiyaki calls for “2 cakes soy bean curd.” Both also call for soy sauce and

monosodium glutamate.

4501. Hesseltine, C.W.; Shotwell, Odette L.; Ellis, J.J.; Stubblefield, R.D. 1966. Aflatoxin formation by *Aspergillus flavus*. *Bacteriological Reviews* 30(4):795-805. Dec. [39 ref]
• Summary: Introduction. Fungi producing aflatoxins and other toxins of *A. flavus*. Natural occurrence of aflatoxin. Factors affecting aflatoxin formation in nature. Production of aflatoxin in culture. Aflatoxin studies at the Northern Regional Research Laboratory.

The occurrence of mycotoxins has been known for several decades. In 1913 Alsberg and Black of the USDA studied the biochemistry of toxins of certain molds isolated from corn meal. *Penicillium puberulum* was found to produce penicillic acid which was toxic. Interest in aflatoxins arose after the death of a large number of young turkeys in Great Britain in 1960. At least 4 aflatoxins are known to exist, produced by certain strains of *Aspergillus flavus* Link, *A. parasiticus* Speare, and *Penicillium puberulum* Bainier.

"*Aspergillus oryzae* and its near relatives are widely used in the preparation of koji for such food fermentations as shoyu (soy sauce), miso, black beans [fermented black soybeans / fermented black soybeans], and sake" (p. 802). *A. oryzae* is a close relative of *A. flavus*; they are distinguished on the basis of minor morphological characteristics. Aflatoxin has been found on only two commercial commodities: Peanuts and cottonseed cake. Although *A. flavus* can be made to grow on soybeans, none of the strains produced much aflatoxin regardless of the conditions. Aflatoxins have not been found in commercial soyfoods produced by *Aspergillus oryzae*.

The authors obtained very low toxin production (0.03 micrograms/milliliter) on pearled soybeans (Hawkeye variety) using a strain of *Aspergillus flavus*. Address: NRRL, Peoria, Illinois.

4504. **Product Name:** La Choy Teriyaki Sauce.
Manufacturer's Name: La Choy Food Products.
Manufacturer's Address: 901 Stryker St., Archbold, OH 43502.

Date of Introduction: 1966.

New Product–Documentation: Fred Marken's brochure.

Talk with Milan Drake. 1988. Jan. 4. He thinks this was launched in about 1966. Chun King may have had an earlier Teriyaki Sauce. He thinks Kikkoman came later. For details, contact Karen Johnston in Fullerton: 714-680-1430. A packaged teriyaki dinner was launched in about 1970. Note that La Choy was part of Beatrice Foods before Hunt-Wesson bought it.

4505. Burkill, I.H. 1966. Dictionary of the economic products of the Malay Peninsula, 2nd ed. 2 vols. Kuala Lumpur, Malaysia: Ministry of Agriculture and Co-operatives. xiv + 2444 p. See vol. 1 (A-H), p. 1098-1103. Index. 24 cm. [11 ref]

• Summary: Information on the soy bean (*Glycine max*) is found under Glycine. Contents: Origin. Man has selected the more tropical races and is still selecting. Search for a race suitable for Malaya. Java, long ago, found one suitable for the drier parts of the island. Secondary uses as fodder, a cover crop, and green manure. High food-value of the seed. The seed, ripe or nearly ripe, as food. Its special use in diabetes. Artificial milk. Vegetable casein [for industrial uses]. substitute for coffee. Seedlings [sprouts] eaten. Sauces, &c., from the bean. Tépépé made in Malaysia with the aid of a fungus. Teou-fu [tofu] prepared by the Chinese. Tao-cho prepared [in Java] with the aid of fungus. Sho-yu or soy kechap. Miso, a Japanese preparation. The making of soy kechap in Java. Organisms in fermentation. Oil [soy-bean oil, or kachang oil]. Criminal use (hairs on the pods cause irritation within the digestive tract). Fibre (in the stem). Joss sticks (Ash of the stem is said to be used in joss-sticks in Indo-China). The soybean is frequently cultivated in Burma and Siam.

A photo (frontispiece) facing the title page shows Isaac Henry Burkill (1870-1965). This second edition is only slightly different from the original 1935 edition of which 2,000 copies were sold. This edition was published on behalf of the governments of Malaysia and Singapore by the Ministry of Agriculture and Cooperatives, Kuala Lumpur, Malaysia. Address: Director of Gardens, Straits Settlements (Singapore; 1912-1925).

 Address: National Food Research Inst., Tokyo, Japan.

4507. Heer, Jean. 1966. World events 1866-1966: The first hundred years of Nestlé. Vevey, Switzerland: Nestlé. 326 p. Illust. 27 cm. [45* ref]

• Summary: This is an English-language translation of *Reflets du Monde 1866-1966: Présence de Nestlé*, which was also published in German, Italian, and Spanish. It is a good overview of a century of world history, with emphasis on Europe, food, and politics. Enriched with many color photos,

it unfortunately has no index.

Nestlé was founded in 1866 making infant milk foods. Initially it consisted of two separate businesses, 120 miles apart, at Cham and Vevey, Switzerland. They were rivals until 1905, when they merged to form the Nestlé and Anglo-Swiss Condensed Milk Company. Now Nestlé makes milk, cocoa, and coffee. In the war of 1870 [Franco-Prussian War], France was defeated by Germany. In 1947 Nestlé acquired Maggi in Kempttal; Maggi has archives. In 1960 Nestlé acquired the share capital of Crosse & Blackwell worldwide, selling canned soups, pickles, canned peas, beans and fish. This move increased Nestlé's manufacturing capacity by the addition of 11 factories, six of which were in Great Britain (including two at Dundee in Scotland). Crosse & Blackwell traces its origins back to 1706, but it got its present name in 1830 when two friends and employees, Edmund Crosse and Thomas Blackwell, bought out a firm that preserved foods for victualling long-distance vessels. In 1892 it became a limited company. After World War I they bought out two companies; one was E. Lazenby & Son Ltd., which had started in the kitchen of a middle-class housewife, Elizabeth Lazenby, wife of a London grocer, who prepared a sauce [Harvey's Sauce] which acquired a great reputation as a seasoning for meat dishes. Manufacture commercially was started in 1776, and remained a family business until taken over by Crosse & Blackwell in 1919. Address: Nestlé.

4508. Light, Luise. 1966. *In praise of vegetables*. New York, NY: Charles Scribner's Sons. xxii + 265 p. Illust. Index. 22 cm.

• **Summary:** Soy-related recipes include: Soya sauce dressing (p. 134).

4509. Miller, Gloria Bley. 1966. *The thousand recipe Chinese cookbook*. New York, NY: Antheneum. First Grosset & Dunlap edition 1970. xiv + 926 p. Illust. magnificently by Earl Thollander. Index. 26 cm.

• **Summary:** This excellent, massive volume, by the blond-haired wife (a professional writer; photo shown on dust jacket) of a Greenwich Village sculptor, offers an in-depth introduction to Chinese cooking and ingredients, though it is unusually heavy on flesh foods and light on grain and vegetable dishes—as the following listing of recipes will show. In describing “The Chinese Diet” (p. 3-4) the author notes, “Meat does not predominate, vegetables do:... There are no dairy products: Butter, cheese and milk are practically unknown to Chinese cooking. (Cattle, few and far between, were more profitably put to work as beasts of burden.) Yet, with nutritional ingenuity, the Chinese created their own ‘cow’ which produced its own ‘dairy’ products. They took the lowly soybean, whose protein closely resembles that of meat, and transformed it in innumerable ways. They softened and ground the soybean, then mixed it with water, converting it first to milk, then to curd, and finally to cheese. (They also

put it to many other uses: made it into sauce and jam; served its sprouts as vegetables; fermented, dried and roasted it; used it salty as a condiment, sweet in pastries.)”

Page 75 notes: Soy sauce should be used discreetly in light soups. If possible, it should be light soy. The dark variety can destroy a soup's lightness and clarity; its strong taste can overwhelm flavors.

Soy-related recipes include: Basic bean curd soup (p. 99-100). Basic cold bean curd (p. 114). Slivered bean curd and shrimp (p. 115). Stir-fried pork and bean curd (p. 133). Stir-fried pork with deep-fried bean curd. Stir-fried pork with pressed bean curd (p. 135). Stir-fried roast pork and bean curd I and II (p. 156-57). Basic steamed minced pork (with “fermented black beans,” p. 167-68). Steamed sliced pork with ham and bean curd (p. 170). Steamed sliced pork with white cheese [white fermented tofu] (p. 171). Basic braised pork with bean curd (p. 174-75). Braised pork with red bean cheese (p. 176). Braised pork with chestnuts, mushrooms and ginkgo nuts (p. 176-77) has a variation that calls for “¼ pound dried bean curd sticks.”

Note: This is the earliest English-language document seen (June 2011) that uses the term “dried bean curd sticks” to refer to dried yuba sticks. Braised pork and bean curd (p. 180). Braised five-flower pork and red bean cheese (p. 180-81). Red-simmered pork (with soy sauce, p. 186-88). Stir-fried spareribs with black bean sauce (with “1 to 2 tablespoons fermented black beans.” “Soak fermented black beans... Mince garlic and scallion stalk, then mash with soaked black beans. Combine with sherry, water and soy sauce... Stir in black bean mixture” with other ingredients, p. 202-03). Steamed spareribs with black bean sauce (“Mince garlic and mash with soaked black beans; then combine with cornstarch, soy sauce and sugar. Pour mixture over ribs,” p. 206). Braised spareribs with black bean sauce (“Mince garlic and ginger root, then mash with soaked black beans,” p. 206). Braised spareribs with red bean cheese (p. 206). Stir-fried beef and bean curd (p. 215). Red-simmered beef (with soy sauce, p. 245-46). Red-simmered (or cooked) duck (with soy sauce, p. 267-71). Stir-fried chicken with soy jam (p. 325-26). Stir-fried chicken and tomatoes with black beans [“fermented black beans”] (p. 327-28). Stir-fried deep-fried chicken with brown bean sauce (p. 329). Stir-fried deep-fried chicken with soybean paste (p. 330-31). Red-cooked or soy chicken (p. 366-69). Steamed fish topped with black bean sauce [“fermented black beans”] (p. 411-12). Braised soy fish (p. 429-32). Braised fish with deep-fried bean curd (p. 434). Braised fish steaks with bean curd (p. 435). Deep-fried bean curd stuffed with minced fish (p. 448). Braised dried oysters with bean curd sticks [dried yuba sticks] (p. 483). Stir-fried shrimp with bean curd I and II (p. 496). Stir-fried shrimp with deep-fried bean curd (p. 497). Stir-fried shrimp with black bean sauce [“fermented black beans”] I and II (p. 500). Poached shrimp with ham and bean curd (p. 527). Basic omelet with bean curd I and II (p. 551-52). Fried eggs with

soy sauce (p. 569). Soy eggs (also called pot-stewed or red-stewed eggs). Soy duck eggs (p. 574). Basic stir-fried bean curd (p. 593). Basic deep-fried bean curd (p. 594). Deep-fried bean curd with dried shrimp sauce. Steamed stuffed bean curd (with pork, p. 595). Miscellaneous bean curd (p. 595-96). Stir-fried spinach and white cheese [fermented tofu] (p. 618-19). Stir-fried string beans and white cheese [fermented tofu] (p. 620-21). Basic Buddhist vegetable dish (A vegetarian dish known as Lo Hon Ji or Lohan Tsai; "Variation: In step 4, stir 2 tablespoons Chinese red cheese, mashed, into the water-soy mixture;..." p. 623). Soy jam noodles (p. 660). Noodles in brown bean sauce (and hoisin sauce, p. 661). Dips (incl. Dip for deep-fried bean curd; many use soy sauce or hoisin sauce, p. 709-14). Soy-vinegar dressing. Soy-sesame dressing (p. 715, with soy sauce and sesame oil). Soy-oil dressing (with soy sauce and peanut oil, p. 716). Marinades (many use soy sauce, hoisin sauce, brown bean sauce, or red bean cheese, p. 717-24). Sauces (many use soy sauce or yellow bean paste, incl. Sweet-and-pungent sauces, p. 725-39).

The chapter titled "Other Useful Information" tells more about bean curd.

The extensive Glossary of Chinese Ingredients (p. 844-72) contains the following soy-related entries: Bean curd (bean cakes; note that recipes call for a certain number of "cakes" of tofu). Bean curd sauce (see cheese, Chinese white).

Bean curd sticks (dried bean curd [dried yuba sticks = foo jook]; "Long, dried, cream-colored sticks, about ½ inch wide and 20 inches long, but bent in two. Are stiff and striated with an enamel-like surface. Sometimes called 'Second Bamboo' because they come from the residue or second layer of creamy bean curd [yuba]. Must be soaked; then they become chewy in texture, nutlike in flavor. Used as a vegetable with soup, steamed fish, stir-fried and braised pork... Other dried varieties include sweet bean curd sticks [tim jook or tiem joke], which are similar but thicker, and are used in fish and vegetarian dishes; and glazed bean curd skin in the form of stiff thin sheets").

Bean paste, yellow (yellow sauce). Bean sauce, brown (see brown bean sauce). Bean sprouts. Yellow soybean sprouts are larger and coarser than mung bean sprouts, and must be husked. "They also have a stronger, more woody flavor." Because of their crunchiness, Chinese call them "teeth vegetable." Beans, black (Type of beans not given. "Note: Sweetened black beans used as a pastry filling sold in Chinese bakeries"). Beans, black fermented beans (black bean sauce or salted black beans). Brown bean sauce. Cheese, Chinese red (red bean curd cheese, spiced red bean curd, or southern cheese). Cheese, Chinese white (bean curd sauce, white bean curd cheese, or white bean sauce). Five Spices (five-flavored powder or five-fragrance spice powder; star anise, anise pepper, fennel, cloves, cinnamon). Hoisin sauce (haisien sauce, Peking sauce, red seasoning sauce, red

vegetable sauce, sweet vegetable paste, or sweet vegetable sauce; another variety is called Ten-Flavored Sauce). Pickles, Chinese (pickled vegetables; pickled in soy sauce). Red bean sauce. Soy jam (soybean paste). Soy sauce (light, black, or heavy varieties). Hoisin sauce (p. 855) is a "Thick, dark brownish-red sauce, made from soy beans, spices, garlic and chili. Sweet and spicy." Used in cooking and as a table condiment.

The chapters titled "Storing Information" and "Soaking Information" include such information on many of the foods listed in the glossary.

The chapter titled "Chinese terminology" (p. 886-91) is especially valuable because it gives the Cantonese names of Chinese foods. It contains the following soy-related entries: Bean curd: Dow foo or dau foo. Bean curd, deep fried: Dow foo pok. Bean curd, spiced: Dow foo kon. Bean curd, watery: Dow foo fa [literally "tofu flowers"; tofu curds]. Bean curd sticks: Foo jook or foo joke. Bean curd sticks, sweet: Tim jook or tiem joke. Bean paste, red: Dow sha or dow cha [azuki]. Beans, black: Woo dow. Bean paste, yellow: Wong dow sa [soy]. Beans, black fermented: Dow see or doe shee. Beans, sweet black: Dow sa. Beans, red: Hoong dow [azuki]. Bean sprouts, soy: Dow gna or dow ngah. Brown bean sauce: Min see jeung or mien see jeung. Catsup: Fon ker jeung. Cheese, Chinese red: Nom yee or Narm yoo [fermented tofu]. Cheese, Chinese white: Foo yee or Foo yoo [fermented tofu]. Hoisin sauce: Hoy sin jeung or hoy sien jeung. Oil, peanut: Far sung yow. Oil, sesame: Jee ma yo or jee ma yow. Peanuts: Far sang or far sung. Red bean sauce: Saang see jeung or shargn she jeung [azuki]. Sesame paste: Jee ma jeung. Sesame seeds: Jee ma. Soy jam [chiang]: Yewn she jeung. Soy sauce: See yu or shee yau or sho yu. Soy sauce, light: Sang chau. Soy sauce, dark: Chow yau or cho yo. Soy sauce, heavy: See yau or jeow yau.

Note: This is the earliest English-language document seen (April 2012) that uses the term "shee yau" to refer to Cantonese soy sauce, or the term "See yau" or "jeow yau" to refer to heavy Cantonese soy sauce.

Illustrations show: A bottle of Chou Soy sauce made by Amoy Canning Co. (p. 112). A brick-shaped can of "Thick Soy" made by Tung Chun Canning Co. (p. 126). An earthenware jug of "Ho Sang Yick Soy Sauce" (p. 203). A Mason-type jar of fermented bean curd made by Tung Chun Soy (p. 596). A bottle of Koon Chu* soy [sauce] (p. 715). Address: Greenwich Village, New York City.

4510. Nakamura, James I. 1966. *Agricultural production and the economic development of Japan, 1873-1922*. Princeton, New Jersey: Princeton University Press. xxiii + 257 p. Illust. Index. 24 cm. Series: Studies of the East Asian Institute, Columbia University. [149* ref]

• **Summary:** Japan's economic growth is usually described in superlatives and agriculture is widely viewed as playing an unusually important role in this growth. In reexamining

government statistics about Japan's historical agricultural growth, the author finds that the median growth rate was not 2.4% as previously believed, but probably no more than 1.0%. This remarkable finding dispels much of the mystery surrounding Japan's miraculous "take-off" in the Meiji period.

Japan was a net food exporter until about 1895. By 1920 Japan had become heavily dependent on food imports, including wheat, soy beans, sugar, and animal products (p. 126).

During the Meiji period and until relatively recently, most rural households in Japan were nearly self-sufficient, producing almost all of their own cloth, clothes, footgear, housing, many farm implements, and most processed foods and beverages including "soy sauce, bean paste sauce (*miso*), pickles, rice wine (*sake*), etc. (p. 127, 139-40).

Table 5 (p. 228-30) gives the yield of ten Japanese crops from 1879 to 1925. The yield of soy beans increased from 0.516 *koku/tan* [10.45 bushels/acre] in 1879 (1 *koku* = 4.96 bushels; 1 *tan* = 0.245 acres) to 0.778 *koku/tan* in 1900 to 0.915 *koku/tan* [18.52 bu/acre] in 1919.

Soybeans are also mentioned on pages 97, 231, and 233. Address: New York.

4511. Nelson, Andrew Nathaniel. 1966. The modern reader's Japanese-English character dictionary. Revised ed. Rutland, Vermont, and Tokyo, Japan: Charles E. Tuttle Co. 1109 p. Index. 24 cm. [15 ref. Jap; Eng]

• **Summary:** Radical 37 = dai or oh = big + 3 strokes = #1171 = *daizu* or *ôname* = soy bean (p. 290).

Radical 75 = tree; at left = ki hen. #2211 = *eda* of *edamame*. Radical 82 = Hair of animals, ke. Radical 85 = Water + 11 strokes = soymilk. Radical 151 = Bean + 7 strokes = *mame* (bean) or *tou* = *toufu*. Radical 164 = Liquid (*Sake sukuri*) + 11 strokes = *shoyu no sho*. Radical 201 = Yellow (variant is 11 strokes).

Soy related words: (1) *Miso*: *miso* (fermented [soy] bean paste; flattery, p. 247). *miso o tsukeru* (to make a mess of, p. 247). *miso shiru*, *misojiru* (bean-paste soup, p. 247). *miso mame* (soybeans, p. 247). *misoni* (boiling with bean paste, p. 247). *misozuke* (pickled in bean paste, p. 247). *misokoshi* (bean-paste strainer, p. 247). *misosuri* (grinding bean paste; flattery, p. 247). *temai miso* (self praise; bean paste of one's own making, p. 420). *miso dengaku* (tofu baked [grilled] with miso, p. 621). *konamiso* (powdered miso, p. 691). *nuka miso* (salted rice-bran paste, for pickling, p. 694). *karamiso* (salty miso, p. 869).

(2) *Tôfu* [tofu]: *yakkodôfu* [yakkodofu] (tofu cut in cubes, p. 47). *kôridôfu* [kori-dofu] (frozen tofu, p. 75). *unohana* (refuse from tofu, p. 119). *shimidôfu*, *kogoridôfu*, *kogodôfu* [shimi-dofu, kogo-dofu, kogori-dofu] (frozen tofu, p. 192).

Note 1 This is the earliest (and only) English-language document seen (May 2012) that contains the word

kogoridôfu or the word *kogodôfu* (written as one word, with diacritics) which it says is the same as *shimidôfu*, all of which it defines as frozen tofu.

age (fried tofu, p. 447). *kara*, *okara* (tofu refuse, p. 525). *aburage* (fried tofu, p. 543). *yuba* (dried tofu [sic], p. 561). *yakidôfu* [yaki-dofu] (broiled bean curd, p. 578).

Note 2 This is the earliest English-language document seen (May 2012) that contains the word *yakidôfu* (written as one word, with diacritics).

nama-age (fried tofu, p. 618). *dengaku* (tofu baked with miso, p. 621). *inarizushi* (fried tofu stuffed with seasoned rice, p. 668). *tofu* (bean curd, tofu, p. 843). *kirazu* (tofu refuse [okara], p. 941). *kôyadôfu* (frozen tofu, p. 978).

toshi no mame ([soy] beans of the bean scattering ceremony, p. 88).

mitsumame (boiled [soy] beans with treacle / molasses, p. 328).

edamamé (green soybeans, p. 494). *irimame* (parched [soy] beans, p. 576). *nimame* (boiled [soy] beans, p. 578).

nattô (fermented soy beans, p. 697).

tamari (soy sauce, p. 564).

azemame (soy beans grown on rice-field ridges, p. 624). *moyashi* (artificially sprouted beans, p. 780). *moyashi mame* (beans for sprouting, p. 781). *hôrai mame* (sugar-coated beans, p. 786).

kuromame (black soy bean, p. 992).

mame abura (soybean oil, p. 843). *tônyû* (soybean milk, p. 843). *kinako* (soybean flour, p. 991). Address: PhD, Tokyo, Japan.

4513. Schenk, E.G.; Naundorf, G. 1966. Lexikon der tropischen, subtropischen und mediterranen Nahrungs- und Genussmittel [Dictionary of tropical, subtropical, and Mediterranean foods and food adjuncts (stimulants / enjoyables)]. Herford, Germany: Nicolaische Verlagsbuchhandlung Herford. xiv + 199 p. Index. 21 cm. Series: Manualia Nicolai 1. [200* ref. Ger]

• **Summary:** Pages 70-71 give a list of Japanese foods (after Mayerhofer and Pirquet 1926) in no apparent order, with the Japanese name followed by a translation of that name into German. Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu, fu [dried wheat gluten], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto-Bohnenkase, Tofu-Sojatopfen, Tonyu-Sojamilch, azuki [small red beans], kwansen-fu, kinako-Sojabohnenmehl, geröstet, amasake-unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu-Sojasauce, yuba-eine Bohnenspeise. Plus many types of sea vegetables.

On pages 140-42 the following terms are defined in German: Soja [soya], Sojabohne [soybeans], Sojabohnenkäse [soy cheese or tofu], Sojabohnenmehl [soybean meal], Sojabohnenöl [soybean oil], Sojakäse [fermented soy cheese], Sojamilch [soymilk], Soja-Nahrungsmittel [soyfoods]: Koji, Miso, Tofu, Nato [sic, natto], kondensierte Soja-Milch [condensed soymilk], Japanische Verarbeitungen [Japanese processed foods: Japanische Soja-Sauce Shoyu (Shoyu), Miso, Tofu], Soja-Nahrungsmittel, javanische [Javanese] soyfoods: Tao-Hoe, Tempeh, Ketjap, Tao-Tjong [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], Sojatunken, Soja-Verarbeitungen: Sojamilch, Bohnenkäse, Teoufou (China), Tofu (Japan), Dan Phu (Vietnam), Natto (Japan), Tao-tehe (China).—Bohnenbrei Miso (Japan), Tao-tjiung (*doujiang*, China).—Sojasauce: Shogu [sic, Shoyu] (Japan), Tsiang-Yeou, Tao-yu (China), Ketjap (Java), Tuong (Vietnam).—Gärmittel: Kiut see (Japan). Then a table shows the nutritional composition of 8 of these foods.

Note 1. This book contains more than its fair share of errors and could be better organized.

Note 2. This is the earliest German-language document seen (May 2005) that uses *Sojabohnenkäse*, the German word meaning “soybean cheese,” to refer to tofu. Address: 1. Prof. Dr. med. habil., Dr. phil. nat, Laurensberg ueber Aachen, Germany.

4514. Sun, Ying-Hsing. 1966. *T'ien Kung K'ai Wu*: Chinese technology in the seventeenth century. Translated by E-tu Zen Sun and Shiou-Chuan Sun. University Park & London: Pennsylvania State University Press. xiv + 372 p. See p. 24, 29, 31, 215-16. Illust. 28 cm. [3 soy ref. Eng]

• **Summary:** The *T'ien Kung K'ai Wu*, by Sung Ying-Hsing (pinyin: *Tiangong Kaiwu*, by Song Yingxing) was published in 1637. The title can be rendered as “The Creations of Nature and Man.” This English-language translation of the 17th century work on Chinese technology contains 18 chapters, 151 superb illustrations, and extensive information on soybeans. The author concluded his preface in 1637 by warning “An ambitious scholar will undoubtedly toss this book onto his desk and give it no further thought; it is a work that is in no way concerned with the art of advancement in officialdom.”

In Chapter 1, “The growing of grains,” the section on “General terms” states (p. 3) that “the ‘five grains’ are sesamum, legumes, wheat, paniced millet, and glutinous millet. Rise is not included because the ancient sages who wrote on the subject were natives of northwestern China. Nowadays 70 per cent of the people’s staple food is rice, while wheat and various kinds of millet constitute 30 per cent. Sesamum and legumes are used exclusively as vegetables as [for making] oil, although tradition still classifies them among the grains.”

The section on “Hemp” (p. 24) notes that the seeds of

hemp and sesame are only two kinds that can be used as grain or for oil. “Sesame is both delicious and nutritious; indeed it would be no exaggeration to say that it is the king of all grains.”

The section on “Legumes” (*shu*, p. 24, 29, 31) states that one of these legumes is the soy bean, of which there are two varieties [colors]: the black and the yellow. They should be planted not later than the time of the Ch’ing-ming festival [in early April of the solar calendar] or thereabouts. There are three types of yellow soy beans: “fifth-month yellow,” “sixth-month popper,” and “winter yellow.” “The yield of the first of these is small, while that of the last is always twice as much. The black variety is harvested invariably in the eighth month. North of the Huai River horses and mules that are used on long journeys must be fed this black soy bean before they can become strong and sturdy. The amount of the yield of the soy bean depends on the quality of the soil, the frequency of cultivation, and the amount of rainfall. All bean jams (*shi*) [fermented black soybeans], sauces (*jiang*), and curds (*fu*) [tofu] are made from soy.

“South of the Yangtse [River] there is another species known as ‘long-legged yellow,’ which is planted in the sixth month after early rice has been cut, and is harvested in the ninth or tenth month. The method of planting this bean in Chi-an, Kiangsi [Ji’an, Jiangxi], is quite amazing: After the rice stalks are cut the stubble is not ploughed over, but in the open end of each stalk are placed three or four beans, which are pushed down with fingers. The beans are nourished by the dew gathered in the stalk stubs; later when the beans begin to grow the stubs will rot, providing further nourishment for the growth of the new crop. Should the weather be dry after the shoots appear, one pint of water [per plant?] is fed to the plants. In all, one watering and two cultivations are sufficient to bring forth a plentiful harvest. Birds must be kept away after the beans have been planted and before the young shoots appear, and man is the only effective guard against them.”

There are also “black-skin and brown-skin varieties of soybeans.” “In cultivating the fields of soybeans and green lentils [sic, mung beans], the land should be lightly ploughed, because the roots of the legumes are short and the shoots straight. If the furrows are deep the clods will pile up, preventing half the seeds from growing. Our ancient agriculturists did not know that deep ploughing was not suitable for legumes” (p. 29).

Other legumes include: (2) The green lentil (*lūdou*) [sic, mung bean], “shaped small and round like a pearl.” (3) The pea (*wandou*, *Pisum sativum*). “It is round like the green lentil, but it has a black spot and is larger in size.” (4) The broad bean (*candou*, *Vicia faba*), “with its pod shaped like a silkworm and seeds larger than the soybean.”

(5) The small lentil (*xiaodou*) [sic, azuki bean]. “The red variety (*chixiaodou*) is effective when used medicinally, while the white variety (*baixiaodou*) (also known as the

rice bean), is good as a vegetable. Planted at the time of the summer solstice, this variety is harvested in the ninth month, and is prevalent in the Huai and Yangtse river regions.”

(6) The black lentil (*lūdou*), “which is now a common garden vegetable in north China. Its flour, made into thin sheets, serves the same purposes as that of the green lentil [sic, mung bean]. In Peking the street peddlers cry their ‘black lentil sheets’ all day long, indicating that the amount produced is considerable.

“A further kind is the white bean (*baibiandou*) [*Dolichos lablab*], which grows along trellises and is also known as the ‘eye-brow bean.’ In addition there are long string beans, tiger-spot beans, knife beans (large French beans [jack beans, *daodou*]), as well as the black-skin and brown-skin varieties of soybeans, and so forth, which are too numerous to describe. In all, they can serve as a vegetable and take the place of grains in the feeding of mankind. How can students of Nature ignore them?”

In Chapter 4, titled “The preparation of grains,” a section on “Preparing millet, sorghum, sesamum, and beans” describes (p. 106) how to separate beans from their pods using a flail or a stone roller pulled by an ox. These two processes are shown in full-page illustrations (p. 83, 105).

In Chapter 12, “Vegetable fats and oils,” the section on “Gradation of vegetable oils” begins (p. 215-16): “For eating, the oils of sesame seeds, turnip seeds, yellow soy beans, and cabbage (also called ‘white cabbage’ [i.e., celery cabbage]) seeds are the best. Next in quality come *Perilla ocymoides* ([the plant] resembles *Perilla nankinensis*; the seed is larger than that of sesame) and rape-seed oil (in the South it is called ‘vegetable seed’); next, camellia or tea-seed oil;... the last in quality is hemp-seed oil...”

The yield of oil (in catties per *tan*) is given (p. 216) for many Chinese oilseeds. The two oilseeds with the lowest / worst yields of oil are: cotton seeds 7, and yellow soy beans 9. By contrast, sesame, castor, and camphor seeds yield 40 and rape seeds yield 30-40. In “Kiangsu [Jiangsu] the bean oil is used as food for humans, and the meal cakes are fed to pigs...” Note: 1 catty = 1 *jin* = 590 gm = 1.3 lb = 20.7 oz. 1 *tan* = ca. 180 liters. Thus, for soybeans, 9 catties = 5.31 kg of oil from ca. 180 liters of soybean seeds.

The next section in this chapter, titled “Methods and implements [for oil-extraction]” gives details of wedge presses and processes—but soybeans are not mentioned. Large illustrations show: Roasting and steaming oil seeds (p. 214). Press for making vegetable oils in China (p. 217). Pounding and grinding vegetable tallow tree seeds (p. 220).

Also discusses: Hemp seeds and oil (p. 24, 216). Sesame seeds and oil (p. 3-4, 24, 106, 215-16, 219). Address: China.

4515. The sacred books of China. Translated by James Legge. 1966. Deli, India: Motilal B/Vanarsidass. Illust. 23 cm. *

• **Summary:** This is the Sacred Books of the East, Vol. 3, 16,

27-28. UNESCO Collection of representative works, Indian Series. The Li-Chi is Part IV.

4516. Wong, Ella-Mei. 1966. Chinese cookery. New York, NY: Arco Publ. Co. [xi] + 100 p. Illust. Index. 23 cm.

• **Summary:** A charming book by an Australian born woman of Chinese ancestry, copyrighted in 1961. She presently “conducts the Chinese Cookery course at East Sydney Technical College... She has also published features in the *Australian Woman’s Weekly*.” The foreword is by D.W. Grover, 1961 Head of Food School, East Sydney Technical College.

Chapter 1, “Chinese ways and means,” includes three sections on ingredients. The first such section, “Dried ingredients,” has an entry for “Bean curd (*foo jook*) [dried yuba sticks] (p. 7). This is sold in sticks or sheets [yuba]; soak in warm water for 10 to 15 minutes. It has little flavor of its own but is highly nutritious and is served with other foods to absorb their flavours. Used in soups and braised dishes—the latter are served on days of fasting.”

The third such section, “Sauces and seasonings,” includes (p. 10-11): “*Hoysin jeung* [Hoisin sauce, *hoy sin jeung*]: Obtainable in tins. This is made of [soy] bean flour and spices, very rich in flavour and color. It is easy to become accustomed to this taste.”

“Monosodium glutamate... It is of vegetable origin and used very sparingly and with discretion it enhances the natural flavour of foods. The Chinese version is a fine white powder called Ve-tsin. In Australia it is known as Zip.”

“Red bean curd [red fermented tofu]: A soy bean product, obtainable in tins. The red colour is added.”

“Soy sauce: Made from salted and fermented soy beans. No Chinese kitchen is ever without it. There are different grades, ranging from thin to thick, and the colour varies from light brown to dark reddish brown...”

“*Taofu* [tofu]: Made from soy bean curd, a similar texture to soft cheese. It has no flavour of its own, but is highly nutritious. It is usually cut into blocks about one inch by 3 inches. In its fresh state it has a milky colour and is also cut into one-inch cubes and deep-fried.”

“White bean curd: Made from soy bean, salted and used as an appetizer or with vegetable dishes.”

In Chapter 4, “Vegetables” (p. 31): “Bean sprouts can be cultivated in the kitchen by sprinkling green beans [mung beans] with warm water... The soy bean can also be sprouted, but usually the sprout is tougher.” In this chapter, the recipe for “Fasting food” (*jie*) (p. 33) calls for “3 sticks bean curd (*foo jook*)” and “4 blocks bean curds (*taofu*).” “This dish is eaten during the Moon Festival and on the second day of the New Year.” Each recipe has an English name and a Cantonese name.

In Chapter 7, “Seafood,” the recipe for Steamed whole fish with black beans (*dow see jing yee*) calls for “1 tablespoon preserved Chinese black beans (*dow see*)” (p.

69).

Note 1. Soy sauce and monosodium glutamate (typically ½ teaspoon per recipe) are called for in many recipes in this book.

(2) Rice with red beans (*Hoong dow farn*) calls for “4 tablespoons red beans (*hoong dow*)” (azuki beans) (p. 87). Address: [Australia].

4517. Zen cookery: The philosophy of Oriental culture. Vol. I. Practical macrobiotics. 1966. Los Angeles, California: Ohsawa Foundation, Inc., The Ignoramus Press. 84 p. Index. 22cm.

• **Summary:** The revolutionary little reddish-orange or yellow book, with a black plastic comb binding, that introduced many to macrobiotic cooking. No author or editor is listed. The Ohsawa Foundation has branches in Los Angeles, New York, Wellesley, Paris, and Tokyo. Contents and format are identical to the 1964 edition edited by Teal Nichols, published by the Ohsawa Foundation of Chico—which see. Address: Ohsawa Foundation, Inc., 1434 N. Curson Ave., Los Angeles, California.

4518. Hanaoka, Yoshio. 1967. Shōyu hozon ni kansuru kenkyū. V. B.H.B., B.A. no kakushu shōyu-chū no kōbo nyūsan-kin ni taisuru sayō ni tsuite [Studies on preservation of soy sauce. V. The effects of B.H.B. and B.A. in several soy sauces on yeast and lactic acid bacteria]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 45(1):22-28. Jan. [25 ref. Jap; eng]

• **Summary:** B.H.B. is n-butyl-p-hydroxybenzoate and B.A. is benzoic acid. Both have germicidal effects on yeasts and lactic acid bacteria. B.H.B. is more effective in killing yeast than bacteria. Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda, Chiba, Japan.

4519. Kuroshima, Eizaburo; Oyama, Y.; Matsuo, T. 1967. Shōyu jōzō ni kanyo suru bisei-butsu no gurutamin san shōchō ni oyobosu eikyō ni tsuite. II. Shōyu baichi ni ni okeru gurutamin-san bunkai to seigōsei [Biosynthesis and degradation of glutamic acid in microorganisms relating to soy sauce brewing. II. Biosynthesis and degradation of glutamic acid in soy sauce medium]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 45(1):9-16. Jan. [15 ref. Jap; eng]

• **Summary:** “The degradation of glutamic acid in soy sauce medium was less than that in the synthetic medium. The degradation of glutamic acid by organisms relating to soy sauce brewing was observed using *Saccharomyces rouxii* variety *halomembranis* and *H. anomala*, but not when using *S. rouxii* and genus *Bacillus*.

“Biosynthesis of glutamic acid in soy sauce medium was decreased remarkably in comparison with that in synthetic medium. Biosynthesis of glutamic acid by test organisms was detectable using *S. rouxii* variety *halomembranis* and

H. anomala, but very hard to observe in other organisms.”

Address: Research Inst. of Marukin Soy Sauce Co., Kagawa prefecture, Japan.

4520. Kuroshima, Eizaburo; Oyama, Y.; Matsuo, T. 1967. Shōyu jōzō ni kanyo suru bisei-butsu no gurutamin-san shōchō ni oyobosu eikyō ni tsuite. I. • **Summary:** Organic acids studied include oxalic, malic, and lactic acids. Address: Shoin Junior College, Kobe, Japan.

4522. Umeda, Isao. 1967. Kore kara no shōyu seizō-hō. I. [Future shoyu production methods. I.]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 62(1):39-42. Jan. [8 ref. Jap]

Address: Nihon Shoyu Kenkyujo.

4523. Yokotsuka, Tamotsu; Sasaki, M.; Kikuchi, T.; Asao, Y.; Nobuhara, A. 1967. Kōji-kin no seisan-butsu ni kansuru kenkyū. I. Hōsan tane kōji-kin no seisan suru shū toshite keikō seibun ni tsuite [Studies on the compounds produced by molds. I. Fluorescent compounds produced by Japanese industrial molds]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 41(1):32-38. Jan. [22 ref. Jap; eng]

• **Summary:** Shows the absence of aflatoxins in Japanese fermented foods such as shoyu and miso—based on extracts of 60 strains of molds. Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4524. Lebumfacil-Davide, Clara S. 1967. Corn and sorghum as possible substitutes for wheat in soy sauce production. *Philippine Agriculturist* 50(9):843-60. Feb. [10 ref]

• **Summary:** Soy sauce was made from three different cereal-soy combinations: Wheat-soybean, corn-soybean, and sorghum soybean. Chemical analysis showed that the traditional wheat-soybean substrate had the highest pH, highest total titratable acidity, and highest percentage of total

nitrogen, proteins, amino nitrogen in total nitrogen, non-chloride solids, amino nitrogen and reducing sugars.

In the soy sauce made from the sorghum-soybean substrate, the amino acids tryptophane, lysine, and histidine were relatively higher.

In the soy sauce made from the corn-soybean substrate, the aspartic and glutamic amino acids were relatively higher. In all the soy sauces, cystine was present in traces only.

“Results obtained showed that neither corn nor sorghum can suitably substitute for wheat in the combinations mentioned. Organoleptic tests for aroma and flavor of the soy sauce showed that wheat-soybean” was the best of the three substrates.

Introduction: For many years Japanese and Chinese food companies have had monopoly on the manufacture of soy sauce for the Philippine market. “However a number food companies in the Philippines are making headway towards soy sauce manufacturing.” However one of the basic problems facing these local companies is the high cost of production, and especially the high cost of importing raw materials, such as soybean and wheat. Unless Filipino farmers can produce and provide these raw materials, a local soy sauce industry will never flourish.

Contains 7 tables. Address: Univ. of the Philippines.

4525. McCormick, Sally. 1967. Azuma Sukiyaki House: A bit of the Orient in the heart of Chicago—5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune*. March 23. p. E9.

• **Summary:** “We were then served Steak Teriyaki, a tenderloin steak, marinated in Teriyaki sauce and thinly sliced...” Next came Beef Teriyaki, with “soy bean cakes [tofu], soy sauce, dry onions and rice wine” stirred into the pan. Although its piece d’resistance is Sukiyaki, the restaurant also offers Chicken Teriyaki and Salmon Teriyaki. Three photos show Azuma Sukiyaki House.

4526. Hayashi, Shizuka. 1967. Serve Japanese soy noodles. *Soybean Digest*. March. p. 24.

• **Summary:** “A soybean exhibition was recently held for 3 consecutive days in Yokohama at the Takashimaya Department Store, one of the three largest department stores in Japan. The exhibit, devoted exclusively to soy foods, was under the sponsorship of the store, the prefectural government of Kanagawa, and various soybean groups.

“It was held to promote increased consumption of various soy products such as salad and cooking oils made from soybean oil, soy sauce, miso, frozen tofu, tofu products, and soy flour. Approximately 25 booths were used by manufacturers to display their products.”

The Japanese American Soybean Institute set up a snackbar named “Protein House” (Tanpaku-an) and served Japanese udon noodles made with a mixture of 15% soy flour and 85% wheat flour. The noodles were very popular and crowds swarmed the booth. “It was emphasized that the

soy noodle has over three times the nutritional value of an ordinary noodle.” 7,000 people visited the 3-day exhibition and 381 entered the contents to name the noodle. The name selected by a committee was “Protein Noodle” (Tampaku-Udon). Address: Managing Director, Japanese American Soybean Inst.

[8 ref. Jap; eng]

• **Summary:** Probably shows absence of aflatoxins in Japanese fermented foods. Three fluorescent compounds, all of which were presumed to be pyrazine derivatives, were newly isolated from the culture of *Aspergillus sojae* X-1. Each of these compounds gave the R_f value resembling that of Aflatoxin B-1 in some solvent system of thin-layer chromatography. Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4532. De, Sasanka S.; Russell, J.S.; Andr , L.M. 1967. Soybean acceptability and consumer adoptability in relation to food habits in different parts of the world. *USDA Agricultural Research Service*. ARS-71-35. p. 20-27. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [1 ref]

• **Summary:** Contents: Traditional soy products in the Far East: Soysauce, soy milk, bean curd, tempeh, natto and miso, roasted soy flour, kochu chang [Korean soybean miso], sprouted beans. Introduction [of soybeans] in other countries: Brazil, USSR, Africa, Latin America, Turkey. New types of products: Defatted soy flour, full-fat soy flour and beverages made from it developed by the Soybean Council of America. Justification: Cost of a pound of protein from different foods. Beef \$4.60. Pork \$4.30. Poultry \$1.50. Nonfat dry milk solids \$0.41. Dry beans \$0.35. Soybeans \$0.14. Attempted introductions: India. Factors involved in adoptability.

“Kochu chang is produced in every household in Korea from mashed boiled [soy] beans which are hung in bags for 2 to 3 months. The product is broken up, dried, and ground. It is then mixed with ground red pepper [plus salt and water] and kept for some time before use.”

This paper was presented by Leon Marie Andr .

Note 1. This is the earliest English-language document seen (Jan. 2007) that contains the term “roasted soy flour.” We read (p. 22): “This product is produced in small amounts and consumed with rice cake [mochi]. There is hardly any information on the nutritive value of the product.”

Note 2. This is the earliest English-language document seen (March 2009) that uses the word “kochu chang” (or “kochu-chang”) to refer to Korean-style red pepper and soybean paste (miso). Address: 1-2. Food and Agriculture Organization of the United Nations, Rome, Italy; 3. FAO Liaison Officer and adviser to UNICEF.

4533. Fischer, R.W. 1967. The use of soy in food products. *Soybean Digest*. May. p. 29, 31-32, 35-36, 38.

• **Summary:** An excellent overview, with considerable history. Contents: Introduction. Grisly hand of hunger. Soybean oil. Oriental soy foods. Soy flour and grits (with a good history of Berczeller, A.E. Staley, Shellabarger, Allied Mills, J.R. Short Milling Co. and Wytase). Isolates and concentrates. The war years (during and immediately after

World War II, soy flour and grits come to be widely disliked). New products and know-how.

“Oriental soy foods:... In the Orient soybeans have, for centuries, played an important part in human diets as soy milk for infants, shoyu, or soy sauce as we call it, miso, tofu, tempeh, kinako, natto, yuba, etc.”

“Isolates and concentrates: In the mid-1930’s processes for further refining the protein factors of soy began to appear. The first 70% soy protein concentrate was turned out by Mead Johnson Co. using the Bonato process of sulfur dioxide and sulfurous acid extraction, but was discontinued for lack of adequate markets for the product. In 1936 the Glidden Co. began working on the production of an isolated protein [90-100% protein] from extracted soy flakes for industrial uses. Glidden, as a major manufacturer of resin, wanted the isolate as a stabilizer for the resin used in sizing paper to provide wet strength. By 1939 Glidden was producing an enzyme hydrolyzed isolated protein to be used with egg albumen for its whipping capacity in producing food toppings... Over the years soy protein isolates have found their greatest application in the industrial field, particularly as paper coatings for high gloss products.”

A photo shows cans of Worthington Choplets, Soyameat (3 varieties), and Numete—all made from spun soy protein fibers. Address: Soypro International Inc.

4534. Hesseltine, Clifford W. 1967. Fermented products: Miso, sufu, and tempeh. *USDA Agricultural Research Service*. ARS-71-35. p. 170-80. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [12 ref]

• **Summary:** Discusses: Miso. Sufu, or Chinese cheese [fermented tofu]. Tempeh. Absence of aflatoxin in fermented food products. Table 1 shows mold fermented food products tested for aflatoxin and found negative. These include shoyu, miso, Chinese black beans (Fermented black soybeans from Taiwan), Hamanatto, moromi, soy tempeh, wheat tempeh, rice tempeh, wheat-soybean tempeh.

Concerning sufu: “The pehtzes [molded tofu cubes] are next brined in various solutions depending on the flavor desired. A typical brine would consist of 12% NaCl and 10% ethanol (sometimes added as rice wine). In other instances, only a salt brine may be used. The molded cakes are allowed to age for about 2 months. The finished cheese along with the brine is bottled, sterilized, and marketed as sufu.”

Of all the various *Mucor* species tested for use in making, the *Actinomucor elegans* used commercially is the best proteinase and almost the best lipase producer. “This same fungus is used in China to produce a food made by fermentation of wheat gluten” Address: Northern Utilization R&D Div., ARS, USDA, Peoria, Illinois.

4535. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical*

Products Institute Report No. G31. 104 p. June. Also titled T.P.I. Report (London). [44 ref]

• **Summary:** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7. Oriental methods of processing soya. 8. Other processes for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

“Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half the full fat soya flour made in the UK is used in bread manufacture.”

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Kinako. Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow's milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers

are Promo Ltd. of the U.K. (“The product made by Promo is marketed under the brand name of ‘Velactin’ by the Wander company.”), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden's Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Sept. 2002) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray's Inn Road, London WC1.

4536. Soriano, Mercedes; Gonzalez, O.N.; Avelino, E. 1967. Studies on the preparation of “soy” sauce from coconut paring meal. *Philippine J. of Science* 96(2):129-37. June. [12 ref]

• **Summary:** In the Philippines, soy sauce (called *toyo*), is a popular seasoning in the Filipino diet because it improves the flavor of other foods. “Soybean is the primary raw material in the commercial production of *toyo*. Since the Philippines is not a producer of soybean and because of its high market price, this study was conducted...”

Summary: Sauces were prepared by both mold-enzyme and acid hydrolysis. Results of organoleptic tests showed that the sauce most preferred by the panel was prepared by enzyme hydrolysis using 2 parts coconut paring meal (the paring is the brownish coating of the coconut meat located directly adjacent to the shell) and 1 part soybean. Of the acid hydrolysates, those prepared from mixtures containing two parts of coconut paring meal and one part of soybean, and from equal parts paring meal and soybean, were most preferred in flavor and aroma by the panel. Address: National Inst. of Science and Technology, Manila, Philippines.

4537. Tada, Masakazu. 1967. Some features of Japanese Buddhism. *British Vegetarian*. May/June. p. 225-28.

• **Summary:** For 1,850 years Japan kept no livestock farms as one sees in Europe. The main source of animal protein was only from fish and shellfish. But modern Japanese, especially those living in big cities, think animal protein is indispensable. One important feature of Japanese vegetarianism is the development and use of fermented foods, such as miso, shoyu, and natto. Address: Dr., 718 Daisen, P.O. Nirayama, Shizuoka, Japan.

4538. Schmeal, Jacqueline. 1967. Cook says hot woks crisp food. *Christian Science Monitor*. July 10. p. 10.

• **Summary:** Point Orient is a Chinese restaurant in Richmond, California. Their recipe for Beef and oyster sauce calls for “1 teaspoon thin soy sauce.” Their recipe for Sauce for beef calls for: “½ teaspoon prepared oyster sauce, ¼ teaspoon thick soy sauce, ½ teaspoon thin soy sauce.”

4539. Chico-San Inc. 1967. Chico-San Inc.—Unique foods: Retail price list. P.O. Box 1004, Chico, California. 2 p. July 15. 35 cm.

• **Summary:** This single-sheet catalog and price list, printed front and back with dark brown ink on pink paper (8½ by 14 inches), begins:

“Dear retail customer: We encourage you to buy Chico-San products through your local health food store. When you buy directly from Chico-San you must add shipping costs to the cost of food.” Includes the following interesting items. Those followed by an asterisk (*) are marked “OEI” meaning “Our Exclusive Import.

Specialties: Rice cakes, buckwheat cakes, millet cakes, wheat cakes, roasted rice, rice crackers*. Condiments: Tekka [miso], Tamari soy sauce*, soybean puree (miso)*, sesame salt, sesame spread, sesame butter, kuzu arrowroot*, salt plums, salt, sesame oil. Crude salt (1 lb to 10 lb). Cereals: Rice cream. Rice: Brown short grain (2 lb to 100 lb). Sesame seeds: White-brown. Black. Beverages: Ohsawa twig tea*, 16 herb tea*, Grain beverage—Koko, Grain beverage—Yano, Lotus root tea*, green tea. Noodles. Beans: Azuki red* (\$1.72/lb), Imported red, black beans [soy] (\$1.37/lb).

Note 1. This is the earliest English-language document seen (March 2009) that uses the term “Soybean Puree” to refer to miso. During the next decade, many macrobiotic publications referred to miso as a “Soybean puree.”

Sea vegetables: Shredded hijiki, kombu*, wakame—curly*, nori—thin sheet, kanten—sea veg gelatin. Dried foods: Lotus root, shrimp, dried fish, small fish—chirimen, tazukuri, shaved bonito [sic, bonito], dried radish [daikon], gourd strips [kampyo, kanpyo], mushrooms. Grain: Barley, buckwheat groats, corn meal, cracked wheat, millet, oat groats & oat meal, rolled oats, rye, wheat—hard red. Flour: One from each grain. Tooth powder jar. Cosmetics. Utensils.

Note 2. This is the earliest document seen (March 2006) that mentions Chico-San. It is also the earliest known Chico-San catalog and price list, and the earliest known Chico-San catalog and price that mentions “Rice cakes.”

Note 3. This is the earliest document seen (Sept. 2002) concerning the use of miso in second generation products (tekka).

Note 4. This is the earliest English-language document seen (Dec. 2006) that uses the term “salt plums” to refer umeboshi salt plums.

Note 5. This is the earliest English-language document seen (Dec. 2011) that mentions seitan, which it calls “seitan.” The entry for “Seitan” (actually misspelled as “Sietan”) is different from all other entries in this catalog, since no weight, no price, and no explanation is given—as if Chico-San has ordered the product, but it has not yet arrived. Moreover, no “OEI” (“Our exclusive import”) appears after the word “Sietan.” Address: P.O. Box 1004, Chico, California.

4540. Hesseltine, C.W.; Wang, Hwa L. 1967. Traditional

fermented foods. *Biotechnology and Bioengineering* 9(3):275-88. July. [8 ref]

• **Summary:** Contents: Summary. Introduction. Fish fermentations. Soybean and peanut fermentations: Koji, shoyu, miso, hamanatto, natto, ontjom, sufu, tempeh. Discussion: Advantages of preparing foods by fermentation. Address: NRRL, Peoria, Illinois.

4541. Edgar, Barry. 1967. Bachelor cooks spicy Indonesian specialty: Nasi goreng. *Christian Science Monitor*. Sept. 26. p. 21.

• **Summary:** Mr. Edgar is an American bachelor who used to live in Holland. Indonesian food is very common in Holland since Colonial Dutchmen brought their Indonesian tastes home with them after Indonesia acquired independence. He learned how to make Nasi goreng (“Fried rice”) and gives the recipe here, together with its special sauce; the ingredients include “2 tablespoons thick soy sauce—also called ketjap benteng.” A good Dutch brand is Conimex. Thin soy sauce makes a poor substitute.

4542. Asao, Yasuo; Sakasai, T.; Yokotsuka, T. 1967. Shōyu kōmi seibun ni kansuru kenkyū. XXVI. Shōyu kōbo ni yoru kōmi no seisei (2) [Studies on flavorful substances in shoyu. XXVI. Flavorous components produced by yeast fermentation (2)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 41(9):434-41. Sept. [12 ref. Jap; eng]

• **Summary:** *Torulopsis* species of yeast were found to produce alkylphenols during shoyu fermentation. Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda Inst. for Scientific Research.

4543. Hanaoka, Yoshio; Yokotsuka, Tamotsu. 1967. Shōyu hozon ni kansuru kenkyū. VII. Shōyu-chū no ansoku kōsan to sono seiin ni tsuite [Studies on preservation of soy sauce. VII. Benzoic acid in soy sauce and its mechanism of formation]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 45(9):826-31. Sept. [8 ref. Jap; eng]

• **Summary:** “Naturally fermented soy sauce contains many kinds of aliphatic and aromatic acids including trace amounts of benzoic acid (B.A.). It was found that the content of B.A. in soy sauce can be most accurately determined by gas chromatography with a hydrogen flame ionization detector.”

“By this procedure the amount of B.A. in raw soy sauce was found to be about 3 parts per million (ppm), and after heating 0.3-1.0 ppm increase was observed. The occurrence of B.A. in soy sauce was found not to be derived from the metabolites of *Aspergillus sojae*, yeasts and bacteria of fermentation, but from the B.A. of raw materials, defatted soybean flour (B.A. about 18 ppm) and wheat (B.A. about 4.0 ppm).” Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda, Chiba, Japan.

4544. *Health Food Business Review*. 1967. Here's a health food so old—it's new. Sept. p. 27, 28, 43.

• **Summary:** Tamari soy sauce has a history that is centuries old. This article discusses it from the viewpoint of macrobiotics and Chico-San. "Only Chico-San produces this product by the old and patient (18 months) method which is 100% natural."

4545. Yokotsuka, Tamotsu; Sakasai, T.; Asao, Y. 1967. Shōyu kōmi seibun ni kansuru kenkyū. XXVI. Shōyu kōbo ni yoru kōmi no seisei (1) [Studies on flavorful substances in shoyu. XXV. Flavorous components produced by yeast fermentation (1)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 41(9):428-33. Sept. [11 ref. Jap; eng]

• **Summary:** Three hundred strains of yeast were isolated from several kinds of shoyu mash, which were found to have good flavor. This good flavor was shown to be caused by the formation of 4-ethylguaiacol and other phenolic components. This research was financed in part by the USDA Agricultural Research Service. Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Noda Inst. for Scientific Research.

4546. Yokotsuka, Tamotsu; Asao, Y.; Sakasai, T. 1967. Shōyu kōmi seibun ni kansuru kenkyū. XXVII. Torurazoku kōbo ni yoru 4EG fukō to hinshitsu hyōka [Studies on flavorful substances in shoyu. XXVII. The production of 4-ethylguaiacol during shoyu fermentation, and its role for shoyu flavor]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 41(9):442-47. Sept. [7 ref. Jap; eng]

• **Summary:** "4-Ethylguaiacol, one of the important flavorful components of shoyu, was microbiologically produced by *Torulopsis* species of halophilic yeast added during the process of shoyu fermentation." Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda Inst. for Scientific Research.

4547. McCormick, Sally. 1967. Azuma Sukiyaki House: Enjoy an evening of dining Japanese style—5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune*. Oct. 26. p. J15.

• **Summary:** "Beef Sukiyaki cooked at the table over a Hibachi grill... made with thin slices of beef, fresh vegetables, soy bean cakes [tofu] and Japanese noodles." This deluxe dinner costs only \$4.75 per person. They also serve Teriyaki and Tempura with soft Samisen [Shamisen] music in lovely, authentic Tatami rooms with sliding shoji screens.

4548. Wu, Edward K. 1967. Exotic Indonesian food: In Hong Kong. *Sun (Baltimore, Maryland)*. Oct. 26. p. D1.

• **Summary:** These are recipes developed by the famous chef

Bambang Soegeng of Hotel Indonesia.

The recipe for Soto Madura calls for "2/3 tsp. [teaspoon] sweet soy sauce." The recipe for Sa Te [Satay] instructs: "Marinate the meat [chicken, beef or lamb] in ½ pint of sweet soy sauce mixed with white pepper and some lemon juice." The recipe for Tomis Bajam calls for "3 tbs. [tablespoons] sweet soy sauce." Address: Hong Kong Bureau of The Sun.

4549. Dubawsky, Rebecca. 1967. Cooking with grains and vegetables plus: Booklet one—A beginning. Boston, Massachusetts: Order of the Universe Publications. 29 p. Illust. No index. 28 cm.

• **Summary:** This was the first macrobiotic cookbook written entirely by a Westerner. Rebecca, an older woman who never married and who later moved to Florida, collected these recipes from Aveline Kushi's cooking classes in Boston. The dedication (p. 3) states: "The teaching of Aveline Kushi has made the information that follows possible." The preface (p. 7), written by Michio Kushi on 20 Oct. 1967, begins: "Life is a dream. The purpose of our life is to realize our dream. Those who see a happy, peaceful dream shall become happy and peaceful..." The book has no copyright page, date or place of publication. It was printed by Jacques de Langre [DeLangre], 7557 Sunset Blvd., Hollywood, California 90046. Address given by Farmilant (1972) as Box 203, Prudential Center Station, Boston.

The section titled "Condiments" (p. 11-12) states: "Soya sauce—(Tamari- Japanese word for thick soya sauce)—always used in cooking—never at table, except with noodles, tempura, or soup. Miso—is a dark brown vegetable protein—much more digestible than animal protein." Recipes are given for making Scallion miso, and Carrot top miso.

The section titled "Beans" (p. 17) mentions black beans: "Dried beans—*aduki*, *navy*, *pinto*, *kidney*, *black beans* and *chick peas*—double in bulk on cooking. 1 cup = 4 servings (side dish to main course)—wash 3 times and soak beans 1 to 3 hours before using." It then warns: "Cook *black beans* by pot—they clog pressure cooker." The section titled "Soups, Sauces, and Spreads" (p. 19) includes a recipe for "Vegetable, soya vegetable, and miso vegetable soup." There are simple recipes for: Miso sauce (p. 22). Cooking black beans (p. 25). Vegetable soya soup (p. 27). Vegetable miso soup. Vegetable sauces (with soya or miso, p. 27).

Description of book: The covers are dark green, with the title printed in black ink and all lowercase letters. In the lower left corner of the cover is written: The Order of the Universe Publications, Box 203 Prudential Center Station, Boston, Massachusetts—02199. At the bottom of page 29 (the last numbered page): "Booklet II, *More About Grains and Vegetables*, will come out as soon as possible." Near the bottom of the rear cover: "November 1967. Revised edition—July 1969. \$1.00."

Note: Jacques de Langre, Ph.D., also spelled his name

DeLangre and Delangre. Address: Boston, Massachusetts.

4555. Chong, Y.H.; Ponnampalam, J.T. 1967. The effect on duckling of a diet containing moulded-soybeans. *Medical J. of Malaya* 22(2):104-09. Dec. [16 ref]

• **Summary:** Recent discoveries have shown that several common species of mold (such as *Aspergillus flavus*, *Aspergillus parasiticus*, and *Penicillium puberulum*) which cause spoilage in food, "produce a group of toxic metabolites known collectively as aflatoxins. Aflatoxins are the most potent liver poisons yet discovered." Aflatoxins are also extremely carcinogenic, and can cause liver cancer.

Ducklings are particularly sensitive to aflatoxins. In this experiment day-old ducklings were fed a "diet containing moulded soybeans which had previously been shown by physico-chemical means to be free of aflatoxins. No significant difference was observed in the general appearance, growth rate, mortality and liver histology between ducklings fed the experimental diet and those fed the control diet. This not only confirmed our previous finding of the absence of aflatoxins but also appeared to rule out the possibility of other hepatotoxic principles of fungal origin in moulded-soybeans."

"Our present results taken in conjunction with those of our previous study (Chong *et al.* 1966) seem to rule out firmly the possibility of aflatoxin contamination in moulded-soybeans and their product—soy sauce." Address: Inst. for Medical Research, Kuala Lumpur, Malaysia.

4556. Murakami, Hideya; Takase, S.; Ishii, T. 1967. Non-productivity of aflatoxin by Japanese industrial strains of *Aspergillus*. I. Production of fluorescent substances in agar slant and shaking cultures. *J. of General and Applied Microbiology (Tokyo)* 13(4):323-34. Dec. [14 ref. Eng]

• **Summary:** "Two hundred and fourteen strains of the *Aspergillus* were cultured both in agar slants and in a liquid medium by shaking, and the productivity of aflatoxins was studied, respectively, by observation of the fluorescence of the medium and by fluorometry and thin-layer chromatography, using the aflatoxin-producing strain ATCC 15517 as a control." None of the resulting products were aflatoxins. "However, the fact does exist that certain strains belonging to the *Aspergillus flavus-oryzae* group or the *A. flavus* group produce aflatoxins..."

"Materials and methods—Microorganisms: We used 214 strains including 176 strains of the yellow-green-spored *Aspergillus* and 38 strains of the other *Aspergillus*. All of the formers were isolated or collected in our institute during 1904 to 1965, consisting of 100 strains for Sake brewing, 32

strains for Miso brewing and 44 strains for Shoyu brewing. Among the latter 38 strains, 16 strains were those used for manufacturing Shôchû (Japanese distilled liquor) and the remainings [sic, rest] were non-industrial strains received from the Institute of Applied Microbiology, University of Tokyo. Aflatoxin-producing ATCC 15517 was sent from the National Institute of Health, Tokyo, and used as a control.” Address: Research Inst. of Brewing, Tokyo.

4557. Rakosky, Joseph, Jr. 1967. Soy proteins—Their preparation and uses in comminuted meat products. *Meat Hygiene Abstracts* 8(6):1-11. Nov/Dec.

• **Summary:** Contents: Introduction. Soybean processing. Soy protein products: Soy grits and flour, textured soy proteins (TSP), hydrolyzed vegetable protein (HVP), fatted or lecithinated soy flours, soy protein concentrates (3 commercial methods are used to immobilize the protein: heat, iso-electric wash, and organic solvent wash), edible isolated soy protein (ISP). The use of soy proteins in meat applications. Summary. List of product in which soy derivatives are used, and the permitted level: Cooked or fresh sausage, chili con carne, spaghetti with meat balls, Salisbury steak, imitation sausage, soups, stews, nonspecific loaves, scrapple, tamales, meat pies, pork with barbecue sauce, beef with barbecue sauce, patties. Address: Director, Technical Services, Chemurgy Div., Central Soya, Chicago, Illinois.

4558. *Soybean Digest*. 1967. State fair booth by N.C. Association. Dec. p. 10.

• **Summary:** In October, the North Carolina Soybean Producers Association participated in the annual state fair at Raleigh with a booth displaying the many food products in which soybeans are used as an ingredient, including meats, strawberries, coconut with artificial flavor, soy bean flour, Snowdrift, soy sauce, mayonnaise, and salad dressings. The response was excellent, according to Jim S. Gardner, executive secretary of the Association. “Surprisingly enough, many people had never had the idea of the value of the soybean to everyday living.” A photo shows woman at the booth with the display of soybean products.

4559. Chang, C.H. 1967. [Organic acid in Korean soy sauce]. *Han'guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 8:1-9. [Kor]*

• **Summary:** Korean soy sauces were prepared by the ordinary and improved methods and the organic acid content of each was analysed—with the following results.

(1) In analysing the general components of prepared soy sauce, larger quantities of total acid, volatile acid, and non-volatile acid were found in improved soy sauce than in ordinary soy sauce.

(2) Volatile organic acids were analysed using gas chromatography. The following results were obtained:

(a) In the ordinary soy sauce, formic acid, acetic acid,

propionic acid, and butyric acid were detected. Acetic acid was in the highest amount, followed by propionic acid, butyric acid, and formic acid, respectively.

(b) In the improved soy sauce, formic acid, acetic acid, propionic acid, and butyric acid were detected. Acetic acid was in the highest amount, followed by propionic acid, butyric acid, and formic acid, respectively.

(3) Non-volatile organic acid was analysed with the paper partition chromatography method. The following results were obtained:

(a) Lactic, glutaric, fumaric, malonic, malic, glycolic, oxalic, tartaric, and succinic acids, in addition to two unknown spots were detected in ordinary soy sauce. Lactic acid was in the highest amount, followed by succinic, glycolic, oxalic, tartaric, glutaric, malic, fumaric, and malonic acids, respectively.

(b) Lactic, glutaric, malonic, malic, glycolic, tartaric, succinic, and galacturonic acid, in addition to two unknown spots were detected in the improved soy sauce. Lactic acid was in the highest amount, followed by succinic, glycolic, malic, glutaric, tartaric, galacturonic, and malonic acids, respectively.

(4) Alpha-keto acid was analysed with paper partition chromatography. The following results were obtained: Pyruvic acid, alpha-keto glutaric acid and an unknown spots were detected in the ordinary and improved soy sauce. Pyruvic acid was in the highest amount, followed by alpha-keto glutaric acid.

(5) Stale flavor in the ordinary soy sauces seemed to be partly affected by butyric acid and propionic acid.

(6) Substances influencing taste, such as lactic acid and succinic acid, were found more in improved soy sauce than in ordinary soy sauce. Address: Seoul Agricultural College, Seoul, Korea.

4560. **Product Name:** Shoyu.

Manufacturer's Name: Hawaiian Miso & Soy Co.

Manufacturer's Address: 1714 Mary St., Honolulu, Oahu, HI 96819. Phone: 808-841-7354.

Date of Introduction: 1967.

New Product—Documentation: Honolulu City Directory. 1966-67. p. 278. Hawaiian Miso & Soy Co. Ltd., 1714 Mary, Honolulu. Not listed 1967-68. 1986 Directory. Listed again under same name and address. Not listed 1987.

4561. Kim, S.Y.; Kim, Z.U. 1967. [Studies on the changes of protein, peptides and amino acids during natto preparation]. *Han'guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 8:11-20. [Kor]*

• **Summary:** In order to study the change of nitrogenous compounds during the Natto preparation, the contents of insoluble protein, water soluble protein, and amino nitrogen were determined, and the pattern of peptides and amino acids was investigated by paper chromatography for the fractions

resulting from molecular sieving. The results are as follows:

(1) Insoluble protein nitrogen, which was increased to 84% by autoclaving the native soybean, decreased to 44%. The trichloroacetic acid soluble nitrogen increased from 8% to 45% during Natto preparation. The soluble protein nitrogen showed a slight increase.

(2) Fractionation of the peptides using Dowex-50 resins showed that they consisted mostly of lower molecular weight peptides, which increased in accordance with the progress of fermentation, especially after a 30-hour period.

(3) Sixteen known and two unknown amino acids, and three peptides with different Rf values, were identified during the Natto preparation. Their appearance showed some difference in that phenylalanine appeared after 10 hours, methionine after 20 hours, and proline after 30 hours. The three peptides appeared at different stages of fermentation. Address: Seoul Agricultural College, Seoul, Korea.

4562. Product Name: Village Soyburger (later renamed Village Soy Patties).

Manufacturer's Name: Village Manufacturing Co.

Manufacturer's Address: Berkeley, California.

Date of Introduction: 1967.

Ingredients: Whole soybeans, brown rice, carrots, oats, seasonings.

Wt/Vol., Packaging, Price: 3.25 oz patties, sold in packs of four.

How Stored: Frozen.

New Product–Documentation: Label and story in Living Lightly catalog, ca. 1982. "It all started in Berkeley, California, in 1967, when a student at the University of California majoring in dietetics, mixed together the ingredients, constituting the first 'Village soyburger.' They were first sold at a sandwich stand just outside the campus."

Letter from Somari Das of *Communities* magazine, Route 1, Box 191, Oroville, California 95965. 1975 or 1976. June 26. "Yes, we are very interested in learning to prepare tofu & miso on a community scale. We are a group of 12 adults and 3 children on 20 acres in Northern California. We have two cottage industries, one of them being a *soyburger* business, so we are pretty familiar by now with the marvelous soybean. We use miso and tamari to make our soyburgers and they are very tasty. At home, we eat a lot of tofu and miso soup, but we buy these products from local distributors rather than produce them ourselves. I am a student of Oriental medicine and feel like my education would be greatly enhanced by learning to prepare these traditional foods at home.—Om Tao, Somari Das."

Talk with Mara Devine. 1988. April 7. The business was started by two women. A collective she belonged to bought the business from these two women in the early 1970s and did it until 1973, when they sold the business. It was made with cooked soybeans (not tofu) pressure cooked with miso. They would run them thru a Hobart grinder then mix in oats

as a binder, carrots, maybe onions or garlic powder, then put it through a patty machine. The patties were then frozen. They were not fried; most people fried or baked them at home. The company also made a Frozen Rice-Patti. Their plant was in Oroville, across the street from the high school. The product is still being made, probably in Oroville. Mara now runs her own company named Soy Devine (which see).

Papers presented at the Symposium on Microbial Toxins held at the meeting of the American Chemical Society, New York, on 12 Sept. 1966. [100+* ref]

• **Summary:** Contents: Part I: Bacterial and algal toxins. Part II: Fungal toxins. One chapter in each part is about soy. They are cited separately. Address: MIT, Cambridge, Massachusetts.

4568. Nakano, Masahiro. ed. 1967. *Hakkô shokuhin* [Fermented foods]. Tokyo: Korin Shoin. 244 p. See esp. p. 81-101. [Jap]

• **Summary:** Includes sections on soymilk yogurt (cultured with *Lactobacillus bulgaricus*) and *nyu fu* [fermented tofu].

Chapter 6, *Nyu fu* notes that this is an ancient food that came from China and Taiwan, but has never become a part of Japanese cuisine. In the United States (and in English) it is known as "Soybean cheese" and "Vegetable cheese," while in China it is known as "Nyufu" as well as Chaw tau fu, Sufu, Fungyu, etc.

6.1.2—Places of production and varieties: Nyufu is made mainly in the middle to southern four coastal provinces of China. These include (pinyin / Wade-Giles): Jejiang / Chekiang (Jap: Sekkô), Jiangsu / Kiangsu (Jap: Kôso), Fujian / Fukien (Jap: Fukken), Guangdong / Kwangtung (Jap: Kanton). A lot of Nyufu is also made in Taiwan, which is located off the coast of Fujian province.

Since nyufu has been produced for a long time over a

vast area, there are many varieties. A study conducted in the 1920s found the varieties shown in chart 6.1 in the Shanghai market (Shanghai is in Jiangsu province near the mouth of the Yangtze River).

(1) Pickled without mold on the tofu. (i) Jianning-dofu: Drain then dry the tofu, add salt, and pickle in jiang or the residue / dregs left after making soy sauce.

(ii) Doufuru: Drain then dry the tofu. Sprinkle it with salt then pickle it in koji.

(2) Culture mold on small cubes of tofu until a fragrant white mycelium surrounds each cube, then pickle.

(iii) Jiangrufu: Pickle in jiang or the residue / dregs left after making soy sauce.

(iv). Honjiang rufu [red jiang fermented tofu]: Pickle in a mixture of red rice / angkak (a red koji made by growing *Monascus* mold on rice) and the residue / dregs left after making soy sauce.

(v) Zaorufu: Pickle in sake lees.

(vi) Hongrufu: Pickle in red sake lees.

(vii) Jiujia rufu: Pickle in white sake / daku-shu, like unrefined sake (*doburoku*).

(viii) Xiangrufu (fragrant rufu): Pickle in jiang with olive leaves, fragrant mushrooms, etc.

Dr. Masahiro Nakano was born in 1907. Address: National Food Research Inst., Tokyo.

4569. Nelson, John H.; Richardson, Gary H. 1967. *Molds in flavor production*. In: Henry J. Pepler, ed. 1967. *Microbial Technology*. New York: Reinhold Publishing Corp. x + 454 p. See p. 82-106. [17 soy ref]

• **Summary:** In this chapter is a section titled "Flavor production by molds in Oriental foods" (p. 94-103) with the following contents: Background, mold species utilized in Oriental foods (*Aspergillus oryzae*, *Actinomucor* or *Mucor* species, *Rhizopus* species, koji culture production, tane koji), shoyu (soy sauce) production, miso (soybean paste) production, sufu (Chinese cheese) production, tempeh production, ragi production, ang-kak (red rice) production.

Introduction to chapter ("Mold-ripened cheese was shipped to Rome from southern France as early as 250 A.D." "Sufu, or Chinese cheese, is produced on a limited scale in Formosa [Taiwan]. Research has laid the foundations for large-scale production of tempeh, an Indonesian fermented soybean food).

Mold-ripened cheese: Background (This type of cheese was first made in France during the Roman era. The name "Roquefort" first appeared in the year 1070. Roquefort is a mold-ripened cheese made from the milk of female sheep {ewes}. The trade association of Roquefort makers is the Société de Roquefort manufacturers), species utilized for flavor production, characteristics of blue cheese flavor, production of mold-ripened cheese, a typical blue cheese manufacturing process. Production of blue cheese flavor by submerged culture techniques: Preparation of inoculum,

flavor development, process modifications.

There are many “cheese varieties in which typical flavor development is principally dependent upon the internal and/or external growth of mold. Blue (Bleu, Blue-veined), Gorgonzola, Stilton, Wensleydale, Gammelost, Nu-World, Camembert, Neufchatel, Mycella, Niva and Brie are produced in many nations...” But Roquefort is made only in France.

Note: Roquefort (sometimes spelled Rochefort in English) “together with Bleu d’Auvergne, Stilton and Gorgonzola is one of the world’s best-known blue cheeses. Though similar cheeses are produced elsewhere, European law dictates that only those cheeses aged in the natural Combalou caves of Roquefort-sur-Soulzon may bear the name Roquefort, as it is a recognised geographical indication, or has a protected designation of origin.”

In 1411 Charles VI granted a monopoly for the ripening of the cheese to the people of Roquefort-sur-Soulzon as they had been doing for centuries.

“In 1925, the cheese was the recipient of France’s first Appellation d’Origine Contrôlée when regulations controlling its production and naming were first defined. In 1961, in a landmark ruling that removed imitation, the Tribunal de Grande Instance at Millau decreed that although the method for the manufacture of the cheese could be followed across the south of France, only those whose ripening occurred in the natural caves of Mont Combalou in Roquefort-sur-Soulzon were permitted to bear the name Roquefort” (Source: Wikipedia at Roquefort, Oct. 2011). Address: Dairyland Food Laboratories, Waukesha, Wisconsin.

4570. *SoyaScan Notes*. 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part II (1967–1971). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1967–Arran begins his first food business when he starts the Golden Lotus restaurant at 2936 West 4th Ave. (at Bayswater), Vancouver. Serving natural, vegetarian and macrobiotic foods, it is the city’s first vegetarian restaurant. Before he left India, his Master had encouraged him to take up this “right livelihood” and promised to extend “all feasible help, both inside and outside.” A place was found and the necessary money appeared as if by magic. Most of the workers were spiritual seekers. All lived upstairs, above the restaurant.

Arran was one of the cooks; he had learned how to cook brown rice, veggies, hijiki, wakame and miso soup while working as a waiter at the Paradox Restaurant in New York City in 1964; he learned the rest by trial and error, including the use of macrobiotic and vegetarian cookbooks such as *Vegetarian Cookery*, by Pietro Rotondi, and (later) *Ten Talents* by Frank and Rosalie Hurd.

“Amazingly, the rather monastic rules—including regular meditation and celibacy—were accepted and enthusiastically followed. In the communal setting, all worked without pay for the first 9 months. “Before the year was out, bills and loans were entirely repaid and all began receiving hourly wages, benefits, room and board. The numbers attending our weekly satsangs outgrew the upstairs, and the venue shifted downtown to the YMCA.” One photo shows Arran standing in front of the Golden Lotus restaurant in 1968 and another standing inside in 1969.

1968 Oct.—Arran and three others return to India to be with Master Kirpal Singh, having received his written permission. On the way they visit Ram Das (the former Richard Alpert) who was in retreat at his father’s large New Hampshire estate. In India Arran lives close to Kirpal Singh. The Master will not initiate those who beg for food, only those who earn an honest living.

1969 March 4.—Arran, with the Master’s blessing, marries an Indian woman, Rattan Mala Bagga, age 22, in a traditional Sikh marriage. She comes from a good family, has an M.A. degree, and is a lecturer at a girls’ school in Moradabad. The Master, who changes her name to Ratana (“jewel”) encourages family life and the tender bonds of matrimonial love and responsibility.

1969 April—Arran and sari-clad Ratana return to Vancouver, Canada, after nearly 6 months in India. He has changed from ascetic to householder. They settle into a little room above the restaurant, sharing a bathroom with 14 others and working, on average, 12–16 hours a day to get the restaurant firmly established. In May and December, Kirpal Singh writes with wise advice. As a result: “In three months we saved \$1,000 to make a down payment on a little two-bedroom house with a garden. Ratana was already pregnant with our first child, and we had had our fill of communal living.”

“Considerable agitation began among the more left-leaning workers to turn the Golden Lotus into a commune. After a lot of soul-searching, we decided to make a clean break, and sold the restaurant to the group for a paltry \$3,000, wishing them all success.” Soon after the Golden Lotus restaurant became defunct.

1970 Jan.—Arran opens a little store named Jyoti Importers and Natural Foods at West 4th Ave., near Yew Street on the same street as the Golden Lotus, but on top of the hill. He sells “Indian bedspreads, clothing, classical musical instruments, and healthy and organic foods. Food soon edged out the other wares. It became obvious that my destined vocation was connected to organic foods and wholistic living.” After several years of growth, the business moves into a much larger building at 1813–1817 West 4th Ave., a corner location and opens as Lifestream Natural Foods on 1 Jan. 1971. Then Lifestream expanded to a second store on Broadway at Traflagar (See: *Shared Vision* 1990, p. 9).

1970 April 4—Arran and Ratana's first child is born at St. Paul's hospital in Vancouver by natural childbirth. Master telegraphed. "You may name the baby Shanti" (the ancient Sanskrit word for "peace"). Note: All the Stephens' children were born at this same hospital. Arran writes: "I was present at the miracle of each birth. On the birth of two of our children, Ratana was blessed with the vision of our Master, and she also experienced great light within."

1970 spring—On an impulse, Arran gives half of his business, Jyoti, to Peter Harwood, his friend and fellow disciple of Kirpal Singh; Peter becomes a working partner.

1970 June—Arran attends the founding meeting of Organic Merchants (OM), held outdoors on the side of Mt. Shasta. Lifestream becomes one of the founding members. OM was the first trade association for natural food retailers on the West Coast and the first organic trade association. Arran also remembers OM meetings at Blake Rankin's, at Lifestream, and at Pajaro Dunes.

1971 (1990 Shared Vision article says Lifestream opened 1970 Jan. 1). Jan. 1—Arran opens Lifestream Natural Foods in Vancouver, British Columbia, Canada, just north of the U.S. border, at 1813-1817 West 4th Ave. (at Burrard). It is Canada's first large natural foods retail store. His father suggests the name. "Free fresh carrot juice drew in crowds; an electric powered 20-inch stone-buhr mill, visible through a window from the street, ground tons of fresh whole-grain flour every day; alfalfa sprouts were grown in our nearby warehouse / factory; fresh nut butters were roasted and milled to order; natural candy bars and cookies were extruded and baked; egg-free cakes and muffins popped from the ovens; pies, crunchy granola, bulk foods, and wholesome artisanal breads were baked and sold by the hundreds. These were all firsts in Canada." The inspiration came from many sources, but was not macrobiotic. The Lifestream brand was represented by a woman gathering sheaves of wheat into a basket. "Teachers brought classes of school children on tours to see how wholesome foods were made. The store became so busy that it was often difficult to wade through the crowds of shoppers and hangers-on... Sales doubled every year for seven years, and the business quickly branched out into wholesale distribution."

1971 or 1972—A separate small vegetarian restaurant, named Mother Nature's Inn (MNI) was started as a *separate* business in the rear of the large retail store (on West 4th Ave.) by Victor Yankowich,... But after about a year MNI was purchased from Victor (for a pittance) for Ratana, who showed her business skills by running it very successfully and profitably. The company's best-known products are its line of Essene sprouted grain breads—moist, heavy, and delectable.

1972—Lifestream opens its own Bread of Life bakery (100% owned by Lifestream) in North Vancouver because of the area's scarcity of organic and natural baked items. The original Lifestream Essene Bread, developed by Arran at

that bakery, was one of the Lifestream's first baked products. Essene Bread was always made with organic grain—from the Alvin Scheresky and David Orchard organic grain farms in Saskatchewan province.

A 1971 color photo shows Arran, smiling, holding a loaf of Essene Bread.

1971—At about this time Lifestream Natural Foods Ltd. moves to 724-26 W. 6th Ave., Vancouver 9, BC, Canada. This was a combination headquarters, warehouse, manufacturing and packaging facility. It housed a flour mill, alfalfa sprout operations, nut butter operation, tamari nut roasting and packaging, plus packaging a wide range of organic grains, beans, nuts, seeds, flours, etc. When this facility opened, the only other Lifestream operation was the retail store.

1971—Since there was a scarcity of natural and organic foods, Lifestream began to do wholesale distribution. Frank Ford, founder of Arrowhead Mills in Texas, appointed Lifestream as distributor in Canada for the entire Arrowhead Mills' range of organic grains, beans, flakes, hot cereals, and flours. Hundreds of products were developed and marketed under the Lifestream brand: Breads, other baked goods, fruit & nut-based energy bars, juices, trail mixes, tamari roasted nuts and seeds, preserves, yogurt, granolas, mueslis, sprouts, soyfoods, expeller-pressed oils, and a wide range of imported Japanese macrobiotic products. During the 1970s Lifestream's profits came from a blend of manufacturing, wholesaling, and retailing—but not even the accountants knew what percentage of the total came from each of these activities. Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

4571. Sung, Betty Lee. 1967. *Mountain of gold: the story of the Chinese in America*. New York, NY: Macmillan. viii + 341 p. Illust. Map. Index. 22 cm. Reprinted in 1971. [283 ref]

• **Summary:** A carefully researched and well written book about the Chinese in America: their struggle for survival, acceptance, and full participation in American life, from the Gold Rush to the present.

Chapter 9, "Chinatowns," states (p. 149): "The restaurants are powerful magnets... Dinner in Chinatown may also be an occasion to entertain guests or to get together with friends and family... Restaurants in Chinatown cater heavily to Chinese clientele. More than any other reason, the Chinese love of food will prolong the life of Chinatowns. If Chinese food is served at home, the basic ingredients must be purchased from Chinatown, for where else can one buy soy sauce, bean curd, dried mushrooms, snow peas, or bamboo shoots?"

Chapter 12, "Restaurants—A natural inclination" states (p. 206): "Add seasonings of fermented bean curd, salt, and a little soy sauce. Put in just enough water to keep the food from burning. Lower the flame slightly. Cover the frying pan

until the water boils (about two minutes)...”

• **Summary:** Five factors contribute 88.9% to the quality of soy sauce: Preference, size of contents, glutamic acid, organic acid, and additives. Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Noda, Chiba, Japan.

4576. Wai, Nganshou. 1968. Chung yang yen chiu yüan hua hsüeh yen chin so [Investigation of the various processes used in preparing Chinese cheese by the fermentation of

soybean curd with mucor and other fungi]. Taipei, Taiwan: Institute of Chemistry, Academia Sinica. 90 p. Jan. Final technical report. USDA PL 480. Project no. UR-A6-(40)-1. On USDA grant no. FG-TA-100. [24 ref. Eng; chi]

• **Summary:** This report is quite similar to (but more detailed than) Wai’s 1964 article titled “Soybean cheese.” This report may have been published in Chinese as well as in English.

Contents: Summary. Detailed report. 1. Introduction. 2. Results: Manufacture of soybean cheese (description of the process), microbiological investigations, analyses (preliminary analysis, coagulation of soybean protein by calcium ion, changes of protein components during the preparation of soybean cheese, hydrolysis of lipids during aging of soybean cheese, some characteristics of the fungus *Actinomucor elegans*), machines of laboratory scale designed for the preparation of soybean milk and soybean curd used as raw materials for soybean cheese. 3. Discussion. 4. Conclusion. 5. Need for additional research. 6. List of publications. Appendixes. A. Historical (History of tofu in China). B. The ancient process (for making 5 types of sufu, and table showing the composition of each—Rose sufu, Tsao Sufu, Red sufu, Kwantung sufu, and Yunnan sufu).

Appendix C: Report on travel to Hongkong and Kowloon for the collection and investigation of fungi used for the manufacture of soybean cheese, by Shuh-Ming Chang and Shu-Chen Sung, Assistant Research Fellows of Institute of Chemistry, Academia Sinica, Taipei, Taiwan (p. 85-88). From 20-29 June 1964 they visited the following factories and collected mold samples from fresh pehtze: (1) Lo-San-Chi Sauce Factory at Sham-Chui-Po, Kowloon. It produces 3 types of soybean cheese ([fermented tofu]; *Fusu*, *Nan-su*, and *Pepper-Fusu*), soy sauce, and “other sauced products.” A description of the process for making soybean cheese is given. (2) Ming-Jean Sauce *Nan-su* and Canning Company near Clear Water Bay, Sing-Jea, Kowloon. (3) Chen-Mang-Chi *Nan-su Fusu* Factory, Chung Ching St., Sai Ying Pung, Hongkong. Sufu is the company’s only product. (4) Con-Ho *Fusu* Factory, Fuk Lo Tsun Road, Kowloon. (5) Kowloon Sauce Company, Queen’s Central Road. It makes sufu, soy sauce, and sauced products. (6) Chu-Rong Sauce Factory at Kam Tin, Sing-Jea. (7) Liao-Mar-Chi *Fusu* Factory, Shanghai St., Kowloon. It is located inside a market and sells tofu and soybean milk at the same time.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the terms “Fusu” or “Nan-su” to refer to fermented tofu.

Summary: Four fungi suitable for making fermented tofu were isolated: *Actinomucor elegans*, *Mucor hiemalis*, *Mucor silvaticus*, and *Mucor subtilissimus*. “Although each fungus can be used for the fermentation, *Actinomucor elegans* is the best one. An improved method for the preparation of sufu was devised.” It is described. Four different solutions (containing Kaoliang wine or ethyl alcohol, plus salt) were developed. The pehtze (freshly grown fungi on cubes of firm

tofu) can be preserved in these solutions for more than one year. The various enzymes and their activities were studied.

Photos (photomicrographs) show: (1) Columella of *Actinomucor elegans*. Magnification 700x. (2) Sporangia of *Actinomucor elegans*. Magnification 180x. (3) Head of *Actinomucor elegans*. 4580. Sanae Restaurant. 1968. Introducing Sanae Restaurant, 272A Newbury Street, Boston (Leaflet). Boston, Massachusetts. 1 p. Single sided. 28 cm.

• **Summary:** “Dear Patrons and Friends: Sanae Restaurant has been designed as a unique, friendly eating place where everyone can enjoy genuine quality food in a family atmosphere. Since the present trend towards artificial, unnatural food is becoming more prevalent, we are trying to present real home cooking, combining food that is as natural

as possible with the soundest old-fashioned methods of preparation. Our menu is centered around whole grains, with fresh vegetables, fish and seasonal fruits as side dishes.”

“We use real sea salt, soy bean paste (miso) and soy sauce (tamari) that has been processed and aged by natural methods, and home-made sesame salt (gomasio)... ‘Sanae’ means a young spring cereal plant which has a hope for a bright future at harvest time.

Hours: 3-10 Sunday-Thursday, 3-11 Friday & Saturday. Closed Mondays.

A photo near the top shows (between two large hearts, left to right): Peggy Taylor, Evan Root, Connie Frank, and Martin Russell, each dressed in a white cook’s apron. Note: Evan Root was the first storekeeper at the first Erewhon retail store (located below street level). Address: 272A Newbury St., Boston, Massachusetts. Phone: 247-8434.

• Summary: “It was a pleasure watching her prepare Beef Sukiyaki... Then soy bean cakes [tofu], dry onions and rice wine were stirred into the pan.” Azuma also serves Beef Teriyaki, Chicken Teriyaki, and Salmon Teriyaki. Three photos show Azuma Sukiyaki House.

4582. Saikowski, Charlotte. 1968. America’s foods expand Japan’s menu. *Christian Science Monitor*. April 19. p. 6.
• Summary: Orville Freeman, U.S. Secretary of Agriculture, wants to export more American products to Japan. In Tokyo, he and his wife attended the recent “American Festival of Fun, Food, and Fashion.” He noted that “The Japanese diet is still low in protein...” which means a great market for American brooder chicks.

“Such traditional Japanese foods as ‘miso’ (soybean paste), ‘shoyu’ (soy sauce) and ‘tofu’ (bean curd) are made for the most part from American-produced soybeans.” Address: Staff correspondent.

4583. Saikowski, Charlotte. 1968. America’s foods expand Japan’s menu. *Christian Science Monitor*. April 19. p. 6.
• Summary: At the recent “American Festival of Fun, Food, and Fashion” in Tokyo, Japan, officials of the USDA and their wives were on a “buy-American campaign” and on a campaign to encourage Japanese officials to reduce Japan’s trade restrictions [such as protective import duties and tariffs]. Mrs. Orville Freeman, wife of the U.S. Secretary of Agriculture, said that America was trying to sell “nutrition, variety, and convenience.”

Japan, which does not have enough land to met its own food needs, already depends heavily on America for its food needs, importing nearly \$1 billion worth last year. “Such traditional Japanese foods as ‘miso’ (soybean paste), ‘shoyu’ (soy sauce), and ‘tofu’ (bean curd) are made for the most part

from” soybeans grown in the United States.

4584. *Soybean Digest*. 1968. Kikkoman produces soy sauce in U.S. tieup. April. p. 52.

• Summary: “Kikkoman Shoyu Co. of Japan will shortly start bottling soy sauce as well as making ‘Teriyaki’ sauce in Oakland, California,” according to the *Japan Economic Journal*. “Teriyaki sauce is a sauce for grilling or broiling purposes processed from soy sauce.” Japan’s No. 1 maker of soy sauce wishes to reduce export costs, such as freight and insurance charges, by shifting completely to local bottling and packing of its products. It will use the existing factories of Leslie Salt Co., Leslie Food Products Inc., and Orrell’s Food Products Inc. “Exports of soy sauce are on an increase recently with the United States, Japan’s top customer, boosting its purchases by five times in the past decade. Kikkoman currently supplies about 85%-90% of the total exports of soy sauce.

“In 3 years, Kikkoman plans to raise its soy sauce and Teriyaki sauce production in the U.S. to about 35 million bottles a year.”

• Summary: “Beef it up—Teriyaki steak and teriyaki chicken, two oriental delicacies, now easy to master with Marukin teriyaki sauce. A must for your kitchen, essentially a soy sauce with very special seasonings. Just pour it on—to flavor and tenderize as it marinates. 12 fl. oz.—59¢.”

An illustration shows a bottle of Marukin Teriyaki sauce. Address: Los Angeles area: Westchester, San Marino, Anaheim, Encino. Phone: TR 4-6600.

4587. *Los Angeles Times*. 1968. Mizutaki says sayonara to lengthy meal preparation. May 30. p. G22.

• Summary: A general recipe for Mizutaki (“water cookery”) includes “Bean curd squares (tofu).” The dipping sauce includes “½ cup soy sauce” and “½ teaspoon monosodium glutamate.”

4588. Fukushima, Danji. 1968. Internal structure of 7S and 11S globulin molecules in soybean proteins. *Cereal Chemistry* 45(3):203-24. May. [36 ref]

• Summary: The internal structure of soybean protein molecules (7S and 11S, native soybean globulins) was investigated by optical rotary dispersion (ORD), ultraviolet difference spectra, infrared absorption spectra, and other techniques. The 11S globulin contained more sulfur-

containing amino acids than the 7S globulin. The major soybean proteins have primary, secondary, tertiary, and quaternary structures.

Native soybean proteins were found to possess a fairly compact internal structure, in which most of the peptide bonds are buried and cannot be hydrolyzed by proteinase without disruption of the internal structure. Only when the closely packed peptide chains are unfolded upon denaturation do they become accessible to proteinase molecules. Thus the substrates are hydrolyzed in proportion to the degree of denaturation of the substrate protein molecules.

Hydrolysis by proteinase appears to occur step by step, especially in the native protein. This could be explained as follows. When a peptide bond located at the surface of a tightly folded molecule is hydrolyzed, the molecule would be partly unfolded in the form close to a random coil, then it would be refolded in a new conformation after a certain time.

The “author concluded that (1) the major internal structures of both 7S and 11S globulins of soybeans are not alpha-helix, but are both the antiparallel betastructures and the disordered structures; (2) the molecules are fairly compact as a whole and even in their disordered parts; (3) the molecules are folded tertiarily and the water-impenetrable hydrophobic region is formed; (4) the hydrophobic bonds play an important role for stabilization of the internal structure; and (5) the molecules are not hydrolyzed by proteinase before the internal structure is disrupted, and the initial velocity of the hydrolysis by proteinases is proportional to the degree of its disruption.” Address: Central Research Inst., Kikkoman Shoyu Co., Noda, Japan.

4589. Watanabe, Bunzo. 1968. The Japanese oilseed processing industry. *Soybean Digest*. May. p. 36, 38.

• **Summary:** Tables show: (1) Imports of soybeans to Japan during calendar year 1967 by country of origin: USA 81%, Red China 19%, Other countries 1%. Total imported: 2,169,000 metric tons (79,710,000 bushels). (2) Consumption of edible refined oils and fats in Japan (1963-1967). Per capita consumption rose from 13.58 lb in 1963 to 18.08 lb in 1967. (3) Total oils and fats production in Japan (1963-1967), imports and domestically grown, by oilseed type. Soybeans are by far the most important oilseed, followed by rapeseed. Rice bran is the main domestic source of oil. (4) Consumption of soybeans in Japan classified by utilization (1963-68, 1,000 metric tons). The following figures are for 1968 (1,000 metric tons): Crushed for oil 1,739. Foods: Tofu and aburage 294. Miso 170. Natto 50. Frozen tofu 40. Shoyu 15. Kinako 13. Other 70. The total used for food grew from 497 in 1963 to 652 in 1968.

Photos show: (1) American Soybean Association (ASA) executives seated around a table holding chopsticks at tempura luncheon with Mr. Watanabe, who is president of the Japanese Oilseed Processors Association, and other

Japanese oilseed officials. From left, Shohei Takai, managing director Japan Oilseed Processors Association (JOPA); S. Yamada, manager oils and fats division, Ajinomoto Co., Inc; Scott Sawyers, ASA country director in Japan; Chet Randolph, ASA executive vice president; Mr. Bunzo Watanabe; and Hiroshi Higashimori, chief secretary JOPA. Tempura is a substantial outlet for soybean oil. (2) Portrait of Bunzo Watanabe. Address: Japanese Oilseed Processors Assoc., Japan.

4590. Chico-San Inc. 1968. Chico-San Inc.—Unique foods: Retail price list. P.O. Box 1004, Chico, California. 2 p. June 1. 35 cm.

• **Summary:** This single-sheet, dated catalog and price list, printed front and back with dark brown ink on pink paper is almost identical to the edition of 15 July 1967 in appearance, content, and pricing.

However two new condiments have been added: Dehydrated tamari, and Seitan. Address: P.O. Box 1004, Chico, California.

4591. *British Vegetarian*. 1968. The Macrobiotic Restaurant. May/June. p. 239.

• **Summary:** This new restaurant has “just opened at 136a Westbourne Terrace, W.2, a few minutes walk from Paddington Station, where Westbourne Terrace crosses Bishop’s Bridge Road (the entrance is on Bishop’s Bridge Road). “Mr. Gregory Sams, who runs it, is a vegetarian and makes a specialty of vegetarian and vegan meals. The recipes are based on organically grown foods, with rice, soya, and sesame the features in a varied menu with an Asian influence; they offer a luxuriously gingery Japanese drink called ume-syo-kuzu [with umeboshi, shoyu, and kuzu]. The menu is a la carte. Phone: 01-723-7367. See also an almost identical article in the July/Aug. issue of this magazine on page 338. “The Macrobiotic Restaurant” is referred to again by this name in the Nov/Dec. 1968 issue of this periodical (p. 529); it is no longer serving lunches. And again in the May/June 1969 issue (p. 290). The name and address are unchanged. 1969

Note: The name of this restaurant was apparently changed to “Seed” shortly after this article was written.

4592. *East (The-Higashi)*. 1968. Charming flavor, traditional fragrance: The story of shoyu for the gourmet. 4(4):45-47. June/July. [Eng]

• **Summary:** Contents: Introduction (Nuoc mam, sashimi, shoyu). The history of shoyu (incl. shojin-ryori, kaiseki ryori). The chance discovery of shoyu (incl. Zen priest Kakushin, Keizanji miso, Yuasa in Wakayama prefecture, tamari, Yamasa Shoyu brewery at Choshi in Chiba prefecture). How is shoyu produced?

“It is said that toward the end of the Muromachi Period around 1560, the people of Yuasa began to sell this seasoning

[*shōyu*] in the Osaka-Kyoto area. Later, during the Tokugawa Period, around 1635, with the establishment of the alternate-year residence of the daimyōs in Edo (*sankin-kōtai*), and the accelerated urbanization of Edo, *shōyu* breweries sprang up at Chōshi and Noda in Chiba Prefecture making it available in the Kantō Plains. Production methods were gradually improved, and wheat began to be used, thus producing the present-day *koi-kuchi* [*koikuchi*] (deep-colored) *shōyu* which took the place of the old *tamari* (settled) *shōyu*. This new deep-colored *shōyu* spread from Edo throughout the whole country. Thus the Yamasa Shōyu Brewery of Chōshi became the main big enterprise producing deep-colored *shōyu*, while *usukuchi* (light-colored) *shōyu* produced in the Kansai Area [Kyoto-Osaka] and *tamari shōyu* produced in Aichi Prefecture [especially around Nagoya] also developed, and continued to hold their places on the market.”

The main reasons Yamasa traditionally maintained its facilities at Choshi are because of the temperate climate and the plentiful supply of under-ground water.

4593. *East (The-Higashi)*. 1968. Yamasa Shoyu: Authentic Japanese quality soy sauce (Ad). 4(4):?? June/July. [Eng]

• **Summary:** At the center of this full-page color ad is a large, rectangular photo of sukiyaki ingredients on a plate above a Japanese table setting. The caption: “Heightens the full natural taste of foods with just the slightest touch, no matter whether cooking is Japanese or western style.” Below that are small photos of a bottle and a yellow and purple can of Yamasa Shoyu. The logo reads: “Since 1645.” Brewed by Yamasa Shoyu Co., Ltd., Choshi, Chiba-ken, Japan.

Note 3. This is the earliest document seen (Oct. 2009) that gives the date 1645 as the beginning of Yamasa Shoyu.

4594. Manabe, Masaru; Matsuura, S.; Nakano, M. 1968. Hakkō shokuhin-chū no keiko seibun ni kansuru kenkyū. I. Chloroform soluble fluorescent compounds produced by koji molds]. *Nippon Shokuhin Kogyo Gakkaishi (J. of Food Science and Technology)* 15(8):341-46. [15 ref. Jap; eng]

• **Summary:** An early study showing the absence of aflatoxins in Japanese fermented foods. Address: Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

4595. Murphy, Jean. 1968. Indonesian fare: Time is worth it. *Los Angeles Times*. Sept. 5. p. J8.

• **Summary:** Cooking Indonesian recipes typically takes more time than Western or even Chinese recipes. A recipe for Vegetable & shrimp soup calls for “1/8 bean cake (tofu), finely sliced.” A recipe for “Pork sate (Saté babi manis)” calls for “1 tablespoon sweet soy sauce (ketjap benteng).”

4596. Koshiyama, I. 1968. Chemical and physical properties of a 7S protein in soybean globulins. *Cereal Chemistry* 45(5):394-404. Sept. [35 ref]
Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4597. Koshiyama, I. 1968. Chromatographic and sedimentation behavior of a purified 7S protein in soybean globulins. *Cereal Chemistry* 45(5):405-12. Sept. [16 ref]
Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4598. Sawyers, Scott. 1968. The soybean market in Japan, Taiwan, and Korea. *Soybean Digest*. Sept. p. 68, 70-72.

• **Summary:** The American Soybean Assoc. office in Japan, known as the Japanese American Soybean Institute, has concentrated on mass media and consumer promotions to increase the utilization of soybean oil, meal, and traditional foods prepared from soybeans. In Japan, this means liquid cooking oil, tempura oil, salad oil, vegetable oil margarine, miso, tofu, and soy sauce. Also, the growing preference for more meat, milk, and eggs in the Japanese diet requires the use of more soybean meal to support an expanding livestock and poultry industry. Efforts were made to popularize two slogans: “Take Oil Once a Day for Foods Cooked with Vegetable oil.” And: “Take Oil for Health, Stamina, and Vitality.” The key focus is to encourage the Japanese to consume more soy oil in their diet. A portrait photo shows Scott Sawyers. Address: Country Director, Japanese American Soybean Inst.-American Soybean Assoc., Tokyo.

4599. McCormick, Sally. 1968. Azuma Sukiyaki House: Dine graciously in the Oriental manner—5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune*. Oct. 24. p. G17.

• **Summary:** “Other Japanese dinners worthy of trying are New York Steak Teri-Yaki, Filet Mignon Teriyaki, Chicken Teri-Yaki, Fresh King Salmon Teri-Yaki, marinated in soy sauce and Mirin Sake and charcoal broiled, Fresh Rainbow Trout, charcoal broiled Sansho-Miso-Yaki style, Maine Lobster tail Teri-Yaki or Curry Yaki, Tuna or Sea Bass Teri-Yaki or Shio Yaki.”

The dinner menu prices range from \$4.35 to \$6.15.

“The menu also features many side dishes with such exotic names as Cold Tofu, Miso Shiru, Chawan Mushi and many more.”

Contains three photos featuring women taken inside the restaurant.

4606. Claiborne, Craig. 1968. The banquet began with 4 kinds of eel. *New York Times*. Dec. 21. p. 42.

• **Summary:** Taipei, Taiwan—Chinese cooking is now “enjoying its greatest prestige in the history of the West.” Yet it is ironic that when Americans think of Chinese cookery, they rarely think of Taipei or Taiwan.

When the instructor at a Chinese cooking class at the local Y.M.C.A. “used tofu, the common bean curd ingredient so frequent in Chinese cooking, a knowledgeable and well-oriented young American housewife told the story of how one of the military wives remarked: “You can’t even buy that here; at least we can’t find it in the P.X.””

Note: P.X. stands for “post exchange,” a store operated by the Army and Air Force Exchange Service on US Army posts.

Claiborne also describes a traditional Shanghai restaurant, the Tung Sheng Lou, at 29-4 Jong Hwa Rd. in Taipei. They serve various unique dishes including “bean curd with 1,000-year-old eggs...” Crab “dipped into an excellent sauce of soy, vinegar and ginger. Followed... by an extraordinary and wonderfully inventive dish of fresh pork

cooked with fermented bean curd and fresh spinach.”

4607. Photographs of Erewhon retail at 342 Newbury Street. 1968. Boston, Massachusetts.

• **Summary:** (1) Front of the store. (2) Back of the store. To the left is the door to the office. On the pallets stacks of both multiwall paper sacks (left) and burlap bags (rear). They arrived at the store by the truckload and the workers (including Jean) had to unload them by hand—sometimes hoisting them onto one shoulder. (3) Jean Allison seated at a desk in the Erewhon office.

These photos were sent to Soyinfo Center by Jean Allison Young of Chatham, Massachusetts, in Feb. 2011.

Letter (e-mail) from Norio Kushi. 2011. Feb. 8. These photos were “both taken at 342 Newbury Street, Boston, in 1968 soon after the move from 303-B Newbury to 342 Newbury, in Boston. I am guessing that both photos were taken within minutes of each other.

“The person behind the cash register, facing towards the right in the photo is Eric Utne, who later worked at *East West Journal*, eventually becoming the editor. He later left *East West Journal* and he, along with his then wife, Peggy Taylor, started *New Age Journal*. When Eric and Peggy split up, Peggy retained *New Age Journal*, with Eric Utne soon thereafter starting *The Utne Reader*. Eric Utne currently lives in Minneapolis [Minnesota] with his wife, Nina...

“The person facing Eric Utne, might be Jim Ledbetter,... or it could be a customer who I have never met. Jim Ledbetter and Jean Allison both lived at 216 Gardner Road, in Brookline with our family during this time. Eric Utne lived in one of the other study houses, 6 Ellery St, Cambridge, Massachusetts.

“The 2nd photo is of the stockroom in the rear half of the store. The size of the stockroom and how the bags of rice and other commodities are stacked would indicate the photos were taken soon after the move. Shelf space in the retail section kept growing along with business, and the rear storage room, once half the square footage of the store began shrinking as the need to expand the retail space increased, eventually necessitating the opening of the warehouse at 33 Farnsworth St. in Boston. Other than brown rice being in the burlap or paper 100 lb sacks, I don’t know what any of the other products would be in the other sacks or boxes.

“As I recall, we didn’t start getting the 50 lb organic rice in the paper sacks till after the opening of the Erewhon warehouse. Up till that point I recall the brown rice came in the 100 lb burlap sacks. Therefore, I feel that what is in the paper sacks would be beans and grains other than brown rice.

“I was noticing on the selves to the left there are smaller sacks. All the rice, grains, beans, etc were all packaged from bulk into these bags by hand. The item that was in these bags were rubber stamped onto the front of the bag just prior to filling them.

“We also received many Japanese items, such as shoyu

(which we called tamari), miso, and umeboshi in those bulk wooden kegs. They were hand poured or scooped into bottles and jars. I don’t see any of these items in this photo. The store photo was also rather Spartan, which is what lead me to feel that these photos were taken soon after moving from 303-B Newbury St. to 342 Newbury St. “I would stop by the store regularly but didn’t actually ‘work’ there during this time. I used to come in and just help out after school or on Saturdays just for the fun of it.

“At the prior location at 303-B Newbury St, I spent many full Saturdays helping out. I was there one Saturday when we had the very first day we did over \$100.00 in sales. The other person who was working on that day was Jean Mohan. At least during the 303-B Newbury Street days, people who lived in our house at 216 Gardner Rd, Brookline, MA, would take turns working at the store, although Evan Root was the manager.”

Letter (e-mail) from Evan Root. 2011. Feb. 10. These two photos “are of the store at 342 Newbury St. This was the ‘first edition.’ It was, of course, remodeled from the shell that was rented. But it is before a bigger remodeling which yielded the whole first floor for the store, bins for grains and beans, and a walk-in refrigerator where the office was. The accounting office and storage moved to the basement and a winched lift to bring the goods up for stocking.” Address: Boston, Massachusetts.

4608. Pickles, H. 1968. Are traditional fermented foods and lactic acid nutrition out of date? *British Vegetarian*. Nov/Dec. p. 520-25.

• **Summary:** Includes a discussion of soy sauce, Worcester Sauce, and miso, and of the writings of Dr. Johannes Kuhl (Professor, the Nuclear Research Institute in Rome), and O. Warburg (the Nobel Prize winner).

“In Asia, mould-enzymes are used to break down soya-beans rich in proteins, when making the spicy sauces [i.e., soy sauce]. The well-known Worcester Sauce is made from a Japanese recipe from the enzymes of soya beans with the same mould *Aspergillus orsae* [sic, *oryzae*] that is also present in correctly-prepared muesli.”

Note: The last sentence is largely inaccurate. Worcester sauce is not made from a Japanese recipe—although it traditionally contained soy sauce.

4609. Chang, C.H. 1968. Biochemical studies on stored soy sauce. *Han’guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 9:9-27. [Eng; Kor]*

• **Summary:** Studies were conducted in order to elucidate chemical components and microflora in three types of soy sauce: 12 year old aged soy sauce prepared by the improved method, and 7 year aged and 20 year aged soy sauces prepared by the ordinary method. The results are as follows:

(1) The following are found to be the most important factors affecting the quality of soy sauce.

(a) Organic acids, reducing sugars and free amino acids were increased over the course of storage.

(b) In the aged soy sauces under study, non-volatile organic acid increased while volatile organic acid decreased, with the total acidity dependent on the latter.

(c) It was found that salt concentration decreased during storage.

(2) The results of investigation of microflora in the stored soy sauce are as follows. A table (a) shows the type and number of bacteria and yeasts in improved and ordinary soy sauce. The three columns show: (1) Name of microorganism, such as aerobic bacteria colony. (2) Improved soy sauce. (3) Ordinary soy sauce.

(b) In the stored soy sauces, aerobic bacteria are incapable of growth due to a drop in pH value and the influence of salt concentration.

(c) Halophilic lactic acid bacteria are incapable of growth due to a drop in pH value. Even the salt concentrations decreased during the storage.

(d) Osmophilic yeast continue growth in a low pH value and in decreasing salt concentration during this stage.

(3) The results of amino acid analysis by paper partition chromatographic and colorimetric methods are as follows:

(a) Fourteen different types of amino acids were detected in the 12 year aged improved soy sauce. Thirteen types of amino acids were detected in the 7 year aged and 20 year aged soy sauces.

(b) The contents of aspartic acid, glutamic acid, serine, valine, leucine, lysine, histidine, and methionine increased in the 20 year aged ordinary soy sauce compared to the 7 year aged soy sauce. Contents of alanine, tyrosine, phenylalanine, and cystine decreased.

(4) The results of sugar analysis by paper chromatography are as follows.

(a) In the 12 year aged improved soy sauce, galactose, glucose, arabinose, xylose, rhamnose, maltose, and an unknown were detected. Their amounts were in the above order, except maltose and an unknown. Address: Seoul Agricultural College, Seoul, Korea.

4616. Abehsera, Michel. 1968. Zen macrobiotic cooking. New Hyde Park, New York: University Books/Avon. 224 p. Index. 18 cm. [15 ref]

• **Summary:** Abehsera's first macrobiotic cookbook contains a strict approach to macrobiotics. Includes many short stories by and about George Ohsawa.

In the Introduction, the author states (p. 13) that if he had been asked to write a cookbook 5 years ago, he would have been utterly amused, for he was in a precarious state of health and, for him, a cookbook was basically a collection of "recipes for stuffing one's belly."

"These five years have been an exhilarating adventure and happiness spent with my dear wife and children together with a 'thousand' friends. The anguished thoughts of a 28-year-old have been dissipated and he has been freed from the tortures and agony that previously pervaded his existence.

"This new and happy change has been due to the profound influence of George Ohsawa, who made it possible for me to recover my health so that I could leave France [Paris] and journey to New York, the city of my dreams. Now, I have decided to write a cookbook."

Contains the following soy-related recipes: Miso spread (with sesame butter, p. 105). Miso onion spread (p. 106). Miso in green (with green pepper and scallion, p. 106-07). Miso soup (p. 117). Chinese soup (with miso, p. 120). La

belle jardiniere (with miso, p. 123). Koi-koku (with carp, burdock, and miso, p. 125-26). French onion soup (with tamari, p. 132). Soup stock made with miso paste (p. 137). There are no tofu or seitan recipes in this book. It is not a vegetarian cookbook, since many recipes call for fish and seafood.

Monthly publications (p. 208): (1) *Yin-Yang*, Centre International Ignoramus, 26 Rue Lamartine, Paris 9eme, France. (2) *The Macro-Biotic Monthly*, Ignoramus Press, Los Angeles, California. (3) *The Order of the Universe*, Order of the Universe Publications, Box 203, Prudential Center Station, Boston, Massachusetts.

Shopping guide (p. 209-10): Those marked with an asterisk (*) welcome mail orders. (1) Chinese products (incl. tofu, woks): Wo Fat Co., 16 Bowery, New York, N.Y. 10013. Mon Fong Wo Co., 36 Pell St., New York, N.Y. 10013. Yuit Hing Market Corp., 23 Pell St., New York, N.Y. 10013.

(2) Organic fruits, vegetables and whole grains. Also oil, sea salt and many other health foods. * Good Earth-Natural Foods, Inc., 1336 First Ave., New York, N.Y. * Nature's Cupboard, 80 E. Seventh St., New York, NY. Living Foods Coop, Inc., 165 Ninth St., New York, N.Y. * Greenberg's, 125 First Ave., New York, N.Y.

The next two stores are the same as above but no fruits and vegetables: * Brownie's Natural Food Stores, 21 E. 16th St., New York, N.Y. * Kalustyan Orient Export Trading Corp., 123 Lexington Ave., New York,

(3) Japanese food products: Bancha tea, seaweed, Japanese vegetables, Japanese knives, soba and udon noodles, dried lotus, burdock, tofu, sesame seeds, bonito and other dried fish, tawashi [vegetable scrubbing brush], daikon [giant white radish]: * Japan Mart Inc., 239 W. 105th St., New York, N.Y. Katagiri & Co., Inc., 224 E. 59th St., New York, N.Y. Tanaka (K.) Co., Inc., 326 Amsterdam Ave., New York, N.Y.

(4) Wholesale organic products and all macrobiotic products: Chico San, Inc., 1262 Humboldt, Chico, California. The Infinity Co., New York, N.Y., 10012. Balanced Foods, 2500 83 St., North Bergen, N.J. [New Jersey]. Specialty Food, 116 W. Houston St., New York, N.Y.

Glossary (p. 211-15): Aduki or azuki beans, bancha, bonito flakes, brown rice, bulgur, burdock, cellophane noodles, chapati, couscous, daikon, ginseng tea, gomasio [gomashio], hiziki [hijiki], Japanese knife, kasha, kokkoh [weaning food for babies], kuzu, lotus tea or kohren tea, miso, mu tea, nituke [nitsuke], nori, sea salt, semolina, soba, soy or soya sauce (see tamari), suribachi, tahini, tamari, tempura, tofu, udon, umeboshi plums, vegetable brush or tawashi, wok.

A few glossary definitions: "Tamari: A pure soy sauce concentrate, a byproduct of miso. Commercial soy sauce is not recommended; macrobiotic stores have the right kind."

"Tofu: A curd made of the liquid in which crushed soybeans have been softened; it is solidified by boiling" [sic].

Note: This book was published in London in 1969 by Anchor Press, Ltd. (201 p.). Address: New York.

4617. Borgstrom, Georg. 1968. Principles of food science: Food microbiology and biochemistry (Vol. 2). New York, NY: Macmillan. xiv + 473 p. Index. 26 cm. [9 ref]

• **Summary:** In Chapter 4, "Fermentation," is a section titled "soybeans" (p. 110-12) which discusses: Tofu or teou-fu, miso, sufu, natto, tempeh, taotjo and ketjap (shoyu / soy sauce).

"Frozen tofu (kori tofu, or koya dofu) is tofu that has been frozen for several weeks and dried. Aburage is fresh tofu dried in deep fat. Namage is fresh tofu that has been surface-fried."

In Chapter 10, "Trends in food utilization," is a section titled "Soybean" (p. 297-301) which discusses: Soybean products and fermented products ("These foods are all rather unknown among Western peoples, although they are eaten by millions of people and constitute some of the most common foods on earth." Yet some "typical oriental soy foods," such as tofu and tempeh, are finding acceptance in the West. One soy product that is widely used in most parts of the world is soy sauce. Soy flour and soy grits were first made commercially in the USA in the early 1930s. Milk made from the soybean is important in China {see Vol. I, Chap. 15}. Fermented products include taotjo, soy sauce or ketjap). Soybean protein, including soybean oil and defatted soybean oil meal (In 1961, 9.5 million tons of soybean oil meal was used in the USA, mainly for animal foods, with special grades used for food and industrial products, such as isolated soybean protein. Purified proteins extracted from dehulled and defatted meal, when toasted, are used in "Civil Defense emergency rations" and by the "international organization Meals for Millions." Some 90% of the processed soybean oil in the USA now goes into food uses. Soybean oil is now the most important ingredient in oleomargarine {see Fig. 10.1}. About one-third of the soybeans moved off the farm are exported; Japan is our biggest customer {taking about 57%} followed by Western Europe {27%}, Canada {8%} and Israel {5%}). Soybean uses (Despite its nutritive value, "the soybean is not looked upon with favor in many areas" for two main reasons: it does not soften well during cooking and it is difficult to digest. Many other legumes share these problems, but they are generally require less cooking. When soy flour is used, alone or with cereal flours, the drawbacks almost vanish. "Soybean milk is not comparable to animal milk or human milk except in protein content." And it usually has an unpleasant, bitter taste, but this can be removed at least cost by bulk processing. When soybean curd is made in the typical way, "many nutritious components are lost," yet it is easy to digest. Soy sauce can be used only as a condiment because of its high salt content. Germinated soybeans make an excellent vegetable, which is rich in vitamin C).

Table 10-1 (p. 300) shows utilization of soybean oil (in millions of pounds) (1947-49 to 1967). The columns are: Shortening (the largest use and steadily increasing), margarine, cooking, salad and other edible oils (No. 2), total for food uses, total nonfood uses.

Toasted soy protein (Made by General Mills, starting in Belmont, Iowa, and named Hi-Pro and Protein Plus. "The Belmont plant has been running at capacity to supply for American Civil Defense stockpiling of toasted soy protein"). MPF (Multi-Purpose Food) made by a joint venture between General Mills and the Meals for Millions foundation. Gelsoy (the "first vegetable protein found to have gelling properties"). Promine (an edible soy protein). Fibroprotein (soy protein spun into filaments). Soybean oil (The initial purpose of the U.S. soybean crushing industry was to obtain oil. The residual meal was considered virtually useless).

Chapter 13, titled "The world food issue," is about world hunger, which is "an ever-present specter for 2.3 billion people of the present world population of 3.4 billion." These people are concentrated largely in warm parts of the globe. Also discusses "protein malnutrition" (the main problem) and the need for more animal protein. North America has an animal protein "intake nine times that of the Far East." A section on "Plant milks" (p. 428-29), which are made from pulses and cereals, includes a subsection titled "Soybeans" which begins: "Soybeans form the basis of the most widely used and successful plant milks in China, Hong Kong, Indonesia, and the Philippines. Such milk has recently become available in Europe and the United States, primarily for clinical purposes"—for children allergic to the proteins in cows' milk.

Notes: Many references, divided into English and non-English, books and papers, are given at the end of each chapter. Address: Michigan State Univ.

4618. Bragg, Paul C. 1968. *How to keep the heart healthy and fit* [1st ed.]. Burbank, California: Health Science. 128 p. Illust. No index. 21 cm.

• **Summary:** The book begins with Bragg telling his [at least partly fictitious] life story: He was "born with a weak heart—a 'blue baby'—on a plantation deep in the heart of Virginia. During the first 14 months of life, he had to fight for his life. From infancy he suffered severe attacks of heart palpitation. At age 8 he was stricken with rheumatic fever and for 11 days hovered between life and death.

His weak heart prevented him from enjoying the activities of a normal, healthy country boy. Along with this weak heart he developed other physical weaknesses—sinusitis, asthma and bronchitis. Finally in his teens, he came down with tuberculosis. He spent several years in large sanatoriums in Denver, Colorado, and at Lake Saranac (within Adirondack Park, northern New York state). Death sentences were pronounced upon him; there seemed to be no hope for his survival. Then he was "miraculously inspired to

go to a famous sanatorium in Switzerland." There the famous Dr. Rollier, using only the natural methods of air, water, sunshine, exercise, and good nutrition, restored his "broken body to buoyant, radiant health."

In a short period of time he rebuilt his body and "started his climb toward super-strength and energy!"

At about this same time, he made the greatest decision of his life, to devote his life "to helping others to finding the treasure he had found—Priceless Radiant Health!" He had "found the magic formula of Natural Living" and now he wanted to pass it on to others.

In Bragg's well-balanced diet, one-fifth should be protein (animal or vegetable). Among the foods he recommends are "soya beans" (p. 76-78) and lecithin (p. 83). The soybean is the richest source of lecithin—and the most widely used (p. 83).

"Soybean powder for healthy heart and nerves: I have been recommending the use of soybean and soybean powder to health-conscious people of this country for more than 50 years" (p. 84). Bragg's "Pep" Drink (easily made at home) includes raw wheat germ, 1 tablespoon pure Soy Powder, 1 banana, and 1 tablespoon lecithin (powder or liquid) (p. 85).

In the section "Delicious Chinese recipes promote heart health," a recipe for "Mushroom chop suey" (p. 121) states: "Put these mixed vegetables into a skillet and add unsaturated oil such as corn oil, soy oil, safflower oil or olive oil. Garlic may be added if you enjoy it. (We do. We feel that garlic is a most important food to help keep the pipes of the body free from rust.) Then add a tablespoon of liquid aminos, which gives the Chinese soy sauce flavor."

Note 1. This is the earliest document see (Aug. 2011) that contains the term "liquid aminos" or "Bragg aminos" or "Bragg liquid aminos." There are no ads in this book for this product or any other food product.

Note 2. This is the earliest document seen (Sept. 2011) in which Paul C. Bragg claims to have been born on a plantation (in Virginia).

Note 3. This is the earliest document seen (Sept. 2011) in which Paul C. Bragg claims that he suffered from rheumatic fever and almost died from it.

Many useful illustrations in the front of the book show the heart, circulatory system, blood vessels, arteries, lungs, etc. The cross section of a healthy artery and a blocked artery. The urinary system. The heart is a muscle, not an organ.

Photos show: (1) Paul Bragg in a "weight lifters" outfit, showing his muscular body. (2) Paul Bragg reading a book, with his [adopted] daughter Patricia Bragg reaching both arms over his shoulders and also holding the book. (3) "Famous pioneer health team: Paul C. Bragg and Bernarr Macfadden." (4) Paul Bragg, smiling, standing next to Duncan McLean, who is holding a small barbell in each hand over his head. A photo (on the last page of this book) shows Paul Bragg and Duncan McLean (a champion sprinter, age

83) holding up Patricia Bragg in Regents Park, London. All are smiling. Address: N.D., Ph.T., Life Extension Specialist, Box 310, Burbank, California 91503.

4619. Dickens, Charles; Stone, Harry. 1968. Uncollected writings from *Household Words*, 1850-1859. 2 vols. Bloomington, Indiana: Indiana University Press. xx + 716 p. Illust. Index. 24 cm.

• **Summary:** Edited, with an introduction and notes by Harry Stone. "The grocer's hot pickle's, Harvey's Sauce, Doctor Kitchener's Zest.

Note: This collection is based on 19 volumes of this weekly periodical that were published from 30 March 1850 to 28 May 1859 in London by Bradbury & Evans. Charles Dickens lived 1812-1870. Address: England.

4620. Hahn, Emily. 1968. *The cooking of China*. New York, NY: Time-Life Books. 206 p. Illust. (many color photos). Index. 28 cm. Series: Foods of the World.

• **Summary:** Another superb work in this superlative series from the editors of Time-Life Books. This book is about cooking in China, where the author lived (in Shanghai), before the 1949 Communist revolution.

Contents: Introduction: The cooking of the world's oldest civilization. 1. An ancient and honorable art. 2. "Chinese cooking" in your own kitchen. 3. Secrets of savor and spice. A reverence for good food. 5. Oriental staff of life. 6. Gentle teas and strong spirits. 7. Feasts for festivals. 8. A cuisine for all continents.

China, the world's oldest existing civilization, has the world's most ancient cuisine—as well as one that is both great and profound (p. 6). When the Red Guards of China's Cultural Revolution appeared in the 1960s, they "attacked every symbol of what they regarded as bourgeois culture. Among the targets in Peking were the city's fine restaurants." In the process they destroyed much of China's culinary heritage—but only inside of China (p. 7). An article by Peggy Durdin in the *New York Times* was titled "Mao's great crime against cuisine" (p. 184). Chinese food is, of course, about life, but it is also about health, and it can resonate on numerous symbolic levels (p. 7).

The southern provinces of China, Fukien, Kwantung, Yunnan, and Kwangsi, enjoy tropical temperatures year round and more than 80 inches of rain. Here rice is the main crop. Yet China is a mountainous country, with 60% of its land at elevation 6,500 feet or higher; only 11% of its land can be cultivated (compared with 80% in the USA) (p. 10). Fukien, a coastal province to the south, makes the best soy sauce in China, and stewing is called "red cooking" because of the color imparted by the soy sauce (p. 16, 42).

Vegetable oil is very important in China because the Chinese rarely use butter (p. 29). "For protein the Chinese depend heavily on the soybean, which has for this reason been called the cow of the East." Soybean oil is used for

cooking. Soybean milk is a good substitute for cow's milk. And "doctors, even Western doctors—prescribe it for babies who cannot get mothers milk and are allergic to cow's milk" [sic]. From soymilk one can make "bean curd, an exceptionally high-protein food known in China as 'the meat without bones.'" Bean curd is made by curdling soybean milk with gypsum, then pressing the curds into pieces about 3 inches square by ½ inch thick. "The thickened curd skin [sic, yuba] is a food by itself, with a more concentrated flavor. Fermented bean curd [fermented tofu] tastes much like cheese." Both soy and mung-bean sprouts are used in China, "In one form or another the soybean can be found in dishes eaten at every meal" (p. 29).

A two-page color photo spread and legend (p. 61-63) shows (numbered) basic Chinese ingredients, incl. "13. Fresh bean curd. 14. Dried bean-curd skin" [yuba]. Buddhist monks and nuns in China are strict vegetarians; special foods that simulate meat have been developed for them. These include vegetarian "duck made from crisp beancurd skin, colored and shaped to look like the bird's flesh" and "chicken roll in *hoisin* sauce, the 'chicken' made of soft soybean curd" (p. 64, 67, 70).

Note: This is the earliest English-language document seen (May 2012) that uses the term "beancurd skin," apparently to refer to yuba.

A full-page color photo and legend (p. 74-75) shows (numbered) Chinese sauces and condiments, incl. "1. *Hoisin* sauce. 3. Soy sauce. 8. Yellow-bean paste, or thick bean sauce. 11. Fermented black beans. 14. Red bean [azuki] paste." "Among the best known of Chinese seasonings is soy sauce, which was mentioned in several Confucian classics as early as the Fifth Century B.C." [sic]. Other condiments made from soybeans are bean paste (for preserving and flavoring meat) and *hoisin* sauce (widely served with Peking duck). "It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of superb soy sauce requires 'as much art in its preparation as good French wines'" (p. 74-75, 77).

The controversy over M.S.G. is discussed. "A really god Chinese chef considers it a questionable shortcut for giving taste to second-rate foodstuffs, but most Chinese cooks admit that its use in certain dishes is perfectly valid" (p. 77-78).

The emperor Chien Lung (1735-1796), 4th ruler in the Manchu [Qing] dynasty, wrote an *Ode to Tea* (p. 91). In China there is an intimate association between eating and health (p. 91).

Recipes: "Steamed bass with fermented black beans *Tou-shih cheng hsien yu* (with "2 teaspoons fermented black beans," soy sauce, Chinese rice wine, and shredded fresh ginger root, p. 104).

Most festivals (each with a feast) in China are based on events of agricultural importance; the two most important are New Years and the Moon Festival (p. 155, 162, 164-65). A Peking duck is "brought to the exact degree of plumpness

and tenderness through force-feeding,” then roasted slowly, suspended by hooks, in a mud-lined oven “until the thick, fat skin becomes golden in color. This crackled skin is the choice part of the dish.” The skin, a piece of the meat, a spring onion, and thick, sweet hoisin are served enfolded in a thin wheat-flour “pancake” (p. 158, 15).

The history of chop suey (unknown in China) and chow mein (had an honorable origin in China) are discussed (p. 178-79).

The first wave of Chinese to America came with the gold rush and transcontinental railway. Most were laborers from southern China. The first Chinatown in the USA was established in San Francisco (1850s), followed by New York City (Manhattan, 1870s). Most early American Chinese restaurants reflected their social status, serving inexpensive foods. In the early 20th century, as China’s Republican revolution was gaining momentum, a second wave arrived to study. These young people, also mostly from southern China, came from far more prosperous backgrounds than those in the 1st wave and they wanted better food. Restaurants were started or upgraded to suit their tastes. Thus, it “was the southern school of cookery that first spread over the world outside China” (p. 179).

China has three great regional cuisines: Cantonese (southern), northern, and Szechuan (p. 179). Six photos show “The Americanization of the fortune cookie: Assembly line at a factory in New York City’s Chinatown.” A two-page spread shows many of the “fortunes” found in fortune cookies (p. 195-97).

“A guide to ingredients in Chinese cooking” (p. 198-99) includes: Bean curd, fresh: Square. Bean-curd skin [yuba] (“Thin stiff sheets of dried bean curd. Sold by weight... {5 to 6 sheets weigh about 1 ounce}”). Bean sprouts (“Young sprouts of the mung bean”). Black beans, fermented (“Strongly flavored, preserved black soybeans.” Sold in cans or plastic bags). Brown bean sauce (“Thick sauce made from fermented yellow beans [huang dou = yellow soybeans], flour and salt. Sold in cans of 1 pound or more”). Hoisin sauce (“Sweet, brownish-red sauce made from soybeans, flour, sugar, water, spices, garlic and chili for use in cooking. Sold in 1-pound cans and up”). Oyster sauce (“Thick brown sauce with a rich flavor, made from oysters, soy sauce and brine”). Red bean paste (“Thick, sweet paste made from red soybeans” [sic, azuki beans]). Salted eggs and thousand-year eggs. Sesame seeds and sesame seed oil. Soy sauce (“Pungent, salty, brown liquid made from fermented soybeans, wheat, yeast [sic, mold] and salt”). Vegetable steak (“A vegetarian food that looks like a small beefsteak but is made from wheat gluten. Sold in cans”). Address: Author, lives in England with her husband.

4621. Hahn, Emily. 1968. *Recipes: The cooking of China*. New York, NY: Time-Life Books. 119 p. Illust. (many color photos). Index. 23 cm. Series: Foods of the World. Revised

ed. 1973, 1980, 1981. [1 ref]

• **Summary:** A recipe for “Shua-yang-jou–Mongolian fire pot (rinsed lamb)” (p. 28-29) calls for “1 tablespoon fermented red bean curd, mashed.”

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term “red bean curd” or that uses the term “fermented red bean curd” (or “fermented red beancurd”) to refer to red fermented tofu.

The excellent “Guide to ingredients used in Chinese cooking” (p. 115-19) is identical to that found in the larger companion volume, *The Cooking of China* (Hahn 1968, p. 198-99). Address: Author, lives in England with her husband.

4622. Hawkes, Alex D. 1968. *A world of vegetable cookery: An encyclopedic treasury of recipes, botany and lore of the vegetable kingdom*. New York, NY: Simon and Schuster. 274 p. See p. 213-14. Illust. by Bill Goldsmith. 29 cm.

• **Summary:** The section titled “Soybean” focuses on green vegetable soybeans, noting: “In the Orient and increasingly in such places as Hawaii and California in this country, green Soybeans are for sale as a fresh vegetable. The plants have pod-laden branches, each short, narrow, very hairy pod containing three or four edible seeds. The fresh Soybean pods are washed, then boiled in lightly salted water until they are soft. Drained, they are seasoned to taste with soy sauce and a bit of sugar, then served, the beans being shucked from the pods at table.”

There is a casserole recipe named “Miss Diddle’s Green Soybeans.” Also discusses briefly dried soybeans, roasted soybeans “ground into a meal and into flours of various degrees of coarseness [roasted soy flour] and “even used as a substitute for coffee, sprouted soybeans (a recipe is given for “Soybean Sprouts Cantonese”), soy oil, soy sauce, tofu, and miso. The author notes: “I often prepare my own version of *miso*, using dried navy or other white beans (see p. 44), instead of utilizing the commercial imported variety.”

“Tôfu is the curd of cooked, mashed white soybeans, which has been precipitated, then pressed into cakes. It is perishable, hence most conveniently bought in cans, water-packed. The rather soft but firm cakes—sometimes baked or even fried prior to canning, and respectively known as *yakidôfu* and *aburage*—have a bland flavor, vaguely reminiscent of a custard. It is just this suavity which makes *tôfu* so valuable, since it quickly absorbs the flavors around it in such things as soups, *sukiyaki*, and *mizutaki*, yet retains its exceptionally pleasant substance. *Tôfu* is to be found in many of our domestic markets, imported from Japan. With its high content of readily digestible protein, it should be better known by all Americans.”

4623. Jones, Dorothea Van Gundy. 1968. *The soybean cookbook: Adventures in zestful eating*. New York, NY: Arc Books, Inc. ix + 240 p. Foreword by Ruth Stout. Index. 21 cm.

• **Summary:** This lacto-ovo-vegetarian cookbook is identical to the original 1963 paperback edition by the same title except that this is a hardcover edition and the publisher is listed as Arc Books rather than Arco Publishing. The publisher's address is the same. Address: Arlington, California.

4624. Kikkoman Shoyu K.K. 1968. *Kikkôman Shôyu shi* [History of Kikkoman Shoyu]. Noda, Japan: Kikkoman Shoyu K.K. 804 p. Illust. No index. 26 cm. [113 ref. Jap; eng+]

• **Summary:** This is the third (and best) major history of Kikkoman, written largely by Mr. Morio Ichiyama. Contents: Preface. I. Overview—1. Fermented foods. 2. Japanese shoyu. II. Present status: 1. Overview of Noda (p. 15): Location, overview photo of city area. 2. Main building and facilities (p. 18): Main office, Tokyo branch, Osaka branch, plant No. 7, Kansai plant, inside the fermentation plant, bottling plant, sake making plant, food manufacturing plant, Goyo Gura traditional shoyu facility, Central Research Center. 3. The distribution and view of the buildings (p. 36): Distribution chart of the main buildings in the Noda area, view of the plant, water providing facility. 4. Products (p. 41): Shoyu, products made by food manufacturing department and sake brewing department. 5. Sales and marketing (p. 44): Domestic, overseas. 6. Welfare facilities (p. 48): Health center house, attached hospital, cultural gymnasium, dormitory and company housing quarters. 7. Connected enterprises (p. 50): *K.K. Senshûya (Chiaki)*, foundational juridicial person / (*kôfûkai*), foundational juridicial person / (*Noda Sangyo Kagaku Kenkyusho*), *Sôbu-Tsûun K.K.*, Kikkoman International, Inc., Tone Coca-Cola Bottling Co., Kikko Food Industry K.K., Seishin Seiyaku K.K. (pharmaceutical company), Mann's Wine K.K. 8. The staff members (p. 58).

III. History. 1. The history of shoyu (p. 61): History of shoyu, origin of character meaning shoyu, Daishokuzen and Shoin, Zashin of Shoin, the beginning of shoyu exports (p. 76), the first shoyu plant overseas, shoyu which was protected by the Lord of the Han (*Hanko*), references to Noda Shoyu in literature. 2. Trademarks (p. 86): The change of trademark, the origin of the Kikkoman trademark. 3. Management of the organization (p. 91): Changes in organization, changes in management, changes in bookkeeping. 4. Production (p. 118): History of the method, raw materials, processes, containers, sauce, new seasonings, various kinds of sake. 5. The plant (p. 231): Noda plant, Kansai (Osaka-Kyoto area) plant, sake making plant. 6. Research center (p. 265): History of the research center, achievements. 7. Businesses (p. 269): Sales, wholesale, business customs, export, transportation, prices, advertising, business offices, overseas activities. 8. Labor (p. 375): Changes in labor conditions, the labor union, labor relations board. 9. Welfare (p. 393): Health insurance

union, medical facilities, dormitories for single workers and company housing quarters, day care center, travel club, fire department, committee for funerals, weddings, etc. (*Kyozaikai*), athletic association, cultural committee, Noda Shoyu co-op.

IV. Pre-history—Before the company's establishment.

1. Natural and environmental history of Noda (p. 415). 2. Development of the shoyu industry in Noda (p. 432). 3. Family tree (p. 440). 4. Brief description of the major contributions (p. 448, incl. Kotohira Shrine, Kameo Mogi's theory of business, founding of the Senshu-kai, the man who emphasized thrift and simplicity, the 1st president of the company, the 2nd president—Mogi-Honke, the 3rd president Chu-do Kikkoman Kuramoto).

V. Company history. 1. Developmental stage and established stage (p. 469): Outline, foundation of the company, beginning of the business, developments and labor problems, overproduction and the business world. 2. The new order and the controlled economy during World War II (p. 494): Outline, changes during the war, process under controlled economy during the war. 3. The U.S. occupation period (p. 519): Outline, development of democracy, danger of the business world, changes caused by international conditions. 4. Development period of new Japan (p. 547): Outline, quickening of economic growth, advancing technology, a step forward to modernization, diversification of the business.

Appendixes: 1. Company time table (20 p.). 2. Charts and graphs concerning the company's history (5 p.). 3. Food history and shoyu (193 p., including many old illustrations, photos, a 38-page chronology of Japanese food culture {p. 137-75}, and a bibliography {p. 191-93}). Closing remarks (2 p.). Contains many photos, illustrations, and copies of early documents.

Note: Ichiyama is not listed in this book as the author, even though he wrote it. On the copyright page the author is given as Kikkoman K.K. Continued. Address: Noda, Japan.

4625. Kikkoman Shoyu K.K. 1968. *Kikkôman Shôyu shi* [History of Kikkoman Shoyu (Continued—Document part II)]. Noda, Japan: Kikkoman Shoyu K.K. 804 p. Illust. [113 ref. Jap; eng+]

• **Summary:** The section on the beginning of shoyu exports (p. 76) states that the exporting of shoyu from Japan began when a group of merchants were allowed to do business after the closing of Japan during the Kan-ei era (1624-30) of the early Tokugawa period. In 1641 a group of Dutchmen moved to Nagasaki from Hirado. At that time, two merchants already in business were allowed to conduct trade: Their names were Koyanagi Heizaemon and Sameya Hisazaemon. They established a stock company with 16 shares. The shareholders were called *Dejima shoshiki urikomi shônin*. To the original two merchants, in 1653 four more were added and in 1666 ten more were added,

making a total of 16. These were called the “Comprador Merchant Guild” (*Konpura Nakama*). They started exporting shoyu from Japan. According to documents in the Hague: 1668–It was exported to Coromandel on the southeast coast of India. 1670–To Ceylon. 1699–To Ceylon, Bengal, and Nakabatanam. 1716–To Coromandel. 1717–To Suratt, in northwest India. Furthermore, the Dutch took shoyu to Europe. So we can see that in the late 1600s and early 1700s the people of Europe started to use shoyu.

The section on exports (p. 294-99) states that it is difficult to tell when shoyu from Noda was first exported from Japan. In 1879 a person named Domoto (?) got one Kikkoman brand and its logo (in the shape of a hexagon, but not the current Kikkoman logo) registered in California, and then he started to sell the product there. In about 1899 the Saheiji MOGI family’s Kikkoman brand shoyu began to be exported to Hawaii via Okada-shoten, a company with offices at Koamicho 3-5 in Tokyo. In 1907 the Verleysen-Nyssens company in Brussels, Belgium, began to import shoyu in large kegs. They repackaged it in grey ceramic bottles of their own design, then published a pamphlet in French (see p. 295) describing the product (which they called “Soya”) and showing a photo of two sizes of bottles. A 1.2 liter bottled retailed for 1.75 francs. Page 296 shows a gift coupon from the year 1922 from America. When a person buys a bottle of shoyu, he or she gets this \$0.50 coupon.

Excerpts from Appendix 3 (p. 152+): Chronology of food history. 1610–Tamari was made in Nagoya using only soybeans when the Nagoya Castle was built. 1615–Dried nori sheets invented in Edo.

1616–Shoyu started to be made in Choshi, Shimousa.

1661–Takanashi (1661) and Mogi (1662) families in Noda started to make shoyu and miso.

1666–Usukuchi shoyu started to be made in Tatsuno, Hanshu / Banshu by a certain man. And Bizen shoyu started to be made in Bizen.

1698–Shoyu wholesaler (*tonya*) first appeared in the literature in *Sonazaki Shinju*, by Chikamatsu Monzaemon.

1781–Kanro shoyu starts to be made. Mr. Takada offered shoyu to Yoshikawa-ko and received the admiration / appreciation of *kanro* (“sweet dew”).

1810–Choshi Shoyu received the *gozengoyô* Tanaka-gen han bakufu.

1829–The Takanashi house of Noda received the Bakufu’s order for shoyu (*goryomaru*). Address: Noda, Japan.

FG-Ja-117. 1 Aug. 1965 to 20 Feb. 1969. [Eng]

• **Summary:** In accordance with the Europeanization and instantization of Japanese coking styles these days, soy sauce consumption per capita has been decreasing. In 1957, total Japanese production of soy sauce exceeded 1.1 million Kl [kiloliters = 1,000 liters]. Thereafter, however, production stagnated and is currently at 1.2 million Kl.

There are more than 4,000 soy sauce manufacturers in Japan, however most of them are smaller enterprises, and only five have large factories. The big five produce 35% of soy sauce made in Japan.

About 160,000 tons of defatted soybean meal and only 15,000 tons of whole soybeans are used to make soy sauce in Japan. Address: Japan Shoyu Research Inst., #9, 3-chome, Koami-cho, Nihonbashi, Chuo-ku, Tokyo, Japan.

4644. Spilsbury, Calvin C. 1969. Three stages in Far East soybean markets. *Foreign Agriculture*. April 14. p. 6-8.

• **Summary:** Today soybean markets in the Far East, the original home of the soybean, have emerged from time-honored Eastern patterns and have differentiated into what may be called three types—traditional, transitional, and industrial. In traditional markets soybeans continue to be sold and used chiefly for human protein foods, and volumes traded are comparatively small. Also, volumes processed by modern methods are small. Transitional markets are characterized by larger volume, the modern processing of considerable quantities of soybeans for oil for human consumption, and the developing use of soybean meal for human food products and for high-protein animal feeds for emerging livestock and poultry industries. In industrial markets very large quantities of soybeans are efficiently imported, marketed, and processed for oils and fats for human use and for meal for vigorous livestock industries; at the same time soybeans are still used in traditional foods and soybean meal is used to make a variety of new food products.

Korea is a traditional soybean market. Nearly all soybeans are processed into human protein foods such as synthetic milk, flour, paste for soup [miso], curd for consumption in more solid form, mash, sprouted beans, soy sauce, and even fermented “cheese”. About 60 to 70% of the domestic crop of about 200,000 tonnes annually is sold in the country’s food markets directly to private and commercial consumers. Total imports in 1968 were 28,000 tonnes—all from the U.S.

Most processing of soybeans for human use is done in individual homes by housewives. For example, nearly every Korean family makes a product known as kochojang, or hot bean mash, which consists of powdered, fermented soybeans mixed with red pepper, salt, and water. Some foodmaking (soybean curd and soy sauce) is organized into cottage industry. Most of the soybeans imported from the U.S. are made into traditional soybean foods for rations for the

Korean army by one large food factory. Crushing soybeans and other oilseeds for oil is done by about 100 small mills throughout the country. The estimated capacity of all the mills added together is about 200,000 tonnes per year of oilseeds of all types. The largest mills have capacities less than 25 tons per day.

In Taiwan, very little of the imported soybeans are used to make traditional Far East foods. The larger crushing and extraction facilities are clustered around large cities—Taipei, Taichung, Tainan, and Kaohsiung. Only the last is a port, and even there no mills are located on deep water. Imported soybeans are discharged by ships’ equipment onto docks, where they are bagged and then stored. Bagged beans are sent by truck or rail to inland processing plants. Modern deep-water bulk discharge facilities are to be built at Kaohsiung along with storage for soybeans and grain.

Japan is the giant of Far Eastern markets for U.S. soybeans. One of the most important recent improvements in soybean logistics has been the development of modern deepwater grain and soybean terminals where soybeans can be rapidly discharged from ships’ holds directly to storage, interim transportation, or crushing mills. The first fast-discharge elevator on deep water for soybeans or grain was built by an American-Japanese company. At present four terminals have been built in the Tokyo and Kobe areas, and two more are under construction. Unloading is accomplished by pneumatic suction tubes with capacities of 600 to 800 tons per hour (about 6,000 tonnes per 8-hour day). In Korea and Taiwan, facilities for the fast unloading of large tankers do not exist. Many large, new crushing mills have been built on harbor frontage rather than inland so that they can benefit from bulk transportation methods. The annual capacity of the 15 large, modern mills in Japan is estimated at 1.8 million tons of soybeans. The first mills in Japan were in the mountains because most oilseed crops were grown there. 4646. Binding, George J. 1969. The soya bean—a vegetable full of body-building protein. *British Vegetarian*. March/April. p. 155-57.

• **Summary:** The “soya bean has the highest protein content of any vegetable. As such it is God’s gift to man and is a must for vegetarians. In the Far East it is known as ‘the meat of the soil.’” The author spent many years in East Asia,

where he studied the foods of the region. Soya beans can be used to make a wide variety of foods; the author briefly describes the following: Bean shoots [soy sprouts], soya bean milk, bean curd or vegetable cheese [tofu], yuba, natto, miso, soy sauce, and boiled whole soybeans.

Since World War II, America has become the largest producer of soya beans. Before that war, England was one of the largest importers of soya beans in the world. "All vegetarians should make certain of a sufficient daily intake of protein. There's no more effective and satisfying way of doing so than eating soya beans." Address: M.B.E.

4647. Stanton, W.R.; Wallbridge, A. 1969. Fermented food processes. *Process Biochemistry* 4(4):45-51. April. [34 ref]
• Summary: "Fermentation of starch tubers such as cassava with fungal organisms such as *Rhizopus* can result in a food product with significant increases in protein content." The cassava dough is inoculated then extruded (like noodles) into fermentation trays.

Table 1 shows many different "vegetable cheeses and related fermented foods." The first such food mentioned is minchin, made from wheat [gluten] in China. The microorganisms used are *Paecilomyces*, *Aspergillus*, *Cladosporium*, *Fusarium*, *Syncephalastrum*, *Penicillium*, and *Trichothecium* species. This is an anaerobic fermentation of wheat gluten for 2-3 weeks at room temperature during the winter, with 10% salt added. The product is cut into strips and used as a condiment. Eaten as a meat substitute, it is rich in protein, nutritious, and healthy.

Fermented soy products include sufu, tempeh, meitauza, Hamanatto, shoyu, miso, and natto. Address: 1. PhD, Head, Microbiology Section, Tropical Products Inst., London, England; 2. Parke Davis Co.

Statistical research on the effect of blending]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 47(4):237-43. April. [10 ref. Jap; eng]

• Summary: "This paper reports mathematical investigations into the effect of blending on the preference of soy sauce

and the correlation among 3 components." Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Noda, Chiba, Japan.

4650. Dosti, Rose. 1969. Happy holiday for Japanese. *Los Angeles Times*. May 8. p. H20.

• Summary: On April 29th, the Emperor of Japan celebrated his birthday, and wherever Japanese live there were banzai cheers. The hurrahs were especially loud in Los Angeles, for more Japanese-Americans live here than in any other part of the United States.

A photo shows Japanese Consul General Kanji Takasugi, with his wife, Shinako. They hosted a party for 800 guests honoring the Emperor's birthday.

The meal is described and recipes are given for tempura and its dipping sauce (*tentsuyu*), based on soy sauce, mirin and grated daikon (white radish). "Plain rice is served with a thin soup called omiso [miso soup] to which soy bean cakes (tofu) and green onion pieces are added."

4651. *Time*. 1969. Cancer: A clue from under the eaves. 93:81. May 9.

• Summary: This article discusses the work of Dr. David Seel, who has studied 919 cases of stomach cancer at the Presbyterian Medical Center in Chonju, South Korea. He thinks the culprit "may be a mold used in the preparation of a favorite Oriental delicacy, soya paste."

He explained that each winter, almost every Korean household makes "loaves of soybean mash" [*meju*, soybean koji, used to make Korean soy sauce and soya paste] and stores them in a cool, dark place, often under the eaves, where they become moldy. By early spring, a mycelium of black or gray mold covers the loaves. The Koreans scrape off this mold, then immerse the loaves in brine for a month. Finally, they pour off the black liquid, which is soy sauce, and "make the debris left in the crock into a stiff soya paste," of which some Koreans consume as much as five ounces a day.

Dr. Seel believes the "soya-paste molds" might well be a cause of stomach cancer in South Korea. He suggests there may actually be two causes of the problem: "The most widely used mold is *Aspergillus flavus*, some growths of which secrete substances called aflatoxins. For some animals, these are among the most powerful cancer-causing agents known. Moreover, says Seel, the stomach lining seems especially liable to damage, including cancer. Among Koreans who had both low vitamin A readings and a high consumption of soya paste, stomach cancer was twice as common as among other groups." Aflatoxins have also been found in peanuts, which are consumed by Southern Negroes, among whom vitamin A deficiency is known to be prevalent. A photo shows a person "immersing soya loaf [*meju*] in brine."

Note 1. For another perspective, see the *SoyaScan Notes*

interview on this subject with Dr. C.W. Hesseltine (Feb. 1981), an internationally recognized expert on aflatoxins.

Note 2. This is the earliest English-language document seen (March 2009) that uses the term “soya paste” to refer to miso, or to Korean-style miso.

4652. *Medical World News*. 1969. Is the staff of Asian life the stuff of cancer? 10(20):12. May 16.

• **Summary:** This article (under the heading “Late News of the Week”) seems to be based, at least in part, on a report in *Time* magazine (9 May 1969, p. 66). *Aspergillus flavus* is “a fungus often found in soya paste or soya sauce. These foods are prepared by molding [i.e. from meju]. *Aspergillus flavus* produces toxic metabolites called aflatoxins, apparently the most potent carcinogenic substances ever discovered.” Research on stomach cancer patients in Korea seems to support the theory that low intakes of vitamin A or a vitamin A deficiency may open the way to stomach cancer if the diet is loaded with carcinogens. A Korean team led by American missionary doctors [incl. Dr. David J. Seel, associate director of the Presbyterian Medical Center in Chonju] examined the socioeconomic, clinical, and dietary histories of 70 stomach cancer patients and 70 controls, matched by age and sex. “A striking finding was that the average daily intake of vitamin A for the control group was around 3,331 International Units, but for the cancer patients, only 2,853. ‘The typical Korean stomach cancer patient is apt to be a farmer with poor education, at the lowest income level,’ reports Dr. Seel. For the poor Korean farmer, soya loaves [meju] are a staple. The loaves are prepared each winter from a bean mash and stored for molding in a cool, dark place, often under the eaves of the farmer’s house.

“Should the American with exotic tastes limit his horizons to avoid carcinogenic intake? A physician attending the meeting assured MWN [*Medical World News*] that Occidentals who are Chinese and Japanese restaurant buffs have nothing to worry about, since they are probably fully protected by the quantities of vitamin A in Western diets.”

4653. Asao, Yasuo; Sakasai, T.; Yokotsuka, T. 1969. Shôyu no fûmi kettei ni okeru kôbo no yakuwari [The role of yeasts in the production of shoyu flavor]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 47(5):318-26. May. [12 ref. Jap; eng]

• **Summary:** Several yeast strains isolated from various kinds of shoyu mash were studied for their ability to produce good flavor in shoyu. Besides *Saccharomyces rouxii* (which is the most indispensable yeast for shoyu fermentation), *Torulopsis* strains were studied and found to play a very important role in producing good shoyu flavor.

Alkylphenols such as 4-ethylguaiaicol and 4-ethylphenol were produced by *Torulopsis* strains when they were added to the shoyu fermentation. These alkylphenols were not produced in mash fermented by *Saccharomyces rouxii*.

Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Japan.

4654. Photographs of Paul Hawken and Evan Root inside the Great Buddha at Kamakura, Japan, looking out the rear window. 1969.

• **Summary:** This Buddha is hollow and there are windows in the rear and a staircase up through the inside. This photo was taken shortly after Paul and Evan arrived in the spring of 1969.

Evan writes (Nov. 2010): “Paul and I went to Japan together, by boat from San Francisco to Yokohama. We took the *Brazil Maru* of the Mitsui OSK line. This was a combination passenger and freight vessel taking 15 days to cross with a one day stop in Honolulu, Hawaii.”

Q: Why did you go and why did Paul go? Was it Michio or Aveline Kushi’s idea? “In conversations with Michio, he often said, ‘when you go to Japan...’ such and such. He never said ‘if you go to Japan.’ I had been running Sanae Restaurant for about a year and a half (a long time in those youthful days). We had gone from a few loyal customers to lines down the block waiting to get in every night. I was starting to think about opening a second restaurant. Michio counseled me not to limit myself by getting tied down to business. At that time, the Boston Macrobiotic community was like a school, and people were coming from all over the country to study. Many of these people worked at Erewhon, Sanae or other macrobiotic enterprises. I wanted to take on a new adventure, and, at the same time make room for others to grow. I did not know exactly what to do, but Michio’s words ‘when you go to Japan’ filled that gap. Of course, I thought, the next step was to go to the country of origin of this movement.

“As far as the case with Paul, I cannot speak for him. My sense is that it was for cultural education plus business.

“Paul and I had been close friends since he arrived in Boston in the summer of ‘68. He hung out at the little Erewhon (303B), and picked my brain about everything. I wanted to start a restaurant and convinced Aveline that Paul was the best man to take over the store. When this was settled, Martin Russell and others filled in at Erewhon while Paul and I took a drive away car out to California so he could arrange to make the move to Boston. On the way, we stopped in all sorts of places to give classes in macrobiotic philosophy and cooking. We also visited Jacques and Yvette DeLangre, Reme’s ranch and Chico-San, places where food processing was going on (Reme’s tekka [miso] and onion concentrate were excellent).

“It seemed like Paul and I were both on the same timetable in terms of needing some new horizons, so it was convenient and natural that we went at the same time. Though Erewhon paid for his trip, and Sanae paid for mine, we both went on business visas connected to Erewhon.”

Q: Did you stay together or see each other often?

“Our arrival was celebrated by a big dinner party at Lima Ohsawa’s. Because we were Michio’s students, many people were there to welcome us. It was a testament to the esteem with which Michio was held in the Japanese *seishoku* [macrobiotic] community. Michio and Aveline themselves had not been back to Japan since leaving for the U.S.

“Note: *seishoku* is the word that was used for ‘macrobiotic’ in Japan when I was there. It is written with the characters for correct / proper + food. The word ‘macrobiotic’ was not commonly used in Japan at that time.

“Paul and I were taken here and there for some sight-seeing including the trip to Kamakura. We also met Mr. Kazama [of Mitoku]. After a short time together in Tokyo, Paul went to Osaka to stay with the Okada family and connect into the food scene and make connections for Erewhon. We saw each other from time to time, once to visit some food production sources like shoyu, rice vinegar and sesame oil. Another time we went on an outing to meet Kôji Ogasawara, the noted proponent of *Kototama* (the word soul); he was the author of a book titled *Kototama: The Principle of One Hundred deities of the Kojiki*. This was something Michio had told us about, related to a kind of esoteric history of Japan. Mrs. Okada took us to Ogasawara’s and we listened to him tell us about the *Kototama* and the *Kojiki*, though due to the language difference and the esoteric nature of the subject, it went largely over my head.”

Q: What of importance did each of you accomplish? How long did each of you stay?

“I recollect that Paul stayed somewhere around 9 months. During that time he did a lot of relationship building for Erewhon, as well as learning about foods and processing. Certainly, the relationship with Muso Shokuhin was deepened.

“As for me, after a month or two, I realized that I didn’t really know what I was doing over there. I had begun to take lessons in Japanese at the Tokyo Nippongo Gakko in Shibuya, but this was no easy language that I could pick up without really applying myself. There quickly came the day that I had to decide to let it go or really dig in. I choose to dig in. That became the what that I was doing. To me that was probably the single most important decision because it affected everything else. After about two years of study, I serendipitously met a teacher who could actually teach the language to Westerners. This was a revelation, and I began to learn the language according to the Japanese way rather than the translated from English way. This deepened my ability to relate and opened many doors for me. My last year there, I worked for Muso Shokuhin as their translator / international correspondent.

“I stayed in Japan for 3 years and 7+ months. By agreement if I did not return within 18 months, I let go of my 50% ownership position in Sanae Restaurant at a prearranged figure (a modest sum) and used that money to support my living and education in Japan until I knew enough to utilize

my Japanese in gainful ways.”

Note: This photo was sent by Evan Root to Patricia Smith and by Patricia to Soyinfo Center (Nov. 2010).

4655. *Guardian (England)*. 1969. Japan: Sculptures from a hard-boiled egg. July 16. p. 16.

• **Summary:** A recipe for Sukiyaki calls for “½ lb tofu (bean curd) in 1-in. cakes.” The dipping sauce includes “12 tablespoons shoyu.” Three suppliers of Japanese food products in London are listed. Mikadoya has two locations and Cydilda has one.

4656. Fukushima, Danji. 1969. Enzymatic hydrolysis of alcohol-denatured soybean proteins. *Cereal Chemistry* 46(4):405-18. July. [24 ref]

• **Summary:** The author studied the effect of denaturation conditions on the enzymatic digestion of soybean proteins. The maximum amount of hydrolysis was 5-10% higher in alcohol-denatured proteins than in water-denatured ones, although the initial speed of hydrolysis was slower in the former. The enzyme trypsin possesses the strongest ability to hydrolyze water-denatured soy proteins. During both denaturation treatments, and especially with water, some of the oligosaccharides in the soy flour disappeared. The degree of hydrolysis increases rapidly at the beginning then quickly slows. The acid-precipitated fraction and the whey fraction increased in their degree of maximum proteolysis after alcohol denaturation, as compared with water denaturation.

For soy sauce manufacture, only the maximum hydrolysis values with mold proteinases are important. Today most of the soybean meal used in Japan for making fermented soy sauce has been extracted with alcohol, and this has made a great contribution to increasing soy sauce yields. 4659. Spilsbury, Calvin C. 1969. The U.S. soybean market in the Republic of China (Taiwan). *USDA Foreign Agricultural Service*. FAS M-209. 20 p. Aug. Summarized in *Soybean Digest*, Nov. 1969, p. 52.

• **Summary:** Contents: Foreword, by Howard A. Akers. Introduction. The market. The oilseed crushing industry: Organization and mill location, number and type of mills, crushing capacity. Soybean oil and foods: Soybean meal demand for swine, soybean meal demand for poultry. Domestic oilseed supplies: Soybeans, peanuts, rapeseed, sesame, minor oilseeds. Marketing: Discharging and handling facilities, freight costs, government controls, purchasing, credit, quality problems, crushing margins wide. Appendix: Directory of major soybean and oilseed crushing mills, by region.

The Foreword notes: "This small island made near-phenomenal strides in both agriculture and industry in the late 1950s and early 1960s, and by the mid-1960s was recognized as a growing dollar market for U.S. soybeans and soybean products." In 1965 Taiwan moved from aid to trade status. In 1966 soybeans were removed from controls, and with the booming economy of 1967-68, imports of soybean from the USA—all paid for in dollars,—leaped to record levels.

Today, Taiwan has one of the world's highest economic growth rates. Since the end of World War II, and especially since 1955, the Taiwan oilseed crushing industry has undergone a complete technological transformation. The country now boasts 36 solvent extraction plants, many of them with modern continuous systems.

In Taiwan today, per capita consumption of soybeans for food is estimated at around 5½ pounds/year, compared with about 4 pounds in 1958. Soybean oil is now Taiwan's major source of edible fats and oils; per capita consumption is about 6 pounds/year compared with 4 pounds/year for peanut oil. Total per capita vegetable oil consumption is about 12 pounds/year. Per capita consumption of animal fats is 6-8 pounds/year.

Domestic production of soybeans rose from 4,000 metric tons (tonnes) in 1935-39 to 72,997 tonnes in 1968. Historically, imports of soybeans and soybean products have been large. In 1938 over 45,000 tonnes of soybeans and about 164,000 tonnes of soybean cake were imported, mainly from Manchuria.

In 1950, Taiwan's vegetable oil crushing industry was first organized into a trade association by a group of 20 crushers using screw presses. By 1967 some 86 crushers were members; this included 35 solvent-extraction operators. Known today as the Taiwan Regional Association of Vegetable Oil Expelling and Refining Industries, the group is located at 82 Nan Yuan Street in Taipei. Today in Taiwan

there are 99 oilseed crushing mills with a total crushing capacity of 1.3 million tonnes—up from only 400,000 tonnes in 1954-55.

As in many countries of East Asia, the Taiwanese consumer has a taste preference for crude peanut oil, sesame oil, and rapeseed oil, in that order. For this reason, soybean oil is often marketed as a blend with peanut or rapeseed oil.

The soybeans required for the manufacture of bean curd [tofu], soybean paste [jiang], [soy] sauce, milk, and other foods are largely produced domestically. In 1969 an estimated 40,000 tons of soybeans will be required for bean curd and 3,000 tons for soybean sauce. "In the rural areas of Taiwan, soybean milk cooperatives have been organized under government auspices. Members use their own soybeans and make their soybean milk at common soybean milk shops."

A map (p. 9) shows the island of Taiwan, each of its prefectures, and where each of four oilseeds (soybeans, peanuts, rapeseed, sesame) are produced. Tables show: (1) Production of four oilseeds in Taiwan from 1965-1968. Peanut production decreased from 88,000 to 74,000 tonnes. Soybean production increased from 66,000 to 73,000 tonnes but was still No. 2 after peanuts (p. 8). (2) Taiwanese soybean production, imports, and utilization from 1955 to 1968 (p. 11). 4663. **Product Name:** Erewhon Soy Sauce. Later renamed Tamari Soy Sauce.

Manufacturer's Name: Erewhon Trading Co., Inc. (Importer). Made in Japan by Marushima Shoyu.

Manufacturer's Address: 342 Newbury St., Boston, MA 02115. Phone: (617) 262-3420.

Date of Introduction: 1969. October.

Ingredients: Water, wheat, soybeans, salt.

Wt/Vol., Packaging, Price: 16 oz or 32 oz bottle, or 18 liter keg.

New Product–Documentation: Erewhon Trading Co. Inc., Wholesale Retail Catalogue. 1970. Jan. 1. "Soy Sauce (imported). Aged naturally in wooden kegs at least 18 months." In 16 oz or 32 oz bottle, or 18 litre keg.

Ad in East West Journal. 1973. Jan. 15-30. p. 24 (rear cover). "Erewhon visits a soy sauce factory [Marushima Shoyu]." Erewhon's "Tamari soy sauce" [actually shoyu] is made by Marushima Shoyu, located on Shodoshima Island. It is aged in cypress wood tanks for about 3 years.

4664. Lawler, Frank K. 1969. UNIDO catalyzes food processing: 44 developing nations being assisted this year to improve and establish food industries by action-oriented UN arm. Activities challenge food and equipment manufacturers. *Food Engineering* 41(10):69-72. Oct.

• **Summary:** Lawler visited UNIDO (United Nations Industrial Development Organization) headquarters in Vienna, Austria, to study activities and problems. Contents: Introduction. Opportunity knocks. Projects aid 44 countries. Needs know-how transfer (one need is for know-how for making textured protein isolates and simulated meats). Program is realistic. Recruits experts. Aims broad and specific (interested in isolated soy protein, fish protein concentrate {FPC}, and producing protein from petroleum). Supporting activities. How UNIDO was born (began activities in Jan. 1967; Light industry division is headed by M. Mautner). Wide scope of activity. Develops information (Special information is developed through discussion by technical experts at sessions arranged by UNIDO. One such session, on soy proteins, will be held in Nov. 1969, with attendance by invitation). Address: Editor, Food Engineering.

4665. Proceedings of All India Workshop Conference on Processing, Utilisation & Marketing of Soybean (Second). 1969. Experiment Station, Pantnagar, Uttar Pradesh, India. (Govind Ballabh Pant Krishi Evam Prodyogik Vishwavidyalay). 181 p. Unnumbered. Held 7-9 Oct. 1969 at Uttar Pradesh Agricultural University, Pantnagar (District Nainital). 26 cm. [73 ref]

• **Summary:** Contents: Objectives and sponsors. Programme. Working committees. Welcome address. Inaugural address. Papers: Technology of processing soybeans, by M.W. Formo. Technology of soybean utilization, by S.S. Kalbag. Marketing of soy products, by S. Ghose. The role

of the Government of India and international agencies in development of soybean in India, by P.R. Krishnaswamy & S. Ghose. Agro-economics aspects of soybean production in India, by I.J. Singh. Prospects for soybean foods in India, by N. Subramanian. Utilisation of soy flour for infant foods and foods for weaned children, by M.R. Chandrasekhara. Defatted and full-fat soy flours by conventional process, by F.E. Horan. Soy protein concentrates and isolates, by E.W. Meyer. Alternative processes for full-fat soy flours for use in developing countries, by G.C. Mustakas. Potential and use of soy protein for low-cost infant foods in India, by R.A. Hill. Potentials in marketing soy foods, by James J. O'Connor. Marketing soy protein products and problems of acceptance, by D.W. Johnson. Role of imitation milk in the feeding of tomorrow's population, by F.V. Kosikowski.

Conference sponsors: The Protein Food Assoc. of India; University of Illinois/USAID; Jawahar Lal [sic, JNKVV] Agricultural University; Indian Council of Agricultural Research; Uttar Pradesh Agricultural University. Address: Pantnagar, India.

4666. Sekine, Hiroshi; Nasuno, Seichi; Iguchi, Nobuyoshi. 1969. Isolation of highly proteolytic mutants from *Aspergillus sojae*. *Agricultural and Biological Chemistry* 33(10):1477-82. Oct. [17 ref]

• **Summary:** "Mutational experiments were performed to improve the protease productivity of the mutant strain X-816 previously induced by X-ray irradiation from *Aspergillus sojae* K.S. as a high protease producer."

A significant correlation was found between the protease production in wheat bran koji and the clear zone around a fungal colony formed on a special medium containing casein. Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4667. Claiborne, Craig. 1969. New restaurant that offers Japanese fare. *New York Times*. Nov. 7. p. 54.

• **Summary:** At Daruma (310 Third Ave., between 23rd and 24th streets), the broiled eel and the teriyaki are excellent. "Even the sukiyaki, which is not cooked at the table as it should be, is above average in its seasonings, and there is an interesting dish called buta tofu [Pork tofu] made with pork and bean curd." There is also a sushi bar.

4668. **Product Name:** Tamari Soy Sauce.

Manufacturer's Name: Eden Organic Foods, Inc.

(Marketer-Distributor). Purchased from Erewhon (Boston–Importer). Made in Japan.

Manufacturer's Address: 514 East William St., Ann Arbor, MI 48104.

Date of Introduction: 1969. November.

Wt/Vol., Packaging, Price: Pint and quart bottles.

How Stored: Shelf stable.

New Product–Documentation: Eden Foods Inc. 1971. July

26. Wholesale pricelist. “Tamari Soy Sauce” is now sold in pints, quarts, or liters.

Eden Foods, Inc. 1974. Feb. 1. Wholesale prices, FOB. “Tamari Soy Sauce (Erewhon).” This is the first time the word “Erewhon” appears after Tamari. It looks like Erewhon was requiring Eden to add it—which may have caused bad feelings.

Eden Foods catalog. Winter 1975-76. Page 12 states: “Tamari Soy Sauce (Erewhon). Tamari Soy Sauce (Japan-Marushima). The latter was available only in 4.75 gallon sizes. Eden has found a way to go around Erewhon, by importing from Marushima, probably via Muso Shokuhin.

Talk with Bill Bolduc, founder, original incorporator, and past president of Eden Foods. 1991. Dec. 8.

Eden Organic Foods first began selling soyfoods commercially in November 1969, starting with their first order from Erewhon in Boston. They would buy “tamari” (actually shoyu) and miso (kome = rice, mugi = barley, and Hatcho varieties) in bulk from Erewhon (which imported them from Japan). At their store, Linda Succop (Bill’s wife’s sister) would repackage the products, putting the shoyu into bottles and the miso into plastic bags. They were labeled using plain white self-adhesive gummed labels with a rubber stamp. One stamp contained the name and ingredients for each product, and another, that was stamped below it, gave the company name and address. They wrote in the weight or volume by hand near the bottom of the label.

Some factors affecting the glutamic acid and its related substances formation in soy sauce brewing]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 47(11):693-700. Nov. [10 ref. Jap; eng]

Address: Research Inst. of Marukin Soy Sauce Co., Kagawa prefecture, Japan.

4670. *SoyaScan Notes*. 1969. Chronology of Eden Organic Foods, Inc. Renamed Eden Foods, Inc. in April 1971. Part I. 1969 to 1972. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1969 Nov. 4—Eden Organic Foods is named and incorporated as a non-profit corporation by Bill Bolduc. Other names on the articles of incorporation are Judith Bolduc, Ronald Teeguarden, Gloria Dunn, and Linda Succop. It is a natural foods co-op retail store at 514 East William St. in Ann Arbor, Michigan. Bill is president of the company and his wife, Judy, is part-time secretary. The date of incorporation, Nov. 4, was selected by an astrologer, Michael Erlewine, because it was astrologically propitious.

Michael also designed the Eden logo of four sprouts in a circle. Also in Nov. 1969 Eden begins selling soyfoods, tamari and miso purchased from Erewhon.

Prior to this, starting in about the summer of 1969, Ronnie Teeguarden and Gloria Dunn had started a loosely-knit food buying co-op—which had no name, no assets, no formal structure, and no bank account. Original or very early members included Tim and Pattie Redmond, Mark and Nancy Retzliff, Linda Succop, Iona Teeguarden, and Bob Thorson. On about 3-5 different occasions they collectively ordered macrobiotic staples (including tamari and miso) from Erewhon in Boston, Massachusetts, using the Erewhon catalog. When the foods arrived, the members got together and divided them up at the Teeguarden-Leabu General Store, at 209 South State St. in Ann Arbor. This general store, located in the basement below Marshall’s Bookstore, carried mostly antique clothing and records, and the art of local artists. By September 1969, Bill and Judy Bolduc joined the food co-op. They also joined the Zen Macrobiotic Supper Club; all of its members were also members of the food co-op.

In the fall of 1969 the Teeguarden-Leabu second-hand store looked like it was about to close, which would leave the food co-op without a home. The group (especially Ronnie Teeguarden) convinced Bill Bolduc to take charge of the food co-op and find it a permanent home, which he did—in an upstairs apartment at 514 East William St. Members of the informal food-buying co-op who worked at Eden Organic Foods included Bill Bolduc, Gloria Dunn, and Tim Redmond. An environmental group named the Environmental Defense Education Network (EDEN) also operated out of the Teeguarden-Leabu General Store; it was from this group that Eden got its name. That fall, after the Eden Organic Foods co-op was up and running, Tim Redmond went to Boston to work and study at Sanae, a macrobiotic restaurant on 272A Newbury St.

1970 summer—Bill Bolduc establishes Eden’s first contact with an organic food grower (Bill Vreeland of Ypsilanti, Michigan, who grows organic wheat and soybeans). He soon makes Eden’s first direct purchase of organically grown wheat, which the company mills and sells.

1970 July 6—Eden Organic Foods, Inc is reorganized upon a stock basis. Bill Bolduc (who resides at 6210 Bethel Church Rd., Saline, Michigan) owns all the shares (1,000). Other people listed on this document are Judith Bolduc, Ronald Teeguarden, and Gloria Dunn.

1970 Sept.—The fledgling company has an offer from Cynthia Shevel to move into a newly decorated mini-mall at 211 South State St. on the main street of campus. They need money to finance the move. Tim Redmond’s father says he will help finance the expansion only if the business is reorganized as a for-profit corporation. So Eden is changed into a for-profit corporation, and Redmond invests the \$10,000 he borrowed from his father in Eden in exchange for

50% ownership. In Nov. 1970 Eden moves into the mini-mall (they register the new address on Nov. 17) and soon begins to mill flour and bake granola at the new store. Bolduc and Redmond are now equal partners.

1971 April 8—Bolduc registers a change in the company name to Eden Foods, Inc. from Eden Organic Foods, Inc. After the store was up and running, Redmond returns to Boston and Sanae restaurant, where he completed his studies.

1971 Jan.—Michael Potter is hired by Bill Bolduc. Mike had initially had a good-paying job at an art gallery in Royal Oak, Michigan. Then he began working for, and eventually became a partner in Joyous Revival, a macrobiotic and natural foods retail store in Birmingham, Michigan. At that time he and his wife, Carol Roller Potter (Ron Roller's sister), moved from Royal Oak to Walnut Lake, Michigan—to be nearer to Joyous Revival. In the fall of 1970 Michael Potter, while still working at Joyous Revival and at Bill Bolduc's request, had done volunteer work to try to help a failing new Eden retail store in downtown Detroit on the campus of Wayne State University. This store was owned jointly by Eden and two people named John and Darleen—two of the first people in the area interested in macrobiotics. By Jan. 1971 it had become evident that the store would not be able to survive financially, so Michael's first job after being hired was to make one last try to save it, then to help in shutting it down.

1971 May or June—Tim Redmond returns to Ann Arbor permanently, having finished his macrobiotic training in Boston. He planned to open a restaurant like Sanae in Ann Arbor but instead got increasingly involved with Eden Foods.

1971 June—Eden starts to wholesale natural foods out of the back of their retail store at 211 South State Street. They buy increasingly from original sources instead of other wholesalers. Buying clubs and co-ops come to the retail store to pick up their bulk foods.

1971 July—Eden's wholesale pricelist, dated July 26, shows that Eden is selling bulk (50 and 100 lb) soybeans, corn, soft wheat, and rye, which are being grown organically in Michigan (by Tom Vreeland). Eden stone-ground a portion of them into flour—on order. Eden is also selling numerous bulk and packaged grains, cereals, flours, and beans from Arrowhead Mills in Deaf Smith County, Texas; some are organically grown.

1971 early summer—Bill Bolduc asks Mike Potter to manage the Eden retail store at 211 South State St. Mike and his pregnant wife, Carol, move to Ann Arbor from Walnut Lake. By this time the company name was Eden Foods, Inc.

1971 Aug.—Eden Foods starts to distribute its wholesale bulk products, especially in the Detroit area. The company starts to bring in small trailer loads of staples from Arrowhead Mills in Texas. Bolduc and Redmond, realizing that Eden is the only natural foods store in the area, borrow some money and rent a 4,000 square foot Quonset hut

warehouse on North Main Street north of Ann Arbor near the Huron River. They expand their wholesale and distribution operations.

1971 Oct.—Mike Potter is given 13.5% of the common stock of Eden Foods, Inc. largely to compensate him for his many hours of unpaid volunteer work. According to Michael Potter (Dec. 1986), at this point the common stock ownership of Eden Foods is: Between Bill and Judy Bolduc 43.5%, Tim Redmond 43.5%, and Michael Potter 13.5%. Potter later says (Feb. 1993) that Bill Bolduc and Tim Redmond now own the same number of shares, but Judy Bolduc owned a small number of shares so the Bolducs owned the largest block.

1972 fall—Ron Roller starts to work part time for Eden Foods. Continued. Address: 514 East William St. in Ann Arbor, Michigan. Phone: 313-769-8444.

4671. *SoyaScan Notes*. 1969. Chronology of Eden Foods, Inc. Part II. 1973 to Nov. 1981. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1973 March—Eden moves into a larger warehouse at 310 West Ann Street in Ann Arbor, sharing it with Midwest Natural Foods, which initially was not a competitor. At about this time, Ron Roller starts working full-time for Eden. While at this warehouse, in late 1973 or early 1974, Eden receives its first shipments of imported Japanese natural foods from Mr. Kazama of Mitoku in Tokyo. Tim Redmond had ordered these foods from Mr. Kazama at a meeting of the Natural Foods Distributors Association in Florida. Initially Eden was forced to import Erewhon-branded products. Redmond recalls that at this time he was working at and managing the warehouse and Potter was working at and managing the retail store. Redmond was managing the corporation because he controlled it.

1973 summer.—The Eden retail store moves to a much larger location at 330 Maynard St. in Ann Arbor, on the University of Michigan campus. It now includes three operations under one roof in 6,000 square feet of leased space: A large natural foods retail store, a natural fast-food deli, and a natural foods bakery named Sun Bakery that had relocated itself from Kalamazoo, Michigan. This operation proved to be very profitable; it paid off all Eden's debts and paid for the new warehouse, offices, trucks, and equipment.

1973 July—Bill and Judy Bolduc leave Eden Foods, selling their stock to Mike Potter for \$2,500 cash. Tim Redmond becomes president. Redmond ends up owning 51% and Potter 49% of the shares in Eden Foods. Potter recalls that he bought the stock directly from the Bolducs, then gave a small amount to Redmond so that Redmond would have majority ownership. Redmond recalls that the Bolducs sold their stock back to the corporation, then Redmond sold enough shares to Potter so that he (Redmond) would keep control with 51% of the shares.

1973 late or 1974 early—Potter and Redmond become equal owners of Eden Foods after Potter loans the company

\$44,000 (entrusted to him by his father), then converts the loan into an investment in the company in exchange for equal ownership.

1973 Sept.—Mike Potter becomes president of Eden Foods at the unanimous recommendation of an employee steering committee. At about this time Midwest Natural Foods starts to compete with Eden Foods, carrying many of the same products that Eden carries plus dairy products and frozen foods. Eden has never sold dairy products or frozen foods and, in the face of new competition from Midwest, Michael Potter reaffirms this position. This decision makes it impossible for Eden to become a full-line distributor like Midwest, and lays the groundwork for Eden's eventual decision in 1986 or 1987 to discontinue distribution to retail stores and focus on manufacturing of natural foods.

1974 spring—Eden moves from 310 West Ann St. into a larger warehouse at 4601 Platt Road. This move extricates Eden from what had become a “pathetic relationship” with Midwest Natural Foods. Redmond is sure that he and Potter became equal partners before this move.

1974 March 7–8—Michael Potter represents Eden at the meeting of Natural Foods Distributors at the Janus conference room in Seattle, Washington.

1974 Oct.—Potter makes the first of his eleven trips to the People's Republic of China. On the way back he visits Yuko Okada at the Muso Company in Osaka, Japan. Potter decides to import exclusively from Muso.

1977 Aug.—Eden Foods opens Turtle Island restaurant at 315 South State St. in Ann Arbor.

1979 spring—Cliff Adler, a painter renovating apartments in Ann Arbor, is hired by Michael Potter to work for Eden in Chicago, Illinois, to try to expand their sales to natural food retail stores. During that summer Cliff lends Eden Foods \$100,000, for which he is paid bank interest rates. Tim Redmond, however, believes Cliff was hired as a salesman in 1976, and that on 15 March 1979 Cliff became a shareholder in Eden Foods, buying 10% of the stock.

1979 Nov. 26—The Eden warehouse at 4601 Platt Road is destroyed by a large fire. According to the *Ann Arbor News* (Nov. 27–29) total damages are estimated at \$650,000. Eden Foods, organized in 1970, employs some 100 persons in distribution and production, supplies about 500 natural food stores and restaurants, has annual sales of about \$5 million, and is said by its owners to be “the largest natural foods distributorship in the Midwest.” This fire burned many of Eden's key records, including records that would have helped in determining dates and facts for this chronology. Eden has never kept a written chronology of key events in the company's history.

1979 Dec.—Within 10 days after the fire, the board of directors (Potter, Adler, and Redmond) meets, authorizes a large number of additional shares of common stock, and decides to give away (free of charge) shares of Eden Foods' common stock to six key employees/managers to

try to motivate them to stay with the company and help try to rebuild it. They also decide to lay off 35 other people. Shortly thereafter Cliff Adler decides to convert his \$100,000 loan to stock (equity)

1980 Jan.—Tim Redmond decides to leave Eden Foods; he leaves in May, selling most of his stock (he kept 1,000 shares) in exchange for ownership of the Maynard Street Connection, Inc., which has a retail store and restaurant at 330 Maynard St., which are now separate companies.

1980 Feb.—Now Michael Potter and Cliff Adler each own 34% of Eden Foods shares, Frank Dietrich (of Natural Foods, Inc., Toledo, Ohio) owns 10% (which he bought for \$100,000), Ron Roller owns 5%, Michael Gordon 4%, Mark Cook 4%, Kathy Knor 3%, Bill Swaney 3%, and Bob Duha 3%. Michael Potter notes that four things saved Eden Foods (which now had a negative net worth of more than \$800,000) after the fire: (1) Cliff Adler's conversion of his \$100,000; (2) The incredible cooperation, generosity, and kindness that Eden received from its suppliers in the natural foods industry, and their trust that Eden would do its best to pay back their money at a time when interest rates were over 20%; (3) Frank Dietrich's investment of \$100,000 in the company; and (4) The great effort made by natural foods retail stores and consumers to go out of their way help Eden survive by purchasing more Eden products. Note that it was not until Feb. 1982 that Eden ended up receiving from its insurer (Hartford Insurance Company) \$400,000 net, or \$0.50 for each dollar Eden felt it was owed.

1980 Nov.—Eden Foods headquarters moves into a 20,000 square foot building at 701 Tecumseh Road in the tiny town of Clinton (population 2,000) about 60 miles southwest of Detroit.

1981 Nov.—Erewhon Trading Co. files for Chapter 11 bankruptcy protection. Trying to keep up with the super-distributors in their region (especially Balanced Foods) Erewhon had moved into an 80,000 square foot warehouse and added too many items to their product line too fast—which destroyed the company. Stow Mills picked up the bulk of their business, with Westbrae scooping up most of the business for their Japanese imports. Eden had not yet recovered enough financially to take advantage of this opportunity. Continued.

4672. *SoyaScan Notes*. 1969. Chronology of Eden Foods, Inc. Part III. 1983 to present. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1983 July—Eden Foods surprises the U.S. natural foods industry by introducing Edensoy, a long-life soymilk in plain, carob, or cranberry flavors, imported from Marusan-Ai Co. in Japan, and packaged in a stand-up foil retort pouch.

1984 Jan.—The Muso Company of Osaka, Japan, appoints Eden Foods its General Agent for North America.

1984 March 2—A series of calamities hit Eden Foods

in quick succession. The FDA (U.S. Food and Drug Administration) informs Eden Foods, in a strongly worded letter, that it considers eleven claims in a promotional pamphlet for Edensoy to be erroneous. The FDA advised that the “Good for Babies” section of the pamphlet be deleted.

1985 June 14—The FDA informs Michael Potter that a six-month-old child in Canada had become seriously ill after being fed the company’s soymilk as an infant formula. The mother said her decision to forgo regular infant formula was inspired by Eden’s own literature—the promotional pamphlet cited above which said that Edensoy was “Good for Babies.” Eden took the position: “There’s a problem and we’re responsible for it.” To date some 18 million packs of Edensoy have been sold.

1985 June 23—Eden Foods voluntarily mails 10,686 requests for a recall of the pamphlet to its distributors and to individual retail stores.

1985 July—Eden Foods forms a joint venture partnership with four Japanese companies, and incorporates in the state of Michigan as American Soy Products, Inc.

1985—Eden opens a west coast sales office and warehouse in San Francisco, California.

1986 May—The Lima Company of Belgium appoints Eden Foods its General Agent for North America.

1986 Nov.—American Soy Products, Inc. launches a new generation of Edensoy soymilk products, in original, vanilla, and carob flavors. Made at a large, new factory in Saline, Michigan, they are packaged in Tetra Brik Aseptic cartons. This is the first aseptic soymilk plant in the USA.

1987 Jan. 1—Eden Foods stops distributing products directly to retail stores (which comprised only 10% of Eden’s total sales), drops 150 products, and starts serving as a master distributor, selling only through other distributors. This decision had a very positive effect on Eden’s growth; all the energy that was formerly required to attend to 10% of the business was now free to be focused on developing new products and the Eden brand.

1988 April 13—Cliff Adler and Michael Potter are in a serious car accident. Cliff is killed and Michael is seriously injured. Upon Cliff Adler’s death, Michael immediately and automatically acquires Cliff’s 34% share in the company—because Eden Foods Inc. and Michael and Cliff, jointly and severally, had a buy-sell contract that came into effect in the event that either Cliff or Michael should die. The value of Cliff’s stock was \$500,000. Michael pays this amount from his personal funds for the stock. Potter now owns a large majority of Eden Foods’ stock.

1988 May—While Eden Foods is still reeling from the effects of the car accident, the FDA files charges against Eden for publishing inaccurate information in a pamphlet which stated that Edensoy was “Good for Babies.” Eden’s previous major effort to recall all of these pamphlets from retail stores apparently had little or no effect on the FDA charges.

1988—Eden Foods joins OCIA, the Organic Crop Improvement Association, for independent certification of organically-grown crops.

1989 Jan. 20—Nearly 6 years after Eden Foods published its ill-fated Edensoy pamphlet, the company is fined \$110,000 by a federal judge in Detroit, and its president, Michael Potter, is fined \$25,000 and sentenced to 30 days imprisonment. On Feb. 24 he begins to serve out his sentence in Bay City, Michigan.

1989 Oct. 12—Michael Potter is convicted of manslaughter and sentenced at the circuit court in Ann Arbor to 8-15 years in jail for his role in the April 1988 automobile accident that caused Cliff Adler’s death. He begins to serve out his sentence in Oct. 1989 in Coldwater, Michigan. Ron Roller takes over as president of Eden Foods—the top position.

1989—Eden and OCIA establish standards for food processing as well as growing crops.

1991 mid-June—Ron Roller, president of Eden Foods, is asked to resign from his position. He chooses to leave and go to American Soy products to work full time. There he becomes CEO.

1992—Eden Foods now has 180 distributors, virtually all of whom distribute Edensoy. Owners of stock in Eden Foods include Mike Potter (who owns more than 50% of the shares), Tim Redmond, Mark Cook, Bill Swaney, and at least one other person.

1992 Aug.—Michael Potter returns to work at Eden Foods. He was re-sentenced and his sentence is changed to 60 months probation. 1993 Dec. 31—Potter purchases Tim Redmond’s remaining 1,000 shares of Eden Foods stock, which Tim has kept since 1980.

4673. *Soybean Digest*. 1969. Soy sauce leader of Japan is gone. Nov. p. 50-51.

• **Summary:** Saihei Toriumi of Chiba, Japan, was president of one of Japan’s leading soy sauce manufacturing firms. He was also one of the organizers of the All Japan Soy Sauce Brewers Association and its first managing director. He had been permanent advisor to the Association since 1956. Mr. Toriumi was a strong supporter of the Japanese American Soybean Institute, and was a director of JASI representing his Association from JASI’s organization until his death. A photo shows Toriumi.

4674. Watanabe, Tokuji. 1969. Industrial production of soybean foods in Japan. Paper presented at United Nations Industrial Development Organization Expert Group Meeting on Soya Bean Processing and Use. 38 p. Document: ID/WG.45/3. Held 17-21 Nov. 1969 at Peoria, Illinois. [16 ref]

• **Summary:** Contents: Tofu and its industrial production: Process of tofu making, tofu production as an industry, equipment for tofu production, varieties of tofu, new materials of tofu, new types of tofu, aburage and other deep

fried tofu.

Note: This is the earliest English-language document seen (May 2012) that contains the term “deep fried tofu” (regardless of hyphenation).

Kori-tofu and its industrial production: Process of kori-tofu making, kori-tofu production as an industry, equipment for kori-tofu production, distribution of kori-tofu, utilization of by-products.

Yuba and its industrial production.

Kinako [roasted whole soy flour] and its industrial production. The Japanese word can be written either in hiragana or using two Chinese characters which mean “yellow flour.” Kinako is made from whole soybeans. Sometimes the soybean hulls are removed before roasting. It is widely used as an ingredient in Japanese confections [such as kinako mochi or Abekawa mochi (toasted mochi in kinako)]; it was traditionally sold along the banks of the Abekawa River in Shizuoka, Japan]. About 12,000 metric tons of soybeans are used per year in making kinako.

New soybean food materials and their industrial production: New soybean food materials, usage of new soybean food materials, future of new soybean foods, other food uses of soybeans.

Natto and its industrial production: Process of natto making, equipment for natto production, natto production as an industry.

Miso and its industrial production: Varieties of miso, Process of miso making, miso production as an industry, industrialization of miso making, distribution of miso, future prospect of demand for miso, mycotoxins and fermented soybean foods.

Shoyu and its industrial production: Process of shoyu making, shoyu production as an industry, nitrogen utilization ratio in shoyu making, special shoyu.

Figures show: (1) Flow sheets of production of traditional soybean foods in Japan: Tofu, kori-tofu, yuba, kinako, natto, miso (with koji), shoyu. (16) Rotary cooker of soybean (by courtesy of Hinode Miso Co., Ltd.). (capacity: 1 metric ton of soybeans). (17) Continuous rice cooker (by courtesy of Hinode Miso Co., Ltd.). (capacity: 1.5 metric tons of rice per hour). (18) Rotary koji fermenter (by courtesy of Miyasaka Miso Co., Ltd.). (capacity: 1.8 metric tons of rice in each fermenter). (19) Pasteurizer of miso (by courtesy of Nagata Machinery Co., Ltd.). (capacity: 1 metric ton of miso per hour). (20) Fermentation tank of moromi [mash] (by courtesy of Kikkoman Shoyu Co., Ltd.). (capacity: 1.5 metric tons of rice per hour). (21) Shoyu in large glass bottle and smaller plastic container. (22) Large-scale koji fermenter (by courtesy of Yamasa Shoyu Co., Ltd.).

Concerning natto: The surface of each natto “soybean is covered with a viscous sticky substance, which has the property of forming long stringy threads when mixed up (Photo 13). The longer the strings, the better the quality of natto.” The texture of the cooked soybeans is softened by the enzymes of *Bacillus natto*. About 50,000 metric tons of soybeans are used each year to make natto. It is most popular in northeastern Japan (Tohoku region). Natto is fairly perishable, and excess ammonia will be produced by overfermentation. There are about 1,300 plants that make natto in Japan; the average plant consumes about 100 kg/day of soybeans. Recently, however, large, mechanized factories that consume 2-3 metric tons/day of soybeans have been constructed. From 10 kg of whole dry soybeans about 18 kg of natto can be made. One package of natto containing 100 gm costs 15-20 yen (about 4-6 cents U.S.).

Note: This is the earliest English-language document seen (Jan. 2012) that uses the word “sticky” to describe natto. Address: Food and Nutrition Div., Food Research Inst., Ministry of Agriculture & Forestry, Tokyo, Japan.

4675. Loring, Kay. 1969. Hancock cafe not ready, but others have fine view. *Chicago Tribune*. Dec. 7. p. F5.

• **Summary:** A section titled “Indonesian rice table” mentions the following: *Tahu goreng* (bean cake [tofu] with bean sprouts, green onions, celery, fried onions and soya sauce), and *ajam semur ketjap* (chicken in soya sauce).

soybean foods. In: Proceedings of the Third International Conference on Global Impacts of Applied Microbiology. See p. 403-20. Held 7-14 Dec. 1969 at Bombay, India. [11 ref]

• **Summary:** Contents: Introduction: The three fundamental drives of man (food, shelter, reproduction), benefits of soybean fermentation. Sufu. Hamanatto. Natto. Tempeh. Magou (now made in South Africa on a modern industrial scale from fermented corn and soybeans). Address: Northern Utilization Research and Development Div., USDA, Peoria, Illinois.

4677. Shurtleff, William. 1969. The Tassajara food trip. Tassajara, California: Published by the author. 63 p. Dec. 28 cm. [8 ref]

• **Summary:** Each of the 167 recipes is numbered, all show a strong natural foods influence, and many show a macrobiotic influence. Soy-related recipes include: 60. Fresh daikon nitsuke with miso. 74. Squash in miso-tahini sauce. 76. Nori with tamari. 77. Basic soybean preparation. 78. Soybeans with hijiki. 79. Soybeans with hijiki and tahini (with miso). 80. Soybeans sauteed in miso. 81. Soybeans with lentils and buckwheat flour. 82. Soybeans with carrots and lentil sprouts. 83. Soybeans with dried daikon. 84. Soybean stew. 85. Broiled soyburgers. 86. Roasted soybeans. 87. Tofu sauteed. 96. Miso soup with tofu, carrots, burdock and mushrooms. 97. Miso soup with wakame. 98. Wakame soup with tofu. 99. Soy sauce & lemon soup. 101. Thick lentil soup with miso. 102. Thick lentil soup with miso & vegetables sauteed. 103. Lentil soup with miso and parsley garnish. 105. Aduki/azuki bean soup with miso. 107. Thick split pea soup with miso & vegetables. 110. Navy bean soup with miso. 115. Mushroom soup with dried tofu.

119. Miso-zuke pickles. 120. Kombu pickled in miso. 122. Bancha with tamari. 123. Kuzu cream with tamari. 125. Ume-syo-kuzu (with umeboshi, tamari and kuzu). 131. Basic soybean spread. 133. Lentil miso spread. 135. Garbanzo and miso spread. 138. Muso (miso-tahini) spread. 139. Peanut butter & tamari spread. 142. Peanut butter, miso, apples, carrot and parsley spread. 161. Sesame tofu (no soy). 163. Nut and seed loaf with miso.

San Francisco's largest natural foods store was New Age Natural Foods, 1326 Ninth Ave. run by Fred Rohé [Rohe]. Also recommended are The Food Mill, 3033 MacArthur, Oakland [founded in 1933 by John Denis, Sr.]; and Chico-San, P.O. Box 1004, Chico, California. Selling Spiral Foods miso and tamari in bulk; The General Store, 5th and Junipero in Carmel.

Note 1. This is the 2nd earliest document seen (Nov. 2010) concerning the work of William Shurtleff with soyfoods. He wrote the book on a typewriter while practicing at Tassajara Zen Mountain Center, made about 30 photocopies, and sent them to friends as Christmas presents. He did not meet Akiko Aoyagi until 25 Dec. 1971 in Tokyo, Japan.

Note 2. This is the earliest document seen (Dec. 2004) in the SoyaScan database concerning or under the subject heading "Soyfoods Movement." Address: Zen Mountain Center, Carmel Valley, California.

4678. Tanaka, Teruo; Saito, Nobuo. 1969. Studies on sensory evaluation of soy sauce. X. Relation between odor patterns and chemical factors (1). *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 47(12):780-89. Dec. [19 ref. Eng]

• **Summary:** Tring to determine which odor components play an important role in or have an important effect on the odor of soy sauce is a momentous problem. The author discuss the linear relationship that exists between odor patterns and 19 chemical factors (on the one hand) and quality patterns (on the other). Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Noda, Chiba, Japan.

4679. Tanaka, Teruo; Saito, Nobuo. 1969. Studies on sensory evaluation of soy sauce. IX. Construction of odor pattern on the odor judgment. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 47(12):772-79. Dec. [27 ref. Eng]

• **Summary:** The major components of soy sauce odor are related to: (1) The ratio of brewed soy sauce to amino acid solution obtained by hydrolysing soy beans with hydrochloric acid and adjusting the resulting solution to pH 5.0 with sodium carbonate; (2) Microbial contamination; (3) Medicinal dependent strains of *Aspergillus oryzae*; (4) Degree of ripening; (5) Pasteurization. These 5 factors explain 75% of the total variance. The strongest is number (1). Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Noda, Chiba, Japan.

4680. Ebine, H.; Matsuura, M. 1969. [Application of *Rhizopus* for shoyu manufacturing: (Part II) Properties of *Rhizopus* enzymes]. *Chomi Kagaku (Seasoning Science)* No. 16. p. 15-. [Jap]*
Address: National Food Research Inst., Tokyo.

4681. **Product Name:** Seitan.

Manufacturer's Name: Erewhon Trading Co., Inc. (Importer-Distributor). Made in Japan by Marushima Shoyu Co.

Manufacturer's Address: 342 Newbury Street, Boston, MA 02115.

Date of Introduction: 1969.

Wt/Vol., Packaging, Price: 3.5 oz jar.

How Stored: Shelf stable.

New Product-Documentation: This is the earliest known commercial seitan product sold in the USA; it was imported from Japan. Erewhon Trading Co., Inc. 1970. Jan. 1. "Traditional foods: Importers, processors, distributors. Wholesale-retail catalog." The company imports and sells "Seitan: Wheat and soy sauce cooked together for a long time. When used in soups or sauteed in vegetables it has a

taste much like beef; 3½ oz.”

Barbara and Leonard Jacobs. 1985. *East West Journal*. Oct. p. 38-39. “Flour power! Cooking with seitan, the delicious natural food from grain.” “When I (Barbara) first tasted seitan, about sixteen years ago, I was fascinated by its flavor and texture. I had stopped eating meat for intellectual rather than sensory reasons, so the idea of using a grain-based product which had the texture of animal food was an appealing one. There were a few problems, however. The only seitan available at that time was expensive, and salty. And the pieces of seitan, as they came out of their jar from Japan, were tiny and hard. Perfect for beer-snacks but not really useful for other purposes.”

Talk with Lenny Jacobs. 1991. Nov. 14. Leonard first heard the term seitan in about 1969. Erewhon was importing a little package of dried, salty seitan from a macrobiotic exporter in Japan. Yuko Okada of Muso Shokuhin, or his assistant Julia Yamaguchi (daughter of Alcan Yamaguchi) might know details on this product.

Talk with Aveline Kushi. 1992. April 9. The first seitan imported to America was made by Marushima Shoyu Co. in Japan. George Ohsawa asked them to make it and showed them how. It was imported to America at about the same time the first miso and shoyu were imported. She thinks it came in small jars, and was so salty that she used it as a seasoning in place of soy sauce in stews (such as soybean stews) or cooked it with vegetables; this cooking made it softer. She is not sure which Japanese company (Muso or Mitoku) exported this seitan to America, or which American company imported it, but it probably started to be imported in about 1969.

Letter (fax) from Yuko Okada of Muso Co. Ltd., Japan. 1992. July 2. “I remember the term ‘seitan’ since I was a kid; it was probably coined by George Ohsawa. *Sei* means ‘is’ and *tan* is the first character in the Japanese term *tanpaku*, which means ‘protein.’ So *seitan* means something like ‘right protein substitute.’ Marushima Shoyu Co. developed seitan commercially in Japan and Muso has carried their seitan since Feb. 1966 when we started. We shipped seitan to Erewhon on a regular basis from 1968. [Note: Kotzsch. 1984, Dec. *East West Journal* p. 14-21 states that Muso began to export foods in 1969.] We also exported it to Chico-San. In Europe, we exported seitan to Paris, France.”

Talk with Tom DeSilva, owner of Erewhon Natural Foods in Los Angeles. 1992. July 10. The first seitan sold at the Erewhon retail store in Los Angeles, by late 1969, was imported from Japan. “I used to eat that stuff with rice crackers like mad. It was just like jerky. I loved it. I could eat a whole package. But it was so salty that you had to keep eating rice crackers to cut the salt.” Originally it was sold in a plastic bag, then later in a jar immersed in a dark liquid. Tom liked the product in the bag better.

4682. **Product Name:** Harmony Foods Miso, and Tamari.

Manufacturer’s Name: Harmony Foods (Importer-Distributor). Made in Japan. Imported from Muso Shokuhin.
Manufacturer’s Address: Ladbroke Rd., London, England.
Date of Introduction: 1969.

Wt/Vol., Packaging, Price: Imported nulk, in wooden kegs. Miso repacked in plastic bags. Tamari in glass bottles.

How Stored: Shelf stable.

New Product–Documentation: Interview with Bill Tara. 1991. Aug. 18. Among the early Japanese foods imported by Harmony Foods were bulk miso and “tamari” (actually shoyu), imported from Muso in wooden kegs. They repackaged the miso in plastic bags and the shoyu in glass bottles under the Harmony Foods label in London. This was the first Japanese miso and shoyu sold in England.

Listing in *The Vegetarian Health Food Handbook* (UK). 1974. p. 173. “Tamari Soya Sauce, and Miso (Soya Bean Sauce) by Harmony Foods.”

4683. Kim, Z.U.; Cho, M.J.; Kim, S.S.; Lee, C.Y. 1969. [Studies on the digestion of soybean protein by *Aspergillus sojae*]. *Han’guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 12:19-24. [Kor]*
Address: College of Agriculture, Seoul National Univ., Suwon, South Korea.

4684. Kim, Z.U.; Cho, M.J.; Kim, S.S. 1969. [Studies on the preparation of improved soysauce kojis]. *Han’guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 11: [Kor]*

• **Summary:** In order to determine the proper ratio of wheat to soybean in soysauce koji so that it is suited to the Korean people’s taste, sensory evaluation for the soysauces made from soysauce kojis with the various above-mentioned ratios and analysis of chemical components through the brewing period of six months was carried out. The results are as follows:

(1) The specific gravity of all the soysauce increased gradually as the time passed and had maximum values in two months, with nearly constant values thereafter. Concerning soybean / wheat ratio, generally the higher soybean/wheat ratio, the lower the observed specific gravity. However, when the ratio was above 10 to 6, the specific gravity was similar.

(2) The solid material in all of the soysauces increased in the earlier stage, and there were no significant differences among the treatments. However, the soysauces without wheat had a slightly lower content.

(3) The less amount of wheat as raw material, the higher the content of total nitrogen was. The content of total nitrogen in every ratio of raw material increased as the mash aged.

(4) The amino-nitrogen levels were found to have similar tendencies to total nitrogen levels.

(5) The reducing sugar content was higher in the soysauces with more wheat and increased rapidly, up to the

maximum level, in two months. Then, the higher the wheat / soybean ratio was, the slower the decrease of the observed sugar content.

(6) The maximum total acidity observed was in the soysauces with a soybean / wheat ratio of 4 to 6, and increased similarly in all the soysauces throughout the period.

(7) According to the sensory evaluation, the short (2-3 months) fermented soysauces showed the best taste when soybean / wheat ratio was 10 to 8 and 10 to 6 if diluted. In long (4-6 months) fermented soysauces, it was 10 to 6 and 10 to 4 diluted. Address: Seoul Agricultural College, Seoul, Korea.

4685. **Product Name:** Broil King Teriyaki Sauce.

Manufacturer's Name: King Shoyu Co. Ltd.

Manufacturer's Address: 1215 Kona St. near Piikoi (P.O. Box 976), Honolulu, Oahu, HI 96808.

Date of Introduction: 1969.

Wt/Vol., Packaging, Price: Bottle.

How Stored: Shelf stable.

New Product–Documentation: Ad in Hawaii City Directory. 1968-69. p. 145. King Shoyu Co. Ltd.

Manufacturers of the famous King Soy Sauce and Broil King Teriyaki Sauce. Illustrations (line drawings) show both bottles and labels. Address: 1215 Kona near Piikoi, P.O. Box 976. Zip Code 96808. Not listed 1979.

Nihei. 1978. Nippon Jojo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." Shows a label. They make amino acid soy sauce. The company is still in business. Letter from Tadao Nihei. 1988. July 19. They ran the business during the war, making chemical soy sauce, but closed in about 1978. Also made Barbecue Shoyu.

4686. **Product Name:** Shoyu Peanuts.

Manufacturer's Name: Moilili Mochi & Candies.

Manufacturer's Address: 2563 South King St., Honolulu, Oahu, Hawaii 96814.

Date of Introduction: 1969.

New Product–Documentation: Hawaii Directory of Manufacturers. 1969. p. 18. The company makes mochi, manju, arare, shoyu, peanut [sic]. In the 1975 directory the product is first listed as "Shoyu Peanuts."

4687. Park, Y.M. 1969. [Studies on commercially produced soybean sauce in Korea]. *Kongjung Pogon Chapchi (Korean J. of Public Health)* 6(2):293-98. [11 ref. Kor; eng]*

• **Summary:** The author conducted a study on soybean sauces collected from 74 manufacturers out of the 228 in Korea from April 6 to July 4, 1969. The pH value, specific gravity, buffer force, salt content, pure extract, arsenic and heavy metals of the sources were analysed. Main findings are as follows:

(1) In the pH value test, out of 74 samples, 6 (8.1%) are

outside the government-permitted range of pH 4.5 to 5.8. The mean value of all samples is 5.03.

(2) Specific gravities of 10 samples (13.6%) are lower than the government permitted value, more than 1.142. The mean value is 1.168.

(3) Buffer forces of 20 samples (27.0%) exceed the government-permitted value, more than 17.0% of the sauce. The mean is 19.09%.

(5) The contents of pure extracts of 15 samples (20.3%) are lower than the government permitted value, more than 8.0% of the sauce.

(6) All the sauces are qualified in the test of arsenic, of which the government-permitted value is less than 1.5 ppm of the sauce.

(7) The contents of heavy metals of 13 samples (17.6%) are more than the government-permitted value, less than 20 pm of the sauce. Address: School of Public Health, Seoul National Univ., Seoul, Korea.

4688. Brissenden, Rosemary L. 1969. South East Asian food: Indonesia, Malaysia and Thailand. Baltimore, Maryland, USA, and Harmondsworth, Middlesex, England: Penguin Books Ltd. 262 p. Index. 18 cm.

• **Summary:** Contents: Acknowledgements. A note on this American edition. Weights and measures. 1. Introduction to South East Asian Food. 2. Utensils, methods, ingredients, glossary. 3. Indonesia. 4. Malaysia and Singapore: Malay, Chinese, Indian, Miscellaneous Malaysian. 5. Thailand.

The glossary of ingredients contains descriptions of: Soya bean curd (fresh or dried), Soya sauce, and monosodium glutamate (also known as Ve-Tsin, Ajinomoto, Mei Ching, Taste Powder, Gourmet Powder, Accent, P'sst!, etc.). The 3 kinds of soya sauce used in this book are light soya sauce, dark soya sauce (which is thicker and heavier; these two kinds are available at Chinese grocers), and Javanese soya sauce, which is sweet and very thick. The latter is available in bottles named Ketjap Manis or Ketjap Benteng, under the Conimex label. To make your own "Javanese soya sauce," combine 1 cup dark soya sauce, ½ cup molasses, and 3 tablespoons brown sugar in a small saucepan over medium heat. Stir until the sugar melts. Keep in a covered jar.

Note 1. This is earliest English-language document seen (April 2012) that contains the term "Javanese soya sauce."

Note 2. This is earliest English-language document seen (April 2012) that contains the term "Ketjap Manis" (regardless of capitalization) used to refer to sweet, thick Indonesian-style soy sauce.

This book has a disproportionate number of recipes based on meat, fish, and poultry. Soy-related recipes include the following. From Indonesia: Ikan semur Djawa (Fish in soya sauce, p. 69, Java). Ayam semur Djawa (Chicken in soya sauce, p. 76-77, Java). Semur daging (Beef in soya sauce, p. 94). Tahu goreng ketjap (Fried bean curd with soya

sauce, p. 105). Tahu pong (Bean curd omelette, p. 111).

From Malaysia and Singapore: Fried fish with soya beans (p. 149-50). Stirred tomatoes or silver beet with black beans (with Chinese black beans [fermented black soybeans], p. 169). Baked bean curd (p. 181). Steamed, dressed bean curd (p. 181-82). Address: Melbourne, Australia.

4690. Cooking good food. 1969. Order of the Universe Publications, Box 203, Prudential Center Station, Boston, MA 02199. 34 p. No index. 28 cm.

• **Summary:** A simple, concise source of the basic macrobiotic ideas adapted to the American way. Note 1. This booklet was written by Jim Ledbetter, a student of macrobiotic teacher Michio Kushi, although his name does not appear in it.

Contents: The traditional food of man. The way of eating. Salt and oil. Special foods. Useful kitchen items. Cooking brown rice. Cooking other grains. Cooking vegetables. Cooking sea vegetables. Cooking beans. Cooking soups. Cooking with flours (Cooking noodles, cooking creams, baking bread, variations with flour). Cooking animal food. Preparing salads. Preparing condiments. Preparing drinks. Cooking desserts. Plasters. Traveling and eating out. The manner of eating. The seven levels of cooking.

In Chapter 4, titled "Special Foods" is a section on "Soybean foods" (p. 6), which states: "The soybean has been called the 'Vegetable Cow' of the Orient. It is full of good vegetable quality protein (43%). It was not traditionally eaten without special preparation, because it is fairly yin, except by monks who wished to limit their sexual desires. When cured with salt, however, it was used as a daily food. You will find these traditional preparations very helpful in your kitchen."

"Tamari is the ancient form of soysauce, fermented for at least eighteen months from soybeans, salt, wheat or barley, and water, without chemicals or preservatives. It has a very distinctive, delicious taste. It is used mainly in cooking vegetables when it is added after salting and just before the end of cooking time, and in broths. It is rarely used directly on grains, but is often found on the table to use with deep-fried foods. Some women mix tamari with an equal amount of water to make it less strong."

"Miso is a paste made from the same ingredients as tamari. There are two varieties; one (Hacho) is a little harder and darker in texture than the other. It has many uses, especially in soups, in which case it is added towards the end of cooking time so that the wonderful digestion-aiding bacteria it contains will not be destroyed. (All of these soybean condiments produce their best flavor when cooked

slightly.) Miso soup has a deep, satisfying bouillon flavor, and is often taken every day as a delicious source of energy. It is helpful to thin miso in a little water before adding it to soups and sauces.

"Morromi [sic, moromi] is the pulp from which tamari has been made. It has a very special tangy flavor, and is used like miso."

"Seitan or 'Protein X' is made from the same ingredients as the above condiments. A slightly different process produces a strong jerky which, when boiled or sauteed, resembles beef in appearance and taste. It is very good in soups" (p. 6). Note 2. This is the earliest document seen (March 2011) that mentions "seitan." It is also the earliest English-language document seen (March 2011) that contains the word "seitan." By placing seitan in the category of "Soybean Foods," the author is apparently emphasizing the importance of soy sauce as one of its two main ingredients. He seems to have tasted seitan, but it is not clear that he knows what its other main ingredients are (wheat gluten, ginger, sesame oil) or how it is prepared.

"Tofu is made from fresh soybeans. This curd or 'cheese' is a good quality, strong yin food which is very refreshing for occasional use in summer when it is cooked with tamari. It is helpful to store tofu in water. The more yang pulp, which is usually thrown away, can sometimes be obtained from the Oriental stores which make tofu, and used to make delicious casseroles or well-sauteed vegetable dishes."

The section on "Condiments" (p. 6-7) discusses Gomasio (Sesame salt), umeboshi (salted plums), and Tekka. The section on "Oriental vegetables" (p. 7) discusses lotus root, daikon, ginger root, Chinese cabbage, jinenjo (Japanese potato), and kuzu arrowroot.

In the chapter titled "Cooking Beans" the author considers "Aduki Beans" to be the "King of Beans."

"Black Beans: The imported Japanese black beans are higher nutritional quality and superior taste. They are very sweet, delicious beans. They should be soaked and boiled, because their skin can become loose and clog a pressure cooker spout."

"Miso Soup: This hearty bouillon is the staple everyday soup. Prepare vegetables and boil for at least one-half hour (if you want a really good soup); thin miso with a little of the stock in a bowl and add it to the soup towards the end. Do not boil the soup after adding miso or the beneficial digestion-aiding bacteria will be harmed. If it is simmered very slowly, it can be cooked from 5 minutes to one hour."

"Tamari Soup: Prepare as above using tamari instead of miso for flavoring. A simple tamari broth with onions or carrots and onions is often served over dishes such as noodles."

In the chapter titled "Preparing Condiments" (p. 27) we read: "Vegetable Miso. Slice vegetables finely and saute. Add diluted miso and water and cook. Scallions, chives, carrot

tops and many other vegetables are good prepared in this manner. 'Tekka' is made from lotus root, burdock root and carrots. 'Sigure' [Shigure] ('November Rain') is prepared with lotus roots, carrots, and onions. A little freshly grated ginger is often added towards the end of the cooking. A small amount of these condiments is usually sufficient."

The chapter titled "Preparing drinks" (p. 28-29) discusses Mu tea, umeboshi tea, chicory, Yanno [Ohsawa coffee], dandelion coffee, Bardan, Kokkoh, kuzu, ume-syo-kuzu, and daikon drink.

The chapter titled "Cooking Desserts" (p. 30) states: "Amasake (Homemade Rice Wine). For special occasions this drink is very smooth and sweet."

Tofu is also mentioned in the chapter titled "Plasters" (p. 31). "Tofu Plaster. Squeeze tofu (soy bean curd, see *Special Foods*) and mix with 10% flour to make it more manageable. Apply this to any painful, feverish, or inflamed area. Alternating tofu plasters with ginger compresses often helps stubborn cases."

Note 3 This is the earliest document seen (July 2000) that mentions "Hacho" miso (spelled that way). Subsequently, many macrobiotic publications used this word and spelled it that way.

The chapter titled "Cooking sea vegetables" briefly defines kombu, wakame, hiziki (the incorrect idea concerning "black rice" comes from a casual remark by Evan Root), arame, dulse, and nori (laver).

Note 4 One original edition of this booklet, sent to Soyfoods Center by Tim Redmond (a founder of Eden Foods), has one dark blue stalk of wheat against a light blue background. In the lower right corner of the cover the following has been stamped with a blue ink stamp: "Eden Organic Food Store, 514 E. William. Ann Arbor, Mich. [Michigan] 48104." Address: [Massachusetts].

• **Summary:** Contents: Map of South Vietnam showing all provinces and their names. Preface, by the author. 1. Introduction: History of soybean, production and trade in the world and in Vietnam, utilization of soybean (uses, nutritive value of the soybean). 2. Botany of the soybean plant: Seed, stem and pubescence, leaves, flower parts, root and nodule bacteria, genetics. 3. Ecological requirement: Germination, temperature, rainfall, day length, soil. 4. Cultivation and storage: Planting (land preparation, depth of seeding, methods of seeding, rate of seeding, time of seeding, rotation, erosion), fertilizer (manure, nodule bacteria, nitrogen, phosphorus, calcium, potash, molybdenum, application), insects (maggot fly, soybean insects found in Vietnam, control), diseases (root disease, foliage disease, seed disease), weed control, harvesting and threshing (harvesting time, methods of harvesting, drying). 5. Variety improvement: Aims of improvement (high yielding variety, disease resistance, insect resistance, day length, varieties tolerant to unfavorable soil conditions, seed size, seed color,

oil and protein content in seed, palatability), introduction method, pure line selection method, breeding method (making the cross, pedigree method, bulk method), regional trials, variety purification and multiplication (breeder's seed, foundation seed, stock seed, extension seed, maintenance). 6. Seed certification standard. 7. Bibliography.

The author thanks for their help: Dr. Thai-Cong-Tung, Director of the Agriculture Research Institute, and Mr. Nguyen-Huu-Quyen, Manager of Eakmat Experiment Station.

"The history of soybean in Vietnam is meager, but the references by Loureiro (1790) and Rumphius (1747) mentioned the cultivation of soybean in Malaysia and Vietnam. Harmand (1877) collected wild soybean (*Glycine laotica*) in the Hue and Bassac areas, and the herbariums [herbarium specimens] are still available at the Agricultural Research Institute, Ministry of Agriculture, Vietnam." Since the history of Vietnam is closely related to that of China, it seems likely that the soybean has been cultivated for many centuries in what is today Vietnam (p. 1).

In Vietnam, the soybean is still not a very familiar crop to the majority of farmers. Although the acreage has gradually increased since 1958, production had not yet reached 10,000 tons by 1967. According to the *Agricultural Statistics Yearbook of Vietnam*, in 1966 in South Vietnam, total soybean acreage was 6,610 hectares and production was 7,585 metric tons, or 1.148 tonnes/ha (p. 7). The main soybean producing provinces are all in the southern half of South Vietnam: Long-Khanh (40% of total South Vietnamese acreage), An-Giang (20.4%), Chau-Doc, Kien-Phong, and Binh-Dinh (5%). In 1963 some 1,440 tones of soybeans were imported and in 1966 some 100 tonnes were exported (p. 6).

Table 4 shows an estimate of the costs and returns per hectare of growing soybeans at the Eakmat Agricultural Experiment Station in Ban-Me-Thuot in 1968. The net income or profit from one hectare was about VN\$26,000, which is larger than for any other field crops, including: cassava (VN\$22,766), mung beans (\$20,267), sweet potatoes (\$19,269), upland rice (\$6,828), corn (\$6,569), and peanuts (VN\$5,100).

Uses: "In Vietnam, the soybean is not commonly used in daily food, but a number of foods such as soysauce, tuong [a soft kind of miso resembling Chinese chiang in consistency, and sold in crocks], bean curd, vermicelli, soymilk, soybean wine, chao [fermented tofu, sold in bottles], soybean oil, [soy] bean sprouts, and green pods [green vegetable soybeans] are available in the market and they are gradually becoming popular among Vietnamese.

Note: This is the 2nd earliest English-language document seen (Oct. 2011) that uses the word "chao" to refer to fermented tofu.

Photos (p. 11-12) show: (3) Bean sprouts and cooked beans with tomato sauce. (4) A shop that sells soybean products in a Saigon market. Soybean paste [tuong] is in big

chars, chao [fermented tofu] is in bottles in front, and bean curds [tofu] are in the front left corner. (5) A Vietnamese girl frying bean curds in the market. (6) Bottles with labels showing various kinds of soy sauces made in Vietnam.

The highest yielding soybean varieties in Vietnam are presently Palmetto and E-32. In trials, they yield about 1 tonne per hectare. Address: FAO Agricultural Officer. Phone: Saigon 91.746.

4696. Loma Linda Food Co. 1969. Wholesale price list. Arlington, California. 4 p. Undated.

• **Summary:** The cover states: "Quality foods since 1906. Camp Meeting Prices 1968, 1969." Soy-related products include: Soy Flour. VegeChee [Tofu]. Soy Beans Boston Style. Soybeans T.S. Smokene (Shaker bottle). Soy Sauce (3 sizes, glass bottles). Other products [probably made mostly from wheat gluten and/or peanuts include]: Nuteena. Proteena. Vegelona. Vegelet 'n Gravy. Dinner Cuts. Dinner Rounds. Vegecuts. Vegeburger (regular or no salt added). Tender Bits. Linketts [Linkettes]. Big Franks. Little Links. Loma Linda Sandwich Spread.

Note: No mention is made of spun soy protein fibers. Address: Arlington, California.

4697. Ohsawa, Georges (Nyoyiti Sakurazawa). 1969. *Le Zen macrobiotique; ou, l'art du rajeunissement et de la longévité* [Zen macrobiotics, or the art of rejuvenation and longevity]. Paris: Librairie Philosophique J. Vrin. 212 p. Index. 19 cm. Preface by Cauvet-Duhamel. [Fre]

• **Summary:** Contents: Preface, by Cauvet-Duhamel. Foreword, by G. Ohsawa. 1. Macrobiotics and the medicine of the Orient. My therapeutics. 3. The seven conditions of health and happiness. 4. With faith, nothing is impossible. 5. Yin and yang. 6. My macrobiotic cuisine and the ten ways of eating properly. 7 Principal foods (*Les aliments principaux*). 8. Secondary foods. 9. Special dishes. 10. Suggestions for some illnesses / maladies. 11. Healing regimens. 12. Food for infants. 13. Some ideas.

Appendixes: A cure in 10 hours. Pro-forma death certificate for the world empire of the American gold dynasty. My talks in the United States (starting in Nov. 1959, in New York, Los Angeles, and San Francisco). The despair of American doctors according to the *Times* of 7 March 1960 (listing of the number of people with 17 incurable diseases). How much does the death of a civilization cost? The real cause of sickness, unhappiness, and war. Professional education and religion. Medicine's last cry of despair. The medical revolution in the China of Mao Tse-tung. Medicine: God alone understands it. My prophecy.

The following foods are discussed: Rice, buckwheat, millet and other cereals (p. 67-77). Azuki beans (p. 98). Sesame tofu (p. 98). Sea vegetables (konbu, hijiki, p. 101-05). Miso and miso recipes (p. 105-08, incl. Tekka). Shoyu and shoyu recipes (p. 108-10). Ohsawa coffee (Yannoh, with

azuki, p. 111-12). Syo-ban (Natural green tea with shoyu, p. 113-14). Kuzu (p. 114). Umeboshi juice (p. 116-17). Ume-syo-ban (umeboshi and tamari shoyu, p. 117). Ume syo-kuzu (with umeboshi, shoyu, and kuzu, p. 117). Miso fried in sesame oil (p. 118).

Note 2. The author, born in 1893, lists his name on the title page as “Georges Ohsawa (Nyōiti Sakurazawa).”

Note 3. This is the earliest French-language document seen (April 2012) that uses the term *tamari* to refer to soy sauce.

4698. Rudzinski, Russ. 1969. Japanese country cookbook. San Francisco, California: Nitty Gritty Productions. xvi + 198 p. Illust. by Mike Nelson. 14 x 22 cm.

• **Summary:** An innovative but hard-to-read book printed with red ink on dark tan paper. The many illustrations (black line drawings) are excellent.

A surprisingly large number of the recipes in this cookbook contain soyfoods. Soy-related recipes include: Sukiyaki (with “1 block of fresh bean cake (*tofu*) or 1 can *tofu*, cut into bite-size squares,” and shoyu, p. 5-10). Teriyaki (normally done on a hibachi grill; *teri* = shiny or glazed and *yaki* = broiled, p. 16). Miso shiru (p. 20). Chicken teriyaki with sesame seeds (with shoyu, p. 24). Chicken liver teriyaki (with shoyu, p. 26). Shrimp teriyaki (with shoyu, p. 28). Spicy shrimp teriyaki (with shoyu, p. 28-29). Tofu dengaku (p. 29). Tofu yaki (fried) (with tofu, miso and shoyu, p. 29). Tofu soup (p. 48). Kaki no miso suimono (Oyster soup with soybean paste, p. 55). Vegetable and noodle miso soup (p. 56). Shrimp miso (p. 56). Takara yaki (omelette with tofu, p. 65). Tofu-egg cakes (p. 66). Tofu-egg omelette with white toasted sesame seeds (p. 66). Fried tofu with egg (p. 67). Cabbage with miso sauce (p. 85). Horenso (spinach) with miso (p. 89). Karai nasubi miso (Spicy eggplant with miso, p. 94). Goma nasubi miso (Eggplant with miso and sesame seed paste, p. 95). Tofu sauce (p. 102). Inari sushi (with aburage, p. 110-11). Miso dango (meatless rice-based patties / balls, p. 117). Soba (buckwheat noodles) with miso sauce (p. 122). Tofu to niku donburi (bowl with meat and tofu, p. 127). Sakana no nitsuke (fish cooked with miso, p. 135). Shiroi sakana no nitsuke (white fish with miso, p. 136). Tofu to ebi no kuzu-ni (tofu and prawns in kuzu sauce, p. 139). Simple kaki (oyster) miso (p. 140). Kaki nabe (pot of oysters with miso, p. 141). Kaki to tofu nabe (oyster pot with tofu and white miso, p. 141). Yaki hamaguri (broiled clams with white miso, p. 143). Kawari tofu nori zuke (prawn dumplings with tofu, p. 148). Tori dango miso (fried ground chicken with miso, p. 162). Tofu, pork and vegetables (p. 167). Mashed tofu and ground pork (p. 168). Buta nabe (pot-au-pork with “4 fried tofu, fresh or canned, cut in strips,” p. 168). Pork mizutaki (with tofu, p. 169). Beef mizutaki (with tofu, p. 175-76). Shabu-shabu (with tofu, p. 181). Shoyu is used in many, if not most, of the recipes in this book.

At the back is a glossary, which includes definitions of

aburage, miso, shoyu, and tofu. Address: California.

4699. Saito, Akio. 1969. [Chronology of soybeans in Japan, 1950 to 1969] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 15-16. [Jap]

• **Summary:** 1950–The production of soybeans increases greatly to 446,900 tonnes (2.1 times more than in recent years).

1950–In March, the food ration system organization is closed. In July the ration systems for miso and shoyu are removed.

1951 March–The restrictions for soybeans and rapeseed are removed. From this time on, the number of natto makers increases rapidly.

1952–Soybean production in Japan reaches 521,500 tonnes, the largest since World War II.

1953 Jan.–Restrictions are imposed on imports of foreign soybeans paid for in foreign currencies.

1955. Rice production in Japan this year is 12,390,000 tonnes (up 35.9% over last year). This is the first time it has topped 12,000,000 tonnes. Irrigated rice cultivation (*suiden*) is 20% more than last year. The days of rice shortages are over and the black-market price of rice falls. The per-capita direct consumption of soybeans for the year is 4.5 kg (This information comes from *Norin Suisan-sho, Shokuryo Jukyu-ho*).

1955 April–Soybeans from Brazil are graded using the AA system (*Yunyu jido shonin sei*).

1956–A new natto container is invented, made of shaved wood (*kyogi*) lined with a polyethylene sheet.

1956 June 13–New regulations for agricultural products and price stabilization. Domestic soybeans are added to them.

1956 Oct.–The tax on imported soybeans rises to 10% and the no-tax system for soybeans is removed.

1959–The first instant miso soup is introduced by Yamajirushi Miso in Nagano. It contains dried green onions, wakame, dried tofu [probably dried-frozen tofu], etc.

1959–At about this time research begins on meat analogs made from soy protein.

1960–Per capita consumption of shoyu drops to 13.7 kg. It has now fallen below 14 kg/person.

1960–Soybean imports rise to 1,128,000 topping the 1,000,000 level of the first time.

1961 July 1–The tax on imported soybeans is removed.

1962–A new natto container made of Styrofoam is invented (*PHP yoki, happo suchiroru*).

1963–In the USA General Mills starts to sell meat analogs made from soy protein.

1965–Per capita miso consumption drops to 7.8 kg, falling below 8 kg/person.

1965–Production of defatted soybean meal reaches 1,074,000 tonnes, passing the 1 million tonne mark for the first time. Production has risen 56% in during the past 5

years.

1966—At about this time meat analogs based on soy protein start to be sold commercially in Japan—to institutions.

1966—Soybean imports rise to 2,168,467 tonnes, passing the 2 million tonne mark for the first time.

1966—Production of soybeans in Japan drops below 200,000 tonnes for the first time. Japan now produces only 9% of the soybeans it consumes.

1966 May—Kikkoman starts selling low-salt shoyu.

1968—Meat analogs based on soy protein start to be sold to the general public in Japan.

1968 June—Research conducted by the *Mainichi Shinbun* shows that the size and price of tofu is now different in different areas. In Tokyo it sells for 25 yen per 300 gm or over. Cakes of tofu sold in downtown Tokyo (*shitamachi*) are smaller than those sold uptown (in the hilly sections) (*yamanote*). Some tofu shops that are not members of the tofu association sell it for 15 yen per 350 gm. In Nagoya it retails for 30 yen per 450 gm, and in Northern Kyushu 25 yen per 450 gm. Per capita consumption of tofu is 33 cakes (*cho*) a year.

1969—Per capita consumption of soy oil in Japan rises to 3.2 kg, passing the 3 kg mark for the first time. In 1969 it was 1.2 kg/person. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

4700. Shibutani, Yoshikazu. 1969. *Shôyu zukuri no jissai* [The reality of manufacturing soy sauce]. Tokyo: Chijin Shokan. 290 p. 19 cm. [Jap]*

• **Summary:** Note: Yoshikazu Shibutani was born in 1893.

4701. Shibuya, Yoshiichi. 1969. *Shôyuzukuri no jissai* [Practical shoyu production]. Tokyo: Chijin Shokan. 290 p. (Modern Engineering Library). [35 ref. Jap]

• **Summary:** A technical book with a substantial bibliography.

4702. Shinojima, Chu; Ashihara, Tamako. 1969. *Practical shoyu cooking: Delicious dishes with Japanese soy sauce*. Tokyo: Japan Publications Inc. 61 p. Illust. No index. 26 cm. [Eng]

• **Summary:** Contents: Introduction. Helpful hints on how to use this book. Egg dishes. Beef and veal dishes. Okinawan dishes. Chicken dishes. Japanese soy sauce—Shoyu. Pork dishes. Modern Japanese cooking. Canned foods and salads. Desserts. Tofu dishes and soups. Fish dishes.

Contains many full-page color photos. The word “shoyu” is used throughout the book, and all recipes call for the use of “shoyu.” The chapter titled “Japanese soy sauce—Shoyu” (p. 32-33) begins: “Shoyu is the single seasoning without which the art of Japanese cooking would be impossible. Its flavor and fragrance also blend beautifully with food of other countries, and shoyu is now in use throughout the world. Japan’s largest shoyu producer,

the Kikkoman Shoyu Company, exports its product to 51 countries around the world.” It also notes that among the traditional influences on Japanese cooking, that “of Buddhism was especially strong in regard to developing a respect for the natural flavor of each food item. The best means of bringing out the flavor of each food was found to be through the use of shoyu.”

4703. Stanton, W.R. 1969. Some domesticated lower plants in South-east Asian food technology. In: Peter J. Ucko and G.W. Dimbleby, eds. 1969. *The Domestication and Exploitation of Plants and Animals*. Chicago: Aldine Pub. Co. xxvi + 581 p. See p. 463-690. Proceedings of a meeting... held at the Institute of Archaeology, London University. Illust. 26 cm. [10 ref]

• **Summary:** In this paper, “lower plants” refers to microorganisms and algae. These cultivated microorganisms include marine and lacustrine algae (*nori*, *kombu*), fungi (*Aspergillus*, *Rhizopus* species), yeasts (*Saccharomyces* species) and bacteria (*Lactobacillus*, etc.). In Indonesia, tempeh (cakes made by fermenting soybeans) and fermented groundnuts “provide about one-third of the total crude protein requirement the population...” (p. 464). A complex fermentation is used to make miso, a fermented soybean paste, in Japan; a number of different microorganisms take part at different stages. Some 75% of the households in Japan use miso daily as the main soup seasoning—according to a recent survey.

“The Japanese products represent a northward and eastward migration of the ‘sho’ process (a general term in Japan for the high salt fermentations). Today these fermentations are carried out under highly industrialized conditions, the organisms being given the benefit of highly specialized environments, and the domestication in consequence has proceeded here further than it has elsewhere in the region” (p. 467). Address: Tropical Products Inst., London.

4704. Steinberg, Raphael. 1969. *The cooking of Japan*. New York, NY: Time-Life Books. 208 p. Illust. General index. Recipe index (English). Recipe index (Japanese). 28 cm.

• **Summary:** A superb, elegant book, that (with its spiral-bound companion volume of recipes) captures in both words and photos (by Eliot Elisfon) the true spirit of Japanese food and cookery. Contents: Introduction: Solving the mysteries of Japan’s marvelous cuisine, by Faubion Bowers. 1. The heritage of a remarkable past. 2. Foods to suit the seasons. 3. The logic of Japanese cookery. 4. The world’s greatest seafood. 5. Simple, satisfying foods of home. 6. A ceremony that sired a cuisine (*kaiseki* or tea ceremony cooking, with roots in 13th century Zen Buddhism). 7. Eating out as a way of life. 8. Magnificent meals in elegant settings.

Soy-related: The writer of the introduction snacked on odorous, fermented soy beans (*natto*) at night before retiring

(p. 6). His son said to him recently, "Please, Dad. Not *tofu* again!" (p. 7). Importance of the soybean (p. 16-17; China has had a huge impact on Japanese culture. "Perhaps the most important food innovation contributed by China was the soybean, which in various disguises is still the foundation stone of Japanese cooking"). Shoyu is the Japanese word for soy sauce (p. 26). Tofu (soybean curd), which is cooked with other foods throughout most of the year, becomes a dish in its own right during the summer, served on ice and flavored with soy sauce (as *hiyayakko*, p. 32). Photos of tofu, shoyu, green soybeans [*edamame*] and *akadashi* miso in prepared festival dishes (p. 34-35). *Matsutake* mushrooms with tofu or shoyu. "The most important lesson to be learned deals with the ubiquitous role of the soybean. Generally considered by Westerners to be the most humble of vegetables, the soybean is in fact the king of the Japanese kitchen. One might almost say that Japanese cuisine is built upon a tripod of soybean products: *miso*, a fermented soybean paste; *tofu*, a custardlike soybean cake; and soy sauce, used both to season foods as they are being cooked and to make dipping mixtures that enhance the flavors of the foods as they are being eaten." Details about these three products and their uses is then given (p. 41-42). Teriyaki or "shining broil" (p. 43). Two-page color photo shows (p. 44-45): Azuki beans and *kuromame* (black soybeans), sesame seeds, sesame oil, *fu* (wheat gluten croutons), *aonoriko* (powdered green seaweed), Kikkoman shoyu, *aka miso*, *shiro miso*, *tofu*, nori and wakame.

Ponzu, a dipping sauce which is half soy sauce and half lemon or lime juice (p. 46). Sukiyaki (p. 46). Tempura (p. 49). *Aemono* and *sunomono* with tofu, miso, or soy sauce (p. 48). Photo of a tofu-slicing knife with a serrated blade (p. 50). Recipes: Clear soup with tofu and shrimp (*Sumashi wan*, p. 55). Miso soup with red and white miso (p. 56-57, 59). Miso-flavored pork and vegetable stew (*Satsuma-jiru*, p. 61). Soy and sesame-seed dressing with string beans (*Goma joyu-ae*, with "½ cup white sesame seeds, toasted and ground to a paste," p. 62). Tofu and sesame-seed dressing with vegetables (*Shira-ae*, p. 63; "Add the sesame seeds..., warm them until lightly toasted. Grind them to a paste in a *suribachi* {serrated mixing bowl} or, more easily, pulverize them at high speed in an electric blender with 1/8 teaspoon of soy sauce. Transfer the sesame-seed paste to a mixing bowl...").

Two color photos show: (1) Toasted sesame seeds in a *suribachi* with a wooden pestle. (2) When ground, they "quickly release their oil and turn into a paste." White miso dressing (*Neri shiro miso*, p. 67). Photo of *zensai*, incl. miso-marinated asparagus, and abalone cooked in soy sauce (p. 72). Sashimi dipped in soy sauce (p. 81-83, 90-91).

Undersea vegetables: nori, kombu, wakame, hijiki (p. 88-89). Recipes: Sushi (p. 95-101). Tempura (p. 103). Mirin and soy dipping sauce for tempura and noodles (*Soba tsuyu*, p. 104). Deep-fried tofu in soy-seasoned sauce (*Agedashi*, p.

105).

Tofu is the Japanese word for soybean curd (p. 108). Umeboshi (p. 109). Miso soup (p. 109-10). Natto and miso (p. 115). Tofu and shoyu in *yudofu* (p. 116). Sekihan and azuki (red beans, p. 120). *Mame* ("beans") are served at traditional wedding feasts; the word also means good health. Mochi (p. 121). Recipes: Sekihan (p. 126). Fox noodles with deep-fried tofu (*Kitsune udon*, p. 127). Bubbling tofu (*Yudofu*, p. 132-33). *Sukiyaki* (p. 134, with tofu and soy sauce). *Shabu shabu* (with tofu, p. 135).

Tofu and miso in *kaiseki* cuisine based on Zen Buddhism and the tea ceremony (p. 146-49). Teriyaki, mirin, ponzu, tofu (p. 152). Tofu and shoyu (p. 159). Sasanoyuki restaurant in Tokyo (uses tofu as a main ingredient in every dish, p. 160-61). Sukiyaki, with tofu and soy sauce (photo, p. 166-67). Broiled mackerel in miso marinade (*Miso zuke*, p. 169). Dengaku tofu (p. 172-73, with color photo). Beef teriyaki (with shoyu, p. 174-75). Yakitori (with teriyaki sauce, p. 174-75). Grilled chicken with sweet soy-seasoned glaze (*Tori teriyaki*, p. 176). Black soybeans and tofu (p. 188). At a geisha house, shoyu is called *murasaki* ("the purple").

A guide to Japanese ingredients (glossary): Incl. *aji-no-moto*, *aonoriko*, *azuki*, *fu*, *goma*, *goma-abura*, *hichimi* (*shichimi*) *togarashi*, *kombu*, *konnyaku*, *mirin*, *miso*, *MSG*, *nori*, *shoyu*, *soba*, *tofu*, *umeboshi*, *wakame*, *wasabi*.

Note: The spiral-bound recipe book accompanying this volume contains the recipes in the parent volume and no new information; the binding makes it easier to use in the kitchen. Address: USA.

• **Summary:** The author of this Seventh-day Adventist vegetarian cookbook is a woman. Interesting recipes include: Nut Cheese (no. 1 & 2, with peanuts or peanut butter and

gluten flour, p. 11). Tomato Nuttose (with nut butter, p. 11). Homemade Nuttose (with nut butter, p. 12). Homemade Protose (with peanut butter and mashed beans (p. 12). Homemade Nutmeat (dark) (with gluten flour, peanut butter, and Vegex, p. 12-13). Homemade Nutmeat (light) (with raw nut/peanut butter and flour, wheat meal, or soybean meal, p. 13). Nuttolene (with peanut butter and eggs, p. 13). Homemade gluten (with Vegex or soy sauce, p. 14). Granola. Preparing and cooking dry soybeans (p. 15). This page describes how to make "soybean pulp," an ingredient is subsequent recipes. "Press cooked soybeans through a coarse sieve or grind in a food grinder. Use in making soups, croquettes, loaf, or soufflé. Cold, the pulp makes a nutritious and flavorful filling for sandwiches when mixed with chopped onion and enough salad dressing or milk to make it easy to spread. May be used like pumpkin or squash with milk, eggs, and spices as a filling for pie. May be used in place of burger in chili."

Soybean loaf (p. 19). Soybean cheese loaf (with 1 can (14 oz.) soy cheese [tofu] and Savita, p. 21). Gluten roast no. 1 (with gluten burger, p. 21). Soybean loaf, p. 27). Soybean-rice loaf (p. 28). Gluten roast no. 1 & 2 (p. 29). Baked soybean croquettes (with soybean pulp, p. 36-37). Soyameat patties (p. 37). Cheese-nut burgers (with VegeChee [tofu, made by Loma Linda Foods], p. 37). Soyameat tetrazzini (p. 52). Soybean casserole (with Wham, p. 52-53). Soybean souffle (with soybean pulp, p. 53). Tofu with mushroom sauce (p. 90; Tofu is "A fresh soybean milk curd obtainable at Oriental markets, or canned under the trade name VegeChee" [by Loma Linda Foods]). Puree of soybean soup (with soybean pulp, p. 110).

Pages 121-22 list "Vegetable protein brand names." All products are made by Seventh-day Adventist food manufacturers. Brand name codes: B = Battle Creek. C = Collegedale. L = Loma Linda. M = Madison. S = Sunnysdale. W = Worthington. 1. Nut meats (canned): Not-Meat (M). Numete (W). Nuteena, Proteena, and Vegelona (L). Protose (B).

2. Gluten burgers: Choplet Burger (W). Collegedale Burger (C). Madison Burger, and Zoyburger (M). Prime Vegetable Burger (B). Redi-Burger, and VegeBurger (L). 2. Gluten steaks: Big Pat, and Fry Sticks (W). Chic-Ketts (S). Collegedale Chops (C). Dinner Cuts, Dinner Rounds, Vege Cuts, and Vegetables 'n Gravy (L). Vegetable Skallops, and Vegetable Steaks (B).

Note 1. This is the English-language document seen (Jan. 2007) that contains the term "Gluten burgers" (or "Gluten burger").

4. Wieners and sausages: Big Franks, and Linketts (L). Saucettes (B). Veja-Links (W). 5. Frozen foods: Chipped Prime, Prosage, Vegetarian Luncheon Slices (Chicken and Beef Style), Wham (W). Note 2. Worthington was the first Adventist company to make frozen meatlike products.

6. Soy meats: Soyameat (Diced Chicken Style, or Diced

Beef Style) (W). VegeChee [Tofu] (L).

Frequently used seasonings in vegetarian entrées. (p. 122). Accent. Bac-O-Chips (General Mills). Bakon Yeast. Gravy Quik (L). G. Washington Broth. McKay's Chicken Style Seasoning. Savita. Savorex, and Smokeene (L). Sovex. Tartex. Tastex. Vegex.

Update. 1995. Oct. 25. Jimmie Joan Thurmon, a Seventh-day Adventist, is retired and lives with her husband at 128 Mountain Ridge Dr., S.E., Cartersville, Georgia 30120-6951. Phone: 770-974-9218. She learned how to make wheat gluten from Seventh-day Adventist women, who had been making it for years. In addition Loma Linda Foods in California and Sanitarium Food Co. in Australia had many products containing wheat gluten on the market by the 1960s. Address: Nashville, Tennessee.

4708. Ucko, P.J.; Dimbleby, G.W. eds. 1969. The domestication and exploitation of plants and animals: Proceedings of a meeting of the Research Seminar in Archaeology and Related Subjects held [18-19 May 1968] at the Institute of Archaeology, London University. Chicago, Illinois: Aldine Publishing Co.; London: Gerald Duckworth & Co. Ltd. xxvi + 581 p. Illust. General index. Index of sites and localities. Index of authors. 26 cm. [500+* ref]

• **Summary:** One goal of this seminar is to gain an "insight into modern man's relationship to his habitat. In the last decade or two a change in methods of investigating these events has taken place, due to the mutual realization by archaeologists and natural scientists that each held part of the key and neither alone had the whole. Inevitably, perhaps, the floodgate which was opened has resulted in a new spate of knowledge..." "This meeting was called so that workers in the archaeological, anthropological, and biological fields could bridge the gap between their respective disciplines..." (p. ix).

"Mankind took an immensely long time to learn how to gain food by any other means than hunting, fishing and gathering. Our record of manufactured tools goes back over one million years but evidence of domesticated animals and plants only starts at a date somewhere near the end of the European Ice Age, i.e. after ca. 10,000 BC" (p. xvii).

While archaeology is presently best suited to study domestication, a movement is taking place in archaeological thought which recognizes the essential unity of the ecological approach; man is increasing being viewed as part of an ecosystem in which he has played a significant, if not dominant, role for some millennia. Increasingly man is seen as "another animal in the world of nature" (p. xxiii).

One cannot solve a problem unless one asks the right questions. And to ask the right questions one must look at the problem from a particular viewpoint. "That viewpoint, so far as the origin of domesticated plants is concerned, is, I am convinced, the ecological one... we must look at wild and cultivated plants associated with man as an ecological

complex and view this in relation to the ecology of man himself.” Scientists must search for exact “archaeobotanical data.”

Vavilov considered the soyabean a primary crop (Hawkes, p. 25). In Indonesia, “fermented cakes of soya beans and groundnut [tempeh and onchom] provide about one-third of the total crude protein requirement of the population...” (Stanton, p. 464). In Japan, advanced fermentation processes are used to make miso and shoyu. Today these fermentations take place under highly controlled, industrial conditions in highly specialized environments (Stanton, p. 467).

This book shows clearly that many crops were domesticated before the soybean. In China, foxtail millet (*Setaria italica* var. *germanica*), broom corn millet (*Panicum miliaceum*), rice (*Oryza sativa*), and wheats (*Triticum* spp.) have been identified in neolithic contexts (Watson, p. 398-99). In Tehuacan, Mexico, radiocarbon datings for common beans (*Phaseolus vulgaris*) have been reported from 5,300 B.P. [before the present] (Smarrt, p. 452-53). Chili peppers (*Capsicum annuum*) share with *Phaseolus* beans and the Cucurbits (squashes) the distinction of being among the first plants cultivated in the New World (Americas). Chili peppers have been found in early sites in both Middle and South America. In Mexico, they have been dated back to about 7,000 BC. “This antedates the development of agriculture and implies that wild plants were being exploited.” The first plants cultivated in Peru appear to be gourds and squashes, but by 2,000 BC peppers were grown in the Ancon area on the central coast (Pickersgill, p. 443, 446-47). Address: 1. Dep. of Anthropology, University College, London; 2. Dep. of Human Environment, Inst. of Archaeology, London.

4709. Yamaguchi, Kozo. 1969. Jôzô kikai: Sake, miso, shôyu seizô no kindai o hakaru [Brewing machines: Designing for the modernization of sake, miso, and shoyu production]. Tokyo: Chijin Shokan. 169 p. (Modern Engineering Library). [20+ ref. Jap]*

A description of all genera and species of this group of molds]. West Germany: Verlag von J. Cramer. viii + 355 p. See p. 74-84. Illust. Index. 25 cm. [809* ref. Ger]

• **Summary:** Within the Mucorales, and within the family Mucoraceae, are a number of genera that are important to fermented soyfoods: I. *Mucor*. VI. *Actinomucor*. IX. *Rhizopus*.

The genus *Rhizopus* was named by Ehrenberg in 1820 (Nova Acta Acad. Leop. 10, 1, 198). The following species of *Rhizopus* mold are discussed in detail, with a short bibliography of previous names for some, and some are illustrated with exquisite line drawings: 1.

Rhizopus homothallicus. 2. *Rhizopus sexualis*. 3. *Rhizopus microsporus*. 4. *Rhizopus circinans*. 5. *Rhizopus echinatus*. 6. *Rhizopus oligosporus* (named by Went & Prinsen Geerligs 1895; In 1907 Saito named it *R. tamari* and found it in Japanese Soja-Koji). 7. *Rhizopus arrhizus* (4 illust. from Zycha 1935). 8. *Rhizopus cohnii*. 9. *Rhizopus oryzae*. 10. *Rhizopus nigricans* (6 illust. from Zycha 1935). Address: 1-2. Biologische Bundesanstalt fuer Land- und Forstwirtschaft, Inst. fuer Forstpflanzenkrankheiten, Kassler Str. 22, D-351 Hann. Muenden, West Germany.

4712. Erewhon Trading Co., Inc. 1970. Traditional foods: Importers, processors, distributors. Wholesale-retail catalogue. Boston, Massachusetts. 12 p. Jan. 1. 22 cm. [2 ref]

• **Summary:** On the cover is the silhouette of three heads of grain on the plant, by a Japanese crest. Prices are given for each item. The company sells the following types of foods: 1. Grains: Brown rice (short grain Kokuho Rose grown by Koda Brothers, in 2 lb, 5 lb., 10 lb., 25 lb., 50 lb., or 100 lb. quantities). Sweet brown rice (Koda Bros.; it is more glutinous than brown rice, in the same 6 quantities). Note: No claim is made, anywhere in the catalog, that this rice is organic, or unsprayed, or “natural” or anything other than regular brown rice.

2. Beans: Azuki beans (imported from Hokkaido), Black beans (“Kuromame, a black soy bean import”), Chickpeas (Garbanzo, imported from southern Europe).

3. Sea vegetables: Dulse (From Grand Manan Island, Canada), hiziki, kombu, nori (dried laver), wakame (the latter 4 imported from Japan).

4. Soy Bean Products: Soy sauce (Aged naturally in wooden kegs at least 18 months; 16 oz for \$1.20, 32 oz for \$2.25, ½ gallon for \$4.25, 1 gallon for \$8.00, 4.75 gallon keg {21.13 liters} for \$30.00). Hacho miso (“Soybean puree made from soybeans, salt & water. No chemicals used in fermentation. Aged at least 18 months”; 1 lb for \$1.20, 2 lb, 4 lb, 44 lb keg for \$36.00). Mugi miso (“Soybean puree. A lighter miso made with barley”; 1 lb, 2 lb, 44 lb keg). Moromi (“A thick sauce removed from the bottom of the soy sauce kegs after fermentation. Its uses are unlimited in soups & sauces”; 7 oz for \$1.20.). Seitan (“Wheat and soy sauce cooked together for a long time. When used in soups or sauteed in vegetables it has a taste much like beef”; 3½ oz for \$1.20). Note 1. This is the earliest document seen (July 2005) that mentions seitan and clearly understands what it is.

5. Condiments: *Furikake* (“A tangy sesame condiment made from Miso, sesame seeds, soy flour, nori and bonito [sic, bonito] flakes”; 3½ oz.), Daikon pickle, Sesame miso (“A hearty condiment for use on rice and other grains. Made from miso and unhulled sesame seeds”; 3½ oz). Tekka (“A

strong dark condiment; famous for its medicinal qualities. Made from carrots, burdock, lotus, ginger, sesame oil, and miso"; 3½ oz), Sesame seeds, Sesame tahini.

6. Sea salt: Grey unrefined (from the Mediterranean Sea, unwashed and unground), White unrefined. 7. Oils: Corn germ oil (unrefined, pressed. No solvents, chemicals, or preservatives), Sesame oil. 8. Noodles: Ito soba, Kame soba, Udon. 9. Beverages: Kukicha, Kohren (Lotus root powder), Mu beverage (made from 16 different herbs), Yannoh (coffee-like drink made from grains and beans).

10. Miscellaneous: Dentie toothpowder (made from eggplant and salt), Kuzu arrowroot, Umeboshi & chiso [shiso, shisonoha, or beefsteak leaves], Umeboshi ("Salt plums aged in wooden kegs for at least 3 years").

11. Cookbooks (written in America): *Cooking Good Food*, and *Cooking with Grains and Vegetables*.

The majority of the above products are imported, mostly from Japan.

The inside front cover states: "Due to the growth of our business and our belief that good quality food should be available at low cost, we have eliminated many items from our wholesale list. We have eliminated most grains because excellent quality grains are available from many sources at more reasonable prices than we are able to charge. Two excellent sources for grains are Arrowhead Mills, Box 866, Hereford, Texas, and Pioneer Specialty Foods, Box 427, Fargo, North Dakota. Also eliminated from our wholesale list is Chico-San products. For these please write directly to Chico-San, 1262 Humboldt Ave., Chico, California, or contact any health food distributor."

Note 2. The products in this catalog do not require refrigeration; they contain no refined sugar / white sugar, no meat, and no dairy products—just like the catalogs of almost all subsequent natural food distributors during the 1970s and 1980s.

Note 3. This is the earliest existing Erewhon catalog seen (March 2011), and the earliest document seen (March 2011) concerning Erewhon and soy.

Note 4. This is the earliest document seen (March 2006) that mentions Arrowhead Mills, of Hereford, Texas. Address: 342 Newbury Street, Boston, Massachusetts 02115. Phone: 617-262-3420.

4713. Claiborne, Craig. 1970. East meets West. *New York Times*. Jan. 4. p. 196.

• **Summary:** The Japanese dish named shabu-shabu "is sometimes called oriental fondue in this country." The Japanese word is "onomatopoeic; it imitates the sound of chopsticks as they swirl the broth." It is served as a communal dish at Saito (131 West 52nd St.) one of New York's best Japanese restaurants.

The recipe for Shabu-shabu calls for "2 pieces tofu (bean curd), cut into 4 pieces (eight pieces in all)." There are also recipes for Ponzu, Gomatare [Gomadare], and Dashi. In

the first two of these, "soy sauce" is a key ingredient. In all three call for the use of "ajinomoto (monosodium glutamate), optional," up to 1 tablespoon in the Gomatare recipe!

4714. Hellendoorn, E.W. 1970. Onbewerkte en bewerkte peulvruchten in onze voeding [Unprocessed and processed legumes in our food]. *Voeding* 31(1):1-14. Jan. 15. [10 ref. Dut]

• **Summary:** The soybean (*de sojaboon*) and soyfoods (p. 6-7) include: Soybean meal (*sojameel*), soy oil (*de olie*), soy sprouts (*gekiemde sojaboonen*), tofu (*tahu*), soy sauce (*sojasaas*), miso, and tempeh. Address: Doctor, Centraal Instituut voor Voedingsonderzoek TNO, Zeist.

4715. Centre de Documentation Internationale des Industries Utilisatrices de Produits Agricoles (CDIUPA). 1970--. IALINE (Industries Agro-Alimentaires en Ligne) base de données [IALINE (Food and Agricultural Industries On-Line) database]. 1, avenue des Olympiades-91300 Massy, France. [271542 ref. Fre]

• **Summary:** This is the world's best database for French-language publications related to food and nutrition. It first became available for use in Jan. 1970, and that is also the date of the earliest record in the database. It is produced by the Center for International Documentation on Industrial Utilization of Agricultural Products (CDIUPA), founded in 1965 by the French Ministry of Agriculture. CDIUPA is administered by APRIA (*Association pour la Promotion Industrie Agricole*), which is a member of the International Commission of Agricultural and Food Industries.

The current contents of the database is published in a monthly journal titled "Industries Agro-Alimentaires: Bibliographie Internationale," which began under that title in Jan. 1983. It was preceded by *Bibliographie Internationale des Industries Agro-Alimentaires. Bulletin Bibliographique* (published from Jan. 1967 to Dec. 1982). In the monthly journal, the citations are grouped under 6 broad headings: 1. General (with 8 subcategories). 2. Agro-food industries (industries agroalimentaires; with 17 subcategories; Many documents on soyfoods are cited in subcategory N titled "*Protéines d'origine animale, végétale, microbiologique, algues et levures aliments*"). 3. Fermentation industries (with 6 subcategories). 4. Food microbiology. 5. Food toxicology. 6. Utilization and adding value to agricultural and food-industry by-products. Biotechnology. The journal contains 3 indexes: Subject index. Index of sources (periodicals [with journal names written out in full], acts of congress, books, theses). Author index.

Information related to soyfoods is likely to be found under the following headings in the subject index: *Aspergillus oryzae*; Farine de soja (incl. soy flour, and roasted soy flour or kinako); Huile de soja (soy oil); Koji; Lait de soja (soymilk); Miso; Natto (incl. natto); Produit à base de soja (incl. dawa-dawa, kinema, soy cheese [western

style], fermented black soybeans / Hamanatto, soynuts, soy ice cream, soy yogurt, thua-nao, yuba), Protéine de soja (soy protein products); Protéine de soja, Produit extrudé (extruded soy products); Protéines d'origine animale, végétale; Sauce de soja (soy sauce); Soja (incl. green vegetable soybeans); Soja, germe (soy sprouts); Sufu (fermented tofu); Tempeh; Tofu. Address: Massy, France. Phone: (1) 69.20.97.38.

4716. Hashimoto, Hikotaka; Yoshida, H.; Yokotsuka, T. 1970. [Removal of iron from soy sauce]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 48(1):50-55. Jan. [16 ref. Jap; eng]

Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., Noda, Chiba prefecture, Japan.

4717. **Product Name:** Tamari (Soya Sauce), Miso (Soya Bean Paste), Daiya Tofu (Bean Curd).

Manufacturer's Name: Hunzana Foods Limited (Importer-Marketer). Made in Japan.

Manufacturer's Address: 34 Dryden Chambers, 119 Oxford St., London, W.1, England.

Date of Introduction: 1970. January.

New Product–Documentation: Ad (full-page) in *The British Vegetarian*. 1970. Jan/Feb. p. 9. Hunzana imports these health foods from Japan. ½ litre of “Tamari (Soya Sauce)” sells for 6 shillings 9 pence (6/9). 1 lb of “Miso (Soya Bean Paste)” sells for 5/6. 188 gm of “Daiya Tofu (Bean Curd)” sells for 6/6. Hunzana also imports other foods from India, North Ireland, Eire, Germany, and Greece.

4718. Tanaka, Teruo; Saito, N.; Yokotsuka, T. 1970. [Studies on sensory evaluation of soy sauce. XI. Relations between odour patterns and chemical factors (2)]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 48(1):56-62. Jan. [13 ref. Jap; eng]

Address: Central Research Inst., Kikkoman Shoyu Co., Ltd., Noda, Chiba, Japan.

4719. Ebine, H.; Matsuura, M. 1970. Rizoopusu-zoku no shōyu jōzō e no riyō. II. Rizoopusu-zoku kōbo to tokusei [Application of *Rhizopus* for shoyu manufacturing. II. Properties of *Rhizopus* enzymes]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 25. p. 140-45. Feb. Reprinted from *Chomi Kagaku* 16(4):15-19 (1969). [4 ref. Jap; eng]

Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan (Norinsho Shokuryo Kenkyujo).

4720. Erewhon Trading Co., Inc. 1970. Traditional foods: Importers, processors, distributors. Mail order catalogue. Boston, Massachusetts. 16 p. March 1. [2 ref]

• **Summary:** On the orange cover is the silhouette of three heads of grain on the plant, by a Japanese crest. The company sells the following types of foods: 1. Whole grains:

Brown rice (short grain grown by Koda Brothers, in 6 weights from 2 lb. to 100 lb). “Not strictly organic, but the finest available in the U.S. today.”

Note: The previous sentence, starting with “Not strictly organic” is deceptive and misleading. According to “Erewhon, A Biography,” by Paul Hawken (*East West Journal*, Aug. 1973, p. 13) the short-grain brown rice being sold by Erewhon at this time was grown by the Lundberg brothers (Wehah Farm, Richvale, California) and harvested in the fall of 1969. But this rice was the result of a secret deal, so Koda Brothers is listed in the Catalog as the grower. According to the Koda website, Koda first started to convert some fields to organic in 2004. Moreover, this rice was not “the finest available in the U.S. today.” The only organically grown brown rice in the USA in March 1970 was grown by the Lundberg Brothers (Wehah Farms) in Richvale, California. 1969 was the first year they had grown rice organically, and they grew 78 acres under contract with Chico-San, who agreed to buy all the brown rice grown on that acreage in exchange for the exclusive right to sell that rice. Chico-San sold half the rice in advance and had no trouble selling all of it. But they refused to sell any of the rice to Erewhon. In 1970 Lundberg expanded their exclusive organic brown rice acreage to 200 acres; that rice was harvested in the fall of 1971.

Sweet brown rice (also grown by Koda Bros.), buckwheat groats (Kasha, from Pocono Mts. in Pennsylvania), wheat berries (organically grown in the Golden Valley of North Dakota), millet (organically grown), barley, yellow and white corn (organically grown in Deaf Smith County, Texas), oats, rye (organically grown in Deaf Smith County, Texas). Table of prices for different weights. 2. Fresh stone ground flours. 3. Cereals, made from whole grains and milled in a manner to allow quick cooking, incl. Kokoh (which can be used as a milk substitute or prepared as a cereal for children). 3. Noodles (udon, soba, and shonai fu—wheat gluten cakes). 4. Beans: Azuki beans (“The King of Beans... Organically grown on the island of Hokkaido, Japan), black beans (a sweet black soybean imported from Japan. Organically grown), chickpeas, soybeans (“Organically grown in Pennsylvania. A food high in protein, vitamins and minerals. Should be soaked many hours before cooking. Particularly good if cooked with Kombu”), pinto beans, whole green lentils, red split lentils. Table of prices for different weights.

5. Sea vegetables: Nori (dried laver), kombu, wakame, hiziki, agar-agar. 6. Dried fish and vegetables: Bonita [sic, Bonito] flakes, chirimen iriko, daikon pickle, gourd strips (dried), daikon (dried radish). 6. Order form. 7. Beverages: Kukicha, mu herbal beverage, yannoh, lotus root powder, mugicha (barley tea), peppermint tea.

8. Soybean Products (imported from Japan): Soy sauce (“aged for at least 18 months”; 16 oz, 32 oz, ½ gallon, 1 gallon, 4.75 gallon keg). Mugi miso—Soybean puree (“Made

by a special enzymatic process, this Miso is aged for 18 months. It is made from soybeans, barley, water and salt. It is ideal for making soups and sauces and blends well with tahini to make a spread for bread.” 1 lb, 2 lb, 4 lb, 44 lb keg). Hacho miso—Soybean puree (“A darker, stronger miso than Mugi Miso...”). Moromi (“A thick sauce removed from the bottom of the Soy Sauce kegs after fermentation. Its uses are unlimited in soups & sauces”; 7 oz.). Seitan (“A concentrated protein source made from wheat and soy sauce. When used in soups or sauteed in vegetables, it has a taste much like beef”; 3½ oz.).

9. Condiments: *Furikake*, kuzu arrowroot, tekka, umeboshi, sesame butter, Erewhon sesame tahini, sesame salt, white sea salt, grey sea salt. 10. Oils: Refined corn oil, corn germ oil, sesame oil. 11. Sundries: Sesame seeds, sunflower seeds, pumpkin seeds, popcorn, raisins (Thompsons), dried apricots, wheat germ (raw), apple butter, whole dried chestnuts. 12. Toilet articles: Dentie (tooth powder made from eggplant and salt), Aditi sesame shampoo, Orgene [Orjene] herbal shampoo, Fu-nori (seaweed shampoo), sesame coconut soap, vege oat soap.

13. Kitchen and tableware: Cookbooks: *Zen Cookery*, *Cooking with Grains and Vegetables*, *Cooking Good Food*, *Zen Macrobiotic Cooking*. Tableware: Rice paddles (bamboo), soy sauce dispenser, oil skimmer, bamboo tea strainer, vegetable press, vegetable brush, bamboo chopsticks (Japanese), chopsticks (Chinese), MAC knife (vegetable), vegetable knife, fish knife, grater, suribachi (3 sizes), Corona hand grinding flour mill (\$10.95).

On the inside rear cover is a United Parcel Service rate chart. Address: 342 Newbury Street, Boston, Massachusetts 02115. Phone: 617-262-3420.

4721. **Product Name:** Hopi Seeds: Sunflower Seeds, and Pumpkin Seeds (Dry Roasted with Tamari).

Manufacturer's Name: Erewhon Trading Co., Inc.

Manufacturer's Address: 33 Farnsworth Street, Boston, MA 02210. Phone: (617) 542-1358.

Date of Introduction: 1970. March.

Ingredients: Sunflower or pumpkin seeds, tamari.

How Stored: Shelf stable.

New Product–Documentation: Erewhon Trading Co., Inc. 1971. Natural and organic foods. Price list. Effective Thanksgiving day, Nov. 1971. Talk with Nik Amartseff. 1992. April 3. See long interview. These two products were developed by Jerry Sh--, were made in a corner of the Erewhon warehouse at Farnsworth Street, and were on the market by late 1969 or early 1970.

4722. **Product Name:** [Soy Sauce, and Hydrolyzed Soy Protein].

Manufacturer's Name: Glucosa S.A.

Manufacturer's Address: Naranja 159, Naucalpan, Mexico.

Date of Introduction: 1970. March.

New Product–Documentation: *Soybean Digest Blue Book*. 1970. p. 117-18. “Manufacturer and distributor.”

4723. Okuhara, Akira; Saito, Nobuo. 1970. Color of soy sauce. IV. Decolorization and depression of browning by reduction. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 48(3):190-201. March. [8 ref. Eng]

• **Summary:** The browning of apples and apple sauce is well known in the west. This report describes the decolorization of the browning pigment and the depression of browning. The browning pigment of soy sauce and concentrated apple juice were found to be reduced using metals such as zinc, aluminum, iron, tin (Sn = stannum), sodium, and magnesium, and by electrolysis, to colorless substances.

“The browning pigments of some liquid foods were also reduced electrolytically to colorless substances.” Address: Central Research Inst., Kikkoman Soy Sauce Co. Ltd., 399 Noda, Chiba prefecture, Japan.

4724. Okuhara, Akira; Saito, Nobuo. 1970. Color of soy sauce. III. Effect of reducing agents on browning of soy sauce. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 48(3):177-89. March. [11 ref. Eng]

• **Summary:** Non-oxidative browning (browning in the absence of oxygen) is depressed by reduction. That is, soy sauce which is kept under reductive conditions by favorable fermentation during the mash process turns brown only slowly. Address: Central Research Inst., Kikkoman Soy Sauce Co. Ltd., Noda, Chiba-ken, Japan.

4725. Okuhara, Akira; Tanaka, T.; Saito, N.; Yokotsuka, T. 1970. [Color of soy sauce. V. Application of multiple correlation analysis to analysis of browning mechanism]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 48(4):228-36. April. [6 ref. Jap; eng]
Address: Central Research Inst., Kikkoman Soy Sauce Co. Ltd., Noda, Chiba prefecture, Japan.

4726. Sugimori, Tsunetake; Jose, Hirokazu. 1970. [Studies on halotolerant lactic acid bacteria relating to soy sauce brewing. I. Isolation and taxonomic studies of *Tetracoccus* sp.]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 48(4):218-27. April. [18 ref. Jap; eng]
Address: Kyoto Research Labs., Marukin Shoyu Co. Ltd., Uji, Kyoto, Japan.

4727. Ives, Bill. 1970. Traveling gourmet finds sukiyaki. *Washington Post, Times Herald*. May 7. p. C14.

• **Summary:** The ingredients in the recipe for Suki-yaki include “1 block tofu (bean curd) cut into one-inch cubes, optional,” “1 cup soya sauce,” and “1 teaspoon monosodium glutamate.”

4728. Descamps, Hubert. 1970. Tamari et kokkoh: Source d'acides aminés [Tamari and kokkoh: Source of amino acids]. *Spirale (Brussels, Belgium)* No. 36. p. 13-16. May. [1 ref. Fre]

• **Summary:** Prof. Christophe of the laboratory of biochemistry and nutrition on the faculty of medicine of the U.L.B. has done an analysis of Kokkoh (grain coffee) and tamari. The composition of 8 amino acids is given for each product.

"Miso, another source of vegetable proteins, strongly resembles tamari, except that the dry extract is superior. Miso contains about 30-40% moisture. Thus it contains about 3 times the concentration of amino acids and other nutrients found in tamari. It is also clear that one cannot consume large quantities of miso. It is interesting to note that miso is very useful for making soups."

Note: This magazine began publication in 1964.

4729. Gray, William D. 1970. The use of fungi as food and in food processing. *CRC Critical Reviews in Food Technology* 1(2):225-329. May. (Chemical Rubber Co. Press, Cleveland, Ohio). [348* ref]

• **Summary:** The section titled "Oriental fungus-processed foods (p. 263)" discusses: Broad differences between fermentation processes in the Occident and Orient, miso, shoyu, Hamanatto, tempeh, ang-khak, ontjom, sufu, meitauza, ketjap, katsuobushi, and other fungus-fermented foods: Chee-fan (a type of sufu), fermented minchin (wheat gluten), fermented soybean prepared from black soybeans in China (fermented black soybeans), tao-cho, tao-si, and taotjo (the last 3 foods made from soybeans). Address: Dep. of Botany, Southern Illinois Univ., Carbondale, Illinois.

4730. Ostrolenk, Vicki. 1970. The secret of Chinese cooking: Sze Ch'ang Wei. *Washington Post, Times Herald*. June 4. p. D8, D18.

• **Summary:** *Sze Ch'ang Wei* means "Beauty-Fragrance-Taste."

Page D18, titled "'Simple' Chinese food recipes" contains a recipe for "Red cooked beef & eggs." Mix II calls for "¼ C [Cup] dark soy sauce." Mix III calls for "2 T [tablespoons] dark soy sauce."

"1 T soy sauce (light)" and "1 t [teaspoon] sugar (or 1 T hoisin sauce)" are called for in separate recipes on the same page.

4731. Pier 1 Imports. 1970. Yen for tempura? (Ad). *Los Angeles Times*. June 7. p. P39.

• **Summary:** "Next time you hunger for Japanese food, begin at Pier 1! Delicate tempura's a snap with our help. Tempura pan [wok], complete with chopsticks, lifter-strainer, draining rack-\$1.59. Non-fail [Hime] tempura batter mix is the quick and easy, sure way to success-\$0.69. Marukin soy sauce, a genuine shoyu, will also come in handy for barbecue

marinades. Economy size 34 oz. bottle-\$0.99."

An illustration shows a bottle of Marukin soy sauce, the other items described, and a bottle of sesame oil. Address: Los Angeles area (11 stores).

4732. Meade, Mary. 1970. Serendipity potato salad is full of surprises. *Chicago Tribune*. June 10. p. B3.

• **Summary:** "The Japanese American Service Committee asked us to tell them which Japanese recipes are most requested by readers." The answer, of course, was sukiyaki. The committee's favorite sukiyaki recipe, which is given, calls for "1 tofu (soy bean curd), cut into 1-inch cubes," and "¾ cup Kikkoman (soy sauce)."

4733. Hansen, Barbara. 1970. Former Miss America finds new frontiers in cookery. *Los Angeles Times*. June 25. p. 128.

• **Summary:** When Rosemary La Planche won the Miss America title in 1941, it was reported that she liked to cook. She is now married, lives in Sherman Oaks, California, and likes to cook creatively. Her recipe for Sukiyaki Rosemary calls for "1 cake tofu (bean curd), cut into bite-size pieces" and for "½ cup soy sauce."

4734. Fujimaki, Masao; Yamashita, M.; Okazawa, Y.; Arai, S. 1970. Applying proteolytic enzymes on soybean. III. Diffusible bitter peptides and free amino acids in peptic hydrolyzate of soybean protein. *J. of Food Science* 35(3):215-18. May/June. [21 ref]

• **Summary:** Fujimaki and co-workers (1968) found that undesirable flavors were mostly removed from a soy protein preparation by treating it with an appropriate proteolytic enzyme. In many cases, however, the enzymic hydrolyzate was accompanied by an undesirable bitter flavor—probably due to some types of peptides.

In this paper, the authors isolated and characterized 7 types of diffusible bitter peptides made by digesting soybean cold-insoluble protein in a dilute hydrochloric acid solution with pepsin. Bitterness of the diffusible fraction was attributed to free amino acids that have a bitter flavor (such as isoleucine, leucine, phenylalanine, and valine) and to various peptides. Almost all diffusible bitter peptides investigated here had leucine at the termini. By treating these peptides with carboxypeptidase A, the bitterness decreased considerably. Moreover, applying carboxypeptidase A or Nagarse (a bacterial neutral proteinase) to the diffusible fraction of the peptic hydrolyzate was also effective in removing some of the bitterness. Address: Dep. of Agricultural Chemistry, Tokyo Univ., Tokyo, Japan.

4736. Wenkam, Nao S.; Wolff, Robert J. 1970. A half century of changing food habits among Japanese in Hawaii. *J. of the American Dietetic Association* 57(6):29-32. July. [15 ref]

• **Summary:** In about 1885, a predominantly vegetarian diet was representative of the farming and laboring classes in Japan. "The three great staples were rice, barley, and soybeans." Those who could not afford rice consumed a less expensive grain such as millet, wheat, barley, buckwheat, or even sweet potatoes. Legumes, which were used universally, included soybean products, peas, mung beans and azuki. The main soybean products were tofu, miso, natto, aburage, and shoyu. Other foods in general use included daikon radish, several types of cabbage, marine algae such as nori, konbu, wakame. etc.

"According to statistics for 1880, total plant food consumption was proportioned as follows: rice, 53 per cent; barley and wheat, 27 per cent; tubers and vegetables, 6 per cent; fruits and algae, less than 1 per cent.

"The chief animal food was fish, much used near the sea, less in the interior. Poultry and eggs were used in small amounts. Beef, mutton, pork, milk, and butter formed a minor part of the diet. The amounts of animal food available per capita per year in 1900 were: meats, 1.3 lb.; fresh fish, 27 lb.; dried fish, 2.5 lb.; and imported meats and fish, 0.3 lb."

A bar chart shows that the daily intake of protein for Japanese adults in Japan and Hawaii has increased from 62 gm in the late 19th century to 101 gm today—an increase of 63%. During the same period, daily fat intake has increased from 10 gm to 87 gm—an 8.7-fold increase! Calories per day are about the same. 4740. Claiborne, Craig. 1970. Culinary cultural revolution topples the Chinese standbys. *New York Times*. Sept. 3. p. 28.

• **Summary:** A recipe for Beef steamed in rice powder calls for "1 tablespoon dark soy sauce. 1 tablespoon light soy sauce." A photo shows Virginia Lee and Ms. Wellington Koo (with fan) each holding chopsticks and cooking.

4741. Geffe, Philip R. 1970. A chef tells all the secrets of Chinese cooking. *Washington Post, Times Herald*. Sept. 6. p. 138.

• **Summary:** The term "black beans" does not refer to the small, lens-shaped black beans from Cuba, but rather to "preserved black soy beans. Records of soybean culture in China go back as far as 2207 B.C." [sic, 11th century B.C.] and there are now more than 10,000 soybean varieties. "The Chinese use inscrutable techniques to process these into an astonishing variety of foods and flavors. The black soy beans (others are yellow or brown) are steamed, fermented and preserved in salt. The result is a condiment with a very strong, piquant flavor totally unlike any product of the West."

At a Chinese grocery (near 7th and H N.W.) Mr. Geffe "bought eight ounces in a plastic bag labelled 'Salted Black Bean,' for 25 cents. 'Yellow Bean Sauce,' in cans, turned out to be a nearly identical substitute for the black beans." He also bought, at reasonable prices, fresh gingerroot, light soy sauce, dark soy sauce, oyster sauce,... Hoisin sauce, five spices, and sesame oil. This last is a flavoring rather than a cooking oil.

Contains a recipe for "Spareribs with black bean sauce." The ingredients include "1 Tb. [tablespoon] black beans." Then: "While ribs are steaming, place beans in a small sieve and rinse in warm tap water. Transfer to a cup and mash thoroughly with a heavy spoon."

Note: This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest which explains that "black bean sauce" and "fermented black beans" or "salted black beans" (etc., under whatever name) are actually made from black soybeans. Address: Electrical engineer, freelance writer, and amateur chef.

4742. Hansen, Barbara. 1970. Language of cookery: Soy sauce hails from number of countries. *Los Angeles Times*. Sept. 10. p. K9.

• **Summary:** Compares Japanese, Chinese, Indonesian, Hawaiian, and U.S. soy sauces. These can be either brewed [fermented] or mixed from various ingredients to simulate

the flavor, color, and texture of the brewed soy sauces. The mixed sauces “are based on hydrolized vegetable proteins and are colored with caramel coloring.”

Among imported Chinese soy sauces, there is “the familiar dark soy sauce and also a light soy sauce, which can be used to salt and season food when a dark color is not desired.”

Shoyu is the Japanese word for soy sauce.

“If you take up Indonesian cookery, don’t assume that ketjap is the thick red sauce which Americans pour on hamburgers. Ketjap is the term for Indonesian-style soy sauce, which is slightly sweetened.” Note: Could this latter be ketjap manis?

4743. *Los Angeles Times*. 1970. Mastering the menu: Learn how to order your Kaffee mit Schlagobers. Oct. 2. p. 12.

• **Summary:** For each of 15 countries where Americans travel, gives a list of words that are useful when ordering in a restaurant. Under Japan: “Kabayaki: Broiled eels. Miso: Bean paste [soy]. Natto: Steamed and fermented [soy] bean. Sashimi: Raw fish dish... Shoyu: Soy sauce. Soba: Buckwheat noodles. Sukiyaki: A quick-cooked meat stew [with tofu and shoyu]. Sushi: Flavored rice and raw fish [sic, many kinds without raw fish]. Tempura: Deep-fried shrimp, fish and vegetables. Tofu: Bean curd. Unagi: Eel.”

Note: This same article appeared under the title “Are menus a puzzle? Master a few of those foreign food phrases” in the Oct. 6 issue (p. F16) of this newspaper.

4744. Baens-Arcega, L. 1970. Sauce manufacture. *Process Biochemistry* 5(10):50-51, 56. Oct. [13 ref]

• **Summary:** Discusses the manufacture of fish sauce and soy sauce in the Philippines. Soy sauce is known among the Chinese as ‘Ch’au yau’ (drawing oil) or ‘pak yau’ (white oil), and its production, which used to be a household art, made Kwantung province famous all over China.”

The process for making fermented soy sauce is described in detail. Photos show: (1) Brine fermentation tanks at Hoc Guan Co., Philippines. (2) A stock of koji trays filled with koji “in sterilised moulding chambers at Silver Swan Manufacturing Co., Philippines. (3) Steam cooking of soya beans for manufacture of soya sauce at the Hoc Guan factory, Philippines. Address: Director, Biological Research Center, National Inst. of Science and Technology, Manila, Philippines.

4747. Hughes, G. Bernard. 1970. Bristol blue glass. *Canadian Antiques Collector* 5(9):17-19. Oct.

• **Summary:** Bristol, England, was long known for its beautiful blue (from cobalt), semi-transparent flint glass. “Bristol-blue” (as was called) was in continuous production at Bristol from about 1763 to 1799, but little if any was made from about 1800 until 1820, during the Napoleonic wars which blocked supplies of Saxon smalt. In 1821, a lavish set was presented to George IV at his coronation; thereafter it came into vogue under the name of “king’s blue.”

“Label cruet sets, gilded with lettering and scrollwork, were advertised in 1764, soy and sauce bottles shortly afterwards. Cruet frames in Sheffield plate were fitted throughout with Bristol-blue oil and vinegar bottles and three casters, and soy frames with three to six gold-labeled bottles. They continued in production until the 1830s, little variation being found...”

Photos show: (1) A collection of Bristol-blue glass on three shelves, ranging in tint from deep cobalt blue to smoky greyish-blue. “The pair of sauce bottles (top left) are cut with hollow diamond facets and are engraved “Soy” and Elder” (p. 17). (2) “Two sets of spirit decanters labelled [gin, brandy, and rum] and decorated in gold, with four 12-sided soy bottles with shoulder bands of diamonds cut in high relief.” The soy bottles are less than half the height of the decanters, and much smaller in diameter (p. 18).

• **Summary:** Insolubilization during drying was the result of polymerization, which took place through disulfide bonds, as indicated by the effects of sulfhydryl-blocking agents, and through hydrophobic bonds, as indicated by the effect of sodium dodecyl sulfate. Address: Cornell Univ., Geneva, New York.

4750. Goldman, M.C. 1970. Southern California—Foodshopper’s paradise! An exciting burst of organic-living

enthusiasm—among young, old and in-between—has created a tidal wave of food shops and more products from Santa Barbara to San Diego. *Organic Gardening and Farming* 17(11):38-45. Nov.

• **Summary:** “Spearheading the surge to organic foods today is the West Coast’s literal Garden of Eden—the southern half of Golden California.” And this should be no surprise. A climate well suited for year-round gardening and farming join with people of all ages with people interested in natural foods plus “that rapidly-enlarging segment of the younger generation now so awake to wholesome eating.

“Actually, a sizable chunk of early interest in organic ideas belongs to this paradisiacal area. Pioneers like Phil Arena, Herbert Clarence White, Maria Wilkes, Clarence Tontz, Lee Anderson and dozens more have all lent the sunny Southwest locale an aura of organic history-in-the making.”

In a late July trip from Santa Barbara south to San Diego the writer observed in shop after shop (there are at least 300 “health food stores”) along the beautiful Pacific coastline, streams of young folks—many with surfboards and/or children in tow—were coming in to buy fresh fruits and vegetables, whole grains, “juices, kelp and dulse, sea salt and soy products, breads and eggs.”

Veteran Betty Morales, prolific writer and lecturer, notes: “The influx of young people is like a blood transfusion to the health-food business, particularly to the retailers of organically-grown foods.”

Sun Circle Ranches, based in California, supplied by some 200 organic farmers (large and small), are the leading nationwide distributor of organic produce.

In Los Angeles, Erewhon Trading Co., related to the original shop in downtown Boston, Massachusetts, is only a year old, yet serves 100 West Coast stores, natural food restaurants, co-ops and various institutions. Paul Hawken, president of Erewhon [a macrobiotic company], notes that even some of the big universities, including UCLA, have become customers for the popular organic brown rice and soy sauce.

Jimmy Silver, shop manager, says the store’s retail clientele consist of about half each younger and older people. Fresh produce from Sun Circle attracts both. Silver sells about 1,200 hundred pound bags of brown rice each month—90% of it wholesale to established shops in L.A. and other parts of the Southwest. Grown for Erewhon by Wehah Farms in Richvale, California, it now retails for \$16.50 per 100-lb sack.

“Grains from the well-known Arrowhead Mills in Deaf Smith County, Texas, also make up a sizable segment of business, says Hawken, a young man who typifies the keen, forceful drive of the new generation in health foods marketing. Along with these and rice, soy sauce made from Japanese organic-grown beans constitutes the biggest seller—nearly 4,000 gallons a month at \$8 by the gallon, down to \$1.20 per pint. Various soybean pastes, such as *mugi miso*

prepared with the beans, well water and salt, are also favorite products. So is seaweed...”

Says veteran store owner Walter Lindberg: “No question about it, people are becoming more concerned about the quality of the food they buy.” All store owners say that business has jumped during the past year—especially from young people. “Young people have an open communication system that far outstrips TV and radio.”

At the Sun and Earth shop in Goleta, a suburb of Santa Barbara packed with students, one popular item (called the “natural foods answer to the TV dinner”) is “a platter of our soyburgers, carrots and parsley,” which retails for 57 cents.

Goldman concludes: “The thunderbolt of organic living has not only struck ground in the West—it’s sent a strong, vital message crackling everywhere in the land.”

Contains 6 photos taken inside the new breed of food shops. Address: Box 866, Hereford, Texas.

4751. Saint, Wint F. 1970. Soy foods—West. *Soybean Digest*. Nov. p. 32-33.

• **Summary:** With such a large number of people of oriental ancestry living along the Pacific Coast of the United States and in the islands of Hawaii—our 50th state—“plus the interest in oriental cooking by occidental people, it is hardly surprising that edible soybeans play a prominent part in the ingredients of many oriental dishes and prepared food products in the West.”

“But very few people have ever heard of a food that has been a staple in the oriental diet for centuries—bean cake.

“Bean cake, which includes tofu and Chinese cheese, is an excellent food, high in protein, and containing all the essential amino acids.”

“Being a soft-curd product, similar in consistency to our cottage cheese, fresh bean cake alone has no distinctive flavor. In fact, it is quite bland. However, it very quickly picks up the flavor of foods with which it is cooked... Thus it may be considered an ‘extender’ or ‘food supplement.’”

Briefly describes how to make “fresh bean cake” on a commercial scale, with calcium sulphate used to coagulate the soy milk (also called “bean milk”). “The residue [okara] usually ends up at the local hog ranch.”

The curded soy milk “is scooped into stainless steel trays, or forms, where any excess water is removed. The slabs are then put through another machine which, by means of wires or knives, cuts the cake into small cubes or rectangular pieces which are packed into jars or ‘see-through’ plastic trays with a very small amount of water. Printed heat-sealing cello tops are affixed along the top edges of the trays.

“The tofu-type bean cake is best when fresh, although if kept in water it will hold its freshness for several days in the refrigerator.

“During the early morning business hours the freshly packed product is delivered to the colorful oriental food

shops and restaurants or western supermarkets of the Pacific Coast and Hawaii. A 1969 news release stated that this product accounted for close to \$3 million in sales by about 20 U.S. manufacturers and that only slightly over 50% of the consumers were of Oriental descent.

“Fermented-type cake: The fermented-type bean cake—Chinese cheese—is also a soy-milk-based product, but its manufacture is somewhat more complicated, lengthier, and closely guarded than the fresh type. When the fermentation process—which is a matter of days rather than hours—has been completed,... the small yellow cubes are packed neatly in a solution of water plus alcohol, in hermetically sealed glass jars, to insure perfect keeping qualities. One large local producer [probably Quong Hop & Co.] is distributing his product in practically all the 50 states of the U.S. as well as shipping into Canada, South America, and even to Hong Kong!

“Of the fermented-type Chinese cheese, the most widely known, and used, is the yellow or Foo Yee, the taste of which can be compared to a mellow Camembert cheese, while the red, or Nam Yee, is more highly seasoned or spicy. The yellow is called for in many Chinese recipes. A jar will be found in most any Chinese-American kitchen, used mainly as a seasoning, as a cheese substitute, or a topping for macaroni or vegetable dishes.

“The red type—Nam Yee—being of a stronger, spicier flavor—is usually used as a condiment or a seasoning for flavoring roasts, steaks, or with fowl.”

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term “Nam Yee” to refer to fermented tofu.

“Oriental recipes calling for the use of bean cake are varied and most interesting. Very simply: bean cake can be eaten ‘as is’ with just a bit of sugar sprinkled over it, or dipped in soy sauce, to give it flavor. Or, it may be diced and scrambled with eggs for a breakfast dish, or prepared with pork—known as Tofu Yuk—or with beef.”

A portrait photo shows W.F. Saint. Address: W.W. Saint Co., San Francisco.

4752. *Soybean Digest*. 1970. A Southeast Asia soy food firm. [Yeo Hiap Seng Ltd.]. Nov. p. 3.

• **Summary:** “A company that started as a family business making soybean products is today one of the largest food and beverage concerns in Southeast Asia. Yeo Hiap Seng Ltd. owns a number of manufacturing plants in Singapore and Malaysia and makes soybean products and also soft drinks and canned foods.

“Yeo Hiap Seng Ltd. started off using soybeans as a base for all its products. It made soy sauce, soybean paste, and other products that are basic necessities for Chinese food...

“In 1950, Yeo Hiap Seng Ltd. decided to undertake the processing of soy milk on a commercial scale. The firm successfully launched the first soy milk in bottles in 1952.

This is marketed as a food beverage known as ‘Beanvit’ and retailed at the same price as other soft drinks...

In 1968 the company successfully introduced soymilk in a modern one-way container. “This form of packaging, which has been widely used for milk, is the tetrahedron-shape kraft paper lined with polyethylene-coated aluminum foil. The product is sterilized before filling.

“The soy milk is heated to 142°C and held for 4 seconds, cooled instantly to the original temperature, then poured into the containers. This method of packaging under sterile conditions will enable the product to be kept for about 8 months without refrigeration. The product is much better in both appearance and taste than with the normal sterilization at 115°C for 15 minutes. The container can be discarded after use.

“Yeo Hiap Seng Ltd. has recently introduced an improved soy milk, ‘Vitabean.’ Packed the same way, Vitabean is enriched with vitamins A, B1, B2, B6, C, D3 nicotinamide and pantothenic acid sufficient to provide half the normal daily vitamin requirements for adults. It has been found there are no great losses of heat-sensitive vitamins processed with this UHT [ultrahigh temperature] method.

“The company says it is looking forward to establishing Vitabean plants in other parts of the world.” A photo shows a machine packaging Beanvit and Vitabean, with a woman standing nearby.

4753. Dwidjoseputro, Dakimah; Wolf, Frederick T. 1970. Microbiological studies of Indonesian fermented foodstuffs. *Mycopathologia et Mycologia Applicata (The Netherlands)* 41(3-4):211-22. Dec. 4. [18 ref]

• **Summary:** Ragi is Indonesian starter culture. From ragi-tempe (tempeh starter) and tempe were isolated *Rhizopus oryzae*, *R. arrhizus*, *R. oligosporus*, *R. stolonifer*, *Mucor Rouxii*, *M. javanicus* and *Trichosporon pullulans*.

From ragi-ketjap, used to prepare Indonesian soysauce, were isolated *Rhizopus oligosporus*, *R. arrhizus*, *R. oryzae*, *Aspergillus oryzae*, and *A. flavus*, the latter species probably being an accidental contaminant. The microflora of *tapé* (*tapeh*) is also described. Two new species are described: *Candida lactosa* and *Hansenula malanga*, from ragi-tapé from Surakarta and Malang, respectively. Address: Vanderbilt Univ., Nashville, Tennessee. Dwidjoseputra now resides in Malang, Indonesia.

4754. Crane, Paul S.; Rhee, S.U.; Seel, D.J. 1970. Experience with 1,079 cases of cancer of the stomach seen in Korea from 1962 to 1968. *American J. of Surgery* 120(6):747-51. Dec. [14 ref]

• **Summary:** This case-control study shows a very high incidence of stomach cancer when compared with other forms of cancer seen in a rural Korean mission hospital. Consumption of miso soup or miso (“soya paste” [doenjang]) was associated with increased risk of stomach cancer. “The

fact that *Aspergillus flavus* is found in soya bean cakes raises the possibility that aflatoxins produced by this mold which grows on the soya cakes (from which soya bean paste is made) may be a possible etiologic factor in the high incidence of stomach cancer seen in 1,079 patients with stomach cancer in a 130 bed hospital in the seven year period from 1962 through 1968 in Southwest Korea.” Soya sauce intake was also studied. Address: 1. Nashville, Tennessee; 2-3. Chonju, Korea.

Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products.

Label sent by Anthony Marrese. 1990. Jan. 10.5 by 2 inches. Red, green, and white on beige. Color photo shows the product, resembling a golden-brown tofu burger with sesame seeds showing, surrounded by peas and carrots. “Soyameat in slices (Sojafleisch in Scheiben).” Neuform certification symbol. Ingredients now read: Whole soybean puree, water, soy oil, egg protein, soy protein, wheat protein, salt, seasonings, dextrose, celery, carob bean flour and guar seed flour as thickeners, onions, spices. Sauce: Water, seasonings, soy sauce, salt. 8 slices per can weigh 200 gm, but 310 gm with sauce. Retail for DM 4.98 (1/90). Composition per 100 gm.: Protein 15 gm, fat 16 gm, usable

carbohydrates 5 gm, calories 221.

4757. **Product Name:** Island Soy Sauce.

Manufacturer’s Name: Honolulu Sake Brewery Co., Ltd.

Manufacturer’s Address: Honolulu, Oahu, HI 96813.

Date of Introduction: 1970.

Ingredients: Water, soy beans, salt, wheat, disodium 5-inosinate, caramel coloring, and sodium benzoate, a preservative.

Wt/Vol., Packaging, Price: 16 fluid oz (1 pint), 50.7 fluid oz (1 quart 1 pint 2.7 fluid oz) or 101 fluid oz (3 quarts 5 fluid oz).

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1930-31. p. 241. The company is currently named Honolulu Ice Co. Ltd. Tomokuni Iwanaga is president. They are at 2153 Booth Rd. In the 1934-35 Directory (p. 211) the name changes to Honolulu Sake Brewery & Ice Co. Ltd. Daizo Sumida is president. Same address. They are never listed as a shoyu manufacturer in any index up through 1954.

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows one label. This company has closed but their brand is being carried on by the Honolulu Sake Brewery and Ice Co. Ltd. Label. Received Feb. 1988 from Honolulu Sake Brewery & Ice Co., Ltd. 4.5 x 3.5 inches. Red, black, yellow, pink, and white. White, pink and red hibiscus flowers on label. Letter from Takao Nihei. 1988. July 19. The product was launched in 1970 by Honolulu Sake Brewery Co. Ltd. Omit “& Ice” in company name.

• **Summary:** The fermented soy sauce industrially produced in Korea is of the Japanese koikuchi type, and in 1970 the annual industrial production was estimated to be about 220,000 kl. Assuming that the daily per capita consumption is about 20 ml, the amount cited above is equivalent to one-half the demand for soy sauce in Korea, and it is estimated the same amount is produced at home.

4766. Abehsera, Michel. 1970. *Cooking for life*. Swan House, P.O. Box 638, Binghamton, NY 13902. xiv + 364 p. First Avon Flare Books printing, March 1972. Index. 21cm.
• **Summary:** Contains many imaginative and joyous macrobiotic recipes. Acknowledgments: "This book could never have been completed without the help of my wife, Claude. Most of the recipes are hers; she cooked, tested and wrote them down... Jack Garvy completed the editing of the book and made definite English corrections. My exceptional friend William Dufty gave valuable advice. Finally, my brother Charles was very helpful..."

The author uses the term "black beans" and from his definition on page 18 it seems that he is referring to black soybeans: "Black Beans, twin brothers of the red aduki in size, are sold in Chinese, Japanese and natural-food stores. They are the milk and honey of the bean family, and their flavor and texture impart a delightful sweetness and richness to any soup or vegetable dish." No definition is given of soybeans. In the section titled "Condiments" (p. 20-21), the author defines soya sauce, miso, seitan, salted plums, tofu, kuzu, etc. "Tofu is another name for soya-bean curd. In Chinatown, you'll see it in wooden barrels. It looks like Feta Greek Cheese and some people would swear it tastes like chicken. It is excellent served with sauteed vegetables, sauces, fried or cooked in Miso Soup.

"Seitan: Your guests will almost certainly mistake this for meat. Teeth find it pleasant to chew. A combination of wheat gluten, wheat soya beans [sic], water and salt, it comes in handy when mixed with vegetables, sauces and soups." Note 1. No recipe for making or using seitan appears in this book.

Soy-related recipes include: Cooking beans in a pressure-cooker (p. 66; "Do not pressure cook black beans. Their skins may come off and clog the pressure cooker spout. It is quite dangerous!"). Cooking beans in a pot (incl. soya beans, p. 67). Black-bean stew (with miso, p. 70). Soja jardiniere (with whole soya beans and miso).

In the chapter titled "Soups," the author tells the story of how the famous Japanese physician, Dr. Tatsuichiro Akizuki, used miso to strengthen his constitution and to survive the atomic bomb dropped on Nagasaki on 9 Aug. 1945. Under "Minerals" in that chapter he discusses other virtues possessed by miso, then gives a recipe for Miso soup (p. 86).

Radishes sauteed in miso (p. 114). Sandwich au gratin (with miso spread, p. 114). Macrobiotic marbles (with miso, p. 155). Claudia's pizza (with miso, p. 158). Salade au cresson (with miso, p. 169). Nato [sic, Natto] (Japanese salad with natto, p. 171; Note 2. The author describes "Nato" as "sour soy-beans, bought in a Japanese store"). Miso sauce (p. 178). Miso spread (with tahini, p. 187). Oat-miso spread (p. 188). Scallion spread (with miso, p. 188). Miso pâté (p. 189). Komoku (with tofu, deep-fried and cut into strips, p. 212). O'Sushi (with tofu, p. 217). Kasha à l'Orientale (with tofu, p. 220). Bi-Cuan (Vietnamese recipe with fried tofu, p. 226). Kagetsu ice cream (with fine soya powder [perhaps Jolly Joan from Ener-G foods in Seattle], p. 334; "Kagetsu is a beautiful restaurant in Seattle"). Yellow pompidou (with soya bean powder, p. 336).

The Foreword states (p. 1-2): "Ten years ago I was a sick man, struggling to stay alive and to finish a novel. I suspected I might fail in both matters and the doctors of Paris agreed. They abandoned me as a hopeless case. It was then that I discovered a way of life called Macrobiotics. After a year of eating grains and vegetables, my health restored, I ventured to New York to discover America and finish my

novel.”

Note 3. *Webster's Dictionary* (1985) defines feta, a word first used in English in 1940, as “a white semisoft Greek cheese made from sheep's or goat's milk and cured in brine.”

Fax from Jimmy Silver. 1991. Dec. 17. This was the first best-selling macro / natural food cookbook. Michel is head of a (the?) Jewish community in Montreal, Canada. He has 7-9 brothers and 1 sister. “His brother, George, founded the Nature de France clay based body care company—originally called Cattier but changed after they were sued by Cartier. I thought they would have prevailed in the suit but George didn't want to spend \$500,000 to fight it even if he won.” Address: New York.

• **Summary:** This comprehensive work, the result of at least

25 years of collaboration, contains over 1,000 recipes. The 4th printing (March 1977) proclaims prominently: “The first Completely Safe Chinese cookbook compiled in accordance with latest food research without MSG (monosodium glutamate).” Following introductory chapters titled “Chinese Cuisine: Background,” “Regional Chinese Cooking,” “Utensils for Cooking, Serving, and Eating,” “Cooking Preparations,” and “Cooking Techniques,” there is a detailed “Guide to Ingredients” (p. 22-57), which describes the following soy-related foods and gives Cantonese / Mandarin pronunciation: beans, black (wu dow / wu do); beans—black salted fermented beans (dow si / do shih; used as a condiment or flavoring agent [seasoning]. Aroma: fragrant, appetizing); bean cake, fermented (fu yu / fu yu [fermented tofu]); bean curd (dow fu); bean curd, dried (dried bean curd [dried yuba], p. 25, 47—tiem jook or fu jook pei / t'ien ch'u or fu pi chi); bean curd cheese, red (nam yu / nan yu); bean filling, sweet (dow sa / do sa; made from red [azuki] beans or green / [mung] beans); bean sauce, brown or yellow (mien see jiong); bean sprouts (large, from soybeans) (wong dow gna / huang do ya); hoisin sauce (red seasoning sauce) (hoy sin jiong / hai hsien jiang); soy sauce (dark lo tsow / lao tsou; heavy—jiong yow / jiang yu [jiang you]; light—sang tsow / sheng tsou; table soy sauce—sin tsow / shien tsou) “Dark soy sauce has caramel added for coloring. Heavy soy sauce, which has a slightly sweet smell, is also known as black soy. Light soy sauce is the most delicately flavored and is light brown in color. Japanese soy sauce, somewhere between the Chinese light and heavy, is preferable to domestic brands but inferior to Chinese brands.”

Vegetable steak (mien gon / mein jing) “Meat substitute made from wheat gluten. Shape: 3-inch square or round patty ½ inch thick.” Brown, chewy, and firm. Sold in cans.

Photos (black and white, p. 47) show fermented black beans, fresh bean curd, pressed bean curd, bean curd sticks and bean curd sheets [both kinds of yuba, but “bean curd sheets” on p. 47 are called “bean curd, dried”], brown bean sauce, and large fresh bean sprouts.

Note 1. This is the earliest English-language document seen (Nov. 2008) that uses the word “dow fu” (or “dow-fu”) to refer to Chinese-style tofu.

Note 2. This is the earliest English-language document seen (Nov. 2008) that uses the term “bean curd sheets” or the term “fu jook pei” or the term “fu pi chi” or the term “t'ien ch'u” to refer to yuba or to dried yuba.

Pages 58-60 contain a “Shopping list for Chinese cupboard.” Foods are listed alphabetically in English, with the Cantonese term romanized and Chinese character forms. Next come the 1,000 Chinese recipes divided into chapters. One chapter is titled “Bean Curd” (p. 422-34), which includes Ma Po Dow Fu (p. 433); there are so many recipes for regular tofu (dow fu) in this book that we do not have room to list them all. The many other soy-related recipes are listed in the excellent index.

Recipes for “bean cake, fermented” [fermented tofu] are: Scrambled eggs with fermented bean cake (Fu yu don, Canton, p. 134). Duck with fermented bean cake (Fu yu ta, Adapted, p. 276). Steamed pork with fermented bean cake (Fu yu tsing ju yoke, Canton, p. 292). Stir-fried green beans with fermented bean cake (Fu yu tsang dow, Canton, p. 391). Lettuce and fermented bean cake (Fu yu sang tsoi, Canton, p. 392). Spinach and fermented bean cake (Dow fu bo tsai, General, p. 399). Watercress and fermented bean cake (Fu yu sai yong tsoi, Canton, p. 40).

Recipes for “black beans, salted” [fermented black soybeans] are: Pork with bitter melon and salted black beans (Fu gwa yoke si, Canton, p. 305). Shrimp with bitter melon and salted black beans (Fu gwa dow si har, Canton, p. 306). Steamed spareribs with salted black beans (Dow si pai gwut, Canton, p. 320). Beef with bitter melon and salted black beans (Fu gwa ngo yoke do si jiong, Canton, p. 340). Black bean sauce (Huk dow tsup, Canton, p. 436; with garlic and ginger. Note 3. This is the earliest separate recipe seen {Nov. 2008} for “Black bean sauce”).

Recipes for “bean curd, dried” [dried yuba] are: Pig’s feet with dried bean curd soup (Ju gyok tiem jook tong, Adapted, p. 113; with “10 sheets dried bean curd.” Soak sheets in hot water for 30 minutes. Drain, cut crosswise into pieces 1 inch wide, then add to soup). Spare ribs with dried bean curd soup (Pai gwut shiu tiem jook, Adapted, p. 321). Dried bean curd strips with soy sauce (Hung shu tiem jook, General, p. 424). Vegetarian ham dried bean curd (Sue ho twei dow fu, Shanghai, p. 429; with “20 sheets dried bean curd”).

Recipes for “bean curd skin” (or bean curd sheets) [yuba sheets, fresh or dried] are: Red-cooked carp with bean curd skin (Fu pi hung sao yu, Shanghai, p. 158; with “bean curd skin to cover” carp). Red-cooked carp with bean curd skin—Approved ulcer recipe (Hung sao li yu dow fu pi, General, p. 158; with “¼ lb. dried bean curd skin {about 20 pieces, 1½ by 5 inches}. Soak for 30 minutes in hot water. Drain. Cut into 2-inch squares).

Recipes for “frozen bean curd” [frozen tofu]: Frozen bean curd with soybean sprout soup (Dung dow fu dow ya tong, Adapted, p. 90; with “2 cakes frozen bean curd” and “½ lb. soy bean sprouts.” “Defrost frozen bean curd by covering with cold water, letting stand 2 to 4 hours before cooking. Then cut each piece into 10 to 12 thin slices”). Spareribs with frozen bean curd (Pai gwut shiu dung dow fu, Adapted, p. 320; with “4 cakes frozen bean curd”). Stir-fried frozen bean curd (Tsao dung dow fu, Peking, p. 422; with “6 cakes frozen bean curd. * Wrap 2 to 3 pieces fresh bean curd together in waxed paper, freeze until hard”).

Recipes for “pressed bean curd” [pressed tofu]: Pressed bean curd shrimp (Sha tze gahn si, Shanghai, p. 178, with “4 pieces pressed bean curd”). Golden strips with pressed bean curd (La jiao tsao san sih, Hupeh, p. 313). Pressed bean curd and celery with stir-fried beef (Dow fu gahn ching tsai ro

si, Shanghai, p. 357). Stir-fried pressed bean curd with pork (Dow fu gahn tsao ro si, Shanghai, p. 427). Stir-fried pressed bean curd with chicken (Dow fu gahn tsao gee si, Shanghai, p. 427).

Recipes for “soybean sprouts” [soy sprouts]: Spareribs soybean sprout soup (Pai gu dow ya tong, General, p. 112). Beef shank soybean sprout soup (Wu hwa niu ro hwang dow ya tong, General, p. 112). Braised soybean sprouts (Hung sao hwang do ya, Shanghai, p. 376).

Note 4. This is the earliest English-language document seen (Nov. 2008) that uses the term “hwang dow ya” or the term “hwang do ya” to refer to soybean sprouts. Address: USA.

• **Summary:** The period of the late 1600s and early 1700s gave rise to the English interest in Indian chutneys and pickles, brought to England by East India merchants. After that, together with the establishment of curry dishes as part of England’s national cookery, “came the relishes, the ketchups and sauces which were the forerunners of the bottled sauces today. They too came to us via the East India Company and its traders, and like so many 18th- and 19th-century foods owe their development to the need for products which would stand up to long sea voyages and help to relieve the monotony of the food available both to the crews of ships and their passengers. The old ‘store sauces’ based on vinegar and horse-radish, soy and garlic, on pickled walnuts, oysters, cockles, mushrooms, lemons, anchovies, and onions gradually became known either as catsups (the word seems to have derived from caveach, a form of spiced vinegar pickle in which cooked fish was preserved. In different forms, such as scabeche, caviche, and so on, the term occurs throughout European cookery, and turns up in Mexico and Japan) or by the name of some individual who was thought to have originated a particular blend. By the mid-19th century, hundreds of British families must have had their own—or what they thought was their own—formula for some such sauce. Some of these sauces were regarded as particular to fish, some to grilled meat, others to roast game, others again were hailed as ‘universal sauces.’ One such, which appears to have been commercialized in the late 18th century was Harvey’s. A recipe for this sauce, mentioned in cookery books and lists of necessary stores throughout the nineteenth century, is given in a cookery dictionary of 1832 (Footnote: *The Cook’s Dictionary* by Richard Dolby, late cook at the Thatched House Tavern, St. James St. New edition, 1832). Ingredients were anchovies, walnut pickle,

soy and shallots, plus a whole ounce of cayenne, three *heads* of garlic, a gallon of vinegar and cochineal for colouring. The whole lot was mixed together, stirred two or three times, every day for a fortnight, strained through a jelly bag until perfectly clear, bottled and corked down. Harvey's, like its rival Worcestershire sauce commercially launched in 1838, was used as a condiment to flavour other less ferocious compounds."

There follows a list of sauces that were popular in the late-Victorian era. Elizabeth Lazenby had a range of sauces; Harvey's was among them.

"The all-conquering tomato sauces and ketchups of today were little known before 1900. The first recipes had appeared in English cookery books during the first years of the 19th century."

The author gives a recipe for a Piquant Sauce (p. 91) that comes from a "modest little manuscript cookery book" in her possession. "The date of the manuscript is probably early Victorian [Queen Victoria reigned 1837-1901]. The recipe reads: "½ oz. of Mace, 1 oz. of Ginger, ½ oz. of Pimiento (Allspice berries of Jamaica pepper), ¼ oz. of Chillies, ½ oz. of Mustard seed, 1 oz. of Long Pepper (*Piper longum*, a variety used in Indian cookery), ¼ pint Soy, 1 quart of Vinegar. Bruise the spice and simmer them in the vinegar a few minutes. Strain it, afterwards add the Soy. *Excellent*. Address: 24 Halsey St., London SW3, England.

4772. Haw, Kum; Yu, Jong Yull; Lee, K.Y.; Sung, N.E.; Tch'ai, B.S.; Cha, C.H. 1970. A report of nutrition survey (1969). *Hanguk Yongyang Hakhoe Chi (Korean J. of Nutrition)* 3:1-43. [16 ref]

• **Summary:** The last nation-wide nutrition survey in Korea was conducted in 1947. The authors of the present survey, with financial support from the Ministry of Health and Social Affairs, conducted this nation-wide survey (incl. dietary, clinical, and socio-economic aspects) from 29 July to Aug. 15, 1969.

Table II-6 (p. 7), titled "Average food intake per person per day (gm)" shows various categories of food in five different areas or occupations, plus the average. Soyfoods are listed under "A. Vegetable foods—2. Pulses and their products" as follows: Soybean—City 2.6, agriculture 3.6, fishery 3.7, mountainous -, mining -, average 2.4 gm/day. Soybean paste [jang]—City 7.5, agriculture 12.4, fishery 5.8, mountainous 11.2, mining 8.1, average 10.4 gm/day. In this category, figures for "Small red bean" [azuki] are also given, with an average of 1.7 gm/day.

Other tables show (with the 1st 3 columns above): II-7. Average nutrient intake per person per day. II-8. Average nutrient intake per adult per day. II-9. Average food and nutrient intake per person per day and % distribution (protein, fat, carbohydrate, energy).

IV-8. Education. IV-9. Roof materials on house. IV-10. Number of rooms in house. IV-11. Wall materials on house.

IV-12. Lighting in house. IV-13. Water supply in house. IV-14. Latrine. IV-15. Bath (private, public, well, stream or spring). IV-16. Kitchen (in the house, out, public). IV-17. Fire place (number in house). IV-18. Fuels IV-19. Kitchen equipment (no. of iron pots, bowls, small bowl, spoons or chopsticks). IV-20. Bed clothes (no. of quilts, of mattresses). IV-21. Occupation (90.6% in agriculture). IV-22. Ownership of house IV-23. Monthly income. IV-24. Land. IV-25. Domestic animals (chicken is by far the most popular). Address: 1. 4773. Hooker, Alan. 1970. *Vegetarian gourmet cookery*. San Francisco, California: 101 Productions. 192 p. Edited by Helen Morrow. Illust. by Sara Raffetto. 21 cm.

• **Summary:** Pages 101-02 state that one of the easiest ways to get one's daily protein is by using soya flour, which can be added to many foods. Soy-related recipes include: Baked soy beans (p. 56). Tofu with tempura vegetables (p. 132). Page 181 recommends various vegetarian food products, including Vegeburger and Choplets (made by Loma Linda Foods), Kikkoman brewed Soy Sauce, Bakon Yeast, and Gravy Quik (which contains soy and other vegetable proteins).

4774. Hosoda Bros. (Hosoda Kyodai Shokai). 1970. Importers & wholesalers (Ad). In: Hokubei Mainichi Shinbunsha, comp. 1970. *Hokubei Mainichi Nenkan [Hokubei Mainichi Year Book]*. San Francisco, California. p. 32. [Eng; jap]

• **Summary:** Ad (1/8 page). The top 1/3 of this ad is in English. In Japanese: Hosoda Kyôdai Shôkai. They import Yamasa Shoyu.

Note: This ad is confusing or misleading. They say they are *seizô oroshi moto*, meaning manufacturer and wholesaler, but in English they say only that they are "Importers & wholesalers." Address: 1596 Post St., San Francisco, California. Phone: 921-6942.

4775. Hughes, George Bernard. 1970. *Sheffield silver plate*. New York and Washington, DC: Praeger Publishers. 303 p. Illust. Index. 26 cm.

• **Summary:** The best treatment of the subject seen to date—especially as it relates to soy. Chapter 19, titled "Cruets and soy frames" (p. 197-202) begins: "Contemporaneous with the Georgian cruet frame was the soy frame." Note: George II of Great Britain ruled from 1727 to 1760.

Early in his reign the British East India Company began to import a new seasoning "known as soy, described in 1776 as 'a sauce as thick as treacle and of a clear black colour.'" Note: No source is given for this quotation, nor have we ever been able to find one.

"The vogue for soy, first served from shallow saucers of silver or porcelain, created a demand for specially designed silver-mounted bottles of flint-glass. By the 1750s soy bottles

were tabled in special frames with two or three other sauces. At first these were differentiated by gilding or engraving a label upon each bottle: from the 1770s the bottles could carry silver or Sheffield plate tickets suspended by chains around their necks—miniature versions of contemporaneous wine labels (Chapter 12).

“In the nineteenth century a soy frame might accommodate as many as six, eight or ten matching bottles each containing a different sauce such as soy, kyan, chili, anchovy, catsup, quin, lemon juice, tarragon, harvey and innumerable others including the Indian sauces mogul, nepaul and carrache. Quin was a sauce evolved by the actor James Quin, its ingredients including walnut pickle, garlic, mushroom catsup, horseradish, anchovies and cayenne. The basic flavour of kyan was derived from the smooth red seedheads of the South American cayenne pepper known contemporaneously as garden coral and today as capsicum.

“The earliest soy bottles, dating to the 1740s, were tabled on a graceful frame of silver. A flat circular or quatrefoil platform supported three or four cast scroll brackets attached by soldering and topped by circular guard rings shaped from drawn silver wire to contain the bottles. The brackets also extended downward from the platform as short legs terminating in spreading feet to provide stability. From the centre a standing loop handle rose above the bottles. These were of flint-glass, their long slender necks fitted with silver covers and handles. The fashionable design was ewer shaped with spout and graceful handle curving upward and downward from a silver mount. Richard Boulton’s trade card of the late 1740s illustrates such a soy frame.

“Thomas Heming, goldsmith to George III, at the King’s Arms, Bond Street, illustrated on his trade card the

fashionable soy frame of the late 1760s. A row of three soy bottles with shallow diamond-cut necks and bodies are shown set in pierced galleries standing in a rococo canoe-shaped dish. This design with and without uprising ends continued fashionable until the Victorian period, usually with a row of four bottles and less frequently with six or eight. These were generally facet cut, but the pattern included a narrow plain reserve to be engraved with the name of the sauce. The pantry usually contained several spare bottles inscribed with the names of fashionable sauces. Sometimes eight bottles were offered, six engraved with the sauce names and two carrying silver bottle tickets which could be selected from a set of six bearing the names of unusual sauces.

“Late Georgian silversmiths and Sheffield platers produced many costly conceptions of canoe-shaped soy frames, ornately enriched with cast and chased decoration and containing superbly cut bottles of the finest flint-glass made specially in the glass-man’s piling pots.

“By the early 1770s Tudor & Leader, Sycamore Hill, Sheffield, were manufacturing light-weight soy frames, the

platform usually of heavy wood such as Spanish mahogany to ensure stability. The upper surface and edges were concealed beneath thinly rolled silver plate or Sheffield plate silvered on one side only. The gallery of an example made by this firm in 1776 was pierced with vertical pales, ovals and lozenges and accommodated six cut-glass soy bottles with loosely fitting lift-off silver caps. Claw and ball feet continued fashionable, but foliage and bracket feet were more common. Soy bottles were now short-necked, deep diamond-cut and might be footed, round or square. They were fitted with glass stoppers, usually with ball finials and cut ornament.

“By the end of the 1780s cruets and soy bottles might be brought together to form a single unit placed conveniently in the centre of the formal or semi-formal dining table. At first the bottles were placed in guard rings fitted to a revolving stand of mahogany, its surface covered with a sheet of silver or Sheffield plate. Such pieces were catalogued by the Sheffield platers as ‘cruet and soy frames’. Soon this device was enlarged into an unwieldy epergne with branches spreading from a decorative pierced ring supported on stays extending from the guard rings encircling the edges of the revolving stand. Each branch terminated in a silver or cut-glass saucer with another set high in the centre. Several elaborate variants were made: in some examples the epergne was hung with gilded baskets for pickles.

“A catalogue of about 1850 illustrates 27 examples of combined cruet and soy frames, the number of bottles ranging from five to eight and each with four cruet bottles. These are shown set in circular frames with very deep galleries elaborately pierced with festoons; in so-called Gothic patterns; with vertical pales below shaped and festooned rims; and in ovals with substantially moulded uprights at the ends and sides supporting plain guard rings. Examples of the so-called crescent may be noted too, containing three vessels, the central one projecting in front of the others, with an elaborate near-horizontal scroll handle at the back rising appreciably above the guard rings. At this time, too, there was a fashion for a soy frame consisting of four conjoined cylinders elaborately pierced and set around a central standing handle and each containing a cut-glass bottle.

“Although the majority of soy bottles were blown from clear flint-glass of varying qualities, there was a fashion for opaque white glass enriched with decorations and labels in coloured enamels, from about 1770 to the early 1790s, and again in the mid-nineteenth century when the inscription was usually black. Typically these bottles were pear-shaped. Bristol blue glass was a satisfying alternative, lettered in gold. Green soy bottles achieved some popularity in the mid-nineteenth century.”

Photos show: (179) “Soy frame, 1780.” (180) “Soy frame, 1790.” Address: England.

4776. Kikkoman International Inc.; Kikkoman Shoyu Co., Ltd. 1970. *Sekai ni aiseru aji no shuyaku* [World renowned sauces (Ad)]. In: Hokubei Mainichi Shinbunsha, comp. 1970. *Hokubei Mainichi Nenkan* [Hokubei Mainichi Year Book]. San Francisco, California. p. 8. [Eng; jap]

• **Summary:** Ad (full page). The bottom 1/8 of this ad, plus one line near the top, are in English. The top line of the ad, in Japanese, means “The main character of taste, which is loved by the world.” Just below that is the title in English. And to the right below that is the “Kikkoman signature” in English. Near the top left in Japanese: Kikkoman products are made using the best selected ingredients and long experience. They start with shoyu, and include teriyaki sauce, sukiyaki sauce, *Menmi* (noodle broth base), and *Manjô Mirin* (sweet saké for cooking). They are the masters of the food seasoning craft. Kikkoman is working hard in the kitchens of the world.

Photos show: (1) A large, metal 1-gallon can of “Kikkoman Shoyu” (written in English). (2) Bottle of Kikkoman Hawaiian Teriyaki Marinade and Sauce. (3) Bottle of Kikkoman Sukiyaki Sauce. (4) Bottle of Kikkoman Worcestershire Sauce. (5) Bottle of Kikkoman Memmi / Menmi. (6) Smaller and slightly flattened bottle of Kikkoman Manjô Mirin.

In the lower left corner is the Kikkoman hexagonal logo. Above: “Since 1630.” Below (in Japanese): *Kunaicho goyôtatsu* (Purveyors to the Imperial Household). Address: San Francisco, Los Angeles, New York, Chicago, USA; Tokyo, Japan.

4777. Kuraun Boeki Kabushiki-gaisha (Crown Imports Co., Inc.). 1970. Crown Imports Co., Inc.: Importers–Exporters (Ad). In: Hokubei Mainichi Shinbunsha, comp. 1970. *Hokubei Mainichi Nenkan* [Hokubei Mainichi Year Book]. San Francisco, California. p. 7. [Eng; jap]

• **Summary:** Ad (half page). The top half of this ad is in English. This Japanese company imports many items from Japan, including Marukin Shoyu. Their main office is in South San Francisco, but they also have an office in San Francisco. Cable Address: “Crownimp” San Francisco. Address: 1336 San Mateo Ave., South San Francisco, California 94080. Phone: 761-0266; 873-7600.

4778. Matsuura, Shinji. 1970. Aflatoxins and fermented foods in Japan. *JARQ (Japan Agricultural Research Quarterly)* 5(1):46-51. [6 ref. Eng]

• **Summary:** No aflatoxins were detected in any samples of miso or shoyu examined. However, aflatoxin-like compounds were detected in about 30% of the koji molds examined, but these compounds differed from aflatoxins in their ultraviolet absorption spectra. Address: Chief, Lab. of Fermentation Technology, Fermentation Div., National Food Research Institute, Tokyo.

4779. Mutual Supply Company (Kyodo Shohi-gaisha). 1970.

General importer & exporter (Ad). In: Hokubei Mainichi Shinbunsha, comp. 1970. *Hokubei Mainichi Nenkan* [Hokubei Mainichi Year Book]. San Francisco, California. p. 9. [Eng; jap]

• **Summary:** Ad (half page). The top ¼ of this ad is in English. Company name with diacritics is: Kyôdo Shôhi-gaisha. They are selling many items including Mitsuba (Clover) brand shoyu (made in Honolulu, Oahu, Hawaii) and Kikkoman shoyu. Address: 1090 Sansome St., San Francisco, California 94111. Phone: (415) 982-1894.

4780. Robeau, Alec. 1970. *Cooking the Indonesian way*. New South Wales, Australia: A.H. & A.W. Reed. 160 p. Index. 21 cm.

• **Summary:** The Introduction has good, long definitions of many Indonesian ingredients including: Ketjap, ketjap manis, soya beans, tahu (tofu, and how to make it at home), taotjo ("These are salted soya beans and are readily available in all Chinese stores and shops." [Note: Taotjo is Indonesian-style miso]), tempe [tempeh].

Soy-related recipes include: Sajur oblok (Smoked fish and vegetable dish, with ¼ lb diced tempe, p. 34-35). Sajur gudek (Spiced vegetables and jackfruit dish, with ¼ lb diced tempe, p. 37). Sajur kangkung (Spiced watercress, with ¼ lb diced tempe, p. 38). Tahu Surabaya (Fried soya bean cakes with vegetables, with ½ lb diced tofu, p. 46). Kuah sate II (Spiced peanut sauce (with ketjap), p. 52). Babi ketjap (Pork in soyabean sauce, with 3 tablespoons soy sauce, p. 74-75). Sambal taotjo (Spiced chilli paste with taotjo, p. 119). Tempe goreng (Fried tempe, p. 128. Serve as a snack or side dish).

4781. Ross, Shirley "Wonderful." 1970. *The interior ecology* cookbook. San Francisco, California: Straight Arrow Books. 134 + 8 p. Recipe index. 22 cm.

• **Summary:** This pseudo vegetarian cookbook contains some fish recipes. Soy-related recipes include: Soybean loaf with tomato sauce (p. 35). Tamari & noodles (p. 55). Fried tofu (with sliced scallions and mushrooms, p. 72). Tofu salad (p. 102). Tamari sauce (with flour, margarine, milk, and mushrooms, p. 115).

4782. Shokuhin daijiten [Great Japanese encyclopedia of foods]. 1970. Tokyo. [Jap]

• **Summary:** Contains entries for amazake, miso, natto, shoyu, and tofu.

4783. Steinberg, Rafael. 1970. *Pacific and Southeast Asian cooking*. New York, NY: Time-Life Books. 208 p. Illust. (color photos). Index. 28 cm. Series: Foods of the World.

• **Summary:** A superb book filled with beautiful recipes, text, and color photos. Accompanied by a 128-page spiral-bound book of recipes. Bean curd [tofu] is mentioned on pages 74 (in Indonesian *gudeg*) and 172 (in Vietnamese soup).

Recipes that call for *ketjap manis* (Indonesian sweet soy

sauce) are Broiled skewered marinated chicken (Saté ajam, with 2 tablespoons *ketjap manis*, p. 88) and Spiced peanut sauce (Kajang saos, with 1 tablespoon *ketjap manis*, p. 93). The actual recipe for "Ketjap manis (Indonesian sweet soy sauce)" on page 106, which makes about 1 quart, calls for: 2 cups dark brown sugar, 2 cups water, 1½ cups Japanese soy sauce, ¾ cup dark molasses, ½ teaspoon ground *laos*, ½ teaspoon ground coriander, and ½ teaspoon freshly ground pepper.

Note: This is the earliest English-language document seen (April 2012) that uses the term "Indonesian sweet soy sauce" to refer to *ketjap manis*.

The very interesting headnote (p. 106) states: "The ubiquitous American tomato ketchup, or catsup, gets its name but not its ingredients from the Malayan 'kechop' (in Chinese 'ketsiap') which originally was a pickled fish brine."

Tjolo-Tjolo (Moluccas, Broiled fish and vegetables with 3 sauces). "To prepare the ketjap sauce, mix ½ cup *ketjap manis* and 1 tablespoon of fresh lime juice in a serving bowl" (p. 107).

4784. Stobart, Tom. 1970. *The International Wine and Food Society's guide to herbs, spices and flavourings*. Newton Abbot, England: David & Charles. 262 p. See p. 236-37. Illust. by Ian Garrard. 26 cm. 1977 ed.—International Wine and Food Publishing Co. Penguin Books ed.

• **Summary:** In the Acknowledgments, the author includes thanks to "Mr Lea of Lea and Perrins Ltd., Worcester, England;"

"Worcestershire sauce (Worcester sauce): This bottled commercial sauce is so famous and so worldwide in its use in every country outside the Iron Curtain that it deserves to be mentioned. The story of its origin is probably this. About 1837, the year Queen Victoria came to the throne, a retired governor of Bengal [Sir Sandys or Lord Sandys] went to his local druggists in Worcester, one of several shops belonging to two pharmacists by name Lea and Perrins, and ordered that a recipe he had brought back from India be made up. This was done but it did not pass muster with the ex-governor and he rejected it. The matter was forgotten until some years later when Mr. Lea and Mr. Perrins were turning out the cellar and the barrel came to light. On tasting it they found it was now quite superlative. Unlike O. Henry's tale of the Apollinaris water, they still had the recipe, and began to make it up for local consumption. The sauce so rapidly became popular that ten years later it was used in the household of many noble families, and the druggists had even begun to export it. Its fame was quickly spread around the world by the pursers [those responsible for the comfort and welfare of the passengers] of the early steamships. For instance, in June 1843, it was recorded [no source is given] that 'The cabin of the Great Western had been regularly supplied with Lea and Perrins' Worcestershire Sauce which is adapted for every variety of dish—from turtle to beef, from

salmon to steaks, to all of which it gives a famous relish. I have great pleasure in recommending this excellent sauce to captains and passengers as the best accompaniment of its kind for any voyage.' Not only does Worcestershire sauce come into most bar cures for a hangover, but it helps to soften the sight of salt pork when one is seasick.

"Worcestershire sauce is now manufactured in many countries and the same old recipe is used. Indeed, the Lea and Perrins factory in Worcester still uses the same splendid Victorian cast iron and wood machinery which, together, with vaults full of barrels of maturing sauce, convey the atmosphere of a winery, belied only by the smell of vinegar and spices.

"Worcestershire sauce is a thin piquant sauce of a general type popular in the days of the East India Company. It is based on vinegar, soy and molasses and contains the juice of salt anchovies together with red chilli, ginger, shallots and garlic; in all, over twenty different tropical fruits and spices. It is not a cooked sauce but is a product of maceration and is matured in oak hogsheads for a long period as it was in the pharmacists' cellar.

"Probably the greatest international use of 'Worcester' is in bars for flavouring tomato juice, and, as already mentioned, for reviving people with a hangover (e.g. prairie oyster). But a look through old correspondence shows that Worcestershire has been used by a surprising number of great chefs as one of their 'secrets'. It is clear that whilst nothing is worse than the excessive use of Worcestershire sauce to disguise bad cooking, it is a valuable flavouring when used with skill and moderation. There is someone to advocate its use in almost any dish: soups, fish, shellfish, meat and game and poultry, eggs, cheese, salad dressings and sauces. Cooks do better to steer clear of made-up flavourings, but an item which has been popular and unchanged for over a century and is used by chefs in so many countries must be an exception. Indeed, one could almost say that it has graduated as a basic natural ingredient."

Note: This is the earliest document seen (Feb. 2012) that tells the story about Lea and Perrins and the barrel of sauce, based on a recipe from India, being left in the cellar and forgotten, only to be later discovered and found to be delicious. Thus Mr. Lea of Lea and Perrins told Tom Stobart a tall tale (embellishing the history of his company), Mr. Stobart carefully recorded it as if it were true, and (as of Dec. 2008) it has been passed down through history as if it were actually true! Address: England.

4785. Stobart, Tom. 1970. *The International Wine and Food Society's guide to herbs, spices and flavourings*. New York, NY: McGraw-Hill. 261 p. Illust. (part color). Index. 26 cm.

• **Summary:** For a book published in 1970, this book contains a great deal of original and useful information. Note that the word "seasoning(s)" does not appear in the title or the index. For many entries, the equivalent word in

various European languages is given. In addition, for plants, the botanical name and family are usually given. Contents: Black and white illustrations. Colour plates. Introduction: The history of flavourings, the importance of flavourings, the origin of this book ("I come to this subject as a traveller who has lived in a number of different countries"), the scientific basis of flavouring, scientific, popular and foreign names, synthetic and harmful flavourings, flavouring in practice, growing herbs. An alphabet of herbs, spices and flavourings (The entries are in alphabetic order). Appendix.

Soy related entries: Harvey's sauce: "One of the old English sauces... In 1870, the courts decided there was no exclusive commercial right to the name 'Harvey's Sauce', as there are recipes for it dating back to at least the 17th century.

"Though there are many formulae, it is, in general, based on walnut and mushroom ketchup—flavoured with anchovy, garlic, and often soy sauce and vinegar. It has the appearance of Worcestershire sauce, but is not hot although it does contain some chilli."

Soy [sauce]—Soya bean: "The soy bean is undoubtedly the world's most important legume." It can be eaten as a fresh bean [green vegetable soybeans], as a dried bean and as soybean flour. It is a leading source of cooking oil "much used as a substitute for olive oil in Spain." From it one can make a kind of milk [soymilk]. "In the East [East Asia], it is also fermented to make various kinds of curd and bean cheese. The soy product which concerns us is soy sauce."

It originated in China and "is thought to have been brought from China to Japan by a Buddhist priest about A.D. 500. In the West it became well known during the nineteenth century. It is one of the ingredients of Worcestershire sauce and Harvey's sauce."

Worcestershire sauce (p. 236-37): See also the original 1970 ed. published in England.

Also discusses: Ketchup, M.S.G., oil ("The word 'oil' is derived from 'olive'"), sesame (incl. tahina. "The pure oil is almost without taste or smell and does not easily go rancid in hot countries, which is one reason for its popularity"). Address: England.

4786. Wiener Bordow, Joan (Sita). 1970. *Victory through vegetables: With a section of recipes from the macrobiotic diet by Barbara Thralls*. New York, NY, Chicago, Illinois, and San Francisco, California: Holt, Rinehart and Winston. ix + 163 p. 22 cm.

• **Summary:** A vegetarian cookbook. The author, whose name on the title page is given as Joan Wiener, was born in 1944. Soy-related recipes include: Soybean milk and soy chaff [Okara] (p. 15). Bean curd and instant bean curd (homemade, p. 15-16). Cream of rice and soybean soup (p. 31). Soy nut salad (with soy nuts, p. 42). Bean curd sukiyaki (p. 49). Far Eastern dumplings (filled with cooked and mashed soybeans, p. 54). Macao noodles and vegetables

(with bean curd and soy sauce, p. 56). Whole wheat role filled with bean curd (p. 59). Soybean tomato mix in stuffed peppers (with soy chaff [okara], p. 71-72). Soybean nuts (fried in butter, with salt, p. 93). Tahini miso spread (p. 136).

4787. *Market Share Trend by Brand. Soy + Teriyaki. Dollar base.* 1970--. Serial/periodical. New York, NY: Statistical Analysis Marketing Inst. (SAMI).

• **Summary:** SAMI data indicates that Kikkoman's share of soy sauce sales in U.S. supermarkets rose from about 26% in 1970 (3rd place) to about 44% in 1979 (1st place). Kikkoman passed Chun King during 1971 to move into 2nd place among the big three, then passed La Choy during 1976 to move into first place.

La Choy's market share rose from about 36% in 1970 to 39% in 1975, then steadily decreased to 34% in 1979. Chun King's market share dropped steadily from about 28% in 1970 to about 17.5% in 1979.

4788. Kikkoman. 1970? Kikkoman: All purpose sauce. Delicious with meats, salad, fish & vegetables (Brochure). Tokyo: Kikkoman Shoyu Co. 12 p. Undated. [Eng] Address: Kikkoman, Tokyo, Japan.

4789. Kikkoman. 1970? Quality results require quality ingredients. Good cooks know there's no substitute for Kikkoman (Leaflet). San Francisco, California. Kikkoman. 1 p. Single sided. 28 cm. Undated. [1 ref]

• **Summary:** This brown and green on tan leaflet gives a 5-step comparison of "Naturally brewed Kikkoman" with "Other types of soy sauce." "1. Brewed from select quality soybeans, wheat, salt, water—aged many months, vs. Made with chemically hydrolyzed protein, corn syrup, salt, water and caramelized sugar—not aged. 2. Natural flavor and color, vs. Synthetic flavor and color. 3. Pleasantly aromatic, subtle piquant taste, vs. Relatively acrid and harsh taste."

"Kikkoman's superior quality makes it ideal; for hamburger, chicken, steaks, chops, fish, stews, meatloaf, gravies, soups, salad dressings and party dips and, of course, for all Oriental dishes. Use as an ingredient, a marinade, and as a baste. Winner of 30 international awards for distinguished flavor and quality—world's standard of excellence! Quality leadership since 1630." A photo shows a bottle of "Kikkoman naturally brewed soy sauce—All-purpose seasoning."

Note: This is the earliest document seen (Oct. 2009) in which Kikkoman uses the term "naturally brewed" (with or without hyphenation) in connection with their soy sauce. The term was coined in about 1943 in Hawaii. Address: California.

4790. Lea & Perrins, Inc. 1970? The Lea & Perrins exciting ideas cookbook: with the easy find index inside cover. Fair Lawn, New Jersey: Lea & Perrins. 32 p. Undated. Illust.

(color). Recipe index. 22 cm.

• **Summary:** A booklet of recipes that call for Lea & Perrins' Worcestershire Sauce. Contents: Appetizers. Soups. Meat main dishes. Poultry. Seafood. Vegetables. Salads. Sandwiches and fillings.

The inside rear cover is titled "Lea & Perrins' Worcestershire Sauce: What's in it for you." An illustration shows two bottles side by side. One is full of the sauce and bears the distinctive orange label. The other contains layers of the ingredients; each layer is described by the side of the jar as follows: "Juicier red onions from the Finger Lakes. Spicier cloves from Zanzibar. Sweeter tamarinds from the West Indies. Snappier garlic from Venice. Bitier chili peppers from Mombassa. Livelier anchovies from the Cantabrian Sea. Choicer eschalots from Holland."

The bottom caption reads: "In a fast changing world we think some things should remain constant. This is why we haven't varied Lea & Perrins Sauce in over 130 years... only pure, natural products of the choicest grades and qualities available. And it is still aged naturally in wooden casks, like fine wine. Some things are just too good to change!"

Note 1. How about the change during World War II from soy sauce to HVP (hydrolyzed vegetable protein)? Is HVP a pure, natural product?

Note 2. Letter (e-mail) from Marlys McGuire, librarian, University of Minnesota in Minneapolis. The typeface looks like it was printed sometime in the 1970's. Also owned by Texas Woman's Univ. (Denton, Texas), Woman's Collection. Address: Fair Lawn, New Jersey 07410.

4791. Brozan, Nadine. 1971. If you've never seen a soybean before... *New York Times*. Jan. 23. p. 18.

• **Summary:** Denis Barber owns about 75,000 bushels of soybeans at any given time—yet he's never seen a soybean. As president of General Arbitrage, a New York commodity trading company, he buys and sells commodity futures. The soybeans he purchases are usually resold before the date he is required to take delivery; if they are not, they end up in a warehouse in Chicago.

In the financial world, the soybean is known as "the Cinderella crop." It contains more protein than any other vegetable—and costs less. Yet in America, soybeans are not widely available in food stores—except in health food stores and Chinese markets. Although supermarkets do not stock the bean, they do sell many products, ranging from salad dressings to pet foods, that contain soybean oil, meal, or flour. They also carry soy sauce and Worcestershire sauce. Babies allergic to cow's milk will probably be given soy milk. Observers of orthodox [kosher] Jewish dietary laws, which do not permit the consumption of meat and dairy products at the same meal, are now able to enjoy imitation sour cream, ice cream, or steaks—each made from the soybean. According to Mr. Barber, less than one half of one percent of the crop is used for human nutrition; its main use

is as a meal for livestock.

Dr. Joseph J. Rackis, principal chemist for the Northern Marketing and Nutritional Research Division of USDA's Agricultural Research Service in Peoria, Illinois, agrees that most soybeans are processed into oil and meal. And even if more were available for sale as food, most people don't like their taste—according to a spokesman for General Foods.

The “future of the soybean probably rests more in what it can become than what it is.” The food industry, scientists and nutritionists believe that the wave of the future lies in the simulation of foods from soybeans. Already they are transforming soybeans into “hamburgers, canned stews, bacon strips, hors d'oeuvre dips, chow mein, pasta, sea food, and a wide range of frozen dinners approximating ham, chicken and beef.” A photo shows soybeans in a plastic bag.

4792. **Product Name:** Tamari-Roasted Almonds.

Manufacturer's Name: Chico-San Inc.

Manufacturer's Address: P.O. Box 1004, Chico, CA 95926.

Date of Introduction: 1971. January.

How Stored: Shelf stable.

New Product—Documentation: Talk with Bob Gerner, founder of Westbrae Natural Foods. 1992. May 11. Bob thinks that Chico-San was the first company in America to make tamari-roasted nuts—a product that was later made by many natural foods distributors and became popular nationwide. But Chico-San's product was (in Bob's opinion) crude. They would cover the nuts with soy sauce then toast them; the soy sauce would burn on the outside and not taste very good.

4793. Imahara, Hirotugu; Iwai, M.; Nakahama, T. 1971. Shôyu no sanmaku-sei kôbo ni kansuru kenkyû.

IX. [Studies on the pellicle-producing soy yeast. IX. Relationship between the physico-chemical properties and pellicle formation of yeast]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 49(1):8-15. Jan. [24 ref. Jap; eng]
• Summary: A pellicle or film is formed on the surface of soy sauce by various strains of *Zygosaccharomyces* yeast. The pellicle-forming yeast generally caused less sedimentation and a smaller specific gravity than non-pellicle-forming yeast. A strong negative charge was found on the surface of the non-pellicle-forming yeast and it was found to be lyophilic.

Note: *Webster's Dictionary* defines lyophilic (an adjective first used in about 1911) as “marked by a strong affinity between a dispersed phase and the liquid in which it is dispersed.” e.g. “A lyophilic colloid.” Address: Faculty of Agriculture, Kyoto Prefectural Univ., Sakyo-ku, Kyoto, Japan.

4794. *Christian Science Monitor*. 1971. Indonesian flavors furnish variety in Southeast Asian cookery. Feb. 23. p. 10.

• Summary: This is a book review of *Art of Indonesian*

Cooking: The ABC's, by Agnes de Keijzer Brackman (Singapore). “Mrs. Brackman points out that the word ‘ketchup’ is derived from the Malay word for soya sauce, ‘ketjap.’” In the West, however, ketchup now uses tomatoes as its main ingredient.

The recipe for “Spicy soya sauce—Sambal ketjap” has as its main ingredient “4 tablespoons sweet soya sauce”—along with red chili, tamarind juice, and fried onions.

Note: This is the earliest document seen (April 2012) that contains the term “sweet soya sauce.” It probably refers to *ketjap manis*, which is thick, sweet Indonesian soy sauce.

4795. Eden. 1971. Eden: Organic foods, natural foods (Ad). *East West Journal* 1(2):8.

• Summary: “Organic grains and vegetables. Miso and tamari. Oils, teas, and condiments. Nuts and seeds. Fresh and dried fruits. Book and utensils. Traveling accommodations on advance notice.” The Eden logo is 4 sprouts in a double circle.

Note: This is the earliest document seen (June 2001) that advertises or markets miso. Address: 211 South State St., Ann Arbor, Michigan; 347 Ludlow Ave., Cincinnati, Ohio. Phone: 313-769-8444.

4796. Essene. 1971. Essene (Ad). *East West Journal* 1(2):10. Feb.

• Summary: “Organic grains—vegetables—beans. Miso—tamari—sea vegetables. Flour stone ground on premises. Distributors of natural and traditional foods. Retail. Wholesale. Mail order. Mon. thru Sat. 9–6:30.”

Note: This is the earliest document seen (March 2006) concerning Essene, an early natural foods and macrobiotic company and distributor in Philadelphia. Address: 320 South St., Philadelphia, Pennsylvania. Phone: WA2-1146.

4797. Marsh, Elisabeth. 1971. Macrobiotique pour les Américains [Macrobiotics for Americans]. *Spirale (Brussels, Belgium)* No. 46. p. 8-11. Feb. [Fre]

• Summary: Translated from the English by Josiane Bagno. Contains 8 lines about miso and 4 lines about tamari. *Spirale* is located at Avenue Voltaire 141, 1030 Brussels.

4798. Mother Nature & Sons Ltd. 1971. Natural foods. Organic and macrobiotic foods (Ad). *East West Journal* 1(2):10. Feb.

• Summary: “Full line of grains, vegetables, beans, sea vegetables, miso, tamari, umeboshi, fruits, nuts, teas, baked goods. From: Lima [Belgium], Chico San, Infinity, Spiral, Hain, Caldron, and Paradox. Located at: 351 Bleeker Street, New York City, NY 10014. Phone: 212-924-7572.

Note: *East West Journal* is edited by Ron Dobrin [a former New York journalist], published by Order of the Universe Publications, and distributed by Tao Books & Publications, Inc., 303b Newbury St., Boston, MA 02115.

Address: 351 Bleeker Street, New York City, NY 10014.
Phone: 212-924-7572.

4799. Rubini, Milton E. 1971. The many-faceted mystique of monosodium glutamate [MSG]: Editorial. *American J. of Clinical Nutrition* 24(2):169-71. Feb. [3 ref]

• **Summary:** "The use of seaweeds, sea tangles [kombu], and soy sauces as condiments has a history in the Orient of at least a thousand years. All contain monosodium glutamate..." It is used in home economics classes, in cooking schools, and by food processors. It is on the US FDA's Generally Recognized as Safe (GRAS) list [it was grandfathered in, not approved after testing].

The so-called "Chinese Restaurant Syndrome" was recently brought to the attention of scientists and the public by Schaumberg and co-workers (1969) in the prestigious journal *Science*.

Different individuals show widely different reactions to monosodium glutamate. Some react vigorously to doses of 1-2 gm, but many develop no symptoms even if they consume 12 gm. It is hard to understand how a simple substance such as MSG that is readily absorbed is so much more toxic when given parenterally [by injection] than orally [consumed by mouth].

Recently glutamate was removed from baby foods; the real question is why it was added in the first place. Address: M.D., Editor in Chief, *American J. of Clinical Nutrition*, Los Angeles, California.

4800. Erhard, Darla. 1971. Nutrition education for the "now" generation. *J. of Nutrition Education* 2(4):135-39. Spring. [41 ref]

• **Summary:** Describes the author's efforts in Berkeley, California, to provide factual nutritional information to members of various San Francisco Bay Area counterculture groups, including Zen macrobiotics, the One World Family Commune, Krishna Consciousness devotees, and fruitarians.

"Food faddism—which used to be associated with older population groups—coupled with vegetarianism has now become the panacea for some members of the younger generation, often called 'hippies.'"

"The majority of my information on the Zen Macrobiotic diet was derived from classes that I attended taught by a former pupil of George Ohsawa, believed by some to be the originator of Zen Macrobiotics. From these groups, I learned that the widely publicized, all-cereal diet originating from the seven levels of eating (dietary eating pattern with initial allowance of certain percentages of all foods with seven progressions to the ultimate all-cereal diet) was the result of mistranslation and misuse of the Zen Macrobiotic principles by the American public." The author then gives a fair and balanced description of a macrobiotic diet; miso, soy sauce and tofu are listed as part of a typical daily macrobiotic menu. Address: 323 Monte Vista Ave.,

Oakland, California 94611.

4801. Kim, Sang Jae. 1971. [Taxonomical studies of Korean *Aspergilli*]. *Misaengmul Hakhoe Chi (Korean J. of Microbiology)* 9(1):1-26. March. [39 ref. Kor; eng]
Address: Dep. of Biology, Graduate School, Kon Kuk Univ., South Korea.

4802. Koshiyama, I. 1971. Some aspects of subunit structure of a 7S protein in soybean globulins. *Agricultural and Biological Chemistry* 35(3):385-92. March. [15 ref]
Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4803. Okuhara, Akira; Saito, N.; Yokotsuka, T. 1971. Color of soy sauce. VI. The effect of peptides on browning. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 49(3):272-87. March. [10 ref. Eng]

• **Summary:** The browning of soy sauce is much faster than that of solutions containing only sugars and amino acids. In soy sauce, a small amount of amino acids is consumed during browning.

Peptides are among the most important components promoting the browning of soy sauce, and some part of the browning of other fermented products is also caused by peptides. Address: Central Research Inst., Kikkoman Shoyu Co. Ltd., 399 Noda, Chiba prefecture, Japan.

4804. Jose, Hirokazu; Sugimori, Tsunetake. 1971. [Studies on halotolerant lactic acid bacteria relating to soy sauce brewing. II. Effect of L-proline on halotolerance of *Tetracoccus* No. 100]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 49(4):302-12. April. [12 ref. Jap; eng]

• **Summary:** *Tetracoccus* No. 100 is a halotolerant lactic acid bacterium isolated from both soy koji and soy mash [moromi]. L-proline facilitates its halotolerance. Address: Kyoto Research Laboratories, Marukin Shoyu Co., Ltd., Uji, Kyoto, Japan.

4805. Mogi, Saheiji. 1971. International marketing of an oriental product: Overseas marketing of Japanese soy sauce. *Asian Productivity Organization. Translation Series* No. 23. 16 p. April. (Tokyo). First published in Japanese in the Japan Marketing Association's magazine *Marketing News*, No. 136. Nov. 1969. [Eng]
Address: Managing Director, International Operations, Kikkoman Shoyu Co., Ltd., Japan.

• **Summary:** Addition of some of these substances to heat-

treated soy milk before drying improved redispersibility of resultant dried products. Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, New York 14456. Sugimoto is presently with Kikkoman, at Noda, Japan.

4807. *Sunset (Menlo Park, California)*. 1971. An introduction to soybeans. 146:226, 228. April.

• **Summary:** “‘They taste so good!’ was the exclamation we heard over and over again from our taste-testers who were sampling soybeans for the first time. The intriguing nutlike flavor and tender texture of these highly nutritious legumes comes as a pleasant surprise.

“Soybeans are indigenous to China and Japan, where they have been used since before recorded history. Here in the West the dried beans are readily available in health food stores and Oriental markets.”

Describes how to soak soybeans (6-8 hours or overnight; reserve liquid for cooking), and how to cook them (simmer for 3 hours). Gives recipes for: Dry-roasted soybeans [soynuts]. Baked soybeans (with onion, salt pork, molasses, catsup, salt, mustard, Worcestershire sauce, and pepper). Marinated soybean salad. Refried soybean tacos.

4808. Hansen, Barbara. 1971. Interest in Asia carries into Kitchen. *Los Angeles Times*. May 20. p. J16.

• **Summary:** Rosemary Brissenden, an anthropologist from the Australian National University at Canberra, has written a book (a work of love) titled “Joys and Subtleties,” about the foods and cookery of Southeast Asia, especially Indonesia, Malaysia, Singapore, and Thailand. In 1957 she “spent three months in Java and Bali with a student delegation from Australia.” They lived with Indonesian families and ate their food. The recipes in her book “are as authentic as close observation of cooks at work could make them.” Moreover they call for the same ingredients used by the Indonesian cooks, such as Javanese soy sauce, coconut milk, laos [a root], lemon grass, trasi, tamarind, and curry leaves. These are now available in most big cities, mainly at Chinese markets.

Ms. Brissenden and her husband are just finishing a six month stay in Los Angeles.

4809. Kosuge, Takuo; Zenda, Hiroshi; Tsuji, Kunio; Yamamoto, Takeshi; Narita, Hiroko. 1971. Studies on flavor components of foodstuffs. I. Distribution of tetramethylpyrazine in fermented foodstuffs. *Agricultural and Biological Chemistry* 35(5):693-96. May. [17 ref]

• **Summary:** Tetramethylpyrazine (T.M.P.) was detected in many Japanese fermented foodstuffs, especially miso (29 mcg/kg), natto (22), and soy sauce (4). Moreover, the amount of T.M.P. in miso increased almost tenfold (from 29 to 265 mcg/kg) after storage for 1 year. This fact indicates that T.M.P. may play an important part in the flavor of these fermented foods. Roasted foods, such as coffee, cocoa,

and peanuts, are a rich source of alkylpyrazines. Address: Shizuoka College of Pharmacy, Shizuoka, Japan.

4810. Yamagata, Kei; Fujita, Tokio. 1971. [Studies on yeasts isolated from saké-cake pickles and soy-mash. II. Salt tolerance and cellular characteristics of *Torulopsis* yeasts]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 49(5):385-89. May. [4 ref. Jap; eng]

Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, Kinki Univ., Osaka, Japan.

4811. *Foreign Agriculture*. 1971. Japanese imports of U.S. soybeans peak at 2.9 million tons in 1970. June 7. p. 5.

• **Summary:** Contents: Introduction. Soybean imports. Rapeseed imports. Peanut imports. Soybean production. Rapeseed production. Peanut production.

Soybean production in Japan has dropped steadily for several years, from 135,700 metric tons in 1969 to 126,000 tons in 1970 (down 7%).

“The [Japanese] Government—in order to encourage diversion of riceland to other crops and to promote the production of oilseeds—has proposed payment of approximately \$393 per acre if soybeans, rapeseed, or other annual crops are planted on paddy fields in 1971. Certain farmers who plant soybeans cooperatively will receive approximately \$450 per acre.”

A photo shows 4 Americans watching a Japanese worker preparing to press moromi in a hydraulic press to make soy sauce.

4812. Nasuno, Seiichi; Nakadai, Tadanobu. 1971. Formation of glutamic acid from defatted soybeans by *Aspergillus oryzae* 460. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 49(6):544-51. June. [25 ref. Eng]

• **Summary:** *Aspergillus oryzae* 460, a strain which was isolated from air, liberates twice as much glutamic acid from defatted soybeans as did ordinary shoyu molds. This strain never produced aflatoxins on two different special media for aflatoxin production. Amino peptidase activity was found to have a significant correlation with the formation of glutamic acid by the isolated strain and related strains of *Aspergillus* species. A mutant exhibiting about twice as much aminopeptidase activity as that of the parent strain was obtained by UV (ultraviolet) irradiation. Address: Noda Inst. for Scientific Research, Noda-shi, Japan.

4813. Ohsawa, George. 1971. *Macrobiotics: An invitation to health and happiness*. Edited and appended by Herman Aihara. Oroville, California: George Ohsawa Macrobiotic Foundation. 95 p. Illust. 21 cm.

• **Summary:** Contents: Introduction. What is happiness? Judgment and health. Seven conditions of health. Foods for health and happiness. How to eat. Macrobiotic external treatment.

Appendixes (by Herman Aihara). A. History of macrobiotics. B. Warning of Diet No. 7. C. How to start macrobiotics. D. Macrobiotic cooking. E. Recipes (Cornellia Aihara). F. Does the macrobiotic diet supply enough protein. G. Vitamins. H. Conclusion: Eight macrobiotic principles, the Unifying Principle, the Order of the Universe.

Soy-related recipes include: Creamed onion-miso soup (p. 41). A table showing the amount of protein in various foods includes soybeans, soy sauce, natto, and miso.

Note: In his book *Learning from Salmon*, Herman Aihara says that this was his first book, published in June 1971. The copyright page says "Copyright 1971," but the National Union Catalog seems to indicate that it was not copyrighted until 1976. The 6th printing was 1984.

4814. Pier 1 Imports. 1971. Pier 1 inspires the sizzle (Ad). *Los Angeles Times*. July 2. p. 31.

• **Summary:** "Orient a charcoaled steak. Steep it in Marukin teriyaki sauce. A marinade made of ginger, soybeans and wholesome wheat. Try a 10 oz. bottle. Reg. 98¢. Now 79¢."

An illustration shows a bottle of Marukin teriyaki sauce. Address: Los Angeles area (18 stores).

4815. Hughes, George. 1971. The economical Georgian cruet. *Country Life (London, England)*. July 15. p. 183-84. * Address: [England].

4816. Pier 1 Imports. 1971. Clearance sale (Ad). *Los Angeles Times*. July 23. p. E22.

• **Summary:** In the far right column: "Our manager in Redondo Beach wants to clear out these items:... Marukin soy sauce (5 oz.). Reg. 39¢. [Now only] 25¢." Address: Los Angeles area (14 stores).

4817. Eden Foods, Inc. 1971. Wholesale pricelist. 211 South State St., Ann Arbor, MI 48108. 2 p. July 26.

• **Summary:** This is the earliest existing Eden Foods catalog seen that is dated. The company was wholesaling the following products: Bulk grains (including some organically grown: Wheat (Deaf Smith), organic [from Texas]; Rye, soft wheat, and open-pollinated corn, organic from Michigan; Brown rice (natural, unsprayed), and sweet brown rice), bulk cereals or packaged cereals (incl. organic cracked wheat, corn flakes, wheat flakes, and rye flakes from Deaf Smith, Texas), bulk flour (all flour is stone ground on order in Ann Arbor, incl. organic soy flour), beans (incl. organic soybeans from Michigan [60 lb], and azuki beans [out of stock until fall]), noodles, oil and nut/seed butters (all unrefined and pressed, incl. soy oil in pint, quart, and 5-gallon sizes), dried fruit.

Soybean products: Tamari soy sauce (pints, quarts, and liters), Hacho Miso (Soy Paste; 1 lb), Mugi Miso (Barley Soy Paste). Note: The Eden logo with 4 sprouts in a circle is shown. Many of these soy products were obtained from

Erewhon, and the grains from Arrowhead Mills. The format of the catalog, the product categories, and the product names and spellings are very similar to those used in the Erewhon catalog at this time. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

4818. *Changing Times*. 1971. The story behind Lea & Perrins Sauce—The Original Worcestershire. July. p. 24.

• **Summary:** "Most of the history of Lea & Perrins Worcestershire Sauce is right there on the label. John Wheelley Lea was a druggist in the English market town of Worcester. William Perrins ran a chemist shop in the nearby town of Evesham. On January 1, 1823, they organized Lea & Perrins, a Worcester chemist shop that was also a distribution center for pharmaceuticals, toiletries and food products concocted on the premises.

"*From a recipe of a nobleman in the county* (inscribed on either side of the shield) refers to Lord Sandys, native of Worcester, ex-governor of the Indian state of Bengal and a connoisseur of exotic eastern sauces and spices. In 1835 Lord Sandys returned from Bengal with a recipe for what became the first *Worcestershire Sauce*—hence the words *the original* to distinguish it from the multitude of imitators.

"*Worcestershire* translates to 'county of Worcester,' and the shield emblazoned on the label is the ancient coat of arms of the county. Lord Sandys's recipe, calling for tamarinds, garlic, eschalots, onions and molasses, almost turned out to be a catastrophe. The initial batch was unpalatable. Lord Sandys rejected it, and crocks of the stuff sat unused in Lea & Perrins's basement, where, like old wine, it mellowed.

"Sometime later someone had the temerity to try another lick. It was delicious. How long did the mixture age? The company isn't telling.

"The recipe, too, is top secret and has never been changed. Neither has the shape of the bottle or its wrapping... After all, why change something that's been a best-seller for 136 years?"

4819. Hashimoto, Hikotaka; Yoshida, H.; Yokotsuka, T. 1971. [Studies on sediment of shoyu. V. Composition of sediments formed by heating of raw shoyu and isolation of precursors of sediments]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 49(7):642-49. July. [12 ref. Jap; eng]

Address: Central Research Laboratories, Kikkoman Shoyu Co., Ltd., Noda, Japan.

4820. Bell, Don. 1971. Ohsawa and the yin and yang of health. *Chicago Tribune*. Aug. 1. p. F23.

• **Summary:** The film "Joe" [1970] has a scene shot in an unusual restaurant in New York City's East Village. The dishes have unusual names like miso soup, hiziki [hijiki], and wakame salad. One man calls it "Jap food," but the waiter explains that it's "food in accordance with the order

of the universe”—a definition of macrobiotics. We are what we eat. A respected scientist has stated that each year, 98% of the atoms in our bodies are replaced by new atoms that we take in from the food we eat, the water we drink, and the air we breathe.

Popular foods in the macrobiotic diet include seaweed, tahini (made from sesame seeds, a replacement for butter), Japanese azuki beans, and miso and tamari (protein-rich seasonings).

4821. Daniels, Mary. 1971. A loaf of whole-grain bread, a jug of bancha and thou: “Food for Life” is food that’s “in accord with the Universe”—even on Halsted Street. *Chicago Tribune*. Aug. 1. p. F18-F25.

• **Summary:** “The mecca of macrobiotics in the United States today is Boston, and its Mohammed [Muhammad] is a Japanese professor of Oriental studies, Michio Kushi. Kushi is a disciple of Georges Ohsawa, who gave his first lectures in New York’s Buddhist Temple in 1959.” Ohsawa’s followers went in two directions. In Oct. 1961, one group went to [Chico] California under the leadership of Herman Aihara. The other followed Kushi to Boston.

The first macrobiotic study house in the Boston area was established very informally about 7-8 years ago in the Kushi’s home in Brookline. Soon thereafter his students founded Tao Books and Erewhon. By word of mouth and by his writings, Michio Kushi has attracted young people from all over the USA, many of them seeking something better than drugs. Soon the demands on his time were so great that Kushi had to give up his classes at Harvard to teach from his home and lecture twice a week on the true path to happiness.

Erewhon is now almost the size of a supermarket; it owns a large warehouse near the Boston docks. Eight large photos show foods sold at Erewhon retail stores. One caption mentions miso.

Part II of this article, titled “Macrobiotics: where it’s at in Chicago,” is about Tom Swan and his macrobiotic food store “Food for Life.” This store, around which the local macrobiotic community revolves, was started in Feb. 1970 at 2356 Seminary by Ron Kotzsch, a Harvard student who had worked at the Erewhon store in Boston.

On the shelves are cans and bottles of corn germ oil and sesame oil (both auger pressed, and both with a rich, natural flavor), sesame butter, a variety of seaweeds imported from Japan, buckwheat noodles, “a fermented soy paste rich in energy called miso (dancers down it before a performance), and a natural soy sauce called tamari that makes you realize how much the supermarket stuff cheats you in taste. All of these things are proudly labeled ‘no preservatives.’”

Also mentions: John Palumbo, Bill Tara, Loren McCune, The Caldron, Dr. Walter Kempner, Burl Ives, brown rice from Chico San, organic foods, Gloria Swanson, and William Dufty. Includes five macrobiotic recipes: Brown rice with gomasio [gomashio]; leftovers fried and served

with tamari (soy) sauce. Seaweed and carrots. Bancha tea. Tempura batter. Raisin muffins.

4822. Hsu, Edward J. 1971. Thickened edible soy sauce and method for the preparation thereof. *U.S. Patent* 3,598,614. Aug. 10. 2 p. Application filed 29 May 1968. [2 ref]

• **Summary:** “A novel thickened soy sauce is prepared by heating liquid soy sauce, adjusted in pH to about 4.5-5, with mixed gelatin and agar or with mixed glutinous rice starch and tapioca starch, the preparation with starches also involving a sequence of controlled cooling steps. The thickened sauce so prepared is highly stable and is adapted to be spread over or otherwise applied to food stuffs.”

Example 1 states that the following ingredients are mixed in the following proportions on a weight basis: Liquid soy sauce (adjusted to pH 4.5 to 5 by addition of sodium hydroxide) 89.7%, tapioca starch 6.0%, glutinous rice starch 4.0%, gelatin powder 0.3%. Address: 2065-D Orchard St., Urbana, Illinois.

4823. *SoyaScan Notes*. 1971. Chronology of Laurelbrook in Maryland. 16 March 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1971 Aug. 23—Laurelbrook Foods begins as a macrobiotic natural foods wholesale distributor in Forest Hill, Harford County, Maryland (about 25 miles northeast of Baltimore). The company started as a division of Cycle Parts & Accessories, Inc., a motorcycle parts company that Rod was planning to start in late 1970 shortly before the idea of starting a natural foods distribution company took form. Laurelbrook company never moved from its original location, but they kept a post office box (P.O. Box 47) in nearby Bel Air. Their original price list shows that they carried 11 products, mostly bulk organic grains and beans (including soybeans) purchased from Arrowhead Mills. Erewhon was their other major supplier from the outset. The company was founded by Rod and Margy Coates, the parents of five daughters (including Sally, Judy, Marion [Ronnie], and Dora Coates) and one son (Dan). Dora was Paul Hawken’s first wife; they were married in June 1971 in Maryland. Judy was John Deming’s first wife; they were married in Aug. 1972. Both Paul and John worked with Erewhon. Rod and Margy decided to call the company Laurelbrook since they lived on Laurelbrook Road in Fallston, Maryland. Rod and Margy first got interested in natural foods in 1967 when their next to oldest daughter, Judy, who had been studying macrobiotics with Michio and Aveline Kushi in Boston, Massachusetts, and had worked for Erewhon, offered to come home and cook for her parents for two weeks and let them try out the diet.

1971 Sept. 30—Laurelbrook is still considered by Rod Coates to be a division of his Cycle Parts & Accessories, Inc.

1973 Dec.—Laurelbrook opens a new, second warehouse in Raleigh, North Carolina (at 330 West Davie St.). Four

people start and run the operation.

1974–Laurelbrook, which now employs 24 people, enlarges its warehouse.

1975–Feb.–Laurelbrook publishes a 6-page booklet showing that the company now distributes about 43 different food products—including soy flour, tamari, and miso.

1976 Nov.—One of Laurelbrook's employees is trying to start a labor union. Management vigorously opposes it. Laurelbrook now employs 32 people and has a fleet of 12 trucks that delivers to 350 stores. It is still a family operation, with Rod and Margy Coates, their 3 children, a son-in-law, a niece, and a nephew working at Laurelbrook.

1977–Laurelbrook outgrows its warehouse at 330 West Davie St. in Raleigh, North Carolina, so they move into a larger warehouse facility at 2319 Laurelbrook Street in Raleigh.

1977 Nov.—Laurelbrook has 44 employees. Sales last year were about \$3 million.

1978 June–Laurelbrook is now importing foods from Mitoku in Japan.

1979 May–Rod Coates hires Richard Curry as accountant and general manager.

1980 March 17–At a special meeting of the board of directors, Rod informs the board that he will be retiring in one week, on 23 March 1980, his 65th birthday. He recommends that he be replaced as president by Richard Curry and that his (Rod's) official position be chairman of the board.

1981 March–Things are not going well at Laurelbrook. Rod and Marge feel that Richard is not doing a good job in running the company. Employee morale is down. But Richard blames the problems on Rod, and wants Rod to be less actively involved with Laurelbrook on a daily basis.

1981 March–Dora Hawken is fired from her position in the Laurelbrook office.

1981 July 21–Rod, Margy, and Dan Coates, constituting all the board of directors of Laurelbrook, resign, effective immediately. They are upset with the way Richard Curry is running the company.

1981 Aug.–Richard Curry offers to buy out the Coates' interest in Laurelbrook foods. They accept the offer. Rod and Margy keep ownership of the property and Richard was to pay them rent for using it.

1981 Nov. 21–Over the next 30 days Richard Curry places five large orders with Hain Pure Foods in the amount of \$35,577.

1982 Feb. 15–Laurelbrook Foods files for Chapter 11 bankruptcy protection and does business under Chapter 11 for about 18 months. Richard Curry is president.

1982 Dec. 22–Rod Coates presents a list of items that he alleges Richard Curry sold illegally after the bankruptcy of Laurelbrook, and before the auction of the company's assets. Attached to this are letters between attorneys.

1983 Oct-Dec.–Rod and Margy Coates have to pay off

the debt of \$35,577 to Hain—even though they no longer own the company. In Dec. 1983 the last of the equipment in the warehouse was auctioned off.

1990 March 4–Rod Coates dies of Alzheimer's disease. As of early 1992, Judy Coates lives in Ross, California, and Dora lives in Marin, California. Address: 505 Granary Rd., Forest Hill, Maryland 21050.

4824. Vanocur, Edith. 1971. Conscientiously natural food. *Washington Post, Times Herald*. Aug. 26. p. K1.

• **Summary:** Yes!, a new “natural food restaurant and carry-out,” recently opened at 1039 31st Street in Georgetown. The restaurant and store (The Center for Natural Living, at the same address) are owned by artist Laura Popenoe and her husband Oliver Popenoe. Their sign reads: “Yes! Whole food. Whole people. Whole world.”

Ganga Wentink is the restaurant manager. She and her husband are the East Coast leaders of a yoga organization named “3-HO” (Happy, Holy, Healthy Organization). She adopted the name “Ganga” after the Ganges River in India. Beautiful and seemingly happy, Ganga is a living advertisement for natural foods. She learned to cook while living in a teepee on a commune in New Mexico. Contains four recipes, including Whole wheat bread (with ¼ cup soy flour) and Indian Dahl Soup (with ¼ cup Tamari soy sauce {aged soy sauce}). Contains four photos.

4825. Murakami, Hideya. 1971. Classification of the koji mold. *J. of General and Applied Microbiology (Tokyo)* 17(4):281-309. Aug. [40 ref. Eng] Address: Research Inst. of Brewing, Tax Administration Agency of Finance Ministry, Takinogawa 2-6, Kita-ku, Tokyo 114, Japan.

4826. Lappé, Frances Moore. 1971. Diet for a small planet. New York, NY: Ballantine Books. xiv + 301 p. Illust. by Kathleen Zimmerman & Ralph Iwamoto. Index. 18 cm. [90 ref]

• **Summary:** This one of the most important and influential books written about food, nutrition, and world hunger during the 1970s. Published on 1 Sept. 1971, it introduced the concepts of “protein complementarity” and “eating low on the food chain” to millions of Americans. By April 1973 the book had been reprinted 7 times. The book's roots lie in the University of California at Berkeley, where Ms. Lappé was enrolled in the School of Social Work in 1968. A committed community organizer of welfare recipients, she was frustrated in her inability to find an agenda that would truly end the people's suffering. So she began to study the political economy of food in the Natural Resources library. From this research came a 1-page handout, then a 5-page handout, then a 70-page booklet, and finally this landmark book.

Contents: Acknowledgments. Foreword. Part I: Earth's labor lost. Part II: Bringing protein theory down to earth.

Part III: Eating from the earth: Protein theory applied. Part IV: Combining non-meat foods to increase protein values. Appendixes. Notes.

Key quotes: "This book is about PROTEIN—how we as a nation are caught in a pattern that squanders it... I propose that our meat-centered diet is at the very heart of our waste of the earth's productivity" (p. xi). "Fully *one-half* of the harvested agricultural land in the U.S. is planted with feed crops. We feed 78% of all our grain to animals. This is the largest percentage of any country in the world" (p. 5). We feed animals "89% of our corn crop, 98% of our grain sorghum crop, 87% of our oat crop, 64% of our barley crop, as well as 95% of our unexported soybean crop. To make beef or veal, 'a cow must be fed 21 pounds of protein [from feed] in order to produce 1 pound of protein from human consumption.'"

This vegetarian book contains 125 pages of recipes and makes extensive use of soybeans and soyfoods—though mostly in the form of whole dry soybeans or grits (*) or soy flour (+), which are two of the least interesting ways of using soybeans. In the section titled "Getting the most protein for the least calories," subsection 5 on "Legumes" (p. 106) states: "Soybean curd (tofu) has the fewest calories for the amount of usable protein, largely because most of the fat is removed in its processing. Tofu is truly an excellent protein source. Lightly sautéed with a fresh vegetable accompaniment, one could easily eat 7 ounces of tofu and fulfill 25 to 30 percent of a day's need for protein. At the cost of only about 5 to 7 percent of a day's calorie allotment. I've included several tofu dishes among the recipes given later in this book."

Tofu is not mentioned in the index, but under "Soy Curd" we find one recipe titled "Leafy Chinese tofu (Soy curd)" (p. 144). It notes that soy + rice, and soy + sesame are complementary proteins.

The recipes are grouped by complementary combinations. Rice and soy (p. 140-45; combining in the proper proportions gives a 32% increase in usable protein): Crusty soybean casserole*. Stuffed cabbage leaves*. Curry rice*. Leafy Chinese tofu (soy curd). Sukiyaki (with tofu).

Rice and wheat and soy (p. 146-50; 24% increase in usable protein): Hearty vegetable soup (with miso and soy sauce)*. Sweet and pungent vegetable curry*. Mexican grains*. Rice-wheat "kasha"*.

Whole wheat and soy (p. 181-88; 32% increase): "Complementary" pizza+. Savory onion quiche+. Wheat-soy waffles+. Chameleon spice cake+. Wheat-soy pudding+.

Wheat, soy, and sesame (p. 189-94; 42% increase): Sesame crisp crackers+. Sesame dream bars+. Journey cakes+. Orange sesame muffins+. wheat-soy-sesame bread+.

Cornmeal and soy and milk (p. 202-08; 13% increase): My favorite cornbread+. Boston brown bread+. Pineapple-corn muffins+. Corn spice coffee cake+. Cornmeal-soy waffles+. Indian pudding*.

Soy, wheat, rice, and peanuts (p. 220-26; 15% increase): Curried soybeans and peanuts*. Nutty bean tacos*. Soybean croquettes*. Spanish soybeans over mixed grains*+. Deep dish vegetable pie*.

Soy and sesame seeds (or sunflower seeds) and peanuts (p. 227-32; 25% increase): Nutty noodle casserole*. Soy-sesame-peanut spread+ (with roasted soy flour). Peanut-sesame loaf supreme+. Soy-pea sesame snacks*. Bean burgers*.

This was one of the first popular books to show the connection between intensive livestock production and environmental degradation. Part I, titled "Earth's Labor Lost," shows how: (1) Animal wastes from huge feedlots cause water pollution (p. 15-16); (2) Growing crops for livestock feed and overgrazing leads to soil erosion, loss of topsoil, and soil depletion (p. 17-18); (3) The increased pressure on our land to grow livestock feeds has led to increased use of pesticides, which kill untargeted species and cause water pollution (p. 26-27). In short, a vegetarian diet "maximizes the earth's potential to meet man's nutritional needs and, at the same time, minimizes the disruption of the earth necessary to sustain him. It's as simple as that" (p. 3).

Also gives a recipe for "Crunchy granola" (p. 251, based on rolled oats, coconut shreds, sesame seeds, and wheat germ).

Note 1. As of Sept. 1991, this book had sold about 4 million copies, and of that 3 million copies in English-language editions.

Note 2. This is the earliest document seen (May 2002) concerning the environmental impact of a vegetarian diet. Address: California.

4827. Edgar, Barry. 1971. Try Indonesian food on your Swiss guests: Bahmi goreng accessories. *Christian Science Monitor*. Oct. 7. p. 11.

• **Summary:** Mentions *benteng* and soy sauce.

4828. *Christian Science Monitor*. 1971. Soy sauce perks up many American dishes, especially turkey and corn. Oct. 21. p. 11.

• **Summary:** Kikkoman began when two families in Japan started a soy sauce company at about the same time the first English families at Plymouth Rock enjoyed their first Thanksgiving. Kikkoman now has a test kitchen in San Francisco, where a home economist uses the company's soy sauce directly on meats as a table sauce.

Soy sauce originated in East Asia. "The Chinese and Japanese names for soy sauce are very similar—"see yow" and 'shoyu' respectively." The original soy sauce in China was made from soy beans, water and salt only. But in Japan, long ago, it was found that adding crushed, toasted wheat produced more natural sweetness, better color, and additional flavor notes. In China, soy sauce is still generally made without wheat—although some manufacturers now add it.

"The 'tamari' sauce sold by American health food stores is really a Chinese-type sauce made in Japan with a Japanese name." But it is no longer authentic tamari, made without wheat; it generally now contains some wheat.

Since 1898 Kikkoman has been the purveyor of soy sauce to the Emperor of Japan. They constructed a special factory for his sauce [the Goyô Gura at Noda].

• **Summary:** Cooked suspensions of isolated soy protein were mixed with a small amount of acid protease preparation from *Trametes sanguines*. Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, New York 14456. Sugimoto is presently with Kikkoman, at Noda, Japan.

4832. Erewhon Trading Co., Inc. 1971. Natural and organic foods. Price list. Boston, Massachusetts. 4 p. Effective Thanksgiving day, Nov. 1971.

• **Summary:** This price list has no cover. Prices are given for each product. Products include: Grains (incl. organically grown brown rice [short, medium, or long grain; Note: The short grain was probably grown by the Lundberg Brothers of Wehah Farms, Richvale, California], Ted Whitmer [in Bloomfield, Montana] organically grown wheat, hard red spring and hard amber durum, and Deaf Smith [Hereford, Texas] organically grown wheat [hard red winter], rye, and corn). Cereals. Stoneground flours (incl. Soybean flour, full fat, organic Deaf Smith; Sweet brown rice flour). Beans (incl. azuki beans, black beans [Japanese, probably black

soybeans], soybeans [organic]). Seeds. Tamari & miso:

Tamari soy sauce (24 pints x \$0.76 each = \$18.24, 12 quarts x \$1.30 each = \$15.60, 6 half gallons x \$2.40 each = \$14.40, 4 gallons x \$4.50 each = \$18.00, 4.7 gallon can for \$19.00, 4.7 gallon wooden keg for \$22.00). Hacho miso (soy paste, 1 lb or 44 lb keg). Mugi miso (barley-soy paste, 1 lb, 2 lb, 44 lb keg). Kome miso (rice-soy paste, 1 lb, 2 lb, 44 lb keg).

Sea vegetables: agar agar (kanten), dulse, hiziki, kombu, nori (dried laver), wakame, wakame root, wakame (thin sheet). Tea: Lotus root tea. Dandelio herbal coffee. Mu herbal beverage. Kukicha twig tea.

Pasta. Crackers (Chico-San Rice Cakes, organic—salted, unsalted, with buckwheat, or with millet). Snacks (incl. Corn munchies [organic corn chips with soy sauce], Chico-San "Yinnies" organic rice candy [made in Chico, California]). Hopi seeds: Sunflower seeds, pumpkin seeds, almonds, cashews, or soybeans, each dry roasted with tamari. Dried fruits. Virgin oils (incl. Soybean oil, pressed and unrefined in pints, quarts, half gallon, gallon, and 5-gallon can). Nut butters. Condiments (incl. sesame salt, and Tekka [vegetable condiment]). Unusual foods: Umeboshi (plums pickled in brine) and Kuzu arrowroot. For cleanliness [body care products]: Sesame lotion [organic and biodegradable], Sesame shampoo, Orjene shampoo, Peppermint Castile soap, Toothpowder, charred eggplant and sea salt [Dentie in bag or jar], Clearlake all purpose cleaner, biodegradable. For cooking (utensils, incl. 2 sizes of "soy dispenser," suribachi with pestle, Save A Tree canvas shopping bag). Flyers: The Organic Merchants NOT List. The Sugar Story. The Oil Story. The Macrobiotic Way.

On the last page is a note from Paul Hawken, with his signature, thanking customers for their orders.

Letter (e-mail) from Norio Kushi. 2011. March 31. "Rosemary Traill just reminded me of an interesting story regarding attempting to get rid of the mice at the Erewhon warehouse at 33 Farnsworth St.

"My mother [Aveline] didn't want to use chemical poisons in getting rid of the mice so someone told her about 'sonic' pest repellents that emit a high pitch sound, inaudible to the human ear, to drive the mice away. These sonic devices were placed around the warehouse and interestingly, what occurred is that the mice changed their diet. Instead of eating the grains, they started eating exclusively seaweed. Somehow, the mice, by eating the seaweed had no problem thriving under the condition of the sonic pest repellents. My understanding is that, after that, they had to resort to regular standard ways of getting rid of the rodents." Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

4833. *Los Angeles Times*. 1971. Take a new route to the Orient with lobster Cantonese. Nov. 21. p. U38.

• **Summary:** In Lobster Cantonese, garlic, sherry, soy sauce and ginger are standard seasonings. "But identifying

the other accents, black bean sauce, for example, is more difficult. This classic Chinese seasoning, also called fermented black beans, is used in tiny amounts for zestiness.” Sesame oil is used to add a nutty flavor.

A recipe for Lobster Cantonese calls for “1 tbsp. [tablespoon] black bean sauce,” a few drops of sesame oil, and 1 tablespoon soy sauce. Then: “Soak beans in water to cover a few minutes, drain and mash. Mix beans with...”

4834. **Product Name:** Hopi Seeds: Sunflower Seeds, Pumpkin Seeds, Almonds, Cashews, or Soybeans (Each Dry Roasted with Tamari).

Manufacturer's Name: Erewhon Trading Co., Inc.

Manufacturer's Address: 33 Farnsworth Street, Boston, MA 02210. Phone: (617) 542-1358.

Date of Introduction: 1971. November.

Wt/Vol., Packaging, Price: 1 oz. polyethylene-cellophane bags.

How Stored: Shelf stable.

New Product–Documentation: Erewhon Trading Co., Inc. 1971. Natural and organic foods. Price list. Effective Thanksgiving day, Nov. 1971.

Talk with Bill Bolduc, founder of Eden Foods. 1992. March 14. Erewhon was probably the first company in America to develop a line of tamari-roasted seeds and grains. Eden was carrying the tamari-roasted soybeans by Oct. 1972, and the full line by early 1973.

4835. **Product Name:** Corn Munchies (Organic Corn Chips with Soy Sauce).

Manufacturer's Name: Erewhon Trading Co., Inc.

Manufacturer's Address: 33 Farnsworth St., Boston, MA 02210. Phone: (617) 542-1358.

Date of Introduction: 1971. November.

Ingredients: Corn tortillas, sesame oil, soy sauce.

Wt/Vol., Packaging, Price: 24 x 4 oz.

How Stored: Shelf stable.

New Product–Documentation: Erewhon Trading Company Inc. 1971. Thanksgiving Day. [Nov.]. Price list. “Snacks: Corn Munchies, organic corn chips w/ soy sauce. 24–4 oz. \$0.40 each.”

4836. Sokolov, Raymond A. 1971. The food at the heart of commune life. *New York Times*. Dec. 2. p. 60.

• **Summary:** Lucy Horton has spent most of the past year on the road, visiting more than 40 communes and collecting country commune recipes. Now she is compiling them into a cookbook. Food is the key to understanding the communal experience. “Food has religious significance.” A photo shows Lucy Horton. Contains three recipes, including “Tamari dressing” (with “¼ cup tamari soy sauce”). A note explains: “Tamari soy sauce is available at health food stores and Japanese groceries...”

4837. Chico-San Inc. 1971. Portfolio. Chico, California. 6 sheets. 8 Dec. 1971. 28 cm.

• **Summary:** Includes the following (all printed back-to-back with dark brown ink on golden yellow paper with a new complex spiral logo): (1) Form letter from J. Robert Kennedy to Lorenz A. Schaller, Pasadena, California, with Kennedy’s signature. Spiral Foods “was formed recently for the purpose of selling direct to those who find it difficult to obtain Macrobiotic food products under the Chico-San label at their local outlets. They are the same products, however, only the label is different.

“If you don’t care to order direct, Chico-San products are sold at health food stores throughout the country.”

Distributors in Mr. Schaller’s area are given: (1) Kahan & Lessin Co., 3131 East Maria St., Compton, CA 90021. (2) Landstrom Co., 428 Talbert St., San Francisco, CA 94114.

(2) “Rice cakes is our bag.” Three varieties, made from brown rice, grown organically by Wehah Farms. (3) “How Chico-San guarantees Oriental-type, organically grown brown rice,” article reprinted from *Health Food Business* magazine. (4-5) Chico food news 1, about Lima soysauce and sweet brown rice, with recipes. Ingredients include soybean flour and Yinnies Grain Syrup (“made from barley and brown rice is a new product from Chico-San”). (6-7) Chico food news 2, about rice chips, corn chips, Yinnies, mochi, with recipes. (8-9) Chico food news 3, about wild American ginseng and Chico-San rice vinegar. (10-11) Chico food news 6, about sea vegetables: Hijiki, nori, wakame, kombu, kanten. Address: 1262 Humboldt Ave., Chico, California 95926. Phone: (916) 343-6770.

4838. Hansen, Barbara. 1971. Mainland China foodstuffs trickle into southland markets: A scattering of soy sauce and canned goods. *Los Angeles Times*. Dec. 9. p. J1, J8.

• **Summary:** Many Americans hoped that the relaxing of trade restrictions with mainland China would lead to an immediate feast of foodstuffs long missing from our markets. Instead of a flood, there has been but a trickle—and you have to search to find it.

The writer has found some new brands of soy sauce from Kwangchow. But many products are not properly labeled. Other products are easier for non-Chinese to identify. “At least the labels are in English. Among the canned goods are fried dace (a type of fish) with salted black beans, whole mushrooms, braised bamboo shoots,...”

4839. Clark, Marion; Sinick, Heidi. 1971. Try it! *Washington Post, Times Herald*. Dec. 12. p. 314.

• **Summary:** The section titled “Organic food feasts” states that “Mother Nature on the Run will cater organic food feasts for any occasion.” This catering service was recently formed by six young health-food enthusiasts who love to cook and who believe that happy food makes happy people. At a recent church dinner, the group served a meal that included “brown

rice with miso, tamari and natural peanut-butter sauce.”

4840. Sokolov, Raymond. 1971. Commune cooking is a real taste trip. *Chicago Tribune*. Dec. 12. p. E12.

• **Summary:** “Foods are frequently eaten with chopsticks. Commune cooks are just as interested in taste as they are in health and, therefore, they go heavy on garlic, tamari soy sauce, and spices.”

Note: A similar article by Sokolov (about Lucy Horton) titled “The food at the heart of commune life” appeared in the *New York Times* (Dec. 2, p. 60).

4841. Chico-San Inc. 1971. Products: A catalog of macrobiotic foods. Chico, California. 8 p. Undated. 22 cm.

• **Summary:** The cover is with dark brown ink on golden yellow paper with a new complex circular spiral logo neat the top and three sheaves of grain across the bottom. The term OEI, applied to some products, means “Our Exclusive Import.” Address: Chico, California. Phone: (916) 343-6770.

4842. Joyous Revival. 1971. Natural Foods (Ad). *East West Journal* 1(20):20.

• **Summary:** The company sells: Miso. Nuts. Seeds. Beans. Grains. Tamari. Fresh ground flours.

Note: Michael Potter, later head of Eden Foods, worked with this company in the early 1970s, until Dec. 1970. He was not a founder of the company, but he eventually rose to become a partner. Address: 1810 S. Woodward Ave., Birmingham, Michigan 48011. Phone: 313-644-9756.

4843. Spiral Foods Inc. 1971. Price list of macrobiotic foods. Chico, California. 2 p. Undated. 35 x 25 cm.

• **Summary:** This single-sheet catalog and price list, printed front and back with reddish-orange ink on green paper, contains 8 panels and is undated. Yet it was sent by Chico-San in a portfolio of sell sheets with a cover letter dated 8 Dec. 1971—from which we can estimate the date. It is also with larger Spiral Foods catalogs issued after the disastrous 1972 fire that destroyed the company’s plant. Under the name of each food is given a brief description. It includes the following foods:

Condiments: Tekka (“A traditional flavoring prepared from carrot, burdock, ginger, lotus root, Soybean Puree {Miso}, and sesame oil”), seitan (“A meat substitute made from vegetable protein of wheat gluten and tamari soy sauce”), salt plums, kuzu arrowroot, sesame salt, sesame butter, sesame oil (from organically grown seeds), Lima sesame oil (imported), crude sea salt (“Unrefined, unprocessed, trace sea minerals retained”), white unrefined sea salt, Mishio (Lima, with kombu), moromi (“Mash of soy sauce before pressing. A pungent flavor”), furikake (“A seasoning made from Miso, sesame seed, nori, bonito [sic, bonito] powder, whole brown rice and kombu” {kelp}), Goma Muso (“A seasoning prepared from traditional Miso

and whole sesame seeds”), bainiku ekisu (concentrate of green [ume] plums), sesame seeds. Dried fish. Cosmetics. Beverages: Yano (grain beverage), Whole grain cereals. Whole grain noodles. Beans: Azuki red (Dainagon, or Korean), black [soy] beans. Sea vegetables. 100% whole grain brown rice. Sweet rice—mochi gome. Rice cakes. Lima soy sauce (“A traditional soy sauce of exceptional quality”), tamari (“The traditional soysauce, fermented naturally and aged 18 months. Prepared from soybean, wheat, salt and water”). Soybean puree (Miso) (“Made from the cultivation of a special enzyme and aged 18 months. The soybean puree is ideal mixed with sesame butter and used as a spread or can be added to soups and sauces”). Utensils.

Note 1. This is the earliest document seen (April 2011) concerning Spiral Foods, a company organized in 1970 by Bob Kennedy of Chico-San and Peter Milbury to distribute Chico-San products directly to retail stores in the greater San Francisco Bay Area. When Chico-San was established in 1962 there were no natural foods stores in the Bay Area (or in the USA). However by 1970 there were many. They were not being well served by the old-line health food distributors such as K&L and Landstrom which distributed Chico-San’s products, yet they wanted to buy Chico-San’s products.

Note 2. This is the earliest English-language document seen (Dec. 2006) that uses the Japanese-language term “bainiku ekisu” (literally “plum flesh extract”) to refer to a commercial extract of ume plums. Address: 1017 Willow Street, Chico, California 95926.

4844. **Product Name:** Protose (Meatlike Product Made of Peanuts and Wheat Gluten).

Manufacturer’s Name: Battle Creek Food Co. Div. of Worthington Foods.

Manufacturer’s Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.

Date of Introduction: 1971.

Ingredients: In 1971: Wheat protein [wheat gluten], water, peanuts, vegetable oil, salt, yeast extract, soy sauce, MSG.

Wt/Vol., Packaging, Price: Can.

How Stored: Shelf stable; refrigerate after opening.

New Product—Documentation: Ad for Protose by Sanitas Nut Food Co., Ltd. 1900. July. *Good Health* (Battle Creek, Michigan). Protose is described as an easy to digest, perfect substitute for meat. There is no evidence showing that gluten was used in this product until 1971. Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 162. Lists the ingredients in “Protose (Battle Creek).” Note that in 1960 Worthington Foods had acquired Battle Creek Food Co.

It’s Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned peanut product resembling cold cuts. Can also be used in salads or sandwiches.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet*

Manual, Utilizing a Vegetarian Diet Plan. 4th ed. p. 176. The ingredients in “Protose (Battle Creek)” are “wheat protein [wheat gluten], peanuts, wheat and soy flour, corn oil, yeast extract, soy sauce, salt, HVP, niacinamide, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12.”

4845. Cho, M.J.; Kim, Z.U. 1971. [Studies on a quick ripening process for soy sauce]. *Han’guk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 14(1):19-27. [Kor]*

4847. **Product Name:** Loma Linda Proteena (Meatless Peanut or Gluten Loaf or Cold Cuts—with Soy Flour).
Manufacturer’s Name: Loma Linda Foods.
Manufacturer’s Address: 11503 Pierce St., Riverside, CA 92515.

Date of Introduction: 1971.

Ingredients: Wheat protein [wheat gluten], unroasted peanut meal, tomato puree, soy flour, salt, yeast extracts, soy sauce, corn sugar, MSG, seasonings, onion powder, caramel color, water.

Wt/Vol., Packaging, Price: 20 oz (567 gm) can.

How Stored: Shelf stable; refrigerate after opening.

Nutrition: In 1988: Per ½ inch slice (2.5 oz–71 gm): Calories 140, protein 17 gm, carbohydrate 5 gm, fat 6 gm, cholesterol 0 mg, sodium 460 mg, potassium 260 mg.

New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 161. The ingredients in “Proteena (Loma Linda)” are: Wheat protein [wheat gluten], unroasted peanut meal, tomato puree, soy flour, salt, yeast extracts, soy sauce, corn sugar, MSG, seasonings, onion powder, caramel color, water.

It’s Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned peanut product resembling cold cuts. Can also be used in salads or sandwiches.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan. 4th ed.* p. 176. The ingredients in “Proteena (Loma Linda)” are “wheat protein [wheat gluten], unroasted peanut meal, tomato puree, soy flour, salt, yeast extract, dextrose, L-lysine, HVP, MSG, caramel color, onion powder, flavorings.”

Label sent by Loma Linda Foods. 1988. Oct. 5. The ingredients now are: Wheat gluten, raw peanut butter, water, tomato puree, soy flour, salt, natural (vegetable) flavors, dextrose, L-lysine, caramel color, onion powder spices, vitamins (niacinamide, D-calcium pantothenate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin,

cyanocobalamin). This product was introduced in 1963. A product called “Soy Beans with Proteena and Tomato Sauce” was introduced in 1934.

4848. **Product Name:** Sanitarium Health Foods Soya Loaf (Canned Meatless Meatloaf).

Manufacturer’s Name: Sanitarium Health Food Co.

Manufacturer’s Address: Sydney, N.S.W., Australia.

Date of Introduction: 1971.

Ingredients: Soya beans, wheat protein, soy sauce, vegetable oil, peanuts, tomato, monosodium glutamate, onion, salt, herbs.

Wt/Vol., Packaging, Price: 425 gm can.

How Stored: Shelf stable.

New Product–Documentation: Label. 1980, undated. “Vegetable Protein—Ideal for casseroles, stews, patties.” Letter from Sanitarium Health Food Co. 1981.

Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1971.

4851. **Product Name:** Golden Label Soya Bean Sauce.

Manufacturer’s Name: Yung Hwa & Company.

Manufacturer’s Address: 10 Gauder Place, Dehiwala, Wellampitiya, Sri Lanka. Phone: 713-675.

Date of Introduction: 1971.

Ingredients: Soya beans, whole wheat flour, salt, preservatives (1988).

Wt/Vol., Packaging, Price: 325 ml and 650 ml bottles retail for Rs 18/- and Rs 35/-.

How Stored: Shelf stable.

New Product–Documentation: Label. 1988. Oval 4.5

by 3.5 inches. Yellow, gold, blue, dark pink, black, and green. "Made in Sri Lanka. For roasts, boiled meats, fish, or soups." Form filled out by Jane Gleason. On 18 March 1988 she talked with Mr. G.D. Bobby Senaveera, who with his wife are managing directors. This was the first commercial soy sauce to be marketed in Sri Lanka. It was first made widely available in the early 1970s. Presently about 3,000 bottles/month are produced. It is a "sun darkened, 2 year fermentation." The company uses about 5 tons/year of soybeans that are purchased for Rs. 7-13 from private sellers or Rs. 10 from the Paddy Marketing Board. "Quality varies so one must go from shop to shop." Demand is steady. Consumers like both the quality/flavor and the natural ingredients. It is one of at least 4 brands of soy sauce made and sold in Sri Lanka.

The company is definitely planning to move into commercial soymilk production. Has applied for government assistance and plans to start producing 30,000 packets/month. Marketing may be through schools or government.

Note: This is the earliest known commercial soy product made in Sri Lanka.

4852. Aihara, Cornelia. 1971. Macrobiotic child care. *Macroguide* No. 8. 41 p. (George Ohsawa Macrobiotic Foundation, 1544 Oak St., Oroville, CA 95965).

• **Summary:** Contents: What is macrobiotic? About the author (autobiographical). Two pages of photos of the Ohsawa and Aihara families. Macrobiotic child care. First solid foods for baby. Prenatal and postnatal care. How to be a beautiful and loved wife. Recipes for baby's solid food. What is the Foundation? [GOMF].

Pages 35-41 contain "Recipes for baby's solid foods." These include: Mochi made with rice flour. Miso zoni (mochi in miso soup). Amasake (describes how to make amasake at home using either (A) 2 cups sweet brown rice, ¼ cup koji, and 4 cups water, or (B) 7 cups sweet brown rice flour, 1 cup koji, and 8 cups boiling water). Address: California.

Address: Wakayama prefecture, Japan.

4854. Binsted, Raymond Horatio; Devey, James D.; Dakin, John C. 1971. *Pickle and sauce making*. 3rd ed. Revised and enlarged. London: Food Trade Press. xi + 332 p. Illust. 23 cm. *

4855. Brissenden, Rosemary L. 1971. *Joys and subtleties: South East Asian cooking* [1st American ed.]. New York, NY: Pantheon Books. A Div. of Random House. 262 p. Index. 19 cm.

• **Summary:** Contents: Acknowledgements. A note on this

American edition. Weights and measures. 1. Introduction to South East Asian food. 2. Utensils, methods, ingredients, glossary. 3. Indonesia. 4. Malaysia and Singapore: Malay, Chinese, Indian, Miscellaneous Malaysian. 5. Thailand.

Ingredients include (p. 35-36): Monosodium glutamate (use sparingly), soya bean curd (incl. "dried bean curd [yuba], used only in Chinese cooking, comes in flat sheets or in twists"), soya sauce (the 3 types used in this book are light, dark {which is thicker and heavier}, and Javanese {which is sweet and very thick}). It is "sometimes available in bottles called Ketjab Manis [Ketjap Manis], or Ketjap Benteng, under the label of Conimex"). A recipe (p. 36) is given for "Javanese soya sauce" containing dark soya sauce, molasses, and brown sugar.

A table (p. 40) gives the name for 3 soyfoods in English, Indonesian, Malay, Chinese, and Thai, respectively. (1) Soya bean curd, tahu, tauhu, tow fu, taw hu. (2) Soya sauce (dark), ketjap, kichup or tauyu, see you, nam pla siiw. (3) Soy sauce (light), -, -, sung chow, nam pla siiw.

Note: This is the earliest English-language document seen (April 2012) that uses the term "See you" to refer to a type of soy sauce.

Soy related recipes include: Ikan semur djawa (Fish in soya sauce, with "2 tablespoons Javanese soya sauce," p. 69). Ajam semur djawa (Chicken in soya sauce {Java}, with "dark soya sauce," p. 76-77). Saté ajam (Chicken saté, with "dark soya sauce," p. 77-78). Semur daging (Beef in soya sauce, with "2 tablespoons dark soya sauce," p. 94). Tahu goreng ketjap (Fried bean curd with soya sauce, with "6 squares soya bean curd," p. 105). Tahu pong (Bean curd omelette, with "3 cakes soya bean curd," p. 111-13). Fried fish with soya beans (with "2 oz. yellow soya beans {available at Chinese groceries in cans}, p. 149-50)." Baked bean curd (with "8 squares soft bean curd," p. 181). Steamed, dressed bean curd (with "1 lb. soft bean curd, roughly chopped and drained," p. 181-82). Address: Melbourne, Australia.

• **Summary:** Contents: Introduction: Nine advantages of fermenting soybeans. Sufu. Hamanatto. Natto. Tempeh. Magou (from South Africa).

"In South Africa, an interesting fermented native food (*magou*) is now made on a modern industrial scale from fermented corn and soybeans. *Magou* is prepared by the fermentation of coarsely ground white corn meal (maize). Pure cultures of *Lactobacillus* used in this fermentation were isolated from native *magou*. The culture, which is not pure, is started in coarse whole wheat flour." Then it is used to ferment corn meal for 22-24 hours. "The mash

from the fermentation tanks is mixed with defatted soybean meal, sugar, whey, or buttermilk powder and yeast. The soybean meals used contain at least 52 per cent protein. After thorough mixing of all the ingredients, the mix is spray dried. Currently this product sells for about 10 cents a pound in 50 pound bags... *Magou* is used principally for feeding miners and other workers employed in heavy industry. It is well adapted to being taken into the mines and reconstituted at the point of consumption." Address: NRRL, Peoria, Illinois.

• **Summary:** A vegetarian cookbook. Soy-related recipes include: Stuffed cabbage with soybeans (p. 36). Salted soybeans (dry roasted soynuts, p. 82-83). Japanese Teri-Yaki sauce (p. 95). Homemade bean curd or tofu (p. 105; no coagulant is used. "Cover and let the soybean milk stand in a warm place until it thickens. Separate the thickened curd from the rest of the liquid, and put it into a pan with water to cover. Simmer for 5 minutes. Remove curd and drain through cheesecloth. Season with salt. Cut into pieces"). Address: Laguna Beach, California.

4860. Mogi, Keizaburo. 1971. *Watakushi no rirekisho* [My personal history (curriculum vitae)]. Tokyo: Nihon Keizai Shinbunsha. 120 p. [Jap]*
Address: Noda, Japan.

4861. Ohsawa, Lima. 1971. *Makurobiotiku ryôri: Shokuyô katei ryôri 700 shu* [Macrobiotic cookery: Food-cure home cookery—700 recipes]. Tokyo: Nihon CI Kyokai. xix + 7 + 200 + 6 p. Illust. (many color plates). Index. 26 cm. [Jap]

• **Summary:** This macrobiotic classic contains many chapters and recipes related to soyfoods and other interesting Japanese foods: Azuki and bean cookery (p. 96-98). Tofu cookery (p. 99-104). Miso cookery (p. 104-08; tofu, miso, and shoyu recipes are also scattered throughout the book). The chapter titled "Other Vegetable Cookery" (p. 110-24) contains many recipes for *kôfû*, a term used to refer to fresh wheat gluten. There are recipes for Kofu cutlets and Kofu croquettes (#419, p. 112). Skewered kofu cutlets. Kofu fukume-ni. Kofu rolls (p. 113). Deep-fried kofu chunks

(#423, p. 114; it states that kofu can be purchased at Chinese grocery stores). Interestingly, there is no mention of seitan. The same chapter contains 9 yuba recipes (p. 121-22). Recipes for sea vegetables are scattered throughout the book, especially in the chapter on wild vegetables (p. 135-37). Two recipes using amazake as a sweetener appear on p. 152, and homemade amazake beverage is found on p. 169

An extensively revised English-language translation of this book was published in 1974 under the title *The Art of Just Cooking* by Autumn Press. Address: Tokyo.

4862. Sung, Betty Lee. 1971. *The story of the Chinese in America*. New York, NY: Collier Books. viii + 341 p. Illust. Map. Index. 21 cm. Originally published in 1967 under the title: *Mountain of Gold: the Story of the Chinese in America*. [283 ref]

• **Summary:** This 1971 edition is basically identical to the original 1967 edition titled *Mountain of Gold: The Story of the Chinese in America*—except for a new Foreword, which notes the repeal of the national origins quota

As in the original edition in American life, from the Gold Rush to the present.

Chapter 9, "Chinatowns," states (p. 149): "If Chinese food is served at home, the basic ingredients must be purchased from Chinatown, for where else can one buy soy sauce, bean curd, dried mushrooms, snow peas, or bamboo shoots?"

Page 206: "Add seasonings of fermented bean curd, salt, and a little soy sauce. Put in just enough water to keep the food from burning. Lower the flame slightly. Cover the frying pan until the water boils (about two minutes)..."

4863. Takashima, Shizuye. 1971. *A child in prison camp* [1st ed]. Montreal, Canada; Plattsburg, New York: Tundra Books. [74] p. Illust. so x 25 cm.

• **Summary:** "The people in Japan, hearing how we have been treated by the Canadian Government, and that we are living in camps in the woods, send us barrels of soya sauce and miso paste."

Note 1. This book is written for elementary and junior high school students. A Japanese-Canadian girl recalls her experiences of the three years (1942-1945) that she and her family spent in a Canadian internment (evacuation and relocation) camp during World War II. It was the New Denver Relocation Center in eastern British Columbia. In late 1941 they had lived in Vancouver, BC.

"In December 1941, 22,000 men, women and children of Japanese origin were living on Canada's West Coast. Within a few months every one of them—whether Canadian-born, naturalized citizen or new immigrant—was stripped of all civil rights and submitted to three years of indignity on a scale that makes the episode the most disgraceful in the country's history" (inside front dust jacket). Address: Toronto, Canada.

4864. Tamura, Heiji; Hirano, Masaaki. 1971. *Shôyu no hon* [The book of shoyu]. Tokyo: Shibata Shoten. 286 + vi p. Illust. Index. 19 cm. [15 ref. Jap; eng+]

• **Summary:** Contents: Part I: Knowledge of shoyu. History of shoyu. How shoyu is made. Topography of shoyu: Shoyu in the provinces. Varieties of shoyu. Races of shoyu. How shoyu is used. Talk on various topics concerning shoyu. The science of shoyu. How to use shoyu and its near future. Part

II: Shoyu cookery. Japanese cookery. Chinese cookery. Western cookery. One drop of shoyu can enliven. Part III: Shoyu and me. Short essays by famous Japanese about their fond, often childhood, memories of shoyu and its significance in their lives and in Japanese culture.

Mr. Tamura is a cooking teacher; he is said to have gotten most of his information other than recipes and reminiscences from another book, *History of Kikkoman Shoyu* (*Kikkoman Shoyu shi*, by Ichiyama 1968). Address: Tokyo, Japan.

4865. Tsuji, Kaichi. 1971. *Kaiseki: Zen tastes in Japanese cooking*. Tokyo and Palo Alto: Kodansha International Ltd. 207 p. With 96 color plates. Original woodcuts by Masakazu Kuwata. 29 cm.

• **Summary:** Contents: Foreword by Yasunari Kawabata (winner of the Nobel Prize for literature in 1968). Foreword: The tea ceremony and kaiseki by Sôshitsu Sen (head of the Urasenke School of Tea and the 15th generation descendent of Sen no Rikyu, founder of the school). Utensils and Kaiseki by Seizô Hayashiya (chief curator of the Ceramics Department at the Tokyo National Museum). The twelve months of kaiseki. The kaiseki courses (defines and describes each course, such as Mukôzuke, Misoshiru [pages 168-71 give a fine description of miso and miso soup], Wanmori, Yakimono, Azukebachi, Hassun, etc.). Postscript. Notes on utensils. List of recipes. Glossary: Includes descriptions of miso, natto (incl. *Daitokujî-nattô*, p. 66), shoyu, tofu, and yuba, plus azuki and Dainagon-azuki, many types of wheat gluten (fu), kuzu, mochi, sea vegetables (konbu, nori, wakame), fresh-water algae (Kamogawa-nori, Suizenji-nori [= Kotobuki-nori]), and umeboshi.

This is a magnificent, beautiful book, the finest work available on Japan's highest form of haute cuisine, Tea Ceremony Cuisine, by a great Japanese Kaiseki chef. It was first published in Japanese by Tan-kôsha Inc. of Kyoto. Soyfoods are used throughout the book—especially miso, since one of the fixed courses in a kaiseki meal is miso soup (*misoshiru*). Many recipes use soy sauce, often the light colored type, usukuchi. Most recipes are shown in an accompanying full-color photo. The tea ceremony was developed at the court of the shogun in late Ashikaga times under such men as Soami, and his father and grandfather, Geiami (1431-1485) and Noami, who were painters, landscape gardeners, and poets in Kyoto. The greatest of the

tea masters, under whom the tea ceremony (*chanoyu*) took final shape, was Sen no Rikyu (1521-1591). Zen preached the importance of the simple, uncluttered life. As a Zen priest and tea instructor, "Rikyu believed that amid the solitude of calm withdrawal from worldly cares sought by those who practice *chanoyu*, there should exist an element of creativity that leads to the serene enjoyment of beauty. The heart of this creativity, according to Rikyu's Zen aesthetics, lies in the careful avoidance of the trite, the obvious, and the emphatic. Beauty has its most powerful effects when it arises from suggestion and restraint..."

"Centuries ago, it was a rule that Zen priests ate only two regular meals a day—morning and noon. But since the priests engaged in rather strenuous work, by evening they were often hungry, and to assuage this hunger they would eat a light meal, which was called *yakuseki* ('hot stones'). This term came from the practice of putting heated stones inside their clothing, by which the priests staved off hunger and cold during long sessions of meditation. When the tea masters developed the custom of serving a meal during the tea ceremony, they called it *kaiseki* ('breast stones'). By evoking the image used in the Zen term, they seasoned their specialty with religious connotations."

Soy-related recipes include: Miso soup (with aonorifu, azuki beans, and mustard, p. 29, plate 1, at Opening, the first of the 12 kaiseki months). Miso soup (with sesame custard, ginkgo nuts, and mustard), and Mukôzuke (with yuba and bonito flakes, p. 41, plate 9, at Evening). Miso soup (with wakanafu, kampyo [kanpyo], and mustard), and Azukebachi (hot dish, with sea cucumbers boiled in saké and mirin, boiled yuba, citron peel garnish, p. 53, plate 17 & 22, at New Year's). Miso soup (with Sanshu miso, roasted mome bean curd [grilled tofu], and black [soy] beans), and Hassun (with natto wrapped in sea bream fillets, and miso-pickled chisha stems, p. 65-66, plate 25 & 31, at Spring).

Note. This is the earliest English-language document seen (May 2012) that contain the term "roasted mome bean curd;" it refers grilled tofu.

Miso soup (with icicle radish, temarifu, and mustard), and Azukebachi (hot dish, with octopus boiled in saké, and yuba, garnished with Japanese pepper, p. 77, plate 33 & 36, at Doll Festival). Miso soup (with yuba, warabi fern shoots, and mustard, p. 89, plate 41, at Flower Viewing). Miso soup (with walnut custard, trefoil, and mustard, p. 101, plate 49, at Brazier). Miso soup (with eggplants, bamboo shoots, and mustard) and Wanmori (abalone and bean curd custard, chisa leaves [a variety of lettuce], and grated ginger, p. 113, plate 57 & 59, at Off Season). Miso soup (with Sanshu miso, shirataimako, junsai) and Wanmori (with yuba and egg custard, asauri, and wasabi, p. 125, plate 65 & 68, at Morning). Miso soup (with Sendai and Sanshu-miso, koimo, and hojiso), and Yakimono (with deep-fried eggplant slices coated with white miso and broiled), and Hassun (broiled burdock wrapped in yuba, and deep-fried green peppers,

p. 137-38, plate 73 & 76, at All Soul's Day). Miso soup (with namafu, shirouri, and mustard), and Azukebachi (hot dish, with deep-fried dumplings of bean curd and hamo {sea/conger eel}, and broiled eggplants), and Hassun (with abalone cooked in saké and miso, soy beans in the pod [green vegetable soybeans] p. 149-50, plate 81, 85 & 86, at Moon Viewing). Miso soup (with koimo, zuiki, and sesame seeds), and Mukôzuke (with abalone, bean curd, and sesame seeds), and Wanmori (with boiled pine mushrooms and bean curd, nori, citron peel, p. 161, plate 89 & 92, at Closing).

Interesting Glossary entries: (1) *Daitokuji-nattô*, a "variety to which extra salt has been added, from the Daitokuji temple in Kyoto where it was first made as a preserve to be eaten in times of famine." (2) "*Fu* is the general name for a light cake made of wheat gluten. The two basic types of this cake are uncooked (*namafu*) and baked (*yakifu*). The names that precede the suffix refer to what has been added to the gluten, the shape of the cake, or the area famous for a certain kind of cake. *Aonorifu* is baked and contains *Aonokiro*. *Chôjifu* is made long (=cho-) and cut to fit the bowl. *Daitokujifu* is fried cake that originated from the Daitokuji temple in Kyoto. *Temarifu* is a cake in the shape of a child's ball (=temari). *Wakanafu* contains several kinds of young greens (=wakana) that give it a fresh springlike color."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term *Daitokuji-nattô* (with a diacritical mark above the o → ô, and hyphenated) to refer to this Japanese type of "fermented black soybeans." Address: Kyoto, Japan.

4866. Watanabe, Tokuji; Ebine, Hideo; Ohta, Teruo. eds. 1971. *Daizu shokuhin* [Soyfoods]. Tokyo: Korin Shoin. 271 p. Illust. Index. 22 cm. [134 ref. Jap; eng+]

• **Summary:** This is the best book published to date on soyfoods in Japan; however it is written in Japanese. Contents: 1. Classifications and varieties of soybeans (p. 1). 2. Physical characteristics of soybeans (p. 5). 3. Chemical characteristics of soybeans (p. 9). 4. Standards and methods of examining soybeans (p. 47). 5. Special characteristics and problems of using soybeans for food (p. 53).

6. Current status of the soybean industry in Japan (p. 63). 7. Soymilk and various types of tofu: Aburage (deep-fried tofu pouches), ganmodoki (deep-fried tofu burgers), kôri-dofu (dried frozen tofu), soymilk, and yuba (p. 75). 8. Fermented soyfoods: Natto (p. 123-40), shoyu (p. 141-67), miso (p. 168-95), fermented tofu (*rufu*) (p. 196-202). 9. Other soyfoods: Kinako (p. 203-04), soy sprouts or moyashi (p. 206-08), tempeh or tenpe (p. 209-17). 10. Quality and usage of defatted soybeans (*dasshi daizu*) (p. 219).

11. New food uses of soybeans and especially defatted soybeans (incl. 70% soy protein powder, soy protein curds, soy protein isolate, surimi gel, spun soy protein fibers) (p. 229). 12. Advice regarding supplying protein from

organizations such as the United Nations and FAO (p. 257).

A 47-page translation of portions of this book (parts of Chapter 6 and all of Chapter 7) by Akiko Aoyagi and Chapters 8.1 and 8.2 by Alfred Birnbaum are available at Soyfoods Center.

Tokuji Watanabe was born in 1917. Hideo Ebine was born in 1921. Teruo Ota was born in 1926. Address: National Food Research Inst., Tokyo.

4867. Watanabe, Tokuji; Ebine, Hideo; Ohta, Teruo. eds. 1971. *Hamanattô* [Hamanatto]. In: Tokuji Watanabe, H. Ebine and T. Ohta, eds. 1971. *Daizu Shokuhin* [Soyfoods]. Tokyo: Korin Shoin. 271 p. See p. 123, 139-40. [Jap; eng+]

• **Summary:** An excellent scholarly work. This subchapter was translated by Alfred Birnbaum. Chapter 8, titled "Fermented soyfoods," has four parts, beginning with "Natto."

Introduction: There are two types of natto: regular natto (*itohiki natto*), produced by the action of natto bacteria on cooked soybeans, and salty natto (*shio-natto*), produced by letting a koji mold [*Aspergillus oryzae*] grow on the cooked beans [to make soybean koji], then adding salt water. Although both are traditional fermented soyfoods that have been passed down in Japan from ancient times, the fermenting agent, production method, and nature of each product are different. The main fermenting agent for regular natto is bacteria and, as no salt is added to the basic ingredients as with salty natto, the ripening time is shorter, although the finished product does not keep well. Also regular natto has the characteristic of forming large amounts of sticky filaments. By comparison, salty natto requires that the koji-molded soybeans ripen in saltwater, the main fermenting agents being the koji mold in the beginning, and yeasts and lactic acid bacteria towards the latter end of the process. As the amount of salt present is high, the ripening time required is comparatively long, taking ordinarily from several months to about a year. Salty natto is usually sold as a blackish, semi-dried product, with absolutely no formation of sticky filaments, but rather with a distinctive flavor derived from the addition of the salt and other seasonings. The large amount of salt used also makes it keep well.

At present, the production of regular natto is by far the larger of the two, being carried out in all regions of Japan; this product is better known and is usually referred to as simply "natto." On the other hand, salty natto is produced as the specialty product of such specific places as Kyoto (*Daitokuji nattô*), Nara (*Jofukuji-nattô*), and Hamamatsu (*Hama-natto*) (p. 123).

8.1.9 Hama-nattô: Hama-natto is a variety of salty natto made in and around Hamamatsu in Shizuoka prefecture. It is unrelated to regular (*itohiki*) natto except that both are fermented soy products. Rather, it is closer to miso. It is said that the first true production of Hama-natto dates from the time when Tokugawa Ieyasu became the lord of Hamamatsu

Castle [1568] and wrote instructions to the monks of the nearby Daifukuji temple.

(a) Production method: The basic ingredients are 100 kg soybeans, 9.2 kg wheat or barley flour, 18 kg salt, 7.5 kg of ginger, and koji starter. Large-seeded soybeans, such as those from the Orani region of Hokkaido or Tsuru-no-ko are used. The wheat or barley is roasted then ground to a no. 85 mesh or finer flour. The ginger is thoroughly washed, thinly sliced, and pickled in shoyu [Japanese soy sauce].

Fig. 8.4 is a flow chart of Hama-natto production. First inspect the large soybeans for any extraneous matter or imperfect beans, then wash them thoroughly to rid them of any sand or dirt. Soak in water at 20°C for 3-4 hours, then allow to drain for several hours. Steam for 5-6 hours at normal pressure, then leave overnight in the steaming vat. The next morning, spread out the beans and allow to cool to below 40°C. Then mix in koji starter (*tané-koji*). Sprinkle the roasted flour on top of this and mix the entire mass well.

Spread the mixture evenly in wooden koji trays and place in a koji incubation room at 30-33°C for approximately 50 hours to allow the growth of the koji mold. When the mold has grown sufficiently, remove the koji trays from the incubation room and allow to sun-dry outdoors until the moisture content of 30-35% at the time of removal from the room, falls to 20-25%, at which point place the mixture in wooden kegs or small vats. Add enough saltwater (or shoyu, which is occasionally used) to just cover the molded soybeans. Place a pressing lid and weight on top of the mixture, and allow to stand for 6-12 months as it ripens.

After the full fermentation is complete, spread the mixture out on a cloth to dry in the sun and mix in the pickled ginger, to make the final product.

Hama-natto is a simple food [or seasoning], dull blackish in color, but the flavor is deep and rich, and its nutritional value and storability are both excellent. Its percentage nutritional composition is shown in Table 8.10. Address: National Food Research Inst., Tokyo.

4868. Yong, F.M. 1971. Studies on soy-sauce fermentation. MSc thesis, University of Strathclyde, Glasgow, Scotland. * Address: Univ. of Strathclyde, Glasgow, Scotland.

4869. **Product Name:** Tamari Soy Sauce.

Manufacturer's Name: Chico-San, Ltd.

Manufacturer's Address: P.O. Box 1004, Chico, CA 95926.

Date of Introduction: 1971?

Ingredients: Water, soybeans, wheat, salt.

Wt/Vol., Packaging, Price: Glass bottle.

How Stored: Shelf stable.

New Product–Documentation: Label (reddish brown, beige, and yellow). Sent by Lorenz Schaller.

4870. *National Observer*. 1972. Guess who came to dinner

and brought a soy-sauce factory? Japanese textiles loom nearer. Jan. 1.

• **Summary:** The Japanese are coming! With the dollar devaluation, many Japanese firms that used to export products to America are now building manufacturing plants here. Most intend to employ American labor. Recently the Walworth County [Wisconsin] board of supervisors voted 42 to 1 to allow construction of a \$6 million Kikkoman soy sauce plant in the county. This will be "Kikkoman's only plant outside Japan, where the company has been making soy sauce for over 300 years." A photo shows two bottles of Kikkoman soy sauce next to a map of Wisconsin.

Note: This is the earliest document seen (Sept. 2008) that that announces Kikkoman's plans to build a soy sauce factory in the United States, or that mentions Walworth, Wisconsin, in connection with Kikkoman.

4871. Dimler, R.J. 1972. Oriental ceremonies at groundbreaking for a new rural industry. *Notes from the Director of the Northern Division* No. 1058. p. 2. Jan. 21.

• **Summary:** Describes the groundbreaking ceremonies on Jan. 19 for the new \$12 million Kikkoman shoyu plant at Walworth, Wisconsin. "Kikkoman sells 100 million gallons

of shoyu annually, besides a line of dehydrated soups, miso,... The shoyu fermentation takes about 3 months and Kikkoman expects to start their first fermentations in October or November 1972 with the first sales in 1973. Initial production will amount to about 2,500,000 gallons annually which will use about 500,000 bushels total of wheat and soybeans per year. The plant brings to fruition the results from PL-480 research that NMN sponsored under the direction of Dr. C.W. Hesseltine (FL= Fermentation Lab), and that Kikkoman continued after the project itself terminated."

Dr. Hesseltine was among the honored guests. He found it cold standing in a corn field for almost 2 hours. Note: NMN probably stands for Northern Marketing and Nutrition Division—according to Dr. Walter Wolf, who worked there for many years. Address: Director [NRRL, Peoria, Illinois].

4872. *Los Angeles Times*. 1972. Search uncovers veal recipe: Culinary SOS. Jan. 27. p. I19.

• **Summary:** In the recipe for "Fried rice," ingredients include "short grain brown rice" and "Tamari soy sauce to taste."

4873. Chico-San Inc. 1972. Chico-San Inc. products: A catalog of unique foods. P.O. Box 1004, Chico, CA 95926. 24 p. Revised Jan. 1972.

• **Summary:** The cover of this catalog is printed with dark brown ink on pea-green paper. A complex, circular orange-red spiral is above the title. Three sheaves of grain are across the bottom. Soyfoods imported from Japan include Lima Soy Sauce, Soybean Puree (Miso), and dehydrated miso. They also sell black [soy] beans.

Contents: Rice cakes is our bag. "How Chico-San guarantees Oriental-type, organically-grown brown rice." Wehah Farms is mentioned often in this article. Whole grains and flours. Cereals. Whole grain noodles. Beans. Specialties (incl. Yinnies / Ame). Seeds. Condiments. Sea vegetables. Dried foods. Beverages. Cosmetics. Dentifrice. Utensils. Recipes.

"Chico-San products have gained increasing acceptance throughout the country since their introduction in 1960." The booklet contains 11 pages of recipes (p. 13-23) including: Miso-sesame spread. Miso soup (p. 20). Address: P.O. Box 1004, Chico, California 95926.

• **Summary:** Soy-related recipes: Soybean milk as a substitute for cow's milk (p. 14; it contains twice as much calcium, and has a higher protein value). About vegetarians (p. 17-18; the first law of occult science is "Thou shalt not kill"). Soy beans (p. 19-20; "Only in recent years has the soy bean gained acceptance in the Western World." Nutritive

value, fresh green beans, sprouts, oil, soy flour, toasted soy beans [soynuts and soynut butter], shelled beans are nutritious as green vegetables, [whole dry] soybeans, soy grits, making soy bean sprouts at home). Soya milk (from soya beans, p. 126). Soy milk (from soy milk powder, p. 126). Soya pineapple tonic (drink with soya powder, p. 128). Soya carob bread (with powdered soy milk, soya carob flour, and soybean oil, p. 141). Soya muffins (with soya flour, p. 146). Soya flap jacks (with sour soya milk, p. 156). Soy waffles—wheatless (with Soya Powder, p. 158). Vegetable soy milk soup (with soy bean powder and "soy butter," p. 182). Soy noodles (with soybean flour, p. 184). Soy sponge balls (with soy flour, p. 184). Pastitsio (with soy noodles, p. 200). Baked soy beans (p. 202). Soy cheese (tofu) (p. 203, made from soybean milk coagulated with lemon juice). Soy beans and zucchini (p. 204). Soy bean patties (p. 205). Soy beans and vegetables. Baked soy cheese supreme ([tofu], p. 205). Soy slice (with "soy nuts" and peanuts, p. 206). Soy bean loaf (p. 207). Soybean omelet (with soybean pulp [see p. 241—ground cooked soybeans], p. 222).

Vegetables—Soybeans: Introduction. Soybean medley (p. 239). Cooked soybeans (p. 240). Baked soybeans. Soybean casserole. Soybean pulp (p. 241). Soybean soufflé. Soy waffles (p. 241). Soy gravy (with soy sauce, p. 318). Soybean stuffing (with canned soybeans, p. 331). Soy grits stuffing (p. 332). Soy bean butter (with soybean flour, water, and oil, p. 481).

Note: The author's name "Max Heindel" is printed on the spine but not on the title page or other front matter. He is also the author of numerous other books published by the Fellowship, advertised in the back of the book, such as: Occult principles of healthy and healing. The message of the stars. Mysteries of the great operas. Gleanings of a mystic. Simplified scientific astrology. The Rosicrucian cosm-conception.

Also discusses: Almonds, nutmeat (mostly peanuts, some soybean meal), peanuts, sesame butter, sunflower seeds. Address: Rosicrucian Fellowship, International Headquarters, Mt. Ecclesia, P.O. Box 713, Oceanside, California 92054.

4875. *SoyaScan Notes*. 1972. Chronology of Janus Natural Foods, macrobiotic and natural foods distributor in Seattle, Washington. And of Granum. 17 March. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1972 Jan.—Janus Foods Inc. is established at 712 Seventh Ave. South in Seattle, Washington, by George Gearhart and Blake Rankin, formerly of Spiral Foods. Some background: In 1969, while a student at UCLA, Rankin came in contact with Erewhon, Los Angeles. After graduation from UCLA he and several friends set up a small health food store in Victoria, BC, Canada. Then he spent 3 months in Boston, Massachusetts, living in a Kushi study house and working in an Erewhon warehouse. Back in Seattle,

he worked at Spiral Foods, a wholesale operation that was an offshoot of Chico-San. Spiral Foods owned the O-Soba Noodle Nook in Seattle. Shortly after that he and George Gearhart, the proprietor, closed Spiral Foods and in Jan. 1972 opened Janus Foods as a macrobiotic and natural foods wholesale and distribution company. Tim Hartman was third of the original incorporators; all three men managed the company. It was successful. From opening day, Janus sold miso and shoyu, imported from Japan; they were among the company's best-selling products. Janus never owned a natural foods retail store or restaurant, and never sold foods retail from their warehouse.

1972 Sept.—Rankin leaves Seattle on a trip to Japan via Hawaii. He leaves Hawaii for Japan in March 1973. Erewhon had given Janus permission to buy natural foods (bearing the Erewhon label) directly from Japan, so in the spring of 1973 Rankin traveled and worked with Muso and Mitoku to set up the first shipments to Janus in Seattle. Janus probably never paid any royalties or fees directly to Erewhon. He leaves Japan in Sept. 1973. Then he goes to Nepal and India on a spiritual search. In late 1973 he returns to Seattle and works for Janus.

1973—Two directories show that “Janus Foods Inc.” is still located at 712 7th Ave. South, Seattle, Washington 98104. They now sell tamari and miso and distribute products from Erewhon, Spiral Foods, Deaf Smith, Pure & Simple, Chico-San, and Arrowhead Mills.

1974 March 8—Janus (Gearhart, Rankin, and Hartman) hosts the meeting of the Natural Food Distributors in Seattle; 16 people representing 12 companies attended.

1974 July 19. By this date, Janus Natural Foods, Inc. is located at 1523 Airport Way South, Seattle, WA 98134. Tim Hartman is still a manager of the company and Rankin is present. The company now sells barley koji. The company now has a lovely sprout-like logo (designed by Frederick Walsh) and a new brand called “Verity,” whose labels were also designed by Walsh. Soy sauce and misos were sold under the Verity label for a while starting before Sept. 1976.

1975—The three managers decide to rotate the presidency of Janus annually. Rankin became president and Hartman left the company before his turn came around. During 1974 and 1975 Rankin and Gearhart were working on miso production.

1976 Sept.—Rankin leaves Janus and returns to Japan where he works for Mitoku and studies calligraphy. A few days after his arrival in Japan he meets his future wife, Yoko. They later had two children, but separated in 1988 and eventually were divorced.

1977—Janus leaves its large warehouse on Airport Way.

1979 Month? (before summer) Janus goes out of business, under the management of George Gearhart.

1981—Rankin returns to Seattle and in January or February starts Granum (pronounced GRAH-num, not GRAY-num) as a distributor and importer for Mitoku

macrobiotic food products from Japan. The Granum logo is designed by Frederick Walsh. As of 1985 Granum has a small retail store and a 10,000 square foot warehouse, both at 2901 N.E. Blakeley St., Seattle, Washington 98105. Expected 1985 gross is more than \$500,000.

As of March 1992 Granum has more than doubled its business compared with 1985. Blake has remarried to Nancy and they have a 2-year-old son, Addison. George Gearhart now lives in the suburbs to the south of Seattle. He is a sales manager, but no longer works in the natural foods industry. Address: 712 7th Ave. South, Seattle, Washington 98104.

4876. *Soybean Digest*. 1972. Kikkoman plans \$8 million plant [in Wisconsin]. Jan. p. 17.

• **Summary:** This new soy sauce plant, to be built by Kikkoman Shoyu Co. at Walworth, Wisconsin, “is believed to be the largest single investment ever made by a Japanese concern in the U.S.” The plant will produce 2.6 million gallons of soy sauce annually. It will be constructed by the Austin Co. of Cleveland, Ohio. Kikkoman began exporting shoyu (to be sold in bottles) to the U.S. in 1949. It was transported in tank containers from Japan to California, where it was bottled and packed for distribution.

4877. Sokolov, Raymond A. 1972. Lobster Cantonese? They may think you mean Americanese. *New York Times*. Feb. 3. p. 28.

• **Summary:** Robert Tsang, a leading Chinatown restaurateur and secretary of the Chinese Restaurant Association, has finally admitted what non-Chinese Americans have long suspected: most restaurants have one menu for Americans (with a limited number of dishes), a full menu for Chinese customers (written in Chinese), and another Chinese menu for only rice and noodle dishes.

So when Americans order lobster Cantonese, they will get an “American” version of the dish. In more detail, it works like this: “The Chinese-style lobster has very little sauce and several ingredients, notably salted black beans and spices, that do not appear in the Americanized recipe.” The American version, by comparison, is soupy, “with three times as much cornstarch, no dark soy sauce, a smaller amount of sesame oil, no ginger, no black beans but double the garlic.”

4878. Vancour, Edith. 1972. ‘Free’ Chinese cooking. *Washington Post, Times Herald*. Feb. 10. p. D1.

• **Summary:** Mrs. Gaylord Nelson (Tia, wife of the Democratic senator from Wisconsin) is an outstanding cook. Although she can cook “in any language,” her specialty is Chinese—and this article is about cooking at Chinese New Year. One of the best known meatless dishes served at this time is called “Arhats Fast or Buddhist Saints ten varieties”; it contains ten ingredients, including “Gluten of flour or skin of bean curd [yuba], cut into 1-inch cubes. (Bean curd skin

has to be boiled for ½ hour)” [sic, yuba needs only a few minutes of cooking].

Contains several recipes which call for soy sauce. A photo shows Mrs. Gaylord Nelson in the kitchen preparing a Chinese dinner.

Note: A condensed version of this article by the same author, titled “Specialty of house: Chinese cooking,” appeared in the *Los Angeles Times* (Feb. 24, p. J25).

4879. *Food Engineering*. 1972. Japanese build sauce plant in U.S. 44(2):95. Feb.

• **Summary:** Subtitle: “Kikkoman Shoyu Co. will produce soy sauce in Wisconsin, using locally grown wheat and soy beans. Sauce will be made by applying modern technology to the traditional natural process.” An illustration shows an aerial view of the plant, which will be the largest Japanese plant to be built in the USA. The initial \$6 million plant will be built by Austin Co., Chicago, and be ready for operation in 1973. A description of the modern process for making “shoyu, a flavorful soy sauce,” is given. A portion of the soy sauce will be blended with other ingredients to make teriyaki sauce. A powdered miso (soy bean paste) soup is under development.

4880. Huang, Su-Huei. ed. 1972. Chinese cuisine: Wei-Chuan cooking book. Taipei, Taiwan: School of Home Economics, Wei-Chuan Foods Corp. 181 p. Illust. No index. 22 cm. [Eng]

• **Summary:** On each page is one recipe and a half-page color photo of the prepared dish. The title of the recipe is written in English in large bold letters and is also given in (to the right) in small Chinese characters, just above the number of servings. Most of the recipes call for ¼ to ½ teaspoon of MSG; many call for soy sauce.

On unnumbered pages at the front of the book are (1) A two-page color photo, on a light blue background, of 39 special ingredients, each numbered, with the numbers and names across the bottom of the pages. These include: “9. nori. 24. pickled plum (*umeboshi*). 25. bean curd noodle [pressed tofu noodles]. 30. bean curd wrapper (*pronounced ‘bai ye’*) [pressed tofu sheets]. 35. bean curd skin [yuba in large, semicircular thin sheets].

(2) Description of some other special ingredients: “Hot bean paste (*pronounced ‘la jiao jiang’*). This is made with red peppers [and soy beans] and has a very hot taste.” “Sweet bean paste (*‘t’ien mien jiang’*). This is made with steamed, fermented bread (black color).” Note 1. Why is this called “Sweet bean paste”? What kind of beans are used to make it?

“Soy bean paste (*‘do ban jiang’*). This is made with fermented soy beans (black color).” “Fermented black bean (*‘do shr’*). This is black [soy] beans which are steamed, then marinated in soy sauce or salt.” “Pickled bean curd [fermented tofu] (*‘do fu ru’* or *‘Chinese cheese’*). This is bean curd which is dried and then pickled; there are many

different kinds with different seasonings.”

(3) Helpful hints: “In all recipes you may substitute Worcestershire sauce for dark vinegar.”

In Chapter 3, “Pork and beef,” soy related recipes are: Shredded pork with sweet soy bean paste (with 1.3 tablespoons “sweet soy bean paste,” p. 39). Note 2. This is the earliest document seen (Feb. 2009) that contains the term “sweet soy bean paste.” See also p. 104 below.

Pork ribs with dried black fermented beans (p. 41). Pork in preserved bean sauce (p. 42).

In Chapter 4, “Sea Food,” is a recipe for Steamed carp with fermented black beans (p. 64).

In Chapter 5, titled “Bean curd and eggs” (p. 102-15) are recipes for: Stewed bean curd (with “1½ squares bean curd”). Assorted dish with hot sauce (with “½ tablespoon hot soy bean paste, 1½ tablespoons sweet soy bean paste,” p. 104). Bean curd stuffed with minced pork. Ma-Po’s fried bean curd with pork. Bean curd leaf rolls with minced pork (With “bean curd wrappers”). Beancurd noodles with celery salad (with “4 oz. {store-bought} bean curd noodles”). Vegetarian chicken (with “16 bean curd sheets”).

Also: Green peppers stuffed with chopped meat (p. 122, with “1 tablespoon fermented black beans, crushed”). Bitter gourd stuffed with fermented black beans (p. 126, with “2 oz. fermented black beans”). Eggplant with bean curd skin (p. 133, with “1 sheet beancurd skin” and “1 sheet nori” [sea vegetable]). Bean curd in earthen pot (p. 142, with “3 squares bean curd”). Address: 19 West Nanking Road, Taipei, Taiwan.

4881. Sokolov, Raymond A. 1972. A maverick farmer who finds gold in natural food products. *New York Times*. March 2. p. 46.

• **Summary:** About Frank Ford who grows wheat on 1,800 acres in Deaf Smith County, Texas. But Ford is a maverick, who farms organically, without sprays or synthetically fertilizers. His company is Arrowhead Mills and his brand, Deaf Smith, have become household words among those who buy natural foods.

Deaf Smith County was named after Erastus (“Deaf”) Smith, a hero of Texas’s war for independence from Mexico. Reputed to have the richest soil in the USA, it is situated on a vast plain about 4,000 feet above sea level.

Contains two recipes. Ingredients in Rebecca Kirby’s soybean chili include 1 cup soybeans and “Tamari soy sauce.” A photo shows Frank Ford.

4882. Yokotsuka, Tamotsu; Aonuma, T.; Mogi, K.; Fukushima, D.; Yasuda, A.; Watanabe, H.; Tsukada, N.; Arai, A. Assignors to Kikkoman Shoyu Company, Ltd. (Noda-shi, Japan). 1972. Method of preparing soy. *U.S. Patent* 3,647,484. March 7. 7 p. Application filed 27 Feb. 1969. 1 drawing. [1 ref]

• **Summary:** Soybeans in any form (incl. soybean meal),

having a moisture content of 30-70% by weight, are steamed with saturated steam having a gauge pressure of not less than 1.8 kg per square cm for a short period of time, not to exceed 10 minutes, followed by rapid cooling to a temperature not to exceed 100°C, are used as the starting material for the preparation of soy [sauce]. This method can provide soy of superior flavor and of high quality wherein the possibility of the formation of clouds [cloudiness] and precipitates when diluted and heated in its use does not occur, and can be carried out advantageously, on an industrial scale, with improved yield and good reproducibility. Address: 1. Higashikatsushikagun; 2. Kashiwa-shi; 3-8. Noda-shi. All: Japan.

4883. Aihara, Cornelia. ed. 1972. *The dô of cooking* (Ryorido). Vol. 1. Macroguide No. 13. San Francisco, California: George Ohsawa Macrobiotic Foundation. 109 p. Illust. No index. March. 25 cm.

• **Summary:** All recipes in this macrobiotic cookbook are numbered. Contains information on soy sauce and miso (p. 44-45). Soy-related recipes include: "Top of stove" casserole noodle soup (with "dry tofu" [dried-frozen tofu] and fried wheat gluten, p. 58). Fried whole wheat noodles (with seitan, p. 60). Homemade noodles with soup (and barley miso, p. 61). Onion miso (p. 62). Rolled cabbage with tofu (p. 63). Wheat gluten (p. 71, made from 10 cups whole wheat flour and 4 cups unbleached flour). Seitan (p. 72). Fresh wheat fu (2 versions). Serving recipes—boiled fu (p. 73). Fried fu—gluten cutlet. Shish kebab (with cooked fu, p. 73-74). Making tofu (at home using 3 cups soybeans and nigari, p. 75-76). Making nigari (p. 76). Quantity tofu preparation (using 10 lb soybeans). Okara or unohana (sauteed with soybeans and vegetables, p. 76). Tofu with kuzu sauce (p. 78). Fried tofu. Shinano-age (Fried tofu with buckwheat, p. 79). Kaminari Tofu (Thunder Tofu, p. 79). Nori-maki (Tofu rolled in nori, p. 80). Age-tofu (stuffed tofu, variation, p. 80-81). Miso salad dressing (p. 90). Bean sprout miso salad (p. 91; it is not clear what kinds of beans the bean sprouts are made from—probably mung beans). Gamodoki ([Ganmodoki] mock goose; p. 99-100).

Note 1. This is the earliest (and only) English-language document seen (May 2012) that contains the word *gamodoki* or the term "mock goose, both of which refer to deep-fried tofu burgers.

French bread made with gluten water (p. 104). Amazake is not mentioned. Some recipes call for chicken or fish as ingredients.

Note 2. This is the earliest cookbook seen (July 2005) that gives a recipe for making seitan, as follows: "1 T. [tablespoon] dark sesame oil. 1 T. minced gingerroot. 1-2 cups soy sauce. 5 cups cold cooked gluten. Heat oil in a sauce pan, add minced ginger (use only fresh ginger) and saute. The amount of soy sauce used depends upon how long you intend to store the Seitan. Use a larger amount

of soy sauce for longer storing and refrigerating. Add soy sauce, bring to a boil, and drop in pieces of gluten. Cook on low heat for three hours, stirring frequently. Remove cover and continue cooking until excess liquid is absorbed and evaporated. Seitan is ideal as a seasoning in noodles au gratin, stews, cooked with vegetables, etc. It will keep for long periods of time in the refrigerator."

After Volume 2 of this series of four seasonal cookbooks was issued, Volume 1 was subtitled "Spring Cooking." Address: San Francisco, California.

4884. Hashiba, H. 1972. Non-enzymic browning of soy sauce. Comparison of the browning of soy sauce with that of a sugar-amino acid model system. *Agricultural and Biological Chemistry* 36(3):390-97. March. [6 ref] Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

4885. Tamura, Shinpachiro; Ishima, T.; Saito, S.; Miyauchi, T.; Tomita, F.; Yoshikawa, S. 1972. [Studies in the patterns of six tastes of twenty drinks in Japan]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 27. p. 77-83. March. [3 ref. Jap; eng]

• **Summary:** "Taste patterns of 20 drinks in Japan were studied." A total of 10 points were assigned to each of "six taste components, namely, sweet, salty, sour, bitter, tasty, and astringent."

These drinks included miso soup and soy sauce soup (*sumashi-jiru*, a clear soup seasoned with soy sauce). A very interesting diagram showing these relationships appears on p. 80.

"The highest pattern similarity (0.996) was found between two kinds of green tea, namely 'sen-cha' and 'ban-cha,' and the lowest one was found between soysauce soup and coffee or Coca-Cola." Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

4886. *Hartford Courant (Connecticut)*. 1972. Some of Shirley's concoctions. April 28. p. 22.

• **Summary:** The recipe for Shirley's cabbage calls for "2 tbsp. tamari sauce."

4887. Hashimoto, Hikotaka; Yokotsuka, Tamotsu. 1972. [Studies on sediment of *shoyu* (Soy sauce). VI. Sediment forming activity in fermented raw *shoyu*]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 50(4):257-63. April. [9 ref. Jap; eng]

Address: Central Research Laboratories, Kikkoman Shoyu Co., Ltd., Noda, Chiba prefecture, Japan.

Address: Central Research Inst., Kikkoman Soy Sauce Co. Ltd., Noda-shi, Chiba prefecture, Japan.

4889. Brown, Dolores. 1972. A face-life for Queen Emma. *Hartford Courant (Connecticut)*. May 7. p. 2F.

• **Summary:** In Curacao, in the Lesser Antilles, a major restoration project is planned by the current government. "Downtown Willemstad, redolent of history and the cradle of Dutch colonial architecture, is being restored... The dear old Queen Emma pontoon bridge will be improved.

Cruise-ship passengers bound for the Caribbean and Curacao will find many bargains there. Any suburban supermarket has shelves full of interesting ingredients reflecting the Dutch heritage: "spices for bambi goreng, a favorite national dish; Indonesian soy sauce, which makes the Japanese product taste like a Japanese copy;..."

4890. Farmilant, Eunice. 1972. Macrobiotic cooking. New York, NY: New American Library. 224 p. Foreword by Herman Aihara. May. Index. 18 cm. [31 ref]

• **Summary:** This pocketbook has a color (beige) photo on the cover of ears of wheat, one wooden spoon filled with soybeans and one filled with unpolished rice. It is "A basic introductory guide to cooking and eating the macrobiotic way." The author's interest in macrobiotics began in April 1968. Basic information on soyfoods (especially miso, tamari, and tofu) is given on pages 29, 33-38, 213-14. Soy-related recipes include: Wheat berries and black beans (i.e. black soybeans, p. 78). Sprouts (incl. soy sprouts, p. 82-83). Miso pickles (p. 124-25). Miso soup (p. 128-29). Cream of miso soup (p. 135). Black beans and wheat berries (p. 139).

There is an entire chapter on miso and tofu (p. 142-46) including: What makes miso so beneficial? Barley miso (nutritional analysis). Miso-vegetable stew. Miso-rice. Miso stew with vegetables. Miso-vegetable spoon bread. Homemade tofu (curded with fresh lemon juice).

Pizza-Macrobiotic style (with miso, p. 149). Chop suey (with tofu and miso, p. 151-52). Miso bechamel sauce (p. 159). Miso gravy. Simple tahini and tamari sauces (p. 160). Tempura dip (with tamari). Simple miso spreads (p. 161). Miso-vegetable spread. Miso-watercress spread.

There is a directory of macrobiotic stores and restaurants in the U.S. (p. 191-203, subdivided alphabetically by state, and within each state alphabetically by city). The following states have the following number of stores and restaurants: Alaska 1, Arizona 4, Arkansas 1, California 32, Colorado 4, Connecticut 18, District of Columbia 3, Florida 14, Georgia 7, Hawaii 2, Illinois 7, Indiana 2, Iowa 5, Louisiana 4, Maine 14, Maryland 7, Massachusetts 51, Michigan 12, Minnesota 3, Mississippi 2, Missouri 3, Nevada 1, New Hampshire 20, New Jersey 9, New Mexico 3, New York 61, North Carolina 5, Ohio 14, Oklahoma 3, Oregon 2, Pennsylvania 8, Rhode Island 5, South Carolina 1, Texas 4, Utah 1, Vermont 26, Virginia 4, Washington 3, Wisconsin 2.

There is also a directory of stores, restaurants, and centers outside the U.S. (p. 204-07, subdivided by country). The following countries have the following number of stores, restaurants, or centers: Australia 1, Belgium 2, Brazil 2, Canada 15, Denmark 4, France 29, Germany 1, Holland (Netherlands) 2, India 1, Italy 1, Japan 3, Portugal 1, Puerto Rico 1, Spain 1, Sweden 1, Switzerland 2, United Kingdom: England 13, Scotland 1, Vietnam 2.

A list of wholesale distributors in the U.S. (p. 208-09) includes Shiloh Farms (Route 59, Sulfur Springs, Arkansas; [Warren Clough]), Erewhon Trading Co. (8003 W. Beverly Blvd., Los Angeles, California 90048), Chico San Foods (1262 Humboldt Ave., Chico, California 95926), Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Deer Valley Farms (Guilford, New York 13780), Infinity Food Co. (171 Duane, New York, NY 10013), Mottel Foods (451 Washington, New York, NY 10013), Juniper Farms (Box 100, Sugar Loaf, NY 10981), Pioneer Specialty Foods (Fargo, North Dakota 58100), Merit Food Co. (Pill Hill Lane, Box 177, Bally, Pennsylvania 19503), Essene (58th & Grays Ave., Philadelphia, PA 19143).

Kuala Lumpur: Ministry of Education, Malaysia. See p. 27-48. Distributed in the USA by UNIPUB, New York.

• **Summary:** Contents: Introduction. Miso. Shoyu. Tane-koji. Koji. Natto. Sake. Concluding remarks. Appendix. Address: Tokyo, Japan.

4892. Dosti, Rose. 1972. Chinese menus are a snap for Sylvia. *Los Angeles Times*. June 22. p. J3.

• **Summary:** Sylvia O'Gilvie snaps together a quick Chinese dinner for herself (or friends) after work. Her recipe for "Spareribs with black bean sauce" calls for "2 tsp. [teaspoons] fermented black beans," 1 teaspoon soy sauce, and ½ teaspoon MSG. Then: "Crush beans to make a paste."

4893. Ibrahim, -. 1972. Soy-sauce processing. In: Science Meeting on Food Protein and Soy-bean Processing, Bandung, Lembaga Kimia Nasional, LIPI. Held 1-2 June 1972. *

Address: Indonesia.

4894. Yutono, -; Darmosuwito, S. 1972. Proses pembuatan kecap [Process for making Indonesian soy sauce]. In: Science Meeting on Food Protein and Soy-bean Processing, Bandung, Lembaga Kimia Nasional, LIPI. Held 1-2 June 1972. [Ind]*

• **Summary:** Describes the 6 steps in the process for making fermented soy sauce.

4895. Conrat, Maisie. 1972. Soybean cookery. *Organic Gardening and Farming* 19(7):89-93. July.

• **Summary:** Discusses the benefits of soybeans and their products: whole soybeans, soy flour, tofu, miso, and soy sauce.

"If you go into a natural food store today, you will find soybeans available in many forms. In some stores you'll find two or more varieties of whole beans as well as soy grits and soy meal, soy powder and soy flour. Most stores also carry roasted, salted soy nuts and a kind of soy cheese called tofu. They will have noodles, spaghetti, and macaroni made from soy; and they will also carry exotic soy products like miso. This may seem like a lot of things to get from one kind of bean, but in Japan, where soy is considered a protein staple, you will find more products yet...

"Both tamari soy sauce and miso are made from fermented soy beans. (Regular commercial soy sauce has been adulterated with various chemicals to simulate fermentation.) Miso is a thick paste made from black [not true] soybeans and rice, and has the same flavor as tamari soy sauce. You can use miso as you would beef extract in making soups, stews and sauces.

"Tofu is a kind of soy cheese. It is widely used throughout China and Japan, where it is available in many forms. Tofu is made from clabbered soy milk, just as cottage cheese is made from clabbered cow's milk. It is very mild and delicate, so you will probably want to serve it in a sauce or soup that has plenty of character."

Contains recipes for: Apple soy crisp (with soy meal). Soy pancakes (with soya flour). Soy cheeseburgers (with soybeans). Soy balls (with soy powder).

4896. Lee, Jai Moon; Kim, Yu Sam; Hong, Yun Myung; Yu, Juhyun. 1972. [Studies on the substitution of raw materials in soy sauce. III. Use of corn and barley]. *Hanguk Sikp'um Kwahakhoe Chi (Korean J. of Food Science and Technology)* 4(3):182-86. July. [14 ref. Kor]
Address: Dep. of Food Engineering, College of Science and Engineering, Yonsei Univ., Seoul, Korea.

4897. Sokolov, Raymond A. 1972. Taking a look at one of China's most obscure cuisines. *New York Times*. Aug. 3. p. 22.

• **Summary:** This is a review of a new Chinese restaurant, Foo Joy (13 Division St., on the edge of Chinatown) that serves Fukinese cuisine, the food of Fukien Province. Seafood is the main ingredient, in part because the province's two leading cities, Amoy and Foochow, are both seaports with big fishing industries.

The recipes for Fried fish rolls and for Pork chops with scallion sauce each call for "1 teaspoon imported light soy sauce." The recipe for Scallion sauce calls for "3 tablespoons black (thick) soy sauce." A photo shows Henry Wong, chef at Foo Joy.

4898. Loring, Kay. 1972. Korean cafes keep growing. *Chicago Tribune*. Aug. 24. p. S_A6.

• **Summary:** This is a review of the restaurant Korea House in Chicago, where an estimated 10,000 people of Korean ancestry now reside. Four years ago there was only one Korean restaurant in the city; now there four. The main Korean seasonings are garlic, onion, red pepper, soy sauce, and sesame—plus kim chee (kimchi).

"No dairy products are used, because as in Japan and China, there is no room in this thickly populated country for dairy industries. Soy bean curds and soy milk are among substitutes." Vegetable oils, such as sesame oil and [soy] bean oil, are widely used in place of animal fats for cooking.

4899. Davis, Pat; Bentley, Carol. 1972. Natural foods and no smoking. *Washington Post, Times Herald*. Sept. 21. p. K1-K3.

• **Summary:** A new natural foods restaurant, The Golden Temple Conscious Cookery, located at 1521 Connecticut Ave. NW, opened several months ago and has had lines at lunch and dinner since that day. The restaurant was started by the Washington, DC, chapter of 3HO (the Happy, Healthy, Holy Organization), which is a yoga lifestyle group "organized in Los Angeles three years ago by Yogi Bhan, a yoga teacher from India." In Dec. 1970 one of his student-teachers, Larry Wentick, came to Washington, DC, to start a center—now called Ahimsa House (yoga ashram) and located at 1704 Q St. NW. Larry, his wife Ganga (pronounced GUN-ga), and a group of about 15 people worked for about six months on the restaurant before it was ready to open. Most of the entrees, salads, and fruit drinks were created by Ganga, a native of California, where natural and organic foods caught on early. Ganga and Larry have both had previous experience in natural food stores and restaurants. Some years ago, Ganga was appointed cook at a commune in New Mexico, and soon she was cooking for 20-30 people a day—without recipes. Later she worked at a natural foods restaurant in Los Angeles and as a cook for Yogi Bhan.

At the Golden Temple, all dishes are prepared with organically grown ingredients whenever available. No meat, fish, or eggs are served, and no refined sugar or flour are used. The restaurant now seats 75 and serves about 400 daily. The ashram's 25 members practice awareness, yoga, good diet, and service to others. The restaurant is bright and spotless.

Three recipes are given. One, Bhan's banquet, calls for "Tamari (soy sauce)."

4900. Ebine, Hideo. 1972. Fermented soybean foods in Japan. *Tropical Agriculture Research Series* No. 6. p. 217-23. Sept. Symposium on Food Legumes.

• **Summary:** Production of fermented soybean foods in Japan in metric tons (tonnes) (1968): Miso: 553,000 tonnes;

includes the use of 169,000 tonnes of whole soybeans, 6,600 tonnes of defatted soybeans, 84,400 tonnes of rice, 18,200 tonnes of barley, and 71,200 tonnes of salt. In addition, roughly 200,000 tonnes of miso are made at home in Japan.

Shoyu: 1,027,000 kiloliters; includes the use of 14,900 tonnes of whole soybeans and 147,320 tonnes of defatted soybeans, 126,600 tonnes of wheat, 7,700 tonnes of wheat bran, and 172,200 tonnes of salt.

Natto: 90,000 tonnes; includes the use of 47,000 tonnes of whole soybeans.

Note that miso uses more soybeans than shoyu. Annual per capita consumptions of these foods was: Miso 6.7 kg, shoyu 10.2 liters, and natto 760 gm. Address: Head, Fermentation Div., National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo.

4901. Menezes, Tobias J.B. de. 1972. Alimentos e molhos obtidos por fermentacao da soja e de cereais [Foods and sauces obtained by fermentation of soybeans and cereal grains]. *Boletim do Instituto de Tecnologia de Alimentos (Campinas, Sao Paulo, Brazil)* No. 31. p. 49-63. Sept. [24 ref. Por]

• **Summary:** Contents: Introduction. Shoyu (*molho de soja*). Miso. Natto. Tempeh. Sufu. For each food, there is an introduction and a description of the process for making that food, sometimes with a flowchart.

Note 1. This is the earliest Portuguese-language document seen (Oct. 2011) that mentions fermented tofu, which it calls “sufu.”

Note 2. This is the earliest Portuguese-language document seen (April 2012) that uses the term *molho de soja* to refer to soy sauce. Address: Brazil.

4902. Saio, Kyoko; Watanabe, Tokuji. 1972. Advanced food technology of soybean and other legumes in Japan. *Tropical Agriculture Research Series* No. 6. p. 209-16. Sept. Symposium on Food Legumes.

• **Summary:** The following amounts of whole soybeans (in 1,000 metric tons) are used in Japan to make these products: Tofu and fried tofu 295, miso 169, natto 47, Kori-tofu (dried or frozen tofu) 34, shoyu 15, kinako 12, others 70. Total 642.

The following amounts of defatted soybeans (in 1,000 metric tons) are used in Japan to make these products: Shoyu 154, tofu and fried tofu 77, miso 8, others 45. Total 284. Grand total: 926. Address: 1. Senior Research Officer; 2. Director. Both: National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo.

4903. Eden Foods. 1972. [Catalog and pricelist]. 211 South State St., Ann Arbor, MI 48108. 2 p. Oct. 5.

• **Summary:** This is the second earliest existing Eden Foods seen that is dated. Soy-related products include: Hopi Roasted Soybeans (1.3 oz snack). Soybeans (1 lb, 2 lb, and 50 lb bags). Soy flour (25 lb or 50 lb). Tamari soy sauce

(pints, quarts, gallons).

Other interesting products include: Azuki beans (25 lb, 50 lb, and 100 lb bags). Sweet rice flour (25 lb). Celestial Seasonings herb teas (incl. The Red Zinger). Mu herbal tea #9, #16. Wild ginseng tea. Wild ginseng root. Wild goldenseal powder. Whole wheat noodles. Dr. Bronner’s Castile Soap. Corona Hand Mill. Honey (blueberry blossom or raw clover; “This honey is strained only once and heated only to 115 degrees and not above in order to preserve the natural nutrients and enzymes in the honey”).

Note: This is the earliest document seen (Jan. 2002) containing the term “Sweet rice” or “Sweet rice flour.” The new term is used in place of the traditional term “glutinous rice” which is inaccurate since this type of rice contains no gluten. People with celiac disease, celiac sprue, or Duhring’s disease must strictly avoid foods that contain gluten; they can eat “sweet rice.” Address: Ann Arbor, Michigan.

4904. *Los Angeles Times*. 1972. Are menus a puzzle? Master a few of those foreign food phrases. Oct. 6. p. F16.

• **Summary:** Foods listed under “Japan” include: “... Miso: Bean paste. Natto: Steamed and fermented bean... Shoyu: Soy sauce... Tofu: Bean curd.”

4905. Wong, William. 1972. The affair of Archbold and La Choy: How love sprouted, then cooled off. *Wall Street Journal*. Oct. 10. p. 4.

• **Summary:** “La Choy Food Products, a division of Beatrice Foods Co.,” grows so many [mung] bean sprouts (700,000 pounds a week) in Archbold, Ohio, that it uses 70% of the village’s water—about 355 million gallons last year. This (and general growth in the area) is threatening to dry up the village’s water supply in Bush Creek Reservoir, which can hold only 308 million gallons.

The average growing cycle is six days from mung bean seed to harvest. The sprouts grow in about 24 70-foot-long bins, each about 5 feet wide and 5 feet deep.

Choy employs 330 workers and pays \$175,000 a year in property taxes. But the villagers don’t like the designation “Chinatown U.S.A.” which has come to be applied to Archbold—even though the town’s Chinese population has been zero throughout its 106-year history.

La Choy started because Wallace Smith, in his mid-20s and a business graduate of the University of Michigan, was running a grocery store in Detroit, Michigan. One of his best-selling foods was mung bean sprouts, grown by Chinese residents of Detroit, and sold to Mr. Smith through Ilhan New, a Korean who had attended college with Mr. Smith. Eventually [by 1920] the bean sprouts in his store sold so well, the Mr. Smith asked Mr. New to grow them for him.

Mr. New agreed to do this. The sprouts continued to sell so well that the two men decided to can them. Sales grew even more and the two men formed a company. The word “choy” means “vegetable” in Chinese.

The company diversified into other Chinese foods and sauces. In 1937, shortly before completion of a new La Choy factory in Detroit, Mr. Smith was killed by lightning. So his wife took his place as a director in the budding company.

After World War II started, the U.S. government declared all of La Choy's products nonessential, denied the company tin for canning, then took over the plant for use in making rifle parts.

It so happens that Mrs. Smith came from Archbold, Ohio—as did her brother and father, both of whom were now important La Choy stockholders. The directors decide to move the company to Archbold and to temporarily enter the business of canning tomato juice—which was essential enough to qualify for tin. After the war, La Choy continued with its former business—but in Archbold.

One day in 1958, in connection with a La Choy celebration, the governor of Ohio and the mayor of Archbold designated Archbold as Chinatown U.S.A. Since then the name has stuck since La Choy has used it in news releases. But the residents still dislike it.

Today Archbold is a village of 3,100 people, two traffic lights, and not a single Chinese.

4906. *New York Times*. 1972. East 60th Street between 2nd and 3rd (Ad). Oct. 31. p. 24.

• **Summary:** An illustration shows all the stores on this block. Below it, a brief description of each is given. "Butler's 203 East 60th. A friendly eatery where the presentation is as important as the preparation. Try the ginger fried shrimp with vegetables, sauteed in apple juice, tamari sauce and ginger root."

4907. **Product Name:** Tan Pups (Skewered Seitan Deep-Fried in a Breaded Batter).

Manufacturer's Name: Amartseff (Nik and Joanne).

Manufacturer's Address: 216 Gardner Rd., Brookline, MA 02146.

Date of Introduction: 1972. October.

Ingredients: High-protein wheat flour. Broth: Water, kombu, sauteed onions, soy sauce, fresh gingerroot. Batter: Pre-ground corn meal, fresh onions, garlic, salt, soy sauce, some of the concentrated liquid in which the seitan had been cooked, and maybe some water.

How Stored: Unrefrigerated and perishable.

New Product–Documentation: This was probably one of America's first two commercial seitan products. With this extremely innovative, all-American product, seitan was transformed from a salty black seasoning into a juicy meat substitute, and the pattern was set for most subsequent seitan products in the western world.

Talk with Nik Amartseff (P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2942; by June 20: P.O. Box 135, Chesterfield, New Hampshire 03443. Phone: 603-256-6750). 1992. May 24. Nik created this product. He and

his first wife, Joanne Street Amartseff, made this product together out of their home, though they never operated under a company name. Joanne now lives in Mission Hill, near Brookline, Massachusetts. They first made the product at Gardner Road in Brookline. It was sort of the Erewhon executive house. The name was a play on two words: "Tan" came from Seitan, and "Pups" came from Hot Dogs.

Nik thinks he first made seitan at home in Los Altos, California. He learned the process by reading about it, either from an early issue of *East West Journal* (which began publication in Jan. 1971), or from a book. *Order of the Universe* (which he also read later) had started publication by 1967. He and Joanne first moved to 216 Gardner Rd. in Boston in May, 1971, when Paul Hawken invited them to Boston from Los Altos, California, where he and Joanne worked at Fred Rohé's New Age Natural Foods. Nik immediately began to work at the Erewhon warehouse and to live at the Erewhon executive house together with Paul and Dora Hawken, Bill and Renee Tara, Hy and Laura Lerner, and some single people including Wally Gorell and Bill Garrison. The women did the cooking in the house, but some of them (including his wife) also cooked the lunches for the workers at the Erewhon warehouse.

Before Nik and Joanne arrived, Renee Tara was baking ready-to-eat unyeasted macrobiotic goodies at home on Gardner Road and selling them at the Erewhon retail store. When Bill and Renee left for England, Renee asked Joanne if she would like to continue this little cottage industry. So in the early spring of 1972 Joanne stopped cooking for Erewhon and took over Renee's business, with the help of Nik's sister, Vera, baking at the Gardner Road house to supplement the family income. Joanne's project was quite successful right away, in part because she did not toe the macrobiotic line very strictly. She sweetened up Renee's strict macrobiotic line and added a number of innovative sweet baked snack foods, which apparently no one else thought of or dared to attempt, such as cookies, yeasted cinnamon-maple nut rolls, fruit tarts, and fig newtons. Nik continued to work full time at Erewhon, but during his time off he experimented with making seitan. He had two ideas: One was to use small pieces of seitan mixed with sauteed vegetables as a filling for piroshki (small cases of dough around the filling; Nik is part Russian), and the other he called Tan Pups—skewered deep-fried seitan on a stick. Joanne recalls that they may have sold these two seitan foods a few times (she is not sure) but they were not regular items. However Nik is quite certain that for at least the last few weeks before he and Joanne moved to New York state, in order to have some extra money, they "baked like crazy" and sold Tan Pups and Piroshki.

In May 1972 Nik quit Erewhon for a while, and he and his wife moved to New York state. They returned to the Gardner Road house in Boston in Sept. 1972 and Joanne resumed baking. At this point Nik began baking with Joanne,

mainly out of necessity to make some money. Their two lines of baked products were (1) Joanne's former line of sweet snack foods, and (2) savory products (such as the Piroshki and Tan Pups). Their two seitan products were on the market by about Oct. 1972 and they soon became popular.

They made Tan Pups entirely by hand as follows: The night before make raw wheat gluten from whole wheat flour (which they bought in bulk from Erewhon). The next morning, cook the loaves of gluten in large enamel kettles with water, kombu, sauteed onions, garlic, and freshly grated gingerroot. About half way through the cooking, add soy sauce. Remove the seitan and simmer the liquid until it is reduced to about 1/4 its original volume. Slice the seitan into pieces about 3/4 inch square and 3 inches long (like a hot dog with a square cross-section; the traditional New England Corn Dog influenced the product concept). Set aside any scraps or trimmings to use later in making Piroshki. In a blender, prepare a thick batter (having a consistency between crepe and pancake batter) using pre-ground corn meal, fresh onions, garlic, salt, soy sauce, some of the concentrated liquid in which the seitan had been cooked, and perhaps some water. Skewer the seitan pieces from one end, then dip them in the batter (without dusting in a dry breading), and deep-fry, placing them like spokes of a wheel in cast iron pots. When they are crisp and piping hot, deliver to stores.

These savory vegetarian foods (typically 100 Tan Pups and 50 Piroshki) were sold at only two outlets: Most at the Erewhon retail store at 342 Newbury St. in Boston, and the rest at The Organic Food Cellar, also on Newbury St. At Erewhon, they were sold on (or later in) a glass case about 10 feet from the entrance of the store. The products were sold in bulk, without packaging or labels. Nik usually delivered them by 3:00 in the afternoon, which was found to be a prime selling time. Most were sold by 6:00 and almost none were left the next day. He delivered 2-3 times a week. The work was exhausting.

But there was a lot of turmoil at the Gardner Road house, so Nik and Joanne moved in with John Deming in Allston (Massachusetts), then with friends in Saugus, then to Gloucester (27 miles northeast of Boston) by Nov. 1972. At each of the 3 houses they made the Tan Pups, Piroshki, and sweet snack foods.

In early 1973, Kathy and Mike Atherton, friends of Nik and Joanne's (Mike was employed at the Erewhon warehouse) moved to Boston from New York. Joanne was due to have a child in June 1973. The business was too labor intensive and soon the family would need more money. So the Amartseffs gave their friends the home business (free of charge) and it was moved to the friends' home in the north end of Boston. Nik gave them the recipes and his two outlets, and showed them how to make all the products. Nik was rehired to work full time at Erewhon by Bill Garrison. Nik and Joanne's son was born in June 1973.

The Amartseffs' friends continued to sell Tan Pups

and Piroshki through at least the autumn of 1973, then they moved on—and the products went off the market. The business never did have a real name.

Nik never heard of nor tasted Tan Pops, the successor of Tan Pups, made by John Weissman.

Talk with Joanne Amartseff. 1992. July 8. She just talked with Nik's sister, Vera, who both Nik and she think has an excellent memory. Vera (who now lives in San Francisco) does not recall them making any seitan products before Nik and Joanne left for New York.

4908. **Product Name:** Hopi Roasted Soybeans.

Manufacturer's Name: Eden Foods, Inc.

Manufacturer's Address: 211 South State St., Ann Arbor, MI 48108. Phone: 313-769-8444.

Date of Introduction: 1972. October.

Ingredients: Whole soybeans, tamari.

Wt/Vol., Packaging, Price: 1.3 oz bag.

How Stored: Shelf stable.

New Product—Documentation: Eden Foods wholesale catalog and price list. 5 Oct. 1972. "Hopi Roasted Soybeans. 24 x 1.3 oz."

Talk with Bill Bolduc, founder of Eden Foods. 1992. March 14. Erewhon was probably the first company in America to develop a line of tamari-roasted seeds and grains. Eden was carrying the tamari-roasted soybeans by Oct. 1972, and the full line by early 1973. Bill learned how to make such seeds from Susan and Jimmy Silver. Susan first showed Bill how to roast sunflower seeds with tamari on their home stove.

4909. Kushi, Michio. 1972. Macrobiotic seminars of Michio Kushi. Boston, Massachusetts. 152 p. Illust. No index. 28 cm. Transcribed by Joan Mansolilli.

• **Summary:** This is a transcript of talk given by Michio Kushi, macrobiotic teacher, in the fall of 1972, from Oct. 10 to Dec. 20. The main subjects are: Theory and practice of natural agriculture. Principles of the ancient world calendar. Disease—Origin, causes, and cures.

Soyfoods are mentioned briefly as the cure for various ailments, including diabetes mellitus (p. 92, 94; miso, tamari), venereal disease (p. 104; tekka, strong miso), stomach cancer (p. 128-29; miso soup, fried tofu, tekka, miso pickles), toxication from cigarette smoking (p. 131; miso soup), appendicitis with high fever (p. 132-33; tofu plaster on head). Address: Boston, Massachusetts.

4910. Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list 11/1/72. Offering the best in natural foods. Ann Arbor, Michigan. 58 p. Nov. 1. Index. Illust. 22 cm.

• **Summary:** This is a very early natural foods catalog, typewritten and mimeographed on pink paper; it contains a few logos of manufacturers but no ads. On the front

cover is a stylized illustration of a rayed sun, with each ray represented as a fruit or vegetable. Contents: Hi! Who, where, phone, why. General information: Service, terms, freight, notes, contact (Henry Bednarz and Larry Kociela, p. 1-2). Special case lot discount—5%. Lines on which case lot discounts are not allowed (7). “Computerized billing by January 1, 1973 including Quantity, Unit, Description, Size, Sugg. [Suggested] Retail, Unit cost, extension, 10 day 2% discount, 10 day case lot discount” (p. 4).

The body of the catalog is an alphabetical listing of suppliers / manufacturers, with major brands or product categories a cross references (e.g. Bakon Yeast, see Sovex). Within each, products are listed alphabetically (shown below in parentheses). These include: Acme juicer Co. Appliances & utensils. Barth’s Nutra Foods (Barth Soya Date Cereal). Books (Nutri-Books Corp., Denver, Colorado). Chico San (Rice Cakes, Lima Tamari Soy Sauce, Miso Soybean Puree, Sesame Salt, Sesame Butter, Salt Plums, Kuzu {wild arrowroot}, azuki beans, Mu Tea, kombu, soysauce tableserver—glass, chopsticks), Celestial Seasonings teas, Continental Culture Specialists (acidophilus culture, kefir grains, royal yogurt), Dr. Bronner & Assoc. (dulse sea lettuce, lecithin protein cereal, Do It Twice Soy Vege Base, pure peppermint oil soap), El Molino (7 Grain Cereal, soy beans—whole, soya flour, soya grits, soya meal, Graham flour), Fearn Soya Foods (Pancake S.F. [Soya Flour] Mix, liquid lecithin, High Protein (carob, chocolate, vanilla), soya protein 96%, Protein 600 Tablets (vanilla, chocolate), Muscle Protein, Soya Powder—Natural, Soya Powder—Low Fat, Soya Granules, cooking soybeans, Wheat Cereal Soya Mix, Corn Bread Soya Mix, Salted Plain SoyoSnax, Soybean—sprouting, lecithin granules, Soy O Snaks—Natural, barley—hulled organic, triticale flour—organic), Flavor Tree (Pernola, Pernuts {unsalted, sea salted, mild garlic, onion, carosel [carousel] carob covered}), Gides, Inc. (Nu-Life {vitamins & minerals—has the most products of any supplier}; A Soyadophilus, vitamin E natural mixed tocopherols), Lassen Foods (granola), Malt-O-Meal (Soytown) (salted soy beans [roasted], unsalted, barbecue flavor, garlic, soy spread, soy honey bar, soy nut bar), Miracle Juicer Co., Modern Products (Gayelord Hauser), Norganic (vegetable oils, incl. peanut oil, soy oil, safflower oil, sesame oil, sunflower oil, Gold Soya Mayonnaise), Richter Bros. (Familia cereals {Swissy Cereal, Fritini Mix}, Morga vegetable bouillon, Pero coffee substitute, Herbmare seasoning salt), A. Sahadi Co. (sesame tahini), Sourdough Jack’s Country Kitchen (sourdough starter), Sovex (granola, Bakon Yeast), Seelect Dietary Products: Herb teas (incl. Bladderwrack, dulse leaves, saw palmetto, Irish moss), St. Laurant Peanut Butter, Sunshine Valley, Viobin (lists 16 products, incl. wheat germ oil), Mineral Waters (incl. Apollinaris, Vichy, Perrier, Mountain Valley), Grist Mill (granola, Wunder Bars, Honey Graham Cracker, Super Protein Concentrate), Norwalk Juicer Co., Parkelp (Ocean Labs, Inc.; lists 4 kelp products), Nuvita

Foods (Langes; Soya Carob Macaroni). Organic Sun Valley Dried Fruits (incl. Calimyrna figs, Monukka raisins, Black Mission figs, Zahadi dates). Honey Preserves—No sugar added. Index by products and suppliers.

Note 1. This is the earliest document seen (May 2006) concerning Midwest Natural Foods.

Note 2. This is the earliest English-language document seen (June 2006) that mentions the “Acme Juicer” or the “Acme Juicer Co.” Address: 310 W. Ann St. (P.O. Box 100), Ann Arbor, Michigan 48107. Phone: 313-761-2997.

4911. Blinn, Johna. 1972. Celebrity cookbook: Keye Luke cooks variation on one theme. *Chicago Tribune*. Nov. 2. p. N_A8.

• **Summary:** Hollywood—Mr. Luke, a veteran actor with Zen Buddhist beliefs, is an amateur cook who has one or two Chinese dishes he likes to prepare—starting with flank steak: “I throw in a little ginger, garlic, assorted black bean paste, and soy sauce. I cook it over a hot fire in a wok.”

His recipe for Asparagus and beef calls for “½ cake bean curd, diced. 2 to 3 tablespoons soy sauce.”

4912. Advest Co. 1972. Private placement \$500,400. 1112 shares. No par value common stock. Erewhon Inc. (\$450) per share. These are speculative securities. Hartford, Connecticut. 34 p. 28 cm.

• **Summary:** Contents: Offering. Risk factors. Use of proceeds. Capitalization. Historical statement of income. The company: Sources of supply, management, employees & facilities. The market. Recent developments. New opportunities. Exhibits: (1) 1972 financial statement. (2) Sample product labels. (3) Photographs of facilities.

Erewhon Trading Company, Inc. is a manufacturer, packager, importer, and distributor of organically grown foods and natural products. Founded in January 1968, the company is a Massachusetts Corporation with its principal offices at 33 Farnsworth Street, Boston. It proposes to issue and sell privately 1112 shares of its common stock at \$450 per share. Advest Co., a member of the New York Stock Exchange, has been retained to act as the selling agent. The company reserves the right to approve each investor and to limit the number of investors to 15. The minimum number of shares purchased by any investor will be 55 shares.

“Management: The business of the company may be deemed to be highly dependent upon Paul Hawken, its president and director, and if the company should lose his services, its business may be materially adversely affected.

Use of proceeds: Net proceeds expected to be received by the company from this offering will be approximately \$475,000. Approximately \$250,000 of the funds raised will be used to pay back loans from the New England Merchants National Bank. An additional \$50,000 will be used to pay accounts payable, and the balance (\$175,000) will be available for additional working capital, to support new

products and expanded sales, and to open a third retail store in Cambridge.

Erewhon's sales were \$491,546 in 1970, then 1,864,833 in 1971, and an estimated \$3,160,011 in 1972. Net profit after taxes was \$31,709 in 1970, then \$84,417 in 1971 and \$14,663 in 1972.

Company history: "Erewhon Trading Company, Inc. was organized in May 1965 by Evan Root to sell natural and organic foods. The company's first store was a small basement level shop on Newbury Street in Boston. Paul Hawken succeeded Mr. Root as manager in August 1967. In November 1969, the company moved its retail shop to 342 Newbury Street where it presently occupies approximately 2,000 square feet of street level space. The store is decorated in a 19th century country store motif and sells a wide range of package and bulk food products, fresh produce, books, and cooking accessories. Sales from this location exceed \$450,000 annually.

"This year (1972) the company also opened a West Coast retail store in Los Angeles, California and a nearby warehouse. This location serves the local retail market and distributes Erewhon labelled packaged foods to the western states. Its retail store has a 'country store' decor... This facility is operated under its own general manager.

"The tremendous interest in organic foods, as reflected by growth in the company's Boston retail store, led to the need to supply a growing number of independent health and organic food retail stores. Consequently the company opened a warehouse in late 1969. Since that time this facility has quadrupled in size and presently occupies 5 floors or 40,000 square feet of two older warehouse buildings at #33 and #29 Farnsworth Street, South Boston.

"This location serves as the company's headquarters, its processing and packaging plants, and its warehouse. Presently about 500 natural food stores throughout the country are supplied with approximately 300 different items. From its two locations [Boston and Los Angeles] the company shipped approximately 2 million pounds of wheat, 2 million pounds of rice, 50,000 gallons of soy sauce and a million pounds of oil in 1971. By dollar volume importance the ten most important product classifications in fiscal year 1972 were grains 23.7%, nut butters 10.1%, fruits 9.9%, vegetable oils 9.1%, raw seeds 7.5%, soy products 6.9%, roasted seeds 6.2%, shampoos and soap 5.8%, beans 5.3%, and pasta 3.1%. Since that time, the company has introduced its own line of granola and nut butters. Both these products are processed at the South Boston warehouse with equipment owned by the company... The greatest number of customers the company serves are in the northeast, accounting for more than 70% of its total revenues." The largest single customer is Star Market, a division of Jewel Tea, which is expected to account for about 6% of company sales in fiscal 1972. Star Market, a regional supermarket chain, purchases its organic and natural foods exclusively from Erewhon. It has 100 feet

of shelf space in the form of individual gondolas expressly for Erewhon products.

"Supply: Erewhon has been a pioneer in the development of organic foods supply. The company has often encouraged farmers to switch over to organic cultivation by ensuring them a fixed price and quantity order. Erewhon presently has close relations with over 50 farms and has developed a strong reputation and high degree of loyalty among the organic farming community.

"The company purchases a large portion of its grains and oils from one source, Arrowhead Mills, Deaf Smith County, Texas. This grower-processor works closely with Erewhon to plan production and inventory the company's needs. Arrowhead maintains approximately 30,000 acres under organic cultivation. Rice is purchased from four growers in Louisiana and California." Erewhon "spends approximately \$10,000 annually to have foods verified organic by two independent testing laboratories... Validity is also sometimes ensured by an independent program conducted by Rodale Press, Inc... Based on soil analysis, independent visit, and quarterly laboratory testing, this program certified 70 farmers on the West Coast in 1971." Continued.

Note: This is the earliest document seen (Dec. 2001) connected with Erewhon that uses the term "natural food" (or "natural foods"). Address: 6 Central Row, Hartford, Connecticut 06103.

4913. Chico-San Inc. 1972. Products (Document part). In: Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list. Nov. 1. Ann Arbor, Michigan. 58 p. See p. 7-8.

• **Summary:** Rice cakes, Buckwheat cakes, or Millet cakes (salted or nonsalted, 3½ oz). Yinnies rice candy (3½ oz). Rice chips or Corn chips (5 oz). Lima Tamari soy sauce (8 oz, pint, or quart). Miso soybean puree (8 or 16 oz). Sesame salt (2, 4 or 8 oz). Sesame salt (4, 8, or 16 oz). Sea salt, white unrefined (1 lb). Salt plums (4 or 8 oz). Kuzu (wild arrowroot) (2 oz or 4 oz). Wholewheat spaghetti (OG [=organically grown], 8½ oz). Buckwheat spaghetti (8½ oz). Wholewheat macaroni (OG, 12 oz). Buckwheat macaroni (12 oz). Azuki beans (8 oz, 1 lb). Wild ginseng root (½ oz). Wild ginseng powder (25/6-pkts). Ohsawa twig tea (4 or 8 oz). Mu tea—Lima, more ginseng (24/2 or 24/8 pkts). Mu tea—Osaka [Japan] (24/2 pkts [also called "16 Herb Tea." Label shows ingredients: Ginseng, Ligusticum, Paonia root, cypress, orange peel, ginger, Rehmannia, cinnamon, cloves, peach kernels, Coptis, liquorice root, Cnicus, Atractylis, Moutan, Hoelen]), Green tea, natural leaf (6 oz). Lotus root tea (1 3/4 oz). Rice cream (OG, 1 or 2 lb). Kombu, kelp size (3½ oz). Tooth powder jar (½ jar).

Appliances: Food grater (with or without well). Vegetable knife—square end. Fish knife—pointed end. Mortar (suribachi, small or large). Pestle—wooden. Vegetable press. Oil skimmer for tempura. Vegetable scrub brush (small or large). Soysauce tableserver—glass. Rice paddle—bamboo.

Chopsticks—lacquered. Chopsticks—long cooking.

At the bottom is the Chico-San spiral logo.

Note: Many of these products are imported from Japan.
Address: [Chico, California].

4914. Bishov, S.J.; Henick, A.S. 1972. Antioxidant effect of protein hydrolyzates in a freeze-dried model system. *J. of Food Science* 37(6):873-75. Nov/Dec. [13 ref]

• **Summary:** The primary antioxidants are phenolic substances, and most of them are synthetic. Their use is being questioned by consumers at a rapidly increasing rate, spurring the search for antioxidants from natural sources, and especially nonphenolic materials. Antioxidant activity has been found in many proteinaceous materials. Experiments were conducted on commercial AYP (autolyzed yeast proteins) and HVP (made by the Vico-Asmus Products Div. of A.E. Staley Manufacturing Co. and by the Food Ingredients Div. of The Nestle Co., Inc.); both were screened for antioxidant effect. Protein hydrolysates show synergistic antioxidant properties with phenolic antioxidants. Address: Food Lab., Food Chemistry Div., U.S. Army Natick Lab., Natick, Massachusetts 01760.

4915. Erewhon Inc. 1972. Distributor price list. Boston, Massachusetts. 4 p. Effective December 8, 1972.

• **Summary:** Includes: Three varieties of Wehah Farms organically grown rice in 50 lb bags (“Colusa” and Golden Rose” are both short grain; the third is sweet brown rice). Azuki beans (100 lb bags). Tamari & miso: Tamari soy sauce (8 oz, pints, quarts, half gallon, gallon, 4.7 gallon can). Hacho miso (30 x 1 lb or 44 lb keg). Mugi miso (24 x 1 lb or 44 lb keg). Kome miso (20 x 1 lb or 44 lb keg). Granola. Rice cream (toasted). Cereals: Infant cereal (Koko). Tsampa Tibetan barley cereal. Stone ground flours (incl. Soybean flour, full fat, organic; brown rice flour, organic). Grains & beans (incl. soybeans, organic’ Barley, pearled).

At the bottom of the last page: “Thank you very much for your order. We try to get our distributor orders out as quickly as possible, but you should allow seven to ten days to be on the safe side... When placing orders please call Bill Garrison or Paul Hawken and when checking on shipping dates and rates, please check with Doug Bray. Thank you.”

An illustration at the top left corner of the front page is clip-art of a man cutting barley. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

4916. Leung, W.-T.W.; Butrum, R.R.; Chang, F.H. 1972. Food composition table for use in East Asia. Atlanta, Georgia: Center for Disease Control, U.S. Dept. of Health, Education, and Welfare. xiii + 334 p. Dec. No index. 30 cm.

• **Summary:** Part I. Proximate composition, mineral and vitamin contents of East Asian foods, by Woot-Tsuen Wu Leung, Ph.D. (Nutrition Program, Center for Disease

Control, Dep. of Health, Education and Welfare), and Ritva Rauanheimo Butrum, M.S., and Flora Huang Chang, B.S. (Federation of American Societies for Experimental Biology).

Part II. Amino acid, fatty acid, certain B-vitamin and trace mineral content of some Asian foods, by M. Narayana Rao, Ph.D., and W. Polacchi (Food Policy and Nutrition Division, Food and Agriculture Organization of the United Nations).

In Part I, Food Group 3 titled “Grain legumes and legume products” (p. 16-22) gives the composition of the following (100 grams edible portion and as purchased): Adzuki beans (*Phaseolus angularis*; incl. “Azuki-an,” and boiled sweetened). Asparagus bean: See Cowpea, yardlong. Asparagus pea: See Goabean. Bambara groundnut or jugo bean (*Voandzeia subterranea*). Bengal gram: See Chickpea. Blackeyed pea: See Cowpea, catjang. Blackgram: See Mung bean. Broad bean or horse bean (*Vicia faba*; incl. “Fukimame” and “Otafuku mame”). Burma bean: See Lima bean. Butter bean: See Lima bean. Catjang pea: See Pigeonpea. Chickpea or Bengal gram (*Cicer arietinum*). Cowpea, all varieties (*Vigna species*). Cowpea, yardlong: See Cowpea, all varieties. Dhal: See Lentil. Dolichos, Australia pea (*Dolichos lignosus*). French bean: See Kidney bean. Goabean [goa bean], asparagus pea, or winged bean (*Psophocarpus tetragonolobus*). Golden gram: See Mung bean. Green gram: See Mung bean. Haricot bean: See Kidney bean. Hindu cowpea: See Cowpeas, all varieties. Horse grain or horse gram or Madras gram (*Dolichos uniflorus*; *D. biflorus*). Horsebean: See Broadbean. Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the word “horsebean” or the word “broadbean” to refer to *Vicia faba*.

Horsegram: See Horse grain. Hyacinth bean or Indian butterbean (*Lablab niger*; *Dolichos lablab*). Indian bean: See Mung bean. Indian butterbean: See Hyacinth bean. Jackbean, common (*Canavalia ensiformis*). Jugo bean: See Bambara groundnut. Kidney bean, French bean, navy bean, pinto bean, snap bean, or string bean (*Phaseolus vulgaris*; incl. “Usura-mame”). Lentil or dhal (*Lens culinaris*; *Lens esculenta*; *Ervum lens*). Lima bean, butter bean, or Burma bean (*Phaseolus lunatus*; *Phaseolus limensis*).

Note 2. This is the earliest English-language document seen (May 2003) that uses the scientific name *Lens culinaris* to refer to lentils.

Note 3. This is the earliest English-language document seen (Jan. 2009) that uses the name “Burma bean” to refer to the lima bean.

Madras gram: See Horse grain. Mung bean, Indian bean, red bean, green gram, golden gram, or blackgram / black gram (*Phaseolus aureus*; *Vigna radiata*; incl. vermicelli, dried starch, starch jelly, instant powdered green or red products with sugar and flour added). Mung bean, black gram or urd (*Phaseolus mungo*; *Vigna mungo*). Navy bean:

See Kidney bean. Peanut or groundnut (*Arachis hypogaea*; incl. raw, roasted, with or without shell, salted, parched, seasoned, fried, peanut flour, peanut butter, peanut milk, peanut cake—defatted, peanut cake—defatted and fermented [onchom]). Peas, garden or field (*Pisum* species; incl. parched—salted, “Uguisu-mame”). Pigeonpea, or catjang pea (*Cajanus cajan*; *Cajanus indicus*). Pinto bean: See Kidney. Red bean: See Mung bean. Rice bean (*Phaseolus calcaratus*; *Vigna calcarata*). Soybean and soy products (*Glycine max*; *G. hispida*; *G. soja*; p. 19-21), incl: Whole mature seeds—dried (yellow, black), whole immature seeds dried, whole seeds—salted (black, green, green soaked, fried, fermented {natto}, pickled, roasted), flour of roasted soybeans, defatted soybeans—whole seeds. Soybean products: Curd—unpressed, curd—tofu—raw (plain, kinugoshi, fukuroiri), curd—tofu—fried (moist type, dried type—regular size, dried type—small size, canned, abura age), curd—roasted [grilled], curd—tofu—fermented (home-prepared, jarred), curd—tofu (dried—spongy square, preserved, dried—rope-like, commercial {fermented with chili pepper}—jarred), curd cheese, curd sheet (milk clot sheet {yuba}) (moist type, dried type, pickled in soysauce), curd—pressed—raw (plain, fermented, spiced, strips—semi-dry), miso (Japan) (plain, sweet {5.3% salt added}, salty—light {10.4% salt added}, salty—dark {11.7% salt added}, mame-miso {9.7% salt added}, powdered {18.5% salt added}), paste [jiang] (plain, fermented, red pepper added, sweet, malt), soybean milk (unenriched—unsweetened, “Kaset” {Thailand; canned—concentrated, fluid}, Saridele {a mixture of soybeans, sesame seeds or peanuts, with vitamins and calcium added—Indonesia}), soybean sauce (dark—thick, light—thin, unspecified), tempeh (fermented soybean product, Indonesia), “Budo-mame” (cooked—Japan), Soybean residue [okara] (liquid, powder). Urd: See Mungo bean. Velvetbean (*Mucuna utilis*; *Stizolobium utilis*; incl. dried or mold-treated {tempeh}). Winged bean: See Goabean, Indes.

Food Group 4 titled “Nuts and seeds (p. 23-29) includes: Almonds, hemp seeds—whole, perilla—common (*Perilla frutescens*), safflower seeds, sesame seeds, sunflower seeds (*Helianthus annuus*), watermelon seeds.

Food Group 5, titled “Vegetables and vegetable products” (p. 30-75) includes: Amaranth, mungbean sprouts, seaweeds (many types), soybeans—immature seeds [green vegetable soybeans], soybean sprouts (raw, cooked).

Note 4. This is the earliest English-language document seen (March 2004) that mentions silken tofu, which it calls (in a table): “Curd, tofu, raw: ‘Kinugoshi,’ Japanese preparation.”

Note 5. This is the earliest English-language document seen (Dec. 2005) that contains the term “flour of roasted soybeans.”

Note 6. This is the earliest English-language document seen (Oct. 2006) that uses the term “Blackeyed pea” to refer to the cow pea. Address: Dep. Health Education and Welfare.

4917. NSC Review (Taiwan; National Science Council—Guo jia ke xue wei yuan hui). 1972-1977. 123. Studies on “Inyu” (Black bean sauce). See p. 88. *

• **Summary:** 123. Studies on “Inyu” (Black bean sauce) is in right column at #123.

4918. Akao, T.; Sasaki, T.; Sakai, M.; Takano, A.; Yokotsuka, T. 1972. A new plant for continuous production of “koji” in the “shoyu” industry. In: First Pacific Chemical Engineering Congress. See p. 127-28. Held 10-14 Oct. 1972 at Kyoto, Japan. *

4919. **Product Name:** Chef Bonneau’s Premium Worcestershire Sauce [Vegetarian].

Manufacturer’s Name: Bonneau Products Co.

Manufacturer’s Address: 81 N.E. Columbia Blvd., P.O. Box 17180, Portland, OR 97217. Phone: 503-289-7181.

Date of Introduction: 1972.

Ingredients: Soy sauce, distilled water, white distilled vinegar, cider flavor, garlic, onion, pepper, sugar, spices & other flavors.

Wt/Vol., Packaging, Price: 3.785 liters.

How Stored: Shelf stable.

Nutrition: Per ½ oz (14.3 gm): Sodium 300 mg.

New Product—Documentation: Talk with Seth Tibbott of Turtle Island Foods. 1997. This small company makes a vegetarian Worcestershire sauce. The quality is good but it contains honey so it is not vegan.

Label and laboratory analysis sent by Bonneau Products. 1997. April 30. The sweetener is given as sugar, not honey. Ph: 3.3 to 3.9. Specific gravity: 1.09 to 1.09. A handwritten note states that the company started making Worcestershire sauce in about 1972. The company’s food specialties, as stated on the letterhead, are: Distilled vinegar. Vinegars. Soy sauce. Worcestershire sauce. Private label manufacturing. A photocopy of the Worcestershire Sauce label (1 gallon) is attached.

Note: This is the earliest known vegetarian worcestershire sauce made in the USA.

4920. Harada, Motô; Nakamura, Y.; Tanimura, A. 1972. Shokuhin-chû no nitorosamine ni kansuru kenkyû. IX. Shokuhin-chû no ashô sanen no bunpu [Studies on nitrosamines in food. IX. Distribution of nitrite in various foods]. *Shoku Eishi (J. of Food Hygiene)* 13(1):36-40. [Jap]*

• **Summary:** Nitrosamines [pronounced nai-TRO-suh-meens] are reaction products from nitrite and amines. Some salt-pickled foods contain considerable amounts of nitrite. But very small amounts of nitrite were found in rice, wheat, and soybeans used as raw materials for making shoyu and miso.

Interest in the safety of nitrites started in about 1970. The following nitrite levels (parts per million) were found in other Japanese foods: Shiouri shiozuki (salt pickled cucumbers) 96, red hot dogs 64-79, niboshi (small dried

sardines) 31, ham 29, fish sausage 24. Very low levels were found in fresh bread crumbs 16, and roasted soy flour 15.

4929. **Product Name:** Tamari Cashews, Tamari Sunflower Seeds, or Tamari Almonds.

Manufacturer's Name: Westbrae Natural Foods.

Manufacturer's Address: 1336 Gilman St., Berkeley, CA 94706.

Date of Introduction: 1972.

New Product–Documentation: Ad (full-page, color) in *Whole Foods*. 1979. Jan. p. 8. "We believe if you've seen one health food nut, you haven't seen them all!" A large photo with diagram shows Westbrae's many tamari nuts, nut mixes, and trail mixes, including Tamari cashews, Deluxe tamari nut mix, Tamari almonds, Tamari sunflower seeds, Tamari nutroaster's mix, Chisholm trail mix, and Jubilee trail mix. "For more information write Westbrae, P.O. Box 8611, Emeryville, California 94662. All Tamari roasted nuts and trail mixes are available in bulk and a select few in two or ten ounce Panda packages."

Interview with Gordon Bennett. 1987. Aug. 28. Westbrae's first food containing soy. The "tamari" (actually shoyu) was imported from Japan.

Talk with Bob Gerner. 1992. May 11. Bob thinks that Chico-San was the first company to make tamari-roasted nuts (by early 1971), and that Westbrae was the second—before Erewhon. This type of product was later made by many natural foods distributors and became popular nationwide. But Chico-San's product was (in Bob's opinion) crude. They would cover almonds with soy sauce then toast them; the soy sauce would burn on the outside and not taste very good. After Bob tasted Chico-San's product, he felt he could improve on it. Westbrae was the first company to process the nuts in an efficient way that made a good-tasting product. After Westbrae Natural Foods opened for business in Feb. 1971, Bob began to buy 1-2 tins of cashews at a time. Then he took a gamble, buying 50 cases. He bought them to use in their best-quality granola—which was cashew granola, but he had no idea what to do with the rest of them. Bob and Gordon Bennett developed the process for making

tamari-roasted nuts by accident at Gilman Street. They had no idea it would work. The trick was to roast the nuts (they started with cashew pieces and sunflower seeds) in a small (home-model) horizontal rotating drum roaster (it held 25 lb at a time), then to dump the roasted nuts into a large metal bowl (the kind used at bakeries). Now pour on soy sauce (shoyu, which Westbrae initially purchased from Chico-San) from a gallon jar, and mix it in manually with a wooden paddle. Keep mixing until the heat from the nuts (375°F) had evaporated all the moisture in the soy sauce and made it stick to the nuts in a light, even coating. Bob recalls, "We guarded this secret process with our lives, since we felt we had a superior product. We didn't tell anyone we put on the liquid soy sauce after roasting." Westbrae distributed this product widely and later developed it into a very big line.

Bob also remembers a fellow in Berkeley named Crazy Robert, who lived with his mother, and who used to toast nuts and seeds with soy sauce in his home and sell them at Ma Revolution on Telegraph Avenue in Berkeley. Bob talked with him and he brought his nuts from Westbrae. Bob thinks that Westbrae and Jerry probably developed their tamari-roasted nuts independently but at about the same time. Jerry used whole cashews and Westbrae used cashew pieces. Note: Jerry's process became the basis of Erewhon's tamari roasted seeds and nuts via Nik Amartseff, who initially worked at New Age Natural Foods in Palo Alto. Bob thinks that store opened in 1971-72.

4930. Yagi, K. 1972. [Packaged bean curd product]. *Japanese Patent* 13 690/72. [Jap]*

• **Summary:** Dried tofu is cooked, soaked in soy sauce, then put into a bag with a mixture of soy sauce, spices, binders, and preservatives. After the air is removed from the bag, it is sealed and steam heated. Address: Japan.

4931. Yokotsuka, Tamotsu. 1972. Some recent technological problems related to the quality of Japanese shoyu. In: Gyoza Terui, ed. 1972. *Fermentation Technology Today: Proceedings of the Fourth International Fermentation Symposium*. See p. 659-62. [40 ref]

• **Summary:** Contents: 1. Amino acid containing seasonings around the world and the general situation of the Japanese shoyu industry. 2. Chemical composition of Japanese shoyu, and the factors which influence the preference for shoyu. 3. Some important technical items in the production of Japanese fermented shoyu. 4. Mycotoxin problems with koji mold (research suggests that koji molds do not produce aflatoxins on TLC {thin layer chromatography}). Address: Kikkoman Shoyu Co., Ltd., Noda-shi, Chiba-ken, Japan.

4932. Aihara, Cornelia. 1972. *The Chico-San cookbook*. Chico, California: Chico-san, Inc. 126 p. Illust. 22cm. by Nan Schleiger. Reissued in revised form as *Macrobiotic Kitchen* by Japan Publications in 1982.

• **Summary:** All recipes are numbered and pages are unnumbered. Soy-related recipes include: 6. Brown rice in soy sauce. 16. Black [soy] beans and brown rice. 23. Inari-sushi (with agé). 24. Ohagi of 3 colors (with roasted soybean flour and miso). 32. Ojiya (with miso or soysauce). 37. Roasted rice (with black soybeans). 38. Musubi (with miso). 55. Kinako mochi. 76. Soy bean stock. 87. Oden (with agé and soy sauce). 90. Kenchin soup (with agé). 95. Cream of onion soup (with miso). 96. Hacho miso soup. 97. Mugi miso soup. 98. Kome miso. 99. Oil miso. 100. Sesame miso. 101. Walnut miso. 102. Miso salad dressing. 103. Shiguri [sic, shigure] miso (with scallops). 104. Tokiwa miso (with shiitake mushrooms, citron, and walnuts). 105. Oyster miso. 106. Tai miso. 108. Nuka miso zuke (vegetables pickled in rice bran and miso). 121. Miso pickles. 137. Daikon with agé. 138. Daikon with miso. 143. Turnip with sesame-miso. 159. Burdock-miso soup. 162. Burdock with miso. 180. Onion-miso sauce. 182. Scallion-miso. 191. Carrots with miso. 192. Carrots with soy sauce. 200. Dengaku (with miso). 220. Roasted soybeans. 221. Soybean soup. 222. Soybeans with vegetables. 223. Soybeans with miso. 224. Soybean tempura. 225. Mashed soybeans with tarako (cod fish roe). 226. Soybean croquettes. 227. Soybean potage. 228. Soybean muffins. 229. Kidney beans with miso. 237. Shigiyaki (small eggplants with miso). 241. Eggplant miso pickle. 267. Rolled shiso leaves with miso. 291. Tofu kuzu sauce. 292. Tofu chili-nabe. 293. Tofu with vegetables. 294. Tofu salad. 295. Okara rice. 296. Torimotsu okara (with chicken giblets). 297. Okara soup. 298. Okara croquettes. 299. Egg tofu. 308. Koi-koku (carp soup with miso). 311. Loach soup (with miso). 312. River fish with miso sauce. 320. Mackerel with miso. 335. Coltsfoot with miso. 341. Dandelion miso-ai [miso-ae]. 345. Horsetail with miso-ai. 359. Watercress miso-ai. 361. Nobiru goma miso (with wild onions). 369. Shiromiso shiru [sweet white miso soup]. 371. Nimame (black soybeans). 400. Shoyu bancha (twig tea). 408. Black bean tea. 409. Amasake (homemade from koji rice and sweet brown rice). 456. Amasake manju. 461. Soba with miso-ame. 515. Tekka (with Hacho and/or mugi miso). 516. Seitan (homemade). 517. Soy sauce (homemade). 518. Miso (homemade). 519. Tofu (homemade using nigari). 520. Nigari (homemade). 521. Amasake (homemade from koji rice and sweet brown rice flour).

Cornelia Aihara was born with a heart valve defect. She was told by doctors that she could never bear children and would probably not live past her nineteenth year. She proved them wrong on both counts. In 1955 she came to America from Japan at the invitation of Herman Aihara, a man she knew only through correspondence, and they were married. Within several years their two children were born.

Cornelia has applied herself to the teaching of macrobiotic cooking, childcare, home remedies, and philosophy since 1960. Address: Chico, California.

4933. Aihara, Cornelia. 1972. *The dō of cooking (Ryorido)*. Vol. 2. Summer cooking. Macroguide No. 13. San Francisco, California: George Ohsawa Macrobiotic Foundation. 103 p. No index. 25 cm.

• **Summary:** All recipes in this macrobiotic cookbook are numbered. The section on “Tofu” contains recipes for: 35. Hiya yako [sic, yakko] (cold, uncooked tofu). 36. Kanten tofu (Tofu aspic). 37. Tofu kuzu aspic. 38. Harusame tofu kuzu sauce. 39. Unagi tofu [vegetarian].

The section on “Miso Soy Bean Paste” contains recipes for: 40. Soy bean miso [soybeans sauteed with miso]. 41. Vegetables with miso sauce. 42. Vegetable miso. 43. Green pepper with miso. 44. Deep fried miso balls.

Other soy recipes include: 60. Nori with soy sauce. 62. Kombu in soy sauce. 64. Hiziki tofu salad. 66. Fried koya tofu with carrot (with dried tofu). 71. Cold miso soup. 73. Split pea miso soup. 81. Tahini-tamari sauce. 89. Soy bean surprise [with miso-tahini sauce]. 92. Okara salad.

GOMF was founded in 1971. Address: 1471-10th Ave., San Francisco, California 94122.

4934. Aihara, Cornelia. 1972. *The dō of cooking (Ryorido)*. Spring. Oroville, California: George Ohsawa Macrobiotic Foundation. 125 p. Illust. by Carl Campbell. Index. 21 cm.

• **Summary:** This macrobiotic book is divided into two parts: Eleven chapters followed by 14 sections of recipes. In part one, miso is mentioned on pages 15, 35, and 51 (Condiments and spices). Recipe section IV, titled “Wheat gluten” (p. 79-82) contains recipes for: Wheat gluten. Seitan. Fresh wheat fu. Boiled fu. Fried fu—gluten cutlet. Shish kebab (using 3 strips of cooked fu). French bread (made with gluten water, p. 115).

Recipe section V, titled “Tofu” (p. 83-90) contains recipes for: Tofu making (using 3 cups green soybeans and nigari coagulant; with 11 excellent illustrations). Nigari (from gray sea salt). Quantity tofu preparation (using 10 lb soybeans). Okara or unohana (using “3 cups soybean puree leftover from tofu making”). Tofu with kuzu sauce. Fried tofu. Shinano-agé (Fried tofu with buckwheat). Kaminari tofu (Thunder tofu). Nori-maki (Tofu rolled in nori; with illustration). Age-tofu (Stuffed tofu; with illustration).

Soy-related recipes include: Onion miso (p. 70). Rolled cabbage with tofu (p. 71). Bean sprout miso salad (p. 100; miso is called “mixed soybean puree {half mugi and half kome}.” The sprouts are probably from mung beans). Ganmodoki (Mock goose; p. 109). Gyoza filled with seitan, dipped in a mixture of soy sauce and lemon juice (p. 111-12). Address: George Ohsawa Macrobiotic Foundation, Oroville, California.

4935. Aihara, Herman. 1972. *Miso & tamari. Macroguide (San Francisco: George Ohsawa Macrobiotic Foundation)*. No. 12. iii + 34 p. [3 ref]

• **Summary:** Contents: Preface. Part I: Miso. Introduction,

the origin of miso, kinds of miso, ingredients (soybeans, barley, rice, salt, water) how to make miso [at home] (barley miso, rice miso, soybean miso, analytical comparison of the three kinds of miso, other types of miso, miso pickles) value of miso (protein, fat, minerals, poison prevention, heart disease, miso for beauty, stamina, miso for radiation and other diseases, miso soup), miso in the treatment of tuberculosis and atomic radiation exposure.

Part II: Tamari or traditional soy sauce. Introduction, history, chemical change of tamari, how to make tamari soy sauce at home, how to use soy sauce.

Part III: The other soybean foods. Tofu (preparation of soybean milk at home, coagulation of soybean protein, the formation of tofu in a mold [for homemade tofu], tofu for external treatment—tofu plaster, age—deep fried tofu [how to make at home]), natto (introduction, how to make natto at home).

Part IV: Appendix. Available publications, G.O.M.F. message.

Illustrations by Carl Campbell show: (1) Two traditional kegs of miso and a glass jar of tamari (title page). (2) Making mugi (barley) miso in Japan (9 steps; p. 10).

Note 1. This is the earliest English-language document seen (March 2009) that describes how to make miso at home. Recipes for three types of miso are given: Barley miso, rice miso, and soybean miso. The method is translated from *Miso University*, by K. Misumi (in Japanese). Fortunately, the exact amount of each of 5 ingredients is given, and nine excellent illustrations show the main steps in the traditional process. Unfortunately, the instructions are somewhat vague.

Note 2. This is the earliest English-language document seen (Jan. 2012) that describes how to make natto at home. Address: San Francisco, California.

4936. Almeida, Maris Elisa Wohlers de; Simao, Antonia Mattos. 1972. *Aminoácidos de hidrolisados de proteína*

de soja: Dosagem de ácido glutâmico [Detection of amino acids in protein hydrolysates of soybean: Determination of glutamic acid]. *Revista do Instituto Adolfo Lutz (Brazil)* 32(1):105-12. [12 ref. Por; eng]

• **Summary:** “Bidimensional paper chromatography as applied in order to separate the different amino acids of industrial soybean protein hydrolysates with satisfactory results.” The content of glutamic acid spots was determined by means of spectrophotometry. Address: Instituto Adolfo Lutz.

4937. Brissenden, Rosemary. 1972. South East Asian food: Indonesia, Malaysia and Thailand. Harmondsworth, Middlesex, England; Baltimore, Maryland: Penguin Books. 264 p. 18 cm. A Penguin handbook.

• **Summary:** After a three-month stay in Indonesia as a member of a student delegation from Melbourne University, Rosemary “realized that she could not live without Indonesian food. So she set about learning as much as she could from Asian students in Melbourne.” In 1964 she was invited to write a weekly column in the Australian on South East Asian food. She is married and has three children.

“A note on this American edition. This book has been especially adapted for the American audience. British weights and measures have been converted into their American equivalents. Sources for obtaining unusual products mentioned in the recipes are given for most large American cities.”

Note: This book is almost identical to the edition published in 1969 in the USA and England by Penguin Books. This American edition was published in 1972 by Penguin Books, Inc. Address: Australia.

4938. Brown, Edith; Brown, Sam. 1972. Cooking creatively with natural foods. New York, NY: Hawthorn Books. xvii + 302 p. Illust. Index. 24 cm.

• **Summary:** This vegetarian cookbook has been 35 years in the making. Edith was born in 1920, and Sam in 1917. “It really goes back to the birth of Brownies [Health Food Restaurant in New York City]. That was in 1936. In the beginning we were just a sliver in the wall, hardly a soybean’s throw from Union Square in New York City. The address hasn’t changed but we have.” Brownies began as a tiny shop selling natural foods to people who lived or worked in the neighborhood. Today we are a restaurant-bakery -country store complex sprawled across Siamese-twin brownstone houses.”

“The expansion of Brownies began modestly in 1938. Sam acquired a vegetable juice extractor and installed four stools in the shop. Vegetable-juice bars have long since become old hat, but the one on East 16th Street happened to be the first one in the country.

“The juice bar won a warm welcome. Customers ‘dug’ the oral vitamin shots being dispensed from the extractor.

Soon people were coming from precincts far beyond the neighborhood to ‘get juiced.’ The word spread. There appeared a distinguished visitor in the person of the late Clementine Paddleford, the influential food editor of (alas, also the late) New York *Herald-Tribune*. Miss Paddleford came, sipped, and wrote rapturously about her discovery. That rave review really put Brownies on the map.” (p. xi)

In the chapter titled “The natural foods cupboard: A glossary” we find good descriptions of various soyfoods: Soyameat (canned, Chicken or Beef Style), soybean granules, soybean powder [flour], soybeans (canned, like Boston baked beans), soybeans (dried), soy nuts [oil-roasted soybeans], Stripples Zips (“Baony, crunchy, smoky bits of vegetable protein made from soy and yeast. A wonderful meatless flavoring.”), tamari (soy) sauce, VegeBurger (canned, made from soy, wheat, and vegetables), VegeChee [tofu], Vegelona.

Soy-related recipes include: Pizza supreme (with Fearn Whole Wheat Soy-O Mix, p. 17). Soy-stuffed mushrooms (with canned green soybeans, p. 17-18). Dill soybeans (p. 74). Triple-treat bean salad (p. 80). Crunchy soybean salad (with canned green soybeans and Chicken-Style Soyameat, p. 81). Soy-nut meatballs (with canned soybeans in tomato sauce, canned VegeBurger, soybean granules, and Toasted Soy Nuts, p. 109-10). Soy, garbanzo & millet pie (p. 126).

One chapter is titled “The miraculous soya—and other members of the clan (bean)” (p. 129-45). The introduction notes: At Brownies we feature soybeans on the relish tray, on the salad menu, and as a meat substitute. We use soybean flour in almost everything that comes out of our ovens.” Soy-related recipes include: Basic soybeans. Zippy soybean salad. Minty soybean salad. Soybean ratatouille. Scrumptious soy pudding. Soy walnut loaf. Protein casserole (with Beef-Style Soyameat). Lentil soy casserole. Tricolor bean salad (with toasted salted Soy Nuts). Exotic bean salad. Neapolitan bean salad. Peppy bean puree. Any-night beans.

Soy recipes with pasta (p. 175-78): Savory soy spaghetti. Soy spaghetti with saucy franks. Corny spy spaghetti. Spaghetti protein casserole (with soybean spaghetti, green soybeans, and Proteena). Soy elbows in parsley mushroom sauce. Oriental elbows. Soya blueberry muffins (p. 248). Crunchy soy-nut spinach cake (with soybean powder and unsalted soy nuts, p. 264).

Brownola plus (like Granola, p. 168). Address: New York, New York.

4939. Claiborne, Craig; Lee, Virginia. 1972. The Chinese cookbook. Philadelphia and New York, NY: J.B. Lippincott Co. xxi + 451 p. Color photos by Bill Adler. Drawings by Barbra and Roderick Wells. Illust. Index. 24 cm.

• **Summary:** Soy related recipes: Coriander and bean curd with sesame sauce (with dried brown bean curd [soy-sauce pressed tofu] and light soy sauce, p. 34). Cold chrysanthemum leaves with sesame oil (with dried brown

bean curd and light soy sauce, p. 35). Chicken with black beans and shallots (with fermented, salted black beans, light soy sauce and dark soy sauce, p. 58-59). Note 1. This is the earliest English-language document seen (Nov. 2011) that uses the term “fermented, salted black beans” to refer to Chinese-style fermented black soybeans. The headnote to this recipe states: “Fermented, salted black beans have an almost winy flavor, and they give an intriguing flavor to almost any dish in which they are cooked.” Yet nowhere in this book do the authors state that these black beans are actually black soybeans.

Soy sauce chicken (with light soy sauce and dark soy sauce, p. 59-60). Hoi sin sauce is mentioned (or a photo shown) as an ingredient on pages 65-66, 147, between pages 282 and 283, and on 4 other pages. Spicy pork and bean curd (with “6 pads fresh white bean curd,” p. 136). Note 2. This is the earliest English-language document seen (Oct. 2008) that uses the term “fresh white bean curd” to refer to fresh tofu, or that uses the word “pads” to as the counter for pieces or cakes of tofu. The headnote states: “Bean curd has as many uses in China as cottage cheese does in the Western world. It is one of those neutral dishes [ingredients] like potatoes and snails which adapt well to assertive flavors.”

Cantonese roast pork (with “2 tablespoons red bean curd sauce” [nam yue?] and “2 tablespoons bean sauce”). Chinese barbecued spareribs (with “2 tablespoons red bean curd sauce,” “2 tablespoons ground bean sauce,” and “3 tablespoons hoi sin sauce,” p. 147-48). Ginger beef and bean curd with hot pepper (with “5 pads fresh white bean curd,” p. 188). Steamed fish with bean sauce (with “¼ cup bean sauce,” p. 208). Stir-fry shrimps with bean curd (with “5 pads fresh white bean curd,” p. 231). Shrimps in black bean sauce with ginger and scallions (with “2 tablespoons fermented salted black beans and 2 tablespoons dry sherry or shao hsing wine.” “Combine the black beans with 1 tablespoon of the wine and crush lightly with a spoon.” Thus, “black bean sauce” can be easily and quickly made in the kitchen from fermented, salted black beans, p. 234-35).

Clams in black bean and oyster sauce (with fermented salted black beans that are quickly made into black bean sauce as above, p. 243-44). Frogs legs with black beans (with fermented salted black beans, p. 257). Mock Peking duck (with “6 sheets dried bean curd,” p. 302-03. “Bean curd comes in large, semicircular thin sheets [yuba] as well as squares [probably yuba; see below]. Because the sheets are notably fragile, they are frequently broken.” The headnote states: “This dish uses dried bean curd to produce an eminently edible creation that tastes remarkably like roast duck”).

Bean curd and beef ball soup (with “1 pad fresh white bean curd,” p. 318). Whiting and bean curd soup (p. 327-28). Flowery bean curd soup (p. 328-29). Bean curd casserole soup (p. 330-31). Tsa chiang mien (Noodles with minced pork and bean sauce, incl. “½ cup bean sauce,” p. 365-66).

One glossy color photo (between pages 282 and 283) and a numbered key shows many ingredients used in Chinese cooking, incl.: 5. Dark soy sauce. 6. Hoi sin sauce. 7. Bean sauce. 8. Light soy sauce (both in tall-neck bottles). 16. Fresh white bean curd. 28. Dried brown bean curd [soy sauce pressed tofu]. 31. Dried bean curd sheets [clearly yuba, since light yellowish brown, semi-transparent, subtly wrinkled surface, and very thin]. 32. Fermented salted black beans (small pile).

Chapter 11, titled “Chinese ingredients...” (p. 419-40) contains many interesting terms and definitions, with Chinese characters accompanying each. Soy related are: Dried bean curd sheets [yuba] (“These paper-thin, light brown half circles are very fragile and are often broken; they can be repaired by wetting and overlapping the broken edges. They are sold in packages of 10 and will keep for 3 to 4 months without refrigeration.” Eventually they will turn rancid, since they have a high oil content”). Dried brown bean curd (3 Cc = Chinese characters given) [doufugan; soy sauce pressed tofu]. Dried red beans [azuki].

Fermented salted black beans (2 Cc) [douchi, dow see]: “An ingredient of Cantonese cooking but virtually unknown elsewhere in China, these black [soy] beans, sometimes simply called ‘Salted Black Bean’ are sold in 1-pound cans or in 8- and 16-ounce plastic bags. They will keep for months if stored in the refrigerator in a covered jar.” Fresh white bean curd (2 Cc) (doufu). Ground bean sauce (3 Cc): Contains “the same ingredients as Bean Sauce, except the whole beans have been ground to a paste. It is sold in oblong 1-pound cans.” Hoi Sin Sauce (3 Cc): “Made from pumpkin.”

Red bean curd sauce (4 Cc): “A thick sauce made from soy beans, red rice, and salt water, this is available in 11-ounce oblong cans and also in 12-ounce round cans labeled ‘bean curd.’”

Note 3. This is the earliest English-language document seen (March 2011) that uses the term “Red bean curd sauce” to refer to a commercial product made with red fermented tofu.

Sesame oil. Sesame paste. Sesame seeds. Shao Hsing Wine (made from rice). Soy sauce (2 Cc) [jiangyou]: Color ranges from light to very dark. The “difference lies more in the color than in the flavor.” Sold in tall-neck bottles ranging for 12-21 ounces. “The soy sauce generally sold in American supermarkets is light soy sauce—it is most suitable used as a dip or in some stir-fry dishes but in general is too light to lend an appetizing color to a dish. Dark soy sauce, usually found only in Chinese markets, is sometimes labeled ‘Black Soy.’ Soy sauce will keep for months and sometimes years without refrigeration.”

There follows a nationwide directory of sources for Chinese ingredients.

Also mentions: Eight precious jewel pudding (with “1 cup dried red [azuki] beans,” p. 406-07). Red sand rice roll

(with “1½ cups dried red [azuki] beans,” p. 408-09).

“Craig Claiborne was food editor of *The New York Times* from 1957 to 1971. During this period he was credited by the Chinese-American Restaurant Association of Greater New York with significantly raising the level of public interest in Chinese food, and thus the standard of Chinese restaurant fare.” A large, excellent color photo on the rear dust jacket shows Craig Claiborne and Virginia Lee preparing a meal together in a kitchen. Address: East Hampton, Suffolk Co., New York (on the eastern tip of Long Island).

4940. Clark, Sydney; Zellers, Margaret. 1972. All the best in the Caribbean, including Puerto Rico and the Virgin Islands. New York, NY: Dodd, Mead & Company. x + 420 p. See p. 68. Illust. 21 cm. Series: All the Best travel books.

• **Summary:** In Chapter 6, “Some things to know,” a section titled “The foods of the Caribbean” (p. 68) talks about the “Dutch islands” which are famous for their dining display, the Indonesian *rijsttafel* [Pron. = RAI-stah-fell]. “The proprietor of the Bali Restaurant in Aruba can prepare a simple ten-ingredient meal in half an hour. This will include... a ‘soft-boiled’ vegetable affair called *lablabs*, flavored with a Chinese sauce called *ketjab* (hence our word ketchup); and a variety of raw appetizers such as green mango, cucumber, onion shoots...”

[Washington, DC]: Food and Agriculture Organization of the United Nations; U.S. Dept. of Health, Education, and Welfare. vii + 296 p. Dec. 27 cm. [1500* ref]

• **Summary:** This book has two title pages and can be cited in two ways. See Leung (1972). Address: Dep. of Health Education and Welfare.

4942. Fowles, Anthony. 1972. Double feature. New York: Simon and Schuster. 285 p. See Chap. 1, p. 20. 21 cm. *

• **Summary:** This is a “novel of suspense” in the mystery fiction genre. “The predictable teriyaki dinner, more edible... than its infra-red mini-grilled BOAC counterpart.”

Note: BOAC (British Overseas Airways Corporation) was the British state airline from 1939 to 1974.

4943. Furia, Thomas E. ed. 1972. CRC handbook of food additives. 2nd ed. 2 vols. Cleveland, Ohio: CRC Press (a Division of The Chemical Rubber Co.). Vol. 1: xi + 998 p. Vol. 2. 412 p. Index. 27 cm. [624* ref]

• **Summary:** The many chapters are published by various authors. Contents of Vol. 1: Introduction. 1. Enzymes. 2. Vitamins and amino acids. 3. Antimicrobial food additives. 4. Antioxidants as food stabilizers. 5. Acidulants in food processing. 6. Sequestrants in food. 7. Gums. 8. Starch in the food industry. 9. Surface active agents. 10. Polyhydric

alcohols. 11. Natural and synthetic flavorings. 12. Flavor potentiators. 13. Nonnutritive sweeteners. 14. Color additives in food. 15. Phosphates in food processing.

Contents of Vol. 2: Legal considerations on food additives. Antioxidants as stabilizers for fats, oils, and lipid-containing foods. Enzymes. Nonnutritive sweeteners: Saccharin and cyclamate. New sweeteners. Natural and artificial flavors. Synthetic food colors.

Vol. 1: Chapter 12, titled “Flavor potentiators” (p. 513-21), by Loren B. Sjöström (Vice-President, Arthur D. Little, Inc., Cambridge, Massachusetts) notes (p. 513): “In the context of flavor, the term ‘potentiator’ is only a few years old. The identification of flavor potentiators is a twentieth century accomplishment, an area of research still in its infancy.” Yet seasonings (such as salt), as well as herbs and spices, have been used since ancient times.

The section on “Flavor enhancers” begins (p. 515): “The best known and most widely used flavor enhancer is monosodium glutamate (MSG). In 1866, a German chemist, Ritthausen, isolated glutamic acid. Later another chemist converted the acid to a sodium salt, monosodium glutamate. In doing their work, neither had any interest in flavor.

“More than 40 years later, in 1908, a Japanese chemist at the University of Tokyo, Dr. Kikunae Ikeda, discovered the flavor enhancing properties of MSG. Dr. Ikeda had set out to find out why and how a certain seaweed, *Laminaria japonica*, affected flavor. Japanese cooks had used this seaweed for centuries to improve the flavor of soups and certain other foods. Dr. Ikeda discovered that the ingredient in the seaweed that made the difference was MSG, and that it had an unusual ability to enhance or intensify the flavor of many high protein foods.

“After isolating MSG, Dr. Ikeda developed a process for extracting it from wheat flour and other flours. Working with the Japanese chemical company, Suzuki and Co., he supervised the construction of a plant and, as a partner with the company, began commercial production of MSG in 1909.

“There were several attempts to produce MSG in the United States in the years following, but it was not until the 1940’s that large-scale MSG production began in this country. By 1968, U.S. production had grown to 46 million pounds per year and world consumption had increased to more than 150 million pounds per year.”

The section titled “Types of potentiators” discusses 5’-nucleotides, maltol, dioctyl sodium sulfosuccinate, and several others. The 5’-nucleotides are synergistic with salt, and especially with MSG; they can have something like a multiplier effect in increasing the effectiveness of salt or MSG.

Note: Soy does not appear in the index of this book. Nor can we find it mentioned in Chapter 12. Yet there are scattered mentions throughout the book: Soy protein concentrate (p. 5). Soy sauce, tamari sauce, and miso—made for centuries in the Orient using fungal protease (p. 59).

Studies on breads supplemented with soy, nonfat dry milk, and lysine (p. 114).

Experimental use of esters of *p*-hydrobenzoic acid in soy sauce and other foods (p. 128). Gas sterilants: Ethylene and propylene oxides. The ethylene oxide process was used during World War II to reduce the bacterial counts in soy flour and cereal products used in processed meat products for the Armed Forces (p. 156). An excellent acidulant for hams and soy bean curds [tofu] has been obtained by coating citric acid with suitable animal or plant oils (p. 242-43).

"Synthetic aroma for soy sauce," by K. Ebihara. 1954 Japanese patent No. 5250'54 (p. 258). Soy flour as a widely used binder for processed meat (p. 425). Soy flakes (31.5% parts by weight) and soy hulls (3.0%) as ingredients in "Soft moist pet food" (p. 445).

Cake doughnut mixes sometimes contain soy flour (p. 656). Completely synthetic coffee whiteners usually contain a combination of vegetable fats, sodium caseinate or soy protein, gums as viscosity stabilizers, phosphate or citrate salts as stabilizers for the proteins and as buffering agents, corn syrup solids or sugar as sweeteners and bodying agents, liquid-type emulsifiers, and colors to duplicate the color of cream (p. 671-72). Whipped toppings are used to replace high-fat cream products just as coffee whiteners are used to replace low-fat cream products. Both use protein, which may be soy protein (p. 672).

Imitation sour cream, sour cream dressings, and chip dips. Replacements for fermented cream products represent a growing market. These non-dairy products contain vegetable oil / fat, protein (either soy protein or sodium caseinate [derived from milk], gum stabilizers, etc., p. 673). When partially hydrolyzed soy protein and sodium hexametaphosphate (SHMP) are added to dried egg white, an angel food cake mix can be prepared in which all of the ingredients can be included in a single mixing stage (p. 679). Gelsoy, a patented soy protein made from specially processed, defatted and dehulled soybean flakes, is reported to have improved water- and fat-binding capabilities when treated with SHMP (p. 746, 778).

Improving protein whipping properties: Sevall and Schaeffer prepared protein whipping compositions from soy protein by combining the protein with SHMP etc. (p. 747). Gunther made an entirely new whipping protein composition by combining an enzyme-modified soy protein similar to Gelsoy, with gelatin and a polyphosphate (p. 747). A long table on the regulatory status of direct food additives mentions "Isolated soy protein" (p. 874-75); its use as a binder is regulated by the Meat Inspection Division (MID) of the USDA.

The word "soybean" is mentioned on 22 pages; all of these concern soybean oil except when noted (p. 65 {soybean protein}, 67 {soybean meal, soybean flour / flours}, 99, 114 {soybean products}, 192, 193, 197, 198, 207, 221, 222, 263, 264, 280, 289, 290, 319 {the soybean

plant resembles the guar plant}, 350 {soybean protein, soybean methylcellulose}, 424, 746 {soybean flakes}, 747 {soybean protein}, 749 {soybean milk}). Address: Technical Development Manager, Industrial Chemicals Div., Geigy Chemical Corp., Ardsley, New York; President, Intechmark Corp., Palo Alto, California.

4944. Goldbeck, Nikki. 1972. *Cooking what comes naturally: A natural foods cookbook featuring a month's worth of natural-vegetarian menus*. Garden City, NY: Doubleday & Company, Inc. x + 230 p. Illust. by Bill Goldsmith. Index. 22 cm.

• **Summary:** In the section on Flour (p. 14-15), soy flour is mentioned. Under seasonings, the author advises (p. 22) to "Use Tamari or pure soy sauce, which has only water, whole wheat flour, and salt added." Recipes for Fried Brown Rice and Vegetables (p. 52) and Cabbage Salad with Carrot Dressing both use "Tamari Soy Sauce" and notes: "It is sold in all health food stores. If you cannot find it, substitute pure soy sauce to which no flavorings, colorings, or artificial ingredients have been added." Page 131 gives a recipe for Tamari Broth. In the section on "Ingredient Substitutions" under "Dairy Products," 1 cup milk is said to equal 1 cup soy milk. Address: R.D. 1, Box 452, Woodstock, New York 12498.

4945. Goldsmith, Maureen. 1972. *The organic yenta*. New York, NY: Antheneum. xii + 179 p. 23 cm.

• **Summary:** Note: *Webster's Dictionary* defines yenta (derived from the Yiddish *yente* = vulgar woman, probably from the name *Yente*, and first used in 1939) as "one that meddles; also a blabbermouth or gossip." The author describes a yenta as "a woman who likes to stick her nose into everybody's business."

Being a single, 25-year-old hippie-type young woman of Jewish ancestry "whose zest for eating good food is surpassed only by her zest for serving good food," she formed the Organic Yenta Eating Club, which allowed her to cook for 20-30 friends at her house. Initially her meals were meat-based continental favorites. Eventually she started to cook natural food, vegetarian recipes to please a man she was dating. Her favorite foods (shrimp, lobster, and crab meat) were considered *traif* (not to be eaten) by Jews. Then she recalled the important distinction in Jewish cookery between meat meals (*fleischig*) and nonmeat meals (*milchig*)—a distinction that many non-Jews (*goyim*) are not aware of. So she developed many Jewish vegetarian recipes.

Soy-related recipes include: Soy sprouts (p. 19-20). Almond fried rice (with fried tofu and soy sauce, p. 48-49). Lentils and nuts (with fried tofu, p. 57). Tofu (homemade from soy flour, p. 58). Organic yenta's "meat loaf" (with cooked soybeans, p. 58-59). Roasted soybeans (p. 60). Soy-cabbage salad (with cooked soybeans, p. 117-18). Address: San Francisco, California.

4946. Hesseltine, C.W.; Wang, H.L. 1972. Fermented soybean food products. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 389-419. Chap. 11. [54 ref]

• **Summary:** Contents: Introduction. Koji. Miso: Preparation of koji, treatment of soybeans (mixing, fermentation). Shoyu: Incl. chemical shoyu. Natto. Hamanatto. Tempeh. Sufu [fermented tofu]. New soybean products made by fermentation: Cheese-type products, fermented soybean milk, an onjom-type product. 10. Future of fermented soybean foods.

Tables: (1) Demand for whole soybeans in Japan (1964-1967) to make miso, shoyu, and natto. In 1967, only 4.5% of the soybeans used to make miso were used in the form of defatted soybeans, whereas the same year 91.1% of the soybeans used to make shoyu were defatted. The total demand in 1967 (in 1,000 metric tons) was miso 177, shoyu 169, and natto 47. (2) Chemical composition of soybean foods: Miso (salty light, salty light, soybean miso), natto, soybeans. (3) Annual production of miso in Japan (1956-1967). Production of 530,078 tons in 1956 decreased to a low of 453,956 tons in 1962, then rose to 520,510 tons in 1967. (4) Composition of miso in relation to time of fermentation and ratio of soybeans:rice:salt for three types of miso: White miso, light-yellow salty miso, and yellow-red salty miso. (5) Average composition of shoyu made from whole soybeans and defatted soybean meal.

Illustrations (flowsheets, without quantities of ingredients) show: (1) Process for making red miso. (2) Process for manufacture of shoyu. (3) Process for making hamanatto. (4) Tempeh fermentation on a laboratory scale. (5) Preparation of sufu. (6) Preparation of soybean cheese. Address: NRRL, Peoria, Illinois.

4947. Hewitt, Jean. 1972. The New York Times heritage cook book. New York, NY: Putnam. xviii + 804 p. Illust. (full page color photos; line drawings by Ray Skibinski). Index. 25 cm.

• **Summary:** This monumental American cookbook contains more than 2,100 recipes organized by region, from the Northeast to the Northwest.

Soy related recipes: Teriyaki appetizer-Hawaii (with "½ cup soy sauce" and "2 pounds round steak, cut into strips,..." marinated and skewered, p. 660).

Tempura, with soy mustard sauce-Hawaii (with "1/3 cup soy sauce, preferably imported," p. 663).

Miso-shiru (Bean paste soup)-Northern California (with "2½ tablespoons miso paste {fermented bean curd paste [sic]}," and "1 fresh tofu {fresh bean curd}, cubed," p. 667).

Ruby's teriyaki-Northern California (with the sauce composed of "2 cups imported soy sauce," mirin, 1 cup sugar, grated fresh gingerroot, catchup, monosodium

glutamate and crushed garlic, p. 695). Note: The sauce can be used with beef ("4 pounds boneless top sirloin") or chicken (2½-3 lb).

Ruby's sukiyaki-Northern California (with "2 cakes fresh tofu {fresh bean curd, see note}" and "½ cup imported soy sauce," p. 696-97). "Note: Tofu is available in oriental food stores."

Fried chicken in teriyaki sauce (with "2 cup imported soy sauce" and 1 cup sugar, p. 702-03).

A brief biography and portrait photo of Jean Hewitt appear on the inside rear dust jacket.

Note: Many recipes call for optional monosodium glutamate. Address: Food reporter and home economist, The New York Times.

4948. Horton, Lucy. 1972. Country commune cooking. New York, NY: Coward, McCann & Geoghegan. 232 + [8] p. Illust. by Judith St. Soleil. Index. 24 cm.

• **Summary:** A nostalgic memoir (for those who came of age at this time) of the world of young Americans in communes in the early 1970s, with many fine illustrations (see p. 27). The author, raised in New York City and educated at Bryn Mawr (Pennsylvania, with a major in classical archaeology), earned her traveling money by working as a live-in maid and cook for a rich "Park Avenue Lady" before embarking on the project that became this book. She hitch hiked to San Francisco, arriving in June 1971, then spent most of the next year visiting 43 communes in 12 states and Canada, and collecting recipes from each. There she found "a New Age of Food Consciousness." The main topic of conversation and common interest at these intentional communities was not God or sex, but food. This book, with her 150+ favorite recipes, features natural and organic foods (with lapses). Most of the recipes from California and the West Coast are vegetarian, but in New Mexico and eastward (especially New England) she was "surprised to find that vegetarianism was more the exception than the rule" (p. 81). Thus, Chapter 3 is titled "Meat (and one fish)." There are recipes for chicken, fish, deer, goat, beef, etc.

The Introduction notes (p. 15): "The *sine qua non* of commune cooking is tamari soy sauce, an unspeakably delicious fermented Japanese product available in natural foods stores which bears no resemblance to commercial soy sauce" * (Footnote: *"Kikkoman soy sauce, available in supermarkets, tastes like tamari but contains a preservative").

"1. Soups: The commune soups I sampled were typically of mixed vegetables with a tomato or miso (p. 159) base" (p. 27).

Tamari chickbits (p. 94, with chicken). Note about soy grits (p. 114). Sprouts (p. 135-36, many kinds including alfalfa, mung beans, soybeans, from Terra Firma, Oregon). Miso Almond Sauce (p. 158-59). Tamari gravy (p. 159). Soy-related recipes include: From Chapter 2, "Vegetarian main dishes"-Donna's soyburgers (p. 60-61, with whole

soybeans, from California). Soy cheeseburgers (p. 61-62, with whole soybeans, from Moon Garden, Oregon). Suzy's soybean casserole (p. 63-64, from Breadloaf, New Mexico). Baked soybeans (p. 64-65, from Woolman Hill School, Massachusetts). Larry's tofu (soy cheese) (p. 65-68, homemade tofu from whole soybeans, from Om Shanti, Mendocino County, California). Breakfast cereal with roasted, salted soybeans (p. 163). Soy spread (p. 227, with soy flour, from The Motherlode, Oregon). Soy nuts (p. 229-30, baked, soaked soybeans with oil and salt). A photo on the rear cover shows the author, age 27, with long blonde hair, granny glasses, and blue denim overalls. Says Raymond A. Sokolov: "Lucy Horton has done more than collect exotic recipes... she has assembled the crucial artifacts of a movement within The Movement."

Also discusses (see index): Adelle Davis, gluten (wheat), granola, ground nuts, macrobiotic diet, peanuts. Address: Derby, Vermont.

4949. Hosking, Richard. 1972. A dictionary of Japanese food: Ingredients & culture. Boston: Tuttle Publishing. 239 p. Illust. by Richard C. Parker. Index. 19 cm. *

• **Summary:** An excellent, accurate book. The basic entry for each word is given under its Japanese name (thus *daizu* rather than soybeans). Each entry includes the Japanese term in kana (usually hiragana) and (usually) kanji (Chinese characters). One hundred small illustrations are very helpful. Address: Prof. of Sociology and English, Hiroshima Shudo Univ., Japan.

4950. Jensen, J. Stoumann. 1972. Bælgplanter. Frugtens anvendelse og potentiel i menneskelig ernæring. En analyserende og diskuterende oversigt [Leguminous plants. Use of their seeds and its potential for human nutrition. An overview, with analysis and discussion]. Unpublished manuscript. Lyngby, Denmark. 110 p. Forwarded to DANIDA Sept. 1974. Unpublished manuscript. [23 ref. Dan]

• **Summary:** Under East Asian soyfoods, mentions soy sauce, miso, natto, sufu, and tempeh. Address: Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, Lyngby, Denmark.

4951. Kawakoshi, Kenji. ed. 1972. Shashi-Chôshi Shôyu Kabushiki Kaisha [History of Choshi Shoyu, Inc.]. Choshi, Chiba-ken, Japan: Choshi Shoyu K.K. 512 p. Illust. No index. 28 cm. [Jap]

• **Summary:** Contents: Preface. Part I: History before the founding of Choshi Shoyu. 1. The origin of shoyu and its development (p. 1). 2. The shoyu industry in Choshi during the Tokugawa period (1600-1868) (p. 25). 3. The Meiji period (1868-1912) (p. 69). 4. The three families that founded the company (p. 87). Part II: The history of Choshi Shoyu (p. 115). 1. The period of the limited partnership (p. 119). 2. The period of expanding development (p. 137). 3.

The period of production growth and heavy competition (p. 159). 4. The period of new development conditions before World War II (p. 203). 5. The days of controlled conditions during World War II (p. 203). 6. Difficulties under the Allied occupation of Japan (p. 223). 7. The period of modernization of the industry and of new technology (p. 247).

Part III: Documents (p. 299). 1. Organization and management (p. 301). 2. Production (p. 327): Raw materials for shoyu, changes in the production process, shoyu containers, the factory. 3. The research laboratory (p. 393): Its history, its work. 4. Business (p. 401): Brands, labels (Choshi Shoyu, Higeta Shoyu, "since 1616." Includes English-language labels from 1954 and 1961), and awards, advertisements, branches, shoyu prices, shoyu taxes. 5. Labor (p. 435). 6. Social benefits and activities (p. 453). Chronology of Choshi shoyu, 1616-1971 (p. 483-509). Conclusion. Address: Japan.

4952. Kikkoman Shoyu Co., Ltd. 1972. Guide to Kikkoman (Brochure). Noda City, Japan. 10 p. 15 x 10 cm booklet. [Eng]

• **Summary:** Contents: Introduction by Kenzaburo Mogi, president. Shoyu: Its past and present. History. Production method. People everywhere love Kikkoman (with a photo of 19 Kikkoman products). Kikkoman all over the world. Kikkoman in Japan. Note that the product is referred to throughout as "Kikkoman Shoyu" and not "Kikkoman Soy Sauce."

"History: In the 6th century Buddhism came to Japan from China, and with it came a strict ban on the eating of meat. Buddhism also brought a new vegetable-base sauce—a paste made by fermenting various grains—which replaced previous meat or fish-base seasonings. For a thousand years or so the Japanese used this paste as one of their major seasonings. It was not until the 17th century that this seasoning was developed into the shoyu that we know today.

Kikkoman worldwide: Kikkoman Foods Inc. (KFI) was established in 1972 to produce shoyu in America, our largest overseas market. Head office and plant: Walworth, Wisconsin 53184 USA.

Kikkoman International Inc. (KII) was established in 1957 to import and distribute our products in the USA. Head Office: 1581 Webster St., San Francisco, California 94115. Branches: Los Angeles, New York, Chicago.

Japan Food Corporation (JFC) is the largest importer and distributor of oriental foods in the United States. Head Office: 900 Marine St., San Francisco, CA 94124. Branches: Los Angeles, New York, Chicago, Sacramento, San Diego, Washington [DC].

Pacific Trading Co., Ltd. (PT) was established in 1928 in Tokyo to export oriental foods, mainly to the United States. Head Office: 767 Marunouchi Bldg., Chiyoda-ku, Tokyo.

Kikkoman Daitokai (Europe) GmbH is a restaurant chain, established in 1972 to serve mainly Japanese dishes.

Head Office: 4 Dusseldorf, Kleverstrasse 46, West Germany.

Kikkoman in Japan. Kikkoman is the leading brand of shoyu in Japan. The second best-selling brand sells only 23% as much shoyu as Kikkoman and the third best-seller only 13% as much. Kikkoman's capital: \$18,500,000. Sales (1972): \$218,000,000. Total production of shoyu (1972): 100,000,000 gallons. Number of employees 4,400. The names of members of the Kikkoman board of directors are given. Kikkoman subsidiaries are Kikko Foods Corp., Mann's Wine Co. Ltd., Seishin Pharmaceutical Co. Ltd., Tone Coca Cola Bottling Co. Ltd.

4953. Kikkoman Shoyu Co., Ltd. 1972. Kikkoman today & tomorrow (Brochure). Noda City, Japan. 14 p. [Eng]

• **Summary:** On the cover of this brochure is a man, standing in the lower right corner, looking up into a dark blue sky, in which there are seven colored heavenly bodies; the large central one is yellow, and the smaller ones, equidistant from the center, are (clockwise from the top) red, orange, yellow and green, blue, violet, and magenta. On the inside front cover is a huge red Kikkoman logo on a white background.

Contents (includes many color photos): History of shoyu and Kikkoman (with a chronology from 1661 to 1972). Present state of Kikkoman (graph of financial increase from 1917-1971; board of directors, company description and spirit). Kikkoman in Japan (products, plants, sales from 1950-1971). Kikkoman export products. Kikkoman soy sauce in America. International operations. Central research laboratories. Kikkoman soy sauce production method. Kikkoman group in Japan. People everywhere love Kikkoman. Kikkoman and advertising. The rear cover is dark blue.

The chronology (p. 1) begins: "Kikkoman Soy Sauce first went on the market in 1661 when the Takanashi and Mogi families constructed breweries and started the brewing of soy sauce." Address: 339, Noda, Noda-city, Chiba 278, Japan. Phone: (0471) 22-1111.

4956. Kwon, Tai-wan. comp. 1972. Fermented foods in Korea: Annotated bibliography (1917-1971). Seoul, South Korea: Korea Institute of Science and Technology. 185 p. 28 cm. For Fermented Soybean Products, see p. 28-85. [248* ref. Eng]

• **Summary:** One of the best sources on soyfoods in Korea. A very well prepared bibliography. Of the 248 references, 83 are related to soy. Most of the documents cited were published in the 1950s and 1960s; only one (p. 28) was published before 1940.

Contents: 1. Fermented vegetable products (*kimchies* [*kimchi*]). 2. Fermented fishery products. 3. Fermented soybean products (soybean koji {meju, maiju, maeju}, soy sauce {kanjang, ganjang}, soy paste {doenjang, dainjang, dwen-jang}, hot soy paste {kochojang, kochuzang}, etc.). 4. Fermented cereal products (alcoholic beverages). 5. Miscellaneous. Appendix. Author index.

Note 1. Doenjang (Korean soybean paste) is first mentioned on pages 28, 64. Dainjang (Korean soybean paste) is mentioned on page 34. Dwen-Jang (Korean soybean paste) is mentioned on page 42.

Kochojang (Korean red pepper miso) is first mentioned on pages 28, 31, 46. Kochozang (Korean red pepper miso) is first mentioned on page 36. "Red pepper sauce" (Korean red pepper miso) is first mentioned on pages 38, 39. "Red pepper paste" (Korean red pepper miso) is first mentioned on pages 71.

Kanjang (Korean soy sauce) is first mentioned on page 34.

Ganjang (Korean soy sauce) is first mentioned on page 53.

Note 2. This is the earliest English-language document seen (April 2012) that uses the word "Kanjang" or the word "Ganjang" to refer to Korean soy sauce.

Meju (Korean soybean koji) is first mentioned on pages 35, 41, 44, 60. Maiju (Korean soybean koji) is first mentioned on page 34. Maeju (Korean soybean koji) is first mentioned on pages 73, 83. Chung-Kook-Jang (Korean natto) is first mentioned on page 79.

Note 3. This is the earliest English-language document seen (Oct. 2010) that uses the word Chung-Kook-Jang (spelled exactly that way) to refer to Korean-style natto. Address: PhD, Head, Food Resources Lab., Korea Inst. of Science and Technology, Seoul, South Korea.

4958. Nakao, Sasuke. 1972. Ryôri no kigen [The origin of foods]. Tokyo: Nihon Hoso Shuppan Kyokai. 225 p. [Jap]

• **Summary:** The important chapter titled "The big natto triangle and miso," by Sasuke Nakano (p. 118-27) discusses

natto, its relatives and ancestors in East Asia, and the “natto triangle” theory (with a map). Nakao hypothesized that natto (*itohiki natto*, made with one or more strains of bacteria) originated in the monsoon area of Southeast Asia, where there are East Asian evergreen forests. He considered Yunnan province in China to be the hypothetical center of natto’s origin.

He states: We don’t know much about natto in Japan. Konnyaku was clearly mentioned in the literature of the Heian period [794-1185]. But natto was first mentioned later, during the Muromachi period [1336-1573], therefore I guess it came from Java [sic] at about that time. Many new things from Europe (such as guns) also entered Japan during the Muromachi period.

What I call the “Miso Group” is salted mold-fermented soyfoods—such as miso, shoyu, tamari, and fermented black soybeans (*douchi*)—that originated in northern China outside the Big Natto Triangle, then spread to central China and to other countries such as Japan and Korea. I have shown the Miso Group on the map in an oval to the upper right. So the triangle and the oval shows the locations of these two groups of processed, fermented soyfoods.

In the Big Natto Triangle we find a number of foods that originated in northern China, including konnyaku and sushi. Sake is also fermented with a mold—the koji mold. Bean sprouts (a great Chinese invention, using beans that are hard to cook) also exist in the Miso Oval, but they spread into many areas within the Big Natto Triangle including Burma and Java.

Nyufu [dairy cheese or yogurt; literally “decayed / spoiled milk”] and tofu: Tofu was also a great invention of northern China—an easy way to eat soybeans. Seen from this point of view, European ways of cooking beans are very primitive.

Note: European beans generally contain too little protein and too much carbohydrates (especially starch) to enable them to be made into tofu.

Mr. Shinoda Osamu has developed the theory that tofu was invented in China but not in ancient times; probably in the middle of the Tang dynasty [618-906], and it became popular in the middle Song dynasty [960-1279], at which time it became an alternative to *nyufu* made from dairy milk. What I call *nyufu* here is different from *funyu* (fermented tofu), which is made by fermenting tofu, appeared after the invention of tofu, and is found today throughout East Asia. It is difficult to know exactly what *nyufu* was; in my opinion it was probably like *dahi* from India. In any case, it is certain that there was a product in called *nyufu* shortly before the Tang dynasty and during the early Tang.

During most of Chinese history, except when the nomadic milk-consuming Mongols ruled China during the Yuan dynasty (1279-1368), animal milks were not part of traditional Chinese culture.

Tofu was in Japan by 1183 AD (see *Diary of Hiroshige*

NAKAOMI, entry for 1183). Maybe tofu was brought in by Buddhist monks and consumed in and around Nara. By the end of the Muromachi period [1336-1573] the center of tofu making and use had moved to Kyoto.

Another interesting thing is that in southern China and in Sichuan province, there is a tofu named *reiki* [*li qi*, pronounced “lichei,” “morning prayer.”] The name originally referred to *nyufu* but later it came to refer to tofu. The origin of the word *reiki* was considered to be Sanskrit or some European language. It may have been connected with *nyufu* and/or dahi or India. Also, if we consider *reiki* to be the original name of tofu, then *nyufu* and tofu may have originated in Sichuan or southern China and migrated up to Northern China.

In summary: Nakano’s theory is based on the observation that there are many varieties of non-salted fermented soyfoods and soy condiments inside the “natto triangle.” Yunnan province in southwest China, Thailand, Myanmar (Burma), Bhutan, Nepal, Indonesia, and Japan all fall within this triangle.

Note 1. This is the earliest English-language document seen (Jan. 2012) that contains the term “natto triangle.” Yet this term can be misleading, especially for non-Japanese. Natto is the only non-salted fermented soyfood or soy condiment indigenous to Japan. Natto is made by fermenting whole, cooked soybeans with bacteria (*Bacillus natto*, or *Bacillus subtilis*) in a warm place (ideally 104°F or 40°C) for about 24 hours. According to various Japanese legends, natto originated almost 1,000 years ago in northeast Japan when cooked soybeans were placed in a rice-straw sack strapped over the back of a horse. The natto bacteria are found abundantly on rice straw, and the warmth of the horse’s body aided the fermentation. Under these conditions, the fermentation would take place naturally, without intentional inoculation.

The “natto triangle” refers to the geographical area within a large triangle in East-, South-, and Southeast Asia—the only place in the world where non-salted fermented soyfoods and soy condiments are indigenous. A number of these—such as tempeh in Indonesia and unsalted fermented black soybeans in China—are fermented primarily with molds (e.g., *Rhizopus*, *Aspergillus*) rather than bacteria. The triangle has its three corners in northeastern Japan (on the northeast, for natto), northeastern India and Nepal (on the west, for kinema), and in Java (Indonesia, on the south, for tempeh). It is incorrect to think of tempeh as a type of natto—by any definition! Applying this correction to the “natto triangle” causes it to fall apart! Extensive research after 1972 on the early history of tempeh and natto gave no support to the conjecture that natto came from Java.

However the incorrect theory actually turned out to have powerful predictive value, especially as close relatives of natto were discovered in northeast India by Tamang and co-workers starting in 1988, more than 15 years after the “natto

triangle” hypothesis was proposed.

4959. National Food Research Institute. 1972. National Food Research Institute [Japan]. NFRI, Ministry of Agriculture and Forestry, Shiohama-cho 1-4-12, Koto-ku, Tokyo. 27 p. [144 ref. Eng]

• **Summary:** Contents: Brief history. Budget and personnel. Organization. General survey of the Institute. Major research area. Facilities and pilot plants. Reports and patents. Publications. Scholarship. Location.

In 1934, the Rice Utilization Research Laboratory was established by the national government. The first building of about 330 square meters was completed in 1935 at the present site. In 1944 the title of the Laboratory was changed to the Research Institute of the Bureau of Staple Food Administration, and investigations were directed toward the processing and utilization of unconventional food resources.

“Owing to the change in the food situation in Japan during World War II, the Institute carried out extensive research on the most efficient utilization of the nutrients in various foodstuffs, and on finding new food sources among various agricultural products, so as to meet the serious food shortage. This trend continued through the post-war period as the nation struggled with an even more acute food shortage problem. Fats and oils, fruits and vegetables, and fermented soybean products miso and soybean sauce were added as subjects of research.

“The Institute again changed its name to the Food Research Institute in 1947, and official analysis and standardization of food commodities were included in its activities... The Institute came to belong to the Food Agency in 1949 and later, in 1961, as a result of the reform in agricultural research administration, it was brought under the administration of the Agriculture, Forestry, and Fisheries Research Council together with other agricultural research establishments.” The name was changed for a third time to the National Food Research Institute in 1970.

T. Watanabe is the Director of the organization. The fermentation research division is headed by H. Ebine, and consists of the following laboratories: Fermentation microbiology (M. Matsuno), fermentation chemistry (T. Ohta), industrial fermentation (H. Ito), mycotoxin (H. Ebine), resources utilization (N. Tsumura). The nutrition research division is headed by S. Kimura.

Note: This institute moved from Tokyo to Tsukuba in Feb. 1979. Address: Shokuhin Sogo Kenkyujo, Tokyo, Japan.

4960. Sakaguchi, Kinichiro. 1972. Development of industrial microbiology in Japan. In: Proceedings of the [Sixth] International Symposium on Conversion and Manufacture of Foodstuffs by Microorganisms. Tokyo: Saikon Publishing Co. viii + 297 p. See p. 7-10. Held 5-9 Dec. 1971 at Kyoto, Japan. [Eng]

• **Summary:** Japan has made many important contributions to the development of industrial microbiology, especially industrial mycology, because of the widespread use of koji molds (*Aspergillus oryzae*). Foods made from this one mold (including sake, miso, and soy sauce) accounted for about 1.5% of the Japanese gross national product, or ¥75,000 billion, in 1970.

Early documents show that molds were being used to make foods as early as 1,000 B.C. in China and as far back as the 6th century [A.D.] in Japan. In Japan, the use of lactic acid fermentation in the pure culture of yeast is already mentioned in “the diary of sake” [*Goshu no Nikki*] written in 1355, however the technology of adding koji starter [*tané koji* or “seed koji”] is even 400 years earlier [i.e., ca 955]. Moreover, an unmistakable description of low temperature pasteurization (*hiire*) appears in the *Tamon-in Diary* (1539-1596), “which was written about 300 years prior to Pasteur’s famous invention.”

When Japan began to introduce European scientific techniques during the Meiji period (Sept. 1868 to July 1912), the first subject of scientific research in Japan was the unique koji mold. One of the first major discoveries was the invention of Takadiastase [an enzyme] by Jokichi Takamine. This enzyme has a great influence on biological chemistry, enzyme chemistry, and various enzymes using microorganisms worldwide.

Soon the physiology of the koji mold and its fermentation products (especially organic acids) was studied by Japanese scientists. The determination of kojic acid by Yabuta was a major discovery. The *Rhizopus* [*Rhizopus*] mold was also investigated; this led to the development of producing organic acids fumaric acid, citric acid, isocitric acid, itaconic acid, gluconic acid and others.

Two outstanding discoveries have recently been made in Japan: (1) The technology for making L-glutamic acid, lysine, and other amino acids; (2) The microbial technology for making flavor-enhancing nucleotides such as inosinic acid and guanylic acid.

Japanese scientists and industries soon realized that instead of using microorganisms, the enzymes isolated from them could be used (in whole or in part) with no reduction in yield or quality. In the case of *Aspergillus oryzae*, which produces various enzymes (amylase, lipase, protease, etc.) this idea has been applied to the manufacture of alcohol, sake, mirin, miso, and soy sauce.

The classification and taxonomy by Jun Hanzawa of microorganisms used in the manufacture of *natto* (fermented soybean) and other popular Japanese fermented foods was of major importance.

Recently, Japanese scientists including Murakami and Yokotsuka [of Kikkoman] have found that the koji mold does not produce aflatoxins.

The industrial application of molds to establish a method of mass culture involves various difficult problems. Many

Japanese manufacturers of sake, miso, and soy sauce “are practicing the conventional solid culture by using what are called Koji rooms” but large manufacturers are gradually switching over to aerobic apparatus.

To use the living action of microorganisms or their enzymatic action to make foods on a large scale will be increasingly seen “as a form of bioengineering or biotechnology,” and the life sciences will increasingly be spoken of as “a science for the future. ‘Seek whatever is desired in microorganisms first. They will never betray you,’ is my slogan.” Although it may seem a little exaggerated, “I should like to ask you to take it as my firm conviction.”

As I stated above, “microorganisms are the most intimate friends of the food industry,” yet they are at the same time its powerful enemies. Their malignant side is as powerful as their benevolent side.

I am very glad, even proud, to see first-class microbial specialists and food specialists exchanging technological knowledge and cooperating with one another, “here in Japan where fermented foods have so long been a tradition.”

• **Summary:** Contents: 1. Introduction. 2. U.S. history: Introduction of soybeans, processing for oil, soybean oil. 3. Soybean meal and protein: Animal feed industry, poultry industry, industrial uses. 4. Soybean production. 5. Oriental history: Ancient history, Oriental fermented foods (shoyu, miso, tempeh, ontjom, natto, hamanatto, tao tjo [Indonesian-style miso], kochu chang, ketjap), Oriental nonfermented foods (soybean milk, tofu), wedge press. 6. Soybeans and world food problems: Green Revolution, protein supplements (high protein food formulations, AID funded), amino acids, CSM, cottage industries.

Concerning industrial uses (p. 8-9): Soybeans rose in popularity as an agricultural crop in the USA at a time when other crops such as corn, wheat, cotton, and tobacco were being produced in surplus quantities. Soybeans took over much of the acreage vacated by these crops. “At that early period it was the hope of many leaders of agriculture, government, and industry that much of the oil and protein of the soybean could be diverted from the food and feed industries into industrial products such as paints, varnishes, soap stock, plastics, adhesives, plywood glue, paper coating and lamination, paper sizing, textile fibers, and other uses... In 1936 the US organized the Regional Soybean Industrial Products Laboratory for this purpose. These new industrial uses were expected to help relieve the problem of farm surpluses... In 1935 the Glidden Company built the first plant for the isolation of industrial grade soybean protein (transferred to Central Soya in 1958). The largest use of industrial grade protein is in the paper-making industry, for coating and sizing of paper board.

“After World War I, soybean meal, because of its low cost, replaced casein as an adhesive for Douglas fir plywood glue, where it still retains a substantial part of the market for the interior grade product.”

“While soybean proteins have several important industrial applications, especially in the paper industry for coating and sizing paper, which are expected to continue for years to come, the original dream of an ever-expanding industrial market [for soy proteins] has faded. In the polymer market it appears that for most applications the proteins cannot be made competitive with the increasing number of low cost, high quality synthetic resins... It is generally recognized that the increasing demand for proteins for feed and food will greatly surpass the anticipated industrial uses.”

4969. Chico-San Inc. 1972? Chico-San history and outline for future development. Chico, California: Chico-San Inc. 5 p. Undated. Unpublished typescript.

• **Summary:** A good early history of Chico-San, typewritten on the company's letterhead probably by Bob Kennedy. Atop the letterhead is printed: "Macrobiotic foods, rice cakes, cereals, sea vegetables." "By 1961 eleven macrobiotic families had packed their belongings, left their jobs behind in New York City, and headed for Chico, California, in the heart of the California rice growing country. In a short time Chico-San, Inc. was formed by some of these people for the purpose of importing foods of superior quality which were not available domestically, and locally producing foods of the highest quality for distribution throughout the United States."

One of the company's first popular products was the "Rice Cake, a light cracker made from puffed up whole grain brown rice. The first "machine," imported from Japan in 1963, made one cake at a time and was a crude, hand-operated device. Soon, three more machines were tied to the original one, still hand operated. Bob Kennedy, Dick Smith, and a few others found it necessary to work twelve hour shifts, and for six and seven days at a time to meet the steadily increasing demand for the unique new cracker. In 1965 pulled shoulder muscles ceased to be a problem when the first semi-automatic Rice Cake machine was put into operation...

"Central to the guiding philosophy behind Chico-San was the search for an organically grown brown rice—the prince of grains. This search ended in 1969 when the first organically grown short grain brown rice was harvested just south of Chico, in Richvale, California. This product, grown under exclusive contract for Chico-San, further enhanced their growing reputation...

"Back in the late fifties and sixties people who were interested in food and health were called 'food faddists', or 'health food nuts.' The food products found in most health food stores at this time consisted of a vast array of vitamin and mineral supplements, super protein concentrates, natural cosmetics, and a scattering of whole grains, few of which were organically grown.

"But little by little products with the Chico-San label found their way onto store shelves. First the Rice Cakes, then natural soy sauce, Miso Soybean paste, Sesame Butter and Sesame Salt, and organically grown Brown Rice became

popular...

"In the back room too is Junsei Yamazaki, who emigrated to Chico from Japan in 1963 for the purpose of producing natural soy sauce and miso for Chico-San. These two products make up the greater percentage of the imports from Japan, and are subject to high duties and shipping costs. For 17 years Junsei was a rice farmer in Japan after graduating from Tokyo University with a degree in agriculture.

"Combined with the income from Stage I, Chico-San will be ready to begin Stage III. This stage includes the construction of a plant for the production of, at first, miso, and then soy sauce." Address: Chico-San Inc., 1262 Humboldt Ave. Chico, California 95926.

4970. Japan Shoyu Research Institute. 1972? Report on the comparative study of shoyu brewing from U.S. and Japanese soybeans (no. 6). Tokyo. 29 p. Project UR-A11-(40)-(C). * Address: Tokyo.

4971. Erewhon, Inc. 1973. Erewhon visits a soy sauce factory (Ad). *East West Journal* 2(20):24. Jan. 15-30.

• **Summary:** "Soy sauce has been produced in Japan since it was introduced, along with Buddhism and the vegetarian diet, from mainland China over one thousand years ago. Today there are 5000 Japanese companies brewing a total of over 300 million gallons of soy sauce each year.

"One of these companies is Marushima Shoyu, located on Shodoshima Island, four hours by boat from Osaka through the Kii Strait. Marushima is a very old company, using traditional methods of manufacture, and it is here that Erewhon Tamari soy sauce is made. All soybeans used at Marushima are of unusually high quality, and come only from the island of Hokkaido."

A description of the process for making this soy sauce is then given. Whole soybeans are washed, soaked, then "steamed and boiled in a 14-foot-high cooker." Toasted whole wheat is "ground into flour, mixed with the cooked soybeans and placed in a large room, right on the wooden floor, which is kept very clean." The *koji* is placed in vats and spring water is added. The soy sauce changes color month by month until, after about one year, it begins to turn very dark and a rich aroma permeates the storage room. It is then poured into cypress-wood tanks and left to age for two more years. Unlike this pure, aged product sold under the Erewhon label, most other brands are aged only one to three months in concrete or metal containers.

"We at Erewhon would like to thank Marushima Shoyu for the wonderful product they make available to us."

Note: This was written by Paul Hawken. An illustration (line drawing) shows a traditional shoyu keg labeled "Marushima" and a gallon glass jar labeled "Tamari." Address: Boston, Massachusetts.

4972. Eden Foods, Inc. 1973. Catalog. 211 South State St., Ann Arbor, Michigan. Undated. Probably published about Jan. 1973.

• **Summary:** Eden Foods is now carrying Organic Soybean Flakes from Arrowhead Mills (34% protein), and a line named “Hopi Seeds” which includes soybeans, sunflower seeds, pumpkin seeds, almonds, and cashews—each dry roasted with tamari, each in a consumer snack-sized pack weighing 1.3 to 1.5 oz. Note: This “Hopi Snacks” line was developed by Eden.

Other interesting products include “Michigan Grain” (soybeans, corn, rye, and wheat grown organically in Michigan, mostly by Tom Vreeland in Ypsilanti), umeboshi plums in salt brine, and kuzu arrowroot. Address: Ann Arbor, Michigan.

4973. **Product Name:** Hopi Seeds: Sunflower Seeds, Pumpkin Seeds, Almonds, Cashews, or Soybeans (Each Dry Roasted with Tamari).

Manufacturer’s Name: Eden Foods, Inc.

Manufacturer’s Address: 211 South State St., Ann Arbor, MI 48108. Phone: 313-769-8444.

Date of Introduction: 1973. January.

Ingredients: Whole soybeans, tamari.

Wt/Vol., Packaging, Price: Soybeans and sunflower: 1.5 oz bag. Pumpkin, almond, and cashews: 1.3 oz.

How Stored: Shelf stable.

New Product–Documentation: Talk with Bill Bolduc, founder of Eden Foods. 1992. March 14. Erewhon was probably the first company in America to develop a line of tamari-roasted seeds and grains. Eden was carrying Erewhon’s tamari-roasted soybeans by Oct. 1972, and the full line by early 1973.

4974. Misko, Karin. 1973. *SeVa longevity cookery cookbook*. Columbus, Ohio: Soybean Press. viii + 113 p. Jan. Illust. by Judy Post. Edited by Debora Bittaker. Introduction by Catherine Bicknell. 22 cm. [45 ref]

• **Summary:** A vegetarian cookbook from the SeVa Restaurant, printed on 100% recycled paper. Soy-related recipes include: Soy milk (p. 18). Tahini milk. Nut milk (p. 18). Miso vegetable soup (p. 25). Variety muffins (with soy flour, p. 36). Salad for Virgo (with green soybeans and roasted soybeans, p. 45). Miso-tahini sauce (p. 51). Brown sauce (with Tamari soy sauce or miso, p. 51). Stuffed cabbage rolls (with green soybeans and brown rice, p. 65). Campfire dinner (with cooked or canned soybeans, p. 65). Soy bean loaf (p. 73). Roasted soybeans (dry roasted, p. 84). Granola (with Soya granules, p. 84).

The glossary (p. 98-100) includes listings for cold-pressed oils, fertilized eggs, ginseng, gluten [sic, gluten], miso, seaweed, tamari soy sauce, and tofu (“a bean curd made from soybeans which is used for flavoring soups and sauces.”)

Brand name products we use (p. 101; Note: Each contains soya). Smokeene, Soyagen (spray-dried soymilk), and Vegeburger (Loma Linda Foods). Soya Granules (Fearn Soya Foods). Stripples (bacon alternative from Worthington Foods). Vege-Sal (Modern Products; flavored with soy bean extract). “Smokeene: smoked seasoning spice made from toasted soy powder, dried yeast, soy sauce and condensed wood smoke. It is used for flavoring soups and sauces.” Address: Columbus, Ohio.

4975. Spiral Foods Inc. 1973. Mail order price list. Chico, California. 2 p. Jan. 35 cm.

• **Summary:** This single-sheet catalog and price list, photocopied front and back with black ink on tan paper, contains numerous background illustrations and the includes the following foods: Snacks: Rice cakes, corn chips, Yinnies—brown rice candy sugarless. Condiments: Lima tamari soy sauce—aged naturally over two years, Miso—soybean puree, entirely natural, rice malt vinegar, sesame butter, sesame oil—cold pressed, sesame salt, sea salt white unrefined, salt plums, kuzu—wild arrowroot starch. Grains, flours, seeds and beans: Brown rice / sweet brown rice—short grain, organically grown. Black [soy] beans—Japan import. Azuki beans—Japan import, dainagon. Whole grain noodles. Sea vegetables. Beverages. Hygienic goods. Utensils.

Talk with Robert J. Kennedy, founder of Chico-San. 1991. Oct. 3. By about 1966-1967 rice cakes and rice chips (senbei) were beginning to cut a wedge into the mass market nationwide, so Chico-San created the Spiral Foods brand for these mainstream products, keeping the Chico-San brand for the health food market. Address: 1144 West 1st Street, Chico, California 95926.

4976. Winarno, F.G.; Fardiaz, Srikandi; Daulay, Djundjung. 1973. *Indonesian fermented foods*. Bogor: Agricultural University Bogor. 25 p. Originally presented as a lecture by Winarno to Regional Graduate Nutrition Course, SEAMEO, Jakarta, in Jan. 1973. [11 ref]

• **Summary:** Also titled “Indonesian Traditional Food Processing.” Address: Dep. of Agricultural Product Tech., Bogor Agricultural Univ.

4977. Wilkens, Emily. 1973. Soybeans respond to seasoning tricks: A new you. *Hartford Courant (Connecticut)*. Feb. 11. p. 2E.

• **Summary:** Though bland like other beans, soybeans respond to a hundred creative seasoning tricks. They are the only vegetable that is a true meat substitute. “As a health and beauty bonus, they’re rich in unsaturated oil (Soy) and super for shiny hair and babysoft skin. The cost? Ridiculously low.”

While Oriental chefs have been using soybeans creatively for centuries, almost all of the American crop has traditionally been fed to livestock. Fortunately, many

American cooks are now “getting acquainted with this super bean instead of leaving it to the animals.”

Soybeans are sold in many forms. As toasted nut-like snacks, they come in cellophane bags or jars in flavors that include salty, garlicky, barbecue, or plain. Soy flour is good for adding protein power to breads, cakes, and other baked goods. “Soy oil is smashing on salad.” And of course there is versatile soy sauce. “Hint: Japanese ‘tamari’ soy sauce is sweeter, less salty than Chinese.”

“Toasted soy snacks are probably the best way to introduce your family to beautiful bean.” Gives a recipe for Soy nut loaf (with “¼ cup soaked soy grits”). Also gives many other ideas for using soybeans and their products in home recipes.

4978. Benton, Gene. 1973. Wine with food a matter of taste. *Los Angeles Times*. Feb. 22. p. J14.

• **Summary:** “Beer and ale show a marked affinity for soy [sauce], ginger, star anise, Szechuan pepper, hoisin sauce, fermented black beans, roasted sesame oil and the myriad pungent dried foods which supply the exotic Chinese flavors.”

4979. Cowan, J.C. 1973. Soybeans: Their uses are many and expanding all the time. *Crops and Soils Magazine* 25(5):10-14. Feb.

• **Summary:** Contents: Introduction. Processing needed. Oil products. Lecithin. Protein products. Texturized protein products. Foreign and fermented products. Future prospects. Address: NRRL, Peoria, Illinois.

4980. Stater Bros. Markets. 1973. You always save! With Stater Bros. everyday low-low prices (Ad). *Los Angeles Times*. March 1. p. L17.

• **Summary:** In the lower left corner of this full-page ad: “Marukin soy sauce, 34 oz.—71¢.” Address: Los Angeles area (16 stores).

4981. Zell, Fran. 1973. Food: Man who skates with grace cooks with beauty. *Chicago Tribune*. March 3. p. 14.

• **Summary:** Sashi Kuchiki, a Japanese star with the Ice Capades, likes to cook. His recipe for Sukiyaki includes “1 block tofu (bean curd) cut into 10 or 12 1-inch cubes” and “1 cup soy sauce.” A photo shows him jumping while ice skating.

4982. Townsend, Dorothy. 1973. Hanoi days filled by shared memories, ex-POW reports: ‘Telling’ movies and books. *Los Angeles Times*. March 5. p. A1.

• **Summary:** During the Vietnam war, POWs would re-tell movies to try to kill time. The food, which featured cabbage soup from Christmas on, is described. “Other side dishes might be [mung] bean sprouts or soy bean cake [tofu].” The latter wasn’t bad, recalled Capt. John H. Nasmyth Jr.,

especially in the later years when “they started putting a sauce on it and it was pretty tasty.” Note: This sauce was probably fish sauce (nuoc-mam), but it might have been soy sauce.

4983. *Chicago Defender*. 1973. ‘Swing’ into spring with vegetables. March 22. p. 25.

• **Summary:** A recipe for Vegetable shop suey calls for “1½ tablespoons soy sauce (Tamari).”

4984. Dowd, James. 1973. Walworth County Japanese plant approaching grand June opening. *Journal-Times (The Racine, Wisconsin)*. March 28. p. 1E.

• **Summary:** Photos show: (1) Kikkoman’s administrative manager, William Hanchette, with T. Murai, Kikkoman’s executive vice president and general manager of the Walworth facility. The grand opening is set for June 16-18. (2) The hydraulic pressing equipment. (3) The front of the plant, from outside. “Kikkoman Foods, Inc. is nearing the completion date of its 146,000-square-foot, \$6 million plant, which will process, bottle, and ship 3.5 million gallons of soy sauce and teriyaki sauce annually. The Walworth plant, the first built by Kikkoman outside the firm’s Japan home, will be a \$12 to \$15 million investment when it reaches full capacity in about four years.” In Japan each person consumes an average of 3.2 gallons of shoyu each year. “Kikkoman’s administrative manager, William Hanchette, said ‘Kikkoman’s U.S. sales have been growing at the rate of 28% per year.’ Hanchette said the Walworth plant will be ready to ship soy sauce to United States, European, and Latin markets by late June or mid-July.” On 14 Dec. 1972 a ceremonial switch signalled the initial starting of the power plant and the raw material conveying system. “‘Making Kikkoman soy sauce is basically a natural brewing process,’ Hanchette explained. Unlike American made soy sauce that employs chemical reactions, the Japanese brand is brewed naturally for about 6 months.” The process is then described. Kikkoman has 3 sales offices and 13 regional warehouses already in operation in the USA. Five years ago a bottling operation was set up in Oakland, California. Soy Sauce was shipped by tanker from Japan, then bottled in Oakland for distribution in the States. The Walworth County site was chosen in 1971 after a thorough study of available locations. Presently there are 10 Americans employed at the plant and a total of 50 are expected to be employed by June. Once the bottling operation gets under way the plant will employ approximately 100 Americans.

“Hanchette said about 40 Japanese have been sent over to place the plant in full operation. He said eventually the Japanese employees will be phased out and replaced by American workers. The Japanese will return to Japan where Kikkoman maintains 23 plants and employs 4,300 people worldwide.”

4985. Simkowitz, Howard J. 1973. Vegetarian and macrobiotic guide: Europe, 1973; or, The great European health food trip. Craftsbury Publishers, Craftsbury, VT 05826. 111 p. March. 21 cm.

• **Summary:** The majority of this book is a directory and often detailed individual description (including address, nearest public transport station, hours) of European restaurants that serve vegetarian and/or macrobiotic food. Also includes food shops, spiritual centers, maps, vocabulary (in English, French, German, Spanish, and Italian), useful phrases (such as “I would like brown rice with carrots and soy sauce”), and exchange rates. It is arranged by country, and within each country by major cities, and within larger cities by districts. For example, in the British Isles, under London, the author states: “I counted 44 vegetarian restaurants in London. Two of these [Wheat, and Chelsea House] are excellent, and seven others [incl. Cranks, and Cyranos] are quite good.”

See ad in Useful Names and Addresses. 1973. p. 49 (Published by GOMF, Chico, California). Address: Craftsbury, Vermont.

4986. Yoshikawa, Seiji; Nishimaru, Shinya; Tamura, Shinpachiro; Ishima, Toshio. 1973. March. [3 ref. Jap]

• **Summary:** Soyfoods analyzed in the survey are: 21. Tofu. 22. Natto. 71. Miso. 72. Shoyu.

Reprinted from *Nihon Shokuhin Kogyo Gakkai Shi (J. of Food Science and Technology)* 19(4):165-79 (1972). Address: National Food Research Inst., MAFF, Tokyo, Japan.

4987. Erewhon. 1973. Supplying natural food stores, co-ops, schools and communities (Catalog). Boston, Massachusetts. 12 p. Effective April 6, 1973.

• **Summary:** The number of products in Erewhon's catalog has increased dramatically during the past year. An illustration at the lower center of the cover is clip-art showing a man cutting barley. A message on the inside front cover is signed “Thank you all, Paul Hawken.” Below his message is a smaller reproduction of the man cutting barley and below it: “Good morning.”

Contents: Grains: Incl. brown rice (short grain, “Colusa,” OG {organically grown}, California; medium grain, “Golden Rose,” OG {organically grown}, California; medium grain, OG, Louisiana; long grain, OG, Texas; glutenous [sic, glutinous] sweet, OG, California). Wheat (Deaf Smith, hard red winter, or hard amber durum, OG, Texas; Ted Whitmer, hard red spring, OG, Montana; soft white pastry, OG, Washington [state]). Barley, pearl.

Buckwheat groats. Corn. Millet. Oats. Popcorn. Rye. Cereals: Incl. Rice cream. Soybean flakes (Deaf Smith, OG). Stoneground flours: Incl. soybean flour, full fat, OG, Texas. Sweet brown rice flour, OG. Beans: Incl. Azuki beans (100, 50, or 25 lb). Soybeans (OG, Texas, 60 lb). Seeds and nuts: Incl. Almonds. Peanuts (spanish, split). Sesame seeds. Tamari & miso: Tamari soy sauce (8 oz, pints, quarts, half gallon, gallon, 4.7 gallon can). Hacho miso soy paste (1 lb or 44 lb keg). Mugi miso barley-soy paste (1 lb or 44 lb keg). Kome miso rice-soy paste (1 lb or 44 lb keg). Sea vegetables: Agar-agar, dulse, hiziki, kombu, nori, wakame, wakame root. Tea: Incl. Mu herbal beverage No. 9 and No. 16. Kukicha twig tea. Celestial Seasonings herb teas (39 flavors). Pasta: Wholewheat spaghetti, elbows, flat macaroni, and shells. Granola: Five flavors. Snacks: Incl. Corn munchies (organic corn chips with soy sauce). Chico-San corn chips and rice chips. Soybean oil (5 gallon tin). Olive oil. Peanut oil (organic, pint, quart, or 5 gallon tin). Butters: Almond Butter (Golden Farms, OG). Peanut Butter (Erewhon, old fashioned). Sesame butter. Sesame tahini. Honey (Paradise Valley, unheated, unfiltered, clover or orange). Condiments: Sea salt. Sesame salt. Tekka (vegetable-miso condiment). Unusual foods: Ame (rice and barley malt—glucose syrup). McHenry's sorghum molasses. Kuzu arrowroot. Sauerkraut. Umeboshi (plums pickled in brine). For cleanliness: Dr Bronner peppermint castille soap. Infinity herbal products (shampoo and soap). Natural Living Company (sesame cream shampoo, sesame lotion). Orjene (herbal shampoo). Tom's coco-orange all-purpose soap. For cooking: Knives (vegetable, utility, paring), chopsticks, rice paddle, tea strainer, “soy [sauce] dispenser” (4½ inch), oil skimmer, vegetable brush, suribachi, Chinese wok, Quaker City hand grinding mill. Austria Email iron-enamel pressure cookers. Save-a-Tree canvas shopping bags, shoulder bags, and bike bags. Flyers: Organic Merchants N.O.T. list. The Sugar Story. The Oil Story. The Macrobiotic Way. Macro-Ecology. Packaged in cellophane bags with recipes (1 lb, 1½ lb, and 2 lb): Incl. brown rice, wheat kernels, pearl barley, alfalfa seeds (OG), sesame seeds, pumpkin seeds, sunflower seeds, mung beans (sprouting), soybeans (sprouting or cooking, OG), pinto beans, chickpeas, green lentils, green split peas, split red lentils, morning cereal (6-grain cereal blend), infant cereal (koko), tsampa Tibetan barley cereal, rice cream, soybean flour (full fat, OG, 24 oz), soybeans (OG, 2 lb).

A long note at the top of this list states: “In our retail store we like to sell ‘bulk’ whenever possible. But we have found that to many new customers coming into our store everyday, pre-packaged foods such as we are presenting here offer a better introduction to the world of whole-grain cookery. Each package has an appealing ‘kitchen-tested’ recipe on the front so that new friends unfamiliar with these foods can give them a try. Furthermore, some people prefer to buy packaged foods because they feel for various reasons that food sold exposed is not as clean or

pure. There is some truth to that, of course, depending on the store, but in any case we are happy to offer a complete line of Erewhon grains, cereals and flours in attractive, biodegradable cellophane packages. We will be expanding this line of cereals and grains and welcome your comments and suggestions. Please let us know how we can serve you better.”

This catalog cover was reprinted with permission from the Michio and Aveline Kushi Macrobiotics Collection, Archives Center, National Museum of American History, Smithsonian Institution, Washington, DC. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

4988. Eden Foods, Inc. 1973. F.O.B. pricelist. 330 Maynard St., Ann Arbor, MI 48108. 3 p. Effective April 15.

• **Summary:** The subtitle reads: “Serving mid-America with natural foods.” Eden Foods is now selling the following soy products: Soybean Flakes (25 lb bags, organically grown, from Deaf Smith, Texas [Arrowhead Mills]). Soy Flour (50 lb bags, organically grown, from Deaf Smith, Texas [Arrowhead Mills]). Soybeans (50 lb, organically grown, Michigan). Soy-Rice Shells (15 lb, organic, [probably from Erewhon]). Kome Miso (soy paste with rice, 1 lb and 44 lb). Tamari Soy Sauce. Mugi Miso. Soybean Oil (Erewhon, pints, quarts, and 5 gallons). Corn Munchies (organic corn chips with soy sauce, 4 oz.). Rice Munchies (organic rice chips with soy sauce, 4 oz.). Sunflower seeds roasted with tamari (50 lb).

Other interesting products include: Umeboshi (salt plums pickled in brine, 22 lb keg). Kukicha twig tea. Lotus root tea. Pure & Simple Apple Butter. Sea vegetables (Wakame, kombu, hiziki, nori [dried laver], dulse, agar-agar [kanten sea gelatin]).

Note: This is the earliest document seen (April 2006) that mentions Pure & Simple (as a brand). Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

4989. *Los Angeles Times*. 1973. Sukiyaki (Letter to the editor). April 19. p. J31.

• **Summary:** Mrs. K.P. requests a recipe for sukiyaki, which is given. It calls for “1 cape [sic, cake] tofu (soy bean curd)” and ½ cup soy sauce.

4990. Chow, Kin-wan. 1973. Dining out tricky in Hong Kong: Menu pitfalls. *Christian Science Monitor*. March 22. p. C7, 20.

• **Summary:** “I’d like to advise Americans to use soy sauce sparingly, if at all, when eating in a Chinese restaurant. Many seem to pour soy sauce on their dishes as if it were salt, which would really upset the chef if he saw it.”

“For four people, you might like... bean curd with almond cream and mixed fruit.” Or try “diced chicken with soya bean sauce.”

4991. Ready, Anne. 1973. Visitor echoes price complaints: High cost of sukiyaki. *Los Angeles Times*. April 26. p. J2.

• **Summary:** Sashi Kukichi, an ice skating champion, is preparing an authentic sukiyaki for his fiancée. “Another ingredient, tofu, is a soy bean cake that, when cooked, resembles a firm egg custard.” The recipe calls for “1 8-oz. cake tofu, cut in 1-inch cubes, optional.”

The recipe for *Tentsuyu* sauce with tempura calls for “1/3 cup soy sauce” and a dash of MSG.

4992. Bongartz, Roy. 1973. Lost in deepest America. *Saturday Review of Society*. 1:61-63. April.

• **Summary:** About La Choy Food Products Co., of Archbold, Ohio—which calls itself “Chinatown U.S.A.” Located 40 miles west of Toledo, Ohio, Archbold is a nice little town of 3,000 surrounded by cornfields. Yet no men or women of Chinese ancestry were to be found. The La Choy plant uses about 360 million gallons of water a year—so much it has nearly dried up the town’s reservoir. It buys none of its food locally.

The company was started in 1920 in Detroit. Two classmates at the University of Michigan, Ilhan New (Korean) and Wallace Smith (American) had started a company making bean sprouts after they graduated; soon the company was also selling a lot of soy sauce and canned foods. Mr. New eventually left the company and in 1937 Mr. Smith was struck by lightning and killed. Smith’s wife, a native of Archbold, moved the business back home to Ohio, where it has remained to this day. In 1947 [sic, Sept. 1943], La Choy was purchased by Beatrice Foods, a conglomerate.

La Choy believes that are the only company in America that knows how to grow (mung) bean sprouts; they harvest 40 tons a day. Each year La Choy makes a total of 100 million cans a year of 30 different food products.

But why do they call it Chinatown U.S.A.?

Note: This is not the *Saturday Review* that began publication in 1920. Rather *Saturday Review of Society* (ISSN 0091-8571) was a short-lived magazine that ended up merging with other magazines: *World* (New York. 1972) ISSN 0049-8009; *Saturday Review of Education*, ISSN 0091-8555; *Saturday Review of the Arts*, ISSN 0091-8563; and: *Saturday Review of the Sciences*, ISSN 0091-8547; to form: *Saturday review. World*, ISSN 0091-620X.

4993. **Product Name:** Corn Munchies, Rice Munchies (Organic Corn/Rice Chips with Soy Sauce).

Manufacturer’s Name: Eden Foods, Inc.

Manufacturer’s Address: 330 Maynard St., Ann Arbor, MI 48108. Phone: (313) 769-8444.

Date of Introduction: 1973. April.

Ingredients: Incl. soy sauce.

Wt/Vol., Packaging, Price: 4 oz.

How Stored: Shelf stable.

New Product–Documentation: Eden Foods, Inc. 1973. April 15. F.O.B. Pricelist.

4994. Rice, William. 1973. The fair-skinned soybean. *Washington Post*. May 10. p. E1, E16.

• **Summary:** The title of the continuation of the article on p. E16 is “The treasures beneath the surface of the fair skinned soybean.” Mirror, mirror on the wall... The soybean is the fairest vegetable of all, for its dull yellow surface covers a treasure of protein and other nutrients. It is presented in many guises: “tofu (used in Oriental cooking as bean curd), green (fresh) soybeans (prepared as fresh limas, or eaten blanched or raw when very young), dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes), soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes), soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many Americans ‘eating Chinese’), tamari (pure soy–preferred by vegetarians), miso (fermented soybean paste), soybean milk (liquid or powdered), soybean grits and flakes, lecithin (supplement to control cholesterol build-up) and some others. Soybeans have long been available in health food stores.”

Rising beef costs have led to the use of “textured vegetable protein” as an “extender” in ground beef products. Contains 4 recipes using whole dry soybeans or soy flour.

4995. Dosti, Rose. 1973. USC students boast surplus: Cooperative beats the price squeeze. *Los Angeles Times*. May 17. p. K2.

• **Summary:** The women graduate students and undergraduates “who live and cook cooperatively at two Soroptimist residences at USC say they can” eat royally on little money. Each of 20 girls pays \$25 a month into a common food fund and volunteers to cook the evening meal for 10 residents once every two weeks.

Their recipe for Sukiyaki includes “1 cake tofu (bean curd), cut into 1-inch cubes” and “1/3 cup soy sauce.” A photo shows the girls, standing, gathered around a common dinner table, buffet style at USC, the University of Southern California, in Los Angeles.

Note: Soroptimist (“best for women”), founded in 1921, is an international volunteer organization for business and professional women who work to improve the lives of women and girls, in local communities and throughout the world. The organization seeks equality, peace, international goodwill, and to improve professional skills and to support human rights, specifically women’s rights. Its headquarters is in Philadelphia, Pennsylvania. In 2009 it boasted about 95,000 members in more than 120 countries worldwide.

4996. Iacobucci, Guillermo Arturo; Myers, Dirck van Buren; Okubo, Kazuyoshi. Assignors to The Coca-Cola Company

and Kikkoman Shoyu Company, Ltd. (Tokyo, Japan), fractional part interest to each. 1973. Process for preparing protein products. *U.S. Patent* 3,736,147. May 29. 10 p. Application filed 5 April 1971. 6 drawings. [5 ref]

• **Summary:** Process for preparing plant protein products having low phytic acid content by subjecting protein isolates to ultrafiltration in the presence of a suitable chemical reagent. Address: Coca-Cola Co., Atlanta, Georgia 30301.

4997. Ewald, Ellen Buchman. 1973. Recipes for a small planet: The art and science of high protein vegetarian cookery. New York, NY: Ballantine Books. xi + 366 p. May. Foreword by Frances Moore Lappé (Hastings-on-Hudson, New York). Illust. by Diane Coleman. 18 cm.

• **Summary:** Lacto-ovo-vegetarian recipes based on *Diet for a Small Planet* by Frances Moore Lappe. The protein content is given for each recipe. Also contains information on complementary proteins. The author was born in 1946.

The chapter on protein complementarity discusses combinations of rice, wheat, peanuts or cornmeal with soy (in the form of whole beans, grits, flour, or tofu). A chart on protein / calorie comparisons gives the number of calories per gram of usable protein including the following: Defatted soybean flour 11, soybean sprouts 12, low fat soybean flour 12, tofu 15, full fat soybean flour 18, soybeans 20, gluten flour 23; Note that all these are relatively low in calories per gram of usable protein. By comparison: Hamburger 15, brown rice 69, cornmeal (whole, ground) 80.

Many recipes in this book contain small amounts of soy flour or grits, or soy sauce. Recipes containing significant amounts of soy include: All-protein crunchy granola (with soy grits, p. 48-49). New granola (with soy flour, p. 52-53). Orange pancakes with orange sauce (with soy flour, p. 58-59). Soy-sesame peanut spread (with roasted soy flour, p. 67). Peanut paté (with whole soybean and soy sauce, p. 70-71). Hot and sour soup (with tofu, p. 83-84). Soybean stew (p. 85). Peanut, tofu and sesame soup (p. 86-87). Exotic barley stew (with miso, p. 87-88). Cabbage soup for a meal (with soybeans, p. 91-92). Curried rice salad (with soybeans, p. 98-99). Gado gado (with tofu, p. 102-03). Soy-peanut marinade (p. 106). Dairy rich sauce (with tofu, p. 115). Chiles rellenos en casserole (with soybeans, p. 126-27). Herbed soybean bulgur casserole (p. 128-29). Garbanzo and cheese loaf (with miso, p. 133-34). Fesenjon–spiced ground beans (with soybeans, p. 135-36). Bean stroganov (p. 140-41). Crusted cauliflower (with soy flour, p. 143-44).

Breads and other baked goods (each with soy flour or grits, p. 195-274): Whole wheat soy bread. Wheat grits bread. Triple rich bread. Unusual pickle or olive juice bread. Cornmeal wheat bread. High rising bread. Spicy rye bread. Limpa bread. Oat rye soy bread. Caraway rye bread. Sourdough whole wheat bread. Egg and yogurt bread (SD = sourdough). Sun seedy oatmeal bread (SD). Four grain bread (SD). Nut and seed bread (SD). Mixed grain bread

(SD). Crunchy nut muffins. Spiced pear muffins. Basic complementary muffins. Oatmeal muffins. Sour orange muffins. Pancake, waffle, or camping bread mix. Sourdough corn bread. Quick wheat soy bread. Quick molasses bread. Quick coconut bread. Cheese-filled coffee cakes. Walnut-and-raisin filled coffee cake. Orange coffee cake. Chocolate coconut cookies. Pumpkin cookies or bars. Fruit bar crunch. Honey almond bars. Banana spice bars. Gingerbread.

Cooking beans (p. 309-10, including soy and azuki/aduki). Putting more protein in your family's diet (Appendix F, p. 326-31).

Glossary (p. 339-44) discusses miso, soy flour, soy grits, tofu ("Tofu is soybean cheese, also known as bean curd... Some supermarkets carry tofu, and you can also get it in health food stores and oriental groceries and restaurants..."). Address: Berkeley, California.

4998. Mogi, Yuzaburo. 1973. Kikkoman—American plant project—From planning to start up. Paper presented at the Governor's Conference on Business Development. 14 p. Held 16 May 1973 at American Baptist Assembly, Green Lake, Wisconsin.

• **Summary:** With an introduction by William C. Kidd, Secretary, Department of Business Development, Wisconsin. Mr. Mogi earned a B.A. degree from Keio Univ. in Japan, and a Master's of Business Administration (MBA) at Columbia University in New York City.

"Kikkoman soy sauce was first shipped to Hawaii in the 1860's... Kikkoman also had extensive operations in Asian countries until 1945. We had production plants in China, Korea, Malaysia, and some other countries. Our exports reached a peak before the war in 1939 and sales in the United States were about 50% of the total sales in foreign countries at that time. After the war we again started exporting in 1950. However, we lost the market in China, and in addition, because of an import duty and restrictions, it became quite difficult for us to export to other Asian countries...

"At the present time, our main overseas market is America where we are selling more than 60% of our total export... The main consumers of Kikkoman soy sauce in the United States before World War II were Japanese Americans... Our sales increased as the number of Japanese immigrants increased... After the war, we changed sales targets. Instead of limiting ourselves to the Japanese-American market we started to aim for the general American. In order to penetrate the American market we decided to market small size bottles. Before the war we sold soy sauce only in large bottles, casks, and cans... In 1957, we established an American subsidiary for Kikkoman International Incorporated, with its head office located in San Francisco. The purpose of Kikkoman International is to import Kikkoman products and distribute them in the United States. In the 1950's our first efforts were concentrated in large cities on the West coast, mainly in San Francisco and

Los Angeles. The Los Angeles branch office was opened in 1958. In the early 1960's we started to approach large cities on the East coast, for example, New York City. We opened a branch in New York in 1961... and one in Chicago in 1965...

"In order for us to effectively penetrate the American market it was a must for us to have the services of good food brokers. Fortunately we have found very good brokers in various parts of the United States. For example, Myers and Sumder in California are the outstanding food brokers in the nation... Three years ago Kikkoman bought about 55% of the stock in Japan Food Corporation (JFC), the largest Oriental wholesaler in the United States...

"As to the advertising,... in 1956 when Eisenhower was elected President, Kikkoman bought election day T.V. time for vote-count announcements in San Francisco all day long... As we came to spend more money for advertisement we have broadened our advertising strategy. Now we have some national and continuous campaigns...

"About three years ago we built a test kitchen and cooking center in San Francisco, adjacent to the head office of Kikkoman International. We now have home economists there. We have been utilizing these facilities to develop new recipes for soy sauce and to educate customers as to how to use soy sauce not only for Oriental food but also American food...

"In December, 1970... we sent the first investigation team to America. The task of this team was to gather data to enable us to compare the cost of having an American plant rather than exporting the product from Japan. Then it was to find the cost difference among different possible locations for the plant, whether in the West coast, the Mid-West, or the East coast. We asked Mr. Mark Pennington, a consultant in New York, to act as a consultant for the project... We decided that it should be in the Mid-West. The reasons why we made the first decision are as follows: 1. Sales of Kikkoman soy sauce, as I mentioned, have been increasing steadily and have almost reached the stage of making it economically feasible to build a plant. 2. We have to get out from a heavy freight burden. We have been buying most of our main raw materials from the United States, mainly soy beans and wheat from the Mid-West... These freight rates have been increasing sharply every year. Still more, almost every year we suffer from strikes of dock workers. 3. Gradually the cost advantage of Japanese business over the American business has been disappearing. In the past,...labor costs in Japan were much lower than those in the United States... We do not have cheap labor in Japan any more. 4. The yen was devalued. The yen devaluation was not the main factor in our decision...

"The reasons why we made the decision to build the plant in the Mid-West are the following: 1. The present main market for Kikkoman products is the West coast... However, we can expect by looking at the various marketing indexing factors, that there is more market potential for our product in the Mid-West and the East coast. Having a plant in the Mid-

West means that we are able to ship the product from there both to the present main market and to the future potential market easily... 2. Our main raw materials are soy beans and wheat, as I mentioned. The Mid-West is the main center for growing these grains. By having the plant there, we can expect to be able to buy the raw materials at lower costs. 3. In the Mid-West there are many food companies. We can expect to sell our product to them for industrial use.

"We chose the Austin Company, Des Plaines, Illinois, as the general contractor... In September, 1971, the president and other top people from Kikkoman, Tokyo, visited the United States and compared six final candidates for the plant site. Then we finally chose Walworth, Wisconsin. The reasons for the decision are as follows: 1. The labor climate there is excellent. 2. The local people are quite friendly. 3. Walworth is a convenient place for transportation. We can expect to keep freight cost and warehousing costs to a minimum... 4. The state of Wisconsin was receptive to Kikkoman from the beginning. I first visited this state in December, 1970, as a member of the first investigation team... 5. The state of Wisconsin is regarded as a state which produces the best quality foods... 6. In Wisconsin we can enjoy beautiful nature. The air is clean, the water is pure, and we have a lot of green here..."

"The total investment will be about 9 million dollars."
Address: Vice-President, Kikkoman Foods, Inc., Walworth, Wisconsin.

4999. Kikkoman Food International Inc. 1973. Unique in all the world—Kikkoman Soy Sauce (Ad). *New York Times Magazine*. June 3. p. 65.

• **Summary:** The New York Times Magazine is part of the Sunday New York Times and may be simply listed as such.

"One expects dishes using Kikkoman to excel—and they do. Kikkoman has enriched the world of good eating since 1630. No other seasoning can match its long record of achievement. It is one of the oldest brands in existence—the winner of 30 major international awards.

"Kikkoman is naturally brewed and age-mellowed to perfection. It's made from protein-rich soybeans and wheat, fresh artesian water, and salt—plus a prized yeast culture over 300 years in development. There is *no* hydrolyzed protein, *no* corn syrup, *no* caramel, *no* artificial flavor or color of any kind. Just pure natural ingredients.

"Try Kikkoman as a seasoning directly from the bottle on chicken, meats, fish. Use as a recipe ingredient, a marinade, a baste. Add a little to gravies, soups, salad dressings and party dips. It's *unique*—an authentic original!" Recipes are given for Good day pot roast, Un-beef brown gravy, Chicken, and Hamburgers. * Soy sauces vary greatly in taste and quality—do not substitute. Kikkoman glorifies flavor!

5000. *Toronto Star* (Ontario, Canada). 1973. The ugly

soybean contains a wealth of protein, vitamins. June 6. p. 77.

• **Summary:** The article begins: "Mirror, mirror on the wall, what is the ugliest vegetable of all? The soybean. Some call it 'tasteless.' Others ask 'What do you do with it?' Cost-conscious cooks, nutritionists, and the food industry would be far more understanding."

Under the soybean's dull yellow surface is "a treasure of protein, more than any other vegetable, and substantial amounts of calcium, iron, other minerals and vitamins B and E. Also the soybean has more changes of clothes than any beauty queen." Consider the following guises:

"Eaten like peanuts: Tofu (used in Oriental cooking as bean curd); green (fresh) soybeans (prepared as fresh, or eaten blanched...); dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes); soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes).

"Other aspects of the bean are: Soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many North Americans 'eating Chinese'); Tamari (pure soy—preferred by vegetarians); miso (fermented soybean paste); soybean milk (liquid or powdered); soybean grits and flakes; lecithin (supplement to control cholesterol build-up)..."

"Soybeans have long been available in health food stores, and some of the larger supermarkets now carry them." The best variety for food use is said to be Bansei. Canned soybeans, which take less time to prepare, make a good beef extender.

Gives recipes for: Soybeans and mushrooms (with "2 cups cooked soybeans" and 1 tbsp. tamari or soy sauce). Baked soybeans (with "1 pound yellow soybeans picked over and washed." Let the beans soak in a large freezer container for 5 hours, then place them in the freezer for at least 24 hours to reduce the cooking time required. "Place frozen beans and liquid in a large kettle. Bring to a boil and simmer gently until tender, adding more hot water if necessary. This takes 2½ to 3½ hours"). Soybean-mint salad (with 2 cups cooked soybeans or 1 can {15½ ounces}), drained. Soy mayonnaise (with ½ cup soy flour).

5001. Dosti, Rose. 1973. Climax of a study project: 4th graders go Japanese for a meal. *Los Angeles Times*. June 14. p. K16.

• **Summary:** At Third Street School in Los Angeles, the 4th graders are finishing a social studies project on Japan; they are using chopsticks to lunch on a typical, authentic, home-cooked (by their parents) Japanese dinner. There was teriyaki on skewers (seasoned with soy sauce), sukiyaki, tempura, Inari Sushi ("made with aburage, a soybean curd skin, in which seasoned rice is stuffed"), and another kind of sushi made of vinegared rice and codfish wrapped in seaweed (nori). Recipes are given for Teriyaki and Inari Sushi. Two photos show the kids cooking.

5002. Mogi, Keizaburo. 1973. 'A memorable day.' Speech given June 16 by Keizaburo Mogi, President of Kikkoman Shoyu Co., Ltd., and chairman of the board of Kikkoman Foods, Inc. *Times (The) (Walworth, Fontana, and Williams Bay, Wisconsin)*. June 21. p. 2. Special 12-page tabloid supplement on Kikkoman Foods Grand Opening.

• **Summary:** Photos show: (1) Participants in the ribbon-cutting ceremony: William McKonke, Keizaburo Mogi, Governor Lucey, Japanese Ambassador to the U.S. Nabuhiko Ushiba, and Saheiji Mogi. (2) Keizaburo Mogi presenting the "grand opening address," with translator Yuzaburo Mogi at his side. "As you know, the history of our company's shoyu brewing at Noda City in Japan spans nearly four centuries... I consider today to be a truly memorable day..."

"It is my desire from today to contribute to society to the best of our ability, as a good citizen of this community, of the state of Wisconsin, and of the American economy.

"For 4 centuries, under the slogan, 'A better product, at lower price, in greater abundance,' our company has tried its best to contribute to society through a more pleasurable and more abundant eating experience, and further, by always working in harmony with the local society for our mutual prosperity. This social consciousness, I believe, has been the source and the driving force of our development in Japan. As I remarked at the start-up ceremony last year, in America also I intend to put this policy into practice with all the strength at my command."

5003. Mogi, Saheiji. 1973. A thank you ... and a promise. Statement by Saheiji Mogi, President of Kikkoman Foods Inc. *Times (The) (Walworth, Fontana, and Williams Bay, Wisconsin)*. June 21. p. 2. Special 12-page tabloid supplement on Kikkoman Foods Grand Opening.

• **Summary:** The decision to build this plant was made in March 1971. The construction was done very effectively by the Austin Company [Des Plaines, Illinois]. The president will do his best to make this an ideal company in every way, which means: (1) Satisfy customers everywhere in their enjoyment of fine eating and make continuing efforts to achieve ever-higher product quality. (2) "As a member of the Wisconsin industrial community, we must contribute to the best of our ability to the local society and to the larger society in general, by developing our potential as a corporation to the fullest." (3) "For the company employees we will provide stable employment, with the very best prospects for happiness and prosperity."

5004. *Times (The) (Walworth, Fontana, and Williams Bay, Wisconsin)*. 1973. Kikkoman welcomes thousands at week-end open house. June 21. p. 1. Special 12-page tabloid supplement on Kikkoman Foods Grand Opening.

• **Summary:** The two-day celebration of the plant opening took place June 16 and 17, Saturday evening and Sunday.

It included a tour of the plant, Japanese music (including *taiko* drumming) and dancing, and buffet tables of delicious food. "The \$9,000,000 facility on the Big Foot Prairie has been completed and the production of Japanese soy sauce has begun. The plant is on a 200-acre site northwest of the Village of Walworth." A description of the process for making this product is given; no mention is made of the fermentation time, or the use of solvent extracted soybean meal, and preservatives. 72 epoxy resin-lined fermentation tanks each hold 17,000 gallons of moromi. The moromi is pressed twice to obtain the soy sauce. "The company produces more than 100,000,000 gallons annually." More than 1,500 invited guests witnessed the ribbon-cutting ceremony. Before the plant was declared open, a Shinto priestess blessed the building. During the rite Keizaburo Mogi, Japan, chairman of the board of Kikkoman Foods, Gov. Patrick J. Lucey, and Charles Shirk, president of the Austin Co. which erected the building, placed holy leaves on the altar. Summaries are given of speeches by Governor Patrick Lucey, Ambassador Ushiba, John Altpeter (chairman of the Town of Walworth board), John Maillard (chairman of the California Brokers Association), and William McKonke (Deputy Director of the Department of Commerce in Washington, DC). The latter "said he wished the Japanese would build 500 more plants like the Kikkoman plant." He drives a Toyota. Master of Ceremonies Milton Neshek read a 14-line telegram (whose text is printed) of greetings and congratulations from U.S. President Nixon. Other telegrams were read from the Prime Minister of Japan, Minister of Foreign Affairs of Japan, and the Governor of Chiba prefecture, Japan.

"In the tradition of the Japanese plant opening customs, a large yellow ball suspended from the ceiling of the plant was opened, dropping colored balloons, streamers and confetti representing the release of all bad luck, evil and problems of the future. This ceremony was performed by Toyaji Murai, vice president and treasurer of Kikkoman Foods, Inc., and Miss Linda Hodges, Princess Soya, representing the American Soybean Assn."

An illustration filling the top half of the page shows the new plant and its grounds. Photos (p. 3) show the Shinto

blessing and the balloons falling. Page 4, titled “Thousands enjoy hospitality, entertainment,” shows a photo of the *taiko* drummers. Page 5 titled “Kikkoman is host at traditional Japanese celebration dinner,” describes the three-tiered buffet at the Lake Geneva Playboy Club; photos show the featured guests.

5005. *Times (The)* (Walworth, Fontana, and Williams Bay, Wisconsin). 1973. Development history of the Kikkoman plant. June 21. p. 8. Special 12-page tabloid supplement on Kikkoman Foods Grand Opening.

• **Summary:** “Starting with the clearing of the site in December, 1971, the plant took approximately 15 months to complete from groundbreaking to dedication.

“Jan. 18, 1972, several weeks after the clearing of approximately 50 acres had taken place, Keizaburo Mogi, president of Kikkoman Shoyu, broke ground for the production complex—a 146,000 sq. ft. plant with a capacity of 300 bottles of product per minute.”

Another description is given of the shoyu-making process; but again no mention is made of the fermentation time, or the use of solvent extracted soybean meal, and preservatives. “Pasteurization is done at the lowest practical temperature in 6,000-gallon tanks...

“The bottling line is designed to handle 300 bottles per minute of the five-ounce and 10-ounce sizes and 200 bottles per minute of the 20-ounce and 24-ounce sizes...

“Kikkoman anticipates production of 2,500,000 gallons of soy sauce and 1,000 tons of soy cake for cattle feed per year. After several years, production will be doubled.”

5006. *Times (The)* (Walworth, Fontana, and Williams Bay, Wisconsin). 1973. Famous symbol. June 21. p. 10. Special 12-page tabloid supplement on Kikkoman Foods Grand Opening.

• **Summary:** A large illustration shows the Kikkoman logo. “The Japanese symbol of a turtle—a hexagon—is the trademark of Kikkoman Shoyu Company, Ltd., Wisconsin’s new food production firm. The turtle is considered a happy animal by the Japanese. It also means prosperity. Inside the bold Kikko (turtle) hexagon is the Japanese figure called man that means 10,000 or 10,000 years. Together they form the company name and trademark that represents a happy, long life. The mark was first used in 1782 and was registered in the United States in 1906. Kikkoman’s company spirit is expressed by the trademark and by ‘Sangyo Damashii,’ an expression that says it always tries to enrich the daily lives of people by adding to the joys and benefits of good eating. Since 1630, Kikkoman has continuously produced the all-purpose seasoning, shoyu or soy sauce.”

Note: This is the earliest English-language document seen (July 2011) which states clearly that Kikkoman has been making soy sauce since 1630. Quite a few previous ads state simply “Since 1630.”

5007. Oberdorfer, Don. 1973. Now even the soybean curd seems lost to Japanese. *Washington Post*. June 29. p. D11.

• **Summary:** Tokyo—Last night the USA announced an embargo on soybean exports—a big surprise and shock in Japan. Now even tofu, the ubiquitous and much-enjoyed soybean curd, will become more expensive. Soybeans are very important in Japan as a source of both food (beancurd, miso soup, soy sauce, etc.) and feed. 60% of the cooking oil in Japan is soybean oil. The USA supplies more than 90% of Japan’s soybeans, and they are a major item of trade.

5008. Pond, Elizabeth. 1973. The day the soybeans stop—Japanese concern. *Christian Science Monitor*. June 29. p. 1-2.

• **Summary:** On June 27 the United States government started rationing soybean exports. This has become a new sore-spot in Japan-U.S. relations. On June 28, Japan’s Foreign Minister, Masayoshi Ohira, expressed his government’s concern to American Ambassador Mr. Robert Ingersoll. Mr. Ingersoll replied with a promise that the U.S. would try to meet Japan’s demand for a stable supply of soybeans, cotton seeds, and cotton-seed products. He also mentioned that U.S. Secretary of Agriculture, Earl L. Butz, had stated at a press conference that “he would give special consideration to agricultural exports to Japan.”

Japan could be hit hard by a shortage of soybeans. “No Japanese dinner is complete without miso soup (made of soybeans), and 92 percent of Japan’s 3-million-ton annual imports of soybeans comes from the United States.”

Now the Japanese are anxiously awaiting July 2, when the U.S. will issue its country-by-country export allocations [quotas]. “Japan fears that it might not even be allocated the full amount of soybean exports that have already been contracted.” Once the U.S. export allocations are announced, the Japanese are hoping that the soybean export embargo will be lifted within a month—even though it is scheduled to last until the next soybean crop is harvested in September. Nevertheless, dealers will start contracting once the allocations are announced.

Japan is called a “surplus-trade” country by the U.S. meaning that the U.S. buys more from Japan than vice versa. So the U.S. has recently been browbeating Japan to buy more from the United States [conveniently forgetting that Japan has a much smaller population than the U.S.].

Last year Japan bought 3.12 million tons of soybeans worldwide,” and it will buy an estimated 3.2 to 3.5 million this year if the supply is available.

“The price of tofu (bean curd) has already been shooting up in this inflationary year. Now Japan’s many small and medium-size bean-curd and soy-sauce manufacturers and restaurant owners fear that the price will skyrocket 100 percent”—hitting every family budget that includes these daily necessities.

Japan no longer grows many soybeans. Production on the small farms is inefficient, and many Japanese farmers are leaving their farms for the cities. "Even a high price support has failed to halt the decrease in Japanese soybean acreage."

5009. *Food Processing (Chicago)*. 1973. 21 outstanding new food plants: For making new and better products, increasing production, lowering costs [Kikkoman's plant in Walworth, Wisconsin]. June. p. 14-15.

• **Summary:** Kikkoman Foods Inc. (a div. of Kikkoman Shoyu, Ltd.) has built a \$9 million, 144,000 square foot plant on a 2-acre site at Walworth, Wisconsin, to make soy sauce and teriyaki sauce. With a pre-cast concrete exterior, it features two packaging lines: 40 cans/minute and 300 bottles/minute. The waste treatment system is designed for 240,000 gallons/day. It was completed in June 1973.

• **Summary:** Noda is the home city of Kikkoman, and Japan's largest center of shoyu production. Contains 65 old photos (all with captions, many with dates), several maps, a condensed history with many dates, and a chronology from 1558 to 1972. Address: Noda, Japan.

5011. Kikkoman Foods, Inc. 1973. Kikkoman Foods, Inc. (Brochure). Walworth, WI 53184. 12 p. Undated. 28 cm. [Eng]

• **Summary:** This color booklet, with a red, white, blue, and green cover, was handed out at the grand opening of Kikkoman's shoyu plant at Walworth, Wisconsin, on 16-17 June 1973.

Contents: Message from Keizaburo Mogi (Chairman of the Board) and Saheiji Mogi (President). Profile of Kikkoman Foods Inc. (including a brief history of operations in America). Color photos of board members. Kikkoman shoyu production method. Kikkoman Foods, Inc. products. Kikkoman glorifies flavor (contains 4 recipes: Chicken teriyaki, Lamb stew superb, Kikko-burgers, and Salad dressing). The history of shoyu. Kikkoman group: Kikkoman Shoyu Co., Ltd., est. 1917 in Noda. Kikkoman International Inc. (KII), Japan Food Corporation (JFC), Pacific Trading Co., Ltd. (PT, est. 1928), Kikkoman Daitokai (Europe) GmbH (Japanese restaurant chain, est. 1972), Kikko Foods Corp. (est. 1961, for Del Monte brand), Mann's Wine Co., Ltd. (est. 1962 in Tokyo). Seishin Pharmaceutical Co., Ltd. (est. 1961 in Noda, enzymes), Tone Coca-Cola Bottling Co., Ltd. (est. 1962 in Ichikawa City, Japan). Message from Patrick J. Lucey, Governor of Wisconsin.

Kikkoman Foods, Inc (KFI) has capital of \$400,000 (issued). Kikkoman's fundamental corporate aim is "to enrich the daily lives of people everywhere by adding to

the joys and benefits of good eating. In this way we feel that we can best contribute to building a happier and more prosperous society." Chronology of Kikkoman in America: 1868–Kikkoman Shoyu first introduced to America when immigrants from Japan brought kegs of shoyu with them to Hawaii. 1957–Kikkoman International Inc. (KII) established in San Francisco to "streamline import and distribution of Kikkoman Shoyu in America." 1958–Los Angeles branch of KII established. 1960–New York branch established. 1965–Chicago branch established. 1968–Kikkoman begins bulk shipments of shoyu to the USA for bottling at Leslie Foods Co. Facilities in Oakland, California. 1972 Jan.–Ground-breaking ceremony for plant at Walworth, Wisconsin. 1972 March–Kikkoman Foods, Inc. is established. 1973 June–KFI plant starts operating in Walworth, Wisconsin.

Color illustrations show (1) The Kikkoman plant from ground level. (2) A ceramic bottle of shoyu exported to Europe around 1670. Written in blue letters on a white background: "Soy. Manufactured by Sollonyama, Nagasaki, Japan. (3) Scene of shoyu production in Noda 100 years ago.

Color photos show: (1) A Japanese worker handing an American worker a soybean; both are smiling and wearing hardhats. (2) Two men with shovels breaking ground (Jan. 1972). (3) Chairman Keizaburo Mogi at the start-up ceremony (Dec. 1972). (3) The outside of the KFI plant from ground level at dawn. (4) Small circular portraits of the KFI officers: Chairman of the Board Keizaburo Mogi, President Saheiji Mogi, Executive Vice President & General Manager Toyoji Murai, Vice President and Treasurer Yuzaburo Mogi, Vice President and Secretary Harumi Kashima, Assistant Secretary Thomas G. Godfrey, Assistant Secretary Milton E. Neshek. (5) Two views of the inside of the plant plus a flow chart, which includes "seed mold" and "automatic mold culturing." However the text above, titled "Kikkoman shoyu production method," states: "Next, a yeast called Kikkoman *Aspergillus Sojae* is introduced and the mixture is cultured for three days. The resulting culture, 'koji' is mixed with salt and water to make a mash called 'moromi.' Then comes the most important part: the process of leisurely brewing in special fermentation tanks. It is this unhurried brewing process that creates the many compounds and elements that bring out the myriad flavors and subtle aromas for which Kikkoman Shoyu is famous."

(6) 12 Kikkoman soy sauce and teriyaki products and package sizes. The larger cans [1.1 to 4 quarts] also have the word "shoyu" on the label. (7) An American family at dinner with bottles of Kikkoman's soy sauce and Mann's Wine on the table. The mother is holding a large serving of roast beef on a platter, with recipes for chicken, lamb, and burgers overhead. The message: Kikkoman enhances the flavor of meat. (8) Small aerial view of the Kikkoman plant in Noda, Japan. (9) Outside of the KII (Kikkoman International Inc.) offices in San Francisco. (10) Patrick J. Lucey, Governor of Wisconsin. Address: Walworth, Wisconsin.

5012. Kikkoman Shoyu Co. Ltd. 1973. The Kikkoman way of fine eating. Kikkoman Shoyu Co. Ltd., No. 11, 3-chome, Koami-cho, Nihonbashi, Tokyo 103, Japan. 80 p. June 16. Illust. No index. 27 cm. Title changed in 1977 with third printing to The Kikkoman Cookbook. [Eng]

• **Summary:** Contents: Preface by Keizaburo Mogi, President of Kikkoman Shoyu Co., Ltd., June 1973. Contents. Part 1: All about shoyu, by Shigeru Otsuka: 1. Shoyu and Japanese food: Japanese cuisine defeated?, the Europeans come to Japan. 2. Japanese food and nature. 3. Shoyu and nature. 4. Japanization of western food. 5. The basic role of shoyu in Japanese cooking. 6. History of shoyu: Fermentation and taste, commercial production, shoyu and the West. 7. Shoyu production process: Raw materials, koji making, fermentation and brewing, pressing. 8. Shoyu and components: The components of bouquet, flavor components, the coloring of shoyu. 9. Shoyu and cooking, shoyu and health. 10. Conclusion. Part 2: Recipes with brewed soy sauce: 11. Appetizers. 12. Salads and Salad Dressing. 13. Beef. 14. Chicken and Egg. 15. Pork and Lamb. 16. Sea food. 17. Sauces. 18. Miscellaneous. 19. Japanese cooking. Postscript.

The term “shoyu” is used throughout this book, except in the recipes (see p. 7 for explanation).

In the section titled “Japanese cuisine defeated” (p. 8-9) Otsuka states that there is no true “American cuisine,” not even the hamburger and hotdog. There are French, Chinese, Italian, and Scandinavian cuisines, but Japanese cuisine is

not well known. “You may say that this is because there were too few Japanese in the United States, but that theory doesn’t hold water. By 1940 there were 1.5 times as many Japanese as Chinese in America. But Chinese restaurants are to be found in even small towns in all parts of the United States. Moreover, they are patronized almost exclusively by non-Chinese Americans. Japanese restaurants, on the other hand, are virtually non-existent except for the West Coast and New York. Further, until very recently customers of such Japanese restaurants were almost all gastronomically homesick Japanese, or occasional Americans invited there by Japanese friends.”

“Certainly there is no mistaking the fact that Japanese cuisine has utterly failed to spread to other parts of the world.”

In the section titled “The Europeans come to Japan” (p. 10), Otsuka notes that Europeans first came to Japan and tasted Japanese food in the mid-1500s. The first [in about 1543] was a group of Portuguese, who landed at Tanegashima, an island off the southern tip of Kyushu. In 1549 a group of missionaries headed by the Spanish Jesuit St. Francis Xavier arrived in Kyoto, at that time the capital of Japan, and began preaching Christianity. The Dutch traders who followed the Jesuits noticed shoyu and started to export it to Europe. “It was about 100 years later that Louis XIV of France began to prize shoyu as a secret ingredient in the luxurious court fare of the time.” Note 1. Louis XIV reigned from 1643 to 1715. Note 2. When we asked Mr. Otsuka for his source concerning Louis XIV’s use of shoyu, he was unable to give any source. However his source may well have been a 1959 Japanese-language leaflet titled *Mieki* by Yataro Obata. Obata admitted in 1983 that his statement was pure speculation.

This book contains numerous color photos of prepared recipes. On p. 19 is a superb old woodblock print by Hiroshige (lived 1797-1858) showing shoyu being made in 19th century Japan. On page 25 are three black-and-white photos showing: (1) Koji being made in a modern, mechanized koji room. (2) Moromi aging in a large, round modern vat. (3) Shoyu being pressed from pressing cloths by modern hydraulic presses. Address: Tokyo, Japan.

5013. Sickler, Roberta. 1973. Ritual of the hearth: A cookbook of 20 menus and 117 unique vegetarian recipes in praise of life. New York, NY: Macmillan Publishing Co. x + 195 p. Illust. by the author. 26 cm.

• **Summary:** The recipes are grouped by season. Soy-related recipes include: Snow pea soup (with 3 bean-curd cakes [tofu] (each about 3 inches square by 3/4 inch thick), soy sauce, and hoisin sauce, p. 4). Green broth (with bean cake [tofu], p. 84). Tofu (homemade from soy flour and lemon juice, p. 86-87; “Tofu is a rich, delicate curd from soybean. It is especially good for summer, served cold with raw vegetables, or in hot soups or sauces. Tofu is

made fresh daily in many Oriental neighborhoods, and sold in the form of small squares. It can be made at home quite successfully.”). Tofu and summer vegetables (with “1 3/4 cups tofu curds, or 3 tofu cakes, cubed,” p. 87). Soy bechamel sauce (with soy flour and Tamari soy sauce, p. 130-31; “We use dark Tamari soy sauce because it is aged slowly in wood and has a light, deep flavor.”). Soy burgers (with whole soy beans, soy oil, soy sauce, miso paste, and soy flour, p. 183-84).

5014. *New York Times*. 1973. Japanese upset by U.S. soybean curbs. July 7. p. 27, 32.

• **Summary:** Many Japanese are angry at President Nixon for his ban on exports of soybeans last week. Japan obtains 92% of her soybeans (nearly 3 millions tons a year) from the USA. These soybeans are needed, however, to meet shortage of cattle feed in the USA. Last Monday in Washington, DC, officials replaced the embargo on soybeans with a system of export licenses. Meanwhile, the price of soybeans has skyrocketed.

Japanese use soybeans in many foods, including “miso soup, a soybean broth.” Tofu (soybean curd) and fish are the two most important sources of protein for Japanese, according to Kuniyoshi Takagi, managing director of the Federation of Tofu Makers’ Associations. Makers of soy sauce say the USA has supplied all of the 240,000 tons of soybeans the industry consumes each year, according to Kaoru Ito, managing director of the Japan Soy Sauce Brewers Association. There was even concern at the restaurant Sasa-no-Yuki (snow on bamboo sprouts), which serves only tofu in 12 varied dishes; a full tofu dinner of 8 tofu dishes costs not more than \$3.00.

The Japanese government, deeply upset, placed soybeans at the top of a list of controlled commodities under a new regulation (that went into effect today) against hoarding and price manipulation. Japan’s “stocks of soybeans stood at 400,000 tons at the end of May, and are expected to drop to 200,000 tons by Sept. 30, and be exhausted by Oct. 31 if there are no further imports,” according to a spokesman for the Ministry of International Trade and Industry.

While the Ministry of Agriculture and Forestry urges the U.S. government to insure that Japan has a steady supply of soybeans, Japanese officials are also “looking for other sources and accelerating programs to increase local production.”

A bar chart shows: (1) U.S. soybean exports to the world: In 1971–420 million bushels worth \$1.3 billion. In 1972–441 million bushels worth \$1.5 billion. In 1973 (first 5 months)–248 million bushels worth \$1.3 billion. (2) U.S. soybean exports to Japan: In 1971–98 million bushels worth \$311.1 million. In 1972–109.4 million bushels worth \$375.4 million. In 1973 (first 5 months)–62.5 million bushels worth \$347.7 million.

5015. *New York Times*. 1973. Japanese upset by U.S. soybean curbs. July 7. p. 27.

• **Summary:** Hiroshi Higashimori, Secretary-General of the Japan Oilseed Processors Association, expressed the feelings of many Japanese in all walks of life, when he said, “We’re really angry at Nixon-san.”

The anger is a result of the U.S. president’s ban last week of soybean exports. “In Washington [DC] last Monday, officials replaced the embargo on soybean with a system of export licenses. Exporters will be allowed to ship 50 per cent of their soybean orders on hand as of June 15 and 40 per cent of their order for soybean meal.

Not long ago, when President Nixon established détente with Peking, without first informing Tokyo, the Japanese called it the “Nixon Shokku.” Now the soybean export embargo is being called the “Shoyu Shokku” [soy sauce shock].

Soybeans are used in Japan to make foods and ingredients that appear in almost every meal. They are a key source of protein in the Japanese diet. The typical breakfast, for example, includes miso soup. Fish and tofu [soybean curd] are two of the most important sources of protein in the Japanese diet, said Kuniyoshi Takagi, managing director of the Federation of Tofu Makers’ Association. Yet he fears that both will become remote from the daily diet, “fish because of contamination and tofu because of the U.S. embargo.”

Makers of soy sauce are also concerned says Kaoru Ito, managing director of the Japan Soy Sauce Brewers Association. The U.S. has supplied all of the 240,000 tons of soybeans that the soy sauce industry imports and processes each year in Japan.

There was even concern at Sasa-no-Yuki (“Snow on bamboo sprouts” [leaves]), a restaurant that features tofu as the centerpiece of 12 varied dishes; a full dinner of 8 tofu dishes costs a maximum of \$3—which is remarkably low for Tokyo. The Japanese government, deeply upset at Washington, “has placed soybeans at the top of a list of controlled commodities under a new regulation against hoarding and price manipulation that went into effect today.”

Meanwhile, Japanese officials are looking for other sources of soybeans.

A two-part bar graph shows U.S. soybean exports in millions of bushels. (1) Exports to the world grew from 420 in 1971 to 441 in 1972 to 248 for the first 5 months of 1973. (2) Exports to the Japan grew from 98 in 1971 to 109.4 in 1972 to 62.5 for the first 5 months of 1973. Source: Department of Commerce.

5016. Moorhead, John D. 1973. Little yellow bean pushing up prices: Whole world wants multipurpose soy meal. *Christian Science Monitor*. July 11. p. 1.

• **Summary:** Boston—“Soybeans: These unassuming yellow beans are the richest and cheapest source of protein known. And their meal makes the world’s best animal feed.” When

president Nixon slapped an embargo and then strict controls on exports of soybeans, he was hoping to reduce soybean prices in the USA, and thereby eventually to reduce the price of meat.

Exports of soybean meal were 27% ahead of expected levels and a serious domestic shortage of soybeans was feared.

Nixon's soybean embargo has hurt the Japanese hardest—even though they were the best customer for U.S. soybeans. U.S. soybeans comprise 92% of all soybeans imported to Japan. Of those, 80% are “used for animal feed and the rest for such human staples as tofu (bean curd) and soy sauce.”

A cartoon shows a personified soybean, wearing a big smile and a king's crown, holding in one hand a scepter with a dollar sign on it, sitting on a little mountain of dollar bills.

5017. Oberdorfer, Don. 1973. Japanese attack U.S. trade policy. *Washington Post, Times Herald*. July 17. p. A1.

• **Summary:** Tokyo, July 16—Secretary of State William P. Rogers and other senior U.S. officials were subjected to a barrage of criticism today for alleged American deficiencies as a trading partner.” At this joint cabinet-level conference on economic affairs, Rogers said that the curbs were “unavoidable and temporary.”

Until just a few months ago, Washington [DC] was doing the complaining concerning the very large bilateral trade imbalance in favor of Japan; Washington made strong demands that the Japanese buy more from the U.S.

“At least four Japanese ministers, headed by Foreign Minister Masayoshi Ohira, expressed official dismay at the export restrictions during today's meeting here.” Secretary of Agriculture Earl Butz was scheduled to be at the joint meeting, but he cancelled at the last minute, saying that he had urgent business to attend to in Washington. In his place he sent Undersecretary of Agriculture J. Phil Campbell.

“At a private hotel luncheon Sunday in the resort town of Hakone, Campbell and his wife heard little or nothing about Japan's special need for soybeans from the lips of their host, Agriculture Minister Yoshio Sakurauchi. However it did not escape their notice that the luncheon menu included boiled soybean snacks (edamame), Japanese soybean soup [miso soup], soybean curd squares (tofu), vegetables mixed with soybean curd [shira-ae], and cucumber with soy sauce.”

5018. Chico-San Inc. 1973. Chico-San Inc. products: A catalog of unique foods. P.O. Box 1004, Chico, CA 95926. 26 p. Revised July 1973.

• **Summary:** Soyfoods imported from Japan include Lima Soy Sauce, Soybean Puree (Miso), and dehydrated miso. They also sell black [soy] beans.

Rice-based products include: Yinnies Grain Syrup (“a low cost natural sweetener made from whole grain barley and organically grown brown rice,” in a 12 oz. jar; a photo shows the jar and label); a 3-page description tells how the

product is made and gives its composition (maltose is the key natural sugar); recipes are included. Yinnies (“A traditional Oriental grain candy. The ingredients are organically grown brown rice and barley. No sugar or artificial sweeteners are used.”). Rice chips with buckwheat. On the label of the Yinnies confection product the following statement appears: “The rice for the Yinnies is grown and harvested exclusively for and under the direct supervision of Chico-San by Wehah Farms of Richvale, California.” A similar statement appears on the Rice Chips label.

Corn Chips. Rice Cakes (3 types, each with brown rice and sesame seeds: Plain, with Millet, or with Buckwheat). San-Wich Rice Cakes—Unsalted (Ingredients: Brown rice [organic], sesame seeds, Chico-San yinnies syrup (brown rice and barley), various sea vegetables, and kuzu).

One section (p. 9-10) is titled “How Chico-San guarantees Oriental-type, organically-grown brown rice.” The words “Reprinted from *Health Foods Business* magazine” and “Wehah Farms” have been carefully deleted from the text of this article!

This is the revised edition of an earlier catalog. “Chico-San products have gained increasing acceptance throughout the country since their introduction in 1960.” The booklet contains 8 pages of recipes, including: Sesame-miso spread for bread or dips. Black soy beans (p. 21). Wakame miso soup. Note: This is the earliest macrobiotic recipe seen which uses the term “Black soy beans” instead of “Black beans” to refer to black soybeans. Address: P.O. Box 1004, Chico, California 95926.

5019. Harper, Anne. comp. 1973. Soybean processing and utilization: A partially annotated bibliography.

Jakarta, Indonesia: Lembaga Ilmu Pengetahuan Indonesia (Indonesian Inst. of Sciences), Jl. Tjilik Riwut 43, Jakarta. vi + 56 leaves. 30 cm. [440 ref. Eng]

• **Summary:** Contents: Preface (by Prof. Sarwono Prawirohardjo, Chairman, ASEAN Permanent Committee on Science and Technology). Introduction: The soybean (*Glycine max*), soybean meal and oil, food uses, industrial uses, scope of the bibliography (“excludes references to non-alimentary utilisation of soybeans” and to “references to alimentary utilisation where the harvested plant has not undergone processing by either fermentation or oil extraction”), terminology of soybean processing (soybean meal, soy flours and grits, solvent extraction, miscella, desolventizer-toaster, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, soy protein concentrates, soy milk, Saridele, yuba, soybean curd [tofu], aburage, koritofu [kori-dofu, dried frozen tofu], soy protein isolate, protein fibre products {spun, spinnerettes}, extrusion-expansion products, fermentation products {ontjom, *Neurospora sitophila*, soysauce, shoyu, *Aspergillus oryzae*, koji, moromi, tamari, koikuchi, natto, miso, tempeh, *Rhizopus oligosporus*, soybean cheese, sufu,

Mucor sufu}, Zygosaccharomyces).

General (p. 1). Fermentation products (p. 2-16). Soybean oil, meal, and protein (p. 17-42). Nutrition (p. 43-56). Note: 500 copies were printed. Address: Indonesia.

5020. Ikeda, Masanori. 1973. Food additives moving into wider applications. *Business Japan* 18(7):51, 56, 61-62, 64. July.

• **Summary:** The section on “Shoyu (Soy Sauce)” states: “Of the various condiments used by the average Japanese over a given year, shoyu or soy sauce constantly ranks first or second, accounting for 18.2 to 20 per cent of total condiments, according to figures by the Prime Minister’s Office Statistics Bureau.”

“There are about 4,000 shoyu producers in Japan, turning out approximately 1,200,000 kiloliters per year. About 40 per cent of the total is produced by five leading producers, and 60 per cent by the rest.” The quality of shoyu made by all companies in Japan is excellent “because the government maintains a strict inspection system under the Japan Agricultural Standards (JAS).”

“Before World War II, some shoyu was exported. But in the 10 years following the end of the war [1945-1955], Japan had little capacity to export due to the difficulty of securing sufficient raw material. Production barely met domestic demand. As the Japanese economy began to recover, exports were resumed.

“Full scale exports began in 1957. Since then Japan has shipped approximately 2,600 kiloliters annually overseas. In 1972 Japan exported approximately 8,000 kiloliters.”

“Shoyu produced for export is graded into two categories—A and B—and the inspection standards are considerably higher than the JAS for domestic consumption. Only products that pass this strict examination are approved for export.”

“Sauces: Sauce manufacturers in Japan (producers of fruit sauce and Worcestershire type sauce) total about 300 in number.” The top ones are Kagome, Ikari, Bulldog, Kikkoman and Chicken. Address: Director General, Food and Marketing Bureau, Ministry of Agriculture and Forestry.

5021. Kikkoman. 1973. Discover new taste—Kikkoman. *Business Japan* 18(7):57. July.

• **Summary:** This full-page ad shows a dispenser of Kikkoman shoyu, tilted downward, at the top, and below it (from top to bottom) a set of measuring spoons, a bowl, a ladle, a dish, a metal skillet and a wok.

The bottom quarter of the ad is devoted to text, which begins: “By the spring of 1973, Americans will be able to taste the delicate flavor of genuine Japanese soy sauce brewed and bottled in a plant now under construction in Wisconsin. It is just one facet in Kikkoman’s worldwide operations... Kikkoman soy sauce is exported to more than 70 countries—proof that it goes well with any kind of food

anyplace.”

Across the bottom of the ad are the Kikkoman hexagonal logo (Since 1630) and, in large bold letters, “Kikkoman soy sauce.”

5022. Eden Foods, Inc. 1973. Wholesale prices. P.O. Box 100, Ann Arbor, MI 48107. 3 p. Catalog. Effective Aug. 1.

• **Summary:** The products are very similar to those in the April 1973 catalog. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

5023. Blinn, Johna. 1973. Food’s a way of life for Jim: Celebrity cookbook. *Chicago Tribune*. Aug. 9. p. W8, or S8, or N8.

• **Summary:** Actor James MacArthur and his second wife live right on the water near Diamond, Honolulu. Currently they are “on a macrobiotic diet kick,” and they eat no meat. He has lost 9 pounds without any effort and he eats as much as he wants. His mother is actress Helen Hayes. Contains a recipe for James MacArthur’s vegetable omelet, which calls for “1 tablespoon tamari (undiluted soy sauce).” A portrait photo shows James MacArthur. Address: Honolulu.

5024. Erewhon. 1973. Supplying natural food stores, co-ops, schools and communities (Catalog). Boston, Massachusetts. 12 p. Effective Aug. 20, 1973.

• **Summary:** The structure and design of this catalog is quite similar to the previous one of April 6, however some new products and sizes have been added. The illustration and note from Paul Hawken are similar. OG = Organically grown. products: Cereals: Soybean flakes (Deaf Smith, OG, 25 lb). Stoneground flours: Soybean flour, full fat, OG, Texas, 50 lb. Beans: Azuki beans (100, 50, or 25 lb). Soybeans (OG, Texas, 50 lb). Tamari & miso: Tamari soy sauce (8 oz, pints, quarts, half gallon, gallon, 4.7 gallon can). Hacho miso soy paste (1 lb or 44 lb keg). Mugi miso barley-soy paste (1 lb or 44 lb keg). Kome miso rice-soy paste (1 lb or 44 lb keg). Pasta: Wholewheat shells (with rice and soy flour, 15 lb). Snacks: Corn munchies (organic corn chips with soy sauce). Hopi Seeds (all dry-roasted with tamari, 1.38 oz or 25 lb): Almonds, cashews, pumpkin seeds, soybeans, sunflower seeds. Vegetable oil, pressed and unrefined: Soybean oil (pint, quart, 5 gallon tin). Condiments: Tekka (vegetable-miso condiment, 3 oz). For cooking: Soy [sauce] dispenser (4½ inch). Packaged in cellophane bags with recipes (1 lb, 1½ lb, and 2 lb): Soybeans (sprouting or cooking, OG, 1 lb or 2 lb) stoneground soybean flour (full fat, OG, 24 oz), soybeans (OG, 2 lb). Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

5025. *New York Times*. 1973. How families abroad are coping at the market: Some Japanese changing diets. Aug. 28. p. 37.

• **Summary:** In Tokyo, there is a widespread awareness that fish is too contaminated with mercury to eat safely. The other

traditional source of protein, soybean products, have jumped in price because of the U.S. soybean embargo. In the last two months, the price of “tofu (bean curd or bean pudding)” has gone up 13 cents to 19 cents; a bottle of soy sauce 51 cents to 64 cents; cooking oil 55 cents to 70 cents,...

Despite the rise in prices, tofu and miso soup are still regular parts of the diet for most Japanese.

A bar graph shows the percentage of income spent for food in 1971 in various countries: U.S. 17.6%. Germany 21.9%. Britain 22.3%. France 26.5%. Japan 30.7%. India 60.0%. Africa (various) 70.0. Source: Bureau of Labor Statistics. Grocery Manufacturers of America.

5026. Hawken, Paul. 1973. Erewhon: A biography. The view within. *East West Journal* 3(8):11-16. Aug.

• **Summary:** An early, critical history of Erewhon, written without any capital letters [all lowercase], expressing the viewpoint of one of its early, important, and very innovative presidents. “Arrogant” is a term often used to describe the attitude of the people running the company. A store by the name of “Erewhon” opened in May 1966 on Newbury St. in Boston, first manned by Evan Root, then Paul Hawken.

Paul “generally worked alone for first year [at Erewhon in Boston] with the exception of occasional help from members of the community—Elaine Sutton, Connie Frank, Peggy Taylor, and even Michio would help bag and clean.

“At that time I was much more interested in lectures, books, ideas, and more invisible things than food. I had no intention of doing Erewhon for very long, but that was before the remarkable and compelling visitations upon my brain that were precipitated by a five week fast augmented by only [brown] rice and water.” Paul then describes the profound spiritual experience he had in 1966—one of great light and energy reaching down to the cellular level. “I could fully experience in that one moment the indivisibility of consciousness and body.”

“Since nothing could really change until cells changed, it seemed the most logical thing was to provide the resource for that change to those who were ready for it. Soil and land would have to be found that was rich and uncontaminated... food should contain the life force inherent in natural growth. The problems posed were complex and many but all these questions gave me the answer as to the purpose of Erewhon... for those seeking the unveiling of the spirit, Erewhon would attempt to provide the renewing and cleansing power of the earth.

“This ‘visceral mysticism’ was a turning point for me and my relation to Erewhon. No revelation can arise unless ignorance precedes it, and the greatest lesson from this vision was the realization of how little I really knew or understood. My ignorance in the matters of spirit and consciousness were so great that I felt more at home with more plain and simple matters. Raising the quality of food seemed an area that was neglected, yet vital, in the path to higher consciousness.”

In 1966 “On Thanksgiving day 1968 we opened a new store down the street [at 342 Newbury St.] which still exists today. At that time we were doing about \$250 a day and the rent on the new store, with utilities, totalled over \$1,000. It was a chance we took, a big chance, and seemed to set the pattern for many to come. The decision to place our economic life on the line was based on growth. By then Erewhon had grown to be six people, and all of us felt in our bones that we had a tiger by the tail. A sort of giddy optimism pervaded the new store, abetted by all of us working 12 to 20 hours a day—Bruce Macdonald, Jim Docker, Jean Allison, Bill Tara (later to leave for Chicago, Illinois), and Roger Hillyard. The intensity was so thick you could scoop it up and bag it. All of us felt like passengers on a very fast vehicle bound for unknown places. Business was increasing very rapidly and it seemed we could do no wrong. Time moved very quickly and I was soon to leave for Japan to establish a source of imported foods. My position as to coming back was ambivalent, so Roger Hillyard was appointed head in my absence. Bill Tara, who had set up Food for Life in Chicago on the tenth floor of a downtown office building, left for Los Angeles with Aveline [Kushi] and set up another Erewhon due to Aveline’s prodding. It was later to prove to be our worst mistake and almost led us to bankruptcy.

“While I was away, roaming around Japan looking for pure foods and wise men, Roger [Hillyard] and others were busy establishing a wholesale business based primarily on the products that were being sent back from Japan. In retrospect, those times were chaotic, and I do not think the chaos let up until four years later, the spring of 1973. The chaos was (as I think back upon it) caused by thinly veiled ambition clothed in a stylishly cut suit of concern for our biosphere and guts. Perhaps this was a reflection of our urgent need to make up for years of bad living, bad ideas, and trash foods. In any case our actions were hasty, well-intentioned, very salty, and somewhat crude, but like a moldboard plow, we just kept coming.

“Chico-San saw us coming and promptly freaked out. They were very dismayed by their loss of New York business as our wholesale market developed. Chico-San had given us the impression in a number of personal conversations that they encouraged our self-reliance and particularly the importance of Japanese foods. Bob Kennedy, the head of Chico-San, candidly admitted that they lost money on imported items and they were able to stay in business only because they sold rice cakes. So it came as quite a surprise to us when they reversed their attitude. They began to express doubts about our motives and ability to procure good foods. Their attitude seemed to change into one where they were the ‘official’ food company, and that was that—appointed by the crown as it were. I can certainly see now how our brashness and youth did nothing to allay their doubts. In retrospect I have much sympathy, while realizing also that they did little

to establish a real dialogue.

“Chico-San was formed by middle-aged people who split from New York City after Ohsawa walked into one of their meetings one night stoned on Scotch [whiskey] and announced the bomb was going to drop. This was during the Cuban [missile] crisis and there were many who shared that fear. They formed a well-organized caravan of families and trekked across the United States in a trip that got national coverage. Their purpose was to find the one place in America that was safest from radioactive fallout and also ideal for growing rice. Eureka! Chico, California. No one was more surprised than the local residents. The rift that opened between Erewhon and Chico-San has never closed. The rift could best be described as an ocean now. Peaceful coexistence. They mainly felt that their maturity and experience uniquely qualified them to be the best judge of what foods people should or should not eat. They thought that there should be only one ‘label’ and that we did not know enough about food to promote it... Herman Aihara who worked there then and Bob Kennedy felt that most young people had been ‘ruined’ by drugs and that their ‘judgment’ could never be completely restored,...” Continued. Address: [President, Erewhon].

5027. Hawken, Paul. 1973. Erewhon: A biography. The view within (Continued—Part III). *East West Journal* 3(8):11-16. Aug.

• **Summary:** Continued: Hawken returned to Boston in Dec. 1969, then was fired by Aveline Kushi. He left and worked in San Francisco with Fred Rohe at New Age Natural Foods. Hawken returned to Erewhon in Boston in the summer of 1970.

In 1970 the “natural foods boom” started and swept Erewhon along with it. “If there is one person who is ‘most’ responsible for Erewhon being here today and not bankrupt, it is John Deming, who brought a sense of joy and happiness wherever he went in the company. He assumed the manager’s position at the retail store and made it the finest part of the company. His positive attitude was in contrast to the apprehension that all of us shared about the future. He gave Erewhon some money without which we would surely have failed. On his twenty-fifth birthday John came into a trust which sort of blew his mind. He had known nothing about it. He wanted to just give it to Erewhon, but it is on the books as a loan. It came just in time to pay back overdue creditors and panting bank officers.”

A table (p. 16) shows Erewhon, Inc.’s sales and sources of supply in 1966 and then in 1973. In 1966 Erewhon had about 200 retail customers. The company bought Koda rice from Sam Rabinowitz; imports from Chico-San, Infinity Co., Japan Foods Corp., and Wing-Wing; Lima (Belgium) products from Merit; grains and flours from Better Foods; and flour from Walnut Acres [founded by Paul Keene].

In 1973 in Boston the warehouse served about 200,000

customers (incl. 200 retail natural food stores, 43 Star Markets, 50 co-ops, 25 schools, 9 distributors, 10 restaurants, and 5 bakeries), and the store about 10,000 customers. In Los Angeles, the warehouse served about 75,000 customers (incl. 150 retail stores, 20 co-ops, 3 bakeries, and 10 distributors) and the store about 5,000 customers. A produce company in Los Angeles was supplied by about 40 organic farmers, and sold to 20 retail stores. Concerning soy products, Erewhon bought organically grown soybeans from Lone Pine in Arkansas [Carl Garrich of the Lone Pine Rice and Bean Farm], and soy oil from California. From Muso Syokuhin in Japan they imported tamari, and kome and hacho miso [plus azuki and black beans]. From Mitoku, Inc. they imported tamari and mugi miso.

Suppliers of organically grown grains included: Short, medium, and sweet rice (Wehah Farms, California). Medium rice (Willow Farms, Louisiana). Spring and durum wheat; flax (Ted Whitmer, Montana). Long rice (Jerry Ladds?, Texas). Winter wheat (Frank Ford, Arrowhead Mills, Texas). White wheat (Lewis Cox & Bill Ingram, Washington state). Buckwheat (Penn Argyl, Pennsylvania). Corn (Bill Stockett, Texas). Millet (Chuck Moses, North Dakota). Oats (Fruen, Minnesota). Rye (Mike Skinner, Colorado). Peanuts (Chas. Warnken, Texas).

Note 1. This is the earliest document seen (July 2011) that mentions Mitoku, or Muso Shokuhin.

Note 2. This is the earliest document seen (March 2006) that mentions Food for Life (started by Bill Tara in Chicago, Illinois). Address: [President, Erewhon].

5028. Ohsawa, George. 1973. Practical guide to Far-Eastern macrobiotic medicine. Herman Aihara, editor. The George Ohsawa Macrobiotic Foundation Inc., 1471–10th Ave., San Francisco, CA 94122. xi + 260 p. Aug. 21 cm.

• **Summary:** This book has a red, white, and black cover with a round yin-yang (t’*ai chi*) symbol on it. The Foreword begins: “This book, a compilation of several books and writings of George Ohsawa, attempts to give the whole scope of macrobiotic medicine to everyone.” It includes the first English translation from French of Ohsawa’s 1956 “Guide pratique de la médecine macrobiotique d’Extrême-Orient.”

Contents: Forward [sic]. Preface. Introduction. Theory of macrobiotic medicine. Curing sickness. Cure the man. Letters from students of macrobiotic medicine. Appendix.

Information on soyfoods is found on the following pages: Tamari bancha (syoban, p. 85, 102). Miso (fermented soybean puree, p. 85). Tekka (miso, p. 87, 95). Tofu plaster (p. 88, 110-11, 125-30). Miso soup (p. 96). Koi-koku (Carp soup with miso, p. 99). Aburage (Age, p. 99). Deep-fried vegetable tofu (ganmo, with “1 tofu, ½ lotus root cut small, 2/3 inch jinenjo {nagaimo}, ½ inch carrot cut small, 2 inches burdock cut small, 1 quart oil, 1 cup whole wheat flour.” Grid the tofu well in a suribachi, adding a pinch of salt, p. 99). Vegetable with ganmo (p. 100).

Note: This is the earliest English-language document seen (May 2012) that contains the word ganmo; it refers to deep-fried tofu burgers.

Dried radish with age ([aburage], see recipe 32, p. 100). Yin/yang soboro (with miso, p. 101). Scallion miso. Onion miso. Shigure miso (p. 103). Pheasant nituke [nitsuke] (with miso, p. 104).

The forward [sic] by Herman Aihara, editor, notes: “This book, a compilation of several books and writings of George Ohsawa, attempts to give the whole scope of macrobiotic medicine to everyone. The main part is treatment for sickness. However, treatment without understanding of principles and a good attitude is dangerous, therefore, the theory of macrobiotic and other articles were added. The book, like its predecessor, *The Unique Principle*, is unique not because of its name and contents, but rather in how it was translated, edited and published.

“The first part is a translation taken from Japanese books such as, *A New Dietetic Cure*, *How to Cure Sickness and a Sick Man*, and *Vegetarianism*. The second part is a translation from the French edition of *Practical Guide to Far-Eastern Medicine* which was done by Ann Harris. Noboru Muramoto was consulted to suit remedies to present-day American needs.

“Cornellia Aihara translated *Cooking for the Sick* which was written by Lima Ohsawa. *Massage and Palm Therapy* are based on notes taken by Cynthia McCluskey at Mirimichi Summer Camp, 1972. Photos of Cornellia demonstrating external treatments were taken by Fred Pulver. *The Manual of Macrobiotics* is a contribution of Nina Bond who took notes at George Ohsawa’s lectures in New York at Summer Camp held about ten years ago.

“The third part is a translation from French and Japanese by Fred Pulver, Lou Oles and Herman Aihara.

“The last part is again taken from several articles appearing in past issues of *The Macrobiotic* magazine. The Appendix is taken from a translation of the French edition of Ohsawa’s *Practical Guide to Far-Eastern Medicine*.”

The preface, by George Ohsawa, states: “I am very happy to give you this short, simplified translation of my book, *Cure—Following the New Way of Eating*. It was originally written in Japanese, and is now in its 465th edition. I want to share with you the practical application of Macrobiotic healing that I have been teaching for almost 40 years—leaving aside the conceptual aspects covered in my other books and classes.

“Herein is the synthesis of my medical philosophy, which is nothing but the biological, physiological and dialectic interpretation of Far Eastern philosophy—the principles of the Order of the Universe and the Order of Man. For 30 years I have been writing on both the practical and theoretical sides of this question and have published more than 20 books and thousands of articles. But at this time I wish to limit myself to giving easily accessible

information.

“My medical philosophy, the way of eating and the art of longevity and rejuvenation, is so simple and inexpensive that anyone can follow it any time, anywhere. If you decide to cure yourself before all else, you can forget about the bitter, painful and costly suffering that results from medical, physical, psychological and religious therapies.

“This system depends on you alone. No reliance on other people or on artificial means—everything depends on how you eat.”

In the first chapter titled “How did I find macrobiotics? The principle of life,” Ohsawa continues: “I was born at Sagano, Kyoto, Japan in 1893. My mother could not produce enough milk and I was a weak baby. I was told by mother that I almost died five times before I reached the first birthday. My family was poor. Father was a principal of an elementary school of a small village before I was born. Then my parents moved to Kyoto where he became a policeman. Mother worked at home to help finance—making strings for kimonos. Mother was an industrious woman. She studied Western science and culture through Yuzuru Nijima who was the founder of the Doshisha University. She died at the age of 30 from tuberculosis, leaving two sons. I was 10 and a younger brother was 6. Two sisters had died earlier due to the wrong diet which my mother introduced in our family through her study of Western science and culture.

“From that time we lived sad days as poor orphans. I was an apprentice in a Buddhist temple as a disciple. However, I soon started to vomit blood like my mother and sisters did. At 18, I had to give up my school, medicine, eggs and meat because I was too poor to continue such expensive living. I lived in the lowest living condition. In other words, I lived with brown rice, radish pickle and salt plum even though I was told that my sickness—tuberculosis—required eggs and meats by the doctors and my mother who gave us milk, eggs and bread every morning (which was violating natural order). We were punished for this violation. Such a diet destroyed our family’s health. I, however, resented that I could not afford to continue such a diet because I didn’t know the fact that such a diet was the cause of mother’s and sisters’ death and my sickness. If I could have afforded to continue that diet, I would have died at that time. I am so grateful that I was poor...

“Curing all my diseases and re-establishing my health at the age of 20, I realized that food is the source of life. After realization of this important fact, I decided to devote my life to preaching this doctrine...

“I traveled to France for the first time in 1914. Since then I have returned a dozen or more times.”

• **Summary:** "A method of preparing soy and miso-paste of superior flavor and taste and of high quality, which comprises treating the starting soy-beans and/or carbohydrates with a current of superheated steam at a gauge pressure of 4-8 kg/square cm and a temperature of 200°C to 280°C for a time not exceeding 15 seconds. The treated soybeans are quickly exhausted into the atmosphere at atmospheric pressure."

The examples use either defatted soybean flakes or granular soybeans. Both the present invention and the conventional method contain 17.55 gm of common salt per 100 ml of soy sauce. Products from the present invention and the conventional method contain (in gm/100 ml) respectively total nitrogen (1.808/1.680), amino nitrogen (0.890/0.828), glutamic acid (1.484/1.376), alcohol (2.08/2.01), and yield of nitrogen (89.42%/82.93%). Address: 1. Kashiwa; 2-5. Noda; 6. Nagareyama. All: Japan.

5033. L.V.N. / L.V.D. 1973. [The role of enzymes and molds in Vietnamese soy sauce production]. *Khoa Hoc Thuong Thuc (Hanoi)*. Oct. 30. [Vie; eng+]*

• **Summary:** For a translation of this article, see HOANG, Van Chi (25 May 1979). A table gives the composition of Vietnamese soy sauce. The mold most suited for soysauce production is *Aspergillus oryzae*. Address: Vietnam.

5034. Brown, Edward Espe. 1973. Tassajara cooking. Berkeley, California, and London: Shambhala. 256 p. 24 cm. Introduction by Zentatsu Richard Baker-Roshi. Series: A Zen Center Book. Illust. by Norval Delwyn Carlson. A Zen Center Book. Index. Oct. 23 cm.

• **Summary:** This friendly, nicely illustrated natural foods vegetarian cookbook is also about the spirit of Zen Buddhist practice. The chapter on "Beans" (p. 121-26) begins with a sort of eulogy: "Beans. What suffering the word evokes. Beans. When you couldn't afford meat. Oh beans! When

you went camping. Beans! Beans are not meat, they're beans: garbanzo, kidney... Soy—which rarely remains as a bean... Beans are the overlooked jewels of the vegetable world. They sell at dirt cheap prices and are one of the best protein buys around... Beans take some getting used to, some familiarity. It's easy to say 'beans don't agree with me,' without having given yourself a chance to agree with them."

Soy-related recipes include: Oriental dressing (with soy sauce, p. 72). Cooking beans (p. 122-23; if presoaked, pressure cook soybeans for 20 minutes at 15 lb pressure. If not presoaked, for 25 minutes. For cooking without pressure, presoak, bring to a boil without salt, and simmer for 2 hours). Soy-sweetened beans (p. 124; "the Japanese version of an American standby"). Nut-buttered beans. Chili beans (p. 125). Blanco beans. Soy beans with hijiki & carrots (p. 126). Five thing beans (p. 126). Easy Oriental dressing (with soy sauce, p. 172). Soy sauce mayonnaise (p. 173). Tahini salad dressing (with soy sauce, p. 174). Seasoning soups (with soy sauce or miso, p. 179). Miso stew (p. 206). Potato-bean bake (p. 211). Basic recipe for burgers (with cooked, ground soybeans, p. 234). Soyburgers (p. 235-36).

Tassajara Zen Mountain Center was founded in 1967. An illustration of the Center cooking in a large skillet graces the cover of this book, which by July 1978 was in its 9th printing. Address: Green Gulch Zen Farm, California.

5035. Ilany (Feigenbaum), J. 1973. Soybean food for today and tomorrow. *Gordian (Hamburg)* 73(10):390-91. Oct.; 73(11):428-30. Nov.; 73(12):464-65. Dec. [21 ref. Eng; ger]

• **Summary:** "This is a short review of what is chiefly known at present of this wonderful bean, which only a few years ago, constituted a strange and exotic food." Contents: Introduction. Composition and nutritional value. Green soybeans. Sprouted soybeans. Soybean flours. Isolated proteins. Soy-food products of the Far East: Kinako, soymilk, yuba, "tofu or curd-soycheese," aburage, natto, Hamanatto, tempeh, miso, shoyu or soy sauce. Soybean oil. Lecithin.

Concerning tofu: Tofu made in the regular way "is called 'Fresh Tofu.' It does not keep long, even under refrigeration, unless it is further processed. For this purpose it may be canned, frozen, fried, smoked, or fermented."

Note: This is the earliest English-language document seen (Aug. 2011) that contains the term "soycheese"; it uses this term to refer to regular tofu.

5036. Taira, Harue. 1973. Heat destruction of amino acids in soybean products. *JARQ (Japan Agricultural Research Quarterly)* 7(4):267-73. Oct. [11 ref]

• **Summary:** Traditional, processed soybean foods that are widely used in homes in Japan include "Shoyu (fermented soy sauce), Miso (fermented soybean paste), Natto (fermented soybeans), Tofu (bean curd), Aburaage (fried bean curd), Kori-tofu (dried Tofu) and Kinako (roasted

soybean flour)."

One of the steps in making each of these foods is heating, which denatures the protein (making it more digestible), eliminates the peculiar soybean flavor, and develops colored substances (which "can prevent oxidation of the unsaturated fatty acid contained abundantly in soybeans during the fermentation process of Miso as an example"). Heating also eliminates antinutritional factors.

"But overheating causes excessive denaturation of soybean protein and destruction of amino acids."

Tables show: (1) Amino acid composition of 7 soybean products, including Mamemiso [soybean miso, such as Hatcho miso] and yuba. (2) Change of amino acid after three steps in the process of making Mame-miso: Soaking the soybeans, heating the soybeans, the final product. (3) Change of amino acid after two steps in the process of making natto: Heating the soybeans, final product. After heating at a rather high temperature for a short time (120°C for 30 minutes), there was no decrease in any amino acids except arginine, which decreased by 17.8%, and decreased by 29.1% in the final product. Some essential amino acids increased during the natto process. Methionine increased from 0.9 gm per 17 gm of nitrogen to 1.1 gm, an increase of 22.2%. Cystine remained unchanged at 1.0. (4) Change of amino acid after three steps in the process of making Tofu: Soaking the soybeans, heating the soybeans, the final product. No amino acids are reduced by heating, and some (such as methionine) increase. Of the 18 amino acids measured, 5 are unchanged, 10 increase, and 3 decrease slightly: Glutamic acid $19.6 > 19.3$. Tryptophan $1.5 > 1.4$. Serine $6.6 > 6.4$.

One of the products which is heated by dry heat only (without soaking in water) is kinako. It is heated at 160°C for 10 minutes, then ground. This heating reduced lysine from 5.1 to 4.8.

Figures (graphs) show: (1) The heat destruction of lysine in defatted soybean flour at 4 different temperatures (from 100°C to 126°C) for 4 different times (from 30 minutes to 4 hours). The higher the temperature and the longer the time, the greater the destruction of lysine.

(2) The heat destruction of cystine in defatted soybean flour. Same 4 temperatures and times; roughly same results.

(3) The influence of water on the heat destruction of lysine in defatted soybean flour. Same 4 temperatures and times. Adding water reduces the destruction of lysine.

(4) The influence of water on the heat destruction of cystine in defatted soybean flour. Same 4 temperatures and times. Adding water reduces the destruction of cystine.

(5) Heat destruction of total and available lysine in defatted soybean flour. Same 4 temperatures and times.

(6) Enzyme treatment and total liberated amino acids. Address: Food Analysis and Nutrition Div., National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

5037. Eden Foods, Inc. 1973. Wholesale prices, F.O.B. P.O. Box 100, 310 W. Ann St., Ann Arbor, MI 48107. 2 p. Catalog. Effective Nov. 1.

• **Summary:** The products are very similar to those in the April 1973 catalog. But a new soy product is Wheat-Soy Grits (50 lb). Other products include "Umeboshi salt plums," and Kelp powder (10 lb, bulk [from California]). Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

• **Summary:** The authors reported a significant increased risk of colon cancer among Japanese-born Issei (first generation immigrants) residing in Hawaii who consumed fermented soybeans (Relative Risk = 1.6), or red [azuki] beans (RR = 1.6). They did not find an increased risk among Nisei (second generation immigrants) or Hawaiian Japanese. Address: 1. Biometry Branch, National Cancer Inst., National Institutes of Health, Public Health Center, U.S. Dep. of Health, Education, and Welfare, Bethesda, Maryland 20014.

5039. Kunen, James Simon. 1973. Dr. Bronner's magic soap. *Esquire*. Dec. p. 218-21, 314, 316.

• **Summary:** This article is about Dr. Bronner's life and his Supermild Pure Peppermint Oil Soap, not his soy-based seasonings. The Bronner family had been in the soap business in Germany since 1848, but Dr. Bronner came up with this particular formula 6 years after immigrating to America, in 1935, as a diaper soap for his own children. "Dr Bronner was blind. He was wearing black goggles with opaque lenses. He was a short and wiry man of 66, tanned but unhealthy looking, too thin for his heavy bones (see full-page photo). His life changed at midnight on 1 Feb. 1962 when he delivered a speech to a black power audience in Watts. On 30 Aug. 1944 he buried his wife in a potter's field in Illinois. She weighed 61 pounds, her jawbones broken. His mother and father had been gassed as Jews in Europe. After that his wife became suicidal. After 1945 he spoke on his peace plan, then was held in a small room. 'Every night they bound me hand and foot to the slab...' Dr Bronner was committed to a mental institution in Illinois in 1946 and his blindness, though recent, may have resulted from the more than 20 shock treatments he was subjected to there. He is in deep trouble with the tax authorities who are not impressed with his idea that he is a rabbi... and do not agree that his work is religious... Recently his principal issue has been fluoridation, on which he spoke every Friday for 17 years in Los Angeles." He believes fluoridation is mass poisoning. His efforts have stopped fluoridation on at least 6 cities. His soap is selling at the rate of 150,000 gallons a year. He has no salesmen or advertisements. He has interesting religious messages on his soap bottles, and he changes them regularly.

5044. Aihara, Cornelia. 1973. The *dô* of cooking (Ryorido). Vol. 3. Autumn cooking. San Francisco, California: George Ohsawa Macrobiotic Foundation. 100 p. Illust. by Carl Campbell. 21 cm. Revised ed. 1977.

• **Summary:** Interesting recipes include: Buckwheat noodle gratin (with tofu, p. 29). Udon with adzuki (p. 32). Endive rolled with agé (deep fried tofu, p. 33). Fu vegetable cream cooked (with wheat gluten cakes, p. 34). Carrots and onions miso (p. 37). Vegetable miso (p. 38). Sliced kombu nitsuke (with koya [dried-frozen] tofu, p. 38-39). Vegetable stew—Chinese style (with agé and frozen tofu, p. 41). Adzuki bean soup (p. 46). Creamed miso soup (p. 46). Kenchin soup (with vegetables and tofu, p. 47). Stuffed agé with sauce (p. 49). Thick tamari soy sauce (p. 50). Tahini-tamari sauce (p. 50). Mock meat sauce (with miso, p. 51). Chrysanthemum leaves with tofu (p. 63). Unagi-modoki (mock eel, with tofu, p. 64). Chick pea vegetable nitsuke (with koya tofu, p. 71). Wheat gluten and seitan (p. 71-74, incl. homemade wheat gluten, fresh wheat fu, boiled fu, fried fu—gluten cutlet, shish kebab with fu). Autumn dish (with adzuki beans and tamari, p. 72). Address: 1471-10th Ave., San Francisco, California 94122.

5045. Albright, Nancy. 1973. The Rodale cookbook. Emmaus, Pennsylvania: Rodale Press Book Division. 486 p. Illust. Index. 25 x 20 cm.

• **Summary:** This book is based on natural foods but makes widespread use of meat, poultry, fish, and dairy products. Raw, unstrained clover honey is used as a sweetener instead of white sugar which “is dangerous to health...”

Basic information on soy: Soybean oil is good for sautéing (p. 4, 20). Tamari soy sauce is used for seasoning in preference to salt (p. 5, 20). Hints for cooking whole soybeans (p. 16). Use soy powder or grits to add protein to meals (p. 21). Basic soy milk (from whole soybeans, p. 63). Cashew milk (p. 64). Sesame milk (p. 68).

Chapter 5, titled “Soybeans, eggs, and cheese,” has an introduction to soybeans (p. 237-38) and many soy related recipes (p. 243-51): Methods for cooking soybeans. Baked soybeans. Barbecued soybeans. Soybean-cheese stuffed peppers (with cooked whole soybeans and cheddar cheese). Soy stuffed peppers (with pureed, cooked soybeans). Soybean chili. Soybean curry. Soybean loaf. Soybean-rice surprise casserole. Soybean-vegetable casserole. Soybean-stuffed eggplant.

Soy related recipes later in the book: Rice-bulgar-soy pilaf (with soy grits, p. 311). Wheat-soy-sesame bread (with soy flour & soy grits, p. 356). Soy milk custard (pudding, p. 400). Wheat-soy dessert (with soy flour, p. 401). Soybean pie (with chopped, roasted soybeans, p. 414). Soy peanut butter cookies (with soy flour).

Note: Neither tofu nor green vegetable soybeans are mentioned (by any name) in this book. In late 1976 (Dec. 6-7) Shurtleff and Aoyagi presented a program (lecture, slide show, food samples) at Rodale Press in Emmaus, attended by 40 members of the staff and employees. Hosts: Nancy N. Bailey and Robert Rodale. There was widespread interest in learning more about these foods. Shurtleff was “surprised they serve white sugar on their dining tables” at Fitness House.

Contains a very interesting directory of natural food stores in the United States (p. 448-76), including phone numbers and specialties.

On p. 242 are simple directions (and 2 photos) for making “yogurt ‘cheese’ to be used in place of cream cheese” in making dips, salads, or desserts. Address: Chef-Manager of Fitness House, the Rodale Press Dining Room, Emmaus, Pennsylvania 18049.

5046. Andersen, Lynn. 1973. Rainbow Farm cookbook. New York, NY: Harper & Row. 222 p. Illust. Index. 24 cm. Preface by Allen Gordon.

• **Summary:** This vegetarian cookbook, which has a macrobiotic flavor, is from Rainbow Farm, located on over 300 acres of mountain land in Phoenicia, New York. Soy-related recipes include: Basic miso broth (p. 34). Miso vegetable soup #1. Miso soup #2 (p. 35). Soy butter dressing

(made with 2 cups each oil and water, 3 tablespoons soy flour, and the juice of 2 lemons, p. 57). Miso vegetables (p. 67). Carrots and onions with tekka (miso, p. 67). Miso-onion spread (p. 76). Miso rice (p. 85). Tahini-miso spread (p. 108). Tahini-miso spread with vegetables (p. 108). Tahini-miso spread with seeds (p. 108). Tahini-tamari spread (p. 108). Miso balls (p. 111). Soy butter (or whipped soy cream, p. 111). Soy milk (with a blender, from soy beans, p. 118). Soy milk (without a blender, from soy flour, p. 118). Soy burgers (from okara, p. 119). Soy loaf (with cooked soy beans, p. 120). Tofu "(Chinese Soy Bean Cakes)" (curded with Epsom salt, p. 120). Miso sauce #1 and #2 (p. 126). Hiziki and tofu ([hijiki], p. 132). Egg noodles (with wheat and soy flours, p. 144). Soy milk with whole beans (p. 205). Soy milk with soy flour (p. 205).

A glossary of "New or Unfamiliar Foods" (p. 212-14) includes good descriptions of tamari, miso soy bean paste, kuzu, and tekka. Address: Phonecia, New York.

5047. Carroll, Anstice; Vona, Embree De Persiis. 1973. *The health food dictionary with recipes*. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. vii + 200 p. Illust. by Vincenzo De Persiis Vona. Index. 24 cm.

• **Summary:** The foods, listed alphabetically, include: Adzuki (p. 1-2). Beans, dried (incl. soy beans, p. 17). Gluten flour (p. 74-75, incl. Gluten soy bread). Miso and Miso butter (p. 101). Morrromi (p. 102). Mu Tea (p. 102). Nori (p. 106). Oil, vegetable (p. 113-14, incl. lecithin, peanut oil, olive oil, always refrigerate vegetable oil after opening; "Vegetable oils can (and should) be substituted for hydrogenated fats such as margarine, shortening, and lard in many recipes"). Peanut (p. 119-21). Peanut butter (p. 121-22). Soy grits (p. 156). Soy milk powder. Soy oil. Soy sauce (p. 156-57). Soybean (p. 159, incl. Soybean salad). Soybean, roasted (p. 160, incl. recipe for making at home). Tofu (p. 174-75, incl. recipe for Tofu-vegetable soup). Umeboshi (p. 175).

5048. Chen, Philip S.; Chung, Helen D. 1973. *Soybeans for health and longer life*. New Canaan, Connecticut: Keats Publishing, Inc. (A Pivot Health Book). xii + 178 p. Index. 18 cm.

• **Summary:** A revised and condensed pocketbook version of Chen and Chen 1956. Contents: Preface. Foreword. Introduction. Part I: Nutritive value of the soybean. 1. Protein. 2. Fat. 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease.

Part II: Soy products. 8. Soybean oil: Phosphatides, margarine. 9. Soybean oil meal: Gelsoy, Multi-Purpose Food. 10. Soy flour. 11. Concentrated soy protein products: Soy protein concentrates (Griffith Laboratories makes Isopro and GL-301), soy protein isolates, and textured or spun soy proteins. 12. Soy milk. 13. Soy cheese (tofu). 14. Soy sauce. 15. Soybean sprouts.

Part III: Soybean culture and preservation. 16. Soybean culture. 17. Preservation of soybeans (preserving green soybeans by canning, freezing, and dehydration).

Part IV: Recipes. 18. Soybeans and soybean pulp. 19. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 20. Soy grits and soy flakes. 21. Soy milk. 22. Soy cheese. 23. Soybean sprouts. Appendix: Soybean utilization (chart). References. Address: USA.

5049. Cowan, J.C. 1973. *Processing and products [soybeans]*. In: B.E. Caldwell, ed. 1973. *Soybeans: Improvement, Production, and Uses*. Madison, Wisconsin: American Society of Agronomy. xviii + 681 p. See p. 619-64. Chap. 20. [52 ref]

• **Summary:** Contents. 1. Introduction. 2. Processing for oil and meal: Preparation of flakes, solvents, extraction, desolventizer-toaster, degumming. 3. Conversion to edible oil products: Refining, bleaching, deodorization, hydrogenation. 4. Edible fat products: Salad and cooking oils, status of flavor stability, shortenings and margarine oils, lecithin. 5. Essential fatty acids and atherosclerosis. 6. Industrial uses of oil. 7. Meal for livestock and poultry: Nutritional aspects, factors affecting use of meals. 8. Edible protein products: Soy flour, concentrates and isolates, textured protein products (textured soy flour or textured soy protein fibers made into "meat analogues" resembling chicken, bacon, etc.). 9. Fermented and specialty foods: Tofu, soybean milk (an intermediate step in the manufacture of tofu), miso, shoyu (tamari, light-colored shoyu), sufu, tempeh, hamanatto, and natto.

Soybeans flow through a crushing plant as follows: First, they are cracked to release or loosen the hull and to break the cotyledon into about 4 parts. Shakers and aspirators separate the hull from the cracked cotyledons and rollers flake them. "Purified petroleum hydrocarbons known as hexane extract the oil from the flakes and the solvent is recovered. Moistened flakes are heated to inactivate the antinutritional factors and are converted to feeds for livestock and poultry. A small proportion of the flakes goes to a wide variety of soybean protein products including flour, isolates, and concentrates."

Tables show: (1) Utilization of soybean in U.S. in million pounds, every 5 years from Oct. 1933 to 1970 (Kromer 1970). (2) Use of soybean meal in the USA for feeding livestock and poultry (million tons). In 1969, the estimated amounts used were as follows: Cattle 3.43. Hogs 1.69. Other livestock 1.73. Total livestock: 6.85. Broilers 3.07. Hens and pullets 1.28. Other poultry 1.10. Total poultry 5.45. Total livestock + poultry 12.30. Note that cattle are the single biggest users. (3) Bleaching soybean oil (process, % clay and type, change in Lovibond color rating). (4) Effect of bleaching, citric acid, and light exposure on soybean salad oil. (5) Specifications for soybean oil. (6) Effect of linolenate content on flavor of soybean oil at

elevated temperatures. (7) Composition of certain edible oil products from soybean oil and related products (salad oil, hydrogenated-winterized soybean salad oil, hydrogenated soybean oil liquid shortening, plastic shortening types I and II). (8) Changes in iron and copper content of soybean oil in commercial refining. (9) Properties of all-purpose and high-stability shortenings from all-hydrogenated vegetable oils and blends of animal fat and/or vegetable oil (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (10) Typical analyses for mellorine and cookie and confectioner's fat. (11) Analytical data for typical margarine oils low and high in polyunsaturates (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (12) NSPA—tentative lecithin specifications (NSPA, 1969-1970). (13) Composition of soybean lecithins. (14). Approximate composition of soybeans and meal products (whole bean, cotyledon, hull, hypocotyl, meal {cake—extruded, flakes—solvent extracted, dehulled flakes—extracted, mill feed—separated hulls, mill run—separated hulls}). (15) Amino acid analysis of soybean meal (44% protein and 49% protein {dehulled}) and corn. (16) Amino acid analysis of blends of soy flour with cereals and milk (Inglett 1968; Corn soy milk {CSM}, Millet soy milk, Wheat soy milk, etc.). (17) Partial formulas for young swine and boiler rations in percent total rations. (18) Partial formulas for dairy feeds (14% protein). A supplement to forage or roughage. (19) Soybean grits and flour—screensize. (20) Composition of soy flour. (21) Composition of 4 types of soy protein concentrates. (22) Uses for high-protein soy products (protein 70 [concentrates] and protein 90 [isolates]). Note: This is the earliest English-language document seen (Dec. 2004) that uses the term “protein 90” to refer to a soy protein isolate. (23) Amino acid analysis of fractions derived from dehulled extracted flakes (Rackis et. 1961, 1970). (24) Effect of cooking in salt solutions on texture of structured granules. (25) Composition and use (1,000 metric tons in 1964 and 1967) of soybeans for traditional foods in Japan (Use of whole soybeans in 1967 in 1,000 metric tons: Miso 169. Shoyu 15. Natto 47. Tofu 329. Total 642. Use of defatted flakes or grits in 1967 in 1,000 metric tons: Miso 8. Shoyu 154. Natto 0. Tofu 77. Total 284).

Figures show: (1) Flowchart: Processing of soybeans to oil and meal using hexane extraction. (2) Illustration: A modern soybean processing facility (aerial view, Central Soya, Inc.). (3) Schematic diagram / flowchart: Manufacture of edible soybean oil products (salad oil, salad and cooking oil, shortenings, margarines, liquid shortening). (4) Illustration: A continuous deodorizer for soybean oil. (5) Graph: Effect of prolonged storage at 100°F on flavor score of hydrogenated-winterized soybean oil or soybean salad oil (nitrogen packed, air packed). (6) Illustration: Continuous chilling and working equipment for margarine production (Votator Div., Chemetron Corp.). (7) Flow diagram; Conversion of emulsions of margarine oils and ripened milk

to conventional stick, whipped stick, and tub margarines (Votator Div.) (8) Chemical structure of prostaglandin- E_2 , a fatty acid with hormone activity. (9) Diagram: Vapor-desolventizer- deodorizer for soybean flakes (Blaw-Knox Co.). (10) Flowchart and diagram: Operations with extruder-cooker. (11) Flow diagram: Manufacture of protein 70 [soy protein concentrate]. (12) Schematic diagram: Manufacture of soy protein isolate (Protein 90). (13) Photo: Chicken-simulated soy protein “meat” in three forms (Swift Edible Oil Co.). (14) Photo: Protein tow containing 16,000 monofilaments spread apart to show its fibrous nature; other tows in background (General Mills, Inc.). Address: NRRL, Peoria, Illinois.

5050. David-Perez, Enriqueta. comp. and ed. 1973. *Recipes of the Philippines*. Philippines: Published by the author. Printed by Cacho Hermanos, Inc., Corner Pines, and Union Streets, Mandaluyong, Metro Manila, Philippines. xiv + 170 p. Plus 8 leaves of unnumbered plates. Undated. Illust. (some color). 22 cm.

• **Summary:** The title page of this book states that the 19th printing was 1973 (Copyright by the author), but no initial date of publication is given. The rear cover states: Reprinted and exclusively distributed by: National Bookstore Inc. Other editions include 1953 (at Library of Congress), 1954, 1960, 1965, and 1968.

Contents: Acknowledgement. Introduction. Reminder, Fiesta fare. Everyday dishes. Sweets and desserts. Breakfast and merienda. Pickles and relishes. Refreshments. Glossary. Contains 19 black-and-white photos.

Soy-related recipes include: Baguio onion with tokua [firm tofu] (p. 28). Bañus en tocho-1 (with tajure, p. 32). Bañus en tocho-2 (with tajure, tausi, and tokua). Bañus in soy sauce (with “2 tablespoons soy sauce,” p. 33). Bawang guisado (with “3 pieces tokua, cubed and fried,” p. 33). Beef steak (with “1 tablespoon soy sauce,” p. 34). Misu-tomato sauce (with “3 tbsps. misu (soybean curd)” [sic, miso, not tofu], p. 74). Paksiw (Pork) (with “¼ cup soy sauce,” p. 78). Paksiw na pata (with “Salt, toyo [soy sauce] and pepper to taste,” p. 78). Pancit “luglug” (with “½ cup soy bean cake (Tokua) cut into small cubes,” p. 80). Pork tapa (with “6 tbsps. toyo” [soy sauce], p. 88). Taguba (pork with “¼ cup soy sauce,” p. 102).

The glossary defines the following soy-related terms: Misu—paste made of fermented rice and soy beans. Tajure—fermented soy beans, caked. Tausi—fermented soy beans. Tokua—soy bean curd. Toyo—soy sauce. Address: Philippines.

5051. Dubawsky, Rebecca. 1973. *Cooking with grains and vegetables*. Los Angeles, California, and Boston, Massachusetts: Order of the Universe Publications. Distributed by Tao Books. 29 p. Undated. Illust. No index. 28 cm.

• **Summary:** This 1973 edition differs from the original 1967

edition as follows: (1) On the cover, in the upper left corner, is an illustration of a man bent over working in a rice field. The title is written in the lower right corner rather than in the upper left. The subtitle "Booklet one—A beginning" and the name and address of the publisher (in the lower left corner) have been omitted. (2) On the inside front cover, near the bottom, is written: "Distributed by Tao Books, 8454 Steller Dr., Los Angeles, Ca. [California] 90230. Tel.: (213) 837-2739 and 303B Newbury Street, Boston, Massachusetts 02115." (3) On the next page are two illustrations apparently taken from early sources (clip art): A full head of wheat with a long awn extending upward from the husk enclosing each grain. Two pumpkins on the vine with leaves above them. Below that: Library of Congress No. 73-127918. (4) Next comes a second title page, with silhouettes of rice plants at the left. (5) Next is a page stating: "The teaching of Aveline Kushi has made the information that follows possible." Below that: "Rebecca Dubawsky." To the left is another silhouette of grasses. (6) Next is a full-page of clip art showing a German chalet in the background, with three farmers working in a field in front of it, and a cart pulled by two oxen in the foreground. (7) Table of contents (p. 5). (8) Two stalks of grain. (9) The preface (p. 7) by Michio Kushi, October 20, 1967. (10) Three full heads of different types of grain. (11) Meals (p. 9).

(12) The last numbered page is 29, which has illustrations of a rice plant standing in water and a head of rice. (13) After that is "The Order of the Universe Publications" which contains descriptions of one periodical (*The Order of the Universe*) and five books and booklets (*Cooking Good Food*; *Cooking with Grains and Vegetables*; *Food for Spiritual Development*, by Michio Kushi; *Spirals*; and *Book of Do-In Guide Pratique*, by Jacques de Langre [DeLangre]). (14) At the bottom of the last page: "Printed in U.S.A. by Jacques de Langre, 7557 Sunset Blvd., Hollywood, Calif. 90046." Address: Boston, Massachusetts.

5052. Encyclopaedia Britannica: Soybean. 1973. Chicago, London, Toronto...: Encyclopaedia Britannica, Inc. 23 volumes. See vol. 20, p. 1037-39. [6 ref]

• **Summary:** An excellent overview of the soybean and its history. Contents: History. Areas of production. Plant characteristics. Cultivation. Uses. Uses in Industry. Address: Chicago, Illinois.

5053. Eno, David. 1973. The little brown rice book. 2nd ed. Launceston, England: Juniper Press. 31 p. Illust. by David Eno. Calligraphy by Jenny Ivermee. No index. 15 cm.

• **Summary:** A vegetarian cookbook entirely hand-lettered in calligraphy. A list of basic items for the stove cupboard (p. 8-9) includes "Soya beans—important source of protein. Tamari—the real soy sauce from fermented soya beans... Red beans [azuki]." Cooked soya beans and red beans are recommended as salad ingredients (p. 20).

5054. Ford, Marjorie Winn; Hillyard, Susan; Koock, Mary Faulk. 1973. The Deaf Smith country cookbook: Natural foods for family kitchens. New York, NY: Macmillan Publishing Co. (Collier Books). London: Collier Macmillan Publishers. xiv + 352 p. Preface by Frank Ford. Illust. Index. 24 cm. [7 ref]

• **Summary:** A pioneering natural foods cookbook, produced and copyrighted by Arrowhead Mills, Inc. of Hereford, Texas. Soy-related recipes include: Roasted soybeans (p. 42-43). Miso soup (with wakame, p. 53). Tamari bouillon (p. 57-58). Todo en la caldera (with soybeans and miso, p. 58). Miso sauce (p. 90-91). Thick tamari sauce (p. 91). Tofu (soybean cheese or bean curd, p. 98-99; an early recipe for homemade tofu made with vinegar or lemon juice as a coagulant. Lists 6 serving suggestions for tofu and 1 for the "soy mash" [okara]). Cooking flaked soybeans (p. 132-33). Soy sesame burgers (with 1/3 cup whole sesame seeds, p. 135-36). Rice pancake with tofu (p. 136). Soybean loaf (p. 138-39). Cooking with soybean flakes (p. 156). Blazing star timbales (with soybean flakes, p. 156-57). Tamale soy pie (with cooked soybeans or soybean flakes, p. 182-83). Soy milk (homemade, p. 292). In the last chapter titled "Natural Foods from Deaf Smith County," the following soy-related foods are discussed: Soybean flakes (p. 324, 327), black beans (a type of soybeans, p. 326), soybeans and foods made from them (p. 327). Soybean flour (p. 328). Tamari roasted nuts and soybeans (p. 331). Tamari soy sauce (p. 334). Miso soybean paste (p. 334). Wheat gluten is not mentioned in this book. Frank Ford's preface shows him to be a devout Christian, organic farmer (in Deaf Smith County, Texas), and advocate of natural foods.

In about Sept. 1991 this early natural foods cookbook was reprinted with a new cover and subtitle ("Natural Foods for Natural Kitchens"). Over 300,000 copies are now in print. Address: 1. Arrowhead Mills, Hereford, Deaf Smith County, Texas; 2. Soquel, California; 3. Foods editor, *The Texas Star*.

5055. George Ohsawa Macrobiotic Foundation. 1973. Useful names and addresses. 1471-10th Ave., San Francisco, CA 94122. 55 p. 21 cm.

• **Summary:** This macrobiotic directory lists names and addresses of macrobiotic people, organizations, food stores and restaurants, and bookstores in the United States (each category broken down by state), Canada, and abroad. The leading states for individuals are California (7.3 pages), New York (1.5 p.), and Massachusetts (1 p.).

There are listings for the following foreign countries: Argentina, Australia, Austria, Belgium, Brazil, Costa Rica, Denmark, England, France, Germany, India, Ireland, Italy, Japan, Mexico, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, South Vietnam.

There are ads for the following companies: Sunflower,

The Queensberry Bakery (112 Queensberry St., Boston 02215), East West Foundation Center, Sanae Inc. at 2 locations (Sanae Restaurant at 272A Newbury St., Boston, and The Seventh Inn at 288 Boylston St. in Boston), Prasad (1956 University Ave., Berkeley, California) (p. 0). Eden whole earth grocery and delicatessen, and Sun Bakery (330 Maynard St., Ann Arbor, Michigan) (p. 18). Janus Natural Foods (712 7th Ave. South, Seattle, Washington 98104. Phone: 206-MA4-1084) shows that they distribute (import) tamari and miso, as well as sea vegetables. They carry the following brands: Erewhon, Spiral Foods, Deaf Smith, Pure & Simple, Chico-San, Arrowhead Mills (p. 27). Cliffrose (129 Coffman, Longmont, Colorado). Ceres Harvest Natural Foods (3632 W. Colorado Ave., Colorado Springs, CO 80904; wholesale and retail) (p. 39). The Good Karma Cafe (501 Dolores St., San Francisco), and The Good Earth (123 Bolinas Rd., Fairfax, CA 94930) (p. 50). Greenberg's Natural Foods, Inc. (125 1st Ave., New York, NY 10003).

Individuals and organizations interested in macrobiotics in the United States (arranged by state): Massachusetts: James Silver, Seventh Inn, 288 Boylston St., Boston, 02116. Erewhon Trading Co., 33 Farnsworth St., Boston, 02210. Michio Kushi, 440 Boylston St., Brookline, 02146. John Deming, c/o Kushi, 440 Boylston St., Brookline, 02146. Nik & Joanne Amartseff, Top of the Harbor, Gloucester, 01930. Ken & Ann Burns, 22 Knoll St., Roslindale, 02131.

Michigan: Mr. and Mrs. Michael Potter, #1169, 1407 Charlton Ave., Ann Arbor, 48103. Judith A. Bolduc, 822 Brookwood Rd., Ann Arbor, 48104.

The George Ohsawa Macrobiotic Foundation is a non-profit organization located at 1471-10th Ave., San Francisco, California 94122. It was founded in 1971. The aim of the Foundation is to spread the teaching of the unifying principle and its practical applications in daily life. Address: San Francisco, California.

5056. Goldbeck, Nikki; Goldbeck, David. 1973. The supermarket handbook: Access to whole foods. New York, NY: Harper & Row. xvii + 413 p. Illust. by Ellen Weiss. Index. 22 cm. Second ed. published 1976 by New American Library/Plume Books. 460 p.

• **Summary:** This influential book is dedicated "To the Preservation of the Family Farm." The authors believe that butter is a better spread than margarine, which is made by saturating polyunsaturated oils and adding many artificial ingredients (artificial color, preservatives). The chapter on beans contains a table titled "Protein for Pennies" that includes soybeans at the top of the list: Calories/lb: 1,828, protein/lb 154.7 gm, cost/lb: \$0.25. Soybeans, unlike other beans, are a complete source of protein. "Soybeans: Soybeans are the most virtuous of all beans. They are the only food in the vegetable kingdom that contains all the essential amino acids the body needs to synthesize protein. People often talk about masking the flavor of soybeans with

gravies and lots of seasoning; we don't know why since these beans actually have quite a pleasant taste of their own. Although cookbooks dealing exclusively with soybeans have been written, soybeans can be used just as you would any other bean and require no special handling" (p. 124).

A quarter pound soybeans grow into about 1 pound of soy sprouts. A nutritional comparison of the whole beans and the sprouts is given, showing the increase in vitamins. An illustrated description of making sprouts is given (p. 130).

Prepared sauces: Imported natural and "tamari" soy sauces are recommended. "The American simulation of soy sauce is unfortunately doctored with sugar, caramel coloring, and preservatives. Kikkomen [sic, Kikkoman] is the purest of these, tainted only with preservatives." Lea & Perrins, "the original Worcestershire Sauce," is considered the best and the only natural one. Other brands add corn syrup, artificial coloring and flavoring, and stabilizers. Recommended soy oil brands: Melba, Hain, Hollywood. They contain no artificial additives.

"The section 'Soybeans: The greatest snack on earth' (p. 282) recommends: 'Soy Ahoy, roasted, unsalted soy nuts; Flavor Tree Peruts, plain or seasoned; Parker's Soy Joys.' Flavor Tree also makes a variety of 'chips.'" But these contain no soy. Note that neither tofu nor miso are mentioned in this book. The book does not advocate a vegetarian diet, but in the chapter "Meeting the Challenge of Meat," it discusses the many health problems with meat and recommends that if you still want to eat meat, try to find a natural, good quality product.

A photo on the back of the dust jacket shows Nikki and David Goldbeck. Address: R.D. 1, Box 452, Woodstock, New York 12498.

5057. Heiser, Charles B., Jr. 1973. Seed to civilization: The story of man's food. San Francisco, California: W.H. Freeman and Co. xii + 243 p. Illust. Index. 23 cm. [83* ref] • **Summary:** Chapter 6, "Poor man's meat: the legumes," contains a section on "Soybeans" (p. 131-33). Photos show: (1) A field of soybeans in the USA planted in rows, free of weeds. (2) Soybean plants ready for harvesting. For more detail, see the 1990 revised edition. Address: Prof. of Botany, Indiana Univ.

5058. Houston, Jeanne Wakatsuki; Houston, James D. 1973. Farewell to Manzanar. San Francisco, California: The San Francisco Book Company / Houghton Mifflin. xiii + 177 p. No index.

• **Summary:** A deeply moving, beautifully written, and very personal book about a tragic episode in American history. "A wonderful, human, feeling book... touching, funny, affectionate, sad, eager, and forgiving. And full of understanding"—Wallace Stegner, winner of the 1972 Pulitzer Prize for Fiction.

Probably because this is a personal story, it does not

mention that both tofu and soy sauce were made on a large scale at Manzanar. However soy is mentioned (p. 27): Woody said, “‘I’ll find out what they’re giving us for breakfast.’ ‘Probably hotcakes with soy sauce,’ Kiyo said.”

On pages xi-xii is the following interesting chronology of Japanese in America: 1869–The first Japanese to settle on the U.S. mainland arrive at Gold Hill, near Sacramento, California.

1870–U.S. Congress grants naturalization rights to free whites and people of African descent, omitting mention of Oriental races.

1886–The Japanese government lifts its ban on emigration, allowing its citizens for the first time to make permanent moves to other countries.

1911–U.S. Bureau of Immigration and Naturalization orders that declarations of intent to file for citizenship can only be received from whites and from people of African descent, thus allowing courts to refuse naturalization to the Japanese.

1913–Alien Land Bill prevents Japanese aliens from owning land in California.

1924–Congress passes an Immigration Act stating that no alien ineligible for citizenship shall be admitted to the U.S. This stops all immigration from Japan.

1941 Dec. 7–Surprise attack on Pearl Harbor by the Japanese.

1942 Feb. 19–President Roosevelt signs Executive Order 9066, giving the War Department authority to define military areas in the western states and to exclude from them anyone who might threaten the war effort.

1942 March 25–Evacuees begin to arrive at Manzanar Camp, in Owens Valley, California, the first of the permanent camps to open.

1942 Aug. 12–Evacuation completed, 110,000 people of Japanese ancestry removed from the west coast to ten inland camps.

1944 Dec. 18–U.S. Supreme Court rules [in *Endo v. United States*] that loyal citizens cannot be held in detention camps against their will, the first major step toward the closing of the camps. Note: Following this decision, the U.S. government announced that all the camps would be closed and the detainees released. The last of the camps was closed in 1946.

1945 Aug. 14–Japan surrenders, ending World War II.

1952 June–Congress passes Public Law 414, granting Japanese aliens the right to become naturalized U.S. citizens. However, long before this, any child of Japanese parents born in the United States or one of its territories (such as Hawaii) automatically became a U.S. citizen at the moment of birth.

Terms used in this book: *Issei*: The first generation. The Issei were born in Japan. Most of them immigrated to the United States between 1890 and 1915.

Nisei: The second generation, the children of the Issei.

American citizens by birth, almost all Nisei were born before the Second World War.

Sansei: The third generation of Americans with Japanese ancestry, most of them born during or after the Second World War. Address: Santa Cruz, California.

5059. Hunter, Beatrice Trum. 1973. *Fermented foods and beverages*. New Canaan, Connecticut: Keats Publishing Co. 116 p. Index. 18 cm. [38 ref]

• **Summary:** In the chapter titled “Soybeans” (p. 31-49), the author discusses tofu (and how to make it at home with or without fermentation), meitauza (fermented okara), hakko tofu (a newly developed high protein food; fermented soybean curd), sufu (Vietnamese call it Chao), shoyu, miso, ketjap (thick Indonesian soy sauce [probably ketjap manis]), tempeh, Hamanatto, natto, Tao-cho from Malaysia, and Tao-si [fermented black soybeans] from the Philippines.

Note: The author has collected her information (both correct and incorrect) for a number of sources, which she does not cite directly, although she does have a bibliography.

5060. Ito, Kazuo. 1973. *Issei: A history of Japanese immigrants in North America*. Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. Illust. Index of personal names only. 24 cm. Translation of *Hyakunen Sakura*. [100* ref. Eng]

• **Summary:** This massive book is basically a history of first-generation Japanese immigrants to Pacific Northwest (especially Washington, Oregon, and British Columbia), focusing on the great struggles and hardships they met, written from the viewpoint of individual Japanese who tell their stories (often in the first person), and compiled by a Japanese journalist. The book was first published in Japanese. Access to the wealth of information it contains is crippled by the lack of a subject index. So if one were looking for information about tofu, miso, or soyfoods, one would have to read the entire book. The index of personal names is well done.

At the very front of this book are very interesting maps of the old Japanese districts of the following cities: Seattle, Tacoma, and Spokane, Washington; Portland, Oregon; Vancouver, British Columbia, Canada. Unfortunately, none of the maps are dated. The name and location of each Japanese organization or business is shown clearly in English. In the part on “Japanese exclusion,” the section titled “The smell of race” [very interesting] (p. 227-28) states: “Exclusionists especially point out that Japanese favorite foods and condiments, such as *miso*, soy sauce, radishes and pickles, are intolerable [in smell]... The neighboring whites complained loudly that they just could not stand the smell of cooking soy sauce... A Japanese smells like miso, and whites in general exude faint waves of

the odor of butter and cheese. The smell of their underarm perspiration is really strong.”

In the part on “Railroads,” the section titled “Life of Yoshiichi Tanaka” notes that he worked with a gang of young Japanese bachelors who were all trying to save money. For breakfast they had miso soup, which was delicious, so everyone ate more, which caused food expenses to rise. “So we skimmed on miso and merely added salt for flavor.” For lunch they sometimes had “fish cooked in soy sauce, or a half cake of *tofu* (bean curd cheese), or radish, carrots and beef boiled hard with soy...” “In the Japanese restaurant in Seattle we could fill up on miso soup, rice and pickles for only 10¢...”

The part on “Alaska” (p. 355) is mostly about work in the canneries: “We shipped Japanese foods such as rice, soy sauce, miso, dried kelp [*kombu*] for soup base, dried sea slugs,... *fu* (a light cake made of wheat gluten), dried seaweed,...” Page 359 mentions soy sauce and miso soup with salmon.

The part on “Sawmills” states (p. 402): “The food was Japanese—first class rice imported from Japan,... and *koyadofu* (a dish made from bean curd). For breakfast they served miso soup with vermicelli in it. Lunch was rice, and fish and vegetables boiled hard with soy sauce.” On Sundays they had red bean soup with mochi (rice cake).

Under “Supplementary food” (p. 408-09): The meals were mostly Japanese. Breakfast: miso soup... Dinner: Sukiyaki. “Some people bought things from Seattle stores like bottles of pickled bean curd (*funyu*), salted sea urchin, fermented soy beans [*natto*], salted plums, or seaweed preserved by boiling in soy sauce (*nori no tsukudani*),...”

In 1907 we spent \$5 to \$6 per month for food, and it was poor. For breakfast we ate miso soup and rice;... for lunch rice cooked together with *aburage* (fried bean curd)... I bought canned salmon and poured soy sauce and sugar on it for dinner. For Saturday dinner we had sukiyaki.

Page 410: Breakfast was tofu in miso soup with pickles and rice. Page 411: Deer meat sukiyaki.

In the part on “Agriculture,” we read that Japanese immigrants to American sometimes enjoyed Japanese soyfoods. In about 1910, in Fife, a farming community near Seattle, in about 1910, Gunji Fujimoto “had miso soup and pickles for breakfast” (p. 440). In about 1916, in Hood River (northern Oregon), Henry Nakamura wrote that Japanese people could get foods from Japan, including “fried bean curd” (p. 499-500). There they also enjoyed miso soup for breakfast, cooked red beans [*azuki*] spread on bread for lunch, and rice, pickles, and dried radish strips cooked with soy sauce for dinner (p. 503). In the early 1920s in Oregon, breakfast typically consisted of rice, miso soup, and pickled cucumbers (Shoemon Nakamura, p. 512).

The part on “Mines” in 1917 (p. 557): “Dinner was Japanese style with stews, beef and tofu cooked together with soy, fish, miso soup, rice and so on.”

Page 568: “The meals at Endo camp were notorious. Breakfast was miso soup and pickles with rice. When the population increased, the amount of soup was increased by adding water, not miso. The contents of the soup was always wakame (seaweed)” all year long “changelessly wakame. Mr. Endo laid in a huge stock of left-over seaweed and fried dried bean curd, and miso, soy sauce and pickles.”

Part 20, “On the Streets,” states that “The old Japanese towns in Seattle, Tacoma, Portland, and Vancouver (Canada) can hardly be traced today.” The author has tried to reconstruct maps of these towns “in roughly the period of the 1920s, but not in any specific year” (p. 779-80). In Nov. 1908 Masanao Hanihara, Secretary of the Japanese Embassy, issued a report on his investigations of living conditions of Japanese in the western USA (p. 791). He found the Japanese still lived “at the level of immigrant laborers;” the conditions in their communities were “extremely low and chaotic.” “The Japanese in these areas hardly mix with white residents, while sometimes they approach or mix with Chinese. There are many ill effects from clique-ishness.” “The majority of Japanese workers lack knowledge of English, so whenever they make contracts they sign papers blindly” (p. 795-96). Hanihara estimated the Japanese population of various states as follows: Washington 9,000 to 10,000, Oregon 3,500 to 4,500, Wyoming 1,000 to 1,500, Idaho 1,000 to 1,500, Montana 1,000, and Alaska 1,000. The largest Japanese community in the region was in Seattle (about 4,000 Japanese). “Shinzaburo Ban of Portland is almost the top among successful Japanese on the Pacific Coast.” His business, S. Ban Co., headquartered in Portland (where he arrived in 1891), acts mainly as a contract agency for Japanese laborers—a sort of employment agency, “and his store supplies sake, miso, soy sauce and other such Japanese foods and small items to the laborers” (p. 789-93; see portrait photo p. 792). A sidebar (p. 793, by Raisuke Tamura, Seattle) notes that “However long they lived in the United States, Japanese had to have Japanese food... Around 1906 I imported from Japan vegetables such as lotus root, Japanese radish [*daikon*], *gobo* (burdock), *zenmai* (fern), *abura-age* [deep-fried tofu pouches], *nigari* (bittern, a tofu coagulant), *tsukuneimo*, *yamaimo*, and so on, in hundred-pound baskets, and sold them to sawmills and railroad camps” (p. 793).

The 1 January 1916 edition the *Hokubei Nenkan* listed all businesses operating in various Japanese towns. These included two “tofu-makers” in Seattle, Washington (p. 800), at least one tofu maker in Tacoma, Washington (p. 804). Tacoma had a Japanese population of 931 in 1915—721 males and 210 females). Spokane didn’t have a Japanese town as in Seattle and Tacoma, but in 1915 it did have a Japanese population of 536 (462 males and 74 females).

The map of old-town Portland, Oregon, probably from about 1935, shows 90 Japanese businesses located between 1st Ave. and 7th Ave. (running north-south) and between W. Burnside and N.W. Glisan (running east-west). Among these

are two tofu manufacturing companies. "Ota Tofu Mfg." is located on 5th Ave. between Everett and Flanders. [Note: The actual address was 86½ 5th N]. "Fuwei Tofu Mfg." is located on N.W. Davis between 3rd Ave. and 4th Ave.

Contents: The book is divided into 21 parts, with each part containing several chapters (the number is shown in parentheses): 1. Sailing (6). 2. Secret passage and ship-jumping (5). 3. Japanese exclusion (15). 4. Japanese women (2). 5. Railroads (5). 6. Alaska (4). 7. Sawmills (2). 8. Agriculture (7). 9. Hotels (2). 10. Restaurants (2). 11. Mines (2). 12. Oysters (2). 13 Japanese language schools (2). 14. Studying English (3). 15. Pro-Japanese (8). 16. Furuya Company (4). 17. Lese majesty affairs (2). 18. Gambling (3). 19. Girls (2). 20. On the streets (9). 21. In Memorium [Memoriam—to the many who died]. (2). Appendixes: (1) Partial list of Japan-U.S. and Japan-Canada sister cities. (2) Japanese consulates. (3) Chronological table: Japan and America (side by side), 1868-Sept. 1972. Bibliography (p. 967-72, mostly Japanese-language books). Epilogues: To English and to Japanese editions. Index of personal names (p. 988-1016). Address: Tokyo and Seattle, Washington.

5061. Li, Shih-Chen. comp. 1973. Chinese medicinal herbs. Translated and researched by F. Porter Smith, M.D. and G.A. Stuart. San Francisco, California: Georgetown Press. 467 + [41] p. See p. 189-96, 411. Index. 24 cm. [1 ref. Eng]
• Summary: This paperback book, which has an orange and yellow cover, is a reprint, published without proper explanation or credit. It is a facsimile copy of Rev. G.A. Stuart's fine book, titled *Chinese Materia Medica* (1911), which is based on the famous *Pen-ts'ao kang-mu* and (as the title page of Stuart's work states) "Extensively revised from Dr. F. Porter Smith's Work" titled *Contributions towards the materia medica & natural history of China. For the use of medical missionaries & native medical students* (1871).

The preface to this 1973 reprint is by Beatrice Bliss, in whose name the book is copyrighted. On the rear cover, Bliss notes: "For over 4500 years Chinese scholars have been compiling medical treatises. The greatest and most complete of all was published in 1578, after 26 years of labor, by Li Shih-chên. American physicians in China, long impressed with the efficacy of organic medicine, translated, researched, and updated his herbal *Pên Ts'ao*, now published for the first time in the United States." The preface continues: "Unlike the Western world, China has been flooded since time immemorial with medical treatises. While the first English-language pharmacopoeia was published in London in 1618, the earliest Chinese treatise still in existence is attributed to the Yellow Emperor who, according to legendary history ascended the throne of China in the year 2698 B.C... The complete *Pên Ts'ao* comprises 1,892 species of drugs, animal, vegetable and mineral, and includes 8,160 prescriptions."

The plants discussed are listed alphabetically by

scientific name. The sections on soybeans, which have many uses as medicinal herbs, are identical to those found in Stuart (1911).

Also discussed are: Kudzu vine, *ko*, or pueraria (*Pachyrhizus thunbergianus*; p. 299). Azuki bean or Ch'ih-hsiao-tou (*Phaseolus radiatus*; p. 316. "It is considered to be good food for donkeys, but is too heavy and heating for mankind. Medicinally, it drives away dropsy and scatters carcinomatous and purulent swellings.").

Wheat Gluten (Mien-chin; p. 445-46). "This is prepared by washing out the starch, and when a small quantity is wanted for catching birds, it is only necessary to masticate the wheat until nothing else is left. It is used as a nutritious article of diet, and is also considered to be antifebrile."

5062. Michaels, Elsa. 1973. The vegetarian menu cookbook. New York, NY: Drake Publishers Inc. 191 p. Illust. (some color). 28 cm.

• Summary: Soy-related recipes include: Soya rice (with soy sauce and margarine, p. 70). Soybean squares (with cooked soybeans and soya flour, p. 117).

5063. Muramoto, Noboru; Abehsera, Michel. 1973. Healing ourselves. New York, NY: Avon/Swan House. 150 p. Illust. Index. 28 cm.

• Summary: The author's first name is misspelled throughout: Noboru is correct; Naboro is wrong. The book is based on 4 weeks of lectures given by Muramoto. Abehsera compiled and supplemented these teachings.

Note: This is the earliest document seen (Sept. 2002) concerning Noboru Muramoto.

5064. Nakayama, Tokiko. 1973. Chûgoku meisaifu [Chinese cuisine: Famous recipes]. Tokyo: Shibata Shoten. 4 Vols. [Jap]*

 Address: Japanese Ministry of Agriculture and Forestry.

5066. San Jia Starch Factory. 1973. [Report on the application of liquid proteinase for soy sauce production]. *Acta Microbiologica Sinica* 13(2):188-90. [3 ref. Chi]

5067. Smith, Margaret Ruth. 1973. Anne Seranne's good food without meat. New York, NY: William Morrow & Co. 351 p. Illust. Index. 27 cm.

• Summary: A vegetarian cookbook. The author, Anne Seranne (= Margaret Ruth Smith) was born in 1914.

Soy-related recipes include: Sweet and sour dashi sauce (with soy sauce, p. 85). Deep-fried soy-bean curd

(with canned, baked soybean curd (*yakidofu*), p. 85). Baked soybeans (p. 175). Soy bread (p. 259; “Use half stone-ground soy flour and half unbleached all-purpose flour in basic recipe.”). Gluten bread (p. 259; Gluten flour combines well with soy). Rye soy bread (p. 259; “Substitute 1 cup each rye flour and soy flour for 2 cups of the all-purpose flour.”).

5068. Kikkoman Foods, Inc. 1973? Standard policy manual. Walworth, Wisconsin. 65 p. Undated. 28 cm. [Eng]

• **Summary:** Section I. Organizational manual. Introduction. Company objectives. Organization principles. Organization chart. Committees. Position descriptions. Section II. Personnel procedure and policy manual. Introduction. Personnel policy. Personnel procedures. Wages, hours, and benefits administration. Relocation policy. Section III. Community and public relations. Employee membership in community organizations. Corporate gifts policy and budget. Section IV. Appendix. Forms exhibit. Other. Address: Walworth, Wisconsin 53184.

5069. Kikkoman Foods, Inc. 1973? Employee handbook. P.O. Box H, Walworth, WI 53184. 16 p. Undated. 19 x 10 cm. [Eng]

• **Summary:** Contents: Sangyo damashi (Our company spirit is expressed in this phrase which means that we always endeavor to enrich the daily life of people everywhere by adding to the joys and benefits of good eating.) Welcome. Our plant. Our product (Soy sauce). Our process. Training. Organization chart of Kikkoman Foods, Inc. Probationary period. Wages and benefits. Rules and regulations. Grievances. Adverse business condition adjustments. Hours of work and payment schedules (three 8-hour shifts). The end or the beginning? President’s message to employees. Address: Walworth, Wisconsin.

5070. Oles, Shayne. 1973? The new Zen cookery: Practical macrobiotics. Woodland Hills, California: Shayer Corporation. 86 p. Undated. Index. 22 cm. Spiral bound.

• **Summary:** A revised edition of the first American macrobiotic cookbook, containing a wide variety of recipes from many sources. The cover is light orange. In the lower right corner is a sumi-e type brush illustration of some grasses and flowers. All recipes are numbered. The recipe numbers and page numbers are a little different from those in the 1966 edition published by Ignoramus Press in Los Angeles. Pages 59-62 (recipe nos. 210-21) are about Miso soybean paste. Pages 62-64 (recipe nos. 222-28) are about Tamari soy sauce.

Herman Aihara (Nov. 1990) has no idea why there are two versions of this book, both undated. Shayne Oles must have published one or both of these after Herman Aihara started the George Ohsawa Macrobiotic Foundation (any time after 1969). Only Shayne Oles would know. One clue is given in *Macrobiotics: Yesterday and Today* by Ron Kotzsch

(1985, p. 170). “In 1966 Lou Oles, who with his wife Shane [sic, Shayne] had managed the revived Ohsawa Foundation, died, and Shane asked Herman [Aihara] to assist her. Herman began to travel to Los Angeles once a month to give lectures at the Foundation headquarters. He was also instrumental in the publishing of Ohsawa’s books, which were selling well on the East Coast as well as the West. By 1969, however, dissention had developed over the role of Shane’s new husband in the organization. Herman resigned. In 1970 the Ohsawa Foundation dissolved. Aihara, who had moved to San Francisco [from Carmichael, near Sacramento], established the George Ohsawa Macrobiotic Foundation as a new educational and publishing organization.” Address: President of Ohsawa Foundation, California.

5071. Source (The). 1973? The Source (Menu). Hollywood, California. 6 p. Undated. 22 cm.

• **Summary:** This attractive undated menu, handwritten in calligraphy with a decorative illustrated border, is from the famous vegetarian restaurant started in 1969 by Jim Baker (Yahowa); the original is owned by the Los Angeles Public Library. Though the restaurant is usually said to be vegetarian, a chicken sandwich (tucked in pita bread) and a tuna sandwich appear on the menu under Salads; all other menu items are vegetarian.

Contents: Breakfast menu (incl. Soy or whole wheat pancakes). Juices (Fresh squeezed to order, incl. Fruit smoothie). Sandwiches. Beverages (incl. Herb tea, Mu tea, Carob milk, Red Zinger tea). Salads (incl. Chinese style salad with tamari sauce, and some with alfalfa sprouts). Fruit salads. Entrees (incl. Magic mushrooms with hiziki and “tamari sauce”). Soup. Desserts (incl. Cheesecake, Ice cream, Coffee cooler, Date shake, Carrot cake, Rice pudding).

Note 1. Since the prices in this menu are about 30% (range 18-66%) more expensive than those in the other menu seen from The Source, this one was almost certainly of a later date.

Note 2. The word “organic” does not appear in this menu. Address: 8301 Sunset Blvd., Hollywood, California. Phone: 213-656-6388.

5072. Kaibara, Ekiken. 1974. *Yôjôkun*: Japanese secret of good health. Translated by Masao Kunihiro. Tokyo: Tokuma Shoten Publishing Co. Ltd. vii + 133 p. Preface by Ayanori Onishi of the Japan Society of Medical History. No index. Jan. 21 cm. [Eng]

• **Summary:** Contents: Preface. 1. What is health preservation. 2. How to keep health. 3. Food and drink: What and how. 4. Repressing sexual desire. 5. The five sensory organs. 6. Easing nature and bathing. 7. Prudently guarding against illness. 8. Selection of a doctor: How to avoid a quack or charlatan.

“The original texts of this book are those of ‘Yôjôkun,’

published in Japanese by Chûôkôron-sha Inc., Tokyo, in 1969, and by Tokuma Shoten Publishing Co. Ltd. in 1968, and are adapted under the direction of Ayanori Onishi.” The author lived 1630-1714, and this book was written in 1713. The Preface notes that the importance nurturing mental discipline lies at the very core of the author’s art of staying healthy. Among his other works is *Yamato Honzo (Japan’s Herbal)*, which is still valued today and well known even abroad. A Soviet scholar has even termed it “the first great work on natural history.” The German physician and naturalist Philipp Franz von Siebold (1796-1866) called Kaibara “the Aristotle of Japan.”

Kaibara, who has been called the “grandfather of macrobiotics,” was an avid observer of the natural and human world. He traveled widely and wrote pioneering works on botany, geography, herbal medicine, and on popular manners and morals. At the age of seventy he retired from active life, and, free to sift through a lifetime of experience and learning, wrote the *Yôjôkun*, which includes the old sage’s views on health and longevity. He begins by asserting that physical well-being and long life are the natural conditions of mankind.

In Chapter One he writes: “The art of health preservation entails, first of all, keeping away from things harmful to one’s body, i.e., the inner desires—the desire for food and drink, sexual indulgence, sleep, endless talk, and the seven emotions: joy, anger, worry, pensiveness, sadness, fear, and surprise—and the outer evils—the four atmospheric aspects: wind, cold, heat, and dampness... An important factor in suppression of the inner desires is temperance in eating and drinking... One should refrain from satisfying sexual desire and try to preserve one’s energy. Sleep should be confined to standard hours. Oversleep is to be avoided... Of particular importance is to take a walk of a few hundred paces after meals... The art of health preservation begins with mental placidity. The way to achieve mental placidity is to keep one’s mind calm and one’s spirit unruffled... The human body is meant to last a hundred years... One should not rely on acupuncture, moxibustion, or medicine... A saint always expounds on the delights of living.” And sickness, like health, is something which mankind creates. Quoting the *Tao Te Ching*, Kaibara observes “One’s life is in one’s own hands.” Sickness comes only when one has willfully abused oneself. “Illness never comes without reason.”

In Chapter 3, Kaibara discourses at length on the subject of food and drink. The author, a Japanese physician, recommends a balanced diet to protect against chronic diseases. Meat and sake should be consumed in moderation. “A person should prefer light, simple meals. One must not eat a lot of heavy, greasy, rich food. One should also avoid uncooked, chilled, or hard food (p. 54)... Of everything that one eats and drinks, the most important thing is rice, which must be eaten in ample amounts to ensure proper nutrition (p. 61)... Do not eat between meals or immediately before

going to bed. After eating take a short walk to stimulate circulation. Massage the stomach and abdomen lightly to encourage digestion...

The section titled “Bean paste” (p. 67) begins: “Bean paste [miso] has a soft quality and is good for the stomach and intestines. Soy sauce and the liquid that drips off bean paste [tamari] have a sharper quality than bean paste and are bad for people who suffer from diarrhea. Nor should vinegar be taken in too large amounts, for it is bad for the spleen and stomach... One must not eat too much of foods that are salty, vinegary [sour], or hot.” One should also avoid tobacco.

In the chapter titled “Repressing Sexual Desire,” Kaibara states that the great human frailties are gluttony and lust. He agrees with the Chinese sages that one should practice sexual abstinence in youth to reserve one’s vitality and vigor. He cites the *Chien Chin Fang* by Sun Szu-miao which talks about the frequencies of sexual intercourse: “At twenty years of age, people should have a discharge [of semen] no more than once in a period of four days, at thirty once in eight days, at forty once in sixteen days, and at fifty once in twenty days. At sixty a person should no longer discharge his energy sexually unless he is particularly vigorous physically, in which case he can do so once a month.” Kaibara believes that it is very important to conserve sexual energy since it deeply affects the function of the kidneys, and the kidneys are the seat of vital energy for all the other organs. Address: Japan.

5073. Prendergast, K. 1974. Protein hydrolysate—A review. *Food Trade Review*. Jan. p. 14, 16-21. [15 ref]

• **Summary:** Contents: Introduction. Enzymic hydrolysis. Alkaline hydrolysis. Acid hydrolysis. Manufacturing process. Raw materials. Cost effectiveness. Ease of application. Temperature stability. Water solubility. Shelf life. Safety. Nutritional. Lack of solubility in oils and fats. Hygroscopicity. Lack of specific individual flavours. Applications: Why are HVP’s necessary?, soups, gravies and bouillons, meat and poultry products, fish products, sauces, savoury snacks, unusual applications, maillard reaction products, novel protein. Analysis and flavouring principles.

“The use of protein hydrolysates to improve the flavour of foods originated many hundreds of years ago in the Far East with the development of traditional soy sauce, which was made by the action of mould enzymes on steamed soyabeans and wheat. Then, in 1912, several patents were granted to Ikeda in Japan, and over the next sixty years enormous advances were made in hydrolysate technology. Now, by process refinement and formulation, manufacturers can produce grades which are tailor-made to an individual food product’s requirements. Furthermore, whereas 30 to 40 years ago most manufacturers had just one or two grades, which were used for every product type, suppliers can now frequently offer a range of thirty hydrolysates, each with its own individual properties, character and flavour.”

To make HVP, protein and hydrochloric acid are cooked at an elevated temperature. When the hydrolysis is complete, the material is neutralized with sodium hydroxide or sodium carbonate to a pH in the range 4.8 to 6.0. A black sludge called humin is removed by filtration, then the filtrate is debittered and decolorized / bleached using an activated carbon. After a final filtration the resulting HVP can be spray-dried to make a powder, concentrated to a paste in vacuum pans, or sold as a liquid. Address: Hercules Powder Co., Ltd.

5074. Eden Foods, Inc. 1974. Wholesale prices, F.O.B. P.O. Box 100, 310 W. Ann St., Ann Arbor, MI 48107. 2 p. Catalog. Effective Feb. 1.

• **Summary:** The products are very similar to those in the Nov. 1973 catalog. The 3 types of miso (Mugi, Hacho, Kome) bear the Erewhon label. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

5075. *Los Angeles Times*. 1974. Seldom-used soybean high in protein, unsaturated fats. Feb. 7. p. F2.

• **Summary:** Genevieve P. Ho, PhD, of the Agricultural Extension Service, USDA, University of California, explains that soybeans and soybean products have been staples in China for 4,000 years [sic, 3,000 years]. Among these products are “soybean curd, soybean milk, soybean sprouts and soy sauce...”

“In 1972, soybeans retailed for 14 cents a pound. Today they sell for 54 cents a pound in health food stores and 31 cents a pound in Oriental markets.” Describes how to cook whole dry soybeans at home. Gives recipes for: Soybean casserole. Soybean cookies (with “1 cup cooked soybeans”). Bean curd soup (with “1 cup bean curd (tofu), broken in small pieces”). Bean curd and shrimp (with “1½ cups bean curd (tofu)” and “1 tbsp. soy sauce”).

5076. Dresden, Donald. 1974. Japan Inn: A good show, visually and gastronomically. *Washington Post*. Feb. 17. p. PO34.

• **Summary:** Dining: The Japan Inn, now in its 3rd year of operation, located at 1715 Wisconsin Ave., NW (Georgetown), continues to rank as one of the finest Japanese restaurants in Washington, DC. To make the broth for Miso soup, begin with a Japanese seaweed called “sea tangle” [kombu], then remove it after it has imparted its flavor. Add dried bonito flakes to produce a delicate, fish-tasting broth. “Bean cake [tofu], mushrooms, and chopped green onions finish the dish.”

Shabu-shabu comes with two dipping sauces. One of these is made by mixing soy [sauce], vinegar, two kinds of sake, seaweed and dried bonito flakes. The other contains sesame seeds, oil, and paste. Shabu-shabu “also contains hot pepper, aged soy bean cake, soy sauce and two kinds of sake, one of them [mirin] sweet.”

Note: The meaning of “aged soy bean cake” is unclear. It could be fermented tofu, although that is rarely used as an ingredient in Japanese cookery.

5077. Pellettier, Mabel. 1974. Chinese: Longtime crisis cookers. *Washington Post*. Feb. 21. p. H2.

• **Summary:** A recipe for Steamed spareribs or pork chops calls for: “2 tablespoons fermented black beans, crushed very lightly in 1 tablespoon water, 1½ tablespoons dark soy sauce.”

A recipe for Shrimp and snow peas calls for “1 tablespoon light soy sauce.”

5078. Kushi, Michio. 1974. Natural agriculture and food processing. *Michio Kushi Seminar Report (Brookline, Massachusetts)* No. 3. Feb. 26 and 27. p. 5-30. Edited by Ane & Mark Riegel.

• **Summary:** On Feb. 26 Mr. Kushi, a macrobiotic teacher, lectured on: Tekka—“Tekka is used not only as a condiment, but also for medicinal use. Tekka is made from three different roots—carrots, burdock, and lotus roots.” The “volume of miso is flexible... Homemade tekka is traditionally made in a cast iron frying pan.” The Japanese word “tekka” derives from *tetsu* (which means iron) and *ka* (fire). “For medicinal use, yang miso is better.”

Miso and miso manufacturing, including how to make malt (rice koji) (8 pages). Note: This section indicates that Mr. Kushi has some basic knowledge of the subject but there are many errors. 1. Koji is not malt (which refers to soaked, germinated cereal grains), but molded cereal grains or soybeans. 2. Koji kin is not malt bacteria, but koji molds. 3. One does not add enzymes to miso and enzymes do not grow. Even modern miso factories do not add enzymes when making miso. 4. The entire mixture is not stirred after 20-25 days to add oxygen. Kushi says you must keep miso for a least 6 months, but to cure sickness it must be kept for 2-5 years. Miso soup can compensate for the bad qualities of meat and eggs—so everyone should eat miso soup daily. Soup stocks and miso soup.

On Feb. 27 he discussed: General outline for making shoyu—soy sauce (4 p.), including discussions with Kikkoman on making natural shoyu starting with whole soybeans. In the early years after 1973, Kikkoman wanted to make natural shoyu and sent Kushi several samples, but he turned them all down, in large part because Kikkoman wanted to use defatted soybean meal instead of whole soybeans. Erewhon is buying shoyu from 3 companies in Japan. But Kushi says the quality is declining compared to five years ago [i.e., 1969], when it had powerful healing effects when taken with bancha or kuzu. He adds: “Around Boston or on our Ashburnham land, I really hope we can begin to make miso or soy sauce.” Kushi says that now, after pasteurization, coloring and flavoring is added [not true, except in HVP soy sauce]. “Traditionally [in Japan] for this

they used natural herbs. For a sweeter taste and darker color they traditionally used kanzô [kanrô?] or ‘sweet grass = sweet herb.’”

“Formerly, until modern technological methods started to be applied, almost each village made their own shoyu like this, either as a joint community project, or someone with money made it and sold it to several villages.”

Using bean and grain sprouts—moyashi (including soy sprouts). Other soybean products: Fried tofu (two methods for agé). Ganmodoki. Kori-tofu or koya-tofu (freeze-dried tofu). Soybean milk (“Soy milk is very yin.” Note: Most Japanese and Japanese scientists consider soymilk to be an “alkaline” {arukari-sei} beverage, which therefore promotes good health). Yuba. In the discussion, soymilk yogurt and “Chinese fermented tofu... fu nyu” (p. 28) were mentioned. The U.N. [United Nations] recommendations on food, using vegetable proteins.

Note: This is the earliest English-language document seen (May 2012) that uses the term “freeze-dried tofu” to refer to dried-frozen tofu. Address: Brookline, Massachusetts.

5079. Erhard, Darla. 1974. The new vegetarians. II. The Zen macrobiotic movement and other cults based on vegetarianism. *Nutrition Today* 9(1):20-27. Jan/Feb.

• **Summary:** This article is mainly a very critical assessment of the macrobiotic diet and movement introduced as a cure by George Ohsawa. It also discusses Sufi groups, the new Vrindaban International Society for Krishna Consciousness (founded in 1966 by his Divine Grace A.C. Bhaktivedanta Swami Prabhupada), and various vegan groups.

A pie chart on page 21 shows the various major food movements in the U.S. counterculture “and how they all lead to unscientific vegetarian forms of food faddism.” Within the natural food movement are organic communes, Krishnas, vegans, Sufis, followers of the Ehret’s mucusless diet healing system, and practitioners of Yoga. Within the health food movement are four major teachers: Paul C. Bragg, Herbert Shelton, Carleton Fredericks, and Adelle Davis. Within the “Cosmic Nutrition Movement” are Zen macrobiotics (yin/yang polarity), and the Messiah’s Crusade (positive/negative polarity).

“Veganism is the philosophy and practice of compassionate living. Founded in England in 1944, the Vegan Society originally stressed the ethics of eating. The American Vegan Society, based in New Jersey, was founded in 1960 and is composed of individuals who are more health oriented. This Vegan philosophy was essentially based on Dr. Albert Schweitzer’s concept of reverence for life, and Mahatma Gandhi’s concept of Ahimsa, a Sanskrit term meaning non-killing and non-injury” [dynamic harmlessness] (p. 27). “Vegans who practice more restrictive diet interpretations may use Dr. Shelton’s Food Combining System.” Vegans and their children often use soy milk.

The reason is that the general natural foods movement is an example of unscientific food faddism is that the “Diet emphasizes natural and/or organic vegetables, fruits, legumes, grains, and usually dairy products, and restricts meat.”

A sidebar briefly defines “Vegetarian terms” including amasake, miso, mochi, nirvana, tamari, tofu, and umeboshi.

Note: This is the earliest document seen (May 2002) concerning Sufism (or Islam) and Vegetarianism. Address: RD, MPH, Research Nutritionist, Clinical Study Center, San Francisco General Hospital, California.

5080. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part I (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm.

• **Summary:** 1974 Feb. 28. Meet Bill Shurtleff and Mr. Masa Miyashita of Kikkoman export dept. (good man, speaks fluent English) at the Imperial Hotel (*Teikoku Hosteru*, built in the 1920s by Frank Lloyd Wright) in Tokyo. Talk for 4 hours. Westbrae hires Shurtleff as an interpreter and guide.

March 1. Dinner at Sasa-no-Yuki, beautiful old restaurant that specializes in tofu cuisine.

March 4, Monday. Visit Kikkoman in Noda with Shurtleff and Miyashita. Tour Plant #7, then Plant #4 (the Goyo-Gura), which produces the emperor’s shoyu in the traditional, natural way. “Saw 5 batches of moromi mash from 1 month old to 12 months old, and tasted each one. Delicious. Great color change between the 1 month and the 12 month moromi. We saw all the traditional tools. The moromi vats were made of cedar and last approximately 200 years.” See a movie on how shoyu is made. Lunch at a sushi shop. Visit two miso retail shops with Shurtleff near his home. One had 42-45 types of miso (mostly rice miso, with 1 each Hatcho, barley, and cooked miso), the other 32-35 types. Tasted many and learned the differences. I buy Saikyo sweet white miso and Hatcho miso.

March 5, Tues. Attend a cooking class at Lima Ohsawa’s house, then have dinner with Lima and the class members. Sick for the next 2 days.

March 9, Sat. Call then meet Mr. Kazama of Mitoku. He represents Erewhon. We may import through Kikkoman’s Pacific Trading. Plan trip to Sendai Miso-Shoyu. Sendai is interested in using organic soybeans to make shoyu but would like a contract stating that all of it will be purchased when done. Dinner at the natural foods restaurant, Hakumon run by a Frenchman named Pierre.

March 11, Mon. Meet Shurtleff early at Tokyo station. Take bullet train (Shinkansen) to visit two Hatcho miso plants (Hayakawa Kyuemon Shoten, and Ota Shoten in Okazaki city, Aichi prefecture). Both plants claim to be over 600 years old. They use modern steamers and koji rooms. They pile 4-6 tons of rocks atop each large vat of miso, age it for 2 summers. It becomes very mellow when fully

aged. They also use about half of their Hatcho miso to make Akadashi miso. It also contains caramel coloring, barley syrup, MSG, shoyu, a white miso, and preservatives. They sell a lot of Akadashi but only a little Hatcho miso. Lunch at an udon noodle shop that hand makes and cuts the noodles. Lots of slurping. Then visit a plant that makes real tamari and shoyu. All the tamari is mixed with junk. Train to Kyoto; stay at Friends World College. Note: This is the earliest English-language document seen (March 2012) that contains the term “real tamari.”

March 12, Tues. Visit a tofu maker, a yuba maker (*Yuba Han*), then the company that makes Saikyo sweet white miso. The owner lies to us initially about his miso aging and caramel coloring (which tastes and looks like tar). Then he reverses himself without batting an eye. Lunch at a 300 year old Zen vegetarian restaurant (*Okutan* near *Nanzenji* temple); so beautiful that I start crying. Fantastic place. Light snow falling by the pond. Enjoy Simmering Tofu (*Yu-dofu*) in a broth. Then we go to a 400-year old tofu restaurant (*Nakamura-ro*) at a shrine (*Gion*) for dessert of *amazake* and *Dengaku* (skewered and braised with sweet miso). On to a second miso factory. It is a bore and the owner does not seem sincere but he has a great reputation among macrobiotics. He makes both natural and sweet white miso. Shurtleff visited him last year. For white miso the soybeans are boiled; for red miso they are steamed. Some white miso contains sodium thiosulphate bleach. Visit another yuba shop. They use granite grinding stones to make soymilk, cast iron pot to cook it in and copper skimming tables. A very beautiful place. Meet Ty Smith at a soba shop. He is a chain smoker, just quit working for Muso, and promoting a cooperative effort between Janus, Chico-San, Erewhon, and The Well to import foods from Japan. Evening at Jittoku coffee house, owned by an American, in a large old Japanese treasury (*kura*). Back to Tokyo by train. Talk until 1:00 A.M.

March 14, Thurs. Meet Kazama and Shurtleff, and take express train to Sendai Miso-Shoyu. We are treated royally by Mr. Muro. Long introduction and discussion. Visit their 2 plants, one modern, one traditional, natural. They make only rice miso. Their production of natural miso is more than all that imported to America by Erewhon and Janus. They age their natural shoyu 18-24 months at the request of Michio Kushi and Erewhon. They have 9 aging vats for the first year, then it is switched to other tanks. They invite us to have a shoyu taste test among 3 products: Kikkoman regular shoyu, Sendai regular, Sendai natural. Both Bill and I choose Kikkoman as best; good aroma, color, and taste. They congratulate us on our good taste. Sendai regular had very strong salty taste. We both liked the Sendai natural least; good color, no aroma, very mild taste. Sendai people say only one year is needed to ferment shoyu naturally. We might sell them organic soybeans (we had purchased 12 truckloads from a farmer) and get shoyu back in 1 year. We meet the president (Sasaki?), born 1928. Elegant geisha-hosted

tempura and sushi dinner with president, 2 vice presidents, production manager, and a consulting professor (Shibasaki sensei). After dinner to a traditional bar for *doburoku* (thick, unrefined sake with a low alcohol content [or was it *nigori-zake*?]), then a sushi house. Shurtleff leaves for Tokyo on night train.

March 16, Sat. Visit Shurtleff and Aoyagi's home for lunch. We have dried-frozen tofu main dish, salad with creamy tofu dressing, strawberries with tofu whipped cream. Delicious. Then we learn how to make tofu at home. It's easy. I'll make it at home in California, then at our Westbrae Natural Foods retail store on Gilman Street (Note: This led to a long series of tofu classes by Gerner, Liz Horowitz, and later Shurtleff & Aoyagi; The retail store changed its name in late 1976 to Gilman Street Gourmet).

Note 1. This is the earliest document seen (April 2006) concerning Westbrae Natural Foods.

Note 2. This is the earliest English-language document seen (Jan. 2012) that contains the term “creamy tofu dressing” (or “dressings”) a term coined by Shurtleff and Aoyagi in *The Book of Tofu* (p. 108). Continued. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

5081. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part II (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm.

• **Summary:** Continued: March 19, Tues. Take bullet train to Kyoto to meet Steve Earle of Muso Shokuhin. We 3 go to Okayama to see Fuchu Miso, that makes mugi miso (the barley miso sold in our store) and sweet white miso. The president's wife is the epitome of Japanese woman. For lunch we have tofu burgers with Italian sauce and mushrooms in a bento made by Akiko. Delicious. Take a boat to Shodo-shima where Marushima Shoyu Co. is located. Island is also famous for toasted sesame oil. Arrive at a ryokan at 6:30 P.M. VIP treatment. Bath before dinner and served in private room by geisha. Too much fish! Note: This is the earliest English-language document seen (May 2012) that contains the term “tofu burgers.”

March 20, Wed. Miso soup for breakfast. Visit Marushima Shoyu where Muso gets its “natural” shoyu for export to America. They have the newest wheat roasters (they roast it with sand), biggest presses. We see cement aging tanks in a temperature-controlled room, then onto a large red building with 150 aging tanks. But we see no whole soybeans, only soybean meal (*dasshi daizu*). “I feel the owner is a liar and this is a bogus operation. The scene gets heavy and ugly. Bill is great and presses on with questions.” The owner claims that 40% of their shoyu is natural, aged for 3 years and made with whole soybeans; 60% made with soybean meal, temperature controlled for 7 months. Thus there should be about 120 vats of natural versus 60 regular.

But where is the natural? Their faces turn red. We have caught them red handed. The owner take us to one musty, dirty old building with 25 vats, only 8 of which contain shoyu, some only half full. Lots of cockroaches. Looks like no one ever goes here. Still no sign of a single whole soybean. Uneasy departure. Steve Earle is embarrassed. We take a train to Tokyo. We present Earle/Muso with a list of inconsistencies and ask for a written reply.

March 21, Thurs. Visit Mr. Kazama's miso factory (*Ikeda Kojiro Miso Shoten* in Kawaguchi-shi near Tokyo), that makes barley miso, the only brown rice miso in Japan, and shoyu. Call Ty Smith of Muso. He says Muso was very happy with our findings concerning the problems at Marushima, and that they have contacted a new source in Kyushu. Marushima said their president died a year or so ago and his son took over. They have lost the old feeling and tradition.

March 22, Fri. 6:00 A.M. Meet with Bill Shurtleff at his tofu master's tofu shop (*San-Gen-Ya*, run by Mr. Toshio Arai). We watch how he makes tofu. Beautiful place (12 feet square) attached to their home. Beautiful people; they don't speak English. Both make tofu starting early in the morning. He delivers in the afternoon and she sells out of the shop. He gave me hot rich soymilk (from *kinugoshi*) with wild mountain honey. Both incredible. So sweet and delicious. They also serve us freshly made agé, kinugoshi, and natto. Lunch at Shurtleff and Aoyagi's home: Noodles and tofu, Chinese fried tofu, tofu pudding, agé, kinugoshi, and mikan orange. We go over my notes from the miso factory. We copy all of his notes. Then I leave, very sad, but the friendship will remain. Akiko is a remarkable lady. Meet Mr. Kazama and go to Pacific Trading. Lousy meeting with Mr. Masaaki Miki (sales manager), and Masa Miyashita (export dept). Go to airport.

Results of the trip: (1) Westbrae started (about 9 months later) to import many varieties of miso, plus shoyu, and other products from Mr. Kazama in Japan. Bob Gerner was the founder, president, and chairman of the board of Westbrae; (2) Bob Gerner and Liz Horowitz taught "Tofu and Miso Cookery Classes" in Berkeley during 1976; (3) Westbrae published and distributed widely two brochures, *What is Miso?* (May 1976) and *What is Tofu?* (July 1976) written by Shurtleff and Aoyagi; (4) In 1976 Westbrae Natural Foods Inc. decided to sell its retail store at 1336 Gilman St. in order to focus on being a distributor and importer. The store had been losing money. Bob Gerner bought it in June 1976 for the low price offered by the highest bidder. He remodeled the store, renamed it Gilman Street Gourmet, and re-opened it in Sept. 1976. In the spring of 1977 Gerner added a deli to the store; there he made and sold Tofu Burgers, Tofu Treasure Balls, and Tofu Steaks Sauteed in Ginger Sauce. The same week that the deli opened, Gerner sold 3,000 to 4,000 of his new Tofu Burgers out of the Westbrae booth at the New Earth Exposition in San Francisco. Bob's nephew and sister

(Margaret) made the tofu burgers. The burgers sold equally well at the same Expo in 1978 and 1979; (5) Shurtleff and Aoyagi wrote *The Book of Miso* and their New-age Foods Study Center moved toward becoming Soyfoods Center.

Note: In late November 1974 Mr. Kazama came to a meeting at Pajaro Dunes by Santa Cruz, sponsored by The Well. The idea was to set up a natural foods trade association. Erewhon wanted to control all imports of Japanese natural foods from Japan. Janus and The Well both had to import through Erewhon. They said Westbrae must buy through them via The Well (Roger Hillyard/Pure & Simple), and pay a 5% commission. Kazama had to defer to them. Gerner refused and they backed off. Ty Smith, now head of Erewhon, was upset that Westbrae was not paying a commission. Gerner told him "Tough." So Westbrae ended up importing from Kazama. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

5082. Photograph of people at the Erewhon warehouse—Boston. 1974. Boston, Massachusetts.

• **Summary:** These photos were sent in 2009 by Patricia Smith, who worked at Erewhon. They are not dated and the names of some people are unknown.

Concerning the date and place: Mark Ripa (Jan. 2011) says: "I think both photos were taken the same day, in the winter of either late 1973 or early 1974. They were taken next to the front windows of the third floor at 31 Farnsworth Street, South Boston (adjacent to the Erewhon warehouse at 33 Farnsworth). 31 Farnsworth was a three floor building adjacent to the six floors of 33 Farnsworth. That floor was used for storage by the Erewhon warehouse. *East West Journal* occupied multiple floors at 31 Farnsworth at the time. I don't remember the context other than it was a department photo of the 'warehouse crew.' Don't remember any other department photos. The photos were taken, I think, by Nik Amartseff (responsible for creating Erewhon labels and product development at the time). He may also have worked for EWJ. Last I heard Nik was living in Vermont."

(1) Photo of Mark Ripa (at Erewhon, Boston), wearing a beard, white suit (top and bottom) and necktie. On the photo, to his right, is written: "I'm Swami Bananananda and I'm here to say"—a take-off of the lyrics to a popular tune advertising Chiquita bananas, which begin: "I am Chiquita banana and I've come to say, Bananas have to ripen in a certain way..." Mark notes: "The two lines written on my photo by persons unknown, perhaps inspired by my borrowed white suit"

Mark wrote to Patricia Smith (Oct. 2010): "My title at Erewhon [Boston] changed over the years. I went back to a resume to clarify the following: April 1972 to Feb. 1974—Packaging line worker, miller's apprentice.

Feb. 1974 to Nov. 1974—Head miller.

Nov. 1974 to Aug. 1975—Buyer / merchandiser for the

Star Market account.

Aug. 1975 to Oct. 1976—Buyer, assistant product development manager. Inventory control manager.

Oct. 1976 to June 1978—Purchasing manager. Product development manager.

June 1978 to Oct. 1979—Quality control manager.

“I had my hand in a few Erewhon labeled products, most of which were manufactured by copackers, notably organic corn chips, potato chips (I think I was the first to market a tamari potato chip), apple juice and apple juice blends (I remember formulating apple spice juice and apple mint juice on my kitchen stove) and Mark’s Natural Spaghetti Sauce (2 varieties)—the first spaghetti sauce to have tamari as an ingredient (Michio Kushi wanted to balance the tomatoes with tamari, which was more workable than miso) and bagels (how could I forget the bagels—but they were discontinued as they molded before their time).”

(2) People who worked at Erewhon, Boston. Mark Ripa is in the 2nd row, far left.

John Fogg, who worked at Erewhon, Boston, identifies the people in this group as follows: Front row (three men, left to right): Dan Seamens, Don Lorenson (great guitar player, supervisor in shipping), and Tony Harnett.

Back row (seven men, L-R): Mark Ripa (probably a purchaser by then), Roger, unknown, Bill West (worked in the warehouse or was a truck driver; ended up as Trucking Manager), Warren Murrah (Receiving Manager), Paul Campbell.

Evan Root adds (Jan. 2001). Tony Harnett is now known as Anthony Harnett. “Anthony and Hugo van Seenus bought the small ‘Bread and Circus’ store in Brookline, Massachusetts. Soon after, Anthony bought out Hugo and developed it into a group of big supermarket sized natural food stores, with a very high quality standard. In 1990 Whole Foods bought him out for \$26 million.”

Steve Zoller adds (Jan. 2011): These were all macho warehouse guys who looked down on the “prods” (production guys) upstairs. The main erewhon building was at 33 Farnsworth St. I believe this was taken in the attached building (31 Farnsworth, I think). I base this on what looks like imports that were stored in that building, on the 1st floor. I would definitely date this later than the spring 1975 catalog photo.

Updates (from Steve): Dan Seamens—is at the WF Regional office in Cambridge. Bill West—married someone from erewhon (forget her name) and moved to New Mexico. Late 1980’s I saw him last and he worked for a juice or soda company. Warren Murrah—Married Susan Stamps (David’s sister) and worked at New Balance (maybe 1980?). Diane Markovitz—moved to St. Augustine, Florida, around 1977 to be with Greg Leonard (Tree of Life). Anthony Valenti—Married Carol (a former erewhonian); I last saw him as a waiter at a high class / priced restaurant in Boston.

5083. Saono, Susono; Gandjar, Indrawati; Basuki, Triadi; Karsono, Herry. 1974. Microflora of ragi and some other traditional fermented foods of Indonesia. *Annales Bogorienses* 5(4):187-204. Feb. [14 ref]

• **Summary:** “Studies have been conducted on the microflora of samples of ‘ragi’, ‘tapé ketela’ [tapeh ketela, from cassava] or ‘peuyeum’, ‘tapé ketan hitam’ [from black glutinous rice], ‘oncom hitam’ [onchom from peanut presscake or cassava presscake], and ‘oncom merah’ [onchom merah] or ‘oncom beureum’ [from peanut presscake or okara; both terms mean “red onchom”] from various places in West Java. Genera found in ragi include *Candida*, *Mucor* and *Rhizopus* species.

Appendix I, titled “Fermented products of Indonesia” lists 26 different traditional fermented products. Those made from soybeans and related products include: Kécap—Soy sauce made from black soybeans. Oncom merah—Okara onchom. Tépép kedelé—Tempeh made from soybeans. Tépép bengook—Tempeh made from the ripe seeds of *Mucuna pruriens* var. *utilis*. Tépép lamtoro—Tempeh made from the seeds of *Leuceuna leucocephala*. Tépép gembus—Okara tempeh. Tépép bongkrék—Tempeh made from the solid refuse of coconut meat. Many of these foods are prepared with the help of a starter called “ragi,” a small, slightly flattened dry ball consisting of rice powder, spices, and microorganisms. Ragi tépép, for example, is the type of ragi used to make tempeh.

Appendix II, titled “Methods of preparation of ‘ragi,’ ‘tapé ketela,’ ‘tapé ketan,’ ‘oncom hitam,’ and ‘oncom merah’ in West Java” contains 1-2 paragraphs on each. On pages 200-204 are detailed illustrations showing the morphology of 14 species and varieties of yeast.

Note 1. The Treub Laboratory was named after Dr. Treub, who was associated with the founding of the Buitenzorg Botanical Gardens in the 1880s. He was there in the mid-1890s.

Note 2. This is the earliest document seen (March 2010) that contains the word “oncom” (spelled in that way). Address: 1,3-4. Treub Lab., National Biological Inst., Bogor; 2. Nutrition Research Inst., Dep. of Health, Bogor.

5084. Ziemba, John V. 1974. Authentic soy sauce brewed in Wisconsin. *Food Engineering* 46(2):58-60. Feb.

• **Summary:** Gives a step-by-step description of the method used by Kikkoman to make shoyu in Walworth, Wisconsin. Eight photos show 2 different views of the outside of the plant and 6 of major steps on the inside. Both mold culture and yeast culture are mentioned. Address: Senior Editor, Food Engineering magazine, Chicago.

5085. Hughes Markets. 1974. Stick with the best blue-chip stamps (Ad). *Los Angeles Times*. March 14. p. G30.

• **Summary:** The section titled “Foods of the Orient” includes:

Yamasa soy sauce, reg. & shinmi 1 gallon can \$2.79.

Coconut juice, Marga Rita 7¼ oz. can, 4 for \$1.

Soy beans, JFC daizu 1 lb. pkg., 3 for \$1.

Won ton skins, in our produce dept., Nanka Seimin 12 oz pkg. 35¢.

5086. Spiral Foods Inc. 1974. Wholesale price list. Chico, California. 4 p. March 15. 28 cm.

• **Summary:** This two-sheet catalog and price list, consisting of two pages stapled in the upper left corner, is printed front and back with reddish-orange ink on tan paper. The first item is five cookbooks. Soy-related products: Condiments: Lima tamari soy sauce (aged naturally over 2 yrs.). Miso—soybean puree (entirely natural—Mugi Miso, or Kome Miso). Lima kome miso. Nigari (natural coagulant to make tofu). Barley koji. Tekka. Sesame salt (toasted whole brown sesame seeds and sea salt). Salt plums (pickled in sea salt). Kuzu (wild arrowroot starch). Utensils: Soy pitcher [soy sauce dispenser]. Address: 1144 West 1st Street, Chico, California 95926. Phone: 343-2111.

5087. Chiang, Cecilia Sun Yun; Carr, Allan. 1974. *The Mandarin way*. Boston, Massachusetts: Little, Brown and Co. xiv + 274 p. Index. 23 cm.

• **Summary:** This charming, interesting book (“as told to Allan Carr” by Cecilia) is combination biography and Chinese cookbook organized by months (moons)—so that it flows with the seasons and seasonal foods. For each of the twelve moons of the old lunar calendar, there is one chapter (e.g., First Moon) of Cecilia’s memories of growing up in China, as one of 13 children in a family of great wealth, followed by an “Interlude” chapter on a particular theme (e.g., “Of shopping and its pleasures”) with her favorite recipes for that time of year.

Soyfoods (including “soy” or “soy sauce,” “fresh bean curd,” and “preserved bean curd”) are mentioned throughout the book—for example: Freshwater “dancing shrimp” were “eaten raw after being dipped in a tangy sauce of preserved bean curd [fermented tofu], pepper, soy sauce, coriander and wine” (p. 8). The pork shoulder was “‘red-cooked’ in soy [sauce] and wine...”

Note: This is the earliest English-language document seen (Oct. 2010) that uses the term “preserved bean curd” to refer to a type of fermented tofu.

Some measure of success in reproducing authentic meals outside of China “can be achieved if the basic supplies are obtained either by purchasing them in Chinese shops or ordering them by mail (several sources, with addresses, are given...)” These include: “fresh ginger root, dried bean curd, dried bean curd [pressed tofu; doufu-gan], sheets [yuba], sesame seed paste, sesame seed oil,... soy sauce,... red bean paste [azuki, also called “1 can sweet red-bean paste” (p. 164)], hot bean sauce” (p. 21)).

Fish with hot spicy bean curd sauce (*Tou-pan la-yü*, with

“1 tablespoon Szechwan hot bean curd paste,” p. 50). Five-spiced spareribs, Peking style (with “2 tablespoons pale soy sauce,” p. 71). Peking duck (with “hoisin (duck) sauce,” p. 96). Red-cooked chicken with chestnuts (with “4 tablespoons dark soy sauce, Japanese Kikkoman or imported,” p. 116). Chopped spinach with shredded bean curd (*Po-ts’ai pan tou-fu kan*, with “dry pressed bean curd,” p. 138). Szechwan four season beans (with “1 heaping tablespoon hot soy bean paste,” p. 162).

In San Francisco’s Chinatown, where the shops are predominantly Cantonese, the “dry goods store provides me with pressed bean curd and bean curd sheets [yuba, doufu pi],...”

Talk with Cecilia Chiang. 2008. Nov. 15. She says that “bean curd sheets” refers to doufu pi or yuba; pressed bean curd to doufu-gan. “Hot bean sauce” is *la douban jiang*, which is *douban jiang* with hot chili peppers; both are made with soybeans. Red bean paste is the same as “sweet red bean paste,” made with azuki beans (*xiao hong dou*), and the same as Japanese *an*. Address: 1. Founder and owner, The Mandarin restaurant, Ghirardelli Square, San Francisco, California.

5088. **Product Name:** Kikkoman Soy Sauce, and Teriyaki Sauce.

Manufacturer’s Name: Kikkoman Foods Inc. Subsidiary of Kikkoman Shoyu Co. Ltd.

Manufacturer’s Address: P.O. Box H, Walworth, WI 53184.

Date of Introduction: 1974. March.

Ingredients: Water, wheat, soybeans, salt, sodium benzoate: Less than 1/10 of 1% as a preservative.

Wt/Vol., Packaging, Price: 10 fluid oz (296 ml).

How Stored: Shelf stable.

New Product—Documentation: *Soybean Digest Blue Book*. 1974. p. 124; 1978. Address is now P.O. Box 69, Walworth, Wisconsin 53184. *Soya Bluebook*. 1980. p. 54. Main office is now “Kikkoman International Inc., Subsidiary of Kikkoman Shoyu Co., Ltd., 50 California St., P.O. Box 784, Suite 3600, San Francisco, CA 94101.

Label (see next page). 1983. 3.25 by 3.75 inch oval. Paper. Red, blue, black, white and yellow. Back label. 2.5 by 3.75 inches. Paper. “All-purpose seasoning. Since 1630. Good Housekeeping seal. Back label gives recipe for “Turkey Polynesian.” Contains a color photo. *Soya Bluebook*. 1987. p. 92. Kikkoman Foods, Inc., Hwy 14 & Six Corners Rd., P.O. Box 69, Walworth, WI 53184. Sales offices: Los Angeles and San Francisco, California; Atlanta, Georgia; Chicago, Illinois; New York, NY.

5089. Shurtleff, William. 1974. Report on visit to Kikkoman Shoyu Co. and their Goyo Gura, Noda, Japan. March 4. Tokyo, Japan. 3 p. Unpublished typescript.

• **Summary:** Kikkoman makes shoyu at the Goyo Gura in the

traditional way, using traditional equipment. It is a beautiful place. A detailed description of the process and equipment is given. Address: Tokyo.

5090. Yoshikawa, Seiji. 1974. Shoyu no kikiaji shiken no kaiseki ni tsuite [Analysis of the results of taste-testing of shoyu]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 29. p. 277-82. March. [Jap]

• **Summary:** Reprinted from *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 68(6):412-17 (1973). Address: National Food Research Inst., MAFF, Tokyo, Japan.

5091. Lin, Florence. 1974. East is red & west is hot. *New York Times*. May 19. p. 86, 88. Supplement.

• **Summary:** In eastern China, the distinctive cooking style is known as “red cooking,” which has to do with soy sauce—not ideology. Shanghai is the gastronomic capital of the east, although some favor Yangchow. In western China, the food is spicy hot. Six recipes are given; most call for soy sauce (dark or regular). The first recipe, *Lo han chai* (Buddha’s delight) calls for “2 ounces er chu (dried soy bean milk skin) [yuba], optional,” and light soy sauce.

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term “er chu” or “soy bean milk skin” or “dried soy bean milk skin” to refer to yuba. Address: Cooking teacher (China Institute) and author.

5092. Hashimoto, Hikotaka; Yokotsuka, Tamotsu. 1974. [Studies on sediment of shoyu. VIII. Mechanisms of

sediment formation during the heating of raw *shoyu* (soy sauce)]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 52(5):328-34. May. [10 ref. Jap; eng] Address: Central Research Laboratories, Kikkoman Shoyu Co., Ltd., Noda-shi, Chiba prefecture, Japan.

5093. Kay, Theodore. 1974. Soybeans in the Nigerian diet. *Samaru Agricultural Newsletter* 16(1):18-22. May. [Eng]

• **Summary:** Contents: Introduction. Nutritional value of the soya bean. Daily amino acid requirements for men, women, and children. Suggested methods of incorporating soya bean into the Nigerian diet: Soya bean paste (soaked, uncooked soya beans, with the hulls on, ground to a white paste) and whole beans (not dehulled). Utilization of the paste: Directly for kosei (akara ball) and panke (puff-puff), for preparation of soya bean milk, which can be used to make protein-enriched pap, fu-fu, bean curd (to-fu), awara or wara. Use of the residue from preparation of soy bean milk [okara]: In Alele (moin-moin), or biscuits. Utilization of whole soya beans: baked, sweet baked powder, stew. Discussion: Why do we need soya bean in Nigeria? Five reasons are given. Acknowledgments to many co-workers.

The soya bean has been cultivated in the Far East since about 2800 B.C. It has [been] the main source of protein for all of East Asia, particularly for the vegetarian Buddhist. It has been used as bean curd (To-fu) and soya sauce in most parts of the Far East from Indonesia up to the Northern end of Japan, as soya bean milk in China, as soya paste (mi-so) in Japan, and as a fermented product (Tempe) in Indonesia.

The crop is well established in Benue Plateau State south of Makurdi, in the North-Western State around Abuja and in the southern part of North-Central State. However, it has been very difficult to cook the beans in a traditional West African way so it has never become popular in this country. Most of the soya bean produced in Nigeria has been exported as a cash crop, except a little for animal consumption. Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

5094. Eden Foods. 1974. Spring pricelist. P.O. Box 100, Ann Arbor, MI 48107. 4 p. Effective June 1.

• **Summary:** There are many more total products than in the Nov. 1973 catalog. The 8 oz tamari soy sauce and the 3 types of miso (Mugi, Hacho, Kome) in 1-lb packages bear the Erewhon brand after the product name in the catalog, but the pints and gallons of tamari soy sauce and the same 3 types of miso sold in bulk (44 lb tubs) do not bear the Erewhon brand, perhaps indicating that Eden has found a way to go around Erewhon in importing bulk miso. New products include: Kuzu arrowroot. Grade C Korean nori (Roland). Canadian leaf dulse (Atlantic Mariculture). Cilician olives (Pure & Simple). Barley malt powder. Barley malt syrup. Maple syrup. Bee pollen. Shiu-chu finest preserved Ginseng roots (China). Kirin extra large ginseng roots, red. pres. (China).

Ginseng balls (*fo-ti-tieng*, *dong kwai* [angelica root]). Mao herb (Chinese ephedra). Lemongrass. And many other herbs. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

5095. *Los Angeles Times*. 1974. Unusual offering: Fresh ginger flavors Chinese steamed fish. June 6. p. OC_C22.

• **Summary:** “If fresh ginger and fermented black beans are not available, they may be omitted.”

A recipe for Chinese steamed fish calls for: “2 tbsp. [tablespoons] soy sauce,... 2 slices fresh ginger, minced, 1 tbsp. fermented black beans, rinsed.”

Note: This recipe also appeared in the 26 Feb. 1976 issue (p. D17) of the *Washington Post*.

5096. Erehwon. 1974. Natural and organic foods: Supplying natural food stores, co-ops, schools and communities (Catalog). Boston, Massachusetts. 16 p. Effective June 1974.

• **Summary:** The structure and design of this catalog is quite similar to the previous one of April 6, however four pages of new products and sizes have been added. The background of the illustration has been changed but the foreground is the same; it is now copyrighted by Erehwon. The note from Paul Hawken has been replaced by a similar one signed “the erewhonians.” OG = Organically grown.

New additions to the catalog: Flyers: (1) Organic Merchants: The flour story. The salt story. (2) Issues of *East West Journal*. From Vol. IV, No. 6, July 1974, “Energy” to Vol. IV, No. 9, Oct. 1974, “Healing.” (3) Natural Recipes: Three by five inch tear-off pads, each pad containing 100 of the same natural-food recipe. Four assortments (A-D), eight different pads in each assortment. There is one soy-related recipe pad in each assortment: (A) Soybeans au gratin. (B) Miso soup. (C) Soybean casserole. (D) Soyburgers.

This catalog cover (blue on white) was reprinted with permission from the Michio and Aveline Kushi Macrobiotics Collection, Archives Center, National Museum of American History, Smithsonian Institution, Washington, DC. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

5097. Claiborne, Craig. 1974. Good and bad of Amsterdam’s Indonesian food. *New York Times*. July 8. p. 34.

• **Summary:** In Amsterdam, the Indonesian restaurant capital of the world, the writer imagines the perfect Indonesian restaurant in the perfect setting; he then proceeds to describe both. At a perfect rijsttafel (which literally means “rice table”) guests would serve themselves. There would be “Delft-designed platters, lazy susans, chafing dishes and bronze grills in or on which simmered or broiled a multitude of dishes with names like *ajam*, *babi ketjap*, *daging madura*, *sambal goreng kering*, *gado gado*, and a dish of plain old *katchang*.”

The two Indonesian restaurants he visited in Amsterdam fell far short of expectations. However at one of these he

tasted “a delicious and hitherto unknown dish of deep-fried soy beans which resembled and tasted like a shredded meat dish.”

5098. *Foreign Agriculture*. 1974. Koreans expand soybean output by planting rice paddy dikes. July 8. p. 8-9.

• **Summary:** Korea, which doubled its imports of U.S. soybeans last year, is again promoting a program to boost domestic oilseed production by planting soybeans on rice paddy dikes. This practice, which was mandatory under the Japanese occupation, had been abandoned until revived last year. In 1973, “dike-bean” acreage was estimated at 86,485 acres. The Ministry of Agriculture and Forestry (MAF) estimates that the maximum area for dike-beans now ranges from 93,900 to 135,900 acres. A significant portion of the crop harvested daily in the summer to be consumed as a cooked, green vegetable, much as Americans eat lima beans. Nearly all of Korea’s soybean production is consumed as food. Industry sources estimate that 70% is used in homes for making soy sauce and paste, 20% for bean curd, and 10% for bean sprouts. Address: Office of U.S. Agricultural Attaché, Seoul.

5099. *Sunset (Menlo Park, California)*. 1974. Tofu in 1974: In this inflationary year tofu makes great budget sense. But this protein custard is a mystery to too many cooks. 153:104-06. July.

• **Summary:** This pioneering and very important, positive article was generated (at least in part) by an Azumaya P.R. campaign at a time when meat prices were skyrocketing.

“As food prices rise, Westerners are learning about soybean curd, an inexpensive protein food sold most often under its Japanese name, *tofu*. Oriental cooks have long known the value of this nearly tasteless substance with the texture of custard. (The Chinese call it *dow foo*.) And now various styles are becoming more widely available.

“Some people may hesitate to try tofu for fear their families won’t accept it. They should realize that tofu is bland and readily assumes the flavors of whatever ingredients you use with it. The recipes here all have Oriental flavors, including such favorites as sweet and sour, teriyaki, and sushi; all are simple and quick to prepare. But the versatility of tofu makes it an appropriate ingredient for other dishes ranging from appetizers and soups to main dishes and desserts.

“The companies that make the various styles of tofu are frequently small family-run operations; products and their names vary slightly from company to company...”

“For all types of tofu, soybeans are ground, mixed with water, and cooked until a milky liquid [soymilk] is extracted and drained off. A coagulant is added to set the liquid, making a curd. How the curd is handled determines the product.”

A table (with 4 columns) describes six types of tofu: (1)

Fresh soybean pudding (called *Dow foo fah* in Chinese and having no Japanese name) is sold in portions of about 1 lb water packed in plastic tubs. (2) Soft tofu (called *Suey dow foo* in Chinese and *Kinugoshi* in Japanese) is sold in 3/4 to 1-lb blocks water-packed in plastic tubs. (3) Medium-firm tofu (Japanese style, called *Dow foo* in Chinese and *Tofu* in Japanese) is sold in 1 to 1¼-pound blocks water-packed in plastic tubs or cartons. (4) Hard tofu (Chinese style, called *Dow foo yuen* in Chinese and having no Japanese name) is sold as two or more slices (about 6 oz each) water-packed in bags or plastic tubs. (5) Raw-fried tofu (called *Hung siu dow foo* in Chinese and *Nama-age* in Japanese) is sold in slices or sticks of various sizes dry-packed in bags or plastic tubs. (6) Deep-fried tofu puffs (called *Dow foo bok* in Chinese and *Age* {ah-gay} or *abura-age* in Japanese) are sold in small dense cubes usually dry-packed about 15 in a 5-oz package (Chinese product) or in large puffy pieces usually dry-packed about 3 in a 1½-oz package (Japanese product).

Note: This is the earliest English-language document seen (May 2012) that contains the term “fried tofu puffs” or the term “Deep-fried tofu puffs” or the term “Raw-fried tofu.”

Photos show (1) Tofu slices taken from the rinsing tank and being packed into plastic tubs at Azumaya, (2) A large photo shows 8 types of Japanese- and Chinese-style tofu on a table near a wok and skimmer: Medium firm tofu, Fresh soybean pudding, Soft tofu (Japanese style), Soft tofu (Chinese-style), Hard tofu, raw fried tofu, Deep-fried tofu puffs (Chinese-style), and Deep-fried tofu puffs (Japanese-style). (3) Teriyaki-glazed raw-fried tofu cubes.

Recipes are given for Tofu and water cress soup, Tofu orange almond pudding, Stir-fried chicken and tofu, Tofu teriyaki appetizers, Fried tofu salad with peanuts, Fried tofu with pork sauce, Rice-filled agé appetizers (Sushi), and Sweet and sour tofu.

5100. Bennett, Jean. 1974. Filipino food: A blending of flavors. The dentist cooks. *Los Angeles Times*. Aug. 1. p. K22.

• **Summary:** About Ida Del Mundo, a fine chef, and her cooking. Philippine cuisine has a long and complex tradition. “Much of it is Spanish in origin. Some of it is of Chinese origin such as the use of wheat, rice, noodles, soy bean curd, [mung] bean sprouts, egg rolls, and the very extensive use of steamed foods.” A recipe for Sweet and sour sauce dip calls for soy sauce. A photo shows Ida cooking Filipino foods.

• **Summary:** “In Japan, glutaminase (EC 3.5.1.2, L-glutamine amidohydrolase) from *Aspergillus sojae* is important as an enzyme which catalyzes the conversion of glutamine to glutamic acid in the *shoyu* brewing process.” Address: Research Section, Kansai Plant, Kikkoman Shoyu Co., Ltd., Takasago, Hyogo, Japan.

5104. Yamamoto, Shusaku; Hirooka, Hitoshi. 1974. Production of glutaminase by *Aspergillus sojae*. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 52(8):564-69. Aug. [11 ref. Eng]

• **Summary:** High-quality shoyu contains a high concentration of glutamic acid, which is essential to the good taste of shoyu. Shoyu molds were tested for their ability to produce the enzyme glutaminase, which catalyzes the conversion of glutamine into glutamic acid. Various conditions of mold culture were also tested. A mutant strain of *Aspergillus sojae*, derived from a selected strain, was found to produce high-quality shoyu. Address: Research Section, Kansai Plant, Kikkoman Shoyu Co., Ltd., Takasago, Hyogo, Japan.

5105. Areekul, Suvit; Thearawibul, Rawadee; Matrakul, Duangmarn. 1974. Vitamin B-12 contents in fermented fish, fish sauce and soya-bean sauce. *Southeast Asian J. of Tropical Medicine and Public Health* 5(3):461. Sept.

• **Summary:** Fermented fish contain a mean of 2.27 micrograms of vitamin B-12 per 100 gm. Fish sauce contains a mean of 1.91 micrograms, and soya-bean sauce contains a mean of 0.14 micrograms—although 13 out of 48 samples contained no B-12 at all.

The average daily consumption of fish sauce or fermented fish in Thailand is 15 ml or 15 gm per person. This could explain the findings (previously reported) that

megaloblastic anemia is rarely seen in Thailand. Address: Dep. of Radioisotopes, Faculty of Tropical Medicine, Mahidol Univ., Bangkok, Thailand.

5107. Ford, Frank. 1974. *The simpler life cookbook from Arrowhead Mills*. Fort Worth, Texas: Harvest Press. 157 p. Introduction by Fred Rohé. Index. 18 cm. [13* ref]

• **Summary:** The copyright page states: “First printing—Oct. 1974. This book [Feb. 1976] is the second edition of a book which was originally released under the title of *Pack to Nature*.” Note: 150,000 copies were in print by Sept. 1976. The introduction (written in Dec. 1975 by Fred Rohe, now of Shiloh Farms, Sulphur Springs, Arkansas) tells how Fred first met Frank Ford in 1968 in Hereford when Arrowhead Mills was supplying organically grown grains and beans for Fred’s natural foods store in San Francisco. At that time, Ford’s business was already 10 years old. Today Arrowhead Mills has 22 shareholders. “There are more than 30 Arrowhead organic growers farming more than 60,000 acres, 44 natural foods distributors bring more than 350 Arrowhead products to thousands of stores throughout every state of the U.S.

“Even more exciting than Arrowhead’s tremendous victory for Frank’s business life is the victory that God has won for his spiritual life. Frank made Jesus Christ lord of his life 3 years ago and that’s when love and joy began to transform his life by the living power of God’s Holy Spirit. God is carrying on a great work in his life, transforming an organic farmer into an organic man, integrating him body, soul and spirit, transforming Arrowhead Mills from a work of man into a work of God. The same miracle of God’s grace has transformed my life, enabling me to understand what Frank means when he says, ‘Arrowhead Mills belong to God.’”

Soy-related recipes are the same as those in the original edition titled *Pack to Nature* (Oct. 1974). A 2-page directory titled “Some Natural Foods Sources” lists 41 companies with full addresses and Zip codes. Details on these new additions are given in the Sept. 1976 edition of this book. Address: Deaf Smith County, Hereford, Texas.

5108. Ford, Frank. 1974. *Pack to nature: Nutrition made easy in the home or in the woods*. Fort Worth, Texas: Harvest Press. vii + 157 p. Introduction by Roger Hillyard. Index. Oct. 18 cm. [13* ref]

• **Summary:** This book, containing over 250 recipes, describes how to use whole, natural food staples in quick, easy to prepare dishes. By Sept. 1976 this book had become

The Simpler Life Cookbook from Arrowhead Mills.

In the introduction, Roger Hillyard (writing in Oct. 1974 from Soquel, California) recalls that in late February of 1969, he and his wife and daughter were returning to Boston from California. They stopped in the small Texas town of Hereford to visit Deaf Smith County and the company that was supplying food to a growing number of natural foods followers and devotees—including Erewhon. Four years later they spent a year in Hereford working with Frank Ford and Arrowhead Mills. “During the five years I have worked with, lived with, and been friends with Frank, I have witnessed one of the most dramatic and beautiful personal unfoldings. Frank never wore that robe of self-righteousness, and he helped me to exchange mine for something more embracing.”

Soy-related recipes include: Quick soy pancakes (with soy flour, p. 35). Soybean salad (with cooked soy flakes, p. 43). Quick tamari orange salad dressing (with tamari soy sauce, p. 47). Paul’s salad dressing (with tamari, p. 47). Soybean chili (with dry soybeans and “tamari soysauce,” p. 54). Sprout soup (with 2 cups fresh soybean sprouts, p. 54). Sprouted lentil soup (with soy flour, p. 55). Squash stew (with soy flakes, p. 55). Tamari bouillon (p. 56). Vegetable-soy-sesame soup (with soy flakes, p. 59). Basic soybeans (p. 74). Basic soy flakes (p. 75). Basic bulghur-soy grits (p. 75). Lentil soy loaf (with cooked soybeans or soybean flakes, p. 84). Soy & mushroom loaf (with soy flakes, p. 85). Soy patties (with soy flakes, p. 87). Stuffed peppers (with soy flakes, p. 87). Soyflake & tahini spread (with soy flakes, p. 106).

A 2-page directory titled “Some Natural Foods Sources” (p. 153-54) lists 30 of the natural food industry’s pioneers, including Akin Distributors, Inc. (Tulsa, Oklahoma), Arrowhead Mills, Inc. (Hereford, Texas), Basic Needs (Grand Prairie, Texas), Cinagro Distributors, Inc. (Atlanta, Georgia), Cliffrose (Longmont, Colorado), Collegedale Distributors, (Collegedale, Tennessee), The Concord (Snowflake, Arizona), Deer Valley Farms (Guilford, New York), Eden Organic Foods (Ann Arbor, Michigan), Erewhon Trading Company (33 Farnsworth St., Boston, Massachusetts 02210, and 8454 Steller Dr., Culver City, California 90320), Food for Health (Phoenix, Arizona), Food for Life (Elmhurst, Illinois), Good Food People (Austin, Texas), Great Plains Distributors (Kansas City, Missouri), Happy Health Products (Miami, Florida), Janus (Seattle, Washington), Laurelbrook Foods (Bel Air, Maryland), Lifestream Natural Foods (Vancouver, BC, Canada; Ratana and Arran Stephens), Mottel Health Foods (New York, NY), Naturally Good Foods (Hereford, Texas), Nu-Vita Foods Inc. (Portland, Oregon), Organic Foods & Gardens (City of Commerce, California), Shadowfax (Binghamton, New York), Shiloh Farms (Sulphur Springs, Arkansas), Taiyo, Inc. (Honolulu, Hawaii), Tree of Life (St. Augustine, Florida), Vim & Vigor (Honolulu, Hawaii), The Well (San Jose, California), Walnut

Acres Inc. (Penns Creek, Pennsylvania).

A small photo on the rear cover shows Frank Ford out hiking, wearing a backpack.

Note: This is the earliest published document seen (Feb. 2010) concerning Lifestream Natural Foods (Vancouver, BC, Canada). Address: Deaf Smith County, Texas.

5109. Hashimoto, Hikotaka; Yokotsuka, Tamotsu. 1974. Studies on sediment of shoyu. IX. Role of hydrophobic bonds among protein molecules in sediment formation during heating of raw *shoyu* (soy sauce). *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 52(10):747-58. Oct. [50 ref. Eng]

Address: Central Research Laboratories, Kikkoman Shoyu Co., Ltd., Noda, Japan.

5110. Katzen, Mollie. 1974. The Moosewood cookbook: Recipes from Moosewood Restaurant, in the Dewitt Mall, Ithaca, New York. Ithaca, New York: Published by the author. 79 p. No index. Oct. 28 cm. *

• **Summary:** This is the self-published, hand-lettered, original edition of what became one of the best and most popular American vegetarian cookbooks of the 1970s and 1980s. The book went through three printings and sold about 5,000 copies over a period of about 2 years before Ten Speed Press approached Mollie to buy the rights to a revised and expanded edition—though still hand lettered. Mollie's first printing of the book was sold for \$4 only at one bookstore—McBooks. The second run was sold at about 3 local bookstores. The warehouse was in Mollie's home and car. She distributed it to the bookstores. The Ten Speed Press edition was published in Oct. 1977. It contains almost everything that was in the original edition but about 3 times as many recipes.

Soy-related recipes include: Perfect protein salad (with cooked soybeans, p. 32). Move over Joyce Chen Casserole (with tofu, p. 37). Zuccanoes (with cooked soybeans, p. 48). Soy gevult (p. 54). Gado-gado (with tofu, p. 55).

Note: Mollie writes in 1990: "I first learned about tofu in 1970 from a Chinese restaurant in San Francisco. They called it 'bean cake' soup. I was intrigued—and not disappointed."

Talk with Mollie Katzen. 1991. Oct. 31. Mollie got her first job as a cook in 1969 at a tiny macrobiotic restaurant named The Ithaca Seed Company in Ithaca, New York. "In those days to be a vegetarian was either to be macrobiotic or just to eat a lot of dairy products and cheese. There was very little available middle ground." Then she moved to San Francisco and from 1970-72 worked as a cook at the Shandygass, a popular, high-class, international gourmet vegetarian restaurant. The Moosewood restaurant was started in 1973 by 7 people, each of whom was an owner; 5 women and 2 men. Mollie was the only person among these who had restaurant cooking experience. The book originated because Mollie wanted to standardize the cooking and recipes in

the restaurant. It was meant mainly for use by the cooks in the restaurant, and prior to its appearance there had been few written recipes. Every recipe that was in this book was served at Moosewood at that time. Quite a few contained dairy products—to try to attract mainstream customers to the 65-seat restaurant, and to please them. Then customers began to ask for the recipes. Originally the restaurant was lacto-ovo-vegetarian except for one meat entree a night, but that was soon dropped because no one wanted to cook it and none of the customers wanted to eat it. The Moosewood restaurant still exists (though they now serve fish) and is bigger than ever. They now publish their own cookbooks and have rights to the name "Moosewood."

Of her three cookbooks, Mollie personally likes her most recent one, *Still Life with Menu*, the best. It is healthier and lower in fat. A new, extensively revised, 15th anniversary of the Ten Speed Press edition of Moosewood will be published in 1992. Address: Moosewood Restaurant, Dewitt Building, Ithaca, New York.

5111. Spira, Ruth Rodale. 1974. Naturally Chinese. Emmaus, Pennsylvania: Rodale Press, Inc. iii + 346 p. Illust. Index. 25 cm. [8 ref]

• **Summary:** Soy-related recipes include: Deep-fried bean curd with sesame sauce (p. 91, with "4 cakes bean curd," each of which is cut into 9 pieces, dried on paper toweling, then deep fried at 375°F). Chicken and bean curd stick soup (p. 109, with "¼ pound bean curd stick" [dried yuba sticks]). Bean curd and greens soup (p. 115, with "1½ pieces fresh bean curd" [tofu]). Stir-fried eggs with soybean sprouts (p. 226). Stir-fried eggs with bean curd (p. 227, with "2 fresh bean curd cakes or 1/3 pound homemade bean curd"). Bean curd sautéed with eggs (p. 258, with "4 cakes fresh bean curd"). Stir-fried bean curd with black mushrooms (p. 259). Stir-fried bean curd with squash (p. 260). Homemade bean curd with soybeans (p. 261-62, curded with vinegar or gypsum / calcium sulfate. The residue [okara], which is called "Soybean pulp, may be added to ground beef up to a 1 to 2 ratio." Step 8. "Remove curd from bag and mix with salt" is a new invention in making tofu—which ends up with a texture like cottage cheese and seasoned with salt). Homemade bean curd with soybean powder (p. 262-63, curded with vinegar or gypsum). Celery cabbage creamed in soy milk (p. 269, with "4 heaping teaspoons soybean powder." "2. Place soybean powder and water in a pint jar. Tighten lid and shake well. Add cornstarch and honey to soybean 'milk'"). Soybean sprouts with celery (p. 273). Spinach in soy sauce (p. 276). Vegetarian dish of the Buddhists (p. 277-78, with "2 ounces dried bean curd" [probably dried yuba sticks] and "3 cakes fresh bean curd").

"A guide to Chinese cooking ingredients" (p. 289-324) and "Glossary" (p. 325-26) describe: Bean curd (dow foo—tofu, incl. pressed curd {firmer}, canned bean curd {somewhat less creamy than the fresh}). Bean curd, dried

(foo jook [dried yuba sticks]; tiem jook is sweeter than foo jook). Bean curd cheese (fooh yu [fermented tofu]). Bean paste, yellow (wong dow sa). Bean sauce, brown (min see jeung). Beans, black soy (kei tou). Beans, black fermented (dow see; these black soybeans are fermented, dried and salted). Hoisin sauce (hoy sin jeung. "A soybean-based sauce..."). Soybean sprouts (Da dow ngah).

Photos show: (1) Three squares ("pillows") of pressed bean curd. (2) A box of "Dried bean curd" [foo jook] (p. 296). (3) Black soybeans (enlarged) (p. 299). (4) A bag full of "Salted black bean (spiced)" (fermented black beans). Made by Koon Chun Sauce Factory, Hong Kong. (p. 300). Note: As of Nov. 2011 the company (in the New Territories, Hong Kong, with a website) is named "Koon Chun Hing Kee Soy & Sauce Factory Ltd."

5112. Sugimoto, Hiroshi. 1974. Treatment of soybean spent solubles by means of yeast cultivation. *J. of Food Science* 39(5):934-38. Sept/Oct. [31 ref]

• **Summary:** "Spent solubles from the preparation of soybean protein isolates and heat-coagulable whey proteins account for about one-fourth of the original dry weight of defatted soybean flakes." These spent solubles usually have been disposed of as sewage. However, because of their high biological oxygen demand (BOD) or chemical oxygen demand (COD), they present a serious waste disposal problem. Some yeast strains, particularly *Candida quilliermondii* or *Debaryomyces hansenii* grow very well on the spent solubles without supplementation. Address: Central Research Lab., Kikkoman Shoyu Co. Ltd., Noda-shi, Chiba-ken, Japan.

5113. Eden Foods. 1974. Fall & winter pricelist. 4601 Platt Rd., Ann Arbor, MI 48104. 2 p. Effective Nov. 1.

• **Summary:** Note that the company has moved to a new and much larger warehouse. Soybean Flakes are still organically grown in Deaf Smith, Texas. Tamari Soy Sauce, and 3 misos still bear the Erewhon brand. Eden is selling Honey Vinegar, Apricot Butter, and Apple Sauce under the Pure & Simple brand. Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

5114. Flores, L.B. 1974. Make soy sauce comparable with the imported kind. *NIST News (The) (Manila)*. NIST-142. Nov. 18. 3 p.

• **Summary:** NIST stands for National Institute of Science and Technology, in Manila. Address: Philippines.

5115. Aihara, Herman. 1974. Soybean diet: Diet for the better protein. Oroville, California: George Ohsawa Macrobiotic Foundation. xi + 164 p. Nov. Illust. Index. 21 cm.

• **Summary:** This book is an expanded version of "Miso and Tamari" (1972). Contents: Preface. Introduction. 1. Theory:

Steak vs. gasoline, is animal protein indispensable, protein requirements, essential amino acids—law of all or nothing, minimum daily requirement of essential amino acids.

2. Miso: Introduction, the origin of miso, kinds of miso, ingredients, how to make miso, value of miso, miso in the treatment of tuberculosis, how to make miso at home using mugi koji, recipes using miso for warmer seasons, recipes using miso for colder times.

3. Tamari or traditional soy sauce: History, chemical change of tamari, how to make tamari soy sauce at home, how to use soy sauce, soy sauce cooking for warmer times, soy sauce cooking for colder times.

4. The other soybean and high protein foods: How to make tofu at home, how to make tofu plaster, how to make agé—deep fried tofu at home, how to make seitan at home.

4A. Tofu, seitan, and gluten cooking for warmer times:

How to make tofu, nigari, and bulk tofu at home, how to make wheat gluten, seitan and fresh wheat *fu* at home. 4B. Tofu, seitan and gluten cooking for colder times. Appendix: Cutting styles, useful information. Bibliography.

Large photos near front of book show: (1) Herman Aihara. (2) Cornelia Aihara looking very happy at her stove. Address: Oroville, California.

5116. **Product Name:** Wheatmeat (Seitan in the Form of Small Meatball-like Chunks—Sold in Bulk).

Manufacturer's Name: Gimme Some Food Co. Renamed Wheatmeat Co. in 1975, then Vegetable Protein Co. in 1976.

Manufacturer's Address: 17 Dent St., West Roxbury, Massachusetts. Then 51 Oak Ave., West Newton, MA. Then 140 River St., Cambridge, MA.

Date of Introduction: 1974. November.

Ingredients: Incl. water, wheat gluten, tamari, ginger.

Wt/Vol., Packaging, Price: In bulk in a large glass jar, in salty little meatball-like chunks.

How Stored: Refrigerated.

New Product—Documentation: 1988. April 19. United States Patent and Trademark Office. Trademark registration by John Weissman (United States Citizen) for "WheatMeat." Trademark registration number: 1,485,401. Date Registered: 19 April 1988. Current address: 140 River St., Cambridge, Massachusetts 02139 [address no longer valid in March 1992]. For: Formed vegetarian protein used as a meat substitute, in Class 29 (U.S. CL. 46). Trademark first used: May 1976. Trademark first used in Commerce: May 1976. Ser. No. 667,393, Filed June 19, 1987. M.E. Bodson, examining attorney. Registered for a term of 20 years from April 19, 1988. Note: The above information was initially supplied by Mark Machlis of Ivy Foods in Salt Lake City, Utah. 1992. Feb. 27, then confirmed by ordering a copy of the trademark registration. John Weissman later stated that the Wheatmeat trademark was owned by ITT / Wonder Bread before he owned it. He waited until they let it go by not renewing it.

Talk with Sandy Chianfoni of Upcountry Seitan. 1991. Nov. 16. She moved to Boston in 1978 and enjoyed Tan-Pops from the time she arrived. They were probably made by the same guy who made "Wheatmeat" (a seitan product) and Wheatmeat Sandwiches, and who lived in Cambridge. She thinks he made Wheatmeat by mixing wheat and vital gluten together rather than by using the traditional process. Michael Cohen of Lightlife Foods might know who made it, since the manufacturer, whose company was named something like the "Vegetable Protein Company" may have offered to sell his company to Michael.

Talk with Joan Donovan, formerly of Upcountry Seitan. 1991. Nov. 17. She thinks this product was made in Jamaica Plain. It was kofu cooked in hot water without tamari. It had no flavor. People would flavor it themselves. She first saw it in about 1979-80 at the Erewhon store in Brookline Village. They sold it in a pan in the store.

Talk with Joel Wollner, a clerk at the Erewhon retail store on Newbury St. in Boston in the mid-1970s. 1991. Nov. 18. Joel recalls that a man named Johnny Weissman made both Wheatmeat and Tan-Pops. He owned the Vegetable Protein Company in Cambridge. Joel is not sure which product was launched first. Johnny still has a trademark on the term. He sold two types (white and brown), one plain unseasoned kofu and one made into seitan. He sold it in little heat-sealed polyethylene bags, 5-6 ounces each, refrigerated. There were several pieces or chunks per bag. They were not slices. There was a little seasoned broth in the bag with the brown seitan type. He brought it in refrigerated or frozen; Erewhon froze it. The product was introduced in about 1976, perhaps as early as 1975. To get details on the product and company, try doing a trademark search.

Talk with Paul Duchesne of Fairfax, California. 1991. Nov. 19. Paul was in Boston from Sept. 1978 for 9 months. Wheatmeat was definitely made by the Vegetable Protein Co. in Cambridge. Johnny Weissman was a partner with some other person in that company. But Paul thinks Johnny made the Tan-Pops on his own. Paul was in the place where Johnny made the Tan-Pops; it was a little deep-frying place in Cambridge, and no Wheatmeat was made there. Wheatmeat Seitan was launched before Tan-Pops. Paul saw Wheatmeat Seitan in natural food stores.

Talk with Lenny Jacobs. 1992. March 11. John Weissman, the first person to make seitan in America, is selling Solar Burgers and stuffed pita sandwiches at Stuff-Its in the Harvard Garage (a collection of little shops) in Harvard Square in Cambridge, Massachusetts. Lenny saw him about a month ago and thinks he can find his address and phone number. Solar Burgers are basically seitan plus some new ingredients. Talk with Lenny Jacobs. 1992. March 30. Johnny's phone number is 617-783-3742. Stuff-Its is 617-497-2220.

Talk with Johnny Weissman of VegPro Co. in Brighton, Massachusetts. 1992. March 31. See this interview for details

on this pioneering product and its history.

5117. Im, Yon-t'aek. 1974. Changyu yangjo e issoso ui hyoso chep'um iyong e kwanhan yon'gu [Studies on the utilization of enzyme preparations for the fermented process of soy-sauce]. M.A. thesis, Koryo Taehokkyo. iii + 34 p. Nov. 30. [37 ref. Kor; eng]
Address: South Korea.

5118. **Product Name:** Sunwheel Organic Hatcho Miso, Mugi Miso, Tamari, and Shoyu.

Manufacturer's Name: Sunwheel Foods (Importer-Distributor). Made in Japan. Imported from Muso Shokuhin.

Manufacturer's Address: London, England.

Date of Introduction: 1974. November.

How Stored: Shelf stable.

New Product-Documentation: CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date of introduction as 1974. In 1984 Sunwheel divided and sold its Sunwheel brand to Northumbrian Fine Foods. Its high quality Japanese products are now imported by Clearspring Natural Grocer. Peter Bradford is the contact person. Japanese agent is Mitoku. Various Japanese manufacturers.

Interview with Bill Tara, founder of Sunwheel. 1991. Aug. 18. By late 1974 Sunwheel Hatcho Miso, Mugi Miso, and Tamari were on the market, imported from Muso (Yuko Okada) in Japan. By 1979 Sunwheel was sold to a larger health food company.

5119. Hughes Markets. 1974. Happy New Year '75 (Ad). *Los Angeles Times*. Dec. 26. p. K20.

• **Summary:** The section titled "Foods of the Orient" includes: Kikkoman soy sauce, one gallon can \$3.29. "JFC Kinako 7 oz. pkg. Soy bean flour-35¢. Misuzu Koya Dofu 3.5 oz. box. Dried Soybean Cake [Dried frozen tofu]-69¢... Age [Deep fried tofu pouches, sold in the fresh produce dept.] 59¢ package."

Also includes Tempura batter mix, New crop botan rice, Motohiko Sapporo maki-Rolled Tangle [konbu]. Azuma yokan-Bean jelly [azuki]. JFC or Hime Shitake-Shiitake dried mushrooms. Hime kampyo [kanpyo]-Dried gourd strips. Take waribashi-Bamboo chopsticks. Kamaboko. Blue chip stamps.

5120. Predicasts, Inc. 1974. World manufactured soybean foods. Special Study No. 108. Predicasts, Inc., 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, OH 44106. vi + 93 p. Dec. 24. No index. 28 cm. Research Analyst: Frederick M. Ross.

• **Summary:** Contents: 1. Introduction. 2. Summary. 3. Economics of Soybean Foods: Soybeans, soy flour, meat extenders (based on extruded textured soy flour), synthetic meat (based on spun isolates). 4. Industry structure: General, \$1,000 million food and feed giants (ADM, Cargill,

Central Soya, General Mills/Takeda Chemical, Nabisco, Ralston Purina/Fuji Oil, and Esmark [Swift]), other major manufactured soy food companies (Unilever, General Host [New York], Miles Laboratories/Worthington & Kyowa Hakko Kogyo, A.E. Staley Mfg. Co., Stange [Chicago, Illinois], Chambers & Fergus [Humberside, England]), food industry structure. 5. Demand for manufactured soybean products: Demand for meat & substitutes, supply of natural meat, demand for meat substitutes, demand for soy flour. 6. North America: United States, Canada. 7. Latin America: General, Argentina, Brazil, Mexico, Other Latin America (Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay). 8. West Europe: General, France, West Germany, Italy, Spain, United Kingdom, Other West Europe. 9. East Europe: General, Hungary, Poland, USSR, Other East Europe. 10. Africa: General, Egypt, Nigeria, South Africa, Other Africa & Mideast. 11. Asia: General, China, India, Indonesia, Japan, Pakistan, Other Asia. 12. Oceania: Australia, New Zealand, Other Oceania.

Most sections contain numerous tables, mostly on meat and meat substitute consumption, and raw protein consumption, by country. Address: 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, Ohio 44106. Phone: 216-795-3000.

5121. Fu, P'ei-mei. 1974-1976. *Peimei shi pu* [Pei Mei's Chinese cook book. 2 vols.]. Taipei, Taiwan. Illust. (color). No index. 22 cm. [Chi; Eng]*

• **Summary:** Volume 1 published April 1976, copyright 1969; vol. 2 published July 1974, copyright 1974. Chinese title also written *P'ei-mei shih p'u*. Address: Cooking teacher, Taipei, Taiwan.

5122. **Product Name:** Amoy Salted Black Bean, Salted Yellow Bean, Yellow Bean Sauce, Crushed Yellow Bean Sauce.

Manufacturer's Name: Amoy Canning Corp. (Hong Kong) Ltd.

Manufacturer's Address: Hong Kong.

Date of Introduction: 1974.

Wt/Vol., Packaging, Price: Can.

New Product–Documentation: Listing in *The Vegetarian Health Food Handbook* (UK). 1974. p. 173.

5123. Central Bureau of Statistics (CBS), Indonesia. 1974. [Industrial census]. Indonesia. [Ind]*

• **Summary:** Contains early statistics on commercial production of tempeh, tofu, Indonesian soy sauce (*kecap*), and Indonesian miso (*tauco*) in Indonesia. Producers are divided into 2 groups by size: Home industry (1-4 workers) and small scale industry (5 or more workers). The amount of soybeans processed in tonnes/year is as follows for home industry/small-scale industry: tempeh (1.8/12.3), tofu (3.8/15.2), soy sauce (0.8/3.7), and miso (4.7/6.3).

Note: This is the 2nd earliest document seen (Sept. 2011) that gives industry or market statistics for tempeh, or for tempeh in Indonesia.

5124. Credit Department. Farmers Bank of China, Taiwan. 1974. Report of the investigation of soy sauce manufacture in Taiwan. Taiwan. *

• **Summary:** 25 million U.S. dollars worth of fermented soy sauce is consumed in Taiwan; 70% of this is regular fermented soy sauce and 30% is inyu. Address: Taiwan.

5125. **Product Name:** Nik's Snaks (Tamari-Roasted Seeds, Nuts, Soybeans, and Trail Mixes).

Manufacturer's Name: Erewhon Trading Co., Inc.

Manufacturer's Address: 33 Farnsworth Street, Boston, MA 02210. Phone: (617) 542-1358.

Date of Introduction: 1974.

How Stored: Shelf stable.

New Product–Documentation: Talk with Nik Amartseff. 1992. April 3. See long interview.

The 1975 Erewhon catalog, titled *Erewhon Harvest '75*, lists an entire page of "Nik's Snaks," containing about 30 products. Of these, eleven are tamari-roasted whole-food snacks. The 30 products are sold in 5 sizes: 2.5 oz, 3.5 oz, or 6 oz. pick-up packages, or 25 lb bulk. The soybeans (dry roasted with tamari, no salt) are sold only in 25 lb packs. Other tamari-roasted seeds include: Spanish peanuts, sunflower seeds, roasted almonds (all 2.5 oz or 25 lb), cashews or pumpkin seeds (25 lb). Non tamari-roasted products include: Raisin walnut mix. Roasted mixed nuts. Raw mixed nuts. Raisin nut mix. Peanut raisin mix. Trail mix. Honey almond granola. Chia seeds. Bee pollen. Alfalfa seeds. Date sugar. etc.

5126. Goel, S.K.; Yong, F.M.; Wood, B.J.B. 1974. Soy sauce production. *British Provisional Patent*. *

• **Summary:** The authors applied for a patent on a quick method of making soy sauce, but cost prevented them from taking it to finalization—so it was never issued.

5127. **Product Name:** 'Lima' Tamari (Soya Bean Sauce), and Miso (Soya Bean Paste).

Manufacturer's Name: Hofels Pure Foods Ltd.

Manufacturer's Address: England.

Date of Introduction: 1974.

New Product–Documentation: Listing in *The Vegetarian Health Food Handbook* (UK). 1974. p. 174.

5128. **Product Name:** Maestro Brewed Soy Sauce. Brand changed to Far East in about 1976.

Manufacturer's Name: House of Herbs.

Manufacturer's Address: P.O. Box 178, Passaic, NJ 07055-0178. Phone: 201-779-2422.

Date of Introduction: 1974.

Ingredients: Water, hydrolyzed vegetable protein (Hercules HVP), salt, sugar, monosodium glutamate, caramel, and sodium benzoate (less than 1/10 of one percent as food preservative).

Wt/Vol., Packaging, Price: 375 ml (12.7 fluid ounce) glass bottle.

New Product–Documentation: Talk with Paul Fischer, owner of House of Herbs. 1997. Sept. 11 and 15. This product was introduced in about 1974. It was first sold in a 375 ml (12.7 fluid ounce) glass bottle; later they changed to two smaller glass bottles to be competitive—10 fl oz (295 ml) and 5 fl oz (148 ml). For a history of this company and the product, see this 1997 SoyaScan Notes interview. A color leaflet (8½ by 11 inches, single sided), sent by Paul, shows the 22 products in his Far East Line.

5129. **Product Name:** Maestro Teriyaki Sauce. Brand changed to Far East in about 1976.

Manufacturer's Name: House of Herbs.

Manufacturer's Address: P.O. Box 178, Passaic, NJ 07055-0178. Phone: 201-779-2422.

Date of Introduction: 1974.

Ingredients: Water, hydrolyzed vegetable protein (Hercules HVP), salt, sugar, monosodium glutamate, caramel, wine, garlic, onion, ginger, and sodium benzoate (less than 1/10 of one percent as food preservative).

Wt/Vol., Packaging, Price: 375 ml glass bottle.

How Stored: Shelf stable.

New Product–Documentation: Talk with Paul Fischer, owner of House of Herbs. 1997. Sept. 11 and 15. This product was introduced in about 1974, shortly after the soy sauce. Paul basically got his recipe for the teriyaki sauce from a cookbook. The product was first sold in a 375 (12.7 fluid ounces) ml glass bottle; later they changed to two smaller sizes to be competitive—10 fl oz (295 ml) and 5 fl oz (148 ml). For a history of this company and the product, see this 1997 SoyaScan Notes interview. A color leaflet (8½ by 11 inches, single sided), sent by Paul, shows the 22 products in his Far East Line.

5130. Korea. 1974. Seoul, Korea: International Publicity Corp. 68 p. Illust. (color). 24 cm. [Eng]*

• **Summary:** Soybeans can be used to make six different foods: Soy sauce, soybean mash, roasted soy flour, soy sprouts, tofu, and soybean oil. Many Koreans still make their own soy sauce at home, starting in the fall. A detailed description of the process is given.

5131. McGinity, Richard C. 1974. Kikkoman Shoyu Co., Ltd. Unpublished Harvard Business School Report. 18 p.

• **Summary:** A Harvard Business School case study, with abundant statistics and insights into the company's internationalization. Address: Research Assoc., Harvard Business School, [Cambridge, Massachusetts].

5132. **Product Name:** Sanitarium Health Foods Tender Bits (Vegetable Protein Bits).

Manufacturer's Name: Sanitarium Health Food Co.

Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.

Date of Introduction: 1974.

Ingredients: Wheat gluten, sauce [incl. soy sauce], onion, flour, vegetable oil, water added.

Wt/Vol., Packaging, Price: 430 gm can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1974. "Soy sauce is the first ingredient in the sauce."

5133. **Product Name:** Sanitarium Health Foods Casserole Mince (Minced Vegetable Protein).

Manufacturer's Name: Sanitarium Health Food Co.

Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, Sydney 2076, NSW, Australia.

Date of Introduction: 1974.

Ingredients: Wheat gluten, flour, soya sauce, hydrolysed vegetable protein, sauce, water added.

How Stored: Shelf stable.

Nutrition: Per 110 gm (¼ can): Protein 16 gm.

New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1974.

5134. **Product Name:** Tamari Nut Mix, and Tamari Roasted Peanuts (Both Dry Roasted).

Manufacturer's Name: Summercorn Foods Inc.

Manufacturer's Address: 401 Watson, Fayetteville, AR 72701. Phone: 501-521-9338/164.

Date of Introduction: 1974.

Ingredients: Nut Mix: Peanuts, sunflower seeds, almonds, pecans, cashews, soy sauce; Peanuts: Roasted peanuts, tamari (shoyu).

Wt/Vol., Packaging, Price: 10 lb.

How Stored: Shelf stable.

New Product–Documentation: Label for peanuts. 1974. 4.75 by 4.25 inches. Paper. Black on pink.

5135. **Product Name:** Johsen Shoyu (Natural Soy Sauce).

Manufacturer's Name: Westbrae Natural Foods (Importer). Made in Japan by Sendai Miso-Shoyu.

Manufacturer's Address: 1224 10th St., Berkeley, CA 94710.

Date of Introduction: 1974.

New Product–Documentation: Interview with Bob Gerner. 1987. Aug. 20. He says imports started in 1975. Westbrae Natural Wholesale Food Catalog. 1980. Spring. The three imported products are now called "1. Johsen Shoyu-Tamari—

Naturally brewed. 2. Johsen Shoyu-Tamari–Naturally brewed shoyu. 3. Traditional (True) Tamari–Wheat free.” Container sizes are 4.75 gallons (1&3), 32 oz (2), 16 oz (3), 12.7 oz. (2), and 5 oz. (2&3). Letter from Gordon Bennett. 1987. Oct. He says the introduction date was 1974.

5136. Wood, B.J.B.; Cardenas, O.S.; Yong, F.M.; McNulty, D.W. 1974. Lactobacilli in the production of soy sauce, sour dough, and Parisian barm. In: The Lactic Acid Bacteria. Proceedings of 4th Long Ashton Research Conference, 1973. See p. 325-335. *

5137. Ali-Bab. 1974. The encyclopedia of practical gastronomy. Translated by Elizabeth Benson. New York, NY: McGraw-Hill. vii + 471 p. Illust. 24 cm.

• **Summary:** This is a translation of *Gastronomie pratique*. In the first section, titled “Gastronomy through the ages,” the subsection on “Great Britain” (p. 20) states: “The inferiority of English cooking manifests in its sauces and ragoûts. The English use too many aromatic herbs, condiments, and pickles. Under the pretext of cooking simply they often use, instead of our sauce bases made from broths or our simmered sauces, very strong industrially prepared sauces such as ketchup, soy sauce, Worcestershire sauce, and Harvey sauce. Englishmen use them in such quantities that they end up by completely smothering the taste of the original preparation.”

Page 44: “83. The *catjang* is a fermented bean curd.” See p. 31.

Soy related recipes: Potage crème veloutée de soja aux perles (Cream of soya bean soup velouté with tapioca, with “2 lbs. soya bean sprouts,” p. 103).

A note just below this recipe reads: “*Soja* or *Soya hispida*, which originates in the warm regions of Asia, is still known under the name of *Glycine hispida*, colloquially called Chinese peas. This is a legume of the Phaseolae family. In China and Japan it is used a great deal, especially among the poorer classes. These vegetables are mainly used in the preparation of pasta, sauces, and a type of cheese [tofu]. Only recently introduced into Europe, only the sprouts are in general use”).

Soja au jus (Soy bean sprouts with meat broth, with “2 lbs. soya bean sprouts,” p. 341).

Inside front dust jacket: The author, whose real name was Henri Babinsky, was of Polish ancestry, born in 1855 in Paris and died in 1931.

Note: The 1st edition was published in 1907 in Paris. The 2nd edition was published in 1912.

5138. Altschul, Aaron M. ed. 1974. New protein foods. Vol. 1A. Technology. New York, NY: Academic Press. xiv + 511 p. [1750* ref]

• **Summary:** Contains 10 chapters by various authors. Five of these are cited separately. Address: Dep. of Community Medicine & International Health, Georgetown Univ. School

of Medicine, Washington, DC.

5139. Brackman, Agnes de Keijzer. 1974. Art of Indonesian cooking: The ABC’s. Singapore: Asia Pacific Press. 127 p. 23 cm. First published in 1970.

• **Summary:** This recipe book, with a long introduction to each chapter, contains numerous soy-related recipes: Soya fish (Ikan ketjap, p. 24; Ketjap is “sweet soya sauce” [probably ketjap manis]). Soya fish, large (Ikan ketjap besar, p. 25). Soya chicken (Ajam ketjap, p. 38). Braised soya duck (Bebek smor ketjap, p. 48). Spicy soya sauce (Sambal ketjap, p. 74). Fermented soya beans (Sambal goreng tempe, p. 77; a must for the rijsttafel [rice table]). Peppered bean cakes [with tofu] (Sambal goreng tahoe, p. 82). Indonesian salad [with tofu] (Gado-gado, p. 85). Spiced soya (Sambal ketjap, p. 106).

The back matter notes that the best source of Indonesian ingredients is the Dutch company Conimex, in Baarn, Netherlands. There is a page of ideas for ingredient substitutes in the West (for sweet soya sauce substitute “equal amounts of Chinese or Japanese soya sauce and molasses”), and a 3-page Indonesian-English kitchen glossary. Address: Brookfield Center, Connecticut.

5140. Brooks, Karen. 1974. The forget-about-meat cookbook. Emmaus, Pennsylvania: Rodale Press. 215 p. 23 cm.

• **Summary:** The glossary (p. 10-11) includes Pero (a coffee substitute made from barley and rye), tamari soy sauce (Contains no chemicals and is made from water, soybeans, wheat, and sea salt), and wheat-soy macaroni (made with whole wheat and soy flours). A “Grain texture chart” (p. 19) gives tips for using soybeans and soy flour. Soy-related recipes include: Soya-raisin griddle cakes (with soy flour, p. 59). String beans with roasted soybeans (p. 134). Soybean-lentil-rice loaf (with cooked soybeans, p. 136). Soyburgers (with cooked soybeans). Notes on cooking beans (incl. soybeans, p. 126). Address: Easley, Missouri.

5141. Crisostomo, L.C.; Corpuz, L.; Celes, F.F. 1974. A comparative study on the utilization of mecan pea for “soy sauce” preparation. Manila: Bureau of Plant Industry. Laboratory Services Div. 8 p.

• **Summary:** Mecan pea (*Vigna sinensis*, a variety of cowpea sometimes known as Davao Beans), when used with wheat in place of soybeans, was used to make “soy sauce” which, when submitted to a taste panel, was given higher scores in odor, flavor & taste, and consistency than both commercial or home-made soy sauce. Therefore mecan-pea “soysauce” (which contains no soy) is highly acceptable. Address: Philippines.

5142. Goel, S.K. 1974. Studies on microbiological and biochemical aspects of soy sauce fermentation. PhD thesis,

Dep. of Applied Microbiology, University of Strathclyde, Glasgow, Scotland. *
Address: Univ. of Strathclyde, Glasgow, Scotland.

5143. Hannaford, Kathryn. 1974. *Cosmic cookery*. Berkeley, California: Starmast Publications. xixd + 264 p. Illust. by Lorena Laforest. 21 cm.

• **Summary:** This vegetarian cookbook contains 190 recipes created and tested at the communal One World Family Natural Foods Restaurant. Page 35 lists uses and seasonings of beans, including aduki beans and soy beans. Favorite seasonings for the latter are thyme, oregano, basil, green pepper, tomato, cheese, soy sauce, onion, or garlic. Soy-related recipes include: Soy grits (p. 75). Macroburger mix (with cooked soybeans, p. 83). Soy mayonnaise (with soy milk powder, p. 111). Chunky soy spread (p. 130). Miso tahini spread. Creamy soy spread (p. 131). Miso soup (p. 144). Miso-scallion broth (p. 145). Macro-sausage (with Soy Spread, p. 163). Spaghetti with miso sauce (p. 176). Super soybean casserole (p. 182). Miso sauce (p. 200). Soya carob nut brownies (with soy milk powder, p. 227). Address: Berkeley, California.

5144. Hunter, Beatrice Trum. 1974. *Favorite natural foods: Adapted from a series of programs on WGBH*, Boston. New York, NY: Simon and Schuster. 219 p. Index. 21 cm. [154 ref]

• **Summary:** Contents: Foreword. 1. Vegetables, vegetables. 2. Perking up the salad bowl. 3. Sprouts (incl. legume seeds {alfalfa, chick pea, lentil, mung bean, peanut, pinto bean, soybean}, grain seeds, vegetable seeds, herb seeds, weed seeds, oil seeds {flax, safflower, sesame, sunflower}). 4. Whole grains. 5. The Cornell mix [for bread; Dr. Clive McCay]. 6. Sourdough. 7. Sauerkraut. 8. Yogurt. 9. Soybeans. 10. Satisfying that sweet tooth: Dried fruit desserts, confections, snacks. 11. Of special concern: Baby foods, brown-bagging, party fare, making good foods even better. Appendix.

Contents of chapter 9, Soybeans: Introduction. Soybean sprouts. Fresh green soybeans as a vegetable: Freezing, canning, drying. Recipes for whole dry soybeans (2). Making soybean pulp (put cooked, drained soybeans through a meat grinder; recipe for green peppers stuffed with soybean pulp). Roasting dry soybeans (soak, drain, and dry roast). Making soybean milk (recipes for spiced soybean milk, brown rice pudding with soybean milk). Making soybean curd (also called "soybean cheese" or "tofu." From soybean milk, from fermented soybean milk, from soybean flour, from soybeans). Using soybean flours (three types: high-fat or full-fat, low-fat or medium-fat, minimum-fat or fat-free). 100% soybean flour cookies (grain-free). Other soybean products you can buy: Soybean grits and soybean flakes (with 1 recipe). Soybean lecithin (with 2 recipes). Tamari, miso. The soybean and you: Meat alternatives, tempeh,

textured vegetable protein products (inferior), fabricated soy foods in school lunch programs ("a nutritional crime"). Avoid mock foods.

About the author: She is the author of numerous books and winner of the French Company's Tastemakers Award. She and her husband, John, live in New Hampshire. Nationally known for her lectures and demonstrations on natural foods, she is a member of the Price-Pottenger Nutrition Foundation and twice a speaker for the Martha Jones Lectures in Nutrition at the Ashbury Theological Seminary in Kentucky. She holds a B.A. from Brooklyn College and a Master's degree from Columbia University. She has done graduate work at State Teachers College in Buffalo, New York, and at Harvard University. A small photo of Beatrice Trum Hunter appears on the front dust jacket of the hardcover edition. Address: New Hampshire.

5145. Iwata, Hisayoshi. 1974. *Shokuhin kagaku* [Food science]. Tokyo: Yokendo. 370 p. Illust. Index. 22 cm. [150+* ref. Jap]

Address: Tokyo, Japan.

5146. Kobayashi, Keizô. 1974. *Shôjin ryôri nyûmon* [Entry gate to Zen vegetarian cookery]. Tokyo: Shibata Shoten. 230 p. Illust. 22 cm. [Jap]

• **Summary:** The author was born in 1930. Address: Formerly asst. head cook at Eihei-ji Zen Monastery. Now head priest, Rinsho-ji, Tateoka, Murayama-shi, Yamagata prefecture.

5147. Kozel, Carlos. 1974. *Guía de medicina natural. I. Salud y curación* [Guide to natural medicine. I. Health and healing]. Viladrau (Gerona prov.), Spain: Ediciones Cedel. xii + 467 p. Illust. 23 cm. Vol. 1 of his *Guía de Medicina Natural* [Guide to Natural Medicine]. [Spa]

• **Summary:** About natural food and vegetarianism. Pages 185-91 discuss soya, which is called "vegetable meat" and from which one can obtain lecithin, soymilk, whole soy flour, miso, tofu, shoyu, etc. The nutritional composition of soybeans is given.

5148. Kôno, Tomomi. 1974. *Shôyu fudoki* [Shoyu throughout the provinces]. Tokyo: Mainichi Shinbunsha. 205 p. [Jap]*

5149. Lo, Kenneth H.C. 1974. *Chinese vegetable and vegetarian cooking*. London: Faber & Faber, Ltd. 172 p. Index. 21 cm.

• **Summary:** This original edition, published in London, is smaller in height, has no illustrations, and 13 fewer pages than the American edition published the same year. The recipes are the same, but on slightly different pages; For details, see the American edition (1974).

5150. Lo, Kenneth H.C. 1974. Chinese vegetarian cooking. New York, NY: Pantheon Books (Div. of Random House). 185 p. Illust. by Tom Funk. Index. 22 cm.

• **Summary:** Originally published in 1974 in London, England, as “Chinese Vegetable and Vegetarian Cooking” by Faber & Faber, Ltd. However that book is smaller in height, has no illustrations, and 13 fewer pages than this American edition. The entire text has been lightly edited and re-set for American cooks and readers. The recipes are basically the same, but on slightly different pages, and with some titles slightly changed (e.g., from “sesame jam” to “sesame paste,” p. 133).

In the Introduction, under “Flavoring,” the following soybean products are listed: Soy sauce, black beans (salted), soybean paste (yellow and black), bean-curd cheese (red and yellow). Soy-related recipes include: Steamed bean curd with peanut butter sauce (p. 50). Hot-marinated bean-curd sticks [dried twisted yuba sticks] with quick-fried [mung] bean sprouts (with “yellow bean-curd cheese” [fermented tofu], p. 60-61). The Lo Han dish of the monks’ mixed vegetables (with tofu, and “red bean-curd cheese” [fermented tofu], p. 72-73). Hot assembly of shredded bamboo shoots and bean curd... (with tofu and “bean-curd cheese [fermented tofu], p. 74). Hot assembly of chestnuts, sliced lotus root, ginkgo nuts, peanuts, Chinese mushrooms, and bean curd (with tofu and “white bean-curd cheese” [fermented tofu], p. 75). Hot black bean and tomato sauce (Ratatouille Chinoise; with salted black beans and soybean paste, p. 82-83). Basic bean-curd soup (p. 105). Enriched bean-curd soup (p. 105). Soy eggs (with soy sauce, p. 125).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the terms “yellow bean-curd cheese” or “red bean-curd cheese” or “white bean-curd cheese” to refer to fermented tofu.

There is an entire chapter titled “Bean Curd” (p. 135-48), with an introduction and the following recipes: Cold bean curd (with soy sauce and peanut oil). Cold bean curd with sesame paste or peanut butter (“Use 1½ tablespoons sesame paste,” p. 136). Hot-and-savory bean-curd pudding (with salted black beans). Hot-and-pungent bean-curd pudding. Red-cooked bean curd with bean-curd sticks [yuba] (with soybean paste and soy sauce; the sticks are about 20 inches long). Stir-fried bean curds. Bean curd stir fried with [mung] bean sprouts or spinach. Bean curd stir fried with green beans. Deep-fried bean curd stir fried with duck eggs and cucumber skins. Deep-fried bean curd stir fried with eggs, mushrooms, and wood ears. Stir-fried shredded bean curd with dried bamboo shoots, dried mushrooms, lily-bud stems, and seaweed. Clear-simmered bean curds. Clear-simmered bean curd with lettuce and cellophane noodles. Clear-simmered bean curd with [mung] bean sprouts, water chestnuts, and sliced cucumbers.

Note 2. This is the earliest English-language document seen (June 2003) that uses the term “sesame paste.”

5151. Masuda, Koh. editor in chief 1974. Kenkyusha’s new Japanese-English dictionary. 4th edition. Tokyo: Kenkyusha. xiii + 2111 p. 27 cm. [Eng; jap]

• **Summary:** The first edition of this superb dictionary was published in 1918, the second in 1931, and the third in 1954. The words are listed in alphabetical order. Some of the definitions of soy-related terms are quite poor. Examples:

Daitokuji natto: not listed.

edamame: “green soybeans.” [Better: Green vegetable soybeans, or Edamamé].

Hamananatto: not listed.

Hamanatto: not listed.

hiryôzu: not listed.

kinugoshi [tofu]: fine-grained *tofu*.

kogori-dôfu = kôya-dôfu.

koikuchi shoyu: not listed.

kôji: “*koji*.” Good.

miso: “*miso*.” Good. Also defines: [ama-miso]: slightly-salted miso.

[miso-koshi]: a miso strainer.

[miso mame]: a soybean; a soya (bean).

[miso-shiru]: miso soup. And many more.

nattô: “fermented soybeans.” [Better: Whole soybeans fermented with *Bacillus subtilis*]. Nattô-jiru: “Miso soup with minced fermented soybeans.” Good.

nomame: not listed.

okara: bean-curd (*tofu*) refuse; lees of bean curd.

omiotsuke [Jap: Misoshiru] See miso [Miso soup; word used by women only].

otsuke [Jap: Misoshiru] Miso potage (soup).

saishikomi shoyu: not listed.

shitaji: soy. See shôyu.

shôyu: “soy (sauce).” Better: Soy sauce.

tamari: “(a kind of) soy; soy sauce; sauce from refined soy.”

tôfu: “bean curd [cheese]; *tofu*.”

[yaki-dofu]: “roasted bean curd.”

[tofu itcho]: a piece (cake) of bean curd.

[tofu-ya]: “a tofu dealer (seller, maker).”

tônyû: “soybean (soya) milk.” [Better: Soymilk, soya milk, or soybean milk].

tsurumame: not listed.

usukuchi shoyu: not listed.

yuba: “dried bean curds” [sic. Better: The protein-lipid film formed atop soymilk when it is heated].

5152. Moulton, Le Arta. 1974. The gluten book. The Gluten Co. Inc., Box 482, Provo, Utah 84601. vi + 147 p. Illust. by Jordon Arts. Index. 15 x 23 cm. Spiral bound. Rev. ed. published 1981.

• **Summary:** Contents: What is gluten?—Why use it?

Nutritional data. Storing wheat. Versatility of wheat. Gluten gives you low-cost meals—comparisons [1 gm of hamburger

protein costs 4.5 times as much as a gram of gluten protein]. Milling your wheat into flour. Gluten flour. Instructions for making gluten. Saving the bran. Saving the starch water. Cooking the gluten. Main dishes. Seasonings. Broth, gravies, sauces. Desserts & candies. Other wheat specialties: Bread, rolls, crackers, parched wheat, bran recipes, snacks, pancakes, muffins, pizza dough, pie crusts, sprouting, frosted drinks, sandwich spreads, pet food, bottled gluten, hints for baby feeding. The do's and don'ts in cooking with gluten (Characteristics of gluten, helpful hints, terms used, questions and answers).

Contains information on all aspects of gluten, how to make it at home, and its use in cooking. The author, a graduate of Brigham Young Univ. and mother of four, "has been giving demonstrations and lectures for the past 10 years in seminars, workshops, and church functions on the uses of wheat. Those who have tasted her endless variety of wheat dishes, know she is an authority on gluten cooking." Soy is not mentioned, nor is "seitan."

"Gluten is the protein (amino acids) part of the wheat. It is the substance which holds the carbon dioxide the yeast makes and enables bread to rise. Gluten contains two principal proteins—glutenin and gliadin. It is the gliadin in the gluten that allows the gluten to form into an elastic-like quality and eliminate the starch and bran."

Saving the starch water from gluten washing is important since it contains nearly all the vitamins and starch from the wheat. These should not be wasted. Uses for the starch water: Cold and hot drinks, gravies, stew, soup, desserts, baby's bath, liquid in bread, hand lotion, floor wax, water for plants, in place of clear water, thickenings, sauces, water for livestock, for reconstituting powdered milk. To wash 12 cups of wheat flour, requires 1 gallon or more of water. Address: Provo, Utah. Phone: 801-377-2239 (in 1990).

5153. Newman, Marcea. 1974. *The sweet life: Marcea Newman's natural-food dessert book*. Boston, Massachusetts: Houghton Mifflin Co. 161 p. Illust. by Linda Stine. Index. 29 cm. A 1981 revised edition contained 176 p. [63* ref]

• **Summary:** This early and beautifully presented natural foods cookbook contains very innovative and tasty tofu dessert recipes made with limited natural sweeteners and no dairy products. It discusses the harmful effects of refined and denatured foods, with details on white flour, sugar, oil, salt, eggs, milk, and baking powder [which contains alum, a product of aluminum; "it may even be harmful"].

Chapter 1, titled "Natural necessities: Equipment, techniques, and ingredients," gives good definitions of and introductions to amasake (p. 6), miso (p. 10), tamari (p. 12), and tofu (soybean cheese, p. 13). Soy-related recipes include: Basic cake II with tofu sour cream (p. 25). Cheesecake tofu pie (p. 37). Cantaloupe cheesecake (p. 37, with tofu). Upside-down tofu cake (p. 38). Mincemeat filling with miso

(p. 50-51). Tofu poppy seed filling (for pastries or phylo, p. 53). Instant tofu cream (p. 59). Tofu cream (p. 59). Tofu cream whip (p. 60). Tofu sour cream I and II (p. 60). Tofu custard (p. 62). Apple tofu delight (p. 82). Cream puffs with amasake filling (p. 82). Cherry tofu strudel (p. 88). Tofu sour cream cherry tart (p. 92). Thanksgiving squash-mincemeat pie (with miso in the filling, p. 98-99).

The inside dust jacket gives a brief biography of the author, who was born and raised in New York. In Berkeley, California, she studied Japanese and natural-food cooking, and helped to start a "noodle bar" where she baked her first dessert. Now she lives in Boston and caters weddings, parties and school fairs with natural and organic foods and desserts.

An Appendix (p. 151-52) lists the name and address of 39 suppliers of natural foods in the USA (divided into five regions) 2 in Canada. This list includes the following companies. Northeast: Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Good Nature Distributing Co. (Box 447, Export, Pennsylvania 15632), Infinity Co. (173 Duane Ave., New York, NY 10005), Shadowfax (25 N. Depot St., Binghamton, NY 13901), Sundance Organic Food (R.D. #1, Box 146A, Coventry, Connecticut 06238), Walnut Acres (Penns Creek, Pennsylvania 17862; founded by Paul Keene).

Southeast: Collegedale Distributors (Box 492, Collegedale, Tennessee 37315), Laurelbrook Foods (Box 47, Bel Air, Maryland 21014), Tree of Life (Box 1391, St. Augustine, Florida 32084).

Midwest and Mountain States: Ceres, Inc. (2582 Durango Dr., Colorado Springs. Colorado 80910), Cliffrose (129 Coffman St., Longmont, Colorado 80501), Eden Foods (Box 100, Ann Arbor, Michigan 48107), Food for Life (420 Wrightwood St., Elmhurst, Illinois 60126).

Southwest: Akin Distributors (Box 2747, Tulsa, Oklahoma 74101), Arrowhead Mills (Box 866, Hereford, Texas 79045), Shiloh Farms (Box 97, Sulphur Springs, Arizona 72768), Sunrise Distributors (Box 5216, Phoenix, Arizona 83010).

West Coast: Erewhon Trading Co. (8454 Steller Dr., Culver City, California 90230), Janus Natural Foods (1523 Airport Way, South, Seattle, Washington 98134), New Day Distributors (1242 S. Berendo St., Los Angeles, CA 90006), The Well / Pure & Simple (795 West Hedding St., San Jose, CA 95126).

Canada: Lifestream Natural Foods, Ltd. (724-26 W. 6th Ave., Vancouver 9, BC), and Natural Foodstuffs (1 Main St., Box 27, Sutton, Quebec).

Note: This book contains the earliest recipe seen (Dec. 2005) for a tofu cheesecake. It is also the earliest English-language document seen (Dec. 2005) that uses the term "cheesecake tofu pie" to refer to a tofu cheesecake. For the story of how Marcea got interested in tofu and wrote this book see the interview: Marcea Newman. 1994. Oct. Re: Early work with tofu and tofu cheesecakes in America.

Address: Boston, Massachusetts.

5154. Ohsawa, Lima. 1974. *The art of just cooking*. With Nahum Stiskin. Hayama, Japan and Brookline, Massachusetts: Autumn Press. 216 p. Illust. by Maurice Owen. Index. 19 x 23 cm. Reissued in 1984 as *Macrobiotic Cuisine* by Japan Publications, NY. 175 p. [26 ref]

• **Summary:** This work is based on Lima's Japanese-language book titled *Macrobiotic Cookery* (1971). In 1953, at age 54, Lima Ohsawa first ventured beyond the shores of her native Japan. She and her husband, Georges Ohsawa, left on their first world tour. In 1955-56 they spent time with Dr. Albert Schweitzer in Lambarene, Gabon. "Being vegetarian Dr. Schweitzer was always very interested in the nutritional assets of the soybean and asked me to show him different ways to prepare it" (p. 10). During this and many subsequent travels, Lima learned many traditional, natural recipes from around the world.

Contains numerous Japanese macrobiotic style recipes. Page 32 gives good definitions of miso and shoyu. Soy-related recipes include: Brown rice with soybeans (p. 53). Inarizushi (p. 55). Brown rice porridge with vegetables and miso (p. 58). Soya omochi (mochi with soya flour). Burdock with miso and lemon peel (p. 90). Broccoli and radish with miso dip (p. 92). Carrot with green beans and tofu (p. 95). Ninjin shiro-ae (with "½ cake of *tofu*, drained and mashed (p. 173)," p. 95). Cucumber with wakame and walnut miso (p. 96). Cucumbers with miso and sesame (p. 97). Onion nitsuke with miso (p. 100). Onion goma-miso-ae (onion with sesame miso, p. 100). Eggplant nabeshigi-yaki (with miso, p. 101). Scallion and aburage nitsuke (p. 101). Scallion dengaku (with miso, p. 102). Renkon ikada age with kuzu-lemon sauce (p. 103). Kabocha miso ni (p. 106). Kabu miso-ae (turnips with sesame miso, p. 109). Daikon age rolls (with aburage, p. 114). Vegetable skewers with koya-dofu (dried-frozen tofu, p. 114). Kombu with shoyu (p. 117). Renkon miso inro (lotus root tempura with miso, p. 123). Coltsfoot buds with miso (p. 126). Wakame miso soup (p. 137). Mugi-miso soup (p. 137). Sake-no-kasu jiru (miso soup with sake lees, p. 137). Go jiru (soybean potage with aburage, p. 141). Oden with ninjin and gobo kombu maki (with aburage, p. 146).

Condiments and pickles (p. 154-57): Gomashio (sesame-salt). Tekka miso (sauteed vegetables with miso). Shigure miso (moist tekka). Miso sauté. Soybeans with miso and burdock. Soybeans with miso. Miso pickles (fall and winter). Sauces, spreads and salad dressings (p. 161-63): Lemon shoyu. Ginger shoyu. Orange shoyu. Tsuje-jiru dipping sauce (with shoyu). Goma joyu sauce (with shoyu). Scallion miso. Walnut miso. Citron miso. Goma miso (sesame).

Beans (p. 165-78). Black bean ni (the black beans are actually black soybeans. "In Japan this exquisitely sweet dish is a must on New Year's Day. It gets even sweeter after standing for a day or two"). Gomoku-mame (soybean

nitsuke).

Tofu ryori (p. 173-78; "Tofu or bean curd is rich in vegetable protein. Although it is rather *yin* in our classification of foods, the recipes I have included here balance its *yin* characteristics with *yang* so don't hesitate to use it occasionally. It's delicious in miso soup, stews and *nabe*, and as a dish by itself. It is available at Oriental food shops and can also be made at home."). Homemade tofu (p. 174; 3 cups soybeans plus nigari make 1 lb. tofu; also describes how to make nigari {sea brine} by dampening 5 lb. sea salt). Variation: Homemade grilled tofu. Unohana pouches (with okara and aburage). Gammudoki. Tofu with kuzu sauce. Tofu roll. Koya-dofu sandwich. Tofu nitsuke. Chinese dow-foo oroshi-ae. Tofu mold (with kuzu). Tofu tempura. Goma dofu (sesame tofu).

Note 1. This is the earliest English-language document seen (May 2012) that contains the term "grilled tofu."

Squid and scallion miso-ae (p. 183). Salmon head soup (with soybeans, p. 183). Surimi shinoda (with aburage, p. 184). Red snapper in miso. Koi koku (with miso, p. 184). Egg tofu (p. 185). Amazake manju (sweet sake dumplings, p. 198). Amazake (homemade, using glutinous "sweet" brown rice, p. 207).

The section titled "*Kofu*: Wheat Gluten" (p. 85-86) includes recipes for Homemade kofu (wheat gluten, including Kofu loaf and Seitan), and Kofu cutlet. "First introduced to Japan from China by Buddhist monks, *kofu* became a very popular food in Zen temples. It is delicious in soups and stews and mixed with sautéed vegetables. *Kofu* cutlet looks, feels, and tastes like meat." Seitan is made by simmering 5 cups cold wheat gluten, separated into small pieces, for 3 hours in shoyu, sesame oil, and minced gingerroot.

Dandelion coffee (made from roasted, ground dandelion root) and Yanno (prepackaged grain coffee, made from 5 different grains) are described on p. 206-07.

The book, which contains many fish recipes, begins with a nice photo of Lima at age 75—she looks 20 years younger—and ends with a good glossary. Lovely illustrations, a wealth of original information on Japanese foods.

Note 2. This is the earliest document seen (July 2000) that mentions "Tekka miso" (spelled that way).

Note 3. This is the earliest English-language document seen (Feb. 2005) that used the word "kofu" to refer to wheat gluten. Address: Tokyo, Japan.

5155. Okada, Chiyoko; Kataoka, E.; Togano, T.; Tamura, S.; Suzuki, T. 1974. Nyūfu no ippan seibun, amino-san oyobi kihatsu-san ni kansuru kenkyū [Analysis of some components, amino acids and volatile acids of nyufu (fermented soybean curd)]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 27(7):309-15. [10 ref. Jap; eng]

• **Summary:** Nyufu is made by partial dehydration of tofu

followed by inoculation with *Actinomucor repens*. After the mold mycelium covers the surface, it is immersed in soy sauce moromi mash for aging. During ageing, the moisture content decreases, while the contents of salt, reducing sugars, and amino nitrogen increase. Only small amounts of lysine and amino-butyrate are found in nyufu. Formic and acetic acids can be detected at every step, whereas propionic acid and isobutyric acid can be detected only in the moromi mash and nyufu. Isovaleric acid is found in nyufu. Butyric acid is found after inoculation with the mold. Address: 1-3. Dep. of Nutrition, Tokyo Univ. of Agriculture; 4-5. National Food Research Inst., Tokyo.

5156. Rachie, K.O.; Roberts, L.M. 1974. Grain legumes of the lowland tropics. *Advances in Agronomy* 26:1-132. See p. 83-85. [493 ref]

• **Summary:** The main plants discussed are peanuts, pigeon peas, cowpeas, and mung beans. However under "Humid Tropics" (p. 83-85) is a rather long discussion of soybeans, which "has been extensively grown for a long time as a basic food crop of the low elevations in southeastern Asia (Indonesia, Philippines, Malaysia). More recently, investigations in India, the West Indies, and both East and West Africa have demonstrated that soybeans can be very successfully grown in the lowland tropics under favorable conditions. At present there is no other species that can so consistently produce on a hectare per day basis both high yields of good quality protein and oil. The main deterrent to increasing production of this species in many tropical regions is lack of markets and understanding of its cultivation and utilization." Discusses: Adaptation and problems. Utilization ("green beans (vegetable)," split, sprouted, soy milk, soy sauce, tofu, tempeh). Recent investigations.

"Perhaps the most successful campaign to introduce soybeans and find solutions to production and utilization problems has been in India with assistance from a USAID-sponsored contract with the University of Illinois. In Africa, French-sponsored research organizations have centered their activities mainly in Madagascar with testing and management experiments in the Cameroons [Cameroon] and Centrafrique [central Africa]." In English-speaking Africa, breeding programs are in place in Tanzania and Nigeria. Address: 1. International Inst. of Tropical Agriculture, Ibadan, Nigeria; 1-2. The Rockefeller Foundation, New York, New York.

5157. Sandler, Sandra Takako. 1974. The American book of Japanese cooking. Harrisburg, Pennsylvania: Stackpole Books. 192 p. Illust. Index. 24 cm.

• **Summary:** The author, a third generation Japanese-American, reveals the secrets of successful Japanese-style cooking—specifically for the American cook. The three introductory chapters discuss tofu (p. 16, 23, 29, 36), shoyu (p. 20), and miso (p. 27, 35). Soy-related recipes include:

Seafood in miso sauce (p. 54). Shellfish in soy-mirin sauce (p. 55). Miso soups (p. 57-59). Tofu & scallions soup (p. 60-61). Instructions for sprouting beans (incl. mung- and soybeans, p. 72-74). Vegetables with tofu & sesame dressing (with white miso, and "white sesame seeds, toasted and ground," p. 77-78). Eggplant and green peppers with miso dressing (p. 78-79). Fried okara (p. 79-80). Sweet cooked soybeans (p. 82). Inari-zushi (p. 89-90). Fish misoyaki (p. 111). Miso abalone (p. 112-13). Beef misoyaki (119-20). Sukiyaki (with tofu and soy sauce, p. 121-22). Pork and tofu (p. 135-36). Stuffed tofu (p. 138-39). Chicken teriyaki (with soy sauce, p. 145). Fresh tofu (p. 154-55). Homemade tofu (p. 155-57). Deep-fried tofu (p. 157). Batter-fried tofu (p. 158). Yakidofu (p. 158-59). Aburage (p. 23, 159). Fox noodles (p. 167-68). Udon in miso shiru (p. 168). Tempura and udon (p. 168-69). San bai zuke (p. 175).

Also discusses azuki beans (p. 23, 178), sweet azuki bean paste (*koshi-an*), sesame seeds, sesame oil (p. 28), sea vegetables, and mochi.

5158. Totten, George O. 1974. Japanese industrial relations at the crossroads: The Great Noda Strike of 1927-1928. In: Bernard S. Silberman and H.D. Harootunian, eds. 1974. *Japan in Crisis—Essays on Taisho Democracy*. Princeton, NJ: Princeton University Press. See p. 398-436. Proceedings of the Conference on Taisho Japan held at Quail Roost, North Carolina, in Jan. 1970. [49 ref. Eng]

• **Summary:** A detailed analysis of the strike against the Noda Shoyu Co. (today's Kikkoman) which had long-lasting, nationwide significance in Japan. "Up until three years after the First World War, the Noda workers led what could only be described as truly impoverished and wretched lives. They were recruited through four local bosses (*oyakata*) who got a rake-off on the workers' yearly wages which they negotiated with the company. Each worker had to sign a yearly contract, or more correctly a promissory note, to work for a year, stating the name of a guarantor as well as the *oyakata*. Four-fifths of the workers lived in shabby shelters provided by the plant, where they slept in two rows and ate the poor and scanty food provided by the company. This practice grew up because most of the workers were too poor to maintain a household."

The Noda local of the Japan General Federation of Labor (*Nihon Rôdô Sôdômei Noda shibu*) was founded on 15 Dec. 1921 by Koizumi Shichizô. It was comprised initially of about 300 workers at Plant 15 in Noda. The first strike, starting on 16 March 1923, lasted 28 days and ended in a compromise. In 1925 Japan's first Universal Manhood Suffrage Act was passed, enabling males over age 25 to vote, without any tax qualifications, thus politically emancipating much of labor for the first time and opening the door for labor-based political parties.

The great Noda strike began on 16 Sept. 1927, when the Noda Shoyu Co. had to close 16 of its 17 plants because

1,358 of the 2,092 employees had decided to strike to secure some 7 demands for better pay and working conditions. The main implicit demand was recognition of the union as a body with the right to bargain collectively. "In the following months, the company carried out several large-scale firings, first issuing an ultimatum to return to work, so that by December 20, 1927, all those on strike were officially discharged. Work had gotten back under way in Plant No. 17 10 days after the strike started, and as time went by the other 16 plants were replenished with some 550 temporary workers. By December, 80 per cent of pre-strike production was reached with 1,350 employees at work, 300 of whom had dropped out of the strike, and of these 150 were clerks, not plant workers... The company hired ultra-nationalist bully gangs to come in and rough up the strikers." The strike finally ended on 19 April 1928, more than 7 weary months (218 days) after it started. It was the longest strike in Japan prior to World War II. In effect, it destroyed the union. Only 300 of the 1,047 fired were allowed to return to work.

5159. Watanabe, Tokuji; Ebine, H.; Okada, M. 1974. New protein food technologies in Japan. In: A.M. Altschul, ed. 1974. *New Protein Foods*. Vol. 1A. Technology. New York: Academic Press. 511 p. See p. 414-53. Chap. 9. [80 ref]
• Summary: Contents: Introduction: Soy products, fish products, enzyme applications. Tofu: General description, new materials, new type products, large-scale production, trends in cost, kori-tofu and aburaage. Miso: General description, new technologies, new type products, problems of mycotoxin, packaging and preservation, trends in cost and consumption. Kamaboko and fish sausage—fish jelly: General description, new technologies, new materials—frozen surimi, packaging and preservation, trends in consumption. Textured vegetable protein: Soybean protein curd, wheat gluten, soybean protein sponge. Hydrolyzed vegetable protein (HVP). New enzyme applications: Liquefied fish protein concentrate (LFP), collagenase for poultry processing, removal of beany flavor from soybean by enzyme treatment, microbial rennet. The protein food structure of Japan.

Fig. 13 (p. 47) shows 3 pie charts, each giving the percentage of protein intake per capita from various sources at three different time periods. In 1921-25 only 9% of the total protein came from animal sources (6% from fish and 3% from other animal sources); 42% came from rice, 21% from soybeans, and 14% from cereal grains other than rice. In 1951-55, shortly after World War II, some 23% of the total protein came from animal sources (17% from fish and 6% from other animal sources—such as milk, eggs, chicken, pork, and beef); 32% came from rice, 15% from soybeans, and 20% from cereal grains other than rice. In 1969, some 30% of Japan's total protein intake came from animal sources (21% from fish and 19% from other animal sources); 22% came from rice, 12% from soybeans, and 13% from cereal grains other than rice. Thus the main trend seen during this

period is the steady increase in the percentage of protein from animal sources and the corresponding decrease from plant sources. Source: Food Balance Sheet. 1970. Ministry of Agriculture and Forestry. Fig. 14 shows that these trends are apparently related to increasing per capita income and GNP. Address: 1-2. National Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan; 3. Tokai Regional Fisheries Research Lab., Fishery Agency, Ministry of Agriculture and Forestry, Tokyo, Japan.

5160. Watanabe, Tokuji; Ebine, H.; Okada, M. 1974. New protein food technologies in Japan: Hydrolyzed vegetable protein (Document part). In: A.M. Altschul, ed. 1974. *New Protein Foods*. Vol. 1A. Technology. New York: Academic Press. 511 p. See p. 441-42. Chap. 9. [7 ref]

• Summary: "HVP is produced from defatted soybean meals or wheat gluten by hydrolysis with hydrochloric acid followed by neutralization. This method was first employed by Ikeda (1908) in his pioneering work which led to methods for the production of MSG. Thereafter, much effort was given to improve the processing, the quality of the crystals of MSG, and the utilization of the residues containing many amino acids. The production of HVP was also begun in shoyu factories to provide material for mixing with tradition soy mash [moromi] in order to reduce the time required for fermentation, to increase the yield, and to accentuate the flavor. The major demand for HVP in Japan is as an ingredient of shoyu and *tsukudani* (preservable foods made from fish, meat, pulses, or vegetables seasoned with shoyu, HVP, sugar, and other condiments)." The amount of liquid HVP (with a nitrogen content of 2.4%) added to shoyu annually is estimated to be 120,000 tons.

"Defatted soybean meal or wheat gluten is hydrolyzed with approximately 18% of hydrochloric acid and filtered. The filtrate is condensed by vacuum distillation to eliminate residual hydrochloric acid and volatile organic substances, and neutralized with sodium hydroxide or sodium bicarbonate to a pH value of 4.8-6.0. The neutralized liquid is then filtered and condensed again by vacuum distillation, followed by deodorization and decolorization if necessary. Paste HVP is prepared by concentration up to 80-85% of dry matter. Spray-dried powder or its pellet are also available.

"Hydrolysis by enzymes has been investigated, particularly for making shoyu. There are some patents on the hydrolysis by enzyme preparations from several origins for making HVP, although these processes have not yet been industrialized (Yoshida et al. 1959; Saito 1961; Iimura et al. 1962; Otani and Kagoshima 1964; Ikeda 1965a)." Address: National Food Research Inst.

5161. Yong, F.M.; Wood, B.J. 1974. Microbiology and biochemistry of soy sauce fermentation. *Advances in Applied Microbiology* 17:157-94. [259 ref]

• Summary: The best review of the literature on soy sauce

available in English. Superb! Contents: Introduction. Fermented soy products. History of soy sauce products. Chemical composition of soy sauce. Raw materials: Soybeans, wheat, ratio of soybeans to wheat, salt, substitute raw materials. Treatment of raw materials. Koji. Culturing the Koji. Mash (Moromi): Preparation (mashing), control of the mash, aging, microbiology of mash. Pressing. Pasteurization. "Chemical" soy sauce. Semichemical soy sauce, or shinshiki shoyu. Future development in the soy sauce industry. Conclusions. References. Address: Dep. of Applied Microbiology, Univ. of Strathclyde, Glasgow, Scotland.

5162. San-Jirushi Jozo K.K. 1974? San-Jirushi, go-annai [Introduction to San-Jirushi]. Kuwana-shi, Central Japan. 6 p. Manufacturer's catalog. Undated. [Jap]
Address: Meisei-dori 1-572-1, Kuwana-shi 511, Mie-ken, Japan.

5163. Canupp-Penrod, R. Lewis. 1975. Soy you want soy sauce [Make yer own]. *Mother Earth News* No. 31. Jan. p. 36-37. [2 ref]

• **Summary:** The author is writing a book on soybean products. "Perhaps the best description of the basic chemical process involved [in making soy sauce] was given by a traveler named Bishop, who visited Korea between 1894 and 1897. He wrote, 'Oil of sesamum is largely used in cooking, as well as vinegar, soy and other sauces of pungent and objectionable odors, the basis of most of them being capsicums and fermented rotten beans.' In Bishop's time, Koreans made soy sauce in the fall, after the harvesting of the dried soybeans." He proceeds to describe the ancient Korean process for making mei-ju [meju, soybean koji] and from it soy sauce.

Then he describes briefly how to make Korean miso (*toin-chang* {*doen-jang*}), tofu (*yu-bu*), soybeans boiled in soy sauce (*kong-cha-ban*), dry roasted soynuts, soy sprouts, and pickled soy sprouts.

Illustrations show: (1) A truncated cone of pounded soybeans, 8-10 inches high by 12 inches in diameter, as it begins its period of fermentation on a homemade mat of cattail leaves. (2) The cone is later enclosed in tapered strips of unbleached muslin and hung from a hook—as under the eaves or a rafter.

5164. Pearce, Jean. 1975. Jean Pearce's How to get things done in Japan. Vol. 1. Tokyo: Japan Times Ltd. [iv] + 245 p. Jan. Index. 19 cm. [Eng]

• **Summary:** This book is composed of reprints of the popular and informative articles, answering questions from readers on a wide variety of subjects, that Jean Pearce wrote in her column in *The Japan Times* from 1 Jan. 1972 to 27 July 1974; they appear in this book in chronological order.

From 16 Oct. 1973 (p. 76): "Health foods" are now

widely available in Japan, but familiar products are not always to be found. You can, however, find many soybean products, including natural soy sauce, and natural miso. "Try Nihon Kenko Shizenshoku in Shinbashi [Tokyo], phone 573-4181, or Shizenshoku Center in Shibuya, 461-7988. Both have restaurants that serve natural foods only."

Note: On pages 77-78 is a good history of Calpis.

From 8 Jan. 1974 (p. 118-19): "Health food remains a subject of interest... The basic Japanese diet, with a little discretion in the use of salt, is a health faddist's delight. Also on natural foods, a shop (Ishii Shoten, 1-2-7 Nishikata, Bunkyo-ku [Tokyo], phone 811-2457 in Japanese), that still makes by traditional methods roasted soybeans from mid-December through June, far superior, I'm told, to any of the imported varieties... 'A nice low-cal snack, and a good hors d'oeuvre...' They come with or without salt."

From 5 Feb. 1974 (p. 134): "A woman wants to learn how to make tofu. I have a recipe but I don't think I'll give it again. It is very difficult to do and the end result is more often failure than success. However, anyone can buy instant tofu at most Japanese food stores. It's easy to make, will be better than trying to do it yourself, and is inexpensive, ¥80 the last time I bought it but it has no doubt gone up. It makes two squares. The nigari she asks about is bittern, necessary for thickening [curdling, coagulating]. Tofu is now available in many foreign countries. If you don't know where to look, call anyplace listed under Buddhist in the classified directory. Ask where they buy theirs."

From 12 March 1974 (p. 154-55): "Tofu lovers, united! There are lots of them and their sympathy was with the woman who was denied a do-it-yourself recipe in this very column. So kinder hearts provide the following.

"Two collectors [Shurtleff and Aoyagi] are compiling a book of tofu recipes, which includes a number for making tofu, using various solidifiers and soybean products. I'll let you know when it's published.

"A book, *Tofu Recipes*, was published by a tofu enthusiast after a year's visit to Japan. It is her first literary endeavor, a labor of love which will be understood by anyone who is a tofu devotee. Grace Kikuchi tells you how to make it and how to use it, relying on childhood memories and modern innovations. I'll be in the kitchen when I finish this column. You can be equally inspired if you send your order to Grace Kikuchi, 260 Sumac Lane, Ann Arbor, Michigan, U.S.A. Enclose \$2.00. Somehow."

From 7 May 1974 (p. 184-85): "There is a new health food [natural food] restaurant in Tokyo, Hakumon ("White Gate"), just across from the Chuo University exit to the Shin Ochanomizu Station on the Chiyoda subway line, phone 291-9762. French owner Jimmy Dejeammes... I'd like to go back daily for the tofu that they make. Try the mochi made of brown rice and prepared in a variety of ways... All bread is baked there; high nutritional value... Among the beverages is Soyolac, made of soybean milk." It is made and distributed

here by Saniku Shokuhin, the Seventh Day Adventist health food company. Neuroca, a Swiss coffee substitute, is also available at Hakumon. Phone before you go. Hakumon may be moving soon. Address: The Japan Times, Tokyo, Japan.

5165. Rhodes, Richard. 1975. A bean to feed the world? *Atlantic (The)* 235(1):38-43. Jan.

• **Summary:** “The soybean could—if we were a world of vegetarians. It is rich enough in protein to replace meat, but now it is fed mostly to animals... Soybeans, not wheat or corn, are the United States’ number one cash crop, and by 1985 they are expected to occupy more acres than any other crop we grow... The annual world crop could satisfy the protein requirements of 800 million people.”

“Soybeans are... too new a crop to evince much nostalgia in farmers. No one loves a soybean except the Chinese and the Japanese who learned to convert it to delectable sauces and palatable curds eons ago”

5166. *New York Times*. 1975. A correction. Feb. 6. p. 28.

• **Summary:** In the recipe for Chicken ketjap, published in yesterday’s edition of the *Times*. “one-half cup of ketjap manis, a sweet Indonesian soy sauce, should have been added to the onion and garlic mixture in step 4. Ketjap manis is available at the Culinary Arts; Aphrodisia, 28 Carmine Street Bloomingdale’s and other outlets that sell imported spices.”

5167. Rice, William; Burros, Marian. 1975. Of Chinese hares and celebrations. *Washington Post*. Feb. 13. p. G1.

• **Summary:** We have just entered the Year of the Hare (or rabbit, according to some translations). A recipe for Shrimp in spicy lobster sauce calls for: “3 cloves garlic, peeled, 1 tablespoon fermented black beans,... 4 teaspoons light soy sauce.” Then: “Crush beans and garlic with side of knife or cleaver, then chop finely.”

A recipe for Anise beef calls for “3 tablespoons dark soy sauce.”

A recipe for Chinese-style beef with string beans calls for “1 tablespoon hoisin sauce.”

Address: Noda Sangyo Kagaku Kenkyusho.

5169. Laurelbrook Foods. 1975. A little bit about our food. Bel Air, Maryland. 6 p. Feb. 28 cm.

• **Summary:** Laurelbrook now distributes about 43 different food products, plus 7 non-food products. Each of these is described, including wheat, brown rice, soy flour (ground from lightly toasted beans by arrowhead mills), granola, tamari (“High quality soy sauce from Japan,

made from whole soybeans, wheat and sea salt...”), miso (“A thick soybean paste from Japan.” Hacho miso, Mugi miso, and Kome miso are available), Deaf Smith peanut butter, vegetable oils (expeller pressed and unrefined), sea vegetables, kuzu, umeboshi (salt pickled plum with chiso [shiso, aojiso] leaf). Address: P.O. Box 47, Bel Air, Maryland 21014; Raleigh Branch: 330 W. Davie St., Raleigh, North Carolina 27601.

5170. Yong, F.M.; Wood, B.J.B. 1975. Sucrase from soy sauce moulds. *Transactions of the British Mycological Society* 64(1):143-46. Feb. [11 ref]

Address: Dep. of Applied Microbiology, Univ. of Strathclyde, Glasgow G1 1XW, Scotland.

5171. McCormick, Sally. 1975. Azuma Sukiyaki House: Authentic Japanese cuisine and atmosphere!—5120 N. Broadway, Chicago (Advertorial). *Chicago Tribune*. March 15. p. G10.

• **Summary:** Azuma is Chicago’s oldest and finest Japanese restaurant. “The Azuma dinner includes Sukiyaki, a generous portion of prime rib slices with fresh mushrooms, bamboo shoots, Tofu (soy bean cakes), Shiratake [Shirataki] (yam noodles) [thin konnyaku noodles] and assorted fresh vegetables.” Azuma also serves Cold tofu [Hiya-yakko], Miso shiru [Miso soup], Beef Teriyaki, Chicken Teriyaki and Salmon Teriyaki. Four photos show Azuma Sukiyaki House.

Note: A similar ad appeared in the 9 Oct. 1975 (p. N17) issue of this newspaper.

5172. Japan Food Corporation. 1975. Kikkoman soy sauce: Now available at most supermarkets (If not, please ask them to stock.) (Ad). *Toronto Star (Ontario, Canada)*. March 19. p. E2, E4.

• **Summary:** These are two tiny ads on two separate pages of this issue of the newspaper. On the left side of each ad is an illustration of a bottle of Kikkoman soy sauce. The name of the advertiser is not given.

The first ad contains only the text shown above.

The text of the second ad reads: “Kikkoman soy sauce. Low in calories. High in proteins.”

Note: This is the earliest document seen (Nov. 2009) that mentions “Kikkoman” in the *Toronto Star*. Address: Toronto, Canada.

5173. **Product Name:** Cedar Lake Vegeburger (Meatless).

Manufacturer’s Name: Cedar Lake Foods.

Manufacturer’s Address: Box 116, Cedar Lake, MI 48812. Phone: 517-427-5590.

Date of Introduction: 1975. March.

Ingredients: Wheat gluten, water, soy flour, oatmeal, corn, yeast, salt, hydrolyzed vegetable protein, onion, celery salt.

Wt/Vol., Packaging, Price: 19 oz can

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Label printed 19 March 1975.

Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 22. Cedar Lakes. “Vegeburger” (19 oz).

Cedar Lake Foods wholesale price list. 1976. March 15.

5174. **Product Name:** Cedar Lake Vegetarian Mix for Sloppy Joes.

Manufacturer’s Name: Cedar Lake Foods.

Manufacturer’s Address: Box 116, Cedar Lake, MI 48812. Phone: 517-427-5590.

Date of Introduction: 1975. March.

Ingredients: Wheat protein, water, tomato paste, textured soy protein, corn meal, oatmeal, rehydrated celery, rehydrated green and red bell peppers, food yeast, soy sauce, salt, hydrolyzed vegetable protein.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Label printed 19 March 1975. Cedar Lake Foods wholesale price list. 1976. March 15.

5175. *Food Processing (Chicago)*. 1975. Worcestershire sauces vary in quality, solids content—affect formulation, usage. 36(3):58. March.

• **Summary:** Lea & Perrins, maker of a traditional brand, found that the solids content of some “average” Worcestershire sauces was as much as 50% lower than their brand. Lea & Perrins “produces its Worcestershire sauce from fresh vegetables—most sauces are made from dehydrated vegetables—and uses no heat for extraction. No colors, chemicals, or preservatives are added. Anchovies, tamarinds, eschalots, garlic, and onions are received at the plant, cleaned, soaked in vinegar, and aged from one to two years. The flavor-containing liquid is then squeeze-extracted.

“Cold extraction eliminates loss of volatiles by heat and also eliminates bitterness or off-flavor often associated with heat extractions. This is especially true with anchovies, where cold extraction gives a smooth flavor with no fish flavor. After extraction the liquid from the various raw ingredients is blended, and then the complete sauce is further aged in wooden casks for several months. After final aging, the sauce receives a short burst of heat for pasteurization purposes.”

It is estimated that there are more than 100 brands and grades of Worcestershire sauce. For more information contact Lea & Perrins Inc., Pollitt Dr., Fair Lawn Industrial Park, Fair Lawn, New Jersey 07410.

5176. Steinkraus, Keith H. 1975. Exotic fermented foods for Americans. *New York’s Food and Life Sciences Quarterly* 8(1):8-11. Jan/March.

• **Summary:** “Nearly all of us are familiar with soy sauce,

the *shoyu* of Japan and China, since this is an exotic food that has become a part of our diet. Few Americans, however, know the flavor and aroma of genuine, fermented soy sauce or are aware of how the product is manufactured. Actually, much of the soy sauce available today is produced by hydrolyzing (digesting) soybeans with hydrochloric acid. This acid splits the proteins and lipids and other soybean components, yielding, when neutralized, a salty, tasty liquid that imparts a meatlike flavor to bland foods.”

Describes how fermented shoyu is made. Then gives a brief introduction to miso, nuoc-mam and other fish sauces, fish pastes, tempeh kedele, ontjom (made from peanut presscake), bongkreng (made from coconut presscake), tapé, and idli.

Photos show: (1) A round tray of koji to be used for making soy sauce. (2) A man holding a tray on which are several large pieces of tempeh wrapped in banana leaves. (3) A deep tray filled with fresh, white tempeh, made at the New York State Agricultural Experiment Station. Address: Dep. of Food Science and Technology, New York State Agric. Exp. Station, Geneva, New York.

5177. **Product Name:** Wheatmeat Sandwiches [Cabbage/Carrot & Coleslaw, or Tomato & Lettuce with Natural Russian Dressing].

Manufacturer’s Name: Wheatmeat Co. Renamed Vegetable Protein Co. in 1976.

Manufacturer’s Address: 17 Dent St., West Roxbury, Massachusetts.

Date of Introduction: 1975. March.

Ingredients: Incl. pita bread, vegetables, seitan (made with washed wholewheat dough, tamari, safflower oil, ginger, garlic). The Cabbage/Carrot Coleslaw was made with grapefruit juice instead of vinegar. The Tomato & Lettuce with Natural Russian Dressing used ketchup and eggless mayo, with other herbs and spices.

Wt/Vol., Packaging, Price: Saran-wrapped.

How Stored: Refrigerated.

New Product–Documentation: Talk with Sandy Chianfoni of Upcountry Seitan. 1991. Nov. 16. She moved to Boston in 1978 and enjoyed Wheatmeat Sandwiches, made by a man who lived in Cambridge. His company was named something like the “Vegetable Protein Company.”

Talk with Lenny Jacobs. 1992. March 11. John Weissman, the first person to make seitan in America, is selling Solar Burgers and stuffed pita sandwiches at Stuff-Its in the Harvard Garage (a collection of little shops) in Harvard Square in Cambridge, Massachusetts. Lenny saw him about a month ago.

Talk with John Weissman. 1992. March 31. In about late 1975 or early 1976 he and Sakee, now business partners, began making seitan in their apartment in West Roxbury, and selling it in bulk (5-10 lbs). Their first customer was a macro study house, but 2-4 weeks later they began selling their

seitan, labeled “Wheatmeat,” at Erewhon, refrigerated, in bulk and as “Wheatmeat Sandwiches,” stuffed in pita bread in several flavors—one with homemade cole slaw, another with tomatoes and lettuce; each had a sauce and was Saran-wrapped with a little paper label. Their main drawback was a short shelf life—only several days.

Letter from John Weissman. 1992. June 25. “Fern Israel originally showed us the method as sautéing the gluten, then stewing in tamari and water, using about half as much tamari as water. When I thought of putting seitan in a sandwich, I decided to lower the proportion of tamari drastically. Thereafter we only stewed the product in tamari broth, ginger and garlic, leaving out the frying or sautéing in oil. This was while still at 17 Dent Street, West Roxbury.”

5178. Spiral Foods Inc. 1975. Wholesale price list. Chico, California. 4 p. April 1. 28 cm.

• **Summary:** This two-sheet catalog and price list, consisting of two pages stapled in the upper left corner, is printed front and back with reddish-orange ink on tan paper. The first item is five cookbooks, including *The Art of Just Cooking*, by Lima Ohsawa. The soy-related products are similar to those in the 1974 catalog. Address: 1144 West 1st Street, Chico, California 95926. Phone: 343-2111.

5179. Spiral Foods Inc. 1975. Mail order price list. Chico, California. 4 p. April 1. 28 cm.

• **Summary:** This two-sheet catalog and price list, consisting of two pages stapled in the upper left corner, is photocopied front and back with black ink on white paper. Address: 1144 West 1st Street, Chico, California 95926. Phone: 343-2111.

5180. Japan Food Corporation. 1975. Kikkoman sauce: Now available at most supermarkets (If not, please ask them to stock.) (Ad). *Toronto Star (Ontario, Canada)*. April 2. p. E3.

• **Summary:** “Here are six good reasons why: Possibly the most rewarding flavour discovery you will ever make. No hydrolyzed protein, no corn syrup, no caramel, no artificial flavour or colour. Just brewed naturally for 12 months. Brewed purely of select quality soy beans, wheat, salt & water (nothing else) [except koji starter culture, spores of the mold *Aspergillus oryzae*]. Recommended by Good Housekeeping. Winner of 30 major international awards for quality, taste and excellency. And you’ll like it.

“Send one Kikkoman label by scraping off any portion and 25 cents for your Kikkoman ‘Ikebana’ and recipe ideas (The label is well pasted).”

An illustration shows a bottle of Kikkoman soy sauce.

Note: The title of the ad calls the product “Kikkoman sauce,” not “Kikkoman soy sauce.” Address: 25-6 Connell Court, Toronto, M8Z 1E8 Canada. Phone: (416) 252-5728.

5181. *Washington Post*. 1975. Meatless meal for Food Day. April 17. p. G3.

• **Summary:** On Food Day, April 17, a dinner banquet will be served at the New York Avenue Presbyterian Church. Proceeds (the meal is \$2) will go to world hunger relief organizations. A meatless recipe, Mung beans and rice, calls for “2/3 cup tamari (natural soy sauce).”

Address: Tokyo.

5184. **Product Name:** Wheatmeat (Cutlets Made of Seitan). Renamed Wheatmeat: Gluten Cutlet by 1977.

Manufacturer’s Name: Wheatmeat Co. Renamed Vegetable Protein Co. in 1976.

Manufacturer’s Address: 17 Dent St., West Roxbury, Massachusetts. Then 51 Oak Ave., West Newton, MA. Then 140 River St., Cambridge, MA.

Date of Introduction: 1975. April.

Ingredients: In 1977: Water, wheat gluten, wheat flour, tamari, yeast extract.

Wt/Vol., Packaging, Price: In 8 oz heat-sealed polyethylene bags.

How Stored: Refrigerated.

New Product–Documentation: Label for “Wheatmeat: Gluten Cutlet” designed in late 1976 or 1977 (when the company was located at 140 River St., Cambridge, Massachusetts) sent by John Weissman on 8 May 1992. 4 inches square. Self adhesive. Dark brown on yellow. “100% vegetarian–100% natural. Use in casseroles, soups, stews, sandwiches. Dip in batter and deep fry. Baste with marinade and bar-be-que. Fry strips and serve with noodles or grains, sauce, cheese, Put in omelets. Keep refrigerated or frozen.” Ingredients are shown above.

5185. Sprague, G.F. 1975. Agriculture in China. *Science* 188(4188):549-55. May 9.

• **Summary:** Contents: Introduction. Agricultural research in China. Map of eastern and central China showing all provinces and major cities. Organization of communes. Fertilization. Cropping systems. Plant protection. Rice. Wheat. Corn. Sorghum and millets. Soybeans. Vegetables and fruits. Animal production. Outlook for expanding crop production during the next decade.

This article is based on observations made by the U.S.

Plant Studies Delegation on their recent visit to China (26 Aug. to 23 Sept. 1974), and on conversations with the many scientists contacted. A more detailed report will be published by the National Academy of Sciences. Among the delegation members was Richard Bernard, U.S. Regional Soybean Laboratory, Urbana, Illinois.

Concerning soybeans: "In the central and southern areas, soybean culture is largely limited to small fields, gardens, ditch banks, and other waste lands. Only in the northeastern provinces does it become an important field crop. Here it is grown in pure stands or interplanted with other crops, primarily corn or sorghum.

"Soybeans are used for food in the green stage, but the more common use is in the manufacture of soy sauce and the various bean curd products. The vines, pods, and waste grain are also used as livestock feeds.

"Some soybean breeding work is done at the Genetics Institute in Peking, but the major breeding effort is concentrated in the northeastern provinces of Kirin, Heilungkiang, Liaoning, and at the Northwest College of Agriculture in Shensi province." Address: Dep. of Agronomy, College of Agriculture, Univ. of Illinois, Urbana.

5186. Satô, Kyôzô; Shôji, Yukitsugu. 1975. Moromi no netsu nendô-ritsu no sokutei [Measurement of heat transmission in moromi]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 53(5):303-05. May. [8 ref. Jap; eng]

• **Summary:** When making shoyu (soy sauce), in order to warm moromi from outside to the desired fermentation, we would like to know how heat is transferred from the heating surface of the fermenter inward. Address: Dep. of Mechanical Engineering, Faculty of Engineering, Tohoku-gakuin Univ., Tagajo, Miyagi prefecture, Japan.

5187. **Product Name:** Tan-Pops (Made with Seitan).

Manufacturer's Name: Wheatmeat Co. Renamed Vegetable Protein Co. in 1976.

Manufacturer's Address: 17 Dent St., West Roxbury, Massachusetts. Then 51 Oak Ave., West Newton, MA. Then 140 River St., Cambridge, MA.

Date of Introduction: 1975. May.

Ingredients: Wheatmeat: Wheat gluten, soy sauce, gingerroot, garlic, and onion. Batter: Corn flour, wheat flour, onion, garlic, herbs, spices, salt.

How Stored: Unrefrigerated and perishable.

New Product–Documentation: R. Leviton. 1983. *Vegetarian Times*. Jan. p. 32-37. "Mochi, amazake and seitan: Introducing three new foods from the Orient." "A product named "Tan-pops" was sold several years ago in Boston. They were large fist-sized chunks of seitan, breaded in cornmeal, deep-fried, and sold unwrapped in wicker baskets by the check-out counters of a few natural foods stores in Boston.

Talk with Lenny Jacobs. 1991. Nov. 14. Corn Dogs are

a traditional New England food made by inserting a skewer into the end of a hot dog, dipping it in a thick cornmeal batter, then deep-frying it. The Tan-Pops made from seitan were on a skewer that was as thick as a chopstick; each was dipped in batter, then deep-fried. Starting in the early 1970s, they started to be sold at natural food stores in Boston, and probably on the West Coast. Lenny saw Tan-Pops sold by the cash register at a number of natural food stores in Boston. They were in a big, uncovered serving bowl, lined with oil-stained paper towels. It was a very unsanitary presentation. [John Weissman responds: "Tan-Pops were put, not 'presented.' They usually sold before they could spoil, and people breathing on them didn't contaminate them because the world was clean then"]. Since it was a fresh, perishable product, it was not distributed outside of the local area where it was made. Barry Creighton may have made them [actually, he did not]. He was with Cable Springs Bakery, and he now lives in Alaska. Kathy Bellicchi might know more about this product. The key point is that the person who made the seitan for these Tan-Pops was one of the first, if not the first, person to manufacture seitan commercially in America—even before Grain Dance.

Talk with Sandy Chianfoni of Upcountry Seitan. 1991. Nov. 16. She moved to Boston in 1978 and at that time they sold Tan-Pops at the Erewhon retail store. They were the same shape as a fat hot-dog on a stick, as they were also dipped in a thick cornmeal batter then deep fried. They were not shaped like a fist. The meat-based ones were also called "Corn Dogs." She does not know who made them but her cousin Richard might know. It may have been the guy who made "Wheatmeat" (a seitan product) and Wheatmeat Sandwiches, and who may have lived in Cambridge. She thinks he made Wheatmeat by mixing wheat and vital gluten together rather than by using the traditional process. He sold it vacuum packed by itself. It was in Boston when she arrived in 1978. Michael Cohen of Lightlife Foods might know who made it, since the manufacturer, whose company was named something like "The Protein Company" may have offered to sell his company to Michael.

Talk with Joel Wollner, a clerk at the Erewhon retail store on Newbury St. in Boston in the mid-1970s. 1991. Nov. 18. Joel recalls that a man named Johnny Weissman made both Wheatmeat and Tan-Pops (or were they spelled Tan-Pups?). He owned the Vegetable Protein Company in Cambridge. Joel is not sure which product was launched first. He thinks at least one of them was being sold by 1976, maybe as early as 1975. Andy Levine, a clerk in the Newbury Street store who now runs Yellow Emperor (they make Chinese herbs) in Eugene, Oregon (Phone: 503-465-6664) might well know more about Johnny. Tan-Pops were about the shape and size of a Corn Dog—which is a hot dog on a stick, deep-fried in a blanket. In the name Tan-Pops, "Tan" comes from seitan, and "Pops" comes from Popsicles. A wiener-shaped piece Wheatmeat was made

into seitan, which must have had a lot of garlic in the broth, was skewered, breaded with a combination of cornmeal, soy grits, and maybe some seasonings or spices, then deep-fried. Johnny delivered them to stores in a basket while they were still hot. “Tan-Pops were an incredibly good product. They sold themselves by their intense aroma. You’d have to be careful not eat too many when they first came in so you’d have some left to sell. They were outrageous. After a while you’d learn not to eat them all. They were crispy and crunchy on the outside, then you’d bite in and they’d be juicy and rich on the inside.”

Talk with Paul Duchesne of Fairfax, California. 1991. Nov. 19. Paul was in Boston for 9 months starting in Sept. 1978. Wheatmeat was definitely made by the Vegetable Protein Co. in Cambridge. Johnny Weissman was a partner with some other person in that company. He is sure that the straight Wheatmeat Seitan was developed before the Tan-Pops. He made more money off the Tan-Pops than off the seitan. But Paul thinks Johnny made the Tan-Pops on his own—he had been making them for about 12-18 months. Paul does not know the name of the company that made Tan-Pops, but the business definitely had a name. Paul was in the place where Johnny made the Tan-Pops; it was a little deep-frying place in Cambridge. The Tan-Pops had a wonderful smell and were delicious but quite greasy. While Paul was there, Johnny was moving his Tan-Pops operation out of that deep-frying place into his house. He was converting his basement into a food plant, in part because of his fear of health inspectors. Johnny was very creative in making foods. In 1979 he developed a Tofu Bologna and some other tofu-based meatlike product, but he was so paranoid that other companies would copy him after he launched them that he never did. “I tasted the Tofu Bologna at his home and I flipped out. It was just fantastic—great texture and flavor—I’ll never forget it.” He was good at product development but poor at marketing. Between late 1978 and 1979, the health department made him stop selling Tan-Pops in a paper-lined basket, asking him to place each one in small, individual, open-top plastic bags in the same basket. Kathy Bellicchi, who ran Cable Springs Bakery, knew Johnny.

Talk with Joan Donovan, co-founder of Upcountry Seitan. 1991. Dec. 7. She remembers that this product was sold at natural food stores in the Brookline/Boston area but she does remember any details about the manufacturer or product.

Talk with Johnny Weissman. 1992. March 31. See this interview for details on the product and its history.

5188. Balsley, Betsy. 1975. 3 ways to picnic. *Los Angeles Times*. June 29. p. R10-R12, R14, R16.

• **Summary:** The section titled “The Japanese influence” contains a recipe for Inarisushi (Cone sushi) which calls for “6 aburage... 1/3 cup soy sauce.” A note at the end states: “Aburage is deep fried soybean curd available in Oriental

food sections.” Address: Dr.

5189. Erewhon Trading Co. [Los Angeles, California]. 1975. Wholesale price list. July 1975. Culver City, California. 10 p. Catalog and price list.

• **Summary:** On the front cover is a copy of an analysis of carrots performed by Agri-Science Laboratories Inc. of Los Angeles. They contain no Organo-phosphates—None detected as Parathion < 0.010 ppm.

Products include: Whole grains. Cereals. Flours—Freshly milled whole grains (incl. Raw soy flour, organic). Beans (incl. Soybeans, organic, Texas {10 or 16 lb}, Soybean flakes, organic, Texas). Butters (incl. Peanut butter, Sesame butter). Applesauce. Carbonated drinks. Juice. Chips. Goodies. Nik’s Snaks. Granola. Soybean products: Tamari soy sauce (4 sizes, 8 oz to 4.7 gal). Hacho miso, soybean paste (1 lb or 44 lb). Mugi miso, Barley-soybean paste (1 lb or 44 lb). Kome miso, Rice-soybean paste (1 lb or 44 lb). Sea vegetables. Specialties (incl. Kuzu arrowroot, umeboshi {Plums pickled in brine}, Sesame salt). Seeds. Nuts. Fresh produce—Organic. Dried fruit—Bulk. Dried fruit—Packaged. Books and flyers (Deaf Smith County Cookbook, Oil Story, Pasta Cooklet). Redwood rennetless natural cheeses (Raw or pasteurized). Pasta (Bulk or packaged, incl. Soya-rice shells). Salt. Oils (incl. Soy oil). Erewhon packaged goods: Grains, cereals, flowers, seeds, beans. Teas. Celestial Seasonings bulk herb teas or tea bags. Cosmetics. Cooking utensils.

Inserted is a letter on Erewhon letterhead from Loren M. Spector, general manager, dated 1 July 1975. It begins: “Dear customers: Please find enclosed our summer price list.” On the back are “July specials.” Address: 8454 Steller Dr., Culver City, California 90230. Phone: (213) 836-7569.

5190. Ichiyama, Morio. 1975. Noda no rekishi [History of Noda]. Nagareyama, Chiba prefecture, Japan: Ron Shobo. 301 p. First ed. published in 1958 under title: Chiba-ken Noda Kyodoshi. [Jap]

• **Summary:** In the section titled “People from Noda who became known worldwide,” the first person profiled is Shinzaburo MOGI (p. 263-65). “Mr. Shinzaburo Mogi, 5th son of the 5th Shichirouemon, was born in 1872 Feb. 27 at Noda. He studied at Tokyo Kosho (later Hitotsubashi Univ.), then left school after graduation. In 1892 he went to the USA. Initially, he worked for a milk company in Toronto, Canada. Then he worked at the Chicago [Illinois] branch office of Yamato Shokai. In 1897 he established Yamato Yunyu Co., an import company, and became its president. In 1913 he received Mr. Tsuneo Tanba as a general manager, to manage the soy sauce plant [?]. Under Mr. Tanba were Mr. Kitazawa and Mr. Kunihara.

Yamato Shokai was a company in Yokohama. whose president was Mr. Takeshi Oba. Its capitalization was 1,000,000 yen stock, half of the money put up by Junjiro Ishii and half by Mr. Shichirouemon Mogi. In 1907 in

Denver [possibly some city other than Denver, Colorado?, says Ken Mogi IV] he managed a soy sauce plant. Later in Toronto, Canada, he had a relationship with a soy sauce plant. But neither of these soy sauce plants was successful. At International Trading he worked with Mr. Ichizaeomn Morimura (see History of Yokohama [which Ken Mogi says he would like to read]).

Mr. Tsuneo Tanba (a collector of ukiyo-e [color wood-block prints of everyday life in old Japan]), who worked under Mr. S. Mogi, said that Mr. S. Mogi, a Unitarian Christian, did not smoke or drink alcoholic beverages. He loved soy sauce, and he never left any soy sauce on his plate after a meal. He said: "I am not willing to go back to Noda. I do not want to manage a soy sauce plant in Noda."

When he was a student, Mr. S. Mogi helped Mr. Tokuzo Fukuda (later a famous scholar) by giving him 2.5 to 3 yen every month. Mr. S. Mogi asked his father to give Mr. Fukuda 6-9 yen per month for 1½ years. The father did not understand the situation so he visited S. Mogi's dormitory and found out the facts and was satisfied. On 1 Dec. 1946 Mr. Shinzaburo Mogi died.

Note 1. Translated by Kenzaburo "Ken" Mogi IV from the edition of 1975 (Showa 50 Aug. 1), for William Shurtleff of Soyfoods Center. Ken Mogi spent a great deal of time trying to find evidence that his ancestor, Shinzaburo Mogi, started a soy sauce plant in Denver, Colorado. He visited Denver in search of evidence. As of 2004 he stated that this was still a theory, NOT a proven fact.

Note 2. As of Feb. 2007, it is unclear whether or not Shinzaburo Mogi ever started a soy sauce plant in Denver, Colorado, or anywhere else in North America. There is no firm evidence that he did, only the memories of two people and some photos of the foundations of an old building. One of them, Tsuneo Tanba, is mentioned above. Yet Mr. Tanba gives no details. Note 3. Mr. Morio Ichiyama was born in 1897. Address: Noda, Japan.

5191. Shuttleworth, John. 1975. Eastern procedures with soybeans are not difficult: Mother Earth news. *Sun* (Baltimore, Maryland). Aug. 30. p. A8.

• **Summary:** First describes, in prose format, how Korean soy sauce is made at home. Then describes, in recipe format, how to make it at home today. Finally describes, in prose format, how to make Korean tubu ("Japanese tofu, or bean curd") at home.

A very similar version of this article, with two small illustrations of Korean meju (soybean koji, in the shape of a truncated cone) appeared in the *Chicago Tribune* on Sept. 28 (p. N_A11).

5192. Dinshah, Freya. 1975. XXIII World Vegetarian Congress cook book. Malaga, New Jersey: North American Vegetarian Society. 40 p. Illust. No index. 27 cm. Spiral bound. Introduction by H. Jay Dinshah.

• **Summary:** This is a vegan cookbook. This congress is a milestone of the vegetarian movement both in North America and worldwide. "The International Vegetarian Union, founded in 1908, had held 22 previous Congresses from 1908 to 1973, each in the British Isles, continental Europe, or India." A congress is held every 2 years. The North American Vegetarian Society was created with two goals: (1) To bring about a complete renaissance of the vegetarian movement in the United States and Canada, and (2) To organize the 23rd Congress, which was held 16-28 Aug. 1975 at the University of Maine, Orono, Maine. Daily menus served at the Congress are listed on pages 7-8. Soya milk, and Willow Run Soya Lecithin Spread were available at each breakfast. Willow Run Spread, Soy Mayonnaise, Tamari Soy Sauce, Soya Milk, and Roasted Soya Beans were available at each lunch and dinner. Soy-related recipes include: Soya sprouts (p. 14-15). Soya butter (made with ¾ cup soya powder, and ½ cup each soy oil and water, p. 16). Soy mayonnaise (with soya powder and Soyagen powder). Soya beans (boiled, then baked, p. 17). Soya peanut savory (with cooked soya beans, p. 20). Soya rounds (with cooked soya beans, baked, p. 20). Several tablespoons to 2/3 cup of Soyagen powder (powdered soymilk) or soya powder are used in many of the dessert recipes (p. 30-36). Soya milk (from soya powder, p. 32). Bread pudding (with soya milk, p. 32). Granola (with soya powder, p. 39). Page 40 lists 34 vegetarian societies affiliated with NAVS in the USA. Address: North American Vegetarian Society, 501 Old Harding Highway, Malaga, New Jersey.

5193. Eden Foods. 1975. Wholesale pricelist. 4601 Platt Rd., Ann Arbor, MI 48104. 19 p. Aug. Catalog.

• **Summary:** This catalog is large enough to have a table of contents on page 1, along with an illustration (line drawing) of large windmills. Page 7 lists "Tamari, Miso & Condiments." Tamari Soy Sauce is now sold under 3 labels (Erewhon, Japan, and Lima-Chico San). Miso (Mugi, Hacho, and Kome) is also still sold under the Erewhon label. Mugi miso is described as "barley-soy paste" and Kome miso as "rice-soy paste." Also includes "Kuzu Arrowroot, Umeboshi Salt Plums (Erewhon), and Sea Salt-white French." Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

5194. Soriano, Mercedes R. 1975. Soy sauce manufacture in the Philippines. Paper read at the Third ASEAN Sub-Committee on Protein. Held 29 July-2 Aug. in Manila, Philippines. * Address: National Inst. of Science and Nutrition, Manila.

5195. Staley (A.E.) Manufacturing Co. 1975. Whatever food plans you're developing-The Protein People can help (Ad). *Food Processing* (Chicago). Aug. p. 42-43.

• **Summary:** This two-page white-on-blue ad discusses how Staley can help with nutrition, texture, flavoring, and

technology. From soy flours and soy sauces, to Mira-Tex (textured vegetable protein) and Gunther whipping proteins (incl. G-400 and D-100). Address: Decatur, Illinois 62525. Phone: (217) 423-4411.

5196. Erewhon Trading Co. 1975. Erewhon talking food. Miso and tamari (Ad). *East West Journal* 5(10):43. Oct. 15.
• Summary: A lengthy description of how traditional miso and tamari (shoyu) are made in Japan and some philosophical reflections on the processes and ancient wisdom that created them. Address: Boston, Massachusetts.

5197. Erewhon Trading Co., Inc. 1975. Erewhon harvest '75. Boston, Massachusetts. 48 p. Oct. Catalog and price list.
• Summary: On the front cover, a brown and white photo shows a rustic farmer, holding a pitchfork, standing by his horse and hay wagon with wife and child. On the rear cover, Erewhon's president, Tyler Smith, writes a poetic passage about the beauty of wheat. Products include: Grains: Lone Pine in Arkansas grows organic short grain and long grain brown rice. Wehah Farms in California grows organic short grain brown rice and non-organic sweet brown rice [glutinous rice]. Baker in Louisiana grows organic medium grain brown rice. Organic hard red winter wheat is grown in Nebraska and in Deaf Smith, Texas. Organic hard red spring wheat is grown by Ted Whitmer in Montana and Ricke in Minnesota. Organic hard amber durum wheat is grown by Whitmer in Montana. Organic soft white pastry wheat is grown by Wild Winds in New York. Other organically grown grains are pearled barley (Idaho), whole unhulled buckwheat for sprouting, hybrid yellow or white corn (Deaf Smith), open-pollinated yellow corn (Minnesota), blue corn, whole oats, and rye. Cereals include organic soy flakes from Deaf Smith (25 lb). Flours include organic soybean flour (25 lb, steelground, full-fat). Pasta (packaged or bulk) includes Japanese soba, Soy Rice Shells.

Snacks from "Erewhon L.A." include Chico-San Yinnies, and Date-Nut Delight. Nik's Snaks (p. 8): This full page lists about 30 products. Of these, eleven are "tamari-roasted" whole-food snacks. The 30 products are sold in 5 sizes: 2.5 oz, 3.5 oz, or 6 oz. pick-up packages, or 25 lb bulk. The soybeans (dry roasted with tamari, no salt) are sold only in 25 lb packs. Other tamari-roasted seeds include: Spanish peanuts, sunflower seeds, roasted almonds (all 2.5 oz or 25 lb), cashews or pumpkin seeds (25 lb). Non tamari-roasted products include: Raisin walnut mix. Roasted mixed nuts. Raw mixed nuts. Raisin nut mix. Peanut raisin mix. Trail mix (Honey almond granola, roasted peanuts, raw sunflower seeds, date pieces, raisins, and sea salt). Honey almond granola. Chia seeds. Bee pollen. Alfalfa seeds. Date sugar. etc. Erewhon Aztec organic corn chips. Baked goods from Cable Springs Bakery in Cambridge, Massachusetts. Fruit juices from Erewhon, Heinke's, Knudsen, Lehr's (natural grape juice from Germany), and Biotta (Swiss Vegetable

juices).

Dairy Products: Cheeses from Alta Dena (also kefir and yogurt) in California, Superior Cheese Co. in Massachusetts, Redwood Natural Cheese Co. in California. Also Favorite Foods yogurt.

Dried fruit, including organically grown Monukka and Thompson raisins, prunes, dates, apricots, apples, Bing cherries, black mission figs, and Calimyrna figs. Peanut-, apple-, sunflower-, and sesame butters. Sesame tahini. Pure & Simple "fruit butters sweetened with honey only; terrific old-fashioned jams (apple, apricot, peach, plum, raspberry, strawberry, grape, cherry). Erewhon apple sauce. "Pumpkin Sour" apple sauce and apple butter made in Plainfield, Vermont. Tree of Life fresh fruit preserves from Florida (8 varieties).

Seeds & nuts, incl. Erewhon organic soybeans in 1-lb packs, and Erewhon organic stoneground soybean flour in 24-oz packs. Arrowhead Mills packaged products, incl. Bulghur-soy grits (24 oz), Soy flakes (16 oz, organic), Roasted soy flour (24 oz, organic). Beans, incl. Aduki (25 lb, from Japan or Mainland China), yellow soybeans (50 lb, organic, New York), black soybeans (25 lb, non-organic from Japan, or organic from New York), green soybeans [dry] (25 lb, organic). Erewhon granola (17 products, including various sizes), Arrowhead Mills granola, Back to Nature granola (unsalted).

Oils, incl. Arrowhead Mills soybean oil (pints, quarts, or 5-gallon jug). Honey. Baking, incl. Premose barley malt, and Yinnies grain syrup from Chico-San. Tea, incl. 2 pages from Celestial Seasonings, and Erewhon Mu tea (9 or 16 herbs), Lotus root tea, Kukicha-branch twig tea. Springwater.

Tamari & Miso: 4 pages of descriptions and prices for Hacho miso (all misos are sold in 1 lb or 44 lb keg), Mugi miso, Kome miso, Tamari soy sauce [actually shoyu] (8 oz, pints, quarts, ½ gallons, gallons, or 4.7 gallon tin), Barley koji (1 lb). Specialties, incl. Unrefined sun-dried sea salt with natural trace minerals from the north coast of Brittany in France, Tekka, kuzu, umeboshi, sesame salt, Herbamare salt, nigari, brown rice vinegar, non-alcoholic beer (Birell, Kingsbury), Bambu instant coffee substitute.

Fearn Soya Foods: Soya granules, Soy-O wheat cereal, Soy-O corn bread & muffin mix, Soy-O bran muffin mix, Soy-O pancake mix-buckwheat, Soy-O pancake mix-wholewheat, Sesame burger mix, Natural soya powder.

Sea vegies: Agar-agar, dulse, hiziki, kombu, wakame, nori seaweeds (a description of each is given).

Erewhon certified organic produce, incl. Daikon grown in California. Soaps, incl. Cattier clay products and Dr. Bronner's Peppermint castile soap, Orjene, Nature's Gate, Tom's Natural Soap.

Cookware, mostly imported from Japan, incl. Soy [sauce] dispenser, 4½ inch. Growing [sprouts and sprouters]. Cast iron. Flyers, incl. Talking Food series, Natural recipes (3 by 5 inch tear-off pads. Soy-related recipes include: Soy

au gratin, Soy casserole, Miso soup, Soyburgers, and Soy loaf).

A map shows Erewhon's delivery region (Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey) and schedule. The company also has an office near New York City at 303 Howe Ave., Passaic, New Jersey 07055. Phone 212-594-6455.

Note 1. This is the earliest document seen that uses the word "vegies" (spelled as such, one of two documents) to refer to vegetables, or "Sea vegies" to refer to sea vegetables (edible seaweeds).

Note 2. This is the earliest document seen (May 2006) that uses the term "trail mix" to refer to a non-perishable mixture of dried fruits, seeds, nuts, roasted soybeans, granola, etc. to be eaten as a snack, as when hiking or walking. Nik Amartseff coined the term "trail mix" and launched the first commercial trail mix product through Erewhon Trading Co. in 1974. At the time, Nik was studying and practicing macrobiotics in Boston, Massachusetts. By the late 1970s several brands of trail mix were on the market in both natural food stores and supermarkets; by the 1980s there were many, as it became a mainstream American snack.

This catalog cover was reprinted with permission from the Michio and Aveline Kushi Macrobiotics Collection, Archives Center, National Museum of American History, Smithsonian Institution, Washington, DC. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

5198. Erewhon [Los Angeles, California]. 1975. Erewhon. November/December 1975. Culver City, California. 22 p. Catalog and price list.

• **Summary:** On the front cover is an illustration (line drawing) of Benjamin Franklin, wearing a fur hat and glasses. Below is a quote from his *Poor Richard's Almanac* (1739): "Keep thy shop and thy shop will keep thee." Other quotes are scattered throughout the catalog.

Products include: Pasta (packaged and bulk). incl. Soya-Rice Shells (organic) "Eat to live, Live not to eat." Bulk staples—Grains (including Sweet Rice from California), flours (freshly milled whole grain), cereals, beans (incl. organic soybeans and soybean flakes from Texas), seeds. "Knowledge like a rich Soil, feeds if not a world of Corn, a world of weeds." Erewhon packaged staples—Grains, flours, cereals, beans (incl. organic soybeans), seeds. "A long life may not be good Enough, but a good Life is long Enough."

Granola. More packages—Arrowhead grains, cereals, and beans, Fearn Soya Foods (from Fearn Soya Products, incl. Soy-O-Pancake Mix {Wholewheat or Buckwheat}, Soya Powder {Natural or Low Fat}), Earthwonder meals-in-a-bag. Arrowhead Mills The Simpler Life food storage program (nitrogen packed in #10 metal cans; incl. soybeans and soy flakes). Juice. "They that cannot Obey, cannot Command." Spreads (nut butters {peanut butter, sunflower butter, sesame

butter, sesame tahini} and fruit butters {Pure and Simple, sweetened only with honey}). Rocky Hollow Herb Farm's line of organic and natural herbs, spices, and essential oils. "Time is an Herb that cures all Diseases." Goodies: Nik's Snaks, chewies (incl. pemmican), chips (incl. Mother Earth Tamari Chips, Corn Munchies—Pure & Simple). "To lengthen thy Life, lessen thy Meals." Rennetless cheese from Redwood Natural Foods. Dried fruit (bulk or packaged, incl. calymyrna figs, medjool dates, monukka raisins). Tamari & miso (Tamari soy sauce—4 sizes aged 2 years, Hacho miso—3 sizes aged 2 years, Mugi miso—3 sizes aged 18 months, Kome miso—3 sizes age not given). Vegetable oils (incl. Arrowhead Soy Oil in 3 sizes). Garden fresh produce. Sea vegetables. Herb teas (incl. Celestial Seasonings). "Make Haste slowly." Body care (incl. Tom's soap and shampoos, Dr. Bronner's soaps, Cattier products), "When the well's dry, We know the worth of Water." Potpourri: Condiments (incl. "kuzu arrowroot, umeboshi (plums pickled in brine)," cookware (Quaker City grain mill, Corona stone mill, Mac steel utility knife, Soy sauce dispenser), publications). "Hunger is the best Pickle." Important stuff (Ordering information). "Drive thy Business, let it not Drive Thee."

On the last page, John Fountain extends "grateful appreciation to all those whose positive accomplishments have created Erewhon: Lima and George Ohsawa, Aveline and Michio Kushi, Cornelia and Herman Aihara, Michel Abehsera, Yvette & Jacques DeLangre, William Dufty, Frank Ford, Paul Hawken, Carolyn Heidenry, Roger Hillyard, Bob Kennedy, Bruce McDonald, Tommy Nakayama, Shane and Lou Olds [sic, Shayne Oles], Fred Rohe, Dr. Pietro Rotundi, Evan Root, Tyler Smith, Bill Tara, our customers, staff, suppliers, and growers, Susan and Lou Remy and all." Address: 8454 Steller Dr., Culver City, California 90230. Phone: (213) 836-7569.

5199. Singer, Peter. 1975. *Animal liberation: A new ethics for our treatment of animals*. New York, NY: New York Review. Distributed by Random House. xix + 301 p. Oct. Illust. Index. 18 cm. Paperback edition published Sept. 1977 by Avon Discus. [200* ref]

• **Summary:** This book, a milestone in and "bible" of the animal rights movement worldwide, first popularized the concepts of animal rights and speciesism (pronounced SPEE-shees-iz-um, a term first used in 1973) as logical extensions of human rights and racism. It helped to make 1975 a year that saw explosive growth in the animal rights and vegetarian movements. Singer is an Australian academic.

The author, an Australian philosopher, argues for an end to oppression and exploitation of non-human animals, discusses animal experimentation and factory farming, and presents vegetarianism as an opportunity to take a political, economic, and moral stance in our daily lives.

Contents: Preface (It begins: "This book is about the tyranny of human over nonhuman animals. This tyranny

has caused and today is still causing an amount of pain and suffering that can only be compared with that which resulted from the centuries of tyranny by white humans over black humans. The struggle against this tyranny is a struggle as important as any of the moral and social issues that have been fought over in recent years"). Acknowledgments. 1. All animals are equal... or why supporters of liberation for blacks and women should support animal liberation too. 2. Tools for research... or what the public doesn't know it is paying for. 3. Down on the factory farm... or what happened to your dinner when it was still an animal. 4. Becoming a vegetarian... or how to reduce animal suffering and human starvation at the same time. 5. Man's dominion... a short history of speciesism. 6. Speciesism today... defenses, rationalizations, and objections to animal liberation. Appendices: Cooking for liberated people (incl. Seventh-day Adventists, bread, peanut butter, tahini, miso, hummus, and Tartex, Chinese recipes, mung bean sprouts and tofu, Indian recipes, Middle Eastern recipes, flat Arabian bread, chickpeas and felafel, Italian recipes, macrobiotic recipes {incl. soy sauce, soybeans}, meat substitutes {incl. TVP, Granburger, Protoveg, Itona, Vitpro, Loma Linda meatless frankfurters, imitation bacon bits}, and milk substitutes—often made from soybeans), further reading, organizations.

Singer's book was not just a philosophical treatise. It was a call to action. Invoking the concept of speciesism, Singer deplored the historic attitude of humans toward non-humans as a "form of prejudice no less objectionable than racism or sexism," and urged that the liberation of animals become the next great cause after civil rights and the women's movement. Singer's popular book produced two important effects. First, it reintroduced to the anti-vivisectionist cause an intellectual basis, a philosophical orientation, and a moral focus. Second, it attracted to the animal rights cause a host of new activists who started many new organizations. The most active and visible of these has been PETA (People for the Ethical Treatment of Animals, in Washington, DC), which by 1988 was thought to have 200,000 dues paying members in the USA.

Singer maintains that: "to treat animals as resources and argue about when use is sustainable, is a classic example of economic rationalism running heedlessly over non-economic values. We should no more hand our wild animals over to the tender mercies of the market than we should hand our children over to the same market forces. Neither children nor wild animals are a 'product' or a 'resource' at all."

Note: This is the earliest document seen (Oct. 2009) that mentions Itona, a British maker of soymilk and meat alternatives. Address: Australia.

5200. Erewhon Trading Co. 1975. News from nowhere (Japanese fermented foods—Miso, tamari, and koji). *East West Journal*. Nov. 15. p. 29.

• **Summary:** The subtitle states: "Erewhon news from

Nowhere is a regular *East West Journal* column providing information about food. We hope that this will be a valuable educational service, enabling readers to select what they eat knowledgeably. If you require more information about food, we invite you to visit us at our retail stores." Note that though the column is written in the first person, no author is given.

"In my opinion the most fundamental change in the creation of traditional fermented foods occurred with the shift of the Japanese rural-based economy after World War II. The movement of the population to the cities and the emphasis on production and manufacturing by large numbers of city dwellers who consumed increasingly larger amounts of food created a demand for soybeans beyond the capacity of the rural of the rural population's productivity. The Japanese turned to America for their soybeans and began to use varieties that did not lead to the fine product to which the native beans had formerly contributed. The result was an economic necessity for research, carried out by American and Japanese technicians, and the results created several basic changes in the manufacturing process.

"First, the koji mold was investigated, and out of the hundreds of strains of mold bacteria [sic] present in the traditional mold culture, certain strains were isolated and propagated for their effectiveness to create the fermentation under laboratory conditions. Thus, new strains of 'hybrid' cultures were developed that would break down the American beans of inconsistent quality. The technicians failed to see the process as a whole, not realizing that the long-term fermentation and great attention in handling the raw materials at different stages was an art that depended on a great variety of naturally occurring bacteria to produce an environment where natural competition worked to strengthen the culture."

"Except for the small number of true traditional makers in Japan, I would say that Americans in their own backyards will, within the next ten years, be producing finer miso and tamari than the majority of producers currently working in Japan." Address: Massachusetts.

5201. Adams, Catherine F. 1975. Nutritive value of American foods, in common units. *USDA Agriculture Handbook* No. 456. 291 p. Nov. Index. 30 cm. Address: Washington, DC.

5202. **Product Name:** Cedar Lake Chippetts / Chipettes (Meatless).

Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer's Address: Cedar Lake, MI 48812.

Date of Introduction: 1975. November.

Ingredients: Wheat protein, water, soy sauce, vegetable seasoning, salt.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 33. Cedar Lakes. “Chippetts” (19 oz).

Label. Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27. “Chippettes–Meatless. Cedar Lake foods.”

5203. **Product Name:** Cedar Lake Sloppy Joe (Meatless).

Manufacturer’s Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer’s Address: Cedar Lake, MI 48812.

Date of Introduction: 1975. November.

Ingredients: Wheat protein, water, tomato sauce, vegetable seasoning, cornmeal, soy sauce, oatmeal, corn oil, salt, brown sugar.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 22. Cedar Lakes. “Sloppy Joe” (19 oz).

Label.

5204. **Product Name:** Cedar Lake Hostess Cuts (Meatless).

Manufacturer’s Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer’s Address: Cedar Lake, MI 48812.

Date of Introduction: 1975. November.

Ingredients: Wheat protein, whole wheat flour, water, soy sauce, vegetable seasoning, salt.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 22. Cedar Lakes. “Hostess Cuts” (19 oz). Plus Label sent by Cedar Lake.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27. First ingredient is written as “Wheat gluten.”

5205. **Product Name:** Cedar Lake Vegetarian Chops.

Manufacturer’s Name: Cedar Lake Foods.

Manufacturer’s Address: Box 116, Cedar Lake, MI 48812. Phone: 517-427-5590.

Date of Introduction: 1975. November.

Ingredients: Wheat gluten, water, soy sauce, salt, hydrolyzed vegetable protein, onion, celery salt.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 22. Cedar Lakes. “Vege Chops” (19

oz).

5206. Midwest Natural Foods Distributors, Inc. 1975.

Catalog #7. Nov. ‘75. Ann Arbor, Michigan. [vii] + 93 + 8 p. Index. Illust. 28 cm.

• **Summary:** This catalog, largely printed by a computer, contains many ads on unnumbered pages. Contents: Hi! Ordering and service information. Bulk: Whole grains, beans, seeds and nuts, dried fruit, nut butters, etc. Refrigerated and frozen (“Frozen meats {beef}—No DES, steroids, female hormones, antibiotics, or stimulants used in feeding; Chickens—No hormones & antibiotics. Ask for turkeys and hens during Thanksgiving.” “Frozen soy products: soy milk and tofu soybean curd”). Books. Packaged (by company and product category). Index by product. Index by manufacturer.

“We are happy to announce that Midwest and Mountain High are now one entity... We go into the fall and winter seasons with a fall and winter catalog, delivery schedule, and computer system.” For new developments, watch the monthly newsletter and sale sheets. “Your Friends at Midwest.”

Includes the following ads (the number is that of the facing page). Wheat Stalk Soya Burger (Cotati, California, p. 17). Arrowhead Mills (p. 27). Dr. Bronner’s Magic Soap (p. 32). Chico-San (p. 35). Erewhon (p. 41, incl. “Trail Mix, Niks”). Fearn Soya Foods (p. 42; shows a package of Fearn Soy/o Buckwheat Pancake Mix). Flavor Tree—Pernut soy beans (p. 42). Hain (p. 49, “Cold pressed safflower oil,” mayonnaise, and margarine). Health Main (p. 54; soy is not mentioned—only natural potato chips and yogurt dressing & dip). Infinity Herbal Products Ltd. (p. 56). Malt-O-Meal—Soy Town (dry roasted soy beans, p. 60). NF Factors (Lafayette, Calif., p. 67. A photo shows a can of Protesoy). Pure & Simple (p. 72, 795 West Hedding St., San Jose, California 95126; mainly fruits, fruit juices, fruit butters, vinegars). Sovex (p. 83-84. “The fastest selling natural cereal line on the market... Here’s the one that started it all, the original Crunchy Granola”). Viobin (wheat germ oil, p. 85F, 89). Tiger’s Milk Products (p. 86).

Companies whose products are listed with ads include: Back to Nature (granola, p. 28). Country Natural (granola, p. 36). El Molino (p. 38-39; incl. Cara Coa Crunch Bar, Carob Fruit & Nut Bar, Carob Mint Candy, Chia Seeds, Flaxseed—Whole, Pumpkin seeds, Soybeans—whole, Soya flour, Soya grits, Carob Coated Soybeans). Ener-G-Foods—Jolly Joan (incl. Instant Soy Milk Powder, Wheat & Soy P&W [Pancake & Waffle] Mix {regular and low salt}, p. 39). Flavor Tree (Pernola cereal, Pernut soy beans—salted, cinnamon, salt free, garlic, Pernut toasted soybeans—salted, salt free, garlic, onion). Wok sets in gift box, Quaker City grain grinder, Corona hand mill (p. 58). Lassen Foods

(granola, p. 60, 60F). Mac Knives (p. 60). Orjene (p. 70-71). Parkelp—Ocean Labs (p. 71, incl. Sea Zun).

The Chico-San Inc. ½-page ad (facing p. 35) features four products; a photo of each is given and each is K-Parve: Rice Cake San-Wich (filled with sesame seeds and Yinnies Rice Syrup). Yinnies Rice Syrup (natural sweetener, made from rice and barley). Yinnies (traditional oriental confection, wrapped like individual candies). Rice Cakes in 4 varieties: Salted or Unsalted, Rice Cakes with Millet—Salted. Rice Cakes with Buckwheat—Salted. “Other Chico-San Products: Organically grown brown rice. Lima soy sauce, miso (soybean puree), rice malt vinegar, sesame butter, sesame oil, nigari, barley koji, tekka, sesame salt, sea salt, salt plums, kuzu, organic rice cream, organic rice flour, black soybeans, azuki beans, sea vegetables, mu tea, lotus root tea, twig tea, toothpowder, seaweed shampoo.” Address: Ann Arbor, Michigan 48107. Phone: 313-769-8444 or in Area 313 1-800-552-6297.

5207. **Product Name:** Niblack Tamari Pumpkin Seeds (Pepitas), and Tamari Roasted Sunflower Seeds.

Manufacturer’s Name: Niblack Foods, Inc.

Manufacturer’s Address: 55 Flint St., Rochester, NY 14608.

Date of Introduction: 1975. November.

Wt/Vol., Packaging, Price: Jar.

How Stored: Shelf stable.

New Product—Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 66. Niblack. “Sunflsds w/Tamari” (10 oz). Note: This company makes mostly wheat germ.

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 72-73.

5208. Shurtleff, William; Aoyagi, Akiko. 1975. Tofu as a food. *Macrobiotic (The) (Chico, California)* No. 110. p. 14-24. Nov. [2 ref]

• **Summary:** Excerpted from the forthcoming Book of Tofu.

The magazine’s editor notes: Tofu is also good for external plasters, especially on a head injury or concussion, etc. However it is not advisable to use it on heart area injuries, as tofu is very yin, and could weaken the heart.

Tofu as food should be balanced with Tamari or Miso, or eaten with fish, burdock or any other yang food. This will balance its yin quality. Address: Lafayette, California.

5209. Tovar Galvez, Luis Raul. 1975. Productos derivados del frijol soya tecnologias tradicionales en el Lejano Oriente [Traditional technology soy products in the Far East]. In: American Soybean Assoc., ed. 1975. *Memorias: Primera Conferencia Latinoamericana Sobre la Proteina de Soya*. Mexico City. 232 p. See p. 185-93. [14 ref. Spa]

• **Summary:** Descriptions of and flow sheets for the production of the following basic soyfoods are given: Miso,

shoyu (*salsa de soya*), natto, tempeh, sufu (fermented tofu), and soy yogurt. A table shows the nutritional composition of each of these foods as well as yuba and kori-tôfu (dried-frozen tofu).

Note 1. This is the earliest Spanish-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempeh.”

Note 2. This is the earliest Spanish-language document seen (Feb. 2004) that uses the term “kori-tôfu” to refer to dried-frozen tofu. Address: Facultad de Quimica, UNAM, Mexico.

5210. Eden Foods. 1975. Wholesale pricelist. Winter 75-76. 4601 Platt Rd., Ann Arbor, MI 48104. 26 p. Dec. 15.

• **Summary:** On the cover is a man entering the gate of his snow-covered cabin in the moonlight. Tamari Soy Sauce is now sold under 2 labels (Erewhon, and Japan-Marushima). The three types of miso (all under the Erewhon brand) are still spelled Mugi, Hacho, and Kome. Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

5211. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• **Summary:** This pioneering work started the “tofu revolution” in America. Contents: Preface.

Acknowledgements. Part I. Tofu: Food for mankind. 1.

Protein East and West. 2. Tofu as a food: Introduction, rich in high quality protein (NPU, biological value, protein score, amino acid content), high protein complementarity (tofu contains an abundance of lysine, an essential amino acid that is deficient in many cereal grains; increase usable protein by combining tofu with wheat, rice, corn, etc.), easy to digest, an ideal diet food, low in saturated fats and free of cholesterol, rich in vitamins and minerals, a health-giving natural food, backbone of the meatless / vegetarian diet, free of chemical toxins, low in cost, easily made at home, quick & easy to use, versatile.

3. Getting started: Introduction, buying and storing tofu, basic ingredients (whole-wheat flour, miso {rice-, barley-, and soybean miso, special Japanese miso, Chinese chiang}, oil, brown rice, salt, shoyu {natural shoyu, shoyu, Chinese soy sauce, synthetic or chemical soy sauce}, sugar, vinegar, monosodium glutamate {MSG}), Japanese kitchen tools (each illustrated), preparatory techniques (salt rubbing, rinsing and pressing leeks and onions, soaking burdock root, reconstituting dried sea vegetables {dried hijiki, wakame, agar}, wheat gluten and kampo [kanpyo], parboiling, cutting tofu and vegetables, using sesame seeds, toasting nori, preparing a steamer), basic recipes (soup stocks and broths {dashi}, basic shoyu dipping sauces {tsuke-jiru}, miso toppings {sweet simmered miso / *nerimiso*, miso sauté / *abura miso*, special miso toppings and dipping sauces, finger

lickin' miso, and regular miso}, miso salad dressings, nut and seed butter toppings, spreads and dressings, basic sauces, rice, noodles and other basic preparations).

Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History of soybeans and "soybean foods," cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*, incl. a recipe for "Sweet emerald bean paste {*Jinda*}), "kinako (roasted full-fat soy flour, incl. Japanese health food treats such as *kinako amé*, *gokabo*, *kokusen*, *kankanbo*, and *abekawa mochi*), soybean sprouts (*daizu no moyashi*), natto ("sticky fermented whole soybeans," with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein {TVP}, soy oil products). 5. Gô (a thick white puree of well-soaked uncooked soybeans). 6. Okara or Uohana. 7. Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding, homemade tofu, tofu quick and easy {incl. Chilled tofu—*Hiya-yakko*}, tofu dressings, spreads, dips and hors d'oeuvre {incl. Creamy tofu dressings and dips, Tofu mayonnaise dressing, Tofu tartare sauce, Tofu cream cheese, Tofu sour cream, Tofu cottage cheese, Tofu guacamole}, tofu in salads {Western style and Japanese style salads incl. *Shira-ae*}, tofu with sandwiches and toast, tofu in soups {Western style and Japanese style soups, incl. miso soup}, tofu in sauces, tofu in breakfast egg dishes, tofu baked, tofu sautéed, stir-fried or topped with sauces {incl. *Mabo-dofu* [Ma Po doufu]}, deep-fried tofu, tofu with grains, tofu broiled {incl. Tofu *dengaku*}, tofu simmered in one-pot cookery and seasoned broths, tofu steamed, tofu desserts {incl. Tofu whipped cream or yogurt, Banana tofu milkshake, Tofu icing, Tofu ice cream, Tofu cheesecake, Tofu-peanut butter cookies}).

9. Deep-fried tofu: Thick agé or nama-agé (incl. *atsu-agé* meaning "thick deep-fried tofu," "three-cornered agé" {*sankaku-agé*} in Kyoto, agé cubes {*kaku-agé*}, "five-color agé" {*gomoku-agé*}), ganmo or ganmodoki (incl. *hiryozu* / *hirosu*, "Flying Dragon's Heads"), agé or aburagé (incl. *kiji*, "agé pouches," "crisp agé," *kanso aburagé*, "agé puffs," "fried soybean cakes," "hollow agé cubes," "Smoked tofu," p. 189-91, 197).

Note 1. This is the earliest English-language document seen (May 2012) that contains the following terms related to deep-fried tofu (p. 180-90): "Thick agé," *nama-agé*, *Hiryozu*, "Dragon," "Flying Dragon's Heads," "treasure balls,"

"Ganmo treasure balls." "fresh or raw deep-fried tofu," "three-cornered agé," *sankaku-agé*, "agé cubes," *kaku-agé*, *kiji*. "agé pouches," "crisp agé," *kanso aburagé*, "agé puffs," "fried soybean cakes," or "hollow agé cubes."

10. Soymilk. 11. Kinugoshi ("Kinu means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk." It is made from concentrated soymilk). 12. Grilled tofu (incl. *sukiyaki*). 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). One type of Korean soybean miso is called *kotsu jang* [sic, *kochu jang*]. When tofu is served with miso [Korean-style, *Tenjang*] as the dominant seasoning, and with rice, "it becomes the popular *Tenjang Chige Pekkem*" (p. 262). 16. Special tofu.

Note 2. This is the earliest (and only) English-language document seen (March 2009) that uses the word "Tenjang" to refer to Korean-style soybean jang (miso).

Part III—Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way.

Appendices: A. Tofu restaurants in Japan; many are vegetarian: In Tokyo: Sasa-no-yuki / Sasanoyuki, Goemon, Hisago, Sanko-in, Shinoda-zushi, Dengaku (south of Tokyo in Kamakura). In Kyoto: Nakamura-ro, Okutan, Takocho, Izusen, Junsei, Nishiki, Hakuun-an, Rengetsu, Sagano, Sorin-an. Tea ceremony cuisine (*Kaiseki ryori*), Zen temple cookery or Buddhist vegetarian cookery (*Shojin ryori*), Tea ceremony cookery from China (*Fucha ryori*), Wild gathered cookery (*Sansai ryori*). A directory of these and others, with addresses and phone numbers, is given (p. 312).

B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe, and 3-7 in Latin America {Mexico City, Rio de Janeiro and Sao Paulo, Brazil}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for “Mock tuna salad with deep fried tofu.”

Note 3. This is the earliest English-language document seen (March 2007) that uses the term “Tofu ice cream” to refer to soy ice cream or that contains a recipe for “Tofu ice cream.”

Note 4. This is the earliest English-language document seen (March 2000) that uses the term “Tofu Cheesecake” and the first to give a recipe for a tofu cheesecake.

Note 5. This is the earliest English-language document seen (May 2000) that uses the term “Tofu Sour Cream” (p. 109) or that contains a recipe for “Tofu Sour Cream.”

Note 6. This is the earliest English-language document seen (Dec. 2003) that uses the term “tofu milkshake” or that gives a recipe for a shake made with tofu.

Note 7. This is the earliest English-language document seen (Jan. 2012) that uses the term “sticky fermented” to refer to natto.

Note 8. This is the 2nd earliest English-language document seen (Nov. 2011) that uses the term “dried-frozen tofu.”

Note 9. This is the earliest English-language document seen (March 2004) that describes preparatory techniques for tofu (p. 96-98).

Note 10. This is the earliest English-language document seen (March 2004) that contains the term “smoked tofu.”

Note 11. This is also the earliest English-language document seen (March 2004) that uses the term “kinugoshi tofu” to refer to silken tofu.

Note 12. As of March 2007, the various English-language editions of this book have sold more than 616,000 copies.

Note 13. This is the earliest English-language document seen (June 2011) that uses the term “tofu lees” to refer to okara (see p. 22, 77).

Note 14. This is the earliest English-language document seen (Aug. 2011) that contains the term “Modern Western soybean foods” (see p. 69), a term that Shurtleff would soon (by 1983) replace by the more accurate “Modern soy protein products.”

Note 15. This is the earliest published English-language document seen (Jan. 2012) that contains the term “creamy tofu dressings” (or “dressing”). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

(fermented soybean cakes) (Document part). In: W. Shurtleff and A. Aoyagi. 1975. *The Book of Tofu*. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 68-69.

• **Summary:** “These cakes of cooked soybeans, bound together by a fragrant, white mycelium of *Rhizopus* mold, have a delectable flavor: fried or deep-fried, they taste remarkably like fried chicken or veal cutlets. Rich in protein (18.3% fresh or 48.7% dried), tempeh is also highly digestible, and *Rhizopus* serves as an effective deactivator of trypsin inhibitor (p. 70). Like other fermented soy products (miso, shoyu, natto) and sea vegetables, tempeh is one of only a few non-meat sources of vitamin B12.

“For centuries prepared daily on a cottage scale throughout Indonesia (where it is a basic food for millions of people and makes use of more than 50 percent of the country’s soybean crop), tempeh is also an important staple in New Guinea and Surinam, and is eaten on a small scale in Malaysia and Holland. Its adaptability to household industries and its low cost should make it, like tofu, a food of worldwide commercial interest during the coming decades.

“Tempeh can be prepared without difficulty in any Western kitchen using either whole soybeans, okara (p. 81), or cooked grains (wheat, rice, barley, or rye) fermented alone or mixed with soybeans. In Indonesia, ½ cup portions of partially cooked, inoculated soybeans are wrapped in banana leaves, tied, and fermented. For larger scale preparation, use (stainless steel) trays with 1/8-inch holes every 2 inches throughout the top and bottom, or similarly-perforated, sausage-shaped plastic bags 1½ inches in diameter. Be sure that all containers are well washed since even small amounts of oil or salt hinder mold growth.

“The starter is available from the U.S. Department of Agriculture, Northern Regional Research Lab., 1815 N. University Ave., Peoria, Illinois 61604. The Farm (p. 316) is now making up a brochure on tempeh preparation which will soon be available with the starter.

“To prepare new starter, carefully scrape darkened (sporulated) mycelium from the surface of freshly fermented cakes or from the wrapper or tray in which tempeh was fermented. Mix with 1 teaspoon (sterile) water and use in place of commercial starter.

“Homemade Tempeh: Makes 6 cakes.

“1 cup soybeans, washed and soaked for 18 hours in a mixture of 1 quart water and 1 teaspoon vinegar or lactic acid.

“½ teaspoon tempeh starter (*Rhizopus oligosporus* mold spores).

“Squeeze beans firmly and repeatedly with one hand in soaking water to remove all seed coats, then carefully pour off water and coats. Refill soaking container with water and repeat until all coats are removed. Combine drained beans and 4 cups water in a pot, bring to a boil, and simmer for 60 minutes. Drain beans, rinse 4 to 5 times under water, then drain well. Allow to cool to body temperature, then mix in

starter. Divide inoculated beans into 6 equal portions, placing each at the center of a 7 by 9 inch piece of aluminum foil.

“Fold over sides, then ends of foil, sealing tightly, to form a 4- by 3- by ½-inch thick ‘package.’ Place packages in a warm clean place or incubator and allow to stand for 24 hours at 88° (or as long as 30 hours at 78°), or until beans are bound together into a cake by a fragrant white mycelium. For best flavor, serve these fresh tempeh cakes as soon as possible, cooked in any of the following ways:

“Deep-fried or Fried: Deep-fry cakes (or pan-fry on both sides) until crisp and golden brown. Serve topped with shoyu, ketchup, Worcestershire, or any of the following Basic Sauces (pp. 48 to 49): Onion, Mushroom, Sweet & Sour, Ketchup-Worcestershire, or Tomato & Cheese. Also delicious in sandwiches and soups.

“Tempeh Goreng (Savory Cutlets): Score both surfaces of 3 fresh tempeh cakes to a depth of 1/8 inch. Combine 3 tablespoons water, ½ teaspoon salt, ½ clove of crushed garlic, and ¼ teaspoon coriander. Add tempeh, marinate for 5 minutes, and drain well. Deep-fry in (coconut) oil (p. 130). Serve as an accompaniment for rice dishes, topped with red-pepper sauce (*sambal*) if desired.

“Tempeh Kemul (Crisp Chips): Cut 3 tempeh cakes horizontally into paper-thin slices; sun-dry for 5 minutes if desired. Combine 6 tablespoons (rice) flour, 1 clove of crushed garlic, ½ teaspoon salt, and ¼ teaspoon coriander. Mix in enough (coconut) milk to form a fairly thin batter, then add tempeh slices and allow to stand briefly. Deep-fry until crisp, and serve like potato chips. For variety use a well-salted tempura batter.

“Tempeh Bacham [Bachem] (Rich Fillets): Combine in a skillet ¼ grated onion, ½ teaspoon salt, 3 to 4 tablespoons brown sugar, and 1½ cups water. Add 3 tempeh cakes (cut crosswise into fourths), bring to a boil, and simmer until all liquid has evaporated. Deep-fry cakes and serve as for Tempeh Goreng.

“Tempeh Kering (Fiery Sauté): Cut 3 tempeh cakes into paper-thin ½-inch squares; sun-dry for 1 to 2 hours if desired. Deep-fry and drain well. Sauté ½ clove of crushed garlic and ½ minced onion in 3 tablespoons oil for 5 minutes. Add 2 tablespoons each brown sugar and water, 1 to 2 minced red peppers, ½ teaspoon salt, and spices (*salam*, *laos*, *asam*) to taste; sauté for 2 minutes more. Add tempeh slices and sauté for 4 more minutes. Scoop out tempeh with a slotted spoon or spatula, drain briefly over wok or skillet, and serve as a topping for cooked rice.

“In Soups: Add diced fresh tempeh to soups and simmer for 30 minutes. Season with salt, miso, or shoyu.

“Baked or Roasted: Bake at 350° for about 20 minutes, or until nicely browned and fragrant. If desired, use as the basis for a pizza-type preparation, or serve topped with any of the sauces mentioned above.”

Illustrations show: (1) Small round and square cakes of tempeh. (2) How to fold inoculated, cooked soybeans a small

packet when making Indonesian-style homemade tempeh.

Note 1. This is the earliest published document seen (Oct. 2011) that describes how to make tempeh at home. The process was learned from an Indonesian couple, Mr. and Mrs. Mustam, in Tokyo, Japan, in March 1975.

Note 2. On 1 Sept. 1975 Shurtleff (in Tokyo) sent a copy of the section on “Tempeh” (typeset galley proofs) from this book to Cynthia Bates at The Farm (Summertown, Tennessee) and requested her comments. Address: Lafayette, California.

5213. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind (Illustrations—line drawings). Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• **Summary:** Continued: Illustrations (line drawings, both numbered and unnumbered) show: A hearth in a traditional Japanese farmhouse with tofu dengaku roasting around a bed of coals in a sunken open-hearth fireplace. An old Japanese plum tree blossoming in winter. Three pieces of skewered tofu dengaku with a sansho leaf atop each in a special serving box. A sprig of sansho with berries. Stylized top of a soybean plant in a circle. Fig. (4) Tofu products available in the West (tofu, dofu, kinugoshi, thick agé triangles, cubes, and cake, agé and agé puffs, hollow agé cubes, soymilk, tofu pudding, doufu-ru {white and red}, ganmo {patties, small balls, and treasure balls}, grilled tofu, dried-frozen tofu, instant powdered tofu, okara, dried yuba, soymilk curds, pressed tofu, savory tofu). A wooden cutting board and Japanese broad-bladed vegetable knife (*nagiri-bôcho*) with vegetables and tofu on a woven bamboo tray.

Note: This is the earliest English-language document seen (May 2012) that contains the term “treasure balls.” It refers to Chinese-style tofu mixed with various finely-chopped vegetables, rolled into balls, and deep-fried tofu. (8) A wooden keg of red miso and a plastic bag of barley miso. (9) Shoyu in a metal can, wooden keg, glass bottle, and table-top dispenser. Traditional Japanese kitchen tools: *Miso-koshi* (woven bamboo strainer used in making miso soup). cutting board, Japanese vegetable knife, wooden spatula, bamboo rice paddle (*shamoji*) and spoon, woven bamboo colander or tray (*zaru*), suribachi, Japanese grater (*oroshi-gané*), sudaré (bamboo mat), pressing sack for tofu or soymilk, serrated tofu-slicing knife, tawashi scrub-brush (made of natural palm fiber), wok with draining rack and wooden lid, stir-frying ladle and spatula, long cooking-chopsticks, mesh skimmer, deep-frying thermometer, Chinese bamboo steamer (*seiro*), charcoal brazier (*konro*, *shichirin*), broiling screen. Covered pot steamer. Small lidded pottery pot. More kitchen tools (p. 50-51). (10) A soybean measuring box (*isshô-bako*). (11) The soybean plant. Two views of a soybean seed with seed coat, hilum, and hypocotyl labeled. A bag full of soybeans. Roasted soybeans in a woven bamboo tray (*zaru*). Edamamé

in the pods. Three shapes of kinako treats. Soybean sprouts. Natto on a bamboo mat (*sudare*). Natto wrapped in rice straw as it ferments. A hand holding chopsticks that lift natto up from a bowl of natto—connected by gossamer threads. Tempeh (round and square pieces). Wrapping a small packet of inoculated soybeans to make tempeh. (15) Two Japanese women in traditional clothing using hand-turned grinding stones (*quern*) to grind soaked soybeans when making tofu. (16) Push-pull grinding stones. (17) Motor-driven grinding stones. (18) Water-powered millstones. (19) Wind-powered millstones. (20) Unohana. (21) A tofu maker sitting on a traditional lever press that presses soymilk from the okara in a pressing sack on a rack. A heavy iron skillet. (22) Folding okara omelet pouches. Okara doughnuts. (23) A bamboo colander. (24) A tofu maker weighting a colander with a brick so that whey will collect in it. (25) Ladling whey from curds; it foams! (27) A horse drinking whey from a wooden vat. Soymilk curds in a bamboo mat. (28) Ladling curds for Awayuki. (29) Fresh tofu in a plastic tub. (30) A tofu maker placing a weight on pressing lids as tofu is pressed in settling boxes (forming boxes). Transferring tofu-filled settling box to sink. Cutting a block of tofu into cakes under water. Eggplant halves in a yin-yang dance. Preparatory techniques used with tofu (slanting press, sliced tofu, squeezing, scrambling, reshaping, crumbling). (32) Utensils for making tofu at home. (33) Three designs for a homemade settling container. (34) Preparing homemade tofu (a-l). (35) Removing tofu from a farmhouse-style settling container (forming box). (36) Chilled tofu. Iceberg chilled tofu. A hot, moist, white towlette (*o-shibori*) is used to wipe the face and hands before (or occasionally after) a meal. Tofu salads in three Japanese pottery dishes. Japanese soups in three types of containers. (37) Chrysanthemum tofu. (38) Tofu poached egg. Tofu-stuffed green peppers. A wok. (39) Filling a wok with oil. (40) testing oil temperature in a wok. (41) Deep-frying tofu tempura—and (42) Serving it in a shallow bamboo basket. (43) Making *Kaki-agé*. (44) Dengaku Hoshi (from *Tofu Hyaku Chin*). (45) Skewered Tofu dengaku. Preparing Tofu dengaku in old Japan (from Hokusai's sketchbooks). (46) A variety of skewers. (47) Chinese firepots. (48) A Simmering Tofu wooden serving container heated by coals from within. (49) Miso oden. (50) Tofu wrapped in rice straw. (51) Nanzenji wrapped tofu. (52) Gisei-dofu. (53) Serving freshly deep-fried agé. (54) The deep-frying area of a traditional tofu shop. (55) Deep-frying tools. (56) Wooden bamboo tray with raised sides. Chinese cleaver. (57) Nori-wrapped sushi with agé (making and serving; six drawings). Eating noodles from old Japan (from Hokusai's sketchbook). (58) Preparing homemade noodles. (59) The Oden man on a winter's eve. A pottery bowl of Oden. Kombu rolls. (60) Making konnyaku twists. (61) Nishime in a multi-layered lacquerware box. (61) Pressing tofu for thick agé in a tofu shop. (62) Deep-frying tofu for thick agé. (63) A tofu maker with deep-fried thick agé

triangles on screen trays.

Note 1. This is the earliest English-language document seen (May 2012) that contains the terms “deep-fried thick agé triangles” (p. 181) or “hollow agé cubes” (p. 23).

(64) Stuffing thick agé. (65) Thick agé stuffed with onions. (66) Pressing tofu for ganmo. (67) Adding seeds and vegetables. (68) Deep-frying ganmo. (69) A farmhouse open-hearth fireplace with nabe kettle. (70) Preparing homemade ganmo. Ganmo balls in a draining tray. Ganmo cheeseburger. (71) Cutting tofu to make agé slices (*kiji*). (72) Deep frying agé. (73) Opening agé into pouches. Agé treasure pouches.

Note: This is the earliest English-language document seen (May 2012) that contains the term “treasure pouches” or the term “Agé treasure pouches.” (74) Agé pouches sealed with foodpicks. Inari shrine with Shinto torii. (75) Kampyo-tied pouches [*kanpyo*]. (76) Making rolled agé hors d'oeuvre. (77) Tofu maker ladling gô (fresh soy puree) into a cauldron. (78) Stirring down the gô. Pressing soymilk from okara with a hand-turned screw press. (79) Serving fresh soymilk in a tofu shop. Six Japanese commercial soymilk products. Little girl at The Farm (Summertown, Tennessee) seated on a small chair drinking a cup of soymilk. Chinese breakfast soymilk soup with deep-fried crullers (*Siento-chiang with yu-chiao tsao pi*). (80) Takigawa-dofu. (81) Tofu maker pouring the soymilk for kinugoshi tofu. (82) Adding solidifier. (83) Trimming kinugoshi from sides of box. (84) Modern lactone kinugoshi (with GDL). (85) Modern kinugoshi factory. (86) Sasa-no-Yuki's Gisei-dofu container. (87) Kinugoshi with ankake sauce. The entrance way to a traditional Japanese restaurant featuring tofu. Traditional metal skewer for making grilled tofu. (88) Traditional tofu maker grilling tofu over a charcoal brazier (*hibachi*). Grilling tofu in a traditional open hearth. (89) An early method of elaborate grilling. Pieces of tofu on different types of skewers. Farmhouse sukiyaki with grilled tofu. (90) Tying frozen tofu with rice straw. (91) Drying farmhouse frozen tofu. (92) Pressing frozen tofu at home. (93) Deep-fried frozen tofu with cheese. (94) Making deep-fried frozen tofu sandwiches (*Hakata-agé*). (95) Frozen tofu wrapped in kombu. (96) Steaming table in a yuba shop. Ten different types / shapes of yuba. (97) Lifting yuba away from soymilk. (98) Yuba sashimi. (99) Yuba envelopes. (100) Deep-fried yuba dengaku. (101) Folding yuba into bundles. Trimming half-dried yuba from a skewer. (102-113) Tofu and yuba in Taiwan, China, and Korea (see separate record). Sesame tofu in pottery bowl. (114) Traditional farmhouse tofu, tied into a package with rice straw rope. (115) Shirakawa-go farmhouses with water-powered rice-dehusker in foreground. (116) Making seawater tofu at Suwanose. Mortar and pestle for pounding mochi. Making community tofu: Western metal hand mill, hand-turned stone mill apparatus, faces of upper and lower stones, colander and cloth, two shapes of cooking pots, Japanese farmhouse earthen cooking stove, cooking pot set on cut-off oil drum, ladle, two wooden

paddles, pressing rack, pressing okara, lever press, pressing sack, wooden settling [forming] container with cloths. (117) Making nigari with salt in bamboo colander, a traditional "salt boat" for refining salt of nigari. (119) Country farmhouse tofu (5 illust.). (121) Morning shopping at a tofu shop. (122) Diagram of a tofu-shop floor plan. (123) Modern pressure with hydraulic press. (124) Modern centrifuge with 3 soymilk barrels. Thirty-one unnumbered illustrations showing every step in making and selling tofu in a traditional Japanese shop (p. 299-306). (125) Cutting tofu for Dengaku (from *Tofu Hyaku Chin*). (126) Ladies busy making dengaku (from *Tofu Hyaku Chin*). (127) Hearth at Nakamura-ro. (128) The garden at Okutan. Six types of Japanese sea vegetables: Hijiki, aonori, wakame, agar, nori, kombu. (129) Japanese vegetables (27 illustrations). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

5214. Shurtleff, William; Aoyagi, Akiko. 1975. Sukiyaki (Document part). In: W. Shurtleff and A. Aoyagi. 1975. *The Book of Tofu*. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 224-25.

• **Summary:** "A Japanese cookbook written over 350 years ago contains the following recipe for Sukiyaki: 'Obtain either wild goose, wild duck, or antelope, and soak the meat in *tamari* shoyu. Heat a well-used Chinese plow (*kara-suki*) over an open fire. Place the meat on the plow, garnish with thin rounds of *yuzu*, and broil on both sides until the color changes. Serve and be happy.'

"The word *sukiyaki*—pronounced *skee-ya-kee*—means 'broiled on the blade of a plow.' Although the modern preparation generally features beef as the basic ingredient, *sukiyaki* was traditionally prepared with wild game, fowl, fish, or shellfish. Wild boar was also a favored ingredient, and seafoods such as tuna, yellowtail, whale, wreath shells, and scallops were and, in areas such as Kyoto, still are widely used in the dish.

"Before reaching its present form, *sukiyaki* passed through a number of unusual historical transformations. The earliest preparation was undoubtedly developed by farmers, hunters, and fishermen who broiled their catch over an open fire using a plow or whatever other utensil was available. Since the earliest plow, the predecessor of the present *nabe*, was nothing but a flat iron plate, it was unable to hold cooking liquids. It was probably for this reason that the meat came to be marinated or basted with *tamari* shoyu, a technique that is still practiced in some Japanese restaurants. Gradually, sake or *mirin* came to be used in the marinade, various vegetables and grilled tofu were broiled with the meat, and the traditional flat plow or griddle became inadequate to hold the juices of this cornucopia of new ingredients. A new container was needed, and at this point, the ancient tradition of broiling wild meat on a plow merged with the newly-imported tradition of *shippoku*, a

type of beef-*nabe* cookery which originated about 300 years ago, just after the first contact with Western traders and missionaries.

"Developed in the international port town of Nagasaki, *shippoku* was said to have its historical culinary roots in Holland, Portugal, China, and Korea. As a result of the merger, the original *sukiyaki* ingredients eventually came to be cooked in heavy iron or Korean-style stone pots, and the dish was served as a one-pot meal prepared at the table. Consequently 'sukiyaki' became a misnomer, for the new dish was neither broiled nor prepared on a griddle-like plow. But neither was the new *sukiyaki* a true *nabe* dish, since its ingredients were not simmered in a seasoned broth. Rather, this unique Japanese creation straddled three categories: it was a broiled dish insofar as the meat was first cooked in a sizzling-hot pan; it was a *nabe* dish since it was a one-pot prepared at the dining table; and it was a *nimono*, or simmered dish, insofar as the meat and vegetables were simmered together in a rich mixture of shoyu, sake, and dashi.

"Up until this time, the Japanese had never apparently considered using beef or other livestock in *sukiyaki*. According to a popular legend, *kamado-gami*, the god of the kitchen hearth, is said to have instructed the Japanese people in ancient times to refrain eating the meat of all four-legged animals, especially of livestock. This admonition was reinforced by the nation's emperors and the vegetarian teachings of Buddhism, so that for about 1200 years—from the 8th century until the 19th century—most Japanese did not eat meat. However with the arrival of Christianity in the 16th century, the eating of beef was also forbidden, and *sukiyaki* was once again prepared exclusively with seafood, wild game, or poultry. Those who developed a longing for broiled meat, but who were not allowed to prepare it in the family's common pot or in the presence of those who kept the faith, were compelled as a last resort to prepare their *sukiyaki* the traditional way, substitution using a plow or mattock for the kettle and enjoying the forbidden delicacy alone and in secret in the barn, field, or forest. This tradition of 'underground *sukiyaki*' is said to have continued until about 1900.

"With the opening of Japan to the West in the mid 19th century and the relaxation of traditional prohibitions, meat eating gradually became fashionable in the cities. Yet most Japanese tasted their first beef with considerable trepidation, having been warned by priests and traditionalists that their action was an affront to their ancestors and that dire consequences would befall them. Little by little, however, beef *sukiyaki* came to be accepted.

"The first Japanese who worked up the courage to actually eat beef did not prepare it Western-style as steak or roast beef. Rather, they cut the meat into paper-thin slices, employing the same method they had used for centuries to prepare *sashimi*, or raw fish. And they seasoned this meat with shoyu in much the same way they would season

simmered vegetable or tofu dishes. Many Japanese probably ate their first beef in the form of sukiyaki, and different parts of the country soon developed unique styles of serving it. To this day in the Kyoto area, restaurants place dispensers of shoyu, *mirin*, and sugar on the table and allow each guest to season his food to taste, whereas restaurants in Tokyo have developed their own unique mixtures of these ingredients to form standard cooking liquids.

“Throughout the world people now associate sukiyaki with fine Japanese cookery. In a sense, this is ironic because Japanese cuisine makes relatively little use of meat, and much of sukiyaki’s historical influence came from abroad. The ancient delicacy of Japanese hunters and the imported *nabe* preparation have now been totally transformed to become Japan’s most famous international dish. And although tofu plays a relatively inconspicuous role in creating the flavor of this dish, sukiyaki has nevertheless been the vehicle whereby thousands of Westerners have had their first taste of ‘soybean curd.’

“Although most present-day sukiyaki uses beef as the featured ingredient, our recipe uses ganmodoki—mock goose—in deference to the earliest traditions of using wild fowl. Homemade frozen tofu and frozen thick-agé, the textures of which resemble that of tender beef, make excellent substitutes. Although regular tofu is occasionally used in sukiyaki, grilled tofu is generally preferred for its ability to absorb the flavors in the rich broth; its substantial, almost meaty texture; its ability to keep its form during the frequent stirring; and its barbeque flavor. In Japan, more grilled tofu is used in sukiyaki than in any other type of cuisine.” A recipe follows. Address: Lafayette, California.

5221. **Product Name:** Instant Japanese Teriyaki Sauce.

Manufacturer’s Name: Noh & Co., Inc.

Manufacturer’s Address: 2025 South Beretania, Honolulu, Hawaii 96814.

Date of Introduction: 1975.

New Product–Documentation: Hawaii Directory of Manufacturers. 1973. p. 11.

5222. Staron, T. 1975. Obtention des protéines à partir des graines oléagineuses par des méthodes microbiologiques [Obtaining protein from oilseeds using microbiological methods]. *Revue Francaise des Corps Gras (Paris)* 22(11-12):579-89. [40 ref. Fre]*

• **Summary:** Discusses some important East Asian fermented foods, including miso, shoyu, and tempeh. Note: This is the earliest record on soyfoods in the IALINE database from CDIUPA. Address: INRA, Stat. Antibiotiques Bioconversions, Chartres, France.

5223. **Product Name:** [Manna Tamari (Soy Sauce)].

Foreign Name: Manna Tamari (Sojasaus).

Manufacturer’s Name: Stichting Natuurvoeding Amsterdam. Renamed Manna Natuurvoeding B.V. in 1982 (Repacker, Marketer, Distributor). Imported from Muso in Japan.

Manufacturer’s Address: Rozenstraat, Amsterdam, Netherlands.

Date of Introduction: 1975.

Wt/Vol., Packaging, Price: 500 ml bottle retails for 7.70 guilders, 1 liter bottle for 14.45 guilders (11/83).

How Stored: Shelf stable.

New Product–Documentation: Richard Leviton. 1983. Trip to Europe with American Soybean Assoc. Oct/Nov. Unpublished manuscript. p. 25. Letters from Sjon Welters. 1989. July 24 and Aug. 10. This product, which was actually shoyu rather than tamari, has been imported from Muso in Japan since 1975. It is presently being made by Marushima Shoyu Co. In about 1980 Manna started importing Manna Organic Shoyu, and in 1989 they plan to start importing Manna Organic Tamari, which will be real tamari.

Note: This is the earliest record seen (Feb. 2003) concerning Manna in Amsterdam.

5224. **Product Name:** Protose (Meatlike Product Made of Wheat Gluten with Soy Flour).

Manufacturer's Name: Worthington Foods.

Manufacturer's Address: Worthington, Ohio.

Date of Introduction: 1975.

New Product–Documentation: This product, introduced in 1900 by the Sanitas Nut Food Co. of Battle Creek, Michigan, was originally based on peanuts. Worthington Foods acquired this company, which had been renamed Battle Creek Foods, in 1960. By 1975 (as shown below), wheat gluten was the main ingredient, and soy flour had been added to formulation.

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 4th ed. p. 176. The ingredients in "Protose (Battle Creek)" are "wheat protein [wheat gluten], peanuts, wheat and soy flour, corn oil, yeast extract, soy sauce, salt, HVP, niacinamide, thiamin, iron, vitamin B-6, riboflavin, vitamin B-12."

• **Summary:** A vegetarian cookbook containing the favorite recipes of celebrities. Page 97 gives a recipe for Vegetable Soup with Protein (organically grown; soybeans are an optional ingredient), a favorite of Gerry and Dennis Weaver. Dennis is a TV star and his wife, Gerry, runs a health food store (The Good Life) in Encino, California.

Page 127 gives a recipe for Soybean Casserole, a favorite of Rodney Dangerfield, a comedian. In the "Food

Dictionary" page 274 states: "Soy sauce. Known also as tamari, this condiment is made from soybeans."

5228. Bragg, Paul; Bragg, Patricia. 1975. Hi-protein meatless health recipes: With history and reasons. Desert Hot Springs, California: Health Science. 184 p. Illust. No index. 21 cm.

• **Summary:** A vegetarian cookbook. Whereas Paul Bragg used to advocate moderate amounts of meat and fish in the diet, he now advocates a meatless / vegetarian diet. These recipes are free of salt and sugar. On the cover the word "Meatless" appears in large bold letters.

Contents: Total health for the total person. Food for thought (sayings). Introduction, by Patricia Bragg (p. 1-9. Strongly advocates a vegetarian diet. Your health food store can substitute for your meat market. Cured meats may cause cancer. Animal fats can be harmful. Vegetarian gourmet cookery). Abundant protein without meat: An arduous journey without meat (Guatemala), health and vitality in Africa's Atlas Mountains [Berbers in Morocco, Algeria, and Tunisia], Arab vegetarians in the Sahara desert, India produces many strong people on a vegetarian diet (incl. Gandhi, yogis. Paul was Gandhi's friend, and they hiked together over miles of hot, dusty roads in India), 175 years of vegetarianism in England (George Bernard Shaw, Bragg's personal friend, lived into his 90s), great vegetarians of the past, fruitarians—a type of vegetarianism, vegans—another type of vegetarian, lacto-vegetarians—the most popular type, vegetarians excel as athletes, degenerative diseases in an affluent society, animal proteins and fats connected with cancer, our malnourished youth, young people are awakening to the importance of good nutrition, a meatless diet must avoid protein deficiency, human individuality, 300,000 retardants born each year in the U.S., how to solve your nutritional problems, how much protein does the body need, protein-hungry hair, sprouts a tremendous source of vegetable protein (incl. soybean sprouts), you must have all the amino acids, vegetarian foods that are rich in amino acids (incl. peanuts, soy beans), B-12 supplement essential in vegetarian diet (soy beans have traces), raw fresh wheat germ also essential in a vegetarian diet, how I discovered the nutritional value of raw wheat germ, combine good nutrition with exercise, brewer's yeast as a vegetable protein—plus, buckwheat leads all grains in protein, buckwheat also rich in minerals and vitamins, here's how to serve buckwheat, use no salt!—its harmful, herbs and garlic add nutrition plus beautiful flavors, the Chinese Restaurant Syndrome, no nutritional value in MSG, Bragg Liquid Aminos (ad, p. 44; many of the recipes in this book call for Bragg Aminos).

Mushrooms an ancient nutritional delicacy. Mushrooms and mushroom recipes. Sesame seeds and recipes. Tahini and recipes. Hulled millet and recipes. Barley and recipe. Chinese yogurt or tofu (and 4 recipes). Suggestions for using Bragg Liquid Aminos (ad, p. 66).

Note: This is the earliest document seen (Aug. 2011)

that contains the term “Bragg Liquid Aminos.” Mexico gives us delicious meatless protein dishes. History of corn. Soybeans. Appetizers. Salads and dressings. Soups important in vegetarian diet. Vegetables. Casseroles. Entrees (incl. Soybean loaf). Egg and cheese dishes. Health beverages. Pineapple holds the secret of protein-digesting enzymes (smoothie recipes). Breads and grains. Sandwiches and fillings. Spreads. Health desserts (incl. Zesty protein confection {with 2/3 cup soy powder [protein isolate]}). Hi-protein carob brownies (with ½ cup soybean powder).

The Bragg travel diet (he takes along his own meatless food). Sickness is expensive (between 1950 and 1979, medical costs in the USA increased 1,568%). Very little money spent on preventive medicine. “Getting old”—True or false? (False, no part of the human body is more than 7 years old, and our blood is replaced every 90 days). When you are healthy—you are happy! Individuals can extend their lives by natural living (examples of Vilcabamba in Ecuador, the Hunza in West Pakistan, and people in the highlands of the Soviet Caucasus; all eat very little meat). Natural diet and exercise the secret of agelessness. Exercise improves circulation to all parts of the body. Why should man die? Man is not originally carnivorous (physiology and anatomy of the human body). The meatless way of eating is simple. What is a balanced diet? Easy method to balance your nutrition. Modern nutrition confuses even so-called experts (but is basically simple. Paul was “born and reared on a large farm in Virginia.” They grew practically all their own foods and had their own gristmill). Health is easiest and safest way. Your body is your closest companion (Be careful about what you eat. The greatest thing in life is energy). Our personal message to you. Protein research data. Protein and calorie counter (a table showing calories, protein, and usable protein for many basic foods). Life’s greatest treasure is radiant health. Your health food store: The specialist that is different (list incl. 3 Bragg products). Let your health food store be your meatless butcher shop. Food for thought (p. 182-84; quotations, most have the author given). From the authors (“This book was written for You... We Professional Nutritionists join hands in one common objective... Scientific Nutrition points the way—Nature’s Way—the only lasting way to build a body free of degenerative diseases and premature aging...”). My favorite recipes (mostly blank page).

Advertisements: (1) Send for important free health bulletins. (2) Bragg live longer, live stronger self-improvement library (list of 25 books by Bragg, with prices).

From the authors. Brief biography of Patricia Bragg (on unnumbered page at end of book), Ph.D., Nutritionist, beauty and health consultant. Advisor to world leaders, glamorous Hollywood stars, singers, dancers, athletes. Lecturer and author (She says she is the daughter of Paul C. Bragg. An accomplished musician, dancer, tennis player, swimmer, and mountain climber. The youngest woman to ever have been granted a U.S. patent. Graduate of the University of

California. Lists her famous clients).

The section on “Chinese yogurt or tofu” (p. 61-65) notes that many years ago, while Bragg was an associate editor of Bernarr MacFadden’s famous *Physical Culture Magazine*, he “made one of the greatest nutritional discoveries” of his life. Macfadden asked Bragg to travel to Manchuria, a long and arduous trip, to study these people well known for their tremendous vitality, energy and health. He was well rewarded, for there he “discovered the magic of the soybean, the most potent of vegetable high-protein foods.” He found that Manchurians eat low on the food chain, make soy milk and tofu. Tofu is sold in food stores throughout Hawaii, where he lives. Tofu is related to spun soy protein. He gives recipes for: Chop suey with tofu. Vegetable casseroles using tofu. Tofu casserole supreme. Tofu & scrambled eggs.

The section titled “Soybeans” (p. 73-81) has the following contents: Herbs to savor soybeans (21 herbs). Soybeans (introduction). How to make soybean sprouts. Soybean recipes. Green soybeans. How to cook dried soybeans. Method for cooking beans. Soy milk. Soybean cheese (made by allowing soy milk to curdle in a warm place, without using a coagulant). Soybean casserole. Soybean and vegetable stew. Sautéed soybean sprouts and onions. Boston baked soybeans. Stuffed peppers with soybeans. Soybean sprouts en casserole. Soybean-rice loaf. Baked soybean croquettes. Soybean patties with tomato sauce. Soybean loaf (with soybean pulp [cooked, ground soybeans]). Stuffed soybean peppers.

The dietetic and therapeutic value of soya: Soya—the vegetable meat, soy proteins, soy oil, soy carbohydrates, digestibility, therapeutic uses, summary of properties and indications, soya in the macrobiotic diet. Appendix: A revolutionary food: The bread of Soyuya (3,600 calories, in existence by June 1974).

"In 1917 soybeans started to be cultivated in Spain thanks to the efforts of an architect from Tortosa, don Juan Abril Guanyabens, who was sick with diabetes. His physician, Dr. Maneget, director of the resort Caldes de Malavella (Gerona) had recommended this new food to counteract his diabetes. The magazine *Consejos para Vivir* (Advice for Living) stated in its issue no. 106 of March 1971 that the above-mentioned doctor, in 1918, published an article on the spectacular results of this plant and its healthy nutritional effects in the Barcelona periodical *La Veu de Catalunya*."

"In about the 1930s a Spanish farmer grew soybeans and found himself with big difficulties in selling the harvest, even though in other countries it was produced and consumed in huge quantities, due to its high nutritional value, its richness of protein, and its ability to enrich the soil with nitrogen. Nonetheless, there is no doubt that the cultivation of this plant can also provide Spain with substantial economic benefits.

"For this reason in 1934 the Ministry of Agriculture, as indicated by the engineer from Montes, don Joaquín Martín Laplaza, in an interesting work, gave 4 kg of seeds to the Division of Hydrology and Forests (*División Hidrológica Forestal*) to that the latter would conduct the appropriate tests concerning the cultivation of this plant. This was done, and care was taken to vary the locality, type of soil and terrain, climate, and irrigation.

"The locations chosen were: (1) a nursery in the

mountains of Prades, between the city of Montblanch and the town of Rojals (province of Tarragona); (2) the city of Seo de Urgell, and (3) in la sierra del Cadí. These test plots were set on the outermost edges of the agricultural pastures and near the forest areas of high altitude, the very areas most likely to be unfavorable for growing soybeans." But despite this, the soybean plants gave good yields of both seeds and forage (p. 6-8). Address: Spain.

5230. Circle, S.J.; Smith, A.K. 1975. Soybeans: processing and products. In: N.W. Pirie, ed. 1975. Food Protein Sources. Cambridge, London, New York, Melbourne: Cambridge University Press. xx + 260 p. See p. 47-64. [88 ref]

• **Summary:** Contents: Introduction. Agronomy: Varieties, cultivation, yields. Soybean composition. Protein nutritional value. Traditional processing into nonfermented foods: Soybeans as a table vegetable (green soybeans), soy milk, tofu (soybean curd), yuba, kinako, salted soybeans, soybean sprouts. Traditional processing into fermented foods: Miso and shoyu, tempeh. Others include: natto, hamanatto, sufu (soy cheese), tao-tjo, kochu chang, ketjap, ontjom, and yogurt-like products.

Contemporary processing without defatting: 'Debittering' by aqueous treatment, whole bean processing, full-fat flour, soy milk and curd. Contemporary defatting processes: Defatting by aqueous processing, defatting with organic solvents, composite flour, soy flours, protein concentrates, protein isolates and textured soy products (recipes for using soy protein products in foods are available from several publications). Address: Anderson Clayton Foods, W.L. Clayton Research Center, 3333 Central Expressway, Richardson, Texas 75080.

5231. Crocker (H.S.) Co., Inc. 1975. Barbecue basics. 4th ed. San Bruno, California. 16 p. Index of recipes. 18 cm.

• **Summary:** The recipes in this booklet promote the products of various companies, including Kikkoman International Inc. (San Francisco, California 94115; soy sauce), Miller Brewing Co. (Milwaukee, Wisconsin; beer), McCormick and Co. (spices), Zee towels, etc. On the color cover are bottles of Kikkoman teriyaki sauce and all-purpose soy sauce. Address: San Bruno, California.

5232. Deer. 1975. The cookbook for people really who love animals. God's Religion, Route 2, Box 98E, Brooksville, FL 33512. 31 p. Illust. No index. 18 x 22 cm.

• **Summary:** This typewritten vegan cookbook with no price on it, copyrighted in 1975 by Burton Waldbaum, expresses the group's world view. The cover title is hand written below an illustration (line drawing) of a girl kneeling down with a cow, lamb, pig, and chicken. The book contains a good collection of 62 vegan recipes, which are straightforward, appetizing, and nutritious. Contents: Introduction, by Sun. Thank you page, by Deer. Breakfasts (12 recipes). Main

dishes: Sauté (5), Vegetable and grains (10), Potatoes (3), Variety dishes (4). Sauces (6). Soups (6). Salads (4). Dressings (3). Healthful treats (8). Glossary. Abbreviations. Memo section. Essential items for cooking.

This spiritual vegan community, founded by Burton Waldbaum (who is also called “Light”), was later renamed “World of God,” and after that “Gentle World.”

Soy-related recipes include: Granola (uses soy granules, optional, p. 5.). Bran muffins (with soy milk [1 cup water and 7 tablespoons soy flour], p. 7). Oatmeal chewies (with soy powder, p. 7). Banana bread (with soy powder, p. 7). Soy burgers (with soy beans and tamari, p. 10). Chick pea loaf (with soy powder, p. 11). Tahini tamari sauce (p. 19). Tomato soup (with soy powder, p. 21). Carob ice cream (with soy powder, p. 25). Vanilla ice cream (with soy powder, p. 25). Quick buckwheat pancakes (with soy or nut milk, and soy powder, p. 25). Carob cookies (with soy powder, p. 27). Carob cake (with soy or nut milk, and soy powder, p. 27). Frosting for carob cake (with soy powder, p. 28). Soy butter (Mix ¼ cup water, ½ cup soy powder or soy flour, ¼ cup oil, 1 tablespoon of sweetener, 1 tablespoon herba-mare [seasoning salt mixture]. Delicious with muffins, bread, or crackers). The glossary lists two soy products: “Soy powder—made from soy beans. Used instead of milk or eggs. As an egg substitute: 1 egg equals 1 tablespoon soy powder and 1½ tablespoons water. As a milk substitute: 4 tablespoons soy powder to 1 cup water. Blend.

“Tamari—made from aged soybeans, A pure soy sauce. A definite must in all vegetarian kitchens. Used in almost everything that you will be cooking.” Indeed, tamari is used to season more than half the recipes in this book; most are not specifically mentioned above. Address: Brooksville, Florida.

5233. Gin, Margaret; Castle, Alfred E. 1975. *Regional cooking of China*. San Francisco, California: 101 Productions. 192 p. Illust. Index. 21 x 21 cm.

• **Summary:** This book is filled with lovely woodcuts from the Horace Carpentier Collection, East Asiatic Library, University of California, Berkeley. Only 11% of China’s land area is arable compared to 80% in the USA, yet today its population, mostly squeezed into the eastern third of the country, is four times that of the United States. The best soy sauce in China comes from Fukien [Fujian] and Amoy. The Classic of Mandarin cuisine reached its zenith around 1800, when Yuan Mei wrote volumes about food; these are still considered to be definitive studies of Chinese gourmet cooking in the Mandarin style. There is one entire chapter titled “Bean curd” (p. 57-63).

The book also contains recipes for: Fuzzy melon soup with bean curd (p. 37). Seaweed soup with bean curd (p. 41). Bean curd soup (p. 42). Ma Po bean curd (Szechwan, p. 59). Stir-fried vegetables with black bean sauce (with “2 tablespoons fermented black beans, rinsed and mashed, 1

slice ginger root, minced, 1 garlic clove, minced,...” p. 90). Stir-fried vegetables with fermented bean cake (fermented tofu, p. 91). Braised soybean sprouts (Shanghai, p. 96). Clams with black bean sauce (with fermented black beans, rinsed and mashed, and slices of ginger root, minced, p. 109). Braised fish with fried bean curd (p. 115).

The glossary (p. 178-84) defines: Bean cake, fermented, and fresh (2-inch squares, 1 inch thick). Bean curd cheese, red (nam goeey). Bean-curd cake, deep fried. Bean-curd sheets or sticks, dried [yuba] (“Creamy beige-colored thin sheets. Used for vegetarian (Buddhist) dishes congee or as substitute for egg roll skins. Stick form is used mainly for soup... Always soak in warm water to make pliable before proceeding with recipe”). Bean curd, sweet (“Comes in dried, flat sheets, about 6 inches by 1½ inches. Mocha in color; no sweet taste”). Bean paste, hot. Black beans, fermented (= Fermented black beans. “Small black beans preserved in salt. Very pungent and moist. Almost always used with garlic and ginger in sauces. Rinse with warm water and mash before using. Purchased in plastic bags by weight in Oriental markets”). Brown bean sauce (“Also known as yellow bean sauce and ground bean sauce”). Fish soy. Hoisin sauce (“Thick, smooth, dark reddish brown sauce made from soybeans, spices, sugar, chili and garlic. Mildly sweet in flavor”). Soy sauce (light vs. dark with caramel added). Address: San Francisco, California.

5234. Goulart, Frances Sheridan. 1975. *Bum steers: How and why to make your own delicious high protein mock meats, fake fish & dairyless desserts, and avoid useless calories, cholesterol, sodium nitrate, salmonella, trichinosis & high prices*. Old Greenwich, Connecticut: Chatham Press. 205 p. Illust. Recipe index. 21 x 19 cm.

• **Summary:** This vegetarian cookbook, interspersed with many well-selected anti-meat quotations, describes how to make meatless meats and milk-free dairylike products at home. Contents: Introduction. On the block: Major mock-meat-making supplies. Vegebutchering: Master mock-meat recipe file. Bogus beef. Pseudo pork. Unreal veal. Sham lamb. Con game. Phony poultry. Fake fish. Un-innards. The vege-deli. Mocking up: General dishes. The mock crock. On the side. Dairyless desserts. Steerage (sources of unfamiliar ingredients).

Chapter 1 begins with an introduction to and nutritional composition of tofu, followed by the soybeans, gluten flour, other legumes, etc. Under “Flavors enhancers” are listed soy lecithin granules or flakes, miso, yeast extract (marmite), soy sauce and tamari, and Worcestershire sauce. Chapter 2 contains recipes for making gluten, tofu, grainola (with soy grits), a stock with miso for non-meat dishes (p. 32), mock milk I (made with soy flour), mock milk II (made with raw cashews or almonds), mock (soy) butter (made with soy flour), and mock cream (with soy flour and soy cream), and mock yogurt (with cashew nuts and soy yogurt culture).

A sampling of the many other soy-related recipes include: Moo-less ragout (with tofu, soy sauce, and soy butter, p. 43). Vegetarian rolladen (with cooked ground soybeans, p. 52). Good red meat (with gluten or tofu, p. 53). Greenbutcher's meatballs (with tofu, p. 57). Mock Mac I (burger with soybeans, p. 64-65). Pineapple pig (with tofu, p. 72). Half-calf (with tofu, p. 79). Surrogate salami (with "bean pulp (residue from making Tofu)" [okara], p. 125). Bumsteads: Two burgers for meat-totalers (with tofu, p. 131). Meatless mincemeat (p. 142). Soybean mustard (with soy sprouts, p. 165). Cow tow: Cowless milk candy (with soy milk powder). Jersey bounce: A moo-juice-less junket (with soy milk, p. 184). Bum bombe: Egg-less, cream free (with soy cream, p. 184). Two 100% vegetarian ice creams: Eggless, milkless (with soy powder, p. 186).

Many recipes also contain wheat gluten: Charisma: Char-broiled bum steers (p. 48). Pig-less pork sausage (p. 70-71). Roast loin of veal (p. 80). Fake steaks: Two sham schnitzels (p. 80-81). Vegetarian cutlets (p. 82). Mocking birds I (p. 83). Fruit stew (p. 86). Sham lamb (p. 89). Sham lamb curry (p. 91). Bum bunny (p. 97). Sweet breads (p. 121).

Aduki beans are used in Moo-less rice pudding (p. 183). Sources of ingredients include: Walnut Acres, Penns Creek, Pennsylvania 17862 (herbs, spices, oils, whole grains, flours, seaweeds, etc.). Erewhon Trading Co., 342 Newbury St., Boston, Massachusetts 02115 (seaweeds and general goods, grains, beans, vegetables, seeds, etc.). Shiloh Farms, Route 59, Box 97, Sulphur Springs, Arkansas 72768. Arrowhead Mills, Box 866, Hereford, Texas 79045. Dynamic Nutritional Products, P.O. Box 528, North Hollywood, California 91603 (Milk-free yogurt culture. Trade names: Soyadophilus and Theradophilus).

Sample quotation: "... traditional American reliance on meat, particularly beef, is perhaps the single largest inefficiency in world dietary patterns..."—*New York Times* Oct. 25, 1974. Address: Wilton, Connecticut.

5235. Keys, Ancel; Keys, Margaret. 1975. How to eat well and stay well the Mediterranean way. Garden City, New York: Doubleday & Co. xvi + 488 p. Foreword by Jean Mayer, PhD, ScD., Prof. of Nutrition, Harvard Univ. School of Public Health. Index. 22 cm.

• **Summary:** Foreword: Ancel Keys, a very great scientist, revolutionized the science of nutrition. Before his work in the 1940s and 1950s, nutritionists studied nutritional "requirements" and were concerned with deficiency diseases. He refocused attention on diseases of excessive consumption of certain nutrients, especially fats. In his famous laboratory, located under the Stadium of the University of Minnesota, "he demonstrated the crucial role of the fat level of the diet in determining the risk of death from diseases of the heart and blood vessels. He went on to... show that saturated fats and cholesterol were the villains in this effect..." The concept

of risk factor in cardiovascular disease originated with Keys.

Chapter 3, on "Diet and health," contains a wealth of interesting information on many subjects including Linus Pauling and vitamin C, vegetable oils and vitamin E ("a teaspoon of soybean oil provides as much vitamin E as most of the packages sold by the druggist"), Dr. John Ludkin of London and sugar as a cause of coronary heart disease (not true), salt, vegetarians ("recently careful studies on the health of Seventh Day Adventists have produced surprising evidence that there is some truth in the health claim"), autointoxication, aging, yogurt and Elie Metchnikoff ("Louis Pasteur's successor as director of the Pasteur Institute"), the milk-drinking Masai of East Africa (their bodies handle cholesterol quite differently from our own), "natural foods" (grown without chemical fertilizers or pesticides), DDT, lecithin (made commercially from soy beans), fad and "kook" diets unlimited (incl. Dr. Atkins "dietary revolution" and—even worse—the 'Zen macrobiotic diet,' violently condemned by all who know anything about nutritional science, because it is likely to cause real trouble if actually adhered to").

The Mediterranean diet is found in Greece, Italy, southern France, and Spain. Characteristics include: Use of olive oil, wine in moderation for dinner, fruit for dessert, meats that contain less fat than their U.S. counterparts. Address: 1. Director, International Cooperative Study on Cardiovascular Epidemiology (in 7 countries), Univ. of Minnesota, Minneapolis and St. Paul, Minnesota.

5236. La Choy Food Products, Inc. 1975. The wonderful world of Oriental cookery: Recipes and menu ideas for the novice, experienced and gourmet cook. Archbold, Ohio: La Choy Food Products. 23 p. Illust. (some color). 21 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

5237. Lea & Perrins. 1975. Appetizer, soup, main dish, vegetable, and salad cookbook. New York, NY: Supermarket Book Company. 128 p. Illust. (color). Index. 22 cm.

• **Summary:** A book of recipes that call for Lea & Perrins' Worcestershire Sauce. Contents: Starters and snacks. Savory soups. Meat main dishes. Poultry main dishes. Seafood main dishes. Beans and rice. Eggs and cheese. Vegetable variety. Refreshing salads. This and that. Contains many full-page color photos of prepared dishes. Address: Worcester, England.

5239. Ohta, Teruo. 1975. Nattô kenkô-hô [The natto way to good health]. Tokyo: Futaba Books. 242 p. Illust. No index. 18 cm. [28 ref. Jap; eng+]

• **Summary:** This interesting, comprehensive book, by a

scientist and expert on the subject, discusses all aspects of natto. Contents: Preface (p. 3). 1. History of natto and its mystery (p. 15). When did natto bacteria appear on earth? The mystery of ancient natto. The first meeting of ancient humans and sticky beans (*neba mame*). Natto is preserving food which was nurtured by the climate where people opposed the government. Why was the Japanese palate better? The amazing wisdom of the Japanese race—"Ancient fermented foods." *Tôshikyô* was a salty natto (*kata natto*) of 2,200 years ago. Natto originated during the Heian period [A.D. 794-1185]. Medicinal natto which Japanese monks kept secretly in olden times. The god of childbirth and princess natto (*hime natto*). Reasoning the "Natto Road." Village natto (*mura natto*) of Tanba, Yamaguni (p. 40). Shoyu-flavored natto started during the Muromachi period [1336-1573]. War provisions in field campaigns and natto. The military commanders of the Sengoku period also used Jinchô natto. Vendors calling out "Natto! Natto!" started during the Edo period (1600-1868). People who challenged the secrets of natto. The dark period of natto making. The mystery of the straw wrapper (*wara zuto*) and the Japanese people. The power of natto, which was studied by even the German army. The Japanese Army and navy studied the power of natto thoroughly (p. 60). Strong ally natto in the time of food shortage. The elite of the foods of the future. Mysterious medicinal effects of natto found in folklore.

2. The homeland of natto (p. 71). From *Hime natto* to *Daraku nabe*—Fukushima prefecture. *Teramichi natto* of Yonezawa and Goto natto—Yamagata prefecture. The early, noncommercialized form of Yukiwari-natto was Goto natto, made with natto, koji, and salt, fermented together for 1 month. Since the middle of the Edo period (about 1735) it has been made in Yamagata prefecture, mostly in farmhouses. It is widely served over rice, mixed with a popular type of diced miso pickle. One commercial manufacturer is Maruyome Shokuhin in Yonezawa city, Yamagata prefecture. Yukiwari-natto looks like Finger Lickin' Miso. The legend of kuromame [black soybeans] of Kiyomasa-kô—Kumamoto prefecture. Pounded natto (*tataki natto*), "Ito" and "Oito"—Kyoto. *Tôzô* and *ôzutsu natto*—Chiba prefecture. Mito natto which was sold in train stations along the Jôbansen line—Ibaraki prefecture. Straw-wrapped natto (*warazuto natto*) and natto mochi of Omi—Shiga prefecture. Iwadeyama natto which was eaten by Hachiman Taro Yoshiie—Miyagi prefecture. Is hikiwari natto ancient natto?—Aomori prefecture. Fluffy natto (*fukkura natto*) in large cooked rice containers (*hettsui*)—Saitama prefecture. Stood still at Kawanakajima saying "Nantoshô" ("What to do?")—Nagano prefecture. Naisho mame in the pitch dark—Gunma prefecture. The origin of natto culture—Yokote's hikiwari natto—Akita prefecture.

3. The secret of eating natto (p. 95). What are fermented foods. Super abilities of wonderful microorganisms. Comrades of microorganisms. Why cooked soybeans

become natto. The natto bacterium is a magician. The useful component of amazing natto. Natto is the last natural food. Stamina food gives endurance to modern people. Natto protein is of high quality. Natto is an excellent maker of amino acids. Natto vitamins which are used by famous people to increase their stamina. The stickiness of natto is a bunch of active strong enzymes. The wondrous abilities of enzymes. Natto has a strong power to prevent sickness. If you take acidic food continuously, the body's resistance will decrease. Natto is a wonderful alkaline food. There are many unsolved mysteries related to natto. To research the secret of very strong multiplication. The Japanese are an advanced country in terms of soybean utilization. It is important that a true health food should have good balance.

4. Medicinal effects of natto (p. 141). Common colds run away when they see natto. Dysentery and typhoid run away too. Skin disease such as favus and scabies—and natto. When the blood pressure rises, eat natto first. A feeling of faintness when you try to stand up is a sure sign of anemia. If you eat natto—no constipation problems. If you get fat during middle age, start a natto diet. The ideal food to prevent heart disease. Arteriosclerosis and natto. Natto strengthens the liver. The big news—natto bacteria control cancer. Natto keeps you from getting very drunk. Eating natto makes beautiful white skin. White rice and natto are ideal a mealtime. Natto—a strong ally of the stomach. Natto bacteria condition the intestines. Natto has the power to remove radioactivity. Challenge the eternal youth and longevity with natto. Natto and mustard pack a double whammy.

5. How to make natto at home (p. 171). How to grow natto bacteria well. Steps in making natto. Various methods of incubation. The method of making natto at home. This is how natto was made in the old days. How to select good natto. How to measure the freshness of natto. The secret of small-bean natto. The difference between domestically grown and imported soybeans.

6. How to eat natto well (p. 199—with many natto recipes). Unique ways of eating natto over rice. Various natto soups. Deep fried natto dishes. Fun one-pot cookery. Snacks. Natto miso and dried natto. Famous preserved natto foods in the various provinces. Other uses and hints.

7. Chronology of natto from 10,000 B.C. to the present (p. 217-39). Key early dates include the following: Heian period: 1051—The legend of Minamoto (Hachimantaro) Yoshiie and natto began (Note: Minamoto Yoshiie was a famous Japanese warrior who lived 1039-1106). The Oshû Kaido [Oshu] became known as the natto road. 1062—Abe Sônin (or Abe Sadamune) started to make "Tôhoku Natto" (a type of sticky natto) in the Hida or Higo region of Kyushu, and was respected by the local people there. 1068—The word "natto" (*usu-shiokara natto*; lightly salted natto) first appeared in the *Shin Sarugakuki* by Fujiwara Akihira.

Kamakura period: Fermented black soybeans became very popular among the samurai and monks. 1129—Zen

master Dogen of the Soto sect returned from Sung-dynasty China and introduced Buddhist Vegetarian Cookery (*shojin ryōri*) to Japan. 1211- Samurai (*bushi*) during the Kamakura period eat brown rice and fermented black soybeans (*shiokara natto*) for stamina. 1332–Soybeans were cultivated on a fairly large scale on land near Kamakura by the Tokugawa shogunate (*bakufu*). From these were made fermented black soybeans and other soyfoods which were quite widely used. 1334–During the Nanbokuchō period Kōgen Hōō appeared. In the Jōshōkōji in Tanba Yamaguni made Warazuto Natto and taught the process to the villagers. It was also called Yamaguni Natto, and remains there to this day.

Muromachi Period: The popularization of regular natto started as itohiki natto became “O-ito.” The *Teikun ōrai* contained recipes using fermented black soybeans (*shiokara nattō*). Fermented black soybeans were eaten by people as *tenshin* or *ochauke* with tea. Natto and tofu were widely served with Buddhist Vegetarian Cookery (*shojin ryōri*). Natto soup (*nattō-jiru*) originated. 1450–In the *Shōjin gyorui monogatari* [A comic tale of the great war between vegetarian foods and animal foods], natto appears as a person named Nattō Tarō Itogasane. 1532–The *Daiso ryōri-sho* (The Daiso cookbook) contains a detailed recipe for how to make natto soup (*nattō-jiru*).

Note: This is the earliest document seen (Jan. 2012) that mentions Yukiwari-natto (with or without a hyphen). Continued. Address: National Food Research Inst., Tokyo, Japan.

Note 2. There are many good cartoons about natto in this book. Address: National Food Research Inst., Tokyo, Japan.

5241. Pearson, Janice; Pearson, Alan. 1975. Light & life cookbook: A new age adventure in natural foods. Forty days of menus and recipes for a transition to balanced vegetarian dieting. Los Angeles, California: Astara. 306 p. Illust. Recipe index. 23 cm. Created with Earlyne Chaney. Series: Astara's Library of Mystical Classics. [20 ref]

• **Summary:** Soy-related recipes include: Tamari dressing (p. 119). Soybean barley soup (p. 221). Savory tofu casserole (p. 223). Miso broth (p. 286). Address: Santa Cruz, California.

5242. Rombauer, Irma S.; Becker, Marion Rombauer. 1975. Joy of cooking. Indianapolis/New York: Bobbs-Merrill Co. 915 p. Illust. by Ginnie Hofmann and Ikki Matsumoto. Index. 25 cm.

• **Summary:** One of the great American cookbooks. A classic and an all-purpose cookbook, this is the last edition revised by Marion Rombauer Becker. Soy-related recipes and descriptions include: Soy or lima bean casserole (p. 255-56). Soy cakes (“patties” of mashed cooked soybeans, rice, vegetables and eggs, rolled in sesame seeds and sauteed, p. 256). About fresh beans—edible soy beans (p. 284-85, with illustration {line drawing}). Green soybeans (cooked, p. 286; “Use the edible vegetable type, not field varieties of beans”). Low-fat tofu dressing (p. 369). About vegetable and nut milks: These are all nutritionally inferior to animal milks, “as their protein is of lower biologic value and their vitamin content is different.” Almond and walnut milks have long been known in Europe. Native Americans used hickory and pecan milk. These milks, and coconut milk, with their delicate, fragile flavors “are a great delicacy in sauces and puddings.” Gives recipes for almond milk, soybean milk (p. 534-35). Soybean curd or tofu (homemade, p. 535; “For other suggestions, see *The Book of Tofu*, by William Shurtleff and Akiko Aoyagi). Soybean paste or extender (cooked soybeans pressed through a colander, p. 535). Alternate or engineered foods (p. 535-36; textured vegetable proteins, “TVPs,” CSM, WSB). Soy flour (p. 549). Soy meal (p. 549-50; coarser than flour). About seeds, grains, beans and peas—Roasted soybeans (p. 564). About commercial sauces—Soy sauce and shoyu (p. 574). Soy whole wheat bread (with soy flour, p. 608).

In the long, excellent section titled “Know your ingredients” (p. 519+), under “The capers and caperlike buds and seeds” (p. 580) we read: “Similar in Use are Chinese fermented black beans, or *toushi*, which are available in cans;...”

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term “Chinese fermented black beans” or the word “*toushi*” to refer to fermented black soybeans.

As of April 1996 the book has not been revised since 1975. It is now a Scribner book published by Simon & Schuster. Hardcover price: \$24.00. Address: Jennifer Becker, 38537 S.E. Hudson Rd., Sandy, Oregon 97055.

5243. Sato, Yoshiya. 1975. *Kikkôman no keiei* [History of Kikkoman operations]. Tokyo: Yomiuri Shinbun-sha. [Jap]*
 • **Summary:** The story of Kikkoman’s development told from the company’s viewpoint.

5244. Silverstein, Alvin; Silverstein, Virginia B. 1975. *Beans: All about them*. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 86 p. Illust. by Shirley Chan. Index. 22 cm. Summarized in *Soybean Digest*, Sept. 1975, p. 43. [7 ref]

• **Summary:** This excellent book for children discusses beans in legend and history, how to grow them, and their future as a low-cost protein supplement. Includes experiments, bean recipes, and games.

Contents: Beans. The story of beans. The history of beans. Beans in legend and lore. The life story of the bean. Kinds of beans. Beans in the garden and the marketplace. Beans for the future. Fun with beans. Beans for good eating.

Page 2: “Kuan Yu, a great war god in Chinese folktales, was a bean curd [tofu] seller in his youth.”

Pages 12-13, a brief (and partially accurate) history of the soybean, begin: “Soybeans are native to eastern Asia. The oldest written records of them date back to 2838 B.C. [sic], when Emperor Shen Nung of China wrote a description of the plant.” Also mentions: The five sacred grains, soybean “milk,” tofu, yuba, [soy] sauces, soybean paste, soybean sprouts, soybean oil, Engelbert Kaempfer, first introduced “to the United States around 1800 when a ship brought some to Philadelphia [Pennsylvania], Commodore Perry (1854), USDA tested about 10,000 different kinds. Now soybeans are the number one U.S. cash crop, accounting for more than 75% of the world’s soybean supply. Soybeans are used as foods for humans (in the form of oil, flour, soy sauce, “milk substitutes, and meat substitutes and ‘extenders’”) and feeds for animals. They are also used in the manufacture of more than 250 industrial products, including paints, soaps, lubricants, adhesives, and fertilizer.

Page 16: “In China, beans were a good luck symbol. A person who wore a string of soybeans hidden around his neck was believed to possess magic powers to do amazing

feats. Three dark soybeans soaked in sesame oil for three days were used to foretell the future.”

The chapter “The life story of the bean” (p. 18-29) gives (with illustrations) a simple and accurate description of the bean seed and how it grows, discussing the hilum or seed scar, the micropyle or tiny hole at one end of the hilum, the seed coat, the two cotyledons in which food for the young growing plant are stored, the embryo nestled (a plant in miniature) between the cotyledons, with its two tiny leaves (the plumule), a little root (the radicle), and a stemlike part connecting them (the hypocotyl). When the seed is planted, and it germinates or sprouts, the “embryo root pokes its tip out through the micropyle and grows out into the soil. Tiny root hairs form along the growing root. They take in moisture and dissolved minerals from the soil.” The hypocotyl grows until it “suddenly pushes up out of the soil—the first part of the seedling to emerge. It is bent over, for the cotyledons are still buried in the soil.” The hypocotyl continues to grow. In a day or so the seed coat splits, then the top of the plant pops up out of the soil. “The empty seed coat is left behind, buried beneath the surface.” Now the young bean seedling is growing straight up. The two seed leaves at the top unfold and grow quickly. Below them on the stem are the two cotyledons. As sun shines on the growing plant, its leaves, cotyledons, and stem begin to turn green—a turning point in the life of the plant.

For a while, the growing plant takes the food it needs from the reserves stored in the two cotyledons. But as these reserves are used up, they shrivel and finally fall off. Now the young plant must create its own food using chlorophyll and photosynthesis.

Chlorophyll traps energy from the sun. When examined under a magnifying glass, one can see that the surface of a plant leaf contains many tiny openings called stomates, which are usually open during the day and closed at night. “When the stomates are open, gases from the air pass freely in and out.” Air is about 80% nitrogen, 20% oxygen, plus smaller amounts of carbon dioxide, water vapors, and others gases. In the leaves, “carbon dioxide and water are combined, using the sunlight energy trapped by chlorophyll, into sugar, starches, and other complicated chemicals. Scientists call this process photosynthesis (photo means light, and synthesis means a putting together).” The by-product, oxygen, passes out into the air through the stomates; it is the gas that humans and other mammals need to breathe.

Describes the underground activities related to plant growth, nodules, bacteria that live symbiotically in the roots and fix ammonia and nitrogen. Also describes the bean flower, its parts, self-pollination, the key role of bees, and how the seeds are formed from the flower.

The chapter “The soybean—Number one” (p. 36-39) describes the current status of the soybean in the USA. The chapter “Beans for the future” discusses modern developments such as CSM, soyfoods such as sufu, tempeh,

miso, spun soy protein fibers, soybean meat analogs, textured vegetable protein (TVP).

When a bean seed sprouts, how does it know which way is “up”? “Could you ever get a seedling with its roots pointing up in the air and its shoot poking down into the soil?” Supposing you cut off all sunlight? No, plants have a built-in gravity sense which scientists call “geotropism.” A plant hormone called an auxin causes the plant to bend upward—and toward the light (heliotropism). In 1888, the symbiotic partnership between legumes and nitrogen fixing bacteria was first discovered by Hellriegel and Wilfarth. There are short-day plants, long-day plants, and day-neutral plants; flowering will not begin until the length of days and nights is just right (p. 54-59). Bean recipes (p. 70-75). Address: 1. Prof. of Biology, Staten Island Community College, New York City; 2. Translator of Russian scientific materials.

5245. Smith, J.E.; Berry, D.R. 1975. The filamentous fungi. Vol. 1. Industrial Mycology. New York, NY: Wiley & Sons. xi + 336 p. Illust. Index. 24 cm.

• **Summary:** This book contains 16 chapters by various authors. A number of these are cited separately. Drs. John E. Smith and David R. Berry did pioneering work with fungi at the Dep. of Applied Microbiology, Strathclyde University, in Glasgow, Scotland. Dr. B.J.B. Wood greatly benefited from their work. All filamentous fungi appear to be strictly aerobic.

Although it was the filamentous fungi which provided us with penicillin, the first clinically useful antibiotic, in the subsequent search for other antibiotics, the filamentous fungi have proved a less prolific source than the bacteria, especially the Actinomycetales. Thus by 1967 over 600 antibiotics have been isolated from bacteria and about 150 from fungi.

The penicillins are the most important compounds that have been isolated from fungi. Their discovery marked the beginning of a new era in the treatment of infectious diseases and they have been of enormous commercial importance. The history of the development of penicillin, from Fleming's first observation of the antagonism between *Penicillium* and *Staphylococcus*, to the large-scale production of penicillin G during World War II, makes fascinating reading. The cephalosporins are an antibacterial agent related to the penicillins. From filamentous fungi we get commercial organic acids, enzymes, antibiotics, edible mushrooms, mycelial biomass, and Oriental foods [such as miso, shoyu, and saké]. The commercial production of organic acids is generally limited to members of the genus *Aspergillus*, which give citric acid (from *A. niger*), D-gluconic acid, and oxalic acid. In terms of tonnage, citric acid is the leading commercial product made by filamentous fungi; in 1975 an estimated 90,000 metric tons were produced worldwide. The main producers of industrial enzymes are *Aspergillus oryzae*

and *A. niger*. Gluconic was first reported as a by-product of fungal metabolism by Molliard in 1922, and was first produced by surface culture in 1928. Fungal proteases are now being used increasingly in cheesemaking as a substitute for natural rennet. The enzymic material obtained from the stomach of calves is of limited supply and subject to fluctuating prices.

Concerning mushrooms: The first attempts to cultivate mushrooms in the Western world are known to have taken place in France during the lifetime of Louis XIV (1683-1715) in underground caves in Paris. During the past decade, the art of mushroom cultivation has given way to a sophisticated technology, which has transformed mushrooms from a luxury food to one available at reasonable prices to all. Most of the important edible species are members of the genus *Agaricus* and industrial exploitation is confined almost entirely to the species *A. bisporus*. Address: Dep. of Applied Microbiology, Strathclyde Univ., Glasgow, Scotland.

5246. Wolf, W.J.; Cowan, J.C. 1975. Soybeans as a food source. Revised ed. Cleveland, Ohio: CRC Press. 101 p. Illust. Index. 26 cm. CRC Monotopic Series. [416 ref]

• **Summary:** Contents: Introduction. Seed structure and composition. Soybean production: Early history, areas of production, production, importance of varieties. Disposal of the crop: Grading standards, disposition. Processing soybeans into oil and meal: Storage, preparation of beans, extraction, desolventizing, degummed oil and lecithin separation. Conversion to edible oil products: Alkali refining, bleaching, hydrogenation, deodorization. Soybean oil products: Salad and cooking oils, shortening and margarine oils, flavor stability of soybean oil, soybean lecithin—products and use. Food uses of soybean proteins: Physical and chemical properties (solubility as function of pH, molecular size, reactions of the 7S and 11S globulins, solubility of isolates, denaturation, amino acid composition), forms of soy proteins (whole soybeans, processed soybean protein products), selling prices and production estimates, functional properties (emulsification, fat absorption, water absorption, texture, dough formation, adhesion, cohesion, and elasticity, film formation, color control, aeration), nutritional properties (antinutritional properties, protein quality of soybean products), foods containing soy proteins (Oriental foods [tofu, kori-tofu, miso, natto, shoyu, tempeh], domestic foods [baked goods, meat products, simulated meats, breakfast cereals, infant foods, beverages, dietary foods, snack foods, miscellaneous uses]), problem areas. Conclusions.

Addendum. Introduction: Origin of soybeans, soybean situation—future, recent sources of information, soybean organizations. Production: Short-term situation, storage and exports, soybean varieties, yield barrier, varieties and antinutritional factors, aflatoxin in soybeans. Edible oil products: Deodorization, an antioxidant for soybean oil, flavor stability of soybean oil, oil from field-damaged beans,

flavor components in soybean oil. Conversion to edible protein products: Production and producers, new processes (full-fat products, defatted flakes and related products, concentrates, isolates, textured protein products). Properties of soy proteins: Functional properties (solubility, water absorption and swelling, viscosity, emulsification, film formation, texture), nutritional and physiological properties (trypsin inhibitors, soybean proteins in blended foods, nutritional value of textured soybean proteins, soybean proteins in infant formulas, effect of alkali treatment on soy protein), flavor studies on soy proteins (organoleptic evaluation of commercial protein products, origin of flavor compounds). Food uses of soybean proteins: Baked goods, meat products and analogs, instant breakfast items, snack foods, legal and regulatory aspects. References.

An excellent source of information on soy flour and modern soy protein products, this book contains a surprisingly small amount of information (about 1 page total) about traditional soyfoods such as tofu, miso, natto, shoyu, tempeh, etc. even though a number of the latter foods are much more widely used worldwide. Soy beverage (soymilk) is not even mentioned. The extensive bibliography would be greatly improved by the inclusion of the titles of the articles.

Table 26, titled "Selling prices and production estimates (in 1970) for soybean proteins" (p. 42) states: Defatted flour and grits sell for 7-8 cents/lb ex factory and estimated annual production in 1970 was 232-237 million lb. Soy concentrates (18-26 cents/pound, 20-35 million lb). Soy isolates (35-45 cents/pound, 25-50 million lb). Address: 1. Research Leader, Meal Products, Oilseed Crops Lab., USDA NRRL, Peoria, Illinois; 2. Adjunct Prof. of Chemistry, Bradley Univ., Peoria, Illinois 61606 (Formerly Chief, Oilseed Crops Lab., NRRL, Peoria).

5247. Wood, B.J.B.; Yong, Fook Min. 1975. Oriental food fermentations. In: J.E. Smith and D.R. Berry, eds. 1975. The Filamentous Fungi. Vol. 1. Industrial Mycology. New York: Wiley & Sons. xi + 336 p. See p. 265-80. [29 ref]

• **Summary:** Contents: Introduction. Koji. Soya sauce (koji). Soy milk, tofu and sufu (Chinese cheese). Miso. Other Oriental food fermentations (tempeh, onjom, Hamanatto, Ang-kak and Lao-chao). Conclusions.

Most people in the West are now familiar with soya sauce. For most Westerners, the growth of mould on a food is generally associated with the deterioration of that food—with only a few exceptions, such as England's Blue Stilton cheese, or Roquefort, Brie, or Camembert cheeses from France.

Note: "Molds of the genus *Penicillium* play a large part in the ripening of the Camembert-Brie, and the Roquefort-Gorgonzola-Stilton series of cheeses."

"Koji is the central feature in most fungal food preparations." Traditionally, koji was made in baskets made of woven bamboo, which provided very good aeration. How non-toxic molds came to be used for koji in humid

sub-tropical or tropical regions remains a mystery. In Japan, the seed-koji (*tané koji*) is "made by growing *Aspergillus soyae* or *A. oryzae* on steamed polished rice, while in China, a mixture of wheat bran and soyabean flour is the preferred substrate" (p. 265, 268).

To make Hamanatto, soyabeans are initially fermented with *Aspergillus oryzae*. "A Malayan dish called Tao-Cho and one from the Philippines called Tao-Si seem to be somewhat similar..." Address: Univ. of Strathclyde, Glasgow, Scotland.

5248. Wright, Louise. 1975. The road from Aston Cross: An industrial history, 1875-1975. Imperial House, Leamington Spa, Warwickshire, England: Smedley-HP Foods Ltd. 84 p. Illust. 25 x 19 cm. No index.

• **Summary:** This book was published on the centenary of the HP Foods Co. The story begins in 1875 when Edwin Samson Moore bought land in Tower Road, Aston Manor, and built his vinegar brewery, registered as the Midland Vinegar Company. He is believed to have taken up agencies for Mellors Sauce and Banquet Sauce. In 1886 the wheat sheaf was registered as the company's trade mark. In 1901 The Moores registered the offices of F.G. Garton Sauce Manufactory at Tower Road. In 1903 H.P. Sauce was launched and sold in Canada. Today it contains soy sauce. In 1902 adjacent Vulcan Brewery was acquired by the Moores. In 1904 the name H.P. was re-registered by the Midland Vinegar Co. In 1906 hundreds of donkey carts toured Great Britain to introduce H.P. Sauce. In 1913 H.P. Sauce was sold in the USA, and by 1917 in France and South Africa. In 1924 the Midland Vinegar Co. was sold to the British Shareholders' Trust, then floated as a public company named HP Sauce Ltd.

In 1930 HP Sauce Ltd. acquired Lea & Perrins Ltd. of Worcester by an exchange of shares. Lea & Perrins Inc. of New York remained a separate entity. Three members of the Perrins family (Dyson, Capt. Allan, and Col. Charles) joined the board of HP Sauce Ltd. Captain Alan Perrins visited Australia to arrange for the manufacture of HP Sauce and Lea & Perrins Sauce there. In 1931 manufacture of HP Sauce started in Sydney, Australia.

In 1940 bottling of Lea & Perrins Worcester Sauce was moved to Tower Road. In 1942 because of shipping losses, HP Sauce was manufactured by E.D. Smith and Sons at Winona, Ontario, Canada. In 1945-46 the bottling of Worcester Sauce was transferred back to Worcester.

In 1950 the purchase of market research data from A.C. Nielson started. In 1957 J.E. Lea was appointed managing director of Lea & Perrins. In 1966 first computer was installed.

In 1967 HP Sauce Ltd. was acquired by the Imperial Tobacco Co. In 1969 H.P. Fruity Sauce (which now contains soy sauce) was launched.

In 1972 the company was renamed Smedley-HP Foods

Ltd. (Smedley-HP for short) and the company offices were moved in phases to Imperial House, Leamington Spa.

Note: In 1916 the Dyson Perrins Laboratory was established at Oxford University. Founded with an endowment from Charles Dyson Perrins, heir to the Lea & Perrins Worcestershire sauce company, it was the main centre for research into organic chemistry at Oxford from 1916 to 2003, when it was retired. "During its 87 year working life, the laboratory had an extremely distinguished career; it can claim a stake in shaping the scientific careers of two Nobel Laureates, namely Lord Todd (1957) and Sir John W. Cornforth (1975) who passed their formative years as young chemists in the laboratories" (Source: Wikipedia). Address: Warwickshire, England.

5249. Wright, Louise. 1975. History of Lea & Perrins Worcestershire Sauce (Document part). In: Louise Wright. 1975. *The Road from Aston Cross: An Industrial History, 1875-1975*. Imperial House, Leamington Spa, Warwickshire, England: Smedley-HP Foods Ltd. 84 p. See p. 30-37. 25 x 19 cm.

• **Summary:** Continued (p. 30): "Another important matter was on the move: A merger between HP Sauce Ltd. and the world famous makers of Worcestershire sauce, Lea & Perrins. Mr. John Wheeley Lea and Mr. William Perrins went into partnership in 1823. Mr. Lea was druggist in Worcestershire; his friend had a chemist's shop in Evesham. Over their Christmas festivities, they decided two heads were better than one and on New Year's Day [1823] pooled their resources to develop the Worcester business as Lea & Perrins. They set up as wholesalers and retailers of pharmaceuticals, toiletries, cosmetics and groceries. Long before the days of ice-cream parlours and Coca-Cola, their shop on Broad Street, Worcester, became the precursor of the modern American drug-store.

"Both men were analytical chemists. Both were aware of the advantages of marketing their own products and their first catalogue listed more than three hundred items. Although trading from a quiet country town, they kept themselves informed and studied world trade. Aware of the rapid growth of Queen Victoria's empire, they also realised that the industrial revolution was rapidly altering Birmingham and the Black Country. Soon their medicinal products were in great demand throughout the Midlands. Later they opened a chemist's shop in London, patronised by Queen Adelaide.

"Their concentrated Essence of Sarsaparilla was recommended for scorbutic affections (scurvy), cutaneous (skin) diseases and for freeing the system from the ill-effects of taking mercury. They recommended Taraxacum (dandelion coffee) for liver complaints because of its gentle diuretic and diaphoretic effects. Presumably their customers were sufficiently conversant with medical terms to know that a diuretic excites the discharge of urine and a diaphoretic produces perspiration.

"Mr. Lea & Mr. Perrins were perfecting their medicines, hair lotions and marrow pomades when Marcus, Lord Sandys visited the shop in Worcester. Late Governor of Bengal, he had retired to his country estate at nearby Ombersley Court, and would be obliged if they would make up one of his favourite Indian sauces. They obliged. Having already arranged their own supplies of spices and dried fruits, from Asia and the Americas, they had the ingredients to hand. Scrupulously following his lordship's recipe, they made the required quantity, plus some for themselves. One taste was enough. The sauce was ghastly: an unpalatable, red hot, fire water. His lordship was entirely satisfied. The remainder however was consigned to a cellar below the shop and there it stayed until the annual spring cleaning and stocktaking.

"It was on the point of being poured away when Mr. Lea and Mr. Perrins detected its appetising aroma. Tasting it once again they discovered it had matured into a rare and piquant sauce. The sauce was saved, more was made. Customers were persuaded to try the new Worcestershire Sauce, and did not need more persuasion: the sauce was an instant success. Sales rose. In 1842, Lea & Perrins sold 636 bottles. In 1845, a manufactory was set up in Bank Street, Worcester. Ten years later the yearly sales were up to 30,000 bottles of Worcestershire Sauce. Travellers covered Great Britain and there were agencies in Australia and the United States. As well as sauce, they found a steady export market for their medicines. No sensible traveller left England without a Lea & Perrins medicine chest."

"By 1862, the firm's international trading had become an extensive two-way traffic. An American firm in New Jersey was asking them to find an English market for hermetically sealed 3 lb cans of fresh fruits, tomatoes, green corn and oysters.

"When it became necessary to build a new factory in Midland Road, Worcester in 1897, Mr. Lea & Mr. Perrins used the latest steel girder construction. The factory rises over vast cellars, which house hundreds of casks of maturing sauce and maturing raw materials. No anchovy is allowed into the cellars under a year old. It matures for at least another year before being used in the sauce manufacture. The steel girders of the cellar roof, which supported the circular yard and its traffic of one ton drays in 1897, are now having to be re-inforced to take 32 ton freight-liners. A royal warrant was granted to the firm by Edward VII in 1904 and has been proudly held ever since. It helped alleviate trouble with imitations of their sauce. In the High Court of Justice in 1906, Mr. Justice Swinfen Eady decreed that no firm other than Lea & Perrins be allowed to call their Worcestershire Sauce, 'The Original' or 'The Genuine'.

"In 1823, William Perrins' son married Sarah Dyson of Huddersfield. Their grandson christened Charles William Dyson, was known as Dyson Perrins. A benefactor to the City of Worcester, to his home town of Malvern and to his old University of Oxford, where he developed his great

love for the earliest printed books... He also inaugurated the Dyson Perrins Porcelain Museum at Worcester.

"After the First World War, Lea & Perrins rapidly expanded. When the merger with HP Sauce Ltd. was settled by mutual agreement in 1930, it had been a private limited company for some time. The branch in the United States, Lea & Perrins Inc., was not officially brought into the new company until a year later, but a gentleman's agreement between the two boards had sufficed while the trans-Atlantic marriage was being formally established. The amicable relationship dated back to Mr. Lea and Mr. Perrins.

"The believed in having friendly dealings with their overseas agents. Foremost among them were their New York agents, John Duncan & Sons. Established since 1819 as importers of wines, quality foodstuffs and preserves, they began to handle Worcestershire Sauce in 1840. Soon, they were handling ever-increasing amounts. During the succeeding forty years, close friendship developed between the two family businesses; indeed, the Duncans have adopted Dyson as one of their own family names.

"By 1875, the demand for Worcestershire sauce had spread throughout the United States. It was agreed to import the sauce in casks and bottle in New York. On the personal side the friendship between the families became so strong that the secret formula was divulged and the rights of manufacture granted to the Duncans. After eight years of manufacture in their various New York factories, they acquired in 1910 a nine storey building in West Street. Following their partnership with HP Sauce Ltd., they remained in West Street until expansion forced them to move to the Industrial Park at Fair Lawn, New Jersey." Continued. Address: Warwickshire, England.

5250. Wright, Louise. 1975. History of Lea & Perrins Worcestershire Sauce (Document part–Document part II). In: Louise Wright. 1975. The Road from Aston Cross: An Industrial History, 1875-1975. Imperial House, Leamington Spa, Warwickshire, England: Smedley–HP Foods Ltd. 84 p. See p. 30-37. 25 x 19 cm.

• **Summary:** Continued: Fair Lawn, near Route 4 out of New York, is an industrial park. Behind the lawns and dignified facades "Lea & Perrins Inc. alone produce 500 bottles of sauce every minute of every working day. The company is now a member of the Imperial Foods Group, but retains its American identity, with its own board of directors and its own purchasing and marketing procedures. The company has been marketing HP Sauce for some years." It is known as HP Steak Sauce.

An early engraved advertisement titled "The First Introduction" (facing p. 32) shows an innkeeper or restaurateur introducing Lea & Perrins' Sauce to three well-dressed gentlemen at a table. Two photos (facing p. 33) show: 1. A view of the front of the Lea & Perrins factory, built at Midland Road, Worcester, in 1897. 2. "The disastrous

fire in 1964, which destroyed much of the building. With fine cooperation by management and employees, the sauce manufacture was held up for a mere 10 days."

In the New Zealand town of Te Wairoa, destroyed by a volcanic eruption in 1886, an undamaged bottle of Lea & Perrins Worcestershire sauce was found preserved by the volcanic dust. It is on display in the museum there (p. 34).

Plate 51 shows three ads published in 1871 by Lea & Perrins in three Australian newspapers (the *Coulburn Herald*, *Bathurst Free Press*, and the *Manaro Mercury*) to caution people against purchasing fraudulent imitations of their "celebrated Worcestershire Sauce." The two agents in Australia were Montefiore, Joseph & Co. (Sydney), and John Lee & Co. (Maitland). The sauce was exported by Lea & Perrins (Worcester) and by Crosse and Blackwell (London); it was sold by "Grocers and Oilmen universally."

Plate 54 states: "Lea & Perrins have been exhibiting since the historic Chicago Exhibition [in Illinois] in 1876, which celebrated the first hundred years of American Independence. The vase and bottled where were displayed there, are on permanent exhibition in the entrance hall of the offices of Lea & Perrins Inc., New York." Plate 55 shows the products of HP Sauce Ltd. and Lea & Perrins Ltd. on display at the British Industries Fair of 1949. Pages 42-43 discuss problems faced by Lea & Perrins in Worcester during World War II. "An army medical unit had taken over their factory, leaving only a small, sealed section in which to continue the highly secret process of making the sauce... One sniff was enough; there is no mistaking a cask of five-year-old anchovies." Lea & Perrins soon moved its bottling machinery from Worcester to Aston Cross. Plate 59 shows a empty glass bottle of Lea & Perrins sauce from 1880.

Plate 60 shows seven old Lea & Perrins Worcestershire sauce bottles. The oldest two, made of green glass with glass stoppers, were both filled in 1866. Two others are from about 1870. The earliest one with a label is from 1920. Plate 83 shows old bottles (with labels) of Worcestershire Sauce made by other manufacturers in Kobe, Japan; Cardiff, Wales; Hamburg-Altona [Germany; Altona became part of Hamburg in 1937]; the United Kingdom, and Portugal. Address: Warwickshire, England.

5251. La Choy Food Prods. 1975? Brief history of La Choy. 2 p. Undated. Unpublished manuscript.

• **Summary:** "Archbold, Ohio, with a population of only 2,500 is the home of La Choy Food Products, largest producer of canned Chinese foods in the world—including China!

"The business actually was started in 1920, by Wally Smith and Ilhan New, who became friends while attending the University of Michigan. Smith had a grocery store in Detroit and wanted to sell fresh-grown bean sprouts. New, a Korean, knew how to grow them.

"Sometime later, the pair conceived the idea of canning

bean sprouts in glass jars. The next logical step was to use metal cans, and this was accomplished in 1922 when the company was incorporated. New left the company shortly after 1930 and Smith was killed by lightning in 1937.

"After several moves, each time to larger quarters, the first La Choy plant was built in 1937 in Detroit. This was sold to the government at the start of World War II and the firm moved to its present 25 acre Archbold site. The La Choy plant today covers approximately 7½ acres under roof.

"'Chinatown, U.S.A.' is more strategically located for the efficient and economical production of Chinese foods than a glance at a map would indicate. Just to the north are the famed celery beds of Michigan. La Choy is the largest single user of Michigan celery in the nation. More than 5,000 tons are used annually in the new process developed by La Choy which produces up to 50 tons a day of extra-fancy fine cut celery for chop suey and chow mein dishes.

"To the east is the famed Pennsylvania mushroom belt, and La Choy is among the largest users of fresh mushrooms in the nation." Note: An attached photocopy of an ad (with no date or source) titled "La Choy operates the world's largest Chinese food plant," contains two photos: (1) Large aerial view of the La Choy plant in Archbold, Ohio. (2) Portrait photo of Gordon E. Swaney, General Manager. He was named General Manager of La Choy Food Products in 1962. He joined La Choy 18 years ago after graduating from Indiana University.

The text below the photo of the plant states: "This multimillion dollar facility was expanded in 1958 and doubled La Choy production. No other Chinese food processing plant anywhere approaches it in output." The plant is situated on 25 acres.

"La Choy became a division of Beatrice Foods Company in 1943, a year after it moved from Archbold, Ohio, from Detroit, Michigan, where the company was started in 1920." Since it became a Beatrice unit, sales have increased more than 700%. Address: La Choy.

5252. Federal Supply Service, General Services Administration. 1976. Federal specification: Soy sauce. *Federal Specifications*. EE-S-610F. 14 p. Jan. 20. [1 ref]* Address: Washington, DC.

5253. Erewon. 1976. Erewon 76. Boston, Massachusetts. 16 p. Feb. Catalog and price list. 28 cm.

• **Summary:** The color cover, periwinkle blue and purple, shows many trees growing in shallow show against a white sky.

The first page, titled "Piscean Specials: Specials Effective February 18, 1976," states: Special intro offer: 3 cases, 5% off Erewon Natural Cheese." Note: Erewon is now selling dairy products.

It also offers specials on: NiksSnacks, Celestial Seasonings tea, OG [Organically Grown] apple juice

(Knudsen's, Heinkes), Tom's soaps, Fearn Soya Products (Buckwheat pancake mix, Wholewheat pancake mix, Corn bread muffin mix), Yinnie syrup, Erewon pastas, Rocky Hollow herbs & spices, Edible essential oils.

On the next page, titled "First Class," a list of "Discontinued items: 10% off regular price" includes: All Nature Born cosmetics. All Sumatra honeys. Tamari ½ gallon size. Bulghur-Soy Grits.

This catalog cover was reprinted with permission from the Michio and Aveline Kushi Macrobiotics Collection, Archives Center, National Museum of American History, Smithsonian Institution, Washington, DC. Address: 33 Farnsworth Street, Boston, Massachusetts 02210; New York City office: 303 Howe Ave., Passaic, New Jersey 07055. Phone: 617-542-1358 and 212-594-6455.

5254. Ho, Coy Choke; Koh, Chong Lek. 1976. Microbiology of soybean-based fermented food in South-East Asia. Paper presented at the Third INTSOY Regional Soybean Conference. 7 p. Held 23-27 Feb. 1976 at Chiang Mai, Thailand. Unpublished manuscript. [17 ref]

• **Summary:** The relatively well-studied soy-based fermented foods in South-east Asia are tempe, sufu (soy cheese), ontjom tahu [okara tempeh], tau chioh ([tauco, tauchio], soybean paste), soy sauce, and thua-nao (natto). These are shown in Table 1, with the microorganisms responsible for fermentation, substrates, uses, and principal references given for each. "It can be noted that only a very limited range of genera of fungi are involved in these fermentations, namely *Rhizopus*, *Aspergillus*, *Neurospora*, *Actinomucor* and *Saccharomyces*. Furthermore, within a genus only a very limited number of species are actually utilized, for example *Aspergillus sojae* in soy sauce fermentation, and *Neurospora intermedia* in ontjom tahu fermentation.

"Regarding ontjom tahu fermentation, the fungus used was formerly erroneously listed as *Neurospora sitophila* (Dwidjoseputro, 1961)."

The authors then use analyses of conidia color and crossing experiments based on meiotic sterility to show that the cultures on okara tempeh (ontjom tahu) belong to a single species, *Neurospora intermedia*.

Note: This is the earliest English-language document seen (March 2009) that uses the word "tau chioh" to refer to Indonesian-style miso. Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur, Malaysia.

• **Summary:** "The Azuma dinner includes Sukiyaki, a generous portion of prime rib slices with fresh mushrooms, bamboo shoots, Tofu (soy bean cakes), Shiratake [Shirataki] (yam noodles) [thin konnyaku noodles] and assorted fresh vegetables." Azuma also serves Beef Teriyaki, Chicken Teriyaki, Salmon Teriyaki, and "Bata-Yaki (prime beef slices cooked with vegetables and served with lemon-soy sauce),..." Two photos show Azuma Sukiyaki House.

5258. Eden Foods. 1976. Spring catalog. 4601 Platt Rd., Ann Arbor, MI 48104. 30 p.

• **Summary:** On the cover is a woman carrying a sheaf of grain and a sickle on her head, with a child following after her. This is the first catalog with explanations of the product categories and individual products. Tamari Soy Sauce is now sold under 2 labels (Erewhon, and Marushima). "All of this soy sauce, bulk and bottled, is naturally and slowly aged for 2 years in wooden kegs. Made from soybeans, wheat, water, and salt." Hacho miso and kome (rice) miso, both still sold under the Erewhon brand, are fermented for 2 years, barley miso for 18 months. A new condiment is Tekka, sold in a 2.8 oz jar. "A salty condiment very rich in iron and minerals. Made from carrot, burdock, ginger, lotus root and miso."

Under packaged meals is Fritini (regular, with herbs, with curry, or with paprika; 8 oz.). Also new is Plum Extract (Bainiku Ikisu [sic, Ekisu]). Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

5259. Ito, Hiroshi. 1976. Hamanattô [Hamanatto]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 71(3):173-76. March. [Jap; eng+]

• **Summary:** Contents: Introduction. A brief history of Hamanatto. Methods of production: Yamaya and Horinji methods, Daifukuji method. The microbiology and chemistry of Hamanatto fermentation. Hamanatto's special characteristics. Serving Hamanatto. Conclusion. Acknowledgments.

Two flowcharts show Hamanatto production methods at Horinji and Daifukuji. Tables: 1. Distribution of various microorganisms in Hamanatto (cells per gram) at Yamaya, Horinji, Daifukuji. 2. Nutritional composition of Hamanatto (from Yamaya, Horinji, and Hamana), Daitokuji natto, and regular sticky natto. 3. Composition of free amino acids (mg per 100 gm defatted, and gm per 10 gm protein) in Yamaya Hamanatto, Daitokuji natto, Yamaya Hamanatto, soybean miso (temperature controlled- and natural fermentations), and Hacho miso. 4. Composition of Hamanatto fats. 5. Volatile acids in Hamanatto. 6. Aromatic compounds in Hamanatto.

In Japan, there are basically two types of natto: Regular natto (*itohiki-natto*) and salty natto (*shiokara-natto*). Generally the word 'natto' refers to the former but in Shizuoka prefecture in and around Hamamatsu city a type of salty natto called *hamanatto* is famous. Totally unrelated to regular natto except in name and the fact that both are fermented soyfoods, it is actually a close relative of soybean miso in terms of its flavor and the way it is produced. However unlike miso, the soybeans retain their original form, uncrushed, and the product has its own unique flavor and aroma. Another type of salty natto is Kyoto's Daitokuji-natto.

A brief history of hamanatto: Hamanatto originated in ancient China and is one of the progenitors of today's miso and shoyu. Many old documents show that its relatives *kokusho* ('grain chiang') and *teranatto* ('temple natto') were brought to Japan from ancient China. A type of fermented, salt-preserved cooked soybeans called *tou-ch'ih kyo* was excavated together with articles buried with one *Mao-tai*, a ruler of the early Han dynasty who lived about 2200 years ago. This was the earliest form of hamanatto. According to the first scholars and envoys from Japan to T'ang dynasty China, *chiang* and *kuki*, both progenitors of miso and shoyu, were introduced to Japan from China. Records show that the great T'ang dynasty Buddhist master Ganjin, who came to Japan by boat in 753, brought with him 1428 gallons of 'sweet kuki,' an early type of salty natto. The first mention of salty natto in Japan appears in Fujiwara Akihara's *Shinsaru Gakki* / *Shin Sarugakuki*, written in 1286 [Note: Others give the date as 1068]. The first character of the word 'natto' means 'to pay, supply, or dedicate,' the second means 'bean or soybean.' According to the *Honcho Shokkan*, written in

1697, the first character was derived from the fact that natto were first prepared in Japanese temple kitchens which are known as *na-ssho*, the place which supplied the monk's food. Since the propagation of salty natto throughout Japan was done primarily by temples, they also came to be known as 'temple natto' (*tera-natto*). They served as an important source of protein and savory seasoning in the Buddhist vegetarian diet. Kyoto's Daitokuji-natto, Ichimei Ikkyuji-natto, and Tenryuji-natto, each made in temples, and the Hamanatto made at Daifukuji and Horiuji temples in and around Hamamatsu city are popular to this day. Hamanatto first became known when the monks of Daifukuji temple presented some to the seventh Ashikaga shogun, Ashikaga Yoshikatsuko, during the 1400s. during the Warring States Period (1467 to 1568) they also presented Hamanatto to lords of the families of Imagawa Toyotomi, and Tokugawa.

Note: This is the earliest document seen (Nov. 2011) that mentions "Ikkyuji" or "Ichimei Ikkyuji" in conjunction with Daitokuji natto.

Because of its unique flavor and aroma and good keeping qualities, hamanatto became known throughout Japan. in some cases the skin of sansho seeds (Japanese pepper; *Zanthoxylum piperitum*) were mixed in and the product called *kara-natto* ('spicy natto'). When Toyotomi Hideyoshi undertook his Korean campaigns, he took lots of hamanatto with him. When he arrived in the ancient province of Hizen in northwest Kyushu, just before his soldiers embarked in boats to Korea, he gave this food the same name, *kara-natto*, but written with characters which mean 'beans for subjugating T'ang dynasty Korea.' This name, he hoped, would bring him luck in his campaign. After returning to the Hamamatsu area in central Japan, he donated land to makers of hamanatto to encourage their craft.

Later, when Tokugawa Ieyasu took over Hamamatsu castle, he used hamanatto as soldiers' provisions. Each year the local monks gave hamanatto as a gift to the shogun, who in turn used it as a New Year's offering. Still later, produced by temple cooks and craftsmen, it was given as a New Year's gift to parishioners; it also had a symbolic meaning since the word for soybeans (*mamé*) has also come to mean healthy and robust. In 1968 Yamaya, a producer of tamari shoyu (soy sauce) under the direction of Suzuki Yasuke, attempted to make an improved version of the product previously prepared at Daifukuji temple and first affixed the name 'hamanatto.' Thus the name of the product developed in the following order: *shiokara-natto* ('salty natto'), *kara-natto* (T'ang dynasty natto), *hamana-natto*, and *hama-natto*. To this day, Daifukuji has maintained its own special method of production, but this too has been commercialized.

Methods of production: Today hamanatto is prepared by two methods: the traditional method handed down from generation to generation since ancient times, and the modern industrialized method which made improvements on the traditional method without harming the special flavor and

aroma. Yamaya company and Horiuji temple use closely related methods; the former is industrialized while the latter is a handmade process using koji starter. Daifukuji uses a different traditional process without koji starter since the ancient incubation room, wooden trays, and rice-straw covering mats are each permeated with starter mold spores. The soybean koji (molded soybeans) is combined with brine and put into vats for the second fermentation in September. Since the room temperature during the koji making (first fermentation) is 20° to 25°C (68-77°F) no special incubation heat source is needed. Yet since the molds propagate naturally, without special inoculation, the koji making takes a long time, up to ten days.

There are numerous points of difference from regular miso production; when making salty natto [fermented black soybeans] the soybeans are not crushed; the koji is incubated with brine in a keg or vat with a heavy pressing lid; and the final product is sun-dried. At the factory, the soybeans are only partially reconstituted [by soaking in water] until they reach 1.5 to 1.6 times their dry weight; this takes 2 hours in winter and 1½ hours in summer. They are then drained and allowed to stand for 4-5 hours so the absorbed water penetrates deeper. If they are drained for too long, the beans become hard. They are then steamed for 4-5 hours [at atmospheric pressure] and allowed to stand overnight in the steamer. At Daifukuji, the unsoaked beans are dropped into boiling water, parboiled for 7-8 minutes, steamed for 7-8 hours in a 2 meter deep steamer, then allowed to stand in the steamer until the next morning. Care is taken that the beans are not crushed or dehulled. Nowadays, since it is known that the process of leaving the beans overnight in the steamer lowers their net protein utilization and makes them more difficult for the enzymes to digest, this step is generally omitted. Traditionally it was always used to darken the beans; there were apparently no problems with bacterial contamination, perhaps because the reaction of sugars and amino acids under heat produces substances which reduce the proliferation of bacteria and yeasts. In fact, the overnight period in the steamer may have been done expressly to encourage this effect. Continued.

5260. Ito, Hiroshi. 1976. Hamanattô [Hamanatto (Continued—Document Part II)]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 71(3):173-76. March. [Jap; eng+]

• **Summary:** Continued. The steamed beans are then spread on a thick rice straw mat (*mushiro*), drained well, sun dried, sprinkled with roasted barley flour, and mixed until each bean is well coated. The straw mat helps to absorb excess water. In factories, the roasted flour is premixed with koji starter (*Aspergillus oryzae* mold spores), they dried the straw mat and used it year after year. Molds such as *A. oryzae*, *A. soyae*, and *Rhizopus* species inoculated the beans during mixing with the flour. The mixture is covered for one night

with rice straw mats, then the next day transferred to wooden koji trays, which are arranged in the koji incubation room to make koji. Care must be taken that excess heat does not develop during fermentation, lest alien bacteria proliferate and the product's flavor and aroma decline. To prevent this, the koji mycelium is broken up three times by hand in the trays during the incubation.

At factories, the finished koji is sun-dried for 4 to 5 hours in winter (Hamamatsu is famous for its dry fall winds) or for 2 hours in summer so that the moisture content is reduced to below 30 to 35 percent. If this drying is insufficient, after the beans have been put into the vats they easily get crushed. The vat used is a 19-gallon wooden vat or a small wooden tub. The koji is divided among several vats, brine made by combining salt with boiled water is added, a pressing lid equal to twice the weight of the vat contents is set in place, and the mixture is allowed to ferment for 80 to 90 days in summer or 150 days in winter. (In some places (Daifukuji), unpasteurized shoyu is used in place of brine).

The use of a heavy pressing lid is preferable since it causes the fermentation to proceed slowly; a light one helps it to go faster, but the soybeans more easily lose their form. At temples they sliver the middle skin of sansho seeds and place these at the bottom of the vat, then add the finished koji and finally the brine. In factories they add a more concentrated brine and ferment the mixture for at least 2 months. The fermentation room (*kura*) should have good air circulation and ventilation, otherwise the product may develop and unpleasant moldy or musty odor.

After draining off the brine scooping the beans out of the vats, they are spread on rice straw mats (traditionally *mushiro* from the Ryukyu islands; today *tatami* matting), sun-dried, and sifted to remove small pieces, which are discarded. In a separate process, gingerroot is cut thinly, soaked in boiling water, sun dried, and soaked in moromi (shoyu mash) for about 10 days to make pickled gingerroot. Sansho seeds are also added to some types.

The microbiology and chemistry of Hamanatto fermentation: The molds found in fresh hamanatto koji and commercial hamanatto, in addition to *Aspergillus oryzae*, include *Rhizopus* species and *A. niger*. Hamanatto such as that made at Daifukuji using a low incubation temperature (20-25°C) and a long time contains a large proportion of *Rhizopus* on the surface of the soybeans. Moreover the amylase and protease enzymes in these molds are weaker and less active than those from the koji used for commercial shoyu or miso. For this reason the soybeans are not broken down, but rather remain in their whole form. If the koji is made mechanically, the enzyme strength and quality increases. The incubation proceeds more quickly in summer since the temperature is higher; the koji is ready in 3 days.

In general during the koji production, amylase, protease, and pepsidase activity reach a maximum at 50 hours, but in order to dry it, it must be left longer which causes the

activity to decrease. In addition to molds, lactic acid bacteria and film yeasts, which are related to *Pediococcus*, are found in all hamanatto; they are mixed in during contact with the straw mats. If air circulation during koji production is poor, lactic acid bacteria proliferate more than usual. Unlike most lactic acid bacteria, they ferment soybean sugars creating undesirable effects, but do not ferment lactose. After the koji-brine mixture is in the vats, film yeasts proliferate among the various flavors; at 45 days they are most abundant, then later decrease. Especially on the surface of vats with poor air circulation, they are found as a white mold. These yeasts produce hamanatto's unique aroma.

Hamanatto's special characteristics: Because the fermentation time is long, the color turns a dark brown. The form of the beans is well preserved. The composition of nutrients is shown in figure 2. Compared with regular natto, hamanatto has less moisture and more salt. Free amino acids are shown in figure 3. Those abundant are glutamic acid, leucine, and proline, while cystine, tryptophan and methionine are the most scarce. Compared with soybean miso, arginine, cystine, and histidine are also relatively scarce. Since soybean miso undergoes an even longer fermentation than hamanatto the difference is the amino acids freed from the soybeans, which is particularly enhanced by protease enzymes from the koji molds. Hamanatto flavor is rich and full-bodied, somewhat like that of soybean miso, but with a special aroma, more tartness, and a unique flavor component that Japanese call *egumi*. The latter, related to oil rancidification, imparts what some describe as a subtle harsh or unpleasant stimulation to the tongue or throat. Kiuchi et al, in 1976, in an analysis of hamanatto lipids, found that this *egumi* originates from linoleic acid. Hamanatto fats, unlike those of regular natto, are more than 70 percent of free fatty acids. The majority of fats in both natto and soybeans are triglycerides, with other fat components being relatively low. The lipase in hamanatto koji breaks down a large percentage of the fats but the composition of the resulting fatty acids is not different from those found in soybeans; in both cases, linoleic acid comprises more than 50 percent of the total.

Hamanatto's volatile acids and aromatic compounds are shown in figures 5 and 6. The aroma of Yamaya's hamanatto was superior to that of Daifukuji or Hamana. This aroma was very poor just after the koji was made but during the ripening of various flavors, isobutyl aldehyde, isobutyl alcohol, and various amines decrease together with a decrease in the poor aroma. However if the air circulation is bad while making koji or during the vat fermentation, alien microorganisms proliferate, leaving an undesirable aroma.

5261. Ito, Hiroshi. 1976. Hamanattô [Hamanatto (Continued—Document Part III. Continued)]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 71(3):173-76. March. [Jap; eng+]

• **Summary:** Continued. Serving Hamanatto: Hamanatto is used both as a seasoning and as a protein source. Like Daitokuji-natto it is sprinkled as a seasoning over hot rice in a small bowl, then doused with hot green tea to make the popular Ochazuke. It may also be served as an hors d'oeuvre with sake, used in place of tea cakes with whisked green tea as Chauke, or served as a rice seasoning in box lunches like shoyu-simmered kombu. Since ancient times it has been used in Zen Temple Cookery as a source of subtle flavor, diced and mixed with grated daikon, sprinkled with vinegar, or used in the Chinese tofu dish Mabo-dofu. Its abundance of glutamic acid and nucleic acids enrich the flavor of any food with which it is served.

Conclusion: Hamanatto, a progenitor of today's miso and shoyu, has been made by traditional methods since ancient times. Long lasting, it embodies the fermentation and nutritional wisdom of our forebears. Thus its scientific study reveals new and valuable information. In its traditional processing methods there are points that should be improved, yet today it is a long lasting food with its own distinctive characteristics.

Acknowledgements: I would like to thank the Yamaya and Hamana companies for supplying documents and samples, and allowing me to quote selected portions; Professor Kayo Kon of Shizuoka Women's University; and my colleagues at the National Food Research Institute, Kan Kikuchi, Teruo Ota, and Shinkuni Sasachi.

Figures show: (1) Hamanatto production methods: Flow charts of the Yamaya-Horinji method (Horinji is in parentheses), and of the Daifukuji method.

Tables show: (1) Distribution of microorganisms in Hamanatto made by Yamaya, Horinji, and Daifukuji. For each maker, there is one column for surface and another for interior. The types of microorganisms are: General bacteria, micrococcus, streptococcus, pediococcus, halophilic lactic acid bacteria, firm-forming yeasts, and molds (Mostly *Aspergillus oryzae* and *Rhizopus* species).

(2) Nutritional composition of three varieties of Hamanatto (Yamaya, Horinji, Hamana), Daitokuji natto, and regular "stringy" (*itohiki*) natto.

(3) Composition of free amino acids in various fermented foods: (A) Yamaya Hamanatto, Daitokuji Natto (both in mg per 100 gm defatted); (B) Yamaya Hamanatto, Daitokuji Natto, Soybean miso (made at controlled temperature), Soybean miso fermented at natural ambient temperature (all four in gm per 100 gm of protein); (C) Hacho miso (in mg per gm). In the far left column 18 amino acids are listed.

(4) Composition of Hamanatto lipids. The four vertical columns are: TG = Triglycerides. DG = Diglycerides. ST = Cholesterol. FFA = Free fatty acids, MG = Monoglycerides. The four horizontal rows are: Soybeans, dry. Soybeans, steamed. Natto. Hamanatto.

(5) Hamanatto volatile acids. (6) Hamanatto aromatic

compounds.

• **Summary:** Clara Lo was born in Hong Kong, but educated in the USA. She marinates her ground pork with "Chinese bean paste [jiang], which she buys in Chinatown." She points out that "a marinade of soy sauce would have the same effect, but the soy sauce must not contain sodium benzoate or other preservatives and be free of any coloring whatsoever..."

Note: This is the earliest English-language document seen (March 2009) that uses the term "Chinese bean paste" to refer to Chinese-style miso.

She notes that the Chinese have traditionally eaten a balanced diet. Based on rice, or wheat, it always includes "green vegetables, fish, meat or soy bean cake [tofu]..."

5267. Huang, Su-hei (Miss). ed. 1976. Chinese cuisine: Wei-Chuan cooking book. Taipei, Taiwan: Wei-Chuan Publishing Co. 221 p. May. Illust. Index (at front). 27 cm. [Chi; Eng]

• **Summary:** This attractive book of Chinese cooking from the Wei-Chuan Cooking School is a bilingual Chinese / English edition. On each page is one recipe and a 1/3-page color photo of the prepared dish. The title of the recipe is written in Chinese in large bold characters and is also given (to the right) in smaller bold letters in English. Above the number of servings is the province or region of China from which the recipe comes (e.g., Szechuan, Cantonese, Peking, Hunan, etc.) Most of the recipes call for ¼ to ½ teaspoon of MSG; many call for soy sauce.

The introduction (p. 2-17) contains: (1) Seasonings for Chinese cooking, incl. soy sauce. (2) Instruments [utensils] for Chinese cooking. (3) Culinary idioms (basic techniques, such as cleaning, cutting, heating the pan, stir frying, etc.). (4) Arrangement of seating order at feast. (5) Arrangement of the dinner sets at a feast. (6) Arrangement of food and menu. (7) Basic principles of arranging the menu. (8) Sample menus for banquets or ordinary meals. (9) Commonly used vegetables (2-page color photo, incl. "9. yellow soybean sprouts").

(10) Commonly used dry materials and canned foods (2-page color photo, incl. "6. fried gluten balls {'mien jin pau'}"). 13. pickled plums ('umeboshi'). 18. agar-agar. 33.

nori (purple laver sheet). 35. bean curd skin [yuba, tofu p'í]. 36. bean curd roll. 37. Pressed bean curd cake [dofugan]. 39. kau fu. 40. bean curd wrapper (bai yeh; pressed tofu sheets). 41. vegetarian gluten roll (mien jin). 42. dried bean curd noodles [kan-ssu]. 43. Fermented black beans [fermented black soybeans]. 44. bean curd stick [dried yuba stick] ('fu dzu'). 47. Soy sauce. These two pages also show Wei-Chuan Foods Corp. is a manufacturer of many Chinese-style foods.

(11) Description of some other special ingredients. "1. Hot bean paste (pronounced 'la jiao jiang'). A thick spicy paste made from ground hot red peppers and soy beans." "2. Sweet bean paste ('t'ien mien jiang'). Made 'from ground, fermented steamed bread and spices'" [soy is not mentioned]. "3. Soy bean paste ('do ban jiang'). A thick black paste similar in taste to sweet bean paste, but made from fermented soybeans." "8. Fermented black beans: Small black [soy] beans which have been marinated in soy sauce and salt and are used to flavor steamed fish and meat or in stir-fried dishes." "10. Pickled bean curd or Chinese cheese [fermented tofu] ('do fu ru'). Bean curd cubes which are first dried and then mixed with wine, spices and salt and allowed to ferment. It is used to season braised pork and duckling." "21. You tiau. A deep-fried crispy Chinese cruller..." * "Kau fu: A spongy type of vegetarian ingredient made from wheat gluten" (see p. 151). "Fried gluten ball ('mien jin pau'): A type of light, round, deep-fried ball made from wheat gluten and water." "Su tsang: A type of long thin roll made of wheat gluten and water."

Interesting soy related recipes: Bean curd noodle and celery salad (with "4 oz. bean curd noodles," Szechuan, p. 23). Steamed spareribs with fermented black beans (with "3 T. [tablespoons] fermented black beans," garlic, ginger root, rice wine, and soy sauce, Cantonese, p. 60). Steamed pork in preserved bean sauce (with "2 squares fermented bean curd" ('do fu ru'), Cantonese, p. 74). Steamed carp with fermented black beans, Hunan, p. 88. Braised carp with hot bean paste (with "1½ T. [tablespoons] hot bean paste" ('la do ban jiang'), Szechuan, p. 100). Stir-fried oysters with fermented black beans (Taiwanese, p. 132).

One section of the book titled "Bean curd & eggs" (p. 140-49) contains various tofu and yuba recipes, including: Ma-Po's bean curd (Szechuan, p. 140). Vegetarian chicken loaves (with "16 sheets bean curd skin" [yuba], Shanghai, p. 147). Eggplant rolls with chopped pork (with "1 sheet bean curd skin, Taiwanese, p. 148). Stuffed bean curd rolls (with "8 bean curd sheets (bai ye), Shanghai, p. 149). Bean curd is counted in squares. Address: Taiwan.

Foods, Progress Report on Research Activities, Jan-May, 1976. Appendix 7. *

• **Summary:** Note: This is the earliest English-language document seen (March 2009) that uses the word “taoco” to refer to Indonesian-style miso.

5269. **Product Name:** The “Billy Biggins,” and the “Weymouth Whitney” (Wheatmeat Sandwiches).

Manufacturer’s Name: Wheatmeat Co. Renamed Vegetable Protein Co. later in 1976.

Manufacturer’s Address: Waltham, Massachusetts.

Date of Introduction: 1976. May.

Ingredients: Incl. pita bread, seitan, vegetables.

Wt/Vol., Packaging, Price: Saran-wrapped.

How Stored: Refrigerated.

New Product–Documentation: Talk with Johnny Weissman. 1992. March 31. After introducing larger Wheatmeat sandwiches, John introduced a new line of smaller seitan sandwiches, in hamburger-sized pita pockets. They were named after people he knew.

Letter from John Weissman. 1992. June 25. In the spring of 1976 John moved the kitchen to a location behind a bar in Waltham, Massachusetts. With friend Robert Allen, they introduced a new line of smaller seitan sandwiches, in hamburger-sized pita pockets. They were named after people he knew, like the “Billy Biggins,” a Wheatmeat sandwich with grated carrots and tahini sauce, etc. Billy Biggins owned the bar. Then they rented space in a basement “mall” in Central Square, Cambridge, to begin a restaurant featuring Wheatmeat, Tan Pops and waffles. The developers ran away after somehow failing. John named another pee-wee sandwich the “Weymouth Whitney,” after the construction manager. It contained Wheatmeat, sauerkraut, caraway seeds, and Russian dressing made with Hain eggless mayo. These little sandwiches didn’t sell very well.

5270. Knoblauch, Mary; Leroux, Charles. 1976. Eats–Mandarin restaurants: Rating the Far East feasts in Chicago and suburbs. *Chicago Tribune*. June 4. p. B1.

• **Summary:** An excellent restaurant review with a summary of the history of Chinese restaurants in Chicago and the different Chinese regional cuisines. In 1965, there was only in Mandarin restaurant in the Chicago area—the Dragon Inn in Glenwood, about 20 miles south of Chicago; today there are about 40. For decades, Cantonese restaurants were synonymous with Chinese restaurants. Fukien, on the coast of China between Canton and Shanghai is famed for its soy sauces.

While it takes a chef only a few minutes to cook a Chinese dish, someone has usually spent hours beforehand chopping and shredding the ingredients.

The Northern China (5001 N. Clark St.) offers “whole braised fish with garlic, onion, and black bean sauce...”

The Cathay Mandarin Restaurant (3014 N. Lincoln

Ave., Skokie) offers a delicious hot and sour soup laced with “generous shreds of chicken, pork, bean curd [tofu], green onion, and dried mushrooms.” “Its Ma poo shrimp are redolent with hot bean sauce, fermented black beans, and garlic.”

The Mandarin serves a “fried bean curd and pork in chili sauce.”

5271. Burros, Marian. 1976. The no-sweat barbecue.

Washington Post. June 24. p. E23.

• **Summary:** The recipe for Chinese barbecued ribs calls for “3/4 cup hoisin sauce. 3 tablespoons yellow bean paste. 1½ tablespoons dark soy sauce.”

5272. Bol en Bois. 1976. Fabrication du tofu [Production of tofu (Brochure)]. 35, rue Pascal, 75013, Paris, France. 3 p. 5th printing, May 1979. [8 ref. Fre]

• **Summary:** A typed description with illustrations (line drawings) of how to make 900 gm of tofu at home from 300 gm of soybeans and nigari. Cites *The Book of Tofu* by Shurtleff & Aoyagi as a source. The company also publishes leaflets on soyfoods: Number 1: Tofu et okara (Tofu and okara), 1.5 Fr. Number 7: Tamari, shoyu et leurs couleurs (Tamari, shoyu and their colors), 2.0 Fr. Address: Paris, France.

5273. MacDonald, W.C.; Dueck, J.W. 1976. Long term effect of shoyu (Japanese soy sauce) on the gastric mucosa of the rat. *J. of the National Cancer Institute* 56(6):1143-47. June. [13 ref]

• **Summary:** The long term effects of feeding shoyu to rats and its effect on gastric mucosa were studied. The animals fed shoyu were smaller and healthier than the controls. Breast tumors developed in 10 control rats, but none developed in those fed shoyu. It was concluded that shoyu did not appear to be a carcinogen in rats.

Note: This is the earliest document seen (May 2000) concerning soy and prevention of breast cancer—in laboratory animals. Address: 1. Dep. of Medicine, Univ. of British Columbia, Vancouver, BC, Canada.

5274. Shurtleff, William. 1976. Notes on making shoyu from visit to Sendai Miso-Shoyu Co. in Sendai, Japan. Tokyo, Japan. 2 p. Undated. Unpublished typescript. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

5275. Shurtleff, William. 1976. Koji starter for miso and shoyu. Nerima-ku, Tokyo, Japan. 2 p. Undated (June?). Catalog.

• **Summary:** This typewritten, photocopied, 2-page leaflet describes 9 different types of koji starter for: Red miso, barley miso, soybean miso, mellow barley miso, sweet white miso, light-colored miso, fast white miso, amazake or

pickling, or shoyu. All 9 types are available from: Mitoku Trading Co., Attn: Mr. Akiyoshi Kazama, C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 03-201-6706. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

5276. *New York Times*. 1976. From column A to column Z (Advertorial). July 4. p. ADS12.

• **Summary:** This is a full page advertorial describing and promoting China's different regional cuisines, including Taiwanese cuisine. We are not told which organization is paying for the ad. Could it be the government of Taiwan?

"For Chinese cuisine—which is unmatched by any other—is a brilliant blend of contrasting tastes and textures. But then, it's the product of several thousand years of genius." "As all aficionados of Chinese food know, Taipei [capital of Taiwan] is a gourmet's paradise." The island republic of Taiwan is a "vital center of vegetarian cuisine." Most customers at these meatless restaurants are Buddhists, who are vegetarians for religious reasons. Over the past 2,000 years, Buddhists have developed a host of totally vegetarian [vegan] dishes that simulate their Chinese counterparts based on meat, fowl, or fish. For example, monks long ago developed a snack that "tastes surprisingly like ham by blending dry-roasted peanuts with tofu, or bean curds, that had been sauteed in soy sauce."

"In vegetarian restaurants, the menu features such dishes as 'roast duck' or 'pork balls' or 'fried fish.' But in fact the ingredients are such non-meat products as soy bean curds, mushrooms, seaweed, water chestnuts, and wheat gluten. Yet so artfully are they prepared and sauced that most non-vegetarians, unless they are forewarned, believe they are savoring meat dishes." Address: Food editor.

5277. Doorn, Wil van. 1976. Lima, the European Erewhon. *East West Journal*. Aug. p. 21-22, 24-25. [Eng]

• **Summary:** This is an interview with Pierre Gevaert, co-owner and manager of Lima natural food factories in St. Martens, Latem, Belgium. Gevaert was working for world peace before George Ohsawa visited in May 1957. In early 1959 Gevaert started to produce large quantities of miso and tamari soy sauce at St. Martens Latem, Belgium, with the help of two Japanese specialists that Ohsawa had sent. The company, named Lima, was officially started in March 1960, though they had been producing food for almost 3 years under the name "Sesame."

In 1962 Lima started to contract with farmers to grow grains organically; they were the first company in Europe to do this, in part because they were so familiar with organic agriculture themselves. "Using the knowledge gained from our own experience, we taught many farmers to grow their produce organically again in the traditional manner." Brown rice was grown in the south of France. In 1967, after operating at a loss for many years, a businessman-

consultant named Edouard van der Seelen advised them to halt production of miso and tamari. Sales were good but the products took 3 years to mature.

Pierre is a Catholic who has practiced macrobiotics for 19 years.

Note: This is the earliest document seen (Jan. 2003) concerning the soyfoods movement in Europe.

5278. Ohsawa-Japan. 1976. List of macrobiotic food products & related items. Tokyo, Japan. 2 p. Single sided.

• **Summary:** Printed with black ink on white paper. Soy related products: Soya bean sauce (shoyu). Soya bean paste (miso). Mugi miso. Kome (koji) miso. mame miso. Tekka. Black [soy] beans (Kuromame). No prices are given. Address: 11-5 Ohyamacho, Shibuyaku, Tokto, Japan. Phone: (03) 465-5021.

5279. *Times (Walworth, Wisconsin)*. 1976. Kikkoman announce expansion program. Aug.

• **Summary:** The addition of 24 new fermentation tanks will increase Kikkoman's capacity from the present 2.5 million gallons/year [approximately 10,000 kiloliters/year] of soy and teriyaki sauces to approximately 3.3 million. The plant is currently operating at 90% of capacity, and employs 65 persons. Production in the expansion will start in about 1 year.

5280. *Chicago Tribune*. 1976. Stocking your Mandarin pantry: A grocery list for Mandarin cooks. Sept. 16. p. D1.

• **Summary:** There are four basic categories of supplies: Dried, canned, condiments, and produce. Under "Dried" we find: "Fermented black beans—Also called salted black beans. Sold in plastic bags, slightly moist; store in covered container in refrigerator."

Under "Canned" are Hoisin sauce, and Hot bean paste. The latter is "Essential to Szechwan dishes... (Don't buy sweet bean paste, yellow bean paste, or soy bean paste by mistake).

Under "Condiments"—"Light soy sauce—The kind you are used to. Buy the ubiquitous brand all Chinese stores and restaurants use, Kikkoman; buy at least a pint." "Dark or black soy sauce—Used as flavoring. Thicker than regular soy, it has a molasses-like quality and is a necessity in many dishes. Measure carefully, though, because it can be overpowering." Also rice vinegar, and sesame oil made in Taiwan or Hong Kong, rather than Japan.

Produce: "Fresh bean curd [tofu]—Sold as produce in plastic containers in a chunk covered with water. Keeps a week in the refrigerator with two or three water changes. (Don't buy dried bean curd, unless your recipe specifies it)."

A photo shows a man walking down South Wentworth Avenue with many Chinese signs and shops in the background.

5281. Greer, Gery. 1976. A look at traditional Japan. *Chicago Tribune*. Sept. 19. p. C13.

• **Summary:** The writer has traveled to Shirakawa-go, a picturesque and traditional village in the Sho River Valley, high in the Japanese “Alps.” The huge thatched-roof houses, built 100 to 250 years ago, with their steeply sloping roofs, are built in the style called *Gassho-zukuri* (“fingertips held together as if in prayer”). Traditionally, the smoke and soot from each home’s central sunken, open-pit fireplace coated and preserved the straw and wood, so that the thick roofs lasted 70 years. The houses were built without nails or hinges; the wood was fastened together firmly with wooden pegs and handmade ropes.

Each October the quiet village is transformed as throngs arrive for the annual *Doburoku Matsuri* (“moonshine festival”). “Doburoku is unrefined sake (rice wine) and it is thick, milky, and potent.”

A visitor can stay at a *minshuku* (a private home turned into a sort of hostel) which is usually less expensive than a *ryokan* (traditional Japanese inn). The *minshuku* typically serves two meals. “Usually dinner will consist of one whole small fish cooked in soy sauce, various mountain vegetables and weeds, *miso* soup... with *tofu* (bean curd), *tsukemono* (Japanese ‘pickles,’ usually pickled cabbage, cucumber, and ginger), and rice.

Breakfast, which is almost identical, “includes a raw egg in place of the vegetables. Break the egg into the bowl provided, add soy sauce, beat slightly with your chopsticks and pour over the [steaming hot] rice”—which partially cooks the egg.

Note: The historic village of Shirakawa-gô, in Gifu prefecture of central Japan (northwest of Tokyo), is one of Japan’s UNESCO World Heritage Sites.

5282. Erewhon, Inc. 1976. Erewhon. Autumn 1976. Boston, Massachusetts. 17 p. Catalog and price list.

• **Summary:** On the front cover is a photo of six adults and three children standing atop the Erewhon warehouse building at 33 Farnsworth Street in Boston. In the background are skyscrapers and the Boston skyline. The people are: Front row (left to right): Maureen Trail Young (sister of Rosemary Trail), Richard Young, Holly Young (youngest child), Tansy Young, Lori Young. Back row (left to right): David Simon, Jeanne Bleiweiss, Tom Herzig.

On the first page, Tyler Smith, writes about this catalog and upcoming events. “To help stimulate our customers, in the late Fall, Erewhon will present a lecture and demonstration day in both the New York and Boston areas which will feature as the main teacher, Mr. Bill Shurtleff, author of *The Book of Tofu* and *The Book of Miso*. He will be coming to this area on a lecture tour from Japan.”

Contents: Grains. Cereals. Flour. Pasta. Juices. Beverages. Spring water. Natural sodas. Nik’s snacks. Barbara’s bakery. Bliss pastries (whole-grain, sweetened

with unfiltered honey, made at Cable Springs Bakery). Donna’s butter cookies, Butterchews, Lind’s candy bars. Chico-San candies (Yinnies, Yinnies San-Wich). Crackers & Chips (incl. tamari corn chips or corn tortilla chips). Rice cakes & bread. Cheese. Butter. Yogurt. Kefir. Produce. Dried fruit. Seeds & nuts (incl. alfalfa seeds unsprayed, almonds, Brazils, cashews, peanuts, pecan halves, pistachios, pumpkin seeds, sesame—brown, sunflower seeds, walnuts). Granola. Beans (incl. aduki [azuki], organic black soybeans or yellow soybeans from New York, and black soybeans from Japan). Seed & nut butter (almond butter, cashew butter, peanut butter {Erewhon or Deaf Smith—crunchy, or unsalted}, sesame butter, sesame-peanut butter, sesame tahini, sunflower butter). Fruit butters. Oils: Erewhon oils, Arrowhead oils (incl. Soy oil). Condiments-sauces: Erewhon sauces (incl. 4 sizes of tamari soy sauce), Erewhon miso (kome {rice & soy}, Hacho {soy only}, or mugi {barley & soy}—each in 3 sizes), Erewhon Japanese imports (incl. shiitake mushrooms, barley kogi [sic, koji] to make mugi [miso], kuzu arrowroot powder, tekka seasoning, nigari (to make tofu), umeboshi), salt (incl. Herbamare salt, unrefined sea salt from France), olives, pickles, sauerkraut, brown rice vinegar (from Japan), Pure and Simple vinegar (Honey, red wine, apple cider natural), mulled cider spices. Baking (incl. barley malt syrup). Niblack’s. Fearn’s [sic, Fearn’s] (incl. Rich Earth wholewheat & soy pancake mix, Soya powder natural). Honey-syrup. Erewhon packages: Beans, grains & seeds (incl. soybeans yellow organic), hot cereals, flours (incl. soybean full-fat organic), baking. Arrowhead packages. Sea vegetables (agar-agar, hiziki [hijiki], kombu, nori, flavored nori with tamari, wakame, dulse). Fmali ginseng. Teas: Erewhon, Celestial Seasonings. Body care: Cattier clay, Dr. Bronner’s, Natural Living, Nature’s Gate, Orjene, Tom’s, luffas. Cookware (incl. soy dispenser glass). Readables: Magazines, books, posters, flyers-recipes. Apparel. Discontinued—sale. New products (Bob Swanson was the former owner and creator of Llama, Toucan and Crow, a New England distributor; Chico-San’s organic rice cakes).

Erewhon’s New York / New Jersey office is located at 303 Howe Ave., Passaic, NJ 07055. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

5283. Ford, Frank. 1976. The simpler life cookbook from Arrowhead Mills. Fort Worth, Texas: Harvest Press. 157 p. Introduction by Fred Rohé. Index. 18 cm. [13* ref]

• **Summary:** The copyright page states: “First printing—Oct. 1974—23,000. Second printing—Feb. 1976—17,000. Third printing [this book], 110,000. This book is the second third edition of a book which was originally released under the title of *Pack to Nature*.”

The body of the book is the same as that of earlier printings. However the 2-page directory titled “Some Natural Foods Sources” has been updated and expanded. It

now lists 41 companies with full addresses and Zip codes. New additions include: Arrowhead Mills Distributing Co. (Denver, Colorado). Ceres Natural Foods (2582 Durango Dr., Colorado Springs, Colorado). Cinagro Distributors (now in Chamblee, Georgia). Earth Bound, Inc. (Woodbury, Connecticut). Earthwonder (Blue Eye, Missouri). Health Foods, Inc. (Des Plaines, Illinois). Houston Health Food Distributors (Houston, Texas). Kahan & Lessin Co. (Compton, California). Kozek Products (Los Angeles, California). Landstrom Co. (San Francisco, California). Laurelbrook Foods No. 2 (Raleigh, North Carolina). Lifestream Natural Foods (now at 1241 Vulcan Way, Richmond, BC, Canada). Manna Foods (Scarborough, Ontario, Canada). Midwest Natural Foods (Ann Arbor, Michigan). Nature's Best (El Segundo, California). Pure & Simple (795 West Hedding, San Jose, California). Shiloh Farms, Inc. Eastern Warehouse (Martindale {near New Holland}, Pennsylvania). The Wide Earth Store (Anchorage, Alaska). Tochi Products (Fargo, North Dakota).

Note: This is the earliest document seen (March 2006) that mentions Health Foods, Inc., a wholesale distributor of health foods and natural foods in Des Plaines (near Chicago). Address: Deaf Smith County, Hereford, Texas.

5284. Kozaki, Michio. 1976. Tōnan Ajia no miso to shōyu [Southeast Asia's miso and shoyu]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* No. 271. p. 1-7. Sept. [Jap]

5285. Revelle, Roger. 1976. The resources available for agriculture: The physical resources of earth, air, fire (energy) and water are large but essentially fixed. The biological and social resources, however, are far from being pressed to the limit. *Scientific American* 235(3):164-68, 170, 172-74, 177-78. Sept.

• **Summary:** Pages 170 and 172 discuss the importance of microorganisms and fermentation. "The fermentation process not only adds distinctive flavors, which are prized in their own right, but also often augments the content of riboflavin and other vitamins. Sauerkraut and yogurt are familiar fermentation products in American diets; tempeh, ragi, sufu, shoyu, ang-kak, tea fungus and mizo [sic, miso] are among those eaten in Asian countries." Address: Director, Center for Population Studies, Harvard Univ., Massachusetts.

5286. Shurtleff, William; Aoyagi, Akiko. 1976. The book of miso. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. Sept. Illust. by Akiko Aoyagi. Index. 28 cm. Revised ed. 1981. New York, NY: Ballantine Books, 620 p. [60 ref]

• **Summary:** Contents: What is miso? Preface. Acknowledgments. Part I. Miso: Savory, High Protein Seasoning. 1. Soybeans, protein and the world food crisis. 2. Miso as a food. 3. The miracle of fermentation. 4. The

varieties of miso: Introduction. An overview: Natural vs. quick miso, salty vs. sweet miso, red vs. white miso, chunky miso and koji miso vs. smooth miso, expensive vs. inexpensive miso, miso from the provinces.

Regular Miso: Rice miso (red / aka, light-yellow / shinshu, mellow red / amakuchi akamiso, mellow beige / amakuchi tanshoku, mellow white / shiro koji, sweet red / edo or edo ama-miso, sweet white / Kyoto shiro miso), barley miso (karakuchi mugi, mellow barley / amakuchi mugi), soybean miso / mamé miso (miso-dama, Hatcho miso, soybean miso / mame miso, tamari miso). Special Miso: Finger lickin' miso / Namemiso (Kinzanji miso, moromi miso, hishio, namémiso, natto miso, goto miso), sweet simmered miso / nerimiso. Modern Miso: Akadashi miso, dehydrated or freeze-dried miso, low-salt / high-protein miso.

Part II. Cooking with Miso (400 recipes). 5. Getting started. 6. Recipes from East and West: Miso toppings, miso in dips & hors d'oeuvres, miso in spreads & sandwiches, miso dressings with salads, miso in soups & stews, miso in sauces, miso with grains, beans & tofu, miso in baked dishes, miso sautéed & simmered with vegetables, miso in grilled dishes, miso in deep-fried dishes, miso & eggs, miso in desserts, miso pickles, koji cookery.

Part III. The Preparation of Miso. 7. Making miso at home and in communities. 8. Japanese farmhouse miso (incl. miso-dama). 9. The traditional miso shop. 10. The modern miso factory. Appendixes: A. A brief history of chuang, miso, and shoyu: Introduction, Chinese chuang, early Japan, the Nara Period (710 A.D. to 784 A.D.), the Heian Period (794 A.D. to 1160 A.D.), the Kamakura Period (1185 A.D. to 1333 A.D.), the Muromachi Period (1336 A.D. to 1568 A.D.), tamari—the forerunner of shoyu (Priest Kakushin returns to Japan from China, where he learned how to make Kinzanji miso, settles at Kokoku-ji temple near town of Yuasa, discovers tamari), miso during the Edo Period (1603 A.D. to 1867 A.D.), the development of shoyu the Meiji and Pre-war Periods (1867 A.D. to 1941 A.D.), modern times, transmission to the West.

B. The varieties of Chinese chuang, Korean jang and Indonesian Tao-tjo. C. The chemistry and microbiology of miso fermentation: Introduction, koji starter molds, making koji starter, making koji—the first fermentation, cooking the soybeans, preparing the miso—the second fermentation, the finished miso. D. People and institutions connected with miso: In Japan—Miso research scholars and institutes, exporters of natural miso and koji to the West, traditional or semi-traditional shops making natural miso, Japan's ten largest miso factories (gives the production in tons/year for several companies), other well-known miso makers. Makers of koji starter and koji, Japanese restaurants specializing in miso cuisine. North America—Miso research scholars and institutes, commercial miso makers, companies importing Japanese miso, koji, or koji starter, individuals interested

in miso. Europe (Belgium, England, France, Germany, Holland, Italy, Portugal) and Latin America (Brazil, Costa Rica, Mexico, Venezuela). E. Miso additives. F. Miso with seafoods, chicken, and meat. G. Table of equivalents. H. So you want to study miso in Japan? Bibliography. Glossary. About the authors (autobiographical).

Note 1. This is the earliest English-language book seen (July 2000) that has the word “miso” in the title. It is also the first book in the Western world written entirely on the subject of miso.

Note 2. This is the earliest document seen (July 2000) that mentions “Hatcho miso” (spelled that way—which is now the correct romanization). Hatcho is a Japanese place name meaning (approximately) “Eighth Street.”

Note 3. This is the earliest document seen (Sept. 2002) that contains industry and market statistics on individual miso companies.

Note 4. This is the earliest document seen (March 2009) that gives illustrated details about commercial miso production.

Note 5. An advertisement on the inside rear cover of the paperback edition of this book announced that the authors were preparing *The Book of Sea Vegetables*. That book was half researched and written but never published because of concern with pollutants in sea vegetables, and increased interest in soyfoods. Address: 790 Los Palos Dr., Lafayette, California 94549.

5287. Shurtleff, William; Aoyagi, Akiko. 1976. *Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977* [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** On 13 Sept. 1976 the authors bought a large, white 1975 Dodge Tradesman 300 van (used, with 40,000 miles on it). On one side Akiko painted in large, bold letters “Tofu and Miso America Tour 1976-77.” Their *Book of Tofu* had been published in December 1975 and *Book of Miso* on 23 Sept. 1976. On Sept. 29 they packed the van full to the ceiling with their books on tofu and miso, plus Larry Needleman’s tofu kits—and departed.

This trip had four main purposes: (1) To introduce tofu and miso to America; (2) To introduce people to the many benefits of a meatless/vegetarian diet; (3) To encourage people to start soyfoods companies, especially tofu shops; and (4) To promote the authors’ newly-published *Book of Tofu* and *Book of Miso*.

This itinerary includes the name and address of 64 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movements: Sept. 29—David and Kathleen Sandler, Robert Dolgin, Don Wilson, Farm Food Co. (San Rafael, California; we observed and recorded in detail how Don Wilson made tempeh and tempeh starter / inoculum at Farm Food Co.). Oct. 1—Petaluma, California. Oct. 2—Josephine County Food

Center, Grants Pass, Oregon. Oct. 3. Heliotrope Natural Foods (Salem, OR). Oct. 4—West Bank Cafe (Corvallis, OR). Oct. 5. Visit Linda Shurtleff (McMinnville, OR). Visit *Rain Magazine* (Portland, Oregon). They do an interview which is published in their Nov. 1976 issue. Oct. 6. Blake Rankin and Janus Natural Foods (Seattle, Washington). Oct. 7. Janus. Oct. 8—Luke Lukoskie and Sylvia Nogaki of Island Spring (Vashon, Washington). Oct. 10—Jack Grady, a macrobiotic (Spokane, WA). Oct. 13—Univ. of Minnesota. Oct. 14—Georgie Yiannias of Wedge Food Co-op and Ananda Marga (Minneapolis, Minnesota). Our largest class with 300 people. Oct. 15—Barbara (“Bobbie”) Reinhardt Shurtleff dies of colon cancer at Alta Bates Hospital, Berkeley, CA. Oct. 15. Famine Food Co-op (Winona, Minnesota). Oct. 16—Bonnie Maroney of The Wisconsin Farm (Ettrick, WI). Oct. 19—Visit George Strayer and Larry Krueger of the American Soybean Assoc. (Hudson, Iowa). Visit David and Ann Tucker (Iowa City, Iowa). Oct. 20. Outpost Natural Foods (Milwaukee, WI). Visit Bountiful Bean Co-op. Oct. 21. Visit Dr. Danji Fukushima and Kikkoman Foods (Walworth, Wisconsin). Oct. 22—Visit Drs. Hesseltine, Wang, Wolf, Mustakas, Cowan at Northern Regional Research Center (Peoria, Illinois). Oct. 23—Morning class on commercial production for Les Karplus and 5 people at Vegetarian Incorporated (Urbana, Illinois). Oct. 23-24. Side trip to visit ADM and Staley (Decatur, IL). Oct. 24—Les and Debbie Karplus of Vegetarian Inc. (Urbana, IL). Oct. 25—Visit Dr. L.S. Wei of the Univ. of Illinois Dept. of Food Science (Urbana, Illinois). Evening program for Karplus in Urbana. Oct. 26. Purdue University (Indiana). Oct. 27—Chris Steele (Lansing, Michigan). Oct. 28—Mike Potter and Louis Howie of Eden Foods (4601 Platt Rd., Ann Arbor, Michigan). Oct. 29—Calico Market (Erie, Pennsylvania). Oct. 30—Visit Greg Weaver and Jay Thompson of Rochester Zen Center (Rochester, New York; Later Northern Soy). Visit Genesee Co-op. Oct. 31—Alternative Health Education Center (Rochester).

Nov. 1—Visit Arnold Karmody at Empty Cloud (Canandaigua, New York). Meet Dr. Keith Steinkraus (Geneva, New York). Nov. 2—Visit with Dr. Steinkraus at New York Agric. Exp. Station (Geneva, NY). Lunch together with his wife, Maxine. Nov. 3—Tom MacDonald at Hannibal, New York. Nov. 4—Ira and Kathy Leviton of Corncreek Bakery (South Deerfield, Massachusetts). Visit Laughing Grasshopper tofu shop just before it begins operation. Nov. 5—Fritz Hewitt of Common Ground Restaurant (Brattleboro, Vermont). Visit Tom Timmins of Llama, Toucan & Crow (Brattleboro). Nov. 6. Shep Erhard (Franklin, Maine). Nov. 7—Ann S. Johnson at Univ. of Maine (Orono, ME). Nov. 8—Visit Marine Colloids (Rockland, Maine). Nov. 10—Drive to Boston, stay with Nahum & Beverly Stiskin (Brookline). Nov. 13—Tofu & Miso program in Boston. Visit Erewhon Natural Foods (33 Farnsworth St., Boston, Massachusetts), Martha Trundy, Jeffrey & Gretchen Broadbent. Nov. 14—Visit to shops in Boston’s Chinatown. Michio and Aveline Kushi

give a big party in our honor at their home at 62 Buckminster Rd., Brookline, then take us out to dinner at the Seventh Inn. Nov. 15–Tofu-making class at a home in Boston. Nov. 17–Visit offices of *East West Journal*. Sherman Goldman conducts long interview, later published in Jan. 1977 issue. Misomaking class at home of Ken Burns. Nov. 18–Visit Joel Wollner in Cape Cod. Nov. 19–Radio show then program for Joel. Nov. 20–Peter Smith at Quaker group in Pennsylvania. Nov. 22–Visit Woods Hole, Massachusetts to study sea vegetables. Evening program at New Bedford, MA. Nov. 23–Stay with Seung Sahn, Sa Nim at Providence, Rhode Island Zen Center. Meditate and show students how to make tofu. Evening at Insight Meditation Center, Barre, MA, a Vipassana center in a former Catholic seminary, co-founded in 1976 by Jack Kornfield, Joseph Goldstein and 3 others. We have dinner, meditate with the sangha, and hear Jack talk about Vipassana. Nov. 24 Sit morning zazen with master and students at Providence zendo. Nov. 25–Thanksgiving. Akiko and I stay alone in a house near Hartford, Connecticut and taste a good tofu pumpkin pie. I read about seaweeds. We take a long walk in the countryside. Nov. 26–Program for Erewhon Natural Foods in Hartford (stay with Maria Orefice, owner of Garden of Eating restaurant in Hartford). Article in *The Hartford Courant* (Dec. 1). Nov. 27–Long River Food Coop in Connecticut. Nov. 28–Stay with Susan and Kirk Gershuny of Snowflower (Tivoli, New York). They plan to make soy ice cream soon. Nov. 29–Drive in Deep snow to the New York Farm in Franklin, New York. Stay in a big house they built. Nov. 30–Carl Bethage of the East West Center in Gardiner, New York. Also did a radio program.

1976 Dec. 1–Visit Frances Moore Lappé at her upstairs office in Hudson-on-Hastings, New York. Then visit her large home on the hillside. Dec. 1–5–We missed a program for Annemarie Colbin in New York City (partly because we feared our van would be burglarized on the street) so we stayed Dec. 1–5 at the luxurious home of Leo S. Nikora (Niki; Bobbie's friend). I work on writing *The Book of Kudzu*. Dec. 6–7. Program for 40 people (Hosts: Nancy N. Bailey and Robert Rodale) at Rodale Press (Emmaus, Pennsylvania); I am surprised they serve white sugar on their dining tables. Dec. 8–Tim Snyder of Ecology Co-op in Philadelphia. Dec. 9–Stay at home of Sylvia Anderson in Pleasantville, New Jersey and do a program upstairs in a modern university. Study magnificent photos of Native Americans by Edward S. Curtis. Dec. 10–Visit Jay and Freya Dinshah of the North American Vegetarian Society (Malaga, New Jersey); their poor vegan child has bowed legs. Dec. 12–Cindy Blouse in Dallastown, Pennsylvania. Dec. 13–Visit Laurelbrook Foods, a natural foods distributor in Forest Hill, Maryland. We meet Rod and Margie Coates. Dec. 14–Big program hosted by Ella May Stoneburner and Seventh-day Adventists near Washington, DC. Dec. 15–Michael Rosoff (who ran the East West Center in Washington, DC) planned to host a class in a DC church. After we witness

a robbery, we are afraid to leave our van on the street. So we do a scaled-down program in the home of Murray and Pam Snyder, which was the East West Center in Baltimore, Maryland. Visit Laurelbrook Foods Warehouse #2 in Durham / Chapel Hill. Dec. 16–Roanoke Food Co-op in Copper Hill, Virginia. Dec. 17–18–John Shuttleworth and Jim Morgans of *Mother Earth News* (Hendersonville, North Carolina). They do a long interview and take photos. Program at night. Note: An audio tape of Bill's talk at this program is filed with Soyfoods Center documents for 1976. Dec. 19–Chandler Barrett in Atlanta, Georgia.

Note 1. This is the earliest document seen (April 2001) concerning the work of Ira Leviton or Tom Timmins with soy. One evening, before Shurtleff was scheduled to speak at Leviton's Corncreek Bakery, Leviton drove Shurtleff to see the Laughing Grasshopper Tofu Shop which was under construction on the second story of an old wooden building in the nearby town of Millers Falls, Massachusetts. Much of the equipment was made out of wood—including wooden curding vats and a wooden cider press. The company opened in Jan. 1977.

Note 2. This is the earliest document seen (April 2006) concerning Llama, Toucan & Crow in Brattleboro, Vermont.

Note 3. This is the earliest document seen (May 2006) concerning the forerunners of United Natural Foods, Inc. (INFI)—in the form of Llama, Toucan & Crow. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

5288. Shurtleff, William. 1976. *New-Age Foods Study Center: Basic purposes and activities* (Leaflet). Lafayette, California. 1 p. Single sided. Sept. 28 cm.

• **Summary:** "1. To work toward creative, low-cost solutions to the present world food/protein crisis by doing basic research and writing books... Our special interests include soybean products (tofu, miso, tempeh, shoyu, etc.), sea vegetables, whole-grain bread, and kuzu.

"2. To aid in the spread of the ideas found in our writings by regularly responding to invitations from any part of the world to do lecture/demonstrations and cooking classes."

3. To encourage the adoption of meatless and vegetarian diets which help make the best use of the planet's precious food resources, are low in cost, conducive to the development of a healthy body and clear mind, kind to animals, and ecologically sound.

"4. To encourage people in the West to begin commercial or community production of tofu, miso, and tempeh..."

"5. To provide centers where people can come to learn more about our work and to begin their own study of basic important foods. In Japan, we assist people in studying with tofu- and miso masters..."

"6. To work actively to promote the key concept of

food self-sufficiency and simpler, low-cost lifestyles that are harmonious with the needs of the planetary ecosystem. Likewise to encourage deeper understanding of selfless service, and of daily life and work as a spiritual practice.

“7. To provide a catalog of publications and materials related to our work. We invite you to contact us and we hope we may be of service to you.” Address: New-Age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: (415) 283-3161.

5289. Shurtleff, William; Aoyagi, Akiko. 1976. Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977. Continued from Jan. 1977. [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** Continued: 1976 Dec. 21. Arrive at The Farm in Summertown, Tennessee. Meet Margaret Nofziger and Stephen Gaskin. Stay until 2 Jan. 1977. We stayed most of the time at “Hoot Owl Hollow,” a large community owner-built home with many families; our host was Edward Sierra. During the next few weeks we stayed in a parked mobile home (owned by the Sandlers) in a lovely valley about 1 hour drive away. I worked on *The Book of Kudzu* final draft. Heavy confrontation with Farm folks—as I am about to start a program—about how they didn’t like my way. Write a 4-page pamphlet titled “What is Tempeh?” jointly with Cynthia Bates. 1976 Dec. 31—This is our first year with significant income (\$27,390, mostly from Autumn Press royalties) but no profit. During 1976 thirty articles and book reviews about our work with tofu and miso were published in magazines and newspapers in the USA and Japan.

1977 Jan. 2—Our Tofu & Miso America Tour continues. Jan. 3—Stay in a suburban home with Lynn Delacruz in Meridan, Mississippi. Jan. 4—Program for Atlantis Distributors in New Orleans. That night we stay in a trailer home with John and Katherine Gabriel in Houma, Louisiana. They are from The Farm and make commercial tempeh in their trailer. Jan. 6—Jim Baker (Dallas, Texas). After the program I meet Dr. Ralph Sand who is studying tofu and soy cheeses at Anderson Clayton. We also visit with my cousin, Bob Shurtleff, near Dallas. Jan. 7—Jane Binante in Denton, Texas. Jan. 9—Jim Hemminger of Gregg St. Tofu Co. (started by Thom Leonard) in Fayetteville, Arkansas. His partner is Mary Weingartner. We sleep on the floor of a small house in Fayetteville and the next morning see Jim make tofu in a bathtub. Jan. 10—East Wind in Tecumseh, Missouri. Jan. 12—Stay with Robert Nissenbaum (a fine, humble fellow) in St. Louis, Missouri. I finish typewritten manuscript of “What is Tempeh?” Jan. 13—Program at a restaurant, The Sunshine Inn (St. Louis). Sponsored by The Ethical Society. Stephen Uprichard, Dale Deraps, and Robert Nissenbaum are there.

Jan. 15—Meet David and Danette Briscoe (Kansas City, Missouri; they soon start publishing *Soycraft*, a small periodical on soyfoods), dinner with Thom Leonard at his home in Lawrence, Kansas (we have miso soup with miso

that Thom made, then do a big program sponsored by the Mercantile Community Co-op in downtown Lawrence at either the Lawrence Library or Community Center—in a big downstairs room. I tape the lecture. Unbeknownst to me, Ken Bader, CEO-to-be of the American Soybean Assoc., is in attendance). Jan. 16—Visit Bob Amelay of the Omaha Food Co-ops in Omaha, Nebraska. Jan. 17—Drive across Nebraska to Denver. Jan. 18-19—Dave Bolduc and Christie Shurtleff in Boulder, Colorado. The first night we do a big tofu program in the historic Boulder Theater. That afternoon we have an audience with the Karmapa—a high Tibetan spiritual leader, who has diabetes; we give him an inscribed hardcover copy of *The Book of Tofu*. Akiko recalls cooking tofu burgers for him. That evening in a large, packed hall, we witness his Holiness conduct the Black Crown Ceremony. Jan. 20. Jimmy Carter is inaugurated as president. Jan. 24—Program for The Colorado Farm in Hotchkiss, Colorado—way out in the boondocks. Jan. 25—Stay with Andrea Chin in Taos, New Mexico. Visit Lama Foundation high above Taos in the snow (Steve Durkee, teacher). They have many small meditation cubicles around the hillside and have just finished a nice adobe meditation hall. Near Durango, Colorado, we visit Ed Tripp, who looks lonely, sad and desolate, farming a little patch of organically grown wheat and living alone in a bare shack on coffee and cigarettes. Jan. 26. We stay somewhere in New Mexico. Jan. 27—Program at the First Unitarian Church in Albuquerque (79 p.m.) hosted by Michele E. Martin of Jemez Bodhi Mandala Zen Center, Jemez Springs, New Mexico. Sit meditation in their cold Rinzaï zendo then soak in the hot springs outside in the snow. Their teacher, Sasaki roshi, is not there. Jan. 28—Susan Berry in Silver City is supposed to host a program. We cannot find her house. At one point along in here we do a program in or near Utah in a remote church up on a little bluff. Dinner before at Frosty Hot Dog place. Jan. 29—Long drive across Arizona to San Diego. Jan. 30—Big program in San Diego for 350 people at the Ocean Beach Community School hosted by David and Barbara Salat, publishers of *Well Being* magazine. Afterwards we stayed overnight on their houseboat in San Diego Bay. Magical. Akiko had a bad cough and was very tired.

In Los Angeles we spend a day (in late January or early February 1977) with Lewis Headrick and Jimmy Silver visiting three small tempeh shops: Bali Foods (in Baldwin Park, run by Mr. Henoeh Khoe), Country Store Health Foods (in Sun Valley; Joan Harriman), and Toko Baru (in West Covina; Randy Kohler). One evening we had dinner with Mr. Yamauchi and perhaps Al Jacobson. I gave a presentation on tofu. Afterwards, in the parking lot, Mr. Yamauchi gave me an envelope containing several hundred dollars in bills—his way of saying thank you for the work we were doing on behalf of tofu. Feb. 1. Drive to northern California, then have dinner at the home of Herman and Cornelia Aihara (Oroville, CA). Feb. 2. Last program of the tour for

Harold Lockhard of the Sacramento Natural Foods Co-op (Sacramento, California; Program is in a modern college building).

On 3 Feb. 1977 arrive home in Lafayette, California.

On this 4-month tour the Shurtleffs, trying to do for soyfoods what Johnny Appleseed did for apples, presented 70 public programs attended by about 3,646 people, did many media interviews and appearances, and travelled 15,000 miles. They had a gross income of \$18,020 from honoraria and sales of their books (Book of Tofu, Book of Miso), tofu kits, pamphlets, and nigari. Total trip expenses were about \$5,361 plus about \$7,200 for books from the publisher, leaving a net income of about \$5,459. It was a huge, challenging, and exhausting Odyssey that bore abundant fruit in the founding of a new tofu shop almost everywhere they spoke.

1977 Feb. 9—Meeting in Lafayette (790 Los Palos Dr.) with Robert Dolgin and David Sandler (from the Farm and Farm Foods in San Rafael) and Larry Needleman leads to the establishment of Bean Machines, Inc. (BMI). The Farm places a firm order for a Japan tofu system.

1977 Feb. 12—Bill and Akiko leave America and fly to Japan. Air fare paid by Hydrometals. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

5290. Shurtleff, William; Aoyagi, Akiko. 1976. Tamari (Document part). In: William Shurtleff and Akiko Aoyagi. 1976. *The Book of Miso*. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. See p. 50, 219-21. Sept. Illust. by Akiko Aoyagi. Revised ed. 1981. New York, NY: Ballantine Books, 620 p. [60 ref]

• **Summary:** In Chapter 5, “Getting started,” in the section on “Basic ingredients,” is a subsection titled “Tamari” which states (p. 50): “A close relative of shoyu, tamari is prepared from a koji which contains only soybeans and no wheat; it has a distinctive, slightly strong flavor and aroma, a dark brown color, and a fairly thick consistency. Produced either as a byproduct of tamari miso (p. 44) or as a food in its own right, it is now rarely used in its natural form, being generally made into *sashimi-damari* by mixing it with miso-damari (see below), *mizumame*, cane sugar, caramel, and often preservatives. Although not widely used in Japan, it remains fairly popular in Kyoto and central Japan, where it is used as a seasoning for *sashimi* (raw fish). In ancient times tamari was widely used in its natural form and highly prized as a fine seasoning, having much the same flavor as a best-grade Chinese soy sauce. Today, an increasing amount is made synthetically.

“*Miso-damari*—also called *uwahiki*—is the tamari-like liquid that accumulates in any variety of miso during fermentation. Thicker and richer than tamari, it is gathered only in very small quantities and is not sold commercially. A delicious by-product of most homemade miso (it rises to the

surface in summer and settles in winter), it may be used like shoyu and is especially delicious with hors d’oeuvres.

In “Appendix A: A brief history of chiang, miso and shoyu,” is a section (p. 219-21) titled “Tamari: The forerunner of shoyu.” Address: 790 Los Palos Dr., Lafayette, California 94549.

5291. Shurtleff, William; Aoyagi, Akiko. 1976. Appendix B: Varieties of Chinese chiang, Korean Jang, and Indonesian Tao-tjo [Tauco] (Document part). In: William Shurtleff and Akiko Aoyagi. 1976. *The Book of Miso*. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. See p. 277-331. Sept. Illust. by Akiko Aoyagi. Revised ed. 1981. New York, NY: Ballantine Books, 620 p.

• **Summary:** Contents: Introduction. Note: Of the romanized Chinese names given in curly brackets below, the first is in the Wade-Giles transliteration; the second is in the more modern pinyin transliteration.

Chinese chiang: Introduction, Red or regular chiang (chunky chiang, hot chunky chiang, Szechwan red-pepper chiang, Hamanatto chiang, Cantonese red chiang, great chiang, yellow-red chiang), black chiang (sweet wheat-flour chiang, black chiang), assorted chiangs (introduction, red-pepper chiang, Canton sweet simmered chiang, dried chiang, other varieties (none of which contain soybeans or grain koji; sesame chiang, peanut chiang, umeboshi chiang, shrimp chiang, corbicular chiang, tangy chiang, semi-fermented chiang)), chiang sauces (bean sauce, hoisin sauce {*hai-hsien chiang*, *haixiang jiang*}, oyster sauce, barbecue sauce, other chiang sauces, none of which contain soybeans or grain koji; shrimp sauce, Chinese Worcestershire sauce, Chinese ketchup). Note 1. The Chinese (Wade-Giles) names and characters for each of these sauces are given on page 230.

Korean jang: Introduction, Korean soybean jang (*doen jang*), Korean red-pepper jang (*kochu jang*), Mild red-pepper jang (*mat jang*), Chinese sweet black jang (*cha jang* or *chungkuk jang*), Japanese red jang (*wei jang* or *ilbon jang*).

Note 2. This is the earliest English-language document seen (March 2009) that uses the word “kochu jang” (or “kochu-jang”) to refer to Korean-style red pepper and soybean paste (miso).

Indonesian tao-tjo: Summary.

Note 3. This is the earliest English-language document seen (Jan. 2012) that uses the term “chungkuk jang” to refer to a fermented Korean soyfood or seasoning. Actually, the term refers to Korean-style natto which, although it is a salted paste, is fermented using bacteria (*Bacillus subtilis*) and therefore does not belong in a book about miso. Address: 790 Los Palos Dr., Lafayette, California 94549.

5292. Shurtleff, William; Aoyagi, Akiko. 1976. The book of miso (Illustrations—line drawings) (Document part). Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and

Brookline, Massachusetts: Autumn Press. 256 p. Sept. Illust. by Akiko Aoyagi. [60 ref]

• **Summary:** Continued: Illustrations (line drawings, both numbered and unnumbered) show: The two Japanese characters for miso. Three men “Putting Hatcho miso to bed” by piling nearly round river stones on top of a huge vat; the pyramid shape makes the pile earthquake proof. A child holding a sheaf of grain. A round *zaru* (woven split bamboo tray) with a circle of salt in the middle. A square wooden measure (*isshô-baku*) filled with soybeans. The top of rice and barley plants showing grains and leaves. A wooden vat of red miso tied with rice-straw ropes. A miso maker standing by large wooden vats of two different sizes, with braided bamboo hoops. A well stocked miso shop in Japan (at Kichijoji train station, Tokyo). A woman standing behind two deep earthenware crocks filled with miso; balls of miso are in a basket. A sunken open-hearth fireplace (*irori*) in a traditional Japanese farmhouse with a pot hanging over the coals on a hook (*jizai kagi*) and tofu dengaku being grilled around the coals, their skewers stuck into the ash.

Nine wooden kegs of different kinds of miso piled up on 3 levels. A field of soybeans planted in rows. A hand holding soybeans pods still attached to the stem. A soybean pod split open to show the beans. (1) Bar chart of protein from different sources vs. protein returned. (2) Diagram of energy flow through two different food chains, one with a steer in the middle, the other with direct consumption of soy and grains. (3) Development aid from affluent nations as a percentage of GNP (1960-1971). Stylized soybean plant growing out of a stylized Planet Earth. Miso gift pack, with poly bags of rice, barley, and Hatcho miso. A Japanese pipe *kiseru*. (6) Graph of intestinal cancer vs. meat consumption among females in selected countries; the more meat consumed, the more cancer. Miso aging (from *Miso Daigaku*). (7) The varieties of miso and their characteristics (full-page table). (8) The percentage of salt in different miso varieties.

(9a) Map of Japan showing where the different types of miso originate. (9b) Map of Japan showing geographical miso preferences. A head of rice. (10) Famous sub-varieties of salty rice miso. Two heads of barley. Table about two types of barley miso. Two sets of soybean leaves with pods. Table about three types of soybean miso. The Japanese characters for Hatcho Miso. (11) A wooden sign in a Hatcho miso office: “Supplier to the Imperial Household.” (12) Two cross-section views of a tamari miso vat. A small pottery crock of sweet simmered miso (*Nerimiso*). Packages of different types of modern miso: Peanut miso, akadashi miso, low-salt, high protein miso, Instant miso soup with dried frozen tofu, leeks, wakame. (14) Different types of miso packaging, both traditional and modern. A sample miso label. (13) Varieties of miso available in the West, plus characteristics of each. Squeezing a bean of miso out of the cut corner of a plastic bag. Three different shoyu containers.

Six different types of tofu on a cutting board. (15) Oriental kitchen tools (utensils; full page). A small crock of salt with a wooden spoon in it.

Suribachi and modern sesame seed grinder. Tofu preparatory techniques. Broiling tofu with chopsticks on a broiling screen. Four forms of kombu. Two stylized crossed sheaves of rice. A traditional farmhouse kamado (raised earthenware cooking area). Pottery crock. Black and white sesame seeds and plant. Yuzu. Sprig of kinome. Head of garlic. Two burdock roots. Two leeks (*negi*). Making broiled miso. Hoba miso. Kaiyaki miso. Yubeshi miso. Wakame plant. A bowl of miso soup. A woman drinking hot miso soup next to a vending machine. Vegetables cut for miso soup (*mi* or *gu*). Table of the most popular ingredients in miso soup. How to make miso soup at home (4 views). Miso-koshi (woven bamboo strainer). Mad monks grinding miso. (19) Full-page table of miso soup throughout the four seasons. Shiso / beefsteak leaves. Kabocha. Daikon. Irori and jizai kagi (sunken farmhouse fireplace and overhead hanging hook). Woman serving miso by a sunken / open hearth fireplace. Woman kneeling, grinding miso with a pestle (*suri kogi*) in a *suribachi* (serrated earthenware mortar / mixing bowl).

(20) Rice patties with nori (*o-musubi*, *o-nigiri*). Bamboo noodle tongs. Homemade noodles in a pot. (21) Broiled mochi wrapped with nori. (22) Steamed tofu. A Chinese cleaver, with its tip stuck into a chopping block. Cultivated shiitake mushrooms growing on a log. Kabocha. Daikon. (23) Miso oden. Doténabé [Dotenabe]. Konnyaku twists. Dengaku Hoshi. Tofu dengaku (2 pieces, skewered; 3 pieces skewered in a box). Japanese eggplant (*nasu*) scored and Shigiyaki. Deep-frying with a wok. Lotus root stuffed with miso. (24) Deep-fried sandwiches. (25) Gashouse eggs. (26) Layered omelets. Japanese bamboo steamer. Kashiwa mochi. Selling miso pickles. Two pickling containers. (27) Salt-pressing. Air-drying daikon and turnips (*kabu*). Miso pickles with tea and chopsticks. Amazaké at the Nakamura-ro restaurant. How to make miso at home: Utensils, ingredients, and process (7 figures). (29) Miso fermentation crocks. Corona hand-mill. Soft mat koji.

(30) Proportions by weight of basic ingredients for various homemade misos; full-page table. (32) Utensils for homemade koji and koji starter. (33) Miso flow chart. (34) Composition of nutrients in 100 gm of basic miso ingredients. (35) Process for homemade rice koji (9 figures). (36) Graph of changes in koji temperatures. Woman leaning over miso vat.

Japanese farmhouse miso: Traditional country farmhouses (2 views). Raised farmhouse kitchen hearth, caldrons and earthenware dais (*kamado*). (38) Farmhouse floor plan. A kura (family treasury and storehouse). Two bamboo colanders. Pounding miso at Suwanose. Making miso in a traditional farmhouse (9 figures). Farmhouse soybean miso made with *miso-dama* (miso balls) (5 figures).

The traditional miso shop: (39) A 17th century workplace (2 figures). (40) Tsujita shop floor plan. Koji trays. (41) Insulated fermentation box. (42) The small tools (full-page). (43) Shop with 2 cauldrons. (44) Steamer and cauldron. (45) A fermentation vat. (46) Shop floor at vat's rim. Preparing traditional rice miso (31 figures). Making koji using natural mold spores. Stacked koji trays. Making miso in a semi-traditional shop (5 figures). Hatcho miso; company and vats (2 views).

The modern factory (2 figures).

A brief history of chiang, miso, and shoyu (incl. evolution of Chinese characters). Hideyoshi Toyotomi and a robber on the bridge (Hatcho miso history). Making miso-damari. Inside a Kikkoman shoyu factory around 1900. Traditional shoyu seller.

Chinese chiang in earthenware jars in a courtyard. Korean jang; selling it and making at home. (48) The interaction of basic miso components during fermentation. (49) Temperature control curves for four quick misos. Edo period shoyu production. Woman cutting tofu for Dengaku and women busy making dengaku, both from the book *Tofu Hyaku Chin*. Cartoon of a man pouring himself sake, yet thinking of miso soup. Ebisu with fishing rod and big fish under left arm. Tamari shoyu pouring out of spigot at base of miso vat. Traditional Japanese kitchen utensils. Sunken fireplace (*irori*) with huge carved wooden overhead hook hanging from braided rice straw rope. Photo (in Nerima-ku, Tokyo) with brief biography of William Shurtleff and Akiko Aoyagi. Address: 790 Los Palos Dr., Lafayette, California 94549.

5293. Shurtleff, William; Aoyagi, Akiko. 1976. Appendix A: A brief history of chiang [jiang], miso and shoyu (Document part). In: William Shurtleff and Akiko Aoyagi. 1976. *The Book of Miso*. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. See p. 214-26. Sept. Illust. by Akiko Aoyagi. [60 ref] • **Summary:** Contents: Introduction. Chinese chiang [jiang]. Early Japan. The Nara period (710-784 AD). The Heian period (794-1160 AD). The Kamakura period (1185-1333 AD). The Muromachi period (1336-1568 AD). Tamari: The forerunner of shoyu. Miso during the Edo Period. The development of shoyu. The Meiji and pre-war periods (1867-1941). Modern times. Transmission to the West.

5297. Hillman, Howard. 1976. 10 of the world's great cuisines—A cook's tour. *New York Times*. Nov. 7. p. XX1, 26, 28, 30.

• **Summary:** China, like France and Italy, is a country of regional cuisines. Canton: "Over 95 percent of Chinese-American restaurants serve Cantonese-style food because most Chinese immigrants to the United States have come from Canton [Guangzhou] and its surrounding Kwantung [Guangdong] Province." Most Americanized Cantonese cooking deserves its mediocre reputation, but true Cantonese cuisine is considered China's finest. So be sure to ask your waiter for authentic Cantonese dishes that have not been adapted to American tastes. Cantonese chefs make every effort to bring out the natural flavor of ingredients rather than masking them with heavy seasonings or sauces. "Flavoring agents much employed in Cantonese cooking include oyster sauce, salted fermented black beans [fermented black soybeans], light soy sauce, rice wine, ginger and chicken stock." "Famous Cantonese dishes include Steamed Fish with Black Bean Sauce,... the vegetarian Buddha's Delight,..."

Next in popularity in America, after Cantonese cooking, is Northern and "Mandarin" cuisine, which comes from the northern provinces of Hopei (which includes Peking), Shantung, and Honan. "Mandarin Cuisine," an Occidental term, correctly refers to the elaborate and delicate dishes prepared for the elite members of the now-defunct Imperial Court. Famous recipes include Peking Duck, Bird's Nest Soup, Shark's Fin Soup, etc. So we must distinguish this from the unique man-on-the-street Northern cuisine. Among

its characteristic “flavoring agents are fermented soy bean paste, dark soy sauce, rice wine and members of the onion family [genus *Allium*], especially garlic, leeks, scallions and chives.”

Next in stateside popularity are the cuisines of Szechuan and Hunan, both known for their use of hot chilis and oil. Finally we have Shanghai, the Central Coast, and Fukien.

5298. Abu Kassim, b. Abu Bakar. 1976. Soybeans in Malaysia. *INTSOY Series* No. 10. p. 243-44. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** Contents: Introduction. Current status. Domestic markets and utilization. Prospects for production. Conclusion.

“Because little information on soybeans is available from East Malaysia, this report is confined to West Malaysia. Soybeans appear to have been introduced into peninsular or West Malaysia about 50 years ago [1926]. The crop, which has been grown among young rubber plants or as a sole crop in rotation with other annual crops, is planted primarily on small farms. Last year, however, there was a move by a few enterprising organizations to try large-scale, commercial plantings.

“Soybean products are consumed in various forms by both humans and livestock. The domestic demand greatly exceeds the local supply, which is therefore dependent upon importation...

“Although soybeans can be grown throughout the country, a large percentage of the crop is raised in the east coast states of Kelantan, Pahang, and Trengganu of peninsular Malaysia... Peninsular Malaysia imports whole soybeans, as well as the flour, oil, and cake of the soybean. Until 1973 about 200,000 gallons of soy sauce were also imported, but in 1974 about 15,000 gallons were exported... Soybeans are used mainly to make beanmilk, curd, sprouts, and other food products for human consumption... It has been estimated that the local consumption of soybeans per capita per year averaged 5.3 kg for the years 1971 to 1973.” Address: Field Crops Branch, MARDI (Malaysian Agricultural R&D Inst.), Serdang, Selangor, Malaysia.

5299. Ebine, Hideo. 1976. Fermented soybean foods. *INTSOY Series* No. 10. p. 126-29. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [11 ref]

• **Summary:** Contents: Introduction. Miso. Shoyu. Natto. Conclusion. Literature cited. Discussion.

Production of fermented soyfoods in Japan in 1974 was as follows: Miso 587,228 tonnes (metric tons; this miso was made from 191,621 tonnes of whole soybeans, 2,200 tonnes of defatted soybean meal, 102,104 tonnes of rice, 22,280 tonnes of barley, 80,265 tonnes of salt).

Shoyu 1,213,350 tonnes (made from 14,278 tonnes of

whole soybeans, 176,138 tonnes of defatted soybean meal, 176,319 tonnes of wheat, 209,674 tonnes of salt).

Natto 90,000 tonnes (made from 47,000 tonnes of whole soybeans). “In 1960 the National Food Research Institute initiated a project to develop a new type of soybean food in order to comply with a request from UNICEF to supply a nutritious protein food for children. The product thus developed is processed in the following way: soaked soybeans are first cooked in an autoclave at 121°C for 30 minutes. A starter of *B. natto* is then added to the hot, cooked soybeans and mixed well. The inoculated soybeans are fermented at 42°C for 8 to 10 hours. The fermented soybeans are then passed through a chopper and spread over trays for vacuum dehydration. The dried material is made into a powder for use as an ingredient, mixed with wheat flour, in biscuits. In animal feeding experiments this new food had an absorption rate of 83 percent and a biological value of 63 percent, a notable improvement compared with the absorption rate and biological value of raw soybeans.”

“An ancient legend indicates that the technology for making soybean foods with the aid of microorganisms originated in China. These foods and the manufacturing process involved were introduced into Japan between 500 and 600 A.D.” Address: Applied Microbiology Div., National Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan.

5300. Lee, Hong Suk; Park, K.Y.; Chung, B.J.; Park, J.S.; Yohe, J.M. 1976. The status of soybean production and research in Korea. *INTSOY Series* No. 10. p. 239-42. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** Contents: Introduction. Major problems related to increased soybean production: Weather, varietal improvement, planting time, soil fertility and pH, cultural practices (cropping systems, planting patterns, seed treatment and inoculation), soybean pathology and entomology. Present and future research problems.

“Good quality soybeans with large grain size have been cultivated for thousands of years in the middle and northern part of the east coast of Korea. Because soybeans have been grown primarily for subsistence, they have not been regarded as a cash crop by Korean farmers... Soybean cultivation in 1974 and 286,188.4 hectares, thus making soybeans the third major crop of Korea in hectareage...

“Soybean production has gradually increased from 231,994 metric tons in 1970 up to 318,576 metric tons in 1974. Although total soybean production has increased, it has not kept up with demand as indicated by the fact that imports have increased from 36,291 metric tons in 1970 up to 66,370 metric tons in 1974...

“Home consumption is the major area for soybean use, about 122,000 metric tons being consumed in 1974. Soybeans are prepared by mix-boiling with rice or

vegetables, or are eaten in the form of curd, sprouts, sauce, paste, milk, and flour. The government uses soybeans primarily for military needs. Soybean oil is used for industrial purposes.” Address: 1. College of Agriculture, Seoul National Univ.; 2. Corps Exp. Station, Office of Rural Development; 3-4. Inst. of Agricultural Science, Office of Rural Development; 5. Crop Improvement Research Center, Office of Rural Development. All: Suweon, Korea.

5301. Sanbuichi, Takashi; Watanabe, Iwao. 1976. Soybean production in Japan. *INTSOY Series* No. 10. p. 237-38. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** “Each year Japan produces approximately 120,000 metric tons of soybeans on 90,000 hectares. About 30 percent of this yield is raised on the northern island of Hokkaido, where large-scale farming is practiced. Especially in the northeastern part of Hokkaido, soybeans are a very important crop... Throughout the country the average soybean yield is about 1.4 metric tons per hectare, but during the past four years production in the Tokachi District of Hokkaido has risen to between 1.8 and 2.0 metric tons per hectare...

“In Japan soybeans are used principally as a source of edible oil and protein foods, such as miso (bean paste), shoyu (soy sauce), tofu (soybean curd), and natto (fermented soybeans). The soybeans produced in Japan usually have large seeds, a high protein content, and are of a quality suitable for producing high quality soy products...

“In general, early varieties are cultivated in the high latitudes and late varieties in the low latitudes, but on the southern island of Kyushu early varieties are occasionally used. Known as summer soybeans, they are sown in the spring and harvested in the summer. Late varieties, which are called autumn soybeans, are sown in summer and harvested in the autumn...

“Results show that large-seeded varieties produce high yields. Soybeans grown in the northern parts of Japan usually have larger seeds than those raised in southern areas. It is believed that the marked difference between day and night temperatures and the favorable soil moisture content during the early stages of plant growth account for the large size of soybean seeds grown in the north. The author observed a serious decrease in seed size when Japanese varieties were introduced into Thailand...

“Soybeans are raised in several types of areas in Japan. Traditionally they have been planted beside the footpaths in paddy rice fields. Intercropping with wheat is another old cultural practice, although both practices are seldom used today. Because of the over-production of rice in Japan, the government has recently recommended that soybeans be cultivated in rice fields.” Address: 1. Tokachi Agric. Exp. Station, Memuro, Kasai-gun, Hokkaido; 2. National Inst. of Agricultural Science, Nishigahara, Kita-Ku, Tokyo. Both:

Japan.

5302. Shurtleff, William. 1976. Report on visit to Kikkoman plant in Walworth, Wisconsin. Lafayette, CA 94549. 2 p. Nov. Unpublished manuscript.

• **Summary:** Contains a detailed description of the ingredients and process used to make shoyu at this plant. The moromi (mash) ages for an average of 6 months. The heating / pasteurization process serves four basic purposes. Kikkoman produces about 2.5 million gallons/year of shoyu at Walworth. About 150,000 to 200,000 gallons of so-called tamari are imported from Japan for sale at natural food stores; this is about 6-8% of total shoyu. Kikkoman has 85% of the U.S. Asian-American trade and about 1/3 of the supermarket trade. Address: 790 Los Palos Dr., Lafayette, California 94549.

5303. Somaatmadja, Sadikin; Guhardja, Edi. 1976. Current status of soybean research and utilization in Indonesia. *INTSOY Series* No. 10. p. 232-35. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [1 ref]

• **Summary:** Contents: Introduction. Production: Hectareage and yield. Production techniques: Systems of cultivation, inoculation, harvesting and processing for storage, storage. Factors affecting soybean production in Indonesia: Seed viability and seed supply, pests, diseases, cultural practices, varieties. Consumption and utilization. Marketing. Extension: Training, method used to increase soybean production (expansion of hectareage, intensification, varieties).

“At present soybeans occupy fifth place among the other food crops, after rice, cassava, maize, and sweet potatoes. Research on soybeans is conducted at the Central Research Institute for Agriculture (CRIA) at Bogor and its substations, including Sukamandi and Ujung Padang; at several universities, such as the Institut Pertanian Bogor, Universitas Gadjah Mada, Jogjakarta, and Brawijaya Malang; and at other research institutes, including Badan Tenaga Atom Nasional, Jakarta, and Lembaga Biologi Nasional, Bogor.

“From 1970 to 1973 the annual harvested hectareage of soybeans averaged 703,878 hectares with a production of 517,199 metric tons and an average yield of 7.34 quintals [1 quintal = 100 kg] per hectare. Approximately 80 to 85 percent of the total soybean hectareage in Indonesia is in Java-Madura...

“Per capita consumption of soybeans in Indonesia reflects the distribution of the crop. In Java the per capita consumption each year is about 5.04 kg; in Sumatra, Kalimantan, Sulawesi, and Maluku/Irian Jaya between 0.10 and 1.04 kg; and in Bali about 3.43 kg.

“Soybeans are not consumed directly, but are processed into a large number of products. Tempeh (fermented soybeans), tahu (soybean curd), tauge (soybean sprouts),

kecap (soy sauce), tauco (fermented mixture [Indonesian miso]), and oncom (made from residues of soymilk and tahu) are consumed as side dishes with rice. Roasted beans, tahu chips, and boiled seeds are eaten as snacks, and boiled young pods are prepared as a green vegetable. Soymilk is consumed as a beverage.” Address: 1. Sukamandi Research Station, Central Research Inst. for Agriculture, Sukamandi; 2. Bogor Agricultural Univ., Bogor. Both: Indonesia.

5304. Tongdee, Amnuay. 1976. Soybean production in Thailand. *INTSOY Series* No. 10. p. 253-54. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** Contents: Introduction. Production and production areas. Cultivation. Varieties, fertilizers, and inoculation. Disease and insect pests. Utilization.

“Soybeans, one of Thailand’s most important crops, have been grown here traditionally, although there is no evidence of when they were first introduced. After having been brought to this country, probably by migrating Chinese, soybeans became part of the Thai diet. They are processed into a variety of foods, including tou-hu tou-cheaw, and soy sauce. Freshly cooked pods [green vegetable soybeans], called tou-rae, are prepared for immediate consumption.” Address: Mae-Jo Agric. Exp. Station, Chiang Mai, Thailand.

5305. Matsuda, Yutaka. 1976. The etymology of soy. *Kwansei [Kansai] Gakuin University Annual Studies* 25:3-4. Dec. Nishinomiya, Japan. [3 ref. Eng]

• **Summary:** “British and American dictionaries including OED (*Oxford English Dictionary*) consider the Japanese word *shōyu* to be derived from Chinese. Is this theory reliable? No!

“OED states that the word is derived from Chinese *shi-yu*, *shi-yau* (*shi* salted beans, *yu* oil), and *Universal English Dictionary* (1932), *American College Dictionary* (1960), *Random House Dictionary* (1966). *Oxford Dictionary of English Etymology* (1966), *Chambers Twentieth Century Dictionary* (1972) have followed suit. This Chinese pronunciation *shi* appears to represent a character meaning fermented soybeans with salt [fermented black soybeans]. On the other hand, the character meaning fermented soybeans and wheat with salt is transcribed *chiang* in present-day standard Chinese [according to the *pinyin* system established in China in 1957]. *Webster’s Third New International Dictionary* (1961) [Web. III] picks out *chiang-yu* as the origin of the Japanese term, and *Klein’s Comprehensive Etymological Dictionary* (1967), *American Heritage Dictionary* (1969) [AHD], *Webster’s New World Dictionary, College Edition* (1970) also adopted the *chiang* theory.

“In Japan *shi* had been eaten before the Taiho Rei Statute (701), but *shō* rather than *shi* was to the Japanese taste, and *shōyu* squeezed from *chiang* was used instead of

shi-yu squeezed from *shi*. It follows that the OED theory—the *shi* theory cannot be supported.

“The Web. III theory—the *chiang* theory is also doubtful. Web. III and AHD note that the Japanese term *shōyu* is derived from Pekinese, but it is hardly plausible that the compound should come from Modern Standard Chinese, because *shiyau-yu* appeared already in the latter half of the 15th century and the very word itself was entered in the Japanese dictionary published in 1597. Indeed the Chinese characters *chiang* and *you* were introduced from Ancient China but the compound word *chiang-you* [pronounced *shoyu* in Japanese] was coined in Japan, as today’s Japanese dictionaries such as *Shin Jigen* (1968) and *Shin Kanwa Jiten* (1973) label the term as Japanese-made. As a matter of fact, several other compounds coined in Japan have been reexported to China: *tetsuzuki* (procedure) and *torishimari* (control), which seem to have been exported from Japan in the earlier periods of the 20th century, are now used in China, too, pronounced *shōuoxū* and *qūdi*, respectively [as written in pinyin]. The characters pronounced *haken* in Japanese and *bàqáan* in Chinese, meaning hegemony, which is so crucial a compound related to the Shino-Japanese [sic, Sino-Japanese] peace treaty under negotiation that the treaty conclusion depends on whether or not the compound will be included in it, also was coined in Japan. Along with these, the compound word *shoyu/chiang-you* has been imported from Japan and is pronounced in the Chinese way.

“Perhaps noticing a marked difference between *chiang-yu* and *shōyu*, *Webster’s New Collegiate Dictionary* (1973) has given up the *chiang* theory and has put forward a new one [Jap. *shōyu*, fr. Chinese (Cantonese) *shi-yaū*, lit. soybean oil]. *Shi-yaū* might be Cantonese *chi you*. Anyway the new theory is nothing but a variant of the OED theory.

“In conclusion, we may duly state that *sōyu* or *soyu* which was the dialectical form of *shōyu* in the latter half of the 17th century was borrowed through Nagasaki into Dutch as *soya* and *soja*, and then from Dutch into English as *soya* and *soy*. The theory that Japanese *soi* was directly adopted into English as *soy* is unsupportable because there was no opportunity at all of direct contact between Japanese and English in those days, though there is a possibility that dialect form *sōi* or *soi* might have existed in Nagasaki at that time.” Address: Nishinomiya, Japan.

5306. Pearce, Jean. 1976. Jean Pearce’s How to get things done in Japan. Vol. 2. Tokyo: Japan Times. [v] + 295 p. Dec. Company and organization index. General index. 19 cm. [Eng]

• **Summary:** The preface begins: “Dear friends, Over the past twelve years, I have been answering letters from both Japanese and foreign readers about this always interesting, often baffling, country.” This book is a compilation of those answers / columns, with two helpful indexes. Under each title will be found at least one (but sometimes more) of

Jean's responses—but no date and no initial writer's name.

"Sing a song of soybeans" (p. 35-37, two answers). "An American here is dependent upon a Japanese tofu maker for his supply of soybeans. He would like to find a commercial source. Somehow it doesn't seem right to buy soybeans from a tofu maker to make one's own tofu. By the time he reads this he may have found a 15-kilo bag of soybeans at his door. Yoshida Bungo Shoten, one of the largest wholesale dealers in soybeans, is the most cooperative company I've contacted."

"Another man who appreciates soybeans is Rinshiro Kato. He is marketing a soybean derivative called Togen, a powder made from the most nutritious parts of the soybean mixed with wheat flour with similar food values. A 500-gram can costs ¥3,000 and provides a month's supply" at the rate of 3 spoonfuls a day. "The company also makes a Togen cookie with sesame seeds, konbu and honey."

"Learn a little" (p. 170-71): "Tofu. I've been using it for years in all kinds of ways. Yet I never knew about pressing it. This removes the water. Japanese would have you wrap a square of regular (momengoshi) tofu (it won't work with the finer textured kinugoshi) in a tenugui [thin towel] and gently squeeze out the water. I wrap mine in a towel and put a breadboard on top with a filled teakettle to weight it down. An hour or so later the tofu has an entirely different texture."

Note: This is the earliest document seen (May 2012) that contains the word *momengoshi* (regardless of hyphenation); it refers to regular or "cotton" tofu.

There are three basic types of soy sauce: Koikuchi is by far the most widely used. Usukuchi is light tan—the choice for lighter color foods like tofu and white fish. The taste is about the same as koikuchi. Tamari is slightly thicker, slightly stronger, and frequently used for sashimi. "It is made without wheat and is the favorite in the Nagoya area."

"Tofu" (p. 228-29): "A man asks for an unusual recipe that may appeal to those who don't like tofu." If all the traditional and Western ways leave you cold, try this: "Cut tofu in one-inch cubes. Put in a jar and cover with gin. Let it age for two weeks or so, and then you have tofu cheese."

The residue [okara] left after grinding and straining tofu is high in food value. You can buy a plastic bag full for ¥20 or so early in the morning from your favorite tofuya-san. Use it as a food or "put it in a cloth bag and polish your floors. In the old days that was how the Japanese achieved that lovely soft finish we all admired."

Good tofu restaurants in Tokyo are Sasa-no-Yuki not far from Uguisudani station and Goemon, in Bunkyo-ku, up the hill from the Hakusan subway station.

Good books about tofu are *The Art of Just Cooking*, by Lima Ohsawa. *Tofu Recipes*, by Grace Kikuchi. *The Book of Tofu*, by Shurtleff & Aoyagi. Address: [Tokyo, Japan].

of tempe, kecap, and taoco. I. The microbial content and its amylolytic, proteolytic, and lipolytic activities. Progress Report Subproject III.b. ASEAN Project for Soybean and Low-Cost High Protein Foods. Jan-Dec. 1976. Unpublished manuscript. *

5308. **Product Name:** Granose Soyapro Wieners. Later renamed Soya Wieners.

Manufacturer's Name: Granose Foods Ltd. (Distributor). Made in Denmark by Nutana.

Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.

Date of Introduction: 1976.

Ingredients: 1980: Soya protein, vegetable oil, egg albumin, oats, salt, glucose syrup, vegetable stabilizer.

Wt/Vol., Packaging, Price: 385 gm can.

How Stored: Shelf stable; refrigerate after opening.

New Product—Documentation: Manufacturer's catalog. 1980. April. "Soya sausages. Serve as frankfurters. Can be broiled, grilled or fried."

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product, made in Denmark by Nutana, was introduced in 1976. It is now named Soya Wieners. Can Label. 1990. 9.5 by 4 inches. Photo of the prepared dish, three wieners on a plate with rice and vegetables against a brown background. Vegetarian. Ingredients: Water, soya bean oil, egg white powder, textured soya protein, tomato puree, onions, soya protein isolate, salt dextrose, spices, soya sauce, oatmeal, guar gum (E412), sodium alginate (E401), hydrolized vegetable protein, smoke flavor. Serving suggestion: Heat or roast Soya Wieners and serve with spaghetti or mashed potatoes. Sliced Soya Wieners are delicious in salads. Ideal for lunch and dinner. Dietary analysis available on request.

5309. **Product Name:** Granose Soyapro {Canned Slices} [Beef Like, Chicken Like, or Ham Like].

Manufacturer's Name: Granose Foods Ltd. (Marketer-Distributor). Made in Denmark by Nutana.

Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.

Date of Introduction: 1976.

Ingredients: 1980: Soya protein, vegetable oil, egg albumen, hydrolised vegetable protein, salt, flavourings.

Wt/Vol., Packaging, Price: 400 gm can.

How Stored: Shelf stable; refrigerate after opening.

New Product—Documentation: Manufacturer's catalog. 1980. April. "Slices of flavoured soya protein fibre canned in sauce. May be used hot or cold as slices or added in pieces to pies, casseroles, etc. Beef like flavour only contains in addition, wheat protein."

Form filled out and Labels sent by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1976. Made by Nutana. Subtitle is now, for example,

“Chicken Like Flavour Soya Fibre in Brown Sauce.” Can Label. 1990. 9.5 by 4 inches. Photo of the prepared dish on a plate with rice and vegetables against a brown background. “Ingredients: Water, textured soya protein, soya bean oil, egg white powder, starch, hydrolysed vegetable protein, yeast extract, vegetable stock, wheat flour, celery powder, salt, stabilizer. Serving suggestion: Cut into shreds and place in a stew of carrots and peas, sprinkle with parsley, serve with potatoes and a salad. Ideal for lunch and dinner.”

5310. **Product Name:** Kikkoman Instant Miso-Shiru Soy Bean Soup Mix [Shiro (White), or Aka (Red)].

Manufacturer’s Name: Kikkoman Corporation.

Manufacturer’s Address: Noda 278, Chiba-ken, Japan.

Date of Introduction: 1976.

Ingredients: Incl. miso (soybeans, rice, salt), dried green onions (negi), dried wheat gluten cakes (fu), dried seaweed, bonito extract, and MSG (monosodium glutamate).

Wt/Vol., Packaging, Price: 1.83 oz foil pouch retails for about \$1.07 (May 1980).

How Stored: Shelf stable.

New Product–Documentation: *Food Product Development*. 1980. May. p. 26. Label in both Japanese and English. Front panel shows a drawing of a miso soup cup with a happy face on it. Each pouch contains 5 individual serving packets.

5311. **Product Name:** Kikkoman “Green Label” Soy Sauce.

Manufacturer’s Name: Kikkoman Foods, Inc.

Manufacturer’s Address: Walworth, Wisconsin; Japan.

Date of Introduction: 1976.

New Product–Documentation: Leaflet. 8½ by 11 inches. Reprinted in *Soyfoods Marketing*. Lafayette, CA: Soyfoods Center. “Sold only in Qualified Health Food Stores. 100% Pure Kikkoman “Green Label” Soy Sauce. Salt Reduced by 50% [from 16% to 8%] as Compared to All Other Soy and Tamari Sauces.”

5312. Kikkoman. 1976. Analysis of 7 brands of soy sauce imported to the USA. San Francisco, California: Kikkoman Foods, Inc. 2 p. Unpublished manuscript. [Eng] Address: Kikkoman.

p. Illust. by Patricia Kinley. Recipe index. 21 cm.

• **Summary:** Soy-related recipes include: Japanese [mung] bean sprouts and cucumbers with sesame dressing (*Moyashi no goma su ae*) uses 1 teaspoon of soy sauce (p. 74). Korean watercress salad-relish (*Namul*) uses 2 tablespoons of soy sauce (p. 74). Soy is not used in any other recipes. The author was born 1921.

5316. Bernhardt, C.F. 1976. The legume food crops. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 29-85.

• **Summary:** “The Chinese did not, nor do not, grind up soybeans to mix with cereals to form a meal or boil them whole like other legumes such as peas or lentils. Prepared in the latter manner they have an unattractive flavour and are not too digestible. In the earliest Chinese writings, there is no mention of the use of soya as a source of oil. Some evidence exists that methods of extracting oil were evolved around the 4th century A.D... To sum it up, soybeans require special treatment to make them an acceptable human food.

“Legumes assume greater importance in countries where starchy roots and fruits (cassava, yam, taro, sweet potatoes and bananas) replace cereals to a large extent as staple foods. The starchy roots and fruits are so poor in protein that they do not meet the protein requirements of even adults when consumed in quantities sufficient to cover the calorie requirements and still less when considering children and mothers.”

Concerning the history of legumes: “Legumes are plants belonging to the Leguminosae family, which is the second largest family of seed plants. Altogether there are about 600 genera with 13,000 species. The word legume is derived from the Latin *legumen* which means any leguminous plant. An alternative name for edible seed of leguminous plants is pulse derived from the Latin *puls*, meaning pottage... The English term legume dates back to about the 17th century [1676].

“Legumes are among the earliest crops to be cultivated by man, going back to Neolithic times when man was changing from hunting and food gathering culture to a food producing society. Often in the old world this is termed ‘The Food Producing Revolution,’ which probably took place between the 9th and 5th millennia B.C. This revolution was centered in what was called the ‘Fertile Crescent’ in the Near East...”

“Remains of peas and lentils have been found at Halicar (Turkey) in about 5,500 B.C. (dated by carbon)... Findings at Jarno [sic, Jarmo, which is an archeological site located in today’s Iraq, in Iraqi Kurdistan in the foothills of the Zagros Mountains east of Kirkuk city] in Turkistan may antedate the Halicar find by perhaps a millennium, so it can be safely said that legumes have been eaten by man for some 8,000 years. Legumes also appear early in the development of agriculture

in the new world. Remains of... kidney beans have been found in the caves near O'Campo (Mexico) which date back to around 4,000 B.C. or perhaps earlier... Remains of cultivated peas have been found in the Neolithic lake village in Switzerland dating back to approximately 4,500 B.C... Remains of lentils have been found in the Egyptian tombs of the 12th dynasty (2,400-2,200 B.C.). Preparation of a lentil soup was depicted in a fresco at the time of Rameses III (1,200 B.C.)... Lentils are the first legume to be mentioned in the Bible in the 25th Chapter of Genesis."

Note: Turkistan or Turkestan is an historical region of Central Asia, usually thought to comprise Turkmenistan, Uzbekistan, Kyrgyzstan, Tajikistan, southern Kazakhstan, western China, and northeast Afghanistan. Address: C.P.C. International (Asia) Ltd., Hongkong.

5317. Boulding, Elise. 1976. From a monastery kitchen. New York, San Francisco, Hagerstown, London: Harper & Row. 127 p. With the assistance of Victor Antonio Avila and Jean-Marie Pearse. Illust. by Daniel Marshall. Index. 23 x 26 cm. • **Summary:** A cookbook; not vegetarian. The monastery (in a farmhouse) is Our Lady of the Resurrection Priory in Cold Spring, on the Hudson River, north of New York City. There the author found a place of quiet retreat and prayer with Brother Victor, and a novice, Brother Patrick.

The recipes are arranged by the four seasons. There are four columns on each page. All or part of the central two columns on each page are occupied by one recipe. To its left and right are many contemplative quotations (with their authors) and old photos or illustrations.

The only recipe that mentions soy is Poor person's sukiyaki (p. 97) which calls for ½ cup soy sauce and "if desired soy bean curd (tofu) cut into squares (if available)." On the same page we read: "Loving-kindness is the better part of goodness"—W. Somerset Maugham.

Page 124, "Useful culinary instruction," states: "Soy bean—Use in many forms for high protein: soy sauce, soy beans, soy paste (called miso, obtainable in Oriental and health food stores, used in place of bouillon cubes, supplies proteins, vitamins, and minerals). Also fresh soy bean cakes (*tofu*: Oriental or health food stores) and sprouted soy beans.

"Miso soup (soy) (per serving)—1 tablespoon miso, 1 cup boiling water, 2 chopped scallions (or 1 small onion), pinch of sugar, 1 or 2 tablespoons wheat germ. Drop 1 beaten egg if desired. Cooks in 5 minutes." Address: New York.

5318. Chiang, Jung-feng; Schrecker, Ellen. 1976. Mrs. Chiang's Szechwan cookbook. New York, Hagerstown, San Francisco, London: Harper & Row, Publishers. xxi + 359 p. Illust. Index. 24 cm.

• **Summary:** The Preface begins: "I met Chiang Jung-feng in 1969 in Taipei, Taiwan, where my husband, John, and I had gone to pursue John's Chinese language studies and our love of Chinese food. She began as our cook and housekeeper;

she soon became a friend and teacher and eventually co-author of this cookbook. Jung-feng was born and raised on a farm on the outskirts of Chengtu, the culinary heart of the province of Szechwan."

The romanization is in pinyin. Chapter 12, titled "Bean curd" (p. 218-32) is exceptional; the introduction is one of the best seen to date. The chapter contains four tofu recipes, including Pock-marked ma's bean curd (*mapo doufu*). The chapter begins: "Every culture has its children's food—things that everybody eats but children dote on. In this country [USA] it might be hot dogs or pizza; in Szechwan it was bean curd. Older people loved rich meat dishes, but children had less developed palates and adored the clear, fresh taste and soft texture of bean curd. Mrs. Chiang's own favorite food when she was a child, the bean curd she ate was particularly delicious because it was homemade..."

"My mother would grind fresh soybeans very fine, then combine them with water to make a kind of soybean 'milk,' When she added a certain chemical (probably gypsum) to this, it coagulated instantly. Then she hung the mixture to drain in a cloth bag for several days; at the end there was a mild, creamy bean curd with a texture as smooth as silk. We ate it several times a week..."

"There are many types of bean curd. Fresh bean curd is the commonest. It comes in soft, white cakes about 1 inch thick and 3 to 4 inches square. It has the consistency of hard custard, and, though fragile and perishable, it can be kept for a week in the refrigerator if you store it in an uncovered bowl of water and change the water every other day."

"Bean curd comes in many other, less common forms. Dry bean curd, or *doufugan*, isn't dry at all. It is just regular bean curd that has been aged [sic] and pressed until it becomes brown on the outside. It is especially delicious boiled with soy sauce and spices and then sliced and served cold.

"Fried bean curd balls, or *youdoufu* are really dry—light, porous balls that, when soaked, become spongy. Their strange texture and mild taste make them greatly prized in vegetarian *haute cuisine*.

"Bean curd skin [*yuba*], another form, comes in thin, shiny brittle sheets."

"There is also [in Taiwan] 'stinking bean curd' [stinky tofu], which the process of fermentation has transformed into a substance strikingly similar to some of the stronger cheeses.

"Finally, there is pickled bean curd [fermented tofu], or *doufu lu*. It was popular in Szechwan and was what Mrs. Chiang's family often ate with rice for breakfast. Chinese groceries occasionally carry jars of the highly spiced Szechwanese version of the stuff. Eaten on top of some plain white rice, it is an amazing gastronomic experience, though not one recommended for the weak in palate. Mrs. Chiang claims that the pickled bean curd her mother made was both hotter and more fragrant." One other bean curd recipe is

given on pages 98-103.

One yuba recipe is: Bean curd skin soup (*fuzhu tang*, with “4 sheets dried bean curd skin,” p. 267-68).

One recipe using fermented black soybeans is: Black beans, green peppers, and pork shreds (*heidouchi qingjiao chao rousi*, with “3/4 cup dried salted black beans,” p. 108-10. “Dried, salted black beans entered Szechwan from the outside, probably either from Canton or Hunan. Because they were not indigenous, Mrs. Chiang’s mother rarely cooked with them, though when she did the results were always delicious. She used them mainly in simple stir-fried dishes, for the black beans have such a strong and complicated flavor that they [can] dominate any dish to which they are added”).

Chapter 16, “Pickles, appetizers, and garnishes” contains a recipe titled simply “Soybeans” (*tangcu douz*, with “1½ cups dried soybeans,” p. 338-40. “Whenever Mr. Chiang’s father invited a group of cronies or relatives over, her mother would make up a large batch of soybeans to serve with the wine. These crunchy, spicy beans are the traditional accompaniment of a Szechwanese drinking session, just as salted peanuts are in America.” After being rinsed, the soybeans are dry roasted in a wok for about 10 minutes, or until slightly brown).

Note: The author is given as Chiang Jung-feng, with Ellen Schrecker and John Schrecker. The section on “Ingredients” includes: Bean curd (*doufu*). Chinese red beans (*dousha*).

“Dried, salted black beans (*douchi*): These dried, salted black beans impart such a delightfully pungent, sour, and salty taste to dishes that, even though they are not Szechwanese in origin, Mrs. Chiang likes to cook with them. They are small, about the size of a pea, black, and partially dried. They come in plastic bags or tins and are available at Chinese markets.”

Dried seaweed (*zicai*). Hoisin sauce (*haixian jiang*): Very similar to *tianmian jiang*. Monosodium glutamate (*and why we don’t use it*). Soy sauce (*jiangyou*). “Soy sauce was such an important condiment in the large and busy peasant household where Mrs. Chiang grew up that the family made it own.” It “was aged in huge earthenware vats.” “Both light and dark soy sauces were produced, as well as a rather unusual sweet variety.” Mrs. Chiang “finds Kikkoman soy sauce particularly good.” The difference between light and dark soy sauces is “a question of color,” not of taste or texture. “Mrs. Chiang, then, uses Kikkoman soy sauce in all her cooking.”

Page 203: John “found that the word ‘ketchup’ originally came into English from a Chinese word in the Fukienese dialect, *ke-tsiap*, which could well mean ‘tomato paste.’”

5319. Claiborne, Craig. 1976. Craig Claiborne’s favorites from the New York Times. Vol. 2. New York, NY: Quadrangle / New York Times Book Co. 442 p. See p. 58.

Illust. Index. 28 cm.

• **Summary:** The Foreword begins: “We are endlessly impressed with the subtle yet seemingly rapid increase in the sophistication of American taste.”

After the recipe for “Hunan lamb,” we read (p. 58): “Note: There are two kinds of soy sauce used in Chinese cookery. Thin or light soy is the most commonly found in supermarkets. Dark or heavy soy sauce, widely available in Chinese and other Oriental stores, has a greater viscosity.”

The section titled “The Japanese grill” (p. 214-18) mentions “dark soy sauce,” “light soy sauce,” “misoshiru,” and “miso (bean paste).” Address: New York.

5320. Cunard, A.C. 1976. Grain legumes in Malaysia. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. v + 225 p. See p. 9-15. [6 ref]

• **Summary:** Soybeans are used for the preparation of soy products such as bean curd, sprouts and sauces. In 1971 Malaysia imported 20,699 tons of soybeans, 3,155 tons of soybean flour, 673 tons of soybean oil, and 21,744 tons of oil cake of soybeans [soybean meal]. The peanut is much more widely grown in Malaysia than the soybean; 83% of the soybeans grown in Malaysia are grown in the state of Pahang. Address: MARDI, Kuala Lumpur, Malaysia.

5321. Dinaburg, Kathy; Akel, D’Ann Ausherman. 1976. Nutrition survival kit: A natural foods recipe and reference guide. San Francisco, California: Panjandrum Press and MidPress Productions. viii + 248 p. Illust. Index. 23 cm. [152 endnotes]

• **Summary:** This book advocates a natural-food lacto-ovo vegetarian diet in place of a junk-food meat-centered diet.

Chapter 6, which emphasizes the importance of dietary fiber—found in whole grains and many other natural foods—advises (p. 110) that cooks use 2 tablespoons of soy granules for every cup (dry measure) of grain or grain product cooked. This will not affect the texture or taste, but it will usually raise the NPU to a level comparable to or greater than that of meat. On page 119 in this chapter is a recipe for Grainburgers (with soy grits or granules and “tamari sauce”).

The section on “Sprouts” (p. 164-66) includes soy sprouts (good stir fried) and sprouting instructions.

Chapter 8, titled “Meat is Bean Replaced” (p. 168-88) discusses: vegetarianism, federal meat inspection, DES (hormones in animal feeds), antibiotics in animal feeds, beef and cancer, world famine, meat and ecology, lost protein, protein, essential amino acids and Net Protein Utilization, cost of 100 gm of usable protein, nutritional value and cost comparison of meat and non-meat foods, mutual supplementation, the “cost” of meat protein, lingering meat myths, soybeans. Soy recipes: Soybeans (pressure cooked). Soybeans (not pressure cooked). Baked beans. Soy cheese (homemade tofu). Soybean curry. Mexican beans (soybean

frijoles refritos). Soybean chili (incl. “vege burger”). Bean and/or grain patties.

Note 1. This is the English-language document seen (Jan. 2007) that contains the term “Grainburgers” (or “Grainburger”) or the term “vege burger” (or “vege burgers”).

Note 2. A paperback edition was published in May 1978 by Jove/HBJ.

5322. Duquette, Susan. 1976. Sunburst Farm family cookbook. Santa Barbara, California: Woodbridge Press Publishing Co. 303 p. Illust. by Donna Wright. Photographs by Mehosh Dziadzio. From the Brotherhood of the Sun. Recipe index. 23 cm.

• **Summary:** “The Brotherhood of the Sun is a family of more than 300 people, who have dedicated themselves to living in harmony with all people and all things. Our desire is to follow the simple laws of God and nature. In order to create an environment in which this is possible, we have established four communities upon thousands of acres of farm and ranch land in the coastal mountains around Santa Barbara, California... In order to help support ourselves and to share with other people our way of life, we have established a large organic foods complex in Santa Barbara called Sunburst Organic Foods.

“This organization includes a large wholesale warehouse that ships food to stores across the country, six large retail markets (with future markets projected along the coast), a community store, a restaurant called ‘The Farmer and the Fisherman,’ a whole-grain bakery and a fresh juice-bottling plant that distributes along the west coast.”

Although this natural foods cookbook is not entirely vegetarian (it includes a chapter titled “Fish,” p. 100-123, and many fish and shellfish recipes), the rest of the book is vegetarian and one long chapter (p. 64-99) is titled “Vegetarian Main Dishes.” The illustrations are beautiful.

Soy-related recipes include: Tofu-vegie soup (p. 17). Miso-onion soup (p. 17). Many recipes topped with “Baco-bits.” Bean salad (with soy beans, p. 35). Sprouts (incl. soy sprouts, p. 38-39). Tamari-onion gravy (p. 63). Enchiladas (filled with tofu or soy beans, p. 85). Corn pudding with Baco-Bits (p. 168). Soy flour cakes (pancakes, p. 268).

The chapter titled “Beans and pasta” (p. 124-39) has a section on Soybeans subtitled “Or: How to get protein without really trying.” Recipes and descriptions include: How to cook whole soybeans (with or without pressure). Soybean loaf. Soyburgers. Soy milk. Tofu (curded with lemon juice or vinegar). Tamari and miso. Cheese-soybean soup. Soy nuts. Soy grits. Soy flakes. Soybean cheese spread.

The Glossary (p. 295-97) contains descriptions of gluten, lecithin (from the soybean), miso, protein powder, tamari, seaweeds, tofu. Address: Santa Barbara, California.

5323. Farr, Barbara. 1976. Super soy!: Delicious protein

without meat. New Canaan, Connecticut: Keats Publishing Co. 151 p. Index of recipes. 21 cm. [9 ref]

• **Summary:** Contents: 1. Magic bean. 2. Soybeans and nutrition. 3. A glossary of soy (and other things)—With a table giving nutritional information for each; bran, dried soybeans, green soybeans, lecithin, miso, nutritional yeast, sesame tahini, soy granules or grits (toasted), soybean oil, soybean powder (also called soybean flour; full-fat soy powder, low-fat soy powder, defatted-fat soy powder), soy protein isolate, soy sauce, soybean sprouts, tofu, yogurt (soy or dairy).

4. Basic techniques with soybeans. 5. Appetizers and snacks. 6. Soups and breakfast dishes. 7. Main dishes. 8. Breads, etc. 9. Sweet things. Bibliography. Note: Contains many recipes.

Dedication: “This book is dedicated to the most inspiring health-seeker: Gayelord Hauser.”

5324. Friedlander, Barbara. 1976. The Findhorn cookbook: An approach to cooking with consciousness. New York, NY: Grosset & Dunlap. xv + 264 p. Introduction by David Spangler. Index. 23 cm. [20+ ref]

• **Summary:** A vegetarian cookbook created by this famous spiritual community at Findhorn, in northeastern Scotland, on a sandy, barren piece of land on a peninsula between the Firth of Moray (part of the North Sea) and Findhorn Bay. In 1962 Peter and Eileen Caddy, their three young sons, and a friend, Dorothy Maclean, came to live there (see photo, p. 76)—following spiritual guidance. Peter and Eileen are British.

Barbara first arrived at the Findhorn Caravan Park in Feb. 1974; she stayed for only 4 days. She returned later that year to live for 6 months, working primarily in the kitchen, to write this book. The first part of the book (to p. 21) is about the spirit and inspiring basic principles of the Findhorn community.

Soyfoods are mentioned occasionally throughout the book. Tamari may be used as a seasoning during sauté-steaming (p. 66). Tofu (bean curd) can be added to a variety of dishes (p. 72). Soy-related recipes: “Soy bread” (made with soy flour plus wheat flour, and miso, p. 151). Baked soybeans (p. 164). “There are never enough recipes for this valuable bean”. Baked soyburgers (with cooked, mashed whole soybeans and miso, p. 164-65). Fried soyburgers (with cooked, mashed whole soybeans, soy oil, tamari, and miso, p. 165). Tamari ginger sauce (p. 220-21). Homemade tofu (makes 10 pints, p. 224-25). Curded with vinegar or lemon juice. Tofu can be added, cubed, to miso soup, used in tofu and scrambled eggs, or made into salad dressing).

5325. Hakim, Rusli. 1976. Grain legumes in Indonesia. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 1-7. [3 ref]

• **Summary:** Grain legumes have long been grown in

Indonesia; traditional uses include bean curd [tofu], tempe [tempeh], oncom [onchom], soysauce, soypaste, and roasted nuts.

Tables show: (1) A ten year average of production, acreage, and yield of soybeans in Indonesia, 1961-1971—by province. The provinces with the highest average production are: East Java (Jawa Timur) 249,651. Central Java (Jawa Tengah) 75,775. West Nusa Tenggara (Nusa Tenggara Barat) 26,659. West Java (Jawa Barat) 18,319. Yogyakarta 11,952.

(3) Per capita consumption of soybeans in Indonesia 1970 (kg per capita per year). West Nusa Tenggara (Nusa Tenggara Barat) 14.14. East Java (Jawa Timur) 5.04. Central Java (Jawa Tengah) 5.04. West Java (Jawa Barat) 5.04. Yogyakarta 5.04. Jakarta 5.04. Bali 3.43. Address: Central Research Inst. for Agriculture, Bogor, Indonesia.

5326. Hayashi, Minao. 1976. *Kandai no bunbutsu* [Han dynasty civilization and objects]. Tokyo: Tokyo Daigaku, Jimbun Kagaku Kenkyujo. 576 p. [Jap]*

• **Summary:** Bo (1982): This book contains a simple drawing of soy sauce making equipment. It shows a hole in the bottom of an earthenware chuang crock, from which liquid soy sauce can be drawn off. The Chinese also put a basket into the crock to draw off the liquid. This is the strongest known evidence that soy sauce existed at the time of the Han dynasty. But it is better to think that its production stems as far back as the Ch'in (221-206 B.C.) or Warring States (403-221) periods.

Note: Hayashi, born in 1925, is a famous Japanese archaeologist, and art- and cultural historian.

Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

5334. Leung, Mai. 1976. *The classic Chinese cook book*. New York, NY: Harper's Magazine Press. xv + 363 p. Illust. (line drawings by Claude Martinot). Map. Index. 24 cm.

• **Summary:** A remarkable book by a excellent cook and writer with much experience in China (where she was born and raised), Hong Kong (with outstanding chefs), and New

York (with more fine chefs). An interesting map of China shows the major culinary regions. The illustrations contribute greatly to the book.

Each recipe is accompanied by its Chinese characters but with no romanization / transliteration. MSG is an optional ingredient in many recipes. Soy related recipes: Chicken with walnuts in hot bean sauce (the sauce mixture includes “6 teaspoons ground bean sauce, 4 teaspoons hoisin sauce, 4 teaspoons black soy sauce,” p. 56-57). Soy sauce chicken (with “½ cup black soy sauce,” p. 66). Chicken in hoisin sauce (the sauce mixture includes “6 tablespoons hoisin sauce, 2 tablespoons black soy sauce,” p. 67). Egg yolk fish cakes with soy vinegar dip (p. 87-88).

The chapter titled “Duck” (p. 91-93) describes how Peking ducks are a different breed from other ducks, how they are raised and force-fed in Hong Kong before being killed. The recipe for Peking duck (p. 109-11) describes the origin of Peking duck in about 1855 in Peking. “Pen Yee Inn, a restaurant specializing in chicken and duck dishes, created the method that made Peking duck a star. The dish was purely for the very rich, and the primary interest was the crisp skin.” Traditionally it required “three months of training just to learn to kill and dress the duck correctly.” This recipe calls for either Hoisin sauce dip or Bean sauce dip. The next recipe is Red-cooked duckling with lettuce in soy sauce (p. 111-12).

The recipe titled “Childbirth ginger” explains: “In Kwantung Province, after a woman gave birth to a child, it was the duty of the mother-in-law to prepare a big pot of this ginger for her daughter-in-law to regain her strength.” Rich in calcium, the supply had to last for a month.

More soy related recipes: Beef with baby corn and Chinese mushrooms in black bean sauce (with “2 tablespoons salted black beans: rinse in hot water, drain, and mash into paste,” p. 158-59). Fish slices in garlic and black bean sauce (p. 183-84). Fried mock plums (“For this dish, shrimp paste is rolled up in bean curd skin to form a long cylinder.” With “2 pieces dried bean curd skin, each 5 by 10 inches,” p. 184-85). Soft shell crabs in black bean and chili sauce (p. 202-03).

The chapter titled “Vegetables and bean curd (p. 205-31) begins: “I do not understand why so many Westerners cook their vegetables as if they were cooking potatoes.” They are “cooked so much that they all taste the same, like cooked potatoes—dull, mushy, and lifeless.” “Fresh bean curd is made of soybeans... [sold in] cakes 1 inch thick and 2 to 4 inches square. Smooth, fragile, custardlike, and ivory colored, bean curd itself is bland in taste, but it quickly absorbs flavor from other ingredients with which it is cooked. As it is inexpensive and high in protein, bean curd serves the purpose of meat and milk for many Chinese in addition to being used as a vegetable. Bean curd is a nutritious and well-loved food. My grandmother used to say, ‘Eat bean curd every day and your eyes will shine like the autumn moon, your skin will be

smooth, and your hair soft and black.’ Generally available in Oriental grocery stores, bean curd is carried in relatively few supermarkets. The canned variety is not acceptable as a substitute for fresh bean curd. Store in a jar, cover with water, and change water daily. It will keep for a week or more.” In recipes that call for bean sprouts, Chinese prefer mung bean sprouts that are fresh, white, firm, and dry—not brownish, limp and watery. Never, never used canned bean sprouts.

Buddhist delight (vegetarian, with “4 fried bean curd puffs: cut each into 4 pieces,” p. 225-26).

Note: This is the earliest English-language document seen (May 2012) that contains the term “fried bean curd puffs.” Pockmarked woman’s spiced bean curd [Mapo doufu] (“It is said that the wife of a cook named Chan, who lived in Szechwan [Sichuan] more than a century ago, created this bean curd recipe. Mrs. Chan’s face was pockmarked.” With “1 pound fresh bean curd: rinse in cold water, cut into ½-inch cubes,” p. 228-29). Hakka stuffed bean curd (“Hakka cooking is well known for its bean curd dishes. This stuffed bean curd is one of the most popular and well-loved among Chinese.” With “3 pieces fresh bean curd, each about 3 inches square: pat dry with paper towels, cut each square into 4 triangles, slice some bean curd out of the middle of one side of triangle to make pocket for stuffing,” p. 229-30). Stir-fried bean curd with pork shreds (p. 231).

The chapter titled “Sauces and dips” includes: Bean sauce dip (with “4 tablespoons Szechwan sweet bean sauce or ground bean sauce,” p. 305). Fresh chili-soy dip (with “6 tablespoons black soy sauce,” p. 308). Hoisin sauce dip (p. 309). Soy-chili dip. Soy-sesame dip. Oil-oyster sauce dip (with “6 tablespoons oyster-flavored sauce,” p. 310). Soy-vinegar dip (with “4 tablespoons thin soy sauce,” p. 311).

The chapter titled “Chinese cooking ingredients with information on storing” is an expanded glossary. Each entry is accompanied by its Chinese characters but no romanization. It includes: Bean curd (fresh). Bean curd cheese (red) (“Labeled as red bean cheese, 2 inches square and about 1 inch thick”). Bean curd puffs (fried) (“Golden color, fluffy and spongy, cushionlike square cakes”). Bean curd skins [yuba] (plain, dried) (“Shiny, light yellow, approximately 6 by 10 inch paper-thin skin, dried and brittle. It is the rich cream that floats atop the” soybean milk made from yellow soybeans). Bean paste (sweet red) [azuki an] (“Made from puréeing Chinese red beans, sugar and shortening”).

Bean sauces: (1) Ground bean sauce “Also known as brown bean sauce or brown bean paste. Brown, thick, puréed sauce made from yellow soybeans, flour, salt, and water; salty and pungent. Sold in cans.” (2) Szechwan chili bean sauce. (3) Szechwan sweet bean sauce. “Labeled as sweet bean paste sometimes. Not sweet, but salty and pungent.”

Black beans (salted) (“Black [soy] beans preserved in ginger, garlic, salt, and spices; used as seasoning”). Hoisin

sauce (“Means ‘seafood sauce’ in Chinese. Made from soybeans, water, garlic, chili, flour, and spices”). MSG (“Monosodium glutamate, which the Chinese call ‘taste powder.’ The Chinese extracted it from soybean protein and have been using it for at least a century... It should be used sparingly. Sold under the brand name Accent”). Oil (Chinese prefer to use peanut oil. “But I find corn oil equally good in the United States”). Oyster-flavored sauce (No mention of soy as an ingredient). Sesame seed oil (“Savory, aromatic, topaz-colored [brown] oil made from roasted white sesame seeds”). Sesame seed paste (Since most imported products have lost their taste, “it is much better to use peanut butter. In China, peanut butter and sesame seed paste are used interchangeably in cooking”). Soy sauces (“The most important seasoning in Chinese cooking. Varieties and grades are many... Knowing their differences and using the right kind is the key to good-tasting dishes.” The following two types are most frequently used): (1) Black soy sauce (“Also known as dark soy sauce; extract from fermented soybeans, caramel, flour, salt and water; darker and heavier than thin soy sauce, salty but with a slightly sweet taste. Do not buy one labeled ‘double dark soy sauce.’ It is too salty”). Thin soy sauce (“Also known as light soy sauce; liquid extract from soybeans, flour, salt, and water after slow fermentation under the sun. The first extraction, which is commonly sold in the States, is the best”).

The “Shopping list” chapter (p. 343-48) contains an expanded alphabetical list of the English names of Chinese ingredients followed by the name in Chinese characters. Address: Madison, New Jersey.

5335. Lie, Goan-Hong; Oey, Kam-Nio; Prawiranegara, D.D.; Herlinda, J.; Sihombing, G.; Jus’at, I. 1976. Nutritive value of various legumes used in the Indonesian diet. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 183-93.

• **Summary:** This general overview discusses soybeans (*Kacang kedelai*), tempeh, soy milk, “tahu or soycurd” [tofu], kecap, taoco [Indonesian-style miso], soy milk, residue of soy milk or tahu [okara] which may be fermented and sold as oncom. The average nutritional composition of the first 6 products is given. Address: Nutrition Research Inst., Jakarta, Indonesia.

5336. Lin, Florence. 1976. Florence Lin’s Chinese vegetarian cookbook. New York, NY: Hawthorn Books. xix + 236 p. Illust. by Nai Gi. 24 cm.

• **Summary:** Contains a great deal of information on and recipes using soyfoods. Chinese food expert Barbara Tropp says this book has the best glossary available, and has very creative and interesting but drab recipes.

Hoisin sauce is a ground bean sauce to which sugar, garlic, and other flavorings have been added. It is the most

popular commercially prepared flavored bean sauce.

Civilized Chinese patterns of eating were established by Confucius. The second great influence was Taoism, which advocated a simple diet, natural foods, and the basic belief that proper eating leads to good health. The third great influence was Buddhism, which was opposed to killing, so advocated a vegetarian diet. The art of vegetarian cookery was initially developed mainly in Buddhist monasteries; later it spread to private homes and restaurants.

To make good meatless broths use soybeans, soy sprouts, tough or wilted vegetables, mushrooms, and / or bamboo shoots. To make soy sprouts, it is best to use new-crop soybeans, which have the highest germination rate. This book contains many recipes that call for sea vegetables. Soy sauce is widely used in Chinese vegetarian recipes.

Chapter 3, titled “Soybeans, soybean products, and other legumes” contains much useful information and recipes. A diagram titled “Chart of soybean products” (p. 53) shows the complex relationships, includes Chinese characters for each product, and shows a few soy products that are not in the Glossary: Fermented soybean curd (*Fu ju*), comes in white (*pai*), red (*hung*) and spiced (*la*). The many interesting recipes, each with a Chinese name (with Chinese characters) and an English name include: *Su huo t’ui* and *su chi* (Mock ham), *Su ya* (mock pressed duck), and *Wu hsiang tou fu kan* (Seasoned pressed bean curd).

Glossary (soybeans, soybean products, and legumes, p. 208-13; Chinese characters are given): “Fresh young soybeans—*Mao tou*:” Delicious. They are in season in the early fall. “They come in dark fuzzy pods and are sold by weight. Young soybeans are like corn and should be eaten as soon as they are picked from the plant. They may be cooked with or without the pods.”

“Dried soybeans—*Huang tou*:” Yellow soybeans.

“Soybean sprouts—*Huang tou ya*:” Sold by weight. Best when made in cooler weather. “When bought fresh, they will keep in the refrigerator for 2-3 days, or longer if kept in a brown paper bag inside a plastic bag.”

“Soybean milk—*Tou chiang*:... usually served hot as a beverage with breakfast.”

“Soybean milk skin—Called by many names [*Fu yi*, *fu p’i*; see p. 53]. Each region has a different name for it, as does each food processor, and the thickness shape and wrapping may be different.” Four kinds are readily available in Chinese food stores” (1) *Erh chu* is “cut into rectangles 1½ x 4 inches and 1/8 inch thick. The pieces some stacked and wrapped in paper, in half- or one-pound packages.” (2) *Yüan chu* comes in sticks [dried yuba sticks]. When reconstituted, its thickness is about the same as *erh chu*. (3) *San pien fu chu* is half-moon shaped. When still soft, it is folded into 6 x 10-inch rectangles then dried. It is thinner than *erh chu*. (4) *Fu yi* “is the thinnest of the bean milk skins. It is paper thin and almost transparent. When dried it is very brittle, and must be handled very gently. It is used mainly to

wrap fillings. It comes in stacks of 8-10 sheets..."

"Soybean milk residue—*Tou fu cha*;" [okara]. Can be a delicious ingredient in cooking. "What is not used for food is made into a feed for animals or put into the ground as fertilizer."

"Curdled soybean milk—*Tou fu hua*:" *Hua* means "flowers." These very tender curds are "eaten hot with soy sauce or cold with syrup as a snack." It is "sold only in bean curd factories by the pint."

"Bean curd coagulant—*Shou shih kao*" [calcium sulfate]: A "white substance which comes in powdered form. It is used to coagulate soybean milk to make *tou fu* (bean curd)."

"Tender soybean curd—*Nen tou fu*: When some water is removed from the curdled bean milk, it is known as fresh tender bean curd. It is cut into squares 4 x 4 by 1½ inches.

"Firm soybean curd—*Lao tou fu*: When a coagulant is added to the boiled bean milk of a different concentration and some of the water is removed, the milk becomes firm bean curd. It is firmer than the tender bean curd and is cut into 3 x 3 x 3/4-inch squares.

"Pressed bean curd sheet—*Pai yeh*: Fresh bean curd sheet looks almost like a sheet of unbleached muslin. When it is frozen, the color turns darker, to a light brown. It is made into square sheets of various sizes. It is used to wrap fillings and it is also sometimes cut into short strips and cooked in dishes along with seasoning vegetables. Pressed bean curd sheet is best eaten fresh..."

"Pressed soybean curd—*Tou fu kan*—plain: When even more water is pressed out of firm bean curd, it becomes pressed bean curd... it is almost like a firm cheese." It may be bought either plain (*Pai tou fu kan*) or seasoned (*Wu hsiang tou fu kan*). "The seasoned curd is cooked in soy sauce and star anise [*pa chiao*], giving it a brown color." "The white pressed bean curd should be soaked in salt water (made of 1 tablespoon salt to 4 cups water) in a covered container. The seasoned pressed bean curd should be soaked in salt water and soy sauce. If stored in the coldest part of the refrigerator, they will keep for several weeks."

"Fried soybean curd—*Yu tou fu*:... The bean curd is cut into 1½ inch cubes and deep fried in oil until a golden crust forms outside, which the inside... remains soft." It "is sold by weight, usually in half- or one-pound bags."

"Wheat gluten—*Mien ching*:" (p. 217). "Deep-fried gluten—*Yu mien ching*:" "Fresh or dried wheat gluten—*K'ao fu*:"

Glossary (condiments and seasonings, p. 219-23): "Soy sauce—*Chiang yu*:" The "most important seasoning liquid in Chinese cooking. Comes in light or dark, thick or thin. Dark or thick is *Lao ch'ou*. Light or thin is *Sheng ch'ou*. Soy sauce also comes in different "flavors, such as mushroom soy sauce and, for nonvegetarians, shrimp roe soy sauce. Flavored soy sauces are used mainly for dips and for special flavors in salads, noodles, and as a final touch to a dish."

Note 2: This is the earliest document seen (April 2012)

that uses the term "mushroom soy" or the term "mushroom soy sauce" to refer to a type of dark soy sauce flavored with mushrooms, or that uses the term "*Lao ch'ou*" to refer to dark or thick Chinese soy sauce.

"Salted black beans—*Tou shih*:" These beans [fermented black soybeans] are "used to flavor bland foods, such as eggplant or bean curd." They are never eaten alone.

"Brown bean sauce—*Yüan shai shih*:" Made from "fermented soybeans and wheat flour mixed with salt and water. The beans in the sauce may be either ground (to make ground brown bean sauce—*Mo yüen shih*), or left whole. To this basic beans sauce, spice and other seasonings are added [in different proportions], creating many varieties" in "different regions of China. In Szechuan, large amounts of hot peppers and crush Szechuan peppercorns are added; in the northern provinces, garlic and scallions are used;..."

"Hoisin sauce—*Hai hsien chiang*:" A "ground bean sauce to which sugar, garlic, and other flavorings have been added. It is the most popular commercially prepared flavored bean sauce. It is used for cooking, or very often as a dip for deep-fried batter-dipped vegetables."

"Sesame paste—*Chih ma chiang*:" "Sesame oil—*Ma yu*:"

5337. Liu, Christine Y.C. 1976. Nutrition and diet with Chinese cooking. [Ann Arbor, Michigan?]. [ix] + 319 p. Illust. (by Jacqueline Sharp). Recipe index. General index. 23 x 19 cm. Reprinted in 1977. [26 ref]

• **Summary:** Contents: Acknowledgment. 1. Introduction. 2. Is Chinese food nutritious?: The protein facts, other advantages. 3. About monosodium glutamate (MSG) (many recipes contain 1/8 teaspoon MSG—optional). 4. Custom, chopsticks and tea. 5. Method of preparation and cooking. 6. Cooking utensils. 7. Menu planning. 8. Recipes: Soup, meat, poultry, seafood, vegetables, bean curd (to fu), rice, noodles and Chinese steamed bread, eggs, desserts and snacks.

9. Chinese ingredients and seasonings. 10. Tables and charts: Measurements and abbreviations. sources of important nutrients, desirable weight for selected heights (for men and women, small, medium or large frame. Source: Metropolitan Life Insurance Co.), minimum daily requirement of calories, certain vitamins and minerals, calories, protein, fat and carbohydrate value of foods used.

11. Recipe index. 12. References. General index. Order forms.

The chapter on "Bean curd "(to fu)" (p. 191-217) contains 22 recipes, each with the English name in bold characters, and the Chinese name both romanized in pinyin and written in Chinese characters. The first of these is a recipe for homemade tofu made from 1 cup soy beans and a choice of five different coagulants. The 2nd recipe in this chapter is "Fried bean curd (to fu), plain fried (*You dou fu*).

Note: This is the earliest English-language document seen (May 2012) that contains the term *You dou fu* (regardless of hyphenation).

For each recipe, the calories, protein, carbohydrates, and fat are calculated. Most recipes call for either “fresh bean curd” or “dry bean curd” (*dou fu gan*). A typical ingredient listing would be “1 lb bean curd, diced.”

Other recipes include: Those calling for soy bean sprouts (p. 40, 73, 185 {home grown}). Steamed fish with black beans (*Dou chi zheng yu*, with “3 T black beans {about one ounce}, p. 141). Lobster Cantonese style (with “1½ T black beans, minced,” p. 154). Wheat gluten (vegetable steaks) (*mian jing*, p. 186). Vegetarian’s delight (*Su shi jin*, with “2 oz. dried bean curd sticks [dried yuba sticks], soaked and cooked.” “Soak the dried bean curd sticks with 1 t [teaspoon] soda in hot water for 1 hour; drain. Add fresh cold water and bring to a boil. Drain and cut into 1 inch long pieces”) (p. 189-90). Red bean paste (*dou sha*) (p. 269). Many recipes are seasoned with soy sauce.

The section on “Chinese ingredients and seasonings” [glossary] includes: Bean curd or to fu, bean sprouts (the sprouts of mung beans or soy beans), black beans (“Fermented and highly seasoned black soy beans”), calcium sulfate, ginger root, hoisin sauce, monosodium glutamate, mushroom soy sauce (“A newly imported soy sauce from the People’s Republic of China... The flavor is excellent...”), oyster sauce (can be used like soy sauce but oyster sauce is saltier), sea weeds, sesame oil, soy sauce.

“About the author: Born and raised in Shanghai, Mainland China, Mrs. Liu completed her education at the National Taiwan University. It was there she met and married her husband, Stephen Liu, presently professor of Microbiology at Eastern Michigan University.

“After the birth of their eldest son, the Lius lived awhile in the United States, then moved to San Paulo, Brazil, where they remained for some years. The Chinese community in Sao Paulo was sizeable and affluent and their cuisine was quite popular. It was during this time that Mrs. Liu kindled her latent interest in cooking which ultimately led to the writing of this book.

“In 1965 the Lius returned to the United States and settled in the Ypsilanti-Ann Arbor area. Mrs. Liu further developed an interest in and took up the study of nutrition at the University of Michigan. She received her Masters degree of Nutrition in the School of Public Health in 1971.

“For some eight years Christine Liu has contributed her cooking and teaching talent to the Ann Arbor community by teaching Creative Chinese Cooking and Nutrition & Diet at the Continuing Education Department of Ann Arbor Public Schools...” The Lius have four children: Ted, Paul, Becky, and Peter. A photo shows Christine Liu. Address: M.P.H., P.O. Box 1332, Ann Arbor, Michigan 48104.

5338. Mallard, Gwen. 1976. Soy bean magic: Delicious recipes with soy beans, flour & grits. Saanichton, British Columbia, and Seattle, Washington: Hancock House Publishers. 80 p. Index. 18 cm.

• **Summary:** Contents: 1. Commercially bought soy products: Soy flour, soy grits, soybean milk, soy flakes (fine, or coarse), soybean oil, soybean lecithin, soy lecithin spread (butter substitute), soy noodles, macaroni and spaghetti, soy sauce, soy coffee, roasted soy nuts, baked and green soybeans (canned). 2. Homemade soy products: Soy milk from dry beans, quick soy milk (from soy flour), soy cream (from soy flour), “soy base” (from soy flour), soy cheese from soy flour [tofu] (curded with lemon juice), oven-roasted soybeans, toasted soy flakes (coarse), toasted soy flour, sprouted soybeans. 3. Soybean recipes: Breads ‘n breakfasts, soups ‘n salads ‘n salad dressings, soy suppers, desserts and delights.

To make soy base (p. 14): Slowly add 2 cups cold water to sifted soy flour to make a smooth paste. Stir in 1 teaspoon salt. Place in a double boiler and “cook for 30 minutes over rapidly boiling water. This mixture will be thick when it is cooked. Soy base is ideal for enriching gravies, stews, puddings, and soups. It will also make an excellent sandwich spread.” Note: This is the earliest English-language document seen (April 2006) that uses the term “soy base” as a noun in this way; within 10 years the term had acquired a different meaning.

On the rear cover is a biography of Gwen Mallard by Derrick Mallard, her husband. She was born in 1917 in Fernie, British Columbia; she lived with her parents and three brothers in a log cabin in the beautiful Elk Valley among Canada’s majestic Rocky Mountains. In 1971 she helped launch a campaign against plans for shipping oil in Alaskan tankers along the coast of British Columbia with the inherent dangers of disastrous oil spills (Note: On 24 March 1989 the tanker Exxon Valdez ran aground and spilled 11 million gallons of heavy crude oil in Alaska’s pristine Prince William Sound—the world’s worst oil spill in history). Gwen runs a small health food store and restaurant 14 miles north of Victoria, British Columbia. Address: British Columbia, Canada.

5339. Matsumoto, Nobumasa. 1976. *Shōyu monogatari* [The tale of shoyu]. Japan: Kikkoman Shoyu Co. Ltd. 172 p. [Jap]*

• **Summary:** A superficial pocketbook about Kikkoman only, but containing some interesting historical information.

5340. Nippon Torui Kikin Kyokai. 1976. *Daizu ni kansuru bunken mokuroku* [List of documents on soybeans and soyfoods]. Tokyo: NTKK. Vol. 2, post 1961. 93 p. [Jap] Address: Tokyo, Japan.

5341. Nix, Janeth Johnson. 1976. *Adventures in oriental cooking*. San Francisco, California: Ortho Book Division, Chevron Chemical Company. 96 p. Illust. (color). 28 cm. Ortho book series.

• **Summary:** By “Oriental” this book means mostly China

and Japan. Soy related: Crisp chicken teriyaki (with soy sauce made into teriyaki sauce, p. 14). Tofu salad (with 1 pound soybean cake, p. 15). Fu yu spareribs (with ¼ cup *fu yu*, fermented bean cake, p. 19).

The section on “Ingredients and equipment” (p. 22-31) begins with a full-page color photo in which we can clearly see: Azumaya tofu in a white plastic film-sealed tub, a plastic bag of “salted black bean” [fermented black soybeans] (ingredients: Black beans, ginger and salt), small pieces of deep-fried tofu, miso in plastic tubs, Kikkoman soy sauce in a large rectangular can, Aji-no-Moto in a red can, etc. The text discusses: Soy sauce (“The one essential ingredient in Chinese and Japanese cooking”). Japanese sauces, seasonings, and pickles (“For example, besides soy sauce, you can find low-sodium soy sauce {for specialized diets}, sukiyaki sauce, teriyaki sauce, and soup base for noodles,” p. 24).

Note: This is the earliest English-language document seen (May 2011) that mentions “low-sodium soy sauce.”

Chinese sauces, seasonings, and pickles, incl. the following which contain soy sauce: oyster sauce, brown bean sauce, Szechwan bean sauce, sweet bean sauce, hot bean sauce. Fermented black beans.

Bean cake—fresh and fried (“Soybean cake is almost as much a staple in Oriental cooking as rice.” The regular type is called tofu in Japan and dow-foo in Chinese. But there are other varieties: softer, firmer, dried, fried {comes in cubes, squares, and oblongs...} Fermented bean cake, also called red bean curd, white bean curd, or *fu yu*,” is often sold in jars. Miso, used mainly in Japanese cooking, comes in many colors).

Bean sprouts mean mung bean sprouts. Foods from the sea include Japanese kombu and nori.

In this same section is a sub-section (p. 30-31) titled “The language of Oriental cooking,” a glossary that includes: Aburage. Age-zushi. Aka-miso. Buta-dofu (“Pork with soybean cake”). Dow foo pok (“Fried soybean cake”). Fu yu (“Fermented soybean cake, used as a seasoning”). Hoisin (“Thick, slightly sweet Chinese sauce made from a soybean base”). Kitsune-zushi: See Age-zushi. Miso (“Red or white soybean paste”). Miso shiru (Japanese miso soup). Miso-yaki (Broiled food that has been marinated in miso). Monosodium glutamate (A white, crystalline flavor-enhancing agent). Nori. Norimaki. Shiro miso (“White soybean paste”). Shoyu (“Japanese soy sauce”). Sukiyaki. Sumiso. Suribachi. Surikogi. Tempura. Teriyaki. Tofu. Umeboshi. Wakame. Wok. Yin and Yang.

Soy related: Miso soup recipes (3, p. 34). Age-zushi (p. 52). Melting spareribs with black bean sauce (with 2 tablespoons fermented black beans, p. 63). Pork roast with miso (p. 64). Stuffed bean cake (with fried bean cake, p. 64). Sukiyaki (with 1 pound square tofu {soybean cake} cut into 1-inch squares, p. 66-67).

In the section on Oriental vegetables is a long sub-

section titled “Soybeans” (with a color photo of green soybeans growing on a plant, p. 94-95) which includes how to grow them in a home garden. The soybean plant has its own time clock, which gets its signal for flowering from the sky. “Short nights (long days) delay flowering; long nights (short days) speed up flowering.” Soybeans need a special inoculant of nitrogen-fixing bacteria. Describes how to cook and shell the beans in the pods, and to serve them cool, while still in the pod, as is commonly done in Japan.

5342. Oiso, Toshio. 1976. History of food and diet in Japan. *Progress in Food and Nutrition Science* 2(1):35-48.

• **Summary:** Contents: 1. Fundamental conditions in the history of the food habits of the Japanese. 2. Age of primitive food (Origin of Japanese culture—2nd century B.C.). 3. Age of stabilized rice-eating habits (2nd century B.C. to first half of 3rd century). 4. Ancient tomb age (Latter half of third century to 6th century). 5. First age of tabooing of meat eating (6th century to 8th century). 6. Age of formalization of food habits. 7. Age of warriors’ [samurai] diet (13th century to first half of 15th century). 8. Age of Zen-styled food in vogue (Latter half of 15th century to first half of 16th century). 9. Age of imported food culture (Latter half of 16th century to first half of 17th century). 10. Age of completion of Japanese food (Latter half of 17th century to first half of 19th century). 11. Age of Japanese-Western mixed diet (Latter half of 19th century to the present). 12. Acknowledgements.

Japan has relatively little arable land. Many ancient Japanese rice grains have been found in remains from the Yayoi Era, both round-grain rice (*Oryza sativa*) and elongated rice (*Oryza sativa indica*). Buddhism (and its precept against killing or eating meat) was introduced to Japan in the middle of the 6th century; production of dairy foods gradually faded out. In China the Han culture was flourishing. A centralized nation with an emperor was established at this time.

In the warrior’s diet we find unpolished / brown rice, rice cake (mochi), fermented bean paste (miso), salted plum (umeboshi), and soy sauce. “Salt was regarded as the most indispensable item” (p. 41). Temples made and sold foods.

In the age of Zen-styled foods the tea ceremony *Chanoyu* was in vogue, brought to completion by Sen no Roikyu (1521-1591); it was accompanied by the development of the “Kaiseki-style dinner” (*Kaiseki ryôri*). A labeled diagram of this dinner is given—shown from two angles.

After the Tokugawa regime was founded, the shogunate closed Japan to foreigners and most foreign influence; this continued for 219 years, as Japanese food and menus became standardized.

In 1867, the last Shogun abandoned the rule of the Tokugawa clan, which had lasted for 263 years. Emperor Meiji became Japan’s ruler and national isolation was ended.

Address: National Inst. of Nutrition, 1-Toyamacho, Shinjuku, Tokyo, Japan.

5343. Ortiz, Elisabeth Lambert; Endo, Mitsuko. 1976. The complete book of Japanese cooking. Philadelphia, Pennsylvania: M. Evans and Co., Inc.; Dist. by Lippincott. viii + 250 p. Illust. by Marion Krupp. Index. 24 cm.

• **Summary:** A very interesting, well researched, and accurate Japanese cookbook. The illustrations are excellent. Each recipe has its Japanese name in large bold letters and a translation directly below in smaller letters. A hallmark of her writing is that she prefers to use the native language words and terms (e.g., *shōyu*) rather than giving her translation of them (e.g., soy sauce). This is helpful, since many of her translations have not withstood the test of time. In some cases, however, she fails to catch nuances or chooses to ignore them; e.g., *momen tōfu* should actually be *momen-dōfu*, and *kinugoshi tōfu* should actually be *kinugoshi-dōfu*. Unfortunately, she uses the term “bean paste” to refer to two very different foods: miso and *azuki-an* (see p. 214, 242). A large number of recipes call for various types of *tōfu* (“bean curd”) or *miso* (“bean paste”).

Seaweeds (p. 4): “The one single thing that distinguishes Japanese cooking is the use of seaweeds.” Kombu is used to make dashi. Nori and wakame are used in many ways.

“The soy bean plays a dominant role in the Japanese kitchen. It comes in the form of *shōyu* (soy sauce), *usukuchi shōyu* (light soy sauce), *momen tōfu* (bean curd), *kinugoshi tōfu* (silky bean curd), *yakidōfu* (broiled bean curd), *koyadōfu* (freeze-dried bean curd), red and white *miso* (bean paste), and so on. Despite their common origin, the products of this versatile bean manage to be very different.

Note: This is the earliest document seen (May 2012) that uses the word “silky” or the term “silky bean curd” to refer to *kinugoshi tōfu*.

Soy-related recipes include: Asparagus with malted bean paste (with “moromi miso” and “usukuchi shōyu,” p. 27). Dengaku (Bean curd with bean paste, p. 28). Stuffed lotus root (with white miso and mustard, p. 30). Noppeijiru (vegetable and fried bean curd soup, with “1 *namaage* {type of fried bean curd}” or “2 pieces *aburaage* {fried bean curd},” p. 35). Kenchin-jiru (vegetable soup, with “1 *momen tōfu* {bean curd} weighing about 8 ounces,” and “4 tablespoons *miso* {bean paste},” p. 36). Clear soup (*suimono*) with okra and bean curd (p. 38). Clear soup with bean curd and wakame (p. 38). Satsuma-jiru (Miso soup with mixed vegetables, incl. red and white miso, p. 45). Miso soup with tofu and shungiku (p. 46). Miso soup with wakame (incl. red and white miso, p. 46). Miso soup with oysters and bean curd (p. 47). Sekihan (pink rice with azuki beans, p. 57). Miso udon (p. 63). Kitsune udon (noodles with *aburaage*, p. 67). Inari-zushi (fried bean curd stuffed with vinegared rice, p. 79). Sole with bean curd and mushrooms (p. 88). Salmon steamed with bean curd (p. 90-91). Mackerel with

red miso (p. 95). Fish marinated in miso (p. 102). Clams in miso, mustard, and vinegar sauce (p. 105). Oysters in vinegared miso sauce (p. 106). Satsuma-agé (with mackerel and bean curd cakes, p. 116-17). Oden (with “4 *ganmodoki* {fried bean curd balls}” and “1 *yakidōfu* {broiled bean curd}, about 7 ounces drained weight,” p. 120-21). Kaki no dotenabe (oysters with bean paste, p. 124-25). Yudofu (simmered bean curd, p. 130). Sukiyaki (Sautéed beef and vegetables, with “2 *yakidōfu* {broiled bean curd},” p. 134-35). Grilled beef with bean paste (p. 146). Nikumiso (chicken and vegetables pickled in bean paste, p. 159). Eggplant with bean paste (p. 163). Green beans with bean paste (p. 168). Daikon with fried tofu (p. 171). Turnips with bean paste (p. 173). Cucumber and soy bean sprouts with sesame seeds (p. 183). Spinach salad with tofu (p. 186).

A short section titled “Bean curd dishes” (p. 187) notes that “the soy bean is the youngest of the bean family, going back only to about 3500 B.C.” Beans in the Middle East go back to 7000 B.C. and in Mexico they go back to 5000 B.C. But the soy bean “makes up in versatility what it lacks in age.”

Recipes Fried bean curd with hijiki (with “2 pieces *aburaage* {fried bean curd},” p. 187). Sole with bean curd (188-89). Deep-fried bean curd with bonito flakes (p. 190). Dried bean curd with vegetables (with “4 *kōyadōfu* {dried bean curd}” and “2 teaspoons *usukuchi shōyu* {light soy sauce},” p. 191). Kūya-mushi (bean curd, chicken, and vegetable custard, p. 192-93). Simmered bean curd and chicken (p. 193). Takara bukuro (treasure bags with *aburaage*, p. 194). Tofu no shirō-ae (p. 195). Hiya-yakko (garnished cold bean curd, p. 196; *Kinugoshi tōfu* {silky bean curd} may be used). Chrysanthemum flower bean curd (p. 197). Nabeyaki Denraku [Dengaku?] (bean curd with white and red bean paste, p. 198). Pork with bean curd (p. 198-99). Ni-yakko (bean curd with dried bonito flakes, p. 199). Sokuseki misozuke (instant pickled vegetables with bean paste, p. 210). Koshi-an (red bean paste, with “1½ red *azuki* {adzuki} beans,” p. 213-15). New year dishes: Kuromame (black soy beans simmered in soy sauce and sugar, p. 220).

Glossary (excellent, p. 228-36)—Soy-related terms: *Aburaage*, *azuki* bean, *fu* (wheat gluten cake), *ganmodoki*, *kinako*, *kinugoshi tōfu*, *kōji*, *koshi-an* (powdered *azuki* paste), *kōyadōfu*, *kōridōfu*, *kuzuko*, *mirin*, *miso*, *misozuke*, *mochi*, *momen tōfu*, *moromi miso*, *namaage*, *nattō*, *shōyu*, *teriyaki* (“a technique of glazing foods in a soy sauce and *mirin* mixture either in a skillet or on a grill”), *tōfu* (“soy bean curd, usually refers to *momen tōfu*”), *umeboshi*, *usukuchi shōyu*, *yakidōfu*, *yuba*. Address: Both: New York.

W.A.T.; Mendoza, E.R.; Mondragon, R.L.; Payumo, E.M.; Ragus, L.N. 1976. The Philippines recommends for soybean 1976. Los Banos, Laguna, Philippines: PCARR. vi + 68 p. Illust. 24 cm. Reissued in 1978. [50 ref]

• **Summary:** Contents. Foreword. Acknowledgment. Introduction. 1. Nutritive value. 2. Utilization. 3. Cost and return analysis of soybean production. 4. Marketing. 5. Cultural management: Selection of varieties, adaptation (soil and climate requirements), land preparation, inoculation, planting, water management, fertilization, crop protection. 6. Post-harvest handling: Threshing, drying, storage. 7. Soybeans in multiple cropping. 8. Seed production. 9. References. Appendices: A. Standardization of soybean. B. Multifarious uses and preparation of soybean and by-products. C. Climate in the Philippines. D. Available inoculants and their distributors. E. Symptoms and first aids for pesticide poisoning. F. Addresses of manufacturers and distributors of pesticides. G. Glossary. Appendix tables. Tables. Figures.

A summary of soybean area, production, and yield in the Philippines, 1959-1975 follows: The number of hectares used for planting soybeans went from 1,690 ha. in 1959 up to 2,200 ha. in 1962, and then decreased annually until it was only 1,240 ha. in 1973. However, a record high of 2,780 ha. was reached in 1974, followed by 2,018 ha. in 1975. Production of soybeans was low in 1959-60, only 571.8 and 981.3 tons, respectively. By 1962, however, production had increased to 2,066.9 tons, but decreased steadily over the years until 1974. In 1974, a maximum of 2,214.0 tons was produced. The corresponding annual yields (tons/ha.) reflect the sharp rise of soybean production in 1961-62 and the ensuing decline of the industry throughout the rest of the 1960s and early 1970s, until 1974, when production soared to new heights. Address: PCARR (Philippine Council for Agriculture and Resources Research), Los Baños, Laguna, Philippines.

5346. Ranill, June. 1976. The El Molino cookbook: Natural wholegrain foods from El Molino & CaraCoa. El Molino Mills, A division of ACG Co., Box 2250, City of Industry, CA 91476. 144 p. Illust. Index. 22 cm. Spiral bound.

• **Summary:** Contents: Part I: Description of grains, seeds, legumes & carob (1-2 pages about each with an illustration; barley, buckwheat, corn, millet, oats, brown rice, rye, triticale, wheat, alfalfa seed, chia seed, flaxseed, pumpkin seed, sesame seed, sunflower seed, lentils, mung beans, split peas, soybeans {p. 22-23}, carob, El Molino and CaraCoa products).

Part II: How to use and enjoy whole grains, seeds, legumes. Part III: Recipes (by Alice Walter).

This year El Molino Mills celebrates its 50th anniversary; thus it was founded in 1926. Soya powder is like soya flour, but it is more finely ground for use in beverages. "Soy flour is made from the raw bean, while soya

flour is made from soybeans that have been lightly toasted. This 'toasting,' actually a moist heat treatment, enhances the flavor." El Molino soya flour is full-fat flour.

El Molino products (p. 26) include Soybeans (whole cooks best), and Carob coated soynuts. No soy flour or powder is mentioned.

Soybeans, soya flour, grits, and powder are used extensively throughout his book. White bread (with soy flour, p. 46). Honey oatmeal bread (p. 48). Cornell bread (p. 50). Soya bread (p. 51; 4.5 cups wheat flour and 1.5 cups soya flour, so 25% soya flour). Improved quickbreads (p. 68). Crunchy muffins (with soya grits, p. 70). Homemade muffin mix. Soya muffins (p. 72). Gluten sesame thins (p. 74). Homemade Granola (with 1 cup El Molino soya flour, p. 75). Soy nuts. Garlic soy nuts. Roasted soybeans (p. 85). Carob breakfast drink (with 1 tablespoon El Molino soya powder, p. 88). Bean salad (featuring soybeans, p. 92). Meatloaf (with soya grits, p. 97). Soybean loaf. Baked soybeans. Soybean chili (p. 101).

The section titled "Meatless dishes" (p. 102-112) features many soy and many gluten recipes: Soybean medley. Cooked soybeans (Basic). Soy cakes. Soybean paste (ground cooked soybeans). Stuffed peppers. Stuffed tomatoes (both with soybean paste). Baked soybean croquettes. Softened soya grits. Stuffed zucchini (with softened soya grits). Tofu (from soybeans curdled with lemon juice). Soy cheese (made from soya powder). Cooked gluten (homemade, p. 110). Gluten cutlets. Gluten patties. Gluten roast. Eggs and soya grits.

Soya milk (from soya powder, p. 115). Pineapple soya cocktail (with soya powder, p. 116). Soya applesauce cake (with soya flour or powder, p. 119). Improved cakes (p. 122). Peanut butter cookies (with soya flour, p. 125). Improved cookies (p. 128). Cookies for your puppy dog (p. 130). Sesame carob balls. Carob nut log (p. 137).

Sesame seed: On page 17 is a full page about sesame seeds and their uses, with an illustration of the sesame plant and its seeds. The Index contains more than 45 entries for "Sesame" including: Sesame butter (p. 17, 87). Sesame granola bars (p. 84). Sesame halvah (p. 17). Sesame milk (p. 17, 115). Sesame in muesli (p. 76). Sesame tahini dressing (p. 93). Address: City of Industry, California.

5347. Shanghai Grain and Oil Industry Co. 1976. [Process for making soy sauce with enzymes]. *Acta Microbiologica Sinica* 16(1):70. [Chi]

5348. Shepard, Sigrid M. 1976. The Thursday night feast and good plain meals cookbook: Natural foods of the Eastern Hemisphere: China, Japan, Indonesia, India, the Middle East. Spokane, Washington: New Age Printing. vii + 442 p. Illust. by Margaret V. Putman. Index. 28 cm.

• **Summary:** This is a natural foods cookbook (not vegetarian), with strong influence from East Asia. The

author's great aunt was a missionary in China. Pages 5-7 describe how to make a "bean curd box" for making tofu, and then how to make tofu at home. Among the many soy-related recipes are about 55 for tofu, 7 for miso, 2 for whole soybeans, and many for soy sauce. Pages 431-34 contain a directory of natural foods provisioners and Oriental foods provisioners.

5349. Smartt, J. 1976. Tropical pulses. London: Longman. 348 p. Index. [275* ref]

• **Summary:** In the chapter on "Pulses in human nutrition," soya beans are mentioned (p. 92-95) under: Germinated seed. Fermented products: Soy sauce, soya bean paste, tempé, natto and Hamanatto. Extracted pulse proteins: Soya bean curd ('tofu'), soya bean 'milk.' Address: PhD, Senior lecturer in Biology, Univ. of Southampton.

5350. Solomon, Charmaine. 1976. The complete Asian cookbook. New York, NY: Summit Books. 511 p. Illust. Color plates. Index. 29 cm.

• **Summary:** This artistic cookbook is loaded with full-page color plates plus a good glossary. Soy-related recipes include: Bean curd omelettes (Tahu telur, from Indonesia, p. 188). Fried bean curd with peanuts (Tahu goreng kacang, from Indonesia, p. 204). Fried bean curd with soy sauce (Tahu goreng kecap, from Indonesia, p. 204). Fried fish with salted soya beans [miso] (Ikan goreng tauceo, from Malaysia, p. 224). Bean curd in salted soya bean paste [tofu in miso] (Taukwa tauceo, from Malaysia, p. 233). Bean curd and bean sprouts [probably mung bean sprouts] (Taukwa dan taueh, from Malaysia, p. 233). Stuffed soy bean cake [with fried tofu] (Tauhu sod sai, from Thailand, p. 316). Glutinous rice and soybean sauce (Nuoc leo, from Vietnam, p. 341). Soup with bean curd (Canh dau hu, from Vietnam, p. 342). Miso tomato sauce (with red misu = red miso, from the Philippines, p. 351). Bean curd in barbecue sauce (Chu hau jeung mun dau fu, from China, p. 414). Bean curd with crab sauce (Hai yook par dau fu, from China, p. 414). Ginger soy sauce (See yau ghung jeung), Chilli soy sauce (See yau laht jiu jeung), Black bean sherry sauce (Dau see sheung jing jeung, with canned salted black beans = fermented black soybeans), Black bean garlic sauce (Suen tau dau see, with fermented black soybeans) (from China, p. 431). Sesame seed sauce (Cho kanjang, from Korea, p. 451, with "4 tablespoons light soy sauce"). Dumpling soup (Mandoo, from Korea, p. 453, with "1 square fresh bean curd" and "2 tablespoons light soy sauce"). Soup of soybean sprouts (Kong namul kuk, from Korea, p. 453, with 500 gm soy bean sprouts and 1 tablespoon soy sauce). Rice with fried bean curd (Kitsune domburi, from Japan, p. 460). Steamed egg custard with tofu (Kuya mushi, from Japan, p. 471). Bean paste soup (Miso shiru, from Japan, p. 477). Sushi in fried bean curd (Inari-Zushi, from Japan, p. 480).

Soy-related glossary entries (p. 485-502) include:

Aburage. Akamiso. Black beans, salted (Chinese: dow see = salted black beans). Bean curd (Chinese: dow foo; incl. yellow bean curd, dried bean curd, red bean curd). Chinese bean sauce (ground = *mor sze jeung* or chunky = *min sze jeung* similar to Malaysian *taucheo* or *tauceo*). Dow foo pok (Chinese-style fried bean curd). Miso. Mushroom soy (Soy sauce flavored with mushrooms during the last stage of processing). Soy sauce (light or dark, shoyu, kecap manis). Yellow beans, salted (=salted yellow beans). Yellow bean paste.

Note 2. It is also the earliest document seen (April 2012) that uses the term *kecap manis* to refer to sweet Indonesian soy sauce.

Interesting glossary entries (p. 485-502): Aburage, bean curd (fresh, yellow, dried, red), black beans, salted (Chinese: *dow see*; made from soy beans, heavily salted and sold in cans and jars), Chinese bean sauce (ground or chunky, like Malaysian *taucheo* or *tauceo*), fish sauce (Vietnamese: *nuoc mam*. Burmese: *ngan-pya-ye*. Thai: *nam pla*. Tagalog: *patis*). Miso. Mushroom soy (Soy sauce flavored with mushrooms during the last stage of processing). Red misu (See miso). sesame seed (Hindi: *till*. Sinhalese: *thala*. Malay: *bijan*. Chinese: *chih mah*. Japanese: *goma*. Indonesian: *wijen*). Sesame oil ("The sesame oil used in Chinese cooking is extracted from toasted sesame seeds..."). Sesame paste ("Sesame seeds, when ground, yield a thick paste similar to peanut butter. Stores specialising in Middle Eastern foods sell a sesame paste known as *tahini*, but this is made from raw sesame seeds, is white and slightly bitter, and cannot be substituted for the Chinese version—which is made from toasted sesame seeds, and is brown and nutty"). Wakame. Wasabi or wasabe. Yellow beans, salted (Very similar to canned salted black beans, but lighter in color). Yellow bean paste (It is not really yellow, but brown. Sold in cans).

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the word "dau fu" (or "dau-fu") to refer to Chinese-style tofu.

Note 2. This is the earliest English-language document seen (March 2009) that uses the word "tauceo" to refer to Indonesian-style miso.

• **Summary:** Contents: Introduction. Oilseeds: Soybeans, other oilseeds. Marine protein concentrates. Single-cell protein. Use of protein concentrates in food products.

Conclusions. References. Comment by Arthur D. Odell of Industrial Grain Products, Montreal, Canada: Vegetable proteins. Marine protein concentrates. Single-cell proteins. Address: Dep. of Nutrition & Food Science, MIT, Cambridge, Massachusetts.

5352. Wang, H.L.; Mustakas, G.C.; Wolf, W.J.; Wang, L.C.; Hesseltine, C.W.; Bagley, E.B. 1976. An inventory of information on the utilization of unprocessed and simply processed soybeans as human food. Peoria, Illinois: USDA Northern Regional Research Center, Interdepartmental Report. AID AG/TAB-225-12-76. 197 p. AID contract report. Undated. No index. 27 cm. Spiral bound. [65 ref]

• **Summary:** Contents: Introduction. Home and village traditional soybean foods by country. 1. Soybean food uses and production in Asia. Soaking dry soybeans. In China: Tou chiang (soybean milk; preparation, ways of serving), tou fu (soybean curd; yen-lu is the Chinese name for nigari), tou fu nao (soft curd), tou fu kan (dry / firm bean curd), chien chang (pressed tofu sheets), yu tou fu (fried tou fu), tung tou fu (frozen tou fu), tou fu pi (protein-lipid film; yuba), huang tou ya (yellow bean sprout or soybean sprout), mao tou (hairy bean, green soybean, or immature soybean), dry soybeans (roasting and frying, stewing and boiling), roasted soybean flour. Fermented soybean foods. Production and consumption of soybeans (China and Taiwan).

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products (aburage or age, nama-age and ganmo), kori tofu (dried-frozen tofu), yaki tofu (grill tofu), yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), edamame (green vegetable soybeans), whole soybeans, kinako. Fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour, soysauce, bean paste [Korean soybean miso], natto (no Korean name is given), production and consumption of soybeans.

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap or soysauce, tauco or bean paste [miso]), food mixtures (Saridele, Tempe-fish-rice or TFR, Soy-rice baby food, soybean residue [okara]-fish-rice), production and consumption of soybeans.

Thailand. Philippines: Soybean sprouts, soybean coffee, soybean cake (made from equal amounts of soybean flour and wheat flour), soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. West Asia [Middle East; Iran and Turkey]. References—Soybean food uses in Asia.

2. Soybean food uses and production in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References—Soybean food uses in Africa.

3. Soybean food uses and production in Europe [both Eastern and Western]. 4. Soybean food uses and production in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela (fried arepas with textured soy). Mexico: New village process, commercial developments of soy-based food products, Gilford Harrison, Ruth Orellana, Seguras Social. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References—Soybean food uses in Latin America.

5. Soybean food uses and production in North America. United States: Oriental populations, vegetarian communes, The Farm in Tennessee. Canada. References—Soybean food uses in North America. 6. Soybean food uses in Oceania. Australia. New Zealand. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soysauce, fermented soybean paste, fermented whole soybeans [Toushih, hamanatto], natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Recent simple soybean processes, other than traditional. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. Foods from whole soybeans developed at the University of Illinois (drum dried flakes, canned and homecooked soybeans, soy beverages and beverage products, spreads, snacks).

Ways of cooking and serving soybeans in the American diet. 9. Industrial processes. Industrial production and selling prices of edible soybean protein products. 10. Barriers to acceptability and utilization of soybeans in food and research recommendations: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Research recommendations [concerning each of the above barriers].

Concerning Morocco: Cereal-soy blends have been used extensively in Morocco; in fiscal year 1974 some 14.7 million lb were shipped to Morocco. Mmbaga (1975) reported that soy flour is being used in making porridge, with 1 part soy flour to 3 parts maize / corn flour.

Tables show: (1) Soybean production and imports in Taiwan, 1962-1975 (tonnes = metric tons, p. 33). Production rose from a 53,000 tonnes in 1962 to a peak of 75,200 tonnes in 1967, then fell to 61,900 tonnes in 1975. Imports

skyrocketed from 62,400 tonnes in 1962 to a record 827,300 tonnes in 1975. (2) Consumption of soybean foods in Taiwan, 1964-1974 (kg/capita/year, p. 34). Total soybean foods not including tofu rose from 1.08 kg in 1964 to a peak of 2.61 kg in 1972 then fell to 1.99 kg in 1974. Consumption of tofu (80% water) rose from 18.75 kg in 1964 to a peak of 33.89 kg in 1972, then fell to 32.04 kg in 1974. (3) Supply and disposition of soybeans in Japan, 1971-1974 (p. 49). Total supply is beginning stocks, plus domestic production, and imports. Total disposition is crushing, plus traditional foods and feed. In 1974 imports accounted for 87.5% of the supply, and crushing accounted for 71.0% of the disposition. (4) Whole soybeans used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 50). Tofu and others rose from 508,000 in 1970 to 539,000 in 1974. Miso rose from 177,000 in 1970 to 192,000 in 1974. Shoyu rose from 13,000 in 1970 to 14,000 in 1974. (5) Defatted soybean meal used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 51). Shoyu rose from 163,000 in 1970 to 176,000 in 1974. Tofu and others was constant at 130,000 from 1971 to 1973. Miso decreased from 4,000 in 1970 to 2,000 in 1974. (6) Production of traditional soybean foods in Japan, 1970-74 (tonnes / metric tons, p. 52). Tofu and others rose from 1,867,800 in 1970 to 2,264,900 in 1973. Shoyu rose from 1,334,100 in 1970 to 1,455,800 in 1974. Miso rose from 552,200 in 1970 to 587,200 in 1974. (7) Production and food use of beans [various types] and consumption of some soybean products in Korea, 1964-1967 (p. 56-57). In 1967 consumption (in tonnes / metric tons) was: Bean curd 290,000. Bean sprouts 270,000. Bean sauce 69,700. Bean paste 27,700. Total: 11.6 kg per capita per year. (8) Soybean production in Indonesia, 1960-1974 (p. 65). It rose from 442,862 tons in 1960 to 550,000 tons in 1974. (9) Consumption of soybeans in various parts of Indonesia in 1970 (p. 66). (10) Production of soybean foods in the province of Central Java, 1968-1972 (tons, p. 67). Kecap rose from 914,695 in 1968 to 1,524,000 in 1972. Tahu decreased from 18,570 in 1978 to 17,000 in 1972. Tempe rose from 506 in 1968 to 39,000 in 1972. (11) Area planted to soybeans and total soybean production in Thailand, 1964-1974 (p. 70). Area rose from 213,000 rais (6.25 rais = 1 ha) in 1964 to 1,016,000 rais in 1974. Production (in metric tons) rose from 31,300 in 1964 to 252,400 in 1974. (12) Utilization of soybeans by soybean-consuming countries, 1964-66 (based on FAO 1971 Food Balance Sheets, 1964-66 average, p. 150). The countries leading in per capita consumption (kg/person/year) are: China (PRC) 6.7. Japan 5.1. Korea(s) 5.0. Singapore 4.3. Indonesia 2.8. Malaysia 2.6. Taiwan (ROC) 1.1. (13) Amounts of cereal-soy blends distributed under Title II, Public Law 480 in fiscal year 1974 (p. 152-155). (14) U.S. exports of full-fat soy flour, 1974-75 (p. 156).

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “tubu” to refer to

Korean-style tofu. Address: Northern Regional Research Center, Agricultural Research Service, Department of Agriculture, Peoria, Illinois 61604.

5353. White, Lynn, Jr. 1976. Food and history. In: Dwain N. Walcher, N. Kretchmer, and H.L. Barnett, eds. 1976. Food, Man, and Society. New York and London: Plenum Press. xv + 288 p. See p. 12-30. [24 ref]

• **Summary:** A brilliant overview. Compared with other crops, the soybean was slow to diffuse out of East Asia, perhaps because in its home territory it was consumed largely as tofu and soy sauce; other cultures had no precedents for such processing (p. 28, footnote). Address: Prof. of History Emeritus, Univ. of California, 405 Hilgar Ave., Los Angeles, California 90024.

5354. Winarno, F.G.; Hardjo, S.; Rumawas, F. 1976. The present status of soybean in Indonesia. Bogor, Indonesia: FATEMETA, Bogor Agriculture University. xxiii + 128 p. 29 cm. [7 ref]

• **Summary:** The best and most comprehensive survey up to this time on the subject, it was done as part of the 1974 Industrial Census of the Central Bureau of Statistics. Full of valuable statistics and tables. Contents. Preface. Summary. List of tables. List of figures. I. Introduction. II. Objectives and survey methods: A. Objectives. B. Survey methods. III. Cultivation, product handling and protection: A. Botany of the soybean. B. Varieties. C. Growth requirements. D. Agronomy of soybean. E. Crop Management. F. Harvesting and product handling.

IV. Production: A. Harvested acreage, production and average soybean yield in Indonesia. B. Center production areas. C. Harvested acreage of soybean versus other food crops. D. Factors affecting soybean production. V. Farm management and soybean marketing in Indonesia: A. Farm management. B. Marketing of soybean.

VI. Soybean utilization (p. 52): A. Soybean products: Introduction, yuba, sere (from Bali: cooked whole soybeans, mixed with onions, hot pepper, turmeric, salt, and coconut presscake; molded into patties, sun dried, then deep fried), soybean milk, tofu (coagulated with *biang* or *siko* {calcium sulphate}), soybean sprouts (*tauge*), soybean powder (soybeans that have been cooked, dried, dehulled, and pounded), soybean mixtures, kecap (Indonesian soy sauce), oncom (fermented soybean product, red or black), tauco (Indonesian-style miso), tempe. B. Soybean utilization: Utilization by farmer (in each of 6 provinces and total), utilization by processor (tempe, tofu, kecap, miscellaneous), census conducted by Central Bureau of Statistics, conversion factor for soybean products. C. Consumption of soybean and its processed products (by province). D. Other components. Appendixes.

Tables in body of text: (1) Brief description of recommended soybean varieties. (2-3). Insecticides used

against *Agromyza* and *Phaedonia inclusa*. (4) Soybean harvest seasons in Indonesia (major harvest months, by province). (5-8) Harvested acreage, production, and average soybean yield during 1950-73, 1960-74, and in Java-Madura (1967-71, 1972, 1973, and 1974). (9) Soybean acreage in Java-Madura. (10) Major production areas in Java-Madura, and average 5-year yield, 1965-69. (11) Harvested acreage of soybeans vs. other crops in Java-Madura, 1971-72. (12) Production cost and value per hectare of soybeans. (13) Major trading and harvest months. (14-15) Percentage of farmer's share and marketing cost of the trade price in various provinces. (16) Percentage of farmer's share of the trade price. (17) Soybean utilization by farmers, 1975-76. (18-21) Production/consumption of tempeh, tofu, kecap, tauco, tauge, yuba, and sere.

(22-29) Raw material utilized by small-scale processors and by soybean home industries in Java and Jakarta. (30-31) Value of raw material and end products of small-scale industries over 3- and 12-month periods. (32) Conversion factor of soybean products to raw material. (33-36) Average daily consumption per capita of soybean and its process products at villages in Lampung, Yogyakarta, East and West Java, and in 4 other provinces. Address: FATEMETA, Bogor Agricultural Univ., Indonesia.

5355. Winarno, F.G.; Hardjo, S.; Rumawas, F. 1976. Kecap (Indonesian-style soy sauce) (Document part). Bogor, Indonesia: In: Winarno, F.G.; et al. 1976. The present status of soybean in Indonesia. FATEMETA, Bogor Agriculture University. xxiii + 128 p. 29 cm. [7 ref]

• **Summary:** The description of kecap (p. 58-59) states: Boil soybeans until tender. Drain and spread over round, shallow woven bamboo trays. Place these in a kecap fermentation room. Leave for 5-7 days until the soybeans are well covered with and bound together by a mycelium of *Aspergillus* and/or *Rhizopus* molds. Then dry the trays and soybean koji in the sun. Break up the soybean koji, place it in salt brine in deep earthenware jars, and place the jars in the sun to ferment for one week or up to one year.

When the mash is ready, boil it, adding clean water if necessary. Remove the liquid using a sieve; this is the first extraction, which is the best quality. Repeat this process 3 to 5 times, adding a brine solution the same salt concentration as the original mash. Each extraction, which will be lower in quality than the one before it, is kept separate to provide different qualities of end product.

As the final step for each different extraction, bring it to a boil and add some ingredients such as palm sugar [jaggery], caramel, or coconut sugar. Other ingredients such as fish extract or bouillon are also occasionally added. Filter the liquid through a piece of cheese cloth, bottle and store.

Note: This is the earliest English-language document seen (April 2012) that uses the term "first extraction" in connection with soy sauce quality,

Page 67: Most kecap is made in small scale enterprises, employing on average 10-11 laborers and working 23.7 days/month. The average kecap maker uses 13,390 kg of soybeans annually to produce kecap with a value of 6.3 million rupiahs. A table (p. 68) gives details by province.

Page 80: Kecap is a very minor soy product in Indonesia. Only 0.2% of all soybeans used to make foods in Indonesia are used to make kecap. The largest percentage of soybeans are used to make tempeh (66%), tofu (33%), and tauco (0.3%).

Pages 93-94: Ingredients required to make kecap include palm sugar, cane sugar, molasses, salt, wheat flour, cassava flour and spices. Palm sugar is the most important sweetener. "Depending on the concentrations of sugar and salt, there are two types of kecap available in the market, sweet and salty kecap." Wheat flour and cassava flour serve as thickening agents, but they are not used by all kecap makers. No information is given on the types or amounts of spices and herbs used in making kecap. Address: FATEMETA, Bogor Agricultural Univ., Indonesia.

the future—now. Paper presented on 1976-77 Tofu & Miso America Tour. 16 p. transcript. Unpublished manuscript. [5 ref]

• **Summary:** This is the transcript of a speech given on 15 Jan. 1977 in Kansas, but a similar speech was given by Shurtleff at 70 public programs throughout the USA. Contents: World hunger and its causes: Population growth, affluence and the feedlot system, land misuses and international food exploitation. Vegetarian diets as a solution to degenerative diseases and food problems. Soybeans in America. Soybeans and soyfoods in East Asia: Tofu, miso, tempeh, shoyu. The future of soybeans on the planet. Address: New-age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: 415-283-3161.

5360. Sunwheel Foods Ltd. 1977. Importers and distributors (Ad). *Spiral (London, England)*. Winter. p. 24-25. Jan.

• **Summary:** Sunwheel Foods Ltd. are importers and distributors of six varieties of Sea Vegetables, Tamari Soya Sauce, and three varieties of Naturally Fermented Miso Soya Bean Paste. This is ad is part of an article titled “Vitamin B-12 and the vegetarian,” by John Jenks. Address: 12 Orpheus St., London SE5 8RR, England.

5361. Claiborne, Craig. 1977. Nuts go into great Oriental dishes: Peanuts in the kitchen. *Chicago Tribune*. Feb. 24. p. E28.

• **Summary:** Nuts, especially the peanut, do not play nearly as important role in serious American cooking as they do in the cuisines of other countries. By contrast, Indonesian chefs do marvelous things with peanuts—mostly in sauces and soups.

A recipe is given for Indonesian chicken satay, which includes “1 tablespoon ketjap manis (a sweet soy sauce), see note.” The dipping sauce for this recipe includes “3 tablespoons ketjap manis.”

The note (at end of article) states: “Many of the ingredients for Indonesian dishes are available in Oriental markets.” Indonesian foods can be ordered by mail from Mrs. De Wildt, R.R. 3, Box 333, Bangor, Pennsylvania 18013.

5362. Leroux, Charles. 1977. Pouring over the virtues of catsup, the sauce everybody loves to hit. *Chicago Tribune*. Feb. 24. p. A1.

• **Summary:** The *Oxford English Dictionary* says that the word *kechap* comes from Malay; the Dutch spelled it *ketjap*.

Some say that catsup originated in China, where it is called *koe-chiap* or *ke-tsiap*.

Food in History, by Reay Tannahill says the word “ketchup” comes from the Siamese *kachiap*.

The sauce we know today as ketchup or catsup—made mainly from tomatoes—is very different from the Oriental sauces mentioned above. They were often made from pickled

fish, salt, and oil. American colonists in Virginia had a “walnut catsup” that they used on baked sturgeon.

There is a reference in *Barnaby Rudge* [1840-1841], by Charles Dickens, about putting ketchup on lamb chops. Note: Dickens states: “‘A bit of fish,’ John said to the cook, ‘and some lamb chops (breaded, with plenty of ketchup), and a good salad, and a roast spring chicken, with a dish of sausages...’” (1841, p. 44).

5363. *Eubiotica (Italy)*. 1977. Le tamari [Tamari]. No. 9. Feb. [Ita]*

Address: Italy.

5364. Nakadai, Tadanobu; Nasuno, Seiichi. 1977. The action of acid proteinase from *Aspergillus oryzae* on soybean proteins. *Agricultural and Biological Chemistry* 41(2):409-10. Feb. [14 ref]

• **Summary:** Until recently it has long been considered that large amounts of free amino acids are liberated from proteins by the hydrolytic action of acid protease from *Aspergillus oryzae*. However recent reports indicate that the liberation of free amino acids in miso brewing is due to the action of carboxypeptidase of the mold. This investigation clearly indicates that “free amino acids are liberated from soybean protein by the hydrolytic action of both acid proteinase and acid carboxypeptidase of *A. oryzae* in the miso brewing, but not liberated by the hydrolytic action of only acid proteinase.” Address: Noda Inst. for Scientific Research, Noda, Chiba, Japan.

5365. Hansen, Barbara. 1977. Cookery of the Spice Islands: Sumatra native instructs. *Los Angeles Times*. March 24. p. J1, J6.

• **Summary:** Until now it has been hard to learn Indonesian cookery, unless you have an Indonesian friend, or visit the country itself, or eat extensively in Holland, which has an Indonesian restaurant in almost every town. The Dutch ruled Indonesia for about 365 years, from about 1585 to 1950.

The best way is to learn first-hand. This is now possible in the Los Angeles area since Danny Unger is teaching a series of classes in Pasadena. He was born in Bukit Tinggi on the Island of Sumatra.

The first lesson focused on sate [pronounced sah-TAY] (grilled cubes of meat on skewers), the Indonesian dish that is probably best known outside that country. “The peanut sauce that is traditionally served with sate introduced to the class such specialized ingredients as terasi, a pungent fish condiment; sambal oelek, a paste of hot red chilies and kecap (pronounced ‘ketjap’), the sweetened Indonesian soy sauce.”

A recipe titled Peanut sauce for gado gado calls for “2 tablespoons kecap (Indonesian soy sauce).”

A note at the end of the article reads: “Terasi, galanga, sambal oelek and kecap are available in Dutch import shops and in Oriental markets that stock foods from Southeast

Asia.”

A large photo shows Danny Unger preparing gado gado with members of his cooking class.

5366. Product Name: Eden Tamari: Natural Shoyu.

Manufacturer's Name: Eden Foods, Inc. (Imported from Muso Shokuhin). Made in Japan.

Manufacturer's Address: 4601 Platt Rd., Ann Arbor, MI 48104. Phone: (313) 973-9400.

Date of Introduction: 1977. March.

Ingredients: Whole soybeans, whole wheat, water, sea salt.

Wt/Vol., Packaging, Price: 8 oz bottle, 1 pint bottle, 1 quart bottle, 1 gallon can.

How Stored: Shelf stable.

New Product–Documentation: Eden Foods. Spring and Summer Catalog 1977. On page 25 is the first record of “Eden Tamari: Natural Shoyu” which is sold in 8 oz, pints, quarts, or 1 gallons cans. “The Muso Shokuhin Company has been supplying the macrobiotic community of the United States with tamari, miso and sea vegetables for the last ten years. All of Eden’s Japanese imports are supplied by Muso... Eden tamari is aged naturally (in wooden kegs) for 30 months and is made from whole soybeans, whole wheat, water, and sea salt.” A photo shows 1 label and 3 bottles of “Eden Tamari: Natural Shoyu.” Prior to this, Eden had imported Tamari Shoyu under the Erewhon brand.

Ad in Soy Craft. 1979. Summer. p. 38. “Traditional Soy Products from Eden Foods.” “Eden tamari is a traditional shoyu naturally aged for three years in cedar vats. It is made from whole soybeans, water, and sea salt, giving it the depth and richness only slow, seasonal aging can allow. Available in 8 oz. pint, 1 gallon, and 4.75 gallon sizes. Also in 55 gallon drums.”

Eden Foods, Inc. 1991. Feb. “Eden Foods Product Overview.” “1972–Trade relationship began with Muso Company, Ltd. of Osaka, Japan.”

Talk with Ron Roller of American Soy Products (formerly of Eden Foods) in Saline, Michigan. 1991. Nov. 27. Originally Eden bought tamari and miso from Erewhon. Then Eden started importing them from Mitoku; they were importing from both Mitoku and Muso in the very beginning.

Letter from Bill Bolduc, a founder of Eden Foods. 1991. Dec. 4. Eden started to import a line of foods from Japan in about 1974 or 1975. Imports had definitely not yet started by the fall of 1973.

5367. Eden Foods. 1977. Spring and summer catalog 1977. 4601 Platt Rd., Ann Arbor, MI 48104. 53 p.

• **Summary:** On the cover are bags, trays, and scoops filled with natural foods. Page 25 states that Eden now sells Tamari Soy Sauce (Eden, or Marushima), plus Hacho, Mugi, and Kome Miso. This is the first catalog in which Erewhon’s name is not listed after any tamari or miso products.

On page 25 is the first record of “Eden Tamari: Natural

Shoyu” which is sold in 8 oz, pints, quarts, or 1 gallons cans. A photo shows the quart bottle with label, and the dispenser. It is “made from whole soybeans and naturally fermented in wooden kegs for 30 months... The Muso Shokuhin Company has been supplying the macrobiotic community of the United States with tamari, miso and sea vegetables for the last ten years. All of Eden’s Japanese imports are supplied by Muso.” Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

5368. Product Name: Island Spring Delicious Steamed Tofu in Sauce.

Manufacturer's Name: Island Spring, Inc.

Manufacturer's Address: P.O. Box 747, Vashon, WA 98070.

Date of Introduction: 1977. March.

Ingredients: Tofu, soy sauce, soy oil, sesame seeds, honey, ginger powder, garlic powder, cayenne pepper, black pepper.

Wt/Vol., Packaging, Price: 12 oz.

How Stored: Refrigerated.

Nutrition: Per 3 oz.: Calories 88, protein 10.3 gm, carbohydrate 2.9 gm, fat 7 gm.

New Product–Documentation: Label. 1979. 2 by 1 inch oval. Self adhesive. Black on gold. “Serve Hot Or Cold.” Leviton. 1981. Soyfoods. Winter. p. 43. “One thousand pounds of tofu a week are converted into Delicious Steamed Tofu, fresh griddled slabs of tofu packed in soy sauce.” Label. 1982. 6 by 5 inches. Plastic film. Brown and yellow on clear. “Delicious steamed tofu is good served hot or cold for snacks, sandwiches, hors d’oeuvres, or as a main course.” Talk with Luke Lukoskie. 1987. Oct. 19. “Suni [his wife, and a Korean-American] joined Island Spring in March 1977, and we started our flavored tofu at that time.” Form filled out by Yvonne Kuperberg. 1988. Oct. 1. Lists original ingredients. Label. 1986. 5 by 4 inches. Pink, green, blue, and black. Shows moon rising over mountains and water with sprig of plum blossoms in left foreground. “A fitness food from the Pacific Northwest, USA.”

5369. Iso, James. 1977. Southeast Asia—emerging growth market for soybeans. *Foreign Agriculture*. April 11. p. 2-4.

• **Summary:** With rising incomes and changing eating habits whetting their appetite for meat and quality protein foods, four nations of Southeast Asia—the Philippines, Thailand, Malaysia, and Singapore—are turning to the world market for more livestock feed ingredients. Brazil—by gearing up its export program—has recently gained a substantial foothold in these markets. And soybeans and soybean products also have come from Asian suppliers like the People’s Republic of China (PRC), Indonesia, and even Japan, the latter exporting soybean meal crushed from U.S. soybeans. Philippine imports of soybean meal in recent years have varied between 50,000 and 70,000 tons a year. The Philippines also is a viable market for soy proteins for food, thanks to the presence there of three major U.S. meatpackers. Some

50% of the processed meat produced by these firms has contained soy protein since the product's introduction into the Philippines in 1969. Ground red meat containing 20% soy protein enjoys good consumer acceptance. Owing to the large Chinese population in the Philippines, food soybean consumption already is significant. Although domestic soybeans make up the major supply for traditional foods, such as bean curds [tofu] and soy sauce, some 500-600 tons of these beans must be imported each month.

Thai soybean production has yet to make much headway. Thailand's climatic and soil conditions apparently have not been conducive to expansion, despite attempts by local growers and some Japanese interests to establish a large-scale industry in the highlands. In 1976, the country produced about 155,000 tons of soybeans, of which 20,000 tons were exported and the rest either used domestically for food or crushed. This year, if the Government approves, a multimillion-dollar soy protein plant will be constructed with the possibility of producing 10,000 tons of a soy infant food annually and 2,000 tons of meat analogue. The Institute of Feed Research and Product Development—a private Government-backed research organization affiliated with Kasetsart University—has spearheaded textured soy protein (TSP) and soy flour research. Malaysia is mainly noted for its huge and rapidly growing production of palm oil.

Although its population of 2.25 million is dwarfed by that of the rest of Southeast Asia, Singapore plays a disproportionately large role in the region's trade. This is because it is a major transshipment port for the region—and for Malaysia in particular. Most of the imported soybeans are crushed, although significant volumes of beans also are used in producing traditional soy foods for the large Chinese population. The only major soybean crusher outside of the Philippines is located in Singapore, an operation which the management anticipates will crush 100,000 tons of soybeans in calendar 1977. One firm is using soy proteins in canned foods, soy sauce, soft drinks, combined milk, and other products. Address: Foreign Market Development, Oilseeds and Products, Foreign Agricultural Service.

5370. Shurtleff, William; Aoyagi, Akiko. 1977. Koji & koji starter for miso and shoyu. Lafayette, California: New-age Foods Study Center. 6 panels. April 26. Catalog.

• **Summary:** This is a revised, expanded, typeset (by Jan Herhold), and illustrated (by Akiko Aoyagi) version of a similar leaflet first printed in June 1976. Printed with black ink on saffron colored (yellowish orange) paper, it begins by noting: "Now you can easily make your own miso or natural shoyu (soy sauce) at home using either high-quality, reasonably-priced koji or koji starters available in the United States; illustrated instructions are given in *The Book of Miso*."

Part I describes two types of koji: Firm granular koji, and soft mat koji. Part II describes nine different types of koji starter for which are sold in three textures: Spore-

powder texture, whole-grain texture, and meal texture. The nine different types of koji starter are for: Red miso, barley miso, soybean miso, mellow barley miso, sweet white miso, light-colored miso, fast white miso, amazake or pickling, or shoyu. All the above are made by the prestigious Japan Brewing Company (*Nihon Jojo Kogyo*), which employs only the very finest traditional, natural methods.

Sources of ready-made koji: Miyako Oriental Foods (Los Angeles, California), Westbrae Natural Foods (Emeryville, California), Chico-San Food Co. (Chico, California), and Janus Natural Foods (Seattle, Washington). Sources of koji starter: Westbrae Natural Foods sells the 5 most widely used koji starters; all are imported from Mitoku Trading Co., Tokyo, Japan. Address: Lafayette, California.

5371. Bernardino, Minnie. 1977. Tofu: Oriental food whose American time has come. Puddinglike soy curd adds taste, nutrition. *Los Angeles Times*. April 28. Part VI. p. 1, 10, 11.

• **Summary:** Better known by its Japanese name (the Chinese call it dow foo), tofu is fresh bean curd made from soybeans. The curds are formed when a coagulant is added to set the milky liquid [soymilk]. "The subsequent processing methods result in a variety of tofu products that differ only in firmness and texture."

"In Los Angeles the majority of tofu products are locally manufactured by the Matsuda-Hinode Tofu Co. which was started by the Yamauchi family in Hawaii about 30 years ago." The company makes a variety of tofu products "including soft to very soft tofu, medium-firm or Japanese-style tofu, and the hard or Chinese-style tofu that is popular for stir-fry dishes. They also make partially cooked styles such as the broiled block of tofu [grilled tofu], deep-fried tofu puffs (age or aburage in Japanese) and the raw-fried tofu (nama-age)."

Gives recipes (some from *The Book of Tofu*, by Shurtleff & Aoyagi) for: Yosenabe. Stuffed fried tofu. Tuna tofu patties. Tofu-orange almond dessert. Mushroom and onion casserole with tofu. Tofu tartare sauce. Pressed bean curd fry. Four photos show tofu being made at Matsuda-Hinode (overhead view of cutting large sheets into blocks in cooling tank) and in dishes. Address: Staff writer.

5372. Hattori, Terumitsu. 1977. Ordinary analysis of Kikkoman soy sauce (Naturally brewed in the United States). 1581 Webster St., San Francisco, CA 94115. 2 p. Unpublished manuscript.

• **Summary:** Solids content: 31.23 gm/100 gm or 37.10 gm/100 ml. Ash (minerals) 15.7 gm/100 g, or 18.7 gm/100 ml. NaCl 14.30 gm/100 gm or 17.00 gm/100 ml. Total nitrogen 1.39 gm/100 gm or 1.65 gm/100 ml. The nitrogenous component is: Amino nitrogen 44%, peptide nitrogen 44%, ammonia nitrogen 12%. Also gives amino acid content, reducing sugar, pH (4.75), titratable acidity (2.40), content of lactic and acetic acids, alcohol (ethanol

1.7 ml/100 gm or 2.05 ml/100 ml), specific gravity (1.188 gm/ml), color, calories (66 cal/100 gm or 79 cal/100 ml), and sodium benzoate preservative 0.05 to 0.07 gm/100 gm. Address: Kikkoman Foods, Inc., Japan Center, P.O. Box 784, San Francisco, California 94101. Phone: 415-563-8700.

5373. Kolb, H. 1977. Herkoemmliche Verfahren zur Nutzung von Soja im asiatischen Raum [Traditional processes for using soya in Asia]. *Alimenta* 17(2):41-45. March/April. [35 ref. Ger]

• **Summary:** Discusses each of the following foods briefly and gives sources of further information: Kinako (roasted soy flour), soymilk, yuba, tofu, kori tofu (dried-frozen tofu), aburaage, namaage, kinugoshi tofu, sufu, soy cheese (Western style), soy yogurt, ganmodoki, natto, Hamanatto, koji, tempeh, miso, tao-tjo [Indonesian-style miso], kochujang, shoyu, and ketjap.

Note: This is the earliest German-language document seen (Oct. 2011) that uses the word “sufu” to refer to fermented tofu. Address: Institut fuer Lebensmitteltechnologie, Frucht- und Gemuesetechnologie, Technische Universitaet Berlin, Koenigin-Luise-Strasse 27, D-1000 Berlin 33, West Germany.

5374. **Product Name:** Soy Nuggets (Chunks of Textured Soy Flour Flavored with Soy Sauce).

Manufacturer's Name: Love Natural Foods.

Manufacturer's Address: 3 Masada Dr., Cohutta, GA 30710.

Date of Introduction: 1977. April.

Ingredients: Defatted soy flour, imported naturally fermented shoyu soy sauce.

Wt/Vol., Packaging, Price: 8 oz box.

How Stored: Shelf stable.

Nutrition: Per 2 oz.: Calories 202, protein 17 gm, carbohydrates 30 gm, fat 1.7 gm, calcium 165 mg, iron 5 mg, sodium 678 mg.

New Product–Documentation: Spot in Whole Foods.

1986. Nov. p. 50. “Soy Substitute.” And in *Vegetarian Times*. Nov. p. 58. “Golden Nuggets of Soy.” Ideal for making chili, spaghetti sauce, and Sloppy Joes. Label. 1987. 5.5 by 8 by 2 inch box. Red, black, and white on tan. Color photo of spaghetti sauce, sloppy joe, and chili dish. “With natural soy sauce. Very low fat. No cholesterol. Perfect for Connoisseur Chili, Super Spaghetti Sauce, Sumptuous Sloppy Joes, and many other great dishes. Reconstitutes to over a pound.” Five recipes on back. Several quotes about love and God. Ad for “Love animals, don’t eat them T-shirts.” Form filled out by David Nazar. 1987. Dec. They now make 1,000 lb/month.

Ad in *Vegetarian Times*. 1991. Dec. p. 49. “Soy Nuggets. Lean bean protein. A great tasting soy granule made with natural shoyu soy sauce. Perfect for connoisseur chili, super spaghetti sauce, sumptuous Sloppy Joes, and many other great dishes.” The company address is still 3 Madada

Drive. A color painting shows Jesus as a child walking with animals, illustrating the spiritual beauty of a vegetarian diet.

5375. **Product Name:** Loveburger. The Classic Vegeburger.

Manufacturer's Name: Love Natural Foods.

Manufacturer's Address: 3 Masada Dr., Cohutta, GA 30710. Phone: 404-694-8179.

Date of Introduction: 1977. April.

Ingredients: Sesame seeds, soy flour, oat flour, bran, potato flour, nutritional yeast, naturally fermented soy sauce (from soybeans, wheat, sea salt), onion powder, basil, garlic powder, marjoram.

Wt/Vol., Packaging, Price: 1 lb box.

How Stored: Shelf stable.

Nutrition: Per 2 oz.: Calories 245, protein 17 gm, carbohydrates 20 gm, fat 11 gm, crude fiber 2 gm.

New Product–Documentation: Label. 1987. 5.5 by 8 by 2 inch box. Blue, black, and red on tan. Color photo of a child leading a cow, lamb, and lion. “Easy. All Purpose. Vegetarian. Quick and easy preparation. Makes two pounds.” Recipe on back. Several quotes about love and God. Ad for “Love animals, don’t eat them T-shirts.” Form filled out by David Nazar. The product is 1/3 soy. They now make 5,000 lb/month. Color ad in *Vegetarian Times*. 1988. Nov. p. 63. “Loveburger. The Classic vegeburger.” Ad in *Vegetarian Times*. 1990. March. p. 49. “Loveburger: The delicious way to get the fiber you need. With over 14% fiber, Loveburger has almost as much as oat bran... *Vegetarian Times* rated Loveburger the most meat-like of the dry mix vegeburgers... Enjoy Loveburger for life.”

5376. Yong, F.M.; Wood, B.J.B. 1977. Biochemical changes in experimental soy sauce koji. *J. of Food Technology* 12(2):163-75. April. [25 ref]

Address: Dep. of Applied Microbiology, Univ. of Strathclyde, Royal College Building, Glasgow [Scotland].

5377. Bernardino, Minnie. 1977. What is this thing called tofu? *Washington Post*. May 26. p. F25.

• **Summary:** This article is very similar to her article titled “Tofu: Oriental food whose American time has come. Puddinglike soy curd adds taste, nutrition” in the *Los Angeles Times* on April 28 (p. 11). A description of tofu plus 7 recipes. Address: *Los Angeles Times*.

5378. **Product Name:** Lima Soy Sauce (Formerly named Lima Tamari Soy Sauce).

Manufacturer's Name: Chico-San, Inc. (Importer). Made in Japan.

Manufacturer's Address: 1144 West 1st St., Chico, CA 95926.

Date of Introduction: 1977. May.

Ingredients: Water, soybeans, wheat, salt.

Wt/Vol., Packaging, Price: Glass bottle.

How Stored: Shelf stable.

New Product–Documentation: Ad in *The Macrobiotic*. 1977. May. p. 25, and 1978. June. p. 24. “Lima Soy Sauce.” “There is a beginning, there is an end.’ This is true in the case of the name ‘Tamari.’ “The word ‘Tamari’ began 16 years ago when George Ohsawa introduced the macrobiotic movement to this country. He wished to distinguish the macrobiotic soy sauce from the regular commercial soy sauce sold in this country. ‘Tamari’ is not soy sauce at all, but a word meaning ‘liquid drip’ which was originally used to describe liquid residue from Miso... Chico-San is now bottling their product, Chico-San Lima Sauce in Japan. This has improved the quality by eliminating a second exposure to air which occurs when soy sauce is bottled here. A problem, though, in importing soy sauce bottled and labeled in Japan is that the Japanese export officials have prohibited the use of the word ‘Tamari’ on the soy sauce label.

“Our label on the Chico-San Lima ‘Tamari’ Soy Sauce bottle now will change to simply Chico-San Lima Soy Sauce. We call it ‘Lima’ soy sauce because it is especially selected for Chico-San by Mrs. Lima Ohsawa who is recognized as the world’s leading exponent on Macrobiotic cuisine and diet.”

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 127. A photo shows the bottle and label.

5379. Leinwand, Rita. 1977. Dutch treat: Trendsetter—A glorious Indonesian rijsttafel party. *Bon Appetit*. May. p. 36-37, 39-42.

• **Summary:** Indonesia was a Dutch colony for 350 years. A sambal is a condiment, but sambals may be used as an ingredient in cooking or served at the table. A glossary includes Kecap manis (“A sweet, mellow Indonesian soy sauce”), which is sometimes labeled “Kecap Benteng Manis.” A recipe for Kecap manis is given (p. 43).

5380. Mendelson, Anne. 1977. Cook’s books. *Bon Appetit*. May. p. 24-25.

• **Summary:** This section is for book reviews. A positive review of *The Complete Book of Japanese Cooking*, by Elisabeth Lambert Ortiz begins: “Westerners who like Japanese food often start to think of the subject with a sort of evangelism. How did this small archipelago, faced with the most crippling energy shortages centuries before the term was invented, come to develop the world’s most poised, precise and visually exquisite techniques for preparing food? And why aren’t more people studying this fresh, unaffected *cuisine minceur* in search of saner ways to cook and dine?”

Later we read (p. 25, col. 2): “The more versatile pork and chicken appear in a variety of surroundings—deep-fried, glazed with *teriyaki* or similar sauces, and simmered or steamed with rice wine.”

Note: The *Oxford English Dictionary* (1989) cites this

article for its use of the word “teriyaki.”

5381. Hayashi, Kazuya; Mizunuma, Takeji; Yokotsuka, Tamotsu. Assignor to Kikkoman Shoyu Company, Ltd. (Japan). 1977. Process for producing koji for fermented food products. *U.S. Patent* 4,028,470. June 7. 7 p. Application filed 8 June 1976. [2 ref]

• **Summary:** “Producing koji for fermented food products by modifying an unmodified koji-substrate composed of a vegetable protein material and a vegetable carbohydrate material, inoculating a koji mold in the resulting modified koji-substrate, and cultivating it, wherein said cultivation is carried out in the presence of 0.1 to 1.2% by weight, based on the water content of the modified koji-substrate, of acetic acid added. This process is suitable for use in the manufacture of fermented foods such as soy sauce, miso, or sake.” Address: 1. Kashiwa, Japan; 2. Noda, Japan; 3. Nagareyama, Japan.

5382. Kushi, Michio. 1977. The book of macrobiotics: The universal way of health and happiness. San Francisco, California: Japan Publications, Inc. x + 182 p. June. Illust. Index. 26 cm.

• **Summary:** Many followers of macrobiotics consider this to be the author’s classic work on the subject. The preface tells briefly how Mr. Kushi got involved with macrobiotics and came to America. He began to lecture in New York in 1955. His teachings began to spread, especially after 1963. By Feb. 1977 he has conducted 5,000 lectures and seminars in America and Europe. One Appendix is titled “A Historical Review of the Macrobiotic Movement in North America” (p. 168-71).

Concerning foods made from soybeans, the book discusses miso (p. 51-52), protein (p. 69), tamari (p. 51-52, 131-33), tekka (52, 133), and tofu plaster (130; “more effective than an ice pack to draw out fever”). Concerning smoking, the author believes that it “does not contribute to produce lung cancer” if the smoker eats a proper traditional (macrobiotic) diet (p. 115).

“In 1949, Michio Kushi, during his postgraduate studies at Tokyo University, was inspired by the teaching of George Ohsawa. He came to the United States in connection with the World Federalist movement. Besides him, Aveline Tomoko Yokoyama in 1951, Herman Aihara in 1953, Cornelia Chiko Yokota, Romain Noboru Sato and his brothers Junsei Yamazaki, Shizuko Yamamoto, Noboru Muramoto and others came to the United States during the following years. After experience with various enterprises they respectively began to teach macrobiotics, mainly in New York. George and Lima Ohsawa also visited America from Europe to conduct seminars. Macrobiotic summer camps, restaurants, and food stores began to operate on a small scale with many American people. Educational activity was organized as the Ohsawa Foundation at that time. However, on the occasion

of the Berlin Crisis in 1961, the major active people related to the macrobiotic movement made an 'exodus' to Chico, California. Robert Kennedy, Lou Oles, Herman Aihara and others began Chico San, Inc., as a food manufacturing and distributing company, and established the Ohsawa Foundation in California. Later, the Foundation moved to Los Angeles, its main activity being publishing George Ohsawa's works. The San Francisco center was established. At a later date, Jacques and Yvette de Langre [DeLangre], Joe and Mimi Arseguet and many others shared educational activities in California and other areas of the West Coast.

"In the meantime, after educational activity in New York, besides several seminars on Martha's Vineyard and various local colleges, Michio and Aveline Kushi moved to Boston in order to concentrate on education for the younger generations. They organized the East West Institute in Cambridge which later moved to Wellesley and then transferred to Boston. To meet the increasing demand for good food, a small basement food store, Erewhon, was opened. Erewhon was managed and developed over the years by the Kushis, Evan Root, William Tara, Roger Hillyard and Paul Hawken. Erewhon was followed by a small restaurant, Sanae, managed at different times by Evan Root, Tyler Smith, and Richard Sandler. Lectures by Michio Kushi continued for five years in Arlington Street Church, Boston, with repeated visits to many major U.S. cities. Erewhon developed into a larger store, on Newbury Street in Boston, and added its wholesale operation from a warehouse on the South Shore, Boston Wharf, distributing constantly to an increasing number of natural food stores. The warehouse facility has been managed by Paul Hawken, William Garrison, Tyler Smith, and currently Jeff Flasher and other associates as well as the Kushis. Erewhon further established a Los Angeles store which also developed into a wholesale operation—managed over the years by the Kushis, William Tara, Bruce Macdonald, and currently by John Fountain and Thomas DeSilva...

"The *East West Journal*, a monthly newspaper, established in 1970—managed over the years by Ronald Dobrin, Jack Garvey, Robert Hargrove, and currently Sherman Goldman, Lenny Jacobs and other associates—is continuing to introduce to the wider society, the new vision for the present and future world. Educational activities directly concerned with teaching and other educational projects have been administered since 1973 by the East West Foundation, a nonprofit educational organization managed by the Kushis, Edward Esko, Stephen Uprichard, and other associates." Address: Boston, Massachusetts.

5383. Product Name: [Mandarin Soy Sauce].
Manufacturer's Name: Wan-Jia-Shiang Brewery Co. Ltd.
Manufacturer's Address: 80-1, Hope St., Sanchung, Taipei 241, Taiwan.
Date of Introduction: 1977. June.

New Product—Documentation: *Soybean Digest Blue Book*. 1977. p. 36.

5384. Product Name: [Soy Sauce].
Manufacturer's Name: Wei-Chuan Foods Corp.
Manufacturer's Address: Plant at No. 518, Chung-Hsin Rd., Sec. 5, San-Chung City, Taipei-Hsien, Taiwan.
Date of Introduction: 1977. June.
New Product—Documentation: *Soybean Digest Blue Book*. 1977. p. 36. See also 1976. p. 38.

5385. Yong, F.M.; Wood, B.J.B. 1977. Biochemical changes in experimental soy sauce moromi. *J. of Food Technology* 12(3):263-273. June. [7 ref]
 Address: 1. Presently: 294F Whampoa Dr., Block 83, Singapore 12; 2. Dep. of Applied Microbiology, Univ. of Strathclyde, Royal College Building, George St., Glasgow G1 1XW, Scotland.

5386. Magida, Phylis. 1977. Make your picnic cuisine 'to go' with ethnic flair: Eats. *Chicago Tribune*. July 8. p. A1.
 • **Summary:** Describes how people picnic in many different countries, and where to buy these ethnic supplies in the Chicago area. In Japan, when people picnic, they take several lacquered boxes filled with movable trays, each filled with a variety of foods designed to keep well without refrigeration. At Tenkatsu's Restaurant (3365 N. Clark St.) buy an order of beef teriyaki, accompanied by at least one of the following: "... *hiya dofu* [chilled tofu] (a rectangle of protein-rich soybean curd that looks like a white molded custard, 85 cents)."

Then walk three doors to Star Market (3349 N. Clark St.) "and buy an eight-piece combination box of *futomaki* (four small seaweed rolls stuffed with rice), and *inari* (four small ovals of deep-fried bean curd)." Eat these at room temperature. Total price at Star: \$3.75.

5387. Cost Plus Imports. 1977. Open 7 days a week (Ad). *Los Angeles Times*. July 14. p. CS5.
 • **Summary:** In the center right column of this large ad: "Gourmet groceries—Marukin soy sauce, from Japan. Zesty sauce for marinade, barbecue and oriental cookery. 1 Qt. [Quart] 2 fl. oz. \$1.44."

An illustration shows a bottle of Marukin soy sauce. Address: Los Angeles area (incl. Torrance).

5388. Yokotsuka, Tamotsu. 1977. "Shoyu": Japanese fermented soy sauce. Paper presented at SCOGS (Select Committee on GRAS Substances) Hearing. 17 p. Held 26 July 1977 at the Hilton Hotel, Bethesda, Maryland. Unpublished manuscript.

• **Summary:** Reports on the acute and long term effects of feeding shoyu to mice and rats. Concludes that the acute toxicity of shoyu was accounted for by the toxicity of its

sodium chloride content. Address: Kikkoman Shoyu Co. Ltd., 339 Noda-Shi, Chiba-ken, Japan.

5389. Neurath, G.B.; Duenger, M.; Pein, F.G.; Ambrosius, D.; Schreiber, O. 1977. Primary and secondary amines in the human environment. *Food and Cosmetics Toxicology* 15(4):275-82. Aug. [17 ref]

• **Summary:** Nitrosamines are reaction products from nitrite and amines. Some salt-pickled foods contain considerable amounts of amines, and thus some nitrosamines may form during processing. But very small amounts of amines were found in rice, wheat, and soybeans used as raw materials for making shoyu and miso.

There are primary and secondary amines. The main secondary amines are dimethyl- and diethyl-amine. 80% of all N-nitroso compounds tested in animal species have been found to induce tumors. Nitrosamines can be found only in the presence of secondary and tertiary amines on the one hand, and nitrite or nitrate ions or nitrogen oxides on the other. High levels of both are found in red radishes, spinach, and green salad. Address: Microanalytical Lab., 2000 Hamburg 56, Hexentwiete 32, Federal Republic of Germany.

5390. Lemov, Penelope. 1977. Family out: A weekly guide to family dining. *Washington Post*. Sept. 8. p. C12. Section D (D_C_12).

• **Summary:** The Mikado Restaurant (4707 Wisconsin Ave., NW), Japanese and moderately priced, offers "Natto, fermented soy beans." Also fish Teriyaki.

5391. Kushi, Aveline. 1977. Re: Why George Ohsawa coined the term "tamari" about 20 years ago to refer to naturally-fermented shoyu. Letter to William Shurtleff at New-Age Foods Study Center, Sept. 28. 5 p. Handwritten.

• **Summary:** Ohsawa coined this term at the request of Lima Foods in Belgium. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146.

5392. East West Foundation. 1977. Food policy recommendations for the United States: Statement of Michio Kushi, September 21, 1977. 359 Boylston St., Boston, MA 02116. 32 p. 28 cm.

• **Summary:** On September 21, 1977, Michio Kushi and several associates, including Dr. Robert Mendelsohn, M.D., met in Washington with members of the White House staff. The meeting, which lasted approximately two hours, began with a 45 minute presentation of a series of recommendations by Michio Kushi, a description of the activities and goals of the East West Foundation (founded 1972), and a history of Erewhon (fiscal 1978 sales estimated at \$10 million). An outline of the East West Journal's position on various political, social, and economic applications of the national food policy was also included in the meeting's agenda.

Recommendations for seasoning foods and to aid

digestion of grains, was traditional foods such as pickled vegetables and naturally fermented soy bean products (such as soy sauce, miso, tempeh, etc.). Note: Dr. Mendelsohn died in about May 1988. Address: Boston, Massachusetts. Phone: 617-536-3360.

5393. Erewhon, Inc. 1977. Erewhon. Harvest 1977. Boston, Massachusetts. 23 p. Catalog and price list.

• **Summary:** On the front cover is a photo of a table dispenser of Erewhon Natural Shoyu (but the neck band reads "Erewhon Tamari Soy Sauce"). On the first page, Jack Garvey (apparently the new president) writes about the meaning of the word "Erewhon," which derives from a book of that title written by Samuel Butler. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

5394. *Los Angeles Times*. 1977. Japan: Top market for U.S. soybeans. Oct. 27. p. H25.

• **Summary:** Japan now imports 55,000 tons of soybeans a year from the United States, which makes Japan the leading customer for U.S. soybeans in the world, according to USDA figures.

The Japanese use soybeans in a variety of traditional foods including "tofu (soybean curd of which 10 million

bricks are sold daily in Japan), miso (fermented soybean paste, the basis for the soup served in most Japanese restaurants [and homes]), aburage (deep-fried tofu) or natto (fermented cooked soybeans), kinako (roasted soybean powder) and shoyu (soy sauce). The use of soy in bread, biscuits and noodles consumes 15,220 tons of soybeans each year.”

Exports of soybeans and soy products (such as soybean oil and meal) have played an important positive role in the U.S. balance of trade and the U.S. farm economy.

5395. Product Name: [Seitan].

Foreign Name: Seitan.

Manufacturer's Name: Jonathan.

Manufacturer's Address: Holleweg 89, 2070 Ekeren (near Antwerp), Belgium. Phone: 031-64.41.73.

Date of Introduction: 1977. October.

Ingredients: Whole wheat, tamari soy sauce, ginger, kombu.

Wt/Vol., Packaging, Price: 250, 500 and 1000 gm trays with transparent plastic film lid.

How Stored: Refrigerated.

New Product–Documentation: This is the earliest known commercial seitan product in Europe. Jos van de Ponsseele (Jos is pronounced like the first syllable in Joseph) was the person responsible for starting seitan production at Jonathan.

Typed letter written in Oct. 1977 on Jonathan letterhead (Jonathan was at Holleweg 89; at the top of the letterhead was an illustration of two seagulls and a round yin-yang (*t'ai chi*) symbol) showing that that company was selling Seitan (a vegetarian steak) and Goulash (made with seitan)—among other things.

Letter from Sjon Welters. 1982. April 16. “Jonathan is a macrobiotic food company. They produce a wide assortment of macrobiotic products, such as... seitan...”

Label sent by Jos van de Ponsseele. 1988. 6.25 by 10.5 inches. This card-stock sleeve fits over the product. Color photo of two slices of seitan on a wooden plate with brown rice, onion rings, mushrooms, and lettuce. The product name, Seitan Natural in English, or Seitan Naturell in German, is written in white on a reddish-orange band. Ingredients: water, wheat*, soya flour*, wheat gluten, soya sauce, sea salt, sea-weed, spices * = Organically grown. Nutritional composition: Minerals 1%, vegetable proteins 20%, vegetable fats 0.3%, carbohydrates 3%. 110 calories (Kcal) per 100 gm. The product is sold frozen in a 200-gm tray. “Vegetable product. Use: Open lid with a sharp knife. Spread mustard or sprinkle tamari on the slices and allow them to fry in a pan. Pieces of seitan are delicious in all sorts of stews as in e.g. sauce bolognese with chopped seitan.” Code CINAB. Best before 12/89.

Letter from Mark Callebert of Lima Foods in Belgium. Jonathan started to make seitan in 1978 in a plant they built at Holleweg, Ekeren (Hoogboom), Belgium.

Letter (fax) from Jos van de Ponsseele and Magda Verfaillie of Mycelia b.v.b.a. in Gent, Belgium, in response to an inquiry. 1992. July 6. Jonathan was the first company in Europe to make seitan for sale commercially. Jos van de Ponsseele, the founder of Jonathan, first learned about seitan during a 9-month stay [with his wife and family] at the Kushi Institute in Boston, Massachusetts, from March to December 1976. There he tasted the seitan prepared by Aveline Kushi. He thought it would be a good meat substitute for the growing group of vegetarians in Europe. [Note: Jos was a butcher with a large meat processing operation before he became a macrobiotic vegetarian]. In Boston, he learned how to make seitan on a home scale from Tamara Uprichard. Then, at the very end of his stay in Boston, he started up medium-scale production of seitan with two Americans; he no longer remembers the name of the company or the names of his American partners. They sold seitan to macrobiotic study houses in Boston and to the Erewhon retail store.

Returning to Belgium, he founded Jonathan. The name “Jonathan” came from a famous book titled *Jonathan Livingston Seagull* [by Richard Bach, 1970]. Jos hired a man named Ludo Peeters as his first employee and they set up the business in a garage at Holleweg 53, 2180 Ekeren, near Antwerp, Belgium. The company's first product, made entirely by hand, was plain fresh seitan. It was introduced some time in 1977. The product name on the label was simply Seitan, written in 4 languages (Dutch, French, German, and English). It was packaged in 250, 500, and 1000 gm carton dishes with a transparent plastic film lid. With seitan, the big challenge for Jos was to introduce an entirely new and valuable product to the market. Two months after introducing seitan, Jonathan started making tofu and soymilk. Ludo continued to work at Jonathan for many years, eventually becoming managing director.

In 1979 Jonathan introduced a fresh seitan burger, then in Jan. 1980 the company moved to its present location at Antwerpsesteenweg 336, B-2080 Kapellen, Belgium. At the new location they introduced a number of new seitan products: Seitan Paté (Feb. 1980, sterilized), Seitan Goulash (late 1980, sterilized), and Seitan Schnitzel (1981, fresh). From 1985 on, Jonathan introduced a series of different ready-to-eat meals in which seitan was a major ingredient. Jos sold Jonathan and left on 1 April 1989.

Talk with Tamara Uprichard. 1992. July 7. She lived in the same Boston macrobiotic study house with Jos and his wife and family. She remembers Jos as being a very gentle, hard-working, and well-organized man.

Talk with Ludo Peeters. 1992. July 9. Ludo started working at Jonathan on 28 Aug. 1978. He made seitan with Jos from the very first day; they were Jonathan's only workers at the beginning and they worked in a garage at Holleweg 58 (the address never changed). Jonathan's first product was seitan, followed by tofu and soymilk. Ludo thinks that the seitan was introduced in Nov. 1978. The

original ingredients were water, wheat, soy sauce, soy flour or meal, salt, kombu, and ginger. The soy flour improved the flavor and nutritional value. He will look for a document to prove the date of introduction.

5396. Product Name: [Goulash {Made from Seitan}].

Foreign Name: Goulash—Gemaakt van Seitan.

Manufacturer's Name: Jonathan.

Manufacturer's Address: Holleweg 89, 2070 Ekeren (near Antwerp), Belgium. Phone: 031-64.41.73.

Date of Introduction: 1977. October.

Ingredients: Incl. seitan.

How Stored: Refrigerated.

New Product—Documentation: This is the earliest known commercial second generation seitan product in Europe. Jos van de Ponsele (Jos is pronounced like the first syllable in Joseph) was the person responsible for starting seitan production at Jonathan.

Typed letter written in Oct. 1977 on Jonathan letterhead (Jonathan was at Holleweg 89; at the top of the letterhead was an illustration of two seagulls and a round yin-yang (*t'ai chi*) symbol) showing that that company was selling Seitan (a vegetarian steak) and Goulash (made with seitan)—among other things.

5397. Katzen, Mollie. 1977. *The Moosewood cookbook: Recipes from Moosewood Restaurant, Ithaca, New York.* Berkeley, California: Ten Speed Press. 222 p. Illust. Index. 28 cm.

• **Summary:** One of the best and most popular American vegetarian cookbooks of the 1970s and 1980s, this hand-lettered work contains 7 tofu recipes, and 1 each using miso and whole dry soybeans, as follows: Shopping list (p. xiii) describes tamari and tofu (“Tofu is soybean curd. It resembles very soft cheese and has a mild flavor. It is an excellent protein food and very charming. Buy it by the pound or individual cake at oriental food shops. Also, some supermarkets are beginning to carry tofu now. It’s usually in pound packages in the produce department.”). Miso soup (p. 9; with chunks of tofu). Perfect protein salad (p. 49; uses whole dry soybeans and wheat). Tofu salad (p. 52). Gado-gado (p. 104; an Indonesian dish with a spicy peanut sauce and tofu chunks, either raw or sauteed in oil with sesame seeds). Ode to Chang Kung (p. 126; with tofu). Szechwan eggplant & tofu (p. 135; an entree). Sauté, Chinese style (p. 149; with tamari-ginger sauce and tofu [though tofu was accidentally omitted from the list of ingredients]).

Note: Molly writes in 1990: “I first learned about tofu in 1970 from a Chinese restaurant in San Francisco. They called it ‘bean cake’ soup. I was intrigued—and not disappointed. The current edition of this book has a revised index, correcting the error relating to page 221.” Address: Moosewood Restaurant, Dewitt Building, Ithaca, New York.

5398. Shurtleff, William; Aoyagi, Akiko. 1977. *The book of kudzu.* Brookline, Massachusetts: Autumn Press, and Lafayette, California: Soyfoods Center. 102 p. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. Reprinted in 1985 by Avery Publishing Group, Inc. (Wayne, New Jersey). [79 ref]

• **Summary:** Contents: Acknowledgments. Kudzu (poem) by James Dickey. 1. The ancient genie. 2. Cooking with kudzu (70 recipes): Basic recipes, sauces, soups, jelled salads, deep-fried preparations, grains with kudzu powder, primary food made from kudzu powder, special tofu with kudzu, jelled desserts, Japanese-style jelled confections, thickened beverages, kudzu noodles, kudzu leaves, shoots, flowers, and roots. 3. Healing with kudzu. 4. Making kudzu powder. 5. Weaving with kudzu. 6. Kudzu and the ecosystem. Appendices: A. Real kudzu powder and its imitations. B. Institutions and people connected with kudzu. Bibliography. Glossary. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

5399. Herb, C.; Williams, Bev. 1977. Tsumago a step back in time. *Los Angeles Times*. Nov. 13. p. M20.

• **Summary:** Tsumago is a historic town, a living museum, relatively untouched by time, in the Japan Alps, southwest of Tokyo. Few Americans visit, or even know it exists—although many Japanese visit. The food is authentic, and is not adjusted for tourists. “Breakfast can include a raw egg mixed with soy sauce at the table and then poured over steaming hot rice. Another breakfast treat is steaming hot soup with various vegetables, seaweed and soy bean curd.” A photo shows one of the town’s narrow lanes.

5400. Betbeze, Merrie. 1977. Pesky kudzu has culinary merits. *Tuscaloosa News (Alabama)*. Nov. 20. p. 2C, 14C.

• **Summary:** This is a review of *The Book of Kudzu*, by Shurtleff and Aoyagi. Most people in the Deep South see kudzu as “a green menace that strangles and destroys the crops and gardens they have worked so hard on.

“But surprisingly to some (maybe most) Americans, kudzu is a useful product that has been an important part of the Chinese culture for over two thousand years, accordingly to a recently published book on kudzu.

“Kudzu has been used for weaving, cooking, and healing in the Chinese and Japanese cultures, according to a book by William Shurtleff and Akiko Aoyagi.

“Today the kudzu root is being made into a powder and used by some Americans mainly for cooking, the author said.” It is now being sold in natural food stores throughout the United States—although there is not much demand for it in Tuscaloosa.

Recipes are given for: Kudzu, shoyu and vegetable sauce. Fried eggplants with kudzu and sesame sauce. Mock cheesecake. Egg and onion miso soup. Corn soup with kudzu. Fragrant kudzu-thickened clear soup (with tofu). Fresh fruit jelled salad. Guacamole jelled salad. Deep-fried

rice balls. And more.

A large photo shows kudzu vines that cover poles, trees, and shacks. Address: Staff writer.

5401. Brooks, Charles D. 1977. Tips for stocking a Chinese kitchen. *Christian Science Monitor*. Nov. 23. p. 32.

• **Summary:** This is a list of important ingredients with a description of each and recommendations: Soy sauce: Chinese soy works best for Chinese cooking. Avoid most brands made in the USA and Hong Kong. "Some of the best soy I've ever tasted comes from mainland China." He especially favors a brand that is flavored with either shrimp or mushroom essence."

Sesame oil: This nutty-tasting oriental oil, pressed from toasted sesame seeds, is used sparingly as a condiment. Do not confuse it with the relatively light-colored oil [pressed from untoasted sesame seeds] sold mainly in health food stores. Beware that Japanese sesame oil is often flavored with red pepper. Keep all sesame oil refrigerated.

Ginger: Always use fresh ginger root, never the dry powder. Keep uncovered in a cool place. Freeze surplus ginger.

"Hoisin sauce: This sweet and pungent sauce gives Chinese roast pork its color and flavor." Chee hou and chap kam are simply hoisin sauce with slight variations.

"Oyster sauce: is the Cantonese. It is made by cooking down oysters in soy sauce. Common tofu is made noble when accompanied by this savory sauce."

"Salted and fermented black beans: These zesty little beans are called dow see by the Cantonese who invented them." Black beans used sparingly with steamed fish make an excellent dish. Keep refrigerated in a covered jar.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Salted and fermented black beans" to refer to fermented black soybeans.

A recipe for "Fragrant soy sauce chicken" has ingredients that include: "1/3 cup soy sauce."

Note: This is the earliest English-language document seen (April 2012) that contains the term "fragrant soy sauce." It appears to be a kitchen preparation rather than a commercial product. Address: San Francisco.

5402. Chang, C.H.; Lee, S.R.; Lee, K.H.; Mheen, T.I.; Kwon, T.W.; Park, K.I. 1977. Fermented soybean foods. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods*. New York: Marcel Dekker, Inc. ix + 671 p. See p. 465-66, 482-87.

• **Summary:** Contents: Korean soy sauce: Kanjang (is made by primitive methods in the home), steps in preparation, microbiology, biochemical changes (p. 465-66). Korean doenjang and kochujang: Description (Soy sauce and miso were introduced to Japan, from Korea, during the Nara period {645-793 AD}), patterns of consumption (Daily per

capita consumption of doenjang and kochujang are estimated to be about 15 gm and 10 gm, respectively), steps in preparation (utensils, substrates, essential microorganisms), control of process, biochemical changes, economics of production and distribution.

Note: This is the earliest English-language document seen (March 2009) that uses the word "kochujang" to refer to Korean-style red pepper and soybean paste (miso).

Illustrations show: (17) Flow sheet: Production of Korean doenjang (soybean paste). Soak soybeans, boil, mash, form into balls, wrap in rice straw, and incubate under rafters until covered with mold (*meju*). Crush, mix with salt brine, and ferment for 6 months to obtain doenjang. (18) Flow sheet: Production of Korean kochujang (soybean paste). Soak soybeans, boil, mash, suspend in rice straw sacks until overgrown with mold (*meju*). Crush, sun-dry, and pulverize to obtain 10 liters of crushed *meju*. Add cooked gelatinous rice flour (2 liters), hot pepper flour (0.5 to 0.7 liters), kanjang (Korean soy sauce), dried beef, jujube flour, honey, and salt brine. Mix. Ferment for 2 months to obtain kochujang.

A table (p. 487) shows the amino acid composition of doenjang. Address: 1. Food & Nutrition Dep., Sacred Heart Women's Univ., Bucheon, Kyungki-do, South Korea.

Address: Dep. of Food Science, Univ. of Agriculture, P.O. Box 203, Sungai Besi, Selangor, Malaysia.

5407. Jan, C.C.; Lin, K.C.; Hsu, W.H. 1977. Taiwanese inyu (black bean) sauce. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods*. New York: Marcel Dekker, Inc. ix + 671 p. See p. 466-67.

• **Summary:** “Description: Taiwanese black bean sauce (*inyu*) is a saline, meat-flavored sauce made by fermentation of black beans (*Glycine soja* Sieb and Zucc.).” Note: This is the wild annual soybean, which has very tiny, black seeds. Theodore Hymowitz, professor emeritus of plant breeding at the University of Illinois, Urbana-Champaign, and one of the world’s leading authorities on wild soybeans and soybean relatives, doubts that soy sauce could be made from the wild soybean. He states (e-mail of 27 Oct. 2008): “Wild annual soybeans are not cultivated. Besides harvesting such beans would be almost impossible as they shatter terribly upon maturity. Nor do the beans mature uniformly. I think the authors are confusing smallish black soybeans with *Glycine soja*. Secondly, the production numbers preclude the growing of *Glycine soja*. In Taiwan the plant is only found in the wild.”

Unlike most traditional soy sauce [which includes cereal grains, especially wheat, in the koji], the flavor of inyu is more stable and becomes more intense following heating or cooking, an advantage in the preparation of Chinese foods. Thus, it is used in place of traditional soy sauce to color and flavor cooked foods, especially fish, poultry, meat, and vegetables.

Inyu is made in Taiwan, China, Hong Kong, and other nations where there are people of Chinese culture. Production in Taiwan alone is estimated at 36,000 metric tons per year, or 1.62 liters of inyu per person in Taiwan each year.

Therapeutic uses: Some Chinese believe that inyu can relieve the pain of burns, heal damaged tissue (after burns), prevent hangover after excess alcohol consumption, “and even to help retain and accentuate the shine of black hair and eyes.”

Method of preparation: Wash black soybeans, then soak, drain, steam, and cool them. Inoculate the cooked beans with *Aspergillus oryzae* [the koji mold] or *A. soyae*, then incubate aerobically to produce a koji in which the beans are completely overgrown by the mold mycelium. In contrast to the traditional soy sauce process, in which the koji is next covered with brine, the black bean koji is first washed,

preincubated at 40-50°C for 4 hours, covered with 18% brine (weight/volume), and fermented for 40-50 days. During this time “the mash undergoes both a lactic acid and a yeast fermentation. Finally the mash is filtered, pasteurized, and bottled.”

Inyu production takes only about 1.5 months versus 5-6 months for traditional Chinese soy sauce—which makes it more economical.

Note: This is the earliest English-language document seen (April 2012) that mentions *inyu*, or with the word “inyu” in the title. Address: President Enterprise Corp., 2-20 Yan Harn, Yeong Kang Shiang, Tainan Hsien, Taiwan.

5408. Liu, S.L. 1977. Taiwanese soy sauce. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. 5413. **Product Name:** Fried Rice & Tofu Sandwich (In a Chapati). Renamed Brown Rice & Tofu Sandwich in late 1978 by Chris Smith.

Manufacturer's Name: Wildwood Natural Foods.

Manufacturer's Address: Sleeping Lady Cafe, 58 Bolinas Rd., Fairfax, CA 94030.

Date of Introduction: 1977. November.

Ingredients: Brown rice, tofu, tamari, alfalfa sprouts, spread (sesame butter, barley miso, scallions), seasonal vegetables (carrot or cucumber), lettuce, whole grain chapati.

Wt/Vol., Packaging, Price: 8 oz.

How Stored: Unrefrigerated and perishable.

New Product–Documentation: Talks with Paul Duchesne between 8 Oct. 1988 and 18 Aug. 1989. His Brown Rice & Tofu Sandwich (BRTS) was developed in Fairfax in late October or early November 1977. He made 200 of them at home and sold them to participants at a macrobiotic seminar led by Michio Kushi in Marin County. Donna Gayle helped him make them.

In Jan. 1978 he started making these sandwiches at the Sleeping Lady Cafe in Fairfax (Marin County) and selling them at the Good Earth Natural Food Store in Fairfax. He bought his tofu (made by Quong Hop & Co. in South San Francisco) at Good Earth. In Feb. 1978 he began to distribute them to many natural food stores throughout Marin County. One of America's early second generation tofu products, the sandwich was made as follows: Saute brown rice with onions, sesame oil, and tamari. Boil a cake of tofu in water with a little salt, then slice it into 4 pieces each about 3 inches square and 1/8 inch thick. Onto a whole wheat chapati (not bread) spread a mixture of sesame butter, barley miso, and scallions. Over that spoon on the fried rice, then place on top one slice of tofu, a long strip of parboiled carrot, some alfalfa sprouts, and romaine lettuce leaf. Fold over two edges of the chapati, wrap it in shrink wrap, and sell it fresh (unrefrigerated) in a wicker box with a calligraphy sign (that showed how to eat it like a banana) on the front counter of natural- and health food stores. One key to the flavor was sesame-miso spread, learned from George Ohsawa's 1966 book *Zen Cookery* #203 "Miso Spread."

While in California in 1978 Duchesne and Chris Smith gave their recipe and production techniques to Joe Nixdorff,

who made the Samurai Hero in Berkeley, to Roy Steevensz, who made the BRTS in Los Angeles.

In September 1978 Paul went to Boston to study macrobiotics, so he gave his Fairfax sandwich business (which still had no name) to Chris Smith, a local friend interested in macrobiotics. Paul had first offered his business to Ron Harris, but Ron declined since he was getting involved in seitan. The California Department of Health came in helped Smith's unlicensed food operation to get licensed. A month later, in October 1978, Chris stopped frying the brown rice and renamed the product, coining the now-famous name "Brown Rice & Tofu Sandwich." At the same time he named his business Wildwood Natural Foods.

The product's original Label (sent by Paul Duchesne. 1989. Aug. 11 and printed before Wildwood was incorporated) is 4.5 by 2 inches. The maker is Wildwood Natural Foods at 58 Bolinas Rd. The ingredients, listed above, are the same as those in the original 1977 edition, but cucumber was never used. The color is black on goldenrod yellow (THE counter-culture color of the late 1970s). Paper. The text reads: "Fresh daily. All organically grown ingredients (whenever possible). Seasonally cooked, spring water. Enjoy your meal... Unwrap one end and peel down as you eat." In Boston, Duchesne started Rice House, where he continued to make the sandwich.

In May 1979 Duchesne and Chris Smith traded places and companies. Paul took over the company he had started originally (now named Wildwood) in Fairfax. For more details see Development of the Brown Rice and Tofu Sandwich, and early history of Wildwood Natural Foods (Duchesne 1988).

Leviton. 1981. Soyfoods. Winter. p. 61. "Putting tofu in the lunch boxes of America." "Wildwood produces a line of eight packaged vegetarian sandwiches including *Brown Rice and Tofu Sandwich* (with vegetables in a whole wheat bun)..."

Note 1. This is the earliest record seen (April 2001) concerning Wildwood Natural Foods.

Note 2. This is the earliest commercial soy product seen (April 2001) with the word "Sandwich" in the product name. by Wildwood Natural Foods.

5414. Yamada, Koichi. 1977. Recent advances in industrial fermentation in Japan: Bioengineering report. *Biotechnology and Bioengineering* 19(11):1563-1621. Nov. [28 ref]

• **Summary:** Table 1 shows the production of miso, shoyu, and vinegar in Japan from 1968 to 1974. Production of both miso and shoyu have increased only slowly. Miso production increased from 538,156 tonnes (metric tons) in 1968 to a peak of 590,137 tonnes in 1973, then fell slightly to 587,228 tonnes in 1974.

Shoyu production increased from 1,026,643 kl (kiloliters) in 1968 to a peak of 1,274,987 kl in 1973, then fell slightly to 1,199,155 kl in 1974.

Advances in miso production: Halophilic (salt tolerant) bacteria such as *Pediococcus halophilus* and *Streptococcus faecalis*, and halophylic yeasts such as *Saccharomyces rouxii*, *Torulopsis versatilis*, and *Torulopsis etchellsii* were shown to be the more important strains. Pure cultures of these strains were used as starters for miso fermentation. Since much time, work, and skill are required to make traditional koji, commercial enzyme preparations with high polypeptidase activity and high proteinase activity are used for evoking the full flavors of miso.

Advances in shoyu production: A new type of cooker which can cook soybean meal at high temperatures for short times is now being used, and advances in koji technology have raised the enzymatic activity and lowered the level of contaminating microorganisms. As a result, nitrogen utilization has been raised to 90% from 60% in 1945 and the time required for ripening the moromi mash has decreased to 4-6 months from one year or more in the past.

Table XIX titled "Production of microbial enzymes in Japan" shows 7 major and 8 minor commercial enzyme preparations, the number of makers of each, the output per year (in tonnes and yen), and the main microorganisms used to make each. By far the most important enzyme in terms of tonnage is α -amylase (11,000 tonnes, 10 makers, *Aspergillus oryzae*), followed by protease (1,050 tonnes, 18 makers, *Aspergillus oryzae*), then glucoamylase (400 tonnes, 8 makers, *Aspergillus niger*). Address: Univ. of Tokyo and Sapporo Beverages Ltd., Tokyo 153, Japan.

5415. Yokotsuka, Tamotsu. 1977. Japanese shoyu. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 437-51. [50+ ref] Address: Kikkoman Corp., 339 Noda, Noda-shi, Chiba-ken, Japan 278.

5416. Cooney, John E. 1977. Selling American: Top soy sauce brewer in Japan shows how to crack U.S. market. Kikkoman studied the ways of the West, advertised on TV, moved in slowly. Some areas still won't buy. *Wall Street Journal*. Dec. 16. p. 1, 29.

• **Summary:** The fascinating—well researched and well written—story of how Kikkoman used Western marketing methods and TV advertising to put shoyu (the Japanese word for soy sauce) in millions of Americans kitchens. In one of their popular commercials, a chef, "resplendent in traditional white garb and floppy hat, is cooking hamburgers. 'Ah,' he says, 'you want to know my secret recipe?' Turning a little bottle of Kikkoman to the camera he sprinkles some on the sizzling meat. 'Add Kikkoman to almost anything,' he says."

In this way Kikkoman has been working to convince Americans that soy sauce is as American as hamburgers. To learn how to persuade the mass market takes time, especially

for a foreign company that is also a pioneer. Kikkoman has been patient—studying American marketing techniques, working slowly but steadily—according to Shinichi Suzuki, presently head of Kikkoman's subsidiary in San Francisco, California. In 1957, when Kikkoman Corp. founded its U.S. subsidiary, soy sauce was unknown to many Americans. Moreover, many Americans at the time considered Japanese products inferior.

During World War II, Kikkoman has been stripped of its overseas holdings in Asia; now the company was eager to expand again, and it viewed the U.S. as a logical place to begin. It already has a small base here, since it had been exporting Kikkoman shoyu to Japanese Americans since the 19th century. It had also been importing large amounts of American soybeans and wheat to make shoyu in Japan, then shipping some of its shoyu (which contained mostly water) back to America—rather inefficient. Moreover, since the U.S. had defeated Japan in World War II, conquering the American mass market would be an especially sweet triumph.

Caution has long been a cornerstone of Kikkoman's business philosophy. The company traces its origins back to the 17th century when two families, the Mogis and Takanashis, began making shoyu in Noda, Japan. Shoyu is said to have come to Japan in the 6th century, when Buddhism was introduced. The new religion, advocating a vegetarian diet, prohibited the eating of meat and fish, which has long been used to make seasonings and sauces. These traditional products were slowly replaced by plant-based products, such as fermented shoyu and miso, and flavorful konbu (kelp) and shiitake mushrooms.

Gradually Kikkoman grew to become Japan's largest maker of soy sauce. Today shoyu is as widely used in Japan as table salt in America, and annual per capita consumption in Japan is about 2.5 gallons (10 liters) a year. "Japan has captured 35% of the market and its name is as familiar as Coca-Cola is here."

In 1957, the U.S. soy sauce market, then only \$1 million a year was dominated by two brands, LaChoy (now owned by Beatrice Foods) and Chun King (now belonging to R.J. Reynolds Industries Inc.). Both companies had lines of Chinese foods and both made their soy sauce without using fermentation by a quick, chemical process. The few Americans who knew about soy sauce thought of it as a seasoning to be used in Oriental cookery.

Kikkoman hired an advertising agency, Grey Advertising, Inc., owned by Richard Guggenheim. He urged Kikkoman to Americanize soy sauce, and to emphasize its versatility as a seasoning. Kikkoman also had to explain that what goes under the name "soy sauce" in America would never be called that in Japan—because it was considered inferior.

Kikkoman chose to educate Americans using the most expensive but effective medium—TV. The ads explained

how Kikkoman is specially brewed and aged, like beer. The American brands are made chemically. The slogan: "Add quality; add Kikkoman." A key decision was made to price Kikkoman a few cents higher than

Because TV advertising was so expensive, Kikkoman decided to educate one region at a time—starting in San Francisco, where its subsidiary was based. The advertising was effective, and by 1959 Kikkoman was ready to educate Los Angeles. Over the next 10 years, going slowly, one region at a time, Kikkoman expanded across America. As it grew, it used food brokers on the belief that "maintaining its own sales force would be too expensive; it still uses them."

In 1970, because of Kikkoman's cautious growth strategy, their shoyu was first distributed nationwide. In 1973 the company opened its first shoyu plant in the Western world, in Walworth, Wisconsin. By 1976 U.S. sales of Kikkoman products had grown to \$11 million. In 1977, for the first time, the parent company in Japan stopped subsidizing its subsidiary's budget for advertising (\$1 million) and promotion. By comparison, the parent company, with about \$350 million/year in sales spends about \$5 million on advertising—or 1.4% of sales.

Has Kikkoman's cautious approach been effective? First, Kikkoman is now the leading soy sauce brand in America. Second, a survey by Grey Advertising "found that two-thirds of all U.S. households had tried soy sauce and 61% of them are 'users,' that is, they buy more soy sauce when they run out."

5417. Hansen, Barbara. 1977. Cooking class proves its prowess: Indonesian style. *Los Angeles Times*. Dec. 29. p. H1, H14.

• **Summary:** A special class and rijsttafel buffet ended the series of Indonesian cooking classes taught by Danny Unger (with help from his wife, Gerdy) in Pasadena. more than 200 guests sampled the dishes, which were of excellent quality, prepared mostly by the students in the class.

The many dishes included "sayur lodeh, a vegetable and bean curd stew;..."

Three recipes are given including: Babi kecap (Soy sauce pork, with 2 tablespoons kecap [Indonesian soy sauce]). Dendeng lambok (Simmered beef, with "3 tablespoons kecap (Indonesian soy sauce)"). Elsewhere in the article, kecap is twice described as "sweet soy sauce" [probably kecap manis].

A photo shows Daniel Ungerer, wearing a batik scarf, as he presides over the buffet.

5418. Goulart, Frances Sheridan. 1977. Soybeans. *Vegetarian Times* No. 22. Nov/Dec. p. 50-51.

• **Summary:** A superficial overview. Discusses "boiled whole beans, toasted whole beans, soybean butter, soymilk, notes on soyflour, soysauce, soy oil, tofu, soy yogurt, mock mocha java (soy coffee)."

5419. **Product Name:** Seitan.

Manufacturer's Name: Grain Dance.

Manufacturer's Address: 187 Downey St., San Francisco, California.

Date of Introduction: 1977. December.

Ingredients: Organic hard red winter whole wheat (always freshly ground), spring water, tamari (actually shoyu), ginger, and onions.

Wt/Vol., Packaging, Price: Bulk, then later in 16 oz round plastic deli tubs, then 8 oz tubs.

How Stored: Refrigerated.

New Product—Documentation: Barbara and Leonard Jacobs. 1985. *East West Journal*. Oct. p. 38-39. "Flour power! Cooking with seitan, the delicious natural food from grain." "Ron Harris of Grain Dance Company in San Francisco has been making seitan for the past 8 years [i.e. since about 1977]. He is currently selling 250 pounds each week in eight-ounce packages. He does everything by hand and has distribution throughout the West Coast.

Talk with Ron Harris and Debbie Brent. 1988. March 6, and 1991. Nov. 17. A history of Grain Dance, one of America's earliest seitan manufacturers. See separate record at March 1988. Tel. 415-347-1378. San Mateo, California.

Talk with Shiwa Harris. 1988. March 13. Phone: 415-661-6997. She learned how to make seitan in Key West, Florida from a woman named Martha, who was originally from Los Gatos. Then Shiwa taught her husband, Ron Harris, how to make seitan. She thinks that her "Shiwa's No-Cheese Cake" was the first tofu cheesecake in San Francisco. She started making it in late 1977, shortly after Ron Harris went commercial with seitan and before her second daughter Elizabeth was born.

Talk with Yuki Muramoto. 1988. Feb. 29. He worked at Rising Sun from about 1975 to 1979. Ron Harris made seitan for a long time. Michael Pierce made his label. Their company was Grain Dance.

Talk with Jacques DeLangre. 1988. March 16. Ron Harris bought a stone mill for making seitan from Jacques.

Talks with Paul Duchesne (formerly of Wildwood Natural Foods) between 8 Oct. 1988 and 18 Aug. 1989. His Brown Rice & Tofu Sandwich (BRTS) was developed in Fairfax in late October or early November 1977. In September 1978 Paul went to Boston, Massachusetts, to study macrobiotics, so he gave his Fairfax sandwich business (which still had no name) to Chris Smith, a local friend interested in macrobiotics. Paul had first offered his business to Ron Harris, but Ron declined since he was getting involved in seitan.

Talk with Aine Travis. 1988. Feb. 18. She worked at Rising Sun for 3 years. Shiwa and Ron Harris made seitan (some of the first in America), which they sold at Rising Sun.

5420. Saono, S.; Brotonegoro, S.; Abdulkadir, S.; Basuki,

T.; Jutono, -; Badjra, I.G.P. 1977. Microbiological studies of tempe, kecap, and taoco. II. Qualitative amylolytic and proteolytic activities of the isolates from various products from west Java. Progress Report Subproject III.b. ASEAN Project for Soybean and Low-Cost High Protein Foods. Jan-Dec. 1977. 8 p. [5 ref]

• **Summary:** An analysis is given of the types of bacteria, yeasts, and molds found in tempe, kecap, and taoco. Scientific names of these microorganisms are not given. For example, in tempeh, molds consistently gave the highest number of viable cultures on any of the test media employed, followed by yeasts and bacteria in that order. Address: 1-4. Treub Lab., the National Biological Inst., Bogor; 5-6. Faculty of Agriculture, Gadjah Mada Univ., Yogyakarta.

5421. Birnbaum, Alfred. 1977. Report on visits to Yamaya, Daifukuji, and Hôrinji—makers of Hamanatto (fermented black soybeans). Japan. 3 p. Unpublished manuscript. Undated.

• **Summary:** Yamaya: Process Alfred observed in the plant: Wash soybeans in a trough, soak them in a big wooden vat, pull plug at bottom of vat and drain fast so that beans on bottom are not soaked longer than those on top. Put soybeans in a 6-foot-deep steamer without pressure and blow in steam through many small holes in bottom. After steaming, leave overnight in steamer with lid on. Empty into pushcarts from lower door in steamer. Dump beans into mats (*mushiro*) that have been spread on floor indoors, break up any clumps of beans by hand (to aid koji growth), but do not crush individual beans. Fan bean with an electric fan to cool and dry.

Put roasted wheat flour (*kosen*) in bags. Mix roasted wheat flour and koji starter in winnowing basket (*mi*), then scatter mixture by hand over beans on straw mats. With two men holding opposite ends of straw mat, toss beans on mat to mix beans with flour and starter. Transfer mixture onto a conveyor belt which runs it into a modern koji incubation room (*muro*) where it is spread in a later 6 to 7 inches thick. After incubation for 20-25 days (temperature any stirring schedule are unknown), pipe the koji out onto a south-facing metal roof (at an angle of 15-20° to the horizontal) onto a piece of 3 by 6 foot polyethylene sheeting (which is sanitary, gives long use, and is inexpensive). After drying, drop the soybeans down a hole in front of a fan that blows away spores from the surface of the beans; if these are left on, the beans get bitter (*nigai*) during the second fermentation. Catch beans in small wooden kegs and transfer them to wooden kegs that hold 4.76 gallons (*4-to daru*). Pack soybeans in firmly in each keg without crushing with a wooden implement.

Put pressing lids atop beans on bottom row of vats, then top with heavy pressing weighs or a second row of vats and weights. The heavier the weights, the firmer the beans remain and the less likely to mash. Yamaya's yearly production is

about 50 metric tons (tonnes).

Gingerroot: Cut into pieces 3/4 inch square by 1/16 inch thick. Put in a separate keg, just cover with soy sauce (*shoyu*). Pickle for 6 months to 2 years to get pickled gingerroot

The vibrator: put soybeans into hopper atop vibrator. One man breaks up any clumps of beans by hand, then drops them onto a vibrating screen (1/8 inch mesh); the man at the bottom adds pickled ginger by hand. Alfred is not sure where this step goes in the process.

Mr. Suzuki, the manager, says that, in Japan, only 1 person in 100 likes hamanatto.

Hamana has stopped making hamanatto; Yamaya is now their supplier.

Mr. Suzuki estimates that Hôrinji makes 3 tonnes a year and that Daifukuji makes 2 tonnes a year. Alfred got the facts later.

Daifukuji: A pretty Shingon sect (Buddhist) mountain temple at the end of a long lane of cedars, 1 hour drive northwest of Hamamatsu. After Japan's war with Korea, Toyotomi Hideyoshi (lived 1537-1598; a daimyo warrior and Japan's 2nd great unifier) gave lands to Daifukuji. They say they were the first place to make hamanatto. Today Daifukuji is very small and primitive; they were sold out of their hamanatto product when Alfred arrived. The head says it does not keep well in warm weather; mold grows on the soybeans. In the fall they make Hamanatto at most 4-5 times a week, and are finished in April or May.

Each time Daifukuji makes 1 (*koku*) or 750 kg of hamanatto, and they do this 5 times a year, from July to September; 150 to 200 kg dry soybeans makes 750 kg hamanatto. They do not use koji starter (*tane koji*) since the spores exist naturally in the koji trays and in the incubation room. They steam the soybeans in a wooden steamer that is placed over a caldron in which water is boiling; the steamer has 4 layers and each is square. They let the soy beans steam in the steamer overnight. A key ingredient is the middle hull of *sansho* pepper (*Zanthoxylum piperitum*; *sanshō no ki no chūkawa*) which is pickled in soy sauce (*shoyu*). This hull is removed, sun-dried, then pickled in 2 vats, 1 *koku* capacity each, with a pressing lid on each. After pickling, they are sun-dried for one day. Alfred did not learn anything about the composition of the brining liquor or how long it takes. 50% is consumed locally (in the area of Hamamatsu) and the remaining 50% is consumed elsewhere—sold mostly in Tokyo department stores. It is sold out by the end of March. It is eaten as a side dish with rice, mixed with grated daikon and topped with *shoyu*. Also eaten atop hot rice, with green tea poured over the top (*ochazuke*). Sugar-coated hamanatto sold is a confection in Kyoto. Hôrinji [Hôrinji] is a Rinzai Buddhist temple. They make hamanatto in the spring and fall when they are not busy. They sell them at the front gate of the head temple (*honzan*), which is Hokoji in Okuyama, and at Seibu department stores. They are seasoned with

gingerroot and sansho seeds (*sansho no mi*). The soaked soybeans are steamed in an open-top cooker at 0.1 to 0.2 kg per square centimeter pressure from 8:00 in the morning to 3:30 in the afternoon—about 7-8 hours. Then the steam is stopped and the beans are allowed to stand in the steamer overnight so that they darken—from yellow to brown. Then, in the morning, the beans are put into wooden koji trays which are stagger-stacked and incubated in the koji incubation room (*muro*) at 27-28°C. with the occasional use of a small kerosene heater, (maximum temperature 35°C) for 3 days to make soybean koji. On the second day, the beans in each tray are stirred by hand. When done, the soybean koji is sun-dried for 1 day on straw mats. Then they are pickled, under a pressing lid and weight, in 2/3 parts new salt water and 1/3 part old tamari soy sauce. Each wooden tub (*taru*) holds 45 kg for finished product. When finished, after about 6 months of pickling, the plug at the base of each wooden tub is pulled and the contents allowed to drain. The tamari that drains off is saved for use with a subsequent batch.

The gingerroot is processed separately. It is sliced into thin rounds, pickled in salt water and tamari, under a pressing lid and weight of about 20 kg, for 1-12 months—typically about 1 month. The sansho is also pickled separately, like the gingerroot, for 1-12 months. Only the finished gingerroot is mixed with the final product; the sansho is sold separately with the product in a bag. This year Horinji made 3 tons of hamanatto. The owner guesses that Yamaya made about 50 tons and Daifukuji about 5 tons.

Two small undated leaflets (in Japanese), one titled “Horinji Hamanatto,” the other “Daifukuji Natto” each tells about the product and its history. They were given to Alfred during his visit to each place. Address: Tama-sô No. 1, Inokashira 1-28-30, Mitaka-shi, Tokyo 181, Japan. Phone: 0422-47-7130.

5422. Product Name: Cedar Lake Vegeburger (Meatless).
Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer's Address: Cedar Lake, MI 48812.

Date of Introduction: 1977.

Ingredients: Wheat protein, water, cornmeal, soy flour, soy sauce, oatmeal, corn oil, vegetable seasoning, salt.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 22. Cedar Lakes. “Vegeburger” (19 oz).

Label.

5423. Product Name: Cedar Lake Chops (Meatless).

Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer's Address: Cedar Lake, MI 48812.

Date of Introduction: 1977.

Ingredients: Wheat protein, water, soy sauce, vegetable seasoning, salt.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Label printed on 12 March 1977.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27.

5424. Product Name: Cedar Lake Vege-Bits (Meatless).

Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer's Address: Cedar Lake, MI 48812.

Date of Introduction: 1977.

Ingredients: Wheat protein, water, soy sauce, vegetable seasoning, salt.

Wt/Vol., Packaging, Price: 19 oz can.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Label.

5425. Product Name: Cedar Lake Grain Burger—Meatless Vegetarian Patties.

Manufacturer's Name: Cedar Lake Foods of Tennessee, Inc. (Packer).

Manufacturer's Address: Cedar Lake, MI 48812.

Date of Introduction: 1977.

Ingredients: Wheat gluten, whole wheat flour, rye flour, barley flour, soy sauce, vegetable seasoning, salt.

New Product–Documentation: Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27.

5426. Product Name: Wanjashan Soy Sauce.

Manufacturer's Name: Mandarin Soy Sauce, Inc. Subsidiary of Wan Jia Shan Brewery Co. Ltd. (Taiwan).

Manufacturer's Address: 419 North St., Middletown, NY 10940.

Date of Introduction: 1977.

New Product–Documentation: *Soybean Digest Blue Book*. 1978. p. 34. Soya Bluebook. 1986. p. 105. Product name is now spelled Wan Ja Shan.

Ad in Food Processing magazine. 1988. Nov. p. 80.

“Naturally brewed Wan Ja Shan Soy Sauce. Brewed in U.S.A. by Mandarin Soy sauce Inc. Packaged from 10 oz. to 55 gallon drums. 419 North St., Middletown, New York.”

Letter from Wen-Chau Chiu, PhD and President, Mandarin Soy Sauce, Inc. 1983. Nov. 22. His company has been making fermented soy sauce (and related products such as Hoisin sauce) since 1977.

5427. Shikata, Hideo; Tsukiyama, R.; Ishigami, Y.; Nishiyama, T.; Moriguchi, S. 1977. *Amazake no seibun*

ni tsuite. I. Tô no teiryô [Components in amazake. I. Determination of sugar composition]. *Nihon Shoyu Kenkyujo Zasshi (J. of Japan Soy Sauce Research Inst.)* 3(3):105-10. [10 ref. Jap; eng+]

• **Summary:** Not long ago, amazake had been declining in popularity as a sweet drink in Japan. However recently its popularity has begun to recover, probably due to the growing interest in natural foods.

In the Ryuno area, light shoyu (*usukuchi shoyu*) has long been made with amazake as an ingredient; it augments the sugar which was consumed during the fermentation, adds its own bouquet, and helps prevent coloration.

The authors found, using paper chromatography (PPC) and other techniques on five types of amazake, that amazake contains about 40% sugar. 50-80% of the total sugar in amazake is glucose, followed by 3.3-9.1% of isomaltose and maltotriose, and 5.5-8.9% of nigerose, maltose, and kojibiose.

Also discusses the changing content of fructose, saccharose, panose, and isomaltotriose. Address: Research Laboratories, Higashimaru Shoyu Co., Ltd., Tatsuno, Japan.

5430. **Product Name:** Mary's Tofu Rice Salad.

Manufacturer's Name: Swan Food Corp.

Manufacturer's Address: 5758½ Bird Rd., Miami, FL 33155.

Date of Introduction: 1977.

Ingredients: Tofu, organic brown rice, carrots, onions, tamari, natural spices, umeboshi salt plum.

Wt/Vol., Packaging, Price: 8 oz.

How Stored: Refrigerated.

New Product-Documentation: Label. 1977. 2 by 1¼ inches. Self adhesive. Black on yellow. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

5431. **Product Name:** Tofu Chip Dip.

Manufacturer's Name: Swan Foods Corporation.

Manufacturer's Address: 5758½ Bird Rd., Miami, FL 33155.

Date of Introduction: 1977.

Ingredients: Tofu (organic soybeans, pure water and nigari, a natural solidifier), umeboshi plum, safflower oil, onion, garlic, dill, shiso leaves, pure water, tamari, parsley, salt, cayenne.

Wt/Vol., Packaging, Price: 8 oz plastic cup. Wholesales for \$0.72 (April 1978).

How Stored: Refrigerated.

New Product-Documentation: Label. 1977. 3 by 3.5 inches. Self adhesive. Yellow, blue, and red on white. "No additives. No preservatives." Illustration of a swan. "Swan Food Corp." order form and price list for distributors. 1978. April.

Ad (full page, black-and-white) in *Alternatives* magazine (Miami, Florida). 1978. July/Aug. p. 49. "Remember the name!" "Tofu Chip Dip." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

5432. **Product Name:** Tofu Baked with Tamari (Organic Soybean Curd; Baked Tofu).

Manufacturer's Name: Swan Foods Corporation.

Manufacturer's Address: 5758½ Bird Rd., Miami, FL 33155.

Date of Introduction: 1977.

Ingredients: Organic soybeans, pure water, nigari (a natural solidifier), and tamari.

Wt/Vol., Packaging, Price: 8 oz. wholesales for \$1.10 (April 1978). Also 14 oz.

How Stored: Refrigerated.

New Product-Documentation: Label. 1977. 3 by 3.5 inches. Self adhesive. Yellow, blue, and red on white. "No additives. No preservatives." Illustration of a swan. "Swan Food Corp." order form and price list for distributors. 1978. April.

Ad (full page, black-and-white) in *Alternatives* magazine (Miami, Florida). 1978. July/Aug. p. 49. "Remember the name!" "Baked Tofu." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

Note: This is the earliest document seen (Feb. 2002) concerning a seasoned or flavored baked tofu.

5433. **Product Name:** Tofu (Marinated). Organic Soybean Curd.

Manufacturer's Name: Swan Foods Corporation.

Manufacturer's Address: 5758½ Bird Rd., Miami, FL 33155.

Date of Introduction: 1977.

Ingredients: Organic soybeans, pure water, nigari (a natural solidifier), tamari, garlic, onion powder.

Wt/Vol., Packaging, Price: 14 oz. wholesales for \$0.85 (April 1978).

How Stored: Refrigerated.

New Product-Documentation: Label. 1977. 3 by 3.5 inches. Self adhesive. Yellow, blue, and red on white. "No

additives. No preservatives.” Illustration of a swan. “Swan Food Corp.” order form and price list for distributors. 1978. April.

Ad (full page, black-and-white) in *Alternatives* magazine (Miami, Florida). 1978. July/Aug. p. 49. “Remember the name!” “Marinated Tofu.” Recipe given by Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 166. Firm tofu. Marinade: Shoyu, water, honey, powdered ginger, garlic powder, dark (toasted) sesame oil, prepared (wet) mustard, cayenne.

5434. **Product Name:** Mary’s Eggless Egg Salad.

Manufacturer’s Name: Swan Foods Corporation.

Manufacturer’s Address: 5758½ Bird Rd., Miami, FL 33155.

Date of Introduction: 1977.

Ingredients: Tofu, celery, onions, garlic, dill, paprika, onion powder, shoyu, salt, turmeric.

Wt/Vol., Packaging, Price: 8 oz deli container. Wholesales for \$0.73 (April 1978).

How Stored: Refrigerated.

New Product–Documentation: “Swan Food Corp.” order form and price list for distributors. 1978. April; Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 160, 163. Note: This is the world’s earliest known product (and the earliest document seen) to bear the name “Eggless Egg Salad,” a name that was later widely used by other companies and cookbooks.

5435. Talking Food Company. 1977. Miso & tamari (shoyu): Foods steeped in culture (Leaflet). Charlestown, Massachusetts. 4 panels.

• **Summary:** Others in this series (copyrighted 1977) are: “More on sugar and how it got that way” (4 p.). “Fiber: Grandmother was right” (4 p.). Address: Charlestown, Massachusetts 02129.

5436. Tsukiyama, R.; Maeda, T.; Miyashita, K.; Shikata, K.; Ishigami, Y. 1977. [Components in amazake. II. Amino acids, organic acids composition, and other components]. *Nihon Shoyu Kenkyujo Zasshi (J. of Japan Soy Sauce Research Inst.)* 3(5):205-09. [46 ref. Jap]

• **Summary:** One of the best analyses seen of the nutritional composition of amazake. Note the large bibliography. Address: Research Laboratories, Higashimaru Shoyu Co., Ltd., Tatsuno, Japan.

5437. Albright, Nancy. 1977. Rodale’s naturally great foods cookbook: the best foods to use and how to use them in over 400 original recipes. Emmaus, Pennsylvania: Rodale Press. [vi] + 408 p. Illust. 24 cm. Reprinted in 1983 as

• **Summary:** This book is based on natural foods but makes widespread use of meat, poultry, fish, and dairy products. Raw, unstrained clover honey is used as a sweetener instead

of white sugar which “is dangerous to health...”

“Natural foods restaurants are ‘in’” (p. 2). “... the joys of natural foods” (p. 3). “... consumers are making a firm commitment to natural food cooking.”

Soy related recipes: Rice and soy crepes (with ½ cup soy flour, p. 53). Whole soybean casserole (p. 74). Bulgur soybean loaf (with ¾ cup soybeans, p. 81).

The section titled “The soybean” (p. 275-85) begins: “The queen of the legumes is the soybean. And its status is growing. From a relatively unknown commodity... it has finally come into its own in this country as an important food. The soybean is the vegetable that most nearly provides the complete protein necessary for good health.” Discusses varieties suited to the family garden. Recipes: Green soybean and corn succotash (with green vegetable soybeans). Soy flour for added values: Soy pancakes. Soy cheeseburgers (with soy grits). Tofu (soybean curd): Mentions the Learning Tree tofu kit and *The Book of Tofu*, by Shurtleff and Aoyagi (1975, Autumn Press; no tofu recipes are given). Soy sauce (shoyu): Herbed soybean salad (with 1 cup soybeans). Fresh vegetable and fruit stew with soybeans. Soybean-cabbage casserole. Soybean coffee. Soybean custard pie. Soy milk (homemade). Carrot soy loaf. Liver pate (with 1 cup soy pulp remaining from making soy milk). Mock pumpkin pie (with soy pulp). Scroggin (backpacker’s food, with 3 cups soybeans, boiled). Soy potato dumplings (with ½ cup soy flour). Soy salad dressing (with ¾ cup soy flour or powder).

A photo (facing copyright page) shows Nancy Albright cutting vegetables in Rodale’s Fitness House kitchen. Address: Author of *The Rodale Cookbook*.

5438. Anderson, Eugene N., Jr.; Anderson, Marja L. 1977. [Food in] Modern China: South. In: K.C. Chang, ed. 1977. *Food in Chinese Culture*. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 317-382.

• **Summary:** Page 326 states: Soybeans—the fifth of the classic Five Staples (or Five Grains)—are usually the most important, although other legumes make a surprisingly good showing in south China, no doubt because soybeans grow better in the north. The soybean “produces more protein per acre and per pound than any other common humanly edible crop, plant, or animal. This has caused them to become more important than any animal food as a protein provider in China. The Chinese have long recognized their similarity to animal products and, indeed, have built up a huge cluster of imitation-meat foods (probably developed originally by, and certainly now associated with, vegetarian Buddhists). The Chinese lack of interest in dairy products is almost certainly, in part, a result of the fact that the soybean provides the same sorts of nutrition more economically—though a desire to differentiate themselves from the border nomads and to be independent of them in food economy must also be taken seriously as an explanation. (It is the classic Chinese explanation of the phenomenon but has been dismissed by

those moderns who believe that all traditional explanations must necessarily be wrong.)

“Further discourse on the soybean belongs properly in the following section on food processing, for the soybean is used neither in its raw state nor, usually, in a simple boiled or roasted form. There are good reasons for this. The soybean, being so nutritious and succulent, has been faced with intense natural selection pressure by seed-eating insects and other animals; surviving soybean strains contain whole galleries of poisons and other unfortunate chemicals, which protect the seeds against destruction but make them dangerous food in the uncooked and unprotected state (Committee on Food Protection 1973). Simply prepared soybeans are not very digestible, since heat bonds some of the nutrients into hard-to-digest form in the intact bean. Thus almost all soybeans consumed in China are fermented, ground into flour, and then processed, sprouted, or otherwise milled.”

“The soybean is so famous that one is surprised to discover from Buck that the broad bean outranks it in some parts of south China.” However in genetically susceptible individuals, *Vicia faba* produces favism, a condition characterized by acute anemia and other unpleasant symptoms. Other important sources of protein are black soybeans (a variety of soybean mentioned by Buck) and sprouts from mung beans and soybeans (*tou ya*). Bean sprouts bridge the gap between grains and vegetables (*ts'ai*) (p. 326-27).

“A huge bowl of rice, a good mass of bean curd, and a dish of cabbages—fresh in season, otherwise pickled—is the classic fare of the everyday south Chinese world.”

“The New World vegetables stand out as a special class because of their common and recent origin in China and their extreme importance. The white and sweet potatoes have become staples, as has corn. In addition to these, the peanut (*Arachis hypogaea*) has become the most important oilseed through much of south China, as well as a much used food” (p. 328). The peanut came from South America. Today, peanuts have become more important in areas where they are grown than rapeseed. Peanut and rapeseed oils are polyunsaturated and contain plenty of linoleic acid, a dietary requirement (p. 333, 343, 348). Mushrooms and their relatives are widely used in vegetarian dishes (p. 332).

The section on food processing (p. 337-41) notes that tragic practice of polishing rice, which removes most of the nutrients including fiber. There are many questions about the origins of pasta. Egg noodles probably originated in China. Italian spaghetti is similar to Chinese *mien* and ravioli to *chiao-tzu*, but they may have existed elsewhere before Marco Polo brought them to Italy from China. The technology of soybean process is too complex to discuss except briefly in this chapter. Most important is the production of bean curd or *tou-fu* (Cantonese *tau-fu*, Hokkien *tau-hu*). Hokkien cooks prefer a drier, firmer bean curd. Bean curd is often

sold fried. The skin resulting from boiling soymilk [*yuba*] is skimmed off, dried, and widely used. “Other closely related processes produce the range of imitation meats developed by vegetarians, specifically Mahayana Buddhists. Credible imitations... are made for chicken, abalone, and other white meats, and even beef and pork. The West has picked up the idea and developed it much further, climaxing in the production of textured vegetable protein (TVP), but has—characteristically!—ignored the problem of making the result taste good. The ideal in the West seems to be to make it tasteless” (p. 339).

Concerning fish farming (p. 334-35): “Some fish, however, a pond-reared. Those that have been effectively domesticated are carps. These have several advantages: they produce vast amounts of protein per acre; they do not have to be specially fed since they eat algae and weedy grass and small animals of the ponds and pond fringes; they can live in foul water, and thus in stagnant ponds and market fish barrels; they are efficient converters, putting a large percentage of their feed into growth; and relative to other fish, they are easy to breed in captivity. The first fish farmed in the world were probably the Chinese carps.” However, no mention is made of soybeans being fed to the fish. Address: 1. Assoc. Prof. of Anthropology, Univ. of California at Riverside; 2. Riverside, California.

5440. Chang, Kwang-chih. 1977. Ancient China. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 23-52.

• **Summary:** “Our study of food in ancient China begins with the Yangshao culture, approximately 5000–3200 B.C. and ends with the Chou dynasty, just before 200 B.C. This is the period of Chinese civilization in which much of its later styles, including its style of cooking and eating, were formed and crystallized... Peking Man lived on game meat, mostly that of a deer with thick antlers (*Sinomegaceros pachyosteus*), and wild plants such as hackberry (*Celtis*

barbouri)...

"In north China we begin with the Yangshao culture, characterized by farming villages and painted pottery, and dated from the fourth to the fifth millennia B.C. In the third and early second millennia B.C., the Lungshan culture, known by its black and gray pottery, filled the northern Chinese area. The Shang civilization followed, beginning around 1850 B.C. From about 1100 to about 200 B.C. was the period of the Chou civilization. For central and south China, the cultural sequence is slightly different."

Grains: The principal grains in the north, throughout the ancient period, were millets of various kinds. These included foxtail millet (*su* or *liang* = *Setaria italica*) and Panicum millet (*shu* = *Panicum miliaceum*). Other cereals planted in the north during this period included wheat (*mai*), hemp (*ma* = *Cannabis sativa*), barley (*mou*), and rice (*tao*).

"Soybeans, known as *shu* in Chou texts, are generally considered to have been first cultivated somewhere in China (Hymowitz 1970; Leppik 1971). However, their history cannot yet be traced farther back than the western Chou period, on the basis of palaeography (T.C. Hu 1963), and the first known archaeological finds date only from the Spring-Autumn period (S.C. Chang 1960, p. 11)."

"Many other beans are regarded by botanists as having had long cultivation histories in China—the velvet bean (*Stizolobium hasjoo*) and the red bean (*Phaseolus angularis* [azuki]) among them—but as yet they have not been identified in the ancient period. The broad bean (*Vicia faba*), usually regarded as of Mediterranean origin, is represented by an archaeological find at the Lungshanoid site at Ch'ien-shang-yang..."

"Plums were often mentioned with salt (*yen mei*) as the chief seasoning agents. In addition, meat sauce (*hai*) was also so used. and in all likelihood soy sauce was known toward the end of the Chou period (see *Shih shi*, "Huo Ch'ih Lieh Chuan")..."

"Unlike English, there is a word in Chinese (both ancient and modern) for food and drink combined—*yin-shih*. This is, of course, a compound word made up of *yin* (drink) and *shih* (food)... Within *shih* itself there is a clear and strong dichotomy between *shih* in the narrow sense meaning fan or grain food, and dishes of meat and vegetables (*ts'ai* in modern parlance)." Address: Prof. of Anthropology, Harvard Univ., Massachusetts.

5441. Editorial Committee for the 30-Year History of the Kikkoman Labor Union. ed. 1977. Kikkōman Shōyu rôdō kumiai sanjūnen-shi [Thirty-Year history of the Kikkoman Labor Union]. Noda: Kikkoman Shoyu Rodo Kumiai. 350 p. [Jap]*

Address: Noda, Japan.

5442. Farm Foods. 1977. Fermentation funnies (Leaflet). Summertown, Tennessee. 2 p.

• **Summary:** Another very creative publication from Farm Foods and The Farm. Each is a leaflet (8½ by 11 inches) printed on both sides with blue ink on white. Each gives, in cartoon-strip format, an introduction to fermentation, fermented foods, tempeh, etc. (1) "For thousands of years friendly microorganisms—have helped people produce a variety of fermented foods. (2) Literally hundreds of foods have enriched our diet... (3) ... which were made available through the action of molds, yeasts and bacteria." An illustration shows sauerkraut, yogurt, bread, soy sauce, vinegar, cheese, each running forward on two legs, each holding up a hand with the index finger pointing up.

(4) "These helpful miniature plants, by secreting enzymes, that act on the parent food [substrate] create new foods." An illustration shows a small critter, driving a tractor over a cake of tempeh, spraying enzymes on the food (as some farmers might spray agrichemicals). (5) "They are good nutritionally and often have better taste, texture, digestibility and keeping properties.

(6) "Now, from Indonesia, another new fermented food. It's tempeh! (pronounced TEM-py or TEM-pay). (7) Yes, it's tempeh, a mild white cake of solid soybeans—Those high-protein, low-cost beans that farmers feed to their cows! (8) First, soybeans are cooked lightly, drained and cooled, sprinkled with tempeh starter, wrapped in wax paper or plastic, and left in a warm place for about a day.

(9) "When it forms, the new tempeh is ready to be quick-cooked or frozen for future meals. It can be fried, boiled, baked, stewed or frozen for different flavors. Now you can prepare tempeh at home and have it as an instant main dish any time you want! (10) Order soybeans, starter, and our instruction booklet separately or ask for our complete kit. Free instructions for making tempeh at home." An illustration shows a packet of tempeh starter. The final frame shows the Farm Foods logo. The leaflet is designed to be folded crosswise into thirds and mailed. On the back is an order form (with prices) and a photo of four kids eating and enjoying tempeh.

Note: An earlier version of this same cartoon strip, with the same title, but undated (probably 1976 or early 1977) is not quite as creative. The text is somewhat similar but there is less promotion of products (only starter kits which are \$1 each). Farm Foods is not mentioned; the return address is: Témpe, Box 156, Summertown, Tennessee 38483. It is also printed with blue ink on white paper and designed to be folded into thirds.

On the back is: (1) A table giving a detailed composition of soybeans. (2) A bar chart showing "Per acre yields of usable protein from different food sources" showing that soybeans (at 356 pounds) are highest, whereas beef (at 20 pounds) is lowest. This chart is adapted from *The Book of Tofu* (1975, p. 15). Address: 156 Drakes Lane, Summertown, Tennessee 38483. Phone: (615) 964-3574.

5443. Fuji Seiyu K.K. (Fuji Oil Co.). 1977. *Daizu tanpaku kogyo-ka e no michi* [Road to industrialization of soy protein. Part I (Document part)]. In: Fuji Seiyu K.K. 1977. *Fuji Seiyu 25 Nen-shi: Showa 21 nen 11-gatsu–Showa 51 nen 3-gatsu* [Fuji Oil Company Ltd.: 25-year history, Nov. 1946 to March 1976]. Tokyo: Fuji Oil Co. 622 p. See p. 417-30. [Jap]

• **Summary:** Outline: As a major Japanese soybean crusher, processing whole soybeans into soybean oil and defatted soybean meal, Fuji Seiyu produced large amounts defatted soybean meal. In 1962-62 Fuji Seiyu began to make *Fuji Takaramame* (a by-product of tofu powder) and *Proplus* using soy protein from defatted soybean meal, even though these were not considered to be good soy protein products.

In 1967 Fuji developed isolated soy protein (containing more than 92% protein) from defatted soybean meal, and started to sell this FujiPro isolated soy protein. Since it was a completely new product and little was known about it, sales were slow in the beginning. But later it started to be sold to makers of second generation meat products (such as sausages or ham).

In 1969 Fuji started to sell Fuji Nikku (“Fuji Meat”), which is a textured protein product (*soshiki tanpaku seihin*) and this expanded their market among hamburger and hamburger ball (meatball) makers. Based on the above experience, Ralston Purina (America’s leading soy protein manufacturer) got to know Fuji and invited the company to do a joint venture. Three years later, in Dec. 1973, the two companies contributed 200 million yen and founded a joint company named Fuji Purina Protein K.K. In 1974 they started to make and sell *FujiPur / FujiPua* (for “Fuji Purina”), a spun soy protein fiber. Presently, Fuji Seiyu is trying to expand into new, undeveloped markets for soy protein foods (p. 418).

For 1964 the Food Bureau (*Shokuryo-chô*) of Japan’s Ministry of Agriculture, planned the following usage of soybean meal: Food 347,000 metric tons (tonnes). Feed 691,000 tonnes. All but 69,000 tonnes of the food use went for miso, shoyu, and tofu. Of this 69,000 tonnes, 40,000 tonnes went for soy protein foods (such as breads, biscuits, doughnuts, shortcake, ice cream, fish paste products, cheese, soup, etc.) and 30,000 tonnes for glutamic acid / MSG (p. 419).

Fuji decided to industrialize soy protein very early and also to make isolated soy protein their main soy protein product. Other Japanese companies that tried to enter the soy protein market failed because they produced only soy protein concentrate (p. 420).

Fuji Seiyu finished their research on isolated soy protein at the end of 1966, then started test production in their 1-tonne pilot plant. In June 1967, they started to build their full-scale plant, and finished by the end of the year; it had a capacity of 100 tonnes/month. The company named its first product Fuji Pro; this isolated soy protein contained more

than 90% protein and about 6% moisture (p. 421).

Then the company found that they could use Fuji Pro in fish paste products, so they tried to sell it to companies making such products. But these manufacturers were very conservative, so after 6 months Fuji gave up and began selling it to secondary meat producers (p. 423).

The meat industry was also very conservative, but after many visits to these companies, Fuji got to understand them better. Some of these companies were already importing soy protein from the USA and using it in their meat products. Fuji’s research & development department developed a sausage containing Fuji Pro and presented samples to the meat processors; they made many repeat visits. In 1968 Fuji received an order from a large meat processor; after that they received orders from medium and small processors one after another. In Nov. 1968 Fuji’s sales finally reached 100 tonnes/month. Later, after many careful investigations, the Japan Agricultural Standards (JAS) decided to make isolated soy protein a JAS product with a standard of identity for use in ham, sausages, etc. In this way, sales of Fuji Pro expanded. But there was also another reason for expansion: Exports! Actually exports started earlier and were easier than sales to the domestic Japanese market. And it was because of the demand from abroad that Fuji decided to build their first full-scale plant in 1967, even though they didn’t have any clear idea about their domestic sales. Fuji’s exports went to Shoemaker, a Dutch food company; this relationship started in about 1964 (p. 424).

At that time the Dutch company was selling soy protein made by Central Soya in the USA. Being dissatisfied with the product’s quality and prices, they looked to Japanese oil makers to produce these products. They contacted several companies, including Fuji Seiyu, which answered their inquiry and told them: “We are still study isolates, but we have a product that contains 50% protein.” They sent Shoemaker a sample of Fuji Takaramame. However Shoemaker wanted a soy protein isolate, so no business was transacted. But from that time on, the two companies stayed in close communication and began to exchange information. Shoemaker asked Fuji to develop a soy protein isolate, provided important suggestions concerning the research, and sent Fuji a report of the European market for such a product. Shoemaker’s cooperation played an important role in the development of Fuji’s isolated soy protein.

Initially, Fuji had placed heavy emphasis on developing soy protein products for second generation fish paste products, but after considering the potential demand in Europe, Fuji started to research soy proteins for meat products such as ham and sausage. Fuji Pro was developed to be highly elastic, emulsifiable, and water soluble—characteristics desired by the European market. Fuji sent some samples. Before they started commercial production, they signed a contract with Shoemaker as a sales agent; it named Fuji as a IPSO (International Protein Sales

Organization) and exporter. Thus, it was because of the European market that Fuji could start commercial production without a domestic market, and it was this European market that enabled Fuji to sell isolates in Japan. Everything seemed backwards. For example, some Japanese from the meat industry went to Europe to study that industry. There they learned that soy protein (named IPSO) was being used in ham and sausages. Returning to Japan, they discovered to their surprise that the soy protein was made in Japan by Fuji. In 1969 Fuji's contribution to Japanese exports (oil and protein) was honored with an award (p. 425-26).

A knowledge of the overseas market for soy protein was a great help to Fuji as its soy protein products began to serve an international market. This also gave ideas for development of new products—starting with meatlike soy protein products. They received news from Bernard Hawley in England that textured soy protein products had been developed in the USA. Hawley was a nutritionist and a consultant (Hawley & Associates) and Fuji began to use his consulting services in April 1966 (p. 428). Hawley made many trips to Japan and he and Mr. Nishimura (the president of Fuji Seiyu) became great friends. In 1967 Fuji sent Hawley to the USA and asked him to study the market for textured soy proteins and the send Fuji a market report (p. 429). Meanwhile, the company president and a man from the planning department also went to the USA to study the market; they soon decided to start making textured soy protein immediately. They visited Wenger Manufacturing Co. in the USA, signed a contract in April 1968, and received a machine [extrusion cooker] that year. Actually they bought only the main body of the machine from Wenger; the other parts (including the power mill) were invented and designed by Fuji technicians (p. 430). Continued. Address: Tokyo, Japan.

5444. Grueninger, Ursula. 1977. *Es muss nicht immer Fleisch sein* [We do not always need meat]. Weil der Stadt, Germany: Walter Haedeker Verlag. 139 p. Illust. by Monika Graff. Index. 25 cm. [Ger]

• **Summary:** This German vegetarian cookbook includes two soy-related recipes: Delicious salad (with soy sprouts and soy sauce, p. 22). Quick vegetables (with soy sprouts, p. 58).

5445. Hsu, Vera Y.N.; Hsu, Francis L.K. 1977. [Food in] Modern China: North. In: K.C. Chang, ed. 1977. *Food in Chinese Culture*. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 295-316. [2 ref]

• **Summary:** "Soybean grows easily as a companion crop with kaoliang or corn. It is consumed all over China" in various forms; as bean curd [tofu], soybean milk, *tou fu nao* ("bean brain"—slightly coagulated soymilk, softer than tofu), *tou cha* [okara] ("the finer remains of the soybean from which the bean milk has been extracted is usually fed to pigs, but can be the poor mans ta'si [side] dish").

Young soybeans in pods, freshly picked from the field, are boiled in water or baked on the fire and consumed as snacks. They are served with soy sauce and sesame oil and eaten by using the teeth to scrape the beans into one's mouth.

Other soybean products consumed in north China include: soybean sprouts (eaten after submersion in boiling water for 1-2 minutes), "fermented bean curd (*fu ju*), molded bean curd (*ch'ou tou fu*), dried bean curd [pressed bean curd] (*tou fu kan*) (p. 301).

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term *ch'ou tou fu* or the term "molded bean curd." Address: 1. Evanston, Illinois; 2. Prof. of Anthropology, Northwestern Univ.

5446. Ismail, Mohamad Salleh. 1977. Accelerated fermentation of fish sauce, fish-soy paste and fish-soy sauce. PhD thesis, Cornell University. 242 p. Page 3618 in volume 38/08-B of Dissertation Abstracts International. * Address: Cornell Univ.

5447. Johns, Yohanni. 1977. *Dishes from Indonesia*. New metricated edition. Melbourne, Australia: Thomas Nelson (Australia) Ltd. xiv + 151 p. Illust. Index. 26 cm. 1st ed. 1971.

• **Summary:** The author comes from a town in Indonesia named Padang Pajang, located in the mountains of West Sumatra in an area known as Minangkabu. The society is matrilineal, so ancestral property is passed down the female line and a new husband comes to live in his wife's family's home. She married an Englishman in about 1955 and they lived in Jogjakarta (in Central Java) from 1956-1958, then in Australia since 1958.

This handsome book, packed with color photos, gives a good introduction to Indonesian cookery—though it contains a disproportionate number of recipes using meat. The excellent glossary of ingredients (p. 10-16) includes: Bean curd (incl. fried bean curd), black bean sauce or salted black beans (*tauco*, sic. Note: *tauco* is Indonesian-style miso, whereas *taosi* is salted black beans; which does she mean?), and soya sauce. Note that tempeh is not mentioned. Soy-related recipes include: Eggs in soya sauce (p. 53-54). Fried fish in black bean sauce (*Tauco ikan*, p. 60). Stir-fried prawns with long beans and black bean sauce (p. 71). Bean curd balls with prawns (p. 72). Braised liver in soya sauce (p. 86). Braised ox tongue in soya sauce (p. 87). Braised chicken in soya sauce (p. 90). Sambal of brown bean sauce (p. 101). Soya sauce sambal (*Sambal kecap*, p. 102). Fried soya bean curd with sauce (p. 125).

Note: This is the earliest English-language document seen (May 2012) that contains the term "fried soya bean curd." Address: Australia.

5451. Laughing Grasshopper Tofu Shop. 1977. Laughing Grasshopper tofu recipes (Brochure). 3 Main St., Millers Falls, Massachusetts 01349. 4 p. Undated. [1 ref]

• **Summary:** Though no author is listed, this leaflet (25 by 19 cm, dark-green ink on beige paper) was probably written by Richard Leviton. A later edition had New England Soy Dairy as the publisher, indicating that the latter was selling this brand of tofu for a while. Discusses soybeans, protein, and world hunger, gives a nutritional analysis of Laughing Grasshopper Tofu, then gives 20 tofu recipes: Basic pan-fried tofu. Basic pan-fried tofu with sauce. Raw vegetable dip. Creamy scallion salad dressing. Creamy dill dressing. Bean curd soup. Tofu guacamole. Tofu 'egg' salad. Scrambled tofu sandwich. Tofu kebab. Tofu barbecue. Tofu baked in tomato sauce. Ravioli or manicotti. Sweet & sour tofu. Strawberry-tofu ice (popsicles or ice cream). Raspberry pudding. Creamy carob pie. Creamy carob pudding. Tofu 'cheesecake' deluxe. Peach kuchen.

Note: This is the earliest document seen (June 2004) that contains a recipe for what would soon become one of the first popular tofu products, widely called "Eggless Egg

Salad" (1977), "Tofu No-Egg Salad" (1978), and "Missing Egg Salad" (1978). This recipe, which contains no eggs, calls for tofu, celery, carrots, onions, mushrooms, green peppers, scallions, mayonnaise, prepared mustard, tamari soy sauce, turmeric, paprika, celery seeds, etc. Address: Millers Falls, Massachusetts. Phone: 413-659-3883.

5452. Madlener, Judith C. 1977. The sea vegetable book: Foraging and cooking seaweed. New York, NY: Clarkson N. Potter, Inc. 288 p. Illust. Index. 21 x 21 cm. [113* ref]

• **Summary:** Contents: Foreword. Preface.

Acknowledgments. All about sea vegetables. Foraging for sea vegetables. Sea vegetable data pages. Cooking with sea vegetables. Sea vegetable recipes. Additional sea vegetable information: Menus, glossary of ingredients, commercial sea vegetable varieties and products, mail-order sources, bibliography.

Lavishly illustrated with many beautiful line-and-dot drawings. Address: Berkeley, California.

5453. Matsumoto, Kosai, II. 1977. Traditional herbs for natural healing: Japanese plums (*ume*) and shelf mushroom (*reishi*). Settsu City, Osaka, Japan: Kosai Matsumoto Office. 147 p. Illust. No index. 21 cm. [10 ref. Eng]

• **Summary:** Contents: Introduction. Letters of support. Part I: History of the Japanese plums (*Ume*)—born in China and raised in Japan. Japanese plums introduced as medicine. The use of Japanese plums as a protection against various diseases. Salted plums (*Umeboshi*) during the Samurai period. Plantings and location of the valuable plum trees. Plum extract, 160 years old. Plum extract's efficacy was accepted by both the Japanese army and navy. Relationship of Japanese plums for restoring acid-alkaline balance. Japanese plums are known as king of alkaline foods. The value of citric acid of Japanese plums. Chemical composition of Japanese plums. Why is citric acid good for your health? Citric acid also metabolizes sugar. What is the citric acid cycle. *Umeboshi* conquers the Himalayas. Japanese plums have powerful antibacterial properties. Even radioactivity can be combatted by Japanese plums. *Ume* can balance your spirit (like a good tranquilizer). The unique properties of the Japanese plums. *Ume* has immediate effect on hangovers. Pregnant women need Japanese plums. The secret of beautiful skin. *Ume* as a source of stamina. A Japanese plum a day slows the aging process. The effective prevention of anemia. How to treat food poisoning with *Ume*. The best way to prevent a cold. *Ume* goes to work instantly on stomach pains. *Ume* has a remarkable effect on liver troubles. Good news for people who are suffering from stomach ulcers. The problem of high blood pressure. Plums for Athlete's foot, snake bites, and as a unique contraceptive. Japanese plums as seen through the eyes of oriental medicine... The best is yet to come. How to properly select Japanese salted plums. Japanese traditional health foods

using plums.

Part II: Reishi—The shelf mushroom or monkey seat mushroom (*Polyporaceae*) of Japan.

The recipe section, titled “Japanese traditional health foods using plums” includes some that call for soy: Soy sauce with plum extract (p. 74; a good dressing for wakame seaweed salad). Crushed bean curd [tofu] with plum sauce (p. 80). Tasty dressings using salted plums (with soy sauce, p. 81). Plum dip (with soy sauce, p. 84).

A section titled “Soy beans” (p. 125) states: “The high level of vegetable fat and protein make soy beans the ideal food for daily health.”

A map of Japan inside the front cover and facing page shows the nine major plum growing areas: From north to south they are: Mito Kairakuen Garden (Ibaragi [Ibaraki]). Yoshino plum district (Tokyo). Hyakusoen park (Tokyo). Soga plum district (Kanagawa). Atami plum gardens (Shizuoka). Mizunoo plum forest (Osaka). Kitano shrine (Kyoto). Tsukigase (Nara). Minabe plum forest (Wakayama). The spectacular flowers bloom in Feb. and March, moving from south to north.

A note/ad on page 146 states: “For your information. This book along with the following products are available from Soken Trading, Inc., P.O. Box 1705, Sausalito, California: Meitan Granules, Plum (Ume) Extract, Handpicked Umeboshi (Salted Plums), Plum Candy, and Kobai Reishi.” A color photo on the rear cover shows Mr. Kosai Matsumoto II. He has three written other books about umeboshi and reishi. Address: 4-14-1 Shojaku, Settsu City, Osaka, Japan. Phone: 06-383-0911.

5454. Mote, Frederick W. 1977. Yüan and Ming. In: K.C. Chang, ed. 1977. *Food in Chinese Culture*. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 193-257. [38 ref]

• **Summary:** The Yuan (Mongol) dynasty (when China was under alien Mongol rule) lasted from +1271 to 1368. The Ming dynasty (when China was again ruled by Chinese) lasted from +1368 to 1644. In 1644 the Ming fell to the bandit Li Tzu-ch'eng, and Manchu invaders from the north [Manchuria] captured Peking, then soon conquered the rest of China—ushering in the Ch'ing dynasty (1644-1912). Note: The Ming period is one of the great eras of orderly government and social stability in human history. A population averaging around 100 million people lived during 276 years in comparative peace.

Page 212 notes that the growth of the palace eunuch staff is an important feature of early Ming government. The *Huang Ming tsu-hsün-lu* (Ancestral Admonitions), issued first in 1381 during the reign of the Ming founder, stipulated that separate bureaus within the palace eunuch staff be designated. The imperial wine bureau oversaw the production of wines, soybean meal, tofu, etc.

Page 200 notes that during this period “consumption

of meat was very low and seems to have remained stable at low levels for many centuries... Because China also used virtually no dairy products, to maintain nutrition they had to supply protein, calcium, fats, and vitamins in many ways quite different from those our society employs. Vegetables, in one way or another, supplied all of those things. The soybean undoubtedly was the most important diet adjunct, being richer in protein than equivalent weights of red meat, richer in digestible calcium than equivalent amounts of milk, and also being an important source of oil and certain vitamins. Excellent cooking oils also were made from sesame seed, rape seed, and other plant materials (*T'ien-kung k'ai wu*, trans. by Sun and Sun, 1966, p. 215-21).”

Pages 240-41 note, under “Special ingredients: The Japanese specialist in the history of Chinese food and eating, Shinoda Osamu,” has remarked that “Traditional China’s diet was strikingly different from the Japanese in two respects: the consumption of oils and fats was four or five times higher in China, and everyday cooking demanded more basic materials. The things required to keep an ordinary kitchen going day by day in Yüan and Ming times are sometimes enumerated in the entertainment literature, encapsulated in the formula of ‘the seven things.’ Shinoda refers to ‘Yüan drama’ for one enumeration of those, probably having in mind the line spoken by a busy housewife: ‘From the moment I get up in the morning, I’m busy with the seven things—fuel, rice, oil, salt, soy sauce, vinegar, and tea’ (*San-shih chung*, p. 261).”

Also discusses: Peanuts (p. 198). Notes that during the last century and a half of the Ming period, from roughly 1500 to 1650 a number of important new crops entered China: Maize, sweet potatoes, peanuts, and tobacco. Vegetarianism (p. 221-25, 242). At private ceremonial banquets, vegetarian foods resembling forbidden meat dishes were served.

Pages 201 states: “Fish were commonly farmed in the ponds, regularly harvested, and sold live in the markets.” However no mention is made of soybeans being fed to the fish. Address: Prof. of East Asian Studies, Princeton Univ., Princeton, New Jersey 08540. Phone: 609-452-4284.

5455. Nakase, Kenji. 1977. *Miso shôyu shiso Hotto Enmyô Kokushi* [The Zen priest who introduced miso and shoyu to Japan: Hotto Emmyo Kokushi, or Kakushin (1207-1298)]. Kyoto: Zenkoku Jokai Shinbunsha. 292 p. Appendix: Miso and shoyu supply adjustment regulations. [Jap]

• **Summary:** A scholarly, carefully researched book on the early history of miso and shoyu in Japan.

5456. Nōsan Gyōson Bunka Kyōkai. 1977. *Nōgyō gijutsu taikei. Sakumotsu-hen. Vol. 6* [Outline of agricultural arts and techniques. Crops. Vol. 6]. Tokyo: Nōsan Gyōson Bunka Kyōkai. See p. 3-7. [Jap]

• **Summary:** Page 4 shows 2 pie charts with statistics from

the year 1974. The 3,500,000 tonnes of whole soybeans consumed in Japan are used as follows: Soy oil 78% of the total, tofu and products 10.5% (except frozen tofu), miso 5.5%, natto 1.5%, frozen tofu 1.3%, kinako (roasted soy flour) 0.4%, shoyu 0.2%, and other 2.6%. The 2,20,000 tonnes of defatted soybean meal are used as follows: Livestock feed 84.6%, shoyu 7.5%, tofu 4.1%, miso 0.3%, other food uses 2.0%, other nonfood uses 1.5%.

A graph on page 7 shows soybean production in Japan and soybean imports. Imports were static from about 1895 to 1918 at about 100,000 tonnes, then they rose rapidly to about 1,000,000 in 1944. They dropped to almost zero following Japan's defeat in World War II, then starting in about 1954, skyrocketed, reaching 1 million tonnes in about 1960, 2 million tonnes in about 1968, and 3 million tonnes in about 1970. After about 1954, soybean production in Japan dropped steadily. Address: Japan.
