DEDICATION AND ACKNOWLEDGMENTS

This book is dedicated to the Mogi family and to Kikkoman, pioneer and leader in soy sauce worldwide.

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Kay Derr, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Ellen Knollman, Patricia Krug, Sarah Lee, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Library of Congress: Ronald Jackson, Ronald Roache.

Lane Medical Library at Stanford University.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s.

Japanese translation and maps: Akiko Aoyagi Shurtleff.

Loma Linda University, Del E. Webb Memorial Library (Seventh-day Adventist): Janice Little, Trish Chapman.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins, Molly Howland, Jacqueline Tao, Lynn Hsu.

Special thanks to Tom and Linda Wolfe of Berwyn Park, Maryland. And to Lorenz K. Schaller of Ojai, California.

■ For outstanding help on this soy sauce book we thank: Kikkoman Corp., San-Jirushi, San-J International, Westbrae Natural Foods, Chico-San, Erewhon, Yamasa Shoyu, Higashimaru Shoyu, Higeta Shoyu, Marukin Shoyu, Amano Foods Ltd., Oriental Show-You Co., Tatsuno Shoyu, Muso Shokuhin, Mitoku. Linda Barber, Joel Dee, Steve Earle, Danji Fukushima, W. Mark Fruin, Bob Gerner, Hoang Van Chi, Theodore Hymowitz, Akiyoshi Kazama, Esta Keirn, Robert Kennedy, Herman Ketting, Michio & Aveline Kushi, Fred Marken, Amy Meyer, Yuzaburo Mogi, Ken Mogi, Teizo Okada, Jeno Palucci, Andrew F. Smith, the Takatsuye family, Sjon Welters, Brian J.B. Wood, Tamotsu Yokotsuka.

■ Finally our deepest thanks to Tony Cooper of San Ramon, California, who has kept our computers up and running since Sept. 1983. Without Tony, this series of books on the Web would not have been possible.

This book, no doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

■ This bibliography and sourcebook was written with the hope that someone will write a detailed and well-documented history of this subject.

INTRODUCTION

Soy sauce: Worldwide, soy sauce is the most widely used and best known product made from the soybean. It is the defining flavor for many of the cuisines of East and Southeast Asia. Soy sauce arrived in many Western countries before the soybean, and before it was generally understood that the soybean was one of its main ingredients. We believe that soy sauce has *the* most interesting history of the many different soyfood products.

Etymology of soy sauce in English:

The words “soy,” “soya” and “soja,” and the term “soy sauce” came into English from the Japanese word *shōyu* via the Dutch. Thus, the name of the soybean was derived from the name of the sauce made from it.

The first European language document in which the words for “soy” or “soy sauce” appeared was Dutch. Why?

After 1633 (when the Portuguese were expelled from Japan by the Tokugawa shogunate), the Dutch were the only Europeans allowed to trade with Japan. Their trading activities, conducted by the Dutch East India Company (VOC), were limited to a tiny artificial island named Deshima in Nagasaki harbor in the south of Japan, far from the capital at Edo (today’s Tokyo). Among the goods the VOC exported from Japan were shoyu (soy sauce), miso, and saké.

At first they exported these goods to VOC trading posts in Asia, but in 1737 they began exporting small amounts (via Batavia, today’s Jakarta, Indonesia) to Amsterdam, Netherlands, where they were auctioned to international merchants.

All of the early Dutch documents that mention shoyu are handwritten letters, the originals of which are located at the VOC archives at The Hague, Netherlands. Soyinfo Center hired a Dutch researcher (Herman Ketting, who could read handwritten Dutch documents from the 1600s) to find and copy as many of these early documents as possible. We helped him to get on the trail by sending him 6-8 early citations from books on the history of Kikkoman.

The Dutch merchants who exported shoyu in kegs from Japan did their best to spell it as it sounded – phonetically. Here is how that spelling evolved – based on documents now at Soyinfo Center; each appears in this book:

1647 Oct. – soije
1651 June – sooje
1652 July – soij
1652 Aug. – soije
1652 Oct. – soije
1652 Oct. – zoije
1654 July – soijo

1655 Aug. – soija
1656 March – soeije
1657 Aug. – soija
1659 Aug. – soija
1660 June – soije
1665 Feb. – soija
1669 Feb. – soija
1669 Feb. – soija
1674 Nov. – sooij
1675 Nov. – soija
1676 March – soija
1676 June – soija
1678 Nov. – soija
1680 June – soije

The link from Dutch to English and other European languages was probably forged on the docks and in the warehouses of Amsterdam, as British and other European merchants bid at auction for a liquid seasoning (*shoyu*) made in Japan with a variety of exotic but similar Dutch names.

These merchants gave their new sauce a name which they hoped would catch on in their own language and also help it to sell. Then they started to distribute it widely; by Dec. 1750 it had reached North America – arriving first in New York Harbor bearing the name “India Soy.”

Here are the earliest known names for soy sauce in various Western languages other than Dutch:

English:

1679 – *saio* (John Locke, in his journal).
1688 – Soy (William Dampier, in his log). This was the spelling that caught on in English. For the next 250 years, soy sauce was usually called “soy” in English.
1696 – Souy (John Ovington).
1727 – Soeju (Engelbert Kaempfer; he lived in Japan on Deshima from Sept. 1690 to Nov. 1692).
1744 – Chinese Soy, Japan Soy (White’s China and Flint-Glass Warehouse, London, ad).
1750 – Indian Soy (Rochell & Sharp, ad, New York City).
1752 – Japan Soy (Berto Valle, ad, London).
1754 – India Soy (John Breues, merchant from Perth, probably Scotland).
1754 – soy of Japan (Society of Gentlemen, London).
1756 – Joppa soy (G. Pastorini, ad, London).
1769 – Soye, East-India Soye (William Stork, North America).
1795 – soy-sauce (C.P. Thunberg).
1803 – soy sauce (Susannah Carter).
1804 – Soy, Sooju (James Mease, Pennsylvania).
1810 – Chinese Soy, Japanese Soy (James Mease, Pennsylvania).

1832 – Canton Soy (John Remond, ad, Massachusetts).

1866 – Shoyu, Sh'taji (James C. Hepburn, Japanese and English Dictionary).

French:

1753 – la Sauce Soju (*Histoire générale des voyages...* Vol. 11).

1765 – le soui, le soi (Denis Diderot).

1790 – la sauce soja (Jean Baptiste de Lamarck).

1796 – sauce de soya (Karl Peter Thunberg).

German:

1785 – Soju, Soy (Charles Bryant).

1801 – Indianische Soya (Philipp A. Nemnich).

1822 – Soya, indische Soya (Joseph Koenig).

Italian:

1907 – Il shoyu (Ruata & Testoni).

1912 – Shoyu (L. Settimj).

1919 – shoyu (G.E. Mattei).

Latin:

1705 – Soia (Samuel Dale).

1712 – Soju (Engelbert Kaempfer; he lived in Japan from Sept. 1690 to Nov. 1692)

1730 – Soia (Joseph P. de Tournefort).

Portuguese:

1603 – Xōyu (Compania de Jesus; earliest Jesuit dictionary of Japanese).

1882 – soia, soja, ketjap (Gustavo d'Utra, Brazil).

1938 – Shoju, Soy, Shiyu, tao-yu (Abreu Velho, Angola).

Spanish:

1910 – Salsa de la haba soya (C.F. Langworthy; translation of his American USDA bulletin).

1912 – choyou, salsa de soja (Adolfo C. Tonellier, in Argentina).

Brief chronology of soy sauce.

160 CE – *Simin Yueling* [*Monthly Ordinances for the Four Classes of People*], by Cui Shi mentions *qingjiang*, the earliest known ancestor of today's soy sauce, made in China from *jiang*.

544 CE – *Qimin Yaoshu* [Important Arts for the People's Welfare], by Jia Sixie (of China), the world's earliest encyclopedia of agriculture, gives the earliest known description of how to make soy sauce.

1568 Oct. 25 – An entry in the unpublished Tamon-in Diary

(*Tamon-in Nikki*) mentions taking shoyu to a Buddhist monk. This appears to be the first time the contemporary characters for shoyu are used in Japan (Iino 2001, p. 23). This diary was kept at a monastery in Nara City, Japan.

1596 – Soy sauce in China starts to be made with a significant proportion of wheat or barley (*Bencao Gangmu*). This book is the first to describe in detail how to make soy sauce on a home scale. However before the 20th century, most soy sauce made in China contained little or no wheat or barley.

1597 – The contemporary characters for shoyu appear in the *Ekirinbon Setsuyōshū*, an early Japanese dictionary written by a Japanese Buddhist priest and published during the Muromachi period (Yokotsuka 1985, p. 205).

1603 – The word “shoyu” (spelled *Xōyou*) and the word “tamari” are first mentioned in a Western language (Portuguese) in *Vocabulario da Lingoa de Iapam*, a Jesuit dictionary published in Nagasaki, Japan.

1630 to 1704 – At some time during this period the earliest ancestor of the company that later became Noda Shoyu Co., then Kikkoman Corporation, began making soy sauce in Noda, Japan. Fruin (1983, p. 1, 16, 18) gives the date as 1661 - and we agree. On 7 Jan. 1930 when Dorsett and Morse, of the U.S. Department of Agriculture, visited the Noda Shoyu Co., Ltd. in Noda, they wrote: “According to their literature, Kikkoman Shoyu was first brewed by Mr. Saheiji Mogi, in the second year of Meiwa (corresponding to the year 1704) in Noda-Machi, Japan” (Log of the Dorsett –Morse Expedition, p. 3465).

1647 Oct. 16 – Japanese soy sauce (shoyu) is now being exported from Nagasaki, Japan, by the Dutch East India Company. In the earliest known handwritten letter (in Dutch) it is called *soije* (*Int Comptoir Nagasaekij*).

1679 – The famous English philosopher John Locke writes in his journal (not published until 1829): “Mango and saio [shoyu] are two sorts of sauces brought from the East Indies.”

1680 – Indonesian-style soy sauce is first mentioned in the West. “And now we have a new Sawce called Catch-up from East-India, sold at a Guiney [Guinea] a bottle” (Petyt 1680, p. 285). Ketjap is the word for soy sauce in the Dutch East Indies (today's Indonesia). Here begins the long and tangled confusion between soy sauce and ketchup. The Indonesian word *ketjap* / *kecap* is probably derived from *ke chiap* / *kicap* / *kitjap* which originated in the Hokkien / Southern Min Chinese sub-dialect of Zhangzhou / Chiang-chiu / Changchew.

1682 – “I do not doubt but you London Gentlemen, do value it [chocolate] above all your *Anchoves*,... your *Soys*, your *Ketchups* and *Caveares* [Caviars] (Chamberlayne 1682, p. 18). “Soys” refers to soy sauces and “Ketchups” probably refers to soy sauces from the Dutch East Indies (today’s Indonesia).

1688 – Dampier, while traveling in Tonquin (today’s North Vietnam) writes in his log (not published until 1705): “The Nuke-Mum [*nuoc-mam*, fish sauce]... is also very savory, and used as a good sauce for Fowls, not only by the Natives, but also by the *Europeans* who esteem it equal with *Soy* [sauce].” This is the earliest English-language document seen that uses the word “Soy” (regardless of capitalization) to refer to soy sauce.

1690 – “Catchup, a high East-India Sauce” – says *A New Dictionary of the Terms Ancient and Modern of the Canting Crew* (printed in London).

1696 – John Ovington, in *A Voyage to Suratt, in the Year, 1689*..., writes, in the chapter on “The English Factory at Surat” [British India], at the section on “Several Sorts of Indian Dishes”: “Bambou and Mangoe Achar [pickle], Souy the choicest of all Sawces are always ready to whet the Appetite.” This is the earliest English-language document seen that uses the word “Souy” to refer to soy sauce.

1705 – Dale, writing in Latin in a book on pharmacology, mentions soy sauce, which he calls “Soia.” The bean from which soy sauce is made is also used to make a condiment called *Ketchup*.

1708 – It is reported: that “Soia of which Ketchup is made, is the Seed of an *Indian Phaseolus* (*Philosophical Transactions*, 1808, p, 2266).

1711 – *Soy* comes in Tubs from Jappan [Japan], and the best *Ketchup* from *Tonqueen* [the northern part of today’s Vietnam]; yet good of both sorts, are made and sold very cheap in *China* (*Account of the trade in India*, by Lockyer, p. 128-29).

1712 – An ad in the *Daily Courant* (London, Dec. 30 p. [2]) states: “There is lately brought over from the East Indies [probably today’s Indonesia] a great parcel of Soy [sauce], commonly call’d Ketchup,...”

1725 – Mrs. Hay (p. 18) describes the earliest known attempt to make Indonesian-style soy sauce (“To make a Ketchup for Sauce”) using walnuts as the main ingredient and without understanding that real soy sauce is made using soybeans.

1728 – “Mushroom-Ketchup” is first mentioned, as Westerners try to make soy sauce using Western ingredients and without understanding that real soy sauce is made using soybeans (Bradley 1728, p. 140). The transformation from “ketjap” (Indonesian soy sauce) to ketchup” began at about this time. Oyster ketchup was first mentioned in 1777 (by Charlotte Mason) and Tomato Ketchup in 1800 (by James Morton).

1737 – The first soy sauce (made in Japan) is exported to the Netherlands by the Dutch East India Co. (VOC). During the 24 years from 1737 to 1760, approximately 46,000 liters of soy sauce were exported as “official trade freight” from Deshima, Nagasaki, Japan, to the VOC’s Batavia headquarters, and about 15,600 liters (about one-third of the total) were then shipped from Batavia to the Netherlands (Yamawaki 1992).

1739 – An Officer from the Custom-house while inspecting a ship “lately arriv’d from China, had the misfortune to break a Jar of Soy of considerable Value... Soy is a rich Ketchup, the best made in India, and gives the highest Gust of any sauce in the World” (*General Evening Post* {London}, Aug. 14, p. [2], col. 3). Note: The word “India” may refer here to the Dutch East Indies, today’s Indonesia.

1747 – *The Art of Cookery*,... by Mrs. Hannah Glasse of England, contains a recipe for homemade ketchup (p. 156) in which mushrooms are the main ingredient. She concludes: If “you put to a Pint of this Ketchup a Pint of Mum, it will taste like foreign Ketchup.”

1750 Dec. 17 – Soy sauce, called “Indian Soy,” the first soy product in the British colonies of North America, arrives in New York City. Sold in pint bottles, it is announced in a classified ad by Rochell & Sharp in the *New-York Gazette Revived in the Weekly Post-Boy* (p. 3). It was probably sold to affluent retail customers for home use. By 1776 soy sauce is being sold in port cities up and down the East Coast of British North America. But much of it is made in Savannah, Georgia, by Samuel Bowen.

Here is a list of the earliest known dates that soy sauce was sold in various British colonies in North America

1768 – Soy made by Samuel Bowen sold in Savannah, Georgia at the Collector’s. The advertised price on 30 Nov. 1768 is 3 shillings 6 pence per bottle or 1 pound 16 shillings for 12 bottles (a 15% saving).

1770 – Soy made by Samuel Bowen sold in Newport, Rhode Island.

1773 – Bowen’s Patent Soy sold in Charleston, South Carolina.

1774 – India Soy sold by N. and W. Coffin in Boston, Massachusetts.

1774 – Bowen’s Patent Soy sold in Philadelphia,

Pennsylvania.

1776 July 4 – Declaration of Independence by the British Colonies of North America.

1778 – India Soy sold in Burlington, New Jersey.

1785 – India soy sold in Baltimore, Maryland.

1786 – Japan soy sold in New Haven, Connecticut.

1812 – East India Soy sold in Portland, Maine.

1818 – Japan soy sold in Alexandria, Virginia.

1837 – Canton Soy sold in Keene, New Hampshire.

1751 – Soy sauce is being imported by England from China – but not from Japan (*A General History of the Several Nations of the World*,... p. 343).

1752 Nov. 6 – “Catchup” (probably soy sauce) is now being sold in the port city of New York (Smith, *New York Gazette*).

1766 May – Samuel Bowen, a former British sailor, starts to sell Bowen’s Patent Soy which he has made on his plantation at Thunderbolt, a few miles east of Savannah, Colony of Georgia. He also starts to export this soy sauce to England. Later in 1766 he is awarded a gold medal for his sauce and other Chinese products by the Society of Arts, Manufactures, and Commerce in London. He applied for a British patent on 6 June 1767 and was issued the patent on July 1 of that year (*Georgia Gazette*, 1766, May 28, p. 1. Hymowitz & Harlan 1983, p. 374-78).

In 1768 he starts to sell his soy sauce in port cities along the east coast of British North America.

1768 – Soy cruets, special bottles for serving soy sauce at table, are now made in England (*Bath & Bristol Chronicle*).

1770 Nov. 26 – An ad by Richard Curson in the *New-York Gazette* is the earliest document seen in which both soy sauce and catchup appear in the same shipment and ad in the British colonies of North America. This “catchup” was probably Indonesian-style soy sauce.

1774 Feb. – Samuel Bowen exports 3 dozen bottles of soy sauce from Savannah, Georgia (*Georgia Gazette*, Feb. 9. p. 2, col. 2).

1783 – Quin’s Sauce is now being made commercially in England; soy sauce was long a major ingredient (Dorsey 1783, Ad).

1795 – Charles Peter Thunberg (in his *Travels in Europe, Africa, and Asia made between the years 1770 and 1795*, Vol. IV, p. 107) states: “The traffic in Soy, on the other hand, is more considerable [than that of tea], and as the tea produced in this country is reckoned inferior to that of China, so the soy is much better than that which is brewed in China. For this reason, soy is not only exported to Batavia [today’s

Jakarta], in the wooden barrels in which it is made, but likewise sold from thence to Europe and to every part of the East Indies.”

1804 – San Jirushi Corp. starts to make tamari shoyu in Kuwana, Japan.

1805 – “33. Dolichos Soja... The *Soja* [soy sauce] of the Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from these seeds and is used in almost all of their dishes, instead of common salt (Miller 1807).

1813 – It is first stated that soy sauce can be shaken in a glass to determine its quality. “Soy should be chosen of a good flavour, not too salt or too sweet, of a good thick consistence, of a dark brown colour and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it does not, it is of an inferior kind, and should be rejected” (*Oriental Commerce*, by William Milburn, p. 519-20).

1821 – “There is a joke amongst seamen, that soy is made from beetles or cockroaches.” This incorrect information appears in 76 subsequent documents. Yet this 1821 American encyclopedia entry begins: “Sooju, or Soy [sauce], is a dark coloured sauce, which is prepared from the seeds of the Chinese plant *Dolichos soja*” (Willich 1821, Vol. 3, p. 264-65).

1823 – “Soy” and “Indian catsup” are the same, and both are made from the “dolichos or Soy bean” (Vignoles, p. 104).

1830 – Harvey’s Sauce is now being made commercially in England using soy sauce as an ingredient (Dolby 1830).

1835 – “*Sooja* is the name of a Japanese sauce, prepared from the seeds of a species of *Dolichos* now made into a distinct genus and called *Soja hispida*. The *Soja* of Japan is preferred as a sauce to the *Kitjap* of China; both, however, are imported into England in large quantities, and are here known as Soy” (Burnett 1835, Vol. 1, p. 666).

1837 – Worcestershire sauce starts to be made at 68 Broad St., Worcester, England by Lea and Perrins (Keogh 1997). Soy sauce was the major secret ingredient in Worcestershire sauce.

1838 – The earliest known recipe for “Tomato soy” appears in *The Virginia Housewife*, by Mary Randolph. Surprisingly, neither “soy” nor “soy sauce” are even mentioned in the body of the recipe. This is an early example of the confusion about the difference between soy sauce and ketjap / ketchup. The term “Tomato soy” might be called an “intermediate form” between soy sauce and ketchup.

1843 – Waterston (in his *Cyclopaedia of Commerce*..., p. 627) states that genuine soy “is imported from Canton but the best is brought from Japan by way of Batavia.”

1873 – Kikkoman brand soy sauce is exhibited at the International Exhibition held in Vienna, Austria, where it is awarded a gold medal (*Japan's Industries*... 1910, p. 163-65).

1873 – Concerning the etymology of “ketjap / ketchup”: *Chinese-English Dictionary of the Vernacular or Spoken Language of Amoy*,... by Carstairs Douglas states (p. 46) that the terms *kōe-chap* and *kê-chiap* refer to the “brine or salt of pickled fish.” We (tentatively) believe that these terms were taken by seafaring Chinese to the Dutch East Indies (today's Indonesia) where, in Malay, they came to be pronounced ketjap and were applied to Indonesian-style soy sauce. To this day, the name for Indonesian soy sauce is unchanged, although it is now written *kecap* – but pronounced *ke-chup*.

From the 1600s to the late 1800s soy sauce was imported from East Asia to Europe and America bearing two different names: Soy and kechup (also spelled catsup, catchup, ketchup, ketchap, kitjap, etc.).

See also Schlegel and Cordier (1894, Part III, p. 140-43) who cite Douglas 1873 and conclude: This “is surely the origin of *Ketchup*, another name for soy” [sauce].

1874 – The first accurate and detailed description of how to make soy sauce on a commercial scale in a European language is given by J.J. Hoffman (in German). While living and teaching in Japan, he is the first Westerner to make a scientific study of the shoyu-making process.

1879 – Saheiji Mogi, of Noda, Japan, registers Kikkoman, his family's pride and flagship brand of shoyu (Japanese-style soy sauce), as a brand name in California – six years before it is granted the same legal protection in Japan. He is soon exporting small wooden kegs, bound with bamboo hoops (18 liters or 4.76 gallons capacity) of Kikkoman shoyu to California and the Western United States where it is prized by the growing number of Japanese immigrants (Fruin 1983, p. 59-60).

1882 – Earliest document seen that mentions Korean-style soy sauce, which it calls “soy” (Griffis 1882, p. 270).

1889 Dec. 8 – Earliest document seen that mentions “teriyaki” appears in a description of dining in Tokio [Tokyo] in the *Detroit Free Press*. It states that “... salmon soaked first in soy sauce and then broiled, but eaten cold. This is called teriyaki” (Stearns, p. 16).

1891 – The earliest known manufacturer of shoyu in Hawaii

or the United States is started in Honolulu, Oahu, by Jihachi Shimada; the company name and brand name are unknown. The company closed soon after it started (Morita 1915, p. 260).

1893 – Exports of soy sauce from Japan are now significant and increasing. “Soy [sauce]. The total value of the latest export is 41,029 yen, and chiefly exported to Hawaii” (p. 247). Exports of Soy [sauce] from Japan to the United States “rose from 7,862 catties [1 catty weighs 1.33 lb] worth 261 yen in 1887 to 9,744 catties worth 1,146 yen in 1881” (p. 429-30) (Japan. Dep. of Agriculture and Commerce, Bureau of Commerce. *General View of Commerce & Industry in the Empire of Japan*).

1893 – The earliest English-language document seen that mentions tamari (Japan, Dep. of Agriculture and Commerce. *A Descriptive Catalogue of the Agricultural Products, Exhibited in the World's Columbian Exposition*).

1893 – HVP soy sauce is now being made from hydrolyzed vegetable protein by Maggi in Europe (Koenig).

1897 – Yamamori Jozo-sho (Yamamori Brewery) starts to make Yamamori Shoyu (soy sauce) in San Jose, California. It is the first company to make soy sauce in the continental United States.

1905 – Sugita Jozo-sho (Sugita Brewery) is now making Sugita Shoyu in San Jose, California. It is the second company to make soy sauce in the continental United States, and also in San Jose!

1905 – Yamajo Soy Co. (Yamajo Shoyu Seizo-sho) starts to make shoyu in Honolulu, Oahu. Established by Mr. Nobuyuki Yamakami, it is the first successful shoyu manufacturer in Hawaii. By 1909 it was renamed Hawaiian Soy Co. Ltd. (Hawaii Shoyu K.K.).

1908 – Kurt Heppe, in his pocket dictionary of terms used in cookery states (p. 313): “Soy – a ketchup of the Soy bean.”

1910 Sept. – More than half of all soy sauce now exported from Japan is Kikkoman brand shoyu. It has been “chiefly instrumental in making Japanese soy known and appreciated in foreign countries.

“The ‘Kikkoman’ firm owns at present six soy breweries, with a total of 4,200 hands and eight sets of boilers and steam engines. The yearly output is about 11,800,000 gallons, of which 2,800,000 gallons are exported to foreign countries, the principal destinations being Honolulu, Portland, San Francisco, Seattle, Los Angeles, Tacoma, Denver, Chicago, London, Paris, Berlin, Vienna, and China ports” (*Japan's Industries*... 1910, p. 163-65).

1915 – *Scientific American Cyclopedia for Formulas*, by Albert A. Hopkins states: “Japanese soy is usually preferred to that of China, because it is free from the treacly [molasses-like] flavor which distinguishes the latter.

1915 – *Shiro shoyu* (pale or light-colored soy sauce) is first mentioned by Takahashi et al. in Japan.

1918 – Oriental Show-You Co. is started in Detroit, Michigan, by Shinzo Ohki, a Japanese man, who begins by importing shoyu and tea from China.

1920 – Oriental Show-You Co. is now selling “genuine imported Japanese soy sauce” (*Chicago Daily Tribune*, March 28, p. C13).

1922 – La Choy starts to import fermented soy sauce from China in wooden barrels to use as a seasoning in their Asian food products.

1940-1990s – The term “soy sauce” gradually replaces “soy” as the English-language name for this sauce.

1942 – Showa Shoyu Brewing Co. is founded in Glendale, Arizona, by John Tadano. They make Japanese-style soy sauce to replace imports from Japan cut off by World War II (SoyaScan Interview with Mary Tadano and Michiko Tadano).

1943 Sept. – La Choy Food Products, Inc. and Oriental Show-You Co. are purchased by Beatrice Creamery Co. (*Wall Street Journal*, Sept. 28, p. 24).

1950 – Earliest known document that mentions hoisin sauce, which it calls (*hoy sien jeung* – in Cantonese); soy sauce is an important ingredient in this “famous red sauce” which is widely served with Peking roast duck (Feng 1950, p. 32).

1955 – A.E. Staley Co. is now the largest U.S. maker of soy sauce; they make the non-fermented HVP type. “While it is conceded that the Staley product has less bouquet than the long-fermented oriental type, it is estimated that the U.S. production is now larger than the approximately 3 million pounds [about 305,500 gallons or 1,156.4 kiloliters] imported last year from the Orient” (*Soybean Digest*, Dec. 1955, p. 14-15).

1955 – Bragg Liquid Aminos are now being made in the United States from hydrolyzed vegetable protein (HVP) without added salt or fermentation (Federal Trade Commission 1955).

1957 – Kikkoman International Inc. is established and is

soon rooted in San Francisco. The company focuses on selling their soy sauce to a largely non-Japanese market in the United States (Fruin 1983, p. 274).

1958 – Spray-dried soy sauce is now being made in Japan. Its first use may have been to season instant noodles / ramen (Motoyama 1958).

1960 – Earliest document seen that mentions *kecap manis* / *ketjap manis* (Indonesian sweet soy sauce; Huang 1960).

1961 – Japanese soy sauce makers, which used only whole soybeans before World War II, now use large amounts of defatted soybean meal instead (Hayashi 1961, p. 18).

1964 Oct. – Noda Shoyu Co. is renamed Kikkoman Shoyu Co. Ltd. (Fruin 1983, p. 243).

1965 – Diamond Teriyaki Sauce starts to be made in Honolulu, Hawaii. This is the world’s earliest known commercial teriyaki sauce. It is made from soy sauce, mirin (sweet sake) and a flavor enhancer.

1973 June 16-17 – Kikkoman opens a modern soy sauce plant in Walworth, Wisconsin. This is Kikkoman’s first soy sauce plant in the Western world. The decision to build this plant was made in March 1971 (*Times*, Walworth, Wisconsin).

1977 – Earliest document seen that mentions *inyu*, Taiwanese black bean sauce – a type of fermented black bean sauce made from soybean koji (Jan et al. 1977).

1979 March – Dr. Danji Fukushima of Kikkoman first refers to the five different types of Japanese shoyu by name, including *saishikomi shoyu* and *shiro shoyu* (*J. of the American Oil Chemists’ Society*, p. 357-62). *Saishikomi* (twice-brewed soy sauce) originated in about 1780 and is made mostly in Yamaguchi prefecture, just north of Kyushu, Japan.

1980 Oct. – Kikkoman Shoyu Co. is renamed Kikkoman Corporation (Fruin 1983, p. 243; Kikkoman Annual Report 1995, p. 22).

1983 Dec. – “Introduction of Soybean to North America by Samuel Bowen in 1765,” by T. Hymowitz and J.R. Harlan is published in *Economic Botany*. This landmark article also documents the following facts: (1) Samuel Bowen was the first person to manufacture soy sauce in North America; he made this sauce in Savannah, Colony of Georgia, from soybeans he had introduced from China and grown on his plantation, Greenwich, in Savannah. (2) From 1770 to 1775 he exported more than 800 gallons of this soy sauce to

England. For this sauce he was awarded a gold medal from the Society Arts, Manufactures and Commerce in England. All information about Samuel Bowen in this book is based on the superb research of Hymowitz and Harlan.

1992 – *Edo jidai shōyu no kaigai yushutsu* [Exports of shoyu from Japan during the Edo period], by Teijirō Yamawaki uncovers the fascinating story of how the Dutch exported shoyu from Japan to the Western world. A landmark publication – in Japanese, with a lengthy English summary done by the Kikkoman Institute for International Food Culture (KIIFC, Noda, Japan). We are deeply grateful for this English summary.

1997 Oct. – Kikkoman Foods Europe B.V. starts to make soy sauce at its first plant in Europe – at Hoogezand-Sappemeer, the Netherlands.

1999-2003 – Japanese food historian Ryoichi Iino writes *The History of Shoyu* in four parts, published online in *Food Culture* (KIIFC).

2005 Nov. – San Jirushi Corp. is purchased by Yamasa Corp.

Alphabetical list of names of soy sauce (useful for searching digital / electronic text):

Bean sauce, bean-sauce

Bentang

Benteng

Black soy sauce

Cantonese soy

Canton soy

Ch'au yau

Ch'au you

Chiang yu, chiang-yu

ABOUT THIS BOOK

This is the most comprehensive book ever published about the history of soy sauce. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of this subject. It is also the single most current and useful source of information on this subject.

This is one of more than 100 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 78 different document types, both published and unpublished.
- 7,151 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 585 original Soyinfo Center interviews and overviews never before published.
- 728 unpublished archival documents.
- 985 commercial soy products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

A complete subject/geographical index is also included.

ABBREVIATIONS USED IN THIS BOOK

A&M = Agricultural and Mechanical
 Agric. = Agricultural or Agriculture
 Agric. Exp. Station = Agricultural Experiment Station
 ARS = Agricultural Research Service
 ASA = American Soybean Association
 Assoc. = Association, Associate
 Asst. = Assistant
 Aug. = August
 Ave. = Avenue
 Blvd. = Boulevard
 bu = bushel(s)
 ca. = about (circa)
 cc = cubic centimeter(s)
 Chap. = Chapter
 cm = centimeter(s)
 Co. = company
 Corp. = Corporation
 Dec. = December
 Dep. or Dept. = Department
 Depts. = Departments
 Div. = Division
 Dr. = Drive
 E. = East
 ed. = edition or editor
 e.g. = for example
 Exp. = Experiment
 Feb. = February
 fl oz = fluid ounce(s)
 ft = foot or feet
 gm = gram(s)
 ha = hectare(s)
 i.e. = in other words
 Inc. = Incorporated
 incl. = including
 Illust. = Illustrated or Illustration(s)
 Inst. = Institute
 J. = Journal
 J. of the American Oil Chemists' Soc. = Journal of the American Oil Chemists' Society
 Jan. = January
 kg = kilogram(s)
 km = kilometer(s)
 Lab. = Laboratory
 Labs. = Laboratories
 lb = pound(s)
 Ltd. = Limited
 mcg = microgram(s)
 mg = milligram(s)
 ml = milliliter(s)

mm = millimeter(s)
 N. = North
 No. = number or North
 Nov. = November
 Oct. = October
 oz = ounce(s)
 p. = page(s)
 photo(s) = photograph(s)
 P.O. Box = Post Office Box
 Prof. = Professor
 psi = pounds per square inch
 R&D = Research and Development
 Rd. = Road
 Rev. = Revised
 RPM = revolutions per minute
 S. = South
 SANA = Soyfoods Association of North America
 Sept. = September
 St. = Street
 tonnes = metric tons
 trans. = translator(s)
 Univ. = University
 USB = United Soybean Board
 USDA = United States Department of Agriculture
 Vol. = volume
 V.P. = Vice President
 vs. = versus
 W. = West
 °C = degrees Celsius (Centigrade)
 °F = degrees Fahrenheit
 > = greater than, more than
 < = less than

HOW TO MAKE THE BEST USE OF THIS DIGITAL BOOK - SEARCH IT

Most Important Thing: The **KEY** to using this digital book, which is in PDF format, is to **SEARCH IT** using Adobe Acrobat Reader: For those few who do not have it, Google: **Acrobat Reader** - then select the **free** download for your type of computer. Then...

Type [Ctrl+F] to “Find.” Near the top right of your screen a white box will appear.

Click the small down-pointing arrow just to the right of that box to get a menu.

Click “Open Full Acrobat Search.”

At the left side of your screen a “Search” box will open.

When asked: “What word or phrase would you like to search for?” type that word or phrase in the box. For example: Kikkoman or New York. No need to use quotation marks. Then click “Search.”

At “Results” click any line that interests you.

For those using a Mac without Acrobat Reader: Safari is often the default browser. Click “Edit” in the toolbar at top. In the dropdown click “Find,” then click “Find...” again. A search bar will open across top of screen with a search box at right. In this box type a word or phrase you would like to search, such as Kikkoman or New York. Click “Done” then scroll through the various matches in the book.

Chronological Order: The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, start reading at the back, just before the indexes.

A Reference Book: Like an encyclopedia or any other reference book, this work is meant to be searched first - to find exactly the information you are looking for - and then to be read.

How to Use the Index: A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional

value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. “Bean curd. See Tofu.”

Countries and States/Provinces: Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at “U.S. States” or “Canadian Provinces and Territories” respectively. All countries are indexed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

Most Important Documents: Look in the Index under “Important Documents -.”

Organizations: Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index – companies like ADM / Archer Daniels Midland Co., AGP, Cargill, DuPont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

Soyfoods: Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

Industrial (Non-Food) Uses of Soybeans: Look under “Industrial Uses ...” for more than 17 subject headings.

Pioneers - Individuals: Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, Artemy A. Horvath, Englebert Kaempfer, Mildred Lager, William J. Morse, etc. Soy-Related Movements: Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/Rights. These are indexed under the person's last name or movement name.

Nutrition: All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one of more than 70 subcategories.

Soybean Production: All subjects related to growing, marketing, and trading soybeans are indexed under Soybean Production, e.g., Soybean Production: Nitrogen Fixation, or Soybean Production: Plant Protection, or Soybean Production: Variety Development.

Other Special Index Headings: Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy-related).

Commercial Soy Products (CSP): See "About This Book."

SoyaScan Notes: This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

"Note:" When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

Asterisks at End of Individual References.

1. An asterisk (*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.
2. An asterisk after eng (eng*) means that Soyinfo Center has done a partial or complete translation into English of that document.
3. An asterisk in a listing of the number of references [23* ref] means that most of these references are **not** about soybeans or soyfoods.

Documents Owned by Soyinfo Center. Lack of an * (asterisk) at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

Document Types: The SoyaScan database contains 135+ different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

Customized Database Searches: This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

BIBLIO: The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

History of Soybeans and Soyfoods: Many of our digital books have a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available, free of charge, on our website, www.soyinfocenter.com and many finished chapters are available free of charge in PDF format on our website and on Google Books.

About the Soyinfo Center. An overview of our publications, computerized databases, services, and history is given on our website.

HISTORY OF SOY SAUCE

1. Liu Xi. comp. 150 AD. *Shiming* [Expositor of names]. China. Passage on soy reprinted in C.N. Li 1958 #46, p. 57, and #221, p. 234. [Chi]

• **Summary:** Wade-Giles reference: *Shih Ming*, by Liu Hsi. Later / Eastern Han dynasty. *Shu* (the simplified character) means soybeans (*shu*, the early, more complex character).

In Chapter 13, fermented black soybeans (*shi*) are mentioned twice. The first states: *Shi* is also written as *shi* (a Chinese character with the same pronunciation / sound that refers to something delectable and highly desirable). It is used to blend / harmonize the five flavors. *Shi* is necessary for this blending to succeed. It helps to make things sweet and delectable. That's why the people of Qi [a region in today's Shandong province near the birthplace of Confucius] call it *shi* (fermented black soybeans). Because it sounds just like *shi* (delicious / delectable) (See Huang 2000, p. 337). The second reference to *shi* in Chapter 13 is in a recipe for dry-roasted meat. "Marinate meat in malt sugar, honey, and *shizhi* (fermented black soybean extract; literally "juice from *shi*"), and roast it until it has the consistency of dried meat" (see Huang 2000, p. 360). (Translated by H.T. Huang, PhD, Feb. 2002). Dr. Huang adds: By the late Han period, *shi* was a popular food product. The fact that it was traded extensively makes it clear that it was considered a culinary necessity of daily life. The second reference is interesting in terms of the origin of soy sauce. *Shizhi* was an extract, probably made by boiling *shi* in water; so it was something like miso soup without the added vegetables, etc. *Shizhi* is also mentioned several times in the *Qimin Yaoshu* (6th century A.D.), but it is not mentioned in any other work in between. It was a precursor of soy sauce but it would have lacked the richness of soy sauce.

Note: This is the earliest document seen (Nov. 2011) that mentions fermented black soybean extract / sauce, which it calls *shizhi*.

Huang (2000) discusses the different types of ferments (*qu*, *koji*) listed in this work and, throughout Chinese food history (p. 167, 261, 150-68). The *Shiming* says "when *hai* is soupy, it becomes *tan*. Thus *hai* can be construed as a thick meat sauce (or a paste), and *tan* a thin one" (p. 334). This work says that fermented black soybeans (*shi*) are "delectable and highly desirable. It was a popular food product. In fact, the extensive trade in *shi* during the Han-Wei Period [202 BC to 265 AD] leaves no doubt that it was considered a culinary necessity of daily living" (p. 337). Fermented black soybean sauce (*shizhi*) was apparently a well-known flavoring agent during the Han. The *Shiming* states: "Roast-dry meat: marinate meat in sugar, honey, and *shizhi* and roast it until it has the consistency of dried meat" (p. 360). The *Shiming* discusses different types of pasta

(both non-filamentous and filamentous) including one with sesame seeds (*huma*) sprinkled over it (p. 468, 472s, 480, 484). Gives a good history of malt sugar made from various cereals (p. 457-58); one type (*i*) is mentioned in the *Shiming*.

Hagerty (1917, p. 33): "The Shih Ming, or Explanation of Terms, by Liu Hsi of the After Han Dynasty period says: 'The Shih, or Bean relish, has an excellent taste, having all five flavors harmonized together. This sauce is necessary in order to complete the flavor of the food and make it taste good. For this reason the people of Chi state pronounce the character for shih (Cc), the name for bean relish, the same as the character (Cc) (?) which denotes "excellent."'"

Wilkinson (2000, p. 66, 790): The chapter titled "Dictionaries" states that China's first etymological dictionary, the *Shiming*, compiled by Liu Xi, appeared circa +200. Liu used rhyming puns plus the literary and spoken languages of his day, to trace the origins of 1,500 words in 27 categories. This is a major work.

2. Cui Shi. 160 AD. *Simin yueling* [Monthly ordinances for the four classes of people]. China. Passage on soy reprinted in C.N. Li 1958 #45, p. 56. [Chi]

• **Summary:** Wade-Giles reference: *Ssu Min Yüeh Ling*, by Ts'ui Shih. Later / Eastern Han. A detailed description, lunar month by month, of the activities of a well-to-do household. An early and important agricultural treatise of the late Han dynasty (2nd century A.D.). The following is based on the translation by Hsu Cho-yun (1980, p. 217-23). 1st month [February]: The first day of the first month is called the New Year. One can make various sauces (or pastes). During the first ten days of the month, roast / fry soybeans (*dou*); in the second ten days, boil soybeans. Chopped soybeans (or groats) are made into *modu* (W.-G. *mo-tu*) (a type of jiang—apparently fermented, salted soy paste), which, by the conjunction of the 6th and 7th month, should be used for making pickled melons, fish sauces, meat sauces, and basic [liquid / clarified] soy sauce (*qingjiang*; W.-G. *ch'ing chiang*). 2nd month: On the day of the spring equinox [March 20], thunder will be first heard. One can plant spiked millet, soybean (*dadou*), female hemp (which does not yield fiber), and sesame (*huma*; "foreign hemp"). One can sell millet, panicked millet, soybeans, hemp, and wheat seed. 3rd month: When it rains, it is time to plant hemp and sesame. When the mulberry turns red, one can plant soybeans. 4th month: One can plant millet, spiked millet, soybeans and lesser [azuki] beans (*daxiaodou*), and sesame. 5th month: On the day of the summer solstice [June 21-22], present wheat and fish to ancestors and deceased parents; offer sacrifice and follow the procedures for food preparation, purification and cleansing. When timely rains fall, one can plant sesame

and male hemp. One can prepare elm sauce and minced meat sauce. One sells [soy] beans, lesser [azuki] beans (*daxiaodou*), and sesame.

6th month: One can sell soybeans, buy oats and wheat, and collect plain white silk.

7th month: On the sixth day, the five grains (*wugu*) and the mill should be ready. One can sell lesser [azuki] beans and [soy] beans, buy wheat, and collect raw silk and white silk.

8th month: One can make *mo-tu* preserve [perhaps fermented soybean] paste and collect leaves of beans.

9th month: Soy is not mentioned.

10th month: One harvests the five grains. One should purchase spiked millet, [soy] beans and lesser [azuki] beans, and hempseed.

11th month: The winter solstice arrives. Buy spiked millet, [soy] beans, lesser [azuki] beans, and hempseed. 12th month: Soy is not mentioned. (Translated by H.T. Huang, PhD, Feb. 2002).

H.T. Huang adds: The four classes of people (in descending order of importance) referred to the scholars / government officials, farmers, artisans / laborers, and merchants. Scholars were the highest class because they ran the country. The merchants were the lowest class because it was felt they did not produce anything. This system lasted from antiquity until about 1949. Ordinances, usually issued by a high official (up to the emperor or king), were executive orders, suggestions, or exhortations as to what the people should or should not do, often in connection with food, crops, or daily living.

H.T. Huang (2000, p. 347, 359, 362-64, 371-72) argues convincingly that the *qingjiang* (clear chiang or “clarified soy sauce”) made during the 1st month is a liquid soy condiment, similar to today’s soy sauce, obtained as a by-product of *chiang*. *Mo-tu* has also been interpreted as fermented soybean paste by Miao Ch’i-Yü ed. (1981, p. 23) and Hung Kuang-Chu (1984, p. 93).

Fukushima (1989, p. 3). This document describes the first liquid soy sauce. “The liquid products which belong to the category of soy sauce did not appear in the literature before the later Han dynasty (about 25-220 A.D.). There is a description of the liquid product which was made by separating the liquid portion from the chiang in *Ssu-ming Yüeh-ling* (*Shimin-Getsurei* in Japanese), published by Ts’ui Shih (*Sai Shoku* in Japanese) in the later Han dynasty. This liquid was called *chiang ch’ing*, which means ‘clear chiang.’”

Bray (1984, p. 56, 630): Monthly Ordinances of the Four Sorts of People. Later Han, c. +160. By Ts’ui Shih. Translated by Herzer (1963, in German). Our present version of this book is based almost exclusively on passages cited in the *Qimin Yaoshu* (+544).

Bo (1982): This work states, “On New Year’s Day, make various types of chiang, meat chiang and ch’ing chiang.” The

term “ching” means “refined” or “clear.” This ch’ing chiang must be today’s filtered soy sauce. In the Ch’ing dynasty (1644-1912) this same term was used to refer to soy sauce. Even today a lot of people along the Yellow River or in the countryside of eastern north China still refer to soy sauce as “ch’ing chiang.” Also, up until recently, in restaurants and hotels in Beijing, there were typically two white ceramic pots. On the one containing soy sauce was written “ch’ing chiang” and on the one with vinegar, “kao ts’u.” Also, in Korea they used to call soy sauce “ch’ing chiang.”

Bray (1981): Almanac of agricultural practice, household management, and ritual for landowning class. With planting instructions. Based on a reconstruction of the text by Shi Shenghan. Also parts appeared in the *Ch’i-min yao-shu*. The original work is lost.

Shih Shêng-han (1962), in his translation and interpretation of the *Qimin Yaoshu*, includes a lengthy analysis of the sources from which it is drawn. On pages 21-23 is a detailed discussion (with one long excerpt) of this book (*Simin Yueling*) and its author. The excerpt states that in the 5th month, one may sell soybeans and azuki beans (*daxiaodou*), and sesame, and buy barley and wheat.

Note 1. This is the earliest document seen (May 2012) that mentions soy sauce, which it calls *qingjiang*.

Note 2. This is the earliest document seen (May 2011) that clearly mentions sesame seeds, which it calls *huma*. Bray (1984, p. 425) says that “sesame did come to China from the West in or just after Han times.” Address: Anhui province, China.

3. Cao Zhi (W.-G. Ts’ao Chih). 220-232 AD. [Poem mentioning shu (soybeans), shih (fermented black soybeans), and fermented black soybean sauce (shih-yu)]. China. [Chi]*
• **Summary:** Qin dynasty or Three Kingdoms? Hagerty (1917, p. 33): “Tsao Chih (Footnote: See Giles, C.B.D., p. 756), a famous poet who lived AD 192-232, makes mention of the [soy] bean in a poem as follows: ‘Make a fire of the stalks and cook the beans. They are both from the same root.’ The Shu bean is cooked and also salted.”

Bo (1982): Ts’ao Chih, a famous poet during the Three Kingdoms period (220-280 A.D.) wrote a famous poem in praise of fermented black soybean sauce: “Cook soybeans to make kan. Strain shih (fermented black soybeans) with water to make fermented black soybean sauce” (*shih-yu*). From this poem it is clear that fermented black soybean sauce became a very important seasoning in the diet of the ruling class. Fermented black soybean sauce is still widely produced in the area south of the Yellow River and in the Choko? River area. Even the poor peasants in the countryside often make fermented black soybeans (*tou-shih*) and fermented black soybean sauce. In the Kosei Shokuryo area, fermented black soybean sauce is often sold as a commercial product. In the southern part of Fukien (Fujian) province, they call soy-nugget sauce “shih-yu.” The pronunciation is very similar

to that of the Japanese term “shoyu.” It is said that Japanese shoyu came into the country at Yahama or Osaka from Senshu? in Fukien Province of China. Or it is said that it is deeply related to niiro/niira tamari, which was produced in Aichi prefecture, central Japan, until the Taisho period. In issue No. 20 of the Hong Kong Consumer Association publication Hsüan-Tsu (“Selections”), they call soy sauce “shih-yu.”

Note: This is the earliest document seen (March 2001) that mentions fermented black soybean sauce, which it calls *shih-yu*. Address: China.

4. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare]. China. Passage on soy reprinted in C.N. Li 1958 #66, p. 66-67, and #295, p. 216-20. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Wade-Giles reference: *Ch'i Min Yao Shu* (QMYS) by Chia Ssu-hsieh. Northern dynasties–Northern Wei (AD 386–534; established by nomadic people from the northern steppes). This is the world's earliest encyclopedia of agriculture. H.T. Huang (2002) adds: “This is the most important book on agriculture or food technology ever published in China. At a remarkably early date it gives both general information and great detail about agriculture and food processing.” The QMYS is divided into 10 books / fascicles (*juan*), and subdivided into more than 91 consecutive parts.

In his Preface, Jia Sixie states that the material in his book comes from four sources: (1) The Chinese classics; (2) Contemporary books, proverbs, and folk songs; (3) Information gathered from experts; and (4) His personal experience (“original material”).

A partial English-language translation of the “original material” and commentary by Shih Sheng-han was published in 1958 (2nd ed. 1962). The numbered text below is based on the 1962 translation titled “A preliminary survey of the book *Ch'i Min Yao Shu*: An agricultural encyclopaedia of the 6th century.” 2nd ed. Peking, China: Science (Kexue) Press. x + 107 p.

Book 2. General comments. The best time to plant soybeans (*dadou*) and oilseed hemp (*youma*) depends on the climate and soil condition. “Realization of the importance of proper choice of season and soil.” These two factors are the key to agricultural success. A table (p. 33) shows: Best, medium, and latest time for various operations: Planting spring soybeans: Best time—First ten days of the 2nd month. Medium—First ten days of the 3rd month. Latest time—First ten days of the 4th month. Also gives such times for azuki beans, male and female hemp, and sesame seeds. For making jiang: Best time—12th and 1st month. Medium—2nd month. Latest—3rd month. Making *shi* (fermented black soybeans): Best—4th and 5th month. Medium—20th day of 7th month until 8th month. Latest—None. In addition: Large dark-red beans (*da chidou*) should be planted in the 3rd lunar month,

and harvested in the 6th month (See Li 1958 #385).

Note 1. The scientific- and common name of dark-red beans is unclear; it may well be another name for azuki beans.

Chapter 4. Millets. It is best to plant millets on new fields (without a previous crop), or on a field where the previous crop was soybeans. Best, medium, and least suitable soil / ground for planting various crops. Spiked millet: Least suitable—Following turnips or soybeans. Panicked millets—Medium soil—Following soybeans. 1.3 Amount of seeds to be sown at different seasons: Soybeans: Best time—8 *sheng/mou* (= 220 ml/508 square meters). Medium time—10. Latest time—12.

Chapter 6, “Soybeans” (*dadou*):

Note 2. The first third (approximately) of this section is quotations from four early Chinese works and commentaries on them: (1) The *Erya* (Literary expositor) (ca. 150 BC) says: “*rongshu* is the same as *renshu*.” Sun Yan's commentary on the *Erya* explains that *rongshu* is the soybean (*dadou*).

(2) According to the *Guangya* by Zhang Yi (Ancient dictionary: Enlargement of the *Erya*) (230 AD), soybeans (*dadou*) are called *shu*; azuki beans (*xiaodou*) are also called *da*. *Hudou* is *jiangdou*. Dr. Huang adds: The true identity of *hudou* is unknown.

(3) The *Guangzhi* by Guo Yigong (Extensive records of remarkable things) (+390) says: When you plant the azuki bean (*xiaodou*), you can get three crops a year. The flavor is good. *Baidou* (“white bean”) is coarse, large, and edible. *Cidou* (“prickly bean”) is also edible. *Judou* (“millet bean”) has a seedling which is like that of the azuki bean (*xiaodou*). The flowers are purple. It can be used for flour (*mian*). It is grown in a place called Zhuti within Jianin (in today's Sichuan). Of soybeans (*dadou*), we have the yellow *luodou* (“drop bean”), the *yudou* (“imperial bean,” in which the bean is elongated), the *yangdou* (“poplar bean”), whose leaves are edible, and the *hudou* (“foreign bean”), which comes in green (*qingdou*) and yellow (*huangdou*) varieties.

(4) According to the *Bencao* (probably *Shennong Bencao Jing*; *Benjing*) (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (100 AD), when Zhang Qian (W.-G. Chang Ch'ien) traveled to foreign lands, he brought *hudou* (“foreign bean”) seeds back to China.

Note 3. Zhang went west along what is now called the Silk Road during the Former / Western Han dynasty, was gone for 11 years, and returned to China in 126 BC. The *hudou* is now generally thought not to be a soybean.

The *Qimin Yaoshu* then begins: So now (i.e., Later Wei), we have two kinds of soybeans (*dadou*), black and white, as well as *changshao* (“long tip”) and *niujian* (“cow path”) varieties. There are three kinds of azuki beans (*xiaodou*): The green (*ludou*), the red (*chixiaodou*), and the white (*baixiaodou*) varieties. There are also the yellow Korean bean (*huang gaolidou*), the black Korean bean (*hei*

gaolidou), the *yandou* (“swallow bean”) and the *bidou*; all are varieties of soybeans (*dadou*). Then there are *wandou*, *jiangdou*, and *laodou*; all are varieties of azuki beans (*xiaodou*).

Note 4. This is the earliest document seen (Aug. 2011) that mentions Korea in connection with soybeans.

Note 5. This is the earliest Chinese-language document seen (Jan. 2005) that uses the word *baixiaodou* to refer to white azuki beans.

Spring soybeans (*dadou*): Plant them at the same time as the early grains; the middle of the 2nd lunar month is best. Use 8 *sheng* of seeds per *mou*. The second best planting time is the first third of the 3rd lunar month; use 10 *sheng* per *mou*. The latest you can plant them is the first third of the 4th lunar month; use 12 *sheng* per *mou*. If you meet with late germinating weather, you can plant in the 5th or 6th lunar month, but you must increase the amount of seed used.

The soil should not be overly fertile. After land has been harvested in the previous autumn, it can be planted sparsely. If the soil is too rich, you may get luxuriant growth but fewer pods. Harvest the crop late. The pods do not drop. If you harvest too early, the seeds will not be full. Use a drill to plant, so the seeds will be placed deep in the soil. The seedlings will be sturdy and have deep roots to reach the moisture in the soil. Pierce (?) once, plow once, and hoe several times.

Mow / cut when all the leaves have fallen. When some leaves are left, it is harder to cut the stems. After mowing, quickly plow stubs under the soil. The soybean stubs dry out easily. If you do not plow them under, the soil will not retain moisture.

To produce [soybeans] for animal feed (*jiao*), use a wheat field as a base, and plant 3 *sheng* of seeds per *mou*. Broadcast the seeds and use a plow to form a narrow and shallow channel; level it plane. If the weather is dry, the stems will be coarse and sturdy, and the leaves sparse. If there are too few seeds, the seedlings will not grow tall; if the seeds are placed too deep, the seedlings will not be able to emerge from the soil.

If the soil is too damp, first plow deeply, then broadcast the seeds away from the plowed furrows and level the soil. Do not do this if the soil is not too damp.

In the 9th month, if you see leaves close to the ground turning yellow and about to fall, immediately harvest the crop. Even if the leaves do not turn yellow, they can easily start to rot. If you do not harvest, the wind will quickly strip the leaves, and the rain will rot the stem. The crop will be ruined.

Book 2, “Cultivating cereal grains.” The best way to improve the soil is to plow under green beans (*ludou*, probably *Dolichos* species rather than mung beans or green gram). Azuki beans or sesame seeds (*huma*) are next (Note 6. Sesame seeds are not a legume and do not enrich the soil). It’s best to broadcast these densely in the 5th or 6th month,

then plow them under [as green manure] in the 7th or 8th or eighth month. In the yield of spiked millet planted the next spring should be 10 *sheng* per *mou*. The effect is as good as adding the excreta of silk worms or well-rotted compost. Varieties of crops. The Chinese and English names of 7 cereal crops and the number of varieties of each recorded in the QMYS are given; soybeans are not in this list. Fertilizing the ground: Succession of crops. This table is similar to a previous one but: For soybeans: Most favorable forerunner—Spiked millet. For azuki beans the best forerunner is spiked millet or wheat. The QMYS was the first book to state that using green manure is “the best thing to do.” The best preceding crops for plowing under as green manure are *Dolichos* beans (*ludou*) or azuki beans. The next best crops are hemp, foxtail millet (*su*; *Setaria italica*), or sesame seeds. The least desirable are rapeseed / colza (*wujing*) or soybeans (*dadou*).

Note 7. This is the earliest document seen (Jan. 2008) worldwide that mentions rapeseed.

Harvesting and storing crops. Soybeans: In the 9th month, when the lower leaves become yellow and fall, reap quickly. Different harvest dates are given for azuki beans and sesame seeds.

Chapter 8 (Li 1958, p. 217)—Hemp: Be careful not to plant soybeans (*dadou*) mixed with hemp.

Chapter 10—Barley or wheat: Upland (high) fields are good for cultivating cereal grains or beans. Note 8. This is the earliest document seen (May 2010) that gives basic formulas for soy ingredients such as jiang, soy sauce, etc.

5. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people’s welfare (Continued)]. China. Passage on soy reprinted in C.N. Li 1958 #66, p. 66-67, and #295, p. 216-20. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Wade-Giles reference: *Ch’i Min Yao Shu* (QMYS) by Chia Ssu-hsieh. Chapter 72—*Shi* (unsalted / bland fermented black soybeans, or salted / savory fermented black soybeans). Most of the following is based on the translation of Huang (2000, p. 337-38). The QMYS gives four methods for making *shi*, however one of them is for making *shi* from wheat, which is of little interest or importance compared with the *shi* made from soybeans. Of the three methods based on soybeans, the first and most extensive is for unsalted / bland fermented black soybeans (*danshi*)—as follows: The incubation must be carried out in a shady, warm hut [incubation room] with a very clean floor. For making bland fermented black soybeans, dig a pit about 2-3 feet deep on one side of the room. The hut should have a thatched roof—not a tiled roof. Tightly seal any windows and the door with mud so that no draft, mice, or insects can enter. Cut a small opening [through the door] just big enough for one person to pass through. Cover it tightly with a thick straw mat when not in use. Ideally the incubation room should be kept as warm as your arm pit. The best

time to make bland fermented black soybeans is late spring (4th moon) or early summer (5th moon). Next best is early fall (7th to 8th moon). You can make it at other times but remember that when the weather is too hot or cold it will be difficult to maintain the desired incubation temperature.

Take cleaned, winnowed soybeans (*jing yangbou*). Boil 10 *dan* (1 *dan* = 40 liters) of them with water in a large pot until they feel soft when pressed between the fingers. Drain and cool until the beans reach the right temperature, warm in winter and cold in summer, when touched by your hand. Then arrange them in conical piles on the floor of the incubation room.

Examine the piles twice a day. Put your hand inside any pile. When the inside feels as warm as one's armpit, stir the pile so that the beans on the outside are moved to the outside and vice versa. After 4-5 such stirrings, the pile should be warm both inside and outside and a white coat [mycelium] should have begun to appear. Now press down the tip of the pile each time it is stirred. After 4 more stirrings, the height of the pile should be reduced to 6 inches. A yellow coat [mainly *Aspergillus* spores] should start to appear. Then spread the soybeans to a height of about 3 inches and allow them to incubate undisturbed for 3 days. A rich yellow coat should now cover the beans. Take the molded beans [soybean koji] outside the hut, winnow to remove the loose coat of yellow spores, then soak in water, place in a basket, rinse thoroughly with water, and air dry on a mat.

Dig a pit 2-3 feet deep on one side of the hut. Line it with straw mats and fill it loosely with millet husks. Place beans in pit. Have a worker stamp on them until they are as compact as possible. Cover beans with a mat, then place more husks on top of it. Trample these down also. The fermented beans (*shi*, bland fermented black soybeans) will be ready after about 10 days in summer, twelve days in fall, or 15 days in winter. If the incubation period is too short, the color of the beans will be too light, but if too long, a bitter flavor will develop... After being dried in the sun, the [unsalted] fermented soybeans may be kept for a year without spoiling.

Dr. Huang notes: The method for making *danshi* may well have been developed before the other three. This is normal, because it is used in medicine. That is probably why it is listed first in the QMYS.

Note 1. This is the earliest existing document seen (Jan. 2011) that mentions unsalted / bland fermented black soybeans (*danshi*). The process is characterized by a warm temperature and use of rice straw close to the soybeans—which probably makes this product intermediate between unsalted soybean koji and Japanese natto.

Note 2. This is the earliest document seen (May 2003) which describes a specific process for cleaning soybeans—winnowing. This is also the earliest document seen (Jan. 2005) that uses the word “winnowing” in connection with cleaning soybeans. Typically, freshly harvested (uncooked)

soybeans are winnowed by tossing them into the air to separate the beans from the pods and chaff.

Note 3. The question arises: How can 40 liters of soybeans, which double in size to 80 liters after being boiled in water, fit into a pit 2-3 feet deep that is already filled loosely with millet husks. The answer: (1) The pit must have a large surface area, while still fitting in one side of a hut; (2) The loosely-packed millet husks (good insulation) will compress when the beans are added, then trampled underfoot.

The second method for making shih (salted fermented black soybeans) from soybeans first appeared in the *Shijing* (Food canon (#1)) (+530?)—which see.

The third method is for making bland fermented black soybeans (*danshi*) at home—as follows: You can make any amount. Wash the beans (*dou*) well. Soak for 1 night. The next morning, steam them as you would rice. To make one picul (*dan*), after it is cooked, cover it with fresh rushes / straw, just as if you were making glutinous rice koji (*nuqu*; W.-G. *nü ch'ü*). After 14 days, the beans should be covered with a yellow coat (*huangyi*). Winnow the coat [to remove some of the yellow spores, which could make the product bitter]. Dry the beans then soak in water until soft. Place beans in an earthenware urn. Dig a hole in the ground big enough to hold the urn. Make a wood fire in the hole. Place the urn in the fire. On top of the beans in the urn, put at least 3 inches of mulberry leaves. Cover urn tightly, then seal the mouth with mud (*ni*). After 10 days it should be ripe. Pour out the contents and dry in the sun until half-dry. Then steam and sun-dry it 3 more times. It should now be ready. (Translated by H.T. Huang, PhD, May 2002). Dr. Huang notes: The process for making *shi* involves a two-stage fermentation: (1) Aerobic culture of airborne wild molds on the surface of cooked soybeans; (2) The enzymes from the molds hydrolyze (digest or “break down”) the soybean constituents under aerobic conditions. Partial hydrolysis of the soy proteins create flavor compounds.

Note 4. This is the earliest document seen (May 2010) that gives a recipe for making fermented black soybeans at home.

Huang (2000, p. 285-87) notes that Chapter 71 contains 23 recipes for making vinegar (*zuo* or *cu*; W.-G. *tso* or *ts'u*). One of these (recipe 17) is a flavored vinegar made with azuki beans (*xiaodou*), plus panicum millet and wine.

6. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Ch'i Min Yao Shu*, by Chia Ssu-hsieh. This is the world's earliest encyclopedia of agriculture.

Letter from Dr. H.T. Huang, 1991. Aug. 4. In the inestimable classic of the 6th century A.D., the *Ch'i Min Yao Shu*, which describes the making of every conceivable type

of processed food (even the making of yogurt) that was of importance, tofu is not mentioned at all. This indicates that tofu had not yet gained the stature of one of the “useful arts” for the people’s welfare by the 6th century AD (See also Huang 2000, p. 313-14).

Fukushima (1989, p. 2-3). “The first document in which soybeans appeared as a substitute for meat in *chiang* was the *Ch’i-min Yao-shu* (*Saimin-Yojutsu* in Japanese) by Chia Ssu-hsieh (Ka Shikyo in Japanese), the world’s oldest encyclopedia of agriculture, published in 535 AD in China.” (Note: The above statement is not true; as of Nov. 2002, five Chinese documents, from 166 B.C., mention soybean *jiang* before the *Ch’i-min Yao-shu*.) Two processes for making *shih* (fermented black soybeans) are described in the *Ch’i-min Yao-shu*. One is the process described earlier in the *Shi-ching* by Hsie Feng (which survives only in the *Ch’i-min yao shu*). In the second process, first described in the *Ch’i-min yao-shu*, soybeans are winnowed, cooked, drained, and cooled. They are piled, the temperature is measured, and then they are stirred. The last 3 steps are repeated 3 times until they are spontaneously molded. They are then spread and furrowed to make soybean *koji*. This is winnowed, washed, drained, dried, moistened, piled, fermented, and dried to give unsalted soybean *shih* (p. 8).

Yu (1987, p. 25): Discusses skills of farming, crop rotation, plowing, care of livestock, fish culture, and food processing in the middle and lower reaches of the Yellow River. Note: This is the earliest document seen (Nov. 2002) that discusses fish culture (fish farming, aquaculture); however soybeans were not used as fish feed.

Wang and Fang (1986): In this 6th century book on Chinese technology, the product *chiang-ching* was mentioned. The characters show that the product was related to *chiang* and was probably the origin of *chiang-yu* (soy sauce). But the method of preparing soy sauce was first described in the 16th century *Pen-ts’ao kang-mu* by Li Shih-chen. (Note: For an excellent discussion of the much earlier origins of soy sauce in China, see Huang, 2000, p. 358-74.) Also in this book more than 20 methods of preparing *tsu* (Chinese-style vinegar made from grains such as millet, rice, or sorghum) are discussed. The grain is cooked, mixed with *ch’ü* (*koji*), packed in a sealed container, and allowed to ferment for 3 weeks.

Yokotsuka (1986, p. 198) cites this as the earliest document seen that mentions a liquid soy sauce. He states that the *Chi-Min Yao-Shu* (532-549) discussed *ch’ü* (mold-cultured cereals made from crushed wheat or wheat flour made into balls or cakes, or cooked rice), *Chiang* (made from soybeans or wheat), *Shi* (mold-cultured soybeans with or without salt), and *Shi-tche* (the saltwater extract of *shi*).

7. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people’s welfare (Continued)]. China. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Ch’i Min Yao Shu* (QMYS), by Chia Ssu-hsieh. Francesca Bray (1984) in her superb book on agriculture in China (*Science and civilisation in China. Vol. 6, Biology and biological technology. Part II: Agriculture. Joseph Needham series*) offers many important insights into the QMYS. She cites it as: Essential Techniques for the Peasantry. Northern Wei, c. +535. By Chia Ssu-Hsieh. Textual references are to the 1957 ed. of Shih Sheng-Han. Bray devotes a long section (p. 55-59) to discussing this work and its context in detail. It is the “earliest Chinese agricultural treatise to have survived in its entirety. It is a long and impressive work, logical and systematic in its arrangement, comprehensive and detailed in its treatment, and a model for all subsequent Chinese agronomists.” She translates the introduction. A long work, it is divided into ten books comprising 92 chapters and over 100,000 characters. It quotes from more than 160 other works, sometimes at great length. Our present versions of the *Fan Shengzhi Shu* [The book of Fan Shengzhi (on agriculture)] (10 BC) and the *Simin Yueling* [Monthly ordinances for the four classes of people] (160 AD) are based almost exclusively on passages cited in the *Qimin Yaoshu*. “Almost half of the book consists of quotations, but the main body of the text is from” Jia Sixie’s own hand. “Little is known about the author except that he served as a middle-ranking official; however it is generally assumed that his agricultural experience was based on conditions in the Shantung area.” The work describes in depth “the practical details of running an agricultural estate, cultivating both subsistence and commercial crops and directing a number of household manufactures and culinary preparations.” The book also gives a detailed description of hemp cultivation (Bray, p. 535).

Adzuki beans are also referred to frequently, especially in connection with cultivation of green manures. With the development of printing in China in the early Song dynasty, it was one of the first agricultural works to be printed by imperial order (Bray, p. 53).

Concerning soybeans (Bray, p. 514-15): “The soybean was probably the most important legume grown in China, but it was by no means the only one. ‘Lesser beans’ (*hsiao tou* or *ta*) came, according to the *Ch’i Min Yao Shu*, in three varieties, red, green and white (Fig. 239). The term *hsiao tou* can probably be identified with the adzuki bean, *Phaseolus angularis* (Willd.) Wight, which is native to China and Japan.”

Note: This is the earliest document seen that clearly mentions the azuki bean.

Bray (1981): Northern Chinese agricultural methods and crops, with extended sections on preserving, brewing, exotic plants, etc. With the *Nongshu* perhaps the most fundamental work. This document, which arrived in Japan during the late 700s, was a key link in the transmission from China to Japan of food preparation techniques. It described how to make

fermented black soybeans. Lists varieties of soybeans and how to grow them. It says Chang Chien brought soybeans to China.

8. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Ch'i Min Yao Shu* (QMYS), by Chia Ssu-hsieh. Bo (1982): This is the world's earliest document describing techniques for processing agricultural products. The production methods for soybean *chiang* and *shih* (fermented black soybeans) are described in detail. In these descriptions, the author frequently used the terms "tou-chiang-ch'ing" (literally "soybean *chiang* refined") and "*chiang ch'ing*" (literally "*chiang* refined"), but unfortunately he didn't describe how these products were made. These terms are almost surely related to the term "*ch'ing chiang*" used in the *Ssu Min Yüeh Ling* by Ts'ui Shih of the Later Han. *Shih* was made from soybean koji. Using only soybeans (instead of soybeans and wheat, as for *chiang*) hydrolyzes the protein more efficiently, and was thus well suited for making fermented black soybean sauce (*kuki-jiru*). Thus this book contains about 70 recipes for using fermented black soybean sauce, many more than for soy sauce. Yet the book does not explain how to make fermented black soybean sauce.

The *Ch'i-min yao-shu* quotes from an even earlier non-extant work, the *Shih ching* (*The Classic of Food*; date and authorship unknown), giving the *Shih ching*'s recipe for making "one thousand year bitter soy wine."

Sato (1963, p. 9), in his book titled "Documents on Soy Nuggets, *Chiang*, Miso, and Shoyu," cites this as the third earliest Chinese document seen on the subject. Called the *Seimin Yojutsu* in Japanese, it was translated into Japanese in 1959 by Nishiyama Kakekazu and Kumadai Yukio. It is written entirely in Chinese characters (*Kanbun*).

Shih Sheng-han (1958). The first English-language (partial) translation of this book; revised 2nd ed. in 1962. For details see these two works. The section titled "Fish-pond" (1958 and 1962, p. 72) states: "There is a whole chapter (62) on fish-pond management... But the source and the calculations of the quotation are dubious. Anyhow we can infer from this chapter that fish-pond management was started in China earlier than the 6th century."

9. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. [Chi]

• **Summary:** Continued: This record concerns information on soy sauce, based on the research and writing of H.T. Huang (2000). The section titled "Fermented soy sauce, *jiangyou*" (p. 358-78) contains an excellent, detailed discussion of this subject. In its food processing chapters, the *Qimin Yaoshu* (QMYS) mentions 3 seasoning agents that have been considered the ancestors of soy sauce: *jiangqing* (W.-

G. chiang ch'ing), *shizhi* (W.-G. *shih chih*), and *shiqing* (W.-G. *shih ch'ing*). *Jiangqing* (which is "clarified *jiang*," is *qingjiang* with the two characters in reverse order and probably means the same thing) is used as a condiment in five recipes—in chapters 70, 76, 77, and 87. Much more popular is *shizhi* (aqueous extract of fermented black soybeans / fermented soybeans) which is used in at least 26 recipes—in chapters 76, 77, 80, 82, 87, and 88. Finally there is *shiqing* (clarified fermented black soybeans / fermented soybeans), which is used in 3 recipes—in chapters 76 and 77. Unfortunately the QMYS gives no indication of how *jiangqing* or *shiquing* were prepared, although in the recipe for a fish and vegetable stew this is, luckily for us, a brief statement on how *shizhi* was obtained by boiling fermented black soybeans (*shi*) in water. In Chapter 76 (p. 465) we read:

Shizhi: Cook [fermented black soybeans] in a separate pot of water. Let it boil once. Strain off the fermented black soybeans, and after the soup settles, decant the clear solution. Do not stir the water during cooking, lest you muddy the decoction so that it will not clarify after straining. When cooking *shizhi*, stop the process as soon as the water reaches the light brown color of amber. Do not allow it to become too dark lest the juice be bitter (Huang, p. 359).

In examining the recipes in the QMYS it is easy to get the impression that these 3 types of soy sauce are used interchangeably. Is it possible that they were simply different names for the same product? The answer is no. There are two cases in which both *jiangqing* and *shiquing* are used in the same recipe, and another case in which *shizhi* and *shiquing* are used to cook the same dish. These examples leave no doubt that these are the names of three different types of soy sauce.

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." The seasonings based on *jiang* (fermented soybean paste) are used in 7 recipes: *Jiang* itself in 2, and soy sauce made from *jiang* (*jiangqing*) in 5 recipes. However the seasonings based on fermented black soybeans (*shi*) were used in 48 recipes (far more): Fermented black soybeans in 20 recipes, fermented black soybean sauce named *shizhi* in 26, and fermented black soybean sauce named *shiqing* in 2.

Note: This is the earliest document seen (April 2012) that mentions the soy condiments or seasonings *jiangqing* or *shiqing*.

10. Sun Simo. 655? AD. *Qianjin yaofang* [A thousand golden remedies]. China. Passage on soy reprinted in H.T. Huang 2000. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Ch'ien Chin Yao Fang*, by Sun SSu-Mo. Tang dynasty. Huang (2000, p. 614) gives the date as Tang, between +150 and +659 (p. 614). This work and its supplement have survived and together they form a veritable encyclopedia of the medical and pharmaceutical

arts of Tang dynasty China. In this work, an entire chapter (Chap. 26) is devoted to diet therapy (p. 136). It mentions that dried young soybean sprouts (*dadou huangjuan*) have medicinal properties (p. 296). It also mentions fermented black soybeans (*shi*) (p. 341). Also mentions malt sugar (*yi*) (p. 460).

Bo (1982): In the literature of the T'ang dynasty it is not rare to use soy sauce for medicinal purposes. In the third volume of this work it is said, "If a dog bites a person, apply 2-3 tou-chiang-ch'ing (literally, "soybean chiang refined") compresses a day. The fourth volume of this work states, "For pain in the fingers and toes, warm chiang ch'ing ("chiang refined") and honey and apply as a compress.

Williams (1988): The author was a well-known alchemist who lived 581-682, during the early T'ang dynasty. For a translation see: Nathan Sivin. 1977. *Science & Technology in East Asia*. New York: Science History Publications.

11. Meng Shen. 670 AD. *Shiliao bencao* [Compendium of diet therapy (Materia dietetica)]. China. Passages on soy reprinted in H.T. Huang 2000. [Chi]

• **Summary:** Wade-Giles reference: *Shih Liao Pên Ts'ao*, by Mêng Shên. Tang dynasty.

Huang (2000) notes that this book emphasizes the relationship between nutrition and health, and the medicinal properties of foods. It was the first of the *Bencao* compilations devoted to diet therapy (p. 116, 135-36). It mentions that dried young soybean sprouts (*dadou huangjuan*) have medicinal properties (p. 296). It gives a recipe for cooking fermented black soybeans (*shi*) similar to that from the *Xinxu Bencao* (Newly improved pharmacopoeia) (+650) (p. 341). It also discusses fermented black soybean sauce (*shizhi*; W.-G. *shih chih*), noting that an excellent product comes from Shan prefecture and describing briefly how it is made: The fermented black soybean sauce (*shizhi*) from Shan prefecture is better than ordinary fermented black soybeans (*shi*). To make it, allow cooked soybeans to ferment to the yellow mold stage of soybean koji. For each *tou* (pint) [of soybean koji], add 4 pints of salt and 4 ounces of pepper. [Note: Some water was probably also added]. It will be half done after 3 days in spring, two days in summer, and 5 days in winter. Add 5 ounces of raw ginger to give it a clean, delicate flavor (p. 360-61). This work also mentions mung beans (p. 298) and malt sugar (*yitang*, p. 460).

Hagerty (1917, p. 4) states: "The Shih liao pên ts'ao (Materia Medica, by Mêng Shen of the T'ang Dynasty, second half of the 7th century), says: 'The Ta tou [soybean] has a cold effect upon the human system. When mixed with rice and pounded into a powder, it may be used as a remedy for reducing all kinds of inflammatory swellings. It is used as a remedy for swellings or inflammation in the region of the reproductive organs of both male and female. This remedy

is prepared in the form of a poultice made by wrapping the bean paste in cotton cloth and applying to the diseased part. It is also a specific for poison from eating certain herbs. According to this work, if these beans are boiled into a liquid form, and the mixture taken, it will eradicate all poison from the system and cure gastric fever, paralysis, pains, difficulty in passage of urine and other bladder troubles. It is also good for improper circulation of the blood, improper functioning of the heart, liver, kidneys, stomach, and bowels, and also a remedy for chills. When mixed together with the ashes of burned mulberry twigs and water, and boiled, it is used as a remedy for dropsy and swelling of the bowels. The yellow bean is a specific for paralysis, pains in thighs, improper functioning of the heart, liver, kidneys, stomach, and bowels, and constipation. It is also used to increase the lung power (?), make the body plump, and beautify the complexion. These beans are also cooked until they are of an oily consistency, mixed with hog's fat, and taken in the form of pills in order to fatten and increase the strength of the body. This may also be used as a remedy to cure hoarseness.

"To prepare a remedy, take one "Shêng" (Chinese pint) of fresh Ta tou beans, forty-nine green bamboo sprouts about four inches (Chinese) long, and one "fen" (one-tenth of an inch) wide. Boil thoroughly in water, and take two doses, one during the day and the other at night—and also after each meal. Another method of utilizing these beans consists of washing them thoroughly, and grinding into a meal and combining with chicken's eggs. This is eaten as a food and will cause man to live a long life. When first eaten they will cause the body to become heavy, but after eating constantly for one year, they will cause the body to become light and also increase the power of the male reproductive organs."

Hagerty continues his translation on p. 78 concerning fermented black soybeans (See also Bretschneider, *Botanicon Sinicum* 1:45): "The Shen-chou-fu, Liquid bean relish, is very much better than the ordinary bean relish and gives the following directions for its manufacture: Take some Ta tou beans [soybeans] and steam until yellow, to each *tou* or peck, add four *sheng* or pints of salt, four *liang* or ounces of pepper. If made in the spring, let it stand for three days; if made in the summer let it stand for two days; if made in the winter let it stand five days, when it is half ripe. Now add five *liang* or ounces of fresh ginger and let it stand in order to clarify. The best method is to bury the vessel containing this mass in horse manure. When Ta tou [soybeans] cannot be obtained, the good bean relish can be used as a substitute."

Note: This is the earliest document seen (Nov. 2005) that mentions cotton cloth.

12. Wang Tao. 752 AD. *Waitai miyao* [Secret formulary from the outer terrace]. China. Passage on soy reprinted in H.T. Huang 2000, p. 371. [Chi]

• **Summary:** Wade-Giles reference: *Wai T'ai Mi Yao*, by Wang T'ao. Tang dynasty. Huang (2000, p. 371) also

translates the title as “Important prescriptions from a distant post” and notes that this book advises: For ulcers, apply soy sauce (*qingjiang*; W.-G. *ch’ing chiang*) and sulphur powder.

Bo (1982): This work advises, “Use *chiang ch’ing* and a special powder to cure gout.” From this we see that during the T’ang dynasty the word *chiang ch’ing* (soy sauce) was still being used.

Needham & Lu (1962, p. 460-61) note that plant biochemists have long realized that saponins are valuable for use as detergents because “they have no deleterious effects upon the most delicate textile fabrics.” Although their detergent power may be weaker than that of modern detergents, they are better for use on silks than modern fat-based soaps. In the *Waitai Miyao*, a interesting chapter titled “Bath beans” (*zaodou*; W.-G. *tsao tou*) is entirely devoted to washing and cosmetic preparations for personal hygiene. The author begins by quoting from the *Qianjin Yifang* (Supplement to *A Thousand Golden Remedies*, by Sun Simo) (about +680) about the use of beans in secret formulas for washing and bathing. Wang Tao then gives about 220 recipes involving many kinds of saponin detergent. Many of these are medicated detergents, which have drugs and perfumes added. There are two especially for face washing, five for hair washing, and eight for bath soap. Among those is a powder, *doumo*, prepared from the soybean “in which saponins must certainly have been contained.”

13. Su Sung [or Kou Tsung-shih]. 1061. *Tu jing bencao* [Illustrated pharmacopoeia, or Pharmaceutical natural history]. China. [Chi]*

• **Summary:** Wade Giles reference: *T’u Ching Pen-Tsao*. In “Translations Concerning the Pai Ta Tou (Soy bean) from the Chih Wu Ming Shih T’u K’ao,” Hagerty (1917, p. 6-8) notes that the *T’u ching* (*T’u ching pên ts’ao*), states: “The Ta tou huang chüan (gives Chinese characters = Yellow soybean + roll or coil), or Bean sprouts, and Shêng ta tou, or Fresh [Raw] soy beans, are grown in the marshy land in the vicinity of Tai-shan mountain. At present they are grown everywhere. The Huang chüan, or Bean sprouts, are grown from the Shêng tou (Fresh bean) and also are called Nieh [character; fresh sprouts (see p. 35)]. When these sprouts are grown they should be dried in the sun and preserved in this manner. The name used by the Fang Shu, or Medical Prescription books, is Huang chüan p’i [characters]. At present the sprouts are generally given to women after childbirth to purify their milk and increase their strength.

“The Ta tou, or Soy bean, has two varieties, white and black. These black beans are used medicinally, but the white variety is not. The very small variety is called the Hsiung tou [characters] (Male bean), and is considered to have excellent medicinal virtues, and may be made a constant article of diet without any bad effects upon the system. It is also employed medicinally in many ways. The fluid made from this bean is very cooling to the human system, and is good for the cure

of cinnibar [cinnabar, mercuric sulfide, HgS] poisoning and all forms of poisoning from eating herbs, etc. When made into Fu [character], or Bean curd, it has a cold effect upon the human system and excites the temper. If it is fried and eaten, it has a heating effect. If they are soaked in wine they make a good remedy for the cure of colds. When made into Shih [character], or Bean relish [fermented black soybeans], it is very cooling to the system. The Huang chüan, or Bean sprouts, and Chiang [character; Chinese miso], or Soy sauce, both have a uniform or even effect upon the system.

“If bean food is eaten by oxen, it has a warm effect upon their systems, but if eaten by horses, the effect upon them is cooling. Although one article of food, it produces different effects. Generally speaking, it is also suitable to use medicinally. As a cure for poison from eating Wu t’ou (Aconite), it is better than the ‘Hsien fang,’ or Fairies’ prescription. If the Huang, or yellow variety [of soy bean], is ground into a powder and eaten, it will satisfy the hunger during the time of famine. If these bean foods are eaten too freely during a short period, the body will become heavy, but if eaten for a long period you will feel as usual.

“The ancient prescription books had a purple soup which was a good remedy for purifying the blood, curing colds, relieving general oppressiveness of the body, etc. This remedy will have good effect if taken two days after childbirth. Another prescription is made as follows: Take five ‘Shêng,’ or pints, of selected Wu tou [characters], or Black [soy] beans, wash clean and soak in one and one-half ‘tou,’ or peck measures, of wine. Fry the beans and wait until the smoke is gone and dip the whole in wine. When the wine has turned into a red-purplish color then remove the beans. The measure of the dose which may be taken can be regulated according to your needs. The ordinary dose is three ‘chan,’ or cups, during the day and night.

“N.B.—Balance (about six rows of characters) of Fu fang, or Medical Prescriptions, is omitted.”

Joseph Needham. 1986. *Science & Civilisation in China*. Vol. 6, Part 1, p. 281. The “emperor Jen Tsung, ordained in +1057 another pandectal treatise, entrusting its preparation” to four highly qualified men, including “the outstanding scientific thinker and statesman Su Sung... A new procedure was now adopted, an imperial rescript being sent to all the prefectures and *hsien* cities of the empire instructing governors and magistrates to have drawings made of the most important drug plants of their regions. In due course, more than a thousand of these reached the capital.” This measure was intended to improve the drawings of the previous century and restore the lost iconography of the Thang [T’ang] dynasty. “But the upshot was two treatises rather than one.” The first compilation by Chang Yü-Hsi was published in +1060. “Su Sung in his turn brought out in +1061 the *Pên Ts’ao T’u Ching* (Illustrated Pharmacopoeia, or Pharmaceutical Natural History), not all pictures but containing much text different from Chang’s, as we know

from the later pandects, which always quote them separately. Both these works were greatly appreciated—and not in China only.” Footnote e: The title of this work “was often afterwards quoted inverted as *Thu Ching Pên Ts’ao*, even by high authorities, but wrongly according to evidence from the Sung bibliographies.”

Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1996. Sept. 29. “The earliest document with an illustration of the soybean is probably the illustrated *Hsin Hsiu Pên Ts’ao* (New, Improved Pharmacopoeia), +659. Illustrations to this work are now lost, but some are preserved in the *T’u Ching Pên Ts’ao* of +1061 and later in the *Ch’ung Hsiu Cheng-Ho Ching-Shih Cheng-Lei Pei-Yung Pên Ts’ao*, generally known as *Cheng Lei Pên Ts’ao* (CLPT), +1249 (final version), which remains available today. The entry on soybean (*Dadou*) in the CLPT includes a picture of the plant. A copy is attached.”

Huang (2000, p. 296-97). This work “states that the ‘white sprouts from the mung bean, *lūdou*, are considered a delicacy among vegetables”” (Footnote: C.N. Li 1958, p. 272), suggesting that they were superior to soybean sprouts.

14. Tang Shenwei. comp. 1082. Zhenglei bencao [Reorganized pharmacopoeia]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-221. [Chi]

• **Summary:** Wade-Giles reference: *Chêng Lei Pên Ts’ao*, compiled by T’ang Shên-Wei. Song dynasty. Needham (1986, p. 561) says that the full title of this work (in W.-G.) is *Ching-Shih Chêng Lei Pei-Chi Pên Ts’ao*. This important work discusses the medicinal properties of foods. Chapter 25 states that the soybean (*dadou*) can be used to make sprouts. When these sprouts are dried, they are called “yellow curls” (*huangjuan*). You can also use the [undried] sprouts as food.

Chapter 25 also contains a long passage from the *Bencao Tujing* (Illustrated pharmacopoeia) (+1061) on dried soybean sprouts (“yellow curls”), fresh soybean sprouts, and mature dry soybeans (which see).

Chapter 25 states that fermented black soybean sauce (*shizhi*; W.-G. *shih chih*) from Shan or Shanzhou (same as today’s Shaanxi province) can be kept for years without deterioration. Note 1. This passage suggests that this type of *shizhi* was a fermented product which would keep as long as today’s soy sauce. If this is true, then *shizhi* would be a precursor of the soy sauce (*jiangyou*) that originated in China in the late Song dynasty (Huang 2000, p. 361).

The next passage appears in a much later book titled *Sannongji*, by Zhang Zongfa (W.-G. *San Nung Chi*, by Chang Tsung-Fa) (Records of the three departments of agriculture) (+1760). Young soybean plants (*doumiao*) grow to a height of 1-2 feet (*chi*). The leaves are round with a pointed tip; their color is green (*qing*) and they have hairs (*mao*) on the surface. One stem divides into branches. In the fall, white flowers appear; they are white or purple, and grouped together. The pods (*jia*) are more than an inch (*cun*)

long, and they typically contain 3-4 seeds, or at least 1-2 seeds. The seeds fill the pods. The pods grow separately from the leaves. The varieties are early, middle, and late. The pods are either large or small, round or flat. The colors of the seeds are yellow, white, red (*chi*), black, spotted / speckled (*ban*), or dark brown. You can [use the seeds to] make jiang or fermented black soybeans (*shi*), tofu (*fu*) or sprouts (*ya*). You can press them to give yield oil (*you*). You can roast / fry (*chao*) them to give nuts (*guo*; soynuts). You can make candy from grain sweetener (*tangmo*). It has many uses. The pods are called *jia*. The leaves are called *huo*. The stems are called *qi*. The seeds are called *dou*. (Translated by H.T. Huang, PhD, Jan. 2003).

Note 3. This is the earliest document seen (Feb. 2003) that mentions red (*chi*) soybeans.

Also mentions malt sugar (*yitang*) and gluten (Chap. 25). (See Huang 2000, p. 296, 460 {malt sugar}, 498 {gluten}, 611). This work was enlarged in +1116 and retitled *Chêng-Ho Hsin-Hsiu Ching-Shih Chêng-Lei Pei Yung* (New revision of the classified and consolidated armamentarium pharmacopoeia of the Chêng-Ho reign period). It was then re-edited +1204 in Jurchen Chin, and definitively republished +1249 in Yuan; later reprinted many times. See also Hummel (1941).

15. Tang Shenwei. comp. 1082. Jingshi zhenglei beiji bencao [The classified and consolidated armamentarium of pharmaceutical natural history]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-221. [Chi]

• **Summary:** Wade-Giles reference: *Ching-Shih Chêng Lei Pei-Chi Pên Ts’ao*, compiled by T’ang Shên-Wei. Song dynasty. See *Zhenglei Bencao* (1082).

16. Luo Yuan. 1174. Erya yi [Wings for the *Literary Expositor* (Ancient Chinese dictionary of classical terms)]. China. Passage on soy reprinted in C.N. Li 1958 #106, p. 81. [Chi]

• **Summary:** Wade-Giles reference: *Erh Ya I*, by Lo Yüan. This is a relatively important work. The section titled “Soybeans” (*shu*) begins by stating that *shu* is the same as *dou* (soybeans). There are many varieties. This book then cites and repeats the information about soybeans in many earlier Chinese-language documents that discuss or mention *shu* including: (1) *Guangya* (Ancient dictionary: Enlargement of the *Erh Ya*) (+230). (2) *Guangzhi* (Extensive records of remarkable things) (+390). (3) *Lüshi chunqiu* (Master Lü’s spring and autumn annals) (-0239). (4) *Shijing* (Book of odes) (-1000).

Then this book continues: As Confucius said, to eat soybean congee (*chuoshu*, literally “suck soybeans”) and drink water (*yinshui*) is a joy [which makes one content]. This is called “filial piety” [to be satisfied with what you have]. It does not depend on the abundance of your material possessions.

According to the *Hanshu* [also called *Qian Hanshu*] (History of the Former Han dynasty) (+76), this year the people are hungry so they have to be satisfied with eating half of their food as soybeans (*shu*) [which were not highly regarded]. They say the army is lacking in grain, and so they mix soybeans (*shu*) with other grains to use as rations—which means even the poor are not lacking in righteousness. So the use of soybeans is extensive.

Then there are several characters that mean various kinds of pastry and cakes. In making pastry and cakes, today they like to use rice. Certain names are given to those made by steaming with millet and those made with soybeans (*dadou*); they complement each other. They also use broken pieces of soybeans (*douxiao*). They also use soybeans to make fermented black soybeans (*shi*). According to the *Chuci* (W.-G. *Ch'u Tz'u*) (Poems of the state of Ch'u) (-0250), the characters *daku* meaning “extremely bitter” or “great bitterness” appear. It has been said that *daku* means “fermented black soybeans” (*shi*) [probably by Wang Yi, 2nd century A.D.]. And it has been said [in the *Qimin Yaoshu*] that you can take the “juice” from fermented black soybeans to obtain fermented black soybean extract (*shizhi*; literally “juice from *shi*”). And you can mix and blend this extract with different flavors such salty taste, vinegar, pepper, ginger, malt sweetener, and honey. In the *Yangshenglun* [Discourse on nurturing life...] (+223), Xi Kang says that eating soybeans (*dou*) makes the stomach feel heavy. (Translated by H.T. Huang, PhD, Aug. 2002).

Dr. Huang notes: Confucius was a very frugal man who found joy in simple things. Compare the attitude of this book with that of the *Xunzi* (Book of Master Xun) (-240) which depicts soybean congee as the ultimate hardship food. For more on fermented black soybean extract, see Huang (2000, p. 359-60).

17. Lin Hong. 1200? *Shanjia qinggong* [Basic needs for rustic living]. China. Passage on soy reprinted in C.N. Li 1958 #303, p. 221-22. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Shan Chia Ch'ing Kung*, by Lin Hung. Southern Song dynasty. Japanese reference: *Sanka Seikyo* / *Sankaseikyo*, by Rinko. An important work. The section titled “Swanlike yellow bean sprouts” states (see Huang 2000, p. 296): Several days before the 15th day of the 7th moon, people soak black soybeans (*heidou*) in water then allow them to sprout as follows: Spread grain chaff on a tray, top the layer with sand, plant the beans in the medium, then press surface with a wooden board. When beans are sprouted [remove board and] cover tray with an [inverted] pail. Remove pail each morning so that sprouts are exposed briefly to the sun. This will enable sprouts to grow evenly and be protected from sun and wind. On the 15th day, display tray in front of the ancestral tablet. After three days, remove tray and wash sprouts clean. Grill sprouts with oil, salt, vinegar and spices to give a savory dish. They are

especially good when rolled in a sesame pancake. Because the sprouts are light yellow, and are shaped like the neck of a swan [goose], they are called “swanlike yellow bean sprouts” (*Ehuang dousheng*). Huang (2000, p. 296) notes that this is the “earliest documentation we have on the preparation and use of soybean sprouts as a food” is in this book. A footnote (Huang, p. 296) states: “The 15th day of the 7th month is the Summer Festival *Zhongyuan* when offerings are made to the ancestral spirits. A long soybean sprout with a yellow tip may resemble the neck of a swan with a yellow beak, hence the name Swan-like bean sprout. Except for the step of exposing the germinating beans to sunlight, this recipe is basically similar to those given in later works, in which the beans are always kept in the dark to prevent the generation of chlorophyll and the emergence of a bitter taste.”

Note 1. This is the earliest document seen (Feb. 2007) that uses the term *heidou* to refer to black soybeans.

Huang (2000, p. 301) states that this work describes two dishes containing tofu: One, named Snow and Red Cloud Soup, is prepared by cooking tofu with hibiscus flowers; the other, Tofu à la *Su Dongpo* [named after the great Song dynasty poet (W.-G. Su Tung-P'o), who lived 1036-1101] is made from yew nuts, scallions, oil and soy sauce.

Huang (2000, p. 354) says that this work contains at least nine recipes in which *jiang* is used, including the celebrated Tofu à la *Su Dongpo* mentioned above.

Huang (2000, p. 358) notes that the earliest references to the term *jiangyou* [soy sauce; the same characters used to write the Japanese word *shoyu*] occur in two works of the late Song dynasty. This work (which may be the first of the two) gives four recipes in which *jiangyou* is used to flavor various vegetables and seafood. A footnote summarizes the recipes, with page numbers from the 1985 modern Chinese version: Soy sauce, ginger threads, and a little vinegar are used as a dressing for lightly cooked young chives (p. 34). A stir fry of spring bamboo shoots, bracken leaves and fish or shrimp is seasoned with soy sauce, sesame oil, salt and pepper (p. 47). Soy sauce is used with sesame oil, pepper and salt to flavour young bamboo shoots, mushrooms and Chinese wolfberry seeds (p. 66). Soy sauce and vinegar are used to season blanched shoots of the daylily [day lily; genus *Hemerocallis*].

Huang continues (p. 358): Neither work tells us how the *jiangyou* was prepared. This does not necessarily mean that soy sauce first originated during the Song. Rather, it means rather that by the time of the Song, *jiangyou* had become the accepted name for the liquid seasoning derived from *shi* or *jiang*. Most scholars agree that soy sauce is almost as old as soy *jiang*, but opinions differ as to what it was called before it became known as *jiangyou* during the Song. A footnote (p. 358) cites three Chinese-language works from the 1980s that discuss this issue.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing

dynasties.” Jiang itself is used in 9 recipes, soy sauce called *jiangyou* in 3 recipes, and soy sauce called *jiangzhi* (W.-G. *chiang chih*) in 1 recipe. Note 2. This is the earliest Chinese-language document seen (April 2012) that uses the word *jiangyou* (one of two documents) or the word *jiangzhi* to refer to soy sauce.

It is surprising that the sauce made from *jiang* should have been called *jiangyou* at all. Throughout the history of the Chinese language *you* has always meant the oily (or greasy), water insoluble substance derived from animal, vegetable, or mineral sources, for example, *zhuyou* (lard), *niuyou* (butter), *chaiyou* (rapeseed oil), *xiangyou* (sesame oil), *tongyou* (tung oil), *shiyu* (petroleum) etc. *Jiangyou* (or *shiyu*) is the one, notable exception. It is an aqueous solution (or suspension) of a variety of substances and by no stretch of the imagination can it be construed as a *yu* (oil). Nevertheless, the term *jiangyou* (soy sauce) gained acceptance in the Song dynasty and is now firmly ensconced in the language, perhaps as an indication of its very special role in the daily life of the Chinese. Thus, we have a surprising situation in which an English translation, ‘soy sauce’ (sauce prepared from the soybean) is a more rational name for the product than its Chinese original, *jiangyou* (oil derived from *jiang*) (p. 358).

Note 3. This is the earliest document seen (Aug. 2007) that mentions sesame oil, which it calls *xiangyou*.

Question: If soy sauce were made from whole soybeans (which contain about 16-20% oil), why wouldn’t that oil rise to the top of the soy sauce, whence it would have to be skimmed off before the soy sauce could be used? Dr. Huang answers (Oct. 2002): There should have been a lot of oil on top of the soy sauce. However in the early Chinese literature, some of which goes into great detail about the process, there is no mention of any oil atop the soy sauce. In the old process, which used mixed cultures of microorganisms, I suspect much of the oil is simply hydrolyzed by lipase enzymes. The oil may have started to appear in modern times when they began to use pure cultures.

Fukushima (1989, p. 4): “The first appearance of the name of *chiang-yu* was in *Shan-chia Ch’ing-kung* (*Sanya-Seikyo* in Japanese) by Lin Hung (*Rin Ko* in Japanese) in the Sung dynasty (960-1127 AD).”

Bo (1982): It was recently discovered that the term “*chiang-yu*,” written with the same characters as the Japanese term “*shoyu*,” and both meaning soy sauce, was used for the first time in China (or the world) in this work, written during the Sung dynasty. *Shoyu* was used either in recipes that didn’t contain meat, or in side dishes. It was an important seasoning to be sprinkled on foods.

18. Wushi zhongkuilu [Madam Wu’s recipe book]. 1200? China. Passage on soy reprinted in H.T. Huang 2000, p. 358. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Wu Shih Chung Khuei*

Lu. Also known as *Chung Khuei Lu*. Author unknown; reputed to be Madam Wu. Southern Song dynasty. Huang (2000, p. 358) notes that the earliest references to the term *jiangyou* [soy sauce] occur in two works of the late Song dynasty. This work describes the use of *jiangyou* in cooking meat, crab, and vegetables. A footnote summarizes the recipes, with page numbers from the 1987 modern Chinese version: Soy sauce is used to marinate sliced raw meat before stir-frying (p. 8). Crab is cooked in wine, soy sauce, vinegar, wine fermentation lees and sesame oil (p. 10). Soy sauce, sesame oil, vinegar and pepper are mixed as a dressing for various vegetables (p. 21).

A full-page table (Huang 2000, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on *jiang* (fermented soybean paste) are used in this book; none are based on soy nuggets (*shi*). *Jiang* itself is used in 5 recipes, and soy sauce made from *jiang* (*jiangqing*) in 3 recipes.

Note: This is the earliest Chinese-language document seen (April 2012) that uses the word *jiangyou* to refer to soy sauce (one of two documents).

19. Buddhist monk Kakushin returns to Japan during the Sung dynasty from China having learned how to make Kinzanji miso (Early event). 1228.

• **Summary:** In *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 219-20) we read: “The origins of modern shoyu can be traced more clearly to the mid 1200s when the Japanese priest Kakushin [1207-1298] returned from China, having learned there the technique for preparing Kinzanji miso. Establishing himself at Kokoku-ji temple near the town of Yuasa (in today’s Wakayama prefecture, just south of Osaka), he began to teach the local people both Buddhist meditation and the method for preparing his miso specialty. According to non-documented oral tradition, he soon discovered that the liquid which settled to the bottom of the miso kegs made an excellent seasoning, so he decided to alter the process slightly by increasing the proportion of water in the basic mixture. After the regular fermentation period, the excess liquid was ladled off and briefly heated to stop fermentation... Kakushin’s creation, too, came to be known as *tamari*, deriving its name from the verb *tamaru*, meaning ‘to accumulate,’ as ‘water accumulates into ponds,’ and by 1260 it was being produced for home consumption in the nearby towns of Yuasa and Hiromachi... By 1290, the first Yuasa tamari was said to have been sold commercially, and soon even poets began to sing the praises of this new delicacy, calling it *murasaki* or ‘deep purple,’...”

In “Chronology of Soybeans,” by Akio Saito (1985. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-14—in Japanese) we read: 1228—The Buddhist monk Kakushin returned from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso, he discovers that the liquid which

gathers on the bottom of the vats can be used as a tasty seasoning. This tamari is considered the first soy sauce in Japan. Kinzansi miso is a type of *namémiso* (Finger Lickin' Miso) made from roasted soybeans and barley koji. To these are added eggplant, white melon (*shiro uri*), etc., and the mixture is fermented.

20. Wu Zimu. 1275. *Mengliang lu* [Dreams of the former capital]. China. Passage on soy reprinted in C.N. Li 1958 #121, p. 86. [Chi]

• **Summary:** Wade-Giles reference: *Mêng Liang Lu*, by Wu Tzu-Mu. This important work is a description of Hangzhou, the capital, towards the end of the Southern Song dynasty. The “Different bureaus” section states that they have fields of rice, wheat, and soybeans (*dou*) used [perhaps as forage] mainly to feed horses belonging to the various government agencies.

The “Street vendors on mats” section describes foods they are selling in Hangzhou—capital of the Southern Song dynasty, including bean-flavored water (*douershui*) and sweet soybean soup (*gandoutang*), honeyed jujubes, fruits, and cooked meats.

The “Market that sells things at dawn” section states that in the summer they sell various things including young soybean congee (*douzizhou*). Note 1. Young soybeans might refer to green vegetable soybeans.

The “Miscellaneous products” section states that children are selling different kinds of foods, including two unknown varieties of soybeans (*qidou* and *fadou*, “law + bean”), brownish-green soybeans (*geqingdou*), salted young soybeans (*yandouer*, maybe green vegetable soybeans), and sugared yellow young soybeans (*douer huangtang*), and cooked soybeans ground to make a cake (*doutuan*).

The section on “Noodle shops” says that these shops sell different kinds of soups and dishes, including pan-fried tofu (*doufu*), fried fish, cooked vegetables, fried eggplant. These are shops where the common people get an inexpensive meal.

The section on “Produce” mentions grains but concentrates on beans, starting with soybeans of different colors: black (*doudahei*), purple (*dazi*), white (*dabai*), yellow (*dahuang*), and green (*daqing*). Also mentions various non-soy beans including white (flat) beans, black (flat) beans, white azuki beans (*baixiao*), red azuki beans (*chixiao*), mung beans (*ludou*), and many others. (Translated by H.T. Huang, PhD, Sept. 2002). Dr. Huang adds: The word “former” in the title indicates that author apparently moved away from Southern Song territory, perhaps northward into that controlled by the Yuan (Mongol) dynasty, which began in 1260. Note 2. This is the earliest document seen (Sept. 2004) that uses the term *doudahei* (“bean large black”) to refer to black soybeans, or the term *dabai* (“large white”) to refer to white soybeans.

Huang (2000): In Lin An (present-day Hangzhou, capital

of the Southern Song dynasty), “tofu soup and grilled tofu [pinyin: *jian doufu*; W.-G.: *chien toufu*] were sold in a wine shop, and a food stall specializing in vegetarian stews also sold grilled tofu” (p. 301). Fermented black soybeans (*shi*) are mentioned (p. 341). A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” In this book, *jiang* (fermented soybean paste) is used in two recipes and fermented black soybean sauce (*shizhi*) is used in one recipe.

This book also “states that ‘things that people cannot do without every day are firewood, rice, oil, salt, soybean paste (*jiang*), vinegar, and tea.’ It is clear that by the time of the Song, edible oil had advanced to the position as one of the proverbial ‘seven necessities’ of life” (Huang p. 436). Vegetable “oil pressing establishments were seen in the southern capital of Hangzhou” (p. 441). Northerners loved to use hemp oil for frying food. Wheat gluten (*fu*) was widely served during the Southern Song; names of four dishes served in a pasta restaurant are given (p. 500).

Wilkinson (2000, p. 854) cites this as *Record of the splendors of the capital city*, by Wu Zimu (no date given). These are reminiscences of the Southern Song capital of Lin’an (Hangzhou) modeled after *Menghualu*.

Talk with H.T. Huang. 1995. Dec. 28. The *chiang* mentioned by this work would definitely have been soybean *chiang*; that is what the word meant, starting a century or two before the beginning of the Christian era.

Letter from H.T. Huang. 1994 April 12, followed by talk of 1995 Dec. 28. The “seven necessities” of life are first mentioned in this book, in chapter 16, p. 136 in the 1982 edition. They are: firewood, rice, oil, salt, *chiang*, vinegar, and tea.” Yet according to another respected source, the original version of the book mentioned eight necessities, the eighth being wine, which was widely used both for drinking and as a condiment in cooking. Today, however, all the modern editions of this book include only seven necessities, omitting wine. Later the list was standardized seven (see Chai Hao 1771), and the term “seven necessities of life” became popular in China during the Yuan dynasty (1279-1368). In the Yuan dynasty there were several famous dramas; this period saw the start of Chinese dramatic literature. The words were put together in rhymes of seven characters, and at least one of these mentioned the “seven necessities.” They couldn’t accommodate eight necessities in the rhyme, so since the Yuan it has always been standardized at seven.

Letter from H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1993. June 5. This book (1982 edition, p. 136) lists *fu* (gluten) with lamb casserole, dragon (shrimp) *fu*, parched *fu* in five flavors, and grilled *fu*. At this time, *fu* (gluten), used as a synonym for *mien chin*, seems to be widespread in the Southern Sung, China.

Note 3. This work was re-issued in 1982 by Commerce Publishers, Beijing. It is part of a series titled “Culinary

Classics of Ancient China.”

Note 4. This is the earliest document seen (Feb. 2010) that mentions grilled tofu. It is also the earliest Chinese-language document seen (Nov. 2009) that mentions Chinese-style grilled tofu, which it calls *jian doufu*.

21. Tamari-style shoyu is sold commercially from Yuasa in the Kishu area of Japan (in today's Wakayama prefecture) (Early event). 1290.

• **Summary:** *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 219-20) states that when the Japanese priest Kakushin returned from China [in 1228], he established himself at Kokoku-ji temple, near the town of Yuasa. By 1260 tamari “was being produced for home consumption in the nearby towns of Yuasa and Hiromachi... By 1290, the first Yuasa tamari was said to have been sold commercially, and soon even poets began to sing the praises of this new delicacy, calling it *murasaki* or ‘deep purple,’ a synonym for the finest shoyu, used to this day.” A nine-line poem about tamari follows.

In “Chronology of Soybeans,” by Akio Saito (1985. *Daizu Geppo* (Soybean Monthly News). Jan. p. 12-14—in Japanese) we read: 1228—The Buddhist monk Kakushin returns to Japan from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso in Japan, he discovers that the liquid which gathers on the bottom of the vats can be used as a tasty seasoning. This tamari is considered the first soy sauce in Japan...

1288-1292—Tamari-style shoyu is sold from Yuasa in the Kishu area (in today's Wakayama prefecture).

22. Saito, Akio. 1292. [Chronology of soybeans, 122 B.C. to A.D. 1292] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (Soybean Monthly News). Jan. p. 12-14. [Jap; eng+] • **Summary:** 122 B.C.—It is said that Lord Liu An of Huainan (*Wainan O Ryuan*) invented tofu. Therefore is sometimes called “Wainan.”

300 A.D.—By this time in Japan people are using fermented foods such as kuki, sake, vinegar, sushi, and hishio made from herbs (*kusa-bishio*) and grains (*koku-bishio*). Kuki is a bean-based product related to miso, natto, or tamari.

630 A.D.—Igunami no Otasuki is sent as a student from Japan to T'ang dynasty China (*Kentoshi*). It is thought that foods like tofu were brought back to Japan by such student monks when they returned [but there are no records of this].

701 A.D.—The Taiho Law Codes (*Taiho Ritsuryo*) are established, and they call for the establishment of the Hishio Tsukasa (Bureau for the Regulation of Production, Trade, and Taxation of Hishio and Miso), located in the Imperial Palace as an annex to the emperor's kitchen (*daizenshoku*). Soybeans were definitely used to make these fermented foods and seasonings such as hishio (like Chinese

chiang), fermented black soybeans (*shi, kuki*), and misho (a forerunner of miso; the term “miso” had not yet been coined).

741 A.D.—Two new Buddhist temples are added to each feudal domain (*kuni*): Kokubunji is for monks and Kokubunniji is for nuns. It is said that from this time, fermented black soybeans (*tera nattô*, or *shiokara nattô*) spread throughout Japan. They are made from soybean koji, which is soaked in salted water and dried.

794—The capital of Japan is relocated to Kyoto from Nara. The Heian period (794-857) begins.

794-1190—Salted pickles (*shio-zuke*), hishio pickles (*hishio-zuke*), miso pickles (*miso-zuke*), and sake lees pickles (*kasu-zuke*) are eaten. The pickles were made by various methods. But only during and after the Muromachi period (1338-1573) were the various pickles made often.

802—Sakanoue no Tamuramaro (758-811) recommends that farmers in Tanzawa grow soybeans as an emergency food.

840—Each feudal domain (*kuni*) is encouraged to plant millet, barnyard millet, barley, wheat, soybeans, azuki beans, and sesame seeds.

901—The Chinese character *so* in the present word *miso* appears for the first time in the *Sandai Jitsuroku*.

927—The *Engishiki* is completed by Fujiwara no Tokihira (871-811) and others. In this book it is written: “In the feudal domain of Omi 60 koku of soybeans [1 koku = 47.6 gallons or 180 liters], in the domain of Tanba 30 koku, in the domain of Harima 20 koku, in the domain of Misa 10 koku, and in the domain of Iyo 10 koku are recommended (*susumu*). It seems that the soybean was an important crop in those days. Soybeans, rice, wheat, sake, and salt are given as the raw materials for making misho (a product resembling miso). The places famous for making misho are Omi, Hida, Yamato, etc. There are 27 misho shops in the Nishi no Kyo area of Kyoto. It is stated in the *Engishiki* that in order to make 1.5 koku of hishio you need 3 koku of soybeans, 1.5 koku of salt, 0.15 koku each of rice, wheat, and sake, and 0.043 koku of non-glutinous rice (*uruchi-mai*). Hishio at that time would seem to resemble today's kidamari; it would seem to have been very salty.

1068?—Salty natto (*shiokara nattô*; probably fermented black soybeans) appears for the first time in the book *Shin Sarugakki*, by Fujiwara no Akihira (lived 989-1066). In this book the lifestyle, manners, and customs of the time are described.

1083—Stringy natto (*itohiki nattô*) is discovered accidentally in Oshu (northeast Japan) during the conquest of Oshu by Minamoto (Hachimantaro) Yoshiie (lived 1041-1108). It is said that the natto was made when cooked soybeans were placed in a sack strapped over the back of a horse. The warmth of the horse caused the fermentation. There are so many legends like this on in the northeast prefectures (*Tohoku Chiho*) of Japan that it seems possible

that natto was originally made there.

1183–Tofu is first mentioned in a document from the Great Kasuga Shrine (*Kasuga Taisha*) in Nara. The characters used to write the word tofu then were different from the characters used today. It seems that this tofu was very hard.

Note: See Diary of Hiroshige NAKAOMI, entry of 1183.

1192–The Kamakura period and shogunate begins as Minamoto no Yoritomo (1147-1199) becomes the first head shogun.

1228–The Buddhist monk Kakushin returns to Japan from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso in Japan, he discovers that the liquid which gathers on the bottom of the vats can be used as a tasty seasoning. Note 1. This tamari is considered the first soy sauce in Japan. Kinzanji miso is a type of *namémiso* (Finger Lickin' Miso) made from roasted soybeans and barley koji. To these are added eggplant, white melon (*shiro uri*), etc., and the mixture is fermented.

1288-1292–Tamari-style shoyu is sold from Yuasa in the Kishu area (in today's Wakayama prefecture).

Note 2. This document contains the earliest clear date seen for the cultivation of soybeans in Japan (A.D. 802, and 840), and for the appearance of the term “tamari” in Japan (1228).

Note 3. This is the earliest document seen (Sept. 2000) that mentions sesame seeds (802 A.D.). Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

23. Jujia biyong shilei quanji [Essential arts for family living (encyclopedia)]. 1301. China. Passage on soy reprinted in H.T. Huang 2000, p. 352. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Chü Chia Pi Yung Shih Lei Ch'üan Chi*, author probably unknown or maybe by Hsiung Tsung-Li (pinyin Xiong Zongli). Late Yuan (Mongol) dynasty.

Huang (2000, p. 352) states that this book “presents two methods for making jiang from soybeans, one for *shu huang jiang* (ripe yellow soy paste) and the other for *sheng huang jiang* (raw yellow soy paste). The names are actually misleading since the ‘ripe’ and the ‘raw’ refer to the manner in which the beans are treated before mixing with wheat flour for the first fermentation and do not refer to the quality of the final product. In the *shu* or ‘ripe’ case, the beans are roasted and ground into flour; in the *sheng* or ‘raw’ case the beans are soaked overnight and boiled until soft and tender. The product from the first fermentation is called *huangzi* [‘yellow child,’ soybean koji] and well as *jianghuang* [‘jiang yellow’].”

Huang (2000, p. 355-56) gives an interesting full-page table which compares the processes for making the following types of jiang: Soybean (*dou*), wheat (*mien*), sweet flour

(*tianmien*), azuki bean (*xiaodou*), jack bean, barley (*damai*), and elmnut (*yuren*). Each of the processes except one is based on the *Jujia Biyong* (ca. 1350); the process for making sweet flour jiang is based on the *Bencao Gangmu* (The great pharmacopoeia) (+1596).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on jiang (fermented soybean paste) are used in this book; none are based on fermented black soybeans (*shi*). Jiang itself is used in 17 recipes, and soy sauce made from jiang (*jiangqing*) in 1 recipe.

Huang (2000, p. 297) notes that this is the earliest document seen to use the term *douya*, which, in English, is the modern term—“bean sprouts.” Mung beans (*lūdou*) are the preferred beans for making such sprouts. A long quotation describes the process in detail and gives a recipe.

Huang (2000, p. 255) quotes a passage describing the process for making *jufu* (also known as *jubing*), from dairy milk curds. Its says to coagulate cow's milk by adding vinegar, just as when making tofu (*doufu*). When the dairy curds are fully formed, drain in a silk bag and press with a stone. Add salt and store in a jar.

Letter from Dr. H.T. Huang. 1996. Sept. 29. “I am glad you brought up the question of when vegetarian mock meat dishes were first prepared in China; it is one that requires further research. The earliest examples of mock meat dishes I have found so far were made with *mien-chin* (wheat gluten).” Gluten is used “in a recipe for mock lung sausage and one for mock eel.” The book contains 4 vegetarian recipes using *mien chien* (wheat gluten), found on pages 132-34. These are vegetarian versions of grilled liver, barbecued liver, mock fermented beans (*doushi* = fermented black soybeans), and mock fish.

Note 1. This is the earliest document seen (Dec. 2005) concerning roasted soy flour.

Note 2. This is the earliest document seen (Aug. 2002) concerning a meatless sausage.

Huang (2000, p. 194-95) notes that this book contains probably the earliest account of the process for making red ferment [*hong qu*; red fermented rice] and a red wine.

Note: This is the earliest document seen (Nov. 2011) that mentions fermented red rice, which it calls *hong qu*.

Bray (1984, p. 623): Translates the title as “Collection of certain sorts of techniques necessary for households (encyclopedia).” Published in Yuan, +1301. Probably by Hsiung Tsung-Li. Ed. Ming, +1560, T'ien Ju-Ch'eng. Partly reprinted in Shinoda & Tanaka (1973), “A Collection of Chinese Dietary Classics.” Also discusses hemp oil, which was widely used in traditional China, was considered to have an offensive smell, and was rated lowest of all the cooking oils, but it was a good lamp oil as it did not smoke or hurt the eyes” (p. 51).

Bo (1982): This book mentions wheat chiang. It also

gives a detailed description of the method for making fermented black soybean sauce: Two months after September, heat clear sesame oil, stir in 3 *tou* [unit of measure] of good fermented black soybeans (*shi*), mix, steam, and cool. Sun dry then steam again. After repeating this process 3 times, mix in 1 *tou* of white salt and put everything in a large cauldron with 3-4 *tou* of hot water. Add 1 *ry* each of three spices, 5 *kin* each of white onion and (?). Simmer down to two-thirds the volume and store in a container. From this it is clear that fermented black soybean sauce was a kind of soy sauce with flavorings and spices.

24. Wang Zhen. 1313. Wangzhen nongshu [Wang Zhen's agricultural treatise]. China. Passage on soy reprinted in C.N. Li 1958 #131, p. 92-93, and #307, p. 222-23. Illust. Also published in 1956 by Zhonghua Press, Beijing. (Pinyin: Wang Zhen. Nongshu). [Chi]

• **Summary:** Wade-Giles reference: *Wang Chên Nung Shu*, by Wang Chên. The title of this illustrated Yuan (Mongol) dynasty book is also given as simply *Nongshu*, since Wang Zhen is the author. There are three numbered sections titled "Principles of agriculture and sericulture;" soy is mentioned in each.

No. 1. The subsection titled "Annual agricultural activities" states: In the second month, plant soybeans. In the eighth month, mow the soybean stems (*yi doujiao*; i.e., harvest the soybeans). In the ninth month, when you might get frost, it is time to harvest soybeans (*dadou*).

No. 2. The subsection titled "Methods of planting #6" lists all the common seeds that can be planted in a field; these include panicum millet, setaria millet, paddy rice, hemp, barley, wheat, soybeans (*dadou*), and azuki beans (*xiaodou*).

It then describes four different planting methods: (1) Broadcasting (*manzhong*), drill planting in rows (*louzhong*), *guazhong*, and planting in difficult places *ouzhong*. For broadcasting: Carry a container of 2,000 cc (2 *dou*) capacity containing the seed grain under your left arm. Using your right hand, take a handful of seed from the container as you walk and, every three steps, scatter it over the prepared field, trying to get even distribution, so that the young plants will be neither too crowded nor too sparse. This was the method used in northern China during the Qin, Han, and Jin dynasties (221 B.C. to A.D. 420). Another method more often used in northern China was drill planting in rows, which is described in the *Qimin Yaoshu* (+544). A special machine (perhaps pulled by oxen) was used to compact the earth, while drilling holes in it. A person walked behind and stamped the holes with his feet. Today (+1313) they use a seed-drill (see Bray 1984, p. 256-57) which automatically plants the seeds in rows. "One man is needed to lead the ox and one to hold the drill, shaking it as he walks so the seed falls by itself." The *ouzhong* method is used near the hilly areas, where there are steep rocky hillsides or city walls. You apply fertilizer and irrigate [by hand].

No. 3. The subsection titled "Organic fertilizers #8" quotes the *Qimin Yaoshu*: To enrich the field, mung beans (*lūdou*) are best. Next best are azuki beans (*xiaodou*) and sesame seeds (*huma*). It's best to plant in the 5th to 6th months. In the 7th to 8th months you kill them [probably by plowing under as green manure]. In the spring, if you plant cereals [after the legumes], you will get 10 piculs per mou. It's as good as using the droppings of silkworms, as well as other excreta [from both farm animals and humans]. Note: Shows Chinese awareness of growing legumes before cereal grains to increase the yield of the cereals. (Translated by H.T. Huang, PhD, Sept. 2002).

The section titled "Soybeans" (*dadou*, also called *bidou*) states: There are three kinds of soybeans (*dadou*): white, black, and yellow. The *Guangya* (+230) says the soybean (*dadou*) is *shu*. The *Erya* (200 B.C.) says that "*rongshu* is the same as *renshu*." Then comes a long quotation about when to plant soybeans. Black soybeans are good for relieving hunger and also as a reserve against famine years. In years of abundance you can use them as fodder / feed (*liaoshi*) for cattle and horses. Yellow soybeans (*huangdou*) can be used to make tofu (*doufu*), and to make jiang and related materials [perhaps such as soy nuggets and soy sauce]. White soybean congee (*baidouzhou*) can be used as a supplemental food. The three soybean varieties (*sandou*) have different colors and different uses, but they are all beneficial grains.

Huang (2000, p. 441-57) states that this is the earliest Chinese document seen which contains a description of an oil press (*youzha*; used to press oil from seeds—in this case sesame seeds). He translates the long passage describing the wedge press, notes that the illustration which accompanies it bears no relationship to the description, then examines why the oil press was developed so much later in China than it was in Mediterranean civilizations—where olive oil was being pressed by the 6th century BC. The most common wedge press was made from large tree trunks, slotted and hollowed out. The seeds were roasted in a large pan over a stove, crushed, then pressed, using wedges hit by a hammer or mallet. A photo (p. 449, from Hommel 1937, p. 91) shows a wedge press. Note: This is the earliest document seen (Nov. 2003) that mentions a wedge press—but not in connection with soybeans.

Bray (1984, p. 628) cites this as *Nung Shu* (Agricultural Treatise). Published in Yuan, +1313. By Wang Chên. Textual references are to the 27 chüan Palace ed. of 1783, prefaced 1774. However it is indexed under *Wang Chên Nung Shu* and refers to many ingenious early Chinese agricultural implements. Concerning woodblock printing (p. 49): The development of printing during the Song dynasty enabled the Chinese government to disseminate both old and newly commissioned agricultural works. Thus, the number of agricultural works published in China increased exponentially from the Song on. Woodblock printing also made possible the use of illustrations, yet relatively few

Chinese agronomists used this new technology. The great pioneer in this field was Wang Chên, author of this book in 1313. Sadly, “most subsequent authors were content to simply crib their illustrations, if any,” from this book. The book devotes a special section to the preparation and weaving of hemp (p. 535).

Concerning soybeans (Bray, p. 514): “Black soybeans are a food for times of dearth; they can supplement [cereals] in poor years, and in good years they can be used as fodder for cattle and horses.” Of the various kinds of soybeans, “although some were thought to be fit only for fodder except in times of famine, others were considered to make wholesome porridges and gruels.”

Concerning kaoliang, Bray says (p. 449) that the word *kao liang* (literally “tall millet”) first appears in this document, but the plant was more commonly known in pre-modern times as *shu shu* (“Szechwan millet”).

Bo (1982): This work states, “Soybeans are the grain that helps the world. Tofu and *chiang ryo?* are made from them. The latter product, used in the recipes in the book, must be soy sauce.”

Bray (1981): A practical handbook on the essentials of agriculture and sericulture in south China. With the *Qimin Yaoshu* perhaps the most fundamental work. The text (except for capitalization and commas) is identical to that in Hagerty 1917.

Perkins (1969): Beancake is not mentioned in the 1313 edition of this book.

Needham (1965), in *Science and civilisation in China. Vol. 4, Physics. Part II: Mechanical engineering*, in the section on oil mills (p. 206-10), states that Wang Zhen first describes the horizontal wedge press used for pressing oil from Chinese oilseeds. However soybeans are not specifically mentioned.

Hagerty (1917, p. 17): Cited as “Nung Shu (Treatise on Husbandry), by Wang Cheng.” “The Ta tou bean includes three varieties, Pai, or White, Hei, or Black, and Huang, or Yellow. The Pai tou, or White bean, is utilized for making congees or gruels, but all kinds may be mixed and used for food” (See: Bretschneider, E. 1882. *Botanicon Sinicon*. 1:81).

25. Ni Zan. 1360. Yunlintang Yinshi Zhidu Shi [Dietary system of the Cloud Forest Studio]. China. [Chi]

• **Summary:** Wade-Giles reference: *Yün Lin T'ang Yin-shih Chih-tu Chih*, by Ni Tsan. Yuan dynasty. Huang (2000) states that this book mentions only one dairy product, milk curds (*rufu*; W.-G. *jufu*), a name that would later be used to refer to fermented tofu (p. 256).

Concerning the history of soy sauce, Huang observes (p. 362): The role of fermented black soybeans as a precursor to soy sauce is further emphasized in the very first specific reference we have to the making of *jiangyou* (soy sauce). Found in this book written by the famous Yuan painter Ni

Zan, it says: “For every official peck of yellow soybean koji (*huangzi*), have ready 10 catties of salt and 20 catties of water. On a *fu* day, mix them [in a jar] and incubate.” Note 1. *Huangzi* is soybeans covered with a mycelium of *Aspergillus* mold used as a substrate for making fermented black soybeans (*shi*). A *fu* day is one of the 3 *geng* days during the summer, based on the calendrical system according to ‘celestial stems’ and ‘earthly branches.’ Essentially, it means that the operation should be carried out when the weather is warm.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on jiang (fermented soybean paste) are used in this book; none are based on fermented black soybeans (*shi*). Jiang itself is used in 3 recipes, soy sauce made from jiang (*jiangyou*) is used in 1, and another type of soy sauce made from jiang (*jiangshui*) is used in 2 recipes. Note 2. This is the earliest document seen (April 2012) that uses the word *jiangshui* to refer to a type of soy sauce.

Also discusses mantou and cooked noodles (p. 476, 484n). Address: China.

26. Han Yi. 1365? Yiya yiyi [Remnant notions from *I Ya*]. China. Undated. [Chi]

• **Summary:** Wade-Giles reference: *I Ya I I*, by Han I. H.T. Huang (2000, p. 322, 617) who cites this book gives its date as “the late Yüan.” Note 1. The Yüan (Mongol) dynasty in China lasted AD 1260-1368. Note 2. This is the earliest document seen (May 2010) worldwide that mentions soymilk. Dr. Huang states that this is also the earliest Chinese-language document seen (Oct. 2003) that mentions soymilk, which it calls *doufujiang*. As of Oct. 2003 *doujiang* is the modern Chinese word for soymilk, but that word does not appear in this document. While discussing the preparation of a thick puree (*fu*, the same character as in *doufu* / *tofu*) of poppy seed and mung bean powder, this book mentions in passing that the poppy seed extract should be cooked in a way similar to that for cooking *doujiang*.

Dr. Huang comments: The statement above implies that soymilk must have been known in China for quite a long time. It also implies that although soymilk had been readily available, it was not itself of much interest as a food or beverage. It probably did not become popular in China until the late Qing (Manchu) dynasty (1644-1912), when the sale of *doujiang* by hawkers became a sight common enough to prompt an artist named Yao Chih-Han [sic, Yao Wenhan] to record the scene in a drawing now owned by the National Palace Museum in Taipei, Taiwan. An excellent reproduction of this illustration appears in Huang’s book (p. 323). During the Qing, the Chinese apparently discovered that prolonged, slow heating rendered soymilk more digestible by and acceptable to adults. Infants, however, have plenty of the enzyme lactase which enables them to hydrolyze lactose

(milk sugar). Lactose is an alpha-galactoside. Therefore, by inference, infants should be able to hydrolyze the alpha-galactosides (raffinose and stachyose) found in soymilk. However, Chinese traditionally did not feed soymilk to their infants—probably because adults could not tolerate it. Surprisingly, this discovery is never mentioned in the literature; it seems to have been treated like a trade secret. However, western researchers (see footnote 2) later found, that during slow heating, the oligosaccharides are gradually hydrolyzed.

Huang (p. 322) then gives several possible reasons for soymilk's lack of popularity in early China: (1) It had an unpleasant beany taste, especially when made using the cold-extraction method. (2) The presence of protease inhibitors (lipoxigenase) and oligosaccharides (complex sugars that cause flatulence) make soymilk less than easily digestible. Cooking the soymilk inactivates the lipoxigenase. A major advantage of making tofu from the cooked soymilk is that most of the flatulence-causing oligosaccharides go off in the whey.

In one footnote on this page, Huang adds that the term next appears in the literature in the *Bencao Gangmu Shi Yi* (Supplemental Amplification of the *Bencao Gangmu*) (+1765, p. 365).

In a second footnote on this page, Huang notes that after prolonged heating, up to 90 minutes, significant amounts of stachyose and raffinose are removed from soymilk (Pires-Bianchi et al. 1983).

Note 3. The term “alpha-galactoside” appears (as of Nov. 2003) in only 3 records in the SoyaScan database (two in 1965 and one in 1988). However the term “alpha-galactosidase” (the enzyme absent in the human digestive tract) is found in 8 records from 1965 to 1998. In 1970 it was found that most of the oligosaccharides (complex sugars which cause flatulence in adults) in soymilk can be eliminated by adding a commercial preparation of alpha-galactosidase to the milk. This enzyme hydrolyzes (breaks down) the oligosaccharides into simple sugars, which the body can digest.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on jiang (fermented soybean paste) are used in this book; none are based on soy nuggets (*shi*). Jiang itself is used in 10 recipes, soy sauce made from jiang (*jiangyou*) is used in 1, and another type of soy sauce made from jiang (*jiangshui*) is used in 1 recipe.

Page 52 mentions *fu cha* (tossed gluten salad) and *chien fu* (pan-fried gluten slices). Address: China.

27. Kuei An hsien chih [Gazetteer for the Kuei An district]. 1368-1662. China. [Chi]*

• **Summary:** Ming dynasty. Bo (1982): Jiang-you (soy sauce) sauce is mentioned in volume 12, is part 19 of the section on food and drink.

28. Liu Ji. 1370. Doneng pishi [Routine chores made easy]. China. [Chi]

• **Summary:** Wade-Giles reference: *To Nêng P'i Shih* by Liu Chi. Ming dynasty. Huang (2000) states: This is the earliest of at least 13 food canons and recipe books in premodern China. “Premodern” refers to the period from the start of the Ming to the end of the Qing dynasty (1368-1912). The author was a distinguished official of the early Ming (p. 129-130). The book contains a brief recipe for making fermented black soybeans (p. 340) and for making jiang (p. 353, 357).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Jiang (fermented soybean paste) is used in 5 recipes, and fermented black soybean sauce (*shizhi*) in 1 recipe.

The book also mentions preparation of meat and fish pastes (*jiang*) including those made from five kinds of fish, yellow sparrow, pork, lamb, mutton, and shrimp. Many of these recipes were copied verbatim from two earlier works (p. 386, 387n). Also mentions the use of soybean jiang to preserve meat or fish (p. 414n). Address: China.

29. Shijô ryôri-sho [Cookbook of the Shijo School]. 1384. Japan. [Jap]*

• **Summary:** This book mentioned “tare-miso,” “usu-tare,” and “tare usu,” which are soy sauces similar to tamari.

30. Oogusa ryôri-sho [Cookbook of the Ogusa School]. 1467-1614. Japan. [Jap]*

• **Summary:** Developed by one of Kyoto's two leading cooking school families. It mentioned soy sauce frequently.

31. Honcho bunsho 1487. Japan [Jap]*

• **Summary:** Yokotsuka (1985, p. 205) states: According “to such books as *Honcho bunsho* (AD 1487), *Shijoryu hochosho* (AD 1489) and others (AD 1504, 1537), Tare-miso or Usudare seems to have been the name for the liquid drained off or press-filtered from the boiled mixture of miso or *sho* [*hishio*] and salt water.” But the word *shoyu* (written with the same characters as *chiang-yu* [*jiangyou*] in Chinese) did not appear in any of these books. Address: Japan.

32. Tajimi Teiken. 1489. Shijôryû hôchôsho [Cookbook of the Shijo school?]. Japan. [Jap]*

• **Summary:** This famous cookbook mentioned “tare miso,” “usu tare,” and “surimiso.”

Yokotsuka (1985, p. 205) states: According “to such books as *Honcho-bunsho* (AD 1487), *Shijoryu-hochosho* (AD 1489) and others (AD 1504, 1537), Tare-miso or Usudare seems to have been the name for the liquid drained off or press-filtered from the boiled mixture of miso or *sho* [*hishio*] and salt water.” But the word *shoyu* (written with the same characters as *chiang-yu* [*jiangyou*] in Chinese) did not

appear in any of these books.

33. *ôkusa-ke ryôri-sho* [The house of okusa cookbook]. 1532. Japan. [Jap]*

• **Summary:** According to Yokotsuka (1980), the word *shoyu*, written with the characters used today, was first used in a cooking book in this work. The next major event with *shoyu* in Japan was when a brewer in Noda sent *tamari* to Kawanakajima.

This book also contains a detailed recipe for making Natto Miso Soup (*nattô-jiru*, a special type of miso soup that contains diced natto), which became popular during this period.

Letter (e-mail) from Naomichi Ishige, Japanese natto expert. 2007. March 20. The title of this book is *ôkusa-ke ryôri-sho*. The “nattô” used to make *nattô-jiru* (natto miso soup) is actually *kuki*, or fermented black soybeans (*shiokara natto*, *tera natto*); it is not *itohiki nattô*. This cookbook was reprinted in a modern version in 1932 (Dec. 15) in Tokyo by Zokugunsho-rui Ju Kanseikai (Ohta Yoshimara [person]).

Note: This is the earliest document seen (Dec. 2011) that mentions *nattô-jiru* [Natto Miso Soup] or miso soup of any type.

34. *Rokuon nichiroku* [Early Japanese dairies kept by head priest at Rokuon-in temple in Kyoto]. 1536. Japan. [Jap]*

• **Summary:** Iino (2001, p. 22-23) states: “The next [actually the first real] reference to *shoyu* is an entry in the *Rokuon-nichiroku* for June 28, 1536, in which the writer mentions preparing *shoyu*. An entry for the previous day mentions preparing *hishio*, which suggests that *shoyu* and *hishio* were prepared separately. In addition, an entry for August 14 of the same year mentions putting *sho* in a cask, as if it were intended as a gift.

“*Tou-miso* prepared at the Tamon-in was usually ready for consumption in about sixty days; the *koji* being incubated in the latter half of June, followed by the addition of brine within a week after incubation, and the refining process in the middle of August. This *sho* referred to in the *Rokuon-nichiroku* was probably the end product of the batch of *shoyu* prepared on June 28.”

“The *Rokuon-nichiroku* consists of a collection of dairies kept by the head priest at the Rokuon-in temple, a smaller temple within the larger Shokokuji temple. The Rokuon-in was located in the center of Kyoto, then the nation’s capital, while the Tamon-in was in Nara. Because of its location, the Rokuon-in was likely to have been influenced by Chinese culture earlier than the Tamon-in, and may well have begun manufacturing soy sauce before the Tamon-in, and give the name *shoyu* to it. In any event, it is apparent that soy sauce was already being manufactured in Japan by the middle of the sixteenth century.”

“An entry in the *Rokuon-nichiroku* for September 8, 1599 mentions a breakfast menu that included a dish of

matsutake mushrooms simmered in soy sauce. Subsequent entries also refer to dishes made by simmering various foods in soy sauce.”

Note: This diary contains (as of April 2012) the earliest known written (but unpublished) reference to word “*shoyu*” in Japan. Address: Japan.

35. Iida Ichirobei of Shimôsa makes *tamari shoyu* and sends it to the Takeda family in Koshu. This is the beginning of Noda Shoyu (Early event). 1558.

• **Summary:** In *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 221-22), in the section titled “The development of *shoyu*,” we read: “The area of Shimousa, about 30 miles northwest of Tokyo and already famous as a center of miso production, was to become the birthplace of the product now known as *shoyu*. In 1561, in the town of Noda, Iida Ichiro Heibei made a new variety of *tamari-shoyu* from *hishio* and presented it to the samurai Takeda Shingen, already known for his interest in miso. The flavorful product soon became known by its elegant name: Kawanakajima Goyo *Tamari-Shoyu*. It was first produced commercially in Shimousa in 1574.”

In “Chronology of Soybeans,” by Akio Saito (1985. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-14—in Japanese) we read:

1558—Iida Ichirobei of the feudal domain of Shimôsa (*Shimôsa no kuni*; today’s Noda city in Chiba prefecture) makes *tamari shoyu*, called Kawanaka-jima Goyo *Tamari*, and sends it to the Takeda family in Koshu. This is the beginning of Noda Shoyu. It is said that the taste of *shoyu* gave a great boost to the energy of Takeda’s army. At about this same time Takeda Shingen (lived 1521-1573) starts to use dried-frozen tofu (*kori-dofu*) for his army in Kawanakajima after tasting the delicious *kori-dofu* from Sahtobei?

36. Tokitsugu *kyôki* [Diary of Tokitsugu Yamashina]. 1559. Japan. Japanese summary by Kawakami 1978. [Jap]

• **Summary:** This diary contains (as of April 2012) the 2nd earliest known written (but unpublished) reference to word “*shoyu*” in Japan. One volume mentions *shirozake* (white sake, close relative of *Amazake*).

The dairies of five Yamashina family members are famous in Japan. The first word in each diary title is the given name of that family member; *kyôki* means “diary.” The Noritoki *Kyôki* (1405-1410) is 3 volumes, 783 pages. The Norioki *Kyôki* (1410-1417) including one of the former volumes is 27 pages. The Tokikuni *Kyôki* (1474-1493) is 4 volumes plus 1 unfinished, 1,125 pages. The Tokitsugu *Kyôki* (1527-1571) is 6 volumes, 2,801 pages. The Tokitsune *Kyôki* (1576-1600) is 10 books, with total pages not given.

Iino (2001, p. 23) states: “Later [after the *Rokuon-nichiroku*], an entry in the *Tokitsugu-kyôki* for August 27, 1559 mentions putting *shoyuu* in a small cask for use as a gift. There is a strong likelihood that the *sho* and *shoyuu*

placed into casks for use as gifts were not *tare-miso* [a by-product of the miso-making process], but were in fact soy sauce.”

37. Hôchô kikigaki [Transcribed instructions for cooking]. 1560-1580. Published in the *Gunsho Ruijû*. Japanese summary by Kawakami, p. 136. [Jap]

• **Summary:** A *hôchô* is a Japanese kitchen knife; *kikigaki* means “listening and writing.” According to Kawakami and Kimura (1985, p. 36-37) the term *shiokara nattô* (“salty natto”) appears in the work titled *Gunsho Ruiju* [compiled about 1819-20] (*Katsuji-hon*, page 344, lower section, line 5). The authors think that this is the earliest document that mentions *tera nattô* or non-stringy natto [fermented black soybeans]. But after that time, the same food appears to be called *ko no daizu* or *kaori no daizu* (“fragrant soybeans”), and that term first appeared in the *Hôchô Kikigaki*, a cookbook that was published about 1560-1580 and that is part of the *Gunsho Ruiju* (*Katsuji-hon*, page 800, upper section, line 6).

This book also gives recipes using *tare miso*, made by mixing miso and water. Mentions *chiang*. Also contains a very early possible footnote reference to soy sprouts, *Moyashitaru mame*.

38. Nôin Eshun. 1568. Tamon-in nikki [Tamon-in diary]. Nara, Japan. See entry for May 21 and Oct. 25. English-language summary by Kodama & Yoshizawa 1977, p. 427. Japanese summary by Kawakami 1978, p. 222. [Jap; eng]

• **Summary:** This diary was kept from about 1539 to 1596 (58 years) at the Tamon-in monastery inside the Kofuku-ji temple in Nara City, Japan.

Concerning soy sauce: Iino (2001, p. 23) states: “By the second half of the sixteenth century, shoyu was being written using the same characters as those used today. An entry in the *Tamonin-nikki* for October 25, 1568 mentions taking shoyu to Choinbo, a Buddhist monk. This appears to be the first time the contemporary characters were used. An entry in the same diary for August 24, 1582 uses different characters to refer to soy sauce. By this stage it seems that the Tamon-in had also started using the term shoyu when referring to *tou-miso*.”

Iino (2003, p. 9): In this diary shoyu made from a second pressing of the moromi (*niban shoyu*) is referred to as *tou-miso niban* (second *tou-miso*) and its production is discussed. This can be seen in several places, including the entry for the date of the 17th year of Tenmon (1548) Jan. 1.

Concerning natto: Letter (e-mail) from Naomichi Ishige, Japanese natto expert. 2007. March 30. The entry for 21 May 1568 mentions *netaru-natto*. The entry was written by Nôin Eshun, who was the chief priest at Tamon-in, a monastery that belonged to Kofuku-ji in Nara. Kawakami et al. (1978) understood *netaru natto* to mean what we now call *itohiki natto*.

Note 1. This is the earliest Japanese-language document seen (Jan. 2012) that uses the term *netaru natto* to refer to natto.

This diary also describes in detail a heating method to kill the microorganisms in saké (Japanese rice wine). It was almost identical with the process invented by Pasteur in France in 1865 (300 years later) for low-temperature pasteurization of wine and milk. The Japanese process was later used on soy sauce.

39. Gao Lian. 1591. Yinzhuàn fùshìjiàn [Compendium of food and drink]. China. Passage on soy reprinted in H.T. Huang 2000, p. 297, 324, 340, 373. [Chi]

• **Summary:** Wade-Giles reference: *Yin Chuan Fu Shih Chien*, by Kao Lien (who lived 1574-1624). Ming dynasty. Huang (2000) discusses: Processes for making sprouts from yellow soybeans (*dahuangdou*) and broad beans (*handou*) (p. 297; Footnote: The identity of *handou* is uncertain; it could be either broad beans (*candou*, *Vicia faba*) or peas (*wandou*, *Pisum sativum*)). Mention of tofu (p. 324). Brief recipe for making fermented black soybeans (*shi*, p. 340).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 27 recipes: jiang itself in 20, soy sauce made from jiang (*jiangyou*) in 5 recipes, soy sauce named *jiangzhi* in one recipe, and soy sauce named *jiangshui* in one recipe. Seasonings based on fermented black soybeans (*shi*) are used in only 5 recipes: Fermented black soybeans (*shi*) in 4 recipes, and fermented black soybean sauce named *shizhi* in 1.

Huang adds (p. 373): Soy sauce (*jiangyou*) started to rival jiang in importance during the Ming [1368-1644], and by the early years of the Qing [1644-1912] had surpassed it in culinary usage. This book is the last Ming entry in the table. Huang also discusses: Use of red ferment (*hongqu*) to make red rice wine (p. 196).

Huang (personal communication, 5 June 1993), gives the date of this document as +1591, and notes that pages 148-49 mention *fu cha* (tossed gluten salad) and *chien fu* (pan-fried gluten slices). This information is repeated from an earlier book by Han I written ca. +1350.

Bo (1982): This Ming dynasty book contains many recipes that use soy sauce. Partly reprinted in Shinoda & Tanaka (1973), “A Collection of Chinese Dietary Classics.”

40. Li Shizhen. comp. 1596. Bencao gangmu [The great pharmacopoeia]. China. Passage on soy reprinted in C.N. Li 1958 #311, p. 224-26. [Chi]

• **Summary:** Wade-Giles reference: *Pên Ts’ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). Ming dynasty. This classic work was completed in 1578, but not published until 1596. It describes almost 2,000 animal, vegetable, and mineral drugs and gives over 8,000 prescriptions. A rich source

of information, it is still very useful. All foods mentioned are considered as medicines, based on the ancient Chinese saying: “Food and medicine have the same origin.” The title might also be translated as “Collected essentials of herbs and trees. Illustrated compendium of materia medica with commentaries.”

Soybeans and soyfoods are discussed in two chapters of this book. Chapter 24 contains sections on soybeans, soybean sprouts, and yellow soybeans, in that order. Chapter 25 has sections on fermented black soybeans, yellow molded soybeans (Jap. soybean koji), tofu and yuba (*doufu pi*), jiang, and soy sauce. Concerning yuba: If a film should form on the surface of soymilk when it is heated in the process of making tofu, it should be lifted off and dried to give yuba (*doufu pi*), which is itself a delicious food ingredient (Huang 2000, p. 303, 323).

Note. This is the earliest Chinese-language document seen (May 2012) that mentions yuba, which it calls *doufu pi*.

The first part of each section is titled “Explanation of names”; when these simply repeat material we have translated from earlier Chinese documents, we will not re-translate it. Another part of each section explains each food / medicine in terms of its “nature” or “vital energy” (*qi*, hot, warm, neutral, cool, and cold) and “flavor” (*wei*, bitter, sour, sweet, pungent, salty).

The section titled “Soybeans” (*dadou*) begins by stating that soybeans are considered a “middle class drug / medicine” according to the *Shennong Bencao Jing* (*Benjing*) (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (+100). This section has four parts: (1) “Explanation of names.” The soybean is *shu*. The pods are called *jia*. The leaves are called *huo*. The stems are called *qi*. (2) “Explanation of uses.” After quoting information from earlier Chinese sources, he states: The different soybean varieties are black, white, yellow, spotted / speckled (*ban*), green, and striped. The black ones are also called *wudou*. They are used for both medicine and food, and for making fermented black soybeans (*shi*). The yellow ones are good for making tofu (*fu*), for pressing to obtain oil, or for making jiang. But the other soybean varieties can also be used to make tofu and can be cooked for food. They are usually planted before summer. The young plants (*miao*) grow to a height of 3-4 feet. The leaves are pointed. In the fall they have small white flowers which come in clumps about one inch across. The plants wither in the frost. According to the *Lüshi Chunqiu* (Master Lü’s spring and autumn annals) (239 B.C.), when soybeans are in season, the stems are long and the branches are short. The pods come in groups of 27. The more branches there are, the more nodes. The large soybeans (*shu*) are round; the small soybeans (*shu*) are oval. The early varieties tend to grow like vines. The leaves float. The nodes are further apart. The pods are smaller and not solid. The later varieties have fewer nodes, less space between nodes, and they are less solid. According to the *Fan Shengzhi Shu*

(The book of Fan Shengzhi {on agriculture}) (10 B.C.), if you plant soybeans in early summer, you should not plant them deep because the flowers do not like too much sun; they will rot and the roots will be scorched. One should adjust the depth of planting according to the variety. [After harvesting] store soybean seeds in a level, shady place in a bag. Take them out 15 days after winter begins; then you can use them for planting. Soybeans can be stored quite easily for one full year, so they can be kept in preparation for a famine year.

(3) Black soybeans—nature and flavor (*heidadou qiwei*): They are sweet, neutral, and nontoxic. Prolonged ingestion will make you / your internal organs feel heavy. When raw, they are warm. When cooked, they become cold—according to *Zhibo* (a person) cited in the *Huangdi Neijing Suwen* (Yellow Emperor’s classic of internal medicine: Questions and answers) (200 B.C.). Chang Qi (another person) says: When soybeans are raw they are neutral, but when they are roasted they become hot, and when they are boiled they become cool (*han*). When made into fermented black soybeans they become cold (*leng*). When used to make jiang or soy sprouts (“raw yellow curls”) they are neutral. When cattle eat them, they are warm [i.e. they have a warming effect on the cattle]. When horses eat them, they are cold. So even though it is one substance, when it is eaten in different ways, it has different effects.

(4) “Inventions” (*faming*): Explains the complex pharmacology and medicinal effects of soybeans on the five internal organs—such as the kidney, liver, etc.

The section titled “Soybean sprouts” (*dadou huangjuan* or “soybean yellow curls”) has two parts: (1) “Explanation of names.” These are sprouted [soy] beans (*dounie*). Allow the black soybean to sprout until it is 5 inches (*cun*) long. Then dry it; this is called *huangjuan* (“yellow curls”). It becomes very small when dried. (2) Nature and flavor (*qiwei*): Sweet, neutral, nontoxic. Note 1. This is the earliest document seen (April 2003) that uses the term *dounie* to refer to “sprouted soybeans.”

The section titled “Yellow soybeans” (*huang dadou*)—explanation of food uses—is divided into three parts: (1) “Explanation of names.” Similar to the passage above stating that yellow soybeans are good for making tofu (*fu*), for pressing to obtain oil, for making jiang, etc. (2) Nature and flavor (*qiwei*): Sweet, warm, nontoxic. (3) Soybean oil (*douyou qiwei*) nature and flavor: Pungent, sweet, and hot (*re*); slightly toxic. Note 2. This is the earliest document seen (Feb. 2003) that uses the term *huang dadou* to refer to yellow soybeans.

Note 3. This is the earliest Chinese-language document seen (Sept. 2006) that uses the term *douyou* to refer to soybean oil.

Note 4. Is fermented tofu (*furu*) mentioned in this work? After looking carefully through the Chinese document, Dr. H.T. Huang says (2002) he cannot find any mention of it, after another long search. Moreover, he does not

mention this book in the section of his Needham series book about fermented tofu (2000, p. 325-28). However Dr. Masaaki Yasuda, a professor in Okinawa, who has spent his professional career studying tofuyo, a type of fermented tofu, disagrees. When asked by Wm. Shurtleff about this specific point he replied (e-mail of 11 Nov. 2011): “You will find mention of fermented tofu in the Special Issue of *Honso Komoku (Bencao Gangmu)* by Li Shih-Chen in 1596. Maybe you only checked ‘the main issues’ of this book, but actually he also published other special issues that were not included in the main issues. You will find the fermented tofu using the key word *furu*, not fermented tofu nor *rufu*. *Furu* in this book clearly refers to the fermented tofu that you are searching for. Of course I read it myself in this book; I did not hear it from anyone else.”

Red azuki beans (*chixiaodou*) are also mentioned in this book; a listing of alternative names, with commentaries, is given. (See Li 1958 #393).

White beans (*baidou*) are also mentioned as follows: White beans (*baidou*) are mentioned in the Song dynasty. They are also called *fandou*. The seedlings can be used as a vegetable. They are good eaten raw. In eastern Zhejiang the flavor is especially good. They can be used to make jiang and tofu (*fu*). In the north, the watery white beans (*shui baidou*) are similar but is not as good. White beans are also called *fandou*. They can be used to complement congee / gruel (*zhou*) and cooked rice served as a main dish (*fan*). According to the author (Li Shizhen) *fandou* is the same as white azuki beans. Some white beans have a yellow color. The beans are about the size of mung beans (*ludou*). Plant them in the 4th or 5th month. The leaves of the seedlings are like those of red azuki beans (*chixiaodou*) and can be eaten. The pods are like those of azuki beans (*xiaodou*). One kind of pod comes with leaves like those of the soybean (*dadou*). They can be cooked like rice and used to make tofu (*fu*). They are of the same category. Nature and flavor (*qiwei*): It is sweet, neutral, and nontoxic. (See Li 1958 #467). (Translated by H.T. Huang, PhD, May 2003). Dr. Huang adds: The white bean (*baidou*) could well be the white azuki bean.

41. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia]. China. Passages on soy reprinted in C.N. Li 1958 #140, p. 95-96, and #311, p. 224-26. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). The following information on soybeans and soyfoods appears in Chapter 25 of the *Bencao Gangmu*.

The section titled “Fermented black soybeans” (*dadou shi*) is divided into four parts: (1) “Explanation of names.” The word *shi* (different character but same pronunciation) also means something delectable and highly desirable. According to the *Shuowen Jiezi* (Analytical dictionary of characters) (+121), you get fermented black soybeans

by adjusting salt and incubating soybeans (*shu*). (2) “Explanation of uses” gives a long, detailed description of how to make fermented black soybeans. See Huang 2000, p. 340-41. *Shi* can be made from various types of soybeans. When made from black soybeans, they make good medicine. There are two kinds of *shi* [both made by a mold fermentation]: unsalted / bland fermented black soybeans (*danshi*), and salted / savory fermented black soybeans (*yanshi*).

To make unsalted / bland fermented black soybeans (*danshi*): In the 6th month, take 2-3 *dou* (20-30 liters) of black soybeans. Winnow until clean then soak overnight in water. Steam the beans thoroughly then spread on a mat. When almost cool, cover beans with artemisia leaves. Examine them every 3 days. When they are covered, but not luxuriantly, with a yellow coating [of mold], dry them in the sun, then winnow until clean. Add enough water to wet the soybeans, so that when scooped by hand, there will be wetness between the fingers. Place them in an earthenware jar (*weng*) and pack them down tightly. Cover with a 3-inch layer of mulberry leaves. Seal mouth of jar with mud, then let stand in the sun for 7 days. Remove beans from jar and dry them in the sun for an hour. Wet them again and put them back in the jar. Repeat this process [from wetting and sunning] 7 times. Finally, steam the beans, cool, dry, and store in the jar.

To make salted / savory fermented black soybeans (*yanshi*): Take 1 *dou* (10 liters) of soybeans, soak in water for 3 days, steam thoroughly and spread on a mat (as before). When the beans are covered with a yellow coating [of mold], winnow, soak in water, drain off the water, and dry in the sun. For every 4 catties of beans (1 catty weighs about 1.33 pounds), mix in 1 catty of salt, plus half a catty of finely-cut strips of ginger. Place mixture in an earthenware jar. Season with pepper (*jiao*), orange peel, perilla, fennel, and almonds. Add water until it is one inch (*cun*) above surface of mixture. Top contents with leaves, then seal the mouth. Sun the jar for a month; then the savory fermented black soybeans will be ready.

Huang (2000, p. 341) notes that the process described above is identical in principal to that in the *Qimin Yaoshu* (Important arts for the people's welfare) (+544), reiterated about 350 years later in the *Sishi Zuanyao* (Important rules for the four seasons) (+900).

(3) Unsalted / bland fermented black soybeans nature and flavor (*danshi qiwei*): Bitter (*ku*), cold (*han*) and nontoxic. (4) Puzhou fermented black soybeans (*Puzhou shi*) nature and flavor: Salty (*yan*), cold (*han*), nontoxic. Note 1. Puzhou is a place in Shanxi province, China, noted for its distinctive fermented black soybeans. This is the earliest document seen (Feb. 2003) that mentions *Puzhou shi*.

The section titled “Yellow soybean koji” (*douhuang*, “bean yellow”) describes the soybeans covered with yellow mold; they are the first step in making salty fermented black

soybeans and are not a consumer food product. This section is divided into two parts: (1) “Explanation of names.” Describes how to make *douhuang*. According to Li Shizhen (the author of this book): Take one *dou* (bushel) of black soybeans. Steam until cooked through. Spread on a mat and cover with rushes—as if you were making jiang. Allow the soybeans to mold until they have a yellow coating. Dry, then grind. (2) Nature and flavor (*qiwei*): Sweet, warm, nontoxic.

Dr. Huang offers a comparison of *danshi* and *douhuang* (Feb. 2003 Feb): Unsalted / bland fermented black soybeans (*danshi*) is an end product, which is largely free of molds when it is sold; it was traditionally used in Chinese medicine. Dr. Huang has never seen or tasted *danshi*, never heard of it being used in food, and never seen it for sale in the USA. *Danshi* is made by a two-stage fermentation. In the first stage, after the soybeans are covered with a yellow coat of mold, they are winnowed, soaked in water, rinsed to remove most of the white mold and its yellow spores, then sun dried. In the second stage, the beans are packed tightly into a container and incubated for 10-15 days depending on the season. This stage enables the enzymes to act on the soybeans, digesting some—but not all—of the soy proteins. If the incubation is too long, some of the excessive peptides resulting from digestion of soy proteins may give the *danshi* a bitter taste. By comparison, yellow soybean koji (*douhuang*) is an intermediate stage of soybean processing not normally sold, but used to make jiang.

(C) The section titled “Tofu”: The first clear recipe for making tofu in China appears in chapter 25 of this book (Huang 2000, p. 303). Li says that the process for making tofu (*doufu*) originated with the Prince of Huai-Nan, Liu An. Black [soy] beans, soybeans, white [soy] beans, mud beans, peas, mung beans, etc. can all be used. There are six steps: 1. Soak the soybeans [in water]. 2. Grind the beans [to give a slurry]. 3. Filter the milk [to remove the insoluble residue {okara}]. 4. Cook the milk [for an adequate time]. 5. Add nigari / bittern (*yen lu*), leaf of the mountain alum tree (*shan fan*), or vinegar to coagulate the milk. 6. Collect the curds.

Note 2. This is the earliest document seen (Jan. 2010) that describes the basic process for making tofu, either at home or on a commercial scale.

Li Shizhen continues: One can also obtain curds by mixing the hot milk in a container with gypsum powder. Various salty, bitter, sour, or pungent materials can also be used to coagulate the soymilk.

Note 3. This is the earliest document seen (Oct. 2002) that mentions nigari. Li (1958) adds: “Vital energy and flavor (*chiwei*, of tofu): Sweet, salty, cold / cooling, slightly toxic.” Huang adds (p. 303) that although Li gives no details about the tofu-making process, we can surmise that the procedure used in his time is very similar to that used today in the Chinese countryside. Huang (p. 304-05) reprints line drawings (from Hung Kuang-Chu 1984, p. 58-60) of the traditional process for making tofu still used in China, and

notes that the same curdling agents or coagulants listed by Li Shizhen (bittern, mountain alum, vinegar, and gypsum) are still in use today.

42. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia (Continued)]. China. Passages on soy reprinted in C.N. Li 1958 #140, p. 95-96, and #311, p. 224-26. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Pên Ts’ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). The following information on soybeans and soyfoods appears in Chapter 25 of the *Bencao Gangmu*.

The section titled jiang, Li (1958, p. 95-96) states: Explanation of the name: According to the *Shiming* by Liu Xi (+150), jiang is like a military general (*jiang*) who directs and can control the poison in food. It is just like a general controlling the evil elements in the population. Explanation of the method: [Li] Shizhen says there are different varieties of *mianjiang* (which is sweet); it can be made from barley, wheat, sweet jiang (*tianjiang*), or bran jiang (*fujiang*). Bean jiang (*doujiang*) also comes in different varieties such as that made from soybeans (*dadou*), azuki beans (*xiaodou*), or peas (*wandou*, *Pisum sativum* L.) and soy sauce (*douyou*, literally “bean oil”).

Note 1. Soy sauce is classified here as a subcategory of bean jiang. This is the earliest document seen (April 2012) that uses the word *douyou* to refer to soy sauce.

To make soy sauce (*douyou*), take 3 *dou* of soybeans (1 *dou* is about 1 pint, so 3 pints of dry soybeans weigh about 2.43 pounds). Boil in water until soft. Mix with 24 catties of wheat flour (1 catty = about 1.33 pounds, so 24 catties weigh about 31.92 pounds). Allow them to become molded. For every 10 catties, add 8 catties of salt and 40 catties of well water. Blend to a slurry. Then collect the sauce [which separates].

Note 2. This is the earliest document seen (April 2012) that describes a method for making Chinese-style soy sauce, and the first describing a significant amount of wheat (or wheat flour or barley) is mixed with the soybeans before fermentation begins. The ratio by weight of wheat to soybeans in this early Chinese soy sauce is about 13 to 1, whereas the ratio in modern (early 21st century) Japanese soy sauce is about 1 to 1. How could the early Chinese make so much wheat flour stick to such a relatively small amount of boiled soy beans? Maybe the soybeans were mashed, mixed with the wheat flour and shaped into cakes before letting the cakes become molded (See Wang and Fang 1987).

To make soybean jiang (*dadou jiang*), dry-roast soybeans (*dou*) then grind to a flour. For every *dou* (pint) add 3 *dou* of flour. Blend well and shape into cakes. Allow it to stand until it becomes moldy. For every 10 catties, add 5 catties of salt. Then cover it with well water [in a container], and sun it and collect it.

Concerning the use of soybeans in wine, Chapter 25

contains a section on “wine” (*jiu*) which refers to a type of soy wine called *doulinjiu* (W.-G. *tou-lin chiu*; “bean soak wine”) which is made by percolating regular Chinese wine (fermented from cereal grains) through roasted black soybeans. A recipe is given and it is stated that the *Congshu Jicheng Chubian* (Collected collectanea) (+1473), having 3,467 volumes, says that it cures post-partum white sickness, apparently an affliction suffered after the birth of a child.

Also describes how to make jiang from azuki beans (*xiaodou*) or from barley (*damai*).

Vital energy and flavor (*qiwei*, of jiang): Salty, cold / cooling, nontoxic. *Mienjiang* [made with wheat and soybeans] is salty. Bean jiang (*doujiang*), sweet jiang (*tianjiang*), soy sauce (*douyou*), barley jiang (*damaijiang*), and bran jiang (*fujiang*) are all salty and sweet [because they are made with wheat, which is hydrolyzed to sugars].

Huang (2000, p. 357) states that this book is the first to introduce the process for making sweet wheat-flour jiang (*tianmian jiang*). The process for making soybean jiang described in the *Bencao Gangmu* is very similar to that described in the *Jujia Biyong* (Essential arts for family living) (ca. +1350).

Huang (2000, p. 363) gives the process for making soy sauce, which appears in the *Bencao Gangmu* as an appendage to the section on jiang, titled “soybean oil” (*douyou*) which was obviously a synonym for soy sauce (*jiangyou*). Take 3 *dou* (1 *dou* = about 10 liters) of soybeans; boil in water until soft. Blend in 24 catties of wheat flour. Incubate until the mixture is covered with yellow mold. Mix 10 catties of the yellow jiang substrate with 8 catties of salt and 40 catties of well water. Ferment in an earthenware jar in the sun until the product is ready. Huang comments that although the passage does not explain how the soy sauce is separated from the fermented mash, it is absolutely clear that we have here a process based on jiang and the product can rightfully be called soy sauce (*jiangyou*).

Concerning the use of soybeans in wine, Chapter 25 contains a section on “wine” (*jiu*) which refers to a type of soy wine called *doulinjiu* (W.-G. *tou-lin chiu*; “bean soak wine”) which is made by percolating regular Chinese wine (fermented from cereal grains) through roasted black soybeans. A recipe is given... birth of a child [see above].

Huang also discusses from the *Bencao Gangmu*: Koji (*qu*) for making rice wine (*jiu*, p. 158). Malt sugar (*i*, p. 158). Red ferment [red rice koji] (p. 192-202). Malt sugar (*i t'ang*, p. 460).

Huang (2000) cites this (p. 621) as *The Great Pharmacopoeia* [or *Pandects of Natural History*]. Ming, +1596. Paraphrased and abridged translation: Bernard E. Read and associates (1-7). Textual references are to the 1975 edition published by Renmin Weisheng, Peking. It mentions dried young soybean sprouts (*dadou huangjuan* or “yellow curls”) as having medicinal properties.

Wilkinson (2000, p. 662) translates the title as

Collection of Materia Medica, gives the publication date as 1602, and notes that Li lived 1518-1593.

43. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia]. China. See p. 360-71. 1965 ed., reprint of 1885 edition, Peking. Also reprinted in 1916 by Shanghai Hong Pao Chai Book Co., Shanghai. [Chi]

• **Summary:** Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chen (lived 1518-1593). The author: Bretschneider (1882, in *Botanicon Sinicum*, p. 54-55) notes: “Li was born at K'i Chou in Hu pei probably in the first quarter of the 16th century, and died toward the close of the same century. His literary name was *Tung pi*. He wrote under the pseudonym *Pin hu*. As was the case with the majority of early Chinese physicians of note, Li Shi chen was not a professional medical man, but a civil functionary and a magistrate of the district of P'eng k'i (T'ung ch'uan fu, Sz' ch'uan [Szechuan]). Besides this, his principal work, Li left several medical treatises. “Li began compilation of this work in 1552, and after 26 years' labour he completed it in 1578. He wrote out the manuscript three times before he was satisfied to give it out as complete. The author died before it was published, and his son, Li Kien yüan, presented the manuscript to the Emperor, in 1596, who ordered it to be printed.”

The work: Called *Honso Komoku* in Japanese, this is the most famous of the many Chinese herbals, and the most important Chinese work on materia medica and natural history. Also called a botanical encyclopedia, it is the first treatise of its kind in which the material is treated critically. Bretschneider (1882, p. 55) adds: “Several editions have been successively issued. The earliest now extant is, it seems, that of Shun chi 15 (A.D. 1658). All editions which I have had an opportunity of examining are printed on indifferent paper and are full of misprints, which make the book very inconvenient for reference... The preface is followed by a general index of the 52 books (chapters) of the work, enumerating the 16 divisions and the 62 classes under which the whole matter is arranged... It begins with a critical review of the 42 capital works on Materia media published” previously.

Concerning the year of publication: Huang (2000, p. 621) says 1596. Yokotsuka (1986, p. 198) says 1590 and cites this as the earliest Chinese work to mention *chiang-yu* and *tao-yu* (the liquid separated from soybean *chiang*). Wai (1964) says 1596. Reischauer and Fairbank (1960, p. 308) say it was completed in 1578. Li (1958) says 1578. Merrill & Walker (1938) say 1590. Bretschneider (1881) says: Completed in 1578 but published in 1596 or 1597.

Talk with H.T. Huang. 1992. March 23. The most current, and one of the best, editions of this work was published in 1982 in Beijing by The People's Health Press (2,977 pages). It is edited and extensively annotated by Liu Heng-ju. He compared several of the most important

extant versions, and where they differ (e.g. where a word is written differently in different versions), he explains these differences in footnotes, and explains why he chose the word or text that he did for his basic text. There is no English translation of the *Pen-ts'ao kang-mu*, one of the great scientific works in China (and worldwide) because: (1) It is a huge book which would take a lifetime to translate; (2) A vast amount of research would be required for an accurate translation; and (3) The cost of the translation and publication, and the relatively limited demand for the finished work would probably make the venture unprofitable for a commercial publisher. Perhaps the Chinese Academy of Traditional Medicine would be able to undertake such a translation, working jointly with English-speaking Western scholars.

In the section on soybeans, this work refers to a type of soy wine called *tou-lin chiu* (“bean soak wine”) which is described as a sake-like fermented alcoholic beverage made from black soybeans. A recipe is given and it is stated that the *Ts'ung-shu chi-ch'eng ch'u-p'ien* (1473) said that it cures post-partum white sickness, apparently an affliction suffered after the birth of a child.

Wang and Fang (1987) write: The method of preparing *chiang-yu* (soy sauce) was first described in this work. Cooked soybeans were mixed with wheat flour, pressed into cakes, and left in the room until the cakes were covered with yellow mold growth. The molded cakes, or *ch'ü*, were mixed with salt and water and aged in the sun. After pressing, the liquid was known as *chiang-yu*. Li also described how to make a similar sauce (*shi-tche*) by boiling fermented black soybeans.

Needham (Botany, 1986, p. 318g): “The soya-bean, *Glycine Soja*, *ta tou*, was considered an antidote for indigestion and poisoned conditions of the intestinal tract, but Li Shih-Chen found that this never had any effect unless *kan ts'ao* (*Glycyrrhiza glabra*) was given with it (chap. 24, p. 4a).”

Fukushima (1979, p. 5-6): “The *chiang-yu* described in *Pen-ts'ao Kang-mu* (*Honso-Komoku* in Japanese), published in 1590 by Li Shih-chen (*Ri Jichin* in Japanese) in the Ming (*Min* in Japanese) dynasty, was also made with *koji* [*ch'ü*] manufactured by using soybeans and cereals (Fig. 4). (In this process soybeans were cooked in water, mixed with wheat, and spontaneously molded to form *koji*. Salt water was mixed in with a paddle, then the mash was insulated and aged. Finally it was filtered to make *chiang-yu*). The ratio of soybeans to wheat in the *koji* making was 3:2. This ratio is very close to that used in making regular Japanese *shoyu*, which is made by using equal amounts of soybeans and wheat.”

Wai (1964) notes that this book infers that soybean curd [tofu] was invented by Liu An.

Sato (1963, p. 20), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the

fourth earliest Chinese document seen on the subject. It was translated into Japanese by Suzuki Shintai.

Morohashi (1955) translated parts of the *Bencao* related to [soy] bean oil (*douyu*), bean sprouts (*douya*, *dounieh*), fermented black soybeans (*doushi*), tofu (*doufu*), [soy] bean flour (*doufen*), bean soak wine (*doulinjiu*), soybeans (*dadou*—production; there are black, white, yellow, dark brown, green, and speckled soybeans).

44. *Ekirinbon setsuyôshû* [Early Japanese dictionary]. 1597. Japan. [Jap]*

• **Summary:** This dictionary contains (as of April 2012) the earliest known published reference to *shoyu* (soy sauce) in Japan, written with the characters used today. Prior to this, other characters were used: *Hishio* / *chiang*, *mame-bishio*, etc. Written by a Japanese priest between 1469 and 1503, it was widely circulated in manuscript form and used by the common people. Modern rendering by Kawakami 1978, p. 220. It also mentions *amazake* and *ko* (the early term for *amazake*).

Note: This is the earliest Japanese-language document seen that mentions *amazake*, which it calls “*amazake*” and “*ko*.” This is also the earliest document seen (March 2001) concerning the etymology of *amazake*.

Yokotsuka (1985, p. 205; 1986, p. 198) gives the title and date as “*Ekirinbon-Setsuyoshu* (1598)” and notes that the word *shoyu* [written with the same Chinese characters as *chiang-yu* / *jiangyou*, the Chinese word for soy sauce] first appeared in this book.

Akio Saito (1985) states that this book was published in 1521.

Fukushima (1989, p. 9): “The word ‘*shoyu*’ first appeared in *Ekirinbon-Setsuyoshu*, a Japanese dictionary published in 1597 during the Muromachi period.”

Iino (2001, p. 23): “Next [after the *Tamonin-nikki* entries of 1568 and 1582] we find an entry for *shoyu* (using contemporary characters) in the *Ekirinbon-setsuyoshu* (1597). The oldest of these dictionary-like *setsuyoshu* is thought to be the *Bunmeibon-setsuyoshu*. Following its publication, similar volumes appeared successively, but none of these contains any reference to *shoyu*. The entry in the *Ekirinbon-setsuyoshu* appears to be the first reference to *shoyu* in a *setsuyoshu*. By this stage it seems clear that soy sauce was in common use, both in name and in practice.”

45. Saito, Akio. 1599. [Chronology of soybeans in Japan, 1336 to 1599, the Ashikaga/Muromachi period] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (Soybean Monthly News). Jan. p. 14. [Jap; eng+]

• **Summary:** 1350—Dengaku (Oden) is mentioned in the records of the Gion shrine in Kyoto.

1444 June—The present characters for “tofu” appear in the *Kagakushu* encyclopedia.

1450—The *suribachi* (a serrated earthenware grinding

bowl or mortar) becomes popular among the common people, therefore miso soup becomes popular.

1469—In the feudal domain of Sanuki (*Sanuki no kuni*) the Sakade Salt Farm (*Sakade Enden*) starts operation.

1500—In the published collection of Japanese poems and songs titled *Shichijû-ichiban shokunin-zukushi uta awase*, there is a drawing of a lady in a black kimono and white headband sitting cross legged on a low platform on a street and selling large and small pieces of cut tofu.

1521—The present characters for the word “shoyu appear for the first time in the book *Ekinbon Setsuyoshu*.

1526—In a memorandum by Munenaga is written: “Late in the night, sitting by the sunken open-hearth fireplace together, and eating many Dengaku tofu” (*Yo mo fuke, irori-be ni hiza o narabe, Dengaku tofu o do kasanari.*) It seems that at the end of the Muromachi period, people spread miso on tofu, grilled it over a fire, then ate it.

1535—In Kishu (today’s Wakayama prefecture), Akagiri Umataro? (Zenuemon/Yoshiuemon?) starts selling Yuasa Shoyu, which is derived from Kinzanji miso.

1558—Iida Ichirobei of the feudal domain of Shimôsa (*Shimôsa no kuni*; today’s Noda city in Chiba prefecture) makes tamari shoyu, called Kawanaka-jima Goyo Tamari, and sends it to the Takeda family in Kosshu. This is the beginning of Noda Shoyu. It is said that the taste of shoyu gave a great boost to the energy of Takeda’s army. At about this same time Takeda Shingen (lived 1521-1573) starts to use dried-frozen tofu (*kori-dofu*) for his army in Kawanaka-jima after tasting the delicious kori-dofu from Sahtobei?

1559—The book *Tokitsugu Kyoki* by Yamashina Tokitsugu (lived 1507-1579) states that Tokitsugu sent a small keg of shoyu to Nagahaki kyoku. It seems that at the end of the Muromachi period, shoyu is becoming popular.

1560 May—Oda Nobunaga (who lived 1434-1582) wins the war over Imagawa Yoshimoto (1519-1560) in Okehazama. At about this time people start use the technique of frying to prepare the side dishes to their meals (*fukushoku-hin*) for the first time.

1573-91—Shoyu making starts on the island of Shodoshima.

1574—Tanaka Chobei of the feudal domain of Shimousa (today’s Chiba prefecture) Ichikawa starts making shoyu.

1587—Maruo Magouemon of Hanshu Tatsuno makes shoyu using Mikazuki soybeans.

1591—Akagiri Saburobei of Yuasa in Kishu-han (today’s Wakayama prefecture) starts to use Shoyu Kaisen, a ship of at least 200 koku [9,520 gallons] capacity to transport his shoyu to other feudal domains (*kuni*) for sale.

1594—The term *koma-dofu* appears in the Rokuon Diary of Ginkakuji. “Rokuon” means “deer garden.” *Koma-dofu* is a very firm tofu which originated in Korea. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

46. Companhia de Iesus [Society of Jesus (Jesuit)]. 1603.

Vocabulario da lingua de Iapam, com a declaração em Portugues, feito por alguns padres, eirmaos da Companhia de Iesu [Vocabulary of the language of Japan, with definitions in Portuguese, produced by some fathers and brothers of the Society of Jesus]. Nagasaki, Japan. 403 p. [Por; Jap]

• **Summary:** At the bottom of the title page is written:

“Com licença do ordinario, & Superiores em Nangasaqui no Collegio de Iapam da Companhia de Iesus. Anno M.D. CIII.” The “Licença” or license by Francisco Pasio is dated 2 Jan. 1603. A romanized version of each Japanese word is given, followed by a brief explanation in Portuguese. In Japanese, this book is known as *Nippo Jisho, Nagasaki-ban*. In 1960, Iwanami Shoten published a facsimile edition in Japan, titled *Nippo Jisho: Vocabulario da lingua de Iapam*, compiled by Tadao Doi (822 p., 22 cm), then in 1980 they published a Japanese translation (xxxiv + 862 p., 27 cm). Kawakami (1978) has summarized some soy-related portions. Iwai (1953, p. 11) notes that this dictionary was compiled by Joao Rodrigues—but this is controversial.

Soy-related terms in this dictionary, and a translation of their definitions from Portuguese, through Japanese, into English, are as follows:

Abura ague. 1. Abura agueno mono. Abura-agé [deep-fried tofu] or abura-agé mono. Things which are deep-fried in oil. Note 1. This is the earliest document seen (April 2001) that mentions fried tofu.

Aburidôfu. Slice tofu, which is made from beans like raw cheese, broil in a fire.

Amazaqe [Amazake], a still-bubbling fermented liquid that has not yet completely become sake; or sweet sake. Note 2. This is the earliest Portuguese-language document seen that mentions amazake, which it calls “Amazaque.”

Azzuqi or azzuqui [azuki beans]. “*Hus feijoes pequenos como lentilhas*” means “Beans that resemble green peas (endo). Azzuqigai is rice porridge (o-kayu) that contains azuki beans. Azzukimochi is mochi that contains azuki beans. Note 3. This is the earliest European-language document or Portuguese-language document seen (Jan. 2005) that mentions azuki beans, which it calls *Azzuqi* or *Azzuqui*.

Cabe [Kabe]. Same as tofu. A type of food which is made from ground beans. This is a woman’s word. Note 4. This is the earliest document seen (Feb. 2004) that uses the word “cabe” (or “kabe”) to refer to tofu.

Côji [Koji], a yeast used in Japan to make sake, or mixed with other things. Note 5. This is the earliest European-language document seen (July 2000) that mentions the word for koji.

Daizzu [Daizu]. Mame. Graos, ou feijoes de Iapao [grain, seed, kernel, or Japanese beans].

Dengacu [Dengaku]. Dancing monks (Bôzos). Or tofu which is skewered, and on top of each slice is spread miso; then it is broiled.

Fanben [Hanben]. A type of food which is made by

broiling tofu and simmering it with miso.

Ichchô. A way of counting some types of food, such as tofu.

Miso. A kind of mixture which is made with *graos* [grains, seeds, kernels], rice, and salt to season Japanese soups.

Note 6. This is the earliest European-language (or Portuguese-language) document seen (March 2009) that mentions miso, which it calls *Miso*.

Misocoxi [*Misokoshi*], a bamboo strainer used for straining miso. Note 7. This is the earliest document seen (March 2011) that mentions a *misokoshi*.

Misoya, a shop that sells miso.

Misoyaqijiru [*Miso-yaki-jiru*], a type of soup (*Xiru*) made with tofu and finely sliced daikon radish. Note that the word tofu was written as “Tofus” in the dictionary but should be written “Tôfus.”

Misôzzu, which should properly be called Zosui, is a healing food made from vegetables, rice, miso, etc. and served to those who are old, weak, or sick. Another meaning of this term is a type of porridge [*kayu*] containing a mixture of rice, vegetables, and other things.

Nattô, a type of food made by a brief boiling of grains / seeds [*graos* is the word used, but soybeans are actually employed], which are then put into an incubation chamber (muro).

Nattôjiru, a soup (*Xiru*) made from natto. Note 8. This is the earliest Portuguese-language document seen (Jan. 2012) that mentions *natto* or *Nattôjiru*. However recall that the “natto” used in Nattôjiru may well be fermented black soybeans.

Saqe (sake, saké).

Tamari, a very savory liquid taken from miso which can be used for seasoning foods [when cooking] or at table. Note 9. This is the earliest document seen (April 2012) that mentions tamari.

Tôfu*–Taufu. A type of food. It is made into the shape of a cheese by crushing soybeans. * Note: The sound of the Japanese character for bean (mame) is “tou.” But at that time “taufu” was the typical pronunciation. In other documents it is the same, for example the *Iitsugu Kyoki* (Iitsugu Diary) written during the Tensho period (1573-1586), with entries in 1588, 1591, and 1600. Sometimes they used the characters for “T’ang” (as T’ang dynasty in China) and “cloth,” although they were also pronounced as “taufu.” In this 1603 Portuguese dictionary there appear a number of tofu terms written in the “open sound form” (kaionke): Cabe [Kabe = wall], Dengacu [Dengaku], Fanben, Ichchô [One cho or cake of tofu], Vdondôfu, and Yudofu. One exception is the term Aburidôfu.

Tôfuya–Taufuya, a shop which makes and sells that cheese-like thing (tofu), which is made by grinding soybeans that have been soaked in water until they are soft.

Vdondôfu [Udon-dôfu]. Tofu which is made like udon

(Japanese-style wheat noodles) and cooked.

Xôyu [Shoyu, or soy sauce], a liquid which corresponds to vinegar except that it is salty. It is used for seasoning foods. It is also called *sutate*. The character *su* means “bamboo mat” [as in “sudare”] and the character *taté* means “to stand up.” Note 10. This is the earliest Portuguese-language document seen (April 2012) that mentions shoyu or soy sauce, which it calls *Xôyu*.

Yudôfu–Yudafu: A food made from thinly sliced tofu, served next to a *kakejiru*-type sauce [which is then poured over the top].

The following terms are not mentioned: Agé (but *abura-agé* is), Daitokuji natto, Edamame (or *Eda mame* or *Yeda mame*), Fu (or gluten or wheat gluten), Hamanatto or Hamana-natto, Hiya-yakko, Kinako, Koya-dofu (or Kori-dofu), Okara, Soi*, Soj*, Shoyu, Tonyu, Unohana, Yaki-dofu, Yuba, Zoy*.

Note 11. This is the earliest dictionary of the Japanese language compiled by Europeans. It is also the earliest document seen (Feb. 2001) concerning soybeans or soybean products in connection with (but not yet in) Europe or Portugal, and the first such document to mention miso or natto.

Note 12. This is the earliest European-language (or Portuguese-language) document seen that mentions tofu, which it calls *Cabe*, *Tôfu*, or *Taufu*.

Michael Cooper (1974, p. 222-23), in his excellent biography of Rodrigues, states that in the preface to this celebrated work, the “compilers promised to produce shortly a supplement containing additional terms and words inadvertently admitted from the dictionary. The supplement appeared the following year, and the Bodleian Library, Oxford, possesses a copy of both the *Vocabulario* and its supplement bound together in one volume. The dictionary runs a formidable total of 330 folios, while the supplement extends to 71 more folios, each page carrying two columns of text. The value of this great dictionary, containing a total of 32,798 entries, is considerable.” “Whether or not Joao Rodrigues had a hand in the compilation of the *Vocabulario* is still a debatable point... Thus until further evidence appears, the identity of the principal European collaborators must remain conjectural.” Address: Nagasaki College of Japan.

47. Product Name: [Higeta Shoyu].

Foreign Name: Higeta Shôyu.

Manufacturer’s Name: Choshi Shoyu.

Manufacturer’s Address: Choshi, Japan.

Date of Introduction: 1616.

Ingredients: Soybeans, wheat, water.

Wt/Vol., Packaging, Price: Keg

How Stored: Shelf stable.

New Product–Documentation: Chamberlain, Basil Hall; Mason, W.B. 1901. Handbook for travellers in Japan:

Including the whole empire from Yezo to Formosa. 6th ed., revised. London: John Murray; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ltd. ix + 577 + 94 p. In the ads at the back is a full page advertisement (p. 49) for “Higeta Soy, manufactured by G. Tanaka, Chôshi, Shimôsa, Japan.” An illustration shows the Higeta trade mark. “Higeta Soy dates from 1615 A.D. (Second year of Genwa). Higeta Soy is honoured with the distinguished patronage of the Imperial Household. Higeta Soy was awarded the superior medal at the World’s Fair at Chicago, and gold and other superior medals by the Home Exhibitions.

Fruin, W. Mark. 1984. “History of Higeta Shoyu Co.” 4060 Amaranta Dr., Palo Alto, California 94306. 4 p. May 15. Unpublished manuscript. Higeta shoyu is one of the oldest brands of soy sauce in Eastern Japan, tracing its history back to the Hamaguchi brothers who migrated at the beginning of the 17th century from Hiromura in Wakayama prefecture (across the river from Yuasa, the birthplace of shoyu in Japan) to Choshi on the eastern tip of the Miura Peninsula, which curves around the top of Tokyo Bay. The Black Current, which runs northward from Wakayama to Choshi, carried the Hamaguchi brothers’ ships. They had the foresight to transport shoyu from its place of origin in western Japan to the newly opened vistas in the 17th century of Tokyo and the Kanto plain hinterland.

Around 1615 the elder of the two Hamaguchi brothers established Hiroya, a food distribution company in Tokyo (then Edo), while the younger brother ventured into the manufacture of Yuasa shoyu. For the next several centuries, Yamasa was noted as a good but local shoyu, indistinguishable from other local brands except for the access to the Tokyo market, which it enjoyed through Hiroya.

In 1914 the elder Hamaguchi joined with two other Choshi families, Tanaka Genba and Fukui Kichibei, to form the Higeta Shoyu Co. Ltd. Each family continued to produce their own brands of shoyu but around 1925 Higeta, which had been Tanaka Genba’s brand, became the sole company brand. An ambitious plan of expansion of expansion was drafted to leapfrog Higeta over Yamasa its local rival.

Akio Saito. 1985. [Chronology of soybeans in Japan]. *Daizu Geppo* (Soybean Monthly News). Jan. p. 14-16. 1616–Tanaka Genba of Kamiusa no Kuni is advised to make tamari shoyu as a side business by Sanagi Kyurouemon of Settsu. The latter runs a sake factory and has a wholesale seafood products shop in Edo. This is the beginning of Choshi Shoyu and Higeta Shoyu.

1895–Around this time the number of small shoyu makers decreased dramatically as Kikkoman, Yamasa, and Higeta increasingly used advanced industrialized methods.

Note: This is one of the earliest brands of commercial soy sauce seen made by any company in Japan.

48. Vliet, Jeremias van. 1637. [Re: Request for provisions].

Letter to Nicolaes Coeckenbacker, head of Dutch office at Firando [Hirado Island, near Nagasaki, Kyushu, southern Japan], June 11. p. 555-65 See p. 565. Handwritten, with signature. [Dut]

• **Summary:** This request includes: 10 pots of sugarloaf, 50 candlesticks dismantled into parts, 50 lacquered plates with legs and gilded flowers, 10 Kegs Murasaki to hawk among the Moors (*10 Balien Moersackjen om onder de Mooren te venten*). Note 1. Murasaki (literally “purple”) is an ancient poetic synonym for soy sauce.

Bibliographic reference in Dutch: NA, VOC 1125, overgekomen brieven en papieren (11-6-1637) 555vo-565vo. The letter is a contemporary hand-written copy, written in a letter-book for the administration on Deshima.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 1125 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 1125].

Note 2. This is the earliest Dutch-language document seen (April 2012) that uses the word “Moersackjen” [murasaki] to refer to soy sauce.

Note 3. The Dutch word for “murasaki” also appears in at least two other letters written requesting provisions during the late 1630s, but in each case “murasaki” seems to be a solid, ordered in units of pieces or bales (such as indigo), as follows: (1) 1638 May 5. NFJ 277, p. 319. Letter from the prince of Tonkin to the president of the VOC settlement at Firando. “8 pieces of murasaki or violet (*8 stucx mourasacqui ofte violeth*). (2) 1638 July 15. NFJ 277, p. 472. Letter from Henrick Nachtegaele in Siam to the honourable mister president Nicolaes Couckenbacker at Firando. “Twenty bales of murasaki to sell and use as a present (*Twintich baelen moersacqui om te vercoopen ende te verschencken*).

Note 4. Assuming “Moersackjen” refers to soy sauce: This is the earliest document seen (Feb. 2012) concerning soybean products (soy sauce) in Siam. This document contains the earliest date seen for soybean products in Siam (1637); soybeans as such have not yet been reported. Address: In India at the office in Siam (*India op het comptoir Siam*).

49. Ryôri monogatari yorozu kikigaku [Many tales of cooking I have heard and recorded]. 1643. Japan. [Jap]*

• **Summary:** This famous printed book by an unknown author is the earliest Japanese book that specialized in cooking. Therefore it was widely quoted in many subsequent cookbooks. Recipes include miso soup and tare-miso.

Some Japanese authors cite the Japanese title as simply *Ryôri monogatari* however the eminent scholar T. Yokotsuka (1985, p. 206) cites it as *Ryôri monogatari yorozu kikigaku*.

The names of the volumes include *Ryôri Taikan*, *Nihon*

100. <i>comptoir nagasaekij</i> (Cassan)	30. ---
12. <i>poften land koud cojeh met de polen samer</i>	13. ---
10. <i>Balien Sacrij u 15 maas gde</i>	2. 7. ---
10. <i>Balien Soije u 27. condrijn gde</i>	

Ryôri Taikan, Zokugun Shoruiju Inshokubu, Shokumotsu Koza.

Note: This is the earliest document seen (Jan. 2008) worldwide, and the earliest Japanese-language document seen (Jan. 2008) that mentions dried-frozen tofu or frozen tofu, which it calls *kôri-dôfu*. Miyashita, who cited this early reference, gave the book's date as 1624.

Concerning shoyu: Iino (2001, p. 21) contains a "Table of ingredients used in *tou-miso* and shoyu during the Edo period." The entry for *Ryori Monogatari* (compiled in 1643) states that *Masaki shoyu* is made from the following ingredients: Soybean 19.6%. Wheat / barley 22.5%. Salt 15.7%. Water 39.2%.

In the section on "Foods, Sake," is a section on "Quick preparation of amazake. Wash 1 *sho* (1.8 liters) of cooked and dried glutinous rice (*domyoji*) in hot water and drain. Mix in 1 *sho* of koji and 1.5 *sho* of water; grind in a *suribachi* very well. Strain in a strainer (*suino*), then simmer in a pot, while stirring. It will become good amazake. Adding white sugar is good."

In the section titled "Man Kiki Gaki" is a description of "How to make Shirokawa Amazake. Crack by grinding 3 *sho* white rice, steam well and cool. Mix in 5 *sho* of koji, 5 *sho* of water, and knead well. Strain in a strainer (*suino*). Discard the pulp and keep the liquid to make amazake. Mix it occasionally. In summer it takes 3 days and in winter 5 days until it is ready."

50. **Product Name:** [Unknown brand of shoyu].

Manufacturer's Name: Unknown shoyu company.

Manufacturer's Address: Choshi, Chiba-ken, Japan.

Date of Introduction: 1645.

New Product–Documentation: Ad in *The East*. 1968. Fruin. 1984. *History of Five Japanese Shoyu Companies*. Soya Bluebook. 1987. p. 94. Address: Kakigaracho 1-23-8, Nihonbashi, Chuo-ku, Tokyo 103, Japan.

Note 1. This is the earliest known commercial soy product made in Japan (Jan. 2007; one of two products).

Note 2. This is the earliest record seen (July 2011) concerning the ancestor of Yamasa Shoyu.

Note 3. The Yamasa Corporation USA website (printed 3 July 2011) under "Company history," states: "In 1645, company founder Gihei Hamaguchi began brewing soy sauce in Choshi, Japan, under the Yamasa name." "Yamasa Corporation began exports of soy sauce to the U.S. over 130 years ago" (i.e., before 1881).

Note 4. The early history of the company now named Yamasa Shoyu is shrouded in mist. We can find no early document which states that the name "Yamasa Shoyu"

existed before 1854. And at that time it was the name of a brand of shoyu, not the name of a company.

51. In't Comptoir Nagasaekij [In the office of Nagasaki].

1647. Letter to Taiwan / Formosa, Oct. 16. Unpaginated.

Handwritten, with signature. [Dut]

• **Summary:** Shipped and loaded in the sailing ship (*fluijtschip*) the *Zwarte Beer* [literally "black bear"] sailing from this place with a Bill of Lading of the chiefs [of this office] to Taiwan (*Taijoan*) in consignment send to the honorable Pieter Antonisz, Maritime (*Overwater*), President of the Island of Formosa (*Eijlants Formosa*).

The list of provisions sent includes: "12 pots of hard bread costs together with the pots—f 30:--:--. 10 kegs (*balien / taru*) of sake (*sackij*) of 15 *maas* a piece—f 15:--:--. 10 kegs (*balien*) of Soy [sauce] at 27 *condrijn* a piece—f 2:--:-- (See above).

Bibliographic reference in Dutch: NA, NFJ 847, Journal (16-10-1647).

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 847. Boekhoudkundig journaal [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 847. Journal of bookkeeping].

Note 1. This is the earliest Dutch-language document seen (April 2012) that clearly mentions shoyu or soy sauce, which it calls *Soije*.

Note 2. A *maas* and a *condrijn* are old units of Asiatic currency of account used in China and Japan. The VOC glossary says: 1 *maas* = 7 or 8 *stuivers*, but in Siam 1 *maas* = 9 *stuiver*. A *condrijn* is smaller than a *maas*. The symbol "f" stands for guilder, the basic Dutch monetary unit. "f 2:07:8" is read "two guilders, 7 *stuivers* and 6 *pennigen*." One *gulden* (singular of *guilder*) = 20 *stuivers*. One *stuiver* = 12 *pennigen*.

Note 3. In 1624 the Dutch established their first trading post on Formosa. They had their colonial capital at Tayoan City (source of the modern name "Taiwan," and site of present day Anping).

Note 4. This is the earliest document seen (July 2007) concerning involvement by the Dutch or the Dutch East India Co. (VOC) with soyfoods (soy sauce) or soybeans.

Note 5. This is the earliest document seen (April 2012) concerning soy sauce trade (imports or exports). In this case exported from Japan to today's Taiwan.

Note 6. This factory (trading post) on Deshima Island in Japan was owned by the Honorable Dutch East India

Company (VOC). Deshima was a small island in Nagasaki harbor, on Japan's southernmost main island of Kyushu. In 1600 the Dutch first made contact with Japan when the Dutch ship *De Liefde* drifted ashore in Usuki Bay in northeastern Kyushu. Many of the original 110 crewmembers had died and only 6 of those remaining could walk ashore unassisted. Two of the survivors went on to earn important places in Japanese history: William Adams and Jan Joosten.

In 1616 European ships were limited to the two ports of Nagasaki and Hirado (an island off the northwest coast of Kyushu, just northwest of Nagasaki).

In 1633 the Tokugawa shogunate (upset at Portuguese Christian missionaries intent on making converts and instigating revolts) adopted a policy of national isolation which continued for 221 years until 1854.

In 1639 the Portuguese were expelled. This left only the Dutch among the Europeans still trading with Japan and their representatives were moved in 1641 from Hirado to the tiny artificial island of Deshima / Dejima built by the shogunate in Nagasaki harbor, where they were kept as virtual prisoners. During this time Japan maintained contact with only two other nations: China and Korea. Chinese merchants were also allowed to trade at Nagasaki, but under strict controls.

By 1639 the Japanese had so successfully closed their doors to the outside world that subsequently Japan all but dropped out of the consciousness of Europeans. The only important exception was the annual Dutch vessel from the East Indies to the Dutch trading post on the island of Deshima in Nagasaki harbor.

During the 1600s and 1700s, the Dutch expanded their network of trading posts throughout Asia, they continued to order provisions from Japan via their tiny but very important trading post at Deshima. Address: Deshima, Nagasaki, Japan.

52. Yorozu kikigaki hidem [Secrets of things heard and written]. 1650. Japan: Publisher unknown. 102 p. 2 volumes. Japanese summary by Kawakami 1978, p. 158. [Jap]

• **Summary:** Within the 54 sections, 34 sections concern food preparation, preservation, etc. Includes how to make shoyu, natto, dried-frozen tofu (kori-dofu), and miso. Between 1650-1673, nine printings were made. Each successive publication became more compact and more popular.

53. Craijers, E. Hendrick; Westerwolt, Volckerus; Momme, Hendrick. 1651. [Re: Request for silver]. Letter to Pieter Sterthenius, president of the Deshima factory [Nagasaki, Kyushu, southern Japan], June 30. p. 48-52. See p. 52. Handwritten, with signature. [Dut]

• **Summary:** This request for silver includes: 10 bales of flour, 4 bales of buckwheat, 6 kegs of sake (*sackje*), 8 kegs of soy [sauce] (*balien [taru] sooje*), 24 little hams, 4 jars of hard bread,... 8 kegs of pickled vegetables (*kônomoro [kô-no-mono]*), 4 books of paper, 6 kegs of soy [sauce] (*moersackien*

[*murasaki*]; a poetic synonym for soy sauce), 12 boxes of marmalade (see below).

Handwritten Dutch text from a letter, listing various goods and quantities:

Bibliographic reference in Dutch: NA, NFJ 284, ontvangen brieven (30-6-1651). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 284 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 284].

Note 1. This is the earliest Dutch-language document seen (April 2012) that uses the word "sooje" to refer to soy sauce.

Note 2. About the recipient: In *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Pieter Sterthenius. He was Council of Justice in Batavia and thereafter in 1651 for one year president of the Dutch merchant settlement in Japan. From 1655 to 1658 he was director of Bengal. In 1658 he went back home to the Netherlands as commander of the return fleet. This letter is a contemporary handwritten copy, in a letter-book for the administration on Deshima. It was sent on the ship *Coninck van Polen*. Address: Supreme merchant and head of the settlement at Siam (*Oppecoopman en opperhooft des comptoirs Siam*).

54. Creijers, Henrick; Westerwolt, Volckerus; Rijck, Jan van. 1652. [Re: Request for Japanese silver to keep the commerce going]. Letter to Adriaen van der Burch, director of commerce at the Deshima factory [Nagasaki, Kyushu, southern Japan], July 3. p. 73-77. See p. 77. Handwritten, with signature. [Dut]

• **Summary:** This request for silver and provisions includes: Two stones to grind wheat, 20 bales of wheat,... 3 bales of buckwheat, 10 kegs of sake (*balien sackij*), 8 kegs of soy

[sauce] (*balien soij*), 2 pots sugarloaf, 6 kegs of pickled vegetables (*kônomoro* [*kô-no-mono*]), 12 *sonwats vissen* (*sonquat* = Japanese New Year), 20 boxes of marmalade, 6 bales *umeboshi* (*omebus*; salted or pickled plums).

Note 1. This is the earliest Dutch-language document seen (April 2012) that uses the term “*Zoije*” to refer to soy sauce. Address: Deshima, Nagasaki, Japan.

58. Caesar, Cornelius. 1654. [Re: Order for provisions].

Letter to Honourable Hapart at the Deshima factory [Nagasaki, Kyushu, southern Japan], July 18. p. 46-56. See p. 53. Handwritten, with signature. [Dut]

• **Summary:** This order for provisions includes: 25 smoked hams, 4 kegs of miso (4 *balies miso*), 4 kegs of soy [sauce] (4 *ditos soijo*), 6 large kegs of the very finest pickled vegetables (*connemon van de alderbeste*), 25 bales of white stamped rice.

Note 1. This is the earliest Dutch-language document seen (March 2009) that uses the word “*miso*” to refer to miso.

Note 2. This is the earliest Dutch-language document seen (April 2012) that uses the word “*soijo*” to refer to soy sauce.

Bibliographic reference in Dutch: NA, NFJ 286, ontvangen brieven (16-7-1654). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 286 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 286].

Note: About the sender: In *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Cornelius Caesar. In 1609 he was born in Goes, a commune in Zeeland province, southwest Netherlands. By 1635 he was already a merchant in the VOC service. In 1636 and 1637 he was a merchant in Quinam [Cochin China]. Then he was a merchant in Taiwan and in

Japan. In 1641 he became supreme merchant. From 1646-1651 he was back in Holland. In 1651 he became Council of Justice in Batavia. From 1653 to 1656 he was Governor of Formosa. In 1657 he died in Batavia. This letter is a contemporary handwritten copy, in a letter-book for the administration on Deshima. Address: Governor of Taiwan and the Council of Formosa.

59. Coijett, Fredrick; Schedel, Fredrick; Dammans, R.; Alphen, Pieter van; Pedel, Thomas. 1655. [Re: List of provisions ordered]. Letter to Honourable Leonard Winnix on Deshima (Nagasaki, Japan), Aug. 3. p. 1-13. See p. 8. Handwritten, with signature. [Dut]

• **Summary:** In this letter (p. 8) is an order for provisions: 12 Japanese hams. 25 bales of white stamped rice. 6 kegs of good pickled vegetables (*connemon* [*kô-no-mono*]). 4 kegs of miso (*Balijen Miso*). 4 kegs of soy [sauce] (*Soija*). 4 bales of buckwheat. 8 Japanese room-mats (*camermatten*). 5 to 6 ordinary tea kettles.

Bibliographic reference in Dutch: NA, NFJ 287, ontvangen brieven (3-8-1655) 1-13. On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 287 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 287].

Note: This is the earliest Dutch-language document seen (April 2012) that uses the word “Soija” to refer to soy sauce. This soon becomes by far the most widely used spelling of “soy sauce” in Dutch; of the 11 letters that mention soy sauce (and that we have seen) written in the 21 years between Aug. 1657 and Nov. 1678, all but one ask for “Soija.” “Soije” was a distant second. Address: Fort Zeeland (Casteel Zeelandia) on Taiwan.

60. Sterthemius, Pieter. 1656. [Re: Order for provisions]. Letter to E. Joan Boucheljon, head of the Deshima factory [Nagasaki, Kyushu, southern Japan], March 8. Unpaginated. Handwritten, with signature. [Dut]

• **Summary:** Order for: 8 little kegs of good soy [sauce] (8 *balietges goede soeija*), 2 kegs of pickled vegetables (*connemonne* [*kô-no-mono*]), 2 kegs of good sake (*sackje*),... 2 sake kettles (*sackie ketels*).

Bibliographic reference in Dutch: NA, NFJ 355, ontvangen brieven (8-3-1656). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 355 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 355. The pages are not numbered]. This letter is written in a letter-book for the administration on Deshima.

Note 1. This is the earliest Dutch-language document seen (April 2012) that uses the word *soeije* to refer to soy sauce or shoyu.

Note 2. This trading post was established by the Portuguese in 1537, by the English at Hooghly in 1651, and by the Dutch at Chinsura in 1656; the towns were united as Hooghly-Chinsura in 1865.

Note 3. This is the earliest document seen (Nov. 2010) concerning soybean products (soy sauce) in India. This document contains the earliest date seen for soybean products in India (1656); soybeans as such have not yet been reported.

Note 4. About the sender: From 1655 to 1658, Pieter Sterthemius was director of the VOC’s Bengal settlement. On 17 December 1659 he went back home to the Netherlands as a commander of nine ships.

About the recipient: In *Pieter van Dam’s Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel the entry for E. Joan Boucheljon appears under Jan Boucheljon. In 1641 he left Holland and sailed as an assistant writer to Asia. He worked mostly in Japan, where he was head of the VOC settlement on Deshima. Three times (in 1655, 1657, and 1659) he was a member of the Council of Justice in Batavia. In Holland, he was known as someone with a good reputation. On 24 Jan. 1661 he returned home to Holland as commander of two ships: the *Kalf* and the *Venenburg*. Address: Director of the Bengal Settlement [on the Hooghly {Hooghly-Cinsura} in today’s West Bengal, northeastern India, on the Hugli River].

61. Indijck, Hendricq; Kettingh, Pieter; Stouthart, Adrien. 1657. [Re: Order for provisions]. Letter to the Deshima factory [Nagasaki, Kyushu, southern Japan], July 8. p. 5-9 See p. 9. Handwritten, with signature. [Dut]

• **Summary:** “For the provision of this settlement [Cambodia] we request... 20 kegs sake (*sackie*), with drinking utensils / accessories, a little soy [sauce] (*wat soija*), and vegetable pickles (*connemonne* [*kô-no-mono*]) to treat the Japanese and other merchants from time to time.”

Bibliographic reference in Dutch: NA, NFJ 288, ontvangen brieven (8-7-1657) 41. On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 288 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 288].

Note 1. This is the earliest document seen (Feb. 2012) concerning soybean products (soy sauce) in Cambodia; soybeans as such have not yet been reported.

Note 2. About the sender: In *Pieter van Dam’s Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Hendricq Indijck. He was supreme merchant in Cambodia and after that he became, three times,

head of the trading post in Japan. In Cambodia he was succeeded by Pieter Kettingh. This letter is a contemporary handwritten copy, in a letter-book for the administration on Deshima. The letter was received on 10 Aug. 1657 by the yacht (*jacht*) *Erasmus*. Address: Head (*Oppehofd*), Dutch factory in Cambodia.

62. Coijett, Fredrick; Schedel, Fredrick; Dammans, Reijnier; Pedel, Thomas; Valentijn, Jacobus. 1657. [Re: List of provisions ordered]. Letter to [illegible] on Deshima (Nagasaki, Japan), Aug. 3. p. 1-5. See p. 4. Handwritten, with signature. [Dut]

• **Summary:** In this letter (p. 8) is an order for provisions: With the return ships, you must send for the use of this settlement and otherwise the following: 10 to 12,000 bales of new rice. 500 bales of wheat. 800 pairs of cotton dress coats for the for the slaves of the factory based on the model / pattern sent with the skipper of the *Domburgh* / *Domburg*; they must be more suitable than the last ones. 150 piculs [1 picul = about 125 lb] of good Japanese tobacco, to fill all cargo space available. 20 bales of white stamped rice. 8 hams. 6 kegs of pickled vegetables (*connemonne* [*kô-no-mono*]). 6 kegs of good sake (*sackie*). 3 kegs of miso (*missouw*). 3 kegs of soy [sauce] (*soija*). 2 pairs of scales [for weighing] with their accessories.

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “missouw” to refer to miso.

Bibliographic reference in Dutch: NA, NFJ 288, ontvangen brieven (8-7-1657) 1-5. On microfilm. Received 19 July 1657. Sent with the ship *Domburgh* / *Domburg*.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 288 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 288]. Address: Fort Zeeland (Casteel Zeelandia) on Taiwan.

63. Coijet, Fredrik; Oetgens, Johan; Pedel, Thomas; van Iperen, Thomas; Harthouwer, D. 1658. Lijst met handelswaar [Re: List of commodities ordered]. Letter to Joan Boucklejou on Deshima (Nagasaki, Japan), July 30. p. 25-33. See p. 28. Handwritten, with signature. [Dut]

• **Summary:** In this letter (p. 28) is an order for provisions: “20 bags of white stamped rice. 6 kegs of pickled vegetables (6: *balien connemonne* [*kô-no-mono*]). 3 kegs of miso (*missoe*). 3 kegs of soy sauce (*soija*). 3 kegs of umeboshi (*mebos* [salt pickled plums]). 6 kegs of sake (*sackij*). 12 pieces of smoked ham.” Also information about copper weights. On p. 33 are the names of the writers.

Note 1. This is the earliest Dutch-language document seen (March 2009) that uses the word “missoe” to refer to miso.

Note 2. This is the earliest document seen (Dec. 2006)

concerning umeboshi salt plums.

Bibliographic reference in Dutch: NA, NFJ 289, ontvangen brieven (30-7-1658) 28. On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 289 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 289].

Note 1. This is probably a list of goods for Goijet’s table, because he requested the same sort and amount of provisions on 7 Aug. 1659. Address: Governor of Formosa, Fort Zeelandia (Casteel Zeelandia) on Formosa [in today’s Taiwan].

64. Coijet, Fredrik; Oetgens, Johan; Pedel, Thomas; van Iperen, Thomas; Harthouwer, David. 1659. Des provisen voor de Tafel van den Gouverneur [Re: Order of provisions for the governor’s table]. Letter to Wagenaar, head of the trading station, Nagasaki (*opperhooft en den Raadt des Nagasakkisen Comptoir*) [Deshima, in Kyushu, southern Japan] and the councillors of this place, Aug. 7. p. 40-41. See p. 41. Handwritten, with signature. [Dut]

• **Summary:** In the postscript of this letter (p. 41) is an “order for provisions for the Governor’s table. Will Your Excellency please send us: 6 kegs of pickled vegetables (6: *balien connemonne* [*kô-no-mono*]). 3 little kegs (*balities*) of the best soy sauce (*soija*). 2 kegs of miso (*missoe*). 1 keg of umeboshi (*mebos* [salt pickled plums]). 6 kegs of good sardines (*sardeijn*), mostly little ones. 20 pieces of smoked ham. 6 pieces *songuats* fishes. 50 sets of three finest dishes or plates of a certain size (*drielingen*). 30 sets of four finest dishes or plates of a certain size (*quarten* [*kwarten*]). 100 fine flat dishes (*pieringen*). 50 fine flat dishes (*pieringen*) of the smallest.” At the end of the postscript are the names of the writers.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 290 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 290]. Address: Governor of Formosa, Fort Zeelandia (Casteel Zeelandia) on Formosa [in today’s Taiwan].

65. Rijck, Jan van. 1660. [Re: Order of provisions for private use]. Letter to Joan Boucheljon, president and head of the trade and other business, Nagasaki [Deshima, in Kyushu, southern Japan], June 29. Unpaginated. Handwritten, with signature. [Dut]

• **Summary:** The provisions ordered include: 200 catties (1 catty = 625 gm or 1.3 lb) uncut tobacco, 50 catties

cuttle-fish (*Zeekath*), 200 pieces *Cantjo* (*Cantio*), 3 kegs of pickled vegetables (*connemon* [*kô-no-mono*]), 3 kegs soy [sauce] (*soije*), 20 kegs of sake (*sackie*), 30 bales of wheat, 6 Japanese coats with double linings, 6 smoked hams, 6 smoked *songuadts* / *songuat* fishes, 4 copper candle holders.

Bibliographic reference in Dutch: NA, NFJ 291, ontvangen brieven (29-6-1660). On microfilm.

About the recipient: E. Joan Boucheljon is mentioned as Jan Boucheljon in *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel. In 1641 he left Holland and sailed as an assistant writer to Asia. He worked mostly in Japan, where he was head of the settlement in 1660. Three times (in 1655, 1657, and 1659) he was a member of the Council of Justice in Batavia. In Holland he was known as someone with a good reputation. On 24 Jan 1661 he returned home to Holland as a commander of two ships: the *Kalf* and the *Venenburg*.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 291 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 291]. Address: Siam.

66. Product Name: [Shoyu].

Foreign Name: Shôyu.

Manufacturer's Name: Takanashi Hyôzaemon XIX.

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1661.

Ingredients: Soybeans, wheat, water.

Wt/Vol., Packaging, Price: Bottle.

New Product–Documentation: Noda Shoyu K.K. (Morio ICHIYAMA, ed.). 1955. Noda Shoyu Keizai Shiryo. Noda: Noda Shoyu Research Dept. p. 1.

Mark Fruin. 1983. Kikkoman: Company, Clan, and Community. p. 1, 16, 18, 21. "Takanashi Hyôzaemon XIX, whose descendants help manage Kikkoman today, began brewing shoyu, or natural soy sauce, in 1661 in the town of Noda... Using a work force of twenty that included fifteen contract laborers, he produced 3,000 gallons his first year."

Note: This is the earliest commercial soy sauce seen made by any company that later became Kikkoman. Although Kikkoman states on the label of each bottle of its soy sauce that the company originated in 1630, we can find no evidence indicating such an early date. The first shoyu made by a member of the Mogi family dates from the 1760s.

67. Product Name: [Miso].

Foreign Name: Miso.

Manufacturer's Name: Mogi Shichizaemon I.

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1662.

New Product–Documentation: Mark Fruin. 1983. Kikkoman: Company, Clan, and Community. p. 16. In 1662

Mogi Shichizaemon started with the manufacture of miso, the rice or soybean paste similar to shoyu in fermentation technology. This is the earliest known soyfood product made by a member of the Mogi family, whose descendants now run Kikkoman.

68. Verdonck, -. 1664. [Re: Order for provisions]. Letter to the Deshima factory [Nagasaki, Kyushu, southern Japan], Aug. Handwritten, with signature. [Dut]

• **Summary:** Order for some small kegs of soy [sauce].

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); inventaris nummer 295 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); record number 295]. Address: Head (*Oppehofd*), Dutch factory in Tonking [Tonkin, in today's northern Vietnam].

69. Speelman, Cornelis; Lange, Pieter de; Huijberts, Pieter; Carpentier, Roelant de. 1665. [Re: Request for copper and provisions]. Letter to E. Jacob Gruijse, supreme merchant and head of the Council (*oppercoopman end opperhooft en aen den Raet*) at the Deshima factory [Nagasaki, Kyushu, southern Japan], Feb. 28. Unpaginated. Handwritten, with signature. [Dut]

• **Summary:** This request includes: 2,500 chests of copper. 60 kegs of Japanese camphor. No tea because we do not like it and it is very foul. 1,500 pieces of porcelain after the specifications of last year, but the bowls were much too coarse; they must be snow-white. 6 to 8 kegs of soy [sauce] (*balities Soija*) and 2 to 3 kegs pickled vegetables (*connemonne* [*kô-no-mono*]). As many walking canes (*rottangs*) as last year if they are beautiful.

Bibliographic reference in Dutch: NA, NFJ 295, ontvangen brieven (28-2-1665). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 295 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 295]. Address: In the Company's castle Geldria at Pulicat / Palghat (*Casteel Geldria tot Paliacatta*) (in today's Tamil Nadu, Coromandel Coast, southeastern India).

70. Maetsuyker, Joan. 1668. [Re: Request for a decision concerning private merchandise]. Letter to Heren XVII ("17 Lords," leaders of the Dutch East India Company, VOC), Netherlands, Dec. 19. [Dut]

• **Summary:** The Governor-General and the Council in Batavia requested a decision from the "Heren XVII" about private merchandise from Japan imported into Batavia. Mostly this private merchandise consists of saké (*sacky*), murasaki [soy sauce], (*moersacky*), pickled vegetables

(*connemonne* [*kô-no-mono*]), etc. This merchandise is imported in little quantities, but with great frequency. The Governor-General and the Council in Batavia advises the Heren XVII to permit this private merchandise, because small quantities were imported... so there is no disadvantage to the VOC. They are goods sent by people in Japan to their friends in Batavia.

Bibliographic reference in Dutch: W. Ph. Coolhaas, *Generale Missiven van Gouverneurs-Generaal en Raden aan Heren XVII, RGP grote serie deel 3* ('s-Gravenhage 1968) 663. The pages with the quotation is folio 274v-275v.

Note 1. This is the earliest letter seen that mentions "murasaki" written to the Heren XVII or to the Netherlands.

Note 2. If *moersackij* refers to soy sauce, this is the 2nd earliest document seen (April 2012) concerning soybean products (soy sauce) in Indonesia; soybeans as such have not yet been reported. Address: Governor-General in Batavia [today's Jakarta, Indonesia].

71. Pavilioen, Anthonio; Caulier, Jaques; Carpentier, Roelant d'; Broeck, Pieter van den; Duijcker, Hendrick; Outhoorn, Hendrick van; Sonhuis, Johan B.; Huijsman, Johannes. 1669. [Re: Order for provisions]. Letter to Governor-General Joan Maetsuyker [Maatsuijcker] and the Councillors of the [Dutch East] Indies [Heren Raden van Indië] in Batavia [Dutch East Indies], Feb. 1. p. 424-35. See p. 433r. Handwritten, with signatures. [Dut]

• **Summary:** This order for provisions includes: "30 kegs sake (*sakkij*), 12 kegs of soy [sauce] (*balije soija*), 12 kegs of miso (*missoe*)."

Bibliographic reference in Dutch: NA, VOC 1270, OBP (1-2-1669) 424r-435vo. On microfilm. This letter is part of the correspondence in the series *Overgekomen Brieven en Papieren* (OBP)—letters and papers sent from Batavia and other factories to the headquarters of the VOC in the Netherlands. This is an important and voluminous part of the VOC archive.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.02; inventaris nummer 1270, 424r t/m 435va. [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.02; record number 1270].

About the sender: In *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Anthonio Paviljoen. From 1659 to 1665 he was commander of Jaffanapatnam in Ceylon. From 1665 to 1676 he was governor (head) of the VOC's settlements on the Coromandel Coast, along the east coast of southern India. From 1668 he was extraordinary councillor and from 1676 to 1678 ordinary councillor of the Council of the Indies (*Heren Raden van Indië*). In 1678 he was fired by the Heren XVII.

Nagapatnam (Now {2007} usually spelled Nagapattinam, formerly Negapatnam, Nagappattinam),

which was one of these settlements on the Coromandel Coast, in today's southeast Tamil Nadu, 160 miles (275 km) south of Madras. It was occupied by the Dutch from 1660 to 1781.

About the recipient: In 1635 Joan Maetsuyker was appointed pensionary (*pensionaris*) to the Council of Justice of Batavia, in 1646 councillor of the Council of the Indies, from 1646 to 1650 governor of Ceylon and from 1653 to 1678 governor-general.

Note 3. Paliacatta (also spelled Paliacatte; today's Pulicat), long the chief Dutch settlement and headquarters of the VOC factories on the Coromandel Coast, was a Dutch post from 1610. Pulicat was a small walled town on the coast. At its center was the Dutch Fort Geldria, with its permanent garrison of soldiers, and its cannon and armory to protect the various Company trading posts along the Coromandel Coast. Inside the fortress was the governor's two-story residence, magnificent and solidly constructed. Pulicat became British in 1825. It is located in today's Tamil Nadu, at the south end of Pulicat Lake.

This letter has been collated into Casteel Geldria (Fort Geldria) in Palliacatta on 1 Nov. 1670 by Joannes Huijsman, the secretary. Address: Fort Geldria, Palliacatta / Paliacatta [in today's southern India].

72. Veliers, Joan; Tierens, Jacob; Indijck, Dirck; Schellinger, Gerrit; Noortman, Pieter. 1669. [Re: Arrival of Honorable Dutch East India Company ships in Bengal]. Letter to Governor-General Joan Maetsuijcker [Maetsuyker] and Council in Batavia [Dutch East Indies], Feb. 11. p. 1697r to 1704vo. See p. 1698r. Handwritten, with signature. [Dut]

• **Summary:** Mentions the arrival of Hon. Dutch East India Company (VOC) ships in Hooghly, Bengal. The cargo contains large quantities of gold, bar-copper and tin, plus 15 pairs of porcelain bottles (*flessen*), 6 pairs of water pots, 6 pairs of *Jacquans*, 12 kegs of sake (*sakkij*), 8 kegs of soy [sauce] (*balien Soija*), 4 pairs of lacquered leather canisters (*Cannassers*, made of basket wicker), 50 pairs of lacquered inkpots, 2 kegs of mum (a kind of beer brewed in Brunswick, Germany), 1 little elephant 147 cm (4.8 feet) high.

Bibliographic reference in Dutch: NA, VOC 1273, OBP (11-2-1669) 1967r-1704vo. On microfilm. The letter is written in a letter-book for the administration of the 'Heren XVII' (the directors of the VOC in the Netherlands). The letter is in a manifest (list of cargo) of the ships Rammekens, Buiksloot, Zwarte Leeuw, Zwaan and Tulp. Special attention: This letter is written to give the governor-general information about the cargo received in Bengal from Japan. The ships transported their cargo from Japan via the Strait of Malacca (between the southern Malay Peninsula and the island of Sumatra) to Bengal.

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); inventaris nummer 1273 [National Archives, Prins Wilhem

Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Company (VOC); record number 1274].

Note 1. This trading post was established by the Portuguese in 1537, by the English at Hooghly in 1651, and by the Dutch at Chinsura in 1656; the towns were united as Hooghly-Chinsura in 1865.

Note 2. This is the earliest document seen (July 2006) concerning soybean products (soy sauce) in Bengal (a former part of British India, as of Oct. 2010 divided between India and Bangladesh. Hooghly is now in West Bengal, India). This document contains the earliest date seen for soybean products in Bengal (Feb. 1669); soybeans as such have not yet been reported.

Note 3. About the recipient: In 1635 Joan Maetsuijcker (usually spelled Maetsuyker) was appointed pensionary (*pensionaris*) to the Council of Justice at Batavia, and in 1646 councillor of the Council of the Indies (Heren Raden van Indië). From 1646 to 1650 he was governor of Ceylon and from 1653 to 1678 he was governor-general. Address: Director, Hooghly [Hooghly-Chinsura in today's West Bengal, northeastern India, on the Hugli River].

73. Pavilioen, Anthonio; Meersche, Jacob van der; Welsingh, Isaac; Exbusier, Jacob; Buijtendijck, Reijnier van; Hervendoncq, Joris. 1670. [Re: Order for goods from Batavia for use by the Honorable Dutch East India Company in Nagapatnam]. Letter to Governor-General Joan Maetsuijcker [Maetsuyker] and the Councillors of the Indies [Heren Raden van Indië] in Batavia [Dutch East Indies], Feb. 13. p. 550r to 574r. See p. 572r. Handwritten, with signatures. [Dut]

• **Summary:** On p. 572r (the recto {front} of folio {page} 572) we read: "Our order for commodities and other items for the use of the Honorable Company. Gold from Japan and from other places with which Coromandel has commerce each year. A list of merchandise: 8 little pints (*pintjes*) of fine oil of cloves, cinnamon, mace, etc. 12 *leggers* (a legger is a large keg of 400 liters capacity) of Spanish wine. 20 kegs of Mum. 2 kegs of good Dutch butter. 20 leggers of wine-vinegar. 9 aums (an aum is a keg of 153.6 liters capacity) of good olive oil. 30 kegs of sake (*Zakkij*) from Japan. 12 kegs of soy [sauce] (*baliën Soija*) from Japan. 6 kegs of miso (*missoe*) from Japan.

Bibliographic reference in Dutch: NA, VOC 1274, BBP (13-7-1670) 550r-574r. On microfilm.

This letter has been collated into Casteel Geldria (Fort Geldria, the headquarters of the VOC factories on the Coromandel Coast) in Palliacatta on 1 Nov. 1670 by Joannes Huijsman, the secretary. The letter is part of a thick bundle of correspondence in the series *Overgekomen Brieven en Papieren* (Letters and papers sent from Batavia and other factories to the headquarters of the VOC in the Netherlands).

This long letter is about management and commerce. The first three folios discuss ships that have arrived. Two

folios deal with a political question in the area around Masulipatnam. Folios 552 to 562 discuss merchandise supplied from several districts to Nagapatnam by ship and from the interior, and commerce problems in some districts. Folio 563 is about the weight of the coin used in Pulicat. Folio 565 is about timber. Etc.

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); toegangsnummer 1.04.02: inventaris nummer 1274, folios 550-574 [National Archives, Prins Willem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Company (VOC); inventory number 1.04.02: record number 1274, folios / pages 550-574].

Note: This is the earliest document seen (May 2010) that clearly mentions soybean products (soy sauce and miso) in Indonesia; soybeans as such have not yet been reported. Address: Fortified town of Nagapatnam [in today's southern India].

74. Li Yu. 1670. Xianqin eji [Random notes from a leisurely life]. China. [Chi]

• **Summary:** Wade-Giles reference: *Hsien Ch'in Ngo Chi*, by Li Yü. Qing dynasty. Huang (2000, p. 129, 131, 297, 616) notes that this celebrated food canon and recipe book from premodern China discusses properties of food and gastronomy. It contains six chapters (60 pages), each dealing with one aspect of civilized life. The chapter on food and drink, which has been issued as a separate booklet in the Chinese Culinary Classics Series, is a scholarly discussion of the culinary virtues of three categories of food, in order of importance as seen by the author: vegetables, grains, and meat and fish. Huang's section titled "Soybean sprouts" quotes from the first category: "Among vegetables, the purest are bamboo shoots, mushrooms, and bean sprouts (*douya*).

Morohashi (1955) gives a modern rendering which states: "As soon as white meat is cooked, a little soy sauce (*jiangyou*) should be added."

75. [List of goods to be provided from the various Dutch factories in Asia]. 1671. Colombo. Dec. 20. Unpublished manuscript. [Dut]

• **Summary:** An order from Japan for the year 1672 for the table of the Governor. Includes 12 kegs of soy [sauce].

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); inventaris nummer 13511 [National Archives, Prins Willem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Company (VOC); record number 13511]. On microfilm.

Note 1. Colombo, a seaport in the Sinhalese kingdom, was settled by Arabs in the 8th century AD, occupied in 1517 by the Portuguese, captured in 1656 by the Dutch, then taken over in 1796 by the English, who first called the island Ceylon.

Note 2. This is the earliest document seen (Nov. 2010) concerning soybean products (soy sauce) in Ceylon; soybeans as such have not yet been reported. Address: Colombo [in today's Sri Lanka].

76. Maetsuyker, Joan. 1674. [Re: List of ships ready to sail for the Netherlands]. Letter to Heren XVII ("17 Lords," leaders of the Dutch East India Company, VOC), Netherlands, Nov. 18. [Dut]

• **Summary:** The ship named "Sticht Uijtrecht" will sail for the chamber of Amsterdam. Private merchandise of Willem van Achterveld, sergeant: Includes: 2 crates [with bottles] Spanish wine and mum. 1 crate of brandy. 1 little barrel of soy [sauce] (*1 vaatje met sooi*)...

Bibliographic reference in Dutch: NA, VOC 1297, OBP (18-11-1674) f.142r.

Note: This is the earliest Dutch-language document seen (April 2012) that uses the word "sooi" to refer to soy sauce.

Location: Nationaal Archief, Den Haag, De Archieven van de VOC; toegangsnummer 1.04.02; inventaris nummer 1297 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the VOC; access number 1.04.02; record number 1297]. Address: Governor-General in Batavia [today's Jakarta, Indonesia].

77. Governor General and Council of the Indies (*Indië*). 1675. Generale missive [General missive]. Letter to Heren XVII [directors of the VOC] in the Netherlands, autumn. 3 p. Handwritten. [Dut]

• **Summary:** "Specification of the goods which several persons take along with them on the ships for the respective chambers of Amsterdam, Zealand, Delft, Rotterdam and Enkhuizen. Homeward shipped on request and permitted by the Governor General and the Council of the Indies with written decree to take along with them the following goods."

"The ship *Ternate* for the chamber of Amsterdam." Note 1. For some ships, lists of private goods are mentioned. But soy [sauce] is mentioned only in the list of private goods for Joan Putmans, the merchant on the ship *ternate*. On folio / page 225 we read: "2 chests (*kelders*) with Japanese porcelain pots in one of them and candy or candied fruit in the other. 1 chest (*kelder*) with Japanese Soy [sauce] (*Japanse Soija*), 25 pots with *atchian* / *atchiar* [maybe atjar pickles] and diverse candied fruit, 1 picul tea [1 picul = about 125 lb], 20 catties bird nests in a little basket of cane / canister" [1 catty = 625 gm]."

Note 2. The goods owned by Joan Putmans are being shipped as "private trade freight" (Japanese: *waki nimotsu*) rather than as "official trade freight" (*motokata* / *compania nimotsu*). It is not known how much soy sauce he was shipping or in what type of containers it was packaged. Dutch research Herman Ketting, PhD thinks there is a good chance that Putmans used the soy for himself or gave it to

friends and relatives in the Netherlands.

Note 3. About the sender: The Governor and the Council of the Indies send a General Letter for the Heren XVII with every homeward bound fleet. This letter is a contemporary handwritten copy. The letter is written in a letter-book for the administration of the Heren XVII, who are the administrators of the Dutch East India Co. (VOC).

Note 3. Herman Ketting, who found this letter, writes (16 July 2007): "So far as I can see now, the cargo lists in the General Missive are the only lists of the VOC, which mentioned the soy [sauce] shipped yearly to the Netherlands. They were made for the Heren XVII and the administration of the VOC-chambers. So I think the soy loaded in the ships bound for the Netherlands, actually arrived in the Netherlands."

Note 4. If this soy sauce did actually arrive in the Netherlands, this would be the earliest document seen (July 2007) showing soy sauce in the Netherlands, or in Europe.

Bibliographic reference in Dutch: NA, VOC 1307, Generale Missiven (najaar 1675) 224r.-226r.

Location: Nationaal Archief, Den Haag, Archieven van de Verenigde Oost-Indische Compagnie (VOC); toegangsnummer 1.04.21; inventaris nummer 1307 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 1307]. Address: Batavia [today's Jakarta, Indonesia].

78. Hase, François de; Fentsel, Herman Pit, Jan. 1676. [Re: Order for provisions]. Letter to Joan Camphuijs, chief merchant and director (*oppercoopman en opperhoofd*) and to the Council of the Company of Merchants in Japan [Deshima factory, Nagasaki, Kyushu, southern Japan], March 17. Unpaginated. Handwritten, with signature. [Dut]

• **Summary:** We request Your Excellency to send with the return ships via the Straits of Malacca... lacquered ware. Also: "50 usual hams. 6 kegs of miacose sake *sackie*. 4 kegs of soy sauce (*Soija*). 3 kegs of pickled vegetables (*connemon* [*kô-no-mono*]). 2 kegs *mineranskij* (*ameneranskij*?). 2 kegs of umeboshi (*mebos* [salt pickled plums]). Note: This means that the soy sauce was also sent via Malacca to Bengal.

Bibliographic reference in Dutch: NA, NFJ 307, ontvangen brieven (17-3-1676). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 307 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 307].

Note: This trading post was established by the Portuguese in 1537, by the English at Hooghly in 1651, and by the Dutch at Chinsura in 1656; the towns were united as Hooghly-Chinsura in 1865. Address: Director, Hooghly [Hooghly-Chinsura in today's West Bengal, northeastern

India, on the Hugli River] (Houglij in Bengalen).

79. Hoorn, J. van. 1676. [Re: Order for provisions]. Letter to the Deshima factory [Nagasaki, Kyushu, southern Japan], June 30. Unpaginated Handwritten, with signature. [Dut]
• Summary: “General request for merchandise and necessities, which are required from Japan this year for several settlements in Asia as for the fatherland (*vaderlandt* / *patria*).

For Batavia: 100 kegs of several provisions such as: 40 kegs sake (*sackij*), 20 kegs soy [sauce] (*Soija*), 15 kegs pickled vegetables (*connemon* [*konmono*]), 10 kegs salted, pickled plums (*meboos* [*umeboshi*]), 10 kegs miso (*missauw*).

For Ceylon (*Chijlon*): 48 kegs of provisions as follows: 20 kegs of good sake, 12 kegs soy [sauce] (*Soija*), 8 kegs pickled vegetables, 4 kegs salted, pickled plums [*umeboshi*], 4 kegs *ameneranskij*.

Note 1. This is the earliest document seen (June 2010) concerning soybean products (soy sauce) in Ceylon; soybeans as such have not yet been reported.

For Coromandel (*Choromandel*): As many kegs of Japanese provisions as is specified hereafter for Bengal.

For Bengal: 17 kegs of provisions as: 6 kegs sake, 4 kegs soy [sauce], 3 kegs pickled vegetables, 2 kegs *Ammeneranskij*, 2 kegs salted, pickled plums [*umeboshi*].

For Malacca: Provisions: 2 kegs each of Soy (*Soija*), pickled vegetables, miso (*missouw*), salted, pickled plums [*umeboshi*], and *ameneranskij*.

Note 2. This is the earliest document seen (May 2010) concerning soybean products (soy sauce) in today's Malaysia. This document contains the earliest date seen for soybean products in Malaysia (June 1676); soybeans as such have not yet been reported.

For Surat (*Zuratta*): 9 kegs of provisions such as sake, pickled vegetables, and soy [sauce] (*Soija*).

Bibliographic reference in Dutch: NA, NFJ 307, ontvangen brieven (30-6-1676). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 355 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 355. The pages are not numbered]. This letter is written in a letter-book for the administration on Deshima.

Note 3. It seems that soy [sauce] is always mentioned in lists of provisions for the table of VOC governors or directors, and their guests; this was written in one letter (see Coijet 1659, Aug. 7).

Note 4. This is a special letter. Part of it contains information from a letter written in the Netherlands by the directors in Holland (Heren XVII). The rest of the information comes from settlements in Asia and was

collected and written in Batavia, then sent to Japan. Address: Batavia castle (Batavia in't Kasteel) [today's Jakarta, Indonesia].

80. Breving, Abert; Haas, Dirk de; Schim, Isaac; Bank, C. 1678. [Re: Unable to comply with order for provisions]. Letter to Rijcklof van Goens, Governor-General and the Council of the [Dutch East] Indies in Batavia [today's Jakarta, Indonesia], Nov. 4. Unpaginated. Handwritten, with signature. [Dut]

• Summary: There was a request from governor-general Rijckloff van Goens in Batavia to transport Sake (*Sakki*) and Soy [sauce] (*Soija*) in waterproof vats, so that the liquids will be well preserved. Albert Brevinck in Japan answers: “That is impossible because we are lacking good vats (*vaten*). For this reason we request that you send vats of first rate quality to Japan. This year we will send the sake for Batavia and Ceylon in good double-walled kegs (*balien*) to help preserve the sake.”

Bibliographic reference in Dutch: NA, NFJ 309, verzonden brieven (4-11-1678). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 309 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 309. The pages are not numbered]. This letter is written in a letter-book for the administration on Deshima.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); inventaris nummer 309 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); record number 309].

Note: About the sender: In *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Albert Breving under Albert Brevinck. In 1671 he was already head of the settlement in Japan, but after that he was transferred to Tonkin. From 1677 to 1679 he was again head of the settlement in Japan. In 1681 he was Council of Justice and he refused a request to once again become head of the settlement in Japan.

About the recipient: Rijckloff van Goens lived 1619-1682. In 1631 he began his VOC service. In 1655 he was back at home in the Netherlands. In 1656 he was appointed to extraordinary Council of the [Dutch East] Indies, In 1660 he became governor of Ceylon. From 1675 to 1678 he was director-general in Batavia, and after that until 1681 he was governor-general. He died in Nov. 1682 at home in the Netherlands. Source: *Bewind en belied bij de VOC... 1672-1702*, by Femme S. Gaastra (Zutphen 1989). Address: Nagasaki [Japan].

81. Locke, John. 1679. Journal. In: Lord [Peter] King,

ed. 1829. *The Life of John Locke, with Extracts from his Correspondence, Journals, and Common-place Books*. xi + 407 p. See p. 133-34. 28 x 23 cm. [Eng]

• **Summary:** This section of Locke's journal, written in 1679, was not published until 1829. In the section titled "Extracts from the Journal of Locke," it is noted by Lord King that in 1679 John Locke wrote in his journal directions for some foreigner about to visit England. Among his description of the foods and condiments which ought to be enjoyed in London, Locke noted: "Puddings of several sorts and creams of several fashions, both excellent, but they are seldom to be found, at least in their perfection, at common eating-houses. Mango and saio are two sorts of sauces brought from the East Indies."

Note 1. The word "saio" almost certainly refers to *shoyu* and was cited as such by both Yule and Burnell in Hobson-Jobson (1886, p. 651, "Soy") and the *Oxford English Dictionary* (1919, "Soya"). If so, this is the earliest English-language document seen (April 2012) that mentions soy sauce, which it calls *saio*.

Note 2. This is the earliest document seen (Feb. 2012) concerning soybean products (soy sauce) in England, or in the East Indies; soybeans as such have not yet been reported.

Note 3. This is the earliest document seen (Oct. 2003) concerning soy sauce in international trade—imported to England, perhaps from British India, to which it was shipped—probably from Japan. Yet the big question is: How did the soy sauce get to British India and where was it made?

John Locke was an English philosopher who lived 1632-1704. After his death, "his papers, correspondence, and manuscripts, came into the possession of Sir Peter King, his near relation and sole executor." Lord King, the 7th baron, lived 1776-1833.

The *Oxford English Dictionary* defines East Indies as "A geographical term, originally including Hindustan, Further India, and the islands beyond [including today's Indonesia]. Opposed to the West Indies or Central American Islands, and now usually restricted to the Malay archipelago." The term was used as early as 1598.

Webster's New Geographical Dictionary (1988) defines East Indies as "1. also East India. Collective name, applied loosely and vaguely, to India, Indochina, and the Malay Archipelago. 2. In better usage, politically, the Republic of Indonesia, formerly the Netherlands East Indies. See Indies. But some writers used to include the islands of the Malay Archipelago."

Talk with Ted Hymowitz. 2003. Sept. 4. Early imports of soy sauce to England were transported in amphoras (resembling the ancient Greek jars or vases); they were sealed with wax at the top. Address: London.

82. Goens, R. van; Speelman, Cornelius; Both, Balthasar; Hurrt, Anth.; Blom, Dirk; Outhoorn, W. van; Camphuijs, Joan. 1680. [Re: Sending sake and soy sauce in casks and

pots]. Letter to the Deshima factory [Nagasaki, Kyushu, southern Japan], June 30. Unpaginated. Handwritten, with signature. [Dut]

• **Summary:** Van Goens etc. request that the sake (*sakij*) and soy [sauce] (*soije*) be poured into well-made casks before shipping. They advise for sake and soy [sauce] as well as for pickled vegetables (*konnemon* [*kô-no-mono*]), umeboshi (*mebos*, [salt pickled plums]), etc. to send them in pots (*potten*). Every pot must be placed in a keg and the space between the pot and the keg must be filled up with straw, so there is no danger of the pots breaking in the kegs.

Van Goens etc. will send pots made in the Netherlands for the shipping of the sake and soy. At Coromandel [on the coast of southeast India] the merchants are annoyed at the bad quality of the sake in the kegs; this is caused by the native wood of which the kegs are made.

Another summary (by Cynthia Viallé): "Batavia informs Deshima that it is sending Dutch tubs to hold the sake and soy [sauce]. The tubs should be cleaned first and prepared to contain the sake and soy."

An appendix to this letter: For Batavia: Four aums of Soy [sauce] in aums and half aums [Note: 1 aum is a measure of capacity (a barrel) of about 177 liters]. Twenty pots put in kegs with pickled vegetables (*konnemon*) and miso (*missou*). Twelve pots of umeboshi as before with fruits. If possible we want them as good as the Japanese send to their friends who live in Batavia, because those are better than the fruits they usually send to us.

For Coromandel: 6 quarter kegs of miso (*missouw*). 10 kegs of Soy [sauce] (*Zoija*). 10 kegs of pickled vegetables. 12 double kegs of saké (*Zackij*). 10 kegs of *omenaranski* [meaning unclear], 4 kegs of umeboshi.

For Ceylon [today's Sri Lanka]: 15 single kegs of Soy [sauce]. 6 double kegs of saké (*sackij*). 12 kegs of pickled vegetables. 20 kegs of umeboshi. 12 kegs *omenaranski* [meaning unclear], 6 kegs of miso (*missouw*).

Bibliographic reference in Dutch: NA, NFJ 311, ontvangen brieven (30-6-1680). On microfilm. The first page of this letter is torn off.

About the sender: Rijckloff van Goens lived 1619-1682. In 1631 he began his service (as a boy) in the VOC (Dutch East India Company). In 1655 he returned home to the Netherlands. In 1656 he was appointed to the extraordinary Council of India (the Dutch East Indies). From 1660 he was governor of Ceylon. From 1675-1678 he was director-general in Batavia, and after that until 1681 he was governor-general. He died in Nov. 1682 at home in the Netherlands.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); inventaris nummer 311 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); record number 311]. Address: In the castle (*kasteel*) Batavia [today's Jakarta, Indonesia].

83. Petyt, William. 1680. *Britannia languens, or A discourse of trade: shewing the grounds and reasons of the increase and decay of land-rents, national wealth, and strength...* London: Printed for Tho. Dring... and Sam Crouch. [8] + 303 + [9] p. See p. 285.

• **Summary:** Apparently trade with France has been prohibited, since French goods are inexpensive and popular, resulting in a negative balance of trade for England.

The section about trade and imports states (p. 284-85): “Now suppose they are forbid [sic] to go to this particular Shop, and will Religiously observe the Prohibition; yet they may and will furnish us with the same things from other Ports; they will bring us more Silks, Laces, and Baubles from *Italy, Flanders, Holland, &c...* “... our *Importers* will find out new trifles and gewgaws [geegaws] for our silly people: How suddenly do we find all the Women and Children of any account in *England* in *Amber Neck-laces*? Which at the rate they are sold at, must cost *England* at least 100,000*l*. [pounds sterling]. And now we have a new Sawce called Catch-up from *East-India*, sold at a Guiney [Guinea] a Bottle.”

Note 1. This is the earliest document seen (March 2012) that contains the word “Catch-up” (regardless of capitalization) or that mentions catch-up (regardless of the many ways in which it is spelled, such as ketchup, catsup, catchup, ketchop, ketchap., etc.). “Soy” [sauce] is not mentioned.

Note 2. “East-India” in this context probably refers to the East Indies and to today’s Indonesia.

Note 3. A guinea was a gold coin whose price was fixed at 1 pound and 1 shilling.

Note 4. This is the earliest document seen (Aug. 2011) that gives the price of Catchup in England. So, a bottle of Catchup was very expensive at that time, and this was the main reason that so many British cooks tried to develop recipes for it.

Note 5. William Petyt lived 1636-1707. The preface is signed Philanglus, his pseudonym. Address: [England].

84. Shixian hongmi [Guide to the mysteries of cuisine]. 1680. China. Passage on soy reprinted in H.T. Huang 2000, p. 325-27. [Chi]

• **Summary:** Wade-Giles reference: *Shih Hsien Hung Mi*. H.T. Huang (2000, p. 623) states that this book is attributed to Wang Shizhen (Wade-Giles: Wang Shih-Chên) but more probably was written by Zhu Yizun (W-G: Chu I-Tsun).

Huang states (p. 324) that frozen tofu (*dong doufu*; W.-G. *tung toufu*) is first mentioned in Chinese in this work. The section titled “Frozen tofu” states: In the depths of winter, place a cake of tofu (*doufu*) outdoors in a basin of water overnight. The water will freeze even though the tofu itself may not. However the beany flavor will be lost in the water, leaving the flavor of the tofu much improved. Another way is to freeze the tofu itself without the water. When thawed, it will look like a little beehive. Wash it well. Heat it in a soup

base or fry it in oil. It will be an unusual dish regardless of how it is cooked. Huang adds that this same description of the process is repeated in the *Yang Xiaolu* (1698). Note: Dr. Huang states (March 2004) that the term *dong doufu* almost always refers to tofu that has been frozen, then thawed and dried. However he has never seen an early description of how it was thawed and dried. In addition, he has never heard the term *bing doufu* (“ice tofu”), meaning “frozen tofu.”

Huang (2000) states (p. 325) that pressed tofu (*doufugan*, “tofu + dry”) is first mentioned indirectly in this work in connection with the preparation of smoked tofu (*xun doufu*; W.-G. *hsün toufu*), which is first mentioned in Chinese in this 1680 book. The section titled “Smoked tofu” states: Press tofu until it is as dry as possible. Soak it in brine, wash well, then dry it in the sun [to give *doufugan*]. Spread sesame oil over the surface, then smoke it. Another method is to soak tofu in brine, wash well, then dry it in the sun. Boil it in soup stock, then smoke it.

When William Shurtleff saw pressed tofu (*doufugan*) prepared in Taiwan and China during the 1970s, it was always pressed using either a hand-turned screw press or a lever-press with huge stones. He never saw it being dried in the sun. Perhaps the efficiency of the screw press in removing moisture from the tofu made the sun-drying unnecessary. Note that sun-drying takes extra time and exposes the warm tofu to unwanted microorganisms.

Huang (2000, p. 326) translates the earliest known account of making fermented tofu*: To make Fujian (W.-G. Fukien) style fermented tofu (*doufuru*, W.-G. *tou fu fu*), press tofu until it contains a little moisture as possible or wrap it in fine cotton paper and desiccate it in fresh ashes. Cut cake into thick square pieces and place them in rows on a bamboo steamer pad. After all steamer tiers are filled, cover steamer. [The best time to make it] is in the 2nd or 3rd month in spring or 9th or 10th month in autumn. Place steamer in an airy place. After 5 or 6 days, surfaces [of tofu] will be covered with a hairy growth, which may gradually turn black or greenish red. Wipe hair off tofu squares with a piece of paper. Save it, making sure not to damage the skin. For [the tofu from] each *dou* of beans, prepare 3 catties of soy sauce and 1 catty of fried salt. (If soy sauce is not available, use 5 catties of salt.) Grind 8 ounces of fresh red ferment spiced with clean peppercorn, fennel and licorice, then mix powder with salt and wine. Place tofu in a jar, add wine sauce mixture, then seal mouth of urn with clay. Allow urn to stand for 6 months; an excellent flavour will result.”

(Footnote: *The original passage is interspersed with notes that describe a variation of the process as it was practiced in Zhejiang (W.-G. Chekiang). These notes make the text somewhat confusing to read, so they were left out in the translation. However, from these notes we can reconstruct the Zhejiang process as follows: After the steamer is filled with tofu squares, steamed them. Place the steamer, while still hot, on a bed of rice straw and

cover completely with rice husks—in a place with little air movement. Remove tofu squares after 5-6 days. Press down and flatten the hairy growth. [This will help to keep the product fresh.] Then layer the squares in a jar. Sprinkle a pinch of salt on each piece of tofu until all surfaces are evenly salted. For each layer of tofu there should be a layer of salt. When salt is dissolved, each piece is heated in the sun by day and marinated in sauce mixture [as indicated in the Fujian process]. Continue sunning and marinating until all sauce is used up. Soak layered tofu in a jar with wine. Then seal mouth of urn with clay. Allow the urn to stand for 6 months and an excellent flavour will result).

Note: This is the earliest document seen (Feb. 2007) that mentions fermented tofu, which it calls *doufuru*.

Huang (2000, p. 326) continues by noting: Two other passages in the *Shixian Hongmi* are also of interest in this connection. One describes a method for making *zao rufu* (W.-G. *tsao ju fu*), i.e. fermented tofu (*furu*) aged with a fermented mash [rice wine dregs]: Transfer ripened *rufu* or samples that are too salty in layers to a new vessel. Line fermented mash or residue between layers and allow material to age. A product with a unique flavor is obtained. The other deals with the making of *doufu fu* (W.-G. *tou fu fu*), a deep fried ‘stinky’ dewatered tofu: Take good quality [pieces of] tofu and grill in oil. Then cover with a cloth screen to keep out flies and other insects. When a “stinky” odour is developed, fry the pieces again in hot “boiling” oil. The flavor is excellent.

Note: This “stinky” tofu is probably *chou doufu*. If it is, this is the earliest document seen (Oct. 2011) that mentions a type of *chou doufu* (“stinky tofu”).

Huang (2000, p. 326-27) comments further: Two interesting points emerge from these passages. First, by the time that the *Shixian Hongmi* (+1680) was published, *furu* and *rufu* had apparently become synonyms for fermented tofu. The word *fu* could now mean a gel or custard made from any edible suspension or emulsion of food material, and *ru* any type of dairy or soy milk derived product. Second, although the word *zha* (W.-G. *cha*) was not used, there is no question that the frying in “boiling oil” shown in the second passage indicates that deep frying was a common method of cooking during the Ming dynasty.

Huang (2000, p. 341) states that this book contains an interesting recipe in which fermented black soybeans (*shi*) are stewed with pieces of pressed tofu (*doufugan*) and bamboo shoots.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 49 recipes: jiang itself in only 8, soy sauce made from jiang named *qingjiang* in 1 recipe, soy sauce named *jiangyou* in a whopping 37 recipes, soy sauce named *jiangzhi* in 2 recipes, and soy sauce named *jiangshui* in one recipe. Seasonings based on fermented black soybeans (*shi*)

are used in only 6 recipes: Fermented black soybeans (*shi*) in 4 recipes, and fermented black soybean sauce named *shizhi* in 2.

Talk with H.T. Huang. 2001. Feb. 20. This 1680 book contains a recipe titled Soy Sauce Pressed Tofu (*Jiangyou Fugan*) which states: Cut pressed tofu (*doufugan*) into pieces. Mix 1 catty of soy sauce with 2 catties of water. Filter the liquid mixture then boil it. Filter it again to remove any remaining residue. Now add to the liquid: mushrooms and 4 different spices (*dingxiang*, *baiqi*, *dahuixiang*, and *guipi* {cassia bark, *Cinnamomum cassia*}), and tofu. Boil for several minutes. Remove from heat and allow to stand for half a day. The color still will not be very dark. Remove tofu from liquid and dry it. After 1 night, repeat the process of boiling and soaking several times. Note: This yields a highly seasoned tofu with a long shelf life at room temperature.

Note: This is the earliest document seen (Feb. 2004) that recommends adding mushrooms or spices / seasonings to soy sauce to enhance its flavor.

85. [Manifest (cargo-list) of goods imported to Batavia in 1681 by two Chinese junks]. 1681. Colombo. p. 860r-61r. See p. 860r. Feb. 7 and 28. Unpublished manuscript. [Dut] • **Summary:** Two Chinese trading junks had arrived from Japan in 1681. On Feb. 7, the junk of captain Quanjock arrived with: 22 straw Calmus (Sweet flag) roots... 1 wicker basket (*canasser*) of medicine and one of tea, 681 kegs and pots containing pickled vegetables (*connemon* [*kô-no-mono*]), soy [sauce] (*soij*) and miso (*missoij*).

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “missoij” to refer to miso.

On Feb. 28 the junk of captain Lunsincqua arrived with: 40 little bureaus. 5 double kegs and 6 single kegs of camphor. 200 kegs and pots containing chestnuts (*carthanjen*), soy [sauce] (*Zoija*), and pickled vegetables (*connemon* [*kô-no-mono*]).

Bibliographic reference in Dutch: NA, VOC 1354, OBP (7 and 28-2-1681) 860r-861r. On microfilm. This letter is part of the correspondence in the series *Overgekomen Brieven en Papieren* (OBP)—letters and papers sent from Batavia and other factories to the headquarters of the VOC in the Netherlands. This is an important and voluminous part of the VOC archive.

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); inventaris nummer 1354, folio 860 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Company (VOC); record number 1354, folio / page 860]. On microfilm. Address: Colombo [in today’s Sri Lanka].

86. Schinne, Isaac van; Cansius, Hendrik; Jonge, Constantin Ranst de; Buijtenhem, Hendrik van; Sweers, Balthasar; Dijck, Pieter van. 1681. [Re: Sending provisions]. Letter to

the Governor-General and the Council in Batavia [today's Jakarta, Indonesia], Oct. 31. Handwritten, with signature. [Dut]

• **Summary:** The Deshima factory is sending 1,000 pairs of cotton stockings, all the porcelain, also the soy [sauce] (*Soija*), saké (*Sackij*), miso (*Misou*), pickled vegetables (*Konnemon* [*Kô-no-mono*]), and umeboshi (*Mebos* [salt pickled plums]), all of the best quality we can get, just as you ordered.

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “Misou” to refer to miso.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 312 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 312]. Address: Deshima factory, Nagasaki [Japan].

87. Chamberlayne, John. 1682. The natural history of coffee, thee, chocolate, tobacco, in four several sections;... London: Printed for Christopher Wilkinson. 36 + [4] p. See Sect. III, p. 18. 21 cm.

• **Summary:** In “The natural history of chocolate. Sect. III” we read (p. 18): “... and I do not doubt, but you *London* Gentlemen, do value it above all your *Cullises* and *Jellies*; your *Anchoves*, *Bononia Sawsages*, your *Cock*, and *Lamb-stones*, your *Soys*, your *Ketchups* and *Caveares* [Caviars], your *Cantharides*, and your *Whites of Eggs*, are not to be compared to our rude *Indian*; therefore you must be very courteous and favourable to this little Pamphlet, who tells you most faithful Observations.”

Note 1. This is the earliest document seen (July 2010) that contains the word “Ketchups” (or “ketchup,” regardless of capitalization) and the 2nd earliest document seen (April 2012) that mentions ketchup (regardless of the many ways in which it is spelled, such as catchup, catsup, ketchop, ketchap., etc.).

Note 2. John Chamberlayne lived 1666-1723. The title page states: “Collected from the writings of the best physicians, and modern travellers.”

Note 3. A “cullis” is a broth of broiled meat strained, or a kind of jelly. “Bononia” is the Roman name of several cities, including Bologna, Italy—whence comes today's Bologna (pronounced baloney) sausage. “Soys” refers to soy sauces. “Cantharides” is more commonly called “Spanish fly.” The meaning of “our rude *Indian*” is unclear.

88. Kurokawa Dôyû. 1686. *Yôshû fushi* [Topography of Yamashiro near Kyoto, based on Yoshu in ancient China]. Kyoto: Shorin Mohe. 10 volumes. Japanese summary by Kawakami 1978, p. 266. [Jap]

• **Summary:** OCLC / WorldCat cites this book as follows: Title: *Yôshû fushi*. Author: Dôyû Kurokawa (who died in

1691). Publisher: [Kyoto]: Shorin Mohe. Year of publication [1686]. Available in Japanese in Microform or microfilm.

Describes shoyu making.

Yokotsuka (1985, p. 205) states: “And in a book (*Yoshu-fushi*, AD 1686), shoyu was defined as a common Shi-ju (Shi-tche in Chinese)...” Note: “Shi” refers to fermented black soybeans.” Therefore the juice from *shi* would be similar to today's tamari, which is soy sauce made with little or no wheat.

Fukushima (1989, p. 9) states that the *Yoshu-Fushi* (Kurokawa, 1682) describes miso and shoyu. Yokotsuka (1991, p. 332) states: “The method of preparing salted and unsalted *douchi* [fermented black soybeans] is described in the book *Yoshufushi* (1686) and elsewhere.

Iino (2003, p. 8) quotes from this 1684 book: “... though *Sakai-joyu* (Sakai soy sauce) was once available only from liquor shops in Izumi (modern-day Osaka) and remains very popular, soy sauce is now made by liquor shops in Kyoto, as well as made by hand at home making the purchase of *Sakai-joyu* unnecessary.” “In the first half of the Edo Period (17th century), soy sauce was made in all regions of Japan and could be purchased anywhere. In addition, soy sauce was made by hand in the large majority of houses”—This is made clear by this references in this book. “The method for making soy sauce is first recorded in the *Yôshu Fushi*. The method described calls for a malt to be made from boiled soybeans and roasted barley. Salt and water are added to the malt and the entire mixture placed in a large barrel. The mixture is to be stirred two or three times a day with a pole resembling an oar. After a minimum of 70 days, the *moromi* (dregs [mash]) is to be placed in a sack cloth. A stone is to be placed on top of the sack and the liquid squeezed out. This liquid can then be boiled with other ingredients to create a variety of dishes.” Iino then comments: “This explanation shows us that the method for producing soy sauce varied little from the way it is made today, though rather than wheat, barley was used and heat was not applied to the extracted liquid.”

89. Rakka Yajin Danshoken. 1686. *Shogei shokan*: Ryôri no bu [A small sample of various skills: Cookery section]. Japan: Nakamura Magobei in Kyoto, Honya Kiyobei in Edo (Tokyo), and Okada Saburo in Osaka. 66 p. Japanese summary by Kawakami 1978. [Jap]

• **Summary:** Pronunciation of the author's name is not clear. This book contains many interesting recipes but almost all were copied from the *Ryôri Monogatari* (1643) and the *Edo Ryôri-shu*. It describes methods for making Maruyama Hishio and tamari, plus a rich miso soup recipe. It is not clear whether or not he copied these recipes.

90. Nihon Saiji-ki 1687. Japan. [Jap]*

• **Summary:** Iino (2003, p. 8) states that this 1687 book mentions the shoyu production process, noting that barley was used in place of rice. Iino comments: “It seems that it

took some time for wheat to be established as the proper mate for soybeans in the production of soy sauce.” Address: Japan.

91. Nihon saijiki 1687. Japan. [Jap]*

• **Summary:** Iino (2001, p. 21) contains a “Table of ingredients used in *tou-miso* and *shoyu* during the Edo period.” The entry for *Nihon saijiki* (compiled in 1687) states that *Shoyu* is made from the following ingredients: Soybean 19.2%. Wheat / barley 19.2%. Salt 19.2%. Water 42.3%. Address: Japan.

92. Dampier, William. 1688. Voyage round the world. In: William Dampier. 1705. Voyage Round the World. The Supplement of the Voyage Round the World, Describing the Countreys of Tonquin, Achin, Malacca, &c. their Product, Inhabitants, Manners, Trade, Policy, &c. London: Printed for James Knapton, at the Crown in St. Paul’s Church Yard. See vol. II. Part I, p. 26-28.

• **Summary:** While traveling in Tonquin (today’s north Vietnam) the author writes: “The *Nuke-Mum* [fish sauce]... is also very savory, and used as a good sauce for Fowls, not only by the Natives, but also by the *Europeans*, who esteem it equal with *Soy* [sauce]. I have been told that *Soy* is made partly with a fishy Composition... tho’ a Gentleman... told me that it is made with wheat and a Sort of Beans mixt with Water and Salt” (p. 28).

Note 1. First cited by Yule and Burnell (1886, p. 651, and 1903, p. 858; both give the year as 1688), and the *Oxford English Dictionary* (1919, Soy). Captain Dampier—a “swashbuckling buccaneer”—lived 1652-1715.

Note 2. This is the earliest English-language document seen (April 2012) that uses the word “Soy” (regardless of capitalization) to refer to soy sauce. The passage on soy sauce, although written in 1688, was not published until 1705.

Note 3. The word “padusoy” (also spelled “paduasoy,” derived from the French *pou-de-soie*) starts to appear in British publications as early as 1663. It has nothing to do with the soybean or soy [sauce]. The suffix “soy” refers to silk, and “padusoy” refers to a corded silk fabric (or a garment made from it). By May 1774 it began to be advertised and sold in the British colonies of North America. Typical sentences: “A piece of black padusoy.” “One pound of this silk will make five yards of padusoy.” “A white padusoy coat and breeches, with a pink-colour’d waistcoat.”

93. Saikaku Ihara. 1688. Nihon Eitaigura Japan. [Jap]*

• **Summary:** Iino (2003, p. 8) states that in this 1688 book, the author “presents two stories about the makers of soy sauce. The first story is that a small miso and soy sauce manufacturer in Echigen Tsuruga thought that by using his talents to produce a product at low cost, he could enlarge his business. However, as his business grew, customers

dwindled, feeling out of place in the large establishment. In the end, his business failed. The second story is about the soy sauce merchant Kiheiji who walked around town selling his soy sauce from wooden buckets attached to a pole carried on his shoulders. In these two stories, Saikaku discusses the selling of soy sauce from the point of view of a large merchant as well as that of one who sells soy sauce from door to door.”

An illustration shows a slanting overhead view of the inside of a shop where soy sauce and miso are sold retail. The small sign hanging outside above the door reads: Soy Sauce and Miso Retailer. Address: Japan.

94. E.B. 1690. A new dictionary of the terms ancient and modern of the canting crew,... London: Printed for W. Hawes, P. Gilbourne and W. Davis. [184] p. 18 cm. [Eng]*

• **Summary:** “Catchup, a high East-India Sauce.” Note 1. This is an English-language slang dictionary.

Note 2. This is the 3rd earliest English-language document seen (April 2012) that mentions Catchup (regardless of spelling), which was probably Indonesian soy sauce.

Note 3. At this time, “East India” (or more commonly) “the East Indies” had two meanings: (1) A collective name, applied loosely and vaguely, to India, Indochina (today’s

Vietnam and Cambodia), and the Malay Archipelago (today's Indonesia and Malaysia). (2) In better usage, politically, a name applied to today's Indonesia, formerly the Netherlands East Indies or Dutch East Indies. Address: Gent., England.

95. *Jinrin kinmô zui* [Illustrated encyclopedia of life in the Edo period]. 1690. Kyoto, Japan. Reprinted in 1990 by Heibonsha (Tokyo); edited by Asakura, Haruhiko. [Jap]
• Summary: The following page numbers refer to the 1990 reprint edition published in Tokyo by Heibonsha. The compiler of this remarkable work is unknown. At the bottom of almost every page (up to p. 293) are one or two half-page illustrations. Pages 317-31 are footnotes, followed by a syllabary index (a e u o, ka ki ku ke ko).

The original edition was divided into seven volumes, including: 2. Noh drama. 3. Producers (farmers, woodcutters, fishermen, etc.). 4. Merchants (sellers). 5. Craftspeople. 6. Various and other jobs. 7. Entertainers. At the end is a long section of footnotes and annotations.

Page 121. The illustration is titled *Kuzune-hori* (Digging kuzu root). Yoshino kuzu is the best known in Japan.

Page 142. Shoyu is a famous product of Sakai. Produced in Osaka and Sakai, it is shipped to various places (no illustration).

Page 144. The right illustration is titled *Koji-shi* (Koji maker). Miso makers, manju (steamed bun) makers, and many others use koji. The illustration shows a man carrying four koji trays (*koji-bune*) filled with koji; he is about to put them into the incubation room (*muro*, which has a rounded top) where the koji will ferment. The text mentions a “thin board” (*usuita*), which may be a second type of koji tray, shown on the ground at right, lacking either one or both ends. The volume of koji is measured by the standardized size of the koji tray.

Page 144. The left illustration is titled *Miso-ya* (Miso

shop). It shows two men mixing or pounding something (either koji, cooked soybeans and water before fermentation, or miso after fermentation) in a wooden mortar (*usu*, *suribachi*) using long wooden spatulas or pestles. They use a wooden spatula (*sekkai*) as their store sign. Behind the men to the left is a vat of fermenting miso with stones on top for pressure. Two wooden scoops in a rectangular wooden “boat” are used for scooping and measuring koji, cooked soybeans, and/or salt. The text says: “Miso makes a good seasoning and helps keep people healthy. A day cannot go by without it.”

Page 152. The illustration, titled *Kome-ya* (Rice shop), shows a man unloading a bale of rice (wrapped in rice straw) from the back of his horse. Nearby is a rice merchant, standing on a low platform near two other bales of rice. The text notes that the shop sells the “five grains” (*go-koku*), which include soybeans (*daizu*).

Page 160. The left illustration, titled *Yakidofu-shi* (Grilled tofu man), shows a man making grilled tofu over a rectangular brazier. In his right hand is a fan, with which he fans the coals beneath several cakes of tofu. In his left hand is a skewer with two prongs that pierce a cake of tofu. In front of his brazier is a wooden pail, which may be used to store cakes of tofu in water. At the front left is a sloping tray on which slices of tofu are drained. The maker of grilled tofu can found in market places, temple gatherings, festivals, and wherever people gather around. Note: This is the earliest Japanese-language document seen (Feb. 2010) that mentions grilled tofu, which it calls *yaki-dôfu*.

Page 162. The illustration, titled *Ko-ya* (Flour shop), shows three people turning a large hand-turned stone mill in which various types of flour (including soy flour, *daizu no ko*, which is probably roasted soy flour {*kinako*}) are ground. Ropes from the ceiling hold up the t-shaped end of a push-pull device used to help turn the heavy upper stone.

Page 166. The right half of the illustration (not shown) is titled *Seller of Tataki natto in Kyoto*. To make this natto, dice stringy (*itohiki*) natto finely, then shape into a thin, flat square. Mix in finely chopped greens and tofu. It is an inexpensive, fast food. It is sold by walking street vendors from the end of September until February, especially at Tomikoji-dori, Shijo-agaru machi (probably in Kyoto).

The other illustration shows two men in front of a shop. Each is carrying a shoulder pole on one shoulder; from each end are suspended containers used to hold food. Each is also wearing straw sandals (*waraji*). The man on the right carries containers that are shaped like boxes with the long edges oriented vertically. A sliding panel may be used to open each box. Inside are either utensils and the ingredients for making tataki-natto, or bowls of tataki-natto ready to eat.

Note: This is the earliest document seen (Jan. 2012) that contains the word *itohiki* or the term “Tataki natto” in connection with natto,

Page 225. The left half of the illustration is titled *Horo*

miso, which is a kind of miso. The character for *Ho* means “law” or “dharma.” The man on the left has cylindrical wooden containers (*magemono*, shaped like traditional Japanese steamers) suspended from each end of his shoulder pole. Atop each is a bamboo mat (*sudarê*). The text states: This miso is made with black soybeans (*kuro mame*). The men who sell it all wear orange robes dyed with persimmons. They never put down the merchandise. Its container was covered and they carried it using a shoulder pole to keep it clean. When they had to put it down, they placed it with one side leaning against something. If anyone stepped over it, the seller demanded that that person buy it. To make *horo miso*, cook black soybeans, then drain off and squeeze out the liquid. The result is a very firm miso with a low water content. Originally it was used in temples, but later it came to be used by the common people.

Note: Naomichi Ishige, a scholar of and expert on Japanese food history, writes (personal communication, March 2008): “To make *horo miso*, mix miso, minced walnut, sesame, and Japanese *sansho* pepper, then saute the mixture with vegetable oil in a pan. People eat *horo miso* with rice, or have it as a relish when they drink sake.

“In the *Jinrin kinmo zui*, the reason *tataki natto* is thin and formed is because people thought that type of *natto* could be easily dissolved in miso soup. However, its rectangular shape does not relate to the way of cooking.

“I am not sure how the peddler in the picture put his goods in a box that he carried. I only imagine that he wrapped a rectangular *tataki-natto* in a bamboo sheath and stored it in the box.

“When peddlers began to sell granulated *itohiki natto*, they put the *itohiki-natto* into a bamboo basket. They ladled up the quantity needed by a rice scoop (*shamoji*) and sold it. Or, they wrapped the *itohiki-natto* in a straw parcel and sold the parcel.” See also letter about *natto* history from Ishige sensei to Shurtleff, dated 16 March 2008.

Page 225. The right illustration is titled *Tofu-shi* (Tofu maker). The text states: Among the craftsmen, tofu makers rise the earliest each morning. Some sell deep fried tofu pouches (*aburaagê*). The book *Kuni Hana Manyoki* mentions the places named Maruyama and Reizan where the craftsmen lived. There may have been a lot of tofu makers who lived in this area. The illustration shows a tofu maker in his shop, sitting at the end of a firm pole used as a lever press to press the soymilk out of the *okara* in the pressing sack (which is placed on a rack) into the wooden vat below. It will then be curdled to make tofu. Also visible in the tofu shop are a wooden tofu forming box with 3 holes in each side, and four hanging *noren* curtains.

Page 291. The illustration is titled *Yaku-harai* (Driving out bad luck). The text mentions *setsubun* (the evening of the last day of winter, just before the first day of spring, also celebrated by some as New Year’s Eve—according to the old lunar calendar) and roasted soybeans (*iri-mamê*). On the

evening of *setsubun*, Japanese wished to be cleansed of all bad spirits and bad luck. So they scattered roasted soybeans (with coins?) and cried out a slogan wishing for long life. This kept them very busy. Note: New Year’s Eve and Day are not traditional Japanese concepts; they were imported from China and the West during the 20th century. Address: Japan.

96. Onna chôhō-ki 1692. Japan. [Jap]*

• **Summary:** According to Ryoichi Iino (2003, p. 10) the term *oshidashi* was used in this book to indicate / refer to soy sauce.

97. Yaoya-shû [Collection of various things]. 1693. Japan: Publisher unknown. Volumes 1-3 have 54, 48, and 46 pages respectively. Japanese summary by Kawakami 1978, p. 152. [Jap]

• **Summary:** The three parts of the book discuss (1) processing foods, (2) cooking, and (3) mochi and confectionery (*kashi*). This is mostly a copy of *Gorui Nichiyo Ryôri Shinan-sho*, but the sequence of the material and the wording has been changed. Some new things have been added. Includes discussions of Nara Horin Miso, quick production of shoyu, and quick preparation of amazake, and Ukeire Tofu. It is not known what the latter is.

98. Hitomi, Hitsudai 1695. [Honcho shokukan. See Pen chao shih chien]. [Chi]*

• **Summary:** Yokotsuka (1985, p. 206; 1986, p. 198) cites this as “*Honcho Shokukan* (1692)” but apparently does not cite it in his bibliography in either case.

The Japanese title can be translated as “Japan’s food dictionary” or “Our country’s food model.” Written during the Edo period, the book is most about tea. The section about sushi states: Mix fish meat into cold rice, then mix in a little vinegar.

99. Hitomi, Hitsudai. 1695. Pen chao shih chien / Ben zhao shi jian [A mirror of food in this dynasty. 12 vols.]. Osaka?: Hiranoya Katsuzemon. 22 cm. Widely referred to as *Honchô Shokkan* in Japanese. Modern rendering by Morohashi 1955, trans. p. 13. Complete modern translation into Japanese by Isao Shimada (1976; Tokyo: Heibonsha). [Chi]*

• **Summary:** This book, written by a Japanese man in Japan, yet entirely in Chinese, contains early references to yuba, frozen tofu, *natto*, shoyu, and miso. When the Japanese read the Chinese characters for yuba, *doufu-lao*, they pronounced them *tôfu no uba*. *Lao* or *uba* means “old woman” or “wet nurse.”

The book states that the word “*natto*” is derived from *nassho*, meaning “temple kitchen” or literally “place of offering, perhaps because the food was offered to Buddha before being offered to the monks.” It also contains the earliest known written mention of *natto*’s medicinal or

healing effects, together with recipes for preparing natto miso soup (*natto-jiru*).

Note: Recall that this *natto-jiru* may well be made with fermented black soybeans rather than itohiki natto.

Saito (1985, p. 15-16) notes: “In 1695 Dr. Hitomi Hitsudai, a Japanese physician, age 74, writes the *Honcho Shokkan* and talks about the good and bad points of daily foods from his medical viewpoint. The 12 volume book is written entirely in Chinese. He writes: ‘Soybean: Makes one feel calm, relaxes the stomach, and is good for the intestines. Miso: One should not be without it. Natto: Makes one feel calm, conditions the stomach, enhances a good appetite, and detoxifies poisons. Tofu: Nowadays tofu in Edo is pretty good. Among the various types, Nishiki-dofu and Kezo-indofu are famous... But it cannot compete with the tofu made in Kyoto. Shoyu: Inactivates any poisoning from eating food, drinking alcohol, or taking medicine.’ The above is taken from the translation into Japanese by Shimada Isao.”

T. Yokotsuka (1985, p. 206; 1986, p. 198) cites this as *Honcho Shokukan* (1692) but apparently does not cite it in his bibliography in either case.

Needham (1986, p. 581) cites this as *Pên Ts’ao Shih Chien* (Materia Medica in Tasteful Verse, by Chu Lun). Ch’ing dynasty. 1739. Partly translated by Swingle. But Needham does not discuss its content.

Fukushima (1989, p. 9) states that the *Honcho-Shokkan* (Hitomi, 1695) describes miso and shoyu.

Concerning shoyu: Iino (2001, p. 21) contains a “Table of ingredients used in *tou-miso* and shoyu during the Edo period.” The entry for *Honcho-shokukan* (compiled in 1695) states that *Shoyu* is made from the following ingredients: Soybean approximately 22%. Wheat / barley approx. 22%. Salt approx. 22%. Water approx. 34%.

Iino (2003, p. 8) states: “In the first half of the Edo Period (17th century), soy sauce was made in all regions of Japan and could be purchased anywhere. In addition, soy sauce was made by hand in the large majority of houses”—This is made clear by a reference in this 1695 book (*Honchô-Shokkan*), which also mentions the shoyu production process, noting that barley was used in place of wheat. On p. 9 Iino adds that detailed instructions for making *niban shoyu* (soy sauce from a second pressing of the moromi with salt water) are also described in this book. Iino then comments: “It is clear that with the beginning of soy sauce production, use was also made of the dregs [shoyu presscake] to make *niban shoyu*.”

100. Endo Genkan. 1696. Chanoyu kondate shinan [Instructions concerning menus for tea ceremony cookery]. Yamaoka Shirobei (Kyoto) and Maedaya Tokubei (Edo). 8 volumes averaging 70 pages per volume. Japanese summary by Kawakami 1978, p. 100. [Jap]

• **Summary:** For each day of the month various menus are given with descriptions on how to make them for tea

ceremony cookery. Contains the first appearance of awase-joyu, using shoyu. A second edition was published in 1837 by Nakamura Sanshido in Osaka.

101. Ovington, John. 1696. A voyage to Suratt, in the year, 1689. Giving a large account of that city, and its inhabitants, and of the English factory there. London: Printed for Jacob Tonson. 606 p. See p. 385, 397. See also Oxford University Press edition (1929), edited by H.G. Rawlinson. A voyage to Surat in the year 1689. p. 231. [Eng]

• **Summary:** Concerning soy sauce: In the chapter on “The English Factory at Surat,” at the section on “Several Sorts of Indian Dishes,” the author is describing Palau [rice pilaf], baked fowl, and beef or mutton cabob roasted on a spit, seasoned with sweet herbs and basted with oil and garlic. He concludes: “Bambou and Mangoe Achar [pickle], Souy the choicest of all Sawces, are always ready to whet the Appetite.”

Note 1. This is the earliest English-language document seen (April 2012) that uses the word “Souy” to refer to soy sauce.

Note 2. This soy sauce was probably made in Japan and shipped from there to India in wooden kegs or vats. In 1796 Thunberg states that Japanese shoyu was shipped to India in vats. Noda Shoyu (1955) states: “According to Dr. Iwao, whose source of information was the Japanese-Dutch Hague Archives in the Netherlands (*Waran Haagu Bunshokan*. Probably Nederlandse Vereniging van Bibliotheecarissen, Documentalisten en Literatuuronderzoekers (NVB)), in 1668 the Japanese sent 12 kegs of shoyu to Coromandel, India (a coastal region of southeast India on the Bay of Bengal), in 1670 to the island of Ceylon, in 1677 to Coromandel again, in 1679 and 1681 to Surat in northwest India and to Coromandel...”

Concerning the peanut or groundnut: Page 77 states: “Sometimes they feast with a little Fish, and that with a few Pindars [peanuts or groundnuts] is esteemed a splendid banquet. These Pindars are sown under ground, and grown there without sprouting above the surface.” Note 3. This is the earliest document seen (Jan. 2005) that mentions the peanut, or that uses the word “Pindars” to refer to peanuts. This is also the earliest citation in the *Oxford English Dictionary* for pindars (also spelled pinda, pinder, pindal, pinda, or pindel). In the Congo, the term is *mpinda*. It was carried by negroes to America and was used in the West Indies and southern USA for the peanut or groundnut.

Note 4. This is the earliest document seen (Sept. 1996) that mentions both soybeans and peanuts.

Note 5. *Webster’s New Geographical Dictionary* (1988) defines Surat (also formerly spelled “Suratte”) as a city in southeast Gujarat on the coast of western India, on the Tapti River near its mouth 150 miles north of Bombay. It was a chief seaport of India by the late 1500s. In 1608 an English factory was established there, the first in India and the

beginning of the British Empire in India. Surat was the seat of British Indian government until 1687. It began to decline in the early 1800s. A photo (frontispiece) facing the title page shows “Surat: The fort from the river bridge.”

The subtitle reads: “Likewise a description of Madeira, St. Jago, Annobon, Cabenda and Malemba (upon the coast of Africa), St. Helena, Johanna, Bombay, the city of Muscatt, and its inhabitants in Arabia Felix [the Arabian Peninsula], Mocha, and maritime towns upon the Red-Sea, the Cape of Good Hope, and the island Ascention [Ascension]. To which is added an Appendix, containing: I. The history of a late revolution in the Kingdom of Golconda [in south central India]. II. A description of the Kingdoms of Arracan and Pegu. III. An account of the coins of the Kingdom of India, Persia, Golconda, &c. IV. Observations concerning the silk worms.

Note 6. Ovington lived 1653-1731. First cited by Yule & Burnell (1886, p. 651; and 1903, p. 859), and the *Oxford English Dictionary* (1919, Soy).

Note 7. The Coromandel Coast in southeast India extends from Point Calimere northwards to the mouths of the Krishna River; to the east is the Bay of Bengal. It has a low shoreline with no good harbors, and is beaten by heavy seas year-round, but especially during the northeastern monsoon (October to April). The chief ports are (as of 1999) Nellore, Madras, Pondicherry, Cuddalore, Tranquebar, and Nagapattinam. Address: M.A. Chaplain to his Majesty.

102. Gu Zhong. 1698. Yang xiaolu [Guide to nurturing life]. China. [Chi]

• **Summary:** Wade-Giles reference: *Yang Hsiao Lu*, by Ku Chung. H.T. Huang (2000, p. 627) gives the date of this document as +1698. In the section titled “Products associated with tou fu,” Huang states: (1) (p. 324) A recipe for making frozen tofu, first mentioned in the *Shixian Hongmi* (Guide to the Mysteries of Cuisine) (+1680), is repeated in this book. (2) (p. 325) that both pressed tofu (*doufugan*) and smoked tofu (*xun doufu*) are mentioned in this book.

In the section titled “Fermented soybeans (*shi*),” Huang states that wheat flour is used as an ingredient in a recipe for making fermented black soybeans (*shi*).

In the section titled “Fermented soy sauce, *chiang yu*,” Huang states (p. 363): About 100 years after the *Bencao Gangmu* (The great pharmacopoeia) (+1596), the next description of the process for making soy sauce (*jiangyou*) appears in this book, in the form of three sketchy recipes, one of which states: Cook yellow soybeans (*huangdou*) or black soybeans (*heidou*) until soft. Mix the soybeans and their cooking water with white [wheat] flour and knead to form a dough. Shape into flat or convex cakes. Cover with artemisia leaves until a good growth of yellow mold appears; then grind these cakes. Incubate the meal in a jar with brine. Warm in the sun to give [a thin] soybean jiang (*doujiang*). Filter through a tightly-woven bamboo sieve placed over a

wide-mouthed vat. The jiang (soy paste) stays in the sieve while the soy sauce (*jiangyou*) is collected below.

Note: This is the 2nd earliest document seen (April 2012) that describes the use of a significant amount of wheat (or wheat) flour in making Chinese soy sauce.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 25 recipes: jiang itself in 14, and soy sauce made from jiang named *jiangyou* in 11 recipes. Seasonings based on fermented black soybeans (*shi*) are used in only 1 recipe, which uses fermented black soybeans itself.

Huang adds (p. 373): During the Ming dynasty, soy sauce (*jiangyou*) started to rival *jiang* [which had a consistency like applesauce] in importance; by the early years of the Qing dynasty, soy sauce had surpassed jiang in culinary usage.

Huang notes (personal communication, 5 June 1993) that page 21 contains recipes for deep-fried gluten and smoked gluten.

Bo (1982): Describes the method for making *chiang-yu* (soy sauce).

103. Saito, Akio. 1699. [Chronology of soybeans in Japan, 1600 to 1699, the early Tokugawa/Edo period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 14-16. [Jap; eng+]

• **Summary:** 1600–Komakabe?, the name of a type of tofu, appears in the *Diary of Oyudono no Kami* (*Oyudono Kami no Nikki*). The very firm tofu called *kata-dofu* that is presently sold in Kochi prefecture (on the southern part of the island of Shikoku) originated from Komakabe.

1601–Daté Masamune (DAH-tay Mah-sah-MU-nay; lived 1567-1636) of Sendai establishes the Goenso-gura and starts making miso. This is the first time that an organized method has ever been used to make miso in Japan. The purpose of this is to make miso for the army and to store salt. According to some theories, the date was 1645 rather than 1601.

1603–In *Nippo Jisho*, a Japanese-Portuguese dictionary, tofu (called “taufu”) is mentioned. It says that tofu is a food that is made from powdered / ground beans and that looks like freshly made cheese.

1605–Tokugawa Ieyasu commands the monks at Daifukuji temple to make Hamana Natto. Note 1. This is the earliest document seen (Nov. 2011) that mentions “Hamana Natto” (or “Hamanatto,” regardless of capitalization). This document contains the earliest date seen for Hamanatto–1605! Note 2. This is the earliest document seen (Nov. 2011) stating that Hamanatto [fermented black soybeans] were made at Daifukuji temple in Hamamatsu.

1616–Tanaka Genba of Kamiusa no Kuni is advised to make tamari shoyu as a side business by Sanagi Kyurouemon of Settsu. The latter runs a sake factory and has a wholesale

seafood products shop in Edo. This is the beginning of Choshi Shoyu and Higeta Shoyu.

1619—At about this time shoyu in quantity is brought from the Kyoto-Osaka area (*Kansai*) to Edo by Taru Kaisen and Hishigaki Kaisen. Note 1. A “Kaisen” is a ship that has a carrying capacity of at least 200 koku (= 9,520 gallons or 36,000 liters). That shoyu is regarded as the best quality and it soon takes over the entire Edo shoyu market.

1624-1644—Konpura Nakama (The union of merchants who go to Dejima / Deshima, an island in Nagasaki Bay) starts to export shoyu through the Dutch East India Company (*Higashi Indo Gaisha*) to Europe and Southeast Asia. It is said that in Europe this shoyu even reached the dining table of Louis XIV. Note 2. This document contains the earliest date seen for soybean products (shoyu) in Europe and Southeast Asia (probably Indonesia, 1644); soybeans as such had not yet been reported by that date. [Question: What is the source of these two dates?]

1626—Sendai Han (*daimyo* domain) starts to monopolize the selling of salt for the first time in the history of Japan. Because of this, all other Hans start to do likewise. Makabeya Ichibei of Kokubunji-cho in Sendai starts to sell Sendai Miso. He continues to sell his miso to the Han government for several generations.

1642—Because of famines in various provinces (*kuni*), the people were advised to eat coarse grains (*zakkoku*) and banned from eating rice. The sale of tofu, udon (wheat noodles), soba (buckwheat noodles), and *manju* (steamed glutinous rice cakes with a sweet azuki-jam filling) were also prohibited.

1645—The Ako Han starts a salt farm. Hatcho miso starts to be made in Mikawa, Okazaki. Hamaguchi Gihei of Hiromura in Kishu goes to Choshi and starts making shoyu. This is the beginning of Yamasa Shoyu.

1649 Feb.—The Tokugawa government (*bakufu*) passes a law to control the lives of farmers. Called Kanno Jorei (*Keian no Ofuregaki*), it states that farmers must plant soybeans and azuki beans between their rice fields and farms. Azé-mame (soybeans grown on the raised footpaths between rice fields) may have started from this forceful edict.

1652 May—Various farmers in Waksa, Kohama-han, Enshiki-gun? protest the heavy soybean tax increase. The farmland tax is often paid with soybeans. The leaders of the protest are killed.

1657 Jan. 18-19—A large fire (called *Sodefuri Kaji*) burned Edo (today's Tokyo). Laborers came from throughout Japan to reconstruct the city. To feed them, many sellers of pre-cooked, ready-to-eat food sprung up in Edo.

1666—Maruo Magouemon? Chotoku? of Hanshu Tatsuno makes Usukuchi Shoyu (light-colored soy sauce). After this, Tatsuno Shoyu's main product becomes Usukuchi Shoyu.

1681—The government bans the withholding or monopolizing of crops (such as rice, barley, or soybeans) following a year with a bad harvest.

1695—Dr. Hitomi Hitsudai, a Japanese physician, age 74, writes the *Honcho Skokkan* and talks about the good and bad points of daily foods from his medical viewpoint. The 12 volume book is written entirely in Chinese. He praises the therapeutic virtues of soybeans, miso, natto, tofu, and shoyu. A translation into Japanese was later made by Shimada Isao.

1695—At about this time, tofu is sold by vendors sitting by the road. We do not know for sure when tofu was first sold by walking street vendors, but it is guessed that this may have taken place in about 1837-1853 when the book *Morisada Manko* was written by Kitagawa Morisada.

1696—There is famine throughout Japan. In eastern Japan, especially in Tsugaru Han, half of the population dies of starvation.

1696—One of the greatest scholars of agriculture during the Edo period, Miyazaki Yasusada (1623-1697), write *Nôgyo Zensho* (Encyclopedia of Agriculture). In it he described the many different colors, sizes, and shapes of soybeans cultivated at that time.

1697—Koikuchi shoyu, similar to the type made today, starts to be made from tamari shoyu in Choshi.

1698—After a big fire in Edo, sellers of Dengaku (skewered grilled tofu with a sweet miso topping) start to appear. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

104. Jones, John. 1701. The mysteries of opium reveal'd. London: Printed for Richard Smith. [v] + 371 p. See p. 349-50, 358.

• **Summary:** Chapter 36, titled “Of the use of the panacea, &c. to stop fluxes.” states (p. 349-50): “III. The Vehicle in Vomiting should be small in Quantity, pleasant, comfortable and warming, lest you should by either Quantity or Quality give any offence to the Stomach; pleasing it answers the same Intent with the Opiate it self, and has often good Effect without Opium for, indeed, every Pleaser is proportionably an Opiate, and Opium is only such in an intense and permanent manner; therefore the Vehicle must be agreeable, as Wine, Hippocras, or Wine burnt with Spices, Rosemary, &c. or the best Cordials, or Wine with some Ketchup, Caviare, or Anchovis, or a little old Cheese dissolved in it upon the Fire,...”

Chapter 38, titled “Of the use of the panacea, &c. as a The tillative [for Titillation]” states (p. 358): “IV. The Regimen. As to Diet, it must be Nourishing, Warming, Comforting, and Titillating, with realishing [relishing] and high Sauces, Oisters [Oysters], Anchovy, Caviare [Caviar], Cockles, Ketchup, Mango's, Garlick, Onions, Leeks, Bears Garlick, Rocket, Sives, Shelot, Ginger, Aromaticks, Roots of Satyrion, Feaverfew, Goats-beard, Silver-weed, Skirrets, Parsnips, and Artichoaks” [Artichokes].

Note 1. This is the earliest English-language document seen (Sept. 2008) that contains the word “Ketchup” (spelled that way, regardless of capitalization).

Note 2. The author believes this diet will help to counteract the effects of opium. Address: Chancellor of Landaff, a Member of the College of Physicians in London: And formerly Fellow of Jesus-College in Oxford.

105. Chikamatsu Monzaemon. 1703. *Sonezaki no shinchû* [The love suicides at Sonezaki]. Japan. [Jap]*

• **Summary:** Iino (2003, p. 9): In this 1703 book, Chikamatsu's first novel set in current times, "the hero, Tokubei, is an apprentice in the Hirano soy sauce shop. He instructs an employee to make the rounds of regular customers carrying casks of *kijoyu*" [raw / unheated soy sauce]. Iino comments: "With such an explanation, it seems that this soy sauce must have been pure and undiluted, even though diluted soy sauce was also being made" [at this time in history]. Address: Japan.

106. Dale, Samuel. 1705. *Pharmacologiae, seu manuductionis ad materiam medicam supplementum:...* [Pharmacology, or a food as a supplement to medicines:...]. Londini (London): Sam. Smith & Benja. Walford. 12 + 389 p. + 67 p. See p. 183-84. 16 cm. See also 1751, Ed. 5, p. 238. [95* ref. Lat]

• **Summary:** The information on soy sauce appears in Section XIX, titled "De Herbis flore papilionaceo seu Leguminosis: De Leguminosis Scandentibus," under the heading "I. De Phaseolo. Pag. 318 pro 2da Specie Phaseoli adde."

Page 184 states "3. *Soia Offic.* [probably *Officinatum*] *Phaseolus Japonicus* ex quo *Japonesium Soia*, qui intinctus species est, conficitur *Herm.* Species *Phaseoli parvi albi*, è *Japonia allata*, è qua conficiunt condimentum *Ketchup* dictum, duum generum, liquidum nimirum & solidum.

Hujus notitiam debemus Botanico erudito D. *Paulo Hermann*o nuper defuncto, qui eam doctissimo amico nostro D. *Gulielmo Sherrard* [Sherard], LL.D. communicavit, sub titulo superscripto, unde nos habuimus.

English translation: "I. About *Phaseolus*. Page 318 for two species of *Phaseolus* [See Note 1 below]. 3. Soy sauce which is kept in stock at the pharmacist's [apothecary's or druggist's or chemist's] laboratory. The Japanese bean from which Japanese soy sauce is made. The latter is a kind of dip. The bean is the Hermann-type [see Paul Hermann, below] of a small white bean brought from Japan; from it they make a condiment called *Ketchup* [Ketjap, Kecap], of two kinds, one clearly liquid and one solid. I owe the notice of this to the erudite Paul Hermann, recently deceased. He communicated this to our most learned friend D. *Gulielmo Sherard* LL.D, under the title written above, whence we have gotten it."

Note 1. The term "Soia" was first used by John Ray (Joannis Raii) in his *Historia Plantarum*, published 1704 in London in 1704 by Smith and Walford, who also published Samuel Dale's Book. On page 438 Ray states: "28. *Phaseolus Japonicus* fructo albo, ex quo *Soia* conficiunt *Japonenses* D. *Sherard*."

Note 2. This is the earliest Latin-language document

seen (April 2012) that mentions soy sauce, which it calls *Soia*.

Note 3. This is the earliest document seen (April 2003) that uses the word "papilionaceo" (or any related word starting with the prefix "papilion" which means "butterfly" in Latin) in connection with the soybean.

Note 4. This passage by Dale raises several questions. (1) It is not clear what sentence starting with "Page 318..." means, since there is nothing related to *Phaseolus* on page 318 of this book or of any other book we know of published before 1705. (2) Both Dale and Ray refer to Sherard as their source, yet we do not know to which document by Sherard they are referring. (3) Paul Hermann first published information about the soybean in 1717 in his *Musaeum Zeylanicum*. How did he know about the soybean in 1705, and in what way did he communicate this information to Sherard, who then communicated it to Dale? (4) It is not clear what the term *Soia offic.* refers to and is an abbreviation of. Note that Linnaeus (1747) miswrites this as "*Soja officinarum*" (this was the first time that the term "*Soja*" was used in connection with the soybean) but gives the page as 238. The author's name on the title page is written "Samuelis Dale." He lived 1659?–1739.

Note 5. Talk with Prof. Ted Hymowitz, Univ. of Illinois. 2006. Sept. 1. This document shows clearly and irrefutably that Dale considered *Ketchup* to be a type of soy sauce; he listed it "taxonomically" under soy. *Soia Offic.* is a pre-Linnean taxonomic name, not a pharmaceutical name. It is curious that "soy" is not listed in the 1710 edition of this book. However the *Soia* entry in 1718 edition is exactly the same as is this 1705 first edition. Address: England.

107. Dampier, William. 1705. *Voyage round the world*. The supplement of the voyage round the world, describing the countreys of Tonquin, Achin, Malacca, &c. their product, inhabitants, manners, trade, policy, &c. London: Printed for James Knapton, at the Crown in St. Paul's Church Yard. See vol. II. Part I, p. 26-28. See also 1729 and 1906 editions. [Eng]

• **Summary:** The passage on soy sauce, written by Captain Dampier in 1688 (as indicated by a note in the margin reading "An. 1688"), makes this the earliest document seen (April 2012) that contains the word "soy," used to refer to what is now called "soy sauce." He begins by describing the process used by the natives in Tonquin (Tonkin, today's northern Vietnam) for using shrimps, small fish, salt, and water to make what is today called *nuoc-mam* in an earthen vessel or jar. "The masht Fish that remains behind is called *Balachaun*, and the liquor pour'd off is called *Nuke-Mum*. The poor people eat the *Balachaun* with their Rice. 'Tis rank scented, yet the taste is not altogether unpleasant; but rather savory, after one is a little used to it. The *Nuke-Mum* is of a pale brown colour, inclining to grey; and pretty clear. It is also very savory, and used as a good sauce for Fowls, not

only by the Natives, but also by the *Europeans*, who esteem it equal with Soy. I have been told that Soy is made partly with a Fishy composition, and it seems most likely by the taste: tho a Gentleman of my acquaintance, who was very intimate with one that sailed often from *Tonquin* to *Japan*, from whence the true Soy comes, told me, that it is made only with Wheat, and a sort of Beans mixt with Water and Salt.”

Note 1. This is the earliest English-language document seen (Jan. 2000) that mentions soy sauce in connection with Japan.

Note 2. First cited by Yule and Burnell (1886, p. 651. They cite the 1729 London ed.; and 1903, p. 858), and the *Oxford English Dictionary* (1919, Soy). Dampier lived 1652-1715.

About this book: It was first published in 1697 in London. A second edition was published the same year, a third edition (corrected) in 1698-1703. Tonquin refers to northern Vietnam, called Tonquin when it was part of French Indochina. Achin is today's Aceh (Atjeh), a region on the northern tip of Sumatra, Indonesia, whose main town is Banda Aceh (formerly Kutaranja). Malacca is a coastal town in today's Malaysia on the Strait of Malacca near Sumatra. This document contains no clear reference to soya in Tonquin (today's North Vietnam). Address: London.

108. Grimston, William Grimston. 1705. The lawyer's fortune: or, love in a hollow tree. A comedy. London: Printed for Bernard Lintott. [8] + 84 + 4] p.

• **Summary:** On page 26 is a dialogue: “Enter favourite.

“Fav. Mistress, shall I put any mushrooms, Mangoes or Bamboons into the Sallet [Salad]?

“Bon. Yes I prithee, the best thou hast.

“Fav. Shall I use Ketchop or Anchovis [Anchovies] in the gravy?

“Bon. What thou wilt.” Address: Viscount.

109. King, William. 1708. The art of cookery, in imitation of Horace's Art of poetry. With some letters to Dr. Lister, and others: Occasion'd principally by the title of a book publish'd by the Doctor... London: Printed for Bernard Lintott. 165 p. See p. 3, 45, 47.

• **Summary:** Page 3: “Consider, dear Sir, in what uncertainties we must remain at present; you know my Neighbour Mr. Greateur is a learned Antiquary, I shew'd him your Letter, which threw him into such a Dubiousness, and indeed Perplexity of Mind, that the next day he durst not put any Catchup in his Fish Sauce, nor have his beloved Pepper, Oyl and Limon [Lemon] with his Partridge,...”

Page 45: This piece is a dialog, adapted (with only small changes) from: Grimston, William Grimston. 1705. *The Lawyer's Fortune: or, Love in a Hollow Tree. A Comedy*. However four words are spelled or capitalized differently.

“Fav. Mistress, shall I put any Mushrooms, Mangoes, or

Bamboons into the Sallad?

“Bon. Yes I prithee, the best thou hast.

“Fav. Shall I use Ketchop or Anchovies in the gravy?

“Bon. What you will.”

Page 47: “There is a Scene of the greatest Horror, and most moving to Compassion of any thing I have seen amongst the Moderns; Talks of no Pyramids of Fowl, or Bisks of Fish is nothing to it, for here we see an innocent Person, unless punish'd for his Mother's and House-keeper's Extravagancy, as was said before in their Mushrooms, Mangoes, Bamboons, Ketchup, and Anchovies, reduc'd to the Extremity of Eating his Cheese without Bread, and having no other Drink but Water.”

Note the three different spellings in one book: Catchup, Ketchop, and Ketchup—suggesting a new word in the English language.

Note 2. A bisk (also spelled bisque) is a thick and rich cream soup, of French origin, made from seafood. Address: By the Author of the Journey to London.

110. *Philosophical transactions, giving some account of the present undertakings, studies, and labours of the ingenious in many considerable parts of the world.* 1708. An account of a book entitled X. Samuelis Dale *Pharmacologiae seu Manuductionis ad Materiam Medicam Supplementum*:... 25:2253-66. For the years 1706 and 1707. See p. 2266.

• **Summary:** “The Star of the Earth, (so call'd,) in a famous Receipt against the biting of Mad-Dogs, he proves to be the *Coronopus* and not the *Sesamoides Salamanticum Magnum*, which some mistake it for. *Soia* of which *Ketchup* is made, is the Seed of an *Indian Phaseolus*,...” Address: [England].

111. Yamato hongusa 1708. Japan. [Jap]*

• **Summary:** Iino (2003, p. 8) states that in the section titled *Shauyu* (another term for shoyu or soy sauce), this 1708 book “states that soy sauce can be made from either soybeans and barley and soybeans and wheat.” Address: Japan.

112. Kaibara, Ekiken. 1709. Yamato honzô [Japanese materia medica. 2 vols.]. Japan. 23 cm. Reprinted in 1932-1936 by Shunyôdô in Tokyo. [Jap]*

• **Summary:** The author, Ekiken Kaibara, lived 1630-1714. Nagata (1960, p. 75) states that E. Kaibara (1709, *Yamato Honzô*) described that autumn soybeans of high quality had been produced in Omi province—today's Shiga prefecture.

Kotzsch (1981, p. 43) states: “Another probable influence on Ishitsuka [the founder of macrobiotics in Japan] was Kaibara Ekken, a philosopher and writer and a popularizer of Confucian thought and ethics, who lived from 1630 to 1714. He wrote on a wide variety of subjects, including philosophy, education, ethics and natural history. His work *Yôjôkun* (*Rules for the Nourishing of Life*) is a practical manual of hygiene and health care... While Ishitsuka does not cite it in his own work, nor does Ohsawa

mention it in his autobiography, it most likely had an influence on Ishitsuka's thought."

Adachi (1982) notes that tamari (written with the characters for bean + oil) was mentioned.

Saito (1985) notes: "Kaibara Ekken (1630-1714) writes *Yamato Honso*, in which he discusses the shapes and use of the 1,362 products from Japan, China, and other countries. He notes that among the five crops (*go-koku*), soybeans are the second most widely produced after rice."

Kotzsch (1985, p. 18) noted: "In case of illness one should first try fasting or a very simple diet as a cure. If that fails then acupuncture, moxibustion (burning pellets of plant fiber on the appropriate *tsubo*, key energy spots) and herbal remedies may be tried as a last resort."

Note: This is the earliest document seen (Jan. 2009) connected with macrobiotics.

113. Useful transactions [in philosophy, and other sorts of learning], for the months of May, June, July, August and September, 1709... Translated into English from the Dutch. Part 3. 1709. London: Printed for Bernard Lintott. 80 p.

• **Summary:** The Introduction states (p. 53): "In many parts of Lapland, Fish is their Subsistence, which they dress with great perfection of Shrimps, Oysters, Anchovy and Ketchup. The Body is serv'd to the Master, and the dried heads are Food for the Cattle."

114. Howard, Henry. 1710. England's newest way in all sorts of cookery, pastry, and all pickles that are fit to be used. Adorn'd with copper plates,... 3rd. ed. with additions of beautifying-waters, and other curiosities. London: Printed for and sold by Chr. Coningsby,... 220 p. See p. 155-56.

• **Summary:** The section titled "Fowls and Rabbits, &c. when in Season" lists (p. 155-56) the many different birds and rabbits in England and when each is in season. It then gives a recipe (p. 156): "To make Gravy. Slice lean Beef, and lay it in a Stew-pan with a bit of Butter, and a slice of Bacon; cover it very close; and when it is done add a Ladle-full of Jelly-broth, so keep it for use; and when you have occasion add some Catchup." Address: Free-Cook of London, and late Cook to his Grace the Duke of Ormond, and since to the Earl of Salisbury, and Earl of Winchelsea [England].

115. Lockyer, Charles. 1711. Account of the trade in India: Containing rules for good government in trade... London: Printed for the author, and sold by Samuel Crouch. [12] + 340 p. See p. 128-29. 19 cm.

• **Summary:** Mr. Lockyer visited Sumatra, Canton, and India during the early 18th century. In Chapter 5, titled "Canton in China," he gives precautions to observe when buying each of various goods there: "Soy comes in Tubs from *Jappan* [Japan], and the best Ketchup [soy sauce] from *Tonqueen*; yet good of both sorts, are made and sold very cheap in *China*. Buy none but what is right, which you are likelier

to meet with among the Merchants than Shop-keepers. The best way is to agree by the Catty; for the Tubs are seldom or never full: But if they will not hearken to it, try which are the heaviest, and refuse all that are not likely to contain the Quantity they ought; draw it off immediately, and secure it in Bottles: Therefore in your Passage thither save as many as you can; for I know not a more profitable commodity.

Note 1. *Tonqueen* refers to Tonkin, which is the northern part of today's (Feb. 2010) Vietnam. France assumed sovereignty over all of Vietnam after the Sino-French War (1884-1885). The French colonial government then divided Vietnam into three different administrative territories. They named the territories: Tonkin (in the north), Annam (in the center), and Cochinchina (in the south). The great majority of the Vietnamese regarded their country as a single land and fought for much of the next 90 years to achieve unification.

Note 2. A catty is a Chinese unit of weight; 1 catty = 1.33 lb. weight avoirdupois.

116. Terajima Ryōan. comp. 1711. *Wakan sansai zue* [Collection of Japanese and Chinese diagrams and drawings of all things]. Japan. 40 books, 106 sections. Japanese summary by Kawakami 1978, p. 269. Translation into modern Japanese titled *Wakan Sansai Zukai* published by Heibonsha in Toyo Pocket Library series. [Jap; eng+]

• **Summary:** This is Japan's oldest encyclopedia, written in *kanbun*, the Japanese transcription of Chinese writing. It is a Japanese compilation, which originated in Japan and is not a Japanese translation of a Chinese work. When cited in Chinese, the title in pinyin is: *Hehan sanchai tuihui* (W.-G. *Ho Han San Ch'ai T'u Hui*). The author's nickname (*aza*) is Shojun; his artist's name (*go*) is Kyorindo. The work contains many illustrations, although they were generally primitive and not very accurate.

In volume 105 (*Jozorui*), which is about brewing and fermented foods, a clear distinction is made between miso, shoyu, and tamari.

The section on yuba states: "Tofu film is made on the surface while making tofu. It looks like yellow paper. If you stir too much, the film will not form properly. If you wish to obtain the film, add coagulant and boil the milk. The wrinkled look of the film resembles (the skin of) an old woman. If you remove too much film, the yield of tofu decreases and the tofu becomes hard to eat." Yuba is referred to as *doufu-p'i*, the present Chinese term. When the text notes that yuba "resembles (the skin of) an old woman," it seems to imply that the earlier term *lao* or *uba* was used because of the similarity of yuba and an old woman's face.

T. Yokotsuka (1985, p. 206) cites this as "*Wakan sansaizue* (1715)" but apparently does not cite it in his bibliography.

Fukushima (1989, p. 9) states that the *Wakan Sansai Zue* (Narushima, 1712) describes miso and shoyu.

Ebine (1989, p. 91-93) gives the date of this work as

1712, and states that volume 105 describes the preparation of “tama-misho” using broad beans (*Vicia faba*; Japanese: *soramame*), and a “whitish misho” using soybeans. For each of these Ebine gives a flowchart. Rice or barley are soaked in water, steamed, and fermented to make rice koji, which is mixed with salt, and then the salted koji is mixed with broad beans that have been cooked and dehulled. The mixture is formed into balls, which are wrapped with rice straw, hung under the rafters over a fireside for several weeks, crushed in a mortar, then mixed with water to make tama-misho. To make whitish misho from soybeans and rice: 10 parts of soybeans are soaked in water, dehulled by brushing, and cooked. The hulls are first removed from the cooker, then the cooked beans are removed, formed into balls, and the balls are sliced. Meanwhile, about 14 parts of rice are polished, soaked in water, steamed, cooled, and allowed to mold spontaneously to yield 16 parts of rice koji. The rice koji, sliced soybean balls, and 1.3 parts of salt are mixed, pounded, packed into vats, and fermented for 10 days to yield the whitish misho.

C.N. Li (1958): Making Fermented Products, Fermented black soybean sauce (*shizhi*; W.-G. *shih chih*). Note: Shih is often used at meals to harmonize the five flavors. People used to use it during this dynasty. Nowadays, if people do not use *chiang*, they do not use *shih*; they use soy sauce (*chiang-yu*), not fermented black soybean sauce (*shizhi*).

Modern rendering by Morohashi (1955). He translated p. 5 (roasted flour), p. 17 (fermented black soybean sauce). Confection of soy flour and *ame* = *Ame chimaki*. In “Making Fermented Foods.” Morohashi (1955) translated p. 5. *tou i* (*mame ame*). In: vol. 10, p. 63.

Concerning shoyu: Iino (2001, p. 21) contains a “Table of ingredients used in *tou-miso* and shoyu during the Edo period.” The entry for *Wakan-sansai-zue* (compiled in 1712) states that *Shoyu* is made from the following ingredients: Soybean 18.2%. Wheat / barley 28.2%. Salt 19.2%. Water 45.5%.

Iino (2003, p. 8) notes that this 1712 book “states that soy sauce made from wheat is suitable for the public and soy sauce made from barley is of low quality.” Iino comments (p. 8-9): “Put simply, the soy sauce sold in shops was made from wheat because that made from barley was inferior.”

On the same page, Iino shows a full page reproduction of the page titled “shoyu” in this book. It gives: “An explanation of soy sauce production with an illustration of the proper sort of barrel to be used.” Iino notes (p. 9): “Another method for producing soy sauce requires a heating process. The *Wakan Sansai Zue* states: ‘... Squeeze the *moromi* to extract the oil [sic, liquid]. If the color is light, the flavor will not be good. Boil the oil [liquid], place it in a pail and leave it over night to darken the color and improve the flavor. Mix the dregs [presscake] again with salt water and extract the oil [liquid]. This [second pressing] is called *niban shoyu* (second soy sauce), and the flavor is very much

inferior.”

117. *Daily Courant* (London). 1712. For sale by the Candle... (Ad). Dec. 30. p. [2], col. 2.4.

• **Summary:** “There is lately brought over from the East-Indies, a great parcel of Soy [sauce], commonly call’d Ketchup, neat and fine as ever came to England, to be sold Wholesale or Retale [Retail], very Cheap, at Mr. Jonathan Clark’s China-seller in King-street near Guild-hall, at Mr. William Emerson’s China-seller at the Angel and Tea-Canister over-against Gutter lane in Cheapside, and at Mr. Joseph Rose’s China-seller in Leicester Fields.”

See next page, top.

Note: The very interesting statement that Soy [sauce] is commonly called Ketchup. Indeed, the Malay / Indonesian word for soy sauce today (July 2010), spelled ketjap or kecap, is identical in pronunciation to the western word spelled “ketchup” or “catsup.”

118. Kaempfer, Engelbert. 1712. *Amoenitatum exoticarum politico-physico-mediciarum, fasculi v.* [Exotic novelties, political, physical, medical. Vol. 5]. Lemgoviae, Germany: W.W. Meyerei. See p. 834-35, 837-40. Illust. p. 838. Reprint of original edition published in 1983 by Steiner (Wiesbaden). [Lat]

• **Summary:** This is Kaempfer’s first major work, his most famous, and his first to mention the soybean. Kaempfer was

There is lately brought over from the East-Indies, a great parcel of Soy, commonly call'd Ketchup, neat and fine as ever came to England, to be Sold by Whol sale or Retail, very Cheap, at Mr. Jonathan Clark's China-seller in King-street near Guild-hall, at Mr. William Emerson's China-seller at the Angel and Tea-Canister over-against Gutter lane in Cheapside, and at Mr. Joseph Rose's China-seller in Leicester Fields.

born on 16 September 1651 at L  mgo, Germany. [L  mgo is presently a city in North Rhine-Westphalia, 44 miles southwest of Hannover.] He lived and traveled in Japan from 23 September 1690 to November 1692 and made many interesting observations. This book, written in Latin, was published in Lemgo in 1712, some 16 years after his homecoming.

The fifth fascicle of the 900 page book, which contains a description of the plants of Japan, includes a full-page illustration (drawing; p. 838), by Kaempfer, of a soybean plant with details of the flower parts and their names. This is the earliest illustration of a soybean plant published in the Western world. Also contains a description of the plant, and descriptions of how to make miso and shoyu. He called the soybean "Daidsu" and wrote the Chinese characters before the romanized name in the sequence "zu" "dai" from left to right. The actual Japanese spelling is "daizu." Note 1. This is the earliest document seen (June 2001) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

Kaempfer's description of the soybean in Latin (p. 837-40) begins: "Daidsu, vulgo & literatis; & ob excellentiam Mame, i.e. legumen, dictus. Phaseolus erectus, siliquis Lupini, fructu pisi majoris candido..."

Translated into English, this reads: "Daidsu—as people and scientists call it, is also called 'mame' for its excellence. An upright bean, a leguminous plant like the lupin, with whitish fruit somewhat larger than peas. A bean, similar to the afore-mentioned, but four feet high and with more branches and leaves, with upright stem, irregular branches and with hairs. It stretches forth leaves like the garden bean, but with more pubescence on the under side of the leaf. In the month of August it bears on pedicels in the axil of the leaves several bluish white flowers with a large standard, which resemble those of lentils. These tiny blossoms are followed by pods measuring 1½ inches long, which are covered with heavy hairs (pubescence) resembling those of the yellow lupin. The pods contain two, and more rarely three seeds, similar to garden peas in size, shape and taste, but laterally somewhat compressed, and with a chestnut brown eye (hilum).

"This legume supplies to the Japanese kitchen vital elements, for they make from it the following: 1—A kind of pap that they call miso, which is added to dishes instead of

butter. Butter is unknown under this strip of heaven. 2—And then the famous so-called shoyu (*Sooju*), a sauce which is poured over if not all dishes, at least over all cooked and fried meals. I add the processing methods for both.

"To produce miso, one takes one measure of mame or phaseolus Daidsu (*phaseolorum Daids*) which is cooked with water for a long time and then brayed or ground and mixed into a soft pap. Under continued braying, common salt is added, in summer four parts, in winter three. If less salt is added, one gets the product quicker, but shelf life is shorter. After reducing has been repeated, one mixes the pap with *koos* [he probably meant *koi*] or dehulled rice (*Oryza*), and mixes the total by repeated braying. This rice in preparation has been boiled a little in the steam of unsalted water. One lets the mixture cool down and remain in a warm cellar one or two days and nights to ripen. This mixture, which has the texture of a pap or spread, is put into a bowl that recently contained the popular *sacki*, a rice wine. Before using, one lets the bowl stand one or two months untouched. *Koos* lends to the product an agreeable taste, and its production requires, like that of the Germans' 'polenta,' the experienced hand of the master. Those therefore who make it are held in high esteem, and they sell it ready made.

Note 2. This is the earliest Latin-language document seen (March 2009) (and the earliest document published in Europe) that mentions miso, which it calls *Miso*. It is also the earliest document seen (March 2009) that compares miso to butter.

"To make shoyu (*Sooju*) one uses the same beans just as thoroughly cooked. And *muggi*, which is barley or wheat fermented (with wheat the product becomes darker) which has been coarsely ground. One mixes equal units with ordinary salt, or only one unit with half of it. The beans are blended with the prepared grain, and one lets the mixture stand in a warm place under cover a day and a night for fermentation. Then the salt is added, one stirs the mass and mixes with water, normally two units to half. When this has been done, the well covered mass is stirred once (better two or three times) the next day and each subsequent day by means of an oven rake. This work is continued for two or three months, then the mass compressed and filtered and the liquid preserved in wooden containers. The older it becomes, the clearer and better it will be. The squeezed mass is again filled up with water and newly stirred and some days after

大豆 *Daidzu*, vulgo & literatis; & ob excellentiam *Mame*, i. e. legumen, dictus. Phaseolus erectus, filiquis Lupini, fructu pisi majoris candido.

Phaseolus priori similis, sed tetrapedalis & plenior, caule erigitur tortè ramoso, inæqualiter tereti & hirsuto; *Folia* exhibens phaseoli hortensis, dorso asperius piloso. *Flosculos* mense Augusto intra sinus foliorum explicat uni pediculo insidentes plusculos, in albo cæruleos, pumilos, floribus Ervi pares, vexillo petalisque rectis, vix expansis: Quos *filiquæ* excipiunt copiosæ fescunciales, pilo longo asperæ, filiquis Lupini fl. lut. similes, femina continentes duo, rariùs tria, piso hortensi formâ magnitudine & sapore paria, quadantenus tamen compressâ, umbilico badio. Hoc

aquæ communis mensuras duas cum dimidiâ: quo facto, massam probè operculatam postridie ac sequentibus diebus singulis ad minimum semel (satiùs bis vel ter) rutabulo agitant. Labore duobus vel tribus mensibus continuato, massam filtrant & exprimunt, liquorem vasis ligneis asservantes; qui quo antiquior fuerit, eò clarior est & melioris notæ. Massam ita emulsam, affusâ aquâ, denuo irrigant & ab agitatione aliquot dierum exprimunt.

黒豆 *Suku*, vulgo *Kuro mame*, i. e. Phaseoli nigri. Phaseoli *Daidzu* species sive varietas, fructu nigro.

Idem fructu nigricante, pumilo medicinali; cujus grana tria vel quatuor in pulverem redacta propinantur asthmaticis.

treatment pressed again.

Note 3. This is the earliest document seen (April 2012) that uses the word *koos* to refer to koji, or that uses the word *Sooju* to refer to shoyu (soy sauce).

Paragraph 3 reads as follows in the original Latin: “Hoc legumen in coquina Japonicâ utramque replet paginam; Ex eo namque conficitur: tum puls *Miso* dicta, quæ ferculis pro consistentiâ & butyri loco additur, butyrum enim hîc coelô res ignota est; tum *Sooju* dictumcelebre embamma, quod nisi ferculis, certè frictis & assatis omnibus affunditur. Utriusque conficiendi modum appono:”

On page 834 Kaempfer lists the Gokoku (five chief cereal grains): *come* [*kome*], *Oryza* in genere: quinque grana Japoniis *go kôkf* secundum excellentiam dicuntur: *come*, *Oryza*; *o muggi*, *Hordeum*; *ko muggi*, *Triticum*; *daidsu*, *Phaseoli facie Lupini* [*Soja hispida*]; *sjodsu* seu *adsuki*, *Phaseoli vulgaribus similes* [*Adzuki*, *azuki*, or *Phaseolus radiatus*, L.].

On page 836 are botanical descriptions, each with 1-2 Chinese characters (read from right to left), of: Broad beans (*Sora mame*), sword beans (*Natta mame* [*nata mame*]), peanuts (*Nankin mame* or *Nankino*), and cowpeas (*Sasagi* [*sasage*], *Shiro Sasangi*).

On p. 837 is a detailed botanical description (in Latin) of the azuki bean, starting with a Chinese character: “Too, vulgo *Atsuki* [*Adzuki*], *Phaseolus hirsutus*...” Note 4. This is the earliest Latin-language document seen (Jan. 2005) that mentions azuki beans, which it calls *sjodsu*, *adsuki*, or *atsuki*.

On page 840 are shorter descriptions (in Latin) of “*Siuku*, vulgo *Kuro mame* [*Black soybean*], i.e. *Phaseoli nigri*. *Phaseoli Daidso* species sive varietas, fructo nigro,” and “*Katz*, vulgo *Kudsu* [*Kudzu*], *Kudsu Kâdsura*.”

Note 5. This is the earliest document seen concerning soya in connection with (but not yet in) Germany. Other early authors to cite it were Linnaeus (1747, p. 222, and 1753, p. 727), Osbeck (1771, p. 253), Linnaeus (1772, p. 171), de Candolle (1885, p. 331), Yule & Burnell (1886, p. 651), and Blasdale (1899).

Note 6. This is the earliest document seen (June 2001) by or concerning Engelbert Kaempfer in connection with soybeans.

Note 7. This is the earliest document seen (Sept. 2003) that mentions lupins.

Note 8. This is the earliest document seen (May 2003) that mentions both lentils and soybeans.

An illustration, which is thought to show Engelbert Kaempfer riding on a horse in Japan, was sent to Soyfoods Center by Herr Deubel of Germany. Address: Lemgo, Germany.

119. Burnet, Thomas. 1715. A second tale of a tub: or, The history of Robert Powel, the puppet-show-man. London: Printed for J. Roberts. x + xlii + 219 + [5] p. See p. 201. 20 cm.

• **Summary:** The long section titled “The history of Robert Powel” states (p. 201): “... Mr. Powel comes in, and tells them with a solemn Face; ‘Gentlemen, I am extremely grieved that my cook let fall a bottle of *Catchup*, by which means you can have no dinner to day, but if you will honour your Friend Powel next Week with your Companies, you shall see the nicest Entertainment I can provide for you;...’”

Note: This is a satire on the 1st earl of Oxford. Sir Thomas Burney lived 1694-1753. Address: [England].

120. Zoshu seiho 1716. Japan [Jap]*

• **Summary:** Yokotsuka (1985, p. 206), who cites this book as “*Zoshu-seiho* (1716),” states that it is about the development of and formulas for commercial shoyu during the Edo period. Address: Japan.

121. Strother, Edward. 1718. *Euodia*: or, A discourse on causes and cures. In two parts. 2nd ed, carefully corrected with additions. London: Printed for Charles Rivington. [16] + 200 + [16] p. 8vo.

• **Summary:** Page 28 states: “A Diet of *Fetids*, (as Stale Meats, Onions, Garlick, Mangoes, Catchups, &c.). Of *Acrids*, (as Mustard,...Ginger). Of *Aromatics*, (as Nutmeg...).

Note: Edward Strother, M.D., lived 1675-1737. Address: M.D. [England].

122. *Pasquin* (London). 1723. *Pasquin* to Marforio. Jan. 23. p. [1-2], col. 2.3.

• **Summary:** There are now many fictitious kings and pretenders in England, even though King George is the sole monarch. One of these is the King of Beggars, who is content to be the King of Vermin. “... they say he never eats *Veal* without *Oranges*, or *Fish* without *Catchup Sauce*.”

123. Smith, Robert. 1723. *Court cookery*: or, The compleat English cook. Containing the choicest and newest receipts for making soops, pottages, fricasseys, harshes [hashes], farces... London: Printed for T. Wotton. [8] + 112 + [8] + 82 + [14] p. 8vo.

• **Summary:** “*Ketchup*” is called for as an ingredient in the following recipes: To dress Snipes (p. 24): “...; pour in some *Ketchup*, and when they are enough, squeeze in the Juice of a Quarter of a Lemon;...” To hash chickens (p. 27): “; when they are boil’d enough, add these to the Yolks of six Eggs, with a little Nutmeg, Vinegar and *Ketchup*, and a good piece of Butter; warm all these together, and Pour them into a Sloop-Dish, and serve them.”

To stew tench (p. 47): “When the Fish is enough, put in Oysters, Capers, *Ketchup*, and Lemon: Garnish your dish with crispt Bread.”

To stew flounders (p. 48): “; when just done, pour off the Liquor into a Sauce-pan, and melt your Butter with it; put in a piece of Anchovy, a bit of Shalot, Mushrooms, and *Ketchup*; draw it thick;...”

To make an excellent sauce for salmon (p. 49): “; take a quarter of a Pint of the Liquor, and draw your Butter with it; mince into it an Anchovy wash’d clean, some Lemon-Juice and Nutmeg, half a Pint of Shrimps; two Spoonfuls of White-wine, with Ketchup and Mushrooms.”

To broil mullets (p. 50): “For the Sauce, take some clarify’d Butter, a little Flower [Flour], Capers, Ketchup, a Faggot of Herbs, Salt, Pepper, Nutmeg, and Orange-Juice, and serve them.” Address: Cook (under Mr. Lamb) to King William, as also to the Dukes of Buckingham, Ormond, D’Aumont (the French Ambassador) and others of Nobility and Gentry [England].

124. Thedens, Johannes. 1724. Diary. In: Paul van der Velse and Rudolf Bachofner, eds. 1992. *The Deshima Diaries Marginalia, 1700-1740*. Tokyo: Japan-Netherlands Institute. xxiii + 595 p. See p. 287 (#196).

• **Summary:** 1724 April 29—This entry describes the return trip, largely by ship, from Edo to Nagasaki. Departing from Itami, they passed Nishinomiya and arrived at Hyôgo, where they went ashore and visited a little temple named Sjacote, which means “ladle.” After they had dined, the village elder “showed us his sake distillery and his soy press which had a large capacity.” Address: Opperhoofd (Chief of the Dutch factory), Deshima, Nagasaki, Japan.

125. Kaempfer, Engelbert. 1727. *The history of Japan, ... Its metals, minerals, trees, plants, animals, birds and fishes; ... Together with a description of the Kingdom of Siam 1690-1692*. (translated by J.G. Scheuchzer from the original edition of April 1727. 2 vols.). London: Printed for the translator. See vol. I, book I, chapter IX, p. 121-22. [1 ref. Eng]

• **Summary:** In Chapter IX, “Of the fertility of the country as to plants,” the section titled *Gokokf* [*Goku-fu*] (“five grains,” p. 121-22) states: “The chief produce of the Fields, which contributes most to the sustenance of Life, is by the Japanese comprehended under the name of *Gokokf*, that is, the *five Fruits of the Fields*. ‘Tis by their good or bad growth they estimate the value of the Ground, the fruitfulness of the Year, and the wealth of the Possessor. They make up the chief dishes at their meals, and make good the want there is of Flesh-meat, which Custom and Religion forbid them to eat.” Note 1. This is the earliest English-language document seen (Dec. 2003) that uses the term “Flesh-meat” to refer to meat.

The five grains (*Gokokf*) are: (1) *Kome* or Rice (from which “they brew a sort of strong fat Beer, call’d *Sacki*...”). (2) *Oomugi* or Barley. “They feed their Cattle and Horses with it: Some dress their Victuals with the Flower [Flour], and make Cakes of it.” (3) *Koomuggi* or Wheat. (4) *Daidso* or Daidbeans. (5) “*Adsuki* [azuki] or *Sodso* [shôzu, shôdzu = small + bean] that is Sobeans” [azuki].

Concerning soybeans: “4. *Daidso*, that is, *Daidbeans*, is a certain sort of Beans, about the bigness of Turkish

Pease, growing after the manner of Lupins. They are next to the Rice in use and esteem. Of the Meal of these Beans is made what they call *Midsu*, a mealy Pap, which they dress their Victuals withal, as we do with Butter. What they call *Soeju*, is also made of it, which is a sort of an *Embamma*, as they call it, which they eat at meals to get a good stomach. This *Soeju* is exported by the Dutch, and brought even into *Holland*. I have describ’d their way of making it in my *Amoenitates Exoticae*. p. 839. where the Plant it self bearing these beans is figur’d and describ’d.”

Note 2. *Midsu* clearly refers to miso, and *Soeju* to shoyu. This is the earliest English-language document seen (March 2009) that mentions miso, or miso in connection with Japan. It is also the earliest English-language document seen (March 2009) that compares miso with butter. *Midsu* has almost the same pronunciation (phonetics), and the same etymology and meaning as the today’s word “miso.” Since spelling did not become fixed until the 18th century, this could be considered the earliest occurrence of “miso” in an English-language document.

Note 3. This is the earliest English-language document seen (April 2012) that uses the word *Soeju* to refer to soy sauce. It is clearly Kaempfer’s spelling of the Japanese word *shoyu*.

The author continues (p. 121-22): “5. *Adsuki* or *Sodso*, that is Sobeans. They grow likewise after the manner of Lupins, and are black, not unlike *Lentils*, or the Indian *Cajan*. The flower [flour] is bak’d with sugar into *Mansje* [*Manju*] and other Cakes.”

Note 4. This is the earliest English-language document seen (March 2006) that clearly mentions azuki beans. It is also the earliest English-language document seen (March 2006) that uses the word “*Adsuki*” or the word “*Sodso*” to refer to azuki beans. Cooked and mashed or ground dry into flour are mixed with sugar to make *an* or “sweetened azuki bean paste.” This is used as a filling for the popular steamed Japanese sweet bun named *manju*.

Besides the several sorts of *Gokokf* just mentioned, the following Plants are comprehended under the same name: *Awa*, Indian Corn, (*Panicum Indicum Tabern*), *Kibi*, or *Milium vulgare nostras*, *Millet*: *Fije*, or *Panicum vulgare juba minore semine nigricante*: And in general all sorts of Corn and *Mami* [Mamé = beans], that is pease and pulse. Azuki beans, though usually red, also occasionally have black or white seedcoats.

In the Introduction to this book, the translator explains that it was first published in English, after Dr. Kämpfer’s death in 1716, thanks to Sir Hans Sloane, who purchased all of Kämpfer’s plates, drawings, and manuscript memoirs as they were about “to be disposed of.” Sloane added them to his library, which the translator believes is “the completest of its kind in Europe,” with an extensive collection of Books of Physik, Natural History and Travels.” “This History of Japan was by the Author divided into five Books.”

Note 5. Kaempfer lived 1651-1716. John Gaspar Scheuchzer lived 1702-1729. His first translation was this one, in 1727. The title page states that the original was “Written in High-Dutch by Engelberus Kaempfer, M.D., Physician to the Dutch Embassy to the Emperor’s Court; and translated from his Original Manuscript, never before printed, by J.G. Scheuchzer, F.R.S. and a member of the College of Physicians, *London*. With the Life of the Author, and an Introduction. Illustrated with many copper plates.”

Note 6. In 1986 a 3 volume edition was published in Glasgow, Scotland by James Maclehose and Sons. This book contains no mention of soybeans in Siam (Thailand).

Note 7. This is the earliest English-language document seen (Nov. 2007) that mentions Lupins (or “lupin” or “lupine” or “lupines”).

Note 8. This is the earliest English-language document seen (Dec. 2000) that mentions the *Goku-fu* or “five grains” and includes the soybean among them.

Note 9. This is the earliest English-language document seen (June 2008) that mentions lentils; it compares them with adzuki [azuki] beans. Address: M.D., Physician to the Dutch Embassy to the Emperor’s Court [in Japan].

126. Three great historical stages in the transformation of ketjap into ketchup (Early event). 1728. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** The two words sets of “ketjap” and “ketchup, catsup, catchup” and their corresponding seasonings have histories that are intertwined and difficult to separate.

So far as we can tell, the Indonesian word “ketjap” meant, and still means, “Indonesian-style soy sauce.” It was a fermented food based on soybeans. The etymology of the word probably traces its origin to southern China, where it can refer to various kinds of sauces.

The transformation from “ketjap” to “ketchup” began in about 1728. Before this time, both products were fermented soybean condiments from Asia. Since the mid-1600s, soy sauce had been imported from Asia to Europe. Initially, Japanese shoyu (soy sauce) was imported from the port of Nagasaki in Japan to the Netherlands by the Dutch East India Co. The Dutch, who purchased *shoyu* eventually standardized the name as “Soy.” In 1750 this “Soy” was first imported into the United States.

Neither the Dutch nor the European and American consumers of “Soy” had any idea of how this sauce was made in Japan, but they knew it was expensive and tasty. So they began to see if they could make it in Europe—using European ingredients. Their initial experiments focused on using vinegar seasoned with mushrooms or walnuts. They were unaware of soybeans at the time and had no access to them, So the first big change was the European ketchup was made without soybeans. The second big change was that European ketchup not a fermented product—although it was aged. The third big change was that the European products

were lower-cost imitations, trying to match the flavor and aroma, color and consistency of a more expensive imported product, by trial and error. The fourth big change was the change in name; shoyu (from Japan) was called “Soy” and “ketjap” (probably from Java) was called “ketchup,” “catsup,” “catchup, etc.

One interesting hint of the basic similarity of Soy and ketchup was the way they were list in advertisements (usually retail ads) in Europe and the United States. Even though 20-50 items might appear in the ad, Soy and ketchup would almost always be listed together, one below the other in the list.

Over the period of about 250 years Soy remained basically the same product, whereas “ketchup” evolved in major ways. The early ketchups were rarely associated with the tomato, yet today the word “ketchup” is generally understood to mean “tomato ketchup.”

127. Swift, Jonathan. 1730. A panegyric on the Reverend D-n S-t [i.e. Dean Swift]: in answer to the libel on Dr. D-y [i.e. Delany]... In: Jonathan Swift. 1735. The Works of Jonathan Smith. 4 vols. Dublin [Ireland]: G. Faulkner. Vol. II, p. 291-92. [Eng]

• **Summary:** The section titled “Poems on several occasions” includes a poem titled “A Panegyrick on the D–n, in the Person of a lady in the *North*” (p. 281+). Written in 1830 it includes these lines (p. 291-92): “Then *Gluttony* with greasy Paws,

“Her Napkin pinn’d up to her Jaws,
“With watry Chaps, and Wagging Chin,
“Brac’d like a Drum her oily Skin;
“Wedg’d in a spacious Elbow-Chair,
“And on her Plate a treble Share,
“As if she ne’er could have enuff;
“Taught harmless Man to cram and stuff.
“She sent her Priests in Wooden Shoes
“From haughty *Gaul* [France] to make Ragous.
“Instead of wholesome Bread and Cheese,
“To dress their Soupes and Fricassyes [fricassees];
“And, for our home-bred *British* Cheer,
“Botargo, Catsap, and Caveer.”

Note 1. This is the earliest English-language document seen (Feb. 2006) that contains the word “catsap.” This quotation is found in the 1735 edition of Swifts *Works*.

Note 2. “Dean” refers to “Dean Smith,” another name by which Jonathan Swift was known. Vol. II is Swift’s poetical writings. *Caveer* is caviar. *Botargo* is a fish-based relish made of the roe of the mullet or tunny. Or the spawn of a mullet pickled. Address: England.

128. Tournefort, Joseph Pitton de. 1730. The compleat herbal: or the botanical institutions of Monsr. Tournefort, Chief Botanist to the late French King... translated [by J. Martyn] from the original Latin. With large additions, from

Ray, Gerard, Parkinson, and others. Vol. II. London: Printed for J. Walthoe... See p. 481. No. 81. Reproduced from John Ray 1704. [2 ref. Lat; Eng]

• **Summary:** “80. Phaseolus Japonicus niger. Butyri vices supplens Deysumisi boondi, *D. Sherard. Raii Supp.* 438. *Black Japanese Kidney-bean supplying the place of Butter.*”

Note 1. This citation and the one that follows were reproduced from William Sherard’s 1704 unpublished manuscript titled *Autograph observations on the first two volumes of John Ray’s Historia Plantarum* (2 volumes in 1), p. 438. But Tournefort made a small error in transcribing Ray’s text. Ray actually wrote *Deysu-Misi-boondi D. Sherard*. This text almost certainly refers to “Daizu-Miso-beans,” thus stating that black soybeans are used to make miso. Early Europeans occasionally considered miso to be a type of butter.

“81. Phaseolus Japonicus fructo albo, ex quo Soia conficiunt Japoneses, *D. Sherard. Raii Supp.* 438.” *Japanese kidney bean with a white fruit, out of which the Japanese make their Soia.*

Note 2. This is the 2nd earliest English-language document seen (Feb. 2006) that uses the term “Kidney-bean” (or kidney bean) or the term “Japanese Kidney-bean” to refer to the soybean. Address: France.

129. Bradley, Richard. 1732. The country housewife and lady’s director, in the management of a house, and the delights and profits of a farm... with the best method of making ketchup, and many other curious and durable sauces. 6th ed, with additions. London: Printed for D. Browne and R. Woodman. vii + 188 + [12] p. See Part I, p. 142-43. Part II, p. 150, 156. Illust.

• **Summary:** This book mentions the word “Ketchup” or the term “Mushroom Ketchup” at least 12 times. In Vol. 1 (p. 142-43), under the month of September, is the same recipe, “To make Mushroom Ketchup” that appeared in the original 1728 edition.

The recipe, titled “Ketchup, in Paste. From *Bencoulin* in the *East-Indies*” states (Part II, p. 150): “There is a Kidney-Bean, we have here, which has a fine relish in it, as the *Indians* say, but in fact there is none but what they give it by Art. This Bean, when it is full ripe, is taken out of the Shells, and boiled to a Pulp, and that Pulp strained till it becomes like Butter; then they put some of all the Spices into it, in Powder, as, Nutmeg, Cloves, Mace, and Pepper, Garlick, and Orange-Juice, or some Mango Pickle. This being well mix’d together, makes an agreeable Sauce, when it is put in any warm Liquor.”

Note 1. “Kidney-Bean” almost certainly refers to the soybean. This is the 3rd earliest English-language document seen (Feb. 2006) that uses the term “Kidney-bean” to refer to the soybean. The first two were Fernández (1704) and Tournefort (1730).

Note 2. This is the earliest document seen (May 2010)

that mentions a relative of Indonesian-style soy sauce (*kécap*) or that describes its preparation. Bradley wrote the Malay / Indonesian word *kécap* as Ketchup, thus starting a confusion that has lasted to the present. However, unlike soy sauce, this Ketchup has the consistency of a paste, is not fermented, and contains no salt. In today’s Indonesia (May 2010), the word *kecap* (ketchup), used alone, means “soy sauce;” *kecap manis* is sweet soy sauce. *Kecap asin* is salty soy sauce. But *kecap ikan* is a brown salty liquid produced by autolysis of fish or fish material, i.e., the degradation of fish material by enzymes in that material.

Note 3. Since this sauce contains no salt or sugar, it could not have lasted for long unless sterilized and sealed. That may explain why “this recipe appears to have had no influence on subsequent cookery writers” (Andrew F. Smith. 1996. *Pure Ketchup*, p. 13).

Note 4. Bencoulin (today spelled Bengkulu, formerly also spelled Bengkoelen, Benkoelen, or Benkulen) was a settlement on the southwest coast of Sumatra, established by the British in 1684, at which time it was the only British settlement in Southeast Asia; a fort was built a few years later. An early center of the British pepper and spice trade, it was ceded to the Dutch in 1824 in exchange for Melaka. Andrew Smith (1996, p. 13) observes: “The provenance of this recipe establishes that the British were introduced to some ketchups in what is today Indonesia.”

In Part II (Vol. 2, p. 156-57) is a recipe titled “To dress a calf’s head in a grand dish. From Mrs. E. Sympton. Take a large Calf’s-Head, and divide it,... Take then the harsh’d [hashed] part, and with some of the Liquor it was boil’d in, put a Glass of White Wine, a little Mushroom Ketchup, a little Nutmeg grated, and a little Mace beat fine, some Pepper and Salt, some grated Lemon-Peel, and stew them together with a bunch of sweet Herbs, and some Butter. When it is enough, put in a little Juice of Lemon, and thicken it with Cream and Butter,...”

Note 5. This book went through many editions in London. The 1st edition appeared in 1726 (Printed for James Woodman and David Lyon). The 2nd edition appeared in 1727 (Printed for James Woodman and David Lyon). The 6th edition appeared in 1732 (Printed for D. Browne and T. Woodman). The recipe for ketchup apparently first appeared in the 6th edition. Richard Bradley lived 1688-1732. Address: Prof. of Botany, Univ. of Cambridge, and F.R.S.

130. Miyake, Yurai. 1732. Mankin sangyo bukuri [How to produce daily household necessities]. Japan: 6 volumes (satsu). Japanese summary by Kawakami 1978, p. 258. [Jap]

• **Summary:** Volume 6, which is about food and drink, emphasizes methods of production, and describes how to make shoyu, sake, vinegar, konnyaku, and many other foods. The book was also known under the title *Machikata Bantaku Shobai Shiho Taisei* (“All houses in the town area business method collection”).

T. Yokotsuka (1985, p. 206) cites this as “*Mankin sangyo bukuri* (1731)” but does not cite it in his bibliography.

Fukushima (1989, p. 9) states that the *Mankin-Sangyotai* (Miyake, 1732) describes how to make miso and shoyu.

Iino (2003, p. 9) states that the *Mankin Sugiwai-bukuro* (1732) discusses only the soy sauce production method using wheat (not barley) and soybeans. Iino comments: “With the beginning of the 19th century, the large bulk of soy sauce seems to have been produced using wheat.” In column 2 of page 9 he adds that this book also gives a description of the method for making *kijoyu* (raw / unheated soy sauce). Iino then comments that from this description we learn that, “while *kijoyu* was very flavorful and could be kept for a long time, the high cost of production made selling *kijoyu* difficult. Therefore a blend of approximately 7-8 liters of *modoshi* [modoki = imitation?, a dilutor?] for every 18 liters of moromi was being sold.” Address: Kyoto, Japan.

131. Harrison, Sarah. 1733. The house-Keeper’s pocket-book, and compleat family cook. Containing above three hundred curious and uncommon receipts in Cookery,... London: Printed for T. Worrall,... 233 p.

• **Summary:** In the Introduction (p. 2-3): “I therefore advise you to lay in a store of Spices, bought at some noted reputable Grocers, as Nutmegs, Cloves, Mace,... Pickl’d Walnuts, Pickl’d Cucumbers, Cucumbers in Mango, Anchovies, Olives, Pickl’d Mushrooms, or Mushrooms dry’d and powder’d, or Kitchup, or Mushroom Juice, or Mushroom Kitchup; but if you have a Garden, then most of the sweet Herbs may be gathered at any time,...”

On page 50 we read: “Some will put an Anchovy or Mushroom-ketchup into this Sauce, which will make it very rich.”

Note 1. This is the earliest document seen (Oct. 2010) that mentions anchovy ketchup (regardless of spelling).

Note 2. This is the 2nd earliest English-language document seen (July 2010) which mentions the word “Ketchup” (or the word “Catsup”) preceded by a noun used as an adjective (Mushroom), or that mentions the term “Mushroom-Ketchup” (regardless of hyphenation or capitalization). The earliest document was Bradley 1732. Address: Mrs., Devonshire.

132. A collection of above three hundred receipts in cookery, physick, and surgery: For the use of all good wives, tender mothers, and careful nurses. By several hands. 5th ed. To which is added a second part,... 1734. London: Printed for the executrix of Mary Kettilby. viii + 9-272 + [4] p. Index. [Eng]

• **Summary:** The word “Catchup” [ketchup] appears in two recipes in this book, the first two recipes in “Additions to Part I” (p. 170-71). “To make catchup that will keep good twenty years. Make a Gallon of strong stale Beer; one Pound

of Anchovies, wash’d, and clean’d from the Guts; half an Ounce of Mace; half an Ounce of Cloves; a quarter of an Ounce of Pepper; three large Races of Ginger; one Pound of Shallots; one Quart of flap Mushrooms, well rubb’d and pick’d: Boil all these over a slow Fire, ‘till ‘tis half wasted; then strain it thro’ a Flannel Bag; let it stand ‘till ‘tis quite cold; then bottle and stop it very close. This is thought to exceed what is brought from India; and must be allow’d the most agreeable Relish, that can be given to Fish Sauce: One Spoonful to a Pint of melted Butter, gives Taste and Colour, above all other Ingredients. *Note*, That the stronger and staler the Beer is, the better the Catchup will be.”

Note 1. This is the earliest document seen (July 2010) that contains the term “twenty years” or the term “keep good twenty years” in connection with how long ketchup made using a certain recipe will keep.

Note 2. This recipe appeared (with minor changes) in many subsequent cookbooks. The basic ingredients here appear to be stale beer, anchovies, mushrooms, and shallots. It might be called an “anchovy and mushroom catchup.”

Note 3. This recipe states clearly that real Catchup [Ketjap; soy sauce] was brought from India—a key statement in trying to understand the origin of catchup / ketchup and its relationship to soy [sauce]. The word “India” here may well refer to “The Indies.”

“To make Catchup of Mushrooms. Take a Stew-pan full of the large flap Mushrooms, and the Tips of those you wipe for Pickling; set it on a slow Fire, with a Handful of Salt; they will make a great deal of Liquor, which you must strain, and put to it a quarter of a Pound of Shallots, two Cloves of Garlick, some Pepper, Ginger, Cloves, Mace, and a Bay-leaf; boil, and scum it very well; when ‘tis quite cold, bottle, and stop it very close.”

Note: This is the earliest English-language document seen (Feb. 2008) that contains the word “Catchup” (regardless of capitalization). Note that this home-made type is thought to be better than that imported from India (the East Indies).

133. Swift, Jonathan. 1735. Miscellanies, in prose and verse. Volume the fifth. Which with the other Volumes already published in England, compleats the Author’s Works. London: Printed for Charles Davis. See p. 141. [Eng]

• **Summary:** The section titled “Poems on several occasions” includes a poem titled “A Panegyrick on the D–n, in the Person of a lady in the *North*.” Written in 1830 it includes these lines (p. 141): “Then *Gluttony* with greasy Paws,

“Her Napkin pinn’d up to her Jaws,
“With watry Chaps, and Wagging Chin,
“Brac’d like a Drum her oily Skin;
“Wedg’d in a spacious Elbow-Chair,
“And on her Plate a treble Share,
“As if she ne’er could have enuff;
“Taught harmless Man to cram and stuff.

“She sent her Priests in Wooden Shoes
 “From haughty *Gaul* [France] to make Ragous.
 “Instead of wholesome Bread and Cheese,
 “To dress their Soupes and Fricassyes [fricassees];
 “And, for our home-bred *British* Cheer,
 “Botargo, Catsap, and Caveer.”

Note 1. This is the earliest English-language document seen (Feb. 2006) that contains the word “catsap.”

Note 2. *Caveer* is caviar. *Botargo* is a fish-based relish made of the roe of the mullet or tunny. Or the spawn of a mullet pickled.

Note 3. “D–n” refers to “Dean” which refers to “Dean Smith,” another name by which Jonathan Swift was known. Address: England.

134. The gentleman’s companion: or, Tradesman’s delight. 1735. London: Printed for J. Stone, and sold by G. Strahan. 257 + [27] p. 17 cm.

• **Summary:** The recipe for “A sauce for Pike or Tench” states (p. 171): “Take a quarter of a Pint of Claret, as much Water, an Anchovy or two, an Onion, some whole Pepper, Mace, Nutmeg and Ginger, a piece of Horse-radish, and Lemon-Peel. Let it boil a good while over the Fire, beat two or three Yolks of Eggs with Gravy and the Juice of a Lemon, and a little Salt; add a little Catchup if you have any, and as much Butter as you please; then stir them together over the Fire till it is thick.” Address: [England].

135. *The Political State of Great Britain*. 1736. Poisonous mushrooms. 53:32. Jan.

• **Summary:** “... Mr. Williams and his Wife... having gathered some Mushrooms, dressed and eat [sic] them, and went to Bed seemingly in good Health; but the next Morning Mrs. Jenkins was found dead by her Husband’s side, and he so dangerously ill, that he survived her but four Hours, notwithstanding he had immediate Help: A Dog which belonged to them having licked the Dish after they had supp’d, was found dead in an Outhouse. There are a Sort of Mushrooms that when you break them are spungy [spongy], with small Holes in them; these are bad: The right Sort, when broke, have a fine Red on the Inside, which scraped makes Ketchup.”

136. *London Spy Revived (England)*. 1737. On Saturday next, May 21, will be published, for the Use of all Families, in Three Sheets in Quarto (... in blue Paper), to be continued Weekly, ‘till the whole is completed, which will be in about twenty Weeks, at the Price of Three Pence each Number, (No.!) of... (Ad). May 18. p. [3], col. 2.1.

• **Summary:** “*The Whole Duty of a Woman: or, An Infallible Guide to the Fair Sex...*”

“To which will be added... Rules and Receipts for making all the choicest Cordials for the Closet; Brewing Beers, Ales, &c. making all Sorts of English Wines, Cyder,

Mum, Mead, Metheglin, Vinegar, Verjuice, Catchup, &c. With some fine Perfumes, Pomatums, Cosmeticks and other Beautifiers.”

137. Ship Enckhuizen in Nagasaki loaded with soy [sauce]. 1737. *

• **Summary:** Herman Ketting is working with William Shurtleff, trying to find when the Dutch East India Company (VOC) first imported soy sauce from Japan to the Netherlands. Ketting writes (20 June 2007): The citation gives the following information: On 13 October 1737 a ship named Enckhuizen (which we know was in Asia at that time) was in Nagasaki loaded with 75 double barrels of Soy [sauce] marked with a “Z.” The 75 Barrels were shipped from Nagasaki to Batavia, the VOC’s headquarters. Of this total, 35 barrels were bound for mainland Holland [Netherlands].

This was surely not the first shipment of soy [sauce] to Holland, because I have sent you some information about the ship Westerwik which lay off the Cape of Good Hope [South Africa] with some tainted soy the same year. In the meantime I have found a letter sent to Holland which informed the Herren XVII that soy is being sent to Holland in June 1737. If you like, I will send you this information [from the General Missives] in the usual format.

138. Ogle, George. 1737. The miser’s feast. The eighth satire of the second book of Horace imitated. A dialogue between the author and the poet laureat [laureate]. London: Printed for R. Dodsley. 26 p. See p. 16.

• **Summary:** This short work is in verse, and every line is in quotation marks: “(Cambridge! my alma mater, candid proctor

“Who gave me, by my proxy, name of doctor)

“Then oyster liquor, an improvement rare!

“More sav’ry far, than catchop or cavare [caviar];”

Note: George Ogle lived 1704-1746. Address: Esq. [England].

139. Ship Westerwijk lying off the Cape of Good Hope with a cargo of tainted soy [sauce]. 1738. *

• **Summary:** Herman Ketting is working with William Shurtleff, trying to find when the Dutch East India Company (VOC) first imported soy sauce from Japan to the Netherlands. Ketting writes (4 June 2007): Most important is perhaps the record about the Ship Westerwijk (1738) lying off the Cape of Good Hope [South Africa] with a cargo of tainted soy [sauce]. This record has a distinctive inventory number (VOC 9149) and therefore is probably more extensive than the other records. So it may contain some references to soy being imported to Asia from Holland.

140. Governors General and the Council of the Indies (Indië). ed. 1739. Generale missiven [General missives].

In: Willem P. Coolhaas and Jurrien van Goor, comp. 2004. *Generale Missiven van Gouverneurs-General en Raden aan Heren XVII der Verenigde Oostindische Compagnie: Deel X: 1737-1743*. 's-Gravenhage: Nijhoff. Book X. 1159 p. (Letters to the Heren XVII of the Dutch East India Company). [Dut]
 • **Summary:** On page 253 (31 Jan. 1739) “zoya” is mentioned twice and “Japans soja” once: “Ship *Enkhuyzen* / *Enkhuizen* / *Enckhuizen*. Soy [sauce] (*Zoya*) for Hoorn and Enkhuizen f139:12:-8.”

“Ship *Schellack*. 4 chests (kelders) of Soy sauce for Delft and Rotterdam f139:12:-8.”

“With the fleet of 1739 in total, 36 chests (kelders) of Japanese Soy (*Japane soja*) f 1231:--:--.”

Note 1. Enthuizen, Hoorn, Delft, and Rotterdam were harbor towns and early “chambers” (*kamers*) of the Dutch East India Co. (VOC), from which overseas trade with the East Indies was conducted. The other two early chambers were Amsterdam and Zeeland.

Note 2. The symbol “f” stands for guilder, the basic Dutch monetary unit. “f 2:07:8” is read “two guilders, 7 stuivers and 6 pennigen.” One gulden (singular of guilder) = 20 stuivers. One stuiver = 12 pennigen.

Note 3. This is the earliest Dutch-language document seen (April 2012) in which the word *Zoya* is used to refer to soy sauce.

Note 4. The General Missives are letters written by the Governors General and the Council of the Dutch East Indies (*Indië*) and sent to the Heren XVII [the directors of the VOC] in the Netherlands. Items in the General Missives are the demand for men and materials for Indies, the number and quality of ships in the Indies, questions about management and information concerning the cargo sent with the fleet to the Netherlands. Address: Batavia, Netherlands.

141. Valckenier, A. 1739. [Re: Merchandise loaded from Batavia, Dutch East Indies]. Letter to Heren XVII (“17 Lords,” leaders of the Dutch East India Company, VOC), Netherlands, Jan. 31. p. 2000-01 [Dut]

• **Summary:** Loaded merchandise is listed according to their place of origin. For example merchandise from Coromandel.

Batavia’s collection: 11,500 pounds of tin from Malacca. f. 3942:-4:-. 30,500 pounds of copper, Japanese, by staffs, f. 13,944:12:-. 36 crates with bottles of Japanese soy sauce (*Zoija Japance*) f. 1231:16:-8. 45,000 pounds of spialter (an alloy / mixture of lead and tin) f. 150,606:-6:-8. 4,209 pounds of black ebony f. 90:-3:-.

Bibliographic reference in Dutch: NA, VOC 2422, OBP (21 Jan. 1739) 2001vo.

Location: Nationaal Archief, Den Haag, De Archieven van de VOC; toegangsnummer 1.04.02; inventaris nummer 2422 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the VOC; access number 1.04.02; record number 2422].

Note 1. The symbol “f.” stands for guilder, the basic

Dutch monetary unit. “f 2:07:8” is read “two guilders, 7 stuivers and 6 pennigen.” One gulden (singular of guilder) = 20 stuivers. One stuiver = 12 pennigen.

Note 2. A. Valckenier was Governor General in Batavia from 1737 to 1741.

Note 3. An alloy of lead and tin is commonly called either old pewter, tin pewter, or solder. Address: Governor-General, and the Councils of the Indies, in Batavia [today’s Jakarta, Indonesia].

142. *General Evening Post (London)*. 1739. London, August 16. Aug. 14. p. [2], col. 3.2.

• **Summary:** “A few Days since an Officer belonging to the Customhouse being a little too curious in rummaging aboard the Prince of Wales [a ship], lately arriv’d from China, had the Misfortune to break a Jar of Soy of considerable Value, which the Proprietors will oblige him to make good. Soy is a rich Catchup, the best is made in India, and gives the highest Gust of any Sauce in the World.”

Note 1. Soy [sauce] is being imported from China to England; it is very expensive.

Note 2. Soy and Ketchup are closely related; soy is richer—probably in flavor and perhaps also in consistency—than Catchup. Since neither Soy sauce nor ketchup were made at this time in today’s India, the word “India” is probably used here in its broad sense to refer to the East Indies, and to today’s Indonesia where ketchup was made and is still made. Today “ketjap / kecap”—pronounced exactly like “Catchup” / “Ketchup”—is the Indonesian and Malay word for soy sauce.

Note 3. The Soy was imported in a jar rather than in a wooden keg or cask. How big and what shape was this jar? Was it made in China? Of what material was it made? Earthenware? Porcelain? Glass?

143. *The Political State of Great Britain*. 1739. An officer over-diligent. 57:145. Aug.

• **Summary:** “About this Time an Officer belonging to the Custom-house being a little too curious in rummaging aboard the *Prince of Wales* [a ship], lately arrived from China, had the Misfortune to break a Jar of Soy of considerable Value, which the Proprietors will oblige him to make good. Soy is a rich Ketchup, the best is made in India, and gives the highest Gust of any Sauce in the World.”

Note: The word “India” may refer to the East Indies, today’s Indonesia (Oct. 2010).

144. Harrison, Sarah (Mrs.). 1739. *The house-keeper’s pocket-book and compleat family cook: Containing about seven hundred curious and uncommon receipts...* 2nd ed., corrected and improv’d with the addition of four hundred genuine receipts sent to the author by several worthy persons. London: Printed for R. Ware. iv + [4] + 263 + [17] p. See p. 2, 34-35, 38. Illust. 18 cm (12mo).

• **Summary:** In Chapter 1, page 2 states: “I therefore advise you to lay in a Store of Spices, bought at some noted reputable Grocers... neither ought you to be without Shallots, Onions, Pickled Mushrooms, or Mushrooms dry’d and powder’d, or Kitchup, or Mushroom Juice, or Mushroom Kitchup;...”

Note 1. This is the only place in this book that the word “Kitchup” (spelled like this) or the term “Mushroom Kitchup” appear; no recipes call for their use.

Note 2 This is the earliest English-language document seen (July 2010) that mentions the term “Mushroom-Kitchup” (regardless of hyphenation or capitalization).

However the word “ketchup” and the term “Mushroom-ketchup” appear in two recipes:

Chap. XV. To dress a calves-head in a grand dish (p. 34-35): “Take a large Calves-head and divide it, and wash it well;... then cut the Flesh off one side of the Head in slices, liked harsh’d [hashed] Meat,... take the harsh’d Part with some of the Liquor it was boiled in; put a Glass of white Wine, a little Mushroom-ketchup, a little Mace beat fine, some Nutmeg grated, a little grated Lemon-peel, and some sweet Herbs, and stew them all together;...”

Beef steaks with oysters (p. 38): “Some will put an Anchovy or Mushroom-ketchup into this Sauce, which will make it very rich.”

Note 2. Sarah Harrison fl. 1733-1777. Address: Devonshire, England.

145. De vergadering van het Haags Besogene [Meeting of the Haags Besogene]. 1740. The Hague, Netherlands. Unpaginated. [Dut]

• **Summary:** The meeting of the Haags Besogene starts 20 Oct. 1740. The committee works on the 24th four-year (quadrennial) account of the Dutch East India Co (VOC).

Monday, 24 Oct. 1740, in the morning. Proceeding with the reading and control of the delivery books to be sold and delivered goods and merchandise, from 1 June 1737 until 15 May 1738, item from 16 May 1738 until 15 May 1739, and finally from 16 May 1739 until 31 May 1740.

Monday, 24 Oct. 1740, after midday. Started with the reading and control of the accounts and merchandise, which on 17 May 1736 were stockpiled in the warehouse of this chamber [Amsterdam] and four years ago were received from the [Dutch East] Indies (Indië [Batavia]). Items that since 31 May 1736 were delivered from the stock according to the journal of bookkeeping and the ledger and the part of the stock lying unsold in the Company’s warehouses:... Japanese Soy [sauce] (*Japanse Soija*); received as before—30 kelders. Note 1. A kelder is a chest; in this case it contains bottles of soy sauce.

Bibliographic reference in Dutch: NA, VOC 4472, Haags Besogene (20 t/m 24-10-1740).

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC);

toegangsnnummer 1.04.21; inventaris nummer 4472. Notulen van het Haags Besogene [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Co. (NFJ); access number 1.04.21; record number 4472. Notes of the Haags besogene].

Note 2. This is the earliest document seen (June 2007) showing soy sauce in the Netherlands. This document contains the earliest date seen for soy in the Netherlands (31 May 1736).

Note 3: The Haags Besogne prepared the meetings of the Heren XVII [the 17 directors who made the most important decisions]. To prepare those meetings, the Haags Besogne had to deal with the letters received from Batavia and the chambers in Holland and Zealand. The Haags Besogne also controlled the different bookkeeping journals, and they saw every letter, report or bookkeeping document in the administration of the VOC; they made many abridgements of or notes about them. On the basis of the findings, the Haags Besogne gave advice to the Heren XVII. After that, the Heren XVII made their decisions. So we can found in the archive of the Haags Besogne some information from books or sources which are lost. There is only one problem: there is no index to or register on the notes of the Haags Besogne. So a researcher must be familiar with the notes of the Haags Besogne. Address: The Hague, Netherlands.

146. The laird and farmer, a dialogue upon farming, trade, cookery, and their method of living in Scotland, balanc’d with that of England. 1740. London: Printed for the author. viii + 118 p. See p. 112. 20 cm.

• **Summary:** In Chapter 16, “Receipts of cookery” is a recipe titled “To stew carp about three or four pound” which states (p. 112). “Cover them with a small Gravy, and a Pint of Red-Wine, four Anchovies, one Onion, Pepper, Mace, and Nutmeg to your Taste; let them stew half an Hour, then turn them, and stew while you think they be enough, then take them up, and thicken your Sauce with the Yolk of three or four Eggs, about a Quarter of a Pound of Butter, four Spoonfuls of *Ingie Siy*, or Catchup, and about half a Lemmon, and pour it over them in the Dish.”

Note 1. The meaning of the term *Ingie Siy* is unclear: Two possibilities are “India soy” or “English soy,” both referring to soy sauce.

Note 2. A “laird” is the owner of a small estate in Scotland. Address: Author of the Familiar Catechism [“a True Scotsman”].

147. Atkyns, Arabella (pseud.). 1741. The family magazine: in two parts. Part I. Containing useful directions in all the branches of housekeeping. Part II. Containing a compendious body of physick. 2 vols. in one. London. xiv + 123 + 324 p. See p. 96-98.

• **Summary:** The section on “General observations” states (p. 27): “Eschalots, Onions, dry’d Orange and Lemon Peel,

Anchovies, Olives, Mushrooms, Ketchup, pickled Walnuts, Mango, pickled Cucumbers, Capers &c. should likewise be always at hand."

148. Moxon, Elizabeth. 1741. *English housewifry*, exemplified in above four hundred receipts: never before printed;... Leeds, England: Printed by J. Lister,... [4] + 209 + [23] p. See p. 26, 189-90. Illust. (7 unnumbered leaves of plates). 21 cm.

• **Summary:** Recipe 51. To make brown frickasy of rabbets [fricassee of rabbits] states (p. 26): "Take your Rabbet and cut the Leg in three Pieces, and the remainder of your Rabbet the same Bigness, and beat it thin with a paste Pin, and so fry them in Butter over a quick Fire; when they are fried put them into a stew Pan with a little Gravy, put in a spoonful of Catchup and grate in a little Nutmeg, then shake it up with a little Flower [Flour] and Butter..."

Recipe 411. To make Catchup states (p. 189-90): "Take your large Mushrooms when they are fresh gathered, cut of the dirty Ends, so break them small with your Hands, put them in a Stone Bowl, adding a handful or two of Salt, let them stand all Night; if you don't get Mushrooms enough at once, with a little Salt they will keep a Day or two whilst you get more, so put them in a stew Pot, and set them in an Oven with Household Bread; when they are enough strain from them the Liquor, and let it stand to settle, then boil it with a little Mace, Jamaica and whole black Pepper, two or three Shallots, boil it over a slow Fire for an Hour, when it is boiled let it stand to settle, and when it is cold bottle it; if you boil it well it will keep a Year or two; you must put in Spices according to the Quantity of your Catchup; you must not wash them [the mushrooms], nor put to them any water."

Note: This recipe would probably soon be named "Mushroom catchup."

149. Eales, Mary. 1742. *The compleat confectioner: or, The art of candying and preserving in its utmost perfection*. 3rd ed. To which is added, a 2nd part: containing A curious collection of receipts in cookery, pickling, family physick, &c... London: Printed for R. Montagu. 100 p. + 103 p. See p. 21-23. 18 cm. [Eng]

• **Summary:** Part II contains two ketchup recipes based on anchovies (small fish). The first, "To make a Katch-up," states (p. 21-22): "Take a wide-mouth'd Bottle, put into it a Pint of the best White-wine Vinegar, then put in ten or twelve Cloves of Eschallot peel'd and bruis'd; then take a Quarter of a Pint of the best White Wine, boil it a little, and put to it twelve or fourteen Anchovies wash'd and cut small, dissolve them in the Wine, and, when cold, put them in the Bottle; then take another Quarter of a Pint of White Wine, and put in it Mace, sliced Ginger, a few Cloves, a Spoonful of whole Pepper; let them boil a little; when almost cold, slice in near a whole Nutmeg, some Lemon-peel, and two or three Spoonsful of Horse Radish, then stop it close, and shake it

once or twice a Day; then use it. You may add to it the clear Liquor which comes from Mushrooms." Note: This recipe is similar to that in E. Smith (1727).

The second, "To make Katch-up that will keep good twenty years," reads (p. 22-23): "Take a Gallon of strong stale Beer, one Pound of Anchovies wash'd and clean'd from the Guts, half an Ounce of Mace, half an Ounce of Cloves, a quarter of an Ounce of Pepper, three large Races of Ginger, one Pound of Eschallots, and one Quart of flap Mushrooms well rubb'd and pick'd; boil all these over a slow Fire till it is half wasted, and strain it thro' a Flannel Bag; let it stand till it is quite cold, then bottle and stop it very close. This is thought to exceed what is brought from India, and must be allow'd to be the most agreeable [agreeable] Relish that can be given to Fish Sauce. One Spoonful to a Pint of melted Butter is sufficient to give both Taste and Colour beyond any other Ingredients.

"Note. *The stronger and staler the Beer is, the better the Katch-up will be.*

Note 1. This 2nd recipe states clearly that real Katch-up [Ketjap; soy sauce] was brought from India—a key statement.

Andrew F. Smith (1996, p. 16) adds: "Subsequently, many other ketchups were made with fish and seafood products. Recipes for making ketchup from cockles, mussels, and oysters were also common. Cockle ketchup was simply cooked cockles, strained and combined with 'savoury spices.' If the cockle ketchup were to be used for making white sauce, 'sherry, lemon-juice and peel, mace, nutmeg, and white pepper' were added; if the recipe were for brown sauce, 'Port, anchovies, and garlick' were mixed in."

Note: Part 2 has a special title page: "Originally published in 1718 under the title Mrs. Mary Eales's Receipts." Address: By the late Mrs. Eales, Confectioner to King William and Queen Ann.

150. Harrison, Sarah (Mrs.). 1743. *The house-keeper's pocket-book and compleat family cook: Containing about seven hundred curious and uncommon receipts...* 3rd ed., corrected and improv'd with the addition of four hundred genuine receipts sent to the author by several worthy persons. London: Printed for R. Ware. iv + 268 + [36] P. See p. 2. Illust. 18 cm (12mo). *

• **Summary:** "I therefore advise you to lay in a Store of Spices,... neither ought you to be without... Kitchup, or Mushroom Juice."

Note 1. Sarah Harrison fl. 1733-1777. Note 2. Andrew F. Smith (1996, p. 14) states: "Presumably, due to the general availability of commercial ketchups, she did not even bother to offer recipes but recommended purchasing them from a reputable grocer, such as the 'Chandler's Shop.' If ketchups were commonly available in shops by 1743, it suggests that the printed references to ketchup lagged far behind that of common usage." Address: Devonshire, England.

151. Haywood, Eliza Fowler. 1743. A present for a servant maid: or, The sure means of gaining love and esteem... The whole calculated for making both the mistress and the maid happy. London: Printed and publish'd by T. Gardner. [4] + 76 p. 8vo.

• **Summary:** In the section on Fish (p. 59+) are two recipes that call for Ketchup. Salmon (p. 59-60): "Wash it. and let it bleed well in the Water... take out the Liver when about three Parts done, and braid it with Ketchup, which, mingled with Butter, will make exceeding rich Sauce."

Fresh cod (p. 60): "The Sauce for this cannot be too rich, and it you are allowed it, spare neither Ketchup, the Body of a Lobster or Crab, Oysters and Shrimps;..." Address: [England].

152. White's China and Flint-Glass Warehouse. 1744. Classified ad: To be sold at seven pence per pound,... *Daily Advertiser (London)*. May 16. p. [5], col. 2.8.

• **Summary:** "Where likewise is sold at the lowest Prices,... Japan and Chinese Soy [sauce], India Ink and Fans, the finest Havanna [Havana, Cuba] and Spanish Snuffs, Lavender, Orange-Flower, Hungary, Honey, and Sanspareil Waters, &c."

Note: This is the earliest English-language document seen (April 2012) that uses the term "Chinese Soy" to refer to soy sauce. Address: Opposite the King's Arms Tavern in New Bond-street [London].

153. Ellis, William. 1744. The modern husbandman: or, The practice of farming. Vol. 3 of 4. Containing the months of July, August and September. London: Printed for and sold by T. Osborne. See p. 117-18. [Eng]

• **Summary:** The chapter titled "Of potatoes" states (p. 117-18) that there are many ways to cook and serve them: "A Third Way. Others, when they are boiled, have a Sauce ready to put over them, made with Butter, Salt, and Pepper; others use Gravy Sauce, others Ketchup, some eat them boiled with only Pepper and Salt, others cut the large ones in Slices, and fry them with Onions, or stew them with Salt, Pepper, and Ale, or Water."

Note: Vol. 1 is Jan. to March. Vol. 2 is April to June. Vol. 3. July to Sept. Vol. 4 is Oct. to Dec.

154. Brouwer, David. 1744. Diary. In: Leonard Blussé, Cynthia Viallé, et al, eds. 2004. The Deshima Diaries Marginalia, 1740-1800. Tokyo: Japan-Netherlands Institute. xl + 898 p. See p. 50, 63 (#180).

• **Summary:** 1744 Oct. 7—"The *compradoors* asked whether I wanted to buy the regular provisions. I replied that I was willing to buy provisions at the prices they charged others. They replied that the *sake* they supplied us was especially brewed for the Company and that the barrels of soy [sauce] given to us are bigger than the regular ones. I ordered provisions amounting to 1,903 taels or f3,806."

Address: Opperhoofd (Chief of the Dutch factory), Deshima, Nagasaki, Japan.

155. Notulen van het Haags Besogene [Notes of meeting of the Haags Besogene]. 1744. The Hague, Netherlands. Unpaginated. Oct. 19-22. [Dut]

• **Summary:** Monday 19 Oct. 1744. The committee starts to work on the 25th four-year (quadrennial) account [of the Dutch East India Co (VOC)] and has agreed to come together for that purpose during the morning from 9 until 12 and after midday from 3:30 until 5:30 p.m...

Thursday 22 Oct. 1744. Started with the reading and control of the account of goods and merchandise which on 31 May 1740 were stockpiled in the warehouse of this chamber [Amsterdam] and which 4 years ago were received from the Indies (*Indië* [Batavia]). Items that according to the journal of bookkeeping and the ledger have been delivered from the stock since that time and the part of the stock from 15 May 1744 has lain unsold in the Company's warehouses. The findings are stated below:

"... Japanese Soy [sauce] (*Japanse Soija*): from the years 1738 and 1739 were stockpiled—30 kelders. Added to this, received from the Indies (*Indië*) during the past four years—61 kelders.

Total in stock as of 15 May 1744—91 kelders. Note 1. A kelder is a chest; in this case it contains bottles of soy sauce.

Bibliographic reference in Dutch: NA, VOC 4472, Haags Besogene (19 t/m 22-10-1744).

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); toegangsnummer 1.04.21; inventaris nummer 4472. Notulen van het Haags Besogene [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Co. (NFJ); access number 1.04.21; record number 4472. Notes of the Haags besogene].

Note 2. A careful examination (by a Dutch PhD researcher at the Hague) of the records VOC shipments arriving in Holland from Batavia finds no evidence that soy sauce was delivered to intermediaries for the Dutch or other markets. For goods such as pepper, sugar, coffee and tea, the Haags Besogne always noted how much was delivered. But for soy sauce they did not. Therefore the soy sauce was probably consumed by VOC directors and their servants.

Note 3. Soy was delivered by VOC ships and stored in VOC warehouses. The inspectors of the warehouses never mentioned that this soy had been delivered to a private merchant. Our reached his conclusion after comparing the note about soy and, for example, a note about pepper. Address: The Hague, Netherlands.

156. Harley, Edward. 1744. The Harleian miscellany: or, A collection of scarce, curious, and entertaining pamphlets and tracts, as well in manuscript as in print, found in the late Earl of Oxford's library. Vol. 1 of 8. London: Printed for T.

Osborne. See p. 520. Index. 27 x 21 cm.

• **Summary:** In “The natural history of chocolate. Sect. III” (p. 518-20) we read (p. 520): “... and I do not doubt but you *London* Gentlemen, do value it above all your Cullisses and Jellies; your Anchoves, *Bononia* Sausages, your Cock and Lamb stones, your Soys, your Ketchups and Caveares [Caviars], your Cantharides, and your Whites of Eggs, are not to be compared to our rude *Indian*; therefore you must be very courteous and favourable to this little Pamphlet, which tells you most faithful Observations.”

Note 1. The pamphlets were selected and edited by William Oldys. Dr. Johnson supplied the preface. Edward Harley, Earl of Oxford, lived 1689-1741.

Note 2. This passage first appeared in Chamberlayne 1682. It is identical except for several changes of spelling, punctuation, and use of italics. Address: Earl of Oxford, Oxford, England.

157. Salmon, Thomas. 1744. *Modern history: or, The present state of all nations. Describing their respective situations, persons, habits, and buildings; manners, laws and customs, religion and policy;... Plants, animals, and minerals.* 3rd ed. Vol. 1 of 3. London: Printed for T. Longman,... And J. Rivington,... 844 p. See p. 35. 38 cm.

• **Summary:** In Chapter 11, on “The empire of China,” a section titled “Other goods imported from China” states (p. 35): “Besides tea, our merchants also bring from China, quicksilver, vermillion, china-root, rhubarb, raw and wrought silks, copper in bars like sticks of sealing wax, camphire [camphor], sugar candy, fans, pictures, lacquered ware, porcelane or china-ware [porcelain], soy, borax, lapis lazuli, galingal,...” Address: Viscount.

158. [Re: Journal of the first bookkeeper in Amsterdam. Items purchased from the VOC]. 1745. Amsterdam, Netherlands. p. 222 [Dut]

• **Summary:** In Amsterdam, 31 March 1745. The following persons purchased Soy [sauce] worth a total of f. 1456:-9:- (*aan Soija guldens*).

Entry No. 250: About 70 crates with bottles (*fleskelders*) sold and delivered at several prices as before folio 189.

Entry No. 321: Sacharias Tielman, according to the delivery book fo. 189, 20 crates with bottles, f430:-9:-.

Entry No. 103 [in ledger]: Nicolaas Fremjin, 20 crates with bottles, f421:-8:-.

Entry No. 311: Jan Leonard Apol, 10 crates with bottles, f207:-4:-.

Entry No. 78: Blote and Knibbe, 10 crates with bottles, f202:-4:-.

Entry No. 367: Jacob Gudmanson, 10 crates with bottles, f194:-4:-.

Total: 70 crates with bottles, f1456:-9:-.

Bibliographic reference in Dutch: NA, VOC 7145, *journaal van de opperboekhouder* (31 maart 1745) 222.

Location: Nationaal Archief, Den Haag, De Archieven van de VOC; toegangsnummer 1.04.02; inventaris nummer 7154 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the VOC; access number 1.04.02; record number 7154.].

Note 1. This is the earliest document seen (Jan. 2012) that gives a price for soy sauce; that price is in Dutch guilders. We are not told the volume of each bottle or how many bottles per crate.

Note 2. The symbols “f” and “f.” stand for guilder, the basic Dutch monetary unit. “f2:07:8” is read “two guilders, 7 stuivers and 6 pennigen.” One gulden (singular of guilder) = 20 stuivers. One stuiver = 12 pennigen.

Note 3. Items records above are not all that a person or persons purchased. For example, Blote and Knibbe bought, in addition to soy [sauce], cloves, coffee, tea, brown pepper, cinnamon, borax, gum resin, and gum olibanum [for incense].

Note 4. The journal of the first bookkeeper is arranged by product type, whereas the ledger of the first bookkeeper is arranged by the surname of the buyer. Address: Amsterdam.

159. *The accomplish’d housewife; or, the gentlewoman’s companion: containing I. Reflections on the education of the fair sex; with Characters for...* 1745. London: Printed for J. Newbery,... [16] + 431 + [13] p. Illust. 12vo.

• **Summary:** The section titled “General directions for small families” states (p. 177-78): “... nor should you be without Onions or Shalots [Shallots], nor dry’d Lemon and Orange Peel; Olives, Anchovies, Catchup and Pickles of every Sort: When these Things are provided you are prepared for any of the following Dishes...” Address: [England].

160. Barbe (William). 1747. Classified ad: William Barbe at the Sugar Loaf in George’s-Lane, almost facing Checquer-Lane, sells... *Dublin Journal (The)* (*Dublin, Ireland*). Sept. 29. p. [3], col. 2.4.

• **Summary:** “... all Kinds of Goods in the Grocery Way: He has also by him Pickles of Various Kinds, Anchovies, Olives, Ketchup, &c.” Address: The Sugar Loaf in George’s-Lane, almost facing Checquer-Lane [Dublin].

161. Glasse, Hannah (Mrs.). 1747. *The art of cookery, made plain and easy: Which far exceeds any thing of the kind ever yet published...* by a lady. London: Printed for the author, and sold at Mrs. Ashburn’s, a china-shop... [16] + ii + [3]-166 p. 29 cm. (folio). [Eng]

• **Summary:** Ketchup is mentioned on the following pages: 57-58, 61, 74, 86-89, 92-94, 97, 100, 121-23, 155-56.

The recipe “To broil mackerel [mackerel] whole” (p. 89) concludes: “Let your sauce be plain butter, with a little Ketchup or Wallnut-pickle.”

“Chap IX. For captains of ships” begins (p. 121-22): “To make a ketchup to keep twenty years. Take a Gallon of

strong Stale Beer, one Pound of Anchovies washed from the Pickle, a Pound of Shallots peeled, half an Ounce of Mace, half an ounce of Cloves, a quarter of an Ounce of whole Pepper, three or four large Races of Ginger, two Quarts of the large Mushroom Flaps rubbed to Pieces. Cover all this close, and let it simmer till it is half wasted, then strain it through a Flannel Bag, let it stand till it is quite cold, then bottle it. You may carry it to the *Indies*; a Spoonful of this to a Pound of fresh Butter melted, makes fine Fish Sauce. Or in the room of Gravy-Sauce, the stronger and staler the Beer is, the Better the Ketchup will be.”

To ragoo artichoke bottoms (p. 123): “Take twelve Bottoms, soften them in warm Water, as in the foregoing Receipts, take half a Pint of Water, a Piece of the strong Soop [sic] as big as a small Wallnut, half a Spoonful of the Ketchup, five or six of the dried Mushrooms, a Tea Spoonful of the Mushroom-powder, set it on the Fire, shake all together, and let it boil softly two or three minutes. Let the last Water you put to the Bottoms boil; take them out hot, and lay them in your Dish, pour the Sauce over them, and set them to Table hot.”

To bake fish (p. 123): “Butter the Pan, lay in the Fish, throw a little Salt over it, and Flour, put a very little Water in the Dish, an Onion, and a Bundle of Sweet Herbs; stick some little Bits of Butter, or the fine Dripping, on the Fish. Let it be baked of a fine light-brown; when enough, lay it on a Dish before the Fire, and skim off all the Fat in the Pan, strain the Liquor, and mix it up either with the Fish-Sauce, or Strong Soop, or the Ketchup.”

“Chap. XIX. To make anchovies, vermicella, ketchup, vinegar, and to keep artichokes, French beans, &c.” (p. 155+) states: To make ketchup (p. 156): “Take the large Flaps of Mushrooms, pick nothing but the Straws and Dirt from it, then lay them in a broad earthen Pan, strow [sic] a good deal of Salt over them, let them lie till next Morning; then with your hand brake [break] them, put them into a Stew-pan, and let them boil a Minute or two, then strain them thro’ a coarse Cloth; and wring it hard. To take out all the Juice, let it stand to settle, then pour it off clear, and run it thro’ a thick Flannel Bag, (some filter it thro’ brown Paper, but that is a very tedious Way) then oil it, to a Quart of the Liquor put a quarter of an Ounce of whole Ginger, and half a quarter of an Ounce of whole Pepper, boil it briskly a quarter of an Hour, then strain it, and when it is cold, put it into Pint Bottles; in each Bottle put four or five Blades of Mace, and six Cloves, cork it tight, and it will keep two Years. This gives the best Flavour of the Mushrooms to any Sauce, if you put a to Pint of this Ketchup a Pint of Mum, it will taste like foreign Ketchup.”

Another way to make ketchup (p. 156): “Take the large Flaps and salt them as above, boil the Liquor, strain it through a thick Flannel-Bag; to a Quart of that Liquor put a Quart of Stale Beer, a large Stick of Horse-radish cut in little Slips, five or six Bay leaves, an Onion stuck with twenty or

thirty Cloves, a quarter of an Ounce of Mace, a quarter of an Ounce of Nutmegs beat, a quarter of an Ounce of black and white Pepper, and a quarter of an Ounce of All-Spice, four or five Races of Ginger, cover it close, and let it simmer very softly, till about one third is wasted, then strain it thro’ a Flannel-Bag, and when it is cold bottle it in Pint Bottles, and cork it close, it will keep a great while. You may put Red Wine in the Room of Beer; some put in a Head of Garlick; but I think that spoils it. The other Receipt you have in the Chapter for the Sea.”

Andrew F. Smith (1996, p. 15) states: “Hannah Glasse, author of the most successful cookbook published in England during the second half of the eighteenth century, featured several ketchup recipes in the first edition of her *Art of Cookery Made Plain and Easy* (1747). Her two mushroom ketchup recipes diverged from Bradley’s in significant ways. Glasse’s first recipe required salt, As previously discussed, salt encouraged [??] fermentation. She also reported that if “mum” (beer) were added to the recipe it would then taste like ‘foreign’ ketchup. Her second mushroom recipe, ‘Another Way to make Ketchup,’ used stale beer, horseradish, bay leaves, onions, nutmeg, allspice, and white and black pepper. Some cooks replaced the stale beer with garlic and red wine, but Glasse believed these additives ruined the ketchup.” Address: England.

162. Notulen van het Haags Besogene [Notes of meeting of the Haags Besogene]. 1748. The Hague, Netherlands. Unpaginated. Oct. 25. [Dut]

• **Summary:** Started with the reading and control of the account of goods and merchandise, which on 15 May 1744 are stockpiled in the warehouses of this chamber [Amsterdam] and which have been received during the last four years from the Indies (*Indië* [Batavia]). Items that according to the journal of bookkeeping and the ledger have been delivered from the stock since 31 May 1748 and that part of the stock lying unsold in the Company’s warehouses.

“... Soy [sauce] (*Soija*): According to the list closed on 15 May 1744 were stockpiled–91 kelders. And received from the Indies (*Indien*) during the past four years–72 kelders.”

Total: 163 kelders. Note 1. A kelder is a chest; in this case it contains bottles of soy sauce.

“From that is delivered during this time: 106 chests (kelders).

“On account of the filling of half empty bottles (*flessen*) and broken bottles: 4 chests (kelders).

“For the benefit of inns and yachts used: 2 chests (kelders). Total: 163 chests (kelders) [So the books balance].

163. Carter, Charles. 1749. *The London and country cook: or, Accomplished housewife*. 3rd. Revised and much improved by a gentlewoman; Many years housekeeper to an eminent merchant in the city of London. London: Printed for Charles Hitch,... Stephen Austen,... and John Hinton. vii + 363 p. See p. 1, 36-37, 73-74, 101-02, 119-20, 169. Illust.

• **Summary:** “Catchup” is mentioned as follows: To broil mackrel [mackerel] whole (p. 1): “Let your sauce be plain butter, but with a little catchup or wallnut-pickle.”

To make anchovy sauce (p. 36-37): “Take a pint of gravy, put in anchovy... “You may add a little juice of lemon, catchup, red wine, and wallnut liquor, just as you please.

“Plain butter melted thick, with a spoonful of wallnut-pickle, or catchup, is good sauce, or anchovy: In short, you may put as many things as you fancy into sauce; all other sauces for fish you have in the *Lent* chapter.”

To hash a calf’s head (p. 73-74): “... flour the meat before you put it in, and put in a few mushrooms, a spoonful of the pickle, two spoonfuls of catchup, and a few truffles and morels; stir all these together...”

To dress sweetbreads (p. 101-02): “... or make a very rich gravy with mushrooms, truffles and morels, a glass of white wine, and two spoonfuls of catchup. Garnish with cocks combs forc’d and stew’d in the gravy.

“*Note*, You may add to the first, truffles, morels, mushrooms, cocks combs, palates, artichoke bottoms, two spoonfuls of white wine, two of catchup, or just as you please.”

To make catchup, that will keep good twenty years (p. 119-20): “Take a gallon of strong stale beer; one pound of anchovies, wash’d and clean’d from the guts; half an ounce of mace; half an ounce of cloves; a quarter of an ounce of pepper; three large races of ginger; one pound of shallots; one quart of flap mushrooms, well rubb’d and pick’d: boil all these over a slow fire, ‘till ‘tis half wasted; then strain it through a flannel bag; let it stand ‘till ‘tis quite cold; then bottle and stop it very close. This is thought to exceed what is brought from *India*; and must be allow’d the most agreeable relish, that can be given to fish sauce: one spoonful to a pint of melted butter, gives taste and colour, above all other ingredients.

“*Note*, That the stronger and staler the beer is, the better the catchup will be.”

To make catchup to keep twenty years (p. 169): “Take a gallon of strong stale beer, one pound of anchovies washed from the pickle, a pound of shallots peeled, half an ounce of mace, half an ounce of cloves, a quarter of an ounce of whole pepper, three or four large races of ginger, two quarts of the large mushroom flaps rubbed to pieces. Cover all this close,

and let it simmer till it is half wasted, then strain it through a flannel bag, let it stand till it is quite cold, then bottle it. You may carry it to the *Indies*; a spoonful of this to a pound of fresh butter melted, makes fine fish-sauce. Or in the room of gravy-sauce. The stronger and staler the beer is, the better the catchup will be.” Address: Cook to his Grace the Duke of Argyle, &c..

164. Moxon, Elizabeth. 1749. *English housewifery, exemplified in above four hundred and fifty receipts, giving directions in most parts of cookery*;... Leeds, England: Printed by J. Lister,... 224 + [22] p. Illust. Index. 12vo.

• **Summary:** Recipe No. 14. To fry beef steaks (p. 13): “; pour out the Fat, and put them in your Pan with a little Gravy, and Onion shred very small, a Spoonful of Catchup and a little salt; thicken it with a little Butter and Flower [Flour] the Thickness of Cream.”

No. 35. Veal cutlets another way (p. 24-25): “; fry them in Butter over a quick Fire; when they are [cooked] enough put from them the Fat they are fried in, and put to them a little small Gravy, a Spoonful of Catchup, a Spoonful of white Wine or Juice of Lemon, and grate in some Nutmeg; thicken them with Flower and butter;...”

No. 38. To make a calve’s head hash (p. 26-27): “Take a Calve’s Head and boil it, when it is cold take one half of your Head and cut off the Meat in thin Slices, put it into a Stew-pan with a little brown Gravy, put to it a Spoonful or two of Walnut-pickle, a Spoonful of Catchup, a little Claret, a little shred Mace, a few Capers shred, or a little Mango; boil it over a Stove, and thicken with Butter and Flower;...”

No. 52. To make a brown fricasey of Rabbits (p. 33): “; when they are fried put them into a Stew-pan with a little Gravy, a Spoonful of Catchup, and a little Nutmeg; then shake it up with a little Flower and Butter.”

No. 73. To stew pigeons (p. 44-45): “... and let them stew whilst your Pigeons be enough; then take part of the Gravy, an Anchovie shred, a little Catchup, a small Onion or a shalot, and a little Juice of Lemon for Sauce;...”

No. 229. To make sauce for salmon and turbot (p. 228): “; take the Gravy that drains from the Salmon or Turbot, an Anchovie or two, a little Lemon peel shred, a Spoonful of Catchup, and a little Butter, thicken it with Flour the thickness of Cream, put to it a little shred Parsley and Fennel;...”

No. 418. To make Catchup (p. 202-03): “Take large Mushrooms when they are fresh gathered, cut of [off] the dirty Ends, break them small in your Hands put them in a stone Bowl with a handful or two of Salt, and let them stand all Night; if you don’t get Mushrooms enough at once, with a litle Salt they will keep a Day or two whilst you get more, so put them in a stew Pot and set them in an Oven with Household Bread; when they are enough strain from the Liquor, and let it stand to settle, then boil it with a little Mace, Jamaica and whole black Pepper, two or three Shallots

boil it over a slow Fire for an Hour, when it boiled, let it stand to settle, and when it is cold bottle it; you must put in Spices according to the Quantity of your Catchup; you must not wash them, nor put to them any Water.”

No. 463. To make minc'd collops (p. 223): “Take two or three Pound [sic] of any tender Part of Beef, (According as you would have the Dish in Bigness)... fry it a little whilst it be a light brown, then put to it a Gill [$\frac{1}{4}$ pint or 118.29 ml] of good Gravy and a Spoonful of Walnut Pickle, or a little Catchup;...” Address: [England].

165. Palmer (Thomas). 1750. Classified ad: For sale by the Candle, at the King's Head Coffee-House in Sweeting's Alley. *General Advertiser* (London). March 6. p. [3], col. 2.5.

For SALE by the CANDLE,
At the King's Head Coffee-House in Sweeting's-Alley,
To-morrow the 7th of March, at Five in the Afternoon,
THE FOLLOWING GOODS,
VIZ.

50 Bags of Cayen Cocoa	} in Coal Harbour
10 Hogheads of fine Carracca	
65 Bags of Marigoo	
100 Bags of Salt Petre	} in the East-India Company's Warehouse,
10 Ditto of Jambbee Pepper	
68 Tubs and Chests of Tea	
1 Cask of Arrack	
3000 Rattans	
4 Chests of Tea (Duty paid)	
10 Bags of Cocoa for home Consumption	
11 Chests of Quicksilver, Salt of Amber, Gum Senica, Coral, Isingglass, Sago, and Sallop,	
6090 Cups and Saucers	
140 Bowls	
48 Enamelled Plates	
96 Dishes	
5 Sets of China	
122 Half-pint Basins	
240 Pint Ditto	
6 Dozen of Soy	
10 Bales of Coffee	
10 Bags of Sago	
15 Casks of Spanish Juice	
And 27 Ream of Writing Paper.	

The Cocoa to be seen at Coal-Harbour; and all the rest of the Goods (except those in the East-India Company's Warehouse) at Tho. PALMER's in Broadstreet, from Th^e Morning to the Time of Sale; Catalogues to be had at the Place of Sale, and of
THOMAS PALMER, Broker.

• **Summary:** “240 Pint Basins. 6 Dozen of Soy [sauce]. 10 Bales of Coffee. 10 Bags of Sago.” Address: Broker, Broadstreet.

166. *Amsterdam: Avec Privilege de Nos Seigneurs, les Etats de Holland et de West-Frise*. 1750. Pais Bas (Pays Bas): D'Amsterdam 14e 5. Octobre [The Netherlands: Amsterdam, Oct. 5]. 80:Oct. 6. [Fre]

• **Summary:** This periodical has no page numbers. However on the 4th page of this issue, in the right column is a description of articles from the East Indies (*des Indes-Orientales*), from Batavia, which arrived at Texel on the 26th of last month. These include 591,964 units of brown pepper, 257 units of ginger conserves, 4 kegs of Arak, 26 cases of

soy [sauce] from Japan (*Caves Soya du Japon*), and 44 silk robes from Japan (*Robbes de Soye du Japon*).

167. Homoeed, Hendrik van. 1750. Diary. In: Leonard Blussé, Cynthia Viallé, et al, eds. 2004. *The Deshima Diaries Marginalia, 1740-1800*. Tokyo: Japan-Netherlands Institute. xl + 898 p. See p. 126, 134, 138 (#156-57).

• **Summary:** In the section titled “Arrival of the *Haarlem* and the *Zuiderburg*,” at 1750 Oct. 17–“On behalf of his master and the incoming governor, Kawachi-no-kami, the secretary, gave me a present consisting of sixty barrels of sake, sixty barrels of soy and two presentation trays heaped with fresh fish. I expressed my gratitude most humbly...” Address: Opperhoofd (Chief of the Dutch factory), Deshima, Nagasaki, Japan.

168. Rochell & Sharp. 1750. Classified ad: Just imported by the last ships from London,... *New-York Gazette Revived in the Weekly Post-Boy* (New York City). Dec. 17. p. 3.

Just imported by the last Ships from London, and to be sold cheap by
ROCHELL & SHARP, at Mr. Seabring's, Baker, in Wall Street,
Superfine & middling Broad Cloths, Bearskins,
Naps & Forrest Cloths, Shalloons, Garlix, Tandems, double Silks,
yd. wd. 3-4 & 7-8 Checks, Sheeting, dy'd Silks, French Vitry,
Oxenbrigs, Sail Cloth, fine Hyson, Green & Bohea Tea, Pepper, Pewter,
China, Toys, Ribbands, Calicoes of sundry sorts, Women's ready made
Cloaks, Pickles, Durham Mustard, Suits of Cloaths with Trimmings
answerable, pickled Mushrooms in Quart Bottles, Sallad Oil in do.
pickled Onions in Quart do. Pint do. of Indian Soy, Bottles of Weston's
superfine Scotch Snuff, Bladders of do. Cutlery, fix neat Saddles with
Trimmings, and sundry other Goods at reasonable Rates.

• **Summary:** “... and to be sold cheap by Rochell & Sharp, at Mr. Seabring's, Baker, in Wall Street, Superfine & middling Broad Cloths, Bearskins,... Pickles, Durham Mustard,... pickled Mushrooms in Quart Bottles, Sallad Oil in do. [ditto = same] pickled Onions in Quart do. Pint do. of Indian Soy [sauce], Bottles of Weston's superfine Scotch Snuff...” This ad also appeared in this newspaper on 24 Dec. 1750, p. 3 and 7 Jan. 1751, p. 4.

Note 1. This is the earliest document seen (July 2011) concerning soybean products (soy sauce) in the British colonies of North America (now the United States), or in New York. This document contains the earliest date seen for soybean products in the British colonies of North America or in New York (Dec. 1750); soybeans as such have not yet been reported. At least 66 different ads for soy sauce appeared in New York City newspapers before 1800!

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “Indian Soy” to refer to soy sauce; it was probably imported from the Indies, the East Indies, or India. To date, 103 documents in the SoyaScan database contain the term “Indian Soy” (regardless of capitalization) but only the earliest ones have been given the keyword for “India.” The term “Indian Soy” was the earliest name given to soy sauce imported to the British colonies

of North America. But what does it mean? Where was it made? It was probably typical Japanese-style soy sauce (*shoyu*), made in Japan and exported from there by the Dutch East India Company (VOC), probably via Batavia (today's Jakarta), to Amsterdam—where it was purchased at auction by merchants who brought it by sailing ship to North America.

Note 3. This is the earliest document seen (July 2006) that mentions Durham Mustard, a famous product made in the city of Durham, in northern England. “In 1720 Mrs. Clements discovered a method for extracting the full flavour from mustard seed by grinding the seed in a mill and subjecting to similar processes used in the making of flour from wheat” (Durham city website).

169. Li Hua-Nan; Li Diao-Yuan. 1750? *Xingyuan lu* [Memoir from the garden of awareness]. China. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Hsing Yüan Lu*, by Li Hua-Nan, compiled by his son Li Tiao-Yüan. Qing dynasty.

H.T. Huang (2000, p. 324), in the section on frozen tofu, states that dried frozen tofu is first mentioned in this work, which suggests: Allow a whole batch of thinly sliced frozen tofu squares to thaw slowly, then store them in a cool place so they can be used in the summer.

Huang (2000, p. 327), in the section on “Making of fermented tofu” states: “Technically the most interesting accounts of the making of *furu* are found in the *Xingyuan lu* (1750). Five recipes are presented, representing two types of methodology. One uses ground wheat *ferment* as shown in the translation given below: ‘First prepare yellow wheat *ferment* as previously described and comminute it to a fine powder. Take ten catties of fresh tofu and two catties of salt. Cut the tofu into thin rectangular pieces. Sprinkle a layer of salt over a layer of tofu. Allow the tofu to soak in the brine [that is generated]. After five or six days remove the tofu but keep the juice for later use. Arrange the tofu pieces neatly in a steamer and steam until they are well cooked. Hang the steamer with its contents in an empty room for half a month when the tofu becomes covered with luxuriant fungal growth. After scraping off the hairy surface the pieces are air dried. Now treat the tofu with dry yellow *ferment* as follows. Decant the salty juice from the soaking step and mix in dried *ferment* to form a paste. Spread a layer of tofu over a layer of *ferment* paste and cover with a layer of fragrant (i.e., sesame) oil. Add a few whole pieces of fagara. Place the stacks in a crock and seal the mouth securely with mud. Warm the crock in the sun during the day. After a month the product will be ready for the table.’”

Huang adds (p. 327): “The other methodology uses the mash left from the fermentation of wine from grains.”

Huang (2000, p. 341-42) also notes that the process for making fermented black soybeans (*shi*) described in the *Bencao Gangmu* (The great pharmacopoeia) (1596) is repeated in four recipes in this book. Although the first stage,

the production of soybean koji (molded soybeans) remains unchanged, “a variety of additional materials such as fagara, sugar, wine, melon juice, melon meat, melon seeds, liquorice [licorice], mint, magnolia bark, fritillary corm [fritillaria; bulbous herbs of the lily family] etc. have been included in one or more recipes for the second stage incubation.” These herbs and spices gave each product its own unique fragrance and flavor. One of the four recipes calls for the use of wheat flour. Huang observes that when the amount of wheat flour is large, the process becomes very similar to that for making soybean jiang.

In addition (Huang 2000, p. 363-64) translates the detailed method for making soy sauce, which is presented as a method for making *qingjiang* (“clear jiang”): Clean and wash one *dou* of yellow soybeans. Boil beans until soft and the color has turned red. Blend beans and cooking water uniformly with 24 catties white wheat flour. Form into cakes, arrange on bamboo or willow [leaf] trays, then cover with rice straw. Place trays in a wind-free room, and incubate for 7 days or until a good growth of mycelium appears. Remove the straw. Place trays in the sun during the day; bring them indoors at night. Repeat the procedure for 14 days. If it rains during the day, trays should be placed in the sun for additional days until the total of 14 days is attained. This is how to make the yellow koji for jiang (*jianghuang*).

For each *dou* of yellow koji for jiang, measure 5 *dou* of well water into an earthenware crock. Measure exactly 15 catties of raw salt into a bamboo basket, and hang the basket in the well water [inside the crock] until all the salt dissolves in the water. Discard any residue in the basket. Mix the yellow koji into the water; let it warm in the sun for 3 days. On the morning of the 4th day, remove earthenware crock from sun and stir contents well with a wooden paddle. Two days later, remove from sun and stir again. Repeat this procedure 3-4 times. After about 20 days, the “clear jiang” (*qingjiang*, or soy sauce) should be ready for use.

To separate the soy sauce (*qingjiang*), use a finely woven cylindrical bamboo tube that is open at both ends. People in southern China call this a “circular sieve for jiang” (*jiangchou*). It is widely available in local markets of the capital [Beijing]. The same markets also sells various sizes of covers for the crocks. When the jiang / mash is ready [it has a consistency resembling that of applesauce], push the woven bamboo tube down into its center until the bottom of the tube rests securely on the bottom of the crock. Remove the jiang inside the tube so that the bottom of the crock is clearly visible. Place a brick atop the tube to prevent it from floating upwards. Liquid soy sauce will flow from the jiang mash into the tube. The next morning the tube should be filled with liquid. Use a bowl to transfer this clear soy sauce into a clean crock. Cover the crock with a piece of cloth to prevent flies from falling in. Warm the crock in the sun for half a month. To make more soy sauce, increase the amount of raw materials. After the sauce is ready, you can also use a

sieve to collect the soybeans that float to the top of the mash. When half-dried, these beans make delicious fermented black soybeans or “fermented bean relish” (*doushi*).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 10 recipes: jiang itself in 4, soy sauce made from jiang named *qingjiang* in 5 recipes, and soy sauce made from jiang named *jiangyou* in 1 recipe. A seasoning named *douyou* is used in 8 recipes. Note: This is the earliest document seen (April 2012) in which a soy-based seasoning named *douyou* (W.-G. *tou yu*) is mentioned. Huang states (p. 371) that *douyou* is written with the Chinese characters for bean + oil.

Wilkinson (2000, p. 646) states that this book (late 18th century) is the first Chinese collection of recipes from a regional cuisine—that of Sichuan.

Fukushima (1989, p. 6): “The general manufacturing methods of soy sauce in the Ch’ing (Shin in Japanese) dynasty are recorded in *Ch’ing-yuan Lu* (sic, *Hsing-yuan Lu*; *Seienroku* in Japanese), written by Li Hua-nan (Ri Kanan in Japanese). Cooked soybeans and uncooked wheat were the raw materials used in koji making. The resultant koji was mixed with brine. After aging, the soy sauce was collected by pressing a deep bamboo colander into the aged mash and ladling out the liquid which had accumulated.”

Bo (1982): Describes the method for making *chiang-yu* (soy sauce).

170. Watkinson (John). 1750? John Watkinson, grocer, tea-dealer, &c. next door to the coffee-house, in Newbrough, Scarbrough, sells the following articles at the lowest prizes, viz. (Leaflet). York? [North Yorkshire], England. 1 p. Undated.

• **Summary:** The long, 5-column list of items sold includes: “Sago, and Sago Powder,... Anchovies, Capers, Olives (French or Spanish), Pickled Mushrooms, Pickled Walnuts, Pickled Gerkins, India Soy Ketchup.” Address: Newbrough, Scarbrough [England].

171. A general history of the several nations of the world, from the flood, to the present times: With genealogies of the respective sovereigns that have reigned, in a chronological series:... 1751. London: Printed for D. Browne. iv + 544 + [10] p. See p. 343. Index.

• **Summary:** Page 343: “Goods imported from China are, first, Tea; Green only is drunk in India, Persia, and the Eastern Nations: Bohea is not valued by them. Besides Tea, our Merchants also bring from China Quick-silver [mercury], Vermillion, China-Root [a root of the genus *Smilax*], Rhubarb, Raw and Wrought Silk, Copper in Bars like Sticks of Sealing-Wax, Camphire, Sugarcandy, Fans, Pictures, Lacquered-Ware, Porcelane [porcelain, a ceramic material] or China-Ware, Soy [sauce], Borax, Lapis-Lazuli, Galingal

and Tutanaque, which is a sort of coarse Tin, and-Several other kind of Merchandizes are purchased there as cheap as in the Countries that produce them.”

Note: Under Japan (p. 388+): “Produces Tea, Gold Dust, Copper, and Cotton. Their Manufactures are Arms, Cabinets, and other lacquered Ware, Pagods [sic], and other Images.” Soy is not mentioned under Japan. Therefore this is an early document stating that soy sauce is imported by England from China—but not from Japan.

172. Dale, Samuel. 1751. *Pharmacologia, seu manuductio ad materiam medicam:...* [Pharmacology, or eating as a supplement to the materia medica:... 5th ed]. Lugduni Batavorum [Leiden]: Impensis Gerardi Potuliet. See p. 238. 26 cm. [117* ref. Lat]

• **Summary:** The information on soy sauce appears in the section on medicinal plants under the heading “I. De Phaseolo... A. 3. Soia, *Offic.* [probably officinarum] *Phaseolus Japonicus*, ex quo Japonensium Soia, qui intinctus species est, conficitur, *Herm.* Species *Phaseoli parvi*, albi, è Japonia allata, è qua conficiunt condimentum *Ketchup* dictum, duum generum, liquidum nimirum & solidum.

“*Phaseolus erectus* siliquis Lupini, fructu pisi majoris candido, *Kemph. Amoen. Exot.* 837.

Hujus notitiam debemus Botanico erudito D. Paulo Hermanno defuncto, qui eam doctissimo nuper amico nostro D. *Gulielmo Sherrard* [Sherard], LL.D. communicavit, sub titulo suprascripto, unde nos habuimus.

This entry is the same as that in the original 1705 edition except for the addition of a middle paragraph from Kaempfer's *Amoenitatum Exoticarum* and small changes in the positions of several words. The author's name on the title page is now written Samuelis Dalei, M.L. Also near the bottom of the title page is written "Ex scriptis Hermanni Boerhaave locupletata. Indice Gallico, Germanico, Belgico, aucta."

A full-page illustration (engraving) shows a oval portrait of Samuel Dale, M.L. (see previous page).

173. Glasse, Hannah (Mrs.). 1751. The art of cookery, made plain and easy: Which far exceeds any thing of the kind ever yet published... by a lady. 4th ed., with additions. London: Printed for the author, and sold at the Bluecoat-Boy... at Mrs. Ashburn's china-shop... [2] + iv + [16] + 334 p. See p. 308-09. 1 leaf of plates. 21 cm. (8vo). [Eng]

• **Summary:** Chapter XIX, titled "To make anchovies, vermicelli, catchup, vinegar,..." has 2 recipes for homemade catchup (p. 308-09).

"To make Catchup: Take the large Flaps of Mushrooms, pick nothing but the Straws and Dirt from it [sic], then lay them in a broad earthen Pan, throw a good deal of Salt over them, let them lye till next Morning, then with your Hand break them, put them into a Stew-pan, let them boil a Minute or two, then strain them through a coarse Cloth, and wring it hard. To take out all of the juice, let it stand to settle, then pour it off clear, run it through a thick Flannel Bag (some filtre it through brown Paper, but that is a very tedious Way) then boil it; to a Quart of the Liquor put a Quarter of an Ounce of whole Ginger, and Half a Quarter of an Ounce of whole Pepper. Boil it briskly a Quarter of an Hour, then strain it, and when it is cold, put it into Pint Bottles. In each Bottle, put four or five Blades of Mace, and six Cloves, cork it tight, and it will keep two Years. This gives the best Flavour of the Mushrooms to any Sauce. If you put to a Pint of this Catchup, a Pint of Mum, it will taste like foreign Catchup."

Note 1. Mum is a type of malt liquor (beer, alcoholic) originally brewed in Brunswick, Germany, widely used in Germany, and imported in large quantities into England in the 17th and 18th centuries. This recipe uses salt, but no sweetener, to help it keep. "Foreign Catchup" probably referred to soy sauce imported from the Dutch East Indies.

"Another way to make Catchup: Take the large Flaps, and salt them as above; boil the Liquor, strain it through a Flannel Bag. To a Quart of that Liquor put a Quart of stale Beer, a large stick of Horseraddish cut into little Slips, five or six Bay-leaves, an Onion stuck with twenty or thirty cloves, a Quarter of an ounce of Mace, a Quarter of an Ounce of Nutmegs beat, a Quarter of an ounce of Black and White Pepper, a Quarter of an Ounce of All-Spice, and four or five Races [Roots] of Ginger. Cover it close and let it simmer very softly till about one Third is wasted; then strain

it through a Flannel Bag, when it is cold bottle it in Pint Bottles, cork it close, and it will keep a great while. You may put Red in the room [place] of Beer; some put in a Head of Garlick, but I think that spoils it. The other Receipt you have in the Chapter for the Sea."

In Chapter XI, "For captains of ships," the first recipe (p. 240) is "To make Catchup for twenty Years: Take a Gallon of strong Stale Beer, one Pound of Anchovies washed from the Pickle, a Pound of Shalots [Shallots] peeled, Half an Ounce of Mace, Half an Ounce of Cloves, a Quarter of an Ounce of Whole Pepper, three or four large Races of Ginger, two Quarts of large Mushroom flaps rubbed to Pieces. Cover all this close, and let it simmer till it is Half wasted, then strain it thro' a Flannel Bag, let it stand till it is quite cold, then bottle it. You may carry it to the *Indies*. A Spoonful of this to a Pound of fresh Butter melted, makes fine Fish-Sauce: Or in the room of Gravy-Sauce. The stronger and staler the Beer is the better the Catchup will be."

Note 2. Hannah Glasse lived 1708-1770. Address: England.

174. Valle (Berto). 1752. Classified ad: Just arrived from Italy in twenty-eight days, in the *Ruby*, Capt. Peter Mauger. *Daily Advertiser (London)*. Feb. 24. col. 2.9.

• **Summary:** Also "... Morelles, new Provence Olives, Spanish and Lucca ditto [Olives], Japan Soy [sauce], Russia Cavear [Caviar] and Butargo, new Gorgona Anchovies, fine small Capuchin Capers,... French, Hungary and Lavender Water,..."

Note: This is the earliest document seen (April 2012) that uses the term "Japan Soy" to refer to soy sauce. Address: In the Hay-Market, St. James's [London].

175. Thompson (Reuben Warren). 1752. Classified ad: Just imported,... *New-York Gazette Revived in the Weekly Post-Boy (New York City)*. June 29. p. 2.

• **Summary:** "... cruet-frames for vinegar, oil, mustard,..." Soy is not mentioned.

176. Notulen van het Haags Besogene [Notes of meeting of the Haags Besogene]. 1752. The Hague, Netherlands. Unpaginated. Oct. 19. [Dut]

• **Summary:** On the first page of notes of the meeting concerning the stock in the warehouses we read:

"Thursday, 19 Oct. 1752: Started with the reading and control of the account of goods and merchandise, which on 31 May [1752] were stockpiled in the warehouses of this chamber [Amsterdam] and which have been received during the last four years from the Indies (*Indië* [Batavia]). Items that according to the journal of bookkeeping and the ledger have been delivered from the stock since 31 May 1752 and that part of the stock lying unsold in the Company's warehouses.

"... Japanese Soy [sauce] (*Japanse Soija*): According to

the list closed on 31 May 1748 were stockpiled—51 *kelders*. And received from the Indies (*Indien*) during the past four years—51 *kelders*.”

Total: 102 *kelders*. Note 1. A *kelder* is a chest; in this case it contains bottles of soy sauce.

“From that is delivered during this time: 39 chests (*kelders*).

“According to the list closed on 31 May 1752, in stock: 45 chests (*kelders*).

“Provided for consumption in inns and yachts: 3 chests (*kelders*).

“In disuse, broken and empty: 15 chests (*kelders*). Total: 102 chests (*kelders*) [So the books balance].

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); toegangsnummer 1.04.21; inventaris nummer 4475. Notulen van het Haags Besogene [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Co. (NFJ); access number 1.04.21; record number 4475. Notes of the Haags besogene]. Address: The Hague, Netherlands.

177. Smith (Richard). 1752. Classified ad: Just imported, and to be sold... *New-York Gazette, or Weekly Post-Boy* (*New York City*). Nov. 6. p. 3.

• **Summary:** “Choice Cheshire Cheese, the best and genuine Sort of Florence Oil by the Bettee,... Anchovies, Capers, Olives, Raisins, Currans [Currants], Pearl and French Barley, Sago,... Flower of Mustard, Catchup, red-Herrings,...”

Note: This same ad, published on the same date in the *New-York Mercury* reads “Florence Oyl, by the Betty” and “Currants.”

Note 3. A “Bette” (often spelled “Betty”) is a straw-covered Chianti flask, used at this time to export oil. The Oxford English Dictionary suggests the word is an American usage. Address: At the corner of the Meal-Market.

178. Eales, Mary. 1753. *The compleat confectioner: or, The art of candying and preserving in its utmost perfection. To which is added a second part...* 5th ed. London: Printed for C. Hitch, and A. Millar. [8] + 100 + [6] + 103 p. See p. 22-23. 8vo. [Eng]

• **Summary:** Part II contains two ketchup recipes based on anchovies (small fish). The first, “To make a Katch-up,” states (p. 21-22): “Take a wide-mouth’d Bottle, put into it a Pint of the best White-wine Vinegar, then put in ten or twelve Cloves of Eschallot peel’d and bruised; then take a Quarter of a Pint of the best White Wine, boil it a little, and put to it twelve or fourteen Anchovies wash’d and cut small, dissolve them in the Wine, and, when cold, put them in the Bottle; then take another Quarter of a Pint of White Wine, and put in it Mace, sliced Ginger, a few Cloves, a Spoonful of whole

Pepper; let them boil a little; when almost cold, slice in near a whole Nutmeg, some Lemon-peel, and two or three Spoonfuls of Horse Radish, then stop it close, and shake it once or twice a Day; then use it. You may add to it the clear Liquor which comes from Mushrooms.” Note: This recipe is similar to that in E. Smith (1727).

The second, “To make a Katch-up that will keep good twenty years,” reads: “Take a Gallon of strong stale Beer, one Pound of Anchovies wash’d and clean’d from the Guts, half an Ounce of Mace, half an Ounce of Cloves, a quarter of an Ounce of Pepper, three large Races of Ginger, one Pound of Eschallots, and one Quart of flap Mushrooms well rubb’d and pick’d; boil all these over a slow Fire till it is half wasted, and strain it thro’ a Flannel Bag; let it stand till it is quite cold, then bottle and stop it very close. This is thought to exceed what is brought from India, and must be allow’d to be the most agreeable [agreeable] Relish that can be given to Fish Sauce. One Spoonful to a Pint of melted Butter is sufficient to give both Taste and Colour beyond any other Ingredients.

“Note. *The stronger and staler the Beer is, the better the Katch-up will be.*

Note 1. This 2nd recipe states clearly that real Katch-up [Ketjap; soy sauce] was brought from India—a key statement.

Note 2. This recipe was later lifted by Hannah Glasse and was subsequently reprinted in other cookbooks.

Note: Part 2 has a special title page: “Originally published in 1718 under the title Mrs. Mary Eales’s Receipts.” The first part is a reissue with cancel title page of the 1733 edition, which was titled: “Mrs. Mary Eales’s receipts.” The second part entitled: “A curious collection of receipts in cookery,...” has a separate title page, pagination and register, and is a reissue with a different title page, of the 1742 edition. Address: By the late Mrs. Eales, Confectioner to King William and Queen Ann.

179. Early soy cruets and soy frames made in England (Early event). 1753.

• **Summary:** The earliest known soy cruets were made in 1753 by Thomas Betts at London, England. The entry reads: “1753. 1 Pr. [pair] Cut Soy Cruits. 6 shillings.”

At 1755 we read: “1 P. [pair] Cut Soy Cruits. 5 shillings... 3 Soy Cruits Stopt. [Stoppered]. 7 shillings 6 pence.” Source for both dates: Buckley, Francis. 1928. “Great names in the history of English Glass. V. Thomas Betts.” *Glass* (Redhill, Surrey, England) 5(7):299-300. July.

Early cruets made in Sheffield, England: One entry appears as follows: “Round 6-bottle Soy Frame, by Richard Morton. Date 1776.” It is accompanied (p. 272) by an elegant illustration showing the six multi-faceted cut-glass bottles (cruets) for holding soy sauce in the metal “soy frame” on a dining table. Another design on the same page is dated 1778. Two more designs for “soy frames” dated 1778 appear on p. 404. Source: Bradbury, Frederick. 1912. *History of Old*

Sheffield Plate. London: Macmillan and Co., Ltd. xiii + 539 p.

180. Gentlewoman. 1753. *Compleat family companion: or, the whole art of cookery made plain and easy;...* London: Printed for the author. 128 p. 12vo.

• **Summary:** In the section titled “Boiling fish” we read (p. 15): (1) Salmon: “... take out the Liver when about three Parts done, and braid it with Kitchup, which, mingled with Butter will make exceeding rich Sauce.”

(2) Fresh cod: “The sauce for this cannot be too rich, and if you are allowed it, spare neither Kitchup, Body of a Lobster, or Crab, Oysters and Shrimps;...” Address: [England].

181. *Histoire générale des voyages, ou, Nouvelle collection de toutes les relations de voyages par mer et par terre* [A general history of voyages: or, New collection of all the accounts of voyages by land and by sea. Vol. 11]. 1753. Paris: Didot, Libraire. 722 p. See pages 707-08. [Fre]

• **Summary:** This seems to be a French-language summary and translation of parts of *Amoenitatum exoticarum*,... by S. Kaempfer 1712 (p. 707-08). “On distingue plusieurs autres sortes de Haricots; une, entr’autres, dont les Japonnois font une espece de bouillie, qui leur tient lieu de Beurre, & dont ils font une sauce fameuse, qui se sert avec les viandes rôties. Ils nomment la bouillie *Miso*, & la sauce *Sooju*.”

Translation: They distinguish several other sorts of beans. From one of these they make a sort of pap, which takes the place of butter for them, and from which they make a famous sauce, which they serve with roasted meats. They call the pap “Miso,” & the sauce “Sooju.”

Note 1. This is the earliest French-language document seen (April 2012) that mentions miso, which it calls “la bouillie *Miso*.”

Note 2. This is the earliest French-language document seen (Feb. 2010) that mentions soy sauce, which it calls “la sauce *Sooju*.”

182. Breues, John. 1754. *The fortune hunters: shewing, (from experience) 1. How people may improve their fortunes, and raise themselves in London, by different and quite opposite ways...* London: Printed for the author; and sold by J. Robinson,... xii + 164 p. 8vo.

• **Summary:** The recipe “To make clear Gravy, and a Ragoo [Ragout] Breast of Veal” states (p. 90-91). “Take three pounds of gravy-beef, four ounces of lean bacon, a small piece of lemon peel, one middle siz’d onion... Take a large breast of veal, roast it half done very brown, then take it from the fire, cut off the two ends and brisket, cut them in handsome pieces, put them amongst your gravy in a stew-pan, then put in two anchovies, two cloves, a bit of lemon peel, fix black pepper corns, all ties in a bit of rag, stew them amongst your gravy and veal, to which you are to add two

spoonfuls of India soy, which being covered very close, let them stew one hour over a slow fire; then put them in the mid-piece of veal...”

Note: This is the earliest document seen (April 2012) that uses the term “India Soy” to refer to soy sauce. It was probably imported from India on British or Dutch ships; it may well have been made in Japan, but could have been made in China. In the Early American Newspapers (EAN) online database (produced by Readex, a division of NewsBank), there are (March 2006) at least 1,300 issues / records that contain the term “India Soy” or “India-Soy” from Nov. 1770 to Nov. 1844. Only a representative sample of these records has been entered into this database. And only the earliest ones have been given the keyword for “India.” Address: Late of Perth [probabl Scotland], Merchant.

183. Society of Gentlemen. 1754. *A new and complete dictionary of arts and sciences; comprehending all the branches of useful knowledge, with accurate descriptions...* Vol. 2 of 4. London: Printed for W. Owen. 1084 p. See p. 985.

• **Summary:** The entry for “Drug” states (p. 985): “a general term for goods of the druggist and grocery kinds, especially for those used in medicine and dying [dyeing]. The principal drugs in medicine make the greatest part of the wholesale trade in the druggist and spicery ways. Some are produced in France, England &c. but the greatest part is brought from the Levant, and the East Indies. The chief drugs imported into this kingdom, are from the East-Indies, being as follows, alum, china-root, camphor, rhubarb, musk, vermilion, soy of Japan, ketchup,...”

Note: This is the earliest English-language document seen (April 2012) that uses the term “soy of Japan” to refer to soy sauce made in Japan.

“Ketchup” may well have referred to soy sauce made in the Dutch East Indies (today’s Indonesia). Address: [England].

184. Relfe (John). 1755. Classified ad: Just imported from London in the Beulah, Captain Ritchie,... *Pennsylvania Gazette (Philadelphia)*. Sept. 25. p. 3.

• **Summary:** “... bandanoes, secle-soy and silk lunges remals,... paduasoy, broad-cloths,... snuff boxes, cruet stands, &c. &c. &c.” Note 1. Both “secle-soy” and “paduasoy” are types of silk cloth, and have nothing to do with soy sauce—which is not mentioned in this ad.

Note 2. This is the earliest English-language document seen (March 2006) that mentions “cruet stands.”

Note 2. The French word for “silk” is *soi*, which often ended up being written “soy” in other languages. Address: Front-street, near Chestnut-street.

185. Glasse, Hannah (Mrs.). 1755. *The art of cookery, made plain and easy: Which far exceeds anything of the kind ever*

yet published... by a lady. 5th ed., with additions. London: Printed and sold at Mrs. Ashburn's China-Shop. vi + [20] + 334 p. 20 cm. Facsimile edition reprinted in 1983 by Prospect Books, London. [Eng]

• **Summary:** "Catchup" is mentioned on the title page (Chap. XIX) and on pages 4, 19-20, 26-29, 32-34, 40, 44.

Different sorts of sauce for a pig (p. 4): "Others take Half a Pint of good Beef Gravy, and the Gravy which comes out of the Pig, with a Piece of Butter rolled in Flour, two Spoonfuls of Catchup, and boil them all together;..."

To make gravy for soops, &c. (p. 19-20): "It is a fine Thing in a House, and will serve for Gravy, thicken'd with a Piece of Butter, Red Wine, Catchup, or whatever you have a mind to put in, and always ready for Soops of most Sorts." Address: England.

186. Pastorini (G.). 1756. Classified ad: Just arrived from Italy,... *Public Advertiser (London)*. April 26. p. [3], col. 2.1.

• **Summary:** "A parcel of fine dry'd Italian Vipers and new Narboun Honey,... with fine Joppa Soy, Indian Mangoes, green and white,..."

Note: This is the earliest document seen (April 2012) that contains the term "Joppa soy." We are aware of only one other document (a Feb. 1760 ad by this same importer) that contains this term. The meaning of the word "Joppa" in this connection is unknown. It is may well be a type of soy sauce, but we cannot be sure. Address: At the Two Civet Cats and Olive Tree, New Bond-street, near Grosvenor-street [London].

187. Notulen van het Haags Besogene [Notes of meeting of the Haags Besogene]. 1756. The Hague, Netherlands. Unpaginated. Oct. 20. [Dut]

• **Summary:** On the first page of notes of the meeting concerning the stock in the warehouses we read:

"Wednesday, 20 Oct. 1756. Started with the reading and control of the account of goods and merchandise, which on 31 May 1756 were stockpiled in the warehouses of this chamber [Amsterdam] and which have been received during the last four years from the Indies (*Indien* [Batavia]). Items that according to the journal of bookkeeping and the ledger have been delivered from the stock since 31 May 1756 and that part of the stock lying unsold in the Company's warehouses.

"... Japanese Soy [sauce] (*Japanese Soija*): According to the list closed on 31 May 1752 there were stockpiled—45 kelders. And received from the Indies (*Indien*) during the past four years—60 kelders."

Total: 105 kelders. Note 1. A kelder is a chest; in this case it contains bottles of soy sauce.

"From that is delivered during this time: 93 chests (kelders).

"Provided for consumption in inns and yachts: 2 chests (kelders).

"In disuse, broken and empty: 10 chests (kelders). Total: 105 chests (kelders) [So the books balance].

• **Summary:** To stew a turkey (p. 135-36): "Bone your turkey and fill it with a forcemeat made thus... put in a quart of good beef and veal gravy, wherein was boil'd spice and sweet herbs, cover it close and let it stew half an hour; then put in a glass of red wine, one spoonful of catchup, a large spoonful of pickled mushrooms, and a few fresh ones, if you have them, a few truffles and morels, a piece of butter as big as a walnut rolled in flour; cover it close and let it stew half an hour longer..." Address: Of Duke-Street, London.

190. *Journal de Commerce (Brussels)*. 1759. D'Amsterdam. Arrivée & chargement des vaisseaux des Indes Orientales [From Amsterdam: Arrival and loading of vessels from the East Indies]. 5:198-202. Sept. See p. 199. [Fre]

• **Summary:** Lists the cargo on six vessels, including (p. 199): "26 Futailles Soya de Japan" [26 kegs of soy (sauce) from Japan].

Note: The various reference to the word Soye concern silk, not soy sauce.

191. Johnson, Mary. 1759. Madam Johnson's present: or, Every young woman's companion, in useful and universal

knowledge. Digested under the following heads:... 2nd ed. London: Printed for J. Fuller. iv + 192 + [20] p. Illust. 12vo.

• **Summary:** In the section on “Bak’d meats” the recipe for Calf’s-Head states (p. 101-02): “add thereto a Lump of Butter roll’d in Flour; and the Sage in the Brains chopped fine; two Spoonfuls of red wine, and one of Catchup; boil them all together; then beat the brains well, and mingle them with the Sauce; pour it into the Dish, and serve it up.”

Note: First published in 1753 as *Young woman’s companion*. Address: No. 81 Fleet-Street, London..

192. Pastorini (Rebecca). 1760. Classified ad: Just arrived,... *Public Advertiser* (London). Feb. 26. p. [4], col. 1.6.

Just arrived,

And to be sold by REBECCA PASTORINI, at the Italian Warehouse, the Two Cats and Olive-Tree, in New Bond-street, near Grosvenor-street, London;

A Parcel of exceeding fine new Norbonne

Honey; likewise a Parcel of small new Portugal Hams, new Bologna Sausages, and Dutch Tongues, Westphalia and English Hams, new French Lucca and Spanish Olives, superfine Provence Oil, Florence and Lucca ditto, new Maccarooni and Vermicelli, with all other Sorts of Pasta, new Parmesan and Swiss Cheese, new Gorgona Anchovies, superfine Pine Capers, the best common Sort ditto, right fine Joppa Soy, and China Pepper, fine India Mangoes, India Vinegar and Lemon Pickle, India Birds Nests, and Lock Soy for rich Soups, all Sorts of Italian Beans, Spanish Pease and Lentils for Soups, right French Soup Strainers, fine French White-Wine and Burgundy Vinegar, fine Garlick, Tarragon Elder, and distilled Vinegar; with all other Sorts of common Ditto, very best superfine Flour of Mustard, and Mushroom Powder, Pickle Mushrooms, and fine English Catchup, fine old Cyprus, Frontinac, and Burgundy Wine, Florence ditto, to be sold wholesale and retail, at the lowest Price.

Note. Dr. Giovanni's Remedy for the Teeth to be sold here and no where else.

• **Summary:** “A parcel of exceeding fine new Norbonne [Narbonne] Honey; likewise... right fine Joppa Soy, China Pepper, fine India Mangoes, India Vinegar and Lemon Pickle, India Birds Nests and Lock Soy for rich Soups, all Sorts of Italian Beans, Spanish Pease and Lentils [Lentils] for Soups,... Pickle Mushrooms and fine English Catchup,...”

Note 1. Narbonne honey is made in the Aude département of south-western France, where it is considered to be of very high quality. It is made by bees who feed on the dense, abundant rosemary flowers, which give its special flavor. It is very light in color, almost white at times, and (even in France) is expensive.

Note 2. This is the earliest document seen (April 2012) that contains the term “Lock Soy” (regardless of capitalization). No clue as to its meaning is given. However we later learn that it is a type of rice vermicelli which (apparently) does not contain any ingredient made from the soybean. Address: Italian Warehouse, the Two Cats and Olive Tree, New Bond-street, near Grosvenor-street, London.

193. Montague, Peregrine. 1760. *The family pocket-book: or, Fountain of true and useful knowledge...* London: Printed for Henry Coote,... 162 p. See p. 58, 140, 146. [Eng]

• **Summary:** Four recipes concern ketchup: (1) Excellent true British Ketchup (p. 58): “Take green Walnuts, beat them in a Marble Mortar, and strain out the Juice, let it stand twelve Hours, then take a Quart of the Juice that’s fine, fix British Herrings, and a little of the Herring-pickle, cut the Herrings small, and put ‘em in a Pan, and add to ‘em a little Mace, about 20 Cloves, and half an Ounce of Jamaica Pepper; boil all together on a slow Fire, for half an Hour, then strain it thro’ a Cloth, put it again into the Pan, and add to it twenty or thirty Shellots [Shallots], and half a Pint of Vinegar, let it boil till the Shellots be tender, then put it in a Bason to cool, and when cold, let it run thro’ a close Cloth of its own Accord, and it will take of all the Scum and Fat; bottle it for Use. If green Walnuts are not to be had, make use of a Pint of Walnut-Pickle; but in this Case the Vinegar is to be omitted.”

Note: This is actually a recipe for homemade walnut ketchup. Moreover, this is the earliest document seen (July 2010) that contains a recipe for walnut ketchup.

(2) To hash Chickens (p. 140): “Cut six chickens into quarters,... add these to the Yolks of six Eggs, with a little Nutmeg, Vinegar and Ketchup, and a good Piece of Butter; warm all these together, and pour them into a Soop-dish [sic], and serve them up.”

(3) How to stew Tench (p. 146): “When the Fish is enoaga [enough], put in Oysters, Capers, Ketchup and Lemon: Garnish your Dish with Crisp bread.”

(4) How to make an excellent Sauce for Salmon (p. 146): “Put into the Liquor of the Salmon, when you boil it, Salt, Vinegar, and Mace; take a Quarter of a Pint of the Liquor, and draw your Butter with it, mince it into an Anchovy wash’d clean, some Lemon-juice and Nutmeg, half a Pint of Shrimps, two spoonfuls of white Wine, with Ketchup and Mushrooms.” Address: Gent. [Gentleman], of Grange Abbey in Oxfordshire [England].

194. Keen (William). 1762. Classified ad: To be sold... *New-York Mercury* (New York City). Nov. 29. p. 2.

• **Summary:** “... pickles of all sorts, viz. wall-nuts [walnuts], mangoes, cucumbers, beans, onions, mushrooms, kitchup, peaches, capers, and anchovies;...”

Note: This is the earliest English-language document seen (Feb. 2006) that contains the word “kitchup” (like “ketchup”). Address: Grocer and Confectioner, at the two green cannisters, in Hanover-Square, next door to Mr. Perry, watch-maker.

195. Gelleroy, William. 1762. *The London cook: or, The whole art of cookery made easy and familiar, containing a great number of approved and practical receipts in every branch of cookery...* Dublin [Ireland]: Printed by T. and J. Whitehouse. iv + [20] + 245 p. See p. 207. Illust. 17 cm. [Eng]

• **Summary:** “Catchup” is mentioned on pages 19-21, 25-27, 42-44, 46, 50, 54, 81, 104, 161.

How to bake a turbot (p. 19): “Bake it of a fine brown, then lay it in your dish; stir the sauce in your dish all together, pour it into a sauce pan; shake in some flour; let it boil, then stir in two large spoonfuls of catchup, and a piece of butter. Let it boil and then pour into basons” [basins].

How to broil mackrel whole (p. 20-21): “Clean them, gut them, cut off their heads, pull out the row at the neck end... rub them with yolks of eggs, strew crumbs of bread over them and broil them. For sauce take plain butter, with a little walnut pickle or catchup.” Address: Late cook to her Grace the Dutchess of Argyle. And now to the Right Hon. Sir Samuel Fludyer Bart. [Baronet] Lord Mayor of the City of London.

196. Gelleroy, William. 1762. *The London cook: or, The whole art of cookery made easy and familiar, containing a great number of approved and practical receipts in every branch of cookery...* London: Printed for S. Crowder. iv + 486 p. Illust. 20 cm. [Eng]

• **Summary:** “Catchup” is mentioned on pages 27-29, 35-37, 50, 60-61, 65, 70, 76, 111, 142-43, 223-24.

How to bake turbot (p. 27): “Bake it of a fine brown, then lay it in your dish; stir the sauce in your dish all together, pour it into a sauce-pan; shake in some flour; let it boil, then stir in two large spoonfuls of catchup, and a piece of butter. Let it boil and then pour into basons” [basins].

How to broil mackrel whole (p. 29): “Clean them, gut them, cut off their heads, pull out the row at the neck end... rub them with yolks of eggs, and strew crumbs of bread over them and broil them. For sauce take plain butter, with a little walnut pickle, or catchup.” Address: Late cook to her Grace the Dutchess of Argyle. And now to the Right Hon. Sir Samuel Fludyer Bart. [Baronet] Lord Mayor of the City of London.

197. Ekeberg, Karl Gustaf. 1764. *Om Chinesiska Soyan* [On Chinese soy sauce]. *Kongliga Vetenskaps Academiens Handlingar (Transactions of the Royal Academy of Sciences, New Series, Stockholm)* 25:38-40. Jan/March. [Swe; eng+]

• **Summary:** A detailed description in Swedish of how the Chinese make soy sauce, written with the intent that Europeans would start making it themselves.

“The natives of nearly all of the Indies (India) use for their cooking a sauce which they have prepared in advance. This sauce serves the purpose of both economizing and making the food better tasting. The inhabitants of the Moluccan Islands [later part of Indonesia] and the islands lying around the Strait prepare, by rotting of small fish, a sauce which in taste and smell doesn’t differ much from anchovies, rather than [using] the soy [sauce] that more recently has become known in Europe.

“The Chinese, who are not inferior to any other people of the world when it comes to home economy or the ability to imitate what they have seen, although not the inventors of

soy sauce themselves, have tried to imitate their neighbors the Japanese, whose soy sauce surpasses that of the Chinese, be it more in price than in taste (goodness). They favor using it in the preparation of several dishes, and especially for dipping meat, fish, and vegetables into, lavishly and differently from other sauces.

“I have the honour to herewith to describe how Chinese soy sauce is prepared, because it has come to be used by us and we ought to be able to produce it ourselves.

“I have previously remarked in a short account of Chinese home economics in the country, that they have a type of small bean called Pactau [“white bean” = white soybean] among their grains. It differs only in size from the Caravance bean (*Caravancer*) usually used as nourishment on board during the voyage home. These Pactau beans are the main ingredient of the soy sauce, and since both types of beans resemble one another fairly closely in taste, and since the Caravance beans do not differ very much from our Turkish beans (*Turkika Boner*), I do not doubt that soy sauce could be prepared from the latter [Turkish beans], if not from our own field-beans. The Chinese prefer, when short of their Pactau beans, to prepare the sauce from a type of lesser blackish-green bean, which they call Hactau. Our native beans ought to be tried, therefore, in case the crop of Pactau beans, imported for experimenting, should fail.

“Thirty-five pounds [actually skalpund; 1 skalpund = 425 gm] of these beans, are cleaned then boiled for 2 or 3 hours in a covered kettle in clean water over a slow fire, until they can be easily mashed between the fingers. Water is added little by little so that the beans do not burn. The beans are removed and spread out on wide, shallow containers (trays) so that the water can run off, and while they are still damp they are rolled in a fine flour (which is ground from the same kind of bean) until they are covered on all sides. They are then placed on smaller trays or loosely woven mats and stacked one and a half inches (literally “thumbs”), one above the other, then placed in an open and loosely woven basket, which is wrapped in a mat or cloth, so that they can ferment and grow moldy during a period of three or four days. Then the cloth is removed and air let in, so that they should become withered and somewhat dried by the time they are left in strong solar heat (or in any other warm area) so that they can dry until they become so hard that they shatter when hit with a hammer and the pieces fly around.

“The flour and the mold are now separated from the beans by rubbing them between the hands. Then the beans are placed in a large or several smaller jars (earthen vessels) and covered with a clear (salt) pickling brine, prepared from 20 pounds of nice clean salt and 100 pounds of clean spring water. The vessels are placed open in the sun during the day, but are closed at night to keep out the cold and the dampness. Otherwise they are placed in a warm area for six whole weeks, to draw [until their whole substance has been well extracted]. When it is observed that the pickling brine

has become dark brown and strong, it is poured off, and brought to a boil several times to increase the strength. Some people add sugar, ginger and other spices to it, according to taste, while it is cooking. They then let the sauce stand with the spices for a few days, before the spices are removed by straining.”

Note 1. The author, Carl Gustaf Ekeberg (written like this on title page) lived 1716-84. He was captain of a ship in the Swedish East India Company's service. He arrived in Canton on 24 August 1766, but had previously visited in 1762. Beckmann (1798, p. 344) gives an English translation of the latter half of this document, starting at “Thirty-five pounds...” Note 2. This is the earliest Swedish-language document seen that uses the term *Caravancer* to refer to soybeans.

Note 3. This is the earliest document seen (July 2001) stating that sugar and/or spices are sometimes added to soy sauce during the last stage of processing.

Note 4. This is the earliest journal article seen (Oct. 2001) that mentions soy.

Note 5. This periodical started publication in 1739 in Stockholm. Address: Capitaine vid Ostindiska Compagniet (Captain with the East India Company).

198. **Product Name:** [Shoyu. Brand named Jôjû Shoyu in 1772].

Foreign Name: Shôyu.

Manufacturer's Name: Takanashi Hyozaemon XXII (Renamed Mogi Hyozaemon in 1764).

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1764.

New Product–Documentation: Noda Shoyu K.K. (Morio ICHIYAMA, ed.). 1940. Noda Shoyu K.K. Nijunen-shi [Twenty-year history of Noda Shoyu, Inc.]. p. 473. The Jôjû brand of shoyu (of which the logo is shown) was introduced in Anei 1 (1772).

Mark Fruin. 1983. Kikkoman: Company, Clan, and Community. p. 18. “In 1764 the eldest son of Takanashi Hyozaemon, now the XXII, married the daughter of Mogi Shichizaemon V. As was often the case when marriage was tied to business, he married into her family, assuming her family's name an occupation. In the year of their marriage, 1764, the adopted son-in-law (*muko-yôshi*) and his bride established a shoyu factory on the advice and with the financial support of the bridegroom's natural family, the Takanashis, who had been making shoyu in Noda since 1661. This was the first Mogi family to venture into shoyu manufacture, but two years later, in 1766, the bride's father, Mogi Shichizaemon, whose ancestors had established the first Mogi household in Noda in 1630, added the manufacture of shoyu to the manufacture of miso, which his family had begun in 1662.” Fruin (p. 73) says that by 1909 this shoyu was sold under the Kamigata brand, but Ken Mogi of Kikkoman says that Kamigata (the brand introduced

by Takanashi Hyozaemon in Anei 1 = 1772) should be pronounced Jôjû, not Kamigata.

199. Tiaodingji [The harmonious caldron]. 1765-1860? China. Undated. [Chi]

• **Summary:** Wade-Giles reference: *T'iao Ting Chi*. Qing dynasty. This is a collection of recipes starting in about the year 1750. Huang (2000) says that this undated work was compiled during the Qing dynasty, between 1760 and 1860. Compiler unknown. The original hand-written manuscript is in the Beijing Library. First printed in a 1986 edition by Hsing Po-T'ao, published by Commerce Publishers in Beijing (p. 625). This is the most comprehensive of the pre-modern food canons. A massive tome covering 871 pages and containing 2,700 recipes, it includes about 250 entries on fermentations and food processing. Parts of it were said to be in circulation before 1765, but other parts perhaps no earlier than 1860. There is great interest in the origin of this book among Chinese food historians, since many of the recipes in it are identical to those in the *Suiyuan Shidan* [Recipes from the Sui Garden], By Yuan Mei (W.-G. *Sui Yuan Shih Tan*, by Yüan Mei). The questions arise: Which book is earlier? Who copied whom? Regardless, this is a book we cannot ignore (p. 132). This massive Qing recipe book does not mention soy sprouts (p. 297).

In Chapter 3, “Meats,” it uses jiang (fermented soybean paste) in 58 recipes, regular soy sauce called *qingjiang* (W.-G. *ch'ing chiang*) in 4 recipes, called *jiangyou* (W.-G. *chiang yu*) in 138 recipes, and called *jiangshui* (W.-G. *chiang shui*) in 2 recipes, and fermented black soybeans (*shi*) in 2 recipes.

In Chapter 7, “Vegetables,” it uses jiang in 33 recipes, regular soy sauce called *jiangyou* (W.-G. *chiang yu*) in 66 recipes, called *jiangzhi* (W.-G. *chiang chih*) in 1 recipe, and called *jiangshui* (W.-G. *chiang shui*) in recipe, and fermented black soybeans (*shi*) in 1 recipe. In this recipe book, which may be considered the summation of culinary arts in China in the 19th century, there are 212 entries for soy sauce (under various names) versus only 91 for jiang. Soy sauce had come to be the more widely used seasoning, but jiang was still important—as it is today (p. 372-73). Fish jiang and shrimp jiang are mentioned (p. 387n). Page 86 describes various ways of preparing *mianjin* (W.-G. *mien-chin*) (wheat gluten) (Huang 2000, p. 502).

200. Diderot, Denis. 1765. Encyclopédie, ou dictionnaire raisonné des sciences, des arts et des métiers: Soui, ou soi [Encyclopedia, or rational / systematic dictionary of the sciences, arts, and trades/crafts: Soy]. Paris: Briasson. See vol. 15, p. 403. Published from 1751-1765 in 17 volumes or fascicles. [Fre]

• **Summary:** “Soui, or soi, singular masculine (Cuisine) is a type of sauce that the Japanese prepare, and which is very much sought after by the peoples of Asia, and by the Dutch, which import it from Japan. It is a type of extract or of liquid

which goes well with all types of meats, and above all with partridge and ham. Then one adds to it mushroom sauce, lots of salt, pepper, ginger, and other spices which give it a very strong flavor, and which help to prevent the resulting sauce (*liqueur*) from spoiling. It will keep for many years in bottles that are well corked, and a small quantity of this liquid mixed with ordinary sauces, enhances them and gives them a very agreeable flavor. The Chinese also make soy (*souï*), but that of the Japanese is regarded as superior. It is said that the reason for this is that the meats are much more succulent in Japan than in China.”

The text in French reads: “*SOUI, ou SOI, s.m. (Cuisin.) c’est une espece de sauce que les Japonnois préparent, & qui est très recherchée par les peuples de l’Asie, & par les Hollandois qui en apportent de ce pays; c’est une espece d’extrait ou de suc qui se tire de toute sorte de viandes, & sur-tout des perdrix & du jambon. On y joint du suc de champignons, beaucoup de sel, de poivre, de gingembre, & d’autres épicerie qui lui donnent un goût très fort, & qui contribuent à empêcher que cette liqueur ne se corrompe. Elle se garde pendant un grand nombre d’années dans des bouteilles bien bouchées, & une petite quantité de cette liqueur mêlée avec les sucs ordinaires, les releve, & leur donne un goût très-agréable. Les Chinois font aussi du souï, mais on regarde celui du Japon comme supérieur; ce qui vient, dit-on, de ce que les viandes sont beaucoup [sic, beaucoup] plus succulentes au Japon qu’à la Chine.*”

Note 1. Diderot, the French encyclopedist, lived 1713-1784.

Note 2. This is the 2nd earliest French-language document seen (Jan. 2010) that refers to soybeans or soyfoods.

Note 3. This is the earliest French-language document seen (April 2012) that uses the words *le Soui* or *le soi* to refer to soy sauce. The text seems to imply that soy sauce had been introduced to France by this time, however we cannot be sure of this. If that were the case, this would be the earliest document seen (Jan. 2010) concerning soybean products (soy sauce) in France; soybeans as such have not yet been reported.

Note 4. This is the earliest Western-language document seen (Feb. 2004) that recommends adding seasonings (such as mushroom sauce, salt, pepper, ginger, or other spices) soy sauce to enhance its flavor. This idea may have been a French innovation.

Note 5. The earliest publication seen that cites this early document (Diderot 1765) was by Shigeru Otsuka, in his book *A Journey into the World of Shoyu* (1987, p. 75). But 14 years earlier, in his chapter titled “All About Shoyu” in *The Kikkoman Way of Fine Eating* (1973, p. 10), when discussing how Europeans got to know about shoyu, he wrote: “It was the great misfortune of the Portuguese that they did not know it. The Dutch traders that followed them, however, did notice shoyu, and began to export it to Europe. It was about 100

years later that Louis XIV of France began to prize shoyu as a secret ingredient in the luxurious court fare of the time.” Note that Louis XIV reigned from 1643 to 1715, more than 50 years before Diderot wrote this passage. We know of no document which states that Louis XIV ever used shoyu. And when we asked Mr. Otsuka for his source concerning Louis XIV’s use of shoyu, he was unable to give any source. Dr. Yokotsuka of Kikkoman (1983) thinks the original source was Dr. Obata. Address: France.

201. *Georgia Gazette (Savannah)*. 1766. Savannah, May 28. No. 140. May 28. p. 1. [Eng]

• **Summary:** “The following articles were entered for exportation at the Custom-house for Christmas and Lady-Day quarters, viz. includes: Rice, 8626 barrels and 218 half barrels—Rough Rice, 1870 bushels—Corn, 5965 bushels—Pease, 100 bushels—Pine lumber, 1,097,101 feet—Shingles 1,944,000... Raw Silk, 712 lb. 8 oz.—Philozel [Filozel], 4897 lb... Indico [Indigo], 55,926 lb.—Barrels of Pork, 551... Salop Powder, 608 lb.—Soy [sauce], 10 gallons.”

Imports include “Rum, 26,756 gallons—Sugar, 147 cwt. [hundredweight] 2 qrs [quarters] and 25 lb.—Negroes, 245—Flour, 229 barrels and 20 kegs...”

Note 1. The last two products (salop powder and soy sauce) were made by Samuel Bowen at his plantation near Savannah, Georgia, for export to England. Was there time for Bowen to make this soy sauce in Savannah? He married in April 1765 and at about the same time probably gave the soybeans he had brought from China to Henry Yonge to plant in the latter’s farm. By 14 May 1765 Bowen owned a plantation of his own.

Note 2. This is the earliest document seen (June 2011) concerning soybean products (soy sauce) in Georgia. This document contains the earliest date seen for soybean products in Georgia (28 May 1766); soybeans as such had not yet been reported by that date.

Note 3. This is the earliest document seen (June 2007) concerning the manufacture of soy sauce in the United States or its export from the United States.

Note 4. This is the earliest document seen (April 2012) that contains industry or market statistics for soy sauce production in a certain geographical area.

Note 5. This is the earliest English-language document seen (April 2012) published in North America that uses the word “Soy” by itself to refer to soy sauce.

Note 6. Lady-Day refers to Annunciation, March 25, observed as a church festival in commemoration of the announcement of the Incarnation of Jesus Christ to the Virgin Mary.

202. **Product Name:** Bowen’s Patent Soy (Soy Sauce).

Manufacturer’s Name: Samuel Bowen.

Manufacturer’s Address: Thunderbolt near Savannah, Colony of Georgia.

Date of Introduction: 1766. May.

Wt/Vol., Packaging, Price: Quart jar.

How Stored: Shelf stable.

New Product–Documentation: *Georgia Gazette* (Savannah). 1766. “Savannah, May 28.” No. 140. May 28. p. 1. “The following articles were entered for exportation at the Custom-house for Christmas and Lady-Day quarters... Soy [sauce], 10 gallons.”

Note 1. This is the earliest known commercial soy product made outside of Asia, or in the Western world, or in the British colonies of North America (in an area that later became the United States), or in the Colony of Georgia (which later became the state of Georgia). This is also the earliest known soy sauce and fermented soy sauce made in the Western world, and the earliest soy product made by Samuel Bowen.

Note 2. In 1766 Bowen also made a type of vermicelli, but it is not clear whether or not it contained soybeans as an ingredient.

British Patent granted to Samuel Bowen. 1767. “New invented method of preparing and making sago, vermicelli and soy from plants growing in America, to be equal in goodness to those made in the East Indies.” Issued July 1. Applied 6 June 1767. Bowen, an Englishman, probably learned the process for making soy sauce while in China sometime between 1759 and 1763. “He claimed that he was a prisoner in China for nearly 4 years and was carried 2,000 miles from place to place through the interior of the country.” Here is a simple chronology: 1764–Bowen arrives in Savannah, The Province / Colony of Georgia. 1765 April. Bowen marries in Savannah and at about the same time (spring) gives his “Chinese vetches” (the soybeans he had brought from China) to Henry Yonge to plant on the latter’s farm. 1765 May 14. Bowen purchases his own tract of land / plantation land at Thunderbolt, a few miles east of Savannah, and by Sept. he owns slaves, one of whom tried to run away.

1765 fall. Bowen’s soybeans probably mature on Yonge’s farm. He uses some of these soybeans to make soy sauce.

1766 March 25. Before Lady’s Day (March 25) Bowen had entered 10 bottles of soy sauce at the Custom House in Savannah for export to England. In 1767 he patented this soy sauce and on 16 Jan. 1769 the American Philosophical Society for the Promotion of Useful Knowledge, in Philadelphia, Pennsylvania, received samples of 6 bottles of soy [sauce] from Samuel Bowen (Lesley 1884). There are numerous other records during the 1770s of Bowen’s soy sauce, which he advertised in the *South Carolina Gazette* (29 Nov. 1773) as “Bowen’s Patent Soy.”

This chronology raises some interesting questions. The questions are by William Shurtleff and the answers (mostly educated guesses) are by Prof. Ted Hymowitz (Oct. 2005).

1. What quantity of Chinese vetches did Bowen bring from China to Savannah? What kind of soybeans were they?

Did he give all of these to Yonge to plant, or did he use some to make soy sauce, and perhaps set some aside in case of crop failure or failure of the seeds to mature in Savannah? Ans: Ted has no idea as to the amount of soybeans brought over by Bowen, but he imagines roughly 10-30 lb. He guesses that they were Maturity Group II (adapted to Pennsylvania), black and small. Small black soybeans appear to withstand changes in temperature and to store much better than yellow or large beans. PB1 is a very popular local variety in India; it germinates quite well under adverse conditions.

2. What is the earliest these soybeans could have produced mature seed for Bowen to use to start making his first batch of soy sauce in Savannah? Ans: If planted in April on Yonge’s farm, these non-adapted beans probably matured in 90-100 days or mid-July. The replanted beans (planted entirely on Bowen’s plantation) would mature in October (90 days). Depending on frost conditions, a third harvest might be ready in late December (85 days). Beans harvested in October would give him time to make Chinese-style soy sauce, ready for export in March.

3. Bowen may have had a conflict or difficult choice: What proportion of the soybeans that matured on Yonge’s farm would he keep as seed for planting, what proportion would he use to make soy sauce, and what proportion (if any) would he set aside in case of crop failure? One lb of soybeans planted would yield about 40-70 lb of soybeans harvested. Bowen may have been smart enough to set aside say 10% of his original beans in case Yonge’s original planting failed—for any reason. With each successful harvest, he would probably have set aside a progressively smaller percentage in case of crop failure.

4. Did Bowen use any wheat in his soy sauce, or only soybeans, salt, water, and koji starter? Typical Chinese soy sauce in the 1760s did not use wheat. It would have taken about 50-60 lb of soybeans to make 10 gallons of Chinese-style soy sauce—the amount he first exported. Ans: Ted wonders if Bowen might have used rice (widely grown in coastal Georgia) instead of wheat.

5. Assuming he learned how to make soy sauce in China, where and in what form did he get the *Aspergillus oryzae* spores he would have needed to make soy sauce in Georgia. How did he transport these back to Georgia?

6. For how long did Bowen ferment and age his soy sauce, and in what kind of vessels? In warmer climates, such as that of Savannah, where the sauce is made Chinese-style in earthenware vats set outdoors and exposed to the sun, it can be ready in as little as 3-4 months (H.T. Huang 2000, p. 366). Assuming that he used the soybeans from Yonge’s first crop, he would have had 5-6 months—adequate time to make a good product.

203. *General Evening Post* (London). 1766. London. June 5. p. [2], col. 2.8.

• **Summary:** “We hear that the Society of Arts, Manufactures

and Commerce, have presented Samuel Bowen, Esq., with a gold medal, for introducing several Chinese manufactories [including soy sauce] in his Majesty's province of Georgia."

204. **Product Name:** [Shoyu].

Foreign Name: Shōyu.

Manufacturer's Name: Horikiri Monjiro.

Manufacturer's Address: Nagareyama (near Noda), Japan.

Date of Introduction: 1766.

New Product–Documentation: Mark Fruin. 1983.

Kikkoman: Company, Clan, and Community. p. 18. In 1766

Horikiri Monjiro from Nagareyama began making shoyu.

"His wife was the second daughter of Mogi saheiji III, who would himself begin soy sauce brewing in a few more years."

205. **Product Name:** [Shoyu].

Foreign Name: Shōyu.

Manufacturer's Name: Mogi Shichizaemon V.

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1766.

New Product–Documentation: Mark Fruin. 1983.

Kikkoman: Company, Clan, and Community. p. 18. "In 1764 the eldest son of Takanashi Hyozaemon, now the XXII, married the daughter of Mogi Shichizaemon V. As was often the case when marriage was tied to business, he married into her family, assuming her family's name and occupation. In the year of their marriage, 1764, the adopted son-in-law (*muko-yōshi*) and his bride established a shoyu factory on the advice and with the financial support of the bridegroom's natural family, the Takanashis, who had been making shoyu in Noda since 1661. This was the first Mogi family to venture into shoyu manufacture, but two years later, in 1766, the bride's father, Mogi Shichizaemon, whose ancestors had established the first Mogi household in Noda in 1630, added the manufacture of shoyu to the manufacture of miso, which his family had begun in 1662."

206. Ryorikata banhō [Many methods for cooks]. 1766?

Japan: Publisher unknown. 60 p. Japanese summary by Kawakami 1978, p. 165. [Jap]*

• **Summary:** This manual, by an unknown author, describes how to make various foods, rather than how to prepare recipes. It discusses shoyu, barley hishio, Kinzanji miso, kiku hishio (it is not known what "kiku" means), hishio, natto, toko miso, uzu-miso, and amazake.

207. Kastens, Herman Christiaan. 1767. Diary. In: Leonard Blussé, Cynthia Viallé, et al, eds. 2004. The Deshima Diaries Marginalia, 1740-1800. Tokyo: Japan-Netherlands Institute. xl + 898 p. See p. 311-12 (#73, 77).

• **Summary:** In the section titled "Diary kept by Deputy Christ during the absence of Kastens," at 1767 April 9—"A small *wangkang* without its top mast, which had stranded off

the island of Koshiki on 25 January, arrived in the roadstead. It had departed from the Chinese harbor of Zoesio on November 17 last year. It was destined for Lonton. Its cargo consisted merely of 56,200 *ganting miso* beans [soybeans used to make miso] and 9,000 catties of oil."

Note: A *ganting* / *gantung* is a measure of weight. It is not clear what kind of oil this is.

1767 May 6—"Today the *wangkang* which arrived here on 9 April got a top mast. It sold part of its cargo of *miso* beans to cover its expenses." Address: Opperhoofd (Chief of the Dutch factory), Deshima, Nagasaki, Japan.

208. *Georgia Gazette (Savannah)*. 1767. Savannah, April 15. No. 186. April 15. p. 2. [Eng]

• **Summary:** "The following articles, being the produce of this province, were entered at the Custom-house for exportation, from the 5th day of January last, to the 5th day of April instant... Salop-Powder, 100 lb.—Soy [sauce], 3 dozen bottles."

209. *New-York Gazette or The Weekly Post-Boy (New York City)*. 1767. Savannah, (in Georgia) April 1. April 23. p. 3. [Eng]

• **Summary:** "Week before last was cleared out for the West-Indies, in the snow *Harriot*, one hundred pound weight of salop powder, and three dozen bottles of soy [sauce], the produce of this province, made by Mr. Samuel Bowen."

Note 1. A snow is a sailing ship with 3 masts.

Note 2. This is the earliest document seen (Dec. 2008) concerning soybeans or soyfoods (soy sauce) in connection with (but not yet in) the West Indies or the Caribbean. If Bowen's soy sauce actually arrived in the West Indies, this would be the earliest document seen (Dec. 2008) concerning soybean products (soy sauce) in West Indies or Caribbean. And this document would contain the earliest date seen for soybean products in West Indies or Caribbean (1767); soybeans as such have not yet been reported.

210. *London Magazine or, Gentleman's Monthly Intelligencer*. 1767. Savannah in Georgia. 26:237-38. May. [3 ref. Eng]

• **Summary:** Three letters or articles are reprinted here in succession: (1) Yonge, Henry. 1766. Re: Certificate to the Society for the encouragement of Arts, Manufactures, and Commerce, London. Letter to Dr. Peter Templeman, Secretary to the Society, London, Dec. 23. 1 p. Reprinted in *Gentleman's Magazine* (London). May 1767, p. 253.

(2) Yonge, Henry. 1767. "An account of the Luk Taw, or Chinese vetches, introduced into Georgia from China by Mr. Samuel Bowen, as appears by a certificate* to the Society of Arts, &c. from Henry Yonge, Esq; Surveyor General of Georgia." *Gentleman's Magazine* (London) 37:253. May.

(3) Templeman, Peter. 1767. [Letter of thanks for Chinese vetches to Samuel Bowen in Georgia from the

Secretary of the Society for the encouragement of Arts, Manufactures, and Commerce, London]. *Gentleman's Magazine* (London) 37:253. May. Note: At the bottom of this letter is written: "Strand, London. April 30, 1767."

211. Bowen, Samuel. 1767. New invented method of preparing and making sago, vermicelli and soy from plants growing in America, to be equal in goodness to those made in the East Indies. *British Patent* 878. July 1. Application filed 6 June 1767. Hymowitz and Harlan (1983, p. 376) shows the first 2 pages of the patent.

• **Summary:** "To the King's most excellent majesty. The Humble Petition of Samuel Bowen of the Province of Georgia in America. Merchant. Sheweth, THAT Your Petitioner hath found out and Invented a Method of preparing & making Sago, Vermicelli, & Soy [sauce], from the Plants growing in America, which he has now brought to such great perfection as to be equal in Goodness to those made in the East Indies; That he has erected Machines for carrying on the said Manufactory, In which he has been encouraged to proceed by the Lords for Trade and Plantations... That in regard he is the First and True Inventor thereof and that the same hath never been practised by any other person or persons whatsoever

Your Petitioner therefore most humbly
Prays Your most Sacred Majesty to
Grant unto him Your Royal Letters
Patent, under the Great Seal of
Great Britain, for the sole Benefit
and Advantage of his said Invention,
within that part of Your Majesty's Kingdom... Whitehall

June 6th 1767.

Note 1. This is the earliest patent seen (May 2005) that mentions soybeans or a soybean product—in this case, soy sauce. The next was in 1905, more than 135 years later. Full text given in Colonial Records of the State of Georgia. Vol. 39. Entry Books, Letters, Memorials, Petitions, etc. 1733-1783. Typed under the authority of John B. Wilson, Secretary of State, U.S. Government Aid through W.P.A. Project No. 3990. 1937.

Note 2. No description of any of the processes is given. The key point is that Bowen's soy sauce is as good as those imported from Asia. The sago was originally intended to relieve diarrhea among scorbutic sailors. It absorbed all the moisture, but contained almost no vitamin C. The source for this document is a book reporting a summary of patents (Hymowitz, pers. comm. 12 March 1988).

212. Christie's. 1767. Catalogue of an auction, 30 Nov. 1767. London, England: Mr. Christie's.

• **Summary:** In this catalog, we read: A gentleman "lately returned from India" has decided to sell his "Dressing Boxes, fine India paper, Muslin, Soy [sauce], [and] fine Batavia Arrack."

Note: Cited by—Wall, Cynthia Sundberg. 2006. The prose of things:... Chicago, Illinois: University of Chicago Press. 316 p. See p. 169. Address: London.

213. *New-York Gazette or The Weekly Post-Boy* (New York City). 1768. Charles-Town (South Carolina) Dec. 29. March 7. p. 2. [Eng]

• **Summary:** "Feb. 9... Mr. Bowen, who has received a medal from the society of arts in London, for his introducing the manufacture of Vermicelli, Sago, Salop, Soy [sauce], &c. in the province of Georgia, is arrived here from London, in his way to that province, and we are told has obtained a royal patent for manufacturing those commodities there, to be imported into Great-Britain; and that the government has contracted with him to supply the royal navy, hospitals, &c. with these necessities."

This article also appeared in the *Boston Post Boy* [Massachusetts] (March 21, p. 2) and the *Boston News-Letter and New England Chronicle* (March 24, Supplement p. 1).

Note: This is the earliest document seen (Aug. 2011) concerning soy in connection with (but not yet in) South Carolina.

214. *Bath and Bristol Chronicle* (England). 1768. To be sold by hand, at Sadler's-Arms, the Upper End of Stall-Street, Bath (Ad). 8(418):4. Col. 1. Oct. 20.

• **Summary:** "... the Stock in Trade from a Glass-Cutter, from London; consisting of a great Variety of cut, engraved and gilt Glasses; fine Pyramids, cut Decanters... Tumblers, Soy Cruets, Chandeliers, Bottles,..., which will be sold at Prime Cost."

Note 1. This is the earliest document seen (April 2012) that mentions "Soy Cruets" (regardless of spelling)—to be used for soy sauce.

Note 2. Bristol is a city in southwestern England on the Avon River near the Bristol Channel—From early times a place of commerce and active in medieval trade.

Note 3. The glass-cutter in London was apparently Christopher Haedy and Family (Buckley 1925, p. 122-23).

215. Bowen (Samuel). 1768. Classified ad: By the King's Royal Patent, granted to Samuel Bowen, for his sago powder, soy, and vermicelli. *Georgia Gazette* (Savannah) No. 270. Nov. 30. p. 3, col. 2.

• **Summary:** "Approved of by the Royal Society of Arts and the College of Physicians as equal in goodness to those articles usually imported into Great-Britain by the East-India Company, in consequence of which Mr. Bowen has the honour of supplying the royal navy with Sago, also several of the outward-bound East-India and African ships.

"The Sago Powder will be of great utility at sea as well as on shore. One pound will make a mess of wholesome nourishing food for 20 men. It is of a light and nourishing substance, proper for fluxes and other disorders of the

bowels, also in consumptive and many other cases.

Directions for preparing Sago Jelly: Mix one large spoonful of the powder with a pint of boiling water, and it becomes a jelly. Then give it what taste you please with wine, spice, sugar, &c. N.B. Dilute the powder first with two spoonfuls of cold water.

“Sold at the Collector’s at the following prices, viz. Sago Powder at 2s. [shillings] per pound, with directions how to use it; and Soy [sauce] at 3s. 6d. [3 shillings 6 pence; there are 12 pence per shilling and 20 shillings per pound] per bottle, or 1£ 16s. [1 pound 16 shillings = 36 shillings, a 15% saving] per dozen.

“Savannah, in Georgia, 30th November, 1768.

Note 1. This is the earliest English-language publication or article seen with the word “soy” (or any variation of soy) in the title. Note that this “soy” refers to soy sauce.

Note 2. The article below this one (unrelated to Bowen) is titled “To Be Sold, A good plantation... Also, ten young likely working negroes. One third of the purchase money is to be paid down, or within two or three months after the delivery of the premises; credit will be given for two or three years, or more if required...”

Note 3. This is the earliest non-patent document seen (Sept. 2001) that discusses a patent related to soy.

Note 4. This ad also appeared in the Dec. 7 (p. 3) and Dec. 21 (p. 4) issues of this newspaper. Address: Savannah, Georgia.

216. Barrell (Joseph). 1768. Classified ad: To be sold at the lowest rates... *Boston Evening Post*. Dec. 12. p. 3.

• **Summary:** “A Parcel of very neat Glass and China Ware, just imported,... labell’d and plain Cruits for Oil, Vinegar, Ketchup, Soy [sauce], & Cayan [cayenne pepper];...”

Note 1. Barrell is selling glass ware (including cruits / cruets), not soy sauce. Yet the ad implies that Bostonians knew what “Soy” was, and that some would probably use their cruits to store and dispense it.

Note 2. This is the earliest document seen (May 2011) concerning soy in connection with (but not yet in) Massachusetts.

Note 3. This ad also appeared in the Dec. 19 (p. 4) and Dec. 26 (p. 4) issues of this newspaper. Address: Store No. 3 on the South Side of the Town-Dock [Boston].

217. “Sample of Chinese Vetches [soybeans], six bottles of Soy and six pounds of powdered sago presented with a letter from S. Bowen of Georgia.” These soybeans were distributed on March 3 to eight local farmers (Early event). 1769. Jan. 16.

• **Summary:** This entry appears under the date “1769. Jan. 16” (p. 24-25) in the following document: Lesley, J. Peter. 1884. *Early proceedings of the American Philosophical Society for the Promotion of Useful Knowledge, compiled by one of its secretaries from the manuscript minutes*

of its meetings from 1744 to 1838 [APS]. Philadelphia, Pennsylvania: Press of McCalla & Stavely. 875 p.

The “Chinese vetches” are soybeans, and the “six bottles of soy” refers to soy sauce, which was made in Savannah, Georgia, by Samuel Bowen—the first man to introduce soybeans to what is now the United States. Soybeans and soy sauce are also discussed on pages 32-33, and 35 of this book.

An important follow-up entry appears under the date “1769. March 3. College. [29 present, incl. Bartram]. The S. Bowen’s Communication Committee then reported, that thanks be returned ‘especially for his ingenious account of the Chinese Vetches...’ The Other Committee [Natural History and Chemistry] were recommended to ‘make some experiments on’ the respective qualities of the samples of Soy & Sago, & report. Ordered that some... Vetches be distributed to... Pemberton, J. & J. Bartram [John and Johnny], J. Morgan, J. Rhea, Abel James, T. Clifford, J. Gibson & G. Roberts.”

Thus Samuel Bowen’s soybean seeds were distributed to eight farmers; all probably lived in Pennsylvania. They received the seed in time for planting in 1769 and were asked to report on their results. It seems extremely likely that at least one of the 8 farmers (incl. John Bartram) grew the soybeans during 1769—however we can find no direct evidence that they actually did. Ted Hymowitz has searched everywhere for these reports, but can find none. He says (Nov. 2005) they may be buried somewhere in the APS archives in Philadelphia.

Yet we do have indirect evidence. In 1804 James Mease wrote in *The Domestic Encyclopedia*: “The Soy-bean bears the climate of Pennsylvania very well. The bean ought therefore to be cultivated.” Who planted these soybeans in Pennsylvania between 1769 and 1804, and from where were they obtained? Probably one of the 8 farmers (including John Bartram), who got them from Samuel Bowen. Ted has found proof (in a book compiled by a descendant of Bartram) that John Bartram grew soybeans in Philadelphia, but we are not told when. Both John Bartram (lived 1699-1777) and James Mease (1771-1846) were members of the American Philosophical Society, however Mease was age 6 when Bartram died.

Note 1. This is the earliest document seen (July 2011) concerning soybeans in Pennsylvania—or in Philadelphia. This document also contains the earliest date seen for soybeans in Pennsylvania (16 Jan. 1769). This may be the earliest document seen (July 2011) concerning the cultivation of soybeans in Pennsylvania—but we cannot be sure.

In the 1700s Philadelphia, a port city on the Delaware River, was the largest city in the American colonies. According to Benjamin Franklin, the population of Pennsylvania was about one-third English, one-third German, and one-third Scots-Irish.

218. *Georgia Gazette (Savannah)*. 1769. Savannah, April 26.

No. 291. April 26. p. 3.

• **Summary:** “Entered for exportation at the Custom-House in Savannah... from the 5th day of January last to the 5th day of April instant... Sago powder, 12,089 lb. Soy [sauce], 5 dozen [bottles].”

219. Stork, William. 1769. A description of East-Florida, with a journal, kept by John Bartram of Philadelphia, botanist to His Majesty for the Floridas; upon a journey from St. Augustine up the River St. John's, as far as the lakes. With explanatory botanical notes... The third edition, much enlarged and improved. London: Sold by W. Nicoll; and T. Jeffries. [4], viii, 40, [2], xii, 35, [1] p. Illust. maps. 30 cm. [2 ref]

• **Summary:** This book is divided into two parts, each of which is paginated separately. At the beginning of the 2nd part is “The introduction to the journal” of John Bartram. When talking about the importance of new plants and naturalists to the American colonies he states (p. ii): “I cannot touch upon this subject without mentioning Mr. John Ellis, Fellow of the Royal Society, and agent for West-Florida... It is to this very ingenious gentleman that I am indebted for the following catalogue of plants that may be useful in America, in which, to avoid confusion in the botanical names, Mr. Ellis hath given both the generical and the specifick or trivial names of the plants, with the page referred to in the celebrated Dr. Linnaeus's 2nd edition of his *Species of Plants*...”

There follows (p. iii on) a 4-column table in which numerous plants are listed under the following column headings: (1) The “Latin names”—genus and species. (2) “2d Ed. Lin. Sp.”—The page on which this plant is mentioned in the 2nd ed. of Linnaeus' *Species Plantarum*. (3). English names. (4) Observations.

On p. v we read: “*Dolichos soja* Linn. Lin. Sp. 1023. A kind of kidbean called Daidso. Used for making Soye* or Indian Ketchup. See Kaempfer, *Amoenitatis*, 837.

“* The method of preparing East-India Soye or India Ketchup. Take a certain measure, for instance a gallon, of that sort of kidney-beans, called Daidso by the Japanese, and Caravances by the Europeans; let them be boiled till they are soft; also a gallon of bruised wheat or barley, (but wheat makes the blackest Soye) and a gallon of common salt. Let the boiled caravances be mixed with the bruised wheat, and be kept covered close a day and a night in a warm place, that it may ferment. Then put the mixture of the caravances and wheat, together with the gallon of salt, into an earthen vessel, with two gallons and a half of common water, and cover it up very close. The next day stir it about well with a battering machine or mill (*Rutabulum*) for several days, twice or thrice a day, in order to blend it more thoroughly together. This work must be continued for two or three months, then strain off and press out the liquor, and keep it for use in wooden vessels; the older it is the clearer it will be, and of so much

more value. After it is pressed out, you may pour on the remaining mass more water, then stir it about violently, and in some days after you may press out more Soye.”

Note 1. This is the earliest American document seen (Dec. 2005) that uses the term “*Dolichos soja*” or the word “Daidso” or “kidbean” to refer to the soybean.

Note 2. This is the earliest English-language document seen (April 2012) that uses the word “Soye” to refer to soy sauce, or the term “East-India Soye” or the term “India Ketchup” to refer to soy sauce from the East Indies, probably the Dutch East Indies (today's Indonesia). The ideas that soy sauce is a type of ketchup, and that this soy sauce comes from the Indies (India) are extremely interesting in trying to understand the origin of the word “ketchup” (regardless of spelling) and the early relationship between soy [sauce] and ketchup.

Note 3. This is the earliest English-language document seen (April 2012) that uses the term “bruised wheat or barley” in connection with the process for making soy sauce. This term and this descriptive recipe would be repeated in more than 20 publications—even though the recipe will not work, since it contains no koji, and many must have wondered just how they are supposed to make “bruised wheat or barley.”

Note 4. John Ellis (ca. 1705-1776), an Irish naturalist living in London, was active in studying the plants of the American colonies and in introducing new plants to them. He was also a commercial agent, representing a number of American colonies in London. In 1769 Ellis was the commercial agent for West Florida in London. Notice that his is a list of plants “that may be useful in America.” He does not say they are already growing in America.

Note 5. Ellis does not mention koji (grains or beans covered with a white mycelium of *Aspergillus* mold), and does not understand its importance in making soy sauce. Kaempfer, from whom Ellis got his instructions for preparing soy sauce, did not mention koji either in connection with soy sauce. However Kaempfer did mention *koos* (by which he probably meant koji), in the previous paragraph of his 1712 classic, in which he described how to make miso.

Note 6. This is the earliest English-language document seen (March 2006) that uses the word “Caravances” (using this or any related spelling) to refer to soybeans.

Note 7. Also included in Ellis's catalog are: Safflower, *Sesamum Orientale* [sesame seeds], locust tree or St. John's Bread (*Ceratonia Siliqua*), true opium poppy, tallow tree of China, true rhubarb, sago palm-tree, true bamboo cane, East India mango-tree, paper mulberry tree, arnotto [anatto], etc.

Note 8. This is the earliest English-language document seen (Aug. 2007) that uses the word “*Sesamum*” or the term *Sesamum Orientale* to refer to sesame seeds, or that gives their scientific name; it says (p. iii): “Latin name: *Sesamum Orientale*. 2d Ed. L. Sp. [2nd edition of Linnaeus' *Species plantarum*]: p. 883. English names: Oyly grain.

Observations: Propagated in the Levant [countries of the eastern Mediterranean] for oyl, which does not soon grow rancid by keeping.”

Note 9. William Stork, a German botanist and member of the Royal Society (London), had this treatise published in London as a promotion of Florida as an attractive place for settlers by describing the climate, soil, flora, and fauna. He emphasized its agricultural potential for cultivating rice, cotton, silk, sugar, and other profitable crops. According to Prof. Ted Hymowitz (March 2006), Stork lived in St. Augustine, Florida, in 1765, and then went to England. Address: [England].

220. *Georgia Gazette (Savannah)*. 1770. Savannah, April 25. No. 342. April 25. p. 3, col. 1.

• **Summary:** “Entered for exportation at the Custom-House in Savannah, from the 5th day of January, to the 5th day of April, 1770... Sago, 2642 lb. Soy [sauce], 13½ doz. [dozen]... Hemp, 660 lb.” Note: Sago powder is made from the root of a sweet potato.

221. Bowen (Samuel). 1770. Classified ad: By the King’s Royal Patent, granted to Samuel Bowen, for his sago powder, soy, and vermicelli. *Newport Mercury (Rhode Island)*. June 4. p. 4.

• **Summary:** The text of this ad is the same as that with the same title published on 30 Nov. 1768 in the *Georgia Gazette*, except for the last paragraph, which reads: “The Sago Powder and Soy [sauce] may be had at Mr. Jacob Polock’s Store on the Long Wharf and at Mr. Nathaniel Bird’s in Thames-Street, Newport” [Rhode Island].

This ad also appeared in the July 9 issue of this newspaper (p. 3).

Note: This is the earliest document seen (Aug. 2011) concerning soybean products (soy sauce) in Rhode Island. This document contains the earliest date seen for soybean products in Rhode Island (June 1770); soybeans as such have not yet been reported.

222. Curson (Richard). 1770. Classified ad: Has just imported and will sell on the most reasonable terms, the following articles,... *New-York Gazette; and the Weekly Mercury (New York City)*. Nov. 26. p. 3.

• **Summary:** “... Single and double refined Loaf Sugar, Pepper, Allspice, the finest Durham Mustard,... Vermicelli [Vermicelli], Pearl Barley, Florence Oyl, Italian small Capers, Raisins and Currants, Jordon [Jordan] Almonds, India Soy [sauce], very best Catchup, Staple Isinglass,...”

Note 1. This ad also appeared in the Dec. 3 (p. 4), Dec. 10 (p. 3), Dec. 17 (Supplement p. 1), and Jan. 7 (1771, Supplement p. 1) issues of this newspaper.

Note 2. “Florence Oyl” refers to olive oil.

RICHARD CURSON,
Has just imported, and will sell on the most reasonable
Terms, the following ARTICLES,
SINGLE and double Refined Loaf Sugar, Pepper, Allspice,
The finest Durham Mustard, Spices of all Sorts,
Refined Petre; Vermicelly, Pearl Barley,
Florence Oyl, Italian small Capers,
Raisins and Currants, Jordon Almonds,
India Soy, Very best Catchup,
Staple Isinglass, Scotch Snuff in Bladders and
Canisters, Rappee and Strasburgh in do.
valop, Fresh Anchovies.
Coriander, Carraway, and Anniseed.
He has also for Sale, Hyson, Sushong, and Green Tea,
with the very best of Madeira Wine, Red Port, and other
Liquors as usual.

223. Amiel (John). 1770. Classified ad: At his store in Smith-street,... *New-York Gazette; and the Weekly Mercury (New York City)*. Dec. 17. p. 4.

• **Summary:** “... English double and single refin’d Sugars. America, lump, and muscavado Sugars... Olives, Capers, Anchovies, Florence oyl, Ketchup, India soy [sauce], Oatmeal,...”

This ad also appeared in the Jan. 14 (1771, Supplement p. 1) issue of this newspaper.

Note 1. John Amiel and his son ran more ads for soy sauce in America before 1780 than anyone else.

Note 2. “Muscavado: Unrefined sugar; the raw material from which loaf and lump sugar are procured by refining. Muscovado is obtained from the juice of the sugar cane by evaporating and draining off the liquid part called molasses” [molasses] (*Webster’s Dictionary*, 1828). Address: Smith-street.

224. Bradley, Martha. 1770. *The British housewife: or, The cook, housekeeper’s, and gardiner’s companion...* 2 vols. London: Printed for S. Crowder and S. Woodgate. See p. Vol. 1, p. 6. Microform: History of women, reel 16, no. 89.

• **Summary:** Chapter II, titled “Of foreign Articles pickled, or otherwise preserved” begins: “Next to the Provisions themselves, the Cook will have Occasion to recollect that what those Things are which serve to give them Flavour, or to eat with them as Additions in Sauce... Of these there is a vast Number, but the greater part of them are prepared at Home. Some we receive from other Countries. The former Kind will be treated of hereafter in their Places, according to the Times they are in Season.

“The latter, or foreign, we shall speak of here. These are principally six, Anchovies, Capers, Caviar, Cayen Pepper, Mangoes, and Soy [sauce]. Of these we shall give some Account...”

Note: There are subsequent articles on Anchovies, Capers, Caviar, and Cayan Pepper, but none on Mangoes, or Soy. Address: Late of Bath [England].

225. Ellis, John. 1770. Directions for bringing over seeds and plants, from the East-Indies and other distant countries, in a state of vegetation: Together with a catalog of such foreign plants as are worthy of being encouraged in our American colonies for the purposes of medicine, agriculture and commerce. London: Printed and sold by L. Davis. 41 p. 25 cm. [1 ref]

• **Summary:** In this, his first booklet, Ellis tells how to pack seeds to prevent them from spoiling on long sea voyages. He depended especially on packing the seeds in beeswax. One page (26) is a 4-column table in which numerous plants are listed under the following column headings: (1) The “Latin names”—genus and species. (2) “2d Ed. Lin. Sp.”—The page on which this plant is mentioned in the 2nd ed. of Linnaeus’ *Species Plantarum*. (3). English names. (4) Observations.

The last entry is: “*Dolichos soja* Linn. Lin. Sp. 1023. A kind of kidney-bean called Daidso. Used for making Soye* or India Ketchup. See Kæmp. Amoenitat. [Kaempfer Amoenitatis], 837.

“* The method of preparing East-India Soye or India Ketchup.

Take a certain measure, for instance a gallon, of that sort of kidney-beans, called Daidso by the Japanese, and Caravances by the Europeans; let them be boiled till they are soft; also a gallon of bruised wheat or barley, (but wheat makes the blackest Soye) and a gallon of common salt. Let the boiled caravances be mixed with the bruised wheat, and be kept covered close a day and a night in a warm place, that it may ferment. Then put the mixture of the caravances and wheat, together with the gallon of salt, into an earthen vessel, with two gallons and a half of common water, and cover it up very close. The next day stir it about well with a battering machine or mill (*Rutabulum*) for several days, twice or thrice a day, in order to blend it more thoroughly together. This work must be continued for two or three months, then strain off and press out the liquor, and keep it for use in wooden vessels; the older it is the clearer it will be, and of so much more value. After it is pressed out, you may pour on the remaining mass more water, then stir it about violently, and in some days after you may press out more Soye.”

Note 1. This information by Ellis, in a different context but in identical form and with only a few words changed, first appeared in Stork 1769.

Note 2. John Ellis (ca. 1705-1776), an Irish naturalist living in London, who was active in studying the plants of the American colonies and in introducing new plants to them. He was also a commercial agent, representing a number of American colonies in London.

226. Young, Arthur. 1770. A six months tour through the

north of England: containing, an account of the present state of agriculture, manufactures and population, in several counties of this kingdom:... Vol. 4 of 4. London: Printed for W. Strathan,... Also in 1770: Dublin: Printed for P. Wilson,... See letter XLIII (starting p. 381).

• **Summary:** On page 587 Young starts a list of the towns where he spent the night, the name of the inn where he stayed, and brief comments. Page 590-91: “*Glenwelt*. Angel. Armstrong’s. Very civil, but not clean, extremely cheap. Boiled fowl with catchup sauce, and roast potatoes 8d. a head.”

Note 1. He begins the list by observing (p. 587): “It is of consequence to know, that in the remotest parts of the kingdom a traveller will meet a reception, in most respects different from what he will find in foreign countries; a decent bed; clean sheets; plenty of fewel [fuel]; wholesome provisions; and generally a civil landlord. As to the prices at some of the following places, I add them as a matter of curiosity, to show, that the north *yet continues, beyond all comparison*, cheaper than the south, in most of the points in which an inn can indicate it.”

Note 2. This book was also reprinted in Dublin in 1770 in three volumes. The exact same quotation appears in Vol. 3, p. 383 (Letter XLIII). Address: [England].

227. Murphy (George). 1771. Classified ad: Pickles and Catsup... *Public Register or the Freeman’s Journal (Dublin, Ireland)*. Jan. 1. p. [4], col. 1.9.

• **Summary:** “... of the best Colour and Flavour, are sold by George Murphy, at the Ship and Sugar-Loaf in Capel-street, opposite A[?]ey-street,—He has a choice Parcel of Pickled Mushrooms.” Address: Ship and Sugar-Loaf, Capel-street [Dublin].

228. Curson & Seton. 1771. Classified ad: Have just imported in the Ship Beulah, from London, a fresh assortment of groceries,... *New-York Gazette; and the Weekly Mercury (New York City)*. March 25. p. 3.

• **Summary:** “New raisins and currants, nutmegs, mace, cinnamon, cloves, Florence oyl,... Italian small capers, catchup, soy [sauce], sago, salup, rappee and Scotch snuffs,...”

This ad also appeared in the April 1 (p. 1) and April 15 (Supplement p. 2) issues of this newspaper.

229. Curson and Seton. 1771. Classified ad: Have just imported per the Earl of Dunmore, from London,... a full assortment of groceries,... *New-York Gazette; and the Weekly Mercury (New York City)*. June 3. p. 2.

• **Summary:** “... White and brown sugar candy, Saltpætre [saltpeter], Soy [sauce] and ketchup,... French bur [burr] mill-stones.”

This ad also appeared in the June 24, July 1, and July 8 issues of this newspaper (Supplement p. 1). Address:

Hunter's Quay.

230. Martin (James). 1771. Classified ad: To be sold,... cheap for cash. *Newport Mercury (Rhode Island)*. June 24. p. 3.

• **Summary:** "Pork in Barrels, dressed Deerskins, Indigo, Bowen's Sago Powder and Soy [sauce]: Inquire at Mr. John Miller's."

A larger version of this ad (with the same text except that the word "Rice" is added after "Indigo,") appeared in 1771 in the Aug. 19 (p. 4), Sept. 2 (p. 4), and Sept. 16 (p. 4) issues of this newspaper. As before, the location of James Martin's shop is not given.

In a search for "James Martin" or "Martin + soy" in the Early American Newspapers (EAN) database from 1771 to 1800 we can find no other records for this merchant in any state (actually in any British colony). So we cannot be sure that James Martin lived in Newport or in Rhode Island.

Talk with Prof. Ted Hymowitz, Univ. of Illinois. 2006. Aug. 1. The items sold by James Martin all came from the southern provinces. The soy [sauce] is clearly made by Samuel Bowen of Savannah, Georgia. The rice almost certainly was grown in Georgia or South Carolina. The pork was salt pork. Since Martin does not give his address in the ad, he was probably a merchant or a seaman who sold goods while sailing up and down the Atlantic coast. If a seaman / sailor, he would buy goods in the South, put them in his dunnage (the extra allowance of space for his personal baggage on the ship), then sell them in shops as he traveled north. Since he paid for the ads, he probably sold the goods on consignment.

More broadly: Although merchants in retail stores in port cities along the Atlantic seaboard advertised in early American newspapers, we don't know how they got their soy sauce. They could have gotten their Bowen Soy directly from Samuel Bowen (which Ted doubts) or from one of the many merchants or traders who sailed up and down the coast. Most of the trade among the British colonies of North America was along the waterways at this time. So these traders could have purchased his Bowen Soy from Samuel Bowen in Savannah (Georgia) or Charlestown (South Carolina), and taken it northwards by boat. A peddler might have appeared at a retail store and showed his wares. The shopkeeper would place his order, including perhaps some bottles of "Bowen Soy," and then he might have advertised his "Bowen Soy." Bowen's Soy was probably transported either by professional traders / agents going up and down the coast, or as dunnage (which was a major way goods were transported by water, including across the oceans).

231. Webster (George). 1771. Classified ad: Has for sale the following articles,... *New-York Journal; or, the General Advertiser (New York City)*. Aug. 1. p. 403.

• **Summary:** "... Fine hyson, congo, Soushong, breakfast, green and bohea teas,..."

Sorted pickles: Cucumbers, beans, peppers, mushrooms, buttons. Walnuts, peaches, mangoes. Nasturtium and onions. Ketchup and India soy [sauce]. Florence oil in betties and bottles."

Note: The meaning of the word "Ketchup" is unclear. Since the word meaning "soy sauce" in Malay / Indonesian is pronounced that way (but also spelled in various other ways, such as ketchap or kecap) it probably refers to soy sauce made in the Dutch East Indies (especially today's Indonesia). However it could possibly refer to a similar product from southern China or elsewhere in Southeast Asia. If this Ketchup was soy sauce made in the Dutch East Indies, was it the sweet, thick type (*kecap manis*) made only in Indonesia, or the salty type (*kecap asin*) made by Chinese throughout Asia? In early American newspapers, advertisements in which both the word "soy" [sauce] and the word "ketchup" appear can be grouped into three periods: (1) From 1771 to 1790—When the word "Ketchup" is mentioned, it appears without an adjective preceding it, immediately before or after the word "soy." For example: "Ketchup and India soy." "India soy and ketchup." "Catsup and India Soy" (1785). (2) From 1781 to 1783—"Ketchup" still appears without an adjective preceding it, and it is mentioned near the word "soy" but not immediately before or after it. For example: "Ketchup, French and Spanish olives, Salad oil, India soy [sauce],..." (3) 1783 on—Ketchup has an adjective preceding it, indicating that it was probably a less-expensive imitation of soy sauce imported from the Dutch East Indies. For example: Mushroom Ketchup."

This ad also appeared in the Aug. 8 (p. 405) and Aug. 15 (p. 412) issues of this newspaper. Address: Grocer, Next door to Alderman Lott's, in Leary's-Street.

232. Amiel (John). 1771. Classified ad: Has imported in the ship Lady Gage, Capt. Kemble from London;... *New-York Gazette; and the Weekly Mercury (New York City)*. Oct. 14. p. 4.

• **Summary:** "... Double refin'd loaf Sugar. Single, Do. Do. [ditto = refined loaf sugar]... White and brown sugar candy... India soy [sauce] and catchup. Fine French and Spanish olives, by the case, jar, or bottles,... Wholesale and retail,..."

Note: This is the earliest document seen (Sept. 2007) that mentions "olives" or "Spanish olives." Address: Smith-street.

233. Amiel (John). 1771. Classified ad: Has imported in the Ship Lady Gage, Capt. Kemble from London;... *New-York Journal; or, the General Advertiser (New York City)*. Oct. 14. p. 469.

• **Summary:** "... White and brown sugar candy, India soy [sauce] and ketchup, Fine French and Spanish olives, Pickled walnuts,..."

This ad also appeared Oct. 31 (p. 476), Nov. 14 (p. 491), Dec. 12 (p. 514), Dec. 19 (p. 517), and Jan. 9 (1772, p. 532)

issues of this newspaper. Address: Smith-Street.

234. Jarvis (James and Arthur). 1771. Classified ad: Have just open'd a variety of glass, viz. *New-York Gazette; and the Weekly Mercury (New York City)*. Dec. 16. p. 1.

• **Summary:** "... root glasses, plain and with loops; blue and white soy crewets and stands, with gilt labels; common do. elegant cut sallad bowls with trifle dishes..."

This ad also appears in the Jan. 6 (p. 3) issue of this newspaper. The "soy crewets" are used at the table to dispense soy sauce. Address: Glass and Earthen Store, Between Burling's and Beekman's Slips, in the Fly.

235. Ellis, John. 1771. A catalogue of such foreign plants as are worthy of being encouraged in our American colonies for the purposes of medicine, agriculture and commerce. Philadelphia, Pennsylvania. From a pamphlet by John Ellis, F.R.S. Presented by the Honorable Thomas Penn, Esq. to the American Philosophical Society thro' the hands of Samuel Powell, Esq. See p. 255-66. 25 cm. *

• **Summary:** Note 1. This pamphlet is mentioned in the minutes of the "Early proceedings of the American Philosophical Society for the Promotion of Useful Knowledge" on 1770 Oct. 19. However Ellis is not mentioned as its author (Lesley 1884, p. 58). It was then published in the Transactions of the American Philosophical Society, held at Philadelphia, for Promoting Useful Knowledge, 1771 (or 1772), i, 255-66 (See p. 259, *Dolichos soja* Linn.).

Note 2. John Ellis (ca. 1705-1776), an Irish naturalist living in London, was active in studying the plants of the American colonies and in introducing new plants to them. He was also a commercial agent, representing a number of American colonies in London. He may have published this pamphlet in England.

236. Ekeberg, Charles Gustavus [Ekeberg, Karl Gustaf]. 1771. A short account of the Chinese husbandry. In: Peter [Per] Osbeck. 1771. A Voyage to China and the East Indies... Translated from the German by John Reinhold Forster. Vol. 2. London: Printed for Benjamin White. 367 p. See p. 267-317. [Eng]

• **Summary:** For details, see Osbeck 1771. Address: Captain of a ship in the Swedish East India Company's service.

237. Osbeck, Per. 1771. A voyage to China and the East Indies, by Peter Osbeck ... Together with a voyage to Suratte, by Olof Toreen ... and an account of the Chinese husbandry, by Captain Charles Gustavus Ekeberg. Translated from the German by John Reinhold Forster. Vol. 1. London: Benjamin White. See vol. 1, p. 73, 77, 218, 253, 304-05. Original edition published in 1757 in Swedish. [Eng]

• **Summary:** Note 1. All of the following passages were written in 1751.

In Canton, China: "Fish cut to pieces were carried about for sale on little tables, which hung on poles as described above: the same was done with bacon, and *Fdaufu* [tofu], a dish which is like our sweet cheese, but which was prepared of *Chinese* beans (*Dolichos Chinensis*)" (p. 218).

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word "Fdaufu" or "fdou-fu" to refer to tofu.

China: "Soya, or the *Tyong-yao* [*jiangyou*] of the *Chinese*, (*Dolichos Soja* Linn.) the *Japan Soya* is better and dearer than the *Chinese*. For its preparation see *Kæmph*. Amoen. p. 839. and likewise *Soja Dolichos*, *Flor. Zeylan.* 354. It was sold the katty for three kanderins" (p. 253).

Note 3. This is the earliest English-language document seen (Feb. 2007) that uses the word "Soya" in connection with the soybean or with soy sauce.

Note 4. This is the earliest English-language document seen (April 2012) that uses the word "Japan Soya" to refer to soy sauce, probably made in Japan. As of Feb. 2012, the term "Japan Soya" (referring to soy sauce) appears in this database three times from 1771 to 1907.

"Fdau-fu, or *Tou-fu* [tofu], which has been mentioned on page 218, was sold by pieces in several places. The *Chinese* shewed me a sort of small pease, which they call *U-ang-teo* [huangdou = "yellow bean"], and of which cheese [tofu] is said to be made, though the name gives reason to conjecture that it has been made from *Tao*, which are the *Chinese* beans, or *Callvanses*." (p. 305).

Non-soy: "Spain, March the 6th, 1751. On my arrival at Cadiz [a seaport and province in southwest Spain], I saw the *Hedysarum coronarium*, or French honey suckle, in plenty. The Spaniards call it *Soya*, and the French *Saint Foin* (Note: What we call St. Foin in England is *Hedysarum Onobrychis*; the *Hedysarum Coronarium* is planted for ornament in our gardens); it was brought to town in great bundles as food for the cattle (p. 77).

Note 5. This plant called Soya in Spain is probably not the soybean.

"*Callvanses (Dolichos Sinensis)* (Footnote: *caule erecto ramosissimo, pendunculis erectis multifloris, leguminibus pendulis; Chinensibus Tao*). They are planted on dry hills, and treated like dwarf kidney beans. They do not grow high, and therefore do not much want to be supported; this however is done in some places, and especially where they stand in the open fields... These beans are of the smallest kind, and are quite white except the germen [hilum], which is black, but white in the middle. The *Europeans* buy them in great quantities, and make use of them in their return from China instead of pease. They have thin husks and are very palatable. A katty, which answers to a pound we use for grocery, was sold for two kanderin, or about three stivers" (p. 304). [Note 6. According to *Index Kewensis* and *Hortus III*, *Dolichos sinensis* (later named *Vigna sinensis* and now named *Vigna unguiculata subsp. sesquipedalis*) is the yard-

long bean or asparagus bean, a subspecies of the cowpea.]

“Lack-Tao [Luk Taw or mung bean] (Footnote: *Phaseolus Max*, *Mungo Persarum*) is the Chinese name of another sort of beans, or pease, which are much less than our wild vetches. The plant itself grows like the former... With these pease they feed the parrots. Among the many seeds which I brought to Sweden, was a kind of small green pease, which was so nicely eat up by the worms at my arrival, that nothing but the husks were left, which served as a nidus [nest or breeding place] to the little beetles, with which they were almost filled” (p. 304-05).

The author: Peter Osbeck, a Swede, lived 1723-1805. He was a pupil of the great Linnaeus and he generally used botanical terms used by Linnaeus. In 1750 he set out on a journey to China as chaplain to a Swedish East Indiaman, *The Prince Charles*, which visited Java and southern China, and returned to Gothenburg, Sweden, on 26 June 1752. Osbeck was a zealous naturalist and brought home a rich collection of natural objects, chiefly Chinese specimens, for during his long stay at Whampoa and Canton he had ample opportunity to collect. All of his collections he placed in the hands of Linnaeus, who described the plants in his *Species Plantarum*, published a year after Osbeck's return. Osbeck's original account of his voyage appeared in 1757 in his native language, Swedish, titled *Dagbok öfver en ostindisk resa*.

The book: Linnaeus is indebted to this book for the greater part of the Chinese plants and animals he described. All of the 244 Chinese specimens collected by Osbeck belong to the neighborhood of Canton. Most of the plants Linnaeus knew from China were those collected by Osbeck, but Linnaeus seems to have been under the mistaken impression that Osbeck's plants came from India, a place that Osbeck never visited. Strangely, most of the systematic botanists who compiled general systematic works on botany after Linnaeus (Lamarck, Willdenow, Sprengel, de Candolle, Kunth, etc.) incorrectly referred to Linnaeus rather than to his source, Osbeck (Bretschneider 1880, p. 88-91).

Bretschneider (1880, p. 116) notes: “The third account of Swedish naturalists in China translated by John Reinhold Forster, is a treatise on *Chinese Husbandry* by Charles Gust. Eckeberg. Eckeberg was Captain of a Ship in the Swedish E.I. [East India] Company's service. We know from Sparrmann's brief account of his voyage to China that Eckeberg was captain of the *Navarcha* and that his ship arrived in Canton Aug. 24 in 1766. It was at this place that Eckeberg made his observations on Chinese husbandry, on which subject he subsequently published a very interesting account, of which I shall give an abstract. It seems that Eckeberg had previously visited Canton, about 1762.”

Note 7. This is the earliest English-language document seen (Oct. 2010) that uses the word “husbandry” in connection with animals. Address: A Swede and pupil of Linnaeus, he traveled in China, arriving in 1751.

238. Amiel (John). 1772. Classified ad: At his store in Smith-Street sells... *New-York Journal; or, the General Advertiser* (New York City). April 30. p. 609.

• **Summary:** “... Jordon [Jordan] almonds, almonds in shell, best Durham mustard, loose, do. [ditto = Durham mustard] in bottles, India soy [sauce], and Ketchup, Italian and other capers, olives, anchovies, Florence [Italy] oyl...”

This ad also appeared in the May 7 (p. 615) issue of this newspaper, and in the May 18 (Supplement p. 2) issue of the *New-York Gazette; and the Weekly Mercury*. Address: Smith-Street.

239. Smith Richards. 1772. Classified ad: Grocer and confectioner... *Rivington's New-York Gazetteer* (New York City). May 13. p. 2.

• **Summary:** “... Jordon [Jordan] almonds, almonds in the shell, best Durham mustard, loose, do. [ditto = Durham mustard] in bottles, India soy [sauce] and ketchup...”

An illustration shows a tea canister (on which is written “Hyson, Souchong, Congo”) flanked by two bullet-shaped sugar loaves. This ad also appears in 1773 in the May 13 (p. 2), June 17 (Supplement p. 2), and Sept. 9 (p. 4) issues of this newspaper. Address: At the Sign of the Tea Cannister and two Sugar Loaves, Queen-street.

240. Amiel (John). 1772. Classified ad: Has just imported, a complete assortment in the grocery way,... *New-York Journal; or, the General Advertiser* (New York City). May 14. p. 619.

• **Summary:** “... Florence oil, pepper. India soy [sauce] and ketchup. Almonds...”

This ad also appeared in the May 21 (p. 628) and May 28 (p. 636) issues of this newspaper. Address: Smith-Street.

241. Roosevelt (John J.). 1772. Classified ad: Has for sale at his store... imported in the last vessels from Europe, the most elegant and extensive variety... *New-York Journal; or, the General Advertiser* (New York City). June 11. p. 647.

• **Summary:** “Jelly glasses. Soy cruets. Carroffs [Carafes]. Wine and water glasses...”

This ad also appeared in the June 18 (p. 649), the June 25 (p. 659), July 2 (p. 661), July 9 (p. 670), and July 16 (p. 678) issues of this newspaper. A slightly revised version also appeared in 1773 in *Rivington's New-York Gazetteer* (Dec. 16, p. 4). Address: Maiden-Lane.

242. Tuder (Samuel). 1772. Classified ad: Has just imported by the Samson, Capt. Coupar, from London, and has for Sale,... *New-York Journal; or, the General Advertiser* (New York City). Aug. 13. p. 699.

• **Summary:** “... Pearl barley. Soy [sauce] and ketchup [sic, ketchup]. White and brown sugar candy.”

This ad also appeared in the Aug. 20 (p. 703), Aug. 27 (p. 712), and Sept. 3 (p. 719) issues of this newspaper. It also

appeared in the Sept. 7 and 14 and Oct. 12 and 19 issues of the *New-York Gazette; and the Weekly Mercury*. Address: Burnet-Street, near the Fly-Market.

243. Clark (John, Jun. [Jr.]). 1772. Classified ad: Begs leave to acquaint his friends and the publick, that he has opened a grocery shop,... *New-York Gazette; and the Weekly Mercury* (New York City). Aug. 17. p. 1.

• **Summary:** "... Florence oyl, salt petre, catchup, soy [sauce], nutmegs, mace, cinnamon, cloves, sago, pearl and Scotch barley, rice, indigo,..." This ad also appeared in the Aug. 24 (Supplement p. 2) and Sept. 7 (Supplement p. 2) issues of this newspaper. Address: At the upper end of Leary's-street, opposite Mr. John Leary's.

244. Amiel (John). 1772. Classified ad: Has just imported in the Earl of Dunmore, Capt. Lawrence,... *New-York Journal; or, the General Advertiser* (New York City). Oct. 1. p. 741.

• **Summary:** "... Fine Florence oil. India soy [sauce] and ketchup. Fine Turkey figs..."

This ad also appeared in the Oct. 10 (p. 748) issue of this newspaper, and in the Nov. 2 (Supplement p. 2), and Nov. 9 (Supplement p. 1) issues of *New-York Gazette; and the Weekly Mercury*. Address: Smith-Street.

245. **Product Name:** [Kihaku Shoyu].

Foreign Name: Kihaku Shōyū.

Manufacturer's Name: Mogi Shichirouemon.

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1772.

New Product–Documentation: Noda Shoyu K.K. (Morio ICHIYAMA, ed). 1940. Noda Shoyu K.K. Nijunen-shi [Twenty-year history of Noda Shoyu, Inc.]. p. 467. The Kihaku brand of shoyu (of which the logo is shown) was introduced in Anei 1 (1772).

Mark Fruin. 1983. Kikkoman: Company, Clan, and Community. p. 18. "By 1768 the first of this series of marriage-business alliances, that of Takanashi Hyōzaemon's son to Mogi Shichizaemon's daughter, was recognized as a separate household in the Mogi line. By 1772 Mogi Shichirōemon, head of the newly formed Kashiwa household, had accumulated enough know-how, experience, and capital to disassociate himself formally from his paternal household and establish himself as an independent householder and shoyu brewer. By 1781, therefore, when a shoyu manufacturing guild was established in Noda, two of the original seven members were Mogis (Shichizaemon and Shichirōemon); by 1782, one year later, Mogi Saheiji, head of the oldest branch of the Mogi line, had added shoyu fermentation to his already established ventures in grain sales and miso manufacture, making the Mogi's proportion of representation in the guild three out of seven. By 1822 two more Mogi families had been added, and a Mogi majority within the guild was secured." Page 73 notes that

by 1909 the four major brands manufactured by the Noda shoyu cartel were Kikkoman, Kihaku, Kamigata (Joju), and Kushigata. Page 96-97 describes the struggle between the Kikkoman and Kihaku brands as the one to represent the new Noda Shoyu Co.

246. Ellis, John. 1772. A catalogue of such foreign plants as are worthy of being encouraged in our American colonies for the purposes of medicine, agriculture, and commerce. *Transactions of the American Philosophical Society* 1:255-66. See p. 259. (Held at Philadelphia, for Promoting Useful Knowledge). [1 ref]

• **Summary:** A facsimile copy of a catalogue by John Ellis is reproduced in the *Transactions of the American Philosophical Society, Held at Philadelphia for Promoting Useful Knowledge*. It begins: "From a pamphlet by John Ellis, F.R.S. [Fellow of the Royal Society]. Presented by the Honorable Thomas Penn, Esq; to the American Philosophical Society thro' the Hands of Samuel Powell, Esqr."

In the section title 'Foreign plants' (p. 327), numerous plants are listed in a 4-column table: The Latin name, the page on which it is mentioned in the 2nd ed. of Linnaeus' *Species Plantarum*, the English names, and observations.

"Dolichos soja Linn. Lin. Sp. 1023. A kind of kidbean called Daidso. Used for making Soye* or Indian Ketchup. See Kaempfer, Amoenitat.

"* The method of preparing East-India Soye or India Ketchup. Take a certain measure, for instance a gallon, of that sort of kidney-beans, called Daidso by the Japanese, and Caravances by the Europeans; let them be boiled till they are soft; also a gallon of bruised wheat or barley, (but wheat makes the blackest Soye) and a gallon of common salt. Let the boiled caravances be mixed with the bruised wheat, and be kept covered close a day and a night in a warm place, that it may ferment. Then put the mixture of the caravances and wheat, together with the gallon of salt, into an earthen vessel, with two gallons and a half of common water, and cover it up very close. The next day stir it about well with a battering machine or mill (*Rutabulum*) for several days, twice or thrice a day, in order to blend it more thoroughly together. This work must be continued for two or three months, then strain off and press out the liquor, and keep it for use in wooden vessels; the older it is the clearer it will be, and of so much more value. After it is pressed out, you may pour on the remaining mass more water, then stir it about violently, and in some days after you may press out more Soye."

Note 1. This is the earliest American document seen that uses the term "Dolichos soja" or the word "Daidso" to refer to the soybean.

Note 2. John Ellis (ca. 1705-1776), an Irish naturalist living in London, was active in studying the plants of the American colonies and in introducing new plants to them. He was also a commercial agent, representing a number of American colonies in London. In 1770 Ellis was the

commercial agent for West Florida in London.

Note 3. Ellis does not mention koji (grains or beans covered with a white mycelium of *Aspergillus* mold), and does not understand the importance of koji in making soy sauce.

Note 4. This document was first cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished.

Note 5. Also included in the catalog are: Safflower, *Sesamum Orientale* [sesame seeds], locust tree or St. John's Bread (*Ceratonia Siliqua*), true opium poppy, tallow tree of China, true rhubarb, sago palm-tree, true bamboo cane, East India mango-tree, paper mulberry tree, annatto [anatto], etc.

Note 6. This is the earliest English-language document seen (July 2003) that refers to sesame seeds or gives their scientific name; it says (p. 256): "Latin name: *Sesamum Orientale*. 2d Ed. L. Sp. [2nd edition of Linnaeus' *Species plantarum*]: p. 883. English names: Oily grain. Observations: Propagated in the Levant [countries of the eastern Mediterranean] for oil, which does not soon grow rancid by keeping."

247. Smith, Mary. 1772. The complete house-keeper, and professed cook. Calculated for the greater ease and assistance of ladies, house-keepers, cooks, &c. &c. Containing upwards of seven hundred practical and approved receipts,... Newcastle, England: Printed by T. Slack, for the author. 398 p.

• **Summary:** Soy sauce is called for as an ingredient in the following recipes: Pigeons in scallop shells (p. 114; "add to it a little butter and flour, and a spoon full of Indian soy, let it just simmer,...").

A peregoe turkey (p. 130-31; "put it in a stew-pan with some good brown gravy, a quarter of a pound of butter, a little flour, a little India soy or catchup, some lemon juice,..."). Note 1. India soy and catchup are viewed as being interchangeable. The word "India" probably refers to the East Indies—today's Indonesia.

A calf's head a la turtle (p. 141; "put it in a stew-pan with a quart of brown gravy, one anchovy, some Indian soy, Cayen [cayenne] pepper, salt, mace,...").

To make a calf's head hash (p. 141; "put it in a stew-pan with some good brown gravy, half an anchovy, three blades of mace, a few mushrooms, a few force-meat balls, some hard eggs, a little Indian soy, and Cayen pepper,...").

To make brown veal collops (p. 156; "put them into a stew-pan with some brown gravy, a bit of anchovy, a little butter and flour, a little Indian soy, or catchup, some force-meat balls, truffles, morels, and a little Cayen pepper..."). Note 2. The word "collop," which refers to slices of meat (typically veal or bacon) or fish, may derived from the French *escalope* or the Swedish *kallop*. In Elizabethan times, Shrove Monday, also known as Collop Monday, was traditionally the last day to cook and eat meat before Lent,

which was then a period of fasting from meat.

Veal olives (p. 156-57; "put some brown gravy in a stew-pan with a little catchup, a few pickled mushrooms and force-meat balls, Indian soy and Cayen pepper,...") Note 3. Both catchup and Indian soy are used.

Veal sweet-breads *A-la-daube* (p. 158-59); "when they are done, strain the liquor into a stew-pan and skim off the fat, put to it a spoon full of India soy and a little lemon juice, thicken it up with a little butter and flour,..."). Note 4. *Daube* means "stew" in French.

Note 5. Note that soy sauce is called both "Indian soy" and "India soy." Address: Newcastle, Late House-Keeper to Sir Walter Blackett, Bart. and formerly in the Service of the Right Hon. Lord Anson, Sir The Sebright, Bart. and other Families of Distinction, as House-Keeper and Cook.

248. *South-Carolina Gazette (Charleston)*. 1773. Classified ad: Bowen's patent sago,... Nov. 29. p. 3, col. 2.

• **Summary:** "So much and generally esteemed in the Royal Navy and the African trade, as an Antiscorbutic, and the only Cure for the Flux [diarrhea], sold by Z. [Zephaniah] Kingsley, at his Store in Bedon's Alley. Its Uses are so well known as to need no Recommendation, being approved of by the Royal Society, the Royal College of Physicians, and the Society for the Encouragement of Arts, Manufactures, and Commerce.—Its good Effects are likewise vouched by Captain Cooke, of His Majesty's Ship *Endeavour*, Mr. Banks and Dr. Solander, during their Voyage round the World in the same ship, as appears by their Report since their Return.

"Likewise to be Sold at the same Place, Bowen's Patent Soy [sauce]."

Note 1. This soy sauce was made in Georgia by Samuel Bowen.

A notice in the same newspaper of 23 June 1772 (p. 3, col. 1) states that Samuel Bowen arrived in Charles-town [Charleston], South Carolina, on the ship Montagu from London.

Note 2. This is the earliest document seen (Aug. 2011) concerning soybean products (soy sauce) in South Carolina. This document contains the earliest date seen for soybean products in South Carolina (Nov. 1773); soybeans as such had not yet been reported by that date.

Note 3. Ads with very similar text to this one subsequently appeared in the newspapers of several port cities where Bowen's sago and soy sauce were sold. Bowen apparently sent the ad with his product. But who paid for publication of the ad? The retailer, Bowen, or both? Whoever paid, this seems like an innovative marketing technique. Address: South Carolina.

249. A collection of scarce, curious and valuable pieces, both in verse and prose; chiefly selected from the fugitive productions of the most eminent wits of the present age. 1773. Edinburgh, Scotland: Printed by W. Ruddiman. [4] +

iv + 412 p.

• **Summary:** One of the pieces is this book is adapted (with only small changes) from: Grimston, William Grimston. 1705. *The Lawyer's Fortune: or, Love in a Hollow Tree. A Comedy*. However seven words are spelled or capitalized differently.

On page 161 is a dialogue: "... and Mrs. Favourite the house-keeper makes these most important enquiries

"Fav. Mistress, shall I put any mushrooms, mangoes, or bamboons into the sallad?

"Bon. Yes, I prithee, the best thou hast.

"Fav. Shall I use ketchop or anchovies in the gravy?

"Bon. What you will."

Note: This book was edited by Walter Ruddiman (lived 1719-1781).

250. *Pennsylvania Chronicle (Philadelphia)*. 1774. Classified ad: Bowen's sago,... Jan. 10-17. p. 421.

• **Summary:** "So much and generally esteemed in the Royal Navy and in the African Trade, as an Antiscorbutic, and the only Cure for the Flux [diarrhea], is, by special appointment, sold by sold by Speakman and Carter, chemists and druggists, on the North Side of Market-street, between Second and Third-streets, Philadelphia.

"The Uses whereof are so well known in England as to need no Recommendation, being approved of by the Royal Society, the Royal College of Physicians, and the Society for the Encouragement of Arts, Manufactures, and Commerce; by Dr. Fothergill, and several other Persons of Reputation.

"Its good Effects are likewise vouched by Capt. Cooke, of the King's Ship *Endeavour*, Joseph Banks, Esq.; and Dr. Solander, during their Voyage round the World in the same ship, as appears by their Report since their Return.

"N.B. At the same place may be had, Bowen's Patent Soy [sauce]."

Note: This ad first appeared on 29 Nov. 1773 in the *South-Carolina Gazette*. But key parts of the text have been changed here for a Philadelphia audience. This ad also appeared in 1774 in the March 7 (Supplement p. 2) and April 11 (Supplement p. 1) issues of *Dunlap's Pennsylvania Packet or, the General Advertiser* (Philadelphia).

251. Leary (John and William). 1774. Classified ad: At their grocery store,... have for sale the following articles, on the most reasonable terms, wholesale and retail. *New-York Gazette; and the Weekly Mercury (New York City)*. Jan. 31. p. 2.

• **Summary:** "... Florence oyl, salt petre [salt-petre; saltpeter], isinglass, catchup, soy [sauce], nutmegs, mace, cloves..."

This ad also appeared in the Feb. 7 (p. 4) and Feb. 14 (Supplement p. 2) issues of this newspaper. And in the Feb. 10 issue (p. 4) of *Rivington's New-York Gazetteer*. Address: Opposite Messrs. Campbell and Gault's, in Maiden Lane.

252. *Georgia Gazette (Savannah)*. 1774. Savannah, February 9. No. 540. Feb. 9. p. 2, col. 2.

• **Summary:** "Entered for exportation at the Custom House in Savannah, from the 10th last to the 5th January 1774:... Sago powder, 100 lb. Soy [sauce], 3 dozen bottles."

253. Amiel (John, jun. [Jr.]). 1774. Classified ad: Has imported in the ship Earl of Dunsmore, Captain Lawrence, from London, and for sale at the lowest rates, at his store in Smith-street,... *New-York Gazette; and the Weekly Mercury (New York City)*. April 25. p. 2.

• **Summary:** "... Extraordinary fine sallad oyl, loaf sugar,... soft shelled almonds, India soy [sauce] and ketchup, orange flower water,..."

This ad also appeared in the May 2 (p. 4) and May 16 (Supplement p. 2) issue of this newspaper. Address: Smith-street.

254. Milbourn (William). 1774. Classified ad: Has just imported per the Earl of Dunmore, Capt. Lawrence,... *Rivington's New-York Gazetteer (New York City)*. April 28. p. 2.

• **Summary:** "... Silver, ebony, and japan'd [japanned = lacquered or varnished] cruit frames, with neat cut silver top glasses, Neat small frames for soy [sauce], &c., Silver and metal watches,..." Address: In Dock-street, near Coenties Market.

255. *Georgia Gazette (Savannah)*. 1774. Account of sundry goods entered for exportation at the port of Savannah, from the 15th November, 1773, (when the first vessel with rice of the crop 1773 was cleared out) to the 5th April, 1774. No. 552. May 4. p. 3, col. 1.

• **Summary:** "Ground nuts, 12 bushels. Sago powder, 7001 lb. Soy [sauce], 3 dozen quart bottles." Note 1. Samuel Bowen is exporting these products to England. Note 2. This is the earliest American document seen (Aug. 2005) that mentions both soy and peanuts.

256. *Georgia Gazette (Savannah)*. 1774. Savannah, May 25. No. 555. May 25. p. 2, col. 2.

• **Summary:** "Entered at the Customhouse by Mr. Samuel Bowen, on board the *Susannah*, Capt. Clarke, bound for Cowes, 20,000 lb. of sago, 200 gallons of soy [sauce], and 200 lb. of vermicelli paste: And for the Society of Arts, by their orders, 1000 lb. of ground nuts, 500 lb. of benny [benne or sesame seeds], and a ten gallon keg of sassafras blossoms."

Note 1. Cowes is a port town on the northern tip of the Isle of Wight, off the southern coast of England, near Southampton and Portsmouth. The "soy" refers to soy sauce.

Note 2. This is the second earliest English-language document seen (July 2003) that refers to sesame seeds, which it calls benny. It is the earliest document seen (April 2012)

concerning sesame seeds in connection with Samuel Bowen; he exported them and apparently grew them. Address: Savannah, Georgia.

257. *Felix Farley's Bristol Journal (England)*. 1774. For sale, a very elegant Stock of Plated Goods,... Cooper's-Hall in King-street, Bristol. June 4. p. 3, col. 1.

• **Summary:** "The Whole consisting of a beautiful Variety of: Tea Urns,... Crewet Frames with ground Glass Castors and Silver Tops; Soy ditto;..."

Note: This is an early reference to Soy Crewet [Cruet] Frames, plated metal frames used to hold bottles of soy sauce at the table. The frames are the property of a manufacturing company [unnamed], going to dissolve a partnership, consigned by the arbitrators to "J. Sketchley, Licensed and Sworn Broker and Auctioneer."

258. Coffin (Nathaniel and William). 1774. Classified ad: Imported from London, and to be sold cheap for cash, in fine order,... *Boston News-Letter*. Dec. 1. p. 3.

• **Summary:** "... French olives, Spanish ditto, Anchovies, Capers, Catchup, India Soy [sauce], Salid Oil, fine Mustard..."

This ad also appeared in the Dec. 5 (p. 4) and Dec. 12 (p. 4) issues of this newspaper.

Note: This is the earliest document seen (May 2011) concerning soybean products (soy sauce) in Massachusetts. This document contains the earliest date seen for soybean products in Massachusetts (June 1771); soybeans as such have not yet been reported. At least 24 different ads for soy sauce appeared in Boston newspapers before 1829—the year that soybeans first appeared in and were cultivated in Massachusetts! Address: King-street, near Oliver's Dock [Boston, Massachusetts].

259. *Georgia Gazette (Savannah)*. 1774. An account of the exports from the port of Savannah between the 5th April 5 and the 10th October, 1774. No. 585. Dec. 21. p. 3, col. 2.

• **Summary:** "Sago powder, 20,683 lb. [pounds]. Soy [sauce], 200 gallons. Ground nuts, 1000 lb. Vermicelli, 200 lb. Benny seed, 500 lb. Sassafras blossoms, 10 lb."

Note: This is the last newspaper article seen (Sept. 2009) indicating that Samuel Bowen was still in Georgia.

260. Long, Edward. 1774. The history of Jamaica: or General survey of the antient and modern state of that island. Vol. 3 of 3. London: Printed for T. Lowndes. See p. 786-87, 903, 905. Reprinted in 2003 by McGill-Queen's University Press in 3 separate volumes. Vol. 3 is 400 p. [1 ref]

• **Summary:** Chapter VIII is titled "A synopsis of vegetable and other productions of this island, proper for exportation, or home use and consumption. Of exotics, cultivable for one or other of these purposes; and of its noxious and useful animals &c."

One page 786-77 we read: "125. Calavances, or red bean.—*Phaseolus*. 7. Browne, p. 293 [sic, p. 292] [Browne, Patrick. 1756. *The Civil and Natural History of Jamaica*, p. 292].

"This is sown at any time after rains; and, in six weeks time, the fruit is large enough to eat green. It is a hardy plant, very much cultivated, thrives in every soil; and the bean is esteemed a wholesome, strengthening food.

"The Chinese have a white sort, called *tao*. They plant it on dry hills. The Europeans buy, of this sort, great quantities for sea-store on their return from China. The East-India soye is prepared in the following manner (Footnote: Ellis, John. 1772. *A Catalogue of such Foreign Plants as Are Worthy of Being Encouraged in our American Colonies...*).

"Take a certain measure; for instance, a gallon, of calavances; let them be boiled till they are soft; also a gallon of bruised wheat, and a gallon of common salt. Let the boiled calavances be mixed with the bruised wheat, and be kept covered close a day and a night in a warm place, that it may ferment. Then put the mixture of calavances and wheat, together with the salt, into an earthen vessel, with two gallons and an half of common water; and cover it up very close. The next day stir it about well with a battering stick, or a churn (the barrel-churn, which is made with slips of board, placed perpendicular to the sides within, about three inches in breadth, and running the length of the barrel, mounted on an axis, at each end placed on a frame, and turned with a windlass-handle, would answer best for this purpose), and for several days, twice or thrice a day, in order to blend it more thoroughly together. This work, must be continued for two or three months; then strain off and press out the liquor, and keep it for use in kegs, or small barrels. The older it is, the clearer it will be, and of a proportionably higher, value. After it is pressed out, you may pour more water on the remaining mass, then stir it about violently; and, in some days after, you may press out more soye."

Note 1. Because the step of making koji using molds prior to fermentation is poorly understood, the product resulting from the above process would probably not resemble soy sauce.

Note 2. This entry is followed (on p. 787) by shorter entries for other pulses, each based on Browne (*Phaseolus*) for: 126. Black-eyed pea. 127. Cuckhold's increase. 128. Sugar bean. 129. Broad bean. 130. The pigeon pea or Angola pea. It is preceded (on p. 786) by entries for: 123. Kidney-bean. 124. Lima bean.

Note 3. Browne (1756, p. 292-93) does mention *Phaseolus* and Calavances, but he does not mention anything related to soybeans, soy sauce, or East-India soye. Long's detailed description of how to make "East-India soye" [soy sauce] is taken, almost verbatim, from Stork (*A Description of East-Florida, with a Journal, Kept by John Bartram of Philadelphia...* 1769, p. v, footnote). Stork, in turn, took his description of how to make soy sauce from Kaempfer

(*Amoenitatum exoticarum...* fasculi v. 1712, p. 837-40).

Also in Vol. 3 (=Book III), Chap. IX is a 4-column table (p. 903-05) titled “A Catalogue of such foreign Plants as might be introduced, and cultivated, in Jamaica, with great propriety.” The last plant on the table is (p. 905): “Luktau: This is a small species of *phaseolus*, or kidney-bean, growing in China, and lately introduced by Mr. Samuel Bowen into Georgia, from whence the seeds might easily be obtained. He says, that where grass is scarce, this furnishes an excellent fodder for cattle, as it may easily be made into hay; that it rises from 18 inches to 2 feet high, and produces four crops in the year; it is therefore very deserving of a trial in different parts of Jamaica, as there are some, no doubt, where it might be found to thrive extremely well.”

Note 4. This is the earliest document seen (Dec. 2008) concerning soy in connection with (but not yet in) Jamaica. Address: Jamaica.

261. Mason, Charlotte (Mrs.). 1775. The lady’s assistant for regulating and supplying her table: Being a complete system of cookery, containing one hundred and fifty select bills of fare... 2nd ed., corrected and considerably enlarged. London: Printed for J. Walter. vi + 471 + [19] p. Index. 22 cm.

• **Summary:** The section on “Spices” (p. 309+) contains a short subsection titled “Soy” (p. 319) which states: “Soy [sauce] comes from the East Indies; it is made from mushrooms which grow in the woods. They are of a purplish colour, and are wrinkled on the surface like a morel. They gather them in the middle of the day, and wash them in salt and water; and then lay them in a dish, mash them with their hands, and sprinkle them with salt and beaten pepper; the next day the liquor is pressed off, and some * galangals and spices added to it; it is boiled up until it is very strong, and then some more salt is sprinkled into it. In this manner it will keep many years.” Footnote: “* Galangals is a root which grows in the East Indies.”

Note 1. This is the earliest document seen (Jan. 2010) which states that the main ingredients in soy [sauce] are mushrooms and salt.

Note 2. This is the earliest edition of this cookbook seen (May 2010) in which soy is mentioned. This entry on soy is found unchanged in all subsequent editions (to 1805). So the author never did realize that that main ingredient in soy [sauce] is soybeans!

Note 3. This recipe or process for making soy sauce is unlike any we have ever seen. Also, we have never heard of using mushrooms as a major ingredient in soy sauce—much less as the main ingredient. What was her source of this unusual information? The typical ingredients are soybeans, wheat or barley, salt, and water. In the two-step fermentation, the wheat is first fermented with a mold to make koji. Then the wheat koji is mixed with the other ingredients and fermented in a vat. After 1-3 years the liquid soy sauce is filtered, then pressed off. However, as early as 1680, the

Chinese were adding mushrooms to soy sauce as a seasoning (see *Shixian hongmi* [Guide to the mysteries of cuisine]), and by 1765 Diderot, in his *Encyclopedia* under “Soy” noted that mushroom sauce and other seasonings were often added to soy sauce to enhance its flavor and shelf life. *Florence Lin’s Chinese Vegetarian Cookbook* (1976, p. 220) stated that soy sauce comes in different flavors, such as “mushroom soy sauce.”

Note 4. The term “East Indies” at this time applied loosely and vaguely to India, Indochina, and the Malay archipelago (incl. mainly today’s Indonesia and Malaysia). Address: [England].

262. Hall and Co. 1776. Classified ad: Foreign China. *Chester Chronicle or Commercial Intelligencer* (Chester, England). Feb. 15. p. [3], col. 1.5.

• **Summary:** “Likewise Mother-of-Pearl beads and spoons, fish and counters, and Indian ink and Indian soy [sauce], &c.” Address: Auctioneers, at the Mitre, in Eastgate-street.

263. Amiel (John, Junr. [Jr.]). 1776. Classified ad: Has for sale as usual, at his store in Smith Street. *New-York Gazette; and the Weekly Mercury* (New York City). May 16. p. 3.

• **Summary:** “... Florence Oil, Sago, Fig and Powder blue, and Starch, India soy [sauce] and Ketchup, Kites-foot Tobacco,...”

This ad also appeared in the May 23 and 30 (p. 4) issues of this newspaper. Address: Smith Street.

264. Agricola Sylvan. 1776. Article XIV. To make Soy or India Ketchup. *The Farmer’s Magazine, and Useful Family Companion. Consisting of Practical Essays,... on the Different Branches of Husbandry,...* 1(7):268. Oct. London: Printed for R. Snagg,... [2 ref]

• **Summary:** “Boil a gallon of that sort of kidney-beans, called Daidu by the Japonese, and Caravances by the Europeans, (the *Dolichos Soja* of Linnæus, Sp. Plant. 1023–Kæmp. *Amoenit.* 837) till they are soft; then take the caravances, and mix with them a gallon of bruised wheat, or barley, (but wheat makes the blackest Soy) and a little common salt, and let the whole be kept closely covered for a day and a night in a warm place to ferment; then put the mixture into an earthen vessel with ten quarts of water, and cover it up very close. The next day stir it about very well with a battering machine or mill, twice or thrice, in order to blend it more thoroughly together, and continue this for two or three months, when the liquor must be strained and pressed out, and kept in wooden or glass vessels for use; the older it is, the clearer it will be, and consequently of more value. After it is pressed out, more water may be added to the mass, and having stirred it about violently as before, for some days, more Soy may be pressed out.”

Note: This is an annual periodical. “Agricola Sylvan” is a pseudonym. Address: Gentleman.

265. Burton (William). 1776. Classified ad: To be sold... The following articles, viz. *New-York Gazette; and the Weekly Mercury* (New York City). Nov. 11. p. 3.

• **Summary:** "... Capers, Mangoes, Walnuts, Anchovies, India Soy [sauce], Ketchup, Florence Oil, Vinegar, Pepper, Mustard,..."

This ad also appeared in the Nov. 18 and 25 (p. 4), and 2, 9, and 23 (p. 4), and in 1777 in the Jan. 20 and Feb. 10 (p. 4) issues of this newspaper. Address: Water-Street, between the Coffee House and the Old-Slip Bridge.

266. Amiel (John, jun. [Jr.]). 1776. Classified ad: Has just opened for sale, at his store, the lower end of Smith-street,... *New-York Gazette; and the Weekly Mercury* (New York City). Nov. 25. p. 2.

• **Summary:** "... Pearl barley, Scotch ditto, truffles [truffles] and morrels [morels], East-India soy [sauce] and ketchup, Florence oil in bottles and betties,..." Many types of pickles are also listed.

Note 1. This is the earliest English-language document seen (April 2012) that uses the term "East-India soy" (regardless of capitalization or hyphenation) to refer to soy sauce from the East Indies, probably from India. In the Early American Newspapers (EAN) online database (produced by Readex, a division of NewsBank), there are at least 35 issues / records that contain the term "East India Soy" (or "East-India Soy") from Nov. 1776 to Nov. 1829.

Note 2. This ad also appeared in the Dec. 2 (p. 2), and Dec. 9 and 16 (p. 4) issues of this newspaper. Address: Smith-street.

267. The Parliamentary register, or, History of the proceedings and debates of the House of Commons... during the second session of the fourteenth Parliament of Great Britain. Vol. 4 of 17. 1776. London: Printed for J. Almon. See p. 49.

• **Summary:** "On board the [ship] *Resolution*. 20 casks of cut tobacco... 6 jars of sallad oil. 44 half chests of ditto [sallad oil], 43 barrels of anchovies... 6 cases of flour of mustard. 144 small cases of pickles. 1 cask of ketchup. 9 cases of portable soup."

These cargoes were sent to Boston [Massachusetts] and consigned to order. No tea, grocery, or drugs were sent. The cargo was shipped and afterwards relanded. The five ships mentioned were said to be sent under the order of General Howe [in 1776, at the time of the American Revolution]. Address: [England].

268. McKenzie's Store. 1777. Classified ad: Are to be sold on the lowest terms,... *New-York Gazette; and the Weekly Mercury* (New York City). April 21. p. 4.

• **Summary:** "... French white wine vinegar, India Soy [sauce] and ketchup, Anchovies and walnuts,..."

This ad also appeared in the April 28 (p. 4) issue of this newspaper. Address: Water-Street, No. 1092, the corner of Irish Street.

269. Moor [Moore] and Neale. 1777. Classified ad: At their store... on the most reasonable terms,... *New-York Gazette; and the Weekly Mercury* (New York City). Aug. 18. p. 4.

• **Summary:** "... Pickles in assortment, ketchup, soy [sauce], and cayenne [cayenne] pepper,..."

This ad also appeared in the Aug. 25 (p. 2) issue of this newspaper. Address: Irish street, in Water-street.

270. Langton (James). 1777. Classified ad: Just imported in the Marlborough, George Dawson, Master, and to be sold by James Langton on board said vessel, lying at Chestnut-street wharf,... *Pennsylvania Ledger; or the Philadelphia Market-Day Advertiser*. Dec. 13. p. 2.

• **Summary:** "... Pickles and soy [sauce] in small cases;..."

This ad also appeared in the Dec. 24 (p. 1), Dec. 31 (p. 6), and Jan. 7 (1778, p. 4) issues of this newspaper. Address: Market-street, Philadelphia.

271. Mason, Charlotte (Mrs.). 1777. The lady's assistant for regulating and supplying her table, being a complete system of cookery... 3rd ed. London: J. Walter. 436 + [17] p. Index. 21 cm.

• **Summary:** The section on "Spices" (p. 290+) contains a short subsection titled "Soy" (p. 299) which is identical to that in the 2nd edition of 1775.

The recipe "To bake a collar of fish (p. 236-37) states: "; add to it... a few mushrooms, two spoonfuls of catchup, or half a one of soy,..."

The word "catchup" appears in this early cookbook at least 62 times, and "walnut catchup" appears at least nine times—so by 1777 catchup has become a widely-used condiment in England.

The section on "Catchup" (p. 297-99) contains the following recipes: Catchup of mushrooms. Another way. To make catchup. Catchup of walnuts. Another walnut catchup. Catchup of the shells. Oyster catchup. English catchup. Next comes the recipe for Soy (p. 299). Here are several of the homemade Catchup recipes given: "To make Catchup: Put the peel of nine Seville oranges to three pints of the best white-wine vinegar; let it stand three or four months; pound two hundred of walnuts, just before they are fit for pickling; squeeze out two quarts of juice, put it to the vinegar; tie a quarter of an ounce of cloves, the same of mace, a quarter of a pound of eschalot, in a muslin rag; put it into the liquor; in three weeks, boil it gently till near half is consumed: when cold bottle it."

"Catchup of Walnuts: Bruise a hundred or two of walnuts, just before they are fit to pickle; squeeze out the juice, let it stand all night, pour off the clear; to every quart, one pound of anchovies; boil it; when the anchovies are

dissolved strain the liquor; add half a pint of red wine, a gill of vinegar, ten cloves of garlic; mace, cloves, and nutmeg, half a quarter of an ounce each, pounded; let this simmer till the garlic is tender.”

“Another Walnut Catchup: Take a hundred of the largest nuts fit for pickling, cut them in slices; put to them a quarter of a pound of eschalots cut through the middle; put them into a stone mortar and beat them fine; add to them half a pound of salt, a pint and a half of the best vinegar; let them stand a week in an earthen pan, stirring them every day; then put them in a flannel bag, and press the liquor from them; add a quarter of a pound of anchovies: boil them up in the liquor, scum it, and run it through a flannel bag, and add to it two nutmegs sliced, some mace, and whole pepper: when cold bottle it.

“Catchup of the Shells [a kind of walnut catchup]: “It is a very good way to pour common vinegar upon green walnuts; let it stand two, three, or four months, as it may be wanted; only, as the vinegar shrinks, keep filling the jar up; then take the liquor and boil it up as before mentioned; the walnuts will bear covering with vinegar three or four times, if done with care. The shells of green walnuts will do, in seasons when there is not a plenty of walnuts.

“Oyster Catchup: Boil small oysters in their own liquor, till the goodness is out; to every pint of clear liquor, half a pint of red wine, the same of white; mace, black, and Jamaica pepper, a quarter of an ounce each; pour it boiling hot on one dozen of eschalots, half the rind of a lemon, a piece of horse-radish; when cold mix it with the oyster liquor; bottle it.”

Note: This is the earliest English-language document seen (March 2012) that contains the term “Oyster catchup” (regardless of spelling or capitalization)

“English Catchup: Take a quart of white-wine vinegar, put into it ten cloves of garlic, peeled and bruised; take also a quart of white port, put it on the fire; and when it boils, put in twelve or fourteen anchovies washed and pulled to pieces; let them simmer in the wine till they are dissolved; when cold, put them to the vinegar; then take half a pint of white wine, and put into it some mace, some ginger diced, a few cloves, a spoonful of whole-pepper bruised; let them boil a little; when almost cold, slice in a whole nutmeg, and some lemon-peel, with two or three spoonfuls of horse-radish; stop it close, and stir it once or twice a day. It will soon be fit for use. It must be kept close stopped.”

Catchup also appears in recipes on pages 132-33, 143, 148-49, 153, 156-58, 164, 167, 169, 171, 173, 213, 220, 237-38, 253, 255, 257, 274, 308-09, 318, 320. Catsup is not mentioned.

Interesting non-soy ingredients. The word “almonds” appears 54 times in this book and the word “almond” 31 times. Almond recipes include: Almond pudding (p. 345, 350). Almond fraze (p. 362, with “half a pound of Jordan almonds”). Almond tarts (p. 365, 366). Almond cheesecakes

(p. 368). Almond custard (p. 371). Almond cake (p. 374). Almond loaves (p. 382). Almond cream (p. 414, or pastachia [pistachio] cream, to be mixed with a pint of dairy cream). Almond soup (p. 205).

Quotation on the title page, near the bottom: “The most refin’d understanding and the most exalted sentiments do not place a ‘woman above the little duties of life.’ Mrs. Griffith.” Address: A professed housekeeper, who had upwards of thirty years experience in families of the first fashion [England].

272. Weston, Richard. 1777. The universal botanist and nurseryman: containing descriptions of the species and varieties of all the trees, shrubs, herbs, flowers, and fruits, natives and exotics, at present cultivated in the European nurseries, green-houses and stoves, or described by modern botanists; arranged according to the Linnæan system, with their names in English... Illustrated with elegant engravings. 2nd ed. Vol. 2 of 4. London: Printed for J. Bell,... 396 p. Illust. [1 soy ref]

• **Summary:** Page 283: “*Dolichos Soja. indicus, caule erecto, flexuoso racemis axillaribus erectis, leguminibus pendulis hispidis subdispermis, fructu pisi majoris candido.*

“*Indian Soye Dolichos.*

“The method of making Indian Soye, from the seed of this species of *Dolichos*, may be seen in Kæmp. Amoen. [Kaempfer Amoenitates 1712] p. S37.

Note: This botanical description in Latin is adapted from that of Linnaeus 1747. “Indian Soye” refers to soy sauce. Address: Esq.

273. Johnston (John) and Co. 1778. Classified ad: Sells wholesale and retail... *Pennsylvania Ledger; or the Philadelphia Market-Day Advertiser*. Jan. 17. p. 4.

• **Summary:** “... Pickles in cases, containing walnuts, catchup, French beans, and cucumbers;...” Address: Corner of Market and Water-streets [Philadelphia].

274. Moore and Neale. 1778. Classified ad: To be sold... *New-York Gazette; and the Weekly Mercury (New York City)*. Jan. 19. p. 4.

• **Summary:** “... Pickles. Ketchup and soy [sauce]. Brown sugar...” Address: Irish street, in Water-street.

275. Kerr (Samuel) and Co. 1778. Classified ad: At their store and wine cellar,... have now for sale, at the lowest prices,... *Pennsylvania Evening Post (Philadelphia)*. Jan. 24. p. 37.

• **Summary:** “... French beans and mangoes in bottles. East India soy [sauce]. Ketchup, olives and capers. Best Durham mustard.”

This ad also appeared in the Jan. 27 (p. 44) and Jan. 29 (p. 47) issues of this newspaper. Address: Front-Street, the sixth house above Chestnut-street.

276. Langton (James). 1778. Classified ad: Lately imported and to be sold... *Pennsylvania Ledger; or the Philadelphia Market-Day Advertiser*. Feb. 18. p. 3.

• **Summary:** "... Cucumbers, walnuts, cabbage, onions, and soy [sauce] in small cases;..."

This ad also appeared in the Feb. 21 (p. 1), March 14 (Supplement p. 2), April 1 (p. 4), May 2 (p. 3), and May 20 (Supplement p. 1) issues of this newspaper. Address: At the store formerly kept by Mr. Gibson, Market-street.

277. Kerr (Samuel) and Co. 1778. Classified ad: Have now for sale... *Pennsylvania Ledger; or the Philadelphia Market-Day Advertiser*. Feb. 21. p. 4.

• **Summary:** "... In bottles: Cucumbers, french beans, mangoes; East-India soy [sauce]; ketchup; olives; capers;..." Address: Store and wine cellar in Front-Street; the sixth house above Chestnut-street, (lately occupied by John Mitchell).

278. Hillman (John). 1778. Classified ad: Has for sale,... *Royal Gazette (New York City)*. March 7. p. 2.

• **Summary:** "... English pickles by the box,... cucumbers, anchovies, mangoes and capers, soy [sauce] and ketchup, best pearl barley;..."

This ad also appeared in the March 14 (p. 4) issue of this newspaper. Address: No. 345, lower End of Smith-Street, New-York [City].

279. Burton (William). 1778. Classified ad: To be sold... The following articles, viz. *New-York Gazette; and the Weekly Mercury (New York City)*. April 6. p. 4.

• **Summary:** "... Florence oil, India soy [sauce], Ketchup, anchovies, Spanish and French olives;..."

This ad also appeared in the June 1 and July 27 (p. 4), and in the April 12 (1779, p. 4) issues of this newspaper. Address: Water-street, between the Coffee-House and Old-slip bridge.

280. Kerr (Samuel) and Co. 1778. Classified ad: Have now laid in a fresh assortment of goods... *Pennsylvania Ledger; or the Philadelphia Market-Day Advertiser*. April 18. p. 1.

• **Summary:** "... Anchovies; East-India soy [sauce]; Ketchup; Pickled walnuts, onion, cucumbers, girkins and mangoes;..."

Note: This is the earliest English-language document seen (March 2006) that contains the term "girkins" (regardless of the spelling). A girkin (also spelled gherkin or gerkin) is a small, oblong, prickly cucumber of West-Indian origin that is used chiefly for pickling.

This ad also appeared in the April 25 (p. 4) and May 20 (Supplement p. 1) issues of this newspaper. Address: Front-Street, between Chestnut and Market-street [Philadelphia].

281. Amiel (John, jun. [Jr.]). 1778. Classified ad: Has

removed to Hanover-Square,... where he has for sale:... *Royal Gazette (New York City)*. May 23. p. 1.

• **Summary:** "... A variety of English and India pickles, Soy [sauce] and Ketchup, anchovies, basket salt, Florence oil;..."

This ad also appeared in the May 27 and 30, June 6, 13, 17 and 20, July 4 and 25, and Aug. 12, 19 and 29 issues of this newspaper. Address: No. 852, Hanover-Square, opposite the Commodore's.

282. Young (John). 1778. Classified ad: Has for sale on the most reasonable terms, the following articles, viz. *New-York Gazette; and the Weekly Mercury (New York City)*. June 29. p. 4.

• **Summary:** "... White castile and turpentine soap, Ketchup and India Soy [sauce], Playing cards by the quantity or single pack;..."

This ad also appeared in the Aug. 10 (p. 2) issue of this newspaper. Address: In Water-street, between the Coffee-House bridge and the Fly Market.

283. Webster (George). 1778. Classified ad: Has for sale, the following articles:... *Royal Gazette (New York City)*. Aug. 5. p. 2.

• **Summary:** "... Cases of London pickles,... 1 bottle of anchovies,... 1 ditto of white wine vinegar, 1 ditto of India soy [sauce], 1 ditto of ketchup, All compleat and fit for Sea. Many of the above articles are put up in small packages fit for the gentlemen of the navy and army."

This ad also appeared in the Sept. 9 (p. 1) issue of this newspaper. And in the Aug. 17 (p. 2) issue of the *New-York Gazette; and the Weekly Mercury (New York City)*. Address: Grocer, at the Sign of the Tea-Canister, in Water-Street, No. 1077.

284. Kerr (Samuel). 1778. Classified ad: Has now for sale. *Royal Gazette (New York City)*. Aug. 19. p. 4.

• **Summary:** "The Co-partnership of Samuel Kerr, and Company, late of Philadelphia [Pennsylvania], being dissolv'd,..." Kerr has "purchased Mr. John Davan's whole stock-in-trade and has now for sale, wholesale and retail,... Pickles, Ketchup, India soy [sauce], Neats Tongues;..." Address: No. 207 Queen-street, near the Fly-Market.

285. McElroy (Archibald). 1778. Classified ad: To the public. The subscriber has removed from Burlington into the house in Bristol, formerly kept by Mr. Charles Bessonnet... and hath for sale... *New-Jersey Gazette (Burlington, NJ)*. Nov. 11. p. 4.

• **Summary:** "... McElroy "has laid in a large stock of liquors of all sorts. He proposes keeping of a reputable Inn, for the accommodation of genteel travellers;..."

"... Bristol Beer, by the dozen; Taunton Ale; London Porter; Wine; India Soy [sauce]; Pickles. N.B. A Hosteler is wanted."

Note: This is the earliest document seen (July 2011) concerning soybean products (soy sauce) in New Jersey. This document contains the earliest date seen for soybean products in New Jersey (Nov. 1778); soybeans as such have not yet been reported. Address: Bristol, New Jersey.

286. Whitworth, Charles; Davenant, Charles (Sir). 1778. Scarce tracts on trade and commerce, serving as a supplement to Davenant's works. London: Printed for Hooper and Davis. Illust.

• **Summary:** Apparently trade with France has been prohibited, since French goods are inexpensive and popular, resulting in a negative balance of trade for England.

The chapter "On Trade" states (p. 426): "Now suppose they are forbid [sic] to go to this particular shop, and will religiously observe the prohibition, yet they may and will furnish us with the same things from other ports; they will bring us more silks, laces, and baubles from Italy, Flanders, Holland, &c... our importers will find out new trifles and gewgaws [geegaws] for our silly people. How suddenly do we find all the women and children of any account in England in amber necklaces? which at the rate they are sold at must cost England at least 100,000*l*. [pounds sterling] and now we have a new sauce called Catchup from East-India, sold at a guinea a bottle.

Note: This document is a reprint of and almost identical to Petyt 1668, however there are small changes in capitalization, spelling, and use of italics. Address: [England].

287. Mason, Charlotte (Mrs.). 1778. The lady's assistant for regulating and supplying her table, being a complete system of cookery... 4th ed. improved, to the present time. London: Printed for J. Walter. 446 + [18] p. Index. 17 cm.

• **Summary:** The section on "Spices" (p. 293+) contains a short subsection titled "Soy" (p. 303) which is identical to that in the 3rd edition of 1777. Address: [England].

288. Long (Joshua). 1779. Classified ad: New Minorca honey, very fine and cheap;... *Morning Chronicle and London Advertiser (England)*. April 13. p. [1], col. 3.7.

• **Summary:** Also "... real Russia Rein Deer [Reindeer] Tongues, very fine new Olives, genuine Japan Soy [sauce], Cherokee Sauce [Cherokee Sauce], cold drawn Castor Oil, real French Mareschall Powder,...

Note 1. This is the earliest document seen (April 2012) that uses the term "genuine Japan soy" to refer to soy sauce.

Note 2. This is the earliest document seen (Oct. 2010) that uses the term "Cherokee Sauce."

Note 3. Although we searched the Web and old French dictionaries, and consulted a French translator, we have been unable (May 2011) to determine the meaning of "real French Mareschall Powder." Address: Warehouse, No. 73, Cheapside, London.

289. Webster (George). 1779. Classified ad: Has received by the last vessels from London,... *Royal Gazette (New York City)*. May 29. p. 1.

• **Summary:** "... an assortment of articles in the grocery way, such as pickles,... Cases of London pickles, 1 bottle anchovies,... 1 ditto mangoes, 1 ditto gurners, 1 ditto capers, 1 ditto onions, 1 ditto sallad oil, 1 ditto white wine vinegar, 1 ditto Indian soy [sauce], 1 ditto ketchup—All compleat and fit for sea.

"Many of the above articles are put up in small Packages, fit for the Gentlemen of the Army and Navy."

This ad also appeared in the Aug. 28 (p. 3), Sept. 11 and 22 (p. 2) issues of this newspaper. And in the Nov. 29 and Dec. 20 (p. 4) issues of the *New-York Gazette; and the Weekly Mercury* (New York City). Address: At the Sign of the Tea-Cannister and Three Sugar Loaves, in Water-Street, No. 1063, between Burling and Beckman's Slips.

290. Walker (Emanuel). 1779. Classified ad: Just imported in the last ships from London,... *New-York Gazette; and the Weekly Mercury* (New York City). Aug. 30. p. 3.

• **Summary:** "... capers and anchovies, India soy [sauce] and ketchup, rough almonds in the shell,..." Address: No. 1, Mill-Street.

291. Amiel (John, junior). 1779. Classified ad: Has imported from London, for sale,... *Royal Gazette (New York City)*. Sept. 15. p. 1.

• **Summary:** "... Raisins, currants and prunes, India soy [sauce] and ketchup, India mangoes with a variety of English pickles,..." Address: No. 852, Hanover-Square, opposite the Commodore's.

292. Meals (Joshua), & Co. 1779. Classified ad: To be sold on the lowest terms,... *Royal Gazette (New York City)*. Sept. 15. p. 2.

• **Summary:** "... With a general assortment of Spices and Pickles, Soy [sauce] and Ketchup.

This ad also appeared in the Sept. 25 (p. 4) issue of this newspaper. And in the Sept. 20 (p. 3) and Sept. 27 (p. 4) issues of the *New-York Gazette; and the Weekly Mercury* (New York City). Address: No. 191, Water-Street, between the Coffee-House and the Fly-Market.

293. Carver, Jonathan. 1779. The new universal traveller. Containing a full and distinct account of all the empires, Kingdoms, and states, in the known world... London: Printed for G. Robinson,... [2] + iii + 664 + [6] p. Illust. (Plates). Maps.

• **Summary:** The section on "China" states (p. 16): "The commodities imported from China, are teas, porcelane, quicksilver, vermillion, and other fine colours; china root, raw and wrought silks, copper in bars of the size of sticks

of sealing wax, camphire [camphor], sugar candy, fans, pictures, lacquered wares, soy, borax, lapis lazuli, galingal, rhubarb, gold, with many things made of mother of pearl.”
Note: This list is largely copied from Thomas Salmon 1744.

The section on “India” states (p. 60-61): “Their sauces consist chiefly of pickles, made of bamboos, garlic, and mangoes; besides which, the composition known in England by the name of soy, is likewise in general esteem. The grand meal in this country is in the evening, the middle of the day, as in other hot climates, being generally devoted to sleep.”
Address: Esq., Author of Travels through the Interior Parts of North America.

294. Encyclopaedia Britannica; or, A dictionary of arts, sciences, &c. On a plan entirely new: by which, the different sciences and arts are digested in the form of distinct treatises or systems, comprehending the history, theory, and practice of each, according to the latest discoveries and improvements... 2nd ed.: Dolichos. 1779. Edinburgh: Printed for J. Balfour and Co. 10 volumes publ. 1778-1783. See vol. 4, p. 2511-12.

• **Summary:** “Dolichos... 2. The soja is a native of Japan, where it is termed *daidsu*; and, from its excellence, *mame*; that is, ‘the legumen or pod,’ by way of eminence. It grows with an erect, slender, and hairy stalk, to our height of about four feet. The leaves are like those of the garden kidney-bean (*See *Phaseolus*). The flowers are of a bluish white, and produced from the bosom of the leaves, and succeeded by bristly hanging pods resembling those of the yellow lupine, which commonly contains two, sometimes three, large white seeds. There is a variety of this kind with a small black fruit, which is used in medicine. Kempfer [Kaempfer] affirms that the seeds of this when pounded and taken inwardly, give relief in the asthma. This legumen is doubly useful in the Japanese kitchens. It serves for the preparation of a substance named *miso*, that is used as butter; and likewise a pickle celebrated among them under the name of *sooju* or *soy* [sauce]. To make the first, take a measure of *mame*, or the beans produced by the plant: after boiling them for a considerable time in water, and to a proper degree of softness, they beat or bray them into a softish pulse; incorporating with it, by means of repeated braying, a large quantity of common salt, four measures in summer, in winter three. The less salt that is added, the substance is more palatable; but what it gains in point of taste, is loses in durability. They then add to this mixture a certain preparation of rice, to which they give the name of *koos*; and, having formed the whole into a compost, remove it into a wooden vessel which had lately contained their common ale or beverage named *sacki*. In about two months it is fit for use. The *koos* give it a grateful taste; and the preparing of it, like the polenta of the Germans, requires the skilful hand of an experienced master. For this reason there are certain people who make it their sole business to prepare the *koos*,

and who sell it ready made for the purpose of making *miso*: a substance which cannot fail to be greatly valued in those countries, where butter from the milk of animals is unknown. To make *sooju*, or *soy*, they take equal quantities of the same beans boiled to a certain degree of softness; of *muggi*, that is corn, whether barley or wheat, roughly ground; and of common salt. Having properly mixed the beans with the pounded corn, they cover up the mixture, and keep it for a day and a night in a warm place, in order to ferment; then, putting the mass into a pot, they cover it with the salt, pouring over the whole two measures and a half of water. This compound substance they carefully stir at least once a-day, if twice or thrice the better, for two or three months: at the end of which time, they filtrate and express the mass, preserving the liquor in wooden vessels. The older it is, the better and the clearer; and if made of wheat instead of barley, greatly blacker. The first liquor being removed, they again pour water upon the remaining mass; which, after stirring for some days, as before, they express a second time, and thus obtain an inferior sort of *soy*.”

Note 1. The descriptions of how to make *miso* and *soy* sauce are based on those of Englebert Kaempfer, published in 1712 in Latin in his book *Amoenitatum exoticarum...* and first written in Japan in 1690-92.

Note 2. This is the earliest English-language document seen (March 2009) that contains the word *miso*. While some *miso* (though usually described as a paste) has a consistency like butter, and a few types have a yellow color resembling that of butter, the Japanese have never used *miso* like butter. Rather they use it as a base for soups, sauces, and stews. The misunderstanding that *miso* “is used as butter” probably comes from the following statement by Englebert Kaempfer in his book *The history of Japan...* (1727). “Of the Meal of these Beans is made what they call *Midsu*, a mealy Pap, which they dress their Victuals withal, as we do with Butter.” Concerning its etymology, the word “*miso*” seems to have come into English from the German *Midsu*, and into German from the Japanese *miso*.

Note 3. This is the earliest English-language document seen (April 2012) that uses the word “*sooju*” to refer to *shoyu* or *soy* sauce. Kaempfer used the same term (written *Sooju*) in 1712 in his book *Amoenitatum exoticarum...* which was written in Latin.

Note 4. This is also the earliest English-language document seen (Oct. 2006) that uses the term “the soja” as a singular noun to refer to the soybean.

Note 5 This is the earliest document seen (Dec. 2002) which states that soybeans can be used to give relief from asthma or other allergic conditions. Address: Edinburgh, Scotland.

295. *New-York Gazette; and the Weekly Mercury* (New York City). 1780. Classified ad: To be sold. April 10. p. 4.

• **Summary:** “... a neat assortment of pickles, catchup, soy

[sauce], mustard, &c... Enquire of the Printer.”

296. Richards (William). 1780. Classified ad: Philadelphia, June 16. The public are hereby notified... to be sold... *Pennsylvania Packet, or the General Advertiser (Philadelphia)*. July 15. p. 4.

• **Summary:** “... Manna, Opium, Rhubarb, Senna, Sago,... fine India soy [sauce], best Mustard, Sweet Oil, and Corks of all sorts.”

Note: This is the earliest document seen (Sept. 2007) that mentions the term “Sweet Oil,” but it is not clear what it means. Address: Market street, at the sign of the Spread Eagle, near the Court-House.

297. Will of Philip Thomas Lee. 1780. <http://gustonhall.org/probate/LEE79.PDF>. 3 p. Printed March 23, 2004.

• **Summary:** In the Charles County, Maryland, Register of Wills, 1785-1791, pages 246-60, we read on p. 253: “2 Glass soy bottles—d .3.0.”

Note: It is unclear whether these bottles contain soy sauce or not. If they do: This is the earliest document seen (May 2011) concerning soybean products (soy sauce) in Maryland. This document contains the earliest date seen for soybean products in Maryland (July 1780); soybeans as such had not yet been reported by that date. Address: Anne Arundel County, Maryland.

298. Burton (William). 1780. Classified ad: To be sold... *Royal Gazette (New York City)*. Aug. 2. p. 4.

• **Summary:** “... Pickles in the best order, Consisting of:... Mushrooms, Anchovies, Gerkins, East-India Mangoes,... Samphire, French and Spanish Olives, India Soy [sauce], Ketchup, Fine Sallad Oil,...”

Note: Samphire is a plant that grows on rocks near the sea shore; it is used for pickling. Address: No. 912, Water-Street, between the Coffee House and the Old-Slip.

• **Summary:** “... Walnuts, Anchovies, Mangoes, Ketchup, French and Spanish olives, Sallad oil, India soy [sauce],

Queen’s sauce [Quin’s Sauce?],...”

Note: This is the earliest document seen (May 2006) that mentions “Queen’s sauce.” Address: No. 21 Little Dock Street.

302. Folgham’s Case and Inlaid Cabinet Manufactory. 1780? The following articles are sold on the most reasonable terms, wholesale, retail, and for exportation. London: Folgham’s. 1 p. Undated.

• **Summary:** Near the bottom of column 2, under “Silver and plated goods”: “Scalloped, round, and oval Crewet and Soy Frames.” Address: No. 81 Fleet-Street, London..

303. Trotter (William) and Co. 1780? List of sweet-meats, groceries, wines, &c. &c. sold by William Trotter and Co. Edinburgh (Leaflet). Edinburgh, Scotland. 1 p. Undated.

• **Summary:** In the 3-column listing, the section on “Pickles” includes: “Capers,... Mushrooms, Kidney Beans, Walnuts, Anchovies, Ketchup, Indian Soy, Vinegars (French, Tarragon, Chiloe or Elder), Lemon Pickle,...”

Note: Chiloé is a province on the west coast of Chile. Address: Edinburgh, Scotland.

304. Crookshanks and Spiers. 1781. Classified ad: To be sold at the store... A general assortment of European and East India goods:... *Royal Georgia Gazette (Savannah)*. Feb. 22. p. 4.

• **Summary:** “... English walnuts, anchovies, India soy [sauce], ketchup, capers, sweet oil...” Address: No. 21 Little Dock Street.

305. Long (Jos.). 1781. Classified ad: Just arrived a parcel of fine new Cuisse d’Oyes. *Morning Chronicle and London Advertiser (England)*. May 11. p. [1], col. 2.7.

• **Summary:** Also “... fine new dates, Japan Soy [sauce], Indian Curry Powder, Kian Pepper [Cayenne Pepper], and Mushroom Powder, all warranted genuine and unadulterated;... the only real Cherokee Sauce [Cherokee Sauce], Zoobditty Match, &c... real French Marescall Powder;...” Address: No. 73, Cheapside, London.

306. Gracie (George). 1781. Classified ad: Has for sale. *New-York Gazette; and the Weekly Mercury (New York City)*. June 11. p. 3.

• **Summary:** “... Mushrooms, capers, India soy [sauce], queen’s sauce, ketchup, French olives, Spanish olives,...” Address: No 8, Fly-Market.

307. Hoffman (Nicholas). 1781. Classified ad: Has for sale,... *New-York Gazette; and the Weekly Mercury (New York City)*. June 18. p. 4.

• **Summary:** “... anchovies, olives, and soy [sauce], capers, gerkins,... spices and cayan pepper,...” Address: No. 4, Water-Street, opposite the Superintendent’s Office.

308. Burton (William). 1781. Classified ad: Has for sale at his store... *New-York Gazette; and the Weekly Mercury (New York City)*. Sept. 10. p. 1.

• **Summary:** "... A general assortment of Pickles in the best order, consisting of: Mushrooms, India mangoes, French and Spanish olives, Gerkins,... samphire, anchovies, India soy [sauce], kitchup, sallad oil, best white wine vinegar, common ditto,..." Address: No. 9, Water-Street, between the Coffee House and the Old-Slip.

309. Dunscomb (Daniel). 1781. Classified ad: At his store,... has for sale. *New-York Gazette; and the Weekly Mercury (New York City)*. Oct. 1. p. 4.

• **Summary:** "... Girkins, fine India soy [sauce], ketchup, best Maccaba snuff,..." Address: No. 164, Water-street, between Beekman and Burling's slips.

310. Lente and Thomas. 1781. Classified ad: Most thankfully acknowledge the favours of their Friends and Customers,... *Royal Gazette (New York City)*. Oct. 31. p. 3.

• **Summary:** "... Pickles: Anchovies, Mushroom, Gerkins, Walnuts, Capers, Olives, &c. by the bottle or case, India Soy [sauce], Ketchup, and Florence Oil." Address: No. 32, Hanover-Square.

311. Cecil & Wood. 1781. Classified ad: Imported in the Georgia Packet, Capt. Haist, from London, and to be sold reasonably for cash, produce, or government bills of exchange,... A general assortment of European and East India goods. *Royal Georgia Gazette (Savannah)*. Nov. 22. p. 2.

• **Summary:** "... sweet oil in pint bottles, catsup and mushrooms, linseed oil in jugs,..."

Note: This is the earliest English-language document seen (Feb. 2006), published in America, that contains the word "catsup." It is also the earliest document seen (Jan. 2006) in which the word for soy sauce from the Dutch East Indies is spelled "catsup." It appears in a United States newspaper about two years before the end of the revolutionary war. Address: At their Store on the Bay.

312. Knox and Cowan. 1781. Classified ad: Have imported in the fleet from England,... *Royal Gazette (New York City)*. Dec. 8. p. 1.

• **Summary:** "... Also, Groceries, viz... Pickles of all kinds, India Soy [sauce], Ketchup, best Florence Oil, best white wine Vinegar, Mustard;..." Address: No. 234, Queen-Street.

313. McCormick (Daniel). 1782. Classified ad: Public auction. *New-York Gazette; and the Weekly Mercury (New York City)*. Jan. 20. p. 3.

• **Summary:** "... To-morrow, at the [Merchants] Coffee House,... And 9 chests London pickles, Containing mangoes, walnuts, girkins, anchovies, capers, oil, ketchup and soy"

[sauce].

314. Child & Harrison. 1782. Classified ad: Sales by auction,... to-morrow, 11 o'clock, near the bridge,... *New-York Gazette; and the Weekly Mercury (New York City)*. March 4. p. 3.

• **Summary:** "... 3000 wt. of good ship bread, 9 crates assorted queen's ware, 8 boxes mustard, 4 boxes Indian soy [sauce], 4 chests bohea tea, 2 trunks of nutmegs, 5 boxes wax candles, 3 ditto spermaceti ditto, &c &c."

315. Lente and Thomas. 1782. Classified ad: have for sale... *Royal Gazette (New York City)*. April 17. p. 2.

• **Summary:** "... Best Sallad Oil. India Soy [sauce] & Ketchup. White Wine, Tarragon, Elder, and Garlick Vinegars." Address: No. 32, Hanover-Square.

316. Meals (Joshua) and Co. 1782. Classified ad: To be sold,... *Royal Gazette (New York City)*. Nov. 9. p. 4.

• **Summary:** "... Pickles, Soy [sauce], Ketchup, Mushrooms, Olives, Capers,..." Address: No. 191, Water-Street, between the Coffee-House and the Fly-Market.

317. **Product Name:** [Shoyu: Named Kikkoman Shoyu in 1784].

Foreign Name: Kikkôman Shôyu.

Manufacturer's Name: Mogi Saheiji.

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1782.

New Product-Documentation: Noda Shoyu K.K. (Morio ICHIYAMA, ed). 1940. Noda Shoyu K.K. Nijunen-shi [Twenty-year history of Noda Shoyu, Inc.]. p. 466. The Kikkôman brand of shoyu (of which the logo is shown) was introduced in Tenmei/Temmei 2 (1784).

Fruin, W. Mark. 1983. Kikkoman: Company, Clan, and Community. p. 18. By 1782 "Mogi Saheiji, head of the oldest branch of the Mogi line, had added shoyu fermentation to his already established ventures in grain sales and miso manufacture, making the Mogi's proportion of representation in the [Noda shoyu manufacturing] guild three out of seven."

318. Gwilt and Goodwyn. 1783. Classified ad: Intending for England shortly,... *Royal Gazette (New York City)*. Jan. 11. p. 3.

• **Summary:** "... For Cash only,... The very best Durham Mustard, India Soy [sauce],..." Address: No. 234, Queen-Street.

319. Lente (Christopher Lewis). 1783. Classified ad: Lente's Store... has for sale. *Royal Gazette (New York City)*. Feb. 5. p. 1.

• **Summary:** "... Ready made French and English Mustard, Florence and Lucca Oil, India Soy [sauce] and Mushroom Ketchup, French and Spanish Olives, Pickles,..."

Note: Lucca is a province of Tuscany, Italy (about 38 miles northwest of Florence), long known for its fine olive oil. Address: No. 32, Hanover-Square.

320. Lente (Christopher Lewis). 1783. Classified ad: Has for sale... *Royal Gazette (New York City)*. Aug. 2. p. 1.

• **Summary:** "... Assorted pickles:... India Mangos [Mangoes], India Soy [sauce], and Ketchup, Anchovies and Capers,..." Address: No. 32, Hanover-Square.

321. Dorsey (John, Jun. [Jr.]). 1783. Classified ad: At his grocery store... has for sale. *Independent Gazetteer (Worcester, Massachusetts)*. Aug. 23. p. 3.

• **Summary:** "... Sweet Oil in jugs, and tap, English and Country Ketchup, Fine India Soy [sauce], and Quin's Sauce. "Waters: Aniseed, Cinnamon, Clove, Orange, Citron, Lemon, Cholic, and bitter... Girkins, Colley Flower [Cauliflower],..."

Note: This is the earliest document seen (April 2012) that mentions "Quin's Sauce." Soy [sauce] was often used as an ingredient in homemade recipes, and probably in most commercial recipes. Address: Third-street, one door below Arch-street.

322. Thomas (William). 1783. Classified ad: Has now for sale,... *Independent Journal (New York City)*. Dec. 1. p. 3.

• **Summary:** "... Spices of all sorts, also Anchovies, Gerkins,... Capers, Soy [sauce], Ketchup, Coratch,..."

Note: This is the earliest document seen (Feb. 2006) that mentions the word "Coratch." Address: No. 6, Queen-street.

323. Lente (Christopher Lewis). 1783. Classified ad: Has for sale. *Independent Journal (New York City)*. Dec. 25. p. 4.

• **Summary:** "... English and foreign Flour of Mustard, India Soy (sauce), Mushroom Ketchup,..." Address: No. 32, Hanover-Square.

324. Bryant, Charles. 1783. *Flora diætetica: Or history of esculent plants, both domestic and foreign. In which they are accurately described, and reduced to their Linnæan generic and specific names. With their English names annexed, and ranged under eleven general heads.* London: B. White. 379 p. See p. 297, 300-01. [2 ref]

• **Summary:** In Chapter VII. Leguminous plants. Section I. Pods and seeds of herbaceous plants (p. 297), there is a listing for "3. *Dolichos soja*. East India Kidney Bean." Pages 300-01 contain full details: "*Dolichos soja*. Indian Kidney Bean. Lin. Sp. pl. 1023. This is a perennial and a native of India. It sends up an erect, slender, hairy stalk, to the height of about four feet, furnished with leaves much like those of the Common Kidney Bean, but more hairy underneath. The flowers are produced in erect racemi, at the bosoms of the leaves; they are of the pea-kind, of a bluish white color, and are succeeded by pendulous, hairy pods, resembling those of

the Yellow Lupine, each containing three or four oval, white seeds, a little larger than peas.

"This plant is much cultivated in Japan, where it is called *Daidso*, and where the pods supply their kitchens for various purposes; but the two principal are with a sort of butter, termed *Miso*, and a pickle, called *Sooju* or *Soy* [sauce].

"The *Miso* is made by boiling a certain quantity of the beans for a considerable time in water, till they become very soft, when they are repeatedly brayed with a large quantity of salt, till all is incorporated. To this mass they add a certain preparation of rice, named *Koos* [probably *koji*; Kaempfer introduced this term in 1712], and having well blended the whole together, it is put into a wooden vessel, where in about 2 months it becomes fit for use, and serves the purposes of butter. The manner of preparing the *Koos* is a kind of secret business, and is in the hands of some certain people only, who sell the *Koos* about the streets, to those who make *Miso*.

"In order to prepare *Sooju* they take equal quantities of beans, wheat, or barley-meal, and boil them to a pulp, with common salt. As soon as this mixture is properly incorporated, it is kept in a warm place for twenty-four hours to ferment; after which the mass is put into a pot, covered with salt, and a quantity of water poured over the whole. This is suffered to stand for two or three months, they never failing to stir it well at least once a day, if twice or thrice it will be the better; then the liquor is filtered from the mass, and preserved in wooden vessels, to be used as occasions require. This liquor is excellent for pickling anything in, and the older it is the better."

Note 1. Bryant's account is largely based on that of Engelbert Kaempfer in his book *Amoenitatum Exoticarum*, written in Japan in 1690-92, and published in 1712. Bryant's book has an excellent, extensive index. It is the earliest English-language document seen (May 2006) that contains a detailed botanical description of the soybean.

Note 2. This is the earliest document seen (Oct. 2010) concerning soybeans (but only wild perennial relatives of soybeans) in India; cultivated soybeans have not yet been reported.

Note 3. This is the earliest English-language document seen (April 2009) that uses the term "East India Kidney Bean" (singular or plural, regardless of capitalization or hyphenation) to refer to the soybean.

Note 4. This is the earliest English-language document seen (March 2009) that uses the term "a sort of butter" to refer to *miso*.

Also discusses: Several species of edible seaweeds [sea vegetables]: "13. *Fucus saccharinus*—Sweet *Fucus* or *Sea Belts*. Lin. Sp. pl. [*Species plantarum*] 1630. *Fucus alatus sive phafnagoides*. Bauh. Pin. 364 [Caspar Bauhin. 1623. *Pinax Theatri Botanici*].

"14. *Fucus palmatus*—Handed *Fucus*. Lin. Sp. pl. 1630.

"15. *Fucus digitatus*—Fingered *Fucus*. Hud. Flo. Ang.

579 [William Hudson. 1762, 1798. *Flora Anglica*]. *Fucus arboreus polyschides edulis*. Bauh. Pin.

“16. *Fucus esculentus*—Edible *Fucus* Hud. Flo. Ang. 578 (p. 90-91, 100-01).

“39. *Ulva lactuca* or Green laver. Lin. Sp. pl. 1632.

Muscus marinus lactucæ similis. Bauh. Pin. 364 (p. 117-18).

Amaranthus oleraceus or Esculent Amaranth from India (p. 119). *Arachis hypogæa* or American Ground Nut [Peanut] (p. 298-99). *Cicer arietinum* or Chick Pea [Chick Pea] (p. 299; it “grows naturally among the corn in Spain and Italy, and it is much cultivated in these places for the table... It is much cultivated in Barbary [the Mediterranean coast of north Africa], by the name of *Gravances*, and is counted one of their best sorts of pulse”). *Ervum lens* or Lentil (p. 301-02; it “is a common weed in the cornfields of France... *Lentils* are a strong, flatulent food, very hard of digestion, and therefore seldom used now but to boil in soups, in order to thicken them”). *Lotus tetragonolobus* or Square-podded Pea [Winged Bean]. *Lotus ruber*, siliqua angulosa Bauh. Pin. 332 (p. 302-03). *Lupinus albus* or White Lupine (p. 303-04). *Ceratonia siliqua* or Carob tree (St. John’s bread, p. 309-10). *Coffea Arabica* or Arabian coffee (p. 311). *Coffea occidentalis* or American coffee (p. 311-12). *Coix lacryma Jobi* or Job’s tears (p. 332). *Polygonum fagopyrum* or Buck Wheat (p. 343). Ginkgo or Maiden-hair tree (p. 377-78). Bread fruit tree (378-79). Some of these are described in detail in separate records.

Note 5. This is the earliest Western document seen (Jan. 2005) that discusses sea vegetables (p. 117-18).

Note 6. This is the earliest document seen (June 2006) that mentions *Coix lacryma Jobi* or Job’s tears.

Note 7. This is the earliest English-language document seen (June 2008) that gives a scientific name for lentils (*Ervum lens*).

Note 8. This is the earliest English-language document seen (June 2008) that mentions the chick pea (which it calls “Chick Pea”) or gives its scientific name (*Cicer arietinum*).

Near the front of the book, a section titled “Terms explained” (xiii-xvi) is a glossary that gives concise definitions of the following botanical terms: Annual, biennial, perennial, sessile, serrated, crenated, pinnated or winged, peduncle, spike, spicula, panicle, spadix, racemus, umbel, calyx, catkin, petal, glume, arista or awn, floret, germen or seed bud, pericarpum, capsule, stamina, styles, stigma, summit. Address: Norwich, England.

325. Muscovy Company. 1783. General tariff of [t]he customs for all ports and frontiers of the Russian Empire, except Astrachan, Orcnburgh, and Siberia, as settled by the commissioners of commerce, 1782. London: Printed for the Russia Company by T. Spilsbury. 99 p. See p. 46. [Eng]

• **Summary:** On page 46 we read: “Soy [sauce] or Ketchup, in common-sized bottles, each—20 Cop.”

Note 1. Two units of Russian currency are given: “Ro.”

and “Cop.”—the first being larger than the latter. “Cop.” may stand for “Copper.”

Note: OCLC Worldcat gives the date of this document as 1783. However Gale ECCO gives the date as 1678—which seems to us impossible.

326. Revere (Paul). 1784. Classified ad: Has imported in the Rosamond, Capt. Love,... a very elegant assortment of plated ware,... *Independent Chronicle and the Universal Advertiser* (Boston). Jan. 8. p. 4.

• **Summary:** “... Festoon, Castor and Soy Frames [for soy sauce at the dining table],...” Address: Directly opposite the Liberty Pole, South End, Boston.

327. Lyon and Longstreet. 1784. Classified ad: Have for sale, wholesale and retail, at their grocery-store,... *Independent Gazetteer* (Worcester, Massachusetts). July 10. p. 3.

• **Summary:** “... India soy [sauce], cayan [cayenne] pepper, black do. [pepper]...” Address: West side of Third-street, one door from Arch-street.

328. Bethune (Alexander). 1784. Classified ad: Has for sale on the most reasonable terms,... *South-Carolina Gazette and General Advertiser* (Charleston). Sept. 2-4. p. 1.

• **Summary:** “... Black and cayan pepper, ginger, saltpetre,... Ketchup, India soy [sauce], lemon pickle, costatch [coratch] & quince sauce.” Note: This is the earliest document seen (Feb. 2006) that mentions “quince sauce.” Address: Grocery, Wine and Spirit Store, No. 113, Broad-street.

329. Pressey’s Warehouse. 1784. Classified ad: New Muscadine raisins. *Morning Post and Daily Advertiser* (London). Dec. 17. p. [1], col. 3.9.

• **Summary:** Likewise, “Cashew Nuts, Ground Nuts,... Vermecelli [Vermicelli], India Mangoes, Soy [sauce], Cherokee Sauce, India Curey [Curry], Jordan Almonds, Seltzer, Spa, and Pymont Water.

“The Nobility may be assured the above are all fresh, and may be depended on to be of the finest quality.”

Note 1. This is the earliest document seen (Oct. 2010) that uses the term “Cherokee Sauce.” The meaning of this term is unclear, as are its ingredients. Address: Henrietta-street, Covent-Garden [London].

330. Skill and Son. 1784. Great Italian and Foreign Warehouse,... (Ad). *Morning Post and Daily Advertiser* (London). Dec. 17. p. [1], col. 3.2.

• **Summary:** “Cheese merchants and oilmen to their Imperial and Most Faithful Majesties; and to their royal highnesses The Duke of Clarence, and Duchess of Cumberland;...”

“Curious rich sauces, superior to any thing of the kind ever sold, for fish, game, wild fowl, stews, hashes, ragouts, venison, etc.”

Essence of Anchovies, Imperial Sauce, Zoobditty Match,

Sauce Espagnole, Cherokee Sauce, Mushroom Ketchup, Quince Sauce [Quin's Sauce?], Oyster Ketchup, Camp Sauce, Sauce Piquante, India Soy [sauce], Coratch, Sauce Royal, Walnut Ketchup, Lemon Pickle, Cavice.

"And every other Sauce in use at the most Fashionable Tables."

Note: This is the earliest document seen (Aug. 2011) that mentions "Cavice." We have been unable to find a description or definition of it, but it seems to be a liquid seasoning; by 1845 Harvey's sauce was considered an acceptable substitute. Address: No. 15, Strand, near Charing-Cross, London.

331. Glasse, Hannah (Mrs.). 1784. The art of cookery made plain and easy; which far exceeds any thing of the kind ever yet published... A new ed. London: Printed for W. Strahan, J. Rivington and Sons, L. Davis, W. Owen, T. Longman, B. Law, T. Payne, B. White, J. Robson, J. Johnson, G. Robinson, [and ten others]. vi + [20] + 409 + 26 p. See p. 324-25. [Eng]

• **Summary:** Chapter 19, titled "To make anchovies, vermicelli, catchup, vinegar, and to keep artichokes, French beans, etc." (p. 319-25) contains a receipt [recipe] titled "To dress White-bait" which states (p. 324-25): "Take your white-bait fresh caught, and put them in a cloth with a handful of flour, and shake them about till they are separated and quite dry; have some hog's lard boiling quick, fry them two minutes, drain them, and dish up with plain butter and soy."

Note 1. The last word, "soy," refers to soy sauce. It does not appear in the index, and we can find no other use of it in this book.

Note 2. This is the earliest document seen (Dec. 2003) published outside of East Asia that contains a soy-related recipe. It is also the earliest Western cookbook seen (April 2012) that uses soy [sauce] in a recipe.

Note 3. On pages 347-48 is a recipe titled "How to make ice cream." This modern-style recipe uses 12 ripe apricots for its basic flavor.

Note 4. Hannah Glasse lived 1708-1770. Note 5. Kendra Van Cleave of the Schlesinger Library, Radcliffe Inst., Harvard University, Cambridge, Massachusetts, looked for (and did not find) this recipe in both the index and the appropriate section of the following editions of this book—all of which are owned by the Schlesinger library: 1747, 1748, 1751, 1755, 1765, 1767, 1770, 1774, 1778, and 1781.

Note 6. As of April 2001 OCLC lists no microfilm edition of this 1784 edition of this book. Address: England.

332. Byrne, Dorsten, and Colburn. 1785. Classified ad: Have imported in the ship Edward, Capt. Coupar, from London,... *Independent Journal (New York City)*. Jan. 5. Supplement p. 2.

• **Summary:** "... A general assortment of pickles, Quin's

sauce, Mushroom ketchup, Florence oil, India soy [sauce], Mustard in ¼, ½, & 1 lb. bottles,..." Address: No. 2, opposite the Fly-Market.

333. Grocery Store. 1785. Classified ad: For sale,... for cash only. *South-Carolina Gazette and General Advertiser (Charleston)*. March 15. p. 4.

• **Summary:** "... sweet oil, catchup, soy [sauce], almonds,..." Address: Elliott street, Corner of Beadon's Alley, Charleston.

334. Priddy's Italian Warehouse. 1785. Classified ad: Parmesan Cheese, &c... *Morning Post and Daily Advertiser (London)*. March 29. p. [3], col. 2.1.

• **Summary:** "Just imported... Curry Powder, Kyan [Cayenne] Pepper, Indian Soy [sauce], Mangoes, Fish Sauces,..." Address: No. 14, Poland-street, nearly opposite Great Marlborough-street [London].

335. Lente (Christopher Lewis). 1785. Classified ad: Has for sale. *Independent Journal (New York City)*. April 16. p. 1.

• **Summary:** "Pickles, &c. for sauces: India and English mangoes, Mushroom and Samphire, Walnuts & Gerkins, Thonfish & Truffels in Oil, Anchovies, Capers, and Luira Olives, Florence and Luira Virgin Quin's Sauce, India Soy [sauce], and Ketchup, Rose and Orange Flower Water, Tarragon Vinegar, Garlic ditto [Vinegar], Ravigotte ditto, Cibulette ditto, Plain Wine do. [Vinegar] in bottles."

Note: Thonfish may refer to a tunny (French: thon. German: Thunfisch), a fish of the genus *Scomber*, the Spanish mackerel (*Webster's Dictionary*, 1828). Address: No. 33, Hanover-Square.

336. Long (Joshua). 1785. Classified ad: Just arrived, a Parcel of fine French Pomatums, hard and soft... *Times (London)*. April 28. p. 1, col. 4. RiceVerm

• **Summary:** "... also West India Pickles of all Sorts; the same from the East Indies, as mangoes, Limes, Pickalilly, and Mountain cabbage; Lemon Pickle, Lime Juice, Lime Rob, &c... Vermicelli and Macaroni [Macaroni], Lock Soy, &c. real Japan Soy [sauce], Kian Pepper [Cayenne Pepper], and real East India Currie Powder."

"N.B. An exceeding fine Parcel of real cold drawn Castor Oil."

Note 1. This is the earliest document seen (April 2012) that uses the term "real Japan Soy" to refer to soy sauce.

Note 2. This is the 2nd earliest document seen (April 2012) that uses the term "Lock Soy." Notice that in this list of items advertised, "Lock Soy" comes immediately after "Vermicelli and Macaroni." Most early publications that describe "Lock Soy," starting with *A Voyage to Cochinchina, in the Years 1792 and 1793*, by John Barrow (published 1806, p. 315) state that it is type of rice vermicelli; made in today's south central Vietnam (Cochinchina around Da Nang) and in China. In Cochinchina it is perfectly

transparent, whereas “The Chinese Lock-soy is opaque.” It (apparently) does not contain any ingredient made from the soybean.

Letter (e-mail) from Andrea Nguyen, Vietnamese-born food writer from Santa Cruz, California. 2010. May 4. Lock Soy could well be Soi Loc—a type of noodle made from tapioca in the area of Da Nang, Vietnam. Squiggly and chewy, it resembles worms. Soy is a misspelling of *soi*, which means “strands.” Loc refers to “tapioca.” If this explanation is correct, it used mostly with sweets and does not contain any soy ingredients.

As of May 2011, the term “Lock Soy” appears in this database 17 times from 1760 to 1911.

Note 2. This is also the earliest document seen (Aug. 2011) that uses the term “real Japan soy” to refer to soy sauce. As of Feb. 2007, the term “Japan Soy” (referring to soy sauce) appears in this database 42 times from 1785 to 1873.

Note 3. This is also the earliest document seen (Dec. 2005) in the *Times* (London) that uses the term “Soy” (with or without capitalization) to refer to soy sauce.

Pomatum is a synonym for “pomade,” a perfumed ointment, especially a fragrant hair dressing. Address: No. 73, Cheapside, London.

337. Burgess. 1785. Classified ad: Spruce Beer Brew-House. *Morning Herald and Daily Advertiser* (London). May 3. p. [1], col. 3.7.

• **Summary:** “... where may be had curious Rich Sauces for Fish, Gravies, Made Dishes, Beefstakes [sic], &c. viz.

“Fine Oyster Ketchup. Ditto [Fine] Anchovie [Anchovy] Ketchup. Ditto Walnut Ketchup. Ditto Zobditty Match. Genuine Cayenne Pepper. Genuine Gorgona Anchovies... Cherokee Sauce. Quin’s Sauce and Coratch. Lemon Pickle. Finest Parmesan Cheese.” Address: Burgess’s Italian and Salad Oil Warehouse, No. 107, Corner of the Savoy Steps, Strand [London].

338. Stenson (William). 1785. Classified ad: Has for sale,... *Maryland Journal* (Baltimore). May 10. p. 2.

• **Summary:** “Wines... London porter, Liverpool beer, Taunton ale, wine and cider vinegar, spermaceti oil, Florence ditto [oil], catsup and India soy [sauce].

“Waters.—Anise-seed, cinnamon, clove, orange, citron and cholic, liquors of all sorts.”

Teas and sundries.—... Cayenne and black pepper, ginger, race and ground, sago, whole and ground,...

Note 1. This is the earliest document seen (May 2011) that clearly refers to soybean products (soy sauce) in Maryland. This document contains the earliest clear date seen for soybean products in Maryland (May 1785); soybeans as such had not yet been reported by that date.

Note 2. This is the earliest English-language document seen (Jan. 2006) that contains the word “race” to define a

form of ginger; it means “gingerroot.”

Note 3. The meaning of the word “cholic” as a type of flavored water is (after considerable research) unclear. Address: Grocery-store in Market-Street, near the Market-House.

339. Young’s. 1785. Classified ad: Sallad oil, vinegars, and Montipolciano wines. *Times* (London). June 8. p. 4, col. 4.

• **Summary:** “... Just Imported... India Soy [sauce], Mangoes, Ketchup.” Plus many kinds of oil, vinegar, and fine “Cyders [ciders], sold by the Hogshead, Gallon, or in Bottles.”

This same ad appears on June 11 (p. 2, col. 3).

Note: This is the earliest document seen (Jan. 2007) in the *Times* (London) that uses the term “India Soy” to refer to a type of soy sauce. Address: New Italian Warehouse, No. 5, Cambridge-street, Golden-square [London].

340. Pressey’s. 1785. Classified ad: Henrietta-street, Covent-garden. *Times* (London). Oct. 25. p. 4, col. 4.

• **Summary:** “The Nobility and Gentry are most respectfully informed, that at Pressey’s Warehouse, Henrietta-street, facing Archer’s Poplin Ware Rooms, they may be supplied with all Kinds of Grocery and Foreign Goods, in a greater Variety that at any House in Town, all of which may be depended on to be of the first Quality, and latest Importation, viz. Muscadine Raisins, in small Boxes,... London Almonds, Preserved Limes, Du Roy Plumbs, Spanish Grapes, great Variety of Foreign Liquors, Preserved Citrons, Apricots, Truffles, Morrells, Campions, Parmesian Cheese, American Essence of Spruce, Cocoa Nuts,... Pistatia-Nuts [pistachio], Seltzer, Pyrmont, and Spa Waters,... Arrack, Old Hock, Patna Rice, East India Curry, Japan Soy [sauce], Cherokee Sauce, Cavica Sauce,... Maccaroni [Macaroni], Vermicelli, Cashew Nuts, new Dates, Lemon Pickle, Plain and Figured India Papers, Tamarinds, Lentils, Qoobity Mutch [Zoobditty Match?], Oyster Ketchup, India Mangoes, Lock Soy, and other Goods. Spermaceti and Wax Candles...”

Note 1. Patna was a former Indian state in northeast India on the right bank of the Ganges River 290 miles (467 km) west of Calcutta. In 1764 it came under British control. Today (2005) it is a city, the capital of Bihar state.

Note 2. This is the earliest document seen (Dec. 2005) that uses the word “Cavica” to refer to the name of a sauce. Elizabeth David (1970, p. 11) believes that it, or its relatives “caveach,” “cavice,” or “scabeche,” may have been the ancestors of the word “catsup.”

Note 3. This is the earliest English-language document seen (Jan. 2006) that contains the term “Qoobity Mutch.” Later modified into “Zoobditty Mutch” and “Zoobditty Match,” it probably refers to a type of sauce.

Note 4. This is the earliest English-language document seen (June 2009) that contains the term “Cherokee Sauce”—also spelled “Cherekey.” Address: Henrietta-street, Covent-garden [London].

341. Bryant, Charles. 1785. Carl Bryant's Verzeichniss der zur Nahrung dienenden so wohl einheimischen als ausländischen Pflanzen. 2 v. [Flora diaetetica: Or history of esculent plants, both domestic and foreign. 2 vols.]. Leipzig: Bey Weidemanns Erben und Reich. See Vol. I, Part I (Erster Theil), p. 478-80. 21 cm. [Ger]

• **Summary:** This is largely a German translation of Engelbert Kaempfer's book *Amoenitatum Exoticarum*, written in Japan in 1690-92, and published in 1712.

The section titled "Dolichos Soja. *Indian Kidney Bean*. Linn. Spec. plant. 1023.-Sojabohne" (p. 478-80) discusses the soybean (also called "Daidso") and various soy products, including miso, koji (*Koos*), and soy sauce (*Der Sooju*).

Note 1. This is the earliest German-language document seen (March 2009) that mentions miso, which it calls "Miso." The actual text reads: "... aber macht man Suppen und eine Art Butter daraus, welche Miso heisst,..."

Note 2. This is the earliest German-language document seen (April 2012) that mentions soy sauce, which it calls "Sooju" or "Soy." The actual text reads: "Dieser letzten Bereitung legt man den Namen Sooju oder Soy bei." "Der Sooju wird folgender Gestalt zubereitet;..."

The chapter on legumes (p. 474-75) also discusses: (1) *Arrachis Hypogaea*. American ground nut. (2) *Cicer arietinum*. The chick pea, or Garavances. French: Pois Chiche. (3) *Dolichos Soja*. East Indian kidney beans. Sojabohne.

Note 3. The term "East Indian" probably refers to the Dutch East Indies—today's Indonesia.

(4) *Ervum Lens*. Lentil. (5) *Lotus edulis*. (6) *Lotus tetragonolobus*. Square podded crimson pea. Spargelerbsen. Vierecktiger Schotenklee. (7) *Lupinus albus*. (8) *Phaseolus vulgaris*. Common kidney bean. French: Faseole. Haricot commun blanc. (9) *Pisum sativum*. (10) *Pisum Americanum*. (11) *Pisum maritimum*. 12. *Vicia Faba*. Common garden bean

Note 3. Charles Bryant died 1799. Address: Norwich.

342. Sake shoyu denjuki [Information about sake and shoyu]. 1785. Japan [Jap]*

• **Summary:** Yokotsuka (1985, p. 206), who cites this book as "*Sake shoyu denjuki* (1785)," states that it is about the development of and formulas for commercial shoyu during the Edo period. Address: Japan.

343. Shôyu denjuki [A record of initiation into shoyu]. 1785. Japan. [Jap]*

• **Summary:** Early book on shoyu production.

344. Young's New Italian Warehouse. 1786. Classified ad: Tuberose roots, Great Britains, &c. *Morning Post and Daily Advertiser* (London). Jan. 23. p. [1], col. 2.3.

• **Summary:** "Foreign and English Vinegars, and Fish

Sauces, Anchovy, Ketchup; Truffles and Morels, Truffle and Mushroom Powder, Cayenne Pepper, India Soy, Mangoes,..." Address: No. 3, Cambridge-street, Golden Square.

345. Thomas (William). 1786. Classified ad: Has now for sale,... *Daily Advertiser, Political, Historical, and Commercial* (New York City). April 25. p. 3.

• **Summary:** "... Tamarinds and Pickles, French and Spanish olives, Anchovies and capers, Mushrooms, India soy [sauce], Ketchup, coratch and Quin's sauce." Address: No. 242, Queen-street, between Wall and King-street.

346. Young. 1786. Classified ad: Italian wines, cyder, perry, Parmesan cheese, &c, &c. *Times* (London). June 10. p. 1, col. 1.

• **Summary:** "Respectfully acquaints the Nobility, Gentry, and Public, that he has now a most excellent assortment of Cyders, of the first Quality, and of his own Growth, in Bottles and Casks, which are so rich and full flavoured of the Apples as to distinguish itself; also fine soft old Perry. Carmignano Nice, and other Italian, or Summer Wines,... Gorgona Anchovies, particularly fine; Capers of all sorts; India Soy [sauce], Mangoes, French and Spanish Olives, new Lucca and Florence Oil for Sallad, Vinegars and Fish Sauces of all kinds, for use of the table and kitchen, Mushrooms and Walnut [walnut] Ketchup, Cayenne Pepper, and Curry Powder...; and all will be sold on terms more considerably reduced than in any other Italian Warehouse in Town."

Note 1. This is the earliest English-language document seen (Jan. 2006) that contains the term "Walnut Ketchup" (or "Walnut Ketchup").

Note 2. Perry (chiefly British) is the expressed juice of pears often made alcoholic by fermentation and sometimes effervescent by carbonation or by fermentation in a closed container. Address: Italian Warehouse, No. 5, Cambridge-street, Golden-square [London].

347. Powell (William). 1786. Classified ad: Assortment of groceries to be sold... *Connecticut Journal* (New Haven). June 14. p. 3.

• **Summary:** "At the store formerly occupied by Mr. Joseph Howell... Mersailles [Marseilles] and Florence sweet Oil. Japan Soy [sauce]. English Kitchup."

Note 1. This is the earliest document seen (March 2011) concerning soybean products (soy sauce) in Connecticut; soybeans as such have not yet been reported.

Note 2. This is the earliest document seen (June 2007) that contains the term "Florence sweet oil," suggesting that this sweet oil might be olive oil. Address: Head of the Long-Wharf.

348. Pressey's Grocery Warehouse. 1786. Classified ad: Patna Rice. *Morning Post and Daily Advertiser* (London). Nov. 15. p. [4], col. 1.9.

• **Summary:** “The Nobility and Gentry are most respectfully informed, that they may be supplied with any quantity of fine Patna Rice...

“He has likewise a large quantity of fine Indian Mangoes, Bamboo Pickles, Japan Soy [sauce], true Curry Powder, Chili Vinegar, Cherokee Sauce [Cherokee Sauce],... preserved East and West India Ginger, preserved Tamarinds, Calcari Paste, Lack Soy, Batavia and Goree Arrack,... Zoobditty Match,...”

This ad also ran on Nov. 17. p. [4], col. 2.7. Address: Henrietta-street, Covent-garden [London].

349. Ellison (Henry). 1786. Classified ad: Has for sale,... *State Gazette of South-Carolina (Charleston)*. Dec. 25. p. 1.
• **Summary:** “... Anchovies. India Soy [sauce]. Ketchup. Jamaica Rum...” Address: Grocery Store, No. 9, Bedon’s Alley.

350. Raffald, Elizabeth. 1786. The experienced English housekeeper: For the use and ease of ladies, housekeepers, cooks, &c. written purely from practice, and dedicated to the Hon. Lady Elizabeth Warburton, whom the author lately served as housekeeper: consisting of near nine hundred original receipts... 10th ed. London: Printed for R. Baldwin. iii + 384 + [14] p. Illust. (4 leaves of plates). 12vo.

• **Summary:** Part III includes many recipes (on 53 pages) that call for the use of Catchup. For example: To make the corner dish (p. 16): “two spoonfuls of mushroom catchup, Chayan and salt,...” To make a Sauce for the Cod’s Head (p. 21): “... then take the meat out of your lobster, pull it in bits, and put it in your butter, with a meat spoonful of lemon pickle and the same of walnut catchup, a slice of the end of a lemon,...”

To make a very nice Sauce for most sorts of Fish (p. 28): “Take a little gravy,... put in a whole onion, one anchovy, a spoonful of catchup, and a glass of white wine, thicken it with a good lump of butter rolled in flour, and a spoonful of cream;...”

351. Saikaku. 1786. *Kôshoku ichidai onna Japan*. [Jap]*
• **Summary:** Iino (2003, p. 9): In this 1786 book “we find reference to *kijoyu* (raw [or unheated] soy sauce) where it states: ‘Add *kijoyu* to *tôzatsuke nasu* (pickled eggplant).’” Address: Japan.

352. Long. 1787. Classified ad: Portable desserts. *Times (London)*. Jan. 3. p. 3, col. 4.

• **Summary:** “The Nobility and Gentry only are informed, that Long has imported a large quantity of neat boxes of curious fruits, much handsomer and genteeler for presents than Guimaroen plumbs, and come at nearly the same price;... preserved, East and West-India Ginger; candied ditto for the pocket when shooting or hunting... real Tapioca, Lock Soy, Japan Soy [sauce], and all kinds of rich sauces, &c. &c. together with a large variety of India goods, at

his warehouse, No. 73, Cheapside, who being the original importer can afford them on lower terms and of superior quality than any shop in town.” Address: No. 73, Cheapside, London.

353. Powell (William). 1787. Classified ad: To be sold... Groceries. *Connecticut Journal (New Haven)*. Feb. 14. p. 4.

• **Summary:** “... Capers and Sallad Oil, Japan Soy [sauce], English Ketchup... Black Pepper, Cayan [Cayenne] do. [ditto = Pepper], Alspice, Race Ginger, Ground do. [Ginger],...” Address: State-Street, New-Haven.

354. Burgess. 1787. At Burgess’s Italian and Salad Oil Warehouse... (Ad). *World and Fashionable Advertiser (London)*. Feb. 17. p. [1], col. 3.5.

• **Summary:** “Superfine Sallad Oil,... West India Pickles, genuine Cayenne Pepper, Bengal Currie Powder, Japan Soy, Lemon Pickle, Oyster Ketchup, Shalot Ketchup, variety of Vinegars, Devonshire Sauce, with the greatest variety of rich Sauces for Fish, Gravies, made dishes,...” Address: No. 107, corner of Savoy Steps, Strand [London].

355. Pressey’s. 1787. Classified ad: New pistachio nuts. *Times (London)*. May 31. p. 4, col. 2.

• **Summary:** “Just landed... Jordan Almonds, dried Dates, Japan and Patna Rice, Bengal Currie Powder, Lock Soy, Japan Soy [sauce], Parmesan Cheese... Chili and French Vinegars, Bambo [bamboo] Achar and Bambo Pickle, Green and Yellow Mangoes, with and without shell, Minorca Honey, Zobditty [Zoobditty] Match... high flavoured Batavia and Goa Arrack, with a great variety of other foreign goods, at Pressey’s Warehouse...”

A very similar ad appeared in the June 7 issue (p. 4, col. 3).

Note: This is the earliest English-language document seen (Jan. 2006) that contains the term “Zobditty Match.” Later modified into “Zoobditty Mutch” and “Zoobditty Match,” it probably refers to a type of sauce. Address: Henrietta-street, Covent-garden [London].

356. Pressey’s. 1787. Classified ad: Preserved East and West-India green ginger. *Times (London)*. June 2. p. 4, col. 3.

• **Summary:** “Just landed... Bengal Currie Powder, Lock Soy, Japan Soy [soy], East India Bervits [Bervitte?, Bervitty?], Rosolio Maraschín from Java, Cashew Nuts, Bengal Paddy, fine high flavoured Batavia and Goa Arrack,... Mandive and Tapioca, Parmasan [Parmesan] Cheese,... Pipe, and Ribbon Maccaroni [Macaroni], new Pistachio Nuts, Hickary [Hickory] Nuts, true Arquebusade Water, Cherokee Quin, Cavice and Wood’s Sauce,... Barbadoes Cane Spirit, Rotterdam Geneva, a variety of Foreign Liquors... at Pressey’s Warehouse... where the Nobility and Families may depend on being supplied with goods of the very first quality.”

This ad also appeared in the June 9 issue (p. 4, col. 3) and the June 16 issue (p. 4, col. 3).

Note 1. Geneva is a highly aromatic bitter gin, originally made in the Netherlands.

Note 2. This is the earliest document seen (Dec. 2005) that uses the word “Cavice” to refer to the name of a sauce. Elizabeth David (1970, p. 11) believes that it, or its relatives may have been the ancestors of the word “catsup.” Address: Henrietta-street, Covent-garden [London].

357. Pressey’s. 1787. Classified ad: Mangoes and bambo achar. *Times (London)*. June 12. p. 4, col. 3.

• **Summary:** “The Nobility and Gentry are most respectfully informed, that they may be supplied at Pressey’s warehouse,... Bambo Achar, Bambo Pickle, true Bengal Currie Powder, fine Patna Rice of the pincushion sort... from the East India Company’s warehouses; Japan Soy [sauce], Turmeric [Turmeric], East India Bervitty, China Lock Soy, Zoobditty Match, high flavoured Batavia and Goa Arrack...”

Note 1. This is the earliest document seen (Jan. 2007) in the *Times (London)* that contains the term “China Lock Soy.” It probably refers to rice vermicelli; notice that it is listed among the sauces and pickles.

Note 2. This is the earliest English-language document seen (Dec. 2005) that contains the term “Zoobditty Match.” According to the University of Wolverhampton online trade dictionary, this is: “A form of sauce or pickle, apparently originating in India, but Advertised around 1800 by tradesmen like Burgess... According to the expert on wine labels, N.M. Penzer [see *The Book of the Wine Label*], the term appears to be a corruption of two Indian terms, ‘joobitty’ (tasty) and ‘machli’ (fish).” Thus it may have been a tasty fish sauce. Address: Henrietta-street, Covent-garden [London].

358. Williams and Company. 1787. Classified ad: Just come in, great choice of fine Nankeen. *Times (London)*. Nov. 26. p. 1, col. 4.

• **Summary:** “... the greatest variety of real old japanned Stick Fans; fine carved Ivory stick and sandalwood [sandalwood] Fans; curious Italian ditto, mounted in the neatest manner;... preserved Ginger and Sweetmeats, Japan Soy [sauce], fine India Matting... All the said goods will be sold cheap, for ready money.” Address: No. 2, St. James’s-street, Pall-mall [London].

359. Mason, Charlotte (Mrs.). 1787. The lady’s assistant for regulating and supplying the table, being a complete system of cookery, &c... Sixth edition, enlarged, corrected, and improved, to the present time. London: Printed for J. Walter, at Homer’s-Head, Charing Cross. [20] + 484 + [20] p. See p. 278-79, 317.

• **Summary:** The section on “Ketchup” contains a recipe titled “Soy” [sauce] (p. 317) which states: “Soy comes from the

East Indies; it is made from their mushrooms, which grow in the woods. They are of a purplish colour, and are wrinkled on the surface like a morell [morel]. They gather them in the middle of the day, and wash them in salt and water; and then lay them in a dish, mash them with their hands, and sprinkle them with salt and beaten pepper; the next day the liquor is pressed off, and some * galangals and spices added to it; it is boiled up till it is very strong, and then some more salt is sprinkled into it. In this manner it will keep many years.”

Footnote: * Galangals is a root which grows in the East Indies.

To bake a Collar of Fish (p. 247-48): “For sauce—take the water the eel was boiled in, and the bones of the eel, with the fins, &c. of the other fish; put them into a saucepan, with a bunch of sweet herbs, an onion, some mace, cloves, and white pepper; let these stew till reduced to a quarter of a pint; strain it; add to it three or four spoonfuls of fish-cullis, a few truffles and morells [morels], a few mushrooms, two spoonfuls of ketchup, or half a one of soy, a piece of butter rolled in flour; season it with a little salt, and give it a boil;...”

The word “ketchup” appears in this early cookbook at least 65 times, and “walnut ketchup” appears at least four times—so by 1787 ketchup has become a widely-used condiment in England.

For example: Pigeons in Fricandeau (p. 278-79): “When they are drawn, truss them with their legs in their bodies, lard them with bacon, slit them, then fry them in butter of a fine brown; then put them into a stew-pan, with a quart of good gravy, a little lemon-pickle, a little colouring, a tea-spoonful of walnut-ketchup, some chyan [cayenne pepper], and a little salt, with a few truffles and morells, and some yolks of hard eggs; lay the pigeons in the dish, and pour the sauce with the ingredients over them.”

A section titled “Ketchup” (p. 315-17) appears just before the “Soy” recipe. There are ten recipes for home-made ketchup: Ketchup of mushrooms. Another way. To make ketchup. Ketchup of Walnuts. Another walnut ketchup. Another walnut ketchup. White ketchup. Ketchup of the shells [of walnuts]. Oyster ketchup. English kechup.

Here are several of the most basic ketchup recipes given.

“To make Ketchup: Put the peel of nine Seville oranges to three pints of the best white-wine vinegar; let it stand three or four months; pound two hundred of walnuts, just before they are fit for pickling; squeeze out two quarts of juice, put it to the vinegar; tie a quarter of an ounce of cloves, the same of mace, a quarter of a pound of eschalot, in a muslin rag; put them into the liquor; in three weeks, boil it gently till near half is consumed; when cold bottle it.”

“Ketchup of walnuts: Bruise a hundred or two of walnuts, just before they are fit to pickle; squeeze out the juice, let it stand all night, pour off the clear; to every quart one pound of anchovies; boil it; when the anchovies are dissolved, strain the liquor; add half a pint of red wine, a gill

of vinegar, ten cloves of garlic; mace, cloves, and nutmeg, half a quarter of an ounce each, pounded; let this simmer till the garlic is tender.”

“Another Walnut ketchup: Pound walnuts in a mortar, squeeze out the juice, let it stand to settle, pour off the clear; to every pint add a pound of anchovies; of mace, cloves, and Jamaica pepper, each half a quarter of an ounce; boil all together till the anchovies are dissolved, then strain it off, put in a good handful of eschalots, and boil it up again; to every quart of this liquor put half a pint of vinegar. It will keep for years; and two or three spoonfuls, in melted butter, makes excellent fish sauce.”

“White Ketchup: Take one quart of white wine, one pint of elder vinegar, and one quart of water; half a pound of anchovies with their pickle, half a pound of horse-radish scraped, one ounce of eschalots bruised, one ounce of white pepper bruised, one ounce of mace, a quarter of an ounce of nutmegs cut in quarters; boil all together till half is consumed, then strain it off: when it is cold, bottle it for use. It is proper for any white sauce, or to put into melted butter.”

“Oyster Ketchup: Boil small oysters in their own liquor, till the goodness is out; to every pint of clear liquor put half a pint of red wine, the same of white; mace, black, and Jamaica pepper, a quarter of an ounce each; pour it boiling hot on one dozen of eschalots, half the rind of a lemon, a piece of horse-radish: when cold, mix it with the oyster-liquor; bottle it.”

“English ketchup: Take a quart of white wine vinegar, put into it ten cloves of garlic, peeled and bruised; take also a quart of white port, put it on the fire; and when it boils, put in twelve or fourteen anchovies washed and pulled to pieces; let them simmer in the wine till they are dissolved; when cold, put them to the vinegar, then take half a pint of white wine, and put into it some mace, some ginger sliced, a few cloves, a spoonful of whole pepper bruised, let them boil a little; when almost cold, slice in a whole nutmeg, and some lemon-peel, with two or three spoonfuls of horse-radish; stop it close, and stir it once or twice a day. It will soon be fit for use. It must be kept close stopped.”

Note: This 6th edition was the last real edition ever published. So the author never corrected her apparently mistaken recipe for “Soy.”

Interesting non-soy ingredients. The word “almonds” appears 54 times in this book and the word “almond” 31 times. Almond recipes include: Almond pudding (p. 345, 350). Almond fraze (p. 362). Almond tarts (p. 365, 366). Almond cheesecakes (p. 368). Almond custard (p. 371). Almond cake (p. 374). Almond loaves (p. 382). Almond cream (p. 414, or pastachia [pistachio] cream, to be mixed with a pint of dairy cream). Almond soup (p. 205). Address: A professed housekeeper, who had upwards of thirty years experience in families of the first fashion [England].

360. Priddy’s Foreign Warehouse. 1788. Classified ad:

French Pomatums, Cheese,... *World (London)*. March 19. p. [1], col. 3.7.

• **Summary:** “... just landed; real Gorgona Anchovies, Quin Sauce, Coratch Cavice, India Soy [sauce], Lemon Pickle and all Sorts of Fish Sauces,...”

Note: This is the earliest English-language document seen (Dec. 2012) that uses the term “Quin sauce” to refer to “Quin’s sauce.” Address: No. 14, Poland-street [London].

361. *Independent Journal (New York City)*. 1788. Soy. March 22. p. 3.

• **Summary:** “Many of our readers may perhaps not be disappointed to know the method of making the celebrated Eastern pickle, known by the name of Soy [sauce]—It is prepared from kidney-bean of India. To a quantity of these beans boiled to a certain degree of softness, they add an equal quantity of pounded barley, or rather wheat; and having properly mixed them, cover up the mass for a day and a night in order to ferment; having then put the whole into a pot, they cover it with salt, pouring over it a proper quantity of water.

“This compound they stir carefully at least once a day, but if twice or thrice the better, for two or three months, at the end of which time filtrate and express the mass, preserving the liquor in wooden vessels. A second quantity of liquor [water] poured on these ingredients, and stirred for some days as before, will yield an inferior kind of soy—We received this account from an ingenious and curious gentleman, long resident in India for the mere purpose of philosophic investigations.”

Note 1. This article also appeared in the *Providence Gazette and Country Journal* [Rhode Island] (5 April 1788, p. 3), and *New-Hampshire Gazette and General Advertiser* (23 April 1788, p. 1).

Note 2. This appears to be an original description. Yet, it is surprising to read that soy sauce was made at this time, or in this way, in India.

362. Priddy’s Foreign Warehouse. 1788. Classified ad: Foreign pomatums, cheese, hams, &c. &c. *Times (London)*. March 31. p. 1, col. 2.

• **Summary:** “... Essence of Anchovies; French and Spanish Olives; India Soy; Lemon Pickle; and all sorts of Fish Sauces, and curious Vinegars, Pickles, Oil, &c.” Address: No. 14, Poland-street [London].

• **Summary:** In the chapter on Japan, Section IV states (p. 122): "Their articles of exportation are wrought silk and cotton, rice, soy, Japan ware, porcelain, gold, silver, copper,..."

Other titles: "New, Royal, and Authentic System of Universal Geography..." Address: Rev., Vicar of Dixon, Monmouthshire [Wales].

366. Williams and Company. 1789. Classified ad: No. 2.—St. James's-street. *Times (London)*. Feb. 10. p. 3, col. 4.

• **Summary:** "Mr. Williams, who has had the honour of serving the first Personages and most of the Nobility and Gentry, begs leave to acquaint them, especially his former customers,... the said collection is said to be the most curious ever seen together in England, and for the conveniency of the Nobility, Gentry, &c. they are placed in the first floor... Indian Matting, preserved Ginger, Japan Soy [sauce], &c. the above goods are all marked at lowest prices for ready money." Address: No. 2, St. James's-street [London].

367. Pressey's. 1789. Classified ad: New Patna rice. *Times (London)*. May 22. p. 4, col. 4.

• **Summary:** "The Nobility are very respectfully informed, that they may be supplied with beautiful new Patna Rice, in small bags and casks, by the last ships from India, of very superior quality; likewise Curry, Batavia Arrack 12s. per gallon, Japan Soy [sauce], Masulipatam Snuff, preserved Ginger..." This ad also appeared in the May 27 issue (p. 3, col. 4). Address: Warehouse, Henrietta Street, Covent Garden [London].

368. China Warehouse. 1789. Classified ad: China Warehouse selling off a prime cost. *Times (London)*. May 25. p. 3, col. 4.

• **Summary:** "A great Variety of Foreign China... Salt Spoons, India Paper Hangings, India Fishing Lines, fine India Ginger, India Soy; also a quantity of real India Nankeens, Muslins, and some very fine India Long Cloth..." Address: No. 15, Shug Lane, near the Haymarket [London].

369. Burgess. 1789. Classified ad: For families going into the country. Delicacies for the table. *Times (London)*. July 27. p. 1, col. 2.

• **Summary:** "To the Curious in Fish Sauce and Gravies.

Burgess's new invented Sauce Picante, to eat with all kinds of cold meats, and directions given for using it. His Original and Superior Essence of Anchovies, so much approved of for Anchovy Sauce. Also the finest flavoured Gorgona Anchovies, for bread and butter, and for making Sandwiches, &c."

"Japan Soy [sauce], and Lemon Pickle. Fine Capoot Capers." Also many types of hams, tongues, pickles and vinegar. This ad also appeared in the Aug. 3 issue (p. 1, col. 2). Address: No. 107, Corner of Savoy Steps [London].

370. Stuart (James). 1789. Classified ad: Has for sale,... at his grocery,... *New-York Daily Gazette (New York City)*. Sept. 16. p. 897.

• **Summary:** "... Quin-Sauce, India Soy [sauce], Ketchup, Mustard, Allspice, Cayenne and black Pepper,..." Address: No. 10, Smith street.

371. Burgess (J.). 1789. Classified ad: Delicacies for the table. *Times (London)*. Dec. 22. p. 2, col. 1.

• **Summary:** "Wild Boar Heads, cooked in the true Epicurean flavour, are landed in high perfection... New Rein Deer Tongues... Dutch Geese Smoked,... Welch Smoked Salmon,... English and Hambro' Sour Crout [Sauerkraut].

"Likewise his Sauce Royal, he can recommend to families, for Stewing all kinds of Carp, Tench, Eels, Barbel, Pike, &c.

"Japan Soy [sauce] and Lemon Pickle. Fine Capoot Capers. Superfine Lucca and Florence Oils, for Sallads. Genuine Cayenne Pepper.

"Best American Spruce Beer, for Table use..."

Note: This is the earliest English-language document seen (Feb. 2006) that contains the term "Sauce Royal." By May 1792 this sauce was being imported into the British colonies of North America. Address: Warehouse, No. 107, Strand, near Exeter Change [London].

372. *SoyaScan Notes*. 1789. Terms used in the *Times (London)* to refer to soy sauce (Overview). 23 Jan. 2007. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** In descending order of frequency, terms with two or more appearances are: Japan Soy—10. Lock Soy (probably a type of rice vermicelli, not soy sauce)—8. India Soy—5. China Lock Soy (probably vermicelli)—2. Lack Soy (probably rice vermicelli)—1. China Lack Soy (probably rice vermicelli)—1.

Note: The prevalence of the term "Japan Soy" indicates (1) That this type of soy sauce was probably most popular, and (2) That it was probably purchased from Dutch merchants; they were the only Europeans allowed to trade with Japan during the 1780s.

373. Ellis, John. 1789. A catalog of such foreign plants as are worthy of being encouraged in our American colonies

for the purposes of medicine, agriculture and commerce. *Transactions of the American Philosophical Society* 1:325-36. See p. 327. (Held at Philadelphia, for Promoting Useful Knowledge. Second edition corrected). [1 ref]

• **Summary:** “From a pamphlet by John Ellis, F.R.S. [Fellow, Royal Society]. Presented by the Honorable Thomas Penn, Esq. to the American Philosophical Society through the hands of Samuel Powell, Esq.”

“*Dolichos soja* Linn. Sp. 1023. A kind of kidneybean called Daidso. Used for making Soye* or Indian Ketchup. See Kaempfer, Amoenitat.

“* The method of preparing East-India Soye or India Ketchup. Take a certain measure, for instance a gallon, of that sort of kidney-beans, called Daidso by the Japanese, and Caravances by the Europeans; let them be boiled till they are soft; also a gallon of bruised wheat or barley (but wheat makes the blackest Soye) and a gallon of common salt. Let the boiled caravances be mixed with the bruised wheat, and be kept covered close a day and a night in a warm place, that it may ferment. Then put the mixture of the caravances and wheat, together with the gallon of salt, into an earthen vessel, and with two gallons and a half with common water, and cover it up very close. The next day stir it about well with a battering machine or mill (*Rutabulum*) for several days, twice or thrice a day, in order to blend it more thoroughly together. This work must be continued for two or three months, then strain off and press out the liquor, and keep it for use in wooden vessels; the older it is the clearer it will be, and of so much more value. After it is pressed out, you may pour on the remaining mass more water, then stir it about violently, and in some days after you may press out more Soye.”

Note: In 1770 Ellis was the commercial agent for West Florida in London. His first book, published in 1770, was titled *Directions for Bringing Over Seeds and Plants... with a Catalogue of Such Foreign Plants as are Worthy of Being Encouraged in Our American Colonies...* It told how to pack seeds (often in beeswax) to prevent them from spoiling on long sea voyages.

First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished. \

374. **Product Name:** [Kimbue Soy Sauce].

Foreign Name: Kimbue Shōyu.

Manufacturer's Name: Fueki Shoyu Co. Ltd.

Manufacturer's Address: 660 Kamiigusa, Kawashima-cho, Hiki-gun, Saitama prefecture, Japan.

Date of Introduction: 1789.

New Product–Documentation: Product with Label (Soken Gentle Tamari) purchased at Open Sesame in Lafayette, California. 1991. Feb. 16. “Low Sodium Wheat Free Soy Sauce.” Since 1789. Ingredients: Whole soybeans, well water, sea salt. “Soken Gentle Tamari... is brewed by the

Kimbue Co., makers of fine soy sauce for over 200 years.”

Ireland: Printed by J. Connor. xxiv + 24 + 534 p. See p. 217.

• **Summary:** The recipe for "Peregoe Turkey" states (p. 217): "Take a turkey about eight or nine pounds weight, draw and singe it, season the inside... roast it one hour and a half, baste it a little with the wine, and then with butter; put the rest of the wine into a stew-pan, with a little good brown gravy, some butter mixed with flour, a spoonful of India soy or mushroom ketchup, a little pepper and salt, and the juice of half a lemon; stew it for fifteen minutes,..."

Note: India soy [sauce] and mushroom ketchup are considered interchangeable. Address: Many years cook at the Globe-Tavern, Fleet-street; the White-Hart Tavern, Holborn; and now at the Temple Coffee-House, London.

384. Lamarck, Jean Baptiste... de. 1790. Dictionnaire encyclopédique méthodique. Botanique. Vol. 2. Dolich du Japon, Dolichos soja Lin. [Systematic and encyclopedic dictionary. Botany. Vol. 2. The Soybean, Dolichos soja]. Paris: Chez Laporte, Imprimeur-Libraire. 774 p. See p. 299. [1 ref. Fre]

• **Summary:** Plants are listed by French names. The author lists the soybean under Dolich. as follows: "28. Dolich du Japon, *Dolichos soja*. Lin. *Dolichos caule erecto flexuos, racemis axillaribus eredis, leguminibus pendulis hispidis subdispermis*. Lin. Thunb. Fl. Jap. 282.

"*Phaseolus erectus, siliquis Lupini, fructu pisi majoris candido*. Kämpf. Amoen Exot. 837. t. 838. Japonicè; daidsu s. mame. *Phaseolus Japonicus*. Raj. Suppl. 438. n°. 28 [John Ray. 1704. *Historia plantarum*. Vol. 3. *Supplementum*. See p. 438].

The original French reads: "Sa tige est droite, haute d'un pied & demi, striée ou cannelée dans sa partie supérieure, & abondamment chargée de poils rousseâtres. Ses feuilles sont composées de trois folioles ovales, obtuses, velues, molles, soutenues sur des pétioles communs velus & striés. Les fleurs font petites, purpurines, disposées dans les aisselles des feuilles sur des grappes droites, velues, & fort courtes. Les gousses sont longues d'un pouce & demi, pendantes, un peu comprimées, pointues, dispermes, & couvertes de poils rousseâtres fort abondans. Cette plante croît au Japon, dans les Indes orientales, & est cultivée au Jardin du Roi. Les Japonais préparent avec ses semences une sorte de bouillie qui leur tient lieu de beurre, & dont ils font une sauce fameuse, qui se sert avec les viandes rôties; ils nomment la bouillie *miso*, & la sauce *soja* ou *soja*."

In English, this means: "Its stalk is straight, a foot and a half high, striped or fluted in its upper part and abundantly covered with reddish or russet hairs. Its leaves are comprised of 3 oval leaflets, obtuse (rounded at the free end), hairy, soft, several leaves are borne on petioles that are hairy and striped. The flowers are small, purplish, arranged on the axils of the leaves, in straight clusters which are hairy and very short. The pods are an inch and a half long, pendant, slightly compressed (not round), pointed, dispermes, and covered

with very abundant reddish hairs. This plant grows in Japan and the East Indies, and is cultivated at the Royal Garden (*Jardin du Roi*). It is an annual, and I have seen a living plant specimen. Using its seeds, the Japanese prepare a sort of paste [miso], which they use in place of butter, and that is also used to make a famous sauce, which is served with roasted meats. They call the paste *miso* and the sauce *sooja* or *soja*.

Note 1. This is the earliest (and only) French-language document seen (Jan. 2010) that uses the term “*Dolic du Japon*” (regardless of capitalization or hyphenation) to refer to the soybean.

Note 2. This is the earliest French-language document seen (April 2012) that uses the term *la sauce soja* to refer to soy sauce.

Note 3. Merrill stated incorrectly that Lamarck called the soybean “*Phaseolus max*” following Linnaeus. Address: Former officer in the Regiment de Beaujolais, Royal Academy of Sciences.

385. Loureiro, Joao de. 1790. *Flora Cochinchinensis: sistens plantas in regno Cochinchina nascentes. Tomus II.* [The flora of Cochin China, setting forth the plants in the kingdom of Cochin China. Vol. 2.]. Ulyssipone [Lisbon], Portugal. p. 433-884. See p. 441-42, 522-24. 27 cm. [Lat]

• **Summary:** In the section titled “*Diadelphia. Decandria*” (p. 441-42) we read: “Sp. 13. *Dolichos Soja*, Dau nanh. Hoam téu [huang-tou = yellow bean]. Writing in Latin, he gives a botanical description of the plant, describes its habitat as Cochin China and China, and cites as sources Thunberg, Kaempfer, and Rumphius. Then he adds: “Uses: These seeds, having been boiled or lightly toasted, are quite acceptable to both the stomach and the palate. From them is made the famous Japanese soy sauce called Soia, which the Chinese and Cochin Chinese frequently use for cooking food and stimulating the appetite. There is also produced a white food resembling coagulated milk (*lactis coagulati*) and called Teu hu or Tau hu [tofu] by the Chinese; it is the most widely used food among them. Although it is rather bland by itself, if the appropriate condiments are added, it becomes a food which is neither unpleasant nor unhealthy.”

The author: Ioannis (Joao) de Loureiro was born in Portugal in 1715. Somewhere between 1735 and 1743 he arrived in Cochin China (today's Vietnam) as a Jesuit missionary. Living at Hué, the capital, near the sea coast, he tells us that he had no access to European medicines. So he was obliged to depend entirely on native medicinals, and by investigating them he was necessarily induced to study the local flora and to make botanical collections. Thus he developed a herbarium of nearly 1,000 species. In 1779 he went to Canton to do botanical research for 3 years, living within a factory. He left for Lisbon in 1782, and died in 1794 or 1796. He was one of the most prominent botanical collectors of the 1700s, giving rich descriptions of

economical and medicinal uses.

The book: Volume 1 was first published in 1789; the set was reissued 3-4 years later edited by Willdenow, with added notes. It describes 1,257 plants (Bretschneider 1880, p. 129-46).

Note 1. This is the 2nd earliest document seen (May 2010) concerning soybeans in Vietnam, or the cultivation of soybeans in Vietnam. This document contains the 2nd earliest date seen for soybeans in Vietnam, or the cultivation of soybeans in Vietnam (1790). The source of these soybeans is unknown.

Note 2. This is the earliest Latin-language document seen (Feb. 2004) that uses the word “*Teu hu*” or “*Tau hu*” to refer to tofu.

Also discusses: *Dolichos tetragonolobus* (p. 437. Winged bean? Habitat: Cochin China and China). The genus *Arachis* (p. 522-24), with two species: *Arachis asiatica* and *Arachis africana*. He notes (p. 524) that Linnaeus calls the latter *Arachis hypogoea* [peanut]. Address: Portugal.

386. Miller, Philip; Chazelles, Laurent Marie. 1790. *Dictionnaire des jardiniers,... Supplement: Dolichos soja* [The gardener's dictionary,... Supplement]. Paris: Chez Guillot, Libraire de Monsieur. See Vol. 1, p. 415. [Fre]

• **Summary:** Entries for the 27 species in the genus *Dolichos* begin on p. 410. On p. 415 we read: “24. *Dolichos soja*. Linn. sp. 28. Thumb. flor. Jap. p. 282.” The *Dolic de Japon* bears pendant pods, covered with coarse hairs, each containing two white seeds, like large peas, from which the Japanese make a sauce, which they call Soy / Soja, for seasoning their foods.

The French text begins: “*Dolic du Japon. La tige de cette plante annuelle est flexueuse, érigée, très-hérissée et longue d'un pied. Ses feuilles sont ternées, elues et pédonculées. Ses fleurs sont propres et en grappes axillaires... les gousses sont pendantes, hérissées, et renferment deux semences blanches, comme de gros pois, dont les Japonais font une sauce pour assaisonner leurs mets, et qu'ils nomment Soja.*”

387. Yuan Mei. 1790. *Suiyuan shidan* [Recipes from the Sui garden]. China. [Chi]

• **Summary:** Wade-Giles reference: *Sui Yüan Shih Tan*, by Yüan Mei. Qing dynasty.

H.T. Huang (2000, p. 323-24), in the section titled “Products associated with tou fu,” states that this is the earliest document seen that mentions fresh tofu curds. In a recipe for “Hibiscus Tofu” (*fuyong doufu*) the famous Qing dynasty gastronome says (p. 100): Place fresh tofu curds (*funao* = “tofu brain”) in well water and heat to boiling three times to remove the beany flavor. Suspend the curds in chicken soup and heat again to boiling. Before serving, garnish with laver / nori (*Porphyra*, a sea vegetable) and pieces of shrimp. Later, fresh tofu curds were also called

“tofu flowers” (*douhua* or *doufu hua*).

Concerning frozen tofu, Huang states (p. 324) that a recipe in this book states: Boil the thawed tofu in water to remove the remaining beany flavor, then simmer it in a soup base.

Huang also states (p. 325, 364) that both pressed tofu (*doufugan*) and smoked tofu (*xun doufu*) are mentioned in this book.

Concerning fermented tofu, Huang (2000, p. 327) notes: By the middle of the Qing dynasty local varieties of *furu* had begun to win national fame, such as the *furu* of Suzhou [in southern Jiangsu; W.-G. Su-chow or Soochow, formerly Wuh sien] and the white *furu* of Guangxi [or Guangxi Zhangzu, an autonomous region in southeast China; W.-G. Kuangsi]. The *Suiyuan Shidan* says:

Rufu: The ones from the [shops] near the front of the Temple of General Wên in Suzhou are particularly good. The colour is black, and the flavour is clean. There are two types, a wet and a dry. The product with some shrimp paste in it is also attractive, but may have a slight fishy taste. The white *furu* from Guangxi (Kuangsi) is also outstanding, especially that made by the family of the official Wang Ku.”

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 48 recipes: Jiang itself in 15, soy sauce made from jiang named *qingjiang* in a 24 recipes, soy sauce named *jiangyou* in 2 recipes, soy sauce named *jiangzhi* in 1 recipe, and soy sauce named *jiangshui* in 6 recipes. Fermented black soybeans (*shi*) are used in 2 recipes, and a new type of soy sauce named *qiuyou* (W.-G. *ch’iu yu*) is used in a whopping 62 recipes. Note: This is the earliest document seen (April 2012) in which a soy-based seasoning named *qiuyou* is mentioned. Huang states (p. 371) that *qiuyou* is written with the Chinese characters for autumn + oil, implying a sauce harvested in autumn.

Wilkinson (2000, p. 647-48). This was the most famous recipe book of its day, yet *wok* dishes accounted for only 16% of the recipes. Yuan Mei (lived 1716-1798) was one of China’s four most famous “literati gourmands;” they exerted a considerable influence on the development of a higher cuisine, especially when they compiled their own cookbooks...”

Letter from Dr. H.T. Huang. 1996. Sept. 29. “Page 103 mentions mock roast goose made with yam wrapped in *tou fu p’i* (yuba).”

Dr. H.T. Huang, expert on the history of Chinese food and agriculture (personal communication, 5 June 1993), gives the date of this document as +1790, and the English translation of the title as “Recipes from the Sui Garden.” He notes that page 107 contains three recipes for gluten.

Newman (1989) states: “The idea of freezing bean curd is not new. Iced Bean Curd is one of Yuan Mei’s recipes from the Xi Yuan Cookery Book written near the end of the 18th

century. This book by a poet, government official and author, is a very comprehensive volume of over 300 recipes, only some are about tofu. One difference is that the Iced Bean Curd recipe is meant to be served hot, the doufu in it is first frozen then prepared for use.”

Bo (1982): In this work Yüan Mei states that it is more graceful for a writer to use the term “ch’ing chiang” instead of “chiang-yu” when referring to soy sauce.

Hummel (1944, p. 955-56): Yüan Mei lived 1716-1798. A poet, literary critic, and essayist, he was a native of Ch’ien-t’ang (Hangchow). Resigning (1748) from his post as magistrate of Chiang-ning, he retired (1749) to his newly acquired “Garden of Contentment,” Sui-yüan, near Nanking. From 1784-1795, spent in alternate travel and quiet seclusion, he came to be known as one of the most skillful poets of his time.

Reichl (1985): Yuan Mei has been called the “the 18th century philosopher of the table.” His sayings are widely quoted. For example: “A great cook cannot with the utmost application produce more than four great dishes a day.” Address: China.

388. Young’s Foreign Warehouse. 1791. Classified ad: At eighteen-pence per pound, the very best Parmesan Cheese, chiefly of the Honey-comb Kind. *Times (London)*. April 6. p. 2, col. 2.

• **Summary:** “Five thousand pounds of the above Cheese is just landed at Young’s Foreign Warehouse... Hams, Tongues, genuine India Soy [sauce], Mangoes, &c. at the lowest prices for ready money.”

“N.B. His Essence of Anchovies and other Sauces may be depended on at all times, as being the most genuine and pure, he being the real inventor.” Address: No. 44, New Bond-street [London].

389. Ball’s Italian and Oil Warehouse. 1791. Classified ad: Just received at Ball’s Italian and Oil Warehouse,... *World (London)*. May 23. p. [2], col. 4.7.

• **Summary:** “... rich Sauces, viz. Essence of Anchovies, Lemon Pickle, Cavice, Corraiter, India Soy [sauce], Quin Sauce, Zoobditty Mak [sic],...”

“Spruce Beer, 4s. per dozen; Seltzer and Pymont Waters of the spring filling, just received.”

The term seltzer water is a genericized trademark that derives from the German town Selters, meaning “water from Selters,” where naturally carbonated water has been commercially bottled and shipped into all parts of the world at least since the 18th century. Address: No. 76, New Bond-street (six doors from Oxford-street) [London].

390. Thomas (William). 1791. Classified ad: Has for sale,... *New-York Daily Gazette (New York City)*. June 2. p. 1.

• **Summary:** “... Fresh India soy [sauce], quins sauce, ketchup, and pickled mushrooms...” Address: No. 243,

Queen-street.

391. Hugget (S.). 1791. Classified ad: Has for sale, imported by Captain Gardner from London. *New-York Daily Gazette* (New York City). June 22. p. 3.

• **Summary:** "... Capers in quart bottles. Quin sauce. Ketchup. Essence of Anchovies. Pickled Lemons. Cavice and India Soy [sauce], Havannah [Havana] Sugars, in boxes..." Address: No. 42, Broadway.

392. Burgess (J.). 1791. Classified ad: Delicacies for the table. At Burgess's Italian Warehouse. *Times* (London). Aug. 20. p. 3, col. 1.

• **Summary:** "Imports, and sells wholesale, retail, and for exportation. J. Burgess begs to inform Noblemen and Gentlemen's Families, he has received a large cargo of fine Parmesan Cheese..."

Under the centered heading "Zoobditty Mutch" are listed: "Walnut Ketchup, of the finest quality. Quin's Sauce. Devonshire Sauce. Cavice. Lemon Pickle. Japan Soy [sauce]. Cherokee Sauce. Fine Capoot Capers, of the best quality, such as will keep. Bengal Currie Powder, with a Receipt [recipe] how to use it."

Note: This long ad, which takes up nearly one newspaper column, has these other centered headings: To the curious in Sallad Oil. Vinegars. Rich sauces. Burgess's Genuine Essence of Anchovies. Burgess's new-invented Sauce a L'Espagnole. Burgess's Sauce Piquante for cold meats. Sauce Royal. Sauce for stewed beef. Pickles. Best mustards. Hams and Tongues. Neats' tongues. True Swiss Arquebu Ade. Seltzer and Pyrmont Waters. Essence of American Spruce. To the Curious in Lamp Oil.

This ad also appeared in the Aug. 29 issue (p. 1, col. 4) and in the Sept. 1 issue (p. 1, col. 3). Address: No. 107, Corner of Savoy Steps, Strand [London].

393. Erving's (John) Grocery-Store. 1791. Classified ad: Just imported on the ship Union, Capt. Barnard... a great variety of delicate sauces, viz. *Argus* (The) (Boston, Massachusetts). Sept. 9. p. 3.

• **Summary:** "Essence of Anchovies, Royal Sauce, Japan Soy [sauce], Quin Sauce, Chilly Vinegar,... Cavices,... Lemon Pickle, Oyster Ketchup, Devil's Paste, E.I. [East Indies = India] Currie Powder, Cerach, Yellow ditto [Yellow Cerach], Elder Vinegar, Cherokee Sauce, Tartarian Ketchup, Zoobditty Mach."

Note: This is the earliest English-language document seen (Feb. 2006) that mentions the word "Cerach" or the terms "Royal Sauce," "Oyster Ketchup" (in North America), "Yellow Cerach," "Tartarian Ketchup," or "Zoobditty Mach." Mr. Erving apparently liked to coin names for commercial products. Address: No. 42, Marlborough-Street [Boston].

394. Skill and Son. 1791. To families town or country,...

(Ad). *Morning Chronicle* (London). Sept. 21. p. [1], col. 4.6.

• **Summary:** "Cheese merchants and oilmen to their Imperial and Most Faithful Majesties; and to their royal highnesses The Prince of Wales, The Duke of Clarence, and Duchess of Cumberland;..."

"To the Curious in Fish Sauce: Skill and Son's Rich and Incomparable Essence of Anchovies, for Fish Sauce, to be used in the same manner as India Soy, or mixed with plain melted butter."

"Skill's Rich Imperial Sauce... for stewing Eels, Carp, Tench..."

"Coratch Sauce, for Steaks, Chops, and Cutlets

"Skill's Newly Invented Camp Sauce, or Essence of Beef..."

"Skill's Newly Invented Mint Sauce, made sweet purposely to eat with Venison, Roast Lamb, &c..."

"Real India Soy, Cavice, Quin Sauce, Zobditty Match, Walnut, Mushroom, and Oyster Ketchups [Walnut Ketchup, Mushroom Ketchup], Lemon Pickle, and all kinds of Rich Sauces, that are in use at the most Fashionable Tables."

Note: This is the earliest document seen (April 2012) that contains the term "real India soy." But what does it mean? Why use the word "real?" Where and how was it made, and from what ingredients? Address: Great Italian and Foreign Warehouse, No. 15, Strand, near Charing-Cross, London.

395. Long (Joshua). 1791. Classified ad: Joshua Long, senior, presents his respects to the Nobility and the Gentry... *Times* (London). Nov. 11. p. 1, col. 3.

• **Summary:** "... and solicits the honour of their command, at No. 83, in Lombard-street, near the Mansion House, where they may depend upon having every article of the best quality and on the same low terms he used to sell at his late Warehouse, No. 73, Cheapside [London], particularly... new fine Tamarinds, East and West India preserved Ginger, Sweet Meats and Pickles, real Japan Soy [sauce], Mangoes, &c. genuine Cayenne and Chilly Pepper; real Bengal Currie Powder, and all sorts of rich sauces..."

"N.B. Foreign Sweetmeats, preserved Ginger, and Curiosities of all sorts bought and sold." Address: No. 83, Lombard-street, near the Mansion House, London.

396. Tessier, -; Thouin, M. 1791. *Encyclopédie méthodique. Agriculture: Cabiou* [Methodic encyclopedia. Agriculture: Manioc]. Paris: Chez Panckoucke. See vol. 2, p. 429-30. [Fr]

• **Summary:** The entry for "Cabiou" (p. 429-30) states: It is the thickened juice of the manioc... it lasts a long time and can replace Soya [soy sauce]. See Manioc. ("il se conserve long-temps, & remplace le Soja. Voyez Manioc. (M. Reynier)").

Note 1. Cabiou is a condiment used to season stews (*ragoûts*) and roast meat (*le rôti*); it is made with the

thickened juice of the manioc.

Note 2. This vol. 2 of the agricultural encyclopedia goes from the letters Bab to Cen. Address: 1. Mr. l'Abbé Tessier, Docteur-Regent de la Faculté de Médecine, de l'Académie Royale des Sciences, de la Société Royale de Médecine, France.

397. Reed (John Van). 1792. Classified ad: Has opened a general retail grocery store. *Federal Gazette, and Philadelphia Evening Post*. Jan. 21. p. 3.

• **Summary:** "... Mushroom ketchup, India Soy [sauce], Quins Sauce, excellent with beef, &c., Lemon Pickle,..." Address: In Water, No. 33, South, second door above Chestnut street.

398. Burgess (J.). 1792. Classified ad: Genuine rich sauces, for fish, made dishes, hashes, beef-steaks, &c &c. *Times (London)*. Jan. 27. p. 1, col. 1.

• **Summary:** A large ad: "The great reputation which J. Burgess has gained by his Sauces (he being the inventor of them) has induced many Persons to give the same Names to Articles entirely different, and of very inferior Quality, which is not only an imposition, but a great disappointment to Families in general..."

Concerning anchovies: "N.B. None are genuine but what are labelled with the Words, 'Burgess's Genuine and Superior Essence of Anchovies, No. 107, Corner of Savoy Steps, Strand, London.'"

The long list of imported goods includes: "Zoobditty Mutch. Walnut Ketchup. Oyster Ketchup. Mushroom Ketchup. Lemon Pickle. Fine Japan Soy [sauce]. Quin Sauce. Morells and Truffles, dry. Green Truffles. Artichoke Bottoms... Potted Lampries [Lampreys] from Hamburg. Bologna Sausages. Sour Crout. Gruyer Cheese... Chapzugar Cheese. Marole Cheese. Stilton ditto. Dried Sprats. Fine Red Herrings. Neats Tongues, nicely pickled..." Address: No. 107, Corner of Savoy Steps, Strand [London].

399. Burgess (J.). 1792. Classified ad: Genuine rich sauce, for fish, made dishes, hashes, beef-steaks, &c. &c. *Observer (London)*. Feb. 5. p. 1.

• **Summary:** "Bengal Currie Powder, with a receipt for using it. Zoobditty Mutch. Walnut Ketchup. Oyster Ketchup. Mushroom Ketchup. Lemon pickle. Fine Japan soy [sauce]. Quin's Sauce..." Address: No. 107, Corner of Savoy-steps, Strand, London.

400. Burgess. 1792. Classified ad: At Burgess's Italian Warehouse. *Observer (London)*. April 1. p. 1.

• **Summary:** "Burgess's original and superior Essence of Anchovies, to be used at table in the same manner as India Soy [sauce]."

"Zoobditty Mutch, Lemon Pickle, Chilly Vinegar, and Genuine Cayenne Pepper, and the Essence of Cayenne

Pepper." Address: Corner of Savoy Steps, Strand [London].

401. Cooke (Joseph). 1792. Classified ad: Just received by the late arrivals from Europe, large and general assortment of silver plate, jewellery [jewelry] & cutlery and Japanned wares, &c. *Mail; or Claypoole's Daily Advertiser (Philadelphia, Pennsylvania)*. April 21. p. 4.

• **Summary:** "... Snuffers, snuffer-trays and ink-stands. Gravy, table, dessert and tea spoons; a variety of salts, with blue linings, soy frames [for soy sauce]; cake baskets and waiters; punch bowls & strainers." Address: Goldsmith and Jeweller [Jeweler], at the Federal Manufactory and European Repository, Wholesale and Retail Warehouse, No. 38, south side of Market-street, between Front and Second streets, Philadelphia.

402. Callender's (Joseph) store. 1792. Classified ad: Just imported, in the ship Mary, Capt. Davis, from London, and to be sold (At a small profit). *Columbian Centinel (Boston, Massachusetts)*. May 12. p. 72.

• **Summary:** "A great variety of delicate sauces, viz.—Anchovies, Essence of do. [ditto = Anchovies]. pickled Walnuts, pickled Onions, Cherokee Sauce, Cavices, Oyster Catchup, Zoobditty Match, Lemon Pickle, East-India Mangoes, Morrells, Truffles, Corach, Capitons, of a superior quality, Quin Sauce, Japan Soy [sauce], Sauce Royal, Currie Powder, Devil's Paste, Tarragon Vinegar,... Mushroom Catchup [Catchup]." Address: South-side the Market House.

403. Commissioners of His Majesty's Customs. 1792. Classified ad: For sale, by order... *Times (London)*. May 31. p. 4, col. 4.

• **Summary:** The goods to be sold are divided into two types: For exportation, and for home consumption. The latter includes: "China Ware, Wine, Soy [Sauce], Haerlem [Haarlem] Oil, Sugar..., Human Hair,... Tobacco." Address: His Majesty's Warehouse, Long Room, Custom-House, London.

404. Colhoun (John). 1792. Classified ad: For sale,... *City Gazette and Daily Advertiser (Charleston, South Carolina)*. Sept. 29. p. 1.

• **Summary:** "... sallad oil in quart and pint bottles; Japan soy [sauce], Quin's fish sauce, mushroom ketchup, lemon pickle,..." Address: No. 42, Broad-street.

405. Mayer (John G.). 1792. Classified ad: Has received per the ship *Hanbury*, and brig *Betsey* from London, a general assortment of pickles,... *City Gazette and Daily Advertiser (Charleston, South Carolina)*. Oct. 25. p. 1.

• **Summary:** "... girkins, walnuts and mangoes pickled, anchovies, mushroom keptchup [sic, ketchup], walnut ditto [walnut ketchup], Quin's fish sauce, Japan soy [sauce], London porter in hampers,..." Address: No. 129, Broad-

street, near the Exchange.

406. Dorsey (John). 1792. Classified ad: Imported by the late arrivals from London, Sheffield, Birmingham, &c. A general and extensive assortment of silver and plated wares, fine cutlery, Japan'd and hard wares:... *Federal Gazette, and Philadelphia Evening Post*. Oct. 26. p. 3.

• **Summary:** "... Candlesticks and branches, from the bracket to the largest size, entire new patterns; egg and soy frames [for soy sauce], wax winders, dish rings and crosses,..." Address: No. 22, North Third Street.

407. Scot (James). 1792. Classified ad: Has received by the ships Amiable and Sovereign from London, a fresh supply of groceries... *City Gazette and Daily Advertiser (Charleston, South Carolina)*. Nov. 3. p. 4.

• **Summary:** "... Oyster ketchup, India soy [sauce], mushroom ketchup, essence anchovies, quins sauce and corash." Address: No. 48, Bay.

408. Farley, John. 1792. The London art of cookery, and housekeeper's complete assistant: On a new plan... 7th ed. London: Printed for J. Scatcherd and J. Whitaker. vi + [26] + 467 p. See p. 271. [Eng]

• **Summary:** In the chapter on "Pickling," the recipe for "Soy" [sauce] states (p. 271): "This article comes from the East Indies, and is made from their mushrooms, which grow in the woods. They are of a purplish colour, and are wrinkled on the surface like a morell [morel; a type of mushroom]. They gather them in the middle of the day, and wash them in salt and water. They then lay them in a dish, mash them with their hands, and sprinkle them with salt and beaten pepper. The next day the liquor is pressed off, and some galangals (a root which grows in the East Indies) and spices added to it. It is boiled up till it be very strong, and then some more salt is sprinkled into it. In this manner it will keep many years."

In the same chapter there are also recipes for Walnut catchup and for Mushroom catchup (p. 255). The word "catchup" appears in this book on 59 different pages. Address: Principal cook at the London Tavern.

409. Phillips, Catharine. 1792. Considerations on the causes of the high price of grain, and other articles of provision, for a number of years back, and propositions for reducing them:... London: Printed and sold by James Philipps. [vi] + 90 p. See p. 28.

• **Summary:** The widespread "use of East India tea" tends to increase the prices of provisions. Both milk and butter are used with it, which also increases their prices. "On the other hand, however, it may be observed, that the general use of tea certainly supersedes the use of much malt liquor and spirits, and thereby tends to keep down the prices" (p. 27).

The great waste of provisions in many families of high rank also tends to tends "to advance the prices of

provisions."

Suppose then a number of hams are stewed for their essence, and the flesh after stewing, thrown away, or given to the dogs, will not this appear a very condemnable waste of good meat? To say nothing of the extravagant luxury of such ketchups, would not many poor people be glad of the meat from which it was extracted?" (p. 28).

Note: The author apparently believes that ketchup is a meat extract, that it is very costly to make, and that the meat is typically discarded after the ketchup is extracted. Address: [England].

410. Hugget (S.). 1793. Classified ad: Has for sale,... of the latest importations from Europe:... *New-York Daily Gazette (New York City)*. Jan. 10. p. 2.

• **Summary:** "Fish sauce: India Soy [sauce], Catsup, Cavice. Pickles: East-India Mangoes, Walnuts, Mushrooms, Olives. Preserves:..."

Note the three unusual types of "Fish sauce." Address: Number 42, Broadway.

411. Hemmij, Gijsbert. 1793. Diary. In: Leonard Blussé, Cynthia Viallé, et al, eds. 2004. The Deshima Diaries Marginalia, 1740-1800. Tokyo: Japan-Netherlands Institute. xl + 898 p. See p. 667 (#30).

• **Summary:** 1793 April 3—"On behalf of the first retainer of the Lord of Tsushima, Sukezaemon presented me with some dried fish and a barrel of soy [sauce]. I dutifully reciprocated." Address: Opperhoofd (Chief of the Dutch factory), Deshima, Nagasaki, Japan.

412. Erving's (John) Grocery Store. 1793. Classified ad: To be sold,... *Mercury (The) (Boston, Massachusetts)*. Aug. 9. p. 4.

• **Summary:** "Pickles: Pickle Peppers. Pickle Cucumbers. Pickle Walnuts. Pickle Mangoes pr. jar. Mushroom Ketchup. Quin Sauce. Fish Sauce. India Soy [sauce]. Stone pickle Pots." Address: No. 42, Marlborough-Street [Boston].

413. Lazenby, Mrs. [Elizabeth]. 1793. Classified ad: Articles worthy public attention. *Times (London)*. Nov. 1. p. 1, col. 2.

• **Summary:** "... who succeeded her late Husband in the above Oil and Candle Business, thinks it a duty incumbent on her to return thanks for the great favours conferred by the Nobility, Gentry, &c. both before and since his demise; having laid in a variety of Articles for the Winter Season, hopes to be honoured with a continuance of their generous encouragement.

"Harvey's Sauce for Fish is sold, by appointment only, at Lazenby's Warehouse."

Note 1. This is the earliest document seen (April 2012) that mentions "Harvey's Sauce" (or "Harvey Sauce")—which was later said by several commentators to use soy sauce as an ingredient. However, it was basically an anchovy sauce.

Note that “Harvey’s” is spelled with an apostrophe.

In *Spices, Salt and Aromatics in the English kitchen*, Elizabeth David (1970, p. 11) states: “A recipe for this sauce [Harvey’s], mentioned in cookery books and lists of necessary stores throughout the nineteenth century, is given in a cookery dictionary of 1832 (Footnote: *The Cook’s Dictionary* by Richard Dolby, late cook at the Thatched House Tavern, St. James St. New edition, 1832 [Note: Also in 1830 ed., which see]). Ingredients were anchovies, walnut pickle, soy and shallots, plus a whole ounce of cayenne, three heads of garlic, a gallon of vinegar and cochineal for colouring. The whole lot was mixed together, stirred two or three times, every day for a fortnight, strained through a jelly bag until perfectly clear, bottled and corked down. Harvey’s, like its rival Worcestershire sauce commercially launched in 1838, was used as a condiment to flavour other less ferocious compounds.”

According to Heer (1966): Commercial manufacture of Harvey’s Sauce was started in 1776, and remained a family business until taken over by Crosse & Blackwell in 1919. Nestlé purchased the company after World War I. Address: Lazenby’s Warehouse, No. 6, Edward-street, Portman-square [London].

414. Pilgrim (Joseph). 1793. Classified ad: Humbly presents his respects to his friends and customers,... *Baltimore Daily Intelligencer*. Nov. 7. p. 1.

• **Summary:** “... also, a variety of pickled Cucumbers, Walnuts, Catsup, India Soy [sauce], Anchovies, Olives, Almonds and Raisins,... He will be happy to serve his friends and the citizens in general, either at their homes, or at his shop... and earnestly requests a continuance of their kind patronage,...” Address: Calvert-street.

415. Baker (Samuel). 1793. Classified ad: The subscriber informs his friends and the public, that he has for sale... *City Gazette and Daily Advertiser (Charleston, South Carolina)*. Nov. 30. p. 4.

• **Summary:** “... Wine glasses. Ketchup, japan soy [sauce]. Raisins, currants...” Address: No. 18, Tradd-street.

416. Davey (A.W.). 1793. Classified ad: Who has at the Repository by retail,... *Baltimore Daily Intelligencer*. Dec. 26. p. 3.

• **Summary:** “... New-England and West-India Rum, India Soy [sauce], Catsup,...” Address: Exchange-Broker.

417. Loureiro, Joao de. 1793. *Flora Cochinchinensis: sistens Plantas in regno Cochinchina nascentes*. Vol. 2. *Dolichos soja* [The flora of Cochin China. Vol. 2.]. Denuo in Germania edita cum notis Caroli Ludovici Willdenow; Bernolini [Berlin], impensis. See p. 537-38. Edited by Willdenow, with added notes. Also published by the Acad. Sci. of Lisbon. [Lat]

• **Summary:** The first edition of this important work was published in 1790. The content of this 1793 edition concerning *Dolichos soja*, published in Berlin and edited by Willdenow, is almost identical to that of the 1790 edition. The text has been re-set to fit on the smaller pages, and some abbreviations have been written out. In the chapter titled “Diadelphia. Decandria” we find: *Arachis* (p. 430-31; incl. *Arachis Asiatica* and *Arachis Africana*, also called *Arachis Hypogoea*). *Phaseolus radiatus* (p. 435). *Dolichos Soja* (p. 537-38).

By unusual coincidence, the earliest known recorded feeding of cow’s milk to a human infant (by Underwood) also occurred in 1793. Address: Portugal.

418. Hill (Thomas). 1794. Classified ad: Liquors and groceries... for cash only. *South-Carolina State Gazette and Timothy’s Daily Advertiser (Charleston)*. May 6. p. 1.

• **Summary:** “... Saltpetre, black pepper, Cayen ditto [= Cayenne pepper]. Ginger in root and ground... Pickolillie [Piccalilli], chou chou, red cabbage. Mangoes, mushroom ketchup. Walnut ketchup, japan soy [sauce]. Essence anchovies, Coratch, Zeobditto [Zoobditty] match, Quin sauce. Cinnamon water, citron ditto.”

Note: A very similar ad by Hill appeared 2 weeks later in the *South-Carolina State Gazette and Timothy’s Daily Advertiser (Charleston)* on 20 May 1794 (p. 4). Address: No. 10, Tradd-street, Directly opposite to Williams’s coffee house and Bedon’s alley.

419. Burgess (J.). 1794. Classified ad: To families leaving town. *Times (London)*. May 20. p. 2, col. 9.

• **Summary:** “Burgess’s original and superior Essence of Anchovies, to be used at Table in the same manner as India Soy” [sauce]. The list of imported goods includes: “Curry Powder, with a Receipt [Recipe] for using,... Zoobditty Mutch, Lemon Pickle, Chilly Vinegar, genuine Cayenne Pepper...” Address: Burgess’s Warehouse, Corner of Savoy Steps, Strand [London].

420. Watson (James) & Co. 1794. Classified ad: Lead in sheet and bars... *American Minerva (New York City)*. Sept. 19. p. 1.

• **Summary:** “... India Soy [sauce] per doz. or single bottle,...” Address: No. 157, Pearl street.

421. Baker (Samuel). 1794. Classified ad: For sale... *City Gazette and Daily Advertiser (Charleston, South Carolina)*. Dec. 10. p. 2.

• **Summary:** “... Girkins. Pickled walnuts. Mushroom ketchup. India Soy [sauce]. Loaf and brown sugar...” Address: No. 18, Tradd-street [Charleston].

422. Bradford (Charles). 1794. Classified ad: Has just received by the *Major Pickney* a choice assortment of

groceries and pickles,... *City Gazette and Daily Advertiser* (Charleston, South Carolina). Dec. 11. p. 1.

• **Summary:** "... Mushroom ketchup. India soy [sauce]. Lemon pickle... Zant currants." Address: Corner of Church & Queen streets.

423. Barney and Hollins. 1794. Classified ad: Sales by auction. *Federal Intelligencer* (Baltimore, Maryland). Dec. 23. p. 1.

• **Summary:** "... sweet oil; catsup; quin's sauce; India soy [sauce], in bottles; Stoughton's bitters;..." Address: Auctioniers [Auctioneers].

424. Thunberg, Charles-Pierre. 1794. *Voyage en Afrique et en Asie, principalement au Japon, pendant les années 1770-1779. Traduis de Suédois [Voyage to Africa and to Asia, especially to Japan, during the years 1770-1779. Translated from Swedish].* Paris: Chez Fuchs, Librairie. xii + 532 p. 20 cm. [Fre]

• **Summary:** Chapter 10, written by Thunberg in Sept. 1775, discusses Japan, Nagasaki (Nangasaki), and the Dutch trade to Batavia [today's Jakarta]. On page 298-99: The goods which they buy in Nagasaki consist mainly of rice, porcelains, umbrellas, silk kimonos, lacquer works, soy [sauce] (*soja ou souï*), copper, and large earthenware pots.

Soy [sauce], which is exported in little kegs, is a liquid or the quintessence of different aromatic ingredients which is good for stimulating the appetite, and is added in small quantities to sauces.

The last sentence in the original French: "*Le soja que l'on exporte en petits barils, est une liqueur ou quintessence de différens ingrédiens aromatiques propre à exciter l'appétit, en en ajoutant une petite quantité aux sauces.*"

Note 1. This is the earliest French-language document seen (April 2012) that uses the word *souï* to refer to soy sauce.

Note 2. Carl Peter Thunberg lived 1743-1828. Address: Chevalier de l'Ordre de Wasa, Professeur de botanique à l'Université d'Upsal [Sweden].

425. Ticknor (E.). 1795. Classified ad: Begs to inform his friends and the public, that he has taken the store,... Lately occupied by Mr. John Erving, where he intends to keep constantly on hand a complete assortment of West-India goods and groceries,... *Columbian Centinel* (Boston, Massachusetts). March 21. p. 4.

• **Summary:** "... East-India Soy [sauce], Essence of Anchovies,... Sauce Royal, Sauce Corach, Sauce Fish and Quin,... Pickled walnuts. Confectionery of all kinds—Hemp." Address: No. 42, Marlboro Street.

426. Scot (James). 1795. Classified ad: Has imported in the ship *Federalist*, from London,... *City Gazette and Daily Advertiser* (Charleston, South Carolina). June 24.

Supplement p. 2.

• **Summary:** "... Mushroom ketchup, japan soy [sauce], lemon pickle and Quin's sauce." Address: No. 48, Bay.

427. Skill and Son. 1795. To families leaving town,... (Ad). *Telegraph* (London). Aug. 10. p. [1], col. 3.7.

• **Summary:** "Rich Fish Sauces and Gravies."

"Skill's newly invented and delicious Camp Sauce, for enriching Game, Hashes, Ragouts, &c. and to eat with all kinds of Cold Meat, Chops, and Beef Steaks."

"Essence of Anchovies, for Anchovy Sauce; to be boiled either in melted Butter, or used as India Soy" [sauce].

"Coratch Sauce, to eat with Chops, Cutlets, Steaks, Minced Veal, Hashes, &c.

"Mint Sauce, made sweet purposely to eat with Venison, Roast Lamb, &c. in lieu of Currant Jelly.

"India Soy, warranted to be genuine and to please; imported by the East India Company."

Note: Where did Britain's East India Company first take this soy sauce on board? Where was it originally made?—almost certainly not in India.

"Quin Sauce, Oyster Ketchup, Cavice, Walnut Ketchup, Cherokee Sauce, Zoobditty Match, Mushroom Ketchup, and every other kind used at the most fashionable tables." Address: At their Italian and French Warehouses, No. 15, Strand, near Craven Street, London.

428. *British Critic: A New Review*. 1795. Thunberg's Travels. Vol. IV. 6:473-81. Nov. See p. 478. [Eng]

• **Summary:** This magazine is publishing long excerpts from Thunberg's *Travels*. Before each is a short introduction (p. 478): "Though soy-sauce is very commonly used in this country, its composition is but little known. It is a considerable article of commerce in Japan, and we here find it thus described.

"Soy-sauce, which is every where and every day used throughout the whole empire, I might almost say in every dish, and which begins even to be made use of in Europe, is prepared from Soy Beans (*Dolichos Soja*) and salt, mixed with barley or wheat..." p. 121 of Thunberg.

429. Jacks (James). 1795. Classified ad: Has imported per the *Flora and Romulus*, from London, a large and general assortment of plate, watches, jewellery [jewelry], &c. *City Gazette and Daily Advertiser* (Charleston, South Carolina). Dec. 14. p. 3.

• **Summary:** "... Plated goods:... A great variety of Castors, Liquor and Soy Frames [for soy sauce]." Address: Jeweller, No. 112, Broad-street.

430. Horace, -; Clubbe, William. 1795. Six satires of Horace: in a style between free imitation and literal version. Ipswich [England]: Printed and sold by George Jermyn. xx + 136 p. See p. 117. 25 cm.

• **Summary:** Fundanius.

“For course the first, two haunches were assign’d,
 “Kill’d in the forest, in a southern wind;
 “So said our host, and so I shou’d suppose,
 “If I might form my judgment by my nose:
 “A dish to whet the appetite stood by
 “With Lettuce, Radishes and Celery:
 “On either side were various sauces seen,
 “As Ketchup, Soy, Anchovies and the Quirt.”

Note: Horace (65-8 B.C.) was a Roman poet and satirist.
 Address: LL.B., Vicar of Brandeston, Suffolk.

431. Thunberg, Charles Peter. 1795. *Travels in Europe, Africa, and Asia, made between the years 1770 and 1779*. In four volumes. Vol. IV. Containing travels in the empire of Japan, and in the islands of Java and Ceylon, together with the voyage home. 3rd ed. London: Printed for F. and C. Rivington. xix + 310 p. See p. 37, 88, 107, 121-22, 177. Index. 21 cm. [Eng]

• **Summary:** In the chapter on Japanese foods, we read (p. 37): “Rice, which is here exceedingly white and well-tasted, supplies, with the Japanese, the place of bread; they eat it boiled with every kind of provisions. *Miso* soup, boiled with fish and onions, is eaten by the common people, frequently three times a day, or at each of their customary meals. *Misos* are not unlike lentils, and are small beans, gathered from the *Dolichos soja*.” Note 1. The latter sentence, which is incorrect, led many subsequent early writers to believe that the seeds of the soy bean were called miso, or that miso was a type of small bean. Rather, miso is a paste made from soy beans.

In the chapter on Japanese agriculture, we read (p. 88): “Of Beans, Peas, and Lentils, many sorts are cultivated, both the larger (*Phaseoli*) and the smaller (*Dolichos*). Of *Daidso* Beans (*Dolichos Soja*) the meal is used for dressing victuals, and the expressed juice for making Soy; as is likewise the whole Bean for the soup called *Miso*, which is a daily dish with the common people. *Atsuki* [Azuki] Beans likewise (*Phaseolus radiatus*) are ground to meal, of which small cakes are made with sugar.”

Note 2. This is the 2nd earliest English-language document seen (Jan. 2005) that clearly mentions azuki beans, which it calls *Atsuki Beans*. It is also the earliest English-language document seen (March 2006) that uses the word *Atsuki* to refer to azuki beans.

Note 3. It is not clear what Thunberg means by “meal” when he says “the meal is used for dressing victuals.”

In the chapter on Commerce, after discussing the tea trade, Thunberg writes (p. 107): “The *Tea Trade* is confined entirely to the inland consumption, the quantity exported amounting to little or nothing. The traffic in Soy [sauce], on the other hand is more considerable; and as the tea produced in this country is reckoned inferior to that of China, so the soy is much better than that which is brewed in China. For

this reason, soy is not only exported to Batavia [Jakarta], in the wooden barrels in which it is made, but likewise sold from thence to Europe and to every part of the East Indies. In some places in Japan too the soy is reckoned still better than in others; but, in order to preserve the very best sort, and prevent its undergoing a fermentation, in consequence of the heat of the climate, and thus being totally spoiled, the Dutch at the Factory [at Desima / Dezima / Dejima] boil it up in iron kettles, and afterwards draw it off into bottles, which are then well corked and sealed [by applying bitumen / coal tar to the stopper]. This mode of treatment renders it stronger and preserves it better, and makes it serviceable for all kinds of sauce. The *Silk trade* is indeed in a very flourishing state in the empire...”

In the chapter titled “Residence at Dezima [1776], Previous to my Return Home,” the author writes (p. 121-22): “Soy-sauce, which is every where and every day used throughout the whole empire, I might almost say in every dish, and which begins even to be made use of in Europe, is prepared from Soy Beans (*Dolichos Soja*) and salt, mixed with barley or wheat. For this purpose, they cultivate this species of bean in several places, although it grows in great plenty wild. Scarcely any kind of legumen [legume] is more copiously used than this. The seeds are served up in soups, once or twice a day all the year round, to people of distinction or otherwise, to the poor and to the rich. Soy is prepared in the following manner: The beans are boiled till they become rather soft; afterwards an equal quantity of pounded barley or wheat is added. These ingredients being mixed together, are set in a warm place, and covered up for four and twenty hours, that they may ferment. An equal quantity of salt is then added to the mixture, and twice and a half as much water is poured upon it. After it has been mixed in this manner in an earthen vessel, it must stand well covered two or three whole months together, during which period it is necessary however at first for it to be stirred about several times in the day for several days together. The liquor is then pressed and strained off, and kept in wooden vessels. Some provinces furnish better soy than others; but exclusively of this, it grows better and clearer through age. Its colour is invariably brown, and its chief excellence consists in the agreeable salt taste which it possesses.”

While in Colombo, Ceylon, in 1777 the author stated that “the *Dolichos pruriens* grew here tolerably common, with its hairy pods, the hairs of which attaching themselves to the hands, occasion much itching, which is allayed by oil, or decoction of rice, and are celebrated as a Vermifuge.” Note 4. This plant appears in the index as “*Dolichos Soja*.”

Note 5. This is the earliest English-language document seen (March 2009) that contains the term “Miso soup.”

Note 6. On the title page, the author’s name is given as Carl Peter Thunberg, rather than Karl Peter. Of the four volumes, only vol. IV bears a date, which is 1795. The translator’s name is not given, not even in the “Translator’s

preface” nor in any record on WorldCat / OCLC online bibliographic database. The original text was written in 1776. Yule & Burnell (1886, p. 651, and 1903, p. 859) state: “1776. An elaborate account of the preparation of Soy is given in *Thunberg’s Travels*, E.T., [vol.] iv. 121-122;”

Note 7. This is the earliest English-language document seen (Feb. 2008) that contains the word “Soy Beans” (or “Soy-Beans”) (p. 121-22).

Note 8. This is the earliest English-language document seen (April 2012) that contains the term “Soy-sauce” (or “soy-sauce”). The *Oxford English Dictionary* says (incorrectly): “1818 Todd (transl. Thunberg), Soy-sauce is prepared from soy-beans (*dolichos soja*) and salt, mixed with barley or wheat.”

Note 9. Lewis and Murakami (1923, p. 223) state: “The third English edition of Charles Peter Thunberg’s *Travels* (London 1796) contains an English-Japanese vocabulary of approximately 1,500 words; this was probably the first English-Japanese vocabulary ever published. It seems to have been unknown to our author [Ranald MacDonald] and his scholars.” Address: Prof. of Botany, Univ. of Uppsala [Uppsala], Sweden.

432. Loring (Israel). 1796. Classified ad: Sea-stores, put up by the subscriber at his store,... *Argus, or Greenleaf’s New Daily Advertiser* (New York City). Jan. 19. p. 3.

• **Summary:** “Merchants and masters of vessels, who may favour him with their orders, may depend upon having them faithfully executed with the best articles,... Essence of anchovies, ketchup, East India soy [sauce], capers, pickles...” Address: No. 19, Front-Street.

433. Hrabowski’s (J.S.). 1796. Classified ad: Fresh bloom hyson tea. *City Gazette and Daily Advertiser* (Charleston, South Carolina). Sept. 15. p. 1.

• **Summary:** “... India Mangoes and Soy [sauce]. Walnut and Mushroom Ketchup...” Address: No. 45, Broad-Street.

434. Glasse, Hannah (Mrs.). 1796. The art of cookery made plain and easy; which far exceeds any thing of the kind ever yet published. London: J. Fairburn. xl + 419 p. See p. 173-74. Index. 22 cm. Facsimile edition reprinted in 1971. [Eng]

• **Summary:** On the title page, after the table of contents, we read: “in which are included, One Hundred and Fifty new and useful Receipts [recipes], not inserted in any former edition.”

In Chapter X, “Fish,” the last receipt [recipe], “To dress White-bait,” is almost identical to that in the 1784 edition—except it is in a different chapter and it lacks two commas. It states (p. 173-74): “Take your white-bait fresh caught and put them in a cloth with a handful of flour, and shake them about till they are separated and quite dry; have some hog’s lard boiling quick, fry them two minutes, drain them and dish up with plain butter and soy.”

Note 1. The last word, “soy,” refers to soy sauce. It does not appear in the index, and we can find no other use of it in this book.

Note 2. “Price: five shillings, bound.”

Note 3. Chapter XIV, “For Lent, or a fast dinner...” (p. 205-64) contains several recipes in which almonds are pounded to a paste in a mortar then mixed with other ingredients and used in place of or with dairy milk or cream, including Almond soup (p. 209-10), Almond fraze (p. 218, sweet pancakes with pounded almonds, sweet cream, eggs, sugar, and grated white bread, pan-fried in butter), How to make a hedge-hog (p. 224; with 2 lb of almonds instead of meat), Almond pudding (two types, p. 243-44), and Ipswitch almond pudding (p. 251). In other chapters, almonds are also used to make Almond cheesecakes (p. 319), Almond custards (p. 320), Almond butter (p. 321), Almond cream (p. 324), and Almond rice (p. 339). In these Lenten recipes, eggs, butter, cream, and cheese are used quite often and liberally. Meat is never used, but eels, fish (flounder, herring, salmon, scate / thornback), and shellfish (crawfish, lobsters, mussels, oysters) are all used.

Note 4. This is the earliest English-language document seen (Jan. 2005) that contains the term “Almond butter” (p. 321) or gives a recipe: “Take a quart of cream, put in some mace whole, and a quartered nutmeg, the yolks of eight eggs, well beaten, and three quarters of a pound of almonds well blanched, and beaten extremely small, with a little rose-water and sugar; and put all these together, set them on the fire, and stir them till they begin to boil; then take it off, and you will find it a little cracked; so lay a strainer in a cullender [colander] and pour it into it, and let it drain a day or two, till you see it is firm like butter; then run it through a cullender, and it will be like little comfits, and so serve it up.”

Note 5. Other interesting ingredients and recipes: Walnut catchup (p. 156). Sago puddings (p. 244, 254). To boil sago [for the sick] (p. 268). To make catchup to keep twenty years (for captains of ships, using mainly strong stale beer, large mushrooms, pickled anchovies, shallots, mace, cloves, pepper, and ginger—no tomatoes or soy, p. 271). To make catchup (two ways, using mainly mushrooms, salt, red wine, and spices—no tomatoes or soy, p. 371-72). Note 6. This is the earliest document seen (Jan. 2006) that contains a recipe for a type of “catchup” in which mushrooms are the main solid ingredient. Address: England.

435. Thunberg, Karl Peter. 1796. *Voyages de C.P. Thunberg. Tome second* [Voyages of C.P. Thunberg. Vol. 2]. Paris: Benoit Dandre. iv + 544 p. See p. 3, 4, 145, 266-68. [Fre]

• **Summary:** An early traveler to East Asia who mentioned soyfoods was the Swedish doctor and prof. of botany at the Univ. of Uppsala, Carl P. Thunberg. In Chapter 20 titled “Japanese Foods” he states (p. 267-68): “Three times a day, with each meal, the people eat miso soup prepared with fish and leeks. These miso [he apparently thought miso was the

name of a legume; see Thunberg 1796 in English] closely resemble lentils. They are the small dolich beans of Japan (*ce sont de petites fèves de dolich du Japon*).*” (Footnote: * “*Dolichos soja*. Lam. Diction. [Lamarck 1790. Dictionary] No. 28).”

“Miso or soy sauce (*Le miso ou la sauce de soya*) constitute the principal food of the Japanese. People of all levels, great or small, rich or poor, eat them several times a day year-round. Here is how they are prepared. The beans are cooked until they are just soft, then they are mixed with an equal quantity of barley or wheat, and the mixture is allowed to ferment for 24 hours in a warm place. Now an equal quantity of salt and 2½ times the amount of water. The mixture is put in an earthen pot, which is well closed and left for 2½ months; it is stirred during the initial days. After the necessary time the liquid is pressed out and stored in wooden kegs. The inhabitants of certain provinces make better ‘soya’ than those in others. Moreover, the longer it ages, the tastier and clearer it becomes. It is always brown and its principal flavor is a pleasant saltiness. The Japanese also eat fish, boiled or fried in oil” (p. 267-68).

“The tea of Japan is inferior to that of China. However, Japanese ‘soya’ [soy sauce] is preferable to that of the Chinese. It is shipped in numerous vats to Batavia [today’s Jakarta, Indonesia], India, and Europe. The Dutch have found a way of protecting it from the effects of heat and of preserving the fermentation. They boil it in an iron pot, funnel it into bottles, and seal the mouths with pitch. This liquid retains all its ‘force’ and can be mixed with all other sauces.” Note: All this took place long before Appert’s invention of canning in 1809 and Pasteur’s invention of pasteurization in 1862. In fact pasteurization had been practiced in Japan for 200 to 300 years before this time.

In Chapter 23, “The State of Agriculture in Japan,” the author notes (p. 291): The Japanese plant a great deal of rapeseed, and the seed furnishes an excellent oil for lamps. In Japanese, the plant is named *na tanne* and the oil *na tanne abra* or *na tanne no abra* (sic, *natane abura*). “Soy flour (*La farine des fèves de daidsou* (Footnote: *Dolichos soia*)) is used in various dishes. The liquid that is pressed out is used to make soy sauce (*du soya*). The roots are put in a soup named *miso*, which the people use daily for nourishment. Small cakes are also made with the flour of azuki beans (*la farine de haricots d’atsouki* (Footnote: *Phaseolus radiatus*)) mixed with sugar.” Note 1. This is the earliest French-language document seen (Jan. 2005) that mentions azuki beans, which it calls *haricots d’atsouki*.

Pages 314-15 state: “Their soy sauce (*sauce de soya*), which has been introduced by many Europe countries, is made with soybeans (*se fait avec des fèves-soya* (Footnote: *Dolichos soya*)), barley or wheat, and salt. Although these beans come spontaneously and abundantly in many places, the consumption which they make of this flour causes them to take particular care with the plant’s cultivation.”

Note 2. This is the earliest French-language document seen (April 2012) that uses the term *sauce de soya* to refer to soy sauce. Address: France.

436. Winterbotham, William. 1796. An historical, geographical, commercial, and philosophical view of the United States of America, and of the European settlements in America and the West-Indies. First American edition with additions and corrections. Vol. 3 of 4. New York, NY: Printed by Tiebout & O’Brien for J. Reid,... 547 p. See p. 402, 269-70.

• **Summary:** The section titled “General description of Georgia” states (p. 269-70): “The rice plant has been transplanted, and also the tea plant, of which immense quantities are consumed in the United States, was introduced into Georgia by Mr. Samuel Bowen, about the year 1770, from India [sic, China]. The seed was disseminated, and the plant now grows, without cultivation, in most of the fenced lots in Savannah.”

Note: This last sentence, if true, is quite surprising and remarkable.”

In the section on “General Information” is a 3-column table giving a list of plants including (p. 402): “Latin names: *Dolichos soja*. English names: A kind of kid-bean, called daidsu. Observations: Used for making soye,* or Indian ketchup. See Kämpff. Amoenitat [Kämpfer, Amoenitatum 1712].

The asterisk (*) refers to a long paragraph at the bottom of the table titled “The method of preparing East-India soye, or India ketchup.” This paragraph is identical to that which first appeared in William Stork (1769) except for a few differences in spelling and capitalization. Address: Rev.

437. Yuan Mei. 1796. Suiyuan shidan [Recipes from the Sui garden]. In: Sui-yüan Ch’uan-chi, 38 pen, Chu-i-t’ang Shu-chu edition. Shanghai, 1921. [Chi]*

• **Summary:** This Qing dynasty book consists of more than 300 recipes, categorized either according to main ingredients (seafood, meat, tofu) or to specialties (dimsum, sweet cakes, etc.). It is the most comprehensive Chinese cookbook before cookery writing became popular in China in the 20th century. The author, Yuan Mei (lived 1716-1798), above all a poet and government official, was also a gourmet and bon-vivant who had 4-6 concubines. He may have been the ranking poet of his times, yet to many Chinese he is remembered for this cookbook, which has had a far-reaching influence down to the present day. Yuan was extremely fond of bean curd, for he lauded it as “far superior to bird’s nest” if it was “well flavored” (Shih-tan, p. 4). His chapter on bean curd, consisting of 9 recipes, showed that he spared neither time, trouble, nor ingredients to flavor his bean curd. His most famous tofu recipe is titled Perfect Wang’s Eight Treasure Bean Curd. Arthur Waley wrote a book titled Yuan Mei (1956, Allen & Unwin), which gives this book’s publication

date as 1796.

Sui Yüan is a sobriquet for Yüan Mei, after his garden of contentment. Hummel (1944:955-56): Yüan Mei lived 1716-1798. A poet, literary critic, and essayist, he was a native of Ch'ien-t'ang (Hangchow). Resigning (1748) from his post as magistrate of Chiang-ning, he retired (1749) to his newly acquired "Garden of Contentment," Sui-yüan, near Nanking. From 1784-1795, spent in alternate travel and quiet seclusion, he came to be known as one of the most skillful poets of his time. His discourse on cooking, written in a vein of charming banter, has been translated into several Western languages. "Tan" means list.

Bo (1982): In this work Yüan Mei states that it is more graceful for a writer to use the term "ch'ing chiang" instead of "chiang-yu" when referring to soy sauce.

438. *Times (London)*. 1797. Classified ad: Japan Soy.—For sale. March 13. p. 1, col. 4.

• **Summary:** "... at No. 34, Fish street... near the Monument; Genuine Japan Soy [sauce], in casks from 10 to 60 gallons, at 16s. per gallon, for ready money only." Address: [England].

439. Brown (T.). 1797. To families, resident in Chelsea, Pimlico, Battersea, Wandsworth, Kensington, and Knightsbridge (Ad). *Observer (London)*. Nov. 26. p. 1.

Note: This is the earliest British newspaper seen (Oct. 2009) in which the term "Japan soy" is mentioned. Address: Paradise Row, Chelsea, London.

440. *Encyclopaedia Britannica*; or, A dictionary of arts, sciences, and miscellaneous literature... 3rd ed... greatly improved. 18 vols. 1797. Edinburgh: Printed for A. Bell and C. Macfarquhar.

• **Summary:** In vol. 6, part 1 (D-E), the entry for *Dolichos* (p. 81) states: 2. The soja is a native of Japan, where it is termed *daidsu*; and, from its excellence, *mame*; that is, "the legumen or pod," by way of eminence. It grows with an erect, slender, and hairy stalk, to the height of about four feet. The leaves are like those of the garden kidney-bean *. The flowers are of a bluish white, and produced from the bottom of the leaves, and succeeded by bristly hanging pods resembling those of the yellow lupine, which commonly contain two, sometimes three, large white feeds. There is a variety of this kind, with a small black fruit, which is used in medicine. Kempfer [Kaempfer] affirms, that the seeds of this when pounded and taken inwardly give relief in the asthma. This legumen is doubly useful in the Japanese kitchens. It serves for the preparation of a substance named *miso*, that is used as butter; and likewise a pickle celebrated among them under

the name of *sooju* or soy [sauce]. To make the first, they take a measure of mame, or the beans produced by the plant: after boiling them for a considerable time in water, and to a proper degree of softness, they beat or bray them into a softish pulse; incorporating with it, by means of repeated braying, a large, quantity of common salt, four measures in summer, in winter three. The less salt that is added, the substance is more palatable; but what it gains in point of taste, it loses in durability. They then add to this mixture a certain preparation of rice, to which they give the name of *koos* [*kōji*]; and having formed the whole into a compost, remove it into a wooden vessel which had lately contained their common ale or beverage named *sacki*. In about two months it is fit for use. The *koos* gives it a grateful taste; and the preparing of it, like the polenta of the Germans, requires the skillful hand of an experienced master. For this reason there are certain people who make it their sole business to prepare the *koos*, and who sell it ready made for the purpose of making *miso*: a substance which cannot fail to be greatly valued in those countries where butter from the milk of animals is unknown.

"To make *sooju* or soy, they take equal quantities of the same beans boiled to a certain degree of softness; of *muggi*, that is corn, whether barley or wheat, roughly ground; and of common salt. Having properly mixed the beans with the pounded corn, they cover up the mixture, and keep it for a day and a night in a warm place, in order to ferment; then putting the mass into a pot, they cover it with the salt, pouring over the whole two measures and a half of water. This compound substance they carefully stir at least once a-day, if twice or thrice the better, for two or three months: at the end of which time, they filtrate and express the mass, preserving the liquor in wooden vessels. The older it is, the better and the clearer; and if made of wheat instead of barley, greatly blacker. The first liquor being removed, they again pour water upon the remaining mass; which, after stirring for some days, as before, they express a second time, and thus obtain an inferior sort of soy."

For *Sakki* (*saké*) see vol. 9, part 1 (p. 71, under Japan). Address: Edinburgh, Scotland.

441. Lettsom, John Coakley. 1797. Hints designed to promote beneficence, temperance, and medical science. Vol. 1. London: Printed by H. Fry, for C. Dilly. v + 273 p. See p. 205-06. Illust.

• **Summary:** Page 205-06: "It has been observed, that as charitable institutions multiply, so do public dinners; and many amiable characters eat and drink themselves into disease, to prevent it in their fellow creatures; and, pity it is, that a benevolent and cordial heart, should suffer under a virtuous influence! Let such calmly reflect and calculate a dinner of this kind.—First, we find rich turtle, or mock turtle soup, which when cold would suspend a spoon,—then succeed boiled salmon, or cod's head, or turbot floating in thick lobster, shrimp, or oyster sauces.—After these have

removed or diminished the sensation of hunger, a firm piece of boiled ham, and roasted and boiled chicken, are presented to excite new desires; and too often are plentifully admitted to remove them: these good things heightened in taste and flavour, by cayenne, black pepper, salt, soy, catchup, mustard and horse radish, beget thirst; and dilution, like the water-engine, when a house is in flames, is brought in aid, to extinguish the fire excited in the stomach." Address: [England].

442. Skill. 1798. Provisions for exportation,... (Ad). *Star* (London). Jan. 22. p. [1], col. 4.

• **Summary:** "Skill's Fish Sauces."

"Skill's newly invented Camp Sauce." "Essence of Anchovies." "Sauce des Epicures." "Lemon Pickle." "Sauce a la Suisse."

"Quin Sauce, to eat with Turbot, and all kinds of Fish."

"Sauce a l'Imperiale."

"Cavice Sauce a la Militaire, Walnut Ketchup, Indian Soy, Oister Ketchup [Oyster Ketchup], Cherokee Sauce, Mushroom Ketchup, Zoobditty Match, and every other sort used at the most fashionable tables, in bottles, 2s. 18d. and 3s. 6d. each, and in cases with partitions, containing twelve sorts of the above Sauces, at only one Guinea each." Address: At his Italian and French Warehouse, No. 15, Strand, near Craven Street, London.

443. Beckmann, Professor [Johann?]. 1798. Account of the methods employed in Japan and China to prepare soy, with some observations on the bean from which it is produced. *Philosophical Magazine (The)* (London) 1:342-45. Sept. [4 ref]

• **Summary:** "This article [soy sauce], which is a brown saline liquor, imported to Europe from the East Indies, is employed for seasoning various kinds of dishes, and improving the taste of different sauces. It is brought from Japan in small wooden vessels, and also from China and other parts of India in glass flasks, several of which are packed together in a wooden box. The use of it has been long general in the East Indies; where it is placed on the table at each meal, instead of salt, for the purpose of dipping in it flesh, fish, and other kinds of food.

"The Japanese are said to be the inventors of this article; and, at present, their soy is preferred to any other; though it is asserted by connoisseurs that this preference arises more from the price than the goodness. In my opinion, it was first introduced in the European commerce in the present century; for it is not to be found in the old catalogues of goods; in Saavary's or Ludovici's dictionaries, nor in the old books on cookery. The first account of the method of preparing it after the Japanese manner was published by Kempfer [Kaempfer].

"Before I give a description of this method, it may not be improper to inform the reader that the people in India, instead of our common kidney beans, cultivate and use as

food another species of a familiar kind, called in botany *dolichos*, and which comprehends several species. Among these there is one called *dolichos soya*. The plant is all over rough; and its weak stem rises to the height of a man. Its flowers, which are small, scarcely appear above the calyx, and are a blueish or almost violet color. The rough husks contain for the most part only two seeds, which in form, size and taste differ very little from our garden pease, except that they are flatted, shaped somewhat like an egg, and have a black speck at the place where they begin to germinate*.

(Footnote: * *Hilum fuscum*. The first description and figure of this plant was given by Kempfer in his *Amoenitat. exot.* p. 837, 838. Both these, however, were improved and rendered more complete by Bergius in *Abhandlungen der Schwedisch. Akad.* xxvi. p. 281. The latest descriptions are those of Thunberg in his *Flora Japonica*, p. 282.; and Jacquin in *Collectanea ad botanicam et hist. nat.* vol. i. p. 46).

"These seeds form the principal component part of soy. In Japan they are first boiled, and then mixed with the same quantity of barley or wheat meal (the latter is for the purpose of giving the soy a darker colour); and the mixture, being covered up, is deposited for twenty-four hours in a warm place, where it ferments. The same quantity of common salt, with the like quantity and half as much water, is thrown over it; and the whole mass, for the space of two or three months, is stirred round daily with a chocolate stick, and closely covered immediately after. At the expiration of that period it is strained or squeezed through a linen cloth, and the liquor, which is preserved in wooden vessels, becomes always clearer and better the longer it is kept. The mass which remains is again subjected to a like process by having water poured over it, and, being stirred round for some days, as before, is then strained.

"Of the preparation in China the following account has been given by Eckberg [sic, Ekeberg or Eckeberg], a Swede:" Beckmann then translates the last half of Ekeberg's 1764 Swedish-language article titled "Om Chinesiska Soyan" (On Chinese Soy Sauce), which see.

"From what has been above said, it may be readily perceived that the preparation of soy in Europe would be attended with no difficulty if it were possible to cultivate the beans. Bergius, however, gives his countrymen little hope that this can be done; and chiefly for this reason, that the plant blows so late in green-houses, that the summer is gone before the fruit can ripen. But this is often the case with exotics which are reared by our gardeners in hot-houses. As they only begin to blow when their nourishment decreases and occasions a stoppage of their growth, the same thing may happen too late in too fertile a soil, or when they have a superfluity of nourishment. On the other hand, when they are transplanted into soil somewhat poorer, and into an open place where they have less shelter, they do not grow so quick and so long; but they blow earlier. And hence it happens, that many exotics planted in the open air produce ripe seeds,

which could never be obtained from them while they were preserved as curiosities and favourites of the gardener in green-houses. I consider it, therefore, as an experiment worth making, to plant these beans in the open fields; and I am inclined to think that in many summers they would produce ripe seeds, especially as Jacquin says expressly that they throve well at Vienna [Austria] in the open air.

“Should my conjecture, however, be not realised, this would not, at any rate, be the case with that of Bergius, who is of opinion that a kind of soy might be obtained from our peas and beans by the same or a similar process; but indeed it would have this great fault, that it would be too cheap, and too soon become common.”

Note 1. The author is probably the German Johann Beckmann (lived 1739-1811). He spoke English, taught mathematics, physics, and natural history at the Lutheran St. Peter's Gymnasium in St. Petersburg, and is best known as the author of that fascinating bedside book *The History of Inventions*. A trained botanist and student of Linnaeus, he first visited Linnaeus in 1765 (See W. Blunt. 1971. p. 166, 172, 174, 175). He also wrote a book on botany, and on the history of inventions and discoveries.

Note 2. This is an excellent, accurate description of both soy sauce and the soybean. It is difficult to tell whether it is compiled from other writings (most likely, see footnote), or whether Beckmann visited India and described (in the third paragraph above) the soybeans that he actually saw growing there. If the latter were true, this would be the earliest document seen (Oct. 2010) concerning soybeans in India, or the cultivation of soybeans in India. And this document would contain the earliest date seen for soybeans in India or the cultivation of soybeans in India (1798; one of two documents—the other being Roxburgh 1832).

Note 3. This is the second earliest English-language publication or article seen with the word “soy” (or any variation of soy) in the title. Note that this “soy” refers to soy sauce. Address: England.

444. Long (Joseph). 1798. Classified ad: Tamarinds in the shell. *Times (London)*. Dec. 19. p. 1, col. 3.

• **Summary:** “Joseph Long, late of No. 73, Cheapside [London], begs leave to inform the Nobility and Gentry, that he has received by the last Fleets a fresh supply... Guava Jelly and Jam, preserved Nutmegs and Cloves, preserved Ginger 5s... West India and other Pickles, Kian Pepper [Cayenne], and East India Curry Powder, both warranted genuine, unadulterated and wholesome; Genuine Japan Soy [sauce], real Gorgona Anchovies, Mangoes, &c. Cocoa Nuts, Cashew Nuts, and Cashews ready roasted for the table. Genuine Cherokee and other rich Sauces for Fish, Fowl, Game, &c.” Address: Foreign Warehouse, No. 83, Lombard-street [London].

445. Pressey's. 1798. Classified ad: Bombay mangoes,

leeches, arrack, India ink,... *Times (London)*. Dec. 26. p. 1, col. 3.

• **Summary:** “... China Paper, white and coloured, Japan Soy [sauce], Lack Soy for Curries, Curry Powder,... Savil Jam,... The Nobility and Gentry are requested to apply at Pressey's Warehouse...”

Note: As of April 2012, the term “Lack Soy” (referring to soy sauce) appears in this database three times from 1798 to 1801. The closely related term “Lock Soy” (also referring to soy sauce) appears in this database nine times from 1785 to 1911. It seems very likely that the two words (Lack and Lock) are somehow related. Address: Warehouse, Henrietta Street, Covent Garden [London].

446. Briggs, Richard. 1798. *The English art of cookery, according to the present practice; being a complete guide to all housekeepers, on a plan entirely new;... A new edition.* Dublin: Printed for P. Byrne. xxiv + 24 + 533 p. 12vo.

• **Summary:** In the chapter on “Fish” the recipe for “White bait” states (p. 75): “Take your white bait fresh caught,... have some hogs-lard boiling hot, and fry them quick two minutes, put them on a sieve to drain before the fire, and dish them in a hot dish, with plain butter in a boat and soy in a crewet.”

Note: First published as “New Art of Cookery.” Address: Many years cook at the Globe-Tavern, Fleet-street; the White-Hart Tavern, Holborn; and now at the Temple Coffee-House, London.

447. Sequeira, I., Jr. 1798. *A new merchant's guide: Containing a concise system of information for the port and city of London:...* London: Printed for the author. [18] + 244 p. Illust. 22 cm.

• **Summary:** The section titled “East-India articles paying customs, &c.” lists the items in alphabetical order (p. 235): “Pickles,... Rose-wood furniture, Soy [sauce], Shawls, Sugar brown,...”

Note 1. The author's full name is Joao Henriques de Sequeira.

Note 2. The meaning of the term “East-India” is not clear. It was probably a collective name, applied loosely and vaguely, to India, Indochina, and the Malay Archipelago. Address: [England].

448. Stavorinus, Johan Splinter. 1798. *Voyages to the East-Indies. Translated from the original Dutch by Samuel Hull Wilcocke.* 3 vols. London: Printed for G.G. and J. Robinson. vi + 534 p. See vol. 1, p. 360. [Eng]

• **Summary:** In Chapter 29, as part of a discussion of Dutch trade with Japan, the translator adds the following footnotes not found in the original text (see p. v-vi): Two Dutch ships go yearly to Japan. They also export “a trifling amount in soy [sauce], china, lacquered ware, and large silk nightgowns. The private trade of the Dutch officers and ships' crews to

Japan, is also very considerable, as well as profitable; they carry out, camphor, china-root, saffron, Venice treacle, Spanish liquorice, ratans, spectacles, looking glasses, watches, manufactured glass, and unicorns' horns (the horn of the menodon monoceros), and receive in return, soy, silks, silk nightgowns, china, lacquered ware, fans, and fine rice" (p. 360).

There are also extensive notes by the translator about the Dutch forts and trading posts / factories in Asia including those on the coast of Coromandel, Negapatnam [Nagapatnam, the head settlement], Sadraspatnam [Zadraspatam, Sadrangapatnam], Pulicat, Sadras, Palicol [Palikol, Katira], Bemelipatnam, Geldria, Surat; In Japan: Decima [Deshima], Nangasakki [Nangasaki, Nangasacqui, Nangasacky, Nangasackij, Nagasaki]. Address: Rear Admiral in the service of the States General.

449. Pressey's. 1799. Classified ad: Patna rice, gram, dohl [dahl, dal], cotton seed,... *Times (London)*. April 8. p. 2, col. 1.

• **Summary:** "... beetle nuts, lychees, lack, soy [Lack Soy, Lock Soy?], Bengal curry powder, Bombay mangoes,... preserved nutmegs, ginger, fruit of the palm tree, five-finger fruit from Canton [China], Mandarin and Bengal oranges, preserved West-India ginger, papaws,... sweet and tart tamarinds, Gwaya [Guava] jelly, Saveljam, casada bread, ochra seed and powder, pure cold-drawn castor oil, long pepper, arrowroot powder, cashew nuts, Pinder's kurganney seed, cocoa nuts, du roy plums... with a greater variety of Foreign Produce than any other Warehouse in Town. The Nobility and Gentry are requested to apply at Pressey's..." Address: Henrietta-street, Covent-garden [London].

450. Ball's Italian and Oil Warehouse. 1799. Classified ad: Potted charr and fresh laver. *Times (London)*. April 25. p. 2, col. 2.

• **Summary:** "Ball has just received from the Lakes a parcel of fresh Potted Windermere Charr [Char, a type of fish] in the highest perfection; also Branston Laver [a sea vegetable; Japanese-nori]. Lately landed... Sour Crout, Bengal Curry, India Soy and Mangoes, Patna Rice. Rich Sauces of all kinds for fish, game, gravies, hashes, &c. that will keep in any climate." Address: No. 76, New Bond-street [London].

451. Hickson (William). 1799. To the nobility and gentry—Hickson's Prepared Gorgona Anchovies... (Ad). *Observer (London)*. May 26. p. 1.

• **Summary:** "Extraordinary fine old Soy [sauce], and Cayan Pepper [Cayenne]. Hickson's rich Sauces and Pickles."

This ad also appeared in the issue of June 9, June 16, July 7 (all p. 1). Address: Oil and Italian Warehouse, No. 170, Strand, near Surry-street.

452. Skill. 1799. Provision and merchant oilman... (Ad). *Star*

(*London*). June 5. p. [1], col. 4.8.

• **Summary:** "Incomparable and luxurious fish sauces and gravies."

"Sauce a la Militaire, Cavice, Walnut Ketchup, Indian Soy, Oyster Ketchup, Cherokee Sauce, Mushroom Ketchup, Zoobditty Match, and every other sort used at the most fashionable tables, in bottles, at 2s. and 3s. 6d. each, and in cases with partitions, containing twelve sorts of the above Sauces, at only one Guinea each." Address: At his Italian and French Warehouses, No. 15 and 16, Strand, opposite St. Martin's Church, London.

453. Ticknor (Elisha). 1799. Classified ad: To be sold,... a general assortment of West-India goods and groceries,... *Columbian Centinel (Boston, Massachusetts)*. Nov. 23. p. 3.

• **Summary:** "... Corks, Catchup Mushroom, ditto, ditto English [Catchup Mushroom English], East-India Soy [sauce], Essence of Anchovies,..." Address: At the sign of the Bee-Hive, No. 42, Marlboro-street, Boston.

454. Marston (John). 1799. Classified ad: Has for sale. *Commercial Advertiser (New York City)*. Nov. 28. p. 3.

• **Summary:** "... Best English Mustard. Mushroom and Oyster Ketchup, India Soy [sauce]. Quin, Cheroque and Fish Sauces. Lemon Pickle and Corach... All orders for Ship Stores thankfully received and punctually attended to." Address: No. 83 Water-street.

455. Long's Foreign Warehouse. 1799. Classified ad: Tamarinds in the shell, as they grow. *Times (London)*. Dec. 10. p. 1, col. 3.

• **Summary:** "... Guava Jelly and Marmalade; preserved Oranges, and Orange and Pine Apple [pineapple] Jam; Pine Apples, and Preserved Mangoes... East India pickled Mangoes, Bamboo Achar, &c. preserved Ginger, 4s. a pound;... genuine Japan Soy [sauce],... real Gorgona Anchovies, real India Currie Powder..." Address: No. 83, Lombard-street [London].

456. Marshal, Ebenezer. 1799. The history of the union of Scotland and England... Edinburgh: Printed for P. Hill; London: Printed for Longman & Rees. vii + 259 p. See p. 233-34.

• **Summary:** Chapter 5, pages 233-34: "The alteration, which, in consequence of the Union, was produced in the manners, dress, and living of the Scots, is this described by the author, who wrote twenty years after the great and important event. 'Where I saw the gentleman, lady, and children, dressed clean and neat, in homespun stuffs of her own sheep's growth, and women's spinning, I see, now, the ladies dressed in French or Italian silks and brocades, and the laird [a small landowner in Scotland] and his sons in English broad cloth. Where I saw the table served in Scots clean fine linen, I see, now, Flemish and Dutch diaper and damask. And

where, with two or three substantial dishes of beef, mutton, and fowl, garnished with their own wholesome gravy, I see, now, served up, several services or of little expensive ashets [platters], with English pickles, yea, Indian mangoes and catchup or anchovy sauces.” Address: Rev., Cockpen [south of the town of Bonnyrigg in Midlothian, Scotland].

457. Nemnich, Philip Andreas. 1799. An universal European dictionary of merchandise, in the English, German, Dutch, Danish, Swedish, French, Italian, Spanish, Portuguese, Russian, Polish, and Latin languages. London: Printed for J. Johnson in St. Paul’s Church Yard, I. Remanat in High Holburn, & W. Remnant in Hamburg. 437 p. 28 x 22 cm. [Eng]

• **Summary:** Terms related to merchandise and trade from twelve languages are defined in English. The 12 languages are Dutch, Danish, Swedish, German, French, Italian, Spanish, Portuguese, Russian, Polish, and Latin. In the section on German terms (the book is unpaginated) and the section on Danish terms, the term “Soya” is defined simply as “Soy” [sauce]. Swedish: “Sojaböner; soy.” Russian: “Soja; soy.” Latin: “Soia; soy.” Neither the terms “Soy* or “Soj* appear in Dutch, French, Spanish, or Polish. Philipp Andreas Nemnich lived 1764-1822. Address: London.

458. Pressey (George). 1800. Classified ad: George Pressey tenders his grateful thanks... *Times (London)*. Jan. 11. p. 2, col. 1.

• **Summary:** “... to the Nobility, Gentry, and Public at large, for their distinguished patronage through a long series of years. Aided by their protection, his own experience, and extensive connections, he is able to draw from varied resources, the most rare and select articles. In his Catalogue, which for extent defies competition, no expense or trouble is spared to supply the minutest deficiency. In Sauces, and other compound articles, the greatest attention is paid to arrive at such rich and elegant flavours as may please the most fastidious palate.”

“Japan Soy and fine Essence of Anchovies... Bombay Mangoes, West India Pickles, Piccalilly,... genuine Cold Drawn Castor Oil, from Barbados; Cayenne Pepper, Arrow Root Powder, East India Currie Powder, Thisco Thomas’s, Pinders, Cashew, Cocoa and Suwarrow Nuts;...” Address: Warehouse, Henrietta-street, Covent-garden [London].

459. Vinton (David). 1800. Classified ad: Morocco pocket-books. *Providence Journal and Town and Country Advertiser (Rhode Island)*. March 26. p. 1.

• **Summary:** “... Cayenne Pepper-Sauce in bottles, per dozen. Basket blown Salt, Capers. India Japan Soy [sauce], per gallon or bottle. Stomachic Bitters, of a fine flavour, in bottles...” Address: At the corner store, No. 7, Market-Square.

460. Stuart (James). 1800. Classified ad: Has removed from no. 17 to no. 10 William-Street... and has for sale,... *Prisoner of Hope (New York City)*. May 24. p. 19.

• **Summary:** “... Brown stout and London Porter by the cask or doz [dozen]. India soy (sauce), walnut ketchup, anchovies and capers. Orange flower and rose waters. Demyjohns [Demijohns] and Florence oil.”

Note: A demijohn is a narrow-necked bottle of glass or stoneware holding from one to 10 gallons that is enclosed in wickerwork and has one or two wicker handles. Address: No. 10 William-Street, corner of Slote Lane.

461. Hickson (W.). 1800. Warehouse for Hickson’s Prepared Gorgona Anchovies... (Ad). *Observer (London)*. Sept. 7. p. 1.

• **Summary:** “... Cavear, Fresh Laver; Preserved Ginger, Tamarinds, Sweetmeats, Soy [sauce], Curry,...”

462. Pressey (George). 1800. Classified ad: New fruit—Just landed,... *Times (London)*. Oct. 30. p. 1, col. 1.

• **Summary:** “... Jar and Sun Raisins, Jordan Almonds, preserved Ginger, Limes, Papaws... Fruit of the Palm Tree, Mandareen [Mandarin] Oranges, Gevava [Guava] Jelly... Mangoes, Pinders [groundnuts], Cashew, Hickery [Hickory] and Cocoa Nuts, Yams, Edders or Cocoas, Cassada [Cassava] Bread, Creme De Noyau, red and white,... Gorgona Anchovies, real Japan Soy [sauce], French and Spanish Olives, with a more extensive assortment of Foreign Produce than any other house in town.

“George Pressey, impressed by a thorough sense of gratitude, returns his sincere thanks to the Nobility and Gentry for the liberal patronage he has so long experienced, and begs leave to assure them that exertion which first drew their attention shall ever remain unwearied to merit the continuance of their favours.” Address: Foreign Warehouse, Henrietta-street, Covent-garden [London].

463. Thompson (Hugh). 1800. Classified ad: Has received by the late arrivals from London,... for cash or approved paper. *Federal Gazette and Baltimore Daily Advertiser*. Nov. 4. p. 3.

• **Summary:** “Plated goods:... bread baskets; soy frames [for soy sauce]; candlesticks and branches, goblets, waiters, tea and coffee urns, cuit frames; tea kettles with silver edges; also best gilt and metal watch chains;...” Address: Frederick-street.

464. Provision Store. 1800. Classified ad: For sale by wholesale and retail,... *Commercial Advertiser (New York City)*. Nov. 17. p. 3.

• **Summary:** “Sauces: Fish. Cherokee. Corach. Quin. Oyster Ketchup. Mushroom do. [ditto = Ketchup]. Walnut do. [Ketchup]. India Soy [sauce]. Pickles: Walnuts. Mangoes. Gherkins. Cucumbers...” Address: 251 Broadway.

465. Catnach (Donald). 1800. Classified ad: Has for sale by

wholesale and retail... *Philadelphia Gazette and Universal Daily Advertiser*. Dec. 29. p. 1.

• **Summary:** "... Capers and Olives in bottles. East-India Soy [sauce] and Ketchup of the first quality... Hempseed and Filberts." Address: Fruiterer, Corner of Market and Third Street.

466. Communications to the Board of Agriculture; on subjects relative to the husbandry and internal improvement of the country. Vol. II. 1800. London: Board of Agriculture. Printed by W. Bulmer. 501 p. See p. 193-96. Illust.

• **Summary:** Section IX (p. 193-94) is titled "Copy of a letter from Mr. Campbell, at Fort Marlborough, with an account of seeds sent by him, by the *Queen* Indiaman."

He writes: "Those which go by the *Queen* are, the cordage palm; the caminium; the copaya, or oil-nut of the Malays; the teak; the soy bean of Japan; and the catupa, a delicate fruit lately discovered." "The adjoined catalogue contains short notices and references to works in which these plants are amply treated of."

He encourages the Board to distribute and test these seeds worldwide, and not only to British colonies. The letter is signed Charles Campbell, Fort Marlborough, 17 May 1798.

On pages 194-96 is an addendum titled "Account of seeds sent in the *Queen* Indiaman." On p. 196 we read:

"*Dolichos Soja*, the Soy Bean.

"This pulse is exotic to the West coast [of Sumatra], and seems to have been imported by the Chinese colonists.

"It is little cultivated here; and never, I believe, with a view to prepare the condiment from it.

"Much of the sauce sold in Europe, under the name of Japan Soy, is manufactured at Batavia [today's Jakarta], by a very simple process. Satisfactory information will, I believe, be found respecting this, in Kempfer's *Amoenitates* [sic, Kaempfer's *Amoenitatum exoticarum*... (1712)], a work I regret the want of.

Note 1. This is the earliest English-language publication seen (Aug. 2008) that contains the word "soy bean" (or "soy beans").

Note 2. Fort Marlborough was in Bengkulu, Sumatra (in today's Indonesia).

467. Matsudaira, Fumai? 1800. Yotsu no toki no hana [Flowers of the four seasons]. Japan. Publisher unknown. 2 large volumes. Japanese summary by Kawakami 1978, p. 157. [Jap]

• **Summary:** These two volumes of writing on cookery contain information on tea ceremony cuisine (*kaiseki ryori*) menus, including grilled tofu (*yaki-dôfu*), Simmering Tofu (*Yû-dôfu*), Miso no Sashimi, Natto Miso Soup (*Natto-jiru*), and Yamabuki Shoyu. The author, Matsudaira, lived 1751-1818.

Note: This is the earliest document seen (Dec. 2011) that

mentions *nattô-jiru* [Natto Miso Soup] in connection with sticky natto.

468. Pennant, Thomas. 1800. Outlines of the globe. Vol. III: The view of India extra Gangem, China and Japan. London: Printed by Luke Hanford, and sold by John White. xi + 284 + [21] p. See p. 75, 283. Index.

• **Summary:** The author traveled in the countries he lists in his itinerary.

In the section on "Tonquin" we read (p. 75): "Fish is in equal abundance. The delicate sauce we call *Soya* is made here of one species" [of fish, sic]. The 1st Appendix (after p. 279), titled "A list of articles imported from the East Indies," lists under "Goods manufactured" (p. 283): "Soy [sauce]. Sago. Shawls." Address: Esq., Downing, England.

469. Pressey (George). 1801. Classified ad: A third cargo of new fruit just landed. *Times (London)*. March 5. p. 1, col. 1.

• **Summary:** "... China Lack Soy [opaque rice vermicelli], for curries; French Haricots [Haricots], Capers and Olives; Pistachio, Pinders, Thisco Thomas's, Cashew, Beetle, and other curious Nuts; Prime Pickled Mangoes... Essence of Anchovies, Japan Soy [sauce], Lemon Pickle, with all kinds of Fish and Game Sauces, compounded to please the most fastidious palate..." Address: Foreign Warehouse, Henrietta-street, Covent-garden [London].

470. Hickson. 1801. Warehouse for Hickson's Prepared Gorgona Anchovies... (Ad). *Observer (London)*. May 24. p. 1.

• **Summary:** "... German Sausages, Cavear, India Soy [sauce], Kian [Cayenne], Tamarinds, Capers, Olives,... India Pickle, Piccalili,... Sauces and Pickles in cases for Families and Sea Service."

471. Workman (James). 1801. Classified ad: Alexandria... articles lately imported from London. *Washington Federalist*. July 29. p. 3.

• **Summary:** "... castors, soy frames [for soy sauce],... Essence of anchovies, quin sauce, cherokee sauce, lemon pickles,..."

Note: This is the earliest document seen (March 2011) concerning soy in connection with (but not yet in) Washington, DC. Address: Royal street.

472. Mason, Charlotte (Mrs.). 1801. The lady's assistant for regulating and supplying the table: Being a complete system of cookery, &c... A new [8th] edition, enlarged, corrected, and improved, to the present time. London: J. Walter. 422 + 25 + [24] p. Index. 21 cm. *

• **Summary:** "Soy is made from mushrooms which grow in the woods [in the East Indies]."

473. Nemnich, Philipp Andreas. 1801. Zwoyter Theil des der

Hamburgischen Commerz-Deputation gewidmeten Waarenlexicon in zwölf Sprachen [Part two of a dictionary of merchandise in twelve languages, dedicated to the Hamburg Commerce Deputation]. Hamburg: Printed by Conrad Mueller. viii + [5] + p. 578-992. 21 cm. [Ger; Eng]

• **Summary:** Terms related to merchandise and trade from twelve languages are defined in German. The 12 languages are Dutch, Danish, Swedish, English, French, Italian, Spanish, Portuguese, Russian, Polish, and Latin.

In the section where English terms are translated to German (p. 637) the term “India soy” is defined as “Indianische Soya.” Philipp Andreas Nemnich lived 1764-1822.

Note 2. This is the earliest German-language document seen (April 2012) that uses the term “Indianische Soya” to refer to soy sauce.

474. Jacks (James). 1802. Classified ad: New assortment of goods, imported in the ship Birmingham Packet, capt. Cochran, from London,... *City Gazette and Daily Advertiser* (Charleston, South Carolina). Feb. 17. p. Supplement 1.

• **Summary:** “... Plated goods:... Liquor Frames. Soy Frames [for soy sauce], Toast Racks and Egg Cups.” Address: Watch-Maker and Jeweller [Jeweler], No. 125, Broad-street, the third door from the State Bank.

475. Cooper and Simpson. 1802. Fish sauces, &c. of superior quality, prepared by Cooper and Simpson, at their Italian oil and fish-sauce warehouse (Ad). *Observer* (London). March 14. p. 1.

• **Summary:** “The universal approbation their rich sauces have so long experienced, and the decided preference they have obtained at the most fashionable tables, induces them to present to the Nobility, Gentry, &c. the following list of the most approved now used:... Coratch, Quin’s Sauce, Lemon Pickle, Oyster Ketchup, Chili Vinegar,...”

“Sold in bottles at 2s. 6d. each; or in Mahogany Boxes, containing Four and Six Bottles, at 10s. 6d. and 15s. 6d. each.—Genuine Cayenne Pepper, Indian Soy [sauce], Mushroom and Walnut Ketchup, Anchovies, Capers, &c.”

This ad also appeared in the April 4 issue (p. 3). Address: No. 179, corner of Fetter-lane, Fleet-street [London].

476. Stuart (James). 1802. Classified ad: Has for sale,... *New-York Gazette and General Advertiser* (New York City). May 20. p. 2.

• **Summary:** “... Gunpowder, teas by the chest or lb.: Hyson, Young hyson, Hyson skin, Souchong, Bohea,... London, Durham, and American mustard, 1st, 2d, and 3d quality playing cards, Cayenne pepper, olives, anchovies, Indian soy [sauce] and ketchup,...” Address: No. X, William street.

477. Commissioners of his Majesty’s Customs. 1802.

Classified ad: For sale, by order of the Honourable the Commissioners. *Times* (London). Dec. 6. p. 1, col. 2.

• **Summary:** The section titled “For home consumption” includes: “Tea, Coffee, Nutmegs, Brandy, Rum, Geneva, Cordials, Wine, Cambric, Muslin, Calico,... Cardamoms, China, Soy [sauce], Musk...” This ad also appeared in the Dec. 8 issue (p. 1). Address: Custom-House, London.

478. Simpson (R.). 1802. Fish sauces, &c. of superior quality, prepared by R. Simpson, (late Cooper and Simpson), at his Italian oil and fish-sauce warehouse (Ad). *Observer* (London). Dec. 12. p. 1.

• **Summary:** “R. Simpson respectfully informs the Nobility, Gentry, &c. that he continues to prepare his superior rich sauces, which, for convenience and utility, stand unrivalled.”

“... Quin’s Sauce, Coratch, Lemon Pickle, Chili Vinegar,... Indian Soy [sauce], Mushroom, Walnut, Oyster and Apple Catsup, &c.” Address: No. 179, corner of Fetter-lane, Fleet-street [London].

479. Mollard, John. 1802. The art of cookery made easy and refined: Comprising ample directions for preparing every article requisite for furnishing the tables of the nobleman, gentleman, and tradesman. 2nd ed. London: Printed for the author, and sold by J. Nunn. xxiv + 314 + [21] p. See p. 130, 265. Illust. 22 cm.

• **Summary:** The recipe for “Oyster sauce for beef steaks” states (p. 130): “Blanch a pint of oysters, and preserve their liquor; then wash and beard them, and put their liquor into a stewpan with india soy and ketchup, a small quantity of each, and a quarter of a pound of fresh butter. Set them over a fire, and when nearly boiling thicken with flour and water; season to the palate with a little cayenne pepper, salt, and lemon juice; strain it to the oysters, and stew them gently fire minutes.”

The recipe for “Anchovie [anchovy] sauce for fish” (p. 265) states: “Put half a pound of fresh butter into a stewpan, add to it three spoonfuls of anchovie liquor, walnut and mushroom ketchups a spoonful of each, the juice of half a lemon, a little cayenne pepper, a tea spoonful of india soy if approved, a sufficient quantity of flour and water to make it of a proper thickness. Make the mixture boil, and skim it clean.” Address: Cook, lately one of the proprietors of Freemasons’ Tavern... now removed to Dover St., Piccadilly [London].

480. Pinkerton, John. 1802. Modern geography: A description of the empires, kingdoms, states, and colonies; with the oceans, seas, and isles; in all parts of the world: Including the most recent discoveries, and political alternations. Digested on a new plan... With numerous maps. Vol. II. London: T. Cadell Jun. and W. Davies; and T.N. Longman and O. Rees. viii + 835 p. See p. 110, 170. Maps. Index. 29 cm.

• **Summary:** On page 83 is a detailed map of China. In the chapter titled “China proper” (p. 83), the subsection on “Botany” states (p. 110): “Besides the multitude of vegetables that are cultivated as articles of human food, and which are probably natives of India, Japan, and the neighbouring islands, the following are found in a truly wild state in China, viz. three species of dolichos, *kidney bean*; d. *sinensis*, *calavanses*; d. soya from the beans of which the true Indian soy is made; and d. *cultratus*...”

In the section on “Japan” (p. 152-), in Chapter IV, “Natural geography,” the subsection on Botany states (p. 170): “The vegetable treasures of Japan are numerous, and have been ably explored by Kämpfer and Thunberg... There are several points of resemblance between the floras of China and Japan, and this similarity has probably been strengthened by a mutual interchange of useful vegetables; if indeed both countries have not rather derived some of their most valuable plants from Cochin-China, or the Philippine islands: the ginger, the soy bean, black pepper, sugar, cotton, and indigo, though perhaps natives of the more southern regions of Asia, are cultivated here with great success and in vast abundance.” Note: Pinkerton lived 1758-1826. Address: [England].

481. Willich, Anthony Florian Madinger. ed. 1802. The domestic encyclopedia; or, a dictionary of facts and useful knowledge. Comprehending a concise view of the latest discoveries, inventions, and improvements, chiefly applicable to the domestic economy. Vol. 3 of 4. Philadelphia, Pennsylvania: William Young Birch and Abraham Small. See vol. II, p. 357. This is a 5-volume work. A second edition was published in 1821.

• **Summary:** The entry for “Ring-Worm or Tetter (*Herpes miliaris*)” states (Vol. 3, p. 497): “These pustules never suppurate and cannot be easily cured; often breaking out at certain periods of the year, even after having been apparently removed. The usual application, in this affection [bodily condition, disease, malady] is the common *black or writing-ink*; but frequent friction or embrocation of the eruption with mushroom catsup, has sometimes been attended with success.” Address: Britain.

488. Carter, Susannah. 1803. *The frugal housewife: or, Complete woman cook...* New York, NY: Printed and sold by G. & R. Waite. 216 p. Illust. Index. 17 cm.

• **Summary:** “Soy” [sauce] is used as an ingredient in the following 4 recipes: To boil skate (“serve it up with butter and mustard in one basin, and anchovy or soy sauce in another,” p. 49). To boil soals [soles] (“Serve them up with anchovy sauce, and butter melted plain; or with shrimp, soy, or muscle sauce,” p. 49). To boil plaice and flounders (“or butter melted with a little catchup or soy,” p. 49-50). To boil a pike, or jack (“Sauce.—Anchovy, shrimp, or soy sauce; or melted butter or catchup,” p. 53).

Note 1. This is the earliest English-language document seen (April 2012) that contains the term “soy sauce” (without a hyphen).

The word “catchup” appears 13 times in this book; neither the word “catsup” nor the word “ketchup” ever appears. “Catchup” is never preceded by an adjective (such as “walnut catchup” or “mushroom catchup”). The amount called for is almost always 1 “spoonful” or 2 “spoonfuls.” It is almost always used in a sauce or gravy for fish or meat. Alternatives listed after it (so considered less preferable or widely available) are soy sauce (once) and walnut pickle (once). Alternatives listed before it before (so considered preferable or more widely available) are soy [sauce] (once), walnut pickle (once), and walnut liquor (once). In one case it is used together with a spoonful of walnut pickle. From the above observations we can surmise that “catchup” was probably ketjap (soy sauce) from the Dutch East Indies. The word “soy” did not appear in the English name because, at this time, no Englishmen (and probably no Dutchmen or other Westerners) knew that ketjap was made from soybeans.

Note 2. This book was “first published as early as 1765 in London and Dublin (Ireland), and was first reprinted in American in 1772. One of the earliest American-printed cookbooks... it made no mention of colonial cooking or common American ingredients. It wasn’t until 1803 that ‘an appendix containing several new receipts adapted to the American mode of cooking’ was added.” This was probably added “by the American publisher to attract American readers, and to respond to the best seller of the day [strongly influenced by Carter’s book], Amelia Simmons’ *American Cookery* (1796),... the first cookbook authored by an American” (MSU introduction). Address: [Clerkenwell, London, England].

• **Summary:** Cooking know-how for family use including descriptions of how to make shoyu, vinegar, miso, etc. Contains many illustrations of how to set the table, etc. The

author wrote this more for family than for professional use.

490. Sugino, Hakuka. 1803. *Shinsen hôchô kakehashi* [New edition vegetable knife bridge]. Osaka, Japan: Akamatsu Kuhe; Asano Yahe. 5 + 18 + 62 + 3 leaves. Illust. (woodcuts). 26 cm. On double leaves, oriental style (*fukurotoji*). [Jap]*

• **Summary:** Iino (2003, p. 9): The 1803 issue of this publication “gives instructions for making homemade soy sauce. It states that by adding *modoki* the soy sauce loses its qualities for preservation making it susceptible to both mold and worms. By adding stock, acidity is increased, affecting the flavor. Therefore it states that *modoki* must not be added when making homemade soy sauce.” Address: Japan.

491. Driver (J.). 1804. For sale at the house of J. Driver, Chapel Row (Ad). *Sydney Gazette and New South Wales Advertiser* (NSW, Australia). March 18. p. 1.

• **Summary:** “Preserved Fruit of all kinds 1s. 6d. per lb. “Fine India Soy [sauce], Best Green Tea 6s. per lb.”

Note 1. This is the earliest document seen (March 2010) concerning soybean products (soy sauce) in Australia or Oceania. This document contains the earliest date seen for soybean products in Australia or Oceania (18 March 1804); soybeans as such have not yet been reported.

Note 2. This is the earliest of 230 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “India Soy.” The newspaper in which this term appears most frequently is *The Argus* (Melbourne) (70 times). By category: 225 are advertising and 5 are news. By decade: In 1840-49 the term appears in the most ads or articles (95), followed by 1850-59 (66). Address: Chapel Row, [Sydney].

492. Grubbens, M. de. 1804. Method of preparing Chinese soy. *Philosophical Magazine (The)* (London) 19(75):260-63. First quarter. [1 ref. Eng]

• **Summary:** “Extracted from the Memoirs of the Academy of Sciences at Stockholm for 1803, first quarter, by M. Lindbom, Captain of the Swedish Mines.* (Footnote: *From the *Annales de Chimie*, No. 148).

“The Transactions of the Swedish Academy for the year 1761 contain a description of the method of preparing soy [sauce], by the late captain Ekeberg; but as this description is incomplete as well as incorrect, since the real Chinese soy will not be obtained by following it, I am fully persuaded that M. Ekeberg never saw, nor was acquainted with, the true process for preparing this substance. There is reason to believe that he gave his description from the accounts of the Chinese, who are not always ready to speak the truth, as I observed during the five years I resided in China... but as I have now procured a very correct account of it [manufacturing soy], I think it my duty to communicate it to the Academy.

"Soy is prepared from a kind of beans, which are whiter and smaller than those of Turkey, the farina of wheat, salt, and water. The proportions are 50 pounds of beans, 50 pounds of salt, 60 pounds of farina of wheat, and 250 pounds of water." Note: Farina here refers to finely ground wheat meal, a little coarser than wheat flour.

"After the beans have been well washed, they are boiled with well water in an open pot for some hours, or until they become soft enough to be kneaded with the fingers. During the boiling they must be always covered with water that they may not be burnt. Care must be taken not to boil them too much: if they are diluted, too much of the substance remains in the juice. When the beans are boiled they are put into large flat wooden tubs, or, as the Chinese do, into vessels made of thin broad splinters of bamboo, two inches and a half in depth and five feet in diameter. In the latter they are spread out to the depth of two inches. When they are sufficiently cooled to be touched with the hand, the farina of wheat is added, and well mixed with them; and this is continued till the whole farina is exhausted. When the mass becomes too dry for the farina to adhere to the beans, a little warm juice is added.

"When the whole is well mixed, the mass is spread out in the tubs above mentioned, taking care that the strata are not more than an inch or an inch and a half in thickness. The mass is then covered, by placing over it a lid which exactly closes it. When it is observed that the mass becomes mouldy, and that heat is disengaged from it, which takes place in the course of two or three days, the cover must be raised up, by placing two rods below it, in order that the air may have freer access. In the mean time a rancid odour is exhaled. If the mass assumes a green colour, it is a sign that every thing goes on well; if it begins to grow black, the cover is raised a little more, in order that the mass may be more in contact with the air. When the mass becomes completely black it is entirely spoiled.

"As soon as it is observed that the whole mass is green and mouldy, which is generally the case in eight or ten days, the cover is removed, and the mass is exposed for some days to the air and the sun.

"When the whole mass has become hard like a stone, it is cut into small fragments, which are thrown into an earthen pitcher, and 250 pounds of water, in which 50 pounds of salt are dissolved, are poured over them. The whole is well stirred; and the height which the water occupies in the pitcher is noted. In case one pitcher is not sufficient, the mass is put into several, taking care that each be proportioned to the quantity of the matter.

"When the pitcher is thus filled it is placed in the sun. The matter must be regularly stirred and shaken every morning and evening, but at night care must be taken to put the cover on it to preserve the mass from the cold. This cover is made convex on the outside that the rain may more readily run off from it, and it is employed also in the day

time, when it rains. The greater the heat of the sun, the more the preparation of the soy is accelerated. This operation in general is undertaken only in summer, and yet it continues for two or three months.

"In proportion as the mass decreases by evaporation, well water is added, and this is continued till the salt water has entirely dissolved both the farina and the beans. The pitcher is then left some days longer in the sun, in order that the solution may be so much the more perfect, as on this depends the good quality of the soy, and even during this time the matter must be stirred every day.

"When the mass has become very succulent and oily, the whole is poured into bags, which are pressed to squeeze out the soy, which is then pure, and ready to be employed. It is not boiled, as M. Ekeberg asserts. It is then put into bottles, which are well closed. The Chinese, who deal in this article, put it into large pitchers. The soy before it is squeezed out is of a dark brown colour, but it afterwards becomes black.

"The Chinese prepare from the refuse that remains two other kinds of soy. The first time they add 150 pounds of water and 30 pounds of salt: having squeezed this mass, they again pour over it 100 pounds of water and 20 pounds of salt, proceeding always in the same manner as above described.

"The last two kinds are not strong, but very salt [sic, salty]; especially that of the last extraction, the colour of which is also clear. These two kinds are the commonest in China. The difference between them is as 8, 4, 1.

"In the year 1759 I prepared in this manner, in my lodgings at Canton, all the soy which I employed. I even brought some bottles of it to Sweden: it was succulent, oily, moderately salty, and entirely different from that usually sold in Europe: in regard to its taste it was equal to that of Japan, which is generally considered as the best.

"This description is the more certain, as I always executed the preparation myself: I will even venture to assert, that it is that used to obtain soy of the best quality.

"M. Ekeberg asserts that the soy is boiled, and that sugar, ginger, and other spiceries are added: but this is void of foundation and cannot be true, since a Chinese pound of soy does not cost more than two *canderins* Chinese money, which are equal to one and a third skilling Swedish.* This was the usual price during my residence in China, and there is no reason to believe that these ingredients were employed in the preparation of it. Besides, soy has no taste either of sugar or of spiceries; the prevailing taste is that of salt."

501. Grubbens, Michael de. 1804. The method of preparing Chinese soy. *Journal of Natural Philosophy, Chemistry and the Arts (London)* 9:237-41. Dec.

• **Summary:** A symbol after the author’s name is linked to a footnote which states: “Extracted from the Memoirs of the Academy of Sciences of Stockholm for 1803, by M. Linborn, and inserted in the Annales de Chimie, Vol. L. from which the present translation is made.”

For the full text of the translation, which is fairly similar, see the earlier article: Grubbens, M. de. 1804. “Method of preparing Chinese soy” [sauce]. *Philosophical Magazine (The)* (London) 19(75):260-63. First quarter.

In the present translation, the word “haricots” is used

rather than “beans.” “Soy is prepared with a species of haricots.”

502. **Product Name:** [Tamari, and Miso].

Foreign Name: Tamari, and Miso.

Manufacturer's Name: Minato-ya. Renamed Sato Shinnosuke Shoten in 1909, then San-Jirushi Brewing Corp. in 1963.

Manufacturer's Address: Ooaza Senba, Kuwana-cho, Kuwana-gun, Ise-no-kuni, Japan.

Date of Introduction: 1804.

Ingredients: Soybeans, water, salt.

Wt/Vol., Packaging, Price: Wooden kegs.

How Stored: Shelf stable.

New Product–Documentation: San Jirushi advertisements in 1980s. Talks with Steve Earle and Michael Fountain. Letter from Steve Earle. 1988. March 7. The best source seen up to this time on the early history of San Jirushi. The product was originally called tamari, not “tamari-shoyu.”

Note: This is the earliest record seen (Feb. 2012) concerning San Jirushi of Kuwana, Japan.

503. Mease, James. 1804. Soy. In: A.F.M. Willich, ed. 1804. *The Domestic Encyclopedia*. Philadelphia, PA: William Young Birch and Abraham Small. See Vol. V, p. 12-13.

• **Summary:** This work is subtitled: “First American edition; with additions applicable to the present situation of the United States: by James Mease.” Material added by Mease appears in square brackets [“Crotchets”].

“SOY [sauce], or Sooju, a species of liquid condiment, which is imported from India, and is used as a sauce for fish. It is prepared from the leguminous fruit of the Soja (*Dolichos soja*, L.) a native of Japan.

“The pods are first boiled till they become soft; when equal parts of them, and of *muggi* (wheat or barley that has been coarsely ground), are thoroughly mixed... This preparation is then kept in a close [sic, closed] vessel, and a warm place, for twenty-four hours, in order to ferment; after which, the mass is put into a pot, and covered with a large portion of common salt, when two *measures* and a half of water are poured over the whole. The compound is stirred, once at the least, every day for the space of two or three months, and at the end of that period, it is filtered; the expressed liquor being preserved in wooden vessels. Fresh water is next added to the same mass; which, after stirring it occasionally for several days, is at length strained; and the liquor, though of an inferior kind, thus rendered fit for use.

“Soy possesses a strongly saline taste, but has only a slight aromatic flavor: it is chiefly used at the tables of the luxurious; and is one of these artificial stimulants of the palate, which deserves no commendation, especially for vitiated or relaxed habits.

“[The Soy-bean bears the climate of Pennsylvania very well. The bean ought therefore to be cultivated.]” Note 1.

SOY, or Sooju, a species of liquid condiment, which is imported from India, and is used as a sauce for fish. It is prepared from the leguminous fruit of the Soja (*Dolichos soja*, L.) a native of Japan.

The pods are first boiled, till they become soft; when equal parts of them, and of *muggi* (wheat or barley that has been coarsely ground), are thoroughly mixed.... This preparation is then kept in a close vessel, and a warm place, for twenty-four hours, in order to ferment; after which, the mass is put into a pot, and covered with a large portion of common salt, when two *measures* and a half of water are poured over the whole. The compound is stirred, once at the least, every day, for the space of two or three months, and at the end of that period, it is filtered; the expressed liquor being preserved in wooden vessels. Fresh water is next added to the same mass; which, after stirring it occasionally for several days, is at

A portrait of James Mease, M.D., appears in the following book: True, Rodney H. 1939. *Sketch of the History of the Philadelphia Society for Promoting Agriculture:... 150th anniversary... Memoirs Vol. 6*. Philadelphia, Pennsylvania: Philadelphia Society for Promoting Agriculture. ix + 228 p. Portrait is facing p. 29.

Note 2. This is the earliest document seen (July 2011) that clearly refers to the cultivation of soybeans in Pennsylvania. This document also contains the earliest clear date for the cultivation of soybeans in Pennsylvania (1804). However soybeans were probably grown in Philadelphia in 1769 (See Lesley 1884). Mease probably learned that the soy-bean grows well in Philadelphia from John Bartram, who also lived in Philadelphia and was also a member of the American Philosophical Society.

Note 3. This document by Mease was first cited in: Piper, C.V.; Morse, W.J. 1916. "The soy bean, with special reference to its utilization for oil, cake, and other products." *USDA Bulletin* No. 439. Dec. 22. See p. 7.

Note 4. This is the earliest English-language document seen (Feb. 2007) that contains the term "Soy-bean" (or "Soy-beans"), or "the Soja." The term "Soy-bean" is the earliest close ancestor / cognate of the modern American word "soybean." By what thought process did Mease coin this term? Did he think: The Soy-bean is the bean used to make Soy [sauce]?

Note 5. This is the earliest English-language document seen (April 2012) with the word "Soy," used alone to refer to soy sauce, in the title.

Note 6. Hymowitz (1991) reports that the soybeans referred to by Mease were those introduced by Samuel Bowen. Dr. James Mease, a physician, scientist, and author, was born on 11 Aug. 1771 in Philadelphia. He was a leader in the organization of the Pennsylvania Horticultural Society and in 1802 was elected to the American Philosophical Society. Mease obtained his information that "The Soy-bean bears the climate of Pennsylvania very well" from the writings Charles Thomson, one of the secretaries of the American Philosophical Society for the year 1770. The last sentence in this 1804 article is a paraphrase of Thomson's Preface to the *Transactions of the American Philosophical Society* (Vol. 1, p. VII) for the year 1770.

In 1805 Mease, age 23, was the secretary of the Philadelphia Society for Promoting Agriculture, in Philadelphia; in 1844 he was chosen president. In 1810 he was secretary of the Agricultural Society of Philadelphia. On 19 Sept. 1991 Dr. Ted Hymowitz of the University of Illinois sent a photocopy of an oval illustration (painting) of a portrait of James Mease, M.D. Address: M.D., Fellow of the American Philosophical Society, Philadelphia, Pennsylvania.

504. Pinkerton, John. 1804. *Modern geography: A description of the empires, kingdoms, states, and colonies; with the oceans, seas, and isles; in all parts of the world: Including the most recent discoveries, and political alternations. Digested on a new plan...* The article America, corrected and considerably enlarged, by Dr. Barton, of Philadelphia. With numerous maps. Vol. II. Philadelphia: John Conrad & Co.; Baltimore: M. & J. Conrad & Co.;... [ii] + 698 p. See p. 85, 130. Index. 23 cm.

• **Summary:** The information about soy in this book is very similar to that in the 1802 edition, although it appears on different pages. In Chapter 4, on the natural geography of China, the section on "Botany" (p. 85) states: "The following are found in a truly wild state in China, viz. three species of *dolichos*, *kidney bean*; *D. sinensis*, *calvances*; *D. soya*, from the beans of which the true Indian soy is made; and *D. culcratus*: *dioscorea alata*, *yam*; *cucurbita sinensis*, China gourd; *nicotiana tabacum*, tobacco; and *convolvulus*

battatas, *sweet potato*.

In another Chapter 4, on the natural geography of Japan, the section on "Botany" (p. 130) states: "... the ginger, the soy bean, black pepper, sugar, cotton, and indigo, though perhaps natives of the more southern regions of Asia [Cochin-China] are cultivated here [in Japan] with great success and in vast abundance."

Note 1. Pinkerton lived 1758-1826.

Note 2. This is the earliest document seen (March 2001) that mentions wild soybeans. Address: [England].

505. Gourgas (Jacob). 1805. Classified ad: Received per Polly, from London, and Venus from Liverpool,... *Repertory (The)* (Boston, Massachusetts). Jan. 18. p. 4.

• **Summary:** "... an elegant assortment of the best English Plated Ware, consisting of: Tea Setts, cake and break Baskets, Castors, Soy Frames [for soy sauce], Candlesticks,..." Address: English Agent, No. 13, Old State House.

506. Dana (Dexter). 1805. Classified ad: For sale,... *Boston Gazette*. Jan. 21. p. 4.

• **Summary:** "... Cream De Noyeau, East-India Soy [sauce], East-India Curry, Mushroom Ketchup, Sweet Oil, in flasks & botls. [bottles], Ising-Glass [Isinglass]..." Address: No. 4, South-side Market-House.

507. Ticknor (Elisha) & Co. 1805. Classified ad: To be sold... a general assortment of W.I. [West-India] goods & groceries. *New-England Palladium* (Boston, Massachusetts). Dec. 20. Supplement p. 4.

• **Summary:** "... Corks, Catchup (Mush. Eng. [Mushroom English]), Catshup (do American [ditto = Mushroom American]), East-India Soy [sauce], Essence Anchovies, Essence of Spruce, Flour (superfine), Garlic, Ginger (Race),... Hemp-Seed..."

Note: This is the earliest English-language document seen (Feb. 2010) that uses the spelling "Catshup" to refer to Catsup. Address: Sign of the Bee Hive, No. 42, Marlboro-street, Boston.

508. Mason, Charlotte (Mrs.). 1805. The lady's assistant for regulating and supplying the table, being a complete system of cookery, &c... A new [9th] edition, enlarged, corrected, and improved, to the present time. London: Printed by Thomas Gillet... iv + [16] + 422 + 26 + [20] p. Index. 22 cm. *

• **Summary:** "Soy is made from mushrooms which grow in the woods [in the East Indies]."

509. McKoy (John M'Koy). 1806. Classified ad: Lisbon lemons, almonds, and oranges... *American Citizen* (New York City). June 6. p. 1.

• **Summary:** "... 40 boxes Olives, Capers and Anchovies,

India soy [sauce], Mushroom Ketchup, Cayenne Pepper, London and Durham Mustard. West India Ginger, preserved in loaf sugar.” Address: No. 148 Broadway, corner Liberty-street.

510. Cartee. 1806. Classified ad: Takes liberty, for the better information of his friends and customers,... *Providence Gazette (Rhode Island)*. July 26. p. 1.

• **Summary:** “... Pepper Sauce, Soy [sauce], Catsup, Raisins, Currants,...” Address: His old Stand, near the Market.

511. Hunter, Alexander. 1806. *Culina famulatrix medicinae*: or, Receipts in modern cookery, with a medical commentary, written by Ignotus, and revised by A. Hunter. 3rd ed. York, England: Printed by T. Wilson and R. Spence, High-Ousegate: For J. Mawman. 284 p. See p. 23, 40.

• **Summary:** The recipe for “Hare soup” (p. 23) states: “Then strain off the gravy, and put to it two spoonfuls of soy [sauce], or three of mushroom or walnut catchup. Cayenne pepper to the taste.”

The recipe for “A sauce for boiled carp, tench, or turkey” (p. 39-40) reads: “To a quarter of a pound of butter, put a pint of cream, and one anchovy pounded. Heat together gently, and put in half a spoonful of India soy, with lemon juice to the taste. When sufficiently heated, take half an ounce of butter, and some flour, which stir into the sauce to make it thicker. Walnut, or mushroom catchup, will, when soy is not to be had, supply its place.”

Note: In the 1810 edition of this book, soy appeared in the same recipe on p. 25-26.

The recipe for “Fish sauce” (p. 59-60) states: “A gill of mushroom pickle; a gill of walnut pickle; six anchovies pounded; two cloves of garlic; and half a tea-spoonful of Cayenne pepper. Boil all together, and bottle when cold. When used, shake the bottle, and put the required quantity into some melted butter.

“Obs. Such is the variety of fish sauces, that the cook can have no difficulty in fixing upon one that has the desired properties. This, by some, is called Quin’s sauce. In this branch of cookery, I believe every cook has his nostrum, of which, part may be his own invention, and part may be derived from tradition.”

Note: This early recipe for Quin’s sauce, which is a store-sauce, contains no soy [sauce]. Address: [England].

512. Shecut, John Linnaeus Edward Westridge. 1806. *Flora carolinænsis*; or, A historical, medical, and economical display of the vegetable kingdom; according to the Linnæan, or sexual system of botany. Being a collection or compilation of the various plants hitherto discovered and made known by the several authors on botany, &c. 2 vols. Charleston, South Carolina: Printed for the author by J. Hoff. 584 p. See vol. 1, p. 514. [1 ref. Eng]

• **Summary:** This book, about the flora of Carolina, was

written for the purpose of stimulating an interest in the study of botany and simplifying the Linnaean system for beginners.

In Vol. 1, page 514 the genus *Dolichos* is described.

Concerning that genus Shecut says: “There are 24 species, mostly exotic, growing in the Indies.” [probably the Dutch East Indies]. The 3rd member of the genus listed is the soybean—today’s *Glycine max*.

“3. *Dolichos Soja*, *Soy*, or *Sooja*, a native of Japan, though bearing this climate; and is the bean, the leguminous fruit of which affords the liquid condiment called Indian Soy [sauce]. *Kempfer* [*Kaempfer*] affirms that the seeds of this species give relief in the Asthma.”

Note: Given that the title refers to a flora of the Carolinas, the author seems to be saying that the soybean either grows or will grow in South Carolina. However the sentence at the end of the subtitle appears to say something altogether different; therefore we cannot be sure. Or, Shecut may have read James Mease (1804), who states: “[The Soy-bean bears the climate of Pennsylvania very well. The bean ought therefore to be cultivated.]” In the same article, Mease says of soy sauce: “SOY, or Sooju, a species of liquid condiment, which is imported from India,...” From Mease, Shecut he may have adopted the phrases “bearing this climate” and “liquid condiment called Indian Soy.” It is possible that this is the earliest document seen (Aug. 2011) concerning soybeans in South Carolina, or the cultivation of soybeans in South Carolina—but this is not at all clear. And all things considered—we think it is unlikely that Shecut observed the soybean growing in South Carolina.

John Shecut lived 1770-1836. Address: Charleston, South Carolina.

513. *Spirit of the Journals (The)*. 1806. The tears of the crewets: On taxing salt and vinegar. For 1805. p. 77-78.

• **Summary:** (From the Morning Chronicle): This poem, with pairs of rhyming lines, begins: “Two sulky Salt-cellars contriv’d to meet / A pensive Pepper-box in Downing Street, / And there conven’d in factious consultation. / The motley Crewets of Administration.”

The poem continues later: “Salt to his porridge George had got before, / Nor car’d what suff’rings public porridge bore. / ‘What honest humble sauce can long enjoy / His fair security?’ cried gloomy Soy; / ‘Catchup, perchance, may ‘scape the luckless hour, / So many Mushrooms now have place and pow’r;...”

Note: Crewets (also spelled cruets) are glass bottles for serving soy [sauce]—or oil or vinegar—at the table. If salt and vinegar are taxed, then catchup (often made with mushrooms) may escape the tax and become ever more popular. Address: [England].

514. Linzee & Cunningham. 1807. Classified ad: Glass. *Columbian Centinel (Boston, Massachusetts)*. Jan. 21. p. 3.

• **Summary:** “... Salad Bowls, Salts, Oil, Vinegar and Soy

Cruits [for soy sauce], Mustard Pots...” Address: No. 50, India-Wharf.

515. Murdock’s (George) Grocery Store. 1807. Classified ad: To be sold... *Repertory (The) (Boston, Massachusetts)*. May 1. p. 4.

• **Summary:** “... Canary & Hemp Seed. Cork, velvet. Catchup, mushroom. India Soy [sauce]. Essence Anchovies. Filberts, Shagbarks...” Note: Shagbarks are the sweet, edible, somewhat aromatic nuts of the shagbark hickory tree that grows in the USA. Address: No. 14, Market Square.

516. Ashburn, Addison. 1807. The family director; or, Housekeeper’s assistant: Containing upwards of three hundred original receipts, in pastry, pickling, preserving, collaring, making wines, &c. Coventry, England: Printed for the author, by N. Merridew. Sold by Longman, Hurst, Rees, and Orme, London; the Author, at Meriden; N. Merridew, Coventry;... xx + 180 p. See p. 152. 19 cm.

• **Summary:** In the midst of the recipes for making different types of catsup, is a recipe titled “To make carrack,” which states (p. 152): “Take a pint of Indian Soy [sauce], a quart of mushroom Catsup, a quart of walnut liquor, half a pound of anchovies, with the bones, a pint of vinegar, some shalots [shallots], three or four cloves of garlic; let it simmer over a slow fire, for half an hour; then run it through a flannel bag, and when cold bottle it in pint-bottles, with a clove of garlic in each bottle. N.B. It will keep seven years.”

Also includes (p. 150-54) home recipes for: Mushroom catsup (how to make). Mushroom catsup another way. To make white catsup. To make cucumber catsup. To make Quin Sauce [Quin’s Sauce] (calls for walnut pickle, mushroom catsup, but not soy). Walnut catsup. Address: Meriden [England].

517. Farley, John. 1807. The London art of cookery, and housekeeper’s complete assistant, on a new plan. Made plain and easy to the understanding of every housekeeper, cook, and servant in the kingdom... 11th ed. London: Printed for Scatcherd and Letterman; G. Wilkie and J. Robinson; W.J. and J. Richardson; Longman, Hurst, Rees, and Orme;... 368 p. 20 cm. Reprinted in 1988 by Southover Press (Lewes, East Sussex, England).

• **Summary:** In the section on “Pickling” is a subsection titled “Soy” [sauce] (p. 212 of 1988 reprint) which states: “This article comes from the East Indies, and is made from their mushrooms, which grow in the woods. They are of a purplish colour, and are wrinkled on the surface like a morel. They gather them in the middle of the day, and wash them in salt and water. Then they lay them in a dish, mash them with their hands, and sprinkle them with salt and beaten pepper. The next day the liquor is pressed off, and some galangals (a root grown in the East Indies) and spices are added to it. It is boiled up till it be very strong, and then some more salt is

sprinkled into it. In this manner it will keep for many years.”

Note: This early recipe is completely wrong; the main ingredient in soy [sauce] has always been soybeans—never mushrooms. Address: Principal Cook at the London Hotel.

518. Miller, Philip. 1807. The gardener’s and botanist’s dictionary: Containing the best and newest methods of cultivating and improving the kitchen, fruit, and flower garden and nursery; of performing the practical parts of agriculture; of managing vineyards, and of propagating all sorts of timber trees... The whole corrected and newly arranged..., by Thomas Martyn Vol. II. London: Printed for F.C. & J. Rivington. 2 vol. in 4. Unpaginated. 38 cm. 20 plates. [9 ref. Eng]

• **Summary:** The plants are arranged alphabetically in the book by genus, but not alphabetically within one genus by species. “33. *Dolichos Soja*: *Lin. spec.* 1023. *syst.* 659. *Reich.* 451. *fl. zeyl. n.* 534. *mat. med.* 171. *Kaempfer. amoen.* t. 838. (*Phaseolus*). *Thunb. jap.* 282. *Lour. cochinch.* 441. *Rumph. amb.* 5. t. 140. (*Cadelium*). *Stems flexuose, racemes axillary, erect, legumes pendulous, hispid, containing about two seeds.*”

Three pages later, under “33.” is a description of the plant and its uses. “Stem round at bottom and smooth; above striated, very hirsute, a foot and more in height. Leaves petioled, hirsute: leaflets petioled, ovate, obtuse with a point, entire, the middle one on a longer petiole and larger, an inch in length: petiole striated, hirsute, a finger’s length. Flowers in short, erect, hirsute racemes: subsessile, from three to five together. Corollas purple, scarcely larger than the calyx.*

“Native of the East Indies, Ceylon, Japan, &c.

“The seeds, which are usually called *Miso* [sic] in Japan, are put into soups, and are the most common dish there, insomuch that the Japanese frequently eat them three times a day. The *Soja* [soy sauce] of the Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from these seeds, and is used in almost all their dishes, instead of common salt. The Chinese also have a favourite dish made of these seeds, called *Teu hu* or *Tau hu* [tofu], which looks like curd, and though insipid in itself, yet with proper seasoning as [is] agreeable and wholesome.**”

Footnotes: “*Thunb. and Linn. **Thunb. and Loureiro.”

Note 1. This is the earliest English-language document seen (April 2012) that uses the word “*Soja*” or “The *Soja*” (regardless of capitalization or italics) to refer to shoyu or soy sauce.

Note 2. Miller associates the word “*Kitjap*” with Chinese rather than with Indonesian soy sauce, a point of key historical interest.

Glycine javanica: “*Java Glycine. Lin. spec.* 1024. *Reich.* 453. *Thunb. in Linn. trans.* 2. 340. *Leaves ternate; stalk villose; petioles rough-haired; bractes lanceolate minute.*

“Stem twining, as in *Phaseolus*, with yellow, reflex hairs scattered over it. Leaves of *Phaseolus*. Pedicels yellow,

with close hairs. Stipules, to the petioles oval-oblong, to the peduncles lanceolate. Peduncles the length of the leaves, terminated by an ovate-oblong, close spike of nodding violet-coloured flowers, with very minute bractes between them.—Native of the East-Indies*; and near Nagasaki in Japan, where it is called *Fajo Mame*, and flowers in september and october [sic].**” Footnotes: “*Linn spec. **Thunberg.”

On the title page, the subtitle reads: “To which are now first added a complete enumeration and description of all plants hitherto known, with their generic and specific characters, places of growth, times of flowering, and uses both medicinal and economical. The whole corrected and newly arranged, with the addition of all the modern improvements in landscape gardening, and in the culture of trees, plants, and fruits, particularly in the various kinds of hot houses and forcing frames: with plates explanatory both of them, and the principles of botany. By Thomas Martyn, B.D., F.R.S. Regius Professor of Botany in the University of Cambridge.”

This elegant set of large books consists of 4 volumes, plus 2 volumes of plates. The soybean appears only in volume 2. Miller gives the most detailed botanical description of the soybean in English up to this time.

Note 2. Philip Miller was head of the famous Chelsea Physic [botanic] Garden in England. Among his many students was William Aiton, who introduced the soybean to England.

Note 3. This is the earliest English-language document seen (Oct. 2004) that uses the term “twining” to describe wild perennial ancestors of the soybean.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the word “Teu hu” (or “teu-hu”), or the word “Tau hu” (or “Tau-hu”) to refer to Chinese-style tofu.

Note 5. This is the earliest English-language document seen (Feb. 2004) that uses the word “curd” in connection with tofu.

Note 6. This is the earliest English-language document seen (Jan. 2004) that uses the word “leaflets” (or “leaflet”) in describing the soybean plant.

Note 7. This is the earliest English-language document seen (July 2001) that uses the word “petiole” (or “petioles” or “petioled”) in connection with the soybean plant. *Webster’s Dictionary* defines petiole (derived from New Latin for little foot), a word first used in 1753, as “a slender stem that supports the blade of a foliage leaf,” i.e., the stem of a leaf.

Webster’s Dictionary defines stipule (derived from New Latin *stipula*, which is derived from the Latin word meaning “stalk”), a word first used in about 1793, as “either of a pair of appendages borne at the base of the leaf in many plants.” Address: F.R.S., Gardener to the Worshipful Company of Apothecaries at their Botanic Garden in Chelsea [England] and a Member of the Botanic Academy at Florence.

519. Rundell, Maria Eliza Ketelby. 1807. A new system of domestic cookery: Formed upon principles of economy, and adapted to the use of private families. By a lady. A new ed., corrected. London: John Murray; Boston, Massachusetts: W. Andrews. [21] + xxx + 351 p. Illust. Index. 17 cm.

• **Summary:** “Soy” [sauce] is mentioned as an ingredient in the following recipes: To broil cod sounds (“a tea-spoonful of soy,” p. 9). To dress fresh sturgeon (“Sauce; butter, anchovy, and soy,” p. 10). Baked carp (p. 12). Perch and tench (“serve with melted butter and soy,” p. 12). Stewed lobster, a very high relish (p. 20). To stew tongue (“season with soy, mushroom-ketchup,” p. 42). Mock turtle (p. 54-55). To boil turkey (p. 81-82). Gravy soup (p. 102). Hare soup (p. 104). Hessian soup and ragout (Use the soy for the ragout, p. 104-05). An excellent sauce for carp, or boiled Turkey (“a large spoonful of real India soy,” p. 113).

“Camp vinegar. Slice a large head of garlick; and put it into a wide mouthed bottle, with half an ounce of Cayenne, two tea-spoonfuls of real soy, two of walnut-ketchup, four anchovies chopped, a pint of vinegar, and enough cochineal to give it the colour of lavender-drops. Let it stand six weeks; then strain off quite clear, and keep in small bottles sealed up” (p. 120).

Note 1. Three *heads* of garlic. Cochineal is a red dye consisting of the dried bodies of female cochineal insects.

The word “ketchup” is used repeatedly in recipes throughout this book, And, in the section on “Ketchups” (p. 168+) there are homemade recipes for: Pontac Ketchup, for Fish. Mushroom Ketchup. Mushroom Ketchup another way. Walnut Ketchup of the finest quality. Cockle Ketchup (p. 169-70).

Note: This is the earliest document seen (July 2010) that mentions “Cockle Ketchup” (regardless of the spelling of “ketchup”).

Lemon Ketchup, or Pickle.

The word “maigre” was fairly common at this time. In the Roman Catholic Church, it referred to days on which abstinence from [red] meat was ordered, or to food (especially soup) that contained no meat or meat juices, and was suitable for maigre days. Fish or seafood, eggs and dairy products were acceptable. Rundell mentions “maigre” five times: In the introduction, titled “Miscellaneous observations for the use of the mistress of a family,” she states (p. 20): “Those who require maigre dishes will find abundance in this little work; and where they are not strictly so, by suet or bacon being directed in stuffings, the cook must use butter instead; and where meat gravies, (or stock as they are called) are ordered, those made of fish must be adopted.

Four recipes have “maigre” in the title: Cod sounds to look like small chickens (“A good maigre-day dish. Wash three large sounds nicely, and boil in milk and water...; when cold, put a forcemeat of chopped oysters, crumbs of bread, a bit of butter, nutmeg, pepper, salt, and the yolks of two

eggs: spread it thin over the sounds and roll up each in the form of a chicken, skewering it; then lard them as you would chickens, dust a little flour over, and roast them in a tin oven slowly. When done pour over them a fine oyster sauce. Serve for side or corner dish,” p. 9. Note 2. A “sound” is the air bladder of a fish. This is an early red-meat alternative!). Soup maigre (calls for half a pound of butter and two yolks of eggs, p. 106). Another [soup maigre] (p. 106). Very fine forcemeat-balls, for fish soups, or fish stewed, on maigre days (“Beat the flesh and soft parts of a middling lobster, half an anchovy,... the yolk of a hard egg,... two table-spoonfuls... of oyster liquor, two ounces of butter warmed, and two eggs long beaten: make into balls, and fry of a fine brown in butter,” p. 125).

Note 3. Maria Eliza Ketelby Rundell (1745-1828) wrote this book to teach her married daughters the art of household management and cookery. First published in Britain in 1806, this book had many errors and sold out quickly. “The first American edition, published in 1807 (and possibly pirated) sold well, fulfilling a similar need for a domestic manual suited to upper class families. It went through 37 American editions, effectively replacing all 18th century cookbooks as being rather old-fashioned, almost more in language than in content,...” The last American imprint appeared in 1844, and the last British imprint in 1846 (MSU biography). Address: [Bath, England].

520. Ryôri no sho [The book of cooking]. 1807. Japan. 50 p. Unpublished. Japanese summary by Kawakami 1978, p. 187. [Jap]

• **Summary:** This is not the book’s true name, but a tentative name applied after it was written. It is not a recipe book but a book on how to make foods, including shoyu and miso. The author was a person who could experiment with shoyu production. A lot of old things are mentioned. The book must be a collection of writings about what the author has heard and also quotations from other books.

521. Sinclair, John. 1807. The code of health and longevity: or, A concise view, of the principles calculated for the preservation of health, and the attainment of long life... 4 vols. Edinburgh, Scotland: Printed for Arch. Constable & Co... 772 + 18 p. See Vol. 1, p. 463. Illust. [30+* ref]

• **Summary:** Section V, titled “The seasonings, or condiments, with which various sorts of foods are usually accompanied” (p. 453+) states (p. 463): “7. There are various combinations of the condiments above detailed, with other articles, but the two principally used are known under the names of catchup and soy. The first is prepared from the juice of mushrooms, submitted to a putrefactive fermentation, and in that state, salt, vinegar, and aromatics, are added to it, when it becomes fit for use. Soy [sauce] is a preparation from seeds produced in the East Indies, submitted to fermentation in a strong solution of common salt. It possesses, therefore,

a saline taste, with little aromatic flavour. Both these articles ere better calculated to please the palate, than to promote health.

“It is justly remarked, that seasonings and sauces ought not to be much indulged in by young stomachs, and strong healthy bodies, who require no spur to their appetite, nor help to digestion. But these helps should be reserved for age, deficiency of stomach, and other infirmities, otherwise that benefit and assistance will not be received from them, which might have been experienced, had the use of them been forboren when they were not necessary *.

Footnote: “* Mainwaring on the Preservation of Health, p. 63.”

Note: Sir John Sinclair lived 1754-1835. Address: Sir, Bart. [baronet], Charlotte-Square, Edinburgh [Scotland].

522. The new encyclopædia; or, universal dictionary of arts and sciences: Dolichos soja. 1807. London: Printed for Vernor, Hood, and Sharpe. See vol. VII. Dol. (p. 417-418). [2 ref. Eng]

• **Summary:** “3. Dolichos Soja is a native of Japan, where it is termed *daidsu*; and, from its excellence, *mame*; that is, the *legumen* or *pod*, by way of eminence. It grows with an erect, slender, and hairy stalk, to the height of about 4 feet. The leaves are like those of the garden kidney-bean. See Phaseolus. The flowers are of a bluish white; are produced from the bosom of the leaves, and succeeded by bristly hanging pods resembling those of the yellow lupine, which commonly contain two, sometimes 3, large white seeds. There is a variety with a small black fruit, which is used in medicine.

“Kempfer [Kaempfer] affirms, that the feeds when pounded and taken inwardly give relief in the asthma. This legumen [legume] is doubly useful in the Japanese kitchens. It serves for the preparation of a substance named miso, that is used as butter; and likewise of a pickle celebrated among them under the name of sooju or soy [sauce]. See these articles.”

Note: This is the earliest English-language document seen (Feb. 2008) that has the word “Soja” in the title.

523. Lazenby, E. [Elizabeth]. 1808. Classified ad: Harvey’s Sauce for fish, game, &c. *Times (London)*. June 4. p. 3, col. 4.

• **Summary:** “E. Lazenby respectfully informs the Nobility and Gentry, the above admired article is prepared only at her Warehouse... and (by appointment) may be had of J. Baxter, Edinburgh; Bell, Scarborough; Gregson, Liverpool; Getty, Manchester; Terry, Brighton; Lomers, Southampton; Elliott and Leedham, Bath; Fishlake, Salisbury, &c. E.L. at the same time begs to recommend her genuine Essence of Anchovies...

“In consequence of the spurious imitations of the above Sauce, E.L. begs to observe, none can possibly be genuine without Mr. Harvey’s signature on the label of each bottle.”

Note: This is the 2nd earliest document seen (Dec. 2007) in the *Times* (London) that mentions “Harvey’s Sauce” (or “Harvey Sauce”)—or that mentions spurious imitations of it or the genuine sauce with his signature. Address: Warehouse, No. 6, Edward-street, Portman-square [London].

524. MacDonald, Duncan. 1808. *The new London family cook: or, Town and country housekeeper’s guide...* London: Albion Press. Printed for James Cundee, Ivy-Lane. iv + 6-634 p. See p. 137. Illust. ([10] leaves of plates). 22 cm.
• Summary: Quin’s sauce (p. 137). “Put two spoonfuls of Quin’s sauce into a little rich melted butter.

“The mode of preparing Quin’s Sauce will be given amongst the pickles.”

Soy [sauce] is mentioned on 5 pages in this book (p. 143, 165, 198, 320, 368).

There are recipes for Mushroom ketchup (p. 319, and mushroom ketchup is used as an ingredient on 8 pages). Walnut ketchup (p. 320, and walnut ketchup is used as an ingredient on 5 pages). Ketchup to keep twenty years (p. 320. “It is, by many, preferred to the best Indian soy”). Oyster ketchup (p. 320).

Quin’s sauce for fish (p. 321. Put to a quart of walnut pickle, six anchovies; the same number of bay-leaves and shalots; some cloves, mace, and whole pepper: boil the whole together till the anchovies are dissolved; when cold, put in half a pint of red wine, and bottle it up. Two spoonfuls of this, in a little rich melted butter, make an admirable sauce).

Another way [of making Quin’s Sauce] (p. 321. “Put half a pint of mushroom ketchup, a quarter of a pint of pickled walnut liquor, three anchovies, two cloves of garlic pounded, and a quarter of a tea-spoonful of Cayenne pepper into a bottle; shake it well, and keep it for use”).

Note: Soy [sauce] is not used in either of these two recipes for Quin’s Sauce. Address: Head Cook at the Bedford Tavern and Hotel [Covent Garden, London].

525. Nicholson, William. 1808. *A dictionary of practical and theoretical chemistry, with its application to the arts and manufactures...* London: Printed for Richard Philipps. 826 p. Illust. [20 p. and 13 leaves of plates, some folded]. 22 cm.
• Summary: The entry for “Soy” on an unnumbered page begins: “We find in the Memoirs of the Swedish Academy [Grubbens 1803] the following account of the mode in which this kind of sauce is prepared.

“The ingredients are 50 lbs. of a small, white bean, the fruit of the *dolichos soja*, 50 lbs. of salt, 60 lbs. of wheat flour, and 250 lbs. of water.

“After having well washed the beans, they are boiled in well-water in an open vessel for some hours, or until they have become so soft as to be worked between the fingers. During the boiling they must be kept covered with water, to prevent their burning; and care must be taken not to

boil them too much, because in that case too much of their substance would remain in the water of decoction.

“The beans, being thus boiled, are taken out, and put into large shallow wooden vessels, which in China are made of thin staves of bamboo, two inches and a half in depth, and five feet in diameter. In these they are spread out to the depth of two inches, and when they are cold enough to be worked with the hand, the wheat flour is gradually thrown in, and mixed with the beans, till the whole of the before-mentioned quantity has been used. When the mass becomes too dry, so that the flour does not mix well with the beans, a little of the hot water of the decoction is added...” Address: [England].

526. Rundell, Maria Eliza Ketelby. 1808. *A new system of domestic cookery: Formed upon principles of economy, and adapted to the use of private families. By a lady. A new ed., corrected.* London: Printed for John Murray; J. Harding; and A. Constable and Co., Edinburgh. xxx + 351 p. Illust. Index. 17 cm.

• Summary: Soy” [sauce] is mentioned as an ingredient in exactly the recipes on exactly the same pages as in the original 1807 edition.

“Ketchup” is mentioned on pages 11 (walnut ketchup), 20, 34, 37, 42 (mushroom ketchup), 43, 46, 49, 50, 54-56, 73, 76, 84, 88, 99, 103, 105, 111, 116, 117-18, 120, 126, 176, 183, 184 (cockle ketchup). Neither “catsup” nor “catchup” are mentioned.

Note: Maria Eliza Ketelby Rundell lived 1745-1828. Address: [Bath, England].

527. Grubbens, Michael de. 1809. *Method of preparing the Chinese soy. Tradesman, or Commercial Magazine* 2(9):197-200. March.

• Summary: Below the title is written: “Extracted from the Memoirs of the Academy of Sciences at Stockholm for 1803, first quarter, by M. Lindbom, Captain of the Swedish Mines.”

The article begins: “The transactions of the Swedish Academy for the year 1761 contain a description of the method for preparing soy, by the late captain Ekeberg; but as this description is incomplete as well as incorrect, since the real Chinese soy will not be obtained by following it, I am fully persuaded that M. Ekeberg never saw nor was acquainted with, the true process for preparing this substance. There is reason to believe that he gave his description from the accounts of the Chinese, who are not always ready to speak the truth, as I observed during the five years I resided in China,...”

528. Young (John). 1809. Classified ad: Has for sale,... *American (The) (Providence, Rhode Island)*. Sept. 1. p. 3.

• Summary: “... Currants, soft shelled Almonds, excellent Bottle and Flask Oil, Table Salt in baskets, India Soy [sauce], Catsup, Loaf and other Sugars, Olives, Capers,...” Address:

At the first corner Store south of the Market.

529. Tichnor (Elisha) & Co. 1809. Classified ad: To be sold... a general assortment of West-India goods & groceries. *Boston Gazette*. Nov. 27. p. 3.

• **Summary:** "... Corks (Velvet). Catchup, Mash. [sic, Mush. = Mushroom], English. Demijohns. East India Soy [sauce]... Rape Seed., Sauce, Quin..." Address: Sign of the Bee-Hive, No. 42, Marlboro' St., Boston.

530. *New York Medical and Philosophical Journal and Review*. 1809. Review: A View of the Nervous Temperament;... by Thomas Trotter, M.D. Vol. 1. p. 233-62. See p. 250. [1 ref]

• **Summary:** This is a book review. Dr. Trotter has sought to find what causes such a temperament. Traditionally physicians have looked at mental, emotional, or hereditary causes. Trotter now asks what kinds foods and drinks, consumed by those with a predisposition to a nervous temperament, lead to such a temperament and to dyspepsia. He has found that these include alcohol, tea, coffee, hot spices and peppers. Those interested in good health are advised to avoid highly seasoned or hot foods and luxurious living (p. 247). "Of themselves, they yield nothing of the nourishing principle. Soy [sauce], catchup, and all the warm sauces, increasing daily in number, have the same pernicious effects" (p. 250).

Note: By the mid-1800s, this group of substances would be grouped together by U.S. health reformers and called "stimulants."

531. Norris (William, Jun. [Jr.]). 1810. Classified ad: Chocolate and segars [cigars],... *Federal Republican and Commercial Gazette (Baltimore, Maryland)*. Jan. 24. p. 1.

• **Summary:** "... Smyrna Dates, Olive Oil in black bottles and Flasks, Mushroom Ketchup and India Soy [sauce] in bottles, Raspberry Brandy and Arrack in bottles,..." Address: Tea Dealer and Grocer, No. 64, Market Street.

532. Bradford (William B.). 1810. Classified ad: English mustard. *Boston Patriot*. Oct. 17. p. 4.

• **Summary:** "... Cassia and Pimento; English Catshup [Catsup]; India Soy [sauce]; Anchovies; Capers;..." Address: South side of the Market House [New York City].

533. Mease, James. ed. 1810. Archives of useful knowledge, a work devoted to commerce, manufactures, rural and domestic economy, agriculture and the useful arts: Chinese soy. Philadelphia, Pennsylvania: David Hogan. See vol. 1. No. 2, p. 219-23. Oct. [4 ref]

• **Summary:** In this introduction to an article by M. de Grubbens titled "Method of Preparing the Chinese Soy," Dr. Mease writes: "The agreeable flavour which the Chinese and Japanese Soy [sauce] communicates to fish is well known.

But the high price of the article confines its use to few persons. Hence it has always been an object to discover the peculiar mode of preparing it. Several processes, particularly those by Professor Beckmann, M. Ekeberg, and by Sir Tilloch, have been published; which have been copied into various periodical publications, and Encyclopedias.

"It will be seen however, that the following method, carries internal evidence of coming nearer to the truth than any other, and is therefore recommended to our readers. The Editor has the satisfaction to assure them that the Bean, *Deliches Soyae* [sic, *Dolichos*], bears the climate of Pennsylvania well; there is therefore nothing to prevent our enjoying the agreeable condiment, of which it is the basis, except our own indifference. Accounts of the trials of the recipe will be thankfully received."

M. de Grubbens' article is "extracted from the *Memoirs of the Academy of Sciences at Stockholm* for 1803, first Quarter, by M. Lindbom, captain of the Swedish mines."

Note 1. For a translation, see de Grubbens 1804. de Grubbens lived for 5 years in China. He prepared soy sauce in 1759 in Canton and brought some bottles of soy that he made to Sweden. Mease lived 1771-1846.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "Japanese Soy" (or "Japanese soy") to refer to Japanese-style soy sauce.

Note 3: This is the earliest English-language document seen (Jan. 2007) that contains string "Soya" or the word "Soyae" in connection with soybeans. The word "Soyae," used as the species name of the soybean may have been a mistake or typographical error, just as the genus name "*Deliches*" was also an error; neither one was ever used again. Mease may have intended to write *Dolichos soja* L., although the correct scientific name of the soybean at this time (1810) was *Soja hispida* Moench. Address: Secretary to the Agricultural Society of Philadelphia, Pennsylvania.

534. *Encyclopaedia Britannica*; or, A dictionary of arts, sciences, and miscellaneous literature... 4th ed.: Sooju, or Soy. 1810. Edinburgh: Printed by Andrew Bell, the proprietor; And for Vernor, Hood, and Sharpe, London. See Vol. IX, p. 471. Vol. XII, p. 699, Vol. XIX, p. 471.

• **Summary:** See *Dolichos* (p. 699, under "Materia Medica, &c," VIII. Leguminous plants. Sect. 1. Pods and seeds of herbaceous plants). "*Dolichos soja*, East India kidney bean."

Vol. XII, p. 699. Leguminous plants. Sect. 1. Pods and seeds of herbaceous plants.

Arrachis hypogaea, American ground nut.

Cicer arietinum, the chick pea.

Dolichos soja, East India kidney bean.

Ervum lens, lentil.

Lotus edulis, incurved podded bird's-foot trefoil. *L.*

tetragonolobus, square-podded crimson pea.

Lupinus albus, white flowering lupine.

Phaseolus vulgaris, common kidney bean. *P.V.*

coccineus, scarlet-flowering kidney bean. *P. albus*, white-flowering kidney bean.

Pisum sativum, common garden pea. *P. umbellatum*, crown pea. *P. quadratum*, angular-stalked pea. *P. maritimum*, sea pea.

Vicia faba, common garden bean. Sect. 2. Pods and seeds of trees. Address: Edinburgh, Scotland.

535. Proteus the Younger. 1810. The Herod: In a series of original satires. London: Printed for the author, by T. Plummer, Seething-Lane, and sold T. Hughes, Ludgate Hill. [iii] + 208 p. See p. 113.

• **Summary:** The chapter titled “The noble passenger” (p. 97-119) describes how a wealthy but miserly man, with his servant, boarded a ship at Portsmouth, England. A storm blew them out to sea, then from Lymington toward St. Johns. The man told his servant to economize in buying the items listed below, because they were expensive. We read (p. 113): “His lessons on economy began; ‘Those half-starv’d hens remaining in yon coop, When once recovered of the pip and roupe, By getting a strange cock, as hens oft do, Will lay us eggs, and hatch us chickens too. The mustard, catsup, vinegar, and soy [sauce], The thyme, the balm, the sage, and cellery, The tripe, the eggs, the butter, and the cheese, With what remains of sugars, coffees, teas; You must collect with more than common care, As all these articles are very dear; The empty bottles and the hampers save, Be vigilant and see we nothing leave.’”

Mushroom catsup is mentioned on p. 23, 38, 40, 55, 63, 86, 94, 119, 157, 170, and 182. Walnut catsup is mentioned on pages 23, 38, 40, 42, 50, 94, 118, 182 and 240. Catsup alone is mentioned on pages 48, 52, 79-80, 82, 86, 92, 101, 121, 173, 182, 195-97, 203, 208, 214, 236-37, 239. Address: Censor in ordinary to Neptune [England].

536. Welles (A. & G.). 1811. Classified ad: Have received by the recent arrivals from London and Liverpool,... *New-England Palladium* (Boston, Massachusetts). Jan. 8. p. 4.

• **Summary:** “... Silver & plated ware: Liquor Frames; Soy Frames [for soy sauce]; Bottle Stands; Egg Cups;...” Address: No. 55, Cornhill, Boston.

537. Bradford (John) & Co. 1811. Classified ad: New grocery store. *New-England Palladium* (Boston, Massachusetts). Nov. 12. p. 4.

• **Summary:** “... English Catshup [Catsup], India Soy [sauce], Pepper Sauce, Anchovies;...” Address: No. 16, Dock-Square.

538. Ukiyo burô. 3 vols. 1811. Japan. [Jap]*

• **Summary:** According to Ryoichi Iino (2003, p. 10) the term *oshidashi* was used in this book to indicate / refer to soy sauce.

539. Virey, Julien-Joseph. 1811. *Traité de pharmacie: Théorique et pratique* [Treatise on pharmacy: Theory and practice]. Paris: Rémond and Ferra. 613 p. See Vol. 1, Book 1, p. 107. [Fre]

• **Summary:** In Book 1, in section 85 (p. 103) on Legumes, is a subsection titled “Dolic” which states: The *D. Soja*, L. of Japan, has excellent seeds. A sauce is made with the soybean (*le soja*) which is very highly esteemed in Europe.

Note: Julien-Joseph Virey lived 1775-1846. Address: Head Pharmacist, Military Hospital of Paris.

540. Dana (Nathaniel). 1812. Classified ad: Has just received a fresh supply of W.I. [West India] goods & groceries,... *Portland Gazette, and Maine Advertiser*. July 13. p. 1.

• **Summary:** “... Real Cinnamon, Cassia. Citron. East India Soy [sauce]. Catsup. Curry Powder. Cayenne...”

Note: This is the earliest document seen (May 2011) concerning soybean products (soy sauce) in Maine. This document contains the earliest date seen for soybean products in Maine (July 1812); soybeans as such have not yet been reported. Address: Kinsman’s Building, Preble Place, nearly opposite Portland Bank.

541. Packer (Mrs. Sarah). 1812. Recently imported. On sale, at the warehouse of Mrs. Sara Packer, Pitt-street (Ad). *Sydney Gazette and New South Wales Advertiser* (NSW, Australia). Aug. 8. p. 4.

• **Summary:** “... the following unexceptionable Articles, for sterling money, at very reduced Prices;... catsup 4s. 9d. per ditto” [bottle].

Note 1. This is the earliest of 3,076 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “catsup.” The newspaper in which this term appears most frequently is *The Argus* (Melbourne) (1,222 times) followed by *The Mercury* (Hobart) (1,162). By category: 2,603 are advertising, 417 are news, and 56 are detailed lists, results, or guides. By decade: In 1860-69 the term appears in the most ads or articles (1,559), followed by 1880-89 (342).

Note 2. It is not clear what ingredients this catsup contains or where it was made (it was probably made in England). Ketjap / Kecap is the Malay / Indonesian word for “soy sauce.”

542. Marshal. 1813. Prices: Marshal’s sale, held by Passmore and Sperry, Auct., part of the cargo of the British prize schooner *Ellen* (Ad). *Grotians Philadelphia Public Sale Report*. April 12. p. 2.

• **Summary:** After the terms of payment, a table of articles is given: “5 tons Liverpool Coal, 84 cents per bushel. 2½ bbls. [barrels] Gunpowder, 51 cents per pound... 4 boxes Indian Soy [sauce], \$6.75 per dozen—In pint bottles and of a good quality. 4 do. [ditto = boxes] Mushroom Ketchup, Soy and Anchovies do. [ditto = Ketchup], \$8.25 per dozen—In pint

bottles and of a good quality.”

Note 1. This is the earliest document seen (Jan. 2006) in which soy sauce is used as an ingredient in a commercial sauce having “Soy” as part of the name; it is mixed with anchovies. By 1836 a related product, made in England, would start to be sold as Lea & Perrins Worcestershire Sauce.

543. *Boston Daily Advertiser*. 1813. Classified ad: Prize goods. On Monday next, will be offered for sale... the following elegant goods. Aug. 14. p. 3.

• **Summary:** “... Plated snuffer trays, silver Gadroon mounts, Plated Glass Cruits [for soy sauce], Plated Toaste [Toast] Racks, Glass soy Frames with new regent Glasses, Plated Candlesticks with slides,...” Address: At the Long Room, Cornhill Square.

544. Stiles & Williams. 1813. Classified ad: Java coffee, Japan soy, spices, &c. *Baltimore Patriot & Evening Advertiser*. Oct. 1. p. 3.

• **Summary:** “... 50 mats old Java. Coffee. 2 dozen bottles Japan Soy [sauce], a scarce and delicious Catsup. A few bottles Curry and old Arrack.”

Note: What a surprising and interesting definition of “Japan Soy!” Address: Corner of Market and South Streets.

545. Keizai yôroku 1813. Japan. [Jap]*

• **Summary:** Iino (2003, p. 9) notes that this 1813 book “states that the highest quality soy sauces are made using wheat as the flavor harmonizes well with the soybeans.” Iino comments that this supports “the idea that wheat, rather than barley, made for a better soy sauce. Therefore, it is thought that the switch from soy sauce made with barley to that made with wheat had been completed by the 18th century.” Address: Japan.

546. Milburn, William. 1813. *Oriental commerce*; containing a geographical description of the principal places in the East Indies, China, and Japan, with their produce, manufactures, and trade... Vol. II. London: Black, Parry & Co. See p. 519-20.

• **Summary:** The subtitle continues “... including the coasting or country trade from port to port; also the rise and progress of the trade of the various European nations with the Eastern world, particularly that of the East India Company, from the discovery of the passage round the Cape of Good Hope to the present period; with an account of the company’s establishments, revenues, debts, assets, &c at home and abroad. Deduced from authentic documents, and founded upon practical experience obtained in the course of seven voyages to India and China.”

“Soy [sauce]: Is prepared in China and Japan, from a particular species of bean, in the following manner:—the beans are boiled till they become rather soft, to which an

equal quantity of wheat or barley is added, and set in a warm place to ferment; the same quantity of salt is then put to the mixture, and three parts as much water added to it. After being properly mixed, it is left to stand, well covered, for two or three months; it is then pressed, and strained off, and kept in wooden vessels. Some places produce better soy [sauce] than others, but exclusively of that, it grows better and clearer through age; its colour is invariably brown. Japan soy is esteemed superior to the Chinese, and is an article of trade from thence to Batavia [Jakarta]. The Dutch, in order to preserve the best sort, and prevent its fermenting, boil it up, and afterwards draw it off into bottles, which are then well corked and sealed.

“Soy should be chosen of a good flavour, not too salt or too sweet, of a good thick consistence, of a dark brown colour and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it does not, it is an inferior kind, and should be rejected.” Note: This is the earliest document seen (Aug. 2003) which states that soy can be shaken in a glass to determine its quality. It is also the first which states that good-quality soy, “when shaken in a glass,” “should leave a coat on the surface, of a bright yellowish brown colour...”

“The following are the quantities imported and sold at the East India sales, in the years 1804 to 1808 inclusive, together with sale amount and average price per gallon” [see table below]:

1804: None.

1805: 443 gallons worth £317 (March Sale) and 1125 gallons worth £642 (September Sale), for a total of 1568 gallons worth £959 (average 12 shillings 5 pence per gallon).

1806: 807 gallons worth £477 (September Sale); (average 11 shillings 10 pence per gallon).

1807: None.

1808: 2148 gallons worth £2022 (September Sale); (average 18 shillings 10 pence per gallon).

252 gallons of soy are allowed to a ton. Note: Total sold during the 5 years: 4523 gallons worth £3458. Address: Of the Honourable East India Company’s Service.

547. Murdock (George) & Co. 1814. Classified ad: For sale... *Boston Gazette*. April 7. p. 3.

• **Summary:** “... A great variety of Fish Sauces, such as India Soy [sauce], Essence of Anchovies, Walnut Catchup, Tarragon Vinegar, Mushroom Catchup, &c.” Address: No. 14, Market Square.

548. Beauchamp, J. 1814. Articles plated upon steel:

J. Beauchamp respectfully informs the public... (Ad).

Repository of the Arts, Literature, Manufactures, Commerce, Manufactures, Fashions and Politics 11(65): Unnumbered page near end of volume. May.

• **Summary:** This unnumbered page is titled “Advertisements for May 1814.”

“J.B. manufactures, in Silver and Plated,... Bread and Cake Baskets, Wine Coolers, Epergnes Plateaux, Urns, Kettles, Tea Sets, Liquor, Cruet, Soy, and Egg Frames, Bottle Stands, and an infinitude of other articles...”

Note: In other words, he makes Liquor Frames, Cruet Frames, Soy Frames, and Egg Frames.

549. Dana (Nathaniel & Luther). 1814. Classified ad: Has just received a fresh supply of West India goods & groceries,... *Eastern Argus (Portland, Maine)*. June 9. p. 4.
• **Summary:** “... Citron. East India Soy [sauce]. Catsup. Curry Powder. Cayenne...” Address: Kinsman’s Buildings, Middle-Street.

550. Tokaidôchû hizakurige 1814. Japan. [Jap]*
• **Summary:** According to Ryoichi Iino (2003, p. 10) the term *oshidashi* was used in this book to indicate / refer to soy sauce.

551. Rundell, Maria Eliza Ketelby. 1814. A new system of domestic cookery: Formed upon principles of economy, and adapted to the use of private families. By a lady. New York, NY: Published by R. M’Dermut & D.D. Arden. xxiii + 20-316 p. Illust. Index. 17 cm.

• **Summary:** “Soy” [sauce] is mentioned as an ingredient in the following recipes: To broil cod sounds (“a teaspoonful of soy,” p. 32). To dress fresh sturgeon (“Sauce; butter, anchovy, and soy.” p. 33). Baked carp, or Black fish (p. 34). Perch (“serve with melted butter and soy,” p. 34). Stewed lobster, a very high relish (p. 41). To stew tongue (“season with soy, mushroom ketchup,” p. 61). Mock turtle (p. 71-72). To boil turkey (p. 96-97). Gravy soup (p. 115). Hessian soup and ragout (Use the soy for the ragout, p. 117-18). An excellent sauce for boiled Turkey (“a large spoonful of real India soy,” p. 125).

“Camp vinegar. Slice a large head of garlick; and put it into a wide mouthed bottle, with half an ounce of Cayenne, two tea-spoonfuls of real soy, two of walnut-ketchup, four anchovies chopped, a pint of vinegar, and enough cochineal to give it the colour of lavender-drops. Let it stand six weeks; then strain off quite clear, and keep in small bottles sealed up” (p. 131).

Ketchup is mentioned on pages 34 (walnut ketchup), 41, 55-57, 61 (mushroom ketchup), 62, 64, 67-68, 70, 72-73, 87, 88, 91, 93, 98, 102, 115, 116, 118, 122, 127-130, 136, 185, 186. Address: [Bath, England].

552. Hotel des Americains. 1815. Classified ad: Paris. *Times (London)*. Jan. 14. p. 1, col. 1.

• **Summary:** “... where the following articles may always be had:... wax candles, Cayenne pepper, curry powder, India soy [sauce], ketchup, essence of anchovy, and English sauce of every description... The English language is spoken in the above place.” Address: Magasin de Provence, Rue St.

Honoré, No. 147.

553. Bevan (Mr.). 1815. Sales by auction. At his rooms in George street (Ad). *Sydney Gazette and New South Wales Advertiser (NSW, Australia)*. Sept. 23. p. 1.

• **Summary:** “On Wednesday of the 4th of October next, at Eleven o’Clock,...

“... Fine Cheeses, a quantity of Valentia Raisins [Valencia],... Sallad Oil [Salad], French Olives, Soy [sauce], Capers, Loaf Sugar and Irish Linen. The above may be viewed prior to the Day of Sale, and may be had by Private Contract.” Address: George street [Sydney].

554. Morrison, Robert. 1815-1823. A dictionary of the Chinese language in three parts. 6 vols. Macao. Printed at the Honourable East India company’s press by P.P. Thomas. 30 cm. [Eng; Chi]

• **Summary:** S.W. Williams, in “A Syllabic Dictionary of the Chinese Language,” starts his preface by noting the great importance of this very early Chinese dictionary. “This work will ever remain a monument to his industry and scholarship; and its publication in six quarto volumes by the East India Company at an outlay of \$60,000 was a just appreciation of its merits. Since then, many similar works have been published, dictionaries both of the general language and its chief dialects.”

Part 1. Chinese and English arranged according to the radicals. Part 2. Chinese and English arranged alphabetically. In Part 2, Vol. 1 (published in 1819), page 739 (#9187) gives 3 characters for *she* [shih = fermented black soybeans], pronounced shuh. *Tow she* is a condiment made from pulse, used in cooking. *She yew* or *Tsëang yew* is soy [sauce].

Note: This is the earliest English-language document seen (Nov. 2011) that mentions fermented black soybeans, which it calls *she* or *Tow she*.

Page 860 (#10365) gives 2 characters for *tow* [pronounced doe]. “A generic name for pulse, beans, and so on. Page 882 (#10622) gives 2 characters for *Tseang* [chiang; like soft Japanese miso]. “A kind of pickle; certain mode of preserving meat, rice, and pulse. *Tseang yew* is soy [sauce].

Part 3. English and Chinese (published in 1822). Page 398 gives “SOI, or Soy” followed by the two characters for “tseang yew” [soy sauce]. Note 1. Illustrations show each of these characters (see next page).

Vol. 3, Part 1 (published in 1823) gives Chinese and English arranged according to the radicals. On p. 397 is the 151st radical, *Tow*. Two early original forms of the radical are shown, each resembling a vessel with a lid. “Name of an ancient vessel to contain food, and used in the rites of sacrifice; a certain measure. Grain; leguminous plants, beans, or peas. Name of an office, of a place, and of a district. A surname.” Characters containing this radical are shown on pages 397-98: *she*—“A sort of pulpy substance made of pulse [shih; fermented black soybeans]. *wan*—“A substance

豉 枝 豆 醬

expressed from pulse; soy. Also read Yuh.”

Note 2. The author, Rev. Robert Morrison (lived 1782-1834), a minister, was the first Protestant missionary in China. He was a Scotchman, though born at Morpeth in Northumberland, England. In 1807 he was sent by the London Mission to try to start a mission in China. But the British East India Company opposed missionary activity. So he traveled via the USA and reached Canton in 1808. Once there, the Company was glad to enlist his great linguistic talents, and he was appointed translator to their factory at Canton. Thus, it was at their expense (£15,000) that his great Chinese dictionary was published in 1822. He had previously published complete translations of the New and Old Testaments. A condensed (2 volumes in 1) edition was published in 1865 in London. He also established the Anglo-Chinese College at Malacca for English and Chinese literature, with a view to the propagation of Christianity. He died in 1834 at Canton, but he was buried at Macao in the Christian cemetery.

Note 3. This is the earliest English-language document seen (March 2001) that mentions fermented black soybeans, which it calls *tow she*.

Note 4. *Webster's New Geographical Dictionary* (1988) defines Macao (Portuguese Macau) as a Portuguese overseas territory consisting of the Macao peninsula (located at the mouth of the Pearl River just south of Canton and about 40 miles west of Hong Kong) and the two small islands of Taipa and Colôane. It was settled by the Portuguese in 1557; from 1717 until the 1800s, Macao and Canton were the only Chinese ports open to European trade. Its independence was declared by Portuguese in 1849 but not recognized by Chinese as Portuguese territory until 1887. It was for many years a haven for missionaries and traders. Portugal agreed in 1987 to return Macao to Chinese sovereignty in 1999. Address: D.D.

555. Stewart, J.A. 1815. *The young woman's companion: or, Female instructor. Being a sure and complete guide to every requirement essential in forming a pleasing companion, a respectable mother, and a useful member of society.*

Interspersed with moral and religious essays... Oxford, England: Printed and published by Bartlett and Newman. 768 p. Index.

• **Summary:** As the title explains, this book is about much more than cookery. The last major part of the book is titled “Directions to female servants” (p. 615+). The first chapter within it, titled “Cookery in all its branches” (p. 622-715), contains most of the recipes. However subsequent chapters on Preserving (p. 715+), Pickling (p. 719+), and Brewing (719+) also contain recipes.

Soy [sauce] is used as a seasoning in the following recipes: To stew tongue (p. 647). Mock turtle (p. 654). Mock turtle, another way (p. 655). To boil turkey (p. 664). Gravy soup (p. 676-77). An excellent sauce for carp, or boiled turkey (p. 681; “... add a large spoonful of real Indian soy. If that does not give it a fine colour, put a little more”).

Note: This is the earliest English-language document seen (April 2012) that contains the term “real Indian soy.” But what does it mean? Why use the word “real?” Where and how is it made, and what are the ingredients?

Mushroom catchup is mentioned on pages 647, 651, 654, 655-56, 665, 677-79, 687, 720 (in Pickling chapter). Walnut catchup on pages 638, 655, 682, 687, 720. Catchup alone is mentioned on pages 644-45, 648, 650, 652-53, 662, 665, 675, 683. “Catsup” is not mentioned. Address: Oxford [England].

556. Tuckey, James Hingston. 1815. *Maritime geography and statistics: or, A description of the ocean and its coasts, maritime commerce, navigation, &c. &c. &c.* Vol. III. London: Printed for Black, Parry, and Co. Booksellers to the Hon. East-India Company. vii + 567 p. Index.

• **Summary:** “The exports from Japan by the Dutch Company are copper in bats and camphire, each ship’s cargo consisting of 6750 pickle [piculs] of the former, and 364 boxes* of camphire, of 125 lbs. each; all of which are purchased on the Company’s account only.

“The articles permitted to be purchased by the individuals of the crew are tea, soy [sauce], porcelain, silk and rice.” Address: A commander in the Royal Navy.

557. Webster, Thomas. 1815. *The encyclopædia of domestic economy: Comprising such subjects as are most... 2 vols.* New York, NY: Harper & Brothers. 1,238 p. See Vol. II, Nos. 4932, 5072. From the last London edition. With notes and improvements by Meredith Reese. Illust. 24 cm.

• **Summary:** In Vol. II: No. 4263. “Rice is boiled to a kind of paste, and drawn out into threads forms a transparent substance used to thicken soups, and is known by the name of China lock soy. There is a kind that is opaque, and which is less esteemed.”

Recipe No. 4932 calls for “a tea-spoonful of soy [sauce], and a little mustard.” Catsup is also called for in recipe No. 4871.

“5072. Soy.—This sauce, much used for fish, comes from Japan and is called there soja [sic, shōyu]. It is made from the seeds of a plant called *Dolichos soja*. Some is also brought from China, but the Japanese is best. It is supposed to be extensively counterfeited in this country. When genuine, it is of an agreeable flavour, neither too salt [sic, salty] nor too sweet, of a thick consistence and clear brown colour. When shaken in a glass, it should leave a coat on the surface of a bright yellowish-brown colour.”

Note: This is the 2nd earliest document seen (April 2012) that uses the word “soja” to refer to soy sauce.

Note: Thomas Webster lived 1773-1844.

• **Summary:** “On Thursday, 8 August—Prompt 1 November.” “Privilege.—Redwood—... Safflower—Soy—Cajaputa Oil...”

“Private-Trade.—Hides—Horns—Soy—Rhubarb—Cubebs—Gambogium...”

560. *Encyclopædia Perthensis*; or, Universal dictionary of arts, sciences, literature, &c. 2nd ed: Soy, or sooju. 1816. Edinburgh: Printed for John Brown. 23 volumes. See vol. XXI. Soy. (p. 197-98). [1 ref. Eng]

• **Summary:** “Soy [sauce], or Sooju, n.s., a celebrated pickle, much used by the Japanese, made from the *mame* or beans of the *Dolichos Soja*. (See *Dolichos*, No. 3). To make it they take equal quantities of the beans boiled to a certain degree of softness; of *muggi*, or corn, whether barley or wheat, roughly ground; and of common salt. Having properly mixed the beans with the pounded corn, they cover up the mixture, and keep it for a day and a night in a warm place, to ferment; then putting the mass into a pot, they cover it with the salt, pouring over the whole two measures and a half of water. This compound substance they carefully stir at least once a day, for two or three months; after which, they filtrate and express the mass, preserving the liquor in wooden vessels. The older it is, the better and the clearer; and if made of wheat at instead of barley, greatly blacker. The first liquor being removed, they again pour water upon the remaining mass; which, after stirring for some days, as before, they express a second time, and thus obtain an inferior sort of soy.”

561. Rundell, Maria Eliza Ketelby. 1816. A new system of domestic cookery: Formed upon principles of economy, and

adapted to the use of private families. By a lady. A new ed., corrected. London: John Murray; Boston, Massachusetts: W. Andrews. [11] + xxx + 354 p. Illust. Index. 17 cm. *

• **Summary:** In the 1816 United States edition of this book, ketchup is mentioned on 37 pages, as follows: 38 (walnut ketchup), 45 (walnut-ketchup), 57-58, 60-61, 63, 65-66, 68, 71-72, 74, 76 (walnut ketchup, mushroom ketchup), 77 (mushroom ketchup), 91-92, 95, 97 (mushroom ketchup), 102 (mushroom ketchup), 106, 117, 119 (mushroom ketchup), 120, 122 (walnut ketchup), 126 (mushroom ketchup), 131 (mushroom ketchup), 132-133 (walnut ketchup), 134, 135 (walnut ketchup), 140 (mushroom ketchup, walnut ketchup), 189, 190 (mushroom ketchup, homemade; walnut ketchup, homemade; cockle ketchup, homemade).

Note: Tomato / tomatia ketchup is not mentioned. Address: [Bath, England].

562. Simpson, John. 1816. A complete system of cookery, on a plan entirely new: Consisting of a extensive and original collection of receipts,... with bills of fare for every day in the year;... London: Printed for W. Stewart. 568 p. Index. 18 cm.

• **Summary:** The recipe for “Breast of veal à la flamond” (p. 63) ends: “... put the veal on the dish and the sauce over it: add a few drops of soy to colour the sauce.”

The recipe for “A cow’s heel stewed, &c.” (p. 475) ends: “... season it with a little Cayenne pepper and salt, and about half a tea spoonful of soy; put a few egg balls, and forced meat balls.”

Mushroom catsup is mentioned on p. 469, 470-71, 475-76. Walnut catsup is mentioned on p. 471, 475-76. Catsup alone p. 465. Catchup is not mentioned. Neither soy nor catsup are listed in the index. Address: [England].

563. Wilby (Francis) & Co. 1817. Classified ad: Elegant China, glass and japanned ware, and musical instruments. *Boston Daily Advertiser*. Jan. 16. p. 3.

• **Summary:** “... Sheffield plated goods: Teapots, Sugar Basons [Basins] and Cream Ewers, Liquor, Castor and Soy Frames [for soy sauce], Candlesticks, Salts, Spoons,...” Address: Auct’rs [Auctioneers], in the Assembly Room, at the Exchange Coffee-House.

564. Murdock (George). 1817. Classified ad: New garden seeds. Just received from London. *Boston Gazette*. March 6. p. 4.

• **Summary:** “... Likewise a variety of Fish Sauces, such as East India Soy [sauce], Essence of Anchovies, Reading Sauce, &c.” Address: No. 14, Market Square.

565. Adamson (Mr.). 1817. Sales by auction: To oil and colourmen, and others (Ad). *Times (London)*. April 17. p. 4, col. 4.

• **Summary:** “The stock and utensils in trade of an Italian Oil

and Colour-shop... linseed, sperm, seal, and Florence oils, India soy [sauce], indigo,...” Address: 58, Fenchurch-street [London].

566. Lewis (Mr.). 1817. To be sold by auction, by Mr. Lewis, on the 17th instant, at the premises of Capt. Fergusson, the following Goods; viz.—(Ad). *Hobart Town Gazette and Southern Reporter (Tasmania, Australia)*. May 10. p. 2.
 • **Summary:** “Europe Pickles (by Gordon & Emnet). Vinegar, Mustard, & Catsup. Real China Soy [sauce]. Pepper & Sago...”

Note 1. This is the earliest document seen (April 2012) that uses the term “Real China Soy” to refer to soy sauce—probably made in China.

Note: This is the earliest of 283 documents seen (April 2012) in the Australian Newspapers database that contains the term “China Soy” or the term “Real China Soy.” The newspaper that mentions this term most frequently is *The Mercury* (Hobart) (256 times). By category: 279 are advertising and 4 are news. By decade: In 1890-99 the term appears in the most ads or articles (207), followed by 1880-89 (51).

567. Byron, George Gordon (Lord). 1817. Beppo: A Venetian story. In: Ernest Hartley Coleridge, ed. 1905. *The Poetical Works of Lord Byron*. London: John Murray, Albemarle St. See p. 418-19.

• **Summary:** Beppo was written in 1817 (between Sept. 6 and Oct. 12) while Byron was living in Venice. It was published on 28 Feb. 1818. The poem opens with Byron talking about the dissoluteness of Venice, even during Lent, and the blandness of the Lenten dishes, which could be made interesting if they were seasoned with soy sauce—which they are not:

“VI. This feast is named the Carnival, which being / Interpreted, implies ‘farewell to flesh’ - / So called, because the name and thing agreeing, / Through Lent they live on fish both salt and fresh. But why they usher Lent with so much glee in, / Is more than I can tell, although I guess / ‘Tis as we take a glass with friends at parting, / In the Stage-Coach or Packet, just at starting.

“VII. And thus they bid farewell to carnal dishes, / And solid meats and highly spiced ragouts, / To live for forty days on ill-dressed fishes, / Because they have no sauces to their stews; / A thing which causes many “poohs” and “pishes,” / And several oaths (which would not suit the Muse), / From travellers accustomed from a boy / To eat their salmon, at the least, with soy;

“VIII. And therefore humbly would I recommend / ‘The curious in fish sauce,’ before they cross / The sea to bid their cook, or wife, or friend, / Walk or ride to the Strand, and buy in gross / (Or if set out beforehand, these may send / By any means least liable to loss), Ketchup, Soy [sauc], Chili-vinegar, and Harvey [Sauce], Or by the Lord! a Lent will

well neigh starve ye.”

Note: From this poem it seems quite clear that soy sauce was available in Venice in Oct. 1817. Therefore, this is the earliest document seen (Feb. 2001) concerning soybean products (soy sauce) in Italy. This document contains the earliest date seen for soybean products in Italy (Oct. 1817); soybeans as such had not yet been reported by that date. Address: England; Italy.

568. Lewis (Mr.). 1817. Sale by auction—By Mr. Lewis. The remains of the valuable Cargo, recently imported on the Brig Jupiter, from Bengal... (Ad). *Hobart Town Gazette and Southern Reporter (Tasmania, Australia)*. Nov. 15. p. 2.
 • **Summary:** “Europe Pickles (by Gordon & Emnet). Vinegar, Mustard, & Catchup. Real China Soy [sauce]. Pepper & Sago...”

569. *Encyclopaedia Britannica*; or, A dictionary of arts, sciences, and miscellaneous literature. 5th ed. Illustrated with nearly six hundred engravings. Enlarged and greatly improved. 20 vols. 1817. Edinburgh: Printed at the Encyclopaedia Press for Archibald Constable. Illust. 28 cm.
 *

Address: Edinburgh, Scotland.

570. Kitchiner, William. 1817. *Apicius redivivus*; or, The cook’s oracle: wherein especially the art of composing soups, sauces, and flavouring essences is made so clear and easy, by the quantity of each article being accurately stated by weight and measure, that every one may soon learn to dress a dinner, as well as the most experienced cook; being six hundred receipts [recipes], the result of actual experiments instituted in the kitchen of a physician, for the purpose of composing a culinary code for the rational epicure, and augmenting the alimentary enjoyments of private families; combining economy with elegance; and saving expense to housekeepers, and trouble to servants. London: Printed for Samuel Bagster. Unpaginated. First edition. 15 cm.

• **Summary:** Since the pages are unnumbered, it is sometimes difficult to describe exactly where references to soy are found. In the chapter on “Roasting,” at the end of No. 62 is a “Recipe to sauce for wild fowls” which contains this ingredient: “Sauce à la Russe*, (the older the better), 1 tablespoonful.” A footnote on that page states: “* By à la Russe we suppose cavice, or coratch, or soy [sauce], is meant.”

In the chapter on “Broths, gravies, and soups,” at the top of the 6th page we read: “culinary scribes indiscriminately cram into almost every dish, anchovies*, garlick, bay leaves, and that hot, fiery spice, Cayenne pepper.” A footnote on the same page explains the asterisk (*) after “anchovies”: “* Soy, cavice-coratch, anchovies, curry powder, browning, catsup, pickle liquor, beer, and wine, are occasionally very convenient auxiliaries to soups, &c.:”

The recipe for “Plain browning (No. 322) Is a very convenient article in the kitchen, to add to those soups or sauces where it is supposed the deep brown of its complexion denotes the strength and savouriness of the composition, and it is a very good substitute for what is called ‘India, or Japan Soy.’ Put half a pound of moist sugar and a tablespoonful of water into a clean iron saucepan...”

Recipes in the book that call for “Soy” [sauce] as an ingredient include: Mackarel broiled (No. 169; “send it up with fennel sauce in a boat, or plain butter with mushroom catsup or soy in it”). Mackarel roe sauce (No. 266). Cream sauce for fish (No. 277). Camp vinegar (No. 403). Fish sauce (No. 425).

The “Original receipt for Quin’s sauce (No. 424) does not contain soy sauce in this edition, although it does in later editions. However it does state: “Obs. [Observations]—The above is copied from this celebrated epicure’s original receipt now lying before me, for which I am indebted to Wm. Blachford, Esq., of Gray’s Inn: its authenticity may be fully relied on. This sauce is prepared, as here described, by Messrs. Ball, 81, New Bond St., London.” Note 1. In early recipes for prepared sauces, such as Worcestershire, soy was considered a secret ingredient, and was therefore not revealed.”

Note 2. Tom Jaine, expert on early culinary history, of Prospect Books (England) thinks (Dec. 2007) that “Obs.—” stands for “Observation(s).”

The section titled “The magazine of taste” (No. 463, near back of book) contains a list of 28 “flavoring materials” which will enable “the thorough-bred *gourmand*” to develop a mahogany “sauce box” containing bottles of favorite ingredients. No. 15 is “Soy (436).” This refers to soy sauce; No. 436 is a recipe for making it at home. The other materials include: Pickles, brandy, curacao, salad sauce, pudding catsup, sauce superlative or double relish, walnut pickle, mushroom catsup, vinegar, oil, mustard, curry powder, etc.

Turning to No. 436 we read: “SOY. (No. 436.). To a small teacupful of water add half a pound of treacle, or moist or lump sugar; set it on the fire in an iron pot till it boils to a dark brown colour, keep stirring it, and take great care, or it will burn: when it is become quite thick, add to it a quarter ounce of salt, and gradually as much water as will reduce it to the consistency of soy; mix well together and boil up for 5 minutes. The addition of a quarter of a pint of good strong beef glaze (Footnote: See No. 187) to three quarters of a pint of the burnt sugar will very much improve it: those who like a goût [taste] of acid may add vinegar.

“Obs.—This will hardly be told from what is commonly called “*genuine India soy*,” and will answer every purpose that is used for. Burnet treacle, or sugar, and Chili vinegar, garlick, and pickled fish appear to be the bases of almost all the sauces that are now sold in the oil-shops. Although indefatigable research and experiment has put us in

possession of all these compositions, it would not be quite fair to enrich the cook at the expense of the oilman, &c.”

Note 3. The meaning of “Burnet treacle” is unclear. Burnet is a common herb. Treacle mustard is a plant. And treacle is the British word for molasses.

Concerning catsup: “Mushroom catsup” (No. 439) is mentioned 30 times in this book. After the basic recipe we read: “Excellent mushroom catsup may be had at Butler’s herb and seed shop, opposite Henrietta Street, Covent Garden [central London]. “Walnut catsup” (No. 438) is mentioned 8 times. Also mentioned are: Oyster catsup (No. 441), Cockle and muscle [sic] catsup (No. 442), Tomata catsup [tomato catsup] (No. 443), White catsup (No. 444), Cucumber catsup (No. 445), and Pudding catsup (No. 446). The word “catchup” does not appear in this book.

The author—who name does not appear on the title page of this first edition—lived 1775?-1827. He was a nonpracticing Scottish physician. Address: England.

571. Raffles, Thomas Stamford. 1817. The history of Java. 2 vols. London: Black, Parbury & Allen. Vol. 1, xlviii + 479 p. Vol. 2, cclx + 291 p. See vol. I, p. 98. Oxford in Asia Historical Reprints, Oxford Univ. Press, 1978.

• **Summary:** In the section titled “Cooking” (Vol. I, p. 98) we read: “The Chinese prepare from the *gédélé* [*kédélé* = soybean] a species of soy [sauce], somewhat inferior to that brought from Japan.

A passage on rice cultivation (Vol. I, p. 116-17) states: “Besides the annual crop of rice which is raised on the *sawah* lands, a variety of plants are raised upon them as a second or light crop within the same year. Among these are several species of *káchang* or bean... Among the most important are... *kédélé* [soybeans]...” “Together with rice are deposited the seeds of other vegetables, which arrive to maturity at different periods, chiefly after the rice harvest. The most common and useful among these is cotton... Next to this are various leguminous and other plants, which do not interfere with rice. No less than six or eight kinds of vegetables are sometimes in this manner seen to shoot up promiscuously in a single field.”

The section on Java’s “Oil-giving plants” (p. 123) states: “Of the oil-giving plants there are many. The *káchang góring* of the Malay countries, or, as it is indifferently termed by the Javans, *káchang china*, *pénden*, or *tána* [peanut] is cultivated almost exclusively for the purpose of obtaining its oil... It is never employed as an article of food by itself; but what remains of it after the oil is expressed, forms an ingredient for the seasoning of rice... The oil is obtained by grinding the seeds between two grooved cylinders, and then separating it either by expression or boiling. The former is chiefly used by the Chinese, and yields as a refuse the oil-cakes, which I formerly observed were employed as manure in some of the gardens near Batavia.”

Raffles (lived 1781-1826) was lieutenant-governor of

Java from 1811 to 1816. He acquired and founded Singapore on 6 Feb. 1819. A 2nd edition was published in 1830 in London by J. Murray. Address: Lieutenant-Governor of Java.

572. Rundell, Maria Eliza Ketelby. 1817. *A new system of domestic cookery: Formed upon principles of economy, and adapted to the use of private families. By a lady.* 3rd ed. New York, NY: Robert M'Dermut. 317 p. Illust. Index. 18 cm. *
• Summary: In this new 1817 United States edition of this book, soy is mentioned as follows: To broil cod sounds (p. 36): "... season a little brown gravy with pepper, salt, a teaspoonful of soy, and a little mustard;..."

To dress fresh sturgeon (p. 37): "Sauce butter, anchovy, and soy."

Baked carp, or black fish (p. 38): "Pour the liquor from it, and keep the fish hot while you heat up the liquor with a good piece of butter rolled in flour, a tea-spoonful of mustard, a little Cayenne, and a spoonful of soy. Serve the fish on the dish, garnished with lemon, and parsley, and horse-radish, and put the gravy into the sauce-tureen."

Perch (p. 38): "Put them into cold water, boil them carefully, and serve with melted butter and soy."

Stewed lobster, a very high relish (p. 45): "Pick the lobster, put the berries into a dish that has a lamp, and rub them down with a bit of butter, two spoonsful of any sort of gravy, one of soy, or walnut-ketchup, a little salt and Cayenne, and a spoonful of port;..."

To stew tongue (p. 65): "Boil it tender enough to peel: when done, stew it in a moderately strong gravy; season with soy, mushroom ketchup, Cayenne, pounded cloves, and salt if necessary."

Mock turtle (p. 75-76): "... simmer till the meat is quite tender. About ten minutes before you serve, put in some basil, chives, parsley, Cayenne pepper, and salt to your taste; also two spoonfuls of mushroom ketchup, and one of soy..."

To boil turkey (p. 100): "Have ready a fine oyster-sauce made rich with butter, a little cream, and a spoonful of soy, if approved; and pour it over the bird:..."

Gravy soup (p. 119): "Boil vermicelli a quarter of an hour; and add to it a large spoonful of soy, and one of mushroom ketchup."

Hessian soup and ragout (p. 121-22): "For the *Ragout*, cut the nicest part of the head, the kernels, and part of the fat of the root of the tongue, into small thick pieces. Rub these with some of the above seasoning, as you put them into a quart of the liquor, kept out for that purpose before the vegetables were added; flour well, and simmer them till nicely tender. Then put a little mushroom and walnut ketchup, a little soy, a glass of port wine and a tea-spoonful of made mustard: and boil all up together before served."

An excellent sauce for boiled turkey (p. 129): "Rub half a pound of butter with a tea-spoonful of flour, put to it a little water, melt it, and add near a quarter of a pint of thick cream, and half an anchovy chopped fine, not washed; set it over the

fire: and as it boils up, add a large spoonful of real India soy. If that does not give it a fine colour, put a little more."

Camp vinegar (p. 135): "Slice a large head of garlic; and put it into a wide-mouthed bottle, with half an ounce of Cayenne, two teaspoonfuls of real soy, two of walnut-ketchup, four anchovies chopped, a pint of vinegar, and enough cochineal to give it the colour of lavender drops. Let it stand six weeks; then strain off quite clear, and keep in small bottles sealed up."

Ketchup is mentioned on 37 pages, as follows: 38 (walnut ketchup), 45 (walnut-ketchup), 57-58, 60-61, 63, 65-66, 68, 71-72, 74, 76 (walnut ketchup, mushroom ketchup), 77 (mushroom ketchup), 91-92, 95, 97 (mushroom ketchup), 102 (mushroom ketchup), 106, 117, 119 (mushroom ketchup), 120, 122 (walnut ketchup), 126 (mushroom ketchup), 131 (mushroom ketchup), 132-133 (walnut ketchup), 134, 135 (walnut ketchup), 140 (mushroom ketchup, walnut ketchup), 189, 190 (mushroom ketchup, homemade; walnut ketchup, homemade; cockle ketchup, homemade).

Note: Tomato / tomatia ketchup is not mentioned. Address: [Bath, England].

573. Beeler (Louis). 1818. Classified ad: Just received. *Alexandria Herald (Virginia)*. Jan. 28. p. 4.

• Summary: "... Also, fresh Zaan-currants, ground nuts, palm nuts of a new kind,... cloves, cinnamon, nutmegs, mace, Japan soy [sauce] or East India catsup, almond oil, English mustard,..."

Note 1. This is the earliest document seen (Sept. 2011) concerning soybean products (soy sauce) in Virginia. This document contains the earliest date seen for soybean products in Virginia (Jan. 1818); soybeans as such have not yet been reported.

Note 2. The idea that soy [sauce] is a type of catsup [regardless of spelling] from the East Indies continues to persist.

574. Bruce (Wm.). 1818. Classified ad: Has for sale. *New-York Daily Advertiser (New York City)*. Aug. 6. p. 1.

• Summary: "... Mushroom and Walnut Ketchup. Harvey & Quin Sauce. India Soy [sauce]. Old Java Coffee..." Address: 139 Broadway, near City-Hotel.

575. Patison (James). 1818. Classified ad: At his wholesale and retail store. *City Gazette and Daily Advertiser (Charleston, South Carolina)*. Nov. 2. p. 3.

• Summary: "... Curry Powder, India Soy [sauce], Walnut, Cauliflowers,... Mushroom Ketchup, Anchovies, Capers; Sallad Oil, in pint bottles. Harvey's Sauce, Camp Sauce, Quin's ditto [Sauce]... Shipped by one of the first houses in London." Address: No. 41, East-Bay.

576. Abel, Clarke. 1818. Narrative of a journey in the interior

of China: And a voyage to and from that country in the years 1816 and 1817;... London: Printed for Longman, Hurst, Rees, Orme, and Browne. xvi + 420 p. Illust. Index.

• **Summary:** Lord Amherst's embassy to the court of Peking [Peking] sailed from London in Feb. 1816. August. Page 72. "The men who navigate and probably live in these junks, subsist chiefly on millet rendered gelatinous by immersion in hot water. With this they eat a savoury preparation of vegetables cut into small stripes, and preserved in a kind of soy [sauce]. At their meals each takes a basin of millet to himself, but the savoury dish is common to many. In eating they bring the basin close to the lips, and shovel its contents by means of their chop-sticks into their mouths till they are fully crammed; then wedging in a morsel of the piquant vegetable, masticate the whole together."

In the chapter on "Plants," in August (p. 86): "Immediately after quitting Tien-sing, the country exhibited much of the same characters of wildness and flatness which they possessed from Ta-koo to that place. The chief difference consisted in an addition to the kinds of cultivated plants. Besides millet and beans [probably soybeans], the *Sida tiliaefolia*, one of the hemp plants of the Chinese, the *Sesamum Orientale*, from which they extract an esculent oil, and the *Ricinus communis*, castor-oil plant, continually occurred in patches, or in fields."

Page 124: "Of the plants cultivated as vegetables, the principal were the *Solanum melongena*, two species of *Capsicum**, the Sweet Potatoe, several species of Gourds and Cucumbers, one or two species of *Phaseolus*, or kidney-bean [one may possibly have been the soy bean], of which they boil the young plants, and above all, the vegetable called by the Chinese *Petsai*, a species of cabbage.

The peanut is discussed on p. 170. Address: F.L.S., Chief Medical Officer and Naturalist to the Embassy [England].

577. Ellis, Henry. 1818. Journal of the proceedings of the late embassy to China: Comprising a correct narrative... Philadelphia: Printed and Published by A. Small. vii + 9-392 p.

• **Summary:** This embassy sailed from London in Feb. 1816.

"7th of August" (p. 62-63): "It appeared that the payment for the service in which the boat was now employed depended upon satisfaction being given, in which case the owner would be rewarded, otherwise he would be punished. On the former embassy the owners were liberally remunerated by Kien-Lung. Millet and some vegetables dressed with soy [sauce], were the principal food of the boat's crew. The praises that all travellers have given to the Chinese for regularity and arrangement are well deserved: though there be noise in their mode of loading and unloading boats, there is no confusion; every man seems to know his duty, and to execute it cheerfully."

"7th of September" in Tien-sing (p. 155): "Great variety of articles were sold in every shop, and, except the druggists,

I observed few shops appropriated to the sale of one commodity only. A black mass, looking like caviare [caviar], proved to be soy mixed with salt, with something to give the mixture consistency." Address: Third Commissioner of the Embassy.

578. Golownin, Capt. Vasilii Mikhailovich [Golovnin, Mikhaiforich]. 1818. Narrative of my captivity in Japan, during the years 1811, 1812 & 1813; with observations on the country and the people. To which is added an account of voyages to the coast of Japan, and of negotiations with the Japanese, for the release of the author and his companions, by Captain Rikord. 2 vols. in 1. London: Printed for Henry Colburn. 348 p. See p. 58, 66. No index. 22 cm.

• **Summary:** In Vol. II: The author, a Russian, was confined to a prison. Page 58: "... our cages were cleaned out, and our coverlets and night-dresses aired in the sun during our absence. Food was brought to us every morning, noon, and evening. At each meal we received thick boiled rice instead of bread. It was dealt out to us in portions which were more than sufficient for Mr. Chlebnikoff and me;... In addition to the rice, we were served with soup made of sea-cabbage and other wild plants, such as sweet cabbage, wild garlic, and water angelica; to which, for the sake of rendering it savoury, pickled beans (Japanese *misso* [miso]) and some pieces of whale fat were added."

Page 66: "We were now supplied with better food: we were frequently treated with a kind of pudding, which the Japanese call tufa [tofu]; fine beans were boiled with our rice, forming a dish which is considered a great delicacy in Japan;..."

Page 198: "Our food in Matsmai [Matsumae] was incomparably better than it had been in Chakodate [Hakodate]... The fish were fried in oil of poppies, and were seasoned with grated radish [daikon] and soy [sauce]."

Note: This is the earliest document seen (Feb. 2001) concerning soya in connection with (but not yet in) Russia or Eastern Europe.

579. Homespun, Priscilla [pseudonym]. 1818. The universal receipt book: Being a compendious repository of practical information in cookery, preserving, pickling, distilling, and all the branches of domestic economy,... 2nd ed. with great additions. Philadelphia, Pennsylvania: Published by Isaac Riley. 378 p. See p. 45-46, 151, 223. Index. 18 cm.

• **Summary:** In the chapter "Select receipts in cookery," a recipe titled "An excellent Catsup which will keep good more than twenty years" (p. 45-46) states: "Take two gallons of stale strong beer, or ale, the stronger and staler the better; one pound of anchovies..." half an ounce each of cloves and mace, ¼ ounce of pepper, "six large roots of ginger, one pound of eschalots [shallots], and two quarts, or more of flap mushrooms, well rubbed and picked. Boil these ingredients over a slow fire for one hour, then strain the liquor through

a flannel bag, and let it stand till quite cold, when it must be bottled and stopped very close with cork and bladder, or leather. One spoonful of this catsup to a pint of melted butter, gives an admirable taste and colour, as a fish sauce, and is by many preferred to the best Indian soy" [sauce].

Surprisingly, this exact same recipe appears in the chapter on page 151, in the chapter "Select receipts in pickling, &c."

In the chapter "Select receipts in distilling, &c." is a recipe (p. 223) for "Camp Vinegar. This, which is a kind of universal sauce is thus directed to be made. Peel a large head of garlic, cut it in thin slices, and put it in a bottle with a wide mouth; then add half an ounce of Cayenne pepper, two table spoonsful each of India soy, and walnut liquor or ketchup, four or five chopped anchovies, twenty grains of cochineal, and a pint of white wine vinegar. When it has stood six weeks, being frequently shaken in the mean time, pour or strain off the clear liquid, and keep it in small bottles closed or sealed up with wax."

Who was Priscilla Homespun? In his excellent book *Pure Ketchup* (1996), Andrew F. Smith states (p. 20) that the original 1814 edition of this book was attributed to Richard Alsop, a wealthy poet, and brother-in-law of the publisher Isaac Riley. Alsop died before Riley reprinted the 2nd edition "of the cookbook four years later under the pseudonym of 'Priscilla Homespun.'"

580. Wrightson's new triennial directory of Birmingham,... 1818. Birmingham, England: Printed and published by R. Wrightson. 198 p. See p. 136-37.

• **Summary:** A full page display ad (unpaginated, between pages 136 and 137) reads: "Waterhouse & Ryland, Silver plate manufactory. Hill Street, Birmingham. The following articles in plated or silver. Table services, dishes, water-plates, tureens, salts, &c. Epergnes & plateaus. Liquor, cruet, pickle & soy-stands, candle-stick & branches. Bread, cake, flower & fruit baskets,... Tea & coffee Setts, waiters & trays." Illustrations show: (1) Two silver plated objects. (2) The royal coat of arms, with a lion and a unicorn on each side, and a lion standing on a crown at the top.

581. *Times (London)*. 1819. Law report. Court of King's-Bench, Guildhall, Wednesday: Lazenby v. Hallett and Hardy. Jan. 14. p. 3, col. 2.

• **Summary:** "This was an action brought by Mrs. Elizabeth Lazenby, the proprietor of an anchovy sauce, generally denominated 'Harvey's Fish Sauce,' to recover damages of Messrs. Hallett and Hardy, wholesale druggists, for vending a certain spurious sauce of their making, under the same name, to the manifest injury of her... who was the only person acquainted with the secret by which the said sauce was made."

Few things are better known in the city of London than this genuine anchovy sauce. Mrs. Lazenby is the sister of

the original inventor, Mr. Harvey, "who, unfortunately for her interests, had not taken out any patent to secure his invention. Mr. Harvey had been the occupier [owner] of an inn at Bedford, known and frequented by every *bon-vivant* who had ever traveled on the western road; and the means which had rendered his house so celebrated, was the exquisiteness of his wines and the pungency of his sauces." He had disclosed the secret only to his sister. Mrs. Lazenby found out about the fraud when a delivery boy, age 13, accidentally delivered counterfeit labels to her. She then traced the defendants through their printer, a Mr. Cox.

"The Jury, without hesitation, returned a verdict for the plaintiff-Damages 40s." Address: Edward-street, Portman-square [London].

582. *Port Folio (The) (Philadelphia and London)*. 1819. On China. 7(2):91-111. Feb. See p. 105-06. See p. 462.

• **Summary:** The article begins: "The following letter from a gentleman of this city [Philadelphia, Pennsylvania?], now abroad, is the result of careful observation, during a long residence among the people whom it professes to describe."

Page 105: "The Chinese make great use of beans, not only to feed their sheep and cattle, but also as food for themselves, in what they call, *thow foo* [doufu; tofu], and *foo chack*, [yuba], a kind of flummery [soft jelly or porridge], exceedingly palatable and nourishing."

Note: This is the earliest English-language document seen (Jan. 2012), and the earliest European document seen (May 2010), that mentions yuba or, this case, dried yuba sticks or rolls, which it calls *foo chack* [Chinese; also spelled elsewhere *foo jook*, *fooh jook* or *fuchu*, "bamboo yuba"]. The yuba is rolled so it looks like a bamboo shoot at each end then folded to form a "V." It is often cooked in a sweet broth, and eaten as a sweet soup; the dried yuba becomes soft, delicate and subtly sweet thin sheets.

"Soy [sauce] is likewise made from beans, with the aid of molasses and salt. The beans are boiled until nearly all the water evaporates and they begin to burn; they are then placed in large jars exposed to the sun, water and molasses are poured upon them and stirred well every day until the liquid is completely impregnated with their flavour; it is then strained off, salted, boiled and skimmed, until perfectly clarified. It will keep any length of time. Many persons have thought that gravy was employed in this condiment, which is not the case, it being entirely a vegetable composition, and certainly very wholesome and agreeable. There are many qualities of it, and it requires much care and attention to make the best. Japanese soy is most esteemed, and is vastly superior to any made in China. Many shopkeepers have large platforms on the roofs of their houses, where a number of jars are placed, for the purpose of making this article of which there is an enormous consumption, since neither rich nor poor can breakfast, dine, or sup without it. It is sauce for every sort of food, gives zest to every dish, and is the *sine*

qua non of a Chinese meal.”

583. *P.P.F. DeGrand's Boston Weekly Report*. 1819. Shipping news: Abstract of foreign arrivals. June 5. p. 1.

• **Summary:** “May 31st. Ship *Levant*, [Captain] Cary, of Boston, from Canton, 128 days.—1530 boxes sugar;... 2 boxes China; 1 tub Candy; 1 box Japan Soy [sauce].”

In the same issue of this newspaper (p. 3) is a section titled “Consignees of Foreign arrivals,” which shows that the 1 box of Japan Soy has been consigned to “Adventures.”

Note: The meaning of the word “Adventures” is not clear. Most of the goods were assigned, by name, to various merchants or their companies. Of the many types of merchandise that arrived from May 29 to June 2, this is the only lot assigned to “Adventures.”

584. *Port Folio (The) (Philadelphia)*. 1819. On China. 7(2):91-111. Feb. Series 4. See p. 105-06.

• **Summary:** “The Chinese make great use of beans, not only for their sheep and cattle, but also as food for themselves, in what they call, *thow foo* [tofu], and *foo chack* [*foo jook*; dried yuba sticks] a kind of flummery exceedingly palatable and nourishing. Soy [sauce] is likewise made from beans, with the aid of molasses and salt. The beans are boiled until nearly all the water evaporates and they begin to burn; they are then placed in large jars exposed to the sun, water and molasses are poured upon them and stirred well every day until the liquid is completely impregnated with their flavour; it is then strained off, salted, boiled and skimmed, until perfectly clarified. It will keep any length of time. Many persons have thought that gravy was employed in this condiment, which is not the case, it being entirely a vegetable composition, and certainly very wholesome and agreeable. There are many qualities of it, and it requires much care and attention to make the best. Japanese soy is most esteemed, and is vastly superior to any made in China. Many shopkeepers have large platforms on the roofs of their houses, where a number of jars are placed, for the purpose of making this article of which there is an enormous consumption, since neither rich nor poor can breakfast, dine, or sup without it. It is sauce for every sort of food, gives zest to every dish, and is the *sine qua non* of a Chinese meal.”

585. *Blackwood's Edinburgh Magazine*. 1819. The tent. 30(5):627-736. Sept. See p. 726.

• **Summary:** On p. 726 the Doctor says, “between two enormous mouthfuls of broiled herring superbly seasoned under the guidance of our master Celt, with Harvey sauce and Cayenne,...”

Note: This is the earliest English-language document seen (April 2012) that contains the term “Harvey sauce” (spelled without an apostrophe).

586. Stearns (Wm.). 1819. Classified ad: Fresh fruit, &C.—for

Thanksgiving. *Essex Register (Salem, Massachusetts)*. Nov. 20. p. 1.

• **Summary:** “... English Mustard; Soye [soy sauce]; Catshup [Catsup]; Harveys [sic, Harvey's] and Quin Sauce; Basket Salt; Table do [ditto = Salt].” Address: No. 2, Union street Building.

587. Stevens (W.). 1819. Sales by auction: Stock of oils, pickles, sauces, etc. (Ad). *Times (London)*. Nov. 26. p. 4, col. 4.

• **Summary:** The fixtures and goods of Messrs. Agar and Brown (of No. 31 Walbrook) include: “240 jars and bottles of pickles, 160 dozen of sauces, comprising Indian soy [sauce], essence of anchovies, walnut and mushroom catsup [catsup], Harvey's and Quin's sauces, elder vinegar,... 5 half hogsheads of mushroom ketchup... May be viewed 1 day previous to sale; and catalogs had on the premises, and of Mr. W. Stevens...” Address: Auctioneer and appraiser, 36, Old Jewry [London].

588. *Asiatic Journal*. 1819. Goods declared for sale at the East-India House. 8(47):519. Nov.

• **Summary:** “For sale 12 November—Prompt 11 February.” “Licensed and Private-Trade... China Ink—Rouge—Pickled Salmon—Soy.”

589. Hickson (Samuel) and Co. 1819. Classified ad: Westphalia hams,... *Times (London)*. Dec. 2. p. 1, col. 2.

• **Summary:** “The greatest variety of sauces and pickles, genuine Cayenne pepper, China soy [sauce], French and Spanish olives...” Address: Foreign Warehouse, 72, Welbeck-street [London].

590. Price. 1819. Classified ad: Westphalia hams, &c. *Times (London)*. Dec. 11. p. 1, col. 5.

• **Summary:** “Price most respectfully acquaints the Nobility and Gentry, that he has just received... sallad oil, Gorgona anchovies, French capers, essence [of] anchovies, India soy [sauce], with a variety of other rich fish sauces.” Address: Italian warehouse, 3, Haymarket, opposite the Opera house [London].

591. Golownin, Capt. Vasilii Mikhailovich [Golovnin, Mikhaiforich]. 1819. *Recollections of Japan*, comprising a particular account of the religion, language, government, laws and manners of the people, with observations on the geography, climate, population & productions of the country. with observations on the country and the people. To which is added an account of voyages to the coast of Japan, and of negotiations with the Japanese, for the release of the author and his companions, by Captain Rikord. Vol. II. London: Printed for Henry Colburn. 302 p. See p. 157, 213. No index. 22 cm.

• **Summary:** Page 157: “... many kinds of beans, which are

a favorite dish of the Japanese; they sometimes eat them merely boiled in water, sometimes in treacle or soy [sauce]; small beans are often boiled with thick rice, and pass for a great delicacy. The Japanese soy is also prepared of beans, and turned sour in casks. They say that three years are required for preparing the best soy.”

Page 213: Footnote: “The imports by the Dutch ships at Nangasaki, consisted, in 1775, of sugar, elephant’s teeth, Japan wood for dying, tin, lead, bar-iron, fine chintzes, Dutch cloths of various colours and fineness, silks, spices, tortoise-shell, saffron, Venice treacle, Spanish liquorice, canes, optical glasses, watches, and the sea-unicorns’ horns from Greenland, which bear a high value in Japan. The exports were copper, raw camphor, lackered wood work, porcelain, silks, rice and soy” [sauce]. Address: Russian Navy.

592. Good, John Mason; Gregory, Olinthus; Bosworth, Newton. 1819. *Pantologia: A new cabinet cyclopædia,...*: Soy. London: Printed for J. Walker;...; Edinburgh and Dublin. See Vol. 10, Q–Soy, last page, last entry. [Eng]

• **Summary:** “Soy [sauce], or Soju, a species of liquid condiment, which is imported from India, and is used as a sauce for fish. It is prepared from the leguminous fruit of the soja (*dolichos soja*, Linnéus) a native of Japan.

“The pods are first boiled, till they become soft; when equal parts of them, and of muggi (wheat or barley that has been coarsely ground) are thoroughly mixed. This preparation is then kept in a close vessel, and a warm place, for twenty-four hours in order to ferment; after which the mass is put into a pot, and covered with a large portion of common salt, when two measures and a half of water are poured over the whole. The compounds is stirred, once at least, every day, for the space of two or three months; and, at the end of that period, it is filtered; the expressed liquor being preserved in wooden barrels. Fresh water is then added to the same mass; which, after stirring it occasionally for several days, is at length strained; and the liquor, though of an inferior kind, thus rendered fit for use.

“Soy possesses a strong saline taste, but has only a slight aromatic flavour: it is chiefly used at the tables of the luxurious; and is one of those artificial stimulants of the palate, which deserves no commendation, especially for vitiated or relaxed habits.”

Note: This entry is copied from: Mease, James. 1804. “Soy.” In: A.F.M. Willich, ed. 1804. *The Domestic Encyclopedia*. Philadelphia, Pennsylvania: William Young Birch and Abraham Small. See Vol. V, p. 12-13. Address: 1. Esq., F.R.S., Member of the American Philosophical Society, and of the Linnean Society of Philadelphia; 2. LL.D., Of the Royal Military Academy, Woolwich,...; 3. Mr., of Cambridge.

593. Rees, Abraham. ed. 1819. *The cyclopedia; or, universal dictionary of arts, sciences, and literature: Dolichos soja*.

London: Longman, Hurst, Rees, Orme & Brown. See vol. XII. Dol. N.P. (Unpaginated). [2 ref. Eng]

• **Summary:** “Of the upright kinds [of *Dolichos*], *D. soja*, Linn. Sp. Pl. 1023. Jacq. Ic. Rar. t. 145, a native of Japan and the East Indies, is famous for its seeds, a great article of food in China and Japan. They are made into a kind of jelly or curd [tofu], esteemed very nutritious, and rendered palatable by adventitious seasoning; or they are prepared with salt, so as to produce the liquid well known at our tables by the name of Soy [sauce]. The flowers of this species are small and unornamental.”

First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished.

Note 1. This is the earliest English-language document seen (Feb. 2004) that mentions tofu in connection with Japan.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word “jelly” in connection with tofu.

Note 3. This is the earliest English-language document seen (Nov. 2002) that uses the term “upright” to describe the soybean plant.

Note 4. This is the earliest English-language document seen (Dec. 2003) with the word “nutritious” (or “nutrition,” “nutritional,” “nutritive,” or “nutrients”) in the title that also mentions soy.

Note 5. Sylvester Graham is said to have obtained much of his information about milling, bread baking, and early diets from this encyclopedia (McCance & Widdowson 1956, p. 49).

• **Summary:** “The plate consists of... epergnes, waiters, liquor, cruet and soy frames, bottle stands, chased cups and

salts,...” Address: Covent-garden [London].

597. Crawford, John. 1820. History of the Indian Archipelago. Containing an account of the manners, arts, languages, religions, institutions, and commerce of its inhabitants. 3 vols. Edinburgh: Printed for Archibald Constable and Co.; London: Hurst, Robinson, and C. See vol. 1, p. 197-98, 370. Vol. 3, p. 319.

• **Summary:** Note: “Indian Archipelago” probably refers to today’s Indonesia and Malaysia.

In Vol. 1, the chapter on “Useful arts” states (p. 197): “This preparation, called by the Malays *blachang*, and by the Javanese *trasi*, is a mass composed of small fish, chiefly prawns, which has been fermented, and then dried in the sun. This fetid preparation, so nauseous to a stranger, is the universal sauce of the Indian islanders, more general than soy [sauce] with the Japanese. No food is deemed palatable without it.”

Continuing on p. 198: Dampier describes it with perfect accuracy, as follows: “Baluchaun is a composition of a strong savour, yet a very delightsom dish to the natives of this country. To make it, they throw the mixture of shrimps and small fish into a sort of weak pickle, made with salt and water, and put it into a tight earthen vessel or jar. The pickle being thus weak, it keeps not the fish firm and hard, neither is it probably so designed, for the fish are never gutted. Therefore, in a short time they turn all to a mash in the vessel; and when they have lain thus a good while, so that the fish is reduced to a pap, they then draw off the liquor into fresh jars, and preserve it for use. The masht fish that remains behind is called balachaun, and the liquor poured off is called nuke-mum [nuoc-mam]. The poor people eat the balachaun with their rice. ‘Tis rank scented, yet the taste is not altogether unpleasant, but rather savory, after one is a little used to it. The nuke-mum is of a pale brown colour, inclining to grey, and pretty clear. It is also very savory, and used as a good sauce for fowls, not only by the natives, but also by many Europeans, who esteem it equal with soy.”* (Footnote: *)“Dampier’s Voyages, Vol. II, p. 28”).

The chapter titled “Husbandry of the materials of food” notes (p. 370): “The whole class of leguminous plants are called by the generic name *Kachang*.

“The most commonly cultivated as green crops, are two broad leaved plants called *Kachang Kadale*, (*Phaseolus max*), [soy bean] and *Kachang Ijo*, (*Phaseolus radiatus*.) The *Kachang Ijo*, or green pulse, is a superior grain to the last, but is more delicate, and requires more care in the culture. The Chinese colonists manufacture Soy from it [sic], and it is for their consumption chiefly that it is raised. Of the *Kadale* ten seeds are considered a good return, and of the other about seven may be an average.”

In vol. 3, the chapter titled “Intercolonial commerce” states (p. 319): “The specific commodities which Japan is either capable of affording, or actually does afford, for

exportation, are gold, silver, copper, tutenague [tutenag; zinc], iron, camphor, ambergris, tea, rice, soy [sauce], wrought silks, lacquered-ware, and earthenware.” Address: F.R.S., Late resident at the court of the Sultan of Java.

• **Summary:** Chapter 54, “Conversation,” states (p. 307): “‘A little Harvey sauce, if you please; yes, Sir, I dined with the noble Baronet; a sumptuous repast; but might have been better conducted;...”

Note: In the 1st ed. (1919, 5 vols., 17 cm), the author’s name appears on the title page.

599. Virey, Julien-Joseph. 1820. Histoire naturelle des médicamens, des alimens et des poisons, tirés des trois règnes de la nature [Natural history of medicines, of foods, and of poisons, drawn from the three kingdoms of nature]. Paris: Rémont and Ferra. xii + 570 p. See p. 281. Index. [Fre]

• **Summary:** In the section on “Legumes” is a subsection titled “Dolic” (p. 281) which states: The *D. Soja*, L. of Japan, has excellent seeds. A sauce is made with the soybean (*le soja*) which is very highly esteemed in Europe. Address: Medical doctor at the Faculty of Paris.

600. Hind (John). 1821. Sales by auction: To oil and colourmen... (Ad). *Times (London)*. Dec. 10. p. 4, col. 3.

• **Summary:** “The stock &c., comprises... French olives and pickles, essences of spruce and anchovies, India soy [sauce], whole and ground ginger,...” Address: Cannon-street, St. George’s, Middlesex [England].

601. Gray, Samuel Frederick. 1821. A supplement to the pharmacopoeia: Being a treatise on pharmacology in general;... A new and improved edition, considerably enlarged. London: Printed for Thomas and George Underwood. xxxiii + 480 + [48] p. Index. 21 cm.

• **Summary:** Chapter 1, “Vegetables,” notes (p. 115): “*Dolichos soja*. Seeds used to make soy [sauce], and are also eaten in soup.”

The long section on “Simple substances” states (p. 199, last entry): “Lock-soy. Rice boiled to a kind of paste, and drawn out into threads: the Cochin-chinese is transparent; the Chinese opaque and less esteemed; used to thicken soups.”

The section on “Compounds.—6. Watery compounds” gives a recipe (p. 324) for: “Quin’s sauce. Soy 8 lb, walnut ketchup, mushroom ketchup ana 2 gall. [gallons], anchovies 8 lb, Cayenne pepper 8 oz., garlic 1 lb.” 2nd recipe: Distilled vinegar 1 gall. soy 1 lb, allspice 8 oz. Distilled vinegar 1 gall., soy 1 lb, allspice 8 oz.

Next comes a recipe for homemade soy sauce (p. 324): “Soy. Seeds of *dolichos soja* (peas or kidney beans may be

used for them) 1 gall., boil till soft, add bruised wheat 1 gall., keep in a warm place for 24 hours, then add common salt 1 gall., water 2 gall., put the whole in a stone jar, bung it up for two or three months, shaking it very frequently, press out the liquor: the residuum may be treated afresh with water and salt, for soy of an inferior quality.

“2. Seeds or beans 35 lb, stew in a little water for 2 or 3 hours, till they can be bruised between the fingers; drain on a sieve, roll them while moist in flour of the same seeds, spread them upon strainers placed one upon another in a hamper, cover with a blanket for 3 or 4 days, or till the seeds are quite mouldy [soybean koji], then expose them to the sun or a fire until they are so hard that the mouldy crust may be rubbed off; now pour upon them water 100 lb, and add common salt 20 lb, let the whole stand in a warm place for six weeks, pour off the now brown liquor and evaporate gently to a proper consistence: some add spice.”

Note: This is the earliest document seen (Aug. 2009) that mentions soy flour (“flour of the same seeds”).

In the same chapter and section (p. 325) are two interesting recipes that contain no soy:

“Ketchup. Mushrooms 4 lb, common salt 2 lb, sprinkle the salt over them, when the juice is drawn out add pimento 8 oz. cloves 1 oz., boil for a short time, and press out the liquor: what remains may be treated again with salt and water for an inferior kind. Black pepper, mace, and ginger, are usually added.”

Walnut ketchup. Green shells of walnuts 1 bushel, common salt 6 lb, let them remain for two or three days stirring them occasionally that the air may turn them black, press out the liquor, add spices to the palate of the country, and boil it. Are all used for sauces.

“2. Juice of young walnuts by the press, to a gallon add anchovies 2 lb, shallots 1 lb, clove, mace, black pepper ana 1 oz. and a clove of garlic, boil a little, and bottle.”

In the chapter on “Compounds.—8. Medicated vinegars” is a recipe (p. 334) for “Camp vinegar. Garlick sliced 8 oz. Cayenne pepper, soy, walnut ketchup ana 4 oz. anchovies chopped no. 36, vinegar 1 gall., cochineal q. s. to colour it a deep red; infuse six weeks, then strain.” Address: Lecturer on the materia medica, pharmaceutical chemistry, and botany.

602. Kitchiner, William. 1821. *The cook’s oracle: containing receipts for plain cookery on the most economical plan for private families: Also, the art of composing the most simple, and most highly finished broths, gravies, soups, sauces, store sauces, and flavouring essences: The quantity of each article is accurately stated by weight and measure; the whole being the result of actual experiments instituted in the kitchen of a physician.* 3rd ed., which is almost entirely re-written. London: Printed for A. Constable & Co., Edinburgh, and Hurst, Robinson, & Co., Cheapside. xvi + 464 p. 18 cm.

• **Summary:** The section titled “The magazine of taste” (No. 463, p. 371) contains a list of 28 “flavoring materials.” No.

15 is “Soy” [sauce]. The others are the same as in the 1817 first edition.

After the word “Soy” is printed (No. 436) which should mean, according to the format of the book, that recipe No. 436 is a recipe for making soy sauce at home. However, when we look for No. 436 we are surprised to find that it is missing. Clearly recipe No. 436 for “Soy” has been removed since the 1817 edition (probably because the result tasted almost nothing like real soy sauce) but the cross reference on p. 371 was not.

The recipe for Browning (No. 313) “Is a very convenient article to colour those Soups or Sauces... It will commonly be told from what is commonly called ‘*genuine Japanese Soy**,’ for which it is a very good substitute.” (Footnote: *’By the best accounts I can find, Soy is a preparation from the seeds of a species of the *Dolichos*, prepared by a fermentation of the farina of this seed in a strong lixivium of common salt.’—Cullen’s *Mat. Med.*” [*Lectures on the Materia Medica*. vol. i, p. 430]). “Browning” is made by simmering half a pound of pounded Burnt Sugar with water, stirring well. “Then add to it an ounce of salt, and dilute it by degrees with water, till it is the thickness of Soy;...”

Several other recipes in the book call for “Soy” [sauce] as an ingredient: Mackarel roe sauce (No. 266). Shrimp sauce (No. 283). Liver sauce for fish (No. 288). Camp vinegar (No. 403). Fish sauce (No. 425). Sauce superlative (No. 429). A note to this latter recipe states that one purpose is to enable “the good Housewives of Great Britain to prepare their own Sauces...”

In the Introduction, the author lists (in approximately chronological order) the title and date of publication of about 250 English recipe books that he has consulted. There are 14 books from 1513 to 1599, and 39 books from 1600-1699, and 90 books from 1700-1799, and 52 from 1800 to 1819.

Note 2. This book was first published in 1817, with the title *Apicius redevivus; or, The cook’s oracle...* The author—who name does not appear on the title page of this 3rd edition—lived 1775?-1827. Address: [England].

603. Willich, Anthony Florian Madinger. 1821. *The domestic encyclopedia: Or a dictionary of facts and useful knowledge. Chiefly applicable to rural & domestic economy.* 2nd American edition, with additions, by Thomas Cooper. Esq. M.D.: Sooju or soy. Philadelphia, Pennsylvania: Abraham Small. See vol. 3, p. 264-65.

• **Summary:** “SOOJU, or Soy [sauce], is a dark coloured sauce, which is prepared from the seeds of the Chinese plant *Dolichos soja*, which has an erect and hairy stem, erect bunches of flowers, and pendulous bristly pods, each containing about 2 seeds.

“There is a joke amongst seamen, that soy is made from beetles or cockroaches. This probably originates in the seeds of the plant from which the sauce is manufactured, having some fancied resemblance in shape and colour to

SOOJU, or Soy, is a dark coloured sauce, which is prepared from the seeds of a Chinese plant *Dolichos soja*, which has an erect and hairy stem, erect bunches of flowers, and pendulous bristly pods, each containing about two seeds.

There is a joke amongst seamen, that soy is made from beetles or cock-roaches. This probably originates in the seeds of the plant from which the sauce is manufactured, having some fancied resemblance in shape and colour to a beetle. These seeds are used in China and Japan as food; they are

a beetle. These seeds are used in China and Japan as food; they are made into a kind of jelly or curd [tofu], which is esteemed very nutritious, and which is rendered palatable by seasonings of different kinds [see A. Rees 1819]. The liquid which we know by the name of soy is thus prepared. After the seeds have been boiled, until they become soft, they are mixed with an equal weight of wheat or barley meal, coarsely ground. This mixture is fermented; and a certain portion of salt and water being added, the whole is allowed to stand for two or three months, care being taken to stir it every day: and by the end of that time it is ready for use.

"Soy is chiefly prepared in China and Japan; but that imported from Japan is considered preferable to any other. The quantity annually vended at the East India Company's sales is from 800 to 2000 gallons; at an average price of sixteen or eighteen shillings per gallon.

"The Soy-bean bears the climate of Pennsylvania very well. The bean ought therefore to be cultivated."

Note 1. This is the earliest document seen, published in America, that mentions tofu. Willich got his definition of tofu from *The cyclopedia; or, universal dictionary of arts, sciences, and literature* (see *Dolichos soja*) edited by Abraham Rees (1819).

Note 2. This is the earliest document seen (Feb. 2001) that mentions the words "beetles" or "cockroaches" as an ingredient in the production of soy sauce. This idea is, of course, totally incorrect.

Note 3. This is the earliest document seen (Oct. 2010) that gives statistics for the amount of soy sauce sold per unit of time in England, or the sale price per unit volume.

Note 4. According to the *Oxford English Dictionary*, the "East India Company is a company formed for carrying on an East Indian trade, especially the English company incorporated in 1600 and described in its charter as 'The Company of Merchants of London trading to the East Indies', which from 1773 exercised political power in the East, and had the chief part in the administration of the

affairs of Hindustan, till 1858, when the government was assumed by the Crown." Address: USA.

604. Kitchiner, William. 1822. *The cook's oracle: Containing receipts for plain cookery on the most economical plan for private families...* From the latest London edition, which is almost entirely re-written. Boston, Massachusetts: Published by Munroe and Francis. viii + 9-380 p. Index. 18 cm. [30+* ref]

• **Summary:** The title page states that these recipes are the "result of actual experiments instituted in the kitchen of a physician." The chapter titled "Fish sauces" includes several references to other recipes (p. 92): "Soy [sauce], No. 436. Mushroom catsup, No. 439."

The chapter on "Broths and soups" states (p. 99): "We again caution the Cook to avoid *Over-Seasoning*, especially with predominant flavors, which, however agreeable they may be to some, are more extremely disagreeable to others... Zest 255, Soy 436, Cavice, Corach, Anchovy, 433... Catsups 432,..."

In the chapter on "Fish," the section titled "To dress them maigre" lists various sauces for maigre [meatless] dishes (p. 188): "Obs. [Observations]—Mushroom Catsup, No. 439,... Anchovy and Soy,—or Oyster Catsup, No. 441, variously combined and thickened with flour and butter, are convenient substitutes."

The chapter on "Gravies and sauces" has a recipe (p. 243) for "Mackerel roe sauce" (No. 266). The last line reads: "Mushroom catsup, Walnut pickle, or Soy, may be added."

The same chapter has a recipe (p. 244) for "Anchovy sauce" (No. 270). The first note (2nd paragraph) states: "Obs.—Foreigners make this Sauce with good Brown Sauce No. 329, or White Sauce No. 364, instead of melted Butter,—and add to it Catsup,—Soy,—and some of their flavoured Vinegars, as Elder or Tarragon,..."

The same chapter has a recipe (p. 247) for "Shrimp sauce" (No. 283). The first note ends: "... strain off the liquor to melt the butter with, and add a little Lemon Juice,—Cayenne,—and Essence of Anchovy,—or Soy,—Cavice, &c.—but *the Flavour of the Shrimp is so delicate*, it will be overcome by any of those additions."

The same chapter has a recipe (p. 249) for "Liver sauce for fish" (No. 288) which can be seasoned with "... a little Essence of Anchovy No. 433, or Soy, or Catsup No. 439."

The same chapter has directions (p. 257-58) for "Browning" (No. 322) which begins: "Is a very convenient article to colour those Soups or Sauces, of which it is supposed their deep brown complexion denotes the strength and savouriness of the composition." "Walnut Catsup" is sometimes used." "It will hardly be told from what is commonly called 'genuine Japanese SOY*,' for which it is a very good substitute." Footnote: * "By the best accounts I can find, Soy is a preparation from the seeds of a species of the *Dolichos*, prepared by a fermentation of the farina [flour]

of this seed in a strong lixivium of common salt.”- *Cullen's Materia Medica*.

In the same chapter is a recipe (p. 281) for “Camp vinegar” (No. 403) whose ingredients include: “Soy, two tablespoonsful. Walnut Catsup, four tablespoonsful. Six anchovies, chopped...” Plus cayenne pepper and minced garlick [garlic]. “Steep all for a month in a pint of best Vinegar, frequently shaking the bottle: strain through a tammis [tamis; cloth strainer], and keep it in small bottles, corked as tight as possible.”

The same chapter has a recipe (p. 288) for “Fish sauce” (No. 425) which calls for two wineglasses each of Port and Walnut pickle, and four of Mushroom catsup. 6 anchovies, pounded. 6 “Eschallots sliced and pounded; a tablespoon of Soy, and half a drachm [dram, a small unit of weight] of Cayenne pepper.” “Obs. This is commonly called *Quin's Sauce*, and was given to me by a very sagacious Saucemaker.”

Note: This is the earliest document seen (Feb. 2008) stating that soy sauce is an ingredient in *Quin's Sauce*, a popular store sauce.

In this same chapter (“Gravies and sauces”) is a section titled “The Magazine of Taste” (No. 463, p. 303-04) which begins: “This is a convenient auxiliary to the Cook. It may be arranged as a pyramidal *Epergne* [a stand or tiered center dish] for a *Dormant* in the centre of the table, or Travelling Store Chest.” It consists of a Sauce Box containing four 8-ounce bottles, sixteen 4-ounce bottles, and eight 2-ounce bottles. Of these 28 “useful flavoring materials.” No. 15 is “Soy” [sauce] (No. 436) in a 4-ounce bottle.

The chapter titled “Made dishes” has a recipe (p. 321-22) for “Savory salt beef baked” (No. 496). For gravy, use strong Consomme, “Soy, or Browning, see No. 322,...”

This book mentions “Catsup” on pages 169-70, and 185. It mentions “Walnut Catsup” on pages 161, 243, 254, 265-66, 281, 287, 291, 292, 319, 329. It mentions “Mushroom Catsup” on pages x, 92, 125, 160, 165, 187-88, 191, 208, 220, 224, 226, 235, 243, 246, 252, 254, 259, 261, 263, 266-67, 274, 287-88, 287-88, 291-92, 304, 323, 331-32, and 357.

Note: Kitchiner's name does not appear on the title page nor in the book. Address: M.D., England.

605. Koenig, Joseph. 1822. *Geist der Kochkunst: Ueberarbeitet und herausgegeben von C.F. von Rumohr*. 2 Nachdruckaufl. [Spirit of the culinary art. Edited and published by Carl Friedrich von Rumohr]. Stuttgart and Tuebingen: J.G. Cotta'schen Buchhandlung. vii + 202 p. See p. 157, 161-62. 21 cm. [Ger]

• **Summary:** In this book the art historian C.F. von Rumohr (lived 1785-1843) conjectures that the *Garum* sauce of the Romans was an imitation of the East Indian sauce (*Sulze*) made from soybeans.

In a modern (2005) facsimile edition of this book, the word “Soya” appears on page 157 (about half way down

under *Gartenschwämme,–Champinjons* [Mushrooms]). The latter text reads: From mature *Gartenschwämmen* mushrooms the English prepare a superior seasoning sauce, which German cookbooks have confused with Indian Soya (*mit der indischen Soya verwechselt haben*).

The word “Soya” also appears 3 times on page 161 and on the top line of page 162.

Note 2. This is the earliest German-language document seen (April 2012) that uses the term *indische Soya* to refer to soy sauce.

606. *London Gazette (The)*. 1823. [Partnership between William Perrins and James Perrins is dissolved]. No. 17889. Jan. 21. p. 111.

• **Summary:** “Notice is hereby given, that the Partnership subsisting between William Perrins and James Perrins, of Evesham, in the County of Worcester, Chemists and Druggists, was this day dissolved by mutual consent; and that the business will be carried on by the said James Perrins alone, who will receive or pay all bills due to or from the said concern,—Witness our hands this 2d day of December 1822.”

Note 1. A typed statement in one of the Lea & Perrins historical scrapbooks (Fair Lawn, New Jersey) states: “The partnership between Mr. William Perrins of Evesham and Mr. John Wheeley Lea to carry on the Chemists and Druggists business at 68 Broad Street, Worcester, was announced 1st January 1823 in Number 17889 of *The London Gazette*, published January 21st 1823. Eventually in 1837, The Original and Genuine Lea & Perrins Worcestershire Sauce was produced commercially, a small quantity having been made up some years previously from the recipe of a Nobleman of the County, and after a period of maturation, the potentialities of the Sauce were recognized by the partners. Lea & Perrins Worcestershire Sauce became popular almost at once,...”

Note 2. Letter from Jessica Portz, Rare Books & Special Collections, University of Minnesota at Minneapolis. 2001. June 4. A careful examination of this issue (21 Jan. 1823) and of all issues from Jan. 1 to March 1, 1823, reveals no announcement of a partnership between Mr. Perrins and Mr. Lea. Further investigation reveals “that *The London Gazette* lists only the *dissolution* of partnerships and does not announce the formation of partnerships. At least this was the case in 1823.” An index to the journal for 1823, which is attached, shows this clearly.

Note 3. The two men said to have started making Lea & Perrins Worcestershire sauce in 1837 were John Wheeley Lea and William Henry Perrins. How are the William Perrins and James Perrins above related to the William Henry Perrins of Worcestershire sauce fame? If the two William Perrins are one and the same person, how did the dissolution of this partnership relate to his formation of a partnership with John Wheeley Lea?

Note 4. If the two William Perrins are one and the same person, this is the earliest document seen (Feb. 2012) related to Lea & Perrins Worcestershire sauce. Address: London, England.

607. Phillips (Mr.). 1823. Sales by auction: A small cellar of wines of a lady of rank deceased (Ad). *Times (London)*. Jan. 25. p. 4, col. 6.

• **Summary:** After the names of the wines and liquors: "... and a few cases of fine Indian Soy [sauce]... May be tasted at the time of sale,..." Address: 73, New Bond-street [London].

608. Lea and Perrins. 1823. Catalog of drugs and chemicals sold by Lea & Perrins, Broad-Street, Worcester [England]. Worcester, England. 2 p.

• **Summary:** Contents: Drugs. Domestic Articles, Spices, etc. Essences, Oils, etc., Patent Medicines.

Under domestic articles is listed "India Soy" [sauce].

Note 1. The latter product was probably Japanese shoyu, exported from Japan, whence the Dutch or British East India Company shipped it to England.

Note 2. This document is *not* the original 1823 document, nor a photocopy or facsimile reproduction of that document. Rather it is a recent computer printout of an "extract from Lea & Perrins' catalogue published in January 1823." It may well be inaccurate. Address: Broad-Street, Worcester, England.

609. Thornton (Mr.). 1823. Sales by auction: Household furniture, fowlingpiece,... (Ad). *Times (London)*. Feb. 14. p. 4, col. 4.

• **Summary:** "Comprising press and fourpost bedsteads and bedding,... 12 cases India soy [sauce], various culinary articles,..." Address: 23, Fenchurch-street [London].

610. Chown (Mr.). 1823. Sales by auction: Superb stock of jewellery and silver-plated articles,... (Ad). *Manchester Guardian (England)*. May 3. p. 1.

• **Summary:** "A most splendid and elegant assemblage of silver-plated articles (silver mountings), comprising... epergnes, tureen sets of beef steak and other covered dishes; soy frames, cruet and spirit do. [ditto = frames], with rich cut glass castors." Address: Appraiser, No. 3, King-street.

611. *Times (London)*. 1823. Sales by auction: India soy, Italian sauces,... (Ad). May 7. p. 4, col. 5.

• **Summary:** "About 220 dozens of India Soy; Reading and Italian fish sauce,..." Address: Welbeck-street, Cavendish-square [London].

612. Tawell, Apothecary, &c. 1823. Classified ad: Medicine chests completely fitted.—Physicians' and family prescriptions accurately dispensed. *Sydney Gazette and New South Wales Advertiser (NSW, Australia)*. May 29. p. 2S.

• **Summary:** "... mushroom and walnut ketchup; essence of anchovies. shrimp sauce, soy [sauce], Cayenne pepper, sallad oil,..." Address: No. 18, Pitt-street, Sydney.

613. Chace (John B.). 1823. Classified ad: Has recently received... *Rhode-Island American, and General Advertiser (Providence)*. July 1. p. 4.

• **Summary:** "... Mushroom and Walnut Catsup—Anchovy, Reading, Cavice and Quin Sauce, for 'wild fowl, game, hashes, beefsteaks, &c. and for enriching gravies'..."

614. Gibbens (George M.). 1823. Classified ad: J. Mathewson & Sons cheese, fresh grapes, old coffee. *American Federalist Columbian Centinel (Boston, Massachusetts)*. Nov. 15. p. 4.

• **Summary:** "... India Soy [sauce] and Currie Powder—..." Address: No. 1, Summer-street.

615. *Encyclopaedia Britannica*; or, A dictionary of arts, sciences, and miscellaneous literature. 6th ed... enlarged and improved. 20 vols. 1823. Edinburgh: Printed for A. Constable. Illust. (582 plates). 28 cm. * Address: Edinburgh, Scotland.

616. Kitchiner, William. 1823. The cook's oracle: Containing receipts for plain cookery on the most economical plan for private families... 5th ed. London: Constable & Co. 484 p. Index. 18 cm. [30+* ref]

• **Summary:** The title page states: "The whole being the result of actual experiments instituted in the kitchen of a physician. The whole work has been carefully revised by the author of 'The Art of Invigorating Life by Food,' &c. 'Miscuit utile dulci.'"

The section titled "The magazine of taste" (No. 463, p. 334-35) contains a list of 28 "useful flavoring materials." No. 15 is "Soy" [sauce] (No. 436).

Note: William Kitchiner lived 1775?-1827. Address: M.D., England.

617. Kitchiner, William. 1823. The cook's oracle: Containing receipts for plain cookery on the most economical plan for private families... 2nd American ed. from the latest London edition, which is almost entirely re-written. Boston, Massachusetts: Published by Munroe and Francis. 424 p. Index. 18 cm. [30+* ref]

• **Summary:** This book seems to be based on the 4th London edition (see p. iii-iv). The soy related recipes are almost identical to those in the 1822 American edition, and are even on the same pages. There are four minor differences in this 1823 edition: (1) All recipe numbers are in parentheses. (2) This book is 44 pages longer. (3) A few words in the recipes have been changed. (4) The "Catsup" recipes are somewhat different. This book mentions "Walnut Catsup" on pages 161, 254, 257, 265-66, 281, 292, 319, 329, 428. It mentions

“Mushroom Catsup” on pages x, 92, 125, 160, 165, 171, 187-88, 191, 222, 224, 226, 228, 235, 252, 254, 261, 263, 266-67, 274, 287-88, 292, 304, 315, 320, 323, 340, and 373. It mentions “Catsup” only on pages 169-70, and 185.

Note: Kitchiner’s name does not appear on the title page nor in the book. Address: M.D., England.

618. Niemeyer, Augustus Hermann. 1823. *Travels on the Continent and in England*. London: Printed for Sir Richard Phillips and Co. viii + 104 p. 23 cm.

• **Summary:** “In these, as also in soy and other rich sauces, which are manufactured by wholesale, a great trade is carried on from London to all parts of the world. The sauces [including soy sauce], mustard, oil, and vinegar stand in ornamental frames for the use of the guests” (p. 315). Address: Germany.

619. Vignoles, Charles Blacker. 1823. *Observations upon the Floridas*. New York, NY: E. Bliss & E. White. 197 p. See p. 99, 104.

• **Summary:** Page 99: “The following list of productions capable of being raised in Florida, has been made out with some pains, and it is believed all these stated are profitable and practicable articles... Dolichos, or Soy bean.”

Page 104: “The dolichos or soy bean is said to produce in China, four crops annually: from this kidney bean is prepared the soy or Indian catsup. In the south of Spain and many parts of the Mediterranean this bean, or a variety of it, forms a large portion of the food of the lower class of people: it is there called *caravances*: as an article of subsistence for negro slaves this is nutritious, and apparently raised in the greatest abundance with facility.”

Note: The author says that “soy” and “Indian catsup” are the same and are both made from the soybean. Very interesting. Address: Civil and topographical engineer.

620. Walkinshaw, Timothy. 1824. On the cookery of the French (Letter to the editor). *London Magazine* 10:178-80. Aug. See p. 180.

• **Summary:** Ends with a poem titled “Le cuisinier français versus Dr. Kitchiner.” The last stanza (No. 5) begins: “If we don’t want our veal done to choke us, / Nor ivory fowls on our dish: / If gendarmes in all shapes should provoke us, / And we like Harvey’s sauce with our fish:...” Address: Button-maker and Alderman, Aldermanbury, London.

621. James (T.H.) & Co. 1824. Sales by auction: On Wednesday next, at T.H. James & Co.’s stores, 96, George-street, at 12 o’clock... (Ad). *Sydney Gazette and New South Wales Advertiser* (NSW, Australia). Nov. 11. p. 3.

• **Summary:** “Britannia metal tea-sets, liquor and cruet frames,... India soy [sauce] and fish sauces, mustard, pickles, basket salt,...” Address: [Sydney].

622. Cooke, John Conrade. 1824. *Cookery and confectionary*. London: Printed by B. Bensley, Bolt Court, for W. Simpkin and R. Marshall. xxiii + 213 p. See p. 25-26. Illust. 20 cm.

• **Summary:** Page 25: “109. A mixture to help any sauce to be used with cold game and meat. One quart of mushroom ketchup, one quart of walnut pickle, half a pint Indian soy [sauce], one pint of French vinegar, ten anchovies, six cloves of garlic, twelve shalots pounded, one spoonful of Cayenne pepper, one ditto of white pepper, ground, six blades of mace, three nutmegs, grated, eight bay leaves, one lemon, sliced, and a sprig of sweet basil: boil all these ingredients one hour, strain off the liquor, bottle, and cork it tight.”

Page 26. “113. Camp vinegar. A quarter of an ounce of Cayenne pepper, four heads of garlic, chopped, half a drachm of cochineal, three spoonfuls of soy, three ditto of walnut ketchup, one quart of vinegar; mix all together, and let it stand in a warm place a month, then strain it off.” Address: Brighton, England.

623. Crayon, Geoffrey (pseud. for Washington Irving). 1824. *Tales of a traveler*. 2 vols. London: John Murray; Philadelphia, Pennsylvania: H.C. Cary & Lee. 19 cm.

• **Summary:** In Vol. II, in the chapter titled “The Inn at Terracina,” we read (p. 75): “The Englishman’s servant, too, had turned the kitchen topsy-turvy in his zeal to cook his master a beefsteak; and made his appearance, loaded with ketchup, and soy [sauce], and Cayenne pepper, and Harvey sauce, and a bottle of port wine, from that warehouse the carriage, in which his master seemed desirous of carrying England about the world with him.” Note: This is the earliest English-language document seen (Dec. 2007) that contains the term “Harvey sauce” (spelled without an apostrophe).

The chapter titled “Wolfert Weber” is discussing his remarkable wife (p. 279): “The influence of her taste was seen, also, in the family-garden, where the ornamental began to mingle with the useful; whole rows of fiery marigolds and splendid hollyhocks bordered the cabbage-beds, and gigantic sunflowers lolled their broad jolly faces over the fences, seeming to ogle most affectionately the passers-by.” Note: Sunflowers are also mentioned on pages 282 (“she began to languish for some more interesting occupation than the rearing of sunflowers,...”) and 379.

Note: Washington Irving (1783-1859) wrote this book under the pseudonym of Geoffrey Crayon. Address: Gent. [New York, USA].

624. Golownin, Capt. Vasilii Mikhailovich [Golovnin, Mikhaiforich]. 1824. *Memoirs of a captivity in Japan, during the years 1811, 1812, and 1813, with observations on the country and the people*. 3 vols. 2nd ed. London: Printed for Henry Colburn and Co. Vol. 1, iv + 315 p. No index. 22 cm.

• **Summary:** In vol. 1, p. 135-36, a footnote states: “Our food in Chacodade [Hakodate] was at first extremely bad.

It usually consisted of boiled rice, a kind of soup made of warm water with grated radish; a handful of finely chopped young onions with boiled beans; or instead of the onions and beans, two pickled cucumbers or radishes. Instead of the radish soup, we sometimes had puddings made of bean meal [tofu?] with rancid stockfish or whale oil. Perhaps twice in the space of fifty days we were supplied with fish, receiving each the half of a kind of plaice (*Pleuronectes*), with soy [sauce].”

In vol. 1, chapter 4, on p. 206, the author is describing his life and food in the prison where he is being held. Page 198: “Our food in Matsmai [Matsumae, a town on the southwest tip of Hokkaido, Japan; the oldest town on Hokkaido] was incomparably better than it had been in Chakodade... The fish were fried in oil of poppies, and were seasoned with grated radish and soy [sauce].” Note: The grated radish was probably *daikon*. Capt. V. Golownin lived 1776-1831.

625. Titsing, Isaac. 1824. Bereiding van de Soija [Preparation of soy sauce]. *Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* 3:159-60. Published in Batavia. [Dut]

• **Summary:** “The preparation of soy sauce (*soija*) is simple, and is performed in the following way:

“One takes a *gantang* (a local Malay unit of measure equivalent to 3.125 kg of rice, or about a gallon) of boiled miso-beans (*gestoofde miso-boonen*). A *gantang* of boiled wheat or barley groats (*gestoofde tarw of gort*), and as many roasted and ground (*gebrande en gemalen*) wheat or barley groats as one deems to be sufficient to give it the necessary color. One then mixes these three together and encloses the mixture in a cupboard to let it mold, for which 8 days are required. After this mixture has become completely green from the mold, it is taken out of the cupboard and allowed to dry in the sun for one full day.

“Next one takes 2½ *gantang* of boiled water and one *gantang* of pure salt, which one dissolves in the water completely; after this it is allowed to stand for 24 hours, until the dirt from the salt has sunk and the water has turned cold. The pure water is then strained off, followed by the addition of the above-mentioned molded substance, which is then stirred with a shovel for 14 days.

“One uses wheat or barley groats for this. The difference is that when the soy sauce (*soija*) is made out of barley groats, it will be much thinner, whereas that made from wheat will be much thicker, have more body, and look like ink.

“The soy sauce (*soija*), which the Chinese call *ketjap* is used like a very delicious and tasty salt with roasted flesh foods, both in Batavia [Jakarta] and in the Netherlands.”

Note: The previous sentence is very interesting! In 1824, in the capital of today’s Indonesia, the Chinese called soy sauce *ketjap*. Mr. Titsingh [Titsing] lived 1744-1812.

He wrote a lot about the Dutch East Indies and Japan. Note that in 1880, Mr. A. Paillieux, in the appendix to his long and excellent article on the soybean in *Bulletin de la Societe d’Acclimatation* (Oct. p. 594-95), gives a French translation of this article but cites the original year of publication as 1781, Vol. III. We believe the date should be 1824 instead.

The resulting soy sauce product is more like Chinese-style soy sauce [*kecap asin*] than Indonesian-style soy sauce, which typically includes sugar plus various herbs and spices. It is very interesting that Titsingh chooses to use the word *soija* (based on the Japanese word *shoyu* = soy sauce) rather than the local Malay word *ketjap* to describe how *ketjap* is made. Address: Netherlands.

626. Wallace, Robert Grenville. 1824. Memoirs of India: Comprising a brief geographical account of the East Indies; A succinct history of Hindostan... Designed for the use of young men going out to India. London: Longman, Hurst, Rees, Orm, Brown and Green. xii + 504 p. See p. 193-94. Index.

• **Summary:** “Alligators and noxious reptiles are very numerous near Batavia and the river Caiman takes its name from the number of the former in it.”

“The trade of Batavia is considerable. Opium, camphor, benzoin, pewter, iron,... from China [come], porcelain, teas, silks, nankeens, alum, borax, brimstone, cinnabar, mother-of-pearl, paper, sweetmeats, and tobacco; from Japan, copper, sabre blades, camphor, soy, and curious articles of furniture varnished, and flowered with mother-of-pearl. The exports are pepper, sugar, coffee, rice, and arrack, with other indigenous varieties. Batavia arrack is the best in the world.”

627. Day (W.) and Son. 1825. Sales by auction: Consignment of fine Havana cigars... (Ad). *Times (London)*. Jan. 24. p. 8, col. 5.

• **Summary:** “... real India Soy [sauce], Old Wines, Ale, and Stout, for absolute sale.” Address: 11, Bishopsgate-street [London].

628. Smith (William). 1825. Display ad: Proprietor of the Agricultural and General Seed Store. *Courrier de la Louisiane (New Orleans)*. April 18. p. 4, col. 3.

• **Summary:** “French olives, capers and anchovies... walnut and mushroom ketchups, and pepper sauce.

“Fine prepared Sauces, for Fish, Game, or Meats, including Quin’s, Harvey’s, Reading and Cavice Sauces; India soy [sauce] and essence of anchovies.”

Note: This is the earliest document seen (May 2011) concerning soybean products (soy sauce) in Louisiana. This document contains the earliest date seen for soybean products in Louisiana (18 April 1825); soybeans as such have not yet been reported. Address: No. 43, Bienville-street, adjoining the Post-Office, New Orleans].

629. Rose (Mr.). 1825. Sales by auction: Under a distress for rent (Ad). *Times (London)*. Sept. 26. p. 4, col. 5.

• **Summary:** “Fish Sauces, Pickles, Olives, India Soy [sauce], &c. in bottles. Also a quantity of sauces in casks,...” Address: Church-court, Old Jewry [London].

630. Spark (A.B.). 1825. On sale, at the Stores of A.B. Spark, George-street... (Ad). *Sydney Gazette and New South Wales Advertiser (NSW, Australia)*. Oct. 20. p. 1.

• **Summary:** “A few chests of Valetta’s Hyson, Chulan, and Souchong Teas,... segars [cigars], vermicelli and soy [sauce];...” Address: George-street [Sydney].

631. Smith (J.J.). 1825. Classified ad: Essence of anchovies without colour. *Times (London)*. Dec. 27. p. 4, col. 4.

• **Summary:** “In consequence of the general opinion that the Essence usually sold is coloured with red lead, &c.,...” Also: “... real India soy [sauce], treble refined sperm oil of finest quality...” Address: Oil and Italian Warehouse, 3, Clare street, near Lincoln’s inn fields [London].

632. *Bulletin des Sciences Naturelles et de Geologie*. 1825.

Continuation du second mémoire sur les genres *Phaseolus* et *Dolichos*; par le doct. Gaetan Savi [Continuation of the second memoir of the genera *Phaseolus* and *Dolichos*; by Gaetan Savi]. 4:346-48. Deuxième Section du Bulletin Universel des Sciences et de l’Industrie,... [1 ref. Fre]

• **Summary:** In the “Botanical” section is a 3-page (p. 346-48) French-language summary of an Italian-language article by Gaetano Savi (Prof. of Botany at Pisa), published in *Nuovo Giornale de’ Letterati* (May and June, No. 15, p. 106).

At the top of p. 348 we read: The genus *Soja* has but one species, *Soja japonica*, Savi; it was *Dolichos Soja* of Linnaeus. The Japanese ferment the seeds of this species with rice and wheat to make a sauce used to season various foods.

633. Grubbens, M. de. 1825. Method of preparing Chinese soy. *Economist and General Adviser (The) (London)* 2:24+. [Eng]

• **Summary:** Note: The text of this document is the same as the following: Grubbens, M. de. 1804. “Method of preparing Chinese soy.” *Philosophical Magazine (The) (London)* 19(75):260-63. First quarter—except that the first paragraph is not included.

634. Normanby, Constantine Henry Phipps. 1825. *Matilda: A tale of the day*. 2 vols. 2nd ed. London: Henry Colburn. v + 379 p. (both volumes). See Vol. 1, p. 160. 19 cm.

• **Summary:** On pages 159-60 we read that Sir James sent “her to his courier for his English comforts, in a canteen as big as the trunk in which Iachimo hides himself. Cocoa paste, essence of coffee &c. were not very serviceable at dinner, but some Harvey’s sauce was hailed with great glee;

though, as there was no fish, there arose some difficulty whether to apply it to *fricandeau*, *fricassé*, *pâté mîlée*, or *poulet rôti*. The sight of all these English comforts, however, gave a new turn to Mrs. Hobson’s feelings about the comparative merits of the two countries” [England and France].

Note 1. Iachimo is a character in *The Tragedy of Cymbeline*, by William Shakespeare. He hides in a chest to gather details of Imogen’s room.

Note 2. This is a work of fiction. Address: Marquess.

635. Blackberd (Gilbert) and Co. 1826. Gilbert Blackberd,... begs to inform his friends and the public,... that he has re-opened the above shop (Ad). *Manchester Guardian (England)*. Feb. 25. p. 2.

• **Summary:** His shop now sells: “... spices, best pickling vinegar, flour of mustard, fine basket salt, salad and other oils, split and whole boiling peas, lemon pickle, Indian soy [sauce], catsups, sauces, anchovies, capers, olives, pickles,...” Address: Druggists, Seedsman, &c. at the Golden Head, No. 22, Market-place, near the Exchange, Manchester.

636. *Scotsman (Edinburgh)*. 1826. Classified ad: Sale by public auction of valuable household effects, for behoof of creditors. March 11. p. 157.

• **Summary:** “A quantity of goods belonging to an estate now winding up, consisting of numerous articles suited for Household purposes, viz... Bottle Stands, Wine Strainers, Salts, Liquor and Soy Frames, Corks, Tea and Coffee Sets, Tea and Coffee Urns,...” Address: The Shop, No. 23, Waterloo Place, Edinburgh.

637. Malcolm (J.). 1826. Has lately received from the first House in London, a supply of drugs, patent medicines, perfumery, pickles, &c, &c. *Sydney Gazette and New South Wales Advertiser (NSW, Australia)*. April 26. p. 4.

• **Summary:** “Pickles.—Walnuts, olives, fish sauce, capers in half pint and pint bottles, mushroom ketchup in ditto and ditto, Indian soy [sauce], fine anchovies,...”

Note: This is the earliest of 144 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “Indian Soy.” The newspaper that mentions this term most frequently is *The Brisbane Courier* (39 times). By category: 119 are advertising and 25 are news. By decade: In 1830-39 the term appears in the most ads or articles (35), followed by 1870-79 (34). Address: No. 95, Pitt-street [Sydney].

638. Webb (Michael, jun. [Jr.]). 1826. Classified ad: Prime St. Croix rum, brandy, &c. *Salem Gazette (Massachusetts)*. July 7. p. 4.

• **Summary:** “... Few cases Anchovies, India Soy [sauce] and various sauces for fish and gravies,...”

639. Remond (John). 1826. Classified ad: New York oysters, Westphalia hams, &c. *Salem Gazette (Massachusetts)*. Dec. 5. p. 4.

• **Summary:** "... 12 dozen Curry Powder. A quantity of Walnut and Mushroom Catsup [in bottles]. East India Soy [sauce]. Also, his winter supply of Celery—..." Address: No. 8, Derby Square.

640. Johnstone, Christian Isobel (Christian Jane). 1826. *The cook and housewife's manual: Containing the most approved modern receipts for making soups, gravies, sauces, ragouts, and made-dishes...* By Mrs. Margaret Dods [pseud.]. Edinburgh, Scotland: Printed for the author. 366 p. Illust. Index. 20 cm.

• **Summary:** In Chapter 5, "Broths, soups, and gravies," has a recipe for "The best beef gravy,—or Jus de boeuf" which says (p. 71): "This may easily be enriched into *savoury brown gravy or sauce, or reduced* to brown soup by adding, after it is strained, water or weak broth, and a glassful of mixed soy [sauce] and mushroom catsup, with a French roll previously soaked in broth, and served in the tureen;..." The same chapter has a recipe for "Ox-head soup, *called Hessian Soup and Ragout*," which concludes (p. 88): "Observations.—Soy, forcemeat balls, wine, &c. are all ordered for this ragout in some approved books of cookery; but we consider such expensive ingredients quite out of place in a preparation, which is cheap, good and savoury, but never can be elegant."

Chapter 6, titled "Fish" has a recipe (p. 118) "To broil cod sounds" which is seasoned with "a tea-spoonful of made mustard, and one of soy."

The same chapter, in a recipe "To dress sturgeon" comes with this: "Sauce,—oyster or lobster sauce, or melted butter, with a little soy and essence of anchovy."

The same chapter on fish tells how to "Stuff and bake carp, pike, and haddock" (p. 123-24): "Strain and add to the sauce a tea-spoonful of made mustard, and one of Chili vinegar, a glass of red wine, and a little soy, with mace, pepper, and salt to taste."

The same chapter has a recipe for "Lobster pie,—a *maigre dish*" (p. 126-27): "A little soy, wine, Cayenne, and catsup will make this pie more relishing." Note: Lobster pie was considered "maigre" because it contained no meat—only shellfish.

Also "An excellent salt fish pie *maigre*" (p. 127-28): "Make a sauce of chopped hard boiled yolks of eggs, melted butter, a little made mustard, and essence of anchovy, or soy, and pour it over the pie."

Also "Lobster haut gout.—H. Jekyl, Esq." (p. 130): "Take a little well-flavoured gravy,—for example, the jelly of roast veal, a few tiny bits of butter, a spoonful of soy, or walnut catsup, or of any favourite flavoured vinegar, and a spoonful of red wine. Stew the cut lobster in this sauce for a few minutes."

Chapter 7, "Sauces, essences, &c." has a section titled

"Vinegaret for cold meat or fowl." Within it is (p. 170-71): "Carach Sauce.—Mix pounded garlic, Cayenne, soy, and walnut pickle in good vinegar."

Also, in the section on "Sauces of shell-fish, and fish sauces" is a recipe for "Anchovy sauce." At the end of it (p. 171-73): "Observations.—This is a sauce which ought to be piquante. The cook is therefore at liberty to make whatever additions she pleases;—Cayenne, soy, essence of anchovy, lemon pickle, horse-radish, mustard, shalot [shallot], nasturtiums, vinegars; in short the whole circle of the pungent and sharp flavours may be pressed into the service."

In that same section: "An excellent store English fish sauce" (p. 174-75): "This is an expensive but very rich fish sauce... A tea-spoonful of the above will convert two ounces of melted butter into a well flavoured extemporaneous sauce; or it may be mixed on the plate like essence of anchovy, soy, &c."

In this same chapter (p. 176-77): "Quin's* Fish Sauce, a Store Sauce.—Two glasses of claret, and two of walnut pickle, with four of mushroom catsup; six pounded anchovies with their pickle, and six shalots pounded; a half glass of soy, black, and Cayenne pepper, Let this simmer slowly by the side of the fire till the bones of the anchovies dissolve. Strain it off, and when cold bottle for use." The footnote (* p. 176) refers to Quin as a "great man" who is no longer living. "As a mere untravelled practical Englishman, and moreover of the old school, Quin, no doubt, ranks high in the lists of gastronomy; but he is completely distanced by many moderns, both in love for and knowledge of the science."

In the same chapter is a section titled "Flavoured vinegars," within which is a recipe (p. 191) for: "Camp Vinegar.—Six chopped anchovies, four spoonfuls of walnut catsup, two of soy, and a clove of garlic chopped very fine. Steep these for a fortnight in a pint of white wine vinegar, and strain and bottle for use."

In Chapter IX, "Made dishes" we learn how "To hash a calf's head" (p. 224-25): "A brown hash may be made as above, by using fried onion, catsup, soy, a little red wine, &c.;..."

Mistress Margaret Dods is a pseudonym for Christian Isobel Johnstone who lived 1781-1857.

Note: The website www.scottishamericansociety.org/id12.html in a section on "Haggis History" (Feb. 2008) states: "In 1826, Meg Dods produced the *Cook's and Housewife's Manual*. She was the landlady of the Cleikum Inn, in St. Ronan's, near Peebles [Scotland]; which housed the gatherings of the Cleikum Club, one of the many dining clubs which flourished at the time. Sir Walter Scott was among the founders [in 1826], and its members celebrated the national literature and the national spirit (literal and figurative) and took a gentle, nostalgic, antiquarian interest in old Scots customs. Mistress Dods is a mysterious figure about whom rumours abound. It is quite firmly believed by many in the food world that Scott was the author of her

cookery book. Others question her very existence or suppose her to have been Scott's mistress... Meg included haggis in her suggested Bill of Fare for St. Andrew's day, Burns' Clubs, or other Scottish National Dinners. Her book gives two haggis recipes." Each is described. Address: Of the Cleikum Inn, St. Roman's [member of the Cleikum Club].

641. *Journal des Connaissances Usuelles et Pratiques*. 1826. Économie domestique: Manière de préparer le Soya chinois [Domestic economy: How to prepare Chinese soy sauce]. 3(14):129-32. [1 ref. Fre]

• **Summary:** This excellent, detailed description begins as follows: Soy sauce (*Le Soya*) is made with a species of small bean named *dolichos soya*, smaller and whiter than the broad bean of Turkey (*le fève de Turquie*), plus soft wheat flour (*farine de froment*), salt, and water, which are used in the following proportions: 50 pounds (*livres*) of the beans, 50 pounds of salt, 60 pounds of soft wheat flour, and 250 pounds of water. After the beans have been washed well, they are boiled with well water, in a pot with no lid on, for several hours, or until they are sufficiently softened to be kneaded with one's hands. While they are cooking, they must remain covered with water so they do not burn. One must be careful not to over-boil them lest too much of their substance escape in the broth.

Once the beans have boiled sufficiently, they are spread in large, flat wooden vats or, as the Chinese do it, in jars fashioned with bamboo sections, large and thin; these jars or vats must be two and a half inches deep and five feet in diameter; the beans are spread into them to a depth of two inches. Once they have cooled enough that they can be touched by hand, soft wheat flour is added and all is mixed; the mixing should be continued until the soft wheat flour is absorbed. Should the matter become too dry for the flour to adhere to the beans, then a little broth is added to it.

Once everything is well mixed, the material is poured into the vats we already spoke about, taking care that the layers do not exceed one inch or an inch and a half in depth. A lid is placed on each vat and it is closed tightly. Once one observes that the mixture begins to mold (*moisir*) and that the heat has fully escaped (this will take from two to three days), the lid is lifted slightly, propped up with little round sticks so that air has easier access to the inside. If the matter takes on a green cast, it means that all is going well. Should it begin to blacken, one must then lift the lid more so as to increase the contact with the air. Should it blacken completely, then the lot is considered ruined.

As soon as one has observed the matter turning green and rancid (*rance*) (which will typically take from 8 to 10 days), the lid is removed and the mixture is exposed for several days to the air and to the sun. Once the whole mass [koji] become as hard as a stone, it is broken into small pieces. These are then thrown into a large earthenware jar and 250 pounds of water, in which 50 pounds of salt has

been dissolved, is poured unto it; the whole thing is stirred and one makes note of the height reached by the liquid in the container. Should one jar not be sufficient, one can reach for several other jars, taking care that each one remains in proportion to the amount of mixture involved.

Once the jug is filled, it is put out in the sun. The substance is regularly shaken and stirred nights and mornings; at night however, one must take care to put the lid back on in order to ward off the cold. This lid is convex on the outside so that the rain water can drip away more readily. The more intense the heat from the sun rays is, the faster the preparation. In general, this operation is only undertaken during the summer, and it can go on for several months.

As the volume of the mixture decreases through evaporation, well water is added until the water and the salt have completely dissolved the flour and the beans. The earthen jar is left out in the sun for several more days, so that the dissolution can be as perfect as can be; for this will ultimately determine the soya quality. And during that time, one should continue to stir the mixture every day as was done previously.

Once the mixture has become substantial and uniform / smooth (*onctueux*), it is poured in bags, that are strongly pressed so as to extract the soy sauce (*soya*), which is then pure and ready to be used; it is never boiled. It is poured into bottles that are carefully capped. The Chinese, who make a large trade of it, place it in large jugs. Before being expressed, soy sauce is of a brown black color; thereafter it becomes completely black.

With the presscake / lees (*la lie*), the Chinese prepare also two other kinds of soy sauce. They first add 150 pounds of water and 30 pounds of salt; after having stirred this mixture well, they will pour another 100 pounds of water and 20 pounds of salt and proceed for the rest as we described it earlier.

Soy sauce being such a substantial item of trade, it might be useful to introduce into France the bean with which it is made; it is possible that we, ourselves, already have in our possession other beans that could also achieve the goal that we are pursuing.

The Japanese people, who also make great use of soy sauce to season their food, know how to prepare, with this species of bean, a food [miso] that they will use in place of butter, mostly to season prepared foods and meats.

Note 1. This is the earliest French-language document seen (April 2012) that uses the term *Le Soya* to refer to soy sauce.

Note 2. The basic recipe calls for the use of more wheat flour than soybeans (60 pounds vs. 50 pounds). In French, *farine de froment* is softer than *farine de blé*.

Note 3. This Chinese-style soy sauce is not heated before bottling—unlike its Japanese counterpart.

642. *Sydney Gazette and New South Wales Advertiser* (NSW,

Australia).1827. The selector: Newspaper advertisements—Puffing (Editorial). Jan. 11. p. 4.

• **Summary:** This editorial begins: “It is a curious picture of the condition and habits of the country... A foreigner finds it difficult to comprehend the daily amount of actual domestic occurrences” brought to you each morning in the newspaper.

“And of all the fierce competitors for preference, in their thousand and one peculiar occupations and capacities... the improver upon India soy [sauce]...” Address: [Sydney].

643. Lelius, -. 1827. Journal of a voyage from Calcutta to China. *Quarterly Oriental Magazine, Review and Register (Calcutta)* 7(14):222-67. June. See p. 257-58.

• **Summary:** Pages 257-58: “A Chinese dinner is a curiosity of the first magnitude, and one which it behoves [behooves] every lover of the ludicrous to witness—One of the Hong merchants *Pon Keequa* by name, or as he is more generally termed “the squire,” gave a dinner to a select party of the Factory, at which I had the good fortune to be present.”

“We at length arrived at the banquetting-room... There were about twenty courses, and dishes innumerable—I counted sixty on the table at one time; they consisted chiefly of small basins or cups of the most beautiful China-ware, and were arranged in three rows down the centre of the table. We were given to understand, I know not with what truth, that we had the happiness to partake of stewed pigeons’ eggs, wild cat, fricassied [fricasseed] frogs, dried worms (particularly recommended as a *bonne bouche* for wine at dessert), sea slugs, sharks, and fins, and a variety of other delicacies,* to which European prejudice might be inclined to apply another term, but which, whatever they may really have been, were rendered extremely palatable by the application of a little Japan soy [sauce],+ or ‘essence of cockroach,’ the finest I ever tasted.”

+ Footnote: +”Soy is really made of a small species of Bean peculiar to Japan; though this may be a bold assertion, considering that the prejudice is so much in favor of Cockroaches.”

644. Leathern (Messrs.) and Co. 1827. Sales by auction: Forfeited and other property (Ad). *Times (London)*. Nov. 28. p. 4, col. 6.

• **Summary:** “... a quantity of India Soy [sauce], matting, &c.,...” Address: 60, Sun-street, Bishopsgate [London].

645. Domestic economy, and cookery, for rich and poor: Contains an account of the best English, Scotch, French, Oriental, and other foreign dishes... by a lady. 1827. London: Longman, Rees, Orme, Brown, and Green. iv + 691 p. Index. 19 cm.

• **Summary:** The chapter on “Domestic economy and cookery” states (p. 13): “Where samphire, dulse, laver, or shell-fish is found, the poor ought to be instructed to gather and preserve it for a little commerce, and to make their own

salt. Cheap as it is, the very carriage is of consequence to them; and, if they made the salt, they might make excellent soy [sauce] of dulse, either for themselves or for sale.” Note 1. Samphire is the name given to a number of very different, edible, succulent plants that grows in salt-sprayed regions along the sea coast of northern Europe.

Note 2. This is the earliest document seen (Feb. 2008) that recommends using sea vegetables or shell-fish for making soy [sauce].

Soy [sauce] is also mentioned on pages 54 (Salad sauce), 164 (Camp vinegar), 273 (Another recipe for anchovy and butter), 277 (Forte excellente), 302-03 (Oyster, cockle, or muscle soup, with mushrooms), 470 (Describes Lock Soy {“Rice boiled to a paste, and drawn into threads”} but omits the word “Soy”).

“Ketchup” or “ketchups” are mentioned on pages 19, 20, 54, 63, 161, 164, 170-74 (mushroom ketchup, walnut ketchup), 220, 223, 239, 254, 268, 275-77, 284, 303, 307, 325, 327, 331, 354-55, 374, 383, 441, 456, 473, 518, 555, 680. Address: [England].

646. Johnstone, Christian Isobel (Christian Jane). 1827. The cook and housewife’s manual: Containing the most approved modern receipts for making soups, gravies, sauces, ragouts, and all made-dishes... By Mrs. Margaret Dods [pseud.]. 2nd ed. Edinburgh, Scotland: Oliver & Boyd. 525 p. Illust. 18 cm. *

• **Summary:** Mistress Margaret Dods is a pseudonym for Christian Isobel Johnstone who lived 1781-1857.

647. Kitchiner, William. 1827. The cook’s oracle: Containing receipts for plain cookery on the most economical plan for private families... A new edition. London: Printed for Cadell and Co., Edinburgh; Simpkin and Marshall, and G.B. Whittaker, London; and John Cumming, Dublin. 491 p. Index. 18 cm. [30+* ref]

• **Summary:** This book is “the result of actual experiments instituted in the kitchen of William Kitchiner, M.D. Author of...” The titles of his seven books are given.

Soy [sauce] is mentioned often: Fish sauces (p. 99). To add zest to broths and soups (p. 108). In sauce for maigre fish dishes (p. 209-210). Mackarel roe sauce (p. 275 [Mackerel]). Anchovy sauce (p. 276). Shrimp sauce (p. 279). Liver sauce for fish (p. 282).

In the chapter on “Gravies and sauces” the recipe for “Browning” (p. 291-92) states: “It is a convenient article to colour those *Soups and Sauces*, of which it is supposed their deep brown complexion denotes the strength and savouriness of the composition.” Burnt Sugar is a favourite ingredient.

“When employed for Culinary Purposes, this is sometimes made with strong Gravy, or Walnut Catsup... It will hardly be told from what is commonly called ‘genuine Japanese Soy,’

* [footnote refers to “Cullen’s *Mat. Med.* vol. i, p. 430] (for which it is a very good substitute).”

To make “Browning”: “Put half a pound of pounded Lump Sugar, and a table-spoonful of water, into a clean iron saucepan, set it over a slow fire, and keep stirring it with a wooden spoon till it becomes a bright brown colour, and begins to smoke; then add to it an ounce of salt, and dilute it by degrees with water, till it is the thickness of Soy; let it boil, take off the scum, and strain the liquor into bottles, which must be well stopped:...”

Camp vinegar (p. 320).

In the chapter on “Store sauces,” the recipe (p. 328) for “Fish sauce.—(No. 425)” includes “a table-spoonful of Soy” and concludes: “Obs. [Observations]—This is commonly called Quin’s Sauce, and was given to me by a very sagacious Saucemaker.”

The section titled “The magazine of taste” (No. 463, p. 346) contains a list of 28 “useful flavoring materials.” No. 15 is “Soy” [sauce] (No. 436).

Catsup (incl. mushroom catsup, oyster catsup, walnut catsup, cockle and muscle catsup) is mentioned on pages 103, 151, 176, 180, 189, 209, 210, 214, 225, 231, 244, 256, 276, 285, 287, 291, 292, 302, 303, 334, 335, 336, 337, 271, 381, 390, 419, and 426. “Mushroom ketchup” appears on page 90. Address: M.D., England.

648. Nahuijs van Burgst, Huibert Gerhard. 1827. Brieven over Bencoolen, Padang, het rijk van Memang-Kabau, Rhiouw, Sincapoera en Poelo-Pinang. Tweede, vermeerderde druk [Letters from Bencoolen {Begkulu}. Padang,... 2nd printing]. Breda: Hollingérus Pijpers. xxi + 288 p. 22 cm. [Dut]

• **Summary:** Ketjap (soja) is mentioned on page 62.

Note 1. This is very interesting. The writer seems to be saying either that in Indonesia (1) Ketjap and soy sauce are identical; or that (2) Ketjap (Indonesian soy sauce) is made from soybeans.

Note 2. This is a biographical description of the author’s travels in today’s Indonesia, Singapore, and Malaya. Address: Colonel, Ridder van de Militaire Willemsorde.

649. Roberts, Robert. 1827. The house servant’s directory: or A monitor for private families... Boston, Massachusetts: Munroe and Francis; New York: Charles S. Francis. 180 p. No index. 27 cm.

• **Summary:** The section titled “On trimming the cruet stand and casters” states (p. 37-38): “... you should remember to examine it very day to see if all the cruets are clean, and full of every thing that is necessary to have in them, such as mustard, oil, vinegar, catsup, soy [sauce], black pepper, and cayenne, or other sauces that you may have bottles for; therefore you should always see that all your casters are furnished with all your articles daily,...”

Note: “This book is an American milestone. It is the first book of any kind written by an African American to have been published in the United States by a major publisher.”

The author (lived 1777-1860) was born in Charleston, South Carolina. “He led a successful life as a valued servant, an active, prominent member of Boston’s African-American community, a prosperous owner of property, and a father.” In 1825 Roberts became “butler to Christopher Gore (1758-1827), a prominent Boston attorney, statesman and diplomat who served as senator and governor of Massachusetts” (MSU introduction). Address: Boston, Massachusetts.

650. Smith (J.J.) and Co. 1828. Classified ad: Sperm oil, candles, essence of anchovies, spices, &c. *Observer* (London). Jan. 27. p. 1.

• **Summary:** “... real India soy [sauce], 2s. 6d. a bottle.—Allowance to Tavern-keepers and the Trade.” Address: Sign of the Blue-coat Boy, 3, Clare-street, near Lincoln’s-inn-fields [London].

651. *Hobart Town Crier (Tasmania, Australia)*. 1828.

Classified ad: Families in want of the following useful and valuable articles... April 19. p. 2.

• **Summary:** “... are most particularly invited to inspect the same, at the Royal Exchange Auction Mart, where they will be sold retail: -

“Very elegant liquor, cruet, and soy frames, plated with silver edges, and cut glass bottles,...”

652. Friend and Phipp. 1828. Sales by auction: To wholesale druggists, oil and colour men... (Ad). *Times* (London). May 28. p. 4, col. 4.

654. Remond (J.). 1828. Classified ad: Oysters, hams, celery, &c. *Salem Gazette (Massachusetts)*. Nov. 28. p. 3.

• **Summary:** “... A quantity of India Soy [sauce] and Curry Powder. Walnut, Mushroom and Tomato Catsup. 50 pots pickled Nuts...” Note: Three types of catsup are advertised. This is the earliest English-language document seen (Feb. 2006) that mentions “Tomato Catsup.” Address: No. 8 1-2, Derby Square.

655. Blackwell, Henry. 1828. The Sheffield directory and guide: Containing a history of the town, alphabetical list & classification of the merchant manufacturers,... including the neighbouring towns & villages [etc.] Sheffield, England: Printed and published by John Blackwell, High Street. lxxxii + 202 p. See p. 110. Illust. Index. 46 cm.

• **Summary:** The section titled “Alphabetical classification of professions, trades, etc.” (p. 110-156) contains many unnumbered pages of advertisements. A full-page ad (on about p. 110) states: “C.F. Younge has also a valuable and extensive stock of silver and silver plated goods, of superior quality. Table services, epergnes, dishes, tureens, liquor, cruet, and soy frames, salts, toast racks,...” Address: Sheffield.

656. *Bulletin des Sciences Agricoles et Economiques*. 1828. Manière de préparer le Soya chinois [How to prepare Chinese soy sauce]. 9:333-35. Quatrième Section du Bulletin Universel. [1 ref. Fre]

• **Summary:** From *Journal des Connaissances Usuelles et Pratiques*, Vol. 3, no. 14, 1826, p. 123; This detailed description begins as follows: Soy sauce (*Le Soya*) is made with a species of small bean named *Dolichos soya*, smaller and whiter than the bean of Turkey (*le fève de Turquie*), plus wheat flour, salt, and water, which are used in the proportion of 50 pounds (*livres*) of the beans, 50 lb of salt, 60 lb of wheat flour, and 250 lb of water.

657. Gray, Samuel Frederick. 1828. A supplement to the pharmacopoeia: Being a treatise on pharmacology in general;... 4th ed., considerably enlarged, including the alterations in the new London Pharmacopoeia, and the new French medicines. London: Printed for Thomas and George Underwood. lvi + 528 p. Index. 22 cm.

• **Summary:** Chapter 1, “Vegetables,” notes (p. 37): “*Bitter cassava*, *J. manihot*. Root full of an acrid, poisonous, milky juice, separable by expression, or corrected by roasting, thus yielding a nutritive farina; also by boiling the juice which is used as a sauce, and made into soy” [sauce].

The same chapter states: (p. 95): “D. [*Dolichos*] soya. Seeds used to make soy, eaten in soup.”

Chapter 3, “Compound combustibles, not oily,” states (p. 166): “Cochin China lock-soy, *Gummi ex oryza arte facta*. Rice boiled to a kind of paste, and drawn out into threads; transparent; used to thicken soups.—China lock-soy, Opaque and less esteemed.”

Chapter 11, “Liquid compounds, not oily,” gives a recipe (p. 340): “Quin’s sauce. Walnut pickle, Port wine, of each 1 pint, mushroom catsup 2 pints, anchovies, eschalots, of each 2 doz., soy ½ pint, Cayenne pepper 2 av. drams; boil gently for ten minutes; strain and bottle.—2 [2nd recipe]. Soy 8 lb, walnut ketchup, mushroom ketchup of ea. 2 gall [gallons]. sprats 8 lb, Cayenne pepper 8 oz. garlic 1 lb.—3. Distilled vinegar 1 gall, soy 1 lb, allspice 8 oz.—4. Walnut pickle ½ a pint, ketchup ½ a pint, anchovies no. 6, garlic 6 cloves, Cayenne pepper 3j. Note 1. The first three of these four recipes for Quin’s sauce calls for soy as an ingredient.

Note 2. This is the earliest English-language document seen (March 2012) which mentions the word “dram” (or “drams”). The archaic spelling of this word is “drachm.”

The apothecary symbol resembles the number “3.” In the avoirdupois system the dram, as a unit of weight, is 1/16 ounce or 1.771 grams.

Next comes a recipe for homemade soy sauce (p. 340): “Soy. Seeds of *dolichos soja* (peas or kidney beans may be used for them) 1 gall, boil till soft, add bruised wheat 1 gall, keep in a warm place for 24 hours, then add common salt 1 gall, water 2 gall, put the whole in a stone jar, bung it up for two or three months, shaking it very frequently, press out the liquor: the residuum may be treated afresh with water and salt, for soy of an inferior quality.—2. Strong purl boiled to an half, add red herrings, anchovies, Spanish liquorice, and garlic: when shaken it should leave a yellow brown colour on the sides of the vessel.”

On the same page is a recipe for Coratch which includes “Ind. [Indian soy or India soy] soy.” On the next page (341) is a recipe for “Kitchiner’s double relish: Sauce superlative 4 pints, add ½ a pint of soy or thick browning.” In the same chapter, the section on “Impregnated vinegars” has a recipe (p. 350) for “Camp vinegar” that calls for soy.

Chapter 11 also discusses “Colour for browning” (p. 391): “Lump sugar 8 oz, water a table-spoonfull; heat it to a brown colour; add salt 1 oz, and dilute with water to the thickness of Japan soy: used to colour sauces.” Address: Lecturer on the materia medica, pharmaceutical chemistry, and botany.

658. Hamilton, Walter. 1828. The East-India gazetteer: containing particular descriptions of the empires, kingdoms, principalities, provinces, cities, towns, districts, fortresses,... 2nd ed. Vol. 1 of 2. London: Printed for Parbury, Allen, and Co. See p. 148. Two (folded) maps. 23 cm. [6 ref]

• **Summary:** Under the entry for Batavia: “The Dutch being the only nation that keeps up an intercourse with Japan, a ship is annually despatched from Batavia laden with kerseymeres, fine cloths, clock-work, spices, elephant’s teeth, sapan wood, tin and tortoiseshell. The returns from Japan consist principally of ingots of the finest red copper, which is converted into a clumsy sort of coin for paying the native and European troops. Various other articles are smuggled in by the officers such as sabre-blades of an excellent temper, Japan camphor, soy [sauce], china-ware, lacquered ware, and silk goods. The cargo always contains a present for the emperor of Japan, and he in return sends one to the Governor general, consisting usually of...”

“A.D. 1619, John Pieterse Coen, the Dutch governor, took the town of Jacatra by assault, and in a great measure destroyed it. He afterwards founded another city, not exactly on the same spot, to which he gave the name of Batavia. In 1811 it surrendered at discretion to the British army under Sir Samuel Auchmuty... During the British possession of Batavia, which lasted until 19th August 1816, its condition was greatly improved and even its pestilential atmosphere somewhat ameliorated by the great pains bestowed on the

draining of the marshes, the cleaning of the town, and the removing of the Europeans to the elevated tracts of the interior.”

Note: A kerseymere is a fine woolen cloth with a fancy twill weave. Address: M.R.A.S.

659. Johnstone, Christian Isobel (Christian Jane). 1828. *The cook and housewife's manual: Containing the most approved modern receipts [recipes] for making soups, gravies, sauces, ragouts, and all made-dishes; and for pies, puddings, pickles, and preserves; also for baking, brewing...* 3rd ed.; in which are given a compendium of French cookery, a new system of fashionable confectionary (sic)... By Mrs. Margaret Dods [pseud.]. Edinburgh: Printed for Oliver and Boyd,... 2 + 1 + 525 p. Illust. 20 cm.

• **Summary:** “Soy” is mentioned on 17 pages as follows: Broths, soups and gravies (p. 135. “The best plain browning for soups, sauces, gravies, &c., is red wine, soy, or mushroom or walnut catsup”).

Ox-head-soup, called hessian soup, and ragout (p. 154-55. “Obs.—Soy, forcemeat-balls, wine, &c., are all ordered for this ragout in some approved books of cookery; but we consider such expensive ingredients quite out of place in a preparation which is cheap, good, and savoury, but never can be elegant”).

To broil cod-sounds (p. 178. “Dish them, and pour a sauce made of browned gravy, pepper, cayenne, salt, a little butter kneaded in browned flour, a tea-spoonful of made mustard, and one of soy”).

To dress sturgeon (p. 180. “Sauce,—oyster or lobster sauce, or melted butter, with a little soy and essence of anchovy”).

To stuff and bake carp, pike and haddocks (p. 189-90. “Strain and add to the sauce a tea-spoonful of made mustard, and one of Chili vinegar, a glass of red wine, and a little soy, with mace, pepper, and salt to taste. Pour a little of this over the carp, and serve the rest in a tureen”). See also p. 194, 195, 197, 240, 249, 251, 252, 258, 293, 294, 316, 373.

Catsup is mentioned on 90 pages of this book.

“Quin’s* fish-sauce, a store-sauce (p. 252. “Two glasses of claret and two of walnut-pickle, with four of mushroom-catsup; six pounded anchovies with their pickle, and six shalots pounded; a half-glass of soy, black and cayenne pepper. Let this simmer slowly by the side of the fire till the bones of the anchovies dissolve. Strain it off, and when cold bottle for use”).

Footnote: *”Had this Great Man [Quin] lived now, he would, we think, instead of so much heavy catsup and coarse walnut-pickle, have adopted some delicately-flavoured vinegar as a substitute for about the one-half of these ingredients,—such as eschalot or burnet-vinegar, or even fiery horseradish-tincture. As a mere untravelled practical Englishman, and, moreover, of the old school, Quin, no doubt, ranks high in the lists of gastronomy; but he is

completely distanced by many moderns, both in love for and knowledge of the science.”

Note: Soy was apparently a traditional ingredient in Quin’s sauce.

Mistress Margaret Dods is a pseudonym for Christian Isobel Johnstone who lived 1781-1857. Address: Of the Cleikum Inn, St. Ronan’s.

664. Nuttall, Thomas. 1829. Soy bean (Letter to the editor). *New England Farmer* 8(14):105. Oct. 23. Friday.

• **Summary:** In this front-page letter dated Oct. 14, Nuttall writes: “As this plant thrives well in this climate, and perfects its seeds, it may not, perhaps, be amiss to say something of its use and history. It is an annual Bean, not much unlike those we commonly cultivate, with an erect stem, showing a slight tendency to twine at the summit only; the flowers are very small for the germs, and reddish in axillary clusters; the legumes are pendulous, hispid with brown bristly hairs, with which the whole plant is more or less clothed—these pods contain 2 or 3 beans when mature, almost of a chocolate brown, and somewhat smaller than any generally cultivated in this country.” It belongs to the genus *Dolichos* (*D. Soja*), which also affords us several other edible legumes. It is said to be indigenous to India and Japan, where as well in China and Cochin-China, it is

very generally cultivated for food and probably preferred for its great productiveness. A single bean produced, and perfectly ripened with us at the Botanic Garden, 182 pods with 2 to 3 beans in each. Whether in this country, where so many fine legumes are cultivated, it might be esteemed for food, is doubtful; the experiment may easily be made. But its principal recommendation at present in [sic, is] only as a luxury, affording the well known sauce called Soy, which at this time is only prepared in [sic, in] China and Japan—that of the latter country being usually preferred. The mode of obtaining this sauce, is said to be as follows: -

“After the seeds are boiled until they become soft, they are mixed with an equal weight of wheat or barley flour coarsely ground. This mixture is fermented, and a certain proportion of salt and water being added, the whole is allowed to stand for two or three months, care being taken to stir it every day; and by the end of that time it is ready for use. Its composition then appears to be perfectly harmless, which cannot be said of many other sauces; and among the Asiatics it is considered beneficial in promoting an appetite.

“Yours, respectfully, Thomas Nuttall.”

Note 1. Unfortunately Nuttall did not indicate where he obtained his seeds. In 1831 a person known only as “H.” received a few soybeans from Nuttall and grew them in Milton, Massachusetts. Nuttall lived 1786-1859.

Note 2. This is the earliest document seen (May 2011) concerning soybeans in Massachusetts, or the cultivation of soybeans in Massachusetts. This document contains the earliest date seen for soybeans in Massachusetts, or the cultivation of soybeans in Massachusetts (1829). The beans were probably planted in about May-July 1829. The newspaper was published in Boston.

Note 3. This is the earliest English-language publication seen (Sept. 2006) with the word “soy bean” (or “soy beans”) in the title.

Note 4. This letter was reprinted in the *American Farmer* (Baltimore, p. 260-61) on 30 Oct. 1829 (Vol. 33, No. 11). Address: Botanic Garden, Cambridge, Massachusetts.

665. Janvier (Thomas). 1829. Classified ad: Offers for sale. *Baltimore Patriot*. Nov. 13. p. 1.

• **Summary:** “Virginia Hemp. Brazil white Sugar. Champagne. East India Soy [sauce]. Manufactured Tobacco. Spanish Cigars...”

Note: This is the last entry seen in the Early American Newspapers database that mentions “East India Soy.” Address: 87 Smith’s whf [wharf].

666. Johnstone, Christian Isobel (Christian Jane). 1829. The cook and housewife’s manual: A practical system of modern domestic cookery and family management. 4th ed., revised and enlarged. Containing a compendium of French cookery, and of fashionable confectionary, preparations for invalids, a selection of cheap dishes, and numerous useful

miscellaneous receipts [recipes] in the various branches of domestic economy. By Mistress Margaret Dods. Edinburgh, Scotland: Oliver & Boyd; London: Simpkin & Marshall. 552 p. See p. 292-93. Illust. 20 cm. The 1st edition was 1826.

• **Summary:** In Part III, Chapter 1 is titled “Made-dishes of beef, mutton, veal, venison, hare, and poultry.” Soy [sauce] is mentioned in two recipes:

“459. To hash a calf’s-head.—Clean and parboil the head; or take what is left of a plainly boiled cold head, and cut it into slices of a rather larger size than for fricassee. Peel and slice the tongue... Season with... a little of any piquant store sauce, and warm up the hash without suffering it to boil... A *brown hash* may be made as above by using fried onion, catsup, soy, a little red wine, &c.; but as all brown made-dishes are expected to be piquant,... seasonings of a more pungent quality are to be used” (p. 292).

“460. Mock-turtle, of calf’s-head.—Get a large fat head with the skin on. Scald and clean it well... When the meat has stewed very slowly, rather soaking in the gravy than actually boiling, and is very nearly ready, put to it cayenne to taste, a small glass of catsup, a very little soy, and a couple of spoonfuls of chopped basil, tarragon, chives, and parsley” (p. 293).

On the title page, the author’s name is given as “Mistress Margaret Dods;” this is a pseudonym for Christian Isobel Johnstone who lived 1781-1857. Address: Of the Cleikum Inn, St. Ronan’s [England].

667. King, Lord. 1829. The life of John Locke, with extracts from his correspondence, journals, and common-place books. London: Henry Colburn. xi + 408 p. See p. 133-34. 30 cm.

• **Summary:** In the section titled “Extracts from the Journal of Locke,” Lord King notes: “The following directions appear to have been set down for some foreigner about to visit England. They are curious, as affording a comparison with the improvement of the present time. ‘England.—1679.’”

Among his description of the foods and condiments which ought to be enjoyed in London, Locke noted: “Puddings of several sorts and creams of several fashions, both excellent, but they are seldom to be found, at least in their perfection, at common eating-houses. Mango and saio are two sorts of sauces brought from the East Indies.” Saio almost certainly refers to *shoyu* (Japanese-style soy sauce) and was cited as such by both Yule and Burnell in Hobson-Jobson (1886, p. 651, “Soy”) and the *Oxford English Dictionary* (1919, “Soya”).

An illustration (engraving) shows a portrait of John Locke. Locke (lived 1632-1704) was an English philosopher. The preface to this work notes that “After the death of Locke, his papers, correspondence, and manuscripts, came into the possession of Sir Peter King, his near relation and sole executor.” Lord Peter King King, the 7th baron, lived 1776-1833.

An 1884 edition of this book, with a slightly different

title (which see), was published in London by George Bell & Sons. Though not a facsimile edition, the passage on soy sauce also appears on page 134. Address: Ockham.

668. **Product Name:** [Kushigata Shoyu].

Foreign Name: Kushigata Shôyu.

Manufacturer's Name: Mogi Shichizaemon.

Manufacturer's Address: Noda, Japan.

Date of Introduction: 1830.

New Product–Documentation: Noda Shoyu K.K. (Morio ICHIYAMA, ed.). 1940. Noda Shoyu K.K. Nijunen-shi [Twenty-year history of Noda Shoyu, Inc.]. p. 471. The Kushigata brand of shoyu (of which the logo is shown) was introduced in Tenpo/Tempo 1 (1830).

Mark Fruin. 1983. Kikkoman: Company, Clan, and Community. Page 73 notes that by 1909 the four major brands manufactured by the Noda shoyu cartel were Kikkoman, Kihaku, Kamigata (Joju), and Kushigata.

669. Crawford, John. 1830. Journal of an embassy from the Governor-General of India to the courts of Siam and Cochin China: Exhibiting a view of the actual state of those kingdoms. 2 vols. 2nd ed. London: Henry Colburn and Richard Bentley. See Vol. II, p. 155, 282, 359.

• **Summary:** Chapter 2, about Siam, states (p. 155): “The imports from China [to Siam] are very numerous, consisting of what are called in commercial language ‘assorted cargoes.’ The following is a list of the principal commodities: coarse earthenware and porcelain, spelter, quicksilver, tea, lack-soy (vermicelli), dried fruits, raw silk, crapes, satins and other silk fabrics, nankeens, shoes, fans, umbrellas, writing-paper, sacrificial paper, incense rods, and many other minor

articles.”

In Chapter 6, about the people of Cochin China (today’s Vietnam), we read (p. 282): “They eat vermin, and the flesh of the alligator; hatched eggs with them are a delicacy; and their favourite sauce is a kind of soy [probably nuoc-mam], in part, at least, composed of the juices of putrid fish, and which, both from taste and odour, would be in tolerable to any other people.”

Chapter 8, about the Island of Singapore, states (p. 358-59): “The first direct arrival from England to Singapore was in the year 1821; in 1822, four ship cleared out with cargoes for the European market; in 1823, nine; in 1824, twelve; in 1825, fifteen; and in 1826, fourteen ships. The greater number of these were bound for London and Liverpool, but there were some also for Stockholm, Hamburgh [Hamburg], and Bordeaux. The staple imports of this branch are cotton goods, woollens, iron, and spelter [unrefined zinc]. The exports are very various, and may be enumerated as follow: ore of antimony, aniseed, aniseed oil, benjamin [gum benjamin, a balsam or resin from a tree], camphor, cassia, cassia-buds, coffee, cubebs [small spicy berries of the *Piper cubeba* from Java], dragons’ blood [a resinous substance, or red juice, extracted from the *Dracoena draco*], elephants’ teeth [tusks, ivory], gamboge [a concrete vegetable juice or gum-resin from Cambaja or Cambodja {Cambodia}], horns of cows, deer, and buffalo; hides of ditto, mother of pearl shells, musk, nankins [nankeens, a type of cotton cloth, originally from China], orpiment [sulphuret of arsenic], pepper, Chinese paper, Chinese raw silk, Chinese wrought silk, ratans [small canes, grown in India] and canes; rhubarb, cloves, mace, and nutmegs; pearl sago, Siam sugar, Japan soy [sauce], tin, tortoiseshell, turmeric, gold and silver bullion, and sapan-wood [sappan wood; a red soluble brazilwood obtained from an East Indian tree *Caesalpinia sappan*]. In 1824, and I have seen no later statement, the sworn value of these articles was 1,035,868 Spanish dollars.”

Note: This is the earliest document seen (May 2010) concerning soybean products (soy sauce) in Singapore. This document contains the earliest date seen for soybean products in Singapore (1826); soybeans as such have not yet been reported. However, in 1830 soy sauce exported from Singapore was probably made in Singapore from soybeans that were in Singapore at this early date; soybeans may well have been cultivated in Singapore at this time. Address: Esq, FRS, FLS, FGS, &c.

670. Dalgairns, Mrs. 1830. The practice of cookery: Adapted to the business of every day life. 3rd ed. Edinburgh, Scotland: Printed for Robert Cadell, Edinburgh. 552 p. Index.

• **Summary:** A book of Scottish cookery. The following recipes call for soy [sauce] as an ingredient: In the chapter on “Fish:” To stew salmon (p. 42). Salmon fritters (p. 43). Cod sounds broiled (p. 48). Dressed skate (p. 49). Boiled carp (p.

50). Little fish puddings (p. 51-52). Brown fish and sauce (p. 52-53). Baked haddocks (p. 54). To bake mackerel (p. 57). To broil sprats (p. 59). Fish soup cake (p. 66).

Hessian stew (beef) (p. 83-84). Rolled mutton (p. 105). Burdwan stew (p. 166). Another way to stew duck (p. 167). Another sauce for roast beef (p. 191). To make a quart bottle of fish or meat sauce (p. 191). Fish sauce (p. 192). Another poivrade sauce for cold meat (p. 195). Fish sauce (p. 202). Coratch (p. 203; “two tablespoons of Indian soy, one spoonful of walnut catsup,...”).

In the chapter on “Gravies, sauces, etc., the recipe To make gravy without meat (p. 187) is especially interesting: “Slice three onions, and fry them brown in a little butter; add them to half a pint of water, and the same of beer, put in some peppercorns, salt, a little lemon-peel, three cloves, a little mace or Jamaica pepper, a spoonful of walnut pickle, and one of mushroom catsup, of soy and essence of anchovy a dessert-spoonful each, a small bunch of sweet herbs, and a quarter of a slice of bread toasted brown on both sides; simmer all together in a closely-covered sauce-pan for twenty minutes, then strain it for use, and when cold, take off the fat. It will taste exactly like a gravy made with meat.”

In the chapter on “Vinegars,” the recipe for “Harvey’s, or camp vinegar” states (p. 406): “Put the following ingredients into two quarts of strong vinegar, three table-spoonfuls of Indian soy, and the same quantity of mushroom catsup, six anchovies, two heads of garlic, a quarter of an ounce of cayenne, and as much cochineal as will colour it; shake it two or three times a-day for a fortnight, then filter, and bottle it for use. Two tea-spoonfuls of this vinegar improves salad sauce, fish and sauce also, and is good in most made dishes.”

The following recipes call for “Harvey sauce” (spelled without an apostrophe): Stewed skate (p. 49). Sauce for the fish puddings (p. 51). To broil a cold roasted shoulder of mutton (p. 105-06). Devil [leg of roasted turkey, goose, or fowl] (p. 168).

Many recipes call for catsup, including mushroom catsup, Lobster catsup (p. 189), Fish catsup (p. 203), and walnut catsup (p. 412); “catchup” is not mentioned.

Note: This is the earliest document seen (Oct. 2010) that mentions “Lobster catsup” (regardless of spelling).

671. Dobell, Peter. 1830. *Travels in Kamtchatka and Siberia*; with a narrative of a residence in China. 2 vols. London: Henry Colburn and Richard Bentley. See vol. 2, p. 324-25. 20 cm.

• **Summary:** Note: The first several paragraphs of this are copied from *Portfolio* (1819, p. 105-06).

In Chapter XII of the section titled “A Residence in China,” the author is describing Chinese food, especially in the Canton area: “An article of food, of which all classes appear extremely fond, is *thow-foo* [tofu] and *foo-chack*, a sort of flummery [soft jelly or porridge], made from beans,

very palatable and nourishing.

Note: The Cantonese term *foo jook* means dried yuba sticks. Perhaps the author was describing the product after the sticks had been broken into pieces and cooked until soft.

Soy, their famous sauce for all kinds of food, is also made from beans. The beans are boiled until all the water is nearly evaporated, and they begin to burn, when they are taken from the fire, and placed in large, wide-mouthed jars, exposed to the sun and air; water and a certain portion of molasses or very brown sugar are added. These jars are stirred well every day, until the liquor and beans are completely mixed and fermented; the material is then strained, salted, and boiled, and skimmed until clarified; and will, after this last process, become of a very deep brown colour, and keep any length of time. Many persons have thought that gravy was used in preparing this condiment; but this appears not to be the case, the composition being entirely a vegetable one, of an agreeable flavour, and said to be wholesome. There are two or three qualities of it; to make the best requires much care and attention. Japanese soy is much esteemed in China, on account of the superior manner in which it is made; perhaps they have a particular sort of bean for that purpose. Shopkeepers at Canton who sell soy, have large platforms on the roofs of their houses, where the jars for preparing soy are all arranged, and exposed to the sun; for the consumption of this article is enormous. Neither rich nor poor can dine, breakfast, or sup without soy; it is the sauce for all sorts of food, gives a zest to every dish, and may be said to be indispensable at a Chinese repast.

“In general, very little meat is eaten.”

Note: The author spent 7-8 years in China between 1798 and 1820. He died in 1852. Address: Counsellor of the Court of His Imperial Majesty, the Emperor of Russia.

672. Dolby, Richard. 1830. *The cook’s dictionary, and house-keeper’s directory: A new family manual of cookery and confectionery, on a plan of ready reference, never hitherto attempted.* London: Henry Colburn and Richard Bentley. iv + 516 p. See p. 446. 22 cm.

• **Summary:** In the section on sauces, we read (p. 446): “Sauce (*Harvey*). Chop twelve anchovies, bones and all, very small, with one ounce of cayenne pepper, six spoonful [spoonfuls] of soy [sauce], six ditto of good walnut pickle, three heads of garlic, chopped not very small, a quarter of an ounce of cochineal, two heads of shalots [shallots], chopped not very small, one gallon of vinegar; let it stand fourteen days, stir it well twice or thrice every day; then pass it through a jelly-bag, and repeat this till it is perfectly clear; then bottle it, and tie a bladder over the cork.”

Note 1. Since Harvey Sauce was a commercial product, we have given the complete recipe. This is the earliest document seen (April 2012) stating that soy sauce is used as an ingredient in Harvey sauce. This is also the earliest document seen (April 2012) that describes the use of soy

sauce as ingredient in a second-generation product.

The book also contains two recipes for Ketchup (p. 298), relatives of expensive imported Javanese soy sauce in those days; kecap / ketjap is the Indonesian word for soy sauce.

(1) “Ketchup, *English*.—Peel ten cloves of garlic, bruise them, and put them into a quart of white wine vinegar; take a quart of white port, put it on the fire, and when it boils, put in twelve or fourteen anchovies, washed and cut into pieces; let them simmer in the wine till they are dissolved; when cold, put them to the vinegar; then take half a pound of white wine, and put into it some mace, some ginger sliced, a few cloves, a spoonful of whole pepper bruised; let them boil a little; when almost cold, slice in a whole nutmeg, and some lemon-peel, with two or three spoonsful of horse-radish; add it to the rest, stop it close, and stir it once or twice a day. It will soon be fit for use. Keep it close stopped up.”

(2) “Ketchup, *White*.—Take a quart of white wine, a pint of elder vinegar, and one quart of water; half a pound of anchovies, with their liquor, half a pound of scraped horse-radish, an ounce of shalots bruised, an ounce of white pepper bruised, an ounce of mace and a quarter of an ounce of nutmegs cut in quarters; boil all together till half is consumed, then strain it off, and when cold, bottle it for use. It is proper for any white sauce, or to put into melted butter.”

Note 2. Neither of these catchup recipes calls for sugar or any other sweetener. The second is strained, whereas the first is not. Both are based on vinegar and wine (or port).

The word “ketchup” appears in three recipes in this book: (1) Calf’s head hashed (p. 106, “two spoonsful of ketchup”). (2) Calf’s head surprise (p. 108, “two spoonsful of walnut and mushroom ketchup”). (3) Celery sauce, (Brown) (p. 130, “a little ketchup”). Address: Cook at the Thatched-House Tavern, St. James St., London.

673. First annual report of the New York City Temperance Society. 1830. New York, NY: Printed by Sleight & Robinson. 54 + 24 p.

• **Summary:** The first appendix to this report is titled “Address delivered at the first anniversary of the New York City Temperance,” by David Hosack, M.D.; he is president of the Temperance Society of Hyde Park, Dutchess County, N.Y. In this address, dated May 11, 1830, he states (p. 4): “In hot climates the very liberal use that is made of the fashionable condiments, mustard, soy, catsup, shallots, cayenne pepper, and turmeric, is to be considered in connexion [connection] with the climate and the excessive use of vinous and spirituous liquors, among the sources of those diseases, (particularly of the stomach and bowels,) which so frequently afflict the inhabitants of the torrid zone; but which are improperly ascribed to the heat of the climate as the exclusive cause. That this is not the case it is sufficient to remark, that the women are comparatively healthy and long lived in those climates; not only because they are less exposed to the direct rays of the sun, but by reason of their

relative temperance. ‘Water is for the most part the drink of the females in hot climates; hence we account for the common fact, that in the West Indies one woman generally survives two or three husbands.’”

The term “vegetable diet,” referring to a vegetarian diet, appears on pages 4-5 of this address: “It occurs to me, sir, that good morals and probably our length of days, would be greatly promoted by returning in a greater degree than is the practice of this day, to the vegetable diet of our antediluvian ancestors, for it is not improbable that the excessive use of animal food, and the excess arising out of the arts that have been employed to excite the appetite, have been in part the source of those violent passions that have so much degraded the moral character of man, at the same time, that by more rapidly wearing out the system, they have swelled the catalogue of his diseases, and abridged the period of his existence. As it regards *strength*, animal food, except where the habitual use of it has rendered it so, is not necessary; the rhinoceros, the elephant, the giraffe, the elk, the bull, and the horse, which excel all other quadrupeds in bulk and strength combined, live solely on vegetable food: and indeed, in our own species numerous examples might be cited in which both the body and mind have attained to extraordinary vigor and exertion, in which the individuals referred to lived exclusively upon a vegetable diet. If it be true, as has been observed by some physicians, that life is a forced state of existence, such must inevitably be the result of the inordinate excitement produced by the excessive use of animal food. Indeed, it may be remarked in confirmation of the justness of this observation, that the most remarkable instances of longevity are found, according to Sir John Sinclair, among those nations who live chiefly on a vegetable diet. The excitants or condiments of the table, though grateful and in many instances salutary additions to our food, become sometimes the causes of disease, especially when habitually taken at our meals, and in great quantities.”

“As an incentive to temperance let it be recollected, that Sir Isaac Newton, when composing his celebrated treatise upon Optics, confined himself to water and a vegetable diet: to this abstemious mode of living, probably may be ascribed the great age, viz. eighty-five years to which he attained.” Address: New York City.

674. First report (Part II). Minutes of evidence taken before the select committee of the House of Commons appointed to enquire into the present state of affairs of the East-India Company, and into the trade between Great Britain, the East-Indies, and China;... 1830. London: Printed for Parbury, Allen and Co. p. 246-418. See p. 385.

• **Summary:** On 16 March 1830, Mr. John Deans is called in and examined. He has resided constantly in the Eastern Archipelago of the East Indies for upwards of twenty years. For most of the time he lived in Java.

#3609. “Can you give the Committee any information

with respect to the trade with Japan?—The Dutch are allowed to trade with Japan, and they are only allowed to send two ships. The trade was conducted until two years ago by the Dutch government of Java. I have here a list of the cargoes in the year 1825, both the imports and exports.”

#3610. “Will you state the principal items of the trade?—In the Japan trade in 1825 there were two ships, amounting in all to about 1,300 tons; one was 600 and the other was 700 tons... The import cargoes [to the East Indies from Japan] consisted of... sackie and soy [sauce], 14,332 f. [Dutch florins];...”

675. Hogendorp, C.S.W. de. 1830. Coup d’oeil sur l’île de Java et les autres possessions néerlandaises dans l’archipel des Indes [A glance around the isle of Java and the other Dutch possessions in the East Indies]. Brussels: C.J. de Mat. xii + 422 p. Folded color map. 24 cm. [Fre]

• **Summary:** Page 158: Under the Malay name of *katjang idjoe*, the Chinese and some indigenous people cultivate a legume which is quite like the pea (*phaseolus radiatus*), from which is made on Java a sort of soy sauce (*soya*), which is called *ketjap*.

Note: Soy sauce in Java is made from the soybean, not from the mung bean (*katjang idjoe*). In Java, soy sauce is, indeed, called *ketjap*.

Page 204: The Europeans burn coconut oil in their lamps; and for this use it is preferable to bean oil (*l’huile de katjang*) [probably soy bean oil].

A long table (p. 396-97) shows the items to be taken on an expedition to Japan in 1827. The items exported from Japan on the return trip will consist mainly of refined copper, camphor, silk cloth,... porcelain, soy sauce (*du soya*), saké (*du sackie*),... Address: Graaf [Count], Knight of the Legion of Honor, Former Resident of Batavia, Buitenzorg, and Cawang.

676. Kitchiner, William. 1830. The cook’s oracle; and housekeeper’s manual: Containing receipts for cookery and directions for carving... With a complete system of cookery for Catholic families. From the last London edition. New York, NY: Printed by J. & J. Harper. 432 p. Illust. Index. Harper’s Stereotype Edition.

• **Summary:** This New York edition reflects American tastes, preferences, ingredients, and ways of spelling. The title page states: “William Kitchiner, M.D. Adapted to the American public by a medical gentleman.” Soy [sauce] is mentioned on pages 88, 95, 178, 232, 235, 238, 246-47, 271, 278, 292, 310, and 330.

The recipe for Quin’s Sauce (p. 278) uses soy [sauce] as an ingredient. This book mentions “mushroom catchup” on pages 88, 154, 178, 197, 217-18, 241-43 (incl. “double mushroom catchup”), 252, 256, 278, 281, 312, 337, 364. It mentions “catchup” (of no special type) on pages 152, 159, 192, 232, 236-37, 283, 284, 302, 329, 422.

It mentions “walnut catchup” on p. 150, 243, 246, 254-55, 271, 282, 308, 318, 432. And “oyster catchup” on p. 178, 285 (No. 441; homemade). The section titled “Catchups” (p. 282-85) has recipes for “Mushroom catchup” (incl. “double catchup”), “Quintessence of mushrooms,” “Oyster catchup,” “Cockle and muscle catchup,” and “Pudding catchup.”

It uses the spelling “Catsup” on only page 422—surprisingly in the index entry for the various types listed above.

The recipe for “Mushroom catchup.—(No. 439)” begins: “If you love good catchup, gentle reader, make it yourself,* after the following directions, and you will have a delicious relish for made-dishes, ragoûts, soups, sauces, or hashes.

“A couple of quarts of double catchup, made according to the following receipt, will save you some score pounds of meat, besides a vast deal of time and trouble; as it will furnish, in a few minutes, as good sauce as can be made for either fish, flesh, or fowl.” (Footnote: “*The mushrooms employed for preparing ready-made catchup, are generally those which are in a putrefactive state. In a few days after those fungi have been gathered, they become the habitations of myriads of insects.—Accum on *Culinary Poisons*, 12mo. 1820, p. 350”). Address: M.D., England.

677. Siebold, Philipp Franz von. 1830. Synopsis plantarum oeconomiarum universi regni Japonici [Synopsis of the economic plants from the entire empire of Japan]. *Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* 12:1-74. See p. 54-57. Also first table at end. [Lat; Dut]

• **Summary:** The English translation of this periodical title is: “Transactions of the Batavian Society of Arts and Sciences.” Batavia roughly corresponds to today’s Jakarta on the island of Java, Indonesia. This work lists 447 economic plants, including the soybean. The section on Leguminosae [sic, Leguminosæ] (p. 54+), mentions plants of the genera *Dolichos* (incl. *D. hirsutus* or Kudzu / Kudzu), *Sooja*, *Phaseolus*, *Pisum*, *Vicia*, *Medicago*, *Arachis*, *Glycyrrhiza*, and *Mimosa*. There are two species of soybeans: *Sooja Japonica*, the cultivated soybean, and *Sooja nomame*, the wild soybean. The genus and its species and varieties are described as follows (p. 56):

“CLXXVIII. Sooja, Moench. Sieb. (Sooja du Japon).

296 *S. Japonica*, Sieb. *Sooju* vernacular *Daisu*, Japan.

Varieties, grouped by color: a. White seeds. *Daisu*, Japan. b. White fuscis seeds. *Tobimame*, Japan. c. Fuscis seeds. *Sinsjumame*, Japan. d. Black round seeds. *Kuromame*, Japan. a. Black flattened seeds. *Kurotokorosun*, Japan. a. Greenish seeds. *Awomame*, Japan.

Uses: To make *Sooju*, *Miso*, *Toafu* (shoyu, miso, and tofu).

297 *S. nomame*, Sieb. *Nomame ac Jawaraketsmai*, Japan (v.v.). [vidi vivam = I have seen a living plant specimen.] *Plantae sponte crescentis folia adhuc tenera pro potu Thea*

colliguntur.

At the end of this article are two large fold-out tables, each 30 by 18 inches, and each titled “Synoptic Table of Plant Uses.” Each table contains six vertical double columns. References to soy appear only in table I. At the bottom right corner of the first is written in Latin: “*Dabam in Insula Dezima mensi Novembris 1827, Dr. von Siebold.*” This translates as: “Given [as a letter for delivery] from the island of Dezima [Deshima], November 1827, Dr. von Siebold.” The plants are divided into categories by type of use. For example: I. Simple foods: A. Cereal grains. B. Legumes. C. Fruits, etc. Under each category is a numbered list of the scientific names of the Japanese plants in that category, followed by its name written in both katakana and Chinese characters. Soy-based uses include: IA. Simple foods (*Alimenta simplicia*) (columns 1-4): Legumes (Legumina). 1. *Sooja Japonica*, Sieb. Daizu, “Yellow + Bean.”

Note 1. This is the second earliest document seen (June 1999) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

II. Composite foods (*Alimenta composita*) (columns 4-5). B. For the sauce “Sooju.” Shoyu. *Sooja Japonica*, Sieb.

C. For the paste (*pulto*) “Miso.” Miso. *Sooja Japonica*,

II. ALIMENTA COMPOSITA.

A. *Pro cerevisia «Sake.»*

Oriza sativa, Seringe.

B. *Pro embammate «Sooju.»*

Sooja Japonica, Sieb.

Hordeum hexast. ac vulgare, Ser.

C. *Pro pulto «Miso.»*

Sooja Japonica, Sieb.

大豆	黄
豆油	油
味噌	味噌

Sieb. plus rice and barley

D. For the cake (*placenta*) “Toofu.” Tôfu. *Sooja Japonica*, Sieb. Note 2. This is the earliest Latin-language or Dutch-language document seen (Feb. 2004) that uses the word “Taofu” or “Toofu” or “Tôfu” to refer to tofu.

P. For the sprouts (*germinatione artifaali*) “Mogasi.” Moyashi. *Soja Japonica*, Sieb.

Note 3. This is the earliest document seen by Siebold in which the soybean is mentioned. This document also contains the earliest date connected with Siebold and soybeans (Nov. 1827). His name on the title page is written “De. de Siebold.”

Note 4. Siebold was born on 17 Feb. 1796 in Würzburg [Bavaria, Germany]. In 1821, as a young ship’s doctor, he arrived in Japan, where he worked as a doctor at Deshima near Nagasaki for the Dutch colony.

Also discusses: Column 1 of table 1 also mentions: 13. *Coix lachryma*, P.S., suudama [Job’s tears]. 2. *Phaseolus atzuki*, Japon, Azuki. “Red + Small + Bean.” 12. *Arachis*

hypogaea, L.E. Rakkasei [peanut]. “Fall + Flower + Bean.” Column 2 mentions *Sesamum Orientale*, P.S., goma [sesame seeds]. Column 3 mentions the wild soybean (*Sooja nomame*), *Amaranthus oleraceus*, A. Japonicus, and A. bicolor. Column 4 also includes sea vegetables (*kaiso*).

Column 5 mentions *ame* [grain syrup], *fu* [wheat gluten cakes], *soba*, *somen* [wheat noddles], *mochi*, *konnyaku*, *kudzu*, and *tokoroten*. III. Medicinal foods (*Medicamina*) (columns 5-6).

678. The cook not mad, or rational cookery: Being a collection of original and selected receipts,... 1830. Watertown, New York: Knowlton & Rice. 120 p. Index. 15 cm.

• **Summary:** “Soy” [sauce] is mentioned only once (p. 87): “No. 274. An excellent Ketchup which will keep good more than twenty years.” The ingredients (which contain no soy) are: “Two gallons of stale strong beer or ale, the stronger and staler the better; one pound of anchovies, cleansed from the intestines and washed, half an ounce each of cloves and mace, one quarter ounce of pepper, six large roots of ginger, one pound of eschalots, and two quarts or more of flap mushrooms, well rubbed and picked.” Boil for an hour, strain through a flannel bag, let stand until cool, bottle and stop “very close with cork and bladder, or leather.”

Immediately after the recipe, the writer adds: “One spoonful of this ketchup to a pint of melted butter, gives an admirable taste and colour, as a fish sauce, and is by many preferred to the best Indian soy” [sauce].

679. Ward, Fanny (Mrs. R.). 1830. A child’s guide to knowledge,... by a lady. 3rd ed. London: Hurst, Chance, and Co.; Whittaker and Co.; Simpkin and Marshall; and Harvey and Darton. iv + 302 p. See p. 78-79. Index. 16 cm.

• **Summary:** Pages 78-79: “Q. What is soy? A. A dark-coloured sauce, made from the seeds of a Chinese plant.

“Q. Is there not a joke among seamen, that soy is made from beetles and cock-roaches? A. Yes: it originates from a fancied resemblance in colour and shape of the seeds to the beetle.

“Q. Where is this esteemed sauce prepared? A. Chiefly in China and Japan; that brought from the latter place is most preferred.”

680. Scammell (William). 1831. On sale—By the subscriber (Ad). *Courier (Saint John, New Brunswick, Canada)*. Jan. 8. p. 4.

• **Summary:** “Small Jars East-India Ginger.

“A few dozen India Soy [sauce].

“Madeira and Port, by the doz. [dozen] or otherwise.”

Note: This is the earliest document seen (Feb. 2010) concerning soybean products (soy sauce) in New Brunswick, or in Canada. This document contains the earliest date seen for soybean products in New Brunswick or in Canada (Jan.

1831); soybeans as such have not yet been reported.

681. Grant (S.B.) & Co. 1831. Classified ad: Offer for sale. *Connecticut Courant (Hartford)*. May 10. p. 4, col. 1.

• **Summary:** “Essence of Gorgona Anchovies, Mushroom and walnut Ketchup, Harvey’s Sauce, Browning Sauce, Indian Soy [sauce], Tomato Ketchup, Sallad Oil,...”

Note: William O. Smith ran several subsequent ads for India Soy, Walnut and Mushroom Ketchup, etc. in 1832 in this newspaper. Address: No. 1, North side of the Market-square.

683. *Mirror of Literature, Amusement, and Instruction (The) (London)*. 1831. Mode of making soy. 18(509):200-01. Sept. 17.

• **Summary:** A long excerpt from *Dobell’s Travels*.

684. *Times (London)*. 1831. Mode of making soy. Sept. 23. p. 2, col. 5.

• **Summary:** From *Dobell’s Travels*: “Soy, the famous sauce for all kinds of food, is made from beans. The beans are boiled until the water is nearly evaporated, and they begin to burn, when they are taken from the fire, and placed in large wide-mouthed jars, exposed to the sun and air; water and a certain amount of molasses or very brown sugar are added. These jars are stirred well every day, until the liquor and beans are completely mixed and fermented; the material is then strained, salted, boiled, and skimmed, until clarified; and will, after this last process, become of a very deep brown colour, and keep any length of time. Many persons have thought that gravy was used in preparing this condiment; but this appears not to be the case, the composition being entirely a vegetable one, of an agreeable flavour, and said to be wholesome. There are two or three qualities of it; to make the best requires much care and attention. Japanese soy is much esteemed in China, on account of the superior manner in which it is made; perhaps they have a particular sort of bean for that purpose. Shopkeepers at Canton who sell soy, have large platforms on the roofs of their houses, where the jars for preparing soy are all arranged, and exposed to the sun; for the consumption of this article is enormous. Neither rich nor poor can dine, breakfast, or sup without soy; it is the sauce for all sorts of food, gives zest to every dish, and may be said to be indispensable at a Chinese repast.”

Note 1. This description of the Chinese process for making soy sauce is unusual in several ways: (1) The writer apparently does not know the name of the bean used. (2) The process of making koji, step one of the two-step fermentation process, is not mentioned. (3) Molasses or brown sugar are added before fermentation. (4) Salt is added after fermentation. (5) The sauce is sunned / fermented on a rooftop rather than in a courtyard at ground level.

Note 2. *Dobell’s Travels* refers to: Dobell, Peter. 1830. *Travels in Kamtchatka and Siberia; with a Narrative of a Residence in China*. 2 vols. London: Henry Colburn and Richard Bentley. See vol. 2, p. 324-25.

Note 3. The quotation above differs slightly from that of the original.

685. Foss (Ambrose). 1831. Chemist & Druggist (Ad). *Sydney Morning Herald (NSW, Australia)*. Sept. 26. p. 2, col. 2.

• **Summary:** Under “Spices, &c.” “Essence of anchovies. Gorgona ditto [anchovies]. India soy and all kinds of fish sauces. Chili vinegar.” Address: No. 18, Pitt-street, Sydney.

686. *Sydney Gazette and New South Wales Advertiser (NSW, Australia)*. 1831. Sydney general trade list. Imports. Reports from the 24th to the 31st Instant, inclusive. Nov. 1. p. 2.

• **Summary:** October 26.—“Elizabeth (ship), 427 tons, Phillips master, from Canton [China], R. Jones, agent;... 12 packages segars [cigars],... 50 packages sweetmeats, 6 jars soy [sauce], 1 box shirts,...”

687. Willis, Michael. 1831. *Cookery made easy: being a complete system of domestic management, uniting elegance with economy...* London: Thomas Allman. xvi + 216 p. See p. 48, 50-51, 60, 64. Illust. Index. 20 cm.

• **Summary:** In the section on boiling fish (p. 46+), “soy-sauce” is used in the following recipes: Skaite (p. 48. “Drain them well, and serve up with butter and anchovy, or soy sauce”). Soals [Soles], plaice and flounders (p. 48. “Serve with anchovy-sauce, and plain melted butter; or with shrimp, or soy sauce). Pike, or Jack (p. 50-51. “Garnish with sliced lemon and scraped horseradish, and anchovy, shrimp, or soy-sauce; or melted butter and ketchup”).

In the section on frying fish (p. 58+), “soy-sauce” is used in the recipe for Flat fish (p. 60. “Serve them with anchovy, or soy-sauce”).

In the section on broiling fish (p. 64+), soy [sauce] is used in the recipe for Sturgeon (p. 64. “Use for sauce, butter, anchovy, and soy”).

Note 1. Neither of the two recipes for Quin’s sauce (p. 182 and 183) use either soy sauce or ketchup as ingredients. They are: Quin’s fish sauce, and Quin’s game, and meat sauce.

Note 2. Ketchup is mentioned throughout this book: Cheaper calf’s head soup (p. 8, with “two spoonfuls of

walnut-ketchup, two of mushroom-ketchup"). 8, Giblet soup (p. 13). To make browning (p. 20-21). Oyster sauce (p. 26). Sauce for any kind of fish (p. 26). Sweetbreads (p. 31, with mushroom ketchup). Lamb's head (p. 42). Pike, or jack (p. 50-51). Chicken (p. 56). Tench (p. 59). Beef steaks (p. 62). Fillet of veal (p. 68). Knuckle of veal (p. 68). Carp or tench (p. 73). Beef hash (p. 75). Lamb's and pluck has (p. 75). Rabbits, brown (p. 81). Breast of veal (p. 84). Artichoke bottoms (p. 95, with mushroom-ketchup). French beans (with ketchup, p. 96). Celery (with ketchup, p. 96). Florentine hare (p. 103-04). Harrico mutton (p. 106-07). Recipe for walnut ketchup (p. 185). Address: For many years cook at the Thatched-House Tavern [England].

• **Summary:** "Respectfully informs the Nobility and Gentry that this Superb Collection consists of... Pickled Bombay and Bengal Mangous [Mangoes], fine Chinese Soy and Curry Powder,..."

Note: This ad also appeared in the April 21 issue (p. 1) of this newspaper. Address: 70, Prince's Street, Edinburgh.

689. Remond (John). 1832. Classified ad: Hams, smoked beef, tongues, cheese, &c. *Salem Gazette (Massachusetts)*. July 3. p. 1.

• **Summary:** "... 6 doz Calcutta Curry, just imported. Canton and Japan Soy [sauce]. Cases of Maccaroni [Macaroni]. Jars of Olives. Pickled Walnuts, &c."

Note 1. This is the earliest English-language document seen (April 2012) that contains the term "Canton Soy," which apparently refers to soy sauce made in Canton, China. In the Early American Newspapers (EAN) online database (produced by Readex, a division of NewsBank), there are at least 5 issues / records that contain the term "Canton Soy" from Aug. 1832 to April 1839.

Note 2. This ad last appears in this newspaper on 3 Aug. 1832 (p. 2). Address: No. 8 Derby Square.

690. Goddard (H.N.). 1832. Sales by auction: India mats and matting (Ad). *Times (London)*. July 5. p. 8, col. 5.

• **Summary:** "... foreign preserves, pickles, arrow-root, fine old East India soy [sauce], French olives, &c." Address: 26, Conduit-street, Bond-street [London].

691. Don, George. 1832. A general system of gardening and botany: Containing a complete enumeration and description of all plants hitherto known; ...Founded upon Miller's Gardener's Dictionary, and arranged according to the natural system. Vol. 2. London: C.J.G. and F. Rivington. 875 p. See p. 356-57 (Soja), 220-21 (Glycine). Index at front. 27 cm. [3 ref]

• **Summary:** This work was published in 4 volumes between

1831 and 1838. It was "caused to be prepared" by the proprietors of *Miller's Gardener's and Botanist's Dictionary*. The alphabetical arrangement of genera used by Miller was discarded. "It only remained, therefore, to choose between the Linnæan artificial method, and the Natural System of Jussieu; but the numerous advantages of the latter, particularly in an extensive work like the present, were too apparent to leave any doubt in the mind of the Editor as to which he ought to adopt... In the Linnæan artificial method, it often happens, that genera, intimately related, are separated far apart into different classes and orders, merely on account of the difference in the number of their stamens and pistils; a circumstance now found in many instances scarcely to be of sufficient importance, even to separate species, still less genera... The plan of the present work is founded on that of M. de Candolle, in his invaluable works entitled *Regni Vegetabilis Systems Naturale* and *Prodromus*, with such alterations as were rendered necessary by the rapid increase of science, and with numerous additions of new genera and species..." Like Miller, Don classifies soybeans in the genus *Soja*.

"CXC. SOJA (*sooja* is the name of a sauce prepared from the seeds by the Japanese). Moench. meth. 153. Savi, diss. 1824. p. 16. D.C. legum. mem. ix. prod. 2. p. 396.

Note 1. This is the earliest English-language document seen (April 2012) that uses the term "*sooja*" to refer to soy sauce.

"Lin. Syst. *Diadélphia, Decándria*. Calyx bibracteolate at the base, 5-cleft, the 3 lower segments straight and acute, but the 2 upper ones are joined together beyond the middle. Corolla with an ovate vexillum, which stands on a short stipe, and with an oblong straight keel." Note 2. *A Dictionary of Botany*, by Little and Jones (1980) defines vexillum (plural: vexilla) as "See Banner." Banner is defined as "The broad uppermost petal of a papilionaceous corolla as in the irregular flowers of certain members of the pea family, Fabaceae. Synonym: Standard or vexillum."

"Stamens diadelphous, the tenth one approximate, but certainly distinct. Stipe of ovary not surrounded by a sheath at the base. Style short. Legume oblong, 2-5 seeded, membranous; the seeds intercepted by cellular dissepiments. Seeds ovate, compressed.—A hispid erect herb, with pinnately-trifoliate leaves, and with the flowers either aggregate in the axils of the leaves on short pedicels, or disposed in short pedunculate racemes.

"1 *S. hispida* (Moench. l. c.) Annual. Hardy. Native of Japan, East Indies, and the Moluccas. *Dólichos Soja*, Li. spec. 1621. Jacq. icon. rar. t. 145. *Soja Japónica*, Savi, diss. 1. c. Kämpf. amoen. 837 and 838, with a figure. Corolla violaceous, hardly longer than the calyx.

"The seeds, which are usually called *Miso* [sic, error based on Miller 1807] in Japan, are put into soups, and are the most common dish there, insomuch that the Japanese frequently eat them three times a day. The *Soja* of the

Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from the seeds, and is used in almost all their dishes instead of common salt. The Chinese also have a favourite dish made of these seeds, called *ten-hu* [*sic*, *teu-hu*, i.e. *tofu*] or *tau-hu*, which looks like curd, and though insipid in itself, yet with proper seasoning is agreeable and wholesome.

“*Var. Beta, pallida* (D.C. prod 2. p. 396.) flowers yellow; seeds white. Roxb. [Roxburgh] hort. beng. p. 55.

“*Hispid Soja*. Fl. [Flowering] July, Aug. Clt. [Cultivated since] 1790. Pl. [Plant] 1½ foot.

“*Cult* [Culture and propagation]. The seeds of this plant only require to be sown in a warm sheltered situation in the month of May.”

Under *Phaseolus*, Don lists a species named *Phaseolus max*, following Linnaeus and Rumphius, but he apparently did not confuse this with the soybean (listed on the same page under *Soja hispida*), since he noted that the species was not sufficiently known, the seeds were black, about the size of coriander-seeds, and that *Max* is the Spanish name of the plant.

On p. 220 we read: “XCV. *Pueraria* (in honour of M.N.N. Puerari, a professor at Copenhagen [Denmark]). D.C. ann. sc. nat. 1825. jan. p. 29. Leg. mem.vi. prod.2. p. 240. Lin. syst. Monadelphica, Decándria.” Species: *P. tuberosa*, *P. Wallichii*.

George Don, son of George Don (1764-1814), was a British plant collector and nurseryman, born in Scotland, and lived 1798-1856. He collected plants on various expeditions for the Horticultural Society of London in Brazil, West Indies, and Sierra Leone. One of the most indefatigable and accurate botanists. Philip Miller lived 1691-1771. Note the similarity of the section on food uses of soybean seeds to that of Miller (1807). Address: England.

692. *Encyclopædia Americana*: A popular dictionary of arts, sciences, literature, history, politics and biography. A new edition. 14 vols.: Soy. 1832. Philadelphia, Pennsylvania: Lea & Blanchard. See vol. 11, p. 502-03.

• **Summary:** “Soy; a dark-colored sauce, prepared by the Chinese from the seeds of a sort of bean (*dolichos soja*). The plant has an upright and hairy stem, erect bunches of flowers, and pendulous, bristly pods, each containing about two seeds. The common story that soy is made from cockroaches or beetles, has probably originated from the form and color of these seeds. The process of preparing soy consists in boiling the seeds until they become soft, and mixing with them an equal weight of wheat or barley meal, coarsely ground. This mixture is fermented, and, a certain proportion of salt and water being added, the whole is allowed to stand for two or three months, care being taken to stir it daily: at the end of this time it is ready for use. The seeds are, besides, employed in China and Japan as food: they are made into a kind of jelly or curd, which is esteemed very nutritious, and is rendered palatable by seasoning of different kinds.

In Japan, they are put into soups, and are the most common dish of the country, being frequently eaten three times a day. Soy [sauce] is chiefly imported from China and Japan, and that from the latter country is the most highly esteemed. The quantity annually sold in England, at the East India company’s sales, is from 800 to 2000 gallons.”

Note 1. Much of this information is taken from Willich (1821).

Note 2. The identical information appeared in the 1849 edition of this encyclopedia, in the same volume and pages.

693. Koenig, Joseph. 1832. *Geist der Kochkunst*: Uebersetzt und herausgegeben von C.F. Rumohr [or rather, written by him]. Zweite vermehrte und verbesserte Auflage [Spirit of the culinary art. Revised and prepared by Karl Friedrich von Rumohr. 2nd enlarged and improved edition]. Stuttgart and Tuebingen: J.G. Cotta. xvi + 196 p. See p. 155. 21 cm. [Ger]*

• **Summary:** In this book the art historian Carl Friedrich von Rumohr (lived 1785-1843) conjectures that the *Garum* sauce of the Romans was an imitation of the East Indian sauce (*Sulze*) made from soybeans.

694. Lee, N.K.M. 1832. *The cook’s own book*: Being a complete culinary encyclopedia; Comprehending all valuable receipts... By a Boston housekeeper. Boston, Massachusetts: Munroe and Francis; New York: Charles E. Francis and David Felt; Philadelphia: Carey and Lea, etc. xxxv + 300 p. No index. 19 cm.

• **Summary:** The section titled “Broths and soups” states (p. xxiv): “Zest, soy [sauce], cavice, coratch, anchovy, curry powder,... are very convenient auxiliaries to finish soups, &c.” “Soy” [sauce] is mentioned as an ingredient in the following recipes: Browning (p. 28-29). Burdwan stew (p. 30). Carp, boiled (“a table-spoonful of soy,” p. 44). Cod sounds, broiled (p. 53). Duck, to stew (2) (p. 67). Gravy made without meat (1) (p. 91). Mutton, rolled (p. 122). Perch boiled (“serve with melted butter and soy,” p. 138). Red mullet (p. 173). Salmon, stew (p. 180). Sauce (2) (“three large table-spoonfuls of Indian soy or mushroom ketchup,” p. 182). Sauce for fish (1) (p. 185). Sauce for fish (2) (“This is commonly called Quin’s sauce.” p. 185). Sauce for fish (3) (p. 185). Sauce for fish (6) (p. 185). Fish or meat sauce, to make a quart bottle of (p. 185-86). Sauce, liver, for fish (p. 186). Sauce for pike (p. 186). Sauce, Harvey (p. 186-87). Note: This latter recipe, which calls for “six spoonfuls of soy [sauce],” is almost identical to that in Dolby (1830, p. 446).

The recipe for Mutton, cold (p. 122) calls for melted butter, into which should be mixed “mushroom ketchup, lemon pickle, and Harvey sauce, a table-spoonful each.”

Sauce poivrade, for cold meat (2) (p. 190). Note 2. Two recipes on p. 190 for “Sauce, Quin’s” contain no soy. Sauce for roast beef (2) (“Put into a stone jar one gill of soy,” p. 190). Sauce for shrimp (2) (p. 191). Sauce, superlative (p.

191). Turkey, boiled (p. 227). Vinegar, camp (p. 241).

Note 1. A gill (U.S.) is a measure of volume, generally equal to ¼ U.S. liquid pint (= ½ cup = 4 fl. oz. = 118 ml).

Note 2. This book is generally considered the first alphabetically arranged encyclopedia in the United States. Its sources were mostly British, and the author acknowledges her borrowing. It was one of the most popular cook books in 19th century America (MSU introduction). Address: Boston, Massachusetts.

695. Ellis (R.). 1833. Sales by auction: To amateurs, curiosity and China dealers, earthenwaremen, and others (Ad). *Times* (London). May 2. p. 4, col. 6.

• **Summary:** "... India soy [sauce], &c." Address: 31, Houndsditch [London].

696. *Olio; or Museum of Entertainment* (The) (London). 1833. Mode of making soy. 11(15):255. May 25.
• **Summary:** A long excerpt from *Dobell's Travels*.

697. Capen (Henry T.). 1833. Classified ad: Family grocery and wine store. *Eastern Argus Tri-Weekly* (Portland, Maine). Aug. 5. p. 1.

• **Summary:** "... Essence Anchovies; Essence Rose; Walnut, Mushroom and Tomata Ketchup; Pickled Mushrooms and Limes;... Camp, John Bull's, Harvey's, Quin's and Reading Sauces; India Soy [sauce]; Gorgona Anchovies;..." Address: Fore street, Portland.

698. Dolby, Richard. 1833. The cook's dictionary, and house-keeper's directory: A new family manual of cookery and confectionery, on a plan of ready reference never hitherto attempted. London: Colburn and Bentley. xii + 541 p. See p. 469. 21 cm.

• **Summary:** In the section on sauces, the author describes (p. 469) how to make Harvey's, a popular sauce. The text is identical to that in the 1830 edition. There is no separate entry for "soy" or "beans, soya" in the body of this dictionary, nor in the 2-page glossary titled "Explanation of some of the terms made use of in the foregoing pages" (p. 533-34).

This new edition has been expanded largely by the addition, at the very front of the book, of a "Bill of fare" for various numbers of persons (in French and English), and of "Plans for laying out the table" (in French only; for different numbers of people in various seasons)—clearly indicating the importance of French in British cookery of this period. Address: Late cook at the Thatched House Tavern, St. James Street.

699. Johnstone, Christian Isobel (Christian Jane). 1833. The cook and housewife's manual: A practical system of modern domestic cookery and family management. 5th ed., revised and enlarged. Containing a compendium of French

cookery, and of fashionable confectionary, preparations for invalids, a selection of cheap dishes, and numerous useful miscellaneous receipts [recipes] in the various branches of domestic economy. By Mistress Margaret Dods. Edinburgh, Scotland: Oliver & Boyd; London: Simpkin & Marshall. 476 p. See p. 248-49. Illust. 20 cm. The 1st edition was 1826.

• **Summary:** Soy [sauce] is mentioned in two recipes, identical to those in the 1829 ed., but on different pages. "459. To hash a calf's-head" (p. 247-48). "460. Mock-turtle, of calf's-head" (p. 248-49).

Note: Christian I. Johnstone lived 1781-1857. Mistress Margaret Dods is a pseudonym for Christian Isobel Johnstone who lived 1781-1857. Address: Of the Cleikum Inn, St Ronan's.

700. Carolinian, A. 1834. The introduction of exotics. *Southern Agriculturist* (The) 7:629-31. Dec. [1 ref]

• **Summary:** The author begins by reflecting on the widely held feeling that times past were better than the present, but that the present generation often thinks—out of vanity—it is more intelligent than those preceding it. "These reflections have occurred to me in looking over a paper, published above seventy years ago [i.e., before 1764], which furnishes a catalogue [sic] of foreign plants, suitable to this country, and recommending their introduction among us. What the fathers did in these respects, the sons can scarcely hope to equal... The wide world appears to have been searched and made tributary to the resources of South-Carolina..."

"The paper referred to, contains the following catalogue:—" Seventy-eight plants are listed with both their common American and scientific names. One of these is: "Daidser: a kind of kid bean, *Dolichos soja*."

Note 1. The author's name may mean simply a person from the Carolinas. This journal was published in Charleston, South Carolina.

Note 2. This is the earliest document seen (May 2004) that contains the word "Daidser," which should probably be "Daizu" or "Daidzu" [Japanese words for "soybean"]. The term "Dolichos Soja" was first used in 1749 by Linnaeus in his *Materia medica, per regna tria naturae*.

First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished.

Note 3. The information on soybeans in this publication probably comes from a publication by John Ellis titled "A catalog of such foreign plants as are worthy of being encouraged in our American colonies for the purposes of medicine, agriculture and commerce." Originally published as a pamphlet, it was then reprinted in the *Transactions of the American Philosophical Society* in 1771 or 1772 (1:259). Concerning the soybean it states: "Dolichos soja Linn. Sp. 1023. A kind of kidbean called Daidzu. Used for making Soye* or Indian Ketchup." The four key pairs of similar terms are: (1) "catalogue" and "catalog." (2) "a kind of kid

bean” and “a kind of kidbean.” (3) “Daidser” and “Daidso.” And (4) “Dolichos soja.”

701. Shankey (J.). 1835. Classified ad: Chinese, Persian, and Indian rarities. *Scotsman (Edinburgh)*. Feb. 14. p. 1.

• **Summary:** “Mr. Shankey has, for a short time, returned to Edinburgh, and respectfully announces that he is now selling by Private Sale, a large and superb assemblage of Eastern Productions, at No. 70, Prince’s Street.

“This splendid Collection of rare and costly articles comprises... Otto of Roses, Chinese Soy, Currie Powder, Preserved Ginger,...” Address: No. 70, Prince’s Street, Edinburgh.

702. Ellis and Son. 1835. Sales by auction: Extensive stock of India, foreign and English China and glass,... (Ad). *Times (London)*. March 18. p. 8, col. 1.

• **Summary:** “... fine India soy [sauce],...” Address: 36, Fenchurch-street [London].

703. Balbi, Adriano; Bradford, Thomas Gamaliel. eds. 1835. An abridgement of universal geography, modern and ancient: Chiefly compiled from the *Abrégé de Géographie* of Adrian Balbi. New York, NY: Freeman Hunt, & Co.; Boston, Massachusetts: William D. Ticknor; Philadelphia, Pennsylvania: Desilver, Thomas, & Co. 520 p. Illust. 28 cm.

• **Summary:** In the chapter on “Empire of Japan,” section 3 titled “Towns” states (p. 418): “Kio, or Meaco [Kyoto, or Miako], was for a long time the Capital, end contains the most remarkable edifices... Meaco is the centre of Japanese commerce and manufactures; silks, tissue, soy [sauce], and lacquered wares are purchased here in their greatest perfection;...”

704. Burnett, Gilbert Thomas. 1835. Outlines of botany: Including a general history of the vegetable kingdom,... Vol. 1. London: John Churchill. viii + 1190 p. See p. 666.

• **Summary:** “(2145.) *Sooja* is the name of a Japanese sauce, prepared from the seeds of a species of *Dolichos*, now made into a distinct genus, and called *Soja hispida*. The *Soja* of Japan is preferred as a sauce to the *Kitjap* of China; both, however, are imported into England in large quantities, and are here known Soy [sauce]. In bond it is worth about 6s. a gallon; but, after it has been adulterated, it is sold at 3s. and upwards a pint. The Japanese make a soup of the seeds, called *Miso*, which is one of their most favorite and common dishes, the natives eating of it three times a day. The Chinese also have a popular dish made of these seeds, called *Teu-hu* or *Tau-hu* [tofu], which looks like curd; and, though insipid in itself, yet with proper seasoning is rendered agreeable and wholesome.”

Note: Burnett, like Miller (1807) and Don (1832) before him, associates the word “Kitjap” with Chinese rather than with Indonesian soy sauce, and reports that both are imported

into England in large quantities. The Japanese product was clearly called and sold as “soy” in England. But what was the Chinese product called and sold as? Was it sold as “real” ketchup, catsup, catchup, etc.? Address: F.L.S., Prof. of Botany in King’s College, London.

705. Dictionnaire de l’Académie française. Sixième édition: Soy [Dictionary of the French Academy, 6th ed.: Soy]. 1835. Paris: Institut de France, and Librairie de Firmin Didot Frères. See Vol. 2, p. 774. [Fre]

• **Summary:** Soy, singular masculine noun. Pronounced so-EH (*Soë*). A type of sauce, of which the usage has come from Japan.

Note: This is the earliest French-language document seen (April 2012) that uses the word Soy to refer to soy sauce.

706. Taylor and Grignon. 1836. Classified ad: Bengal curry powder. *Times (London)*. Jan. 11. p. 8, col. 2.

• **Summary:** "... electric battery, books, Indian Soy [sauce], ends of broad cloth,..." Address: 38, King-street, Covent-garden [London].

714. Davis, John Francis (Sir). 1836. *The Chinese: A general description of the empire of China and its inhabitants*. 2 vols. London: Charles Knight & Co. Vol. 1, iv + 395 p. See vol. 1, p. 303. Illust. Index. 20 cm. Series: Library of Entertaining Knowledge.

• **Summary:** Chapter VIII, titled "Manners and customs," contains a long discussion of food and drink in China (p. 298-321) and states: "The following description of a Chinese dinner, from the pen of our friend Captain Laplace of the French navy, although rather a long extract, is given with so much of the characteristic vivacity of his countrymen, and so well conveys the *first impression* of a scene not often witnessed by Europeans, that it is introduced without further apology."

"The first course was laid out in a great number of saucers of painted porcelain, and consisted of various relishes in a cold state, as salted earthworms, prepared and dried, but so cut up, that I fortunately did not know what they were until I had swallowed them... All these et-cæteras, including among the number a liquor which I recognized to be soy [sauce], made from a Japan bean, and long since adopted by the wine-drinkers of Europe to revive their faded appetites or tastes, were used as seasoning to a great number of stews which were contained in bowls, and succeeded each other uninterruptedly" (p. 302-03).

The author finds great difficulty holding and using "the two little ivory chop sticks, tipped with silver... I contrived to eat with tolerable propriety a soup prepared from the famous birds'-nests, in which the Chinese are such epicures. This substance thus served up is reduced to very thin filaments,

transparent as ising-glass [isinglass], and resembling vermicelli, with little or no taste*." (Footnote: *") It is generally accompanied with pigeons'-eggs, boiled hard, and eaten with soy." (p. 304).

"Besides this vegetable [pe-tsae or white-cabbage, a species of brassica], the northern provinces consume millet and the oil of sesamum, as general articles of diet. Many of the cottagers were observed to possess the means of independent support, in the patches of cultivation which surrounded their huts, being supplied in many cases with a small and simple mill, worked by an ass, for the expression of the sesamum-oil. The vegetable oils which are used to the southward are obtained from the *Camellia oleifera*, and the *Arachis hypogæa* [peanut] as well as the *Ricinus*." (p. 312).

In Chapter I, titled "Early European intercourse," the famous incident involving James Flint in China (p. 60-63) is described, noting that Flint was "conveyed to a place called Tsien-shan, or Casa Bianca, near Macao, where he was imprisoned, but pretty well treated, though all correspondence was cut off... Mr. Flint remained in prison from March, 1760, to November, 1762, when he was carried by the Chinese to Whampoa, and put on board the ship *Horsendon*, to be conveyed to England."

Note 1. Two editions of this book were published by the same publisher under the same title in 1836. Only the pagination is different. The edition cited above has "The Library of Entertaining Knowledge" written at the top of the title page. The other edition, which lacks this series heading, discusses (in the exact same words cited above) soy on p. 322-23, sesamum [sesame] and peanut oils on p. 332-33, and James Flint on p. 58-62.

Note 2. This is the earliest English-language document seen (Aug. 2007) that uses the word "sesamum" (not as a scientific genus name) to refer to sesame seeds, or the term "sesamum-oil" or "oil of sesamum" to refer to sesame oil.

Note 3. This is the earliest English-language document seen (Sept. 2006) that contains the term "vegetable oils" (or "vegetable-oil" or "vegetable-oils").

Note 4. The author, John Francis Davis, lived 1795-1890. Address: Esq., F.R.S., &c. Late His Majesty's Chief Superintendent in China.

715. *Dictionnaire des productions de la nature et de l'art* [Dictionary of the productions of nature and of art...]. 1836. Brussels, Belgium: Imprimerie de Balleroy. See Vol. 2, p. 237. [Fre]

• **Summary:** Soja. Soy sauce (*Le soja*) is a liquid (*liqueur*) prepared with the seeds of the dolich of Japan [soybean]. The dolich is a plant of the leguminous family and of the genus of diadelphia decandria (*diadelphie déandrie*): it contains 16 known species.

Note 1. This is the earliest French-language document seen (April 2012) that uses the term *Le soja* to refer to soy sauce.

Note 2. The subtitle of this book is: *Qui sont l'objet du commerce tant de la Belgique que de la France* [Which are the object of commerce for both Belgium and France].

716. Murray, Hugh; Crawford, John; Gordon, Peter; Lynn, Thomas; Wallace, William; Burnett, Gilbert. 1836. An historical and descriptive account of China: Its ancient and modern history, language,... geology, botany, and zoology. Vol. 3. 2nd ed. Edinburgh: Oliver & Boyd; London: Simpkin, Marshall, & Co. 461 p. Illust. Index.

• **Summary:** This comprehensive, almost encyclopedic, book was compiled by reading all accounts of travel in China. Every aspect of China and Chinese life is discussed in 9 chapters. Chapter 8 (p. 331-86) is a "Conspectus of the flora of China... and the important uses to which the important plants are applied by the Chinese.

Page 337-38: "The *lock-soy* of China is a kind of vermicelli made from rice."

Pages 321 and 357 lists many *Dolichos* species, including *D. Soja*.

Pages 357-58: "Many leguminous plants are cultivated by the Chinese both for ornament and use. Peas, beans, haricots, and other pulse, such as some species of *dolichos*...

"Sometimes whole fields of beans were observed by Staunton; and at others the small spots accidentally left vacant near the edges of banks, or along ridges of corn, the *dolichos* [soybean] was planted. The seeds of this plant are like those of the kidney-bean, and are usually dressed and eaten like French beans. The pods, however, are from one to two feet in length... From the seeds of the *soja* [soybean] the peculiar savoury sauce known under the name of soy is made, and the *teu-heu* or *tau-hu* [tofu] which is a very popular dish in China, is prepared from the seeds of this plant." Address: 1. F.R.S.E.; 2. Esq.; 3. Esq.; 4. Captain; 5. F.R.S.E., Prof. of Mathematics in the Univ. of Edinburgh; 6. Esq., Late Prof. of Botany, King's College, London.

717. Foster (John). 1837. Classified ad: Has just received an extensive and prime assortment of W.I. [West India] goods & groceries. *New Hampshire Sentinel* (Keene). Dec. 7. p. 1.

• **Summary:** "... Water, Milk and Sugar Biscuit; Tomato, Walnut and Mushroom Ketchups; Canton Soy [sauce; from China]; Olives;..."

Note: This is the earliest document seen (July 2011) concerning soybean products (soy sauce) in New Hampshire. This document contains the earliest date seen for soybean products in New Hampshire (Dec. 1837); soybeans as such have not yet been reported. Address: Keene.

718. A Lady (Frances H. Green). 1837. The housekeeper's book: Comprising advice on the conduct of household affairs in general. Philadelphia, Pennsylvania. xvi + 217 p. See p. 82, 99. *

• **Summary:** "Perch boiled: Put them into cold water, and let

them boil carefully; serve with melted butter and soy" (p. 82).

"To make soy: One pound of salt, two pounds of common sugar, fried for an hour and a half over a slow fire; add to this three pints of boiling water, essence of anchovies about half a pint, a few cloves, and a bunch of sweet herbs; boil together till the salt is dissolved; when cold bottle it for use."

Note: In the last recipe, soy is not an ingredient. Address: Philadelphia.

719. **Product Name:** Worcestershire Sauce.

Manufacturer's Name: Lea and Perrins.

Manufacturer's Address: Broad Street, Worcester, England.

Date of Introduction: 1837. January.

Ingredients: Incl. vinegar, soy sauce, anchovies or anchovy sauce.

Wt/Vol., Packaging, Price: Bottle.

How Stored: Shelf stable.

New Product-Documentation: Ad in *Times* (London).

1844. July 19. p. 11, col. 5. "Lea and Perrin's Worcestershire Sauce, prepared from the recipe of a nobleman in the country."

Times (London). 1876. "High Court of Justice, July 26, Chancery Division. (Before the Master of the Rolls.) *Lea v. Millar*." "It appeared to his Lordship to be established that Messrs. Lea and Perrins' predecessors in business either invented or obtained the recipe for an article to which they gave the name of Worcestershire sauce, and that they were the first persons to sell an article by that name. This was about the year 1836, and within a very few, probably not more than two, years afterwards other people, of whom one Batty seemed to be the first, began to sell an article under the same name. Indeed the name, within a very few years after it was first used by Messrs. Lea & Perrins, appeared to have become a common name in the trade;..."

Berg and Toit. 1938. *Farming in South Africa*. Oct. p. 392 "The soybean: Its production and industrial use." A black-and-white photo shows two small jars of this sauce. Only the words "Lea and Perrins" are legible. The product is made in England.

Louise Wright. 1975. *The Road from Aston Cross: An Industrial History, 1875-1975*. Imperial House, Leamington Spa, Warwickshire, England: Smedley-HP Foods Ltd. Page 32 states that Mr. Lea and Mr. Perrins "believed in having friendly dealings with their overseas agents. Foremost among them were their New York agents, John Duncan & Sons. Established since 1819 as importers of wines, quality foodstuffs and preserves, they began to handle Worcestershire Sauce in 1840. Soon, they were handling ever-increasing amounts." Page 30 states that the Lea & Perrins partnership in Worcester was created on 1 Jan. 1823 (New Year's Day).

Note 1. We are not told when Lea & Perrins Worcestershire sauce started to be made commercially, or when the first bottle of Worcestershire sauce was sold—a glaring omission!

Page 31 states: “In 1842, Lea & Perrins sold 636 bottles [of Worcestershire Sauce]. In 1845, a manufactory was set up in Bank Street, Worcester. Ten years later the yearly sales were up to 30,000 bottles of Worcestershire Sauce.” In 1897 “it became necessary to build a new factory in Midland Road, Worcester.” Page 33 states: “By 1875 the demand for Worcestershire sauce had spread throughout the United States. It was agreed to import the sauce in casks and bottle it in New York.” In about 1902 the sauce was first manufactured in New York. In 1910 production was moved to a nine storey building on West Street, New York.

Note 2. This is the earliest known commercial soy product (April 2012) that uses soy sauce as a major ingredient. No doubt there were much earlier products in Japan, China, etc. but we have record of them until 1848 when Inari-zushi originated.

Boston Globe. 1987. Sept. 30. Gives address only.

Letter from J.W. Garnett, Factory General Manager, Lea & Perrins Ltd., P.O. Box 31 Registered Office, Midland Road, Worcester WR5 1DT, England. 1991. Jan. 29. The Lea & Perrins Company of Worcestershire was purchased by HP Foods in 1930 and as such operates as a brand in its own right with general control coming from HP Foods. The Lea & Perrins Worcestershire Sauce is still manufactured in the Midland Road Factory, Worcester, and has been since 1896. “I am certain that Lea & Perrins’ Worcestershire Sauce contained soy sauce up to 1940 when supply became extremely difficult due to the Second World War. We have a recipe dated 1948 which records the use of soy sauce as being discontinued, so we assume that it was not re-introduced following the end of Second World War. I’m sorry I cannot be more specific.”

“BSN group [B.S.N. Ltd.] purchased HP Foods from Hanson Trust in July 1988. BSN is a large French multinational company; their brands include Evian and Dannon. For details see the book titled *The Road to Aston Cross*, a copy of which I am enclosing with our complements.”

Keogh, Brian. 1997. *The Secret Sauce: A History of Lea & Perrins*. Worcestershire, England: Leaper Books. viii + 135 p. Lea & Perrin’s Worcestershire sauce “has been produced commercially in Worcester since 1837, basically to the same secret formula and process. It was first made at 68 Broad Street, Worcester, England, in the back of the chemist shop owned by the two men who created it: Mr. John Wheeley Lea (born 1791) and Mr. William Henry Perrins (born 1793). Both men were born in villages in Worcestershire. From the early 1840s it was widely exported (Introduction, p. vii). In Jan. 1823, Lea, an established chemist, took on Perrins as a partner. Their original catalog,

dated 1 Jan. 1823, which lists over 300 items from around the world, is still in existence. The catalog includes two ingredients of the sauce to be—anchovies and tamarinds. However the recipe for the sauce and the method for making it must remain a secret. By 1837 Lea and Perrins owned 3 chemist shops; they were now well established and successful chemists.

Worcester lay on the River Severn, which flows southward into the wide Bristol Channel, and which for centuries had been used to carry goods between Bristol and the Midlands. In 1815 the opening of the Birmingham-Worcestershire further increased traffic. In 1850 the Great Western finally brought its railway to Worcester (p. 1-5, 27, 35).

Note 2. During the 1800s, the ingredients used in making Worcestershire Sauce were a carefully kept secret. Forman (1886) was one of the first to state that soy sauce is used as an ingredient in Worcestershire sauce. Rorer (1902) repeated this idea, but in more detail, and for the first time in a cookbook. Fesca (1904) was the first to show this based on chemical analysis in a laboratory. At least 101 documents confirm this fact. During World War II, soy sauce was permanently replaced by HVP as an ingredient in Lea and Perrins Worcestershire Sauce (see Garnett 1991, above).

720. Woodblock print by Hiroshige showing shoyu being made in 19th century Japan. 1837.

• **Summary:** Utagawa Hiroshige III (also known as Ando Hiroshige) was a Japanese ukiyo-e artist who lived 1797-1858; the date of print is a guess, based on the dates he lived. The print is part of a series by Hiroshige on Japanese industries.

Note: A black-and-white photo of this print appears in the book titled *The Kikkoman Way of Fine Eating* (1973, p. 19), with the caption “Hiroshige print showing shoyu making (19th century).”

Note: We have been unable to find this print, or reference to it, in one large book about Hiroshige and his

prints. He did, however, create a series of color woodblock prints showing Japanese craftsmen and industries.

721. Randolph, Mary. 1838. *The Virginia housewife: or, Methodical cook*. Baltimore, Maryland: Plaskitt, & Cugle. 180 p. No index. 18 cm.

• **Summary:** The section on “Pickling” (p. 161) begins with the following recipes: “Lemon pickle. Tomato catsup. Tomato marmalade. Tomato sweet marmalade. Tomato soy. Pepper vinegar. Mushroom catsup.”

But what is “Tomato soy”? (p. 163). Surprisingly, it contains no soy [sauce], and the word “soy” is not even mentioned in the body of the recipe, only in the title.

Slice a bushel of tomatoes and 3 onions, layer with salt, and allow to stand for 3 days. Then boil the mass in an iron pot all day, stirring constantly.

“The next morning, pass the mixture through a sieve, pressing it to obtain all the liquor you can; and add to it one ounce of cloves, quarter of a pound of allspice, quarter of a pound of whole black pepper, and a small wine glass of Cayenne; let it boil slowly and constantly during the whole of the day—in the evening put it into a suitable vessel to cool; and the day after, bottle and cork it well: place in a cool situation during warm weather and it will keep for many years, provided it has been boiled very slowly and sufficiently in the preparation. Should it ferment. it must be boiled a second time.”

Note 1. “This is considered by some to be the first truly American cookbook and by all to be the first regional American cookbook.” Mary Randolph lived 1762-1828 (MSU introduction).

Note 2. This is the earliest document seen (May 2012) that contains the term “Tomato soy” or a recipe titled “Tomato soy.” Address: Virginia.

722. Ladies Ornamental Hair Emporium. 1839. Classified ad: For sale. *Rhode-Island Republican (Newport)*. March 13. p. 4.

• **Summary:** “... Canton Soy [sauce; from China] and Mushroom Catsup, for sale... Also, Mint, Tanzy, Rose, Orange and Peach Waters.”

Note: This ad also appeared in the April 17 issue of this newspaper. The latter is the last entry seen (Feb. 2006) in the Early American Newspapers database that mentions “Canton Soy.” Address: 137 Thames-street.

723. *Gentleman’s Magazine (London)*. 1839. Obituary: Mr. James Bird. 11:551. May. New Series.

• **Summary:** He died on March 26. At Yoxford, Suffolk. Mr. Bird set up “in a stationer’s shop and a small circulating library in the village of Yoxford, and with the help of miscellaneous stock in trade... With Hymn-books, Harvey’s Sauce, Tea-trays, and Candlesticks.”

724. Firth (Robert) and Co. 1839. Classified ad: This day, Wednesday, the 2d of Oct. Messrs. Robert Firth and Co. will sell by Public Auction,... *Bombay Times and Journal of Commerce (India)*. Oct. 2. p. 625.

• **Summary:** “... at their Rooms, an invoice of Damask Table Cloths,... several cases of Insects, Japan Soy [sauce], China Preserves, Lavender Water, Books,...”

725. Bateman, William. 1839. *Magnacopia: a chemico-pharmaceutical library of useful and profitable information for the practitioner, chemist and druggist*,... 3rd ed. London: Churchill. xii + 379 p. 15 cm.

• **Summary:** In the section on sauces (p. 272+): Sauce aristocratique (p. 272): “Pound green walnuts in a mortar, squeeze out the juice through a strainer, and let it stand to settle. Pour off the clear, and to every pint of juice add a pound of anchovies, one drachm each of cloves, mace, and Jamaica pepper (bruised). Boil together till the anchovies are dissolved, strain it off, and put in a good handful of shalots, and boil again. To every pint of the above, add half a pint of best brown vinegar, and three ounces of soy.”

Sauce au roi (p. 273): “Take a quart of best brown vinegar, three table spoonfuls each of soy and walnut ketchup, three shalots (cut small), one ounce of cayenne pepper, and four bruised cloves.

“Remark.—Keep these ingredients together for a month, and shake them frequently. Ketchups in sauces are not generally to be approved, except they are made at home, and can be warranted a perfect essence of the fruit, as they tend to thicken every description of cold meat sauces, which makes them unsightly and unsaleable.”

Quin sauce (p. 275): “The same as Sauce Aristocratique, leaving out soy.”

Harvey’s Sauce (p. 275): “Take quin sauce, six ounces; soy, two ounces; cayenne, two drachms; brown vinegar, four ounces.”

Piquante sauce (p. 275): “Take two ounces of cayenne pepper, a pint of brown vinegar, and an ounce of soy and port wine.”

Isle of Wight sauce (p. 276): “Take a quart of soy, ditto [a quart] of port wine, ditto of brandy, ditto of mushroom ketchup; mixed together.”

726. *Conversations on nature and art*. 1839. Philadelphia, Pennsylvania: Lea & Blanchard. 333 p.

• **Summary:** In Chapter 5, p. 97 contains this exchange: “Mrs. C. There is one piece of information which I can add to the account which we have just read; and that is the mode in which the Chinese prepare their bird’s-nest soup.

“Henrietta. We should like very much to hear it.

Mrs. C. The soup is served up with pigeons’ or plovers’ eggs floating on it... There being neither salt nor pepper in the preparation of this dish, it would be quite insipid were it not for vinegar and soy [sauce], which you use at pleasure*

(Footnote: *Dobell's Kamtchatka). "Esther. I have heard all kinds of strange stories about Soy, and should like very much to know what it is really made of.

"Mrs. C. Soy is made from a species of *Dolichos* (*D. Soja*). There follows a long excerpt about the mode of making soy from *Dobell's Travels* (1830).

Also discusses: Uses of sea weed (p. 92-94).

727. Graham, John. 1839. A catalogue of the plants growing in Bombay and its vicinity; spontaneous, cultivated or introduced, as far as they have been ascertained. Bombay: Printed at the Government Press. ix + 254 p. See p. 52. 22 cm. [5 ref]

• **Summary:** "205. *Soja*. W. & A. [Wight & Arnott 1834] *Diadelpia Decandria*. *Sooja*—name of a Chinese sauce prepared from the seeds.

"405. S. [*Soja*] *Hispidia* W. & A. 762. *Dolichos soja*. Rox. [Roxburgh] *Flora*. 3. p. 314. Jacq. [Jacquin] *Ik. Rar.* t. 145. An annual, hairy plant; flowers small, of a reddish purple; in gardens. In Japan the seeds are called *Miso* [sic, error based on Miller 1807], and are commonly eaten in soups (Don. [1832])

"206. *Dolichos*. L. *Diadelpia Decandria*. *Greek*, for long, -tedious: (Odys.) name given in allusion to the habit of the plants, sending forth long shoots. Gaert. t. 150. Lam. t. 610." The author then gives brief descriptions of *Dolichos uniflorus*, *D. falcatus*, and *D. sinensis*.

The title page reads: "Published under the auspices, and for the use of the Agri-Horticultural Society of Western India. To be continued and completed Printed by special permission, at the Government Press, Bombay." A quote from Linnaeus is on the title page. The author, John Graham, lived 1805-1839. Voigt (1845) notes that Dr. J. Graham was a professor of Botany at Edinburgh, Scotland. Contains a preface giving a short account of the author and a manuscript index of native names. Address: Deputy Post-Master General of Bombay.

728. Medhurst, Walter Henry. comp. 1839. An English and Japanese and Japanese and English vocabulary: compiled from native works. Batavia [Jakarta].

• **Summary:** Near the bottom of the title page we read: Printed by lithography. The text of the entire book is handwritten on very thin paper. The pages are unnumbered. The volume is divided into three parts, each with a title written only in Chinese characters. The Introduction begins: "The following compilation is with diffidence offered to the public, principally because the author has never been in Japan and has never had the opportunity of conversing with the natives." Medhurst knows Chinese, but not Japanese, and the text was written by a Chinese person who understands neither English nor Chinese—which explains why the book contains so many errors, as the author acknowledges.

Each page of this dictionary is divided into three vertical

columns: (1) The word(s) in English. (2) The Japanese word written in Roman letters (*Romaji*). (3) The Japanese word written in katakana (and sometimes also in kanji).

In section 7, titled "Food consumed by men," page 2 lists "bean flour—*mame no ko*" which is probably roasted soy flour or *kinako*. Page 4, under "drinkables," lists "soy—*s'ya*, *so e*" which is soy sauce or *shoyu*.

Note 1. This is the earliest English-language document seen (Dec. 2005) that uses the term *mame no ko*, or the term "bean flour—*mame no ko*" to refer to roasted soy flour.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term word *s'ya* or the word *so e* to refer *shoyu* or soy sauce.

Walter Henry Medhurst lived 1796-1857. Address: Christian Missionary, Batavia.

729. Ure, Andrew. 1839. A dictionary of arts, manufactures, and mines; Containing a clear exposition of their principles and practice. 2 vols. London: Longman, Orme, Brown, Greene & Longmans. vii + 1334 p. See Vol. 2, p. 1158. A 2nd London edition was published in 1840. [1 ref]

• **Summary:** "SOY, is a liquid condiment, or sauce, imported chiefly from China. It is prepared with a species of white haricots, wheat flour, common salt, and water; in the proportions respectively of 50, 60, 50, and 250 pounds. The haricots are washed, and boiled in water till they become so soft as to yield to the fingers. They are then laid in a flat dish to cool, and kneaded along with the flour, a little of the hot water of the decoction being added from time to time. This dough is next spread an inch or an inch and a half thick upon the flat vessel (made of thin staves of bamboo), and when it becomes hot and mouldy, in two or three days, the cover is raised upon bits of stick, to give free access of air. If a rancid odor is exhaled, and the mass grows green, the process goes on well; but if it grows black, it must be more freely exposed to the air. As soon as all the surface is covered with green mouldiness, which usually happens in eight or ten days, the cover is removed, and the matter is placed in the sunshine for several days. When it has become as hard as a stone, it is cut into small fragments, thrown into an earthen vessel, and covered with the 250 pounds of water having the salt dissolved in it. The whole is stirred together, and the height at which the water stands is noted. The vessel being placed in the sun, its contents are stirred up every morning and evening; and a cover is applied at night, to keep it warm and exclude rain. The more powerful the sun, the sooner the soy will be complete; but it generally requires two or three of the hottest summer months. As the mass diminishes by evaporation, well water is added; and the digestion is continued till the salt water has dissolved the whole of the flour and the haricots; after which the vessel is left in the sun for a few days, as the good quality of the soy depends on the completeness of the solution, which is promoted by regular stirring. When it has at length assumed an oily appearance, it

is poured into bags, and strained. The clear black liquid is the soy, ready for use. It is not boiled, but is put up into bottles, which must be carefully corked. Genuine soy was made in this way at Canton, by Michael de Grubbens. (See *Memoirs of Academy of Sciences of Stockholm* for 1803)."

In Vol. 1, under "Oils," a large table (p. 894-95) titled "List of plants which yield the ordinary Unctuous Oils of commerce" contains four columns: Number (1-41), plants, oils, and specific gravity. The oils include linseed oil, walnut oil, poppy oil, hemp oil, oil of sesamum, olive oil, almond oil, oil of behen or ben, cucumber oil, beech oil, oil of mustard, oil of sunflower, rape seed oil, castor oil, tobacco seed oil, palm kernel oil, grape seed oil, butter of cacao, cocoa nut oil, palm oil, laurel oil, ground-nut oil, piney tallow, oil of julienne, oil of camellia, oil of weld seed, oil of garden cresses, oil of deadly nightshade, cotton seed oil, colza oil, summer rapeseed oil, oil of radish seed, cherry-stone oil, apple seed oil, spindle tree oil, cornil berry tree oil, oil of the roots of cyper grass (*Cyperus esculenta*), henbane seed oil, horse chestnut oil, pinetop oil. Note that soybean oil is not mentioned.

Note 1. This is the earliest English-language document seen (July 2002) that contains the term "Ground-nut oil" (or "Groundnut oil").

Ure was a physician, an M.D. The title page states that this book is "Illustrated with twelve hundred and forty engravings on wood." Vol. I contains pages 1-744, and vol. II, pages 745-1334. Address: London.

730. Australian Auction Company. 1840. Entire cargo of the "Juliet." To be sold by public auction (Ad). *Sydney Gazette and New South Wales Advertiser (NSW, Australia)*. Jan. 9. p. 3.

• **Summary:** "On Monday, the 13th January next,... at 11 o'clock precisely."

"The Entire Cargo of the Barque Juliet from Java consisting of—1,546 Packages superior Black Teas, 7,857 [packages] Superior quality Sugar, 221 baskets fine white ditto [Sugar], 516 Bags Table Rice, 286 Bags Coffee,...125 Casks Arrack [palm wine],... 10 Barrels and 100 cases best Cognac Brandy,... 92 Baskets Salad Oil, 6 Ditto [Baskets] Japan Soy [sauce], 189 Cases French Wines,..."

Note: This is the earliest of 3 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term "Japan Soy." Address: The Mart, George-street [Sydney].

731. Kay (T.). 1840. Sales by auction: Important sale of foreign carpets,... (Ad). *Times (London)*. April 6. p. 8, col. 4.

• **Summary:** "... carved ivory chess men, fine old India Soy and currie powder... T. Kay begs to call the attention of the nobility and gentry, hotel and lodging-house keepers, to the above magnificent stock,..." Address: The Mart [London].

732. Faulkner's. 1840. Classified ad: India Soy, 1s. 6d. per bottle. *Times (London)*. June 8. p. 7, col. 2.

• **Summary:** "Essence of anchovies, 1s.; Reading sauce, 1s.; Harvey's ditto, 1s.; Universal ditto, 1s.; King of Oude, 1s. 3d.;... Cavice, 1s.; Ketchup, 9d.; Chili Tarragon, and raspberry vinegars, 1s...."

Note 1. This is the earliest document seen (Dec. 2005) in the *Times (London)* that uses the term "King of Oude" to refer to the name of a sauce, apparently coined by Faulkner. Oude (later Oudh) was a place in northern British India.

Note 2. Note that India Soy sells for twice as much as Ketchup—which is probably soy sauce from the Dutch East Indies. Unfortunately we cannot make a reliable price comparison since we are not told the size of the bottle in which each was sold. Address: Sauce and foreign warehouse, 44, Jermyn-street, St. James's [London].

733. Lea, Perrins, & Smith. 1840. Worcestershire Sauce (Ad). *Manchester Guardian (England)*. Oct. 17. p. 1.

WORCESTERSHIRE SAUCE.—So many sauces, under every variety of name, have been of late contending for public favour, that we have hesitated to extend beyond our own vicinity the introduction of a new one, which has, nevertheless, in a very short time, become much sought after and esteemed in other parts of the kingdom.—The Worcestershire Sauce is prepared by us from the favourite recipe of a nobleman of acknowledged *goût*. It possesses a peculiar piquancy; it is applicable to almost every dish, on account of the superiority of its zest; the diffusible property of its delicate flavour renders it the most economical, as well as the most useful of sauces.

LEA, PERRINS, & SMITH, Worcester and Cheltenham
Sold in Manchester by Messrs. Roach and Co. Market-street; Mr. Yates, Old Exchange, and Mr. Hutchinson, Old Church Yard.

• **Summary:** "So many sauces, under every variety of name, have been of late contending for public favor, that we have hesitated to extend beyond our own vicinity the introduction of a new one, which has, nevertheless, in a very short time, become much sought after and esteemed in other parts of the kingdom.—The Worcestershire Sauce is prepared by us from the favourite recipe of a nobleman of acknowledged *goût*; it possesses a peculiar piquancy; it is applicable to almost every dish, on account of the superiority of its zest; the diffusible property of its delicate flavour renders it the most economical, as well as the most useful of sauces.

"Lea, Perrins, & Smith, Worcester and Cheltenham. Sold in Manchester by Messrs Roach and Co., Market-street; Mr. Yates, Old Exchange, and Mr. Hutchinson, Old Church Yard."

Note: This is the earliest document seen (Feb. 2012) that mentions "Worcestershire Sauce," or Lea and Perrins, or "a nobleman" in connection with Worcestershire Sauce. The sauce must have been sold commercially by this time. What happened to Mr. Smith? Address: Worcester and Cheltenham.

734. Allen, R.; Allen, E. 1840. The Midland counties'

railway companion, with topographical descriptions... Nottingham, England: Printed by R. Allen. 148 p. See p. 143.

• **Summary:** Near the rear of the book, a 1/3 page display ad, under “Birmingham” reads (p. 143). “J.R. & I. Sherwood, Plated ware manufacturers, dinner tea, and coffee services, in elegant variety; Candlesticks and branches; Snuffer trays; Liquor, Cruet, and Soy Stands, &c.

“76, Lichfield Street, Birmingham.” Four illustrations show various plated wares. Address: 1. Nottingham; 2. Leicester. Both: Proprietors.

735. Goodrich, Samuel Griswold; Bradford, T.S. eds. 1840. A pictorial geography of the world: Comprising a system of universal geography, popular and scientific. Boston, Massachusetts: Otis, Broaders and Co.; New York, NY: Tanner and Disturnell. 1008 p. Illust. 28 cm. *

• **Summary:** Watts (1852) states: “Kio, or Meaco [Kyoto, or Miako], was for a long time the Capital, end contains the most remarkable edifices... Meaco is the centre of Japanese commerce and manufactures. Silks, tissue, soy [sauce] and lacquered wares, are purchased here in their greatest perfection,...” Note 1. This passage mentioning soy also appears in the 1856 ed. (p. 472) in the chapter on “Empire of Japan,” section 3 titled “Towns.”

Note 2. Issued in ten parts. “Illustrated by more than one thousand engravings. With a copious index, answering the purpose of a gazetteer.”

736. Holman, James. 1840. Travels in China, New Zealand, New South Wales, Van Diemen’s Land, Cape Horn, etc., etc. 2nd ed. London: George Routledge. viii + 519 p. Illust. Forms vol. 4 of the author’s *Voyage Round the World*.

• **Summary:** Mr. Holman was in southern China in Sept. and Oct. 1830. He visited Macao and Whampoa, but stayed at Canton, where the following events took place.

On the page titled “Mode of preparing soy” (p. 105): “He also sells soy [sauce], both of the kind made in China, and that which is brought from Japan. The latter is considered the best. There is a large manufactory of this article in the island of Honan, opposite Canton; and another at Whampoa.

“Soy is made from the seeds (or beans) of the *Dolichos Sooja*, and the process of preparing it is as follows:—The beans are first boiled soft, when nearly an equal quantity of wheat or barley flour is added. After this has gone through a regular process of fermentation, a quantity of salt is put in, sufficient to make a brine strong enough to float an egg, using three times as much water as the original quantity of beans. This compound is then left for two or three months, when it is pressed, and strained for use. It improves by age, and is best preserved in earthen jars, and bottles, well sealed.”

The page titled “Dine with Tin-Qua” (p. 139) describes his dinner at a Hong merchant’s house: “On dinner being

announced, we were conducted to a circular table, and each of us provided with a pair of ivory chopsticks mounted with silver, a silver ladle with the handle much curved, a small cup of soy, a saucer or stand for the bowls out of which we were to eat, and an elegant silver cup richly gilt, with two handles, mounted on a stand of similar material, and resembling in form an inverted saucer.”

Page 140: “The dinner commenced with a large bowl of birds’- nest soup, from which each person helped himself. We found it very insipid until flavoured with soy, as the necessary condiments of salt and pepper seem to be wholly neglected in Chinese cookery.” Also served “was a vegetable soup made of prepared sea-weed from the coast of Japan.” This dried weed is called Tay-choey. Address: R.N., F.R.S. [England].

737. Leslie, Eliza. 1840. Directions for cookery, in its various branches. Philadelphia, Pennsylvania: E.L. Carey & Hart. 468 p. Illust. Index.

• **Summary:** “Soy” [sauce] is mentioned as an ingredient in the following recipes: To boil trout (“For sauce, send with melted butter, and put some soy into it; or flavour it with catchup,” p. 54).

Quin’s sauce (p. 172). Since this was also a commercial product, and it contained soy [sauce] we will give the whole recipe: “Pound in a mortar large anchovies, moistening them with their own pickle. Then chop and pound six small onions. Mix them with a little black pepper and a little cayenne, half a glass of soy, four glasses of mushroom catchup, two glasses of claret, and two of black walnut pickle. Put the mixture in a small saucepan or earthen pipkin, and let it simmer slowly till all the bones of the anchovies are dissolved. Strain it, and when cold, bottle it for use; dipping the cork in melted rosin, and tying leather over it. Fill the bottles quite full.”

Harvey’s Sauce (p. 173). This was one of the most popular commercial sauces. “Dissolve six anchovies in a pint of strong vinegar, and then add to them three table-spoonfuls of India soy, and three table-spoonfuls of mushroom catchup, two heads of garlic bruised small, and a quarter of an ounce of cayenne. Add sufficient cochineal powder to colour the mixture red. Let all these ingredients infuse in the vinegar for a fortnight, shaking it every day, and then strain and bottle for use. Let the bottles be very small and cover the corks with leather.”

Tomato soy (p. 224). Although “soy” is in the title of this recipe, no soy sauce is called for as an ingredient. Another suitable title might be “Tomato catchup” (see below). The ingredients: 8 quarts tomatas [tomatoes], salt for layering, 2 ounces cloves, 1 ounce mace, 2 ounces black pepper, 3 “table-spoonfuls of cayenne, all powdered.”

The interesting chapter on “Catchups” (p. 174-78) contains detailed recipes for: Lobster catchup. Anchovy catchup. Oyster catchup. Walnut catchup. Mushroom

catchup. Tomata catchup. Lemon catchup. Sea catchup [with anchovies; keeps well at sea]. All are salty liquids that have been simmered, strained, bottled and corked. None contain “soy.” Note: To make “Tomata catchup,” mash and squeeze ripe tomatas, then boil with fine salt for 2 hours, stirring frequently. Strain through a fine sieve. Season with mace, cinnamon, nutmeg, ginger, and white or red pepper, all powdered fine. Boil until very thick, then bottle, cork, and seal. This is the earliest recipe seen titled “Tomata catchup.”

“Ground-nuts” are used as ingredients in 2 recipes: Cocoa-nut maccaroons [macaroons] (p. 352). Molasses candy (p. 365). Address: Philadelphia.

738. *Manchester Guardian (England)*. 1841. Domestic, miscellaneous, &c.: Chinese dinners. March 31. p. 4.

• **Summary:** From Saturday Magazine: “A festival given at Canton by one of the Hong merchants... to a select party of English, is thus described by one of the party. We sat down in number about fifteen... We were told we had the happiness to partake of stewed pigeon’s eggs, wild cat, fricassied [fricasseed] frogs, dried worms (particularly recommended as a *bonne bouche* for wine at dessert), sea slugs, sharks fins, and other delicacies, which, whatever they may really have been, were rendered extremely palatable by the application of a little Japan soy [sauce].

Note: It seems surprising that soy sauce from Japan would have been used at a banquet in Canton, China. How would the writer have known where the soy sauce had been made? How interesting if the Chinese were actually importing soy sauce from Japan at this time because they considered it superior to their own. Or perhaps the writer is using “Japan soy” as a generic term for all soy sauce.

739. Siebold, Philipp Franz von; Busk, M.M. 1841. *Manners and customs of the Japanese, in the nineteenth century: From recent Dutch residents of Japan, and the German of Dr. Ph. Fr. von Siebold*. London: John Murray. xi + 423 p. 20 cm. No index.

• **Summary:** This book was compiled from earlier sources, especially those of the first three physicians at Dejima, Japan.

Philipp Franz von Siebold, a learned German, lived 1796-1866. Note Sieb. & Zucc. Siebold’s German book titled *Nippon* was published in 1897. Japan is largely an unknown country. Europeans are excluded except for the Dutch factory at Dezima [Dejima]. Siebold, “like his talented and indefatigable predecessors, Kaempfer and Thunberg, held the situation of physician to the factory.”

In the chapter on “Banquets” we read (p. 186): “At entertainments of this description, each guest is served with a portion of every dish in a small bowl. Another bowl is placed beside him, and kept constantly replenished with rice, whilst the sauces and other condiments, of which, besides soy [sauce], are salted ginger and salted fish, are handed round by the servants of both sexes, who are in constant

attendance.”

The chapter on “Husbandry” states (p. 329): “Barley and wheat are likewise grown—the former for feeding the cattle; the latter is little valued, and chiefly used for cakes and soy. This last is made by fermenting together, under ground, wheat, a peculiar kind of bean, and salt. Beans of all sorts, some other vegetables, and various roots, are sedulously cultivated,...”

“Dr. Von Siebold’s Japanese museum [at Leyden] is said to be the finest in Europe, and far richer and in every respect superior to the Japanese rooms in the Royal Museum at the Hague.” (p. 297). Mrs. M.M. Busk is listed by some as the compiler of this book, but her name does not appear in this 1841 edition.

Note: Soy is not mentioned in this book.

740. Cooley, Arnold James. 1841. *The cyclopaedia of practical receipts in all the useful and domestic arts: Being a compendius book of reference for the manufacturer, tradesman, and amateur*. London: J. Churchill. vi + 281 p. See p. 207. 20 cm. *

• **Summary:** Cover title: “Cyclopedia of 3000 practical receipts.”

Page 207 mentions Quin’s sauce, Walnut Catsup, and soy [sauce]. Address: “By a practical chemist”.

741. Oken, Lorenz. 1841. *Allgemeine Naturgeschichte fuer aller Staende. Dritten Bandes dritte Abtheilung* [General natural history for all places. Vol. 3. Part 3]. Stuttgart, Germany: Hoffmann’sche Verlags-Buchhandlung. 2135 p. See p. 1661-62, *Die Soju-Bohne* (*P. hispida*). [3 ref. Ger]

• **Summary:** This seems to be the second translation of Kaempfer’s description of the soybean—(8) *Die Soju-Bohne* (*Ph. mungo, hirtus*)—and of miso and soy sauce into German; the first was by Bryant in 1785. Oken cites Kaempfer, Jacquin, and Plenck.

The line that mentions miso and soy sauce reads (p. 1661): *Aus reifen Bohnen macht man ein Gemüse (Miso) und eine scharfe Brühe (Sooju)*. Descriptions of how to make miso and soy sauce are then given. Address: Germany.

742. Penny cyclopaedia of the Society for the Diffusion of Useful Knowledge: *Soja hispida*. 1841. London: Charles Knight & Co. See vol. 22, p. 193-94. [2 ref]

• **Summary:** “*Soja Hispida* (Moench), *Soja Japonica* (Savi), the *Dolichos Soja* (Linn), a leguminous plant, native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to ‘form a favourite dish, called *ten-hu*, or *tau-hu* which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome’ (Don’s *Dictionary*). The Japanese call the seeds *Miso* [sic, error based on Miller 1807] and put them into soup, of which they

sometimes partake three times a day. They likewise prepare with them the sauce termed *Sooja* which has been corrupted into Soy.

“The beans are boiled until all the water is nearly evaporated, and they begin to burn, when they are taken from the fire, and placed in large wide-mouthed jars, exposed to the sun and air; water and a certain proportion of molasses or very brown sugar are added. These jars are stirred well every day, until the liquor and beans are completely mixed and fermented; the material is then strained, salted, and boiled, and skimmed until clarified, and will after this process become of a very deep brown colour, and keep any length of time. It has been stated that the gravy or juice of meat was used in preparing this condiment, but it appears to be entirely made from vegetable materials. There are two or three qualities of soy. To make the best requires much care and attention. Japanese soy is much esteemed in China on account of the superior manner in which it is made. Shopkeepers at Canton who sell soy have large platforms on the roofs of their houses, where the jars for preparing soy are arranged and exposed to the sun; for the consumption of soy is enormous. Neither rich nor poor can breakfast, dine, or sup without it; it is the sauce for all kinds of food; gives a zest to every dish, and may be said to be indispensable at a Chinese repast.’ (Dobell’s *Kamschatka*.) Soy is only sparingly used as a sauce in this country. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation.”

Note: This is the earliest document seen (May 2004) that uses the word “stomachic” in connection with soy sauce. *Merriam-Webster’s Collegiate Dictionary* (1998) defines stomachic (first used as a noun in 1735) as “a stimulant or tonic for the stomach.” Address: London, England.

743. Timbs, John. 1841. *Popular errors: Explained and illustrated*. London: Tilt and Bogue. vii + 376 p. Index. 17 cm.

• **Summary:** In Chapter 2, titled “Errors respecting the properties of food,” the section titled “Soy from black-beetles” (p. 86) states:

“Sailors have a notion that Soy [sauce] is made from cockroaches; and, however absurd the belief may appear, the reason for it is worthy of investigation. The Chinese at Canton have a large Soy manufactory, and they are particularly solicitous to obtain cockroaches from ships; from which circumstances sailors immediately conclude that it is for the purpose of making Soy from them. But, it is better established that cockroaches are used by the Chinese bait in fishing. The infusion of cockroaches is also used in medicine; and Mr. Webster, surgeon of H.M.S. *Chanticleer*, states that common salt and water, saturated with the juices of the cockroach, has all the odour, and some of the flavour and qualities, of Soy; so that the sailors’ notion, after all, may not be far from the truth.” Address: Editor... [England].

744. Johnson and Moore. 1842. Ex “Clifton” (Ad). *New Zealand Gazette and Wellington Spectator* (Wellington). Feb. 23. p. 1.

• **Summary:** Goods for sale from the sailing ship Clifton include: “... Chili vinegar, Mushroom and Walnut Ketchup, strong vinegar for pickling, India soy [sauce], anchovy, lemon pickle,...”

Note 1. This same ad appeared in at least 8 subsequent issues of this newspaper.

Note 2. This is the earliest document seen (Dec. 2009) concerning soybean products (soy sauce) in New Zealand. This document contains the earliest date seen for soybean products in New Zealand (Feb. 1842); soybeans as such have not yet been reported.

Note 3. This is the earliest of 306 documents seen (Nov. 2009) in the New Zealand Newspapers database (paperspast) that contains the term “India Soy.” The term was last used in New Zealand Newspapers on 24 June 1902.

Note 3. This is the earliest of 2,638 documents seen (Nov. 2009) in the New Zealand Newspapers database (paperspast) that contains the word “Ketchup” (regardless of capitalization). The word was last used in New Zealand Newspapers on 2 Oct. 1930.

Note 4. This is the earliest of 39 documents seen (Nov. 2009) in the New Zealand Newspapers database (paperspast) that contains the term “Walnut Ketchup” (regardless of capitalization). The term was last used in New Zealand Newspapers on 28 June 1906.

745. Fell (Alfred) and Co. 1842. Cargo of the Wave to be sold by auction (Ad). *Nelson Examiner and New Zealand Chronicle*. Oct. 22. p. 129, col. 1.

• **Summary:** Goods to be sold include: “... Nuts and raisins, India soy [sauce], olive oil, and bottled fruits, Pickles, sauces, mustard, and ketchup.” Address: Trafalgar Street.

746. Grinnell, Minturn & Co. 1842. Classified ad: Offer for sale. *New-York Daily Tribune*. Oct. 27. p. 4.

• **Summary:** “50 chests Lac Dye. 50 jars Chinese Soy. 100 cases German Soap—48 pipes Olive Oil.” Address: No. 78 South-street [New York City].

747. Fell (Alfred) and Co. 1842. Unreserved sale, for the benefit of those whom it may concern (Ad). *Nelson Examiner and New Zealand Chronicle*. Nov. 19. p. 145, col. 1.

• **Summary:** “... will submit for competition by public auction, on Wednesday next, the 23d instant, at their Warehouse... Three cases sauces, One case Indian Soy [sauce], Window Glass, 12 by 10.

“Terms at sale, which will commence Twelve o’clock punctually.”

Note: This is the earliest of 602 documents seen (Nov.

2009) in the New Zealand Newspapers database (paperspast) that contains the term “Indian Soy.” The term was last used in New Zealand Newspapers on 6 Dec. 1924. Address: Trafalgar Street.

748. A trip home with some home-spun yarns. 1842. London: Saunders and Otley. xvi + 424 p.

• **Summary:** Page 75: “... let me refer you to the late celebrated Quin, who was so excessively fond of him” [fish].

Page 76: “... and suggested that I might not like the Quin Sauce, (though in fact it proved excellent).”

749. Lee, N.K.M. (Mrs.). 1842. The cook’s own book, and housekeeper’s register: Being receipts for cooking every kind of meat, fish, and fowl;... A book of carving; and Miss Leslie’s seventy-five receipts for pastry, cakes, and sweetmeats. By a Boston housekeeper. Boston, Massachusetts: Munroe and Francis; New York: Charles S. Francis. xlviii + 300 + 37 p. No index. 19 cm.

• **Summary:** The recipes related to soy in this edition are very similar to those in the 1832 edition (which see)—in the same recipes on the same pages. “Soy” [sauce] is mentioned in recipes on pages xxiv, 28-29, 30, 44, 53, 67, 91, 122, 138, 173, 180, 182, 185 (Quin’s sauce), 186-87, 190 (Quin’s Sauce), 191, 227, 241. Catchup is mentioned throughout the book, including mushroom catchup, walnut catchup. Address: Boston, Massachusetts.

750. Ure, Andrew. 1842. A dictionary of arts, manufactures, and mines; Containing a clear exposition of their principles and practice. New York, NY: D. Appleton & Co. 1340 p. See p. 1164. [1 ref]

• **Summary:** At SOY [sauce], the text is identical to that found in Vol. II, page 1158, of the original 1839 edition published in London by Longman, Orme, Brown, Greene & Longmans (vii + 1334 p.). A second London edition was published in 1840. The title page states that this book is “Illustrated with twelve hundred and forty engravings on wood. From the second London edition.” It is the first American edition. Many other American editions were published including one in 2 volumes in 1856 (New York: D. Appleton & Co.), which see. The entry for SOY, in Vol. 2, p. 694-95, is also identical to that in the American 1842 ed. Address: London.

751. Faulkner’s. 1843. Classified ad: Bottled fruits, assorted, 12s. per dozen;... *Times (London)*. Jan. 24. p. 7, col. 4.

• **Summary:** “;... Indian soy [sauce], 1s. 3d. per bottle; essence of anchovies, shrimps, and lobsters, 1s.; Reading sauce, 1s.; Harvey’s ditto, Mogul or Chatny, King of Oude, Chili vinegar, &c. all 1s. each; ketchups, 9d.; pickles, various, 1s.; curry powder, 1s. 3d. per packet;...”

Note: This is the earliest document seen (Dec. 2005) that uses the word “Chatny” [probably “Chutney”] to refer

to the name of a sauce, apparently coined by Faulkner. Address: Italian and grocery warehouse, 44, Jermyn-street, St. James’s, three doors from Duke street [London].

752. Hickson (Samuel) and Son’s. 1843. Classified ad: Hickson’s sauces and pickles. *Times (London)*. Feb. 9. p. 2, col. 6.

• **Summary:** “The King of Oude’s sauce, superior tomata, essence of lobster, essence of shrimps, essence of Gorgona anchovies, Bickson’s sauce for fish, gravies, &c., genuine China soy [sauce], mushroom and walnut ketchup, lemon pickle, oyster sauce... Harvey and Reading sauces,... Bruce’s Madras curry and mulligatawny pastes, curry powder and chutnee [chutney]...”

Note: “China soy” probably refers to soy sauce made in China. Address: 72, Welbeck-street [London].

753. Lea and Perrin’s. 1843. Lea and Perrin’s “Worcestershire Sauce” (Ad). *Observer (London)*. March 5. p. 1.

• **Summary:** “Prepared from the recipe of a nobleman in the country. The above celebrated Sauce, has from the time of its introduction, been steadily progressing in public favour; its peculiar piquancy, combined with exquisite flavor, establish it of a character unequalled in sauces. Noblemen and those of acknowledged goût, pronounce it to be ‘the only good sauce;’ and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c, especially unrivalled. As a rapidly increasing inquiry is now made for it in all parts of the kingdom, the proprietors beg to state that druggists, grocers, and others may be supplied by their agents:—Messrs. Barclay and Sons, Farringdon-street; Mr. J. Harding, King-street, Stepney; Messrs. Metcalfe and Co., 16 Southampton-row; and by the wholesale oil and Italian warehousemen in London, upon the same terms as at their warehouse at Worcester—Sold retail by the usual venders of sauces in half-pint bottles at 1s. 6d., pints 2s. 6d., and quarts 5s. each, with the proprietors’ stamp over the cork of every bottle.”

Note: This is the earliest document seen (March 2012) that gives prices for Lea and Perrins’ sauce, or that shows them selling it in three sizes of bottles, or that uses the word “celebrated” to describe Lea & Perrin’s Worcestershire sauce. Address: Worcester.

754. *Naval and Military Gazette: East India and Colonial Chronicle (London)*. 1843. Lea & Perrin’s ‘Worcestershire Sauce’ (Ad). April 1. p. 208, col. 2. *

• **Summary:** This small ad states: “prepared from the recipe of a nobleman in the country.”

Note: This article was cited by the *Oxford English Dictionary* (1989) at “Worcestershire Sauce.” Soyinfo Center has not seen it. This periodical was published from 1833 to 1886. The British Library owns only Jan. 1861 to Dec. 1874. Shelfmark: Newspapers9ab. Address: Worcestershire,

England.

755. Otterson (F.). 1843. Ex Phoebe—(Ad). *Nelson Examiner and New Zealand Chronicle*. April 8. p. 225.

• **Summary:** “24 cases consisting of... salad oil, olives, Cayenne pepper, walnut catsup, mushroom catsup, Harvey sauce, Reading sauce,...”

756. Watson (William R.). 1843. Drugs, medicines, and select groceries (Ad). *Palladium (The) (Charlottetown, Prince Edward Island, Canada)*. Dec. 28. p. 4.

• **Summary:** “Has just received per Acadian from Greenock, and Jane Sprat from Halifax, his winter supply... Mustard, assorted Pickles, do. [ditto = assorted] Sauces, Real Indian Soy, Olives, Capers, &c...”

Note: This is the earliest document seen (Feb. 2010) concerning soybean products (soy sauce) in Prince Edward Island, Canada. This document contains the earliest date seen for soybean products in Prince Edward Island (Dec. 1843); soybeans as such have not yet been reported. Address: No. 14, Cheapside.

757. Lea and Perrins. 1843. Lea and Perrin’s “Worcestershire Sauce;” (Ad). *Pictorial Times (England)*.

• **Summary:** “prepared from the Recipe of a Nobleman in the Country.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour; its peculiar piquancy, combined with exquisite Savour, establish it of a character unequalled in the sauces. Noblemen and others of acknowledged gout [taste], pronounce it to be ‘the only good sauce;’ and for enriching gravies or as a zest for fish, curries, steaks, game, cold meat, &c. especially unrivalled. As a rapidly increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents:—Messrs. Barclay and Sons, Farringdon Street; Mr. J. Harding, 59, Ling St., Stepney; Messrs. Metcalfe and Co., 16, Southampton Row; and by the wholesale oil and Italian warehousemen in London, upon the same terms as at their warehouse at Worcester.—Sold retail by the usual venders of sauces in half-pint bottles at 1s. 6d. pints 2s. 6d. and quarts 5s. each, with the Proprietors’ stamp over the cork of every bottle.” Address: [Worcester, England].

758. Waterston, William. 1843. A cyclopædia of commerce, mercantile law, finance, and commercial geography:... Edinburgh, Scotland: Oliver & Boyd; London: Simpkin, Marshall, & Co. iv + 684 + 39 + 128 p. 23 cm.

• **Summary:** The section titled “Soy” (p. 627) states: “Soy, a peculiar savoury sauce made from the bean of the *Soja*, a species of *Dolichos* growing in the eastern parts of Asia. Genuine soy is well flavoured, thick, brown, and clear; and when shaken in a glass, it should leave a coat on the surface of a bright yellowish brown colour. It is imported

from Canton, but the best is brought from Japan by way of Batavia” [Dutch East Indies].

Note 1. Following p. 672 (the end of the basic cyclopædia) is a one-page table titled “Tariff of duties exigible in the United Kingdom.” For each imported item there are two rates: (1) From foreign countries, and (2) From British possessions. Tariffs are levied on beans (10 pence/bu), “oil-seed cakes” (1 shilling/ton), and some seeds (“Cole, flax, hemp, rape, sesamum;” 1 pence/qr [pence/quarter; in the UK a “quarter” is usually a quarter of a hundredweight {112 lb} or 28 lbs]).

Note 2. No soybeans or soy cakes were being imported to England at this time. Soy [sauce] is not mentioned. At the end of the book is an alphabetical “Supplement” and three maps of Great Britain.

Note 3. This is the earliest English-language document seen (March 2005) that mentions “rape” seeds (or the rape plant), or that mentions “Cole” a seed very similar or identical to rape seed.

Note 4. This is the earliest English-language document seen (Sept. 2006) that contains the term “oil-seed” (or “oil seed”).

Note 5. This is the earliest English-language document seen (Sept. 2005) that contains the term “oil-seed cake” (or “oil-seed cakes” or “oil seed cake”). Address: Accountant, Edinburgh [Scotland].

759. Faulkner’s. 1844. Classified ad: Bottled fruits, 12s. per dozen;... *Times (London)*. Feb. 21. p. 11, col. 1.

• **Summary:** “;... Indian soy [sauce], 1s. 3d. per bottle. Essences—anchovies, lobsters, and shrimps, 1s. Harvey’s sauce, 1s.; Reading sauce, 1s.; King of Oude and Chetna sauces, 1s.; Chili, Tarragon, and other vinegars, 1s.; ketchup, 9d.; pickles, 1s. Salad oil, curry powder,... equally cheap.”

Note: This is the earliest document seen (Dec. 2005) in the *Times* (London) that uses the word “Chetna” [probably “Chutney”] to refer to the name of a sauce, apparently coined by Faulkner. Address: Grocers and oilmen, 44, Jermyn-street, St. James’s, three doors from Duke street [London].

760. Faulkner’s. 1844. Classified ad: Westphalia hams, 9d. per lb.;... *Times (London)*. June 27. p. 11, col. 4.

• **Summary:** “;... India soy [sauce], 1s. 3d. per bottle. Essences—anchovies, lobsters, and shrimps, 1s.; Harvey’s sauce, 1s.; Reading sauce, 1s.; King of Oude and Chetna [Chutney?] sauces, 1s.;...” Address: Grocers and oilmen, 44, Jermyn-street, St. James’s, three doors from Duke-st. [London].

761. Lazenby (E.) and Son. 1844. Classified ad: Harvey’s Fish Sauce. *Times (London)*. June 27. p. 11, col. 4.

• **Summary:** “Having numerous complaints from families who are imposed upon by the spurious imitations of their Harvey’s Fish Sauce, request purchasers to observe that

each bottle of the genuine article bears the name of 'William Lazenby' on the back, in addition to the front label used so many years and signed 'Elizabeth Lazenby,' E. Lazenby and Son's Essence of Anchovies continues to be prepared with that peculiar care which has rendered it so justly admired as sauce for salmon, turbot, cod, soles, eels, &c. and is manufactured only at their old-established fish-sauce warehouse..." Address: Fish-sauce Warehouse, No. 6, Edward-street, Portman-square [London].

762. Bell (Lucius) & Co. 1844. Wholesale and retail grocers (Ad). *Globe (The) (Toronto, Canada)*. July 9. p. 4.

• **Summary:** This company in Rochester, New York (on the central southern shore of Lake Ontario), is advertising in a newspaper in Toronto, Ontario, Canada (on the northeastern shore of Lake Ontario). The two cities are about 90 miles apart as the crow flies.

"We propose to keep in Rochester, an assortment of Teas, Coffees, Fruits, Spices, Sugars, &c., embracing every variety and quality that can be found in the finest establishments in the City of New York.

A long list of goods, divided into categories, is given.

"Sauces, &c. Canton Soy [sauce; from China], Mushroom, Walnut and Tomato Catsup, Harvey, Reading. Anchovy, John Bull, Quinn and General Sauce." Address: No. 26, Buffalo St., Second Store East of Arcade Hall, Rochester, New York.

763. Lea and Perrins. 1844. Classified ad: Lea and Perrins' Worcestershire Sauce,... *Times (London)*. July 15. p. 11, col. 1.

• **Summary:** "... prepared from the recipe of a nobleman in the country. 'Great Western Steam-ship, June 6, 1844.—The cabin of the Great Western has been regularly supplied with Lea and Perrins' Worcestershire Sauce, which is adapted to every variety of dish from turtle to beef, from salmon to steaks, to all of which it gives a famous relish. I have great pleasure in recommending this excellent sauce to captains and passengers for its capital flavour, and as the best accompaniment of its kind for a voyage.—(Signed) James Hosken.' Sold wholesale by the proprietors, Messrs. Lea and Perrin, Worcester; Messrs. Barclay and Sons, Farringdon street; and the principal oil and Italian warehousemen in London; and retail by the usual venders of sauces."

Very similar ads appeared in the July 19 issue (p. 11, col. 5) and in the Aug. 23 issue (p. 8, col. 1). In both of these, the name is written "Lea and Perrin's" instead of "Lea and Perrins'" Worcestershire Sauce. Address: [Worcester, Worcestershire, England].

764. Lea & Perrin. 1844. Classified ad: Lea & Perrin's [sic] Worcestershire Sauce,... *Indian Mail (The)* 1(18):574. Oct. 4.

• **Summary:** "... prepared from the recipe of a nobleman in the country.

"Great Western Steam-ship, June 6, 1844.—The cabin of the Great Western has been regularly supplied with Lea and Perrin's Worcestershire Sauce, which is adapted to every variety of dish, from turtle to beef, from salmon to steaks,—to all of which it gives a famous relish. I have great pleasure in recommending this excellent sauce to captains and passengers for its capital flavour, and as the best accompaniment of its kind for a voyage.

"(Signed) 'James Hosken.'

"Sold wholesale by the proprietors, Messrs. Lea & Perrin [sic], Worcester; Messrs. Barclay and Sons, Farringdon street; and the principal Oil and Italian warehousemen in London; and retail by the usual venders of sauces."

This ad also appeared in this same periodical on 6 Dec. 1844 (p. 638).

Note: This is the earliest ad seen (Feb. 2012) for Worcestershire Sauce outside of England. The new product will soon be sold worldwide, starting in British colonies. Address: Worcester, England.

765. Dodwell and Miles' India and London Civil and Military Agency. 1844. Classified ad: Dodwell and Miles, having an experience of thirty year's service... *Bombay Times and Journal of Commerce (British India)*. Nov. 20. p. 746, col. 1.9.

• **Summary:** "... in the Civil and Military Department of the Hon. Company's Home Establishment, they are enabled to afford correct and exclusive information upon the several points of regulation which may affect the service generally;..."

After the section on "Pickles," the section on "Sauces" lists: "Day's City of London, Genuine India Soy, Essence of Anchovies, Tomata, Quin's Sauce, Cherokee Universal, Camp Sauce, Harvey's Reading, Brighton, Lemon Pickle, Mushroom Catchup, Walnut Catchup,... all at 16s. in half pints, 32s. in pints.

Note: This ad also appeared in the Dec. 7 (p. 786) and 4 Jan. 1845 (p. 10), and 8 Feb. 1845 (p. 92) issues of this newspaper.

766. Butman (Benjamin) & Co. 1844. Classified ad: Wholesale and retail grocers. *Barre Patriot (Massachusetts)*. Nov. 22. p. 4.

• **Summary:** "... Walnut, Mushroom, and Tomato Ketchup—India Soy [sauce]—Canton Preserved Ginger —..."

Note: This is the last entry seen (Feb. 2006) in the Early American Newspapers database that mentions "India Soy." Address: No. 180 Main-street (Opposite American Temperance House), Worcester.

767. Leslie, Eliza. 1844. Directions for cookery, in its various branches. 20th ed. With improvements, supplementary receipts, and a new appendix. Philadelphia, Pennsylvania:

Carey & Hart. 511 p. Illust. Index.

• **Summary:** “Soy” [sauce] is mentioned on the following pages: 172 (Quin’s sauce), 173 (Harvey’s sauce), and 224 (Tomata soy). Recipes for using or making “catchup” are found throughout the book—including: Lobster catchup (p. 174): “This catchup, warmed in melted butter, is an excellent substitute for fresh lobster sauce at seasons when the fish cannot be procured, as, if properly made, it will keep a year.

“Take a fine lobster that weighs about three pounds. Put it into boiling water, and cook it thoroughly. When it is cold break it up, and extract all the flesh from the shell. Pound the red part or coral in a marble mortar, and when it is well bruised, add the white meat by degrees, and pound that also; seasoning it with a tea-spoonful of cayenne, and moistening it gradually with sherry wine. When it is beaten to a smooth paste, mix it well with the remainder of the bottle of sherry. Put it into wide-mouthed bottles, and on the top of each put a table-spoonful of sweet oil. Dip the corks in melted rosin, and secure them well by tying leather over them.

“In using this catchup, allow four table-spoonfuls to a common-sized sauce-boat of melted butter. Put in the catchup at the last, and hold it over the fire just long enough to be thoroughly heated.”

Anchovy catchup (p. 174-75): “Bone two dozen anchovies, and then chop them. Put to them ten shalots, or very small onions, cut fine, and a handful of scraped horseradish, with a quarter of an ounce of mace. Add a lemon, cut into slices, twelve cloves, and twelve pepper-corns. Then mix together a pint of port, a pint of madeira, and a pint of anchovy liquor. Put the other ingredients into the liquid, and boil it slowly till reduced one-half. Then strain it, and when cold put it into small bottles, securing the corks with leather.”

Oyster catchup (p. 175): “Take large salt oysters that have just been opened. Wash them in their own liquor, and pound them in a mortar, omitting the hard parts. To every pint of the pounded oysters, add a half pint of white wine or vinegar, in which you must give them a boil up, removing the scum as it rises. Then to each quart of the boiled oysters allow a tea-spoonful of beaten white pepper, a tea-spoonful of pounded mace, and cayenne pepper to your taste. Let it boil up for a few minutes, and then pass it through a sieve into an earthen pan. When cold, put it into small bottles, filling them quite full, as it will not keep so well if there is a vacancy at the top. Dip the corks in melted rosin, and tie leather over each.”

Walnut catchup (p. 175-76): “Take green walnuts that are young enough to be easily pierced through with a large needle. Having pricked them all in several places, throw them into an earthen pan with a large handful of salt, and barely sufficient water to cover them. Break up and mash them with a potato-beetle, or a rolling-pin. Keep them four days in the salt and water, stirring and mashing them every day. The rinds will now be quite soft. Then scald them with

boiling-hot salt and water, and raising the pan on the edge, let the walnut liquor flow away from the shells into another pan. Put the shells into a mortar, and pound them with vinegar, which will extract from them all the remaining juice. Put all the walnut liquor together, and boil and skim it, then to every quart allow an ounce of bruised ginger, an ounce of black pepper, half an ounce of cloves, and half an ounce of nutmeg, all slightly beaten. Boil the spice and walnut liquor in a closely covered vessel for three quarters of an hour. When cold, bottle it for use, putting equal proportions of the spice into each bottle. Secure the corks with leather.”

Mushroom catchup (p. 176): “Take mushrooms that have been freshly gathered, and examine them carefully to ascertain that they are of the right sort. Pick them nicely, and wipe them clean, but do not wash them. Spread a layer of them at the bottom of a deep earthen pan, and then sprinkle them well with salt; then another layer of mushrooms, and another layer of salt, and so on alternately. Throw a folded cloth over the jar, and set it by the fire or in a very cool oven. Let it remain thus for twenty-four hours, and then mash them well with your hands. Next squeeze and strain them through a bag.

“To every quart of strained liquor add an ounce and a half of whole black pepper, and boil it slowly in a covered vessel for half an hour. Then add a quarter of an ounce of allspice, half an ounce of sliced ginger, a few cloves, and three or four blades of mace. Boil it with the spice fifteen minutes longer. When it is done, take it off, and let it stand awhile to settle. Pour it carefully off from the sediment, and put it into small bottles, filling them to the top. Secure them well with corks dipped in melted rosin, and leather caps tied over them.

“The longer catchup is boiled, the better it will keep. You may add cayenne and nutmeg to the spices. The bottles should be quite small, as it soon spoils after being opened.”

Tomata catchup (p. 177): “Take a peck of large ripe tomatas [tomatoes]. Having cut a slit in each, put them into a large preserving-kettle, and boil them half an hour. Then take them out, and press and strain the pulp through a hair sieve. Put it back into the kettle, and add an ounce of salt, an ounce of powdered mace, half an ounce of powdered cloves, a small teaspoonful of ground black pepper, the same of cayenne pepper, and eight table-spoonfuls of ground mustard. Mix the seasoning with the tomatas pulp; let it boil slowly during four hours. Then take it out of the kettle, and let it stand till next day, in an uncovered tureen. When cold, stir into it one pint of the best cider vinegar. Put it into clean bottles, and seal the corks. It will be found excellent for flavouring stews, hashes, fish-sauce, &c.”

Lemon catchup (p. 177): “Grate the peel of a dozen large fresh lemons. Prepare, by pounding them in a mortar, two ounces of mustard seed, half an ounce of black pepper, half an ounce of nutmeg, a quarter of an ounce of mace, and a quarter of an ounce of cloves. Slice thin two ounces of

horseradish. Put all these ingredients together. Strew over them two ounces of fine salt. Add the juice of the lemons. Boil the whole twenty minutes. Then put it warm into a jar, and let it stand three weeks closely covered. Stir it up daily.

“Then strain it through a sieve, and put it up in small bottles to flavour fish and other sauces. This is sometimes called lemon pickle.”

Sea catchup (p. 178): “Take a gallon of stale strong beer, a pound of anchovies washed from the pickle, a pound of peeled shalots or small onions, half an ounce of mace, half an ounce of cloves, a quarter of an ounce of whole pepper, three or four large pieces of ginger, and two quarts of large mushroom-flaps rubbed to pieces. Put the whole into a kettle closely covered, and let it simmer slowly till reduced to one half. Then strain it through a flannel bag, and let it stand till quite cold before you bottle it. Have small bottles and fill them quite full of the catchup. Dip the corks in melted rosin.

“This catchup keeps well at sea, and may be carried into any part of the world. A spoonful of it mixed in melted butter will make a fine fish sauce. It may also be used to flavour gravy.”

Note: The word “catsup” is not mentioned. Address: Philadelphia.

768. Morrison, John Robert. 1844. A Chinese commercial guide: Consisting of a collection of details and regulations respecting foreign trade with China. 2nd ed., revised throughout... Macao: Published by the author. vii + 280 p. 24 cm.

• **Summary:** Section 6, “Description of the articles of export at Canton” (p. 131+), contains a long description of soy sauce (p. 141): “50. Soy. This is a condiment made from the *Dolichos* bean, which grows in China and Japan; the name is derived from the Japanese *siyau* [sic, *shōyu*]. To make it the beans are boiled soft, and then an equal quantity of wheat or barley is added; after this has thoroughly fermented, a quantity of salt, and three times as much water as the beans were at first, are added. The whole compound is now left for two or three months, and then pressed and strained. Good soy has an agreeable taste, and if shaken in a tumbler, lines the vessel with a lively yellowish-brown froth; the color of soy in the vessel is nearly black. It improves by age. Japan soy is considered superior to the Chinese, but both are of different qualities, and are probably made of various materials, some of which may be base enough. It is for the most part sent to England and America.”

Note 1. This is the earliest English-language document seen (April 2012) that uses the word *siyau* to refer to shoyu or soy sauce.

Note 2. This is the earliest English-language document seen (Feb. 2008) that uses the word “tumbler,” or the word “froth,” or the term “yellowish-brown froth” in connection with soy sauce.

Note 3. John Robert Morrison lived 1814-1843.

Address: L.L.D., Hongkong.

769. Okura, Nagatsune. 1844. *Kôeki kokusan-kô* [Greatly beneficial domestic production ideas. 8 vols.]. Edo [later Tokyo], Japan: Suharaya. Illust. 23 cm. [Jap]*

• **Summary:** This is an early multivolume work about farm management and farm production (including production of foods) in Japan. The author, Nagatsune Ohkura, lived 1768 to about 1847.

Iino (2003, p. 9) presents two illustrations from this 1844 book showing soy sauce production.

(1) A woman, standing, facing forward, and wearing a kimono, is roasting soybeans in a large metal wok over a hot fire in a cauldron dais. A man, kneeling on the floor and facing away, appears to be spreading something (perhaps the freshly roasted soybeans) on a straw mat (probably to cool). Four groups of Japanese script characters describe what is happening in the illustration.

(2) A man in the foreground is stirring moromi in one of two wooden barrels (each is about 3 feet tall, 3 feet in diameter, with the staves bound together by three braided bamboo hoops). The stirring tool that he is using is illustrated in the lower right corner; at the bottom tip is attached a circular wooden disk about 6 inches in diameter and ½ inch thick. A man in the background, facing forward, is using a long-handled dipper, held in his right hand, to ladle shoyu out of a woven bamboo colander (partially submerged in one of the wooden barrels described above) and into a wooden keg (about 18 inches tall, 20 inches in diameter with the staves bound together by three braided bamboo hoops) on

the floor next to the barrel. Three groups of Japanese script characters describe what is happening in the illustration. Address: Japan.

770. Okura, Nagatsune. 1844. *Kôeki kokusankô* [On profitable local industries / Essay on the nation's benefit]. Japan [Jap]*

• **Summary:** In 1978 an enlarged modern edition was published in Tokyo, Japan, as part of the series *Nihon nosho zenshu*. The new edition contains 8 + 437 + xiii pages, is illustrated, and is 22 cm tall. The original edition is said to have been published in 2 volumes in 1842.

Yokotsuka (1985, p. 206), who cites this book as "*Koeki Kokusanko* (1844)," states that it is about the development of and formulas for commercial shoyu during the Edo period.

Edward E. Pratt, in *Japan's protoindustrial elite* (1999, p. 158) cites this as "Ookura Nagatsune, *Kôeki kokusankô* (1842).

Christie's auction website says that Okura lived from 1766 to 1860. Address: Japan.

771. The United States practical receipt book: or, Complete book of reference, for the manufacturer, tradesman, agriculturist, or housekeeper, containing many thousand valuable receipts, in all the useful and domestic arts, by a practical chemist. 1844. Philadelphia, Pennsylvania: Lindsay & Blakiston. 359 p. Index. 20 cm.

• **Summary:** By "A practical chemist." On page 231 is a recipe for "Harvey's Sauce. Quin sauce [Quin's Sauce], 48 parts; soy [sauce], 16 parts; cayenne, 1 part. Mix and steep

for one week, then pour off the clear liquid."

On page 287 is a recipe for "Soy. Kidney beans, 1 gallon; wheat (bruised), ½ gallon; malt, (bruised), ½ gallon; salt (bruised), 1 gallon. Mix them, and let them lay together for two or three days, then add boiling water, 2 gallons; red herrings, 1 pound; garlic, 3 ounces; Italian juice, 3 ounces. Let them stand in a jar together for three months." Note: "Kidney beans" was an early misnomer for soy beans.

On page 303 are three recipes for "Quin's sauce"; the first two call for: (1) "Walnut catsup, 2 gallons; mushroom catsup, 2 gallons; soy, 1 gallon; garlic, 1 pound; cayenne, ½ pound; sprats, 6 pounds. Boil for fifteen minutes; strain and bottle." (2) "White vinegar, 1 gallon; soy, 1 pint; mushroom catsup, ½ pint; walnut catsup, ½ pint; allspice, 8 ounces; cayenne, 1 ounce. Mix, and boil or macerate, then strain and bottle."

Other recipes that contain soy [sauce] as an ingredient: "A peculiar sauce" (p. 31; 1 quart). "Isle of White sauce" (p. 55, with mushroom ketchup). "Camp vinegar" (p. 104; 2 oz, with walnut catsup). "Piquante sauce" (p. 218). "Sauce aristocratique" (p. 265, a quarter pint). "Sauce au roy" (p. 266, ½ pint with walnut ketchup).

772. Williams, Samuel Wells. 1844. *Ying Hwá Yun-fú Lih-kiái*. An English and Chinese vocabulary in the court dialect. Macao: Printed at the offices of the Chinese repository. 440 p. 20 cm. [Eng; Chi]

soy. 豉油 *shí yú*.

• **Summary:** Page 267 contains the term for soy sauce and its Chinese characters: "Soy, *shí yú*." No other listings were seen for soy-related terms, as under bean or beans. But the index (p. 411) lists various characters containing the "bean" radical, including "bean" (pronounced tau or tou) and shi.

豆	Tau Tau T'ou ²
豈	K'í Hí K'í ¹
豉	Shí Shí S'í ²
豉	Shú Shú S'í ²

Note 2. This is the earliest English-language document seen (June 1999) in which Chinese characters are used to write the name of the soybean or related products.

The author, Samuel Wells Williams, lived 1812-1884. The Preface notes that "This Vocabulary is intended to succeed that of Dr. Morrison's in the Canton dialect, and was

commenced after that book was out of print.” The latter work was *Morrison’s Dictionary of the Chinese Language*, 3 parts, 6 vols. Macao. 1822.

773. Watson (W.R.). 1845. Select groceries (Ad). *Islander (The) (Charlottetown, Prince Edward Island, Canada)*. Feb. 1. p. 2.

• **Summary:** Includes: “... Tarrogon and Chilly Vinegar [Tarragon, Chili], Tomato Sauce, Indian Soy [sauce], Mushroom Catsup,...”

774. Lyons (Samuel). 1845. Ex Kestrel from Hongkong (Ad). *Sydney Morning Herald (NSW, Australia)*. April 1. p. 1.

• **Summary:** “Bamboo hats, crackers, silk handkerchiefs, silks, Chinese curiosities, lacquerware, preserves, soy [sauce], and camphor wood trunks.”

“12 cases soy, 1 dozen each.”

775. Lea and Perrins. 1845. Classified ad: Lea and Perrins’ Worcestershire Sauce... *Times (London)*. April 15. p. 11, col. 1.

• **Summary:** “... is pronounced by connoisseurs to be the only good sauce for enriching gravies, or as a zest for fish, curries, soups, game, steaks, cold meat, &c., and its rapidly increasing sale has induced the proprietors to open a warehouse in London. The very general and decided approbation bestowed on this sauce having encouraged imitations, the proprietors have adopted Betts’s patent metallic capsules, on which are embossed the words ‘Lea and Perrins’ Worcestershire Sauce,’ as a means of protection. Sold wholesale, retail, and for exportation by the proprietors, Vere-street, Oxford-street; Crosse and Blackwell, Soho-square; Barclay and Sons, Farringdon-street; Metcalfe and Co., Southampton-row; and by venders of sauces generally.”

Note: This is the earliest document seen (Feb. 2012) that contains the word “imitations” (or “imitation”), or the word “connoisseurs,” or the phrase “only good sauce,” or the names “Vere-street” or “Crosse and Blackwell,” in connection with Lea and Perrins or Worcestershire sauce. Address: [England].

776. Lea & Perrin. 1845. Classified ad: Lea & Perrin’s [sic] Worcestershire Sauce... *Supplement to Allen’s Indian Mail* No. 36. p. 543. Sept. 2.

• **Summary:** “... is pronounced by connoisseurs to be ‘the only good sauce’ for enriching gravies, or as a zest for fish, curries, soups, game, steaks, cold meat, &c. The approbation bestowed on this sauce having encouraged imitations, the proprietors deem it necessary to caution purchasers to ask for ‘Lea and Perrin’s [sic] Worcestershire Sauce,’ and to observe that the same is embossed on Betts’s metallic capsules, which they adopted as a protection to the public. Sold wholesale, retail, and for exportation by the proprietors,

Vere-street, Oxford-street; Crosse and Blackwell, Soho-square; Barclay and Sons, Farringdon-street; Metcalfe and Co., Southampton-row; and by venders of sauces generally.” Address: Worcester, England.

777. Lea and Perrin. 1845. Classified ad: Lea and Perrin’s [sic] Worcestershire Sauce... *Times (London)*. Oct. 11. p. 15, col. 5.

• **Summary:** “... is pronounced by connoisseurs to be the only good sauce for enriching gravies, or as a zest for fish, curries, game, steaks, cold meat, &c. The approbation bestowed on this sauce having encouraged imitations, the proprietors deem it necessary to caution purchasers to ask for ‘Lea and Perrin’s [sic] Worcestershire Sauce,’ and to observe that the same is embossed on Betts’s metallic capsules, which they have adopted as a protection to the public. Sold wholesale, retail, and for exportation by the proprietors, Vere-street, Oxford-street; Crosse and Blackwell, Soho-square; Barclay and Sons, Farringdon-street; and venders of sauces generally.” Address: [England].

778. Acton, Eliza. 1845. *Modern cookery, in all its branches: Reduced to a system of easy practice, for the use of private families*. 2nd ed. London: Longman, Brown, Green and Longman’s. xviii + 576 + 32 p. See p. 136. Illust. Index. 16 cm. [Eng]*

• **Summary:** Recipe for “Walnut catsup” (p. 134, 135). Recipe (p. 136) for “Epicurean sauce: Mix well, by shaking them in a bottle, a quarter-pint of Indian soy [sauce], ½ a pint of Chili vinegar, ½ a pint of walnut catsup, and a pint and a half of the best mushroom catsup. These proportions make an excellent sauce, either to mix with melted butter, and to serve with fish, or to add to different kinds of gravy; but they can be varied, or added to, at pleasure.

“Indian soy, ¼ pint; Chili vinegar, ½ pint; walnut catsup, ½ pint; mushroom catsup, 1½ pint.

“Obs. [Observations]—A pint of port wine, a few eschalots, and some thin strips of lemon-rind will convert this into an admirable store-sauce. Less soy would adapt it better to many tastes.”

Note 1. Eliza Acton lived 1799-1859. Illustrated with numerous woodcuts. Publishers advertisements (32 p.) at end. Note 2. Neither this London edition nor the Philadelphia edition of the same year contains a recipe for Quin’s Sauce (as stated on the Internet at www.seafoodfish.com). Address: England.

779. Acton, Eliza; Hale, Sarah Josepha Buell. 1845. *Modern cookery, in all its branches: Reduced to a system of easy practice, for the use of private families...* From the 2nd London ed. Philadelphia, Pennsylvania: Lea and Blanchard. 1 + xvii-xxxv, 37-418 p. See p. 116-18. Illust. Index. 21 cm. [Eng]*

• **Summary:** This book is identical to the London edition of

the same year except: (1) The physical size and pagination are different. (2) In the American edition, there is a two-page American preface (in addition to the British preface) which notes that the few changes “which have been made refer chiefly to the preparation of those articles that may be regarded as more strictly American, as Indian corn, terrapins, and some others.” Otherwise the receipts (recipes) are identical, but on different pages. “Walnut catsup” (two recipes, p. 116-17). “Epicurean sauce” (with Indian soy [sauce], p. 118). Address: England.

780. Allen, Ann H. 1845. The housekeeper’s assistant, composed upon temperance principles,... By an old housekeeper. Boston, Massachusetts: James Munroe and Co. 142 + v p. Index. 19 cm.

• **Summary:** This book is dedicated to temperance, which is “the handmaid of religion.” Therefore, alcohol is used only a few of the recipes—such as vinegar and mulled wine. “Soy” [sauce] is mentioned as an ingredient in the following recipes: Camp vinegar (“2 teaspoons veal soy,” p. 82). Mock turtle (“two spoonfuls of mushroom catsup, and one of soy,” p. 99). Hare soup (“and add a spoonful of soy,” p. 123-24). Perch and tench (“serve with melted butter and soy,” p. 129). Lobsters stewed (“one [spoonful] of soy, or walnut catsup,” p. 130). To dress surgeon (“Sauce, butter, anchovy, and soy,” p. 132).

The recipe for Molasses candy (p. 29) calls for peanuts as an ingredient: “Flavor with essence of lemon, and stir shelled pea-nuts (ground-nut), or almonds, into it...”

Note: This is the earliest document seen (Jan. 2006) that mentions “veal soy.” But what is it?

781. Waters, John. 1846. My uncle, the parson. *The Knickerbocker: Or, New-York Monthly Magazine* 27(1):14-19. Jan. See p. 18-19.

• **Summary:** “My uncle, accustomed as he was to the excellent specimens of what has been called *parson’s meat*, paused for a moment... while the mutton was hot... But at his own second slice he sent Jim to the pocket of the chaise for a bottle of Worcestershire Sauce; and finding it hardly warm enough for so raw a day, produced a small flat phial with gilt edges and glass stopper that comes to us generally from Smyrna with Attar of Roses, but which was now filled with Cayenne pepper that he used as reinforcement.”

The last sentence of the story reads (p. 19): “My father on the contrary, who thought the parson a little too fastidious on the subject of dress, liked the story all the better for the mistake; and the delicate fibre of some thing that I will not call malice, was to him in the narration very like a slight dash of Worcestershire Sauce to the gravy of my Uncle the Parson.”

782. Wilkinson (Messrs.). 1846. Sales by auction: Stock of a drysalter, pickle and drug warehouse (Ad). *Times (London)*.

April 8. p. 12, col. 5.

• **Summary:** “... 60 casks of pickles of different kinds, and 20 pipes of cucumbers in brine, 500 dozens of various pickles in bottle, castor oils, boiled and other oils, vinegar, Indian soy [sauce], lozenges,... seven-horse steam engine,... mill with pair of French burr stones, coppers,...” Address: Ludgate-hill [London].

783. *Chinese Repository*. 1846. Statements of the number, tonnage, &c., of the merchant vessels of different nations in the port of Canton, for the year 1845. 15(4):165-71, April. [1 ref]

• **Summary:** From the China Mail, Feb. 5th, 1846: A table (No. V, p. 170-71) shows “the quantities and value of merchandise exported from the port of Canton in 181 British vessels... and in 24 Lorchas [3-masted Chinese sailing ships] to the countries and places undermentioned during the year ending 31st December, 1845.”

Soy [sauce] 430 piculs. \$4,256. (a) Sent to Bombay, Calcutta [British India], or the Cape.

Note: The tables in this article were apparently compiled by Francis C. Macgregor, H.M. Consul.

784. Lea and Perrins. 1846. Worcestershire Sauce testimonials (Ad). *New Zealand Journal (The)* No. 166. May 9. p. 107, col. 1.

• **Summary:** “Messrs. Lea and Perrins, proprietors of the Worcestershire Sauce, beg to submit the following Testimonials, as a guarantee to the public of the superior qualities of this sauce, and also to caution purchasers against worthless imitations, by observing their names are affixed to the metallic capsule which secures the cork of each bottle, to imitate which is fraud.

“The Queen’s, Cheltenham, Feb. 28th, 1846.

Gentlemen,—I have no hesitation in bearing testimony to the excellent qualities of your ‘Worcestershire Sauce,’ as the numerous families of the first rank in this kingdom, and from the Continent of Europe, and India, who honour the Queen’s by their patronage enable me to speak confidently of the very general estimation in which it is held by them, and from my own experience of its merits and usefulness, I believe it to be, of its kind, quite unequalled.

“I am, Gentlemen, Your obedient servant,

“To Messrs. Lea & Perrins. S.G. Griffith.

“(Copy of a Letter from Mr. J. Cockburn.) January 10th, 1845.

“Sir,—When about to proceed to the West Indies in August last, you favoured me with a bottle of Lea and Perrins’ Worcestershire Sauce, on trial; before opening which, I submitted it to the test of a four months’ voyage in the Tropics, and on coming home in December, it was opened in the latitude of the Azores, and found in the highest state of preservation. On submitting it to the cook (who is a man of great experience, having been seven years in the

London Tavern, and eight years at sea) he declared it to be the best sauce ever put into his hands; and I am persuaded, from the fact of its being adapted to all kinds of dishes, that Lea and Perrins' Sauce will go far to supersede the great variety of stores hitherto indispensable on board ships when employed on long voyages.

"I am, sir, your most obedient servant, James Cockburn, Acting Providore R.M.S.P. 'Thames.'

"To Mr. John Osborn, Royal Mail Steam Packet Office, Moorgate Street, London."

Note: This is the earliest ad seen (Feb. 2012) for Worcestershire Source in New Zealand or Australia. Address: [England].

785. E. 1846. Soy (Letter to the editor). *Farmers' Cabinet and American Herd-Book* 10(12):379-80. July 15.

• **Summary:** Letter dated 26 June 1846. "Dr. Emerson of this city [Philadelphia] has received from a friend in China, some seeds of the *Dolichos soja*, a plant from which the Chinese and Japanese prepare their celebrated dark coloured sauce called soy [sauce], an article largely consumed by all ranks of people in those populous countries. The consumption is rather limited in the United States, but in England about 1000 gallons are imported annually, in addition to a large quantity counterfeited at home. It is excellent on fish and with soups. The flavour is peculiar, but when once acquired, the taste like that for olives and many other things, becomes very strong. By the Chinese and Japanese soy is not only esteemed for its agreeable but for its wholesome qualities. The notion of its being made for cock-roaches is of course a vulgar error."

After giving a brief description of the process for making "soy," the author notes: "The best soy comes from Japan. When genuine, it is of an agreeable flavor, neither too salt nor too sweet, of a thick consistence, and clear brown color. When shaken in a glass, it should leave a coat on the surface of a bright yellowish brown color." An alternative method of making soy [sauce] from the seeds of *Dolichos Soja* is then described. Both this and the previous method mention that soy is made by a fermentation process, but they do not mention koji or any other source of microorganisms.

"The seeds or soy-beans are also employed in China and Japan in various ways as food. They are made into a kind of jelly or curd [tofu], which is esteemed very nutritious [nutritious] and is rendered palatable by seasoning of different kinds. In Japan they are put into soups, and are the most common dish of the country, being frequently eaten three times a day."

An editor's footnote to this letter dated June 26 states: "Dr. E. has left with us a few of the Soy beans, which will be distributed among those who may incline to plant them. As the season is late, it is doubtful whether they would mature this summer; a few however might be tried, and others left to plant next spring."

Note 1. Hymowitz (1986, personal communication)

thinks this may have been Ralph Waldo Emerson. This journal was published in Philadelphia, Pennsylvania. First cited by Hymowitz. 1987. Introduction of the Soybean to Illinois. *Economic Botany* 41(1):28-32.

Note 2. This is the earliest journal article seen worldwide that refers to tofu—which it calls "a kind of jelly or curd." Address: Philadelphia, Pennsylvania.

786. Earle (C.V.). 1846. Ex "Thomas Lowry," "Angelina," "St. George," and other later arrivals (Ad). *Maitland Mercury & Hunter River General Advertiser (New South Wales, Australia)*. Sept. 19. p. 3.

• **Summary:** "To be had at the Medical Chemical Repository, opposite the Angel Inn, West Maitland,

"A various assortment of Drugs and Chemicals required in the medical profession, viz.: -

"Corrosive Sublimate,... Indian Soy [sauce], and Burgess's Essence of Anchovies,..."

"Agent for Lea's celebrated Worcester Sauce, patronized by the Royal Family."

Note: This is the earliest of 3,252 documents seen (Feb. 2012) in the Australian Newspapers database that contains the term "Worcester Sauce" (regardless of capitalization). The newspaper in which this term appears most frequently is *The Mercury* (Hobart) (1,091 times), followed by *The Argus* (Melbourne) (918 times). By category: 2,928 are advertising, 275 are news, and 49 are detailed lists, results, or guides. By decade: In 1860-69 the term appears in the most ads, articles, etc. (734), followed by 1880-89 (512).

787. *Moreton Bay Courier (Brisbane, Queensland, Australia)*. 1846. Facts worth knowing. Oct. 31. p. 4.

• **Summary:** "Soy [sauce] is not made, as commonly asserted, from cockroaches, but from the beans of the *dolichos soja*, a native of Japan, pickled and fermented with salt."

788. Nichols (R.F.) & Co. 1846. Classified ad: Have in store and for sale the following articles, viz: *New Orleans Commercial Bulletin*. Oct. 31. p. 1, col. 6.

• **Summary:** "50 boxes Bitter Almonds.

"50 boxes sweet Shelled Almonds.

"20 boxes French Fruits, in juice.

"4 dozen Worcester Sauce.

"50 boxes Mushroom, Walnut and Tomato Catsups."

Address: [New Orleans].

789. *Colonial Times (Hobart, Tasmania, Australia)*. 1846. Domestic intelligence: New sauce (Ad). Dec. 11. p. 3.

• **Summary:** "We are those who, with Dr. Kitchner, of 'Cook's Oracle' celebrity, lean toward good things, and who, with Apicius of old, and with Quin and other epicures of more modern times, seriously opine that the inventor of a new sauce is worthy of favourable consideration. Now,

Harvey, Quin, and Burgess, have already immortalised themselves in this particular achievement, as hath, also, the anonymous compounder of the celebrated ‘Reading Sauce;’ but another aspirant has arisen in the clever inventor of another sauce, entitled ‘Worcestershire Sauce,’ which, in our epicurean opinion, eclipses all of its precursors. Of what it is compounded surpasseth our knowledge; but this we can safely affirm, that a more delicious condiment has not yet been invented for the gratification of the gustatory organs, nor one better calculated to excite an appetite in this more than warm and relaxing weather. With fish, flesh, fowl, or even ‘good red herring,’ it is equally good; and we can strongly recommend it to all those who, as wise men, do not despise their stomachs. We perceived by the advertisement, that Mr. Gilbert has a few cases, and perhaps other tradesmen may have a supply.”

790. Gilbert (Edward). 1846. On sale at Gilbert’s Grocery Store next door to the Liverpool Tea Warehouse (Ad). *Colonial Times* (Hobart, Tasmania, Australia). Dec. 12. p. 3.
• Summary: “... 50 cases pickles. A few cases Worcestershire Sauce.”

This ad also appears in *The Courier* (Hobart) on 12 Dec. 1846 (p. 3) and on 16 Dec. 1846 (p. 1).

Note 1. This is the earliest of 8,918 documents seen (Feb. 2012) in the Australian Newspapers database that contains the term “Worcestershire Sauce” (regardless of capitalization). The newspaper in which this term appears most frequently is *The Mercury* (Hobart) (4,395 times), followed by *The Argus* (Melbourne) (1,491 times). By category: 8,728 are advertising, 183 are news, and 6 are detailed lists, results, or guides, and 1 is family notices. By decade: In 1860-69 the term appears in the most ads, articles, etc. (3,205), followed by 1870-79 (2,949).

Note 2. Soy sauce was usually one of the main ingredients in Worcestershire sauce.

791. Lea & Perrins. 1846. Lea & Perrins’ Worcestershire Sauce (Ad). *Manchester Guardian* (England). Dec. 30. p. 1.
• Summary: “... so highly esteemed and patronised for fish, hot and cold meats, steaks, gravies, soup, &c. may be obtained of the most respectable dealers in sauces, universally; the wrapper and label of each bottle bearing the names of Lea and Perrins; without which, it cannot be genuine.

“Sold wholesale by Lea and Perrins, Worcester, and 6, Vere-street, Oxford street, London; Barclay and Sons, Crosse and Blackwell, and other Italian warehousemen and merchants, London.” Address: Worcester.

792. Herincq, F. 1846. Coup d’oeil sur la culture au Japon. I. Plantes potagères, plantes économiques [A glance at the culture of Japan. I. Vegetable garden plants, economic plants]. *Revue Horticole: Journal d’Horticulture Pratique*

(Paris) 5:69-75. April/Dec. Series 2. See p. 72-73. [Fre]
• Summary: Legumes include beans (*haricots*, *fève*) and their varieties, peas, and above all the *Dolichos soja*, with which the sauces etc. are prepared. Address: France.

• Summary: “Messrs. Lowes and MacMichael will sell by public auction, at the Exchange, on Monday next, at 12 o’clock precisely.

Five cases Chinese Soy [sauce], in the original packages, and of first-rate quality, well worthy of the attention of private families.

Note: This is the earliest of 10 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “Chinese Soy.” The newspaper that mentions this term most frequently is *The Courier* (Hobart) (7 times). By category: all 10 are advertising. By decade: In 1840-49 the term appears in the most ads or articles (7), followed by 1850-59 (3). Address: Liverpool Tea Warehouse.

794. Maitland Mercury & Hunter River General Advertiser (New South Wales, Australia). 1847. Shipping intelligence (From the Sydney Morning Herald). May 1. p. 2.

• Summary: “Imports. April 27. *Pandora*, barque, 297 tons, Captain Cobb, from China and Manila: Cargo from China—301 chests 600 half-chests and 7 cases congou tea,... 50 boxes soy [sauce],...”

Note: This cargo was for Caucasian clients.

795. Connell & Ridings. 1847. Auction sales: Will sell by auction,... (Ad). *Daily Southern Cross* (Auckland, New Zealand). Sept. 18. p. 1, col. 3.

• Summary: “... at 11 o’clock this day, at their mart, Queen-street:—... China ornaments—China vases, China matting—Chinese toys, Curry powder, Indian soy [sauce], A variety of drapery goods.” Address: Queen Street.

796. Lea and Perrins. 1847. Classified ad: Appetite and digestion improved. *Times* (London). Oct. 6. p. 7, col. 2.

• Summary: “Lea and Perrin’s Worcestershire Sauce, an exquisite relish for fish, steaks, chops, meat, game, &c., and for flavouring soups and curries. It is acknowledged to contribute to health by its stomachic and digestive properties, is used and recommended by the faculty, and patronised by the nobility and gentry. The universally expressed approbation of this sauce, and the demand for it in every quarter of the globe, having induced imitations of inferior quality, purchasers are respectfully recommended, in order to secure the genuine, to see that the names of Lea and Perrins are upon the label and patent cap of the bottle. Sold by the proprietors, 6, Vere-street, Oxford-street, London, and 68, Broad-street, Worcester;...”

Note 1. This is the earliest document seen (Feb. 2012) that uses the words “health” or “digestion” or “digestive” or “stomachic” or “nobility” in connection with Lea & Perrins’ Worcestershire sauce.

Note 2. This ad also appeared in the issue of 26 Jan. 1848 (p. 11, col. 1). Address: [England].

797. T.W.H. 1847. The soy bean (Letter to the editor). *Farmers’ Cabinet and American Herd-Book* 12(3):78-79. Oct. 15.

• **Summary:** Letter dated 18 Sept. 1847. “It is a native of Japan and of the Molucca Islands. It thrives well in New England, having been successfully raised in the Botanic Garden, at Cambridge, and elsewhere in Massachusetts... The plant is very productive. Eight of the beans, planted in Milton, Mass., in 1831, yielded a wine pint of seed, weighing eleven and a half ounces. One hundred and ten of the beans, taken promiscuously, weighed half an ounce. In this proportion, the production of the eight beans would be 2530, or more than 316 for one. In 1829, a single bean, in the Botanic Garden in Cambridge, produced 182 pods, which, as some of them contained three beans, was more than 364 for one. Should their qualities as articles of food be found agreeable, these beans will become valuable on account of their great productiveness.

“The inhabitants of Japan, of China, and Cochin China, and of some parts of India, cultivate these beans extensively, and eat them cooked or prepared in various ways. They make a very important article in the cookery of the Japanese, who use them chiefly in two forms. The first, called *Miso*, is a rich paste, of the consistence of butter, the place of which it supplies in various dishes, and is composed of a mixture of the beans and rice stewed and highly seasoned with salt. The second, called *Sooju* [shoyu] by the Japanese, is the celebrated sauce, known in commerce by the name of *Soy* [sauce] and imported in large quantities from the East, the best being brought from Japan. The Japanese method of making *Soy* was described by Kaempfer, in the ‘*Amoenitates Exoticae*,’ published in Latin, in 1712. It is as follows:” An 18-line description is then given.

“Kaempfer says that the Japanese use this sauce to season every dish of fried or roasted food. For fish, beef, and mutton, it forms a very savoury as well as a harmless condiment, the flavour of which is much admired by those who have become accustomed to it; and by many it is preferred to the best Chinese catsup.”

“The making of *Soy*, as here described, seems to be a very simple process, and the experiment is worth trying. Should it prove successful, the cultivation of the plant in this country, may become profitable. The beans are said to be good when cooked, like common kidney beans; but it is doubtful whether they would ever take the place of our best varieties of them.”

First cited by Hymowitz. 1986. Bibliography of early,

previously uncited publications on soybeans in the United States. 2 p. Unpublished.

Note 1. This is the earliest document seen (July 2000) published in the United States that contains the word “Miso.”

Note 2. This is the earliest document seen (June 2001) that mentions the term “profitable” (or “profit” or “profits”) in connection with soybeans in the United States. Address: Cambridge, Massachusetts.

803. **Product Name:** [Inari-zushi (Vinegared Sushi Rice in Sweetened Tofu Pouches/Agé)].

Foreign Name: Inari-zushi.

Manufacturer’s Name: Jukkenten Restaurant.

Manufacturer's Address: Tokyo, Japan.

Date of Introduction: 1848.

Ingredients: Deep-fried tofu pouches, water, sugar, shoyu, mirin, sushi rice, sweet vinegared gingerroot (gari).

How Stored: Refrigerated.

New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu*. p. 194. "In Japan, the most popular way of serving agé [deep-fried tofu pouches] is in the form of *Inari-zushi*. Packed into lightweight wooden boxes and topped with thin slices of vinegared gingerroot, Inari-zushi are often found at picnics and outings of all kinds where they play much the same role as do sandwiches in the West. Served at most sushi shops, they are very inexpensive and are prepared in a different way by each chef.

"Inari-zushi is said to have originated in Tokyo about 1848, the creation of one Jiro Kichi, chef at the *Jukkenten* restaurant. Kichi peddled his new culinary treats at night through the streets of Tokyo carrying a four-sided paper lantern called an *andon*. On this he painted a red Shinto *torii* gateway, the hallmark of the Inari shrine where the Goddess of rice is said to abide. Since foxes are said to be very fond of agé, and since the fox is the patron animal of Inari shrines, this pictorial symbolism and its curious logic seemed natural and appropriate; Inari-zushi soon spread throughout Japan."

804. *Ainsworth's Magazine: A Miscellany of Romance, General Literature, & Art* (London). 1848. The angler in Norway. 14:148-53. See p. 150.

• **Summary:** In describing what a single angler [fisherman] should take with him on his fishing trip to Norway (p. 150): "He must also stow away a bottle of cayenne pepper, one of essence of anchovy, another of soy [sauce], and one or two of Harvey's sauce. Soy, in our opinion, is detestable, and we firmly believe it to be nothing more than the essence of crushed black beetles, so we would suggest Worcestershire, or our friend Soyer's new sauce, and one or two bottles of Chili vinegar."

805. Davis, John Francis. 1848. *The Chinese: A general description of the empire of China and its inhabitants*. 2 vols. New York: Harper & Brothers. Vol. 1, 383 p. See vol. 1, p. 302-03. Illust. Index. 16 cm. [69 ref]

• **Summary:** This 1848 edition is very similar to the 1836 edition except: (1) It was published in the USA by Harper & Brothers. (2) The type has been reset so that, for example, vol. 1 contains 383 pages and vol. 2 contains 440 pages; any particular passage is slightly different in its pagination. Thus, soy [sauce] is mentioned on pages 302 and 303 in this 1848 edition. Sesamum oil and peanut oil (p. 333). Sir John Francis Davis lived 1795-1890. Address: Esq., F.R.S., &c. Late His Majesty's Chief Superintendent in China.

806. Francis, G. 1848. *The dictionary of practical receipts: Containing the arcana of trade and manufacture, domestic*

economy, artistical, ornamental & scientific processes, pharmaceutical and chemical preparations, &c. &c. &c. London: D. Francis; W. Strange. 348 p. See p. 316.

• **Summary:** The entry for "Soy, English" states (p. 316): "Take 1 gallon of haricot or white kidney beans, boil till soft, add bruised wheat 1 gallon; keep in a warm place for twenty-four hours, then add common salt 1 gallon, water 2 gallons; put the whole into a stone jar, bung it up for two or three months, shaking it very frequently, then press out the liquor, which is a good imitative [sic, imitation] of Chinese soy."

Note 1. This recipe will not work since neither koji nor soy beans are called for.

Note 2. Apparently soy made in China was well known (and expensive) in England at this time.

807. Morrison, John Robert. 1848. *A Chinese commercial guide: Consisting of a collection of details and regulations respecting foreign trade with China*. 3rd ed., revised throughout. Canton: Printed at the Office of the Chinese Repository. viii + 310 p. Illust. 22 cm.

• **Summary:** Section 6, "Description of the articles of export at Canton" (p. 170-83), contains a long description of "Soy" [soy sauce] (p. 180). It is identical to that found in the 2nd ed. of 1844.

Note: Chapter 3 contains detailed information on money (from many countries), Chinese weights & measures, etc. (incl. Chinese measures of capacity, length, and land measures). Interesting terms in Section 6: Aniseed stars, Chinaware or porcelain (now widely made in Europe), crackers (fire-crackers), pecul / peculs [piculs], caties [catties], lackered ware (the best kind comes from Japan), Nankeens (a kind of cotton cloth, so named from Nanking), paper (that used in books is made from yellow bamboo). Address: LL.D., Hongkong.

808. Williams, Samuel Wells. 1848. *The Middle Kingdom: A survey of the geography, government, education, social life, arts, religion, &c., of the Chinese empire and its inhabitants*. With a new map of the empire, and illustrations, principally engraved by J.W. Orr. London and New York: Wiley and Putnam. 2 volumes. See vol. I, p. 283, 290; vol. II, 402-03.

• **Summary:** In volume 1, in Chapter 6 titled "Natural History of China," the section on legumes (p. 283) states: "The widely diffused and extensive tribe of Leguminosæ holds an important place in Chinese botany, affording many esculent vegetables and valuable products. Peas and beans form important objects of culture, and the condiment called soy [sauce] (a word derived from the Japanese *soya*) is prepared chiefly from a species of *Dolichos*. One of the commonest modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum, or turmeric. The common Chinese eat few meals, without the addition of one form or other of the bean curd or bean jelly" [tofu].

Note 1. This is the earliest document seen (Feb. 2004) that mentions turmeric in connection with tofu. However, Williams seems to be a bit confused here. He starts to describe how the condiment soy sauce is made in China, but he first states (incorrectly), that the dehulled beans are ground to flour which is then mixed with powdered gypsum or turmeric (also incorrect) before the soy sauce fermentation. The powdered gypsum and turmeric are part of the process for making bean curd—in which hot soymilk is curded with gypsum. Typically, to make bean curd in China, soaked (not dry) soybeans are ground to a slurry or paste (not a flour), mixed with water to make soymilk, which is cooked, then mixed with gypsum, which curds the hot soymilk. Firmly pressed tofu can be cooked with turmeric [and often soy sauce] to preserve it and give it a yellow color. Williams' incorrect idea that whole dry soybeans are first ground to a flour before being made into tofu is repeated by many subsequent European writers.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word “flour” in connection with the soy bean.

In a long discussion of the famous *Pun Tsau* [*Pên Ts'ao* or *Ben Cao*] herbal, by Li Shih-chen, the author notes (p. 280) that “The second division of grains contains four families:... 3. That of leguminous plants; and 4. The family of fermentable things, as bean curd, boiled rice, wine, yeast, congee, bread, &c., which, as they are used in medicine and produced from vegetables, seem most naturally to come in this place.”

In volume 2, in Chapter 13 titled “Architecture, dress, and diet of the Chinese,” the section on “Vegetables eaten by the Chinese” (p. 43) states: “The Chinese have a long list of culinary vegetables, and much of their agriculture consists in rearing them. Leguminous and cruciferous plants occupy the largest part of the kitchen garden; more than twenty sorts of peas and beans are cultivated, and the pods and seeds of two species of *Dolichos* are eaten, and the beans of another species made into soy by boiling and powdering the kernels, then fermenting them with yeast, and mixing other ingredients according to the taste of the maker or purchaser. Another still more common condiment made from beans, is called bean curd or bean jam, by boiling and grinding them, and mixing the flour with water, gypsum, and the juice of yellow seeds.”

Concerning oils and fats (p. 46): “Oils and fats are in universal use for cooking; crude lard or pork fat, castor oil, and that expressed from two species of *Camellia* and the ground-nut, are all employed for domestic and culinary purposes.”

Chapter 20 titled “Commerce of the Chinese,” states (p. 402-03): “The silk trade is more likely to increase than any other branch of commerce, after tea, and the Chinese can furnish any amount of raw and manufactured silks according to the demand for them. The best Soy is made by boiling

beans soft, adding an equal quantity of wheat or barley, and leaving the mass to ferment; a portion of salt, and three times as much water as beans, are afterwards put in, and the whole compound left for two or three months, when the liquid is pressed and strained. The flavor and ingredients of soy vary considerably, even among the people who make it, and much of that exported is supposed to be more or less adulterated.”

Note: The author apparently does not know what kind of beans are used to make Soy. In the 1882 edition of this book, he gives a more accurate description.

Note: This is the earliest document seen (Oct. 2002) concerning soy and adulteration. It speculates that much exported soy [sauce] is adulterated.

Also discusses: *Coix lachryma*, a kind of grass used for weaving floor matting (p. 276). “Hemp is cultivated for its fibres, and the seeds furnish an oil used for household purposes, and medicinal preparations; but the intoxicating substance called *bang*, made from it in India, is unknown in China” (p. 281). Samuel Wells Williams lived 1812-1884. Address: New York, Author of “Easy Lessons in Chinese,” “English and Chinese Vocabulary,” &c.

809. Wu, Ch'i-chün. 1848. Ta tou [The soy bean]. In: Wu Ch'i-chün, ed. 1848. *Chih Wu Ming Shih T'u K'ao* [Illustrated Treatise on the Names and Natures of Plants]. Published at T'ai-yuan-fu, Shansi, China. 28 cm. [Chi; eng]
• Summary: This treatise, containing 1,714 plates (including two illustrations of soybean plants), is the most important source of Chinese information on native plants.

The sections on the soy bean were translated into English and indexed by W.J. Hagerty in 1917. The translation includes photocopies of plates from the original work. Hagerty, who lived in Berkeley, California, was Chinese Translator for the Office of Crop Physiology and Breeding Investigations, USDA. He drew heavily on Bretschneider 1881, *Botanicon Sinicum*. Wu Ch'i-chün lived 1789-1847.

The translation is divided into two parts, each numbered separately, typewritten and double spaced. Part 1 (Book 1:8-9) is 3 pages translated. Part 2 (Book 1:24-33, titled *Pai ta tou* or “white soy bean”) is 98 pages translated and includes a 16-page index to Part 2 only. Pages 1-38 of Part 2 contains numerous translations of the information about soybeans quoted from earlier Chinese texts. Pages 39-75 of Part 2 are extracts concerning beans (both soy beans and other beans) from Chinese gazetteers (*Chih Shêng Chu Shu*). The work concludes with a discussion of individual soyfoods, including many quotes from ancient Chinese documents: Shih or soybean relish [fermented black soybeans] (p. 76-80); Tou fu or bean curd (p. 80-81); Chiang or soy sauce (p. 81-82). The index is on pages 83-98.

In the introduction we read: “The Huang tou is at present commonly called *Mao tou* (characters: ‘hair + bean’), or Hairy bean. When this is planted it grows very profusely. The beans are at first eaten as a vegetable, while later they are

utilized like grain foods. The people cannot go a day without this food.”

Both full-page illustrations (line drawings, apparently original) of soybean plants are bound before the title page. They show: (1) An upright soy bean plant, with two sets of flowers, two pods, and roots. Four types of seeds are shown near the bottom of the plate, but with no Chinese characters. At the left of the page, the following is written in four blocks of Chinese characters from top to bottom: *Chih Wu Ming Shih T'u K'ao* (the title of this book). Ta tou (soybean; literally “big bean”). Page number 8. *Ku lei chüan chih I* (Class—grains—Chapter 1).

(2) White soybean, slanting from lower left to upper right, including flowers two pods with outlines of the seeds, and roots. The seeds of five different types of soybean seeds are shown, each accompanied by its Chinese characters: Tea bean, yellow bean, black bean, white bean, and duck's egg green bean. At the left of the page four blocks of Chinese characters are written from top to bottom. The first and last blocks are the same. The second block is *pai ta tou* (white soybean). The third block is page number 10.

Note 1. The first illustration of the soybean plant (and an azuki bean plant) also appears in K.C. Chang, ed. 1977. *Food in Chinese Culture* (p. 178). Note 2. Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1999. July 9. He transcribes and translates the Chinese characters on the left of these two illustrations, then adds: “I presume the illustrations were original since they are different from the other illustrations I have seen in the pharmacopoeias.”

Note 3. This is the earliest Chinese-language document seen (June 2009) stating that the term *mao tou* is used to refer to both green vegetable soybeans and to regular dry soybeans. Address: Michael J. Hagerty, Berkeley, California. June 1917.

810. Duncan (R.J.). 1849. Ex “Lalla Rookh,” Captain Haines, from London (Ad). *New Zealand Spectator and Cook's Strait Guardian* (Wellington). March 17. p. 2, col. 2.
• **Summary:** Goods to be sold include: “... 1 case Perfumery &c., India Soy and other Sauces, A most excellent assortment of the Best English made Blue Cloth Caps.” Address: Wellington.

811. Lea and Perrins. 1849. Appetite and digestion improved: Lea and Perrins' Worcestershire sauce (Ad). *Observer* (London). April 15. p. 1.

• **Summary:** “... imparts the most exquisite relish to steaks, chops, and all roast meat, gravies, fish, game, soup, curries, and salad, and by its tonic and invigorating properties enables the stomach to perfectly digest the food. Sold by the proprietors, Lea and Perrins, Vere-street, Oxford-street, London; and 68 Broad-street, Worcester; Messrs. Barclay and Sons; Crosse and Blackwell; and other oilmen and

merchants in London; and by the principal dealers in sauces generally.—N.B. To guard against imitations, see that the names of ‘Lea and Perrins’ are upon the label and patent cap of the bottle.” Address: London and Worcester.

812. Nathan (David). 1849. Auction sales: Will sell by auction (Ad). *Daily Southern Cross* (Auckland, New Zealand). Aug. 24. p. 1, col. 2.

• **Summary:** “On Thursday next, August 28th, 1849, at his Rooms, Shortland-st., at 11 o'clock. 5 cases Mustards. 5 ditto [cases] Worcestershire Sauce. 1 ditto Black Draughts.” Address: Shortland-st.

813. Hedde, Isidore; Renard, Éd.; Haussmann, A.; Rondot, Natalie. 1849. Étude pratique du commerce d'exportation de la Chine [Practical study of the business of exporting from China]. Paris: A la Librairie du Commerce, Chez Renard; Canton, China: Chez Reynvaan et Cie.; Batavia: Chez Sanier. 280 p. See p. 188-90. [3 footnotes. Fre]

• **Summary:** Item No. 64 is “Soy sauce” (*Soya*). Names: English: soy. Portuguese: soja. Chinese court dialect [Mandarin]: chi-you. Chinese (Cantonese): chi-yaou. Nature and origin of the basic material: Soy sauce (*le soya*) is a seasoning made with the seeds of a species of bean (*haricot*), which grows in China and Japan: it is the *si-yao* of the Japanese, the *you-tao* of the Chinese, the *dolichos soja* of the botanists. It is a member of the legume family. Footnote: The *you-tao* is found among the edible plants of Macao and Canton, and entire fields of it are cultivated on the island of Tchou-san, as well as in the provinces of Fujian (*Fo-kièn*) and Zhejiang (*Tché-kiang*).

Method of manufacture: The manufacture of soy sauce (*du soya*), without being difficult, requires attentive care and practice; Chinese families prepare their soy sauce themselves.

Weigh a certain quantity of black [soy] beans (*haricots noirs*), boil them over a low flame; they must be taken out in time to avoid overcooking. Drain them, then add a certain quantity of wheat or barley flour [the amount is not specified]. Cover the vessel, and leave it for a bit in some warm and humid corner. Fermentation begins, an abundant mold forms, and when it is withered and dried out, wash the beans. Next throw them in a jar with an equal weight of sea salt, three times as much boiling water and some aromatic substances. There is nothing more to do than to place the terrine [a glazed, earthenware cooking dish] in the sun; open it during the day and close it at night or when it rains. One month later, the soy sauce is done, which does not prevent many housekeepers from allowing theirs to age thirty or forty days more. Clarify, drain the mass, and put the liquid in bottles.

Description of the finished product: Soy sauce (*Le soya*) is a clear liquid, brownish-black in color; when shaken in a bottle, it should leave a brownish yellow foam on the walls.

Its flavor is pleasant and renders it an excellent seasoning.

Soy sauce from Japan is much more esteemed than that of China; its taste, quality, and aroma are so unlike that it is not doubtful that the preparation is different. It appears, besides, that the Japanese use other very common ingredients, they say, in their empire.

Price in Canton (piasters/picul): First grade: 12. Second grade: 10. Third grade: 8. However you can buy a good grade for as little as 5.25 to 7.75 piasters/picul. Churn-ching [Chunking?] sells for 3 piasters a dozen bottles of superior quality soy sauce which is ordinarily sent to British India.

Exportation, destination, and usage: This seasoning has now been adopted throughout almost all of British India, and for the last 20 years [since 1829] it has even been served on the tables of London, Singapore, Pulao Pinang (the first British settlement in Malaya; *Poulo-Pinang*), Manila [Philippines], Batavia [today's Jakarta, Indonesia], and Bourbon [today's island of Réunion / Reunion]—and much is consumed. The usage is expanding in the United States.

A table shows exports of soy sauce (quantity and value) from Canton: In 1844–1,120 piculs worth 9,029 piastres / piasters; 98.9% is sent to England, 0.9% to the USA, and 0.01% to France. In 1845–568 piculs worth 6,380 piasters; 75.7% is sent to England, 13.7% to Denmark, 8.5% to Sweden, 1.6% to the USA, and 0.5% to Germany.

The Chinese consume large quantities of it which they make themselves in their homes; products destined for export come from factories in Henan (a province in central China; W.-G. Honan) and Canton.

Export duties: 4 mèces per picul = 5.05 francs per 100 kg.

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (soy sauce) in Réunion. This document contains the earliest date seen for soybean products in Réunion (1849 or before); soybeans as such had not yet been reported by that date.

Note 2. This is the earliest document seen (April 2007) concerning export duties or tariffs on a soy product—soy sauce exported from China—or soybeans.

Note: This is the earliest French-language document seen (April 2012) that uses the words *chi-you* or *chi-yaou* to refer to soy sauce. Address: Commercial Delegates attached to the French Mission in China.

814. *Knife and Fork (The)* (London). 1849. Gastronomic rambles about London. For 1849. p. 94-96.

• **Summary:** In this early “advertorial” we read (p. 95): “Let the student pass with me into Vere Street, Oxford Street, and note particularly the emporium where Lea and Perring’s celebrated Worcestershire Sauce is made, and, where the exquisite essence of coffee and dandelion coffee, are sold in great quantities.”

815. Pridham, Charles. 1849. A historical, political and

statistical account of Mauritius and its dependencies.

London: T. and W. Boone. xii + 410 + 16 p.

• **Summary:** At the end of this book is a section of ads, numbered separately. On page 14 (lower half) we read: “Worcestershire Sauce testimonials.

“Messrs. Lea and Perrins, proprietors of the Worcestershire Sauce, beg to submit the following testimonials as a guarantee to the public of the superior qualities of this celebrated Sauce, and also to caution purchasers against worthless imitations, by observing their names are affixed to the metallic capsule which covers the cork of each bottle, to imitate which is fraud.

“Testimonials: Caledonian United Service Club, Edinburgh, April 6, 1846.

“Gentlemen—Your Worcestershire Sauce has gained great celebrity in Edinburgh and is in constant use at this hotel. It is highly approved for the very agreeable zest which it imparts to gravies and made dishes, and I have no hesitation in saying that in my opinion it is an excellent sauce. I am, &c.,

“James Ellis, Caledonian United Service Club. To Messrs. Lea and Perrins, Worcester.

“‘South London News,’ Jan. 24.—It is an old but true saying that ‘good wine needs no bush,’ the same remark applies to the Worcestershire Sauce, prepared by Lea and Perrins. It is only necessary for us to make this one observation, that for flavour and piquancy it exceeds all the other sauces that are now before the public, and has only to be tasted to be appreciated. M. Soyer, the celebrated chef de cuisine at the Reform Club, has given his decided approval of it, and the members of that large and magnificent establishment are among its patrons.

“Sold wholesale, retail, and for exportation, by the proprietors, Vere-street, Oxford-street; Crosse and Blackwell, Soho-square; Barclay and Sons, Farringdon-street, and by venders [vendors] of sauce generally.” Address: Canning Place, Kensington, England.

816. Riddell, R.F. 1849. Indian domestic economy and receipt book; comprising numerous directions for plain wholesome cookery, both Oriental and English; with much miscellaneous matter answering for all general purposes of reference connected with household affairs, likely to be immediately required by families, messes, and private individuals, residing at the presidencies or outstations. Bombay: Printed at the “Gentleman’s Gazette” Press. xxiv + 506 p. See p. 438. Index. 23 cm. 2nd edition, revised, 1850. Published at Madras by The Athenæum Press. 8th ed. published in 1877 in Calcutta.

• **Summary:** Page 438 states: “Dolichos Soya Sauce. Take fresh soy 8 ounces, chilli vinegar one pint, garlic vinegar one ounce, syrup eight ounces, port wine or Vin de tinto one pint, salt four ounces, tart acid one ounce, mix the whole together.

“For soup, fish, meat, steaks, &c.”

By the author of “Manual of Gardening for Western India.”

Note: This is the earliest English-language document seen (April 2012) that uses the term “Soya Sauce” (regardless of capitalization) to refer to soy sauce. Address: Aurungabad, India.

817. Humphrey, Seym & Co. 1850. Classified ad: Spices, sauce, &c. *Hartford Daily Courant (Connecticut)*. Feb. 28. p. 3, col. 1.

• **Summary:** “Currie powders. Tomato Catsup, made by Mrs. Jeffrey. Mushroom do. [ditto = Catsup]. Anchovies. Sardines. Harvey Sauce. India Soy [sauce]. Reading Sauce. Bordeaux Olive Oil... for sale wholesale and retail.”

Note: This ad appeared 15 more times in this newspaper during 1850 from March 1 to April 1. Address: 124 Main street.

818. Troughton (G.). 1850. Grocery, wine & spirit store (Ad). *Head Quarters (Fredericton, New Brunswick, Canada)*. March 2. p. 4.

• **Summary:** “Sauces and pastes: Harvey Sauce,... Lea & Perrin’s Worcestershire Sauce,... Tomato Ketchup, Mushroom ditto [Ketchup], Essence of Anchovies,... India Soy [sauce], Gorgona Anchovies,...” Address: Queen Street, Opposite the Stone Barracks, Fredericton.

819. *Maitland Mercury & Hunter River General Advertiser (New South Wales, Australia)*. 1850. Shipping intelligence (From the Sydney Morning Herald). April 17. p. 2.

• **Summary:** “Imports. April 14.—*Titania*, schooner, 140 tons, Captain Knight, from Hongkong and Manila: 5 packages silks, 40 half-chests cassia, 60 packages matting,... 30 boxes sweetmeats, 20 boxes soy [sauce], 1 package tea,... 2,400 bags sugar.”

Note: This cargo was for Caucasian clients.

820. *New York Daily Times*. 1850. Miscellaneous. May 6. p. 2.

• **Summary:** “The resolutions to be proposed by the Chancellor of the Exchequer, in accordance with the new Budget...”

“In lieu of present custom duties on the following articles of foreign import, duties shall be charged as follows: On apples, 3d. per bushel;... sauces not otherwise enumerated, 1d. per lb; soy, 6d. per gallon;...”

821. Fullalove (James). 1850. Sales by auction: Next Tuesday, Mr. James Fullalove will sell by auction... (Ad). *Manchester Guardian (England)*. May 11. p. 12.

• **Summary:** “;... six dozen essence of anchovies, twelve dozen Harvey’s and Reading’s sauces, three dozen mustard, Indian soy [sauce], three dozen cayenne pepper, and six half-hogsheads of London vinegar; foreign cigars,...” Address:

104 King-street, Manchester.

822. Hay & Ivey. 1850. Classified ad: The whole cargo of the Martha and Elizabeth from Canton. To dispose of by public auction,... *Courier (The) (Hobart, Tasmania, Australia)*. May 22. p. 1.

• **Summary:** “Now landing; comprising an assortment of Teas of a very superior description, purchased in China by a gentleman of great experience expressly for this market; comprising -”

“... Four cases vegetable Macassar oil, in all its purity. Eight cases Chinese soy [sauce]. Three ditto [cases] touch paper.

Note: This is the most recent of 10 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “Chinese Soy.” Address: Elizabeth-street [Hobart].

823. Fullalove (W.D.) & Brother. 1850. Will sell by auction, on Friday 31st, 1850... (Ad). *Manchester Guardian (England)*. May 25. p. 8.

• **Summary:** “Under a deed of assignment.- Groceries, tea...”

“... several dozen cayenne pepper, Harvey’s sauce, Reading sauce, essence anchovies, mushroom ketchup, India and China soy [sauce], Chili vinegar, &c.; also several dozen British wines, and about 3cwt. choice cigars,... May be viewed the morning of sale.”

Note: This is the earliest (and only) document seen (Oct. 2010) that contains the phrase “India and China soy.” The use of these two place names together raises several important questions. Was China soy made in China? If so, was it exported from China to England? From which port? Was India soy made in British India? Or was it made elsewhere (where?), shipped to India (or to the Dutch East Indies), and then transshipped from India to England? By what country or organization was it shipped to India? How was it made and from what ingredients? How did the price of the two in England compare? How did the quantity of the two imported to England compare? Which was preferred in England for its taste? Address: The Mart, 73 and 75, King-street, Manchester.

824. Brigham (Mr. J.). 1850. Sales by auction: New goods. Ex “Constantinople” (Ad). *New Zealander (Auckland)*. July 10. p. 2.

• **Summary:** “An assortment of merchandise consisting of—... Cigars, Candles, Pipes. Butter, Worcester Sauce, Blue, &c.”

Note: This is the earliest of 11,690 documents seen (Feb. 2012) in the New Zealand Newspapers database (paperspast) that contains the term “Worcester Sauce” (regardless of capitalization). The term was last used in New Zealand Newspapers on 10 March 1931.

825. Somerville (Mark). 1850. Ex *Moa*, On sale by the undersigned (Ad). *New Zealander (Auckland)*. Sept. 4. p. 1.

829. Kôto gosui 1850. Japan. [Jap]*

• **Summary:** According to Ryoichi Iino (2003, p. 10) the term *oshidashi* was used in this book to indicate / refer to soy sauce.

830. Beasley, Henry. 1850. The druggist's general receipt book: Comprising a copious veterinary formulary,... London: John Churchill. viii + 424 p. See p. 258, 260-61. Illust. Index. 20 cm.

• **Summary:** In the chapter on "Beverages, dietetic articles, and condiments" (p. 239+) is a section titled "Culinary vinegars, sauces, &c." (p. 258+). Soy [sauce] is used in the following recipes: "Camp vinegar" (p. 258; 2 recipes, The first includes 2 oz. of soy and 4 oz. of walnut catsup. The second includes "Vinegar a quart, walnut catsup a pint, mushroom catsup 3 tablespoonfuls, garlic 4 heads, cayenne ½ oz., soy 2 tablespoonfuls...").

"Quin sauce" (p. 260. "Mushroom catsup ½ pint, walnut pickle ¼ pint, port wine ¼ pint, 6 anchovies and 6 shallots {both pounded}; soy a tablespoonful, cayenne ½ dr.; simmer together for 10 minutes, strain, and bottle"). "Sauce superlative" (Dr. Kitchiner's) (p. 260-61. "Port wine and mushroom catsup, of each a pint,... a ¼ pint of soy may be added").

The last recipe in the section is: "Soy. Boil a gallon of the seeds of dolichos soja till soft, add a gallon of bruised wheat, keep them in a warm place for 24 hours; add a gallon

of salt, and 2 gallons of water, and after keeping them bunged up in a stone jar for 2 or 3 months, press out the liquor."

In this same section are recipes from "Mushroom catsup" and "Walnut catsup," neither of which use soy [sauce] as an ingredient. Address: Uxbridge [England].

831. Beecher, Catharine Esther. 1850. Miss Beecher's domestic receipt book: Designed as a supplement to her treatise on domestic economy. 3rd ed. New York, NY: Harper & Brothers. xiii + 306 p. Illust. Index. 20 cm.

• **Summary:** In Chapter VIII, "On the preparation of hashes, gravies, and sauces," is a recipe for "Soy" [sauce]. Surprisingly, it contains no soy [sauce], and the word "soy" is not even mentioned in the body of the recipe, only in the title. Perhaps it looked and tasted somewhat like real soy, although it would have been much sweeter and probably thicker. "Soy. One pound of salt, two pounds of sugar, fried half an hour over a slow fire, add three pints of boiling water, half a pint of essence of anchovies, a dozen cloves, and some sweet herbs. Boil till the salt dissolves, then strain and bottle it." The next 3 recipes are: Tomato catsup. Mushroom catsup. Walnut catsup.

Chapter XXVII, "On setting tables, and preparing various articles of food for the table, notes (p. 245): "*Pickles* are served especially with fish, and *Soy* is a fashionable sauce for fish, which is mixed on the plate with drawn butter."

Peanuts are used as an ingredient in two recipes: To prepare for sugar candies (p. 180). Molasses candy (p. 292).

Note: Catharine Esther Beecher (1800-1878), the elder sister of anti-slavery author Harriet Beecher Stowe, was a "pioneer educator and home economist with a lifelong commitment to solving women's problems through education." Their "brother, Henry Ward Beecher, author and minister, was renowned as the greatest orator of his day" (MSU introduction). Address: Hartford, Connecticut.

832. Dubois de Jancigny, Adolphe Philibert. 1850. Japon, Indo-Chine, Empire Burman (ou Ava), Siam, Annam (ou Cochinchine), Péninsule Malaise, etc., Ceylan [Japan, Indo-China, Burmese Empire (on Ava), Siam, Annam (or Cochinchine), Malay Peninsula, etc., Ceylon]. Paris: Firmin Didot Frères. 2 p. + 666 p. 3 maps (1 folded). No index. 21 cm. [50* ref. Fre]

• **Summary:** All references to soy are in the first part of the book, which is about Japan. Page 129 R.3: The dishes are arranged on the table in groups of five. One contains rice, another fish and vegetables seasoned with soy (des légumes confits dans du soy,...).

Page 176 R.1: The commercial products most researched are the wax tree (*Rhus succedanea*), bamboo, saké, soy (*du soy; soya*), mustard, silk fabrics,..."

Page 184 L.7: Wheat is one of the principal ingredients of soy, the Japanese sauce, which is so widely used

throughout the archipelago and is even shipped to Europe.

Note: The table of contents (at end of book) shows that this book is divided into two major parts: (1) Japon [Japan] and Indo-Chine [Indochina]. The latter part is divided into the following geographical sections: Birmah [Burma], Siam, Péninsule Malaise [Malay Peninsula], Provinces anglaises dans l'Indo-Chine [British provinces in Indochina]; Arakan {former name of the Rakhine State of Burma}, Martaban (now Mottama, in southeast Burma), Maulmein [Mawlamyine, Moulmein in lower Burma], Amherst [Kyauikkami, Burma], Ye [Mon State, in Burma], Tavoy [Dawei, Burma], Tenasserim [Tanintharyi Division of Burma], Annam ou Empire Cochinchinois, and Ceylan [Ceylon]. This gives us a nice French definition of "Indochina" at this time.

Also: Page 317 R.1. Ngapi is a fish sauce, a favorite among the people of Burma. Address: Aide de Camp du Roi d'Oude.

833. Rundall, Thomas; Adams, William. 1850. Memorials of the empire of Japon: In the XVI and XVII centuries. London: Printed for the Hakluyt Society (Series 1, No. 8). xxviii + 186 p. 22 cm. Facsimile edition reprinted in 1968 by B. Franklin (New York). [20+ ref]

• **Summary:** Contents: Preface—A description of the empire in the 16th century. From... Harleian manuscript #6249. Six letters of William Adams, 1611 to 1617. Notes. Summary of a narrative by His Excellency Don Rodrigo de Vivero y Velasco... of his residence in the empire: A.D. 1608-1610.

The preface states: The Portuguese first arrived in Japan in about 1542; the Spaniards arrived a little later. The first indication of any misunderstanding between the Japanese government [shogun, "Taico Sama"] and the Europeans residing there appears in 1587. In that year the shogun "despatched [dispatched] two imperial commissioners, in rapid succession, to Father Cuello, the vice-provincial of the Portuguese, to demand: 1. Why he and his associates forced their creed [Jesuit Roman Catholicism] on the subjects of the empire. 2. Why they incited their disciples to destroy the national temples? 3. Why they persecuted the bonzes [native priests]? 4. Why they, and the rest of their nation, used for food animals useful to man, such as oxen and cows? [see note M]. Finally, why they permitted the merchants of their nation to traffic in his subjects, and carry them away as slaves to the Indies?" The replies of the vice-provincial are given, showing disdain for the Japanese and their religions (p. x-xi).

On p. xxiv is a detailed discussion of Dutch trade with Japan and the island of Deshima.

The English attempts at trade with Japan failed. "The English retired from Japan in 1623, and a subsequent attempt was made (in 1673) to renew the intercourse; but it proved unsuccessful" (p. xxv).

"The Americans must be placed in the same category

with ourselves [the British]. In the year 1837 the *Morrison*, a vessel belonging to citizens of the United States, sailed from Singapore, on an expedition to Japan." It was driven away by cannon fire from isolationist Japan (p. xxviii).

Note: In addition to its commercial aims, the ship (headed by Charles W. King) had been attempting to repatriate seven shipwrecked Japanese citizens who had been picked up in Macau. It also carried Christian missionaries such as Samuel Wells Williams.

Letter No. IV by Sir Thomas Smith to William Adams concerns Capt. John Saris of the *Clove*, who anchored near Firando [Hirado] in June 1613.

Unites of currency (p. 88). 10 Condrens = 1 Mas = 6 pence (British). 10 Mas = 1 Taie = 5 shillings.

In the section of the book titled "Notes," Note O (p. 123-24) is about "Produce of the fields" (from E. Kaempfer). One of the five fruits of the field is: "4. *Daidso*, or *Daid-beans*; from which *soeju* [shoyu], or *soy* [sauce], is made; and which is highly esteemed as an article of food."

Note A A (p. 164-67), titled "Fate of the English factory at Firando," discusses what items the Spaniards, Portuguese, and Dutch tried to import to Japan, and the weak demand for these products. Note: William Adams lived 1564-1620.

834. Love (Andrew). 1851. Classified ad: General importer of European goods. *New Orleans Commercial Bulletin*. Jan. 14. p. 2, col. 6.

• **Summary:** "Has just received from the ships *Miltiades*. from Liverpool, and *Lyman*, from London, the following Goods, which he offers on the most reasonable terms, viz:

"Pickles and Sauces, the original Worcester Sauce, from the celebrated house of Crosse & Blackwell, London, etc., etc." Address: 106 Poydras St., New Orleans.

835. Hughes (Wellesley). 1851. Ex "Cresswell," from London, and on sale by the undersigned, one hundred and ninety-six packages groceries,... (Ad). *New Zealander (Auckland)*. March 22. p. 1, col. 4.

• **Summary:** "... oilman's stores, fruits, &c., &c. consisting of—... Burgess Essence Anchovies. Anchovy Paste. Mushroom Catsup. Lea and Perrin's Worcester Sauce. Brown Vinegar."

Note: Similar ads appeared in the March 23 (p. 1) and March 26 (p. 1) issues of this newspaper. Address: Auckland.

836. Hughes (Wellesley). 1851. Ex "Emma," "Maukin," and "Moa." *New Zealander (Auckland)*. April 30. p. 2.

• **Summary:** The goods sold included: "Currie Powder, India Soy [sauce], Ling Fish,..." Address: Auckland.

837. Burdick (R.M.) & Co. 1851. Classified ad: P.T. Barnum's menagerie. *Hartford Daily Courant (Connecticut)*. June 9. p. 3.

• **Summary:** "Also—Pickles, catsup, Worcestershire sauce,

capers, sardines, pepper sauce, figs, nuts, prunes, preserved ginger, &c. &c.”

This ad also appeared in the June 11, 12, 13, and 19 issues of this newspaper.

Note 1. This is the earliest document (and the earliest ad) seen (Feb. 2012) that mentions Worcestershire sauce in the United States. Note that it has no brand, and is thus sold as a generic commodity. Notice also that it first appears in Hartford, Connecticut, rather than in New York City.

Note 2. R.M. Burdick & Co. is probably a general retail store, and not the importer. Address: 250 Main St.

838. *Freemason's Quarterly Magazine and Review* (London), 1851. Masonic intelligence—Provincial—Worcestershire. p. 202-65. See p. 250.

• **Summary:** “I heartily wish, brethern, both for your sakes and my own, that upon the present occasion it were in my power to flavour the *toast* which has just been so eloquently proposed, and so well received, by pouring over it a few drops of your far-famed Worcestershire sauce, which, if we may credit the advertisements, imparts an exquisite relish to everything, and possesses so many tonic and invigorating properties.”

839. Somerville (M.). 1851. On sale—Ex “Maukin” (Ad). *New Zealander* (Auckland). July 26. p. 1.

• **Summary:** “... German Matches. Worcester Sauce, (Lea and Perrin’s). Castor oil, quarts, pints and half-pints.”

Note: This ad also appeared in the 29 July 1851 issue of the *Daily Southern Cross* (p. 2). Address: Corner of Shortland and Queen-streets, Auckland.

840. A housekeeper. 1851. *The American matron: or, Practical and scientific cookery*. Boston and Cambridge, Massachusetts: James Munroe and Company. 263 p. See p. 162, 165, 205. Index. 19 cm.

• **Summary:** In the chapter on “Sauces,” the recipe for “A good beef gravy” (p. 162) states: “add a table-spoonful of soy [sauce], or tomato catchup.”

In the same chapter, “Forcemeat ingredients” (p. 165) include: “Cloves, soy or catchup, curry.”

In the chapter on “Meats,” the recipe for “Veal cutlets” (p. 204-05) says: “Make a little gravy by adding a little water and butter to the fry. Dredge in flour, with some soy or catchup.”

Note: Soy and catchup are used interchangeably.

The word “catchup” appears on 10 pages in this book including: Chowder (with tomato catchup, p. 173-74). To toast a tautog or black fish (“with a little walnut or tomato catchup,” p. 176). Ragout of beef (with “two spoonsful of catchup,” p. 198). Breast of veal ragout (with “two table-spoonfuls of catchup,” p. 204). Veal fricandeau (with “three table-spoonsful of white wine and two of catchup,” p. 205-06). Veal olives (with “a table-spoonful of catchup,” p.

206). Roasted or baked liver (with “a little butter, catchup, pepper, and salt,” p. 206). Cucumber catchup (homemade, p. 247). Tomato catchup (homemade, p. 247). Address: Salem, Massachusetts.

841. Ellis, Robert. 1851. *Official descriptive and illustrated catalogue of the Great Exhibition of the Works of Industry of all Nations*. London: Spicer Brothers,... 5 parts (cxcii + 1469 p.). See p. 58, 677-78, 857, 871. Illust. 27 cm.

• **Summary:** The section titled “Official illustrated catalogue advertiser” states (p. 58): “The Worcestershire Sauce, prepared by Lea & Perrins, from the recipe of a Nobleman in the country, imparts the most exquisite relish to steaks, chops, and all roast meat, gravies, fish, game, soup, curries, and salad; and by its tonic and invigorating properties enables the stomach to perfectly digest the food. The daily use of this condiment has proved most conducive to health, and established its fame throughout the world. Sold wholesale by the proprietors, Lea & Perrins, 6, Vere-street, Cavendish-square; Crosse & Blackwell, Soho-square; and other merchants, London; and retail by the principal dealers in sauces.”

In Vol. 2 (Sections 3-4): The section titled “Class 23.—Works in precious metals, jewellery, etc.” under “Collis, George Richmond, Church Street, Birmingham [England]—Manufacturer” states (p. 677-788): “Inkstands. Dish-covers. Soy frame” (p. 678 L.2). The section titled “British possessions in Asia” (p. 857) begins with the “East Indies.” “Class III: Agricultural produce” contains a section on “Pulses” (p. 871) which includes “Bhut (*Soja hispida*), from Kêmaon (Kumaon).” The next section, “Roots and Oil Seeds, &c” includes linseed, “Kisto til (*Sesamum orientale*)—from Calcutta,” safflower, etc.

Note: This was the first major international exhibition of arts and industries, held in 1851 in London at the Crystal Palace. A great success in every way, it showed the world’s latest achievements at a time when mankind was making progress at a speed never before known. Address: London.

842. Leslie, Eliza. 1851. *Miss Leslie’s complete cookery: Directions for cookery, in its various branches*. 38th ed. Thoroughly revised, with additions. Philadelphia, Pennsylvania: H.C. Baird. 7-528 p. Illust. Index. 19 cm.

• **Summary:** Soy [sauce] is used in the following recipes:

Page 44: Salmon baked in slices (“Melt two ounces of butter than has been rolled in flour, in a half pint of water, and mix with it two large glasses of port wine, two table-spoonfuls of catchup, and two of soy.” Mix and strain, then pour this over the slices and bake in an oven”).

Page 50: To boil fresh cod (“Or you may make a sauce by flavoring your melted butter with a glass of port wine, and a table-spoonful or more, of soy”).

Pages 52-53: Fried perch (“Send to table with them in a boat, melted butter flavoured with soy or catchup”).

Pages 53-54: To broil trout ("For sauce, send with them melted butter, and put some soy into it; or flavour it with catchup").

Page 172: Quin's sauce (same as in the 1840 ed. p. 172). Harvey's sauce (same as in the 1840 ed. p. 173; soy sauce is used as an ingredient).

Catchup is mention on 35 pages.

Elizabeth Leslie lived 1787-1858. Address: Philadelphia.

843. Soyer, Alexis. 1851. *The modern housewife: Or, ménagère*. Comprising nearly one thousand receipts, for the economic and judicious preparation of every meal of the day,... London: Simpkin, Marshall & Co. xvi + 450 p. See p. 84, 103. Illust. 18 cm.

• **Summary:** The section on "Condiments" states (p. 84): "Soy is obtained from the seed or fruit of an Indian plant, called *dolichos soja*, or soya; it is produced in a very similar way to ketchup; it enters greatly into use in the variety of sauces [such as Worcestershire sauce] that are made for the table, it being of a very strong, sweet-bitter taste; it should only be used in moderation in cookery."

In the section on Sauces, recipe 181, "Wild fowl sauce," calls for: "Walnut catsup one tablespoonful; the same of Harvey's or Worcestershire sauce, the same of lemon-juice..." (p. 103).

"Harvey sauce" or "Harvey's sauce" (the two terms are used with about equal frequency in this book) is used in small amounts to season at least 20 recipes. (p. 103, 117-18, 127, 223, etc.). Recipe "404. Hashed beef" states that the flavour may be varied with "a few spoonfuls of catsup, Soyer's, Harvey's, Soho, or Reading sauce."

Contains many recipes for catsup, including "mushroom catsup" and "walnut catsup." However the word "catchup" is not mentioned.

Note 1. This is the earliest document seen (March 2012) stating that soy sauce is used as an ingredient in Worcestershire sauce.

Note 2. Alexis Soyer (lived 1810-1858) was a French chef who became the most famous cook in Victorian London. Address: England.

844. Transatlantic rambles: or, A record of twelve months' travel in the United States, Cuba, & the Brazils, by a Rugbæan. 1851. London: George Bell. vii + 168 p. See p. 107-08. 12mo.

• **Summary:** "Day and Martin, with an immense picture of the house in Holland, on a large placard, occupied a place on one wall, and Lea and Perrin's Worcestershire attracted attention from the other."

Note: He appears to have seen this in "the Brazils." Address: London.

845. Burdick (R.M.) & Co. 1852. Classified ad: Now is the time to secure truly great bargains. *Hartford Daily Courant*

(*Connecticut*). Feb. 12. p. 3.

• **Summary:** "... Pickles, Catsup, Pepper Sauce,... Table Oil, Worcestershire Sauce, Corn Starch, Tapioca, Sago, Vermicelli,..." Address: 250 Main St.

846. *New York Daily Times*. 1852. New-York City. March 10. p. 1.

• **Summary:** The section titled "The label forgeries ended" states: "Some two years ago a Pearl-street importer, named George Raphael, was indicted at the instance of Messrs. Duncan & Sons, who alleged that defendant had sold large quantities of Worcestershire Sauce, with forged labels, in the name of Lea & Perrins, the English manufacturers. The case was finally brought to trial in the Court of Sessions on Monday. James T. Brady appeared as counsel for the defendant. The Jury retired and deliberated for some hours, but returned with a verdict of Not Guilty. The defendant was therefore honorably discharged, and thus ends a two-years' litigation."

Note 1. This is the earliest document seen (Feb. 2012) that mentions "Duncan" or "Duncan & Sons", or that concerns a lawsuit, in connection with Lea & Perrin's Worcestershire sauce, or that mentions this sauce in connection with New York City.

Note 2. This article strongly suggests that Lea & Perrin's Worcestershire sauce was being sold in the United States as early as 1849; the importer at that time was probably Duncan & Sons. Address: New York.

847. Burdick (R.M.) & Co. 1852. Classified ad: Pure cider vinegar,... *Hartford Daily Courant (Connecticut)*. Aug. 16. p. 3.

• **Summary:** "... from farmers, just what every family want for pickling."

• **Summary:** "... begs most respectfully to announce to his Friends, constituents, and the public at large that he has recently landed from the ship 'Seringapatam' a most choice stock of every description of goods, which he has got out on commission..."

"... sauces of all sorts in large pints, sauces in small pints of new kind, viz: piquante, regent, windsor, city of London, onion, coratch, gloucester, india soy, king oude, mogal, chitna, wellington, China soy,... chitney and tomata sauce,..." Address: No. 28 Apollo street.

849. London and New York Pickle and Preserve Warehouse, 1852. Classified ad: Having taken the premises... *New York Daily Times*. Dec. 17. p. 4, col. 2.

• **Summary:** “London Pickles, Sauces, Ketchups, &c. in all the various styles... India Soy [sauce], Currie Powder, and African Cayenne in fancy Chinese packing.” George Raphael is the new owner of this large warehouse.

Note: This ad appeared 8 more times in this newspaper during 1852-1853 from Dec. 22 to Jan. 14. Address: 46 Vesey-st., New York City.

850. Day, Charles William. 1852. Five years’ residence in the West Indies. 2 vols. London: Colburn and Co., Publishers. See Vol. 1, p. 254. Illust. 20 cm.

• **Summary:** “...; but roasted meats or fowls, are always so impregnated with the pyroligneous acid of the wood-fire, as to have a smoky, or baked taste, well known to all travellers in the Highlands of Scotland. Worcestershire sauce is now beginning to be used; but usually the only condiment beyond pepper and salt, will be a bottle of pickled peppers. Greens, or salads, are rarely seen.” Address: Esq.

851. Dickens, Charles. 1852. The world here and there: or, Notes of travellers. From “Household Words,” edited by Charles Dickens. New York, NY: George P. Putnam. 231 p. See p. 76.

• **Summary:** “Rice fields, of course, we pass; rice is a staple article of diet to the Japanese, as to so many other millions of the human race. It is the vegetable food that finds its way into more mouths than any other. There is wheat, also, in Japan, used chiefly for making cakes and soy [sauce]; barley for feeding cattle. The cattle being used as beasts of draught and burden, it is thought improper to kill them, or to deprive the young calves of their milk; the Japanese, therefore, refrain from milk and beef. They eat great quantities of fish, poultry, and venison.”

852. Hale, Sarah Josepha Buell. 1852. The ladies’ new book of cookery... 5th ed. New York, NY: H. Long & Brother. xvi + 474 p. Index. 20 cm.

• **Summary:** The section on seasonings (p. 4) notes that if soups “want flavor, most of the prepared sauces will give it to meat-soups, and anchovy with walnut ketchup and soy [sauce], will add to those of fish, but must be used sparingly.”

Soy [sauce] is used as an ingredient in the following recipes: Sago soup (“season it with soy and ketchup,” p. 13). Lake and pond fish soup (p. 24-25). Stock for fish soup (“If meant to be *browned*, the onions should be fried, and a good spoonful of mushroom ketchup, or India soy be added,” p. 25). Marinade (“a glass of soy,” p. 31-32). Cod sounds (p. 35). Baked whittings a la Francaise (“a few drops of soy,” p. 46. Note 1. A whiting is a marine food fish). To collop halibut (“a spoonful of soy or fish sauce,” p. 48-49. Note 2. To collop is to cut into small pieces or slices). To stew lobsters (“1 [spoonful] of soy or walnut-ketchup,” p. 57). Rolled mutton (p. 124). To “devil” turkey (p. 168-69). To hash a

duck or goose (p. 172). Rich gravy (“A dessert-spoonful of essence of anchovies or soy will be a great improvement,” p. 189). Gravy for fowls without meat (“a tea-spoonful of soy, p. 189). For all sorts of fish (“Take a spoonful of vinegar, one of Indian soy, the same of mushroom catsup and Harvey’s sauce with a little Cayenne. Add three large spoonsful of melted butter,” p. 203-04). Brown sauce (p. 204). Universal sauces (Nos. 3 and 4, p. 208-09).

Quin’s sauce (p. 210). Since this was also a commercial product, we will give the whole recipe: “Mix a quarter of a pint of walnut catsup with half a pint of water, half a glass of soy, and a quarter of a pint of port or raisin wine; add six anchovies, beaten to a paste, or a gill of essence, six sliced shalots [shallots], and a quarter of an ounce of chilies; simmer all slowly for half an hour, then let the mixture stand a few days, when it may be strained and bottled for use.”

Salad dressing (Obs. [Observation] 1. “small quantities of soy, cavice, essence of anchovies, or catsup may in turn be used to flavor the compound,” p. 248). Another salad dressing (“a tea-spoonful of soy or essence of anchovies,” p. 249).

Sarah Josepha Buell Hale lived 1788-1879. Address: [Boston, Massachusetts].

853. Mac Farlane, Charles. 1852. Japan: An account, geographical and historical, from the earliest period at which the islands composing this empire were known to Europeans, down to the present time, and the expedition fitted out in the United States, etc. New York: Putnam. xii + 365 p. Illust. 19 cm. Reprinted in 1856 by S. Andrus & Son (Hartford, Connecticut). Facsimile edition reprinted in 2002 by Ganesha Publishing (London) and Edition Synapse (Tokyo). Series: Japan in English, Vol. 1. [50* ref]

• **Summary:** Charles Mac Farlane, a British romantic author, lived 1799-1858. He explains in the Preface that he never traveled to Japan, and that this is a compilation. It is rather superficial, relying heavily on Englebert Kaempfer (1727).

The section on plants states, rather vaguely (p. 243): “Not only the fields and flat country... but likewise the hills and mountains, are made to produce corn, rice, pease, pulse, and numerous edible plants.”

The section on domestic manners describes a Japanese feast. The host “drinks a cup of sackee [sake] with each guest... As whets, servants, of both sexes, from time to time, hand round soy [sauce], other sauces, pickled or salted ginger,... which are all eaten with the Chinese chopstick” (p. 288-89). Address: Esq., Canterbury, England.

854. McCulloch, John Ramsay; Vethake, Henry. 1852. A dictionary, practical, theoretical, and historical, of commerce and commercial navigation. 2 vols. Philadelphia, Pennsylvania: Hart, Carey and Hart. See Vol. 2, p. 201, 536, 18 at end.

• **Summary:** Nangasacki [Nagasaki] (p. 200-01): The

Japanese islands are believed to contain 50,000,000 people. All foreigners are rigidly excluded, “with the exception of the Dutch and Chinese; and they are allowed to visit Nangasacki, the former with 2 ships and the latter with 10 junks.”

“The Chinese trade with Japan is understood to be conducted from the port of Ningpo, in the province of Chekiang, which is so conveniently situated, that 2 voyages may be performed in the year, even by the clumsy junks of China. The commodities with which the Chinese furnish the Japanese, consist of raw sugar, cow and buffalo hides, wrought silks, consisting chiefly of satins and damasks, eagle and sandal wood, ginseng, tutenague or zinc, tin, lead, fine teas, and, for more than 100 years back, some European broad cloths and camlets. The exports consist of copper, limited to 15,000 piculs, or about 900 tons; camphor, sabre [sword] blades, pearls, some descriptions of paper and porcelain, and some Japan ware, which is either curious or handsome, but not so substantial as that of China.”

“The following are the quantities and value of goods exported and imported by the Dutch in their trade with Japan in 1825; the ships employed being one of 600, and one of 700 tons burden. The trade is exclusively carried on with the port of Batavia.” A table shows exports to and imports from Nangasacki. Imports from Nangasacki to Batavia, then Holland include: “Sakkie [saké] and soy [sauce]. Value: 14,302 florins.

Soy (p. 536): a species of sauce prepared in China and Japan from a small bean, the produce of the *Dolichos soja*. It is eaten with fish and other articles. It should be chosen of a good flavour, not too salt nor too sweet, of a good thick consistence, a brown colour, and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it do not, it is of an inferior kind, and should be rejected. Japan soy is deemed superior to the Chinese. It is worth, in bond, from 6s. to 7s. a gallon. It is believed to be extensively counterfeited.—(*Milburn's Orient. Com.*).

At the end is a long table titled “The new tariff of 1846, together with the tariff of 1842, reduced to ad valorem rates, as far as practicable.” On page 18 is “Soy.” 1846 = 30. 1842 = 30. Address: 1. Esq.; 2. LL.D, Prof., Univ. of Pennsylvania.

855. Watts, Talbot. 1852. Japan and the Japanese: From the most authentic and reliable sources. With illustrations of their manners, costumes, religious ceremonies, &c. New York, NY: J.P. Neagle. 184 p. Illust. No index.

• **Summary:** In the section titled “Customs, manners, &c.” the author borrows text from Thunberg (1802, p. 267) without using quotation marks (p. 111): “Ladies do not eat with the men, but by themselves. Rice supplies the place of bread, and is boiled with every kind of provisions. Fish and fowls are very plentiful, and are eaten in abundance; but miso-soup * boiled with fish and onions is the customary

food of the common people.”

Footnote: *”Misos are small beans, like lentils, the produce of the *dolichos soja*.”

In the chapter titled “Empire of Japan (from Goodrich’s Pictorial Geography)” under “Towns” (p. 122) we read: “Kio, or Meaco [Kyoto, or Miako], was for a long time the Capital, and contains the most remarkable edifices... Meaco is the centre of Japanese commerce and manufactures. Silks, tissue, soy [sauce] and lacquered wares, are purchased here in their greatest perfection,...”

The chapter titled “The Japanese empire (From Memoirs of a Captivity in Japan, by Captain Golownin, of the Russian Navy)” contains a long excerpt (p. 140) about the mode of making soy [sauce]. “The Japanese soy is also prepared of beans, and turned sour in casks. They say that three years are required for preparing the best soy...” Address: M.D. [USA], Late in the service of the Hon. D. E. I. [Dutch East India] Company.

856. *Blackwood's Edinburgh Magazine*. 1853. Lady Lee’s widowhood. Part III.—Chapter X. 73:278-83. March. See p. 280.

• **Summary:** In this fictional story, a group of officers and soldiers, in the sleepy town of Doddington, are having a meal at their mess hall in a hotel. An “odour of various compounded perfumes heralded the approach” of Captain Sloperton who “possessed a face and figure that no young female of the middle or lower class ranks could look upon without presently loving him to distraction. The first time the bar-maid of the hotel set eyes on him, she put soy instead of sherry into the soda-water compound she was mixing...”

857. Fox (Chas. E.) & Co. 1853. Coopers’ shred isinglass (Ad). *Hartford Daily Courant (Connecticut)*. April 18. p. 3.

• **Summary:** “... Lea & Perrin’s Worcestershire sauce. Anchovy paste. Sardines, anchovies. India currie powder. Walnut and Tomato Catsup. Capers, Pickles in jars.”

858. Fox (Chas. E.) & Co. 1853. Classified ad: For the table—Worcestershire sauce. *Hartford Daily Courant (Connecticut)*. Nov. 24. p. 10.

• **Summary:** “Royal Osborn Sauce. John Bull Sauce. India Soy Sauce. Reading Sauce. Harvey’s Sauce. Warwickshire Sauce. Sauce pour Savourer.”

Note: This ad also appeared in the Nov. 30 (p. 2) issue.

859. *Putnam's Monthly Magazine (New York)*. 1853. The Potiphar in Paris: A letter from Miss Caroline Pettitoes to Mrs. Settum Downe. 2(11):482-86. Nov. See p. 486.

• **Summary:** The letter is written from Paris in October. “He sends Worcestershire sauce to the thief, or a pillow of poppies, and says to him—Friend, all of mine is thine, and all of thine is thy own. This, benighted people of Sennar, is the practice of Christian people.”

Note: This article and passage appeared in a book titled *The Potiphar Papers*, by George William Curtis, published in 1856.

860. Herbert, Henry William. 1853. *American game in its seasons*. New York, NY: Charles Scribner. xiii + 343 p. See p. 183. Illust. 19 cm.

• **Summary:** The chapter titled “The salmon” describes how to cook and serve this fish (p. 183). In salted water, “let him boil *quantum suff*. Then serve him up, with no sauce save a few spoonfuls of the water in which he was cooked, and if you please, the squeeze of a lemon, or, better yet, a lime—but,... eschew the lobster sauce, and the rich condiments, as Reading, Worcestershire or Soy [sauce], for he is rich enough without, and they will but kill his natural flavor, and undo his delicacy.” Address: Author [Philadelphia, Pennsylvania].

861. Metropolitan Mechanics’ Institute. 1853. *A record of the first exhibition of the Metropolitan Mechanics’ Institute, held in the east wing of the patent office, February and March, 1853*. Washington, DC: H. Polkinhorn, printer. 52 + 14 + 68 + 11 + 8 + 3 p. See p. 7. 23 cm.

• **Summary:** In the first 52 pages of this book, under “Catalogue of Articles Deposited for Competition and Premium...” in Class III.—Substances used as food, we read (p. 7): “548, J.B. Kibbey & Co., assorted groceries.” These are listed under two groups: American and Foreign. Under Foreign we read: “2 flasks oil, 4 jars anchovie [anchovy] paste, 2 jars shrimp paste, 2 jars English mustard, 2 jars Worcester sauce, 2 jars Harvey sauce, 2 jars John Bull sauce, 2 bottles essence anchovies, 2 bottles India Soy [sauce], 1 bottle essence shrimps, 1 bottle walnut catsup,...” Address: Washington, DC.

862. New York Exhibition of the Industry of All Nations. 1853. *Official catalogue of the New York Exhibition of the Industry of All Nations, 1853-54*. First revised ed. New York, NY: Published by George P. Putnam & Co. for the Association. 224 + 23 p. 19 cm. 1 vol.

• **Summary:** In the chapter on objects from Great Britain and Ireland, under “Class 3—Substances employed as food” (p. 102), item 4 states: “Specimens of Worcestershire sauce.—Lea & Perrins, *manu*. [manufacturer], Worcester, England.—*Agents*, John Duncan & Sons, 407 Broadway, New York City.”

Note 1. In the original edition of this catalog, the exact same information appears on p. 98.

Note 2. The first major international exhibition of arts and industries was held in 1851 in London at the Crystal Palace. A great success in every way, it showed the world’s latest achievements at a time when mankind was making progress at a speed never before known. The next international fair opened only 2 years later in New York City. Held in a huge and very impressive building made

mostly of glass and steel (modeled on the Crystal Palace, but larger), it opened in July 1853. An “Official Catalog” and an “Illustrated Record” (with about 500 illustrations) were published. The building housed 5,272 exhibitors, about half of whom came from 23 foreign nations: America 1,467. Germany 639. Great Britain 581. France 418, etc. Unfortunately, the exhibition, though impressive, was a financial failure. It had to close on 1 Nov. 1854 with debts of \$300,000. In Oct. 1857 the “fireproof” building caught fire and burned to the ground in less than 30 minutes. Address: New York.

863. Philp, Robert Kemp. 1853. *The shopkeeper’s guide*. London: Houlston & Stoneman. viii + 245 p. See p. 68-69, 77, 80, 82. Index.

• **Summary:** Describes the main items that different types of shopkeepers should have in stock. In the section titled “Electro-plated goods” (p. 68-69) is a subsection titled “Plated goods,” which contains a long list (p. 69) including: “Salts, gilt inside. Soup and sauce tureens. Soy frames. Spoons and forks.”

Under “Papier mache goods” (p. 77): “Card trays. Cruet, soy [sauce], pickle, and liqueur frames. Inkstands.”

Under “The chandler and the oilman” (p. 80): “Burgess’s essence of anchovies. Harvey’s Reading sauce. Cock’s ditto [Reading sauce]. Ketchup. India soy. Finest salad oil.”

The grocer (p. 80-83): Under sauces (p. 82-83)—“Superior essence of anchovies. Burgess’s essence of anchovies. Essence of shrimps. Essence of lobster. Real India soy. Quin sauce. Caviare sauce [Caviar?]. Coratch sauce... Harvey’s sauce. Worcestershire sauce... Mushroom ketchup. Walnut ketchup.” Address: Editor of the *Family Treasury* (Late Editor of the “*Family Friend*”), London, England.

864. Smith (James). 1854. *Sale of merchandise and land (Ad)*. *New Zealand Spectator and Cook’s Strait Guardian* (Wellington). Jan. 14. p. 2.

• **Summary:** “Mr. James Smith has received instructions from the Importers, to sell on Tuesday, 17th January next, without reserve, ex *Northfleet*, from London, the undermentioned desirable Merchandise, viz: -

“Bloater Paste. Worcester Sauce. Capers.” Address: [Wellington, New Zealand].

865. *Observer* (London). 1854. *Public amusements: Japanese exhibition*. Feb. 26. p. 1.

• **Summary:** “The first direct importation from Japan is now open for exhibition, at the Gallery of the Society of Painters in Water Colours, 5A, Pall-mall East, until 15th March, as the society requires the gallery for their paintings.—Admittance, 1s.

“Japan.—Some of the scarce, but noted Japan Soy [sauce], has been forwarded amongst the curiosities now on exhibition at 5, Pall-mall East. On the Continent it is

esteemed as far superior to that in general use.”

This announcement also appeared in the March 5 edition, p. 1.

866. *New York Daily Times*. 1854. Business notices. March 1. p. 4.

• **Summary:** “Lea & Perrin’s Worcestershire Sauce.—Is the only sauce to which a medal has been awarded by the Juries in the Crystal Palace at New York, for foreign exhibitors, and in order to guard the public against numerous counterfeits the proprietors deem it requisite to state that the genuine Sauce can at all times be obtained of the wholesale agents for the United States,

“Messrs. John Duncan & Sons, New York. N.B.—This universally popular condiment not only imparts a piquant relish to all descriptions of food, but by promoting digestion, tends to preserve health.”

Note 1. This is the earliest published document seen (Feb. 2012) that mentions a medal awarded to Lea & Perrin’s Worcestershire Sauce; it was awarded at an exhibition in New York.

Note 2. This is the earliest document seen (Feb. 2012) concerning Lea & Perrin’s Worcestershire Sauce that uses the word “counterfeits” (or “counterfeit,” etc.) to refer to imitations. Address: New York.

867. Lea and Perrins. 1854. Classified ad: The only medal awarded by the Jury of the New York Exhibition to English or foreign sauce manufacturers... *Times (London)*. March 30. p. 11, col. 1.

• **Summary:** “... has been obtained, amongst numerous competitors, by Lea and Perrins, for their Worcestershire Sauce, whereby further testimony is afforded of its being the best sauce extant.

“The celebrity of this sauce has extended to every quarter of the globe, and its efficacy in promoting the general health is becoming daily more observed and acknowledged. In the United States it is held to be the most agreeable condiment, and is esteemed for its tonic and invigorating properties, its habitual use enabling the stomach perfectly to digest the food.”

“On the continent of Europe these qualities have been testified to, by a gentleman who writes to Lea & Perrins thus—‘I have carried a bottle of your Worcestershire Sauce in a tour I have just completed through Spain and Portugal, and I believe I owe my present state of health to its use. Your sauce is stomachic, and I think medicinal. I can with truth say there is nothing in a traveller’s baggage so essential to his comfort, at least in these countries, as your sauce.’

“In India also, where it is found at the mess of every regiment, a medical gentleman writes from Madras to his brother in the same profession at Worcester in the following terms,—‘Tell Lea and Perrins that their Sauce is highly approved in India, and that it is, in my opinion, the most

palatable as well as the most wholesome sauce made.’

“This sauce is suitable for every variety of dish, and the universal demand which its excellence has created, has led to many imitations being offered to the public, under a variety of names, but the genuine may be known by the names of ‘Lea & Perrins,’ being impressed upon the patent metallic capsule, or patent glass stopper of the bottle, as well as the labels and wrapper.

“Manufactory, 68, Broad-street, Worcester; wholesale and export warehouse, 19, Fenchurch-street, London; and to be obtained also of Crosse and Blackwell, Barclay and Sons, London, and all the principal druggists, grocers, and Italian warehousemen throughout the United Kingdom and abroad.

Note 1. This may be the earliest document seen (Dec. 2005) concerning soybean products (soy sauce {though not mentioned}, an ingredient of Worcestershire Sauce) in Spain. This document contains the earliest date seen for soybean products in Spain (1854); soybeans as such had not yet been reported by that date.

Note 2. This is the earliest document seen (Feb. 2012) that uses the word “medicinal” (or “medicine” or “medical”) in connection with Lea & Perrins’ Worcestershire sauce, or that mentions a letter from a man who has carried a bottle of this sauce “through Spain and Portugal.”

Note 3. A graphic from *The Secret Sauce* (1997, p. 95) shows the medal more clearly than does our photocopy of the same medal, which was the only medal awarded in 1853 at the New York Exhibition to a sauce manufacturer. Address: [England].

868. Jones and Bonham. 1854. Sales by auction: This evening.—150 framed and glazed prints,... (Ad). *Times (London)*. May 3. p. 15, col. 2.

• **Summary:** This company “(late George Jones and Son) will sell by auction, at their great Rooms... superior property... 50 dozen sparkling Champagne, 35 baskets of the fine Japanese soy [sauce], superior miscellaneous goods,...”

Note: “Japanese soy” refers to soy sauce made in Japan. Address: [London].

869. Fox (Chas. E) & Co. 1854. Classified ad: For the table -. *Hartford Daily Courant (Connecticut)*. May 8. p. 2.

• **Summary:** “... Capers, Olives, Anchovies, Tomato, Walnut and Mushroom Catsup;... Worcestershire, Royal Osborn, John Bull, Reading, Harvey, India Soy and Warwickshire Sauces, for imparting a zest to fish, chops, steaks, soups, and made dishes.”

Note: This ad also appeared in the May 9 issue (p. 3) of this newspaper.

870. *New York Daily Times*. 1854. Special notices. Sept. 6. p. 5.

• **Summary:** The section titled “Champagne wines...” states: “Lea & Perrin’s Worcestershire Sauce, landing ex

Manhattan, from Liverpool. For sale by John Duncan & Sons, No. 405 Broadway, between Walker and Lispenard sts." Address: New York.

871. Sharland & Co. 1854. On sale by the undersigned, ex *Joseph Fletcher* (Ad). *Taranaki Herald* (New Zealand). Oct. 11. p. 1, col. 2.

• **Summary:** "1 case Child's Night Lights. 1 do [ditto = case] Lea & Perrin's Worcestershire Sauce." 1 case each "Burgess' Essence Anchovies. Burgess' Reading Sauce. Burgess' India Soy [sauce]. Burgess' Mushroom Ketchup."

872. Weston (Thomas) & Co. 1854. Public auction sales, in the Estate of the late Mr. Wellesley Hughes, stock in trade of groceries, &c. (Ad). *Daily Southern Cross* (Auckland, New Zealand). Oct. 31. p. 1.

• **Summary:** "Thomas Weston & Co. have received instructions to sell by Auction to-morrow, 1st November, at the premises of the late Mr. Wellesley Hughes, Shortland-street, at 11 o'clock, the stock in trade of groceries, &c., comprising goods lately imported from England... Packages being unbroken.

"3 cases muscatels.

"3 cases jams 2 and 1 lb.

"1 case Worcester sauce.

"16 casks carbonate soda." Address: [Auckland, New Zealand].

873. Badham, Charles David. 1854. *Prose Halieutics; or ancient and modern fish tattle*. London: John W. Parker and Son. xii + 552 p. See p. 65-75. Chap. 5. Fish Sauces. 20 cm.

• **Summary:** All of the relishes of the ancients were liquid sauces. Fermented salted fish sauces have been consumed since ancient times. The earliest reported are garum and alec, which were as highly prized in the Roman and Greek eras as Harvey and Burgess sauces were in England at the time this book was written. The original garum is reported to have been made from the viscera and blood of mackerel (known to the Romans as 'garum sociorum' and to the Greeks as *garon*), but many other types of fish were also used. The ancients produced many kinds of salt, each with its own properties and color. "Besides all of these natural salts, there was a highly aromatized and savoury kind eaten, either as a condiment at table, or as a whet to appetite, and out of this, says Pliny, Garum was made, and owed to it a great share of its celebrity." Many different types of garum were sold to the Latin public, varying greatly in taste, quality, consistency and color. Most were clear, but some "ran thick and turbid." Garum is no longer made in Italy.

The Greeks enjoyed both garum and alec, the latter being thicker than garum and made from anchovies (called *aleculæ* or *halecula*). Note: The author is Rev. Badham. Soy is not mentioned.

Note: Wilkinson (2001, p. 298) states that *Liquamen* was

the fermented fish sauce of ancient Rome. Gáros [(garos) mistakenly called garum] was the fermented fish sauce widely used in ancient Greece in food preparation. Address: Rev., M.D., Fellow of the Royal College of Physicians, England.

874. Hakura, Yokyu? 1854. *Yôshû roku* [A record of small provision]. Japan. Publisher unknown. 46 p. Written in Kanbun (Chinese). Japanese summary by Kawakami 1978, p. 156. [Jap]

• **Summary:** Mentions red miso (*aka-miso*), how to make a type of miso soup called *shi-yu* or *kuki-yu*, and tofu. Hatcho miso from Mikawa was recommended as red miso.

875. Lea & Perrins' celebrated Worcestershire Sauce (Ad). 1854. In: Charles Pope. 1854. *Yearly Journal of Trade*. 24th ed. London: Printed for the proprietor. See p. 84 near end.

• **Summary:** At the end of this volume, and paginated separately, is *Pope's Yearly Journal of Trade Advertiser* [1854-5]. On page 84 is this half-page ad: "Pronounced by connoisseurs to be the 'only good sauce' and applicable to every variety of dish. Extract of a letter from a medical gentleman at Madras [India], to his brother at Worcester, May, 1851. 'Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.'

"Sold universally by the principal dealers in Sauces."

Note: This is the earliest document seen (Feb. 2012) related to this sauce that contains (even approximately) these words: "Extract of a letter from a medical gentleman at Madras, to his brother at Worcester..." or "'Tell Lea & Perrins that their Sauce is highly esteemed in India,...'" or "'the most wholesome sauce made.'"

An illustration in the center of this add shows a bottle of the sauce. This is the earliest document seen (March 2012) with an illustration of a bottle of this sauce.

876. *Report of the Commissioner of Patents, Agriculture*. 1854. Preliminary remarks. p. v-vi. For the year 1853.

• **Summary:** "Among the foreign products which have been more recently introduced and distributed, and which appear to be adapted for profitable cultivation, we would instance... peas from Japan... Among the products proposed to be introduced from abroad, are rice and the soja bean of Japan, the latter of which is used for making the celebrated 'Soy sauce.'"

Note 1. The author apparently does not realize that the "peas from Japan" and the "soja bean of Japan" are one and the same plant.

Note 2. This is the 2nd earliest English-language document seen (Feb. 2008) that uses the term "soja bean" (or "soja beans") to refer to the soybean.

Note 3. This is the 2nd earliest English-language

document seen (April 2012) that contains the term “soy sauce” (without a hyphen).

877. Simmonds, Peter Lund. 1854. The commercial products of the vegetable kingdom, considered in their various uses to man and their relation to the arts and manufactures; forming a practical treatise & handbook of reference for the colonist, manufacturer, merchant, and consumer... London: T.F.A. Day. xix + 668 p. See p. 313. Index. 23 cm.

• **Summary:** In the section on “Pulse” we read (p. 313). “The well known sauce, Soy, is made in some parts of the East, from a species of the *Dolichos* bean (*Soja hispida*), which grows in China and Japan. In Java it is procured from the *Phaseolus radiatus*. The beans are boiled soft, with wheat or barley of equal quantities, and left for three months to ferment; salt and water are then added, when the liquor is pressed and strained. Good soy is agreeable when a few years old; the Japan soy is superior to the Chinese. Large quantities are shipped for England and America. The *Dolichos* bean is much cultivated in Japan, where various culinary articles are prepared from it; but the principal are a sort of butter, termed *mico*, and a pickle called *sooja*.

“1,108 piculs of soy were shipped from Canton in 1844, for London, British India, and Singapore. 100 jars, or about 50 gallons of soy, were received at Liverpool in 1850. The price is about 6s. per gallon in the London market.”

One page earlier, the section on “Pulse” states (p. 312): Of leguminous grains there are various species cultivated and used by the Asiatics, as the *Phaseolus Mungo* [mung bean], *P. Max* [soya bean], and *P. radiatus* [probably azuki bean], which contains much alimentary matter; the earth-nut (*Arachis hypogaea*), which buries its pods under ground after flowering.”

“Captain H. Biggs [sic, Bigge], in a communication to the Agri.-Hort Soc. [Agricultural & Horticultural Society] of India, in 1845 [sic, Aug. 1844], states that of the esculents a large white pea forms the staple of the trade of Shanghae [Shanghai], or nearly so, to the astonishing amount of two and a-half millions sterling. This he gives on the authority of the Rev. Mr. Medhurst, of Shanghae, and Mr. Thoms [sic, Thom], British Consul at Ningpo. These peas are ground in a mill and then pressed, in a somewhat complicated, though, as usual in China, a most efficient press, by means of wedges driven under the outer parts of the framework with mallets. The oil is used both for eating and burning, more for the latter purpose, however, and the cake, like large Gloucester cheese, or small grindstones in circular shape, is distributed about China in every direction, both as food for pigs and buffaloes, as also for manure.”

Note 1. The “large white pea” is clearly the soybean.

Note 2. This is the earliest document seen (Aug. 2001) that uses the spelling “Shanghae.”

In the chapter titled “Oleaginous plants” we read (p. 512): “In Japan a kind of butter, called *mijo*, [sic, *miso*] is

obtained from a species of the *Dolichos* bean (*Dolichos soja*).

Also discusses: Almonds and almond oil (p. 510, 533). Wheat gluten (221, 234, 264). Hemp and hemp oil (p. 510). Sesame or teel, sesame oil, black til, and gingelie oil (p. 511, 533-34). “The export of linseed and rapeseed cakes from Stettin” (p. 564).

Note 3. Peter L. Simmonds lived 1814-1897.

Note 4. This is the earliest English-language document seen (July 2003) that uses the words “gingelie” or “teel” to refer to “sesame.”

Note 5. This is the earliest English-language document seen (Sept. 2006) that uses the word “Oleaginous” or the term “Oleaginous plants” in connection with the soybean. Oil derived from the soybean is also mentioned. Address: England.

878. Woodcroft, Bennet. comp. 1854. Titles of patents of invention: Chronologically arranged from March 2, 1617 to October 1, 1852. 2 vols. London: Printed by G.E. Eyre and W. Spottiswoode. Published at the Great Seal Patent Office. 8 + 1554 p. See p. Vol. 1, 158 in the chronological index, or p. 60 in the alphabetical index at Bowen. Great Britain Patent Office. *

• **Summary:** This index concerns patents granted for inventions in Great Britain. Starting in 1624, the British system rewarded and encouraged inventors through the grant to them of limited monopolies. Woodcroft played a key role in the British patent reform campaign that succeeded in 1852 in overcoming the many obstacles that confronted the would-be patentee and requiring that specifications be published with each patent. This book is the first to list all early British patents. It does so in the form of three indexes: a chronological index, a subject index, and a name index of patentees.

Name of Patentee: Samuel Bowen. Progressive Number: 878. Date: 1st July 1767. “A grant unto Samuel Bowen of the province of Georgia in America, merchant, of his new invented method of preparing and making sago, vermicelli, and soy from the plants growing in America, to be equal in goodness to those made in the East Indies; to hold to him, his executors, admors, and assignors, within England, Wales, and town of Berwick-upon-Twere, are also in all His majesty’s colonys and plantations abroad for the term of 14 years pursuant to the statute; with a clause to unroll the same within 4 kalendar months from the date hereof. Witness His Majesty at Weston, the first day of July, in the year above.”

Note: Also in 1854 Woodcroft authored a book titled “Alphabetical Index of Patentees of Inventions.” That book is an author’s index to the book mentioned above.

In 1969 the Patent Office of Great Britain issued an *Alphabetical Index of Patentees of Inventions, 1617/1852*, published in New York by A.M. Kelley. It is a reprint of Woodcroft’s original book. Bennet Woodcroft lived 1803-

1879. Address: England.

879. Woodcroft, Bennet. 1854. Alphabetical index of patentees of inventions, from March 2, 1617 (14 James I.) to October 1, 1852 (16 Victoriae). London: Queens Printing Office. 647 p. See p. 60. 15 & 16 Victoriae, Cap. 83. Sec. XXXII. [1 soy ref]

• **Summary:** To Samuel Bowen was issued English Patent 878 of 1 July 1767, titled “Making sago, vermicelli, and soy [sauce], from American plants, equal in goodness to those from the East Indies.”

Note: A new edition of this book was issued in 1969 by the Great Britain Patent Office. With an introduction and appendix of additions and corrections compiled in the Patent Office Library. By Bennet Woodcroft (lived 1803-1879). Published in London by Evelyn, Adams & Mackay. Address: Superintendent of Specifications, Indexes, &c.

880. Lea and Perrins. 1855. Classified ad: Lea and Perrins’ Worcestershire Sauce... *Times (London)*. Jan. 31. p. 14, col. 5.

• **Summary:** “... is universally acknowledged to be the most valuable condiment, and experience has proved its efficacy in promoting digestion and preserving health. Sold by Crosse and Blackwell, Barclay and Sons, and the principal dealers everywhere.”

This ad also appeared in the 27 April 1856 issue (p. 14, col. 2) of this newspaper. Address: [England].

881. Browne, D.J. 1855. Report on the seeds and cuttings recently introduced into the United States. Preliminary remarks. *Report of the Commissioner of Patents, Agriculture*. p. x-xxxv. For the year 1854. See p. xv.

• **Summary:** “*Japan pea*, also described in last year’s report, and has been since cultivated with remarkable success.

“*Soja bean*, (*Soja hispida*) procured by the Japan Expedition [of Commodore Perry]; two varieties, the ‘White’ and the ‘Red-seeded,’ both of which are employed by the Japanese for making soy, a kind of black sauce, prepared with the seeds of this plant, wheaten flour, salt, and water. This ‘soy,’ or ‘soja,’ which is preferred to the *Kitjap* of the Chinese, is used in almost all their dishes instead of common salt. The soy may be made as follows:

“Take a gallon of beans of this plant and boil them until soft; add bruised wheat, one gallon; keep in a warm place for twenty-four hours; then add common salt, one gill [$\frac{1}{2}$ cup], and water, two gallons; and put the whole into a stone jar, and keep it tightly closed for two or three months, frequently shaking it; and then press out the liquor for use.

“The seeds of this plant only require to be sown in a warm, sheltered situation at the time of planting Indian corn, and cultivated as any garden bean.”

Note 1. The author of this report apparently did not realize that the Japan Pea and the Soja Bean are one and the

same plant. Note 2. This is the earliest American document seen (Jan. 2003) that uses the term “*Soja hispida*” to refer to the soybean.

Note 3. The “Japan Expedition” refers to that led by the American Commodore Matthew Calbraith Perry (lived 1794-1858).

Note 4. Piper and Morse (1923, p. 40) state concerning the Perry Expedition to Japan in 1854: “The Mammoth may well be the ‘white-seeded’ soja bean obtained by the Perry expedition. The ‘red-seeded soja bean’ was, probably, the adzuki bean (*Phaseolus angularis*), as no red-seeded soybean is known.” If this were an adzuki bean, this would be the earliest document seen (March. 2003) concerning azuki in the United States.

Note 5. This is the earliest English-language document seen (April 2012) that uses the term “*Kitjap*” to refer to Chinese soy sauce.” Observe the similarity between the words “*Kitjap*” and “*Ketchup*”—suggesting that the word “*ketchup*” may have a Chinese origin.

Note 6. Also discusses: White quinoa (*Chenopodium quinoa*, p. xiii-xiv). White Lupine (*Lupinus albus*, from southern Spain and Germany, xv-xvi). Yellow Lupine (*Lupinus luteus*, from Germany, p. xvi). Chinese yam (*Dioscorea batatas*, from China but more recently from France, p. xvii).

Note 6. This is the earliest document seen (Jan. 2005) that mentions quinoa in the USA. Address: United States Patent Office, Washington, DC.

882. Fox (Chas. E) & Co. 1855. Classified ad: English sauces, pickles, &c. *Hartford Daily Courant (Connecticut)*. May 16. p. 3.

• **Summary:** “Worcestershire Sauce, Royal Osborn do. [ditto = Sauce], Warwickshire do., John Bull do., Napoleon do.; Reading, India Soy and Harvey Sauces for fish, game, soups, steaks, etc... Piccallilli [Piccalilli], India Currie Powder. Mushroom, Walnut and Tomato Catsup.”

Note: This ad appeared 12 more times in this newspaper during 1855 from May 17 to May 31.

883. Somerville (M.). 1855. Ex “Rock City” from London (Ad). *Daily Southern Cross (Auckland, New Zealand)*. June 22. p. 2, col. 5.

• **Summary:** “From the celebrated Houses of Crosse & Blackwell, G.F. Coward & Batty and Company. One hundred and fifty cases fancy groceries and oilman’s stores... 30 cases Chouchou, Imperial hot and mixed pickles, 6 cases Sauces & Soyer’s relish, Indiana Soy [sic, Indian Soy], China Soy, Worcester Ketchup, Harvey, John Bull, &c., in fancy vases and bottles, 20 cases Bottled vinegar, pints, quarts, and fancy decanters,...”

Note 1. This is the earliest of 177 documents seen (Nov. 2009) in the New Zealand Newspapers database (paperspast) that contains the term “China Soy.” The term was last used in

New Zealand Newspapers on 23 April 1906.

Note 2. The meaning of “Worcester Ketchup” is unclear. The text should probably read “Worcester [sauce], Ketchup,...” Address: Auckland.

884. Coleman, Debbie. 1855. Cook book: First volume. 182 p. Unpublished manuscript. July 16. See p. 28, 120.

• **Summary:** Recipes for “Mushroom soy” are given on two pages—28 and 120. The process, ingredients, and amount of each ingredient are identical but the wording is slightly different. The recipe on page 28 states: “Break the mushrooms, put them into an iron pot, a layer alternately of salt and mushrooms and let them remain until the next day. Then boil them $\frac{1}{4}$ of an hour, and strain through a cloth, and add to the liquor, mace, onions, and all kinds of spice. Boil away $\frac{1}{2}$, strain again, bottle, and cork tightly and rosin the corks. The proportions are 1 bu. mushrooms, 1 pt. salt, 6 onions, $\frac{1}{2}$ oz. spices each. This makes 8 pint bottles.”

The recipe on page 120 begins: “Break the mushrooms, put them in an iron pot, a layer of mushrooms and of salt alternately and let them remain till the next day. Boil them $\frac{1}{4}$ of an hour, strain them through a towel...”

Note 1. This is the earliest document seen (April 2012) that contains the term “mushroom soy.” Note that “soy” is not used as an ingredient in this sauce, but that the sauce may be intended as an alternative to real “soy” sauce.

Note 2. This is the earliest English-language document seen (April 2012) that mentions a non-soy sauce that resembles soy sauce.

The word “soy” also appears in several other places as follows:

“Ragout:... When it boils, take it off and add 25 oysters, some walnut liquor, India soy, tomatoes and capers” (p. 12).

“Mutton chops—French way:... When thick enough strain it, take off the fat, add a pickled cucumber cut up fine, 2 tablespoonsful of capers, 2 or 3 tablespoonsful of vinegar and 1 small teacupful of tomato soy.” Mrs. Camac (p. 16).

“To stew a fillet of veal:... $\frac{1}{4}$ of an hour before dinner, pour off the gravy, skim off the fat and thicken if necessary with a very little flour and add 3 tablespoonsful of tomato soy... Mrs. Markoe” (p. 17).

The chapter titled “Pickles” begins (p. 24) with a recipe for “Walnut ketchup” followed by a recipe for “Tomato ketchup”—the latter by Mrs. Coleman.

“Bouilli Beef:... Put it into a pot, and nearly fill it with water, a handful of salt, 5 carrots, 5 turnips, 3 onions, some celery, 2 bunches potherb, 3 tablespoonsful tomato soy, a tablespoonful whole allspice, a full teaspoonful mace, a tablespoonful sweet marjoram, 5 cloves and pepper. Put it on at 7 if you dine at 3... H.M.” (p. 95). “... add 3 tablespoons of tomato soy and pour it over the meat... H.M.” (p. 97).

“Tomatoes as soy: Take full grown ripe tomatoes, reject every bad one and cut out every spot; have them perfectly dry, then cut them up, leaving the skins on and fill a large

jar; put the jar in a pot of water, till the tomatoes pass readily through a fine colander, then put the strained liquor into a bell-metal kettle with about $\frac{1}{2}$ a tablespoon of salt to every gallon. Put it over a slow fire and let it simmer, simmer, simmer, say 6 hours. About $\frac{1}{2}$ hour before it is done, add spice to your taste say, cloves, mace, allspice. Stew it long enough to extract the flavor from the spice. Bottle it and on the top of each bottle, pour a very little sweet oil. Cork tight and put it away in a dry place.—Mrs. Chapman” (p. 119).

“Another recipe for tomatoes as soy: Take a bushel of tomatoes and $\frac{1}{2}$ peck of onions. Slice them all roughly without peeling. Take a qt. of salt; put the onions and tomatoes in layers in a tub, sprinkling the salt between them. Let it stand 2 or 3 days till it begins to ferment. Then put it on with an oz. cloves, an oz. of allspice and $\frac{1}{2}$ a mustard seed; bottle of Cayenne of ordinary strength into a large iron kettle and let it boil steadily all day, putting it on early in the morning, taking great care it does not burn; then strain it and the next day boil the liquor again till it begins to thicken. Rosin bottle and cork it and it will keep for years” (p. 119).

Note 3. Neither of the last two recipes contain soy, but they were apparently meant as an alternative to real “soy” sauce. Today the resulting product would resemble tomato sauce or tomato ketchup.

Note 4. This unpublished manuscript was dated July 16th, 1865. Some recipes are followed by a woman’s name at the lower right; presumably each was developed by that woman, to whom the author gave credit.

The manuscript was self-published as a book in 1938 by Sarah R. Brock (182 p. 23 cm, with index); the author’s name is given as Debbie Brown Coleman. The 1938 edition states: “... a book I had printed for family distribution of my mother’s [recipes]...” The only library known to own this printed edition is the University of Denver [Colorado], Penrose Library.

885. *Daily Southern Cross (Auckland, New Zealand)*. 1855. China and the Chinese. July 17. p. 2 (Supplement).

• **Summary:** A very interesting lecture was recently delivered at the School of Arts, Sydney [Australia], by Dr. J. Berncastle, on the subject of “China and the Chinese.”

“The soy [sauce], which it had been said was made from cockroaches, was made from a pea which was allowed to ferment with salt.”

• **Summary:** In the section on "Legumes" (p. 596) we read (p. 598): "Japan pea, also described in last year's report, and has been since cultivated with remarkable success.

"Soja bean (*soja hispida*), procured by the Japan expedition; two varieties, the 'white' and the 'red-seeded,' both of which are employed by the Japanese for making soy [sauce], a kind of black sauce, prepared with the seeds of this plant, wheat flour, salt and water. This 'soy,' or 'soja,' which is preferred to the kitjap [ketjap, kecap] of the Chinese, is used in almost all their dishes instead of common salt. The soy may be made as follows: take a gallon of the beans of this plant and boil them until soft, add bruised wheat one gallon; keep them in a warm place for twenty-four hours, then add common salt one gill, and water two gallons, and put the whole into a stone jar and keep it tightly closed for two or three months, frequently shaking it, and then press out the liquor for use. The seeds of this plant, to be cultivated, only require to be sown in a warm sheltered situation, at the time of planting Indian corn, and cultivated as any garden bean." Address: Philadelphia, Pennsylvania.

893. Hassall, Arthur Hill. 1855. Food and its adulterations: Comprising the reports of the Analytical Sanitary Commission of "The Lancet" for the years 1851 to 1854 inclusive, revised and extended. London: Longman, Brown, Green, and Longmans. xlviii + 657 p. Illust. Index. 23 cm. [10+* ref]

• **Summary:** This is a remarkable, and an important book, very professional and carefully documented, incorporating the relatively new science of microscopy, an early salvo in the "Sanitary Reform" movement and harbinger of the subsequent reforms in the UK and (later) the USA, banning adulteration of foodstuffs and creating pure food and drug laws.

The book is dedicated Sir Benjamin Hall, Bart., M.P., President of the General Board of Health. The dedication begins: "Sir, The fact has at length become recognised that the sanitary condition of the people is the great social question of the day, for it is one that vitally affects the interests, the well-being, and even the safety of every individual throughout these realms, rich and poor, high and low, but especially the latter."

One key fact: That "more persons have died, and still continue to die, from the neglect of proper sanitary precautions, and from living in violation of the fundamental laws and rules of health, than have ever fallen in battle." Adulterated food is an important cause.

The Commission examined 33 samples of commercial bottled sauces. Five of these were labeled “India Soy” [sauce]. Treacle [molasses] and salt formed the basis of all five of these samples, which may have consisted entirely of these two ingredients only (p. xxii).

The section titled “On sauces, and their adulterations” (p. 506-12) contains detailed information on each sauce mentioned. “A great variety of substances, chiefly vegetable, enter into the composition of the various sauces in use” including “tomato, garlic, sorrel, mushroom and walnut catsup,... the seeds of an Indian plant called *Dolichos soja* or *soya*, of which soy is made;...”

For each of the five samples of India Soy are given:

- (1) Name and address of business from which sample was purchased.
- (2) Purchase price: Typically 1 shilling, 6 pence.
- (3) A description of the article and its adulterants.

“Results of the microscopical and chemical examination of thirty-three samples of the principal sauces, obtained chiefly from manufacturers.

“India soy.

“1st Sample—Purchased of Batty & Co., Pavement, Finsbury-square. Price 1s. 6d.

“This article is dark, thick, and like syrup; it is made up to a great extent of treacle slightly burned; and judging from the consistence, appearance, and taste, it appears to be little else than treacle very strongly flavoured with salt. Examined with the microscope, there were detected in it numerous oval sporules of the fungus invariably present in treacle. “2nd Sample.—Purchased of Thomas Snelling, 30. Fenchurch-street. Price 1s. 3d. Appearance, taste, and composition very similar to Sample 1.; it certainly consists in great part of treacle and salt.

“3rd Sample.—Purchased of Kenning & Hale, 5. Poultry, London. Price 1s. 6d. Composition the same as the previous samples, it consisting chiefly of treacle and salt.

“4th Sample.—Purchased of J. Wingrave & Co., 80. St. Paul’s-churchyard. Price 1s. 6d. Composition apparently the same as in the previous samples, it consisting principally of treacle and salt. 5th Sample.—Purchased of John Burgess & Son, 107. Strand. Price 1s. 6d. Composition apparently the same as in the previous samples, treacle and salt being the chief ingredients. Neither copper nor lead was detected in this or the above samples.

“By the above observations, we do not mean to imply that the samples of Soy examined may not consist, either in part or entirely, of genuine India Soy; but this we do say, that, if genuine, then is Soy little better than a mixture of treacle and salt, out of which ingredients we undertake to produce an article scarcely if at all distinguishable from the samples referred to.”

Harvey’s Fish Sauce contained vinegar, catsup, and much salt, but no soy.

Cocks Reading Sauce (p. 508) contained “vinegar, much cayenne and salt, catsup, and perhaps a small quantity of

shallots or garlic and soy.”

Soyer’s Relish (p. 509) was found to contain soy as one of many ingredients.

Page 511 gives a summary of the main findings. “1st. That treacle and much salt formed the bases of the five samples of India Soy examined, if they did not even entirely consist of these two ingredients.”

“... every intelligent cook might readily succeed in preparing all the sauces which are ordinarily required for the table, by the exercise of a very slight amount of reflection and ingenuity. In order to aid such endeavours, we introduce a few receipts of some of the more useful and less known sauces:...

“Soy: ‘Boil four pounds of the seeds of *Dolichos soya* with water, until they become soft; then add four pounds of bruised wheat; keep the mixture in a warm place for twenty-four hours; then add four pounds of common salt, and eight pounds of water; put the mixture into a stone jar, and cork it up for two or three months; then press out the liquor. The best soy is imported from China.’”

Note 1. Koji is the key ingredient missing from the above recipe.

Note 2. The first long section in this book, titled “Coffee and its adulterations” (p. 3-9) proves that much coffee sold in England is adulterated and that chicory is the most widely used adulterant; soy is not mentioned as an adulterant for coffee, although roasted “beans” are (p. 3, 6-7). The lower the price of the coffee, the more the adulteration (in general). Address: M.D., Chief analyst of the commission, 8, Bennett-street, St. James’-street [London].

894. Hildreth, Richard. 1855. Japan as it was and is. Boston, Massachusetts: Phillips, Sampson and Co.; New York: J.C. Derby. xii + 576 p. Folded map. Index. 21 cm. Facsimile edition reprinted in 1973 by Scholarly Resources (Wilmington, Delaware).

• **Summary:** Richard Hildreth (lived 1807-1865) never traveled to Japan, but he read widely from the writings of those who did. He summarizes them and quotes them in this book, which is basically a history (in chronological order, by the date of Hildreth’s source).

In Chapter 32 (1690-1692), in the section on tea, the following quotation (probably from Engelbert Kaempfer) appears (p. 312): “The common sauce for these and other dishes is a little soy [sauce], as they call it, mixed with *saki* [sake], or the beer of the country.”

In Chapter 39 (1775-76), in the section on imports and exports, the following summary appears (from C.P. Thunberg) (p. 390-91): “The chief articles of export were copper, camphor and lackered [sic, lacquered] goods; porcelain, rice, saki, soy,* were also exported” (Footnote: *)“This sauce, used in great quantities in Japan and exported to Batavia by the Dutch, whence it has become known throughout the East Indies and also in Europe, is made from

the soy bean (*Dolichos Soia*) [sic], extensively used by the Japanese in the making of soup [sic]. The soy is prepared as follows: the beans are boiled until they become rather soft, when an equal quantity of pounded barley or wheat is added. These ingredients being mixed, the compound is set away for twenty-four hours in a warm place to ferment. An equal quality of salt is then added, and twice and a half as much water. It is stirred several times a day for several days, and then stands well covered for two or three months, when the liquid portion is decanted, strained, and put in wooden casks. It is of a brown color, improves with age, but varies in quality, according to the province where it is made. The Dutch of Deshima cork up the better qualities in glass [sic, porcelain] bottles, boiling the liquor first in an iron kettle, to prevent fermentation, by which it is liable to be spoiled).” Address: Author, Boston, Massachusetts.

895. Warner (Otis) & Co. 1856. Classified ad: Worcestershire sauce, &c. *Hartford Daily Courant* (Connecticut). Jan. 5. p. 1.

• **Summary:** “Just received, Worcestershire Sauce in pints and half pints. Also pickles in jars and by the gallon; Capers, Pepper Sauce, Tomato Catsup, Olives, Brandy Peaches, &c.” Address: 250 Main St.

896. Duncan (John) & Sons. 1856. Sauces of various kinds (Ad). *New York Daily Times*. Feb. 8. p. 8.

• **Summary:** “Lexicographers tell us there are various kinds of sauce, some of which are exceedingly appetising, while others are difficult of digestion. The old Colonists, and even our modern Yankees and Virginians, speak in their quaint rustical way of ‘garden sass,’ under which term they include all culinary vegetables. But there is another kind of sauce which, deriving its name from a palatable condiment, is yet, in itself, directly the reverse of palatable; we mean the sauce of a pert young gentleman or forward miss, in whose education manners have been neglected.

“The third kind of sauce is the best of all inasmuch as it gives zest to the languid appetite and flavor to viands which need its aid. These sauces are variously prepared, and are known under different names; but the one which is most celebrated, for its tonic and invigorating properties, is the Worcestershire sauce, manufactured by Lea & Perrin, and sold by their agents, John Duncan & Sons, No. 405 Broadway, New York.—*Baltimore Patriot*, Feb. 5.” Address: New York.

897. Duncan (John) & Sons. 1856. Champagne wines, landing ex *Samuel G. Fox* (Ad). *New York Daily Times*. March 29. p. 8.

• **Summary:** “Scotch malt whiskey landing ex *Mary Morris*.
“English cheese landing ex *American Eagle*.

“Lea & Perrin’s Worcestershire Sauce, landing ex *Harvest Queen*. For sale by

“John Duncan & Sons, No. 405 Broadway.” Address: New York.

898. Hempel, Charles J. 1856. Original communications: Much ado about nothing. Dr. Peters’ Review (Letter to the editor). *Philadelphia Journal of Homeopathy* 4(12):738-44. March. See p. 741-42.

• **Summary:** “In the February number of the North American Homeopathic Journal, we find an article entitled ‘*On fatty diseases of the heart*,’ by Dr. Peters. This article is an importation, in condensed form, from British soil, together with all of the allopathic absurdities and crudities with which the original composition is tainted. Under the head of ‘*Diet*,’ for instance, the patient is advised to use pepper, mustard, salt and Worcester sauce, in order to aid digestion. This is a good old English and universally recommended allopathic fashion, recommended by Dr. Chambers, and, upon his authority, by his American imitator, Dr. Peters. We do not object to usages like these, but how does such treatment agree with the use of homeopathic doses? How do these quantities of pepper, mustard, salt, and Worcester sauce agree with the *nux vomica* which Dr. Peters prescribes as an accompaniment to these condiments? Is the reader to understand that the *nux* is to be taken in teaspoonful doses stirred in a mixture of pepper, mustard, salt and Worcester sauce? This is a species of homeopathy which may be acceptable to the most inveterate advocate of allopathy, but which cannot but be rejected by all the thoughtful and enlightened friends of our cause. Spirit of Hahnemann!...” Address: M.D.

899. Duncan (John) & Sons. 1856. Among the various condiments offered to the public as a zest for Soups, Meats, Game, &c,... (Ad). *Hartford Daily Courant* (Connecticut). April 3. p. 2.

• **Summary:** “... helping digestion and promoting the general health, Lee [sic, Lea] & Perrins’ Worcestershire Sauce stands unequalled. The testimony of medical men in Europe and America attest to its virtues. Since the introduction of this sauce into the United States by Messrs. John Duncan & Sons of New York some fifteen years since [i.e., about 1841], the demand has become so large and its use so general, that it is now considered an ‘indispensable’ on the Breakfast, Luncheon, Dinner and Supper tables.”

900. Duncan (John) & Sons. 1856. The only medal awarded by the New York Exhibition to the English or foreign sauce manufacturers... (Ad). *Hartford Daily Courant* (Connecticut). April 25. p. 2.

• **Summary:** “... has been obtained, amongst numerous competitors, by Lea and Perrins, for their Worcestershire Sauce, whereby further testimony is afforded of its being the best sauce extant.

“The celebrity of this sauce has extended to every

quarter of the globe,...

This also appeared in the July 12 issue (p. 2) of this newspaper.

Note: The text of this long ad is almost identical to the following earlier ad: Lea and Perrins. 1854. "The only medal awarded by the Jury of the New York Exhibition to English or foreign sauce manufacturers..." *Times* (London). March 30. p. 11, col. 1. The ending however reads: "Sole agents for the United States, John Duncan & Sons, 405 Broadway, New York." Address: 405 Broadway, New York.

901. *Dublin University Magazine (The)*. 1856. The fortunes of Glencore. 48:579-94. Nov. See p. 591.

• **Summary:** "Chapter XXVII—The villa at Sorrento."

This story takes place in Sorrento, a small city in southern Italy. Stevins opened a bag brought by a messenger and "proceeded to litter the table and floor with a variety of strange and incongruous parcels... 'Yarmouth bloaters—Atkinson's cerulean paste for the eyebrows—Worcester sauce—trade returns for Tahiti—a set of shoemaking tools—eight bottles of Darby's pyloric corrector...'"

902. Dickens, Charles. 1856. The grocer's hot pickle's, Harvey's Sauce, Doctor Kitchener's Zest. *Household Words*. Vol. 13. p. 555. *

• **Summary:** Note: 19 volumes of this weekly periodical were published from 30 March 1850 to 28 May 1859 in London by Bradbury & Evans. Charles Dickens lived 1812-1870. Address: England.

903. *Encyclopædia Britannica*, or dictionary of arts, sciences, and general literature: Japan. 1856. Boston, Massachusetts: Little, Brown, & Co.; Chicago, London, Toronto...: Encyclopaedia Britannica, Inc. 820 p. 8th ed. See vol. 12.

• **Summary:** In volume 12, under Japan, the section on agriculture (p. 693) states: "Beans and peas of different kinds are cultivated in great abundance, particularly the bean *Dolichos soja*, from which soy, a kind of sauce, is prepared by boiling and fermentation, is made."

Note: This encyclopedia has no index. This is the only entry seen for the soybean; it is not mentioned under beans, China, or Indonesia, and there are no entries for Japan pea, soy*, or soya.

904. Faulkner, Alexander. 1856. Faulkner's dictionary of commercial terms: With their synonyms in various languages. Bombay, India: Printed at L.M. D'Souza's Press. iii + 158 + vii p. 18 cm. [1 ref]

• **Summary:** "Soy. A peculiar savoury sauce, made from the bean of the *Soja*, a species of *Dolichos*, growing in the Eastern parts of Asia. Genuine soy is well flavoured, thick, brown, and clear; and when shaken in a glass it should have a coat on the surface of a bright yellowish-brown colour. It is obtained from Canton [China]; but the best is exported from

Japan, by way of Batavia [Dutch East Indies]. Waterston."

Also discusses: "Ground nuts.—Guz. (Guzerattee) [Gujarati], Hind [Hindi], *Bhoysing*. Groundnuts are now extensively cultivated in the Concans on account of the oil which they afford. They are occasionally exported to England and France.

"Ground nut oil.—Hind. *Bhoysing ka teil*. It is the oil obtained from ground-nuts by expression. It is largely exported from Bombay to France and England."

Note: The Concans or Co'ncan was an extensive maritime district of southwestern India in the province of Bejapore extending 220 miles along the shore from Damaun to Malabar, bounded on the west by the Indian Ocean and on the south by Canara and Sattara [Satara]. Between 16° and 20° north latitude. On today's map, it would be along the coast south of Bombay. A long range of mountains, named the Western Ghats, runs right along the shore of western India from the Gulf of Khambhat to near the southern tip of the continent (Cape of Comorin).

905. Green, Daniel S. 1856. Narrative of the expedition of an American squadron to the China Seas and Japan, performed in the years 1852, 1853, and 1854, under the command of Commodore M.C. Perry, United States Navy. Report upon the agriculture of Japan. *Senate Executive Document* No. 79. 33d Congress, 2nd Session. Vol. 1. p. 52; Vol. 2. p. 85. Also published as House of Representatives Executive Document No. 97. Same Congress, Session, and pages.

• **Summary:** Upon his return and at Commodore Perry's request, Dr. Daniel S. Green, surgeon of the expedition, wrote a short "Report upon the agriculture of Japan" from notes and from memory, hoping that it might afford some interest to American farmers. This document marked the introduction of Japanese products to American agriculture.

"Their chief grain is rice, of which they are said to produce the best in all Asia. They also make barley and wheat. The first is used for feeding the cattle; the other [wheat] is not much valued, and is chiefly used for cakes and soy [sauce]. This last is made by fermenting, under ground, wheat with a peculiar kind of bean and salt" (1:52).

"Of beans the Japanese have several sorts, as white and black, runners or climbers, and bush or snap beans; the black-eye or cow pea, and a peculiar hairy-podded bean, growing upon a branching stem, called commonly Japan pea; and also a diminutive one, not much larger than a lentil [probably azuki]. From one of these [Japan pea] the famous soya is made, a fermented condiment used for various dishes" (II:85).

Vol. I, p. 369 gives a list of articles received from the Japanese government, from Udono, 4th commissioner, including "1 box, 10 jars of soy."

Note 1. This is the earliest journal article (from an irregular serial) seen (Oct. 2001) that mentions soy.

Note 2. This is the earliest English-language document

seen (Oct. 2006) that uses the term “black-eye” to refer to the cow pea.

Note 3. This document was published as a book in 1856 in London by Trubner & Co. (624 p.). Compiled by Francis Lister Hawks, the lead author is given as Matthew Calbraith Perry. Address: USA.

906. Hawks, Francis L. comp. 1856. Narrative of the expedition of an American squadron to the China Seas and Japan, performed in the years 1852, 1853, and 1854, under the command of Commodore M.C. Perry, United States Navy,... New York: D. Appleton and Co.; London: Trubner & Co. viii + 296 p. See p. 197, 248.

• **Summary:** Introduction (p. 66): “Their [the Japanese] chief grain is rice, of which they are said to produce the best in all Asia. They also make barley and wheat. The first is used for feeding the cattle; the other is not much valued, and is chiefly used for cakes and soy [sauce]. This last is made by fermenting, under ground, wheat with a peculiar kind of bean [soy bean] and salt.”

Page 430: A list shows articles received from the Japanese government: “5th. From Udon, 4th commissioner—... 1 box, 10 jars of soy.”

Page 443: “All formal business being now concluded to the mutual satisfaction of both parties, the Japanese commissioners invited the commodore and his officers to partake of an entertainment prepared for the auspicious occasion... When all were seated, the servitors brought in a rapid succession of courses, consisting chiefly of thick soups, or rather stews, in most of which fresh fish was a component part. These were served in small earthen bowls or cups, and were brought in upon lacquered stands, and placed, one before each guest, on the tables. Together with each dish was a supply of soy or some other condiment, while throughout there was an abundant quantity of saki—the Japanese national liquor—a sort of whisky distilled from rice. Various sweetened confections, and a multiplicity of cakes, were liberally interspersed among the other articles on the tables.”

In describing the shops in Hakodadi [Hakodate] (p. 511): “The provision shops contain rice, wheat, barley, pulse, dried fish, seaweed, salt, sugar, saki, soy, charcoal, sweet potatoes, flour,... There is no public market in the town, as neither beef, pork, nor mutton are eaten, and very little poultry.” Address: D.D., LL.D.

907. Kane, Elisha Kent. 1856. Arctic explorations: The second Grinnell expedition in search of Sir John Franklin, 1853, ‘54, ‘55. Vol. II. Philadelphia, Pennsylvania. 467 p. See p. 19. Illust.

• **Summary:** In the chapter titled “A relishing lunch,” in the entry dated Jan. 17, 1855, we read (p. 19): McGary “has foraged out some raw cabbage and spiced it up with curry-powder,... This, with a piece of corn-bread,—no bad article either,—he wants me to share with him. True to my old-times

habitude, I hasten to the cabbage,—cold roast-beef, Worcester sauce, a head of endive, and a bottle—not one drop less—of Preston ale, (I never drink any other.)” Address: M.D., U.S.N.

908. Siebold & Comp. 1856. Catalogue raisonné et prix-courant des plantes et graines du Japon cultivées dans l’établissement de von Siebold & Comp. à Leide [Annotated catalogue and current price list of plants and seeds from Japan cultivated at the firm of von Siebold & Co., Leiden, Netherlands]. Leyden [Netherlands] and Bonn: Henry & Cohen. 24 p. 23 cm. [1 ref. Fre]

• **Summary:** In the section titled “Seeds of garden and agricultural plants harvested in the fall of 1855 in Japan” is a one-line entry (p. 18) which reads: “28. Soja japonica Savi * à graines blanch. vert et noir. Usage: Pl. à Soy. Un petit paquet: Fr. 1.” (Footnote: “*C’est la plante légumineuse, des graines de laquelle les Japonais préparent le Soy (*Sojû*). sauce bien connue aux gourmands.”)

Translated into English: “28. Soja japonica Savi *; white, green, or black seeds. Usage: Plant can be used to make soy sauce. (Footnote 4: “*This is a leguminous plant, whose seeds the Japanese use to make Soy (*Shôyu*) sauce, which is well known to connoisseurs of fine food (*gourmands*).”)

Note 1. This is the earliest seed catalog seen (Dec. 2003), worldwide, in which soybean seeds are offered for sale—although no prices are given. The original catalog is located at the Department of East Asian Studies, Ruhr-Universitaet Bochum, Universitaetsstrasse 150, 4630 Bochum 1, Germany.

Note 2. Siebold & Co., plant and seed company, was started in 1842 by Philipp Franz von Siebold with Blume and Rodbard; Siebold and Joseph G. Zuccarini first gave the soybean its present genus name, *Glycine*. They gave the wild soybean its present scientific name *Glycine soja*. M.M. Busk in 1841 wrote: “Dr. Von Siebold’s Japanese museum [at Leyden] is said to be the finest in Europe...” For details on Siebold’s life and work as a botanist see: Bretschneider (1882—*Botanicon Sinicum*, Part I, p. 126-27).

Note 3. This is the earliest French-language document seen (April 2012) that uses the term *Le Soy* (*Sojû*) to refer to soy sauce.

Note 4. First cited by Prof. Ted Hymowitz, Univ. of Illinois. Personal communication 1 Jan. 1997. Address: Leyden, Netherlands.

909. Smith, J. Jay. 1856. Editor’s table: New and valuable trees and fruits. *Horticulturist, and Journal of Rural Art and Rural Taste* (Albany, New York) 11:330-31. [1 ref]

• **Summary:** “One of the most remarkable catalogs ever published has just appeared in Leyden [Netherlands]; it contains a priced list of the Japanese plants actually cultivated in the nursery of Siebold & Co., of that place”

[Leyden].

“He also offers seeds of the *Soja japonica*, the real plant from which the sauce called Soy is prepared.”

Note 1. Siebold & Co. was started by Philipp Franz von Siebold; he and Joseph G. Zuccarini first gave the soybean its present genus name, *Glycine*. They also gave the wild soybean its present scientific name *Glycine soja*. M.M. Busk in 1841 wrote: “Dr. Von Siebold’s Japanese museum [at Leyden] is said to be the finest in Europe...” For details on Siebold’s life and work as a botanist see: Bretschneider (1882–*Botanicon Sinicum*, Part I, p. 126–27).

Note 2. This is the earliest document seen (March 2002) stating that the soybean was being sold in a seed catalog.

Note 3. First cited by Prof. Ted Hymowitz, Univ. of Illinois. Personal communication 1 Jan. 1997.

To continue: “As is well known, the Dutch monopolize the intercourse of Europeans with Japan, the country most in climate like the British Isles, but resplendent with a vegetation infinitely richer and more varied. *Camellia*, *Cephalotaxus*, *Cryptomeria*, *Aucuba*, *Chimonanthus*, *Clematis*, and *Pyrus Japonica*, sufficiently indicate how beautiful and hardy is the flora of Japan, to say nothing of *Weigela*, *Forsythia*, and the whole race of *Moutans*. Availing themselves of their commercial privileges, the Dutch have sedulously occupied themselves with the acquisition of everything most worthy of introduction to Europe, and the result is already a total number of 3 or 400 species and varieties offered for sale by the firm mentioned above. Of so curious an assemblage, we are sure that a brief account will be interesting to all lovers of gardens. We shall, however, confine our remarks to what are represented to be hardy races.”

These include conifers (4 species) and sycamores (2). “Fruit trees comprehend a very early apricot called *Armeniaca Mume* [later *Prunus mume*], whose early rose-colored flowers are extremely ornamental, while the fruit, owing to the firmness of the flesh, is particularly well adapted for preserving [as *umeboshi* in Japan]... Mention, moreover, is made of a Japanese variety of Peach.” Also described are many small flowering trees and shrubs, and some climbing shrubs. “Finally there is a considerable number of herbaceous plants, among which are included several new kinds of *Funkia* and *Lilium*, a Burdock called *Lappa edulis*, the roots of which are eaten like *Scorzonera*; a couple of *Iris*es; *Polygonatum japonicum* whose roots are a substitute for asparagus; a *Polygonum* called *Sieboldi*, recommended as a green crop for cattle food, as an excellent bee plant, &c. &c.; and the Chinese Yam, which M. Siebold calls *Dioscorea opposita*, and to the hardness of which he fully testifies.” *Soja japonica* is then mentioned.

“Some of these novelties have already been introduced into England, and are offered for sale by E.G. Henderson. Who will be the first to advertise these interesting articles in America?”

Note 4. This is the earliest English-language document seen (Dec. 2006) that refers to *umeboshi* salt plums, but it does not mention them specifically.

910. Stretton, Julia Cecelia. 1856. *Margaret and her bridesmaids*. 3 vols. London: Hurst and Blackett, Publishers. Successors to Henry Colburn. See Vol. 3, p. 275–76.

• **Summary:** “Mrs. Banks did all she intended, and welcomed dear Fred, very warmly. But she was disappointed in seeing him enjoy the feast she had prepared for him. He hardly tasted a mouthful of fish, he said it was so woolly; and he turned up his nose at the beefsteak—there was no Worcester sauce to it; and the scalloped oysters had no cayenne pepper in them.” Address: Author.

911. Ure, Andrew. 1856. *A dictionary of arts, manufactures, and mines; Containing a clear exposition of their principles and practice*. Vol. 2. New York, NY: D. Appleton & Co. 998 p. See p. 694–95. 23 cm. [1 ref]

• **Summary:** The entry for SOY is identical to that in the 1842 American ed. The title page states: “Illustrated with nearly sixteen hundred engravings on wood. Reprinted entire from the last corrected and greatly enlarged English edition. In two volumes.” Volume 1 was xiv + 1118 p. Ure was a physician, an M.D.

In 1863 a work titled “A Supplement to Ure’s Dictionary of Arts, Manufactures, and Mines,” edited by Robert Hunt, was published in New York by Appleton & Co. It contains no reference to soy [sauce]. Address: Upper Seymour St., London 18, England.

912. Williams, Samuel Wells. 1856. *A tonic dictionary of the Chinese language in the Canton dialect*. Canton, China: Printed at the office of the Chinese repository. xxxvi + 832 p. See p. 438, 511. 22 cm. [10 ref. Eng; chi]

• **Summary:** At the top of the title page, the title is written in Chinese (Cantonese) but printed in Roman letters: *Ying Wá Fan Wan Ts’üt Iu*. This book contains definitions and expansions of 7,850 characters; it focuses on those in general use. Soy-related characters include the following: Page 61—*Fu*. Corrupted, rotten; *tau fu* bean curd.

Page 438—*Shí*. Salted eatables, as beans, oysters, olives, which are afterwards dried and used as relishes; *tau shí* salted beans; *shí yau* soy [sauce]; *mín shí* salted flour and beans used in cooking; *lám shí* stoned and pickled olives; *tau shí kéung* salted beans and ginger—a relish” [like Hamanatto in Japan].

Note 1. This is the earliest English-language document seen (Nov. 2011) that uses the term *tau shí* or the term “salted beans” or the term “salted beans and ginger” to refer to fermented black soybeans.

Note 2. Concerning the term *mín shí* (mín shí), Dr. H.T. Huang (expert on Chinese food history, June 2008 personal communication) says it is simply Cantonese for *mian shi*

(pinyin; or in Wade Giles *mien shih*, characters #4503 + #5805). The characters are the same in Cantonese or in pinyin. The term is used only in Cantonese, where it often refers to “soy paste” or *jiang / Chiang* (character #661). Dr. Huang has not seen the term used in classical texts or heard it in Mandarin or Fujian dialects.

Page 511–*Tau*. Pulse, peas, beans, legumes; *hung tau* red pulse [beans]; *ti tau* ground-nuts; *tau fu* bean curd; *tau fu fa* bean curd jelly [soymilk curds]; *tau fu kon* [pinyin: *doufugan*] bean curd cakes.

Page 533–*To*. A knife; a sword with one edge; *leung min* to a bean-curd knife.

Page 708–*Yun*. Liver, yellow; *tau fu yun* yellow bean curd cakes.

In the Preface, the author refers to ten earlier Chinese or Cantonese-English dictionaries and related works by Kanghi (*Kanghi Tsz T'ien*, which have been in use throughout the empire for nearly 150 years), Morrison (1827), Medhurst (1842-43), De Guines, Gonçalves, Callery, Klaproth, Bridgman (1841), Williams (1841), and Bonney (1854).

Note 3. This is the earliest English-language document seen (Feb. 2008) that uses the term “tau fu kon” or “bean curd cakes” to refer to tofu.

Note 4. This is the earliest English-language document seen (March 2001) that mentions *shí*, *tau shí*, or fermented black soybeans, which it calls “salted beans.” This is also the earliest document seen (March 2001) concerning the etymology of fermented black soybeans.

Note 5. Note: This is the earliest document seen (Jan. 2012) that contains Cantonese romanization / transliteration. Address: Canton, China.

913. Williams, Samuel Wells. 1856. A Chinese commercial guide: Consisting of a collection of details and regulations respecting foreign trade with China... 4th ed., revised and enlarged. Canton: Printed at the Office of the Chinese Repository. viii + 376 p. Illust. 22 cm. *

• **Summary:** Samuel Wells Williams lived 1812-1884. Address: L.L.D., Hongkong.

914. *Calcutta Review (The)*. 1857. Life in the North West [of India]. 28:1-23. March. See p. 17.

• **Summary:** “The tiffin consists of an awful ‘devil’ in which mustard, cayenne, Worcestershire sauce, West India pickle, and other irritating ingredients, are mixed. This awful compound is washed down with ‘a cup’ and some more brandy-pawnee.”

915. *Blackwood's Edinburgh Magazine*. 1857. Afoot. 81(498):434-49. April. See p. 445.

• **Summary:** “The nobleman who has magnanimously declined the immortality of associating his name with the Worcestershire sauce, how often, when a few drops of the precious condiment have given a relish to our dry chop or

cold bone have we wished him all the pleasures which await on good digestion.”

916. Turpin (Edward). 1857. Display ad: Choice liquors! *New Orleans Commercial Bulletin*. Oct. 2. p. 3, col. 4.

• **Summary:** “Worcestershire Sauce, Lea & Perrins. “English Pickles, Crosse & Blackwell’s.”

Note: Turpin sells mostly liquors. Illustrations show several kegs or casks. Address: 129 Common st. [New Orleans].

917. Bowman, Anne. 1857. The common things of everyday life: A book of home wisdom for mothers and daughters. London and New York: G. Routledge. 183 p. See p. 45.

• **Summary:** In the section titled “Hashes” we read (p. 45): “Let it boil down to three-fourths of the quantity, then strain off the gravy, and flavour it with a little ketchup or Worcester sauce, put in the sliced meat, and make it hot over the fire, taking care that it does not boil, and serve it with sippets of toasted bread.”

Note: Sippets are small sops of fried or toasted bread used to garnish broths, soups, gravy or meat (Glasse 1747). Address: Author.

918. Davis, John Francis (Sir). 1857. China: A general description of that empire and its inhabitants. New ed., revised and enlarged. 2 vols. London: John Murray. Vol. 1, xx + 480 p. See vol. 1, p. 364-65. Illust. Index. 20 cm.

• **Summary:** This 1857 edition is very similar to the 1836 and 1848 editions except: (1) It was published in London by John Murray. (2) Parts (unrelated to soy) have been revised and enlarged, and the type has been reset so that, for example, vol. 1 contains 480 pages and vol. 2 contains 428 pages; any particular passage is slightly different in its pagination. Thus, soy [sauce] is mentioned on pages 364 and 365 in this 1857 edition.

Also discusses: Mr. James Flint (p. 46-50). Oil of sesamum and of peanuts (p. 373).

Sir John Francis Davis lived 1795-1890. Address: Bart. [Baronet], K.C.B. [knight commander of the Order of the Bath], F.R.S., Hollywood, Gloucestershire [England]. Late Her Majesty’s plenipotentiary in China, and Governor and Commander-in-Chief of the Colony of Hongkong.

919. Ellet, Elizabeth Fries. 1857. The practical housekeeper; A cyclopædia of domestic economy... Comprising five thousand practical receipts and maxims. Illustrated with five hundred wood engravings. Edited by Mrs. Ellet. New York, NY: Stringer and Townsend. 599 p. Illust. Index. 23 cm.

• **Summary:** Chapter XXVI, “Condiments,” states (p. 135): “Soy [sauce] is obtained from the seed or fruit of an Indian plant, called *dolichos soja*, or *soya*; it is made like ketchup; it enters greatly into use in the variety of sauces that are made for the table, being of a very strong, sweet-bitter taste; it

should be used in moderation in cookery.”

The receipts [recipes] are numbered sequentially. Soy [sauce] or Worcestershire is used as an ingredient in the following receipts: 18. Gravy soup (“a large spoonful of soy and one of mushroom ketchup,” p. 161-62). 61. Mock turtle (p. 172-73). 70. Hare soup (“a spoonful of soy or Harvey’s sauce,” p. 178). 104. Stock for fish soup (“If meant to be browned,... a good spoonful of mushroom ketchup or India soy [should] be added,” p. 185). 110. Oyster soup (“add two spoonfuls of soy or any fish sauce,” p. 186). 118. Lake and pond fish soup (“but if made solely with water, then use Chili vinegar, soy, mushroom ketchup, or any of the savoury sauces,” p. 188). 190. Marinade (Cut large fish into steaks. Then, instead of wine or cider, “a quart of table-beer, a glass of soy, one of essence of anchovies, and one of ketchup, may be used,” p. 189-90). 133. To collop halibut (“a spoonful of soy or fish sauce,” p. 192).

153. To cook trout (“eat with salt and lemon-juice, or with shrimp or lobster sauce; or a dash of Worcestershire or Harvey sauce; though I think these bad taste,” p. 195-96). 254. For all sorts of fish (“Take a spoonful of vinegar, one of Indian soy, the same of mushroom ketchup and Harvey’s sauce, with a little cayenne. Add three large spoonfuls of melted butter; stir all well and heat it over the fire,” p. 214). 256. Brown sauce (“simmer it in a glass of port wine, with a tablespoonful of soy and walnut ketchup,” p. 215). 291. Epicurean sauce (“Indian soy, two ounces; walnut and mushroom ketchup, of each eight ounces; port wine, two ounces,” p. 222).

292. Carrack or Indian sauce for cold meat (“Two heads of garlic sliced, five spoonfuls of soy, five spoonfuls of mushroom ketchup, eight spoonfuls of walnut pickle, fifteen anchovies, or five spoonfuls of essence of anchovies, three spoonfuls of mango pickle, one quart of vinegar—mix in a bottle and set in the chimney corner; shake daily for a month,” p. 222).

313. Sauce, Harvey (“Chop twelve anchovies, bone and all, very small, with one ounce of cayenne pepper, six spoonfuls of soy, six ditto of good walnut pickle, three heads of garlic chopped not very small, a quarter of an ounce of cochineal, two heads of shalots [shallots] chopped rather large, one gallon of vinegar; let it stand fourteen days, stir it well twice or thrice every day, then pass it through a jelly bag, and repeat this till it is quite clear; then bottle it, and tie a bladder over the cork.” p. 225-26).

398. A l’espagnole (or Spanish sauce) (“If it wants flavor, add soy,” p. 238). 396. Carachi [a sauce] (“three tablespoonfuls of soy, three of mushroom ketchup, three of walnut pickle, six anchovies dissolved, two or three spoonfuls of mangoe or India pickle liquor, and a pint of the best vinegar, with sufficient cochineal to color,” p. 239). 459. Rump of beef stew (“a spoonful of soy and Oude sauce,” p. 252). 500. To stew tongue (“season with soy, mushroom ketchup,” p. 262). 704. Haricot of mutton (p. 302). 977.

Turkey pulled and grilled (or devilled, p. 360).

1153. Camp vinegar (“two teaspoonfuls or real soy, two of walnut ketchup,” p. 400-01). 1166. Walnut ketchup (Irish mode, p. 403).

1172. Artificial sauces for fish (“Those most commonly used are soy and anchovy, merely mixed from the cruets into melted butter by each individual of the company... The savory store sauces for fish, as prepared and sold in the shops, are all to a certain degree agreeable to some palates, but anchovy and soy seem the prevailing sort for fish,” p. 405). 1173. Store sauces (No. 1, An excellent and not common Pickle, called ‘Salade,’ {“Pour in a wine-glass of soy”}, Quin’s sauce {contains no soy}, p. 405-06).

Mackenzie’s Perigord pie (“Worcester sauce, good with savory pies, is said to be made on a basic of good walnut ketchup, with additional spices,” p. 418-19). Note 1. Perigord is a former province of France, which corresponds roughly to the current Dordogne département in the Aquitaine region of southwest France.

Note 2. Elizabeth Fries Ellet lived 1818-1877. This comprehensive cookbook “captures American culinary arts just prior to the Civil War.”

Note 3. This is the earliest English-language document seen (Feb. 2007) that uses word “soya” to refer to the soybean plant; previously it has been used only to refer to soy sauce.

Note 4. This cookbook contains many recipes, especially meat, poultry, and fish recipes, and desserts, credited to Alexis Benoît Soyer (lived 1810-1858). Born in France, Soyer moved in 1830 to London, where he became a famous chef to fashionable society and the author of many popular cookery books. He subsequently worked for Irish famine relief and with the British army in the Crimea. In 1849 he developed a table-top cooking range (*The Magic Stove*, Soyer / Soyer’s stove), and in 1857 his Field stove. Soyer died in London in 1858, at age 48.

920. Ockside, Knight Russ; Doesticks, Q.K. Philander. 1857. The history and records of the Elephant Club compiled from authentic documents now in possession of the Zoölogical Society. New York. NY: Livermore & Rudd. 321 p. See p. 123. Illust.

• **Summary:** This novel is actually by Edward Fitch Underhill (1830-1898). “Dennis had somewhere heard of ice cream,” but when it arrived he did not know how to season it. Perceiving “that other people made use of bottles from the caster stand... He began with pepper, followed it with vinegar, kept on to the Cayenne, added a good quantity of oil, drowned it with ketchup, and then with unusual impartiality, not wishing to neglect any of the bottles, he poured Worcestershire sauce over the whole.” Address: 1. M.D.; 2. P.B.

921. Timbs, John. 1857. Popular errors: Explained and

illustrated. A book for old and young. An entirely new edition. London: Kent and Co. (Late Bogue). viii + 376 p. Index. 17 cm.

• **Summary:** In the chapter titled “Errors in science, art, and inventions,” the section titled “Soy from black-beetles” (p. 80) is identical to that in the 1841 edition.

Note: At the head of the title page is written: “Things not generally known.” John Timbs lived 1801-1875. An 1860 edition, containing only 247 pages, was also published in London by Kent. Address: F.S.A. [Fellow of the Society of Arts/Antiquaries], Author of *Curiosities of London*,... [England].

922. *Knickerbocker: Or, New-York Monthly Magazine*. 1858. Editor’s table. 51(1):84-110. Jan. See p. 109.

• **Summary:** “‘Madame, your coffee, mustard, apples, Worcestershire sauce, and Oolong tea, went by the two o’clock train.’”

923. *Littell’s Living Age*. 1858. A Chinese state dinner. No. 722. p. 817-19. March 27. [1 ref]

• **Summary:** From The Correspondence of The Times: “The same hands that brought them in scattered also an entourage of still smaller basins. These are sauces of every flavor and strength from crushed fresh chillies to simple soy [sauce]. Watch the Chinaman. How cunningly he compounds.”

924. Lea and Perrins. 1858. Celebrated Worcester Sauce (Ad). *Age (The) (Melbourne, Australia)*. April 27. p. 3, col. 2.

• **Summary:** “Pronounced by connoisseurs to be the Only Good Sauce, and applicable to every variety of dish.

“Extract of a letter from a medical gentleman at Madras [India], to his brother at Worcester, May, 1851. ‘Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome sauce that is made.’

“Extensive frauds. Lea and Perrins have discovered that several of the Foreign Markets have been supplied with spurious imitations of their ‘Worcestershire Sauce,’ the labels of which closely resemble those of the Genuine Sauce, and in one or more instances with the names of L. and P. forged; they have deemed it their duty to caution the public, and request purchasers to see that the name Lea & Perrins are upon the Wrapper, Label, Stopper, and Bottle.

“L. & P. further give notice, that they will proceed against any one who may infringe upon their right, either by manufacturing or vending such imitations, and have instructed their correspondents in the various parts of the world, to advise them of such infringements.

“Wholesale and for Exportation by the proprietors Lea and Perrins, Worcester, England; Crosse and Blackwell, and other Oilmen and Merchants, London.

Note: This is the earliest document seen (Feb. 2012)

that contains the words “Extensive frauds” or the words “spurious imitations” in connection with Worcestershire sauce. Address: [Worcester, England].

925. Duncan (John) & Sons. 1858. “The only good sauce” (Ad). *New York Times*. May 22. p. 8.

• **Summary:** “So pronounced by gentlemen of acknowledged *goût* [taste], prepared by Messrs. Lea & Perrins, under the name ‘Lea & Perrins’ Worcestershire Sauce,’ and suitable for soups, fish, meats, game, gravies, curries, &c., imparting a most exquisite flavor, zest and piquancy. For sale by grocers and druggists generally. Beware of imitations.” Address: Sole agents for the proprietors, 405 Broadway [New York City].

926. Harrington (W.M.) & Co. 1858. Spring supplies—1858 (Ad). *British Colonist (Halifax, Nova Scotia, Canada)*. June 15. p. 1.

• **Summary:** “The Subscribers have completed their stock, ex White Star, London, George Bradford, Liverpool, and Roseneath, Glasgow, consisting of—English Pickles and Sauces, Anchovy Paste,... Bengal Chutney, India Soy [sauce], Sallad Oil,...”

927. *Colburn’s United Service Magazine (and Naval and Military Journal)*. 1858. The Karlee Caves and notices of Bombay. Part II. July. p. 419-24.

• **Summary:** A British party is traveling near Bombay, India. On page 423 we read: “We were often amused with sundry visits from borahs, or native pedlars [peddlers], who sell us anything we ask for.” There follows a bargaining session. Page 424: “We pay him eight annas, which is equivalent to a shilling... We now inspect both baskets, and make the old fellow turn out everything—pomade, jam, pickles, Warren’s blacking, dress shirts, boot hooks, hair oil, metal teapots, bridles and currycombs, lead pencils, China silk handkerchiefs, and Worcestershire sauce.”

Note: By July 1858 Worcestershire sauce is being sold by pedlars in India.

928. *New York Times*. 1858. Outfit for the woods... (Letter to the editor). Aug. 13. p. 2.

• **Summary:** “Round Lake, Bartlett’s, Tuesday, July 13, 1858. Dear R.: We are finally off for a camping time... The outfit Martin gave us rather surprised me... twenty-five pounds of pork, the same quantity of Indian meal [cornmeal] and wheat flour, bread and biscuits, soda and cream of tartar, West India and maple sugar, Worcestershire sauce and current [currant] jelly, tea and chocolate were stowed away together, filling a champagne-basket full.”

• **Summary:** This book is an abbreviated version of: Hawks, Francis L. 1856. *Narrative of the Expedition of an American Squadron to the China Seas and Japan, Performed in the Years 1852, 1853, and 1854, under the command of Commodore M.C. Perry, United States Navy,...* New York: D. Appleton and Co.; London: Trubner & Co. viii + 296 p.

“Soy” sauce is mentioned on pages 197 and 248.

930. Simmonds, Peter Lund. 1858. A dictionary of trade products, commercial, manufacturing, and technical terms: with a definition of the moneys, weights, and measures of all countries, reduced to the British standard. London: G. Routledge & Co. viii + 422 p. 18 cm.

• **Summary:** Two entries are related to the soybean: “Mico, mijo [miso], a vegetable butter or solid oil, made from *Soja hispida*, in Japan.”

“Soy, a sauce or flavoring originally made in the East; and said to be produced from a species of *Dolichos* bean.” Note: the author is apparently unaware that the sauce is made from soybeans.

The Preface begins: “The present is especially a practical, commercial and industrial age: newspapers, lecturers, popular authors, all lend their efforts towards the diffusion of sound and useful knowledge among the masses; and the commercial and industrial element has become the leading feature of instruction.”

Also discusses: Almond oil, almonds, amande, arachis oil (“generally known in commerce as nut oil”), catsup (non-soy; “Catsup, Ketchup, a seasoning or sauce for meat, made of mushrooms, tomatoes, walnuts, or other vegetable substances), earth-nut (see ground-nut; in America called pea-nut), flax, flax-seed, gingelie (Indian name for *Sesamum orientale* or teel seed), gluten, glutinous, ground-nuts (from which oil is expressed), hemp (a fibre), hemp-seed (from which oil is expressed), ketchup (see catsup), lima-bean (“the *Phaseolus limensis*, an esteemed kind of pulse cultivated in the tropics; the perennial kidney-bean, *P. perennis*”), linseed, linseed-meal, linseed-oil, oil (fixed or fat oils vs. volatile or essential oils; solid fats vs. fluid fixed oils), oil-cake (“the marc or refuse after oil is pressed from flax-seed, rape-seed, coconut pulp, &c...”), pea-nut (an American name for the ground-nut), sesame (a plant from which oil is expressed; in India called Gingely, Gingelie, teel or til), siritch (Arab name for sesame oil), soya (see sherbet).

Note 1. This is the earliest English-language document seen (Jan. 2009) that gives “*Phaseolus limensis*” as the scientific name of the lima bean.

Note 2. Peter L. Simmonds lived 1814-1897. This book is dedicated to Dr. Lyon Playfair, C.B., F.R.S., President of the Chemical Society, etc. Address: F.R.G.S., F.S.S., author, 8 Winchester St., Pimlico [southwest London, England].

• **Summary:** Under “Soy” (noun, p. 131) are the Chinese characters and the Cantonese term for soy sauce, *shi-yau*, with tones shown.

Note 1. *Shi-yau* is, more precisely, “soy nugget sauce.”

Under “Bean” (p. 11) is the Chinese character *tau*.

At the top of the title page are four large, bold characters: *Ying Yüeh Tzu Tien*. Address: M.A.

935. Cornwallis, Kinahan. 1859. Two journeys to Japan, 1856-7. 2 vols. London: Thomas C. Newby. Vol. 1, vii + 340 p.; Vol. 2, 340 p. Illust. No index. 19 cm. Facsimile edition reprinted in 2002 by Ganesha Publishing (London) and

Edition Synapse (Tokyo). Series: Japan in English, Vols. 4-5.

• **Summary:** This book appeared five years after the Perry Expedition to Japan captured the interest of the western world. Cornwallis, a young British writer, took advantage of this interest by writing this book—which was later exposed as a forgery (See: Yamigawa, Joseph K. 1941. “Cornwallis Account of Japan a Forgery and its exposure. *Monumenta Nipponica* 4(1):124-32. Jan.). He drew his material partly from the numerous authentic books about Japan already widely available, and partly from his imagination.

Cornwallis said that he first arrived in Japan in July 1856 on an American sloop of war which landed in the harbor of Shimoda. He immediately becomes enchanted by everything about Japan, and depicts it as an almost ideal place.

During a visit to Simoda [Shimoda], he had lunch at the temple of the Russians: “After we had discussed to our satisfaction the birds and the fishes, the rice and the soya, the latter the finest fish sauce in the world, we wound up by eating fruit and drinking saki [sake],...” (p. 34).

The next morning, on board ship after the usual Japanese breakfast, a Russian came on board. “He laughed at our complaints [about the food, and said] that we had better, for our own peace, make up our minds to rest content with a good supply of rice, soya, saki, and a stray chicken or fish now and then, so long as we remained at our present anchorage” (p. 35).

His 2nd journey to Japan supposedly took place in Aug. 1857. This time he was on board an American steam-frigate that went from Shanghae [Shanghai, China], to the “Japanese island of Lew-kew” [in the Ryukyu Islands, also spelled Luchu or Loochoo; a chain of islands extending 600 miles from Taiwan to Kyushu, Japan].

Part / Volume II contains a long history of European exploration of and visits to Japan. With his host, Mr. Noskotoska, he visits Nagasaki and the old Dutch trading post there he calls “Desima” [Dejima, Deshima]. During a visit in Nagasaki to the Noskotsuka home, where he is fascinated by the women (who do not feel embarrassed to be seen naked after bathing) and treated like a king, he was invited to “the mid-day repast” at home. “Here were four small lacquered tables, on each of which lay the accustomed ivory chopstick, the small porcelain cup for tea, and the larger one of lacquer-work for saki [sake, saké], the small glass cruet of soy [sauce], the porcelain spoon, and the silver fork” (p. 105). Address: [England].

936. Majendie, Vivian Dering. 1859. Up among the Pandies: or, A year’s service in India. London and New York: Routledge, Warne, and Routledge. xii + 360 p. See Chap. 11, p. 130. 19 cm.

• **Summary:** A British lieutenant describes his military service in colonial British India, putting down mutinies, etc. “... we had partaken of a good breakfast, and were in a state of profuse perspiration from hot tea and military ardour,

which, conjointly with “Worcestershire sauce” and curry, was burning within us, our existence, which not half an hour ago looked blank and worthless, now assumed such a delightful *couleur de rose*, that,...” we looked forward to our march tomorrow towards Lucknow.

Note: The “Pandie” (after a sepoy named Manghal Pandi) were those who started the Indian Mutiny, the great revolt of the Bengal native army in 1857, which led to the transference of Indian government from the East India company to the crown in 1858. Address: Sir, Lieut., Royal Artillery.

937. Oliphant, Laurence. 1859. Narrative of the Earl of Elgin’s mission to China and Japan in the years 1857, ‘58, ‘59. 2 vols. Edinburgh and London: William Blackwood and Sons. xiv + 492 p. Illust. (coloured lithographs). Map.

• **Summary:** Page 60: In Nagasaki, they visit a tea-garden high on a hill above the city. “We have long since taken off our shoes, and now squat in a circle on the floor, and gaze with curiosity, not unmixed with alarm, at the display before us. There is raw fish thinly sliced, and salted ginger; there are prawns piled up with a substance which in taste and appearance very much resembles toffy; there are pickled eggs and rock-leeches, and pieces of gristle belonging to animals unknown, to be eaten with soy [sauce];... but still the experiment is hazardous, and we are relieved at the sight of a bowl of rice as a safe *piece de resistance*.”

Pages 67-68: In Macao, at a Chinese restaurant, the author “managed, by the aid of chopsticks, to make a very satisfactory repast off eggs a year old preserved in clay, sharks’ fins and radishes pared and boiled into a thick soup, *bêche de mer* or sea-slugs, shrimps made into a paste with sea-chestnuts, bamboo roots, and garlic, rendered piquant by the addition of soy [sauce] and sundry other pickles and condiments, and washed down with warm samshu in minute cups. Dishes and plates were all on the smallest possible scale, and pieces of square brown paper served the purpose of napkins.”

Pages 398-99. The author found it very difficult to obtain any statistics about Tientsin or its trade. He finally found a respectable, local Chinese merchant. “The theme upon which he dwelt most feelingly was the excessive poverty of the city of his abode. It exported absolutely nothing, he averred... Among its imports from the south are dried fruits, sugar, glass ware, camlets, woollens [woolens], opium, &c., in small quantities. Numerous cargoes of [soya] beans and bean-cakes are brought over from Neu-chwang [Newchwang] and the Manchurian coast.”

In Appendix II a table (p. 491) shows “Trade returns between Shanghai and Japan.” Imports from Japan from 1st Jan. to 30th June 1859. Isinglass (Kanting) 1,551 peculs [piculs]. Seaweed, all kinds, 61,561 peculs. Soy [sauce] 562 peculs. Address: Private secretary to Lord Elgin.

938. Steinmetz, Andrew. 1859. Japan and her people. London and New York: Routledge, Warnes, and Routledge. xv + 447 p. Illust. No index. 22 cm. 2nd ed. 1860. Facsimile edition reprinted in 1973 by Scholarly Resources, Inc. (Wilmington, Delaware). Reprinted again in 2002 by Ganesha Publishing (London) and Edition Synapse (Tokyo). Series: Japan in English, Vol. 1. [30 ref]

• **Summary:** The author of this book has apparently not been to Japan; he compiled it from more than 30 major works on Japan (see p. xi-xii). The book is divided into two parts and 7 chapters. The 35 old illustrations add to the color of the book.

In Chapter 3, “Palaces, temples, castles, towns, houses, gardens, vehicles, etc.” we read (p. 175): “;... all sorts of vegetables which the season affords, and innumerable other dishes peculiar to Japan, made of seeds and powdered roots, and dressed in many different ways. The common sauce for these and other dishes is soy mixed with saki.”

In Chapter 6, “Social and domestic life,” is a long quotation from Kaempfer (1727) describing the great yearly festival held on the third day of the third month [*hina matsuri*, dolls’ festival]. “... cakes made of mugwort and rice, which they call *futsumotzi* [*sic, kusa mochi*], that is, mugwort cakes, are prepared after the following manner:—The mugwort leaves [are finally] “reduced to powder, and mixed with boiled rice and *adsuki*, or red beans, coarsely powdered, and so baked into cakes” (p. 273).

“A Japanese feast usually consists of seven or eight courses... As whets, servants of both sexes, from time to time, hand round soy [sauce], other sauces, pickled or salted ginger, and small, nicely-cut morsels of salted fish, which are all eaten with Chinese chopsticks” (p. 274-75). Andrew Steinmetz lived 1816-1877. Address: Esq., of the Middle Temple, Barrister-at-Law [England].

939. Timbs, John. 1859. Hints for the table: or, The economy of good living. London: Kent and Co. x + 184 p. See p. 80-81, 93. Illust. No index.

• **Summary:** The chapter on “Sauces and Gravies” states (p. 80-81): “Nine-tenths of the ketchup sold by grocer-oilmen is a vile compound of liver and the roe of fish, seasoned with pepper and other condiments. If you wish the article genuine [apparently mushroom ketchup], procure the mushrooms, and make it yourself. “India Soy is difficult to purchase genuine: it should be made from an Indian plant called *Dolichos soja*, or soya; but treacle and salt are the basis of the soy ordinarily sold.

“Many persons,’ observes Mr. Dobell, in his *Travels in China*, ‘have thought that gravy was used in preparing soy; but this appears not to be the case, the composition being entirely a vegetable one, and made from beans. Japanese soy is much esteemed in China; probably it is made with a particular bean.* In China the consumption of soy is enormous: neither rich nor poor can dine, breakfast, or sup

without soy; it is the sauce for all sorts of food, and may be described as indispensable at a Chinese repast.” (Footnote: *”Now that Japan is open to our trade, we hope to receive Japan soy with greater certainty”).

The chapter on “Salads” notes (p. 93): “The following are excellent salad ingredients: essence of anchovies, soy [sauce], sugar, truffles, flavoured vinegars;...”

Note: The name of the author, J. Timbs, does not appear on the title page.

940. Walsh, J.H. ed. 1859. The English cookery book: uniting a good style with economy, and adapted to all persons of every clime; containing many unpublished receipts in daily use by private families. Collected by a committee of ladies... London: G. Routledge and Co. vii + 375 p. Illust. Index.

• **Summary:** The term “Worcestershire sauce” appears on 11 pages in this book: Stewed beef steak (“If without them [carrots and turnips], the gravy must be flavoured with Worcestershire sauce and anchovy,...” p. 116). To fry or broil rump or beef steaks (“... then add [to the gravy] a table-spoonful of ketchup (mushroom or walnut), a table-spoonful of Worcestershire sauce, and a little mixed pickle chopped up,...” p. 121). Haricot of mutton (“This will take three hours to stew. Add a little ketchup, or anchovy, or Worcestershire sauce to the gravy before serving.” p. 124). Kidneys, fried (“When nearly done throw in some flour to thicken the gravy, which will be favoured by the addition of stock, or hot water flavoured with Worcestershire sauce and the juice of a lemon.” p. 128).

Ragout breast of veal (“... strain the gravy through a sieve; skim off all the fat, and take as much of the liquor as is required, and thicken it with flour and butter, and flavour with lemon pickle or juice, walnut and mushroom ketchup, or Worcestershire sauce.” p. 134-35). Veal cutlets (“The bone taken out of the fillet with part of the knuckle will boil down and make good stock, browning it in the usual way (see Gravies), and flavouring with a little mushroom ketchup and Worcestershire sauce;... p. 140-41). To fry pork (These “are best when fried in the French fashion, when, however, they require a made-gravy. When this is not at hand” add “a chopped onion and a tea-spoonful of mustard to the flour, and a table-spoonful of Worcestershire sauce or pickle to the water.” p. 143). To stew a hare (“... before serving, thicken the gravy with flour and butter, or arrowroot, and add two table-spoonfuls of ketchup, or one with some Reading or Worcestershire sauce, and the juice of half a lemon.” p. 152-53). Beef or mutton scalloped (“... adding some good broth or gravy, with some walnut ketchup and a little Worcestershire sauce poured upon it,... p. 161). Cold beef or mutton stewed with peas (“Simmer another hour and a half, then stir in a little Worcestershire sauce, and add flour and butter, with a little flour of mustard, to thicken it.” p. 161). To stew carrots brown (“... cut each carrot into as many round

balls as it will make; put them into a stewpan with a pint of gravy, flavoured with a little pepper, salt, mushroom ketchup, and Worcestershire sauce;..." p. 185). Veal pie ("... then pour in some gravy from the bones, with a little mushroom ketchup, and a very small quantity of Worcestershire sauce; cover with a short crust, or good puff paste, and bake." p. 206). Address: F.R.C.S., author of "A Manual of Domestic Economy," England.

941. Parker (A.J.). 1860. London Club Sauce (Ad). *New York Times*. Feb. 3. p. 8.

• **Summary:** "This unrivaled Sauce, manufactured by Parker Brothers, London, can be obtained of their agent in this City, A.C. Parker,... This article is superior to the Worcestershire Sauce and can be obtained at one-half the price."

Note: This ad also appeared on June 24, p. 8. Address: No. 15 Beekman-street [New York City].

942. *Irish Times and Daily Advertiser (Dublin)*. 1860. House of Commons: In committee on customs' acts. March 5. p. 3.

945. *Gardener's Monthly*. 1860. Questions and answers. 2(7):212. July.

• **Summary:** Page 212: "Lady or calavan pea—J.J.F.—The pea you send is the Japan pea, or *Soja hispida*, a popular bean with the Japanese, of which the celebrated Soy soup [sic, Soy sauce] is made."

Note: This is the earliest document seen (June 2008) that refers to the soybean as either the "Lady pea" or the "calavan pea."

946. Lea and Perrins. 1860. Classified ad: Notice.—Beware of imitations. *Times (London)*. Aug. 4. p. 13, col. 4.

• **Summary:** "Lea and Perrins' Worcestershire Sauce is pronounced by connoisseurs to be the most agreeable addition to every variety of dish. See the names of Lea and Perrins on every label, bottle, and stopper. Sold by Messrs. Crosse and Blackwell, London, and by dealers in sauces generally. Sole manufacturers, Lea and Perrins, Worcester." Address: [England].

947. Lea and Perrins. 1860. Notice.—"Beware of imitations." Lea and Perrins' Worcestershire Sauce is pronounced by connoisseurs to be a most agreeable addition... (Ad). *Observer (London)*. Aug. 5. p. 1.

• **Summary:** "... to every variety of dish. See the names of Lea and Perrins on every bottle, label, and stopper. Sold by Messrs. Crosse and Blackwell, London, and by dealers in sauces generally. Sole manufacturers: Lea and Perrins, Worcester." Address: Worcester, England.

948. Duncan (Jno.) & Sons. 1860. Ask for Lea & Perrins' Worcestershire Sauce (Ad). *New York Times*. Nov. 29. p. 6.

• **Summary:** "The most popular and economical condiment known; delicious in soup, gravy, with fish, hot or cold meats, game, &c. The great reputation of this Sauce in all parts of the world has induced many imitations under the name of Worcestershire Sauce. Purchasers desiring the *genuine* will observe the name of Lea & Perrins' upon *each* bottle and wrapper. For sale by all respectable Grocers and Fruiterers." Address: Sole agents, 405 Broadway [New York City].

949. Lennox, William Pitt. 1860. Pictures of sporting life and character. 2 vols. London: Hurst and Blackett, Publishers, successors to Henry Colburn. See Vol. II, p. 228. Illust.

• **Summary:** Using a tame decoy, one can "pass an agreeable hour or two, especially with the prospect of seeing the produce served up at dinner with the following sauce:—One glass of port wine, one tablespoon Worcestershire sauce, one ditto lemon juice, four grains of Cayenne pepper, and a shallot, to be scalded, strained, and added to the gravy of the bird." Address: Lord [England].

950. *Pasinomie: Collection des Lois, Decrets, Arretes et Reglements Generaux Qui Peuvent Invoques en Belgique (Brussels)*. 1860. Tarif: Désignation, droits d'entrée, assimilation [Tariff schedule]. 38:330. For 18 Dec. 1857. No.

510. Reign of Leopold I. [Fre]

• **Summary:** There are three columns in this long (p. 329+) tariff schedule. However before explaining them we must explain that when No. 17 in the left column is paired with #12 in the right column (as they now are), they make no sense. So the two columns on this page are not properly aligned. In fact (as we can see from other tariff schedules published at about this time), No. 18 in the left column was intended to be paired with #12 in the right column; in this way they make perfect sense. The following explanation assumes that small change in alignment.

For the soy entry (p. 330) these are: (Col. 1, No. 18). Designation of merchandise: Grains / seeds not specifically subject to other tariffs. (2) Entry duty / tariff: Free (no duty or tariff). (3) Assimilations (*Assimilations*). These are assimilated into spices (*épiceries*): Cardamom, cumin, saffron, soy [sauce] (*le soja*), and vanilla.

Note 1. It is not clear how to translate *le soja*. Is it a grain or seed (the soybean) as described in column 1? If so, then what does that have to do with spices? Or is it a spice (soy sauce) as implied in column 3? Yet it is the only item in its group in column 3 that is not a seed. Looking at the broad historical context, it probably refers to soy sauce, which had probably been imported into Belgium (from the Netherlands) long before this time, whereas soybeans probably had not been. If our guess is correct, then soy sauce may be imported into Belgium duty-free.

Note 2. This is the earliest document seen (May 2006) concerning soy in connection with (but not yet in) Belgium. Address: Brussels, Belgium.

951. Schroeder, Georg. 1860. Handbuch für Zollbeamte und Steuerpflichtige: ein alphabetisch geordnetes Waarenverzeichnis,... [Handbook for customs officers and tax collectors: an alphabetical list of goods...]. Cassel. 528 p. See p. 101. 8vo. [Ger; Eng]

• **Summary:** The entry for *Japanische Soja* (Japanese soy) states (p. 101): a very strong kind of Arrak or Branntwein from Japan [sic].

Note: This is the earliest German-language document seen (April 2012) that uses the term “Japanische Soja” to refer to soy sauce or to Japanese soy sauce.

The entry for *Soja, Soya, Soy* states (p. 218): An Indian liquid for the seasoning of foods. Address: Zoll-Inspektor.

952. Taylor, Charles. 1860. Five years in China: With some account of the Great Rebellion, and a description of St. Helena. New York, NY: Derby & Jackson; Nashville, Tennessee: J.B. McFerrin. xvi + 413 p. See p. 131-32. No index. 20 cm,

• **Summary:** Chapter 10, titled “What and how they eat,” states: “The most common nuts are cocoa-nuts, walnuts, chestnuts, almonds, filberts, and ground-nuts, or, as they are variously called in different parts of this country [USA]—pea-

nuts, ground-peas, goobers or pindars” (p. 131).

The Chinese: “Being very fond of highly-seasoned food, they use many condiments, sauces and catsups. One of these has a taste very similar to that of the celebrated ‘Worcestershire sauce’” (p. 132).

Note: Interesting that the word “catsup” is used to describe Chinese soy sauce; the Chinese word may be something like *ket-siap*. Address: M.D. (Formerly [Methodist] missionary to China).

953. Wraxall, Lascelles. 1860. Camp life: or, Passages from the story of a contingent. London: Charles J. Skeet. xii + 307 p. No index.

• **Summary:** These are sketches from the Crimean war. Chapter 5 is devoted to military details. “I had just returned to my quarters, jaded with a long day’s work, and had hardly completed the preparation for my dinner. These were simple enough in all conscience: for they consisted in uncorking a bottle of Worcestershire sauce, a condiment which entered into every culinary combination. I had, then, just dug a hole in the centre of the slab peas porridge, into which the beneficent liquid would be poured, when I was startled by a heavy tap at the door” (p. 45).

Note: The author’s full name is Frederick Charles Lascelles Wraxall. Address: Author, Kensington, England.

954. Somerville (M.). 1861. Ex “Bosworth,” from London. For sale at the city mart,... (Ad). *Daily Southern Cross* (Auckland, New Zealand). March 12. p. 1.

• **Summary:** Items from Crosse & Blackwell being sold include “4 cases Lea and Perrin’s Sauce” [Worcestershire]. Address: Auckland.

955. Sutton (F.). 1861. F. Sutton begs respectfully to inform his friends... he has greatly enlarged his premises and stock, which now comprises: (Ad). *Hawke’s Bay Herald* (New Zealand). July 6. p. 5.

• **Summary:** Items being sold include “Lea and Perrin’s Sauce” [Worcestershire]. “Crosse and Blackwell’s Sauce, assorted.”

Note: A similar ad appeared in this newspaper on July 13, 20, 27, Aug. 6, 13, 20, 27, and Sept. 3. Address: Napier.

956. Debenham and Tewson (Messrs.). 1861. Sales by auction: Friday next.—Without reserve, to realize advances (Ad). *Times* (London). Sept. 3. p. 12, col. 4.

• **Summary:** “... Mangold Wurtzel, and other Seed, Indian soy [sauce],...” Address: 80, Cheapside [London].

957. Duncan (John) & Sons. 1861. Lea & Perrins’ celebrated Worcestershire Sauce (Ad). *Hartford Daily Courant* (Connecticut). Sept. 3. p. 3.

• **Summary:** Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. ‘Tell

Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.'

"Pronounced by connoisseurs to be the 'only good sauce' and applicable to every variety of dish.

"The above Sauce is not only the best and most popular condiment known, but the most economical, as a few drops in Soup, Gravy or with Fish, hot and cold Joints, Beef Steak, Game &c., impart an exquisite zest, which unprincipled Sauce manufacturers have in vain attempted to imitate.

"On the Breakfast, Luncheon, Dinner or Supper Table, a cruet containing 'Lea & Perrins' Worcestershire Sauce' is indispensable.

"To appreciate the excellent qualities of this delicious preparation, it is only necessary to purchase a small bottle of the *genuine*, of a respectable grocer or dealer, as many Hotel and Restaurant proprietors seldom place the pure Sauce before their guests, but substitute a genuine bottle filled with a spurious mixture.

"For sale by grocers and Fruiterers everywhere.

"John Duncan & Sons, Union Square and Fourteenth st., New York. Sole agents for the United States. A stock always in store. Also, orders received for direct shipment from England.

"Beware of Counterfeits and Imitations."

An illustration (line drawing) shows the bottle of sauce. This published ad is 4 inches tall by 2.5 inches wide.

Note: This is the earliest document seen (Feb. 2012) that mentions the word "cruet" (or "cruets"), in connection with Worcestershire sauce. However soy cruets and soy frames were being made in England as early as the 1770s (Bradbury 1912). Address: Union Square and 14th st., New York.

958. Bennett (Charles). 1861. Most important sale of a first-class stock of jewellery, watches, plate and plated ware (Ad). *Irish Times and Daily Advertiser (Dublin)*. Nov. 4. p. 2.

• **Summary:** Items to be auctioned include: "Electro-plated ware of the newest designs, and suitable to the present style of entertaining, consisting of dessert stands,... butter coolers, sugar vases, spirit, cruet, egg, and soy frames; toast racks, knife trays, salt celars,..." Address: Auctioneer, 6, Upper Ormond-quay.

959. Duncan (Jno.) & Sons. 1861. A gentleman writes to Lea & Perrins thus: (Ad). *New York Times*. Nov. 29. p. 6.

• **Summary:** "I have carried a bottle of your Worcestershire Sauce in a tour I have just completed through Spain and Portugal, and I believe I owe my present state of health to its use. Your Sauce is Stomachic, and I think medicinal. I can with truth say there is nothing in a traveller's baggage so essential to his comfort, at least in these countries, as your Sauce.' For sale by all respectable grocers and fruiterers." Address: Sole agents, Union-square, late No. 405 Broadway [New York City].

960. Pestonjee Jewanjee & Co. 1861. Classified ad: Fresh supplies!!! Just landed by the undersigned, at their General Depot,... *Bombay Times and Journal of Commerce (British India)*. Dec. 25. p. 4, col. 3.7.

• **Summary:** Under "Crosse & Blackwell: Quality, flavour, and price. Preserved provisions." The section on "Sauces &c." lists: "Reading Sauce, Harvey's John Bull,... Essence of Anchovies, India Soy, King of Oude Sauce,... Lea and Perrin's Worcestershire Sauce, Mushroom Catsup, Walnut ditto,..." Address: No. 1, Military Square, Bombay.

961. Lockhart, William. 1861. The medical missionary in China: A narrative of twenty years' experience. London: Hurst and Blackett, Publishers. xi + 404 p. See p. 63-69. No index. 23 cm.

• **Summary:** The author, a Christian medical missionary in Shanghai (he went there with Dr. Medhurst in 1843), describes the daily life of people in China. Chapter 4, which is mainly about food and money, has a long section about "pulse" or "beans," however the soy bean is never mentioned by name.

"Large quantities of *pulse*, a species of round white or yellowish bean, are grown in the north of China, at Shantung and Chih-le [Shantung and Chili], and in the south of Mantchouria [Manchuria], the yearly produce of this article is enormous. Its exportation forms a large branch of commerce; and the carrying of the beans, oil, and cakes gives employment to many thousand junks, which bring down their cargoes to Shanghai, Ningpo, and other ports.

"These beans are used chiefly for making oil: the other uses of them are subordinate to this."

He describes how the beans are ground in two different types of stone mills, the latter 30 feet in diameter and pulled by an ox. They are then steamed in baskets, pressed in a long, horizontal wedge press, filtered through straw then cloth, and stored in large baskets "lined with a very tough thin paper glued to the inside of the basket by varnish, and then varnished over. The oil never exudes if the paper has been properly attached to the baskets, each of which will hold 100 pounds of oil, and is the shape of a large flat jar, with a narrow mouth." Note 1. This is the earliest English-language document seen (Nov. 2003) that mentions a "wedge press" in connection with soybeans. It is also the earliest such document seen written by Westerner.

"The bean-cake, or residue after expression of the oil, is largely used as manure, and is found to fatten the land and improve the crops. It is never eaten by cattle.

"Soy [sauce] is made from the same bean, which after being slightly boiled in water is placed in the open air, in large jars with basket tops, for the purpose of fermentation. The beans turn brown and soft, and become a brown pultaceous mass. After the soy has drained away or been expressed, it is strained and packed in small jars for sale. No

use is made of the residue.

Note 2. “Pultaceous” means “having a consistency like that of porridge.”

Note 3. This is the earliest English-language document seen (March 2007) that mentions the “residue” left over after making soy sauce.

“*Tau fu*, or pulse-curd, is made by steeping the beans in cold water, when being soft they are ground between two flat stones. A spindle fixed in the centre of the lower passes through the upper stone, in which a hole is made about halfway between the centre and the rim. Through this hole the beans are passed as the upper stone revolves, by means of a handle fixed in the side of its rim. When ground they pass out at the rim as a creamy liquid, which is placed in a vat to settle. The supernatant fluid is afterwards drawn off, and the curd placed on a suspended square of cloth to get rid of more of the liquid. It is then transferred to square wooden frames lined with cloth, and next into a bean press loaded with a large stone. The remaining liquid drains out, leaving behind a thick cake of solid curd, which is cut up into small squares. [Note 4. The writer fails to mention that a coagulant is added to transform the milk into curd.] The curd is also sold after it leaves the filter and before it is pressed, and in both forms is fried with a little oil, and eaten as relish with rice. Sometimes cakes of curd are exposed to the air to ferment, when they become brown and dry, turning partly into soy, and form a tasty combination, much relished by the Chinese, of curd and soy.

“The beans are also given to animals, especially sheep and goats, as we give them brown peas.”

“The bean-oil is used for lamps, and also for cooking purposes. It is a pale, thin, clear oil, rather strong in smell, but not disagreeable (p. 69).

“The oil mills are very large establishments, and always at work. In some of them from fifty to sixty buffaloes are kept to perform the work at the stone wheels.”

Note 5. This is the earliest document seen (Sept. 2001) concerning the use of soy bean oil in lamps for illumination or lighting.

Note 6. This is the earliest English-language document seen (Sept. 2006) that uses the term “bean-oil” to refer to soybean oil.

Note 7. This is the earliest document seen (July 2002) concerning the feeding of soybeans or soy products to goats. Address: F.R.C.S., F.R.G.S., of the London Missionary Society [England].

962. Smith, George. 1861. *Ten weeks in Japan*. London: Longman, Green, Longman and Roberts. xv + 459 p. Illust. Index. 23 cm. Facsimile edition reprinted in 2002 by Ganesha Publishing (London) and Edition Synapse (Tokyo). Series: Japan in English, Vol. 11. [20* ref]

• **Summary:** This is a very interesting book by a careful observer of Japanese culture. In 1860 he stayed mostly

in Nagasaki, Yokuhama (Yokohama), and Yeddo (Edo, later Tokyo). Though he has long experience living as a Christian missionary and bishop in China and Hong Kong, he generally admires the Japanese, yet repeatedly calls them “pagans.”

While walking among the shops in Nagasaki, he notes (p. 27): “Soon again we pass the spacious warehouses of the dealers in sauces, condiments and soys, where large jars lie filled with decoctions of pulse and rice, and are left to ferment and become mellow with exposure and age.”

In the countryside around Yeddo he observed (p. 235): “The large quantities of rye grown in these parts were explained to us as being used in the manufacture of the celebrated Japanese soy; while rice is the ordinary material employed in making the universal spirituous beverage so often alluded to under the name of sakee” (saké, sake). Note: The word “sakee” appears in at least 19 places in this book.

“The secluded Chinese community who reside in Nagasaki compose a trading guild and factory, subjected for ages to all the past vexatious restrictions experienced by the Dutch.” They generally number about 200 persons (p. 32).

The chapter on “Nagasaki” begins (p. 78-79): “The Chinese form no unimportant part of the community in Nagasaki and are regarded with much dislike by the Japanese. In ancient times there was a free intercourse and unrestricted commerce between the two countries. But the change produced by former European difficulties and civil wars in the policy of the Japanese government towards the Spaniards, Portuguese and Dutch, was extended also to the Chinese mercantile strangers. After the severe edicts against the Christian religion and the prohibition of Christian books, the Chinese were detected importing Roman Catholic publications, and incurred the heavy displeasure of the government. In the year A.D. 1688 they were forcibly confined to a small settlement on the edge of the harbour, and subjected to the same restraints as those endured by the Dutch in the neighbouring scene of their imprisonment in Desima (Deshima). In the year A.D. 1780 the Chinese trading guild was removed a couple of hundred yards further back from the harbour to a Buddhist [Buddhist] monastery... Rigidly guarded and watched, the Chinese factory shared with the Dutch the humiliation and inconvenience of a common captivity.” The Chinese guild is now confined to their factory in the southern suburb, where they are isolated by Japanese guards. “Formerly the Chinese were not allowed to walk into the city... At present they amount to about four or five hundred persons, their number being diminished or increased by the departure or return of their junks trading to Japan.” At present, three Chinese junks are annually permitted to make a trading voyage to Japan.

Mr. von Siebold first came to Japan in 1823 and remained in the Dutch factory at Desima until 1830, “devoting himself to literary pursuits and scientific researches into the botany and natural history of the

country.” While studying the “history and geography of Japan, he purchased and published a native map of the empire. In the days of the old regime this audacious act was easily made to bear the appearance of constructive treason; and the colonel was... imprisoned for thirteen months in a solitary room at Desima, and finally banished from the Japanese empire. After an absence of nearly thirty years he returned eight months ago, and has resumed at the age of sixty-four his studies and investigations respecting the country in the hope of being able after three or four years to perfect his observations and on his return to Europe to publish the results of his lengthened researches for the benefit of the scientific world.” He now has a lithographed map of Nagasaki, and believes the population is a little over 60,000 (p. 208-09).

A table shows that 35 ships with cargo and 20 in ballast (empty) arrived in Nagasaki during the last 6 months of 1859. During the same period there departed 43 ships with cargo and 9 in ballast. Much of the trade is with China; items include sea weed for jelly, sea slugs for soup, peas and beans (p. 227-28).

Along the Tokaido, near Kanagawa: “The usual crops of wheat, barley, bean, peas and small quantities of still ungathered rape-seed, prevailed...” (p. 271). Address: D.D., Bishop of Victoria, Hong Kong.

963. Tilley, Henry Arthur. 1861. Japan, the Amoor, and the Pacific: With notices of other places comprised in a voyage of circumnavigation in the Russian corvette “Rynda,” in 1858-60. London: Smith, Elder and Co. xii + 405 p. Illust. No index. 22 cm. Facsimile edition reprinted in 2002 by Ganesha Publishing (London) and Edition Synapse (Tokyo). Series: Japan in English, Vol. 12.

• **Summary:** The section titled “Natural productions” (p. 93-95) states: “... the sauce called Soya, made from bean meal [sic] and salt, flavoured with herbs; different fermentations of rice known as saki [saké]; flax and a kind of nettle (*Urtica Japonica*) from which ropes are made;...”

“The chief food of the people is fish and rice, with eggs, vegetables, vermicelli, sea-weed, and pickled roots, cakes, and sweetmeats, to diversify the diet. Saki, tea, and sugar-water are the only drinks.”

Japan is described (p. 56) as a “mysterious land so long a marvel to the rest of the civilized world.”

The merchants and trading classes of Japan “are considered contemptible” [the lowest of the six classes] by higher authorities, government employees, and feudal retainers” (p. 61). The pariahs [outcasts] are all those whose business is with dead animals, in skinning them, &c. (p. 82).

Trade with foreign nations begins each year on July 1. Wax, camphor, and seaweed are exported in large quantities from Japan (p. 65).

“The Japanese belong to the Mongolian race, of which they may be considered the first class, as they are certainly

superior to the Chinese, both morally and physically” (p. 83).

“Education is widely spread among the people, who are all able to read and write; the bonzes [Buddhist priests] being the chief instructors” (p. 89). Address: [Englishman].

964. Wang Shixiong. 1861. Suixiju yinshipu [Discourse on food and drink from the Random Rest Studio]. China. Passages on soy reprinted in H.T. Huang 2000, p. 319n, 324, 371-73. And in N. Wai, 1964, p. 92. [Chi]

• **Summary:** Wade-Giles reference: *Sui Hsi Chū Yin Shih P’u*, by Wang Shih-Hsiung. Qing dynasty.

The section on fermented tofu states: Firm tofu (*doufugan*) is difficult to digest. Children, the elderly, and sick people should not eat it. If you transform firm tofu into fermented tofu (*furū*) it will be good for sick people / patients; it gets better the longer it is aged. (Translated by H.T. Huang, PhD, April 2003).

H.T. Huang (2000, p. 319n, 653) states that the list of tofu products in this book (p. 63) is similar to that published about 11 years earlier (ca. 1850) in: *Hu Ya* (Lakeside elegance), by Wang Rizhen.

Huang (p. 324) states that this is the second earliest known Chinese document to mention pressed tofu sheets (*qianzhang* {W.-G. *ch’ien chang*} or *baiye* {W.-G. *pai yeh*}).

Huang (p. 371-73) states that, according to this book, the first batch of soy sauce, produced during the summer and harvested in the fall, was called *qiuyou* (W.-G. *ch’iu yu*) (“fall oil”). It is called for by this name in 62 recipes in the book. Huang adds that the term is almost never used today.

The book also describes an unusual use for wheat gluten: If one accidentally swallows a coin, roast some gluten without destroying its shape, grind well, mix with boiled water and drink. If the coin is caught in the throat, it will be coughed up. If it is in the stomach, it will be eliminated with the stool (Huang 2000, p. 501).

Huang (personal communication, 5 June 1993), notes that page 28 states: “*Mien-chin* is made by kneading wheat dough under water. It is cooling, disperses heat, mitigates thirst and dispels anxieties. But it is not easy to digest, and should be chewed well.”

Wai (1964, p. 92) translates the section on fermented tofu: “Hardened tofu is difficult to digest, and is not good for children, old people, or patients. Sufu [fermented tofu], which is prepared from tofu and gets better the longer it is aged, is very good for patients.” Wai concludes: “Therefore, we may presume that soybean cheese [fermented tofu] was sold long before the Ch’ing [Qing] dynasty.” He then describes the ancient process. The cubes of tofu are inoculated with the fungus by arranging them on a large bamboo tray and covering them with rice straw (on which the fungus grows wild).

965. Williams, S. Wells. 1861. Notices of Chinese agriculture and its principal products. *Report of the Commissioner of*

Patents, Agriculture p. 467-76. For the year 1860. See p. 474.

• **Summary:** “Agriculture has held a higher place in the estimation of the Chinese, in comparison with other pursuits, than among any nation of which we have definite knowledge... The fabled founder of agriculture, called Shin-nung [Shennong], *i.e.*, the Divine Husbandman, was likewise one of the five sovereigns, who are regarded as the founders of the black-haired race of China; he flourished during the fourth and fifth centuries after the deluge, and is now worshipped as one of the tutelary gods of the Empire. The ceremony of ploughing a field near Peking is performed every spring by the Emperor or his proxy” (p. 467).

Note 1. This is the 2nd earliest English-language document seen (June 2009) that mentions Shennong or the Divine Husbandman. Describing him as “The fabled founder of agriculture,” indicates that he was a legendary / mythical rather than an historical figure.

“A great number of plants are grown in various parts of the country for the oil found in their seeds or nuts, which is consumed in cooking, burning, or in the arts, while the refuse cakes taken from the oil mills are returned to the ground as one of the best manures known. Oil is expressed for these purposes by simple pressure from the ground-nut (*Arachis*) throughout the Southern and Central Provinces, and the nut itself is baked for food.” The Chinese also use rape oil, castor oil and the oil of the Sesamum, the Camellia sesanqua, and the oleifera (the latter two are called tea oil), and the croton *Jatropha curcas*.

“The list of leguminous and cruciferous plants cultivated in China is a long one... An emulgent [filtered or milked out] preparation of flour from the Dolichos bean, mixed with ground gypsum or tumeric [turmeric], and a touch of salt, called bean curd [tofu], accompanies every meal; the same materials, differently prepared, are sent abroad as Soy” (p. 474). Note 2. The author is referring here to the soy bean, tofu, and soy sauce. Address: Author of “The Middle Kingdom”.

966. Lea & Perrins. 1862. Lea & Perrins celebrated Worcestershire Sauce (Ad). *Quebec Mercury (Canada)*. Jan. 2. p. 1.

• **Summary:** “Pronounced by connoisseurs to be the ‘only good sauce’ and applicable to every variety of dish.

“Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. ‘Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.’

“Extensive frauds. L. & P. having discovered that several of the Foreign Markets have been supplied with Spurious Imitations of the ‘Worcestershire Sauce,’ the labels of which closely resemble those of the Genuine Sauce, and in one or more instances the names of L. & P. forged,

they have deemed it their duty to caution the public, and to request purchasers to see that the name of Lea & Perrins are upon the *Wrapper, Label, Stopper, and Bottle*.

“L. & P. further give notice, that they will proceed against any one who may infringe upon their right, either by manufacturing or vending such imitations, and have instructed their correspondents in the various parts of the world, to advise them of such infringements.

“Wholesale and for exportation by the Proprietors Lea & Perrins, Worcester, England; Crosse and Blackwell, and other Oilmen and Merchants, London.

“Quebec, Nov. 9, 1861.

A small illustration shows a bottle of Lea & Perrins’ Worcestershire Sauce.

Note 1. This is the earliest document seen (Feb. 2010) concerning soybean products (Worcestershire sauce, whose main ingredient was soy sauce) in Québec. This document contains the earliest date seen for soybean products in Québec (May 1862); soybeans as such have not yet been reported.

Note 2. This is the earliest document seen (Feb. 2012) in which Lea & Perrins uses the term “will proceed against” to threaten a lawsuit.

Note 3. This ad appears about 20 times in this newspaper from 1862 to 1864.

967. Hassall, Arthur Hill. 1862. Food and its adulterations: Comprising the reports of the Analytical Sanitary Commission of *The Lancet*, for the years 1851 to 1854, inclusive. *North American Review (Cedar Falls, Iowa)* 94(194):1-41. Jan. See p. 31.

• **Summary:** This is a review of this book, published in 1855 by Longmans (London).

Page 31: “The many sauces which are used as condiments, very largely by the English and to some extent in this country, are also adulterated mixtures. For instance, treacle and salt formed the basis of 5 samples of India Soy examined.”

Note: This sentence means that all of the five samples examined were adulterated. Address: M.D., Chief Analyst of the Commission.

968. Simon, Eugène. 1862. Sur un envoi d’animaux et de végétaux du Japon [On a shipment of animals and vegetables from Japan (Letter to the editor)]. *Bulletin de la Société d’Acclimatation* 9:689-93. Aug. See p. 691-93. [Fre]

• **Summary:** This is a long letter addressed to the Secretary General of the Society for Acclimatization. A section titled “*Sur la fabrication du soja* [On the production of soy sauce]” (p. 691-93) states: Soja, or soy sauce, is a condiment which, in Japan, is consumed in considerable quantities. Some years ago it enjoyed marked success in America, England, Holland, and in India, where it had first been introduced. Today, the popularity remains only in America.

The exportation is weak from the Indies, where it is replaced by another product, and the trade is nearly null in Europe because of the difficulty of making it cross the hot latitudes of the tropics via the tip of South of Africa.

It is nevertheless an excellent product, which could offer the culinary art a resource to be used in many ways, if one could obtain a quality as good as that in the country from which it comes. Actually, nothing could be easier. All one needs to do is to make it locally [in France]. This is a very important industry in Japan. There are more than 6 factories in the city of Nagasaki, and each occupies an average area of 700 to 800 square meters. In total, they produce 1.2 million kg of soy sauce for consumption.

Two types of grain are necessary to make soy sauce. One is a special type of bean called haricot Soja, or soybeans, of which 15 kg are included under #5 in the shipment I have just made to France. The other is ordinary barley (*orge*, not *ble*, wheat). One makes equal parts of beans and wheat. The beans are cooked in an equal volume of water and the wheat is roasted. Then one combines them in a big tub, into which one pours them little by little, while mixing them as much as possible with the aid of a large wooden spatula (pusher). When it all has the consistency of a rather thick paste, one places it in a wooden mold (koji tray) about 1.5 inches deep, 18 inches long, and 8 inches wide. In arranging this cake or this brick in the mold, one must make the upper surface slightly concave. These cakes are then transported into hermetically sealed chambers (the koji room), where it must ferment on shelves around the walls and in the center of the room. All the walls and the openings, with the exception of two window placed at the height of a man, from which one can watch the fermentation from the outside, must be carefully insulated or padded with straw, fixed in the middle of a lattice of bamboo or other wood.

The fermentation starts at the end of very few hours [no inoculation?] but if the temperature of the chamber is very low, one can stimulate the fermentation by placing a small brazier here. However, one must use the brazier only as a last resort; the effect is to brown the cakes. The fermentation lasts for 7 days, during which time one can enter once or twice into the chamber, in order to assure oneself that all is in good condition. When they are well made, the cakes must have a uniform yellowish gold tint. They are then removed and thrown into a large vat, 6 feet deep and 4.5 feet in diameter. Here one adds a saturated salt solution [*sel a chaux* = calcium oxide] in the proportion of 2 kg of solution to 1 kg of cake. One agitates it and mixes it gradually until the vat is full.

One must then leave the vat alone for at least one year, but when one wants an extra fine soy sauce (*soja*), it must be left for 3 years. Regardless of the time, one removes the mash (*pâte*) from the vat, puts it in a hemp sack, or better yet, one of palm filaments, and carries it to the press. The soja which collects during the first turns of the press is

the best quality. But because of the high price it would be able to demand, one would not find its sale assured. One therefore renounces this quality, except in the two capitals of Edo (Tokyo) and Miyako (Kyoto), where there live a large number of princes and rich people, who can conveniently pay for it.

In general, only two grades of soy sauce are made. The first is made from all the liquid which one is able to extract by the press, and which is then of a good medium quality. The second is obtained by mixing the presscake with salt water and letting it stand for 6 months; this is only sold to the poor. A jar of soja weighing 214.5 kg sells in Japan for 16-17 French francs. The ordinary soja of the first quality is a liquid of thick consistency and dark brown color. It is almost the only sauce for all Japanese dishes, rich or poor. It always accompanies fish. The Europeans in China or Japan, who have used it a lot or a little, add it to beef or to beef bouillon, to which it imparts a most agreeable color and flavor. The number 10 case of various products, which will be a part of my shipment contains 3 bottles of soja of different qualities under the numbers 18, 19, and 20. No. 18 comes from Miyako (Kyoto), but it is possible that the trip may alter it a little.

Note: This is the 2nd earliest French-language document seen (April 2012) that uses the word *soja* to refer to soy sauce. The French used the word *soja* to refer to soy sauce before they used it to refer to the soybean. Address: French consul in China.

969. Lea & Perrins. 1862. Sauce.—Lea and Perrins Worcestershire Sauce (Ad). *Quebec Mercury (Canada)*. Nov. 25. p. 2.

• **Summary:** “Pronounced by connoisseurs to be the ‘only good sauce’ and applicable to every variety of dish.

“Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. ‘Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.’

“Caution. Lea & Perrins beg to caution the public against spurious imitations of their celebrated Worcestershire Sauce.

L. & P. have discovered that several of the Foreign Markets have been supplied with Spurious Imitations, the labels closely resembling those of the genuine Sauce, and in one or more instances the names of L. & P. *forged*.

“L. & P. will proceed against any one who may manufacture or vend such imitations, and have instructed their correspondents in the various parts of the world to advise them of any infringement of their rights.

“Ask for Lea and Perrins’ Sauce. Sold Wholesale and for Export by the Proprietors, Worcester; Messrs. Crosse and Blackwell; Messrs. Barclay and Sons, London; &c. and by Grocers and Oilmen universally.

“Quebec, Nov. 18, 1862.

A small illustration shows a bottle of Lea & Perrins' Worcestershire Sauce.

970. Chalmers, John. 1862. An English and Cantonese pocket-dictionary, for the use of those who wish to learn the spoken language of Canton Province. 2nd ed. Hongkong: Printed at the London Missionary Society's Press. vi + 163 p. See p. 134. 19 cm. [Eng; Chi]

• **Summary:** Under “Soy” (noun, p. 134) are the Chinese characters and the Cantonese term for soy sauce, *shi-yau*, with tones shown.

Note: *Shi-yau* is, more precisely, “fermented black soybean sauce.” Address: M.A.

971. Lear, Edward. 1862. A book of nonsense. New York, NY: Frederick A. Stokes. 112 p. See p. 64. Illust. 15 cm.

• **Summary:** The following limerick appears on page 64 of this original 1862 edition:

“There was an Old Person of Troy,
Whose drink was warm brandy and soy;
Which he took with a spoon,
By the light of the moon,
In sight of the city of Troy.”

Above the poem is an illustration (line drawing) of a big man seated on a little chair placing a spoon to his lips. In front of him, on the ground, are a bottle of brandy and a smaller bottle of soy [sauce]. In the background is the skyline of a city with a half moon overhead.

Edward Lear (1812-1888) was an English painter and nonsense poet. Lines 3 and 4 are indented from the others. A 1912 edition was edited by Lady Strachey. Address: London.

972. Rigg, Jonathan. 1862. A dictionary of the Sunda language of Java. Batavia, Java: Lange & Co. xvi + 537 + v p. 27 cm. Constituting: *Verhandeligen van het Bataviaasch Genootschap van Kunsten en Wetenschappen*. Vol. 29.

• **Summary:** The term “Sunda Isles” once referred to the Malay Archipelago; Java, Sumatra, Borneo, and Sulawesi were called the “Greater Sunda Islands.” This Sundanese-English dictionary includes the following soy-related words:

“Kachang, a pea, a bean, pulse. *Dolichos* and *Phaseolus* of which the species are very numerous” (p. 182).

“Kadalé, a variety of pulse frequently planted” (p. 183).

Kéchap, Catchup, a dark coloured sauce prepared by the Chinese” (p. 212).

Also mentions: “Kachang tanéuh, ground nut, *Arachis hypogæa*, so called from the seed vessels returning into the earth, and becoming a sort of granulous root” (p. 183). Ragi, which acts as a ferment in preparing Tapai (p. 391). “Tahi-minyak, oil-cake. The refuse of making oil from the ground-nut or kacang taneuh. This oil cake is much used as a valuable manure, especially for sugar cane” (p. 473). “Tapai, a preparation of boiled ketan rice, in which Ragi has been mixed and set to ferment for a couple of days. Tapai is given as a treat at all native entertainments” (p. 483). About 150 different words for different kinds of rice are also given. Address: Member of the Batavian Society of Arts and Sciences [Jakarta, Dutch East Indies].

973. Ripley, George; Dana, Charles A. eds. 1862. The new American cyclopaedia: A popular dictionary of general knowledge. 16 vols. New York, NY: D. Appleton and Company. 850 p. See Vol. 14, p. 800. 26 cm.

• **Summary:** The entry on p. 800 for “Soy” states: (Japanese, *sooja*), a sauce prepared in Japan and China from the small beans of the plant called by McCulloch *dolichos soja*, and by others *soja hispida* or *soja Japonica*. The beans are boiled nearly to dryness, then put in wide-mouthed jars with water and molasses or brown sugar, and exposed to the sun and air. Every day they are well stirred; and when the fermentation is completed the mixture is strained, salted, and boiled, and skimmed until clarified. Japanese soy is considered the best; but there are many deceptions in the article. It is recognized by a peculiar flavor, neither too salt nor sweet; a thick consistence and clear brown color; and particularly by its leaving, when shaken in a glass, a coat of bright yellowish brown upon the sides. It is imported into Europe and the United States to be used with fish.

974. The practical family cookery book: Containing all necessary directions for preparing stylish, medium, and plain dinners. With a separate treatise on preserving, pickling and confectionery, the method of preparing pastry, cakes, and jellies, and the art of breadmaking. 1862. London: Ward and Lock. 64 p. + 60 p. No index.

• **Summary:** In Part I of this book: Hare soup (“Strain the soup and season it with a little soy [sauce], Cayenne pepper, Harvey’s sauce, and a glass of wine, &c.,” p. 5).

In the chapter on “Fish” we read (p. 10): “Melted butter, nicely made, is almost invariably served up with fish; and for sauce, essence of anchovy, soy, catsup, or Chili vinegar.”

“Fish-liver sauce: Boil the liver of the fish you are cooking, chop it fine or pound it, and mix it with melted butter. A little catsup, cayenne, or soy [sauce] may be added

to it" (p. 57).

Harvey's sauce is mentioned on pages 3 and 5. Reading sauce is mentioned on page 3.

Tomato sauce is mentioned on pages 29, 39, 42, and 54.

Catsup is mentioned on many pages including p. 3-5, 10, 13, 15-17, 23, 31, 37-39, 40-42, 44-45, 51, 55-58.

In Part II of this book, in the section on "Sauces" (p. 56): "Piquant sauce is made with two ounces of Cayenne pepper, a pint of pickling vinegar, an ounce of soy [sauce], and the same of port wine."

Page 57: "Sauce aristocratique... To every pint, when cold, add a pint of the best pickling vinegar, and three ounces of soy.

"Quin Sauce is the same, omitting the soy [sauce].

"Harvey's Sauce is made by adding to six ounces of the Quin Sauce two ounces of soy, two drachms of Cayenne, and a quarter of a pint of vinegar.

"Sauce au roy, -Take a quart of the best pickling vinegar, three table spoonsful of soy, and as much walnut catsup,... put al these ingredients into a bottle, and keep them together for a month before using shaking them frequently.

"Isle of Wight sauce is made by mixing quantities of soy, port wine, brandy, and mushroom catsup.

"When catsup is added to sauces. it should always, if possible, be home made, or it can seldom be depended upon.

"Mushroom catsup.-Mushrooms of a large growth, much expanded, and the gills dark-coloured, are generally used for the purpose." A detailed home-made recipe is given, followed by one for "Walnut catsup," whose main ingredient is the juice of unripe walnuts.

975. Messer (Wm.) & Co. 1863. Classified ad: Messer's famed Newhaven Fish Sauce. *Scotsman (Edinburgh)*. Nov. 14. p. 5.

• **Summary:** "The Famed Sauce for all kinds of Fish; and will be found more agreeable to most palates than Essence of Anchovies, Mushroom Catchup, Indian Soy [sauce], or so-called Fish Condiments." Address: Wholesale and Export Pickle, Sauce, and Unfermented Wine Manufacturers, 19 South Niddy Street, Edinburgh.

976. Edmundson (J.) and Co. 1863. J. Edmondson and Co. call attention to the under-mentioned articles, as particularly appropriate for Christmas presents (Ad). *Irish Times and Daily Advertiser (Dublin)*. Dec. 24. p. 1.

• **Summary:** "Tea kettles and tea urns to match, electro silver butter coolers, dish covers, corner dishes, cruet stands, sauce and soy frames, cake baskets,..." Address: 33, 34, 35, 36 Capel Street.

977. Stanton's. 1863. Classified ad: Holiday gifts... *Chicago Daily Tribune*. Dec. 24. p. 4, col. 2.

• **Summary:** "All the sauces: Harvey, Reading, Beef Steak, Worcestershire, Essence of Shrimps, Anchovy and Lobster,

John Bull, Soho, Chutney, India Soy [sauce], Sultana, Cumberland, Catsups."

Note: This ad also appeared in the Dec. 31 (p. 4) issue of this newspaper. Address: 135 Lake Street.

978. Beasley, Henry. 1863. The druggist's general receipt book: Comprising a copious veterinary formulary; numerous recipes in patent and proprietary medicines... Fourth American from the fifth London edition. Philadelphia, Pennsylvania: Lindsay and Blakiston. xiii + 14-466 p. Index.

• **Summary:** In the chapter on "Beverages, dietetic articles, and condiments" is a section titled "Culinary vinegars, sauces, &c." (p. 277-79). Soy [sauce] is used in the recipes for "Camp vinegar" (2 recipes), "Quin sauce," "Epicurean sauce" ("Indian soy 2 oz."), and "Sauce superlative" (Dr. Kitchiner's; ¼ pint soy is optional).

The last recipe in the section is: "Soy. Boil a gallon of the seeds of *Dolichos soja* till soft, add a gallon of bruised wheat, keep them in a warm place for 24 hours; add a gallon of salt, and 2 gallons of water, and after keeping them bunged up in a stone jar for 2 or 3 months, press out the liquor."

In this same section are recipes from "Mushroom catsup" and "Walnut catsup." Address: Author.

979. Simmonds, Peter Lund. 1863. The dictionary of trade products, commercial, manufacturing, and technical terms: with a definition of the moneys, weights, and measures of all countries, reduced to the British standard. New edition, revised and enlarged. London: Routledge, Warne & Routledge. 463 p. 17 cm.

• **Summary:** Two entries are related to the soybean: "Mico, mijo [miso], a vegetable butter or solid oil, made from *Soja hispida*, in Japan."

"Soy, a sauce or flavoring originally made in the East; and said to be produced from a species of *Dolichos* bean, *Soja hispida*."

Peter L. Simmonds lived 1814-1897. Address: F.R.G.S., F.S.S., author.

980. Waterston, William. 1863. A cyclopædia of commerce, mercantile law, finance, commercial geography, and navigation. New ed., corrected and improved, with a supplement by P.L. Simmonds. London: Henry G. Bohn. iv + 672 + 328 p. 23 cm.

• **Summary:** The section titled "Soy" (p. 627) is identical to that in the 1843 and 1847 editions. Also discusses hemp and hemp seed oil (p. 362-64).

Note: The book was revised by adding 328 pages of new information onto the back of the previous edition. Address: Mercantile agent and accountant [England].

981. Williams, Samuel Wells. 1863. The Chinese commercial guide: Containing treaties, tariffs, regulations, tables, etc...

With an appendix of sailing directions. 5th ed. Hongkong: A. Shortrede & Co. xvi + 387 + 266 p. Index. 21 cm. Facsimile edition reprinted in 1966 by Ch'eng-Wen Publishing Co., Taipei, Taiwan.

• **Summary:** In the section titled “Description of articles of export” [from China, alphabetical], Chinese characters accompany every entry. On p. 111 is an entry for “Beans and peas” (*tau*) incl. bean cake (*tau ping* or *tau shih* = “bean stones”). “The Chinese cultivate legumes to a greater extent, perhaps, than any other nation.”

The manufacture of bean jam [jiang] and bean curd cakes [tofu] for food from the flour employs many people. The cakes used for manure are made by crushing the ripe peas [sic, beans] and boiling the grits soft; the mass is then pressed into cakes in iron hoops, and made solid by means of wedges driven down by heavy mallets. Peas and bean cakes are exported from Yingsz’ [Ying-k’ou, Yingkou?] and Tientzin to Amoy and Swatau [Swatow, Shantou, in Guangdong province]; they comprise one-fourth of all the produce shipped from Tientsin in 1861; and there is little else sent from Yingsz’. In 1859, about a million piculs [1 picul = 133.33 lb] of the cake were reshipped to the south of China from Shanghai alone, chiefly for the consumption of sugar growers.”

In the same section is an entry (p. 139) for: “Soy, *shi yú* [*shiyu* = fermented black soybean sauce], and *tsiáng yú* [*jiangyou* = soy sauce], is a condiment made from the *Dolichos* bean, which grows in China and Japan; our name is derived from the Japanese *siyau* [*shoyu*]. To make it, the beans are slowly boiled soft, then an equal quantity of wheat or barley flour is added; after this has thoroughly fermented and become mouldy, the beans are washed, and put into jars with their weight in salt, adding some aromatics, and three times as much boiling water as the beans were at first. The whole compound is now left for a month or more, exposed to the sun, and then pressed and strained. Good soy has an agreeable taste, and if shaken in a tumbler, lines the vessel with a lively yellowish-brown froth; its color in the dish is nearly black. There are many qualities of it, and when well made all improve by age. Japan soy is considered superior to Chinese, but both are of different qualities, and are probably made of various materials, some of which may be base enough. It is most commonly sent to England, India, and Europe, to form the basis of other sauces and condiments. It is worth from \$4 to \$8 per picul and goes chiefly from Canton.”

On p. 129 is a section on “Oil” (*yú*), incl. [soy] bean oil (*tau yú*), wood oil (*tung*), cotton-seed oil, sesamum oil, olive oil, ground-nut oil, cabbage or rape oil, fish oil, etc.

In the same section (p. 149) is an entry for “Vermicelli (Chinese characters) *fun sz*, i.e. flour threads. This article, sometimes called *loksoy* [*lock soy*], manufactured from both rice and wheaten flour, is extensively used among the natives in soups. It is everyway inferior to the European.”

Note 1. This is the earliest English-language document seen (Sept. 2006) that uses the term “bean oil” to refer to soybean oil, or that mentions *tau-yú* as the Chinese (Cantonese) name for soybean oil.

Note 2. This is the earliest English-language document seen (Sept. 2006) that uses the term “*Dolichos* bean” to refer to the soybean. It is also the earliest English-language document seen (Sept. 2006) that repeatedly uses the word “bean” (not preceded by the word “soy” or “soya”) to refer to the soybean.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the term “bean-cakes” to refer to tofu.

Note 4. This is the earliest English-language document seen (May 2005) that uses the “grits” to refer to coarsely ground soybean flour or pieces.

Note 5. This is the earliest English-language document seen (Sept. 2003) that contains the term “cotton-seed” or term “cotton-seed oil” (each spelled with a hyphen).

Note 6. This is the earliest English-language document seen (Oct. 2006) that that uses the term “crushing” (or “crush,” “crushes,” “crushed” or “crushings”) in connection with soybeans to refer to the process of pressing the beans to yield oil and cake.

This section also discusses (alphabetically): Almonds (but not almond oil), ground-nuts (*hwa sang* characters, ground-nut cake characters *hwa sang ping*; the “oil is the chief article of export”), gypsum (*shih kau*, used especially in making bean-cakes and curd [tofu], sometimes called bean-macaroni), manure cakes or poudrette (*kang sha*, made from night soil mixed with earth for exportation. “The refuse of ground-nuts, sesamum, rape-seed, and other oleaceous seeds, is prepared for manure and for feeding swine and sheep, and sent from one part of the country to another”), salt, seaweed, sesamum seed, and silk.

A table titled “Rates of freight in steamers to Canton” states (p. 228): “Soy, per tub of 1 picul—\$0.75.”

In the section on “Foreign commerce with Japan” we read (p. 254): “Camphor, sulphur, porcelain, copper, nut-galls, vegetable wax, cassia, soy, and verdigris, have been furnished at rates and quantities sufficient to export to Europe.”

Other sections discuss Chinese, Japanese, and British weights and measures, numerals, coins and currency.

Samuel Wells Williams lived 1812-1884. Address: LL.D., Hongkong.

982. Lea and Perrins. 1864. Sauce.—Lea and Perrins’ Worcestershire Sauce. Pronounced by connoisseurs “The only good sauce.”... (Ad). *Observer (London)*. Jan. 24. p. 8.
• **Summary:** “None genuine without name on wrapper, label, bottle, and stopper. Sold by Crosse and Blackwell. Barclay and Sons, and grocers and oilmen universally.” Address: Worcester, England.

983. *Times (London)*. 1864. Classified ad: Napoleon, by the Grace of God and the will of the nation... July 30. p. 1, col. 1.
• Summary: This article describes a lawsuit in France “Between Crosse and Blackwell, manufacturers of sauces and pickles, residing at No. 21, Soho-square, London, county of Middlesex (England)...And William Knight, provision dealer, residing at Boulogne-sur-Mer, defendant,...”

“Considering that it is an established fact” that in Jan. 1864: “The plaintiffs have caused to be seized at Knights divers pickles prepared with vinegar and mustard contained in Jars, labelled Crosse and Blackwell, and bearing the designation of Imperial Mixed Pickle, Girkins, India Pickle, Piccallilli [Piccalilli], Essence of Anchovies; Considering that these jars, with their labels and contents, constitute, on the part of Knight, spurious imitations of the products of the plaintiffs, of which they declare having deposited specimens, with their trade marks, at the Registrars of the Tribunal of Commerce of the Seine, on the 12th of May, 1863, which is not disputed.”

The plaintiffs are asking for damages of 600 French francs. “Considering that Crosse and Blackwell declare to release from seizure certain products labelled Lea and Perrins;-”

The plaintiffs apparently won the case, but appear to have been awarded much less money than they asked for.

984. *Argus (The) (Melbourne, Victoria, Australia)*. 1864. D’Artagnan, for Sydney. Aug. 8. p. 4.

• Summary: “73 bags rice, 10 boxes tea,... 3 boxes opium, 24 boxes 20 baskets ginger, 100 jars soy [sauce],... 49 baskets pickles, 5 boxes bean sticks [dried yuba sticks],...”

Note 1. These Chinese foods were probably imported to Australia for the Chinese who had joined the Victoria gold rush, which lasted until the late 1860s.

Note 2. This is the earliest English-language document seen (May 2012) that uses the word “beans sticks” (two words) to refer to what are probably dried yuba sticks.

985. Cre-Fydd. 1864. Cre-Fydd’s family fare: The young housewife’s daily assistant, on all matters relating to cookery and housekeeping... New ed., revised. London: Simpkin, Marshall, and Co. clx + 340 p. Index.

• Summary: The author is a woman. The following recipes call for soy [sauce]: Mock turtle soup (p. 6-7). Giblet soup (p. 9). Raviuoli soup [ravioli] (p. 10). Ox-tail soup (p. 12). Ox-cheek soup (à la mode, p. 13). Sheep’s head soup (p. 13-14). Gravy (p. 18; “Note.—If mushrooms are not to be had, substitute one tablespoonful of ketchup, to be put in with the soy”). Braised salmon (p. 20-21). Sauce supreme (p. 29). Baked pike (p. 49). Loin of mutton stuffed, and served with rich gravy (p. 59). Loin of mutton stewed with pickles (p. 59-60). Lamb’s head and pluck (p. 77). Minced beef with Italian paste (p. 82). Stewed brisket of beef with French beans (p.

83). Brisket of beef, stewed with pickles (p. 83). Stewed calf’s liver (p. 110). Roast fowl, with gravy and bread sauce (p. 127-28). Braised fowl and white sauce, with braised beef and chestnuts (p. 132-33; “Note.—If you have no Cre-fydd sauce, use instead a tablespoon of port wine, a teaspoonful of soy, a teaspoonful of brand and a saltspoonful of chutney). Roast gosling, stuffed (p. 138). Braised duck, with turnips (p. 139). Stewed pigeons (p. 142). Braised pheasant and beef, with chestnuts (p. 145). Roast partridges (p. 147). Roast hare (p. 150). Haricot of mutton (p. 259-60). Piquante sauce (To be made in August, p. 283). Superlative mixture (For gravies, stews, &c, p. 287). Store closets, stores, etc. (p. 321-22; “Every good housekeeper will have her store-closets scrumptiously clean, and stocked in moderation with everything likely to be required.” Incl. soy, Harvey-sauce, mushroom and walnut ketchups).

Also called for are: Harvey-sauce (11 times). Mushroom ketchup (28 times). Walnut ketchup (3 times).

The following are not mentioned: Worcestershire sauce. Worcester sauce. Address: Great Britain.

986. Oppelt, Gustave Louis. 1864. *Traité général théorique et pratique de comptabilité: Commerciale, industrielle et administrative* [General treatise, theoretical and practical, on compatability: Commercial, industrial and administrative]. Paris: Eugène Lacroix. vi + 367 p. 25 cm. [Fre]

• Summary: A long table titled “Revision of the Belgian tariff duties” (p. 236+) contains three columns. For the soy entry (p. 237) these are: (Col. 1, No. 17). Designation of merchandise: Grains / seeds not specifically subject to other tariffs. (2) Entry duty / tariff: Free (no duty or tariff). (3) Assimilations (*Assimilations*). These are assimilated into spices (*épiceries*): Cardamom, cumin, saffron, soy [sauce] (*le soja*), and vanilla.

In short, soy sauce may be imported into Belgium duty-free. Address: Prof. of commercial sciences.

987. Sanderson, J.M. 1864. *The complete cook. Plain and practical directions for cooking and housekeeping; with upwards of seven hundred receipts:...* Philadelphia, Pennsylvania: J.B. Lippincott. 196 p. Index. 19 cm.

• Summary: The recipes are numbered sequentially. “Soy” [sauce] is mentioned as an ingredient in the following recipes: 112. Sauce for boiled carp, or boiled turkey (“and as it boils up, add a large spoonful of Indian soy: if that does not give it a fine colour, put a little more,” p. 54).

“456. Camp vinegar.—Take four table-spoonfuls of soy, a quarter of an ounce of cayenne pepper. six anchovies, bruised and chopped, walnut pickle a quarter of a pint, a clove of garlic shred fine; steep the whole for a month in a quart of the best vinegar, shake it four or five times a week, strain it through a tamis [strainer], and put it in half-pint bottles, close corked and sealed, or dipped in bottle cement” (p. 125).

Note: Colouring or browning: 322... “dilute by degrees

with water, till it is of the thickness of soy,” p. 95. Soy is mentioned for comparison, but not used as an ingredient in this recipe (322).

The section titled “Catsups” (p. 125-27) begins: “These rank high, and deservedly so, amongst the list of flavourings, particularly mushroom catsup. Includes: Walnut catsup. Oyster catsup. Cockle and muscle catsup. Mushroom catsup. Mushroom catsup without spice. Mushroom powder.

Note: James Sanderson was at one time Chef at the Franklin House in Philadelphia. Most of his recipes were copied, completely or heavily, from well-known English works (MSU introduction). Address: Philadelphia.

988. Richardson. 1865. English mutton and soles for dinner on Monday (Ad). *New York Times*. July 30. p. 5.

• **Summary:** “For sale—Crosse & Blackwell’s pickles. Lea & Perrin’s Worcestershire sauce, Scotch oatmeal, mushroom ketchup, capers, &c.” Address: No. 100 William-st., near John [New York City].

989. Brennwald, C. 1865. Rapport général sur la partie commerciale de la Mission suisse au Japon [General report on the commercial section of the Swiss mission to Japan]. Berne, Switzerland: Printed by J.A. Weingart. 155 p. See p. 100-01, 103. [Fre]

• **Summary:** The section on Japanese exports mentions miso and soy sauce. Address: Counselor and Secretary of the Legation [to Japan].

990. Graham (Messrs. D.) and Co. 1866. 600 packages of groceries, oil-men’s stores, wines and spirits,... (Ad). *Daily Southern Cross (Auckland, New Zealand)*. July 28. p. 2.

• **Summary:** “... 3 cases Mushroom Catsup, 2 cases Indian Soy [sauce], 1 case French Olives,...” Address: Vulcan-lane.

991. Phillips and Company, Ltd. 1866. Classified ad: Provisions and stores, for town or districts, of guaranteed and quality. *Bombay Times and Journal of Commerce (British India)*. Aug. 25. p. 7.

• **Summary:** In the section on “Sauces—Anchovy Essence, Harvey’s Sauce, Mushroom and Walnut Catsups, India Soy,... Worcestershire, Lea and Perrins, Worcestershire, Phillip’s, pint, Yorkshire relish.”

Note: A new brand of Worcestershire sauce (Phillip’s) is now being advertised and sold by Phillips & Company, Ltd. in Bombay—for significantly less than the price of Lea and Perrins’ sauce. This is the earliest document seen (April 2012) that mentions a brand of Worcestershire sauce made by a company other than Lea and Perrins. Address: Bombay, New Oriental Bank Buildings, and Poona.

992. *Times (London)*. 1866. Money-market & city intelligence. Aug. 27. p. 6, col. 4.

• **Summary:** “The general sense of what is due alike

to the public and the interests of commerce causes the Trade Marks’ Act to be enforced in nearly all places with wholesome severity. According to the recent advices from India, the police in June last entered the premises of a printer in Calcutta and seized a large quantity of forged labels of several English manufacturers, among which were those of Allsop and Sons, Lea and Perrins, P. and J. Arnold, Day and Martin, and Crosse and Blackwell. The latter firm immediately commenced a persecution under the Trades’ Marks Acts (India), section 485 of the Penal Code, which resulted in the conviction of the offender, and his being sentenced to two years’ vigorous imprisonment.”

993. Lea and Perrins. 1866. Sauce.—Lea and Perrins’ Worcestershire Sauce (Ad). *Observer (London)*. Oct. 28. p. 8.

• **Summary:** “This delicious condiment, pronounced by connoisseurs ‘the only good sauce,’ is prepared solely by Lea and Perrins. The public are respectfully cautioned against worthless imitations, and should see that Lea and Perrins’ names are on the wrapper, label, bottle, and stopper. Ask for ‘Lea and Perrins’ sauce. Sold wholesale and for export by the proprietors, Worcester: Messrs. Crosse and Blackwell, Messrs. Barclay and Sons, London &c.: and by grocers and oilmen universally.” Address: Worcester, England.

994. Lindley, John; Moore, Thomas. eds. 1866. The treasury of botany: A popular dictionary of the vegetable kingdom; with which is incorporated a glossary of botanical terms. 2 vols. (Parts I and II). London: Longmans, Green, and Co. xx + 1254 p. See Part I. p. 131, 536-37, 747. Part II. p. 1068, 1075. Illust. 17 cm.

• **Summary:** Bean (Part I, p. 131) “Sahuea bean, *Soja hispida*.

Glycine (Part I, p. 536-37) “A small genus of *Leguminosae*, all, excepting one, being slender decumbent [reclining along the ground, but with ascending apex or extremity] or twining herbs, with alternate stalked leaves made up of three to seven leaflets varying much in form, and bearing axillary racemes or fascicles of small yellow or violet pea-flowers. The genus belongs to the tribe *Phaseoleae*, and is most nearly allied to *Teramnus*, from which it is distinguished by its pods being destitute of the hardened hooked style seen in the latter, and by the ten stamens, which are united into a tube, being all, instead of the alternate ones only, anther-bearing. The species are pretty equally distributed through tropical Asia, Africa, and Australia, where a few inhabit extratropical regions.

“The Sooja of the Japanese, *G. Soja*, the only erect species of the genus, a dwarf annual hairy plant, a good deal like the common dwarf kidney or French bean (*Phaseolus vulgaris*), has small violet or yellow flowers, borne in short axillary racemes, and succeeded by oblong two to five-seeded hairy pods.

“The seeds, like kidney beans in form but smaller, are called Miso [sic, error based on Miller 1807] by the Japanese and are made into a sauce which they call Sooja or Soy. The manner of making it is said to be by boiling the beans with equal quantities of barley or wheat, and leaving it for three months to ferment, after which salt and water is added, and the liquid strained. The sauce is used by them in many of their dishes, and they use the beans in soups. The Chinese cook the beans also in various ways, and the plant is cultivated for the sake of them in various parts of India and its Archipelago.

“Mr. Bentham groups the species in three sections, which some regard as genera: *Soja*, with flowers fascicled on the racemes, and falcate pods with depressions but not transverse lines between the seeds; *Johnia*, with flowers similarly arranged, and straight pods with transverse lines between the seeds; and *Leptocyanus*, with solitary flowers on the racemes, and straight pods. The Glycine or *Wistaria* of gardens is now referred to *Millettia*.

Miso (Part II, p. 747). “A fatty substance obtained from *Soja hispida*.

Soja (or *Soya*) *hispida* (Part II, p. 1068) is the only representative of a genus of *Leguminosae* of the tribe *Papilionaceae*, and much cultivated in tropical Asia on account of its beans, which are used for preparing a well-known brown and slightly salt sauce (Soy), used both in Asia and Europe for flavouring certain dishes, especially beef, and supposed to favour digestion. Of late it has been cultivated as an oil-plant. *S. hispida* is an erect hairy herb, with trifoliate leaves, and axillary racemose flowers, which have a five-cleft calyx, a papilionaceous corolla, ten diadelphous stamens, and an oblong pod which contains from two to five ovate compressed seeds. Modern botanists generally refer the plant to *Glycine*: which see.”

Soy (Part II, p. 1075) “A sauce originally prepared in the East, and said to be produced from the beans of *Soja hispida*.

Note 1. This is the earliest document seen (April 2003) in which the soybean is classified under *Papilionaceae*.

Note 2. This is the earliest English-language document seen (April 2003) that uses the term “oil-plant” to describe the soybean.

Also discusses (in alphabetical order): Agar-agar. Alfalfa. Algæ. Almond. Amande de terre (French, *Cyperus esculentus*). Amaranthus. Arachis [peanuts]. Aspergillus. Bean, under-ground kidney = *Arachis hypogaea*. Cannabis. Chenopodium [Common Goosefoot]. Coix [lachryma, Job’s tears]. Cyperus. Earth-nut (*Arachis hypogaea*). Flax. Gingelly oil. Hemp.

Part II: Job’s tears. Legume. Leguminosæ. Linseed. Linum. Lupinus (incl. *Lupinus albus*, *L. luteus*). Nut, bambarra ground (The seed of *Voandzeia subterranea*, p. 795). Nut, earth (*Arachis hypogaea*). Oil (incl. sesamum). Oilcake (“The residuum after expressing the oil of various seeds, especially linseed and rape, which is used for

cattle feeding, and as a manure”). Oil-plant (*Sesamum orientale*). Pindals, pindars. Psophocarpus. Pueraria. Quinoa (*Chenopodium Quinoa*). Sea-girdles (*Laminaria digitata*). Sea-hangers. Sea-wand (*Laminaria digitata*). Seaware. Seaweeds. Seawrack. Seawracks. Sesame. Sesamum. Tetragonolobus.

“Voandzeia. So called from Voandzou, the name given by the natives of Madagascar to the only known representative of this genus of *Leguminosæ*, the *V. subterranea* of botanists, a creeping annual, with long-stalked leaves composed of three leaflets... It is a native of Africa, and is extensively cultivated in many parts of that continent, from Bambarra and the coast of Guinea to Natal [in today’s South Africa], its esculent pods and seeds forming common articles of food among the inhabitants of those regions. Although the plant is not indigenous to the Western Hemisphere, it is commonly found in many parts of South America, such as Brazil and Surinam, whither it has been carried by the negro slaves and has now become naturalised. The pods are sometimes called Bambarra Ground-nuts; in Natal the natives call them Igiuhiuba; while in Brazil they are known by the name of Mandubi d’Angola (showing their African origin), and in Surinam by that of Gobbe.

“Voandzou. The Malagassy name of a genus of *Leguminosae*, called after it *Voandzeia*” (p. 1224).

Note 3. This is the earliest English-language document seen (Nov. 2005) that contains the word “oilcake” (or “oilcakes”). Address: 1. Ph.D., F.R.S., F.L.S., Botanic Garden, Chelsea. Late emeritus Prof. of Botany in University College, London; 2. F.L.S., Curator of the Chelsea Botanic Garden.

995. Blot, Pierre. 1867. Modern and mediæval dinners. *Galaxy (The)* 3(7):717-23. April 1. See p. 722.

• **Summary:** “French cookery was simple and rather coarse until the sixteenth century, when Catherine de Medici, wife of Henry II, and niece of Pope Leo X, brought with her Italian cookery, as well as Italian vices, diplomacy, fashions and manners.”

French cookery reached its zenith during the reigns of Louis XV [ruled 1715-1774] and Louis XVI [ruled 1774-1792].

“Alexander Dumas [the father] also has some pretensions and has invented many dishes.” He devised a salad which is described (p. 722); it was seasoned with “a little soy” [sauce].

996. Duncan’s (John) Sons. 1867. Lea & Perrins—Celebrated Worcestershire Sauce (Ad). *Hartford Daily Courant (Connecticut)*. June 11. p. 3.

• **Summary:** “Pronounced by connoisseurs to be the ‘only good Sauce,’ and applicable to every variety of dish.” An illustration shows a bottle of the sauce.

Note: This is the 2nd earliest document seen (Feb. 2012)

that contains an illustration of Lea & Perrins Worcestershire sauce.

997. Hepburn, James C. 1867. A Japanese and English dictionary; with an English and Japanese index. Shanghai, China: American Presbyterian Mission Press. xii + 558 + 132 p. 2nd ed. 1872; Abridged ed. 1873, 1881; 3rd ed. 1886; 4th ed. 1888; 5th 1894; 7th ed. 1903. First edition was reprinted in 1966 and 1983. Index. 24 cm.

• **Summary:** This is Hepburn's earliest Japanese-English dictionary. The words are arranged alphabetically by their romanized spelling. Each word is written in three ways. After the romanized word (main entry), written in uppercase letters with diacritical marks (which we have largely omitted below), the same word is written in katakana, then again in Chinese characters. Finally, one or more definitions are given.

Soy-related words and terms in the 1867 edition:

Amazake: Sweet sake, a kind of fermented rice.

Daidz [Daizu]: A kind of large white bean. Soja hispida.

Go: Beans mashed into paste. *Mame no go*.

Gokoku: The five cereals, wheat, rice, millet, beans, *kibi*.

Hiriodz [Hiriodzu, Hiryozu]: A kind of food [made of tofu fried in oil].

Note 1. This is the earliest English-language document seen (May 2012) that contains the term *Hiriodz* (the modern spelling is *Hiryozu*) which refers to deep-fried tofu treasure balls.

Ireru—*Kono mame was yoku iremash'ta*: these beans are well parched.

Iriru—*Mame wo iriru*: to parch peas [beans].

Kinako ["yellow flour"]: A kind of food made of beans.

Kiradz [Kirazu]: The refuse left in making *tôfu*.

Koji: Malt made by fermenting rice or barley, in the process of making sake, and soy [sauce].

Koji-buta: A shallow box for holding malt.

Mame: Bean, pea. *Mame no ko*: bean flour.

Miso: A kind of sauce made of [soy] beans.

Natto: A kind of food made of [soy] beans.

Nigari: The brine formed by the deliquescence of salt.

Sashi (verb): *Shoyu wo sashi*—To season with soy [sauce].

Sashimi: Raw fish cut in thin slices and eaten with soy.

Sh'taji [Sorted after "Shis," Shitaji]: Soy (used only by women). Syn. Note 2. This is the earliest English-language document seen (April 2012) that uses the word "sh'taji" or shitaji" to refer to soy sauce.

Shoyu: Soy, a kind of sauce made of fermented wheat and beans. This is the earliest English-language document seen (April 2012) that uses the word "shoyu" (spelled correctly like this) to refer to soy sauce.

Tofu: A kind of food made of beans.

Umeboshi (*hakubai*). Dried plums. Ume-dzke [Ume-zuke]: Pickled plums. *Ume ga mada umimasen*: The plums

are not yet ripe.

Yuba [hot water + leaf]: A kind of food made of beans. Yu-dofu: Boiled tofu.

Note 3. This is the earliest English-language document seen (Oct. 2008) that contains the word "yuba."

The English-Japanese part of this dictionary starts after p. 558 and is titled "An index; or, Japanese equivalents for the most common English words." Separately numbered to p. 132, it includes: "Bean, Mame. Barm, Kôji, tane. Pea, saya yendo [saya-endo]. Soy [sauce], Shôyu."

Terms NOT mentioned include Aburaage, Aburage, Atsu-age, Daitokuji natto, Edamame (or Eda mame or Yedamame), Ganmodoki, Hamanatto, Hiya-yakko, Kori-dofu, Koya-dofu, Nama-age, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 4. The author apparently did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans.

Note 5. This is the second earliest English-language document seen (June 1999) in which Chinese characters are used to write the name of the soybean or related products.

Note 6. This is the earliest English-language document seen that contains the word "tofu," or the word "natto" (Jan. 2012), or the word "koji" (March 2001).

Note 7. This is the earliest English-language document seen (Feb. 2004) that refers to amazake, which it calls "Amazake."

Note 8. This is the earliest English-language document seen (May 2012) that uses the term "Shoyu" (or "shoyu") to refer to soy sauce.

Note 9. This is the earliest English-language document seen (Dec. 2005) that uses the word "Kinako" to refer to roasted soy flour.

Note 10. This is the earliest English-language document seen (Dec. 2008) that uses the word "Kiradzu" to refer to what is now called "okara," or "soy pulp." Address: Shanghai, China.

998. Knight, Charles. ed. 1867. The English cyclopædia—Natural History. Vol. IV: Soja. London: Bradbury, Evans, & Co. 1291 p. See p. 843.

• **Summary:** "Soja, a genus of Plants belonging to the natural order *Leguminosæ*. *Soja hispida* (Moench), *S. Japonica* (Savi), the *Dolichos Soja* (Linn.), is a native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to 'form a favourite dish, called "ten-hu," or "tau-hu" [tofu], which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome' [Don 1832]. The Japanese call the seeds 'Miso' [sic] and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed 'Sooja,' which has been corrupted into 'Soy.' Soy is only

sparingly used as a sauce in this country. It has the character of being a useful stomachic, but not more so than any of the other condiments when used in moderation.”

Note: The entry for “Soy” says to see “Soja.”

Note: Much of the information in this entry for Soja comes from the *Penny Cyclopaedia of the Society for the Diffusion of Useful Knowledge* (London, 1841. See Soja hispida).

Also in this volume: Sesamum (p. 758). Voandzeia (p. 1224).

999. Simmonds, Peter Lund. 1867. The commercial dictionary of trade products, manufacturing and technical terms:... A new edition, revised and enlarged. London and New York: George Routledge and Sons. viii + 463 p. See p. 353. 17 cm.

• **Summary:** The entry for “Soy” is two words longer (and more accurate) than that in the 1858 edition. “Soy, a sauce or flavoring originally made in the East; and said to be produced from a species of *Dolichos* bean, *Soja hispida*.”

Otherwise, the contents and page layout of this book seem to be identical to those of the 1858 edition except that a long supplement has been added to the rear, p. 423-63.

Soy-related entries in the supplement: “Midsu [sic, miso], an oily pulp made from beans in Japan, with which food is dressed instead of butter.” “Miso, a substance used in Japan as butter by boiling the soy bean (*Soja hispida*), and mixing it with rice, salt, etc.

Other interesting entries in the supplement: Agar-agar, chufas, hasheesh (Arabic word for hemp, hay; also an intoxicating drug made of hemp, which is sold in the form of sweetmeats, paste, and tobacco), mindoubi (a name in Brazil for the ground nut, *Arachis hypogaea*). Peter L. Simmonds lived 1814-1897. Address: F.R.G.S., F.S.S., author, 8 Winchester St., Pimlico [southwest London, England].

1000. *Brisbane Courier* (Queensland, Australia). 1868. Sauces. Jan. 11. p. 7.

• **Summary:** “India Soy [sauce] is difficult to purchase genuine; it should be made from an Indian plant called *Dolichos soja*, or soya, but treacle and salt are the basis of the Soy ordinarily sold. ‘Many persons,’ observes Mr. Dobell, in his *Travels in China*, ‘have thought that gravy was used in preparing soy, but this appears not to be the case, but the composition being entirely a vegetable one, and made from beans. Japanese soy is much esteemed in China, probably it is made with a particular bean? In China the consumption of soy is enormous; neither rich nor poor can dine, breakfast, or sup without soy; it is the sauce for all sorts of food, and may be described as indispensable at a Chinese repast.’”

Note: This is the earliest of 2 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “Japanese soy.”

1001. Sakuma, Yonekichi. 1868. Nikki [Diary]. April 25. Unpublished. [Jap]*

• **Summary:** In the first year of Meiji (1868) the author was a passenger on the ship “Scioto” (*Saioto-go*), headed for Hawaii with the first group of Japanese immigrants. He noted in his diary of April 25: “Yokohama departure. Provisions of rice, miso, shoyu.”

Note: This is the earliest document seen (April 2011) concerning soybean products (miso and shoyu) in Hawaii. This document contains the earliest date seen for soybean products in Hawaii (April or May 1868); soybeans as such had not yet been reported by that date.

Letter from Mr. Nihei. 1988. Oct. 23. Yonekichi SAKUMA, born on 11 July 1840, came from Chiba prefecture. He went to Hawaii as an immigrant in 1868, and died in 1927 at age 88.

Letter from Paul J. O’Pecko, Reference Librarian, Mystic Seaport Museum, Mystic, Connecticut. 1990. July 3. There were at least two three-masted sailing vessels named Scioto sailing in 1868, but there is no indication that any vessel named Scioto was ever owned by the Pacific Mail Steamship Company. It is possible they may have chartered it.

1002. *Farmers’ Cabinet* (Amherst, New Hampshire). 1868. Classified ads. 66(49):3. June 25.

• **Summary:** “Worcestershire sauce, pepper sauce, catsup, mustard, cayenne pepper, &c. at the Old Mill Store, Milford.” This ad also appeared in the October 15 (1868, p. 3) issue of this newspaper.

Note: Milford is a town in Hillsborough County, southern New Hampshire. Address: Milford.

1003. Chambers’s encyclopædia: A dictionary of universal knowledge for the people: *Dolichos*. 1868. London: W. and R. Chambers. See vol. III, p. 619.

• **Summary:** “*Dolichos*, a genus of plants of the natural order Leguminosæ [Leguminosae], sub-order Papilionaceæ [Papilionaceae], closely allied to *Phaseolus* (see Kidney Bean), and chiefly distinguished by the extension of the base of the standard so as to embrace the wings of the corolla at their base. The genus includes a considerable number of species,...; *D. Soya* or *Soja hispida* (the Soy Bean); *D. Catiang*, and *D. uniflorus* (Horse Gram), natives of India; *D. sphaerospermus* (Calavana or Black-eyed Pea), a native of the West Indies.”

“The well-known Chinese sauce or ketchup called Soy (q.v.) is made from the Soy Bean.”

Note: This entry appears to be saying that “ketchup” is the same as Soy [sauce].

1004. Chambers’s encyclopædia: A dictionary of universal knowledge for the people: Soy. 1868. London: W. and R.

Chambers. See vol. IX, p. 10.

• **Summary:** “Soy is a thick and piquant sauce, made from the seeds of the Soy Bean (*Soja hispida*), a plant of the natural order *Leguminosæ*, suborder *Papilionaceæ*, so nearly allied to the genus *Dolichos* (q.v.) as to be often included in it. It is a native of China, Japan, and the Moluccas, and is much cultivated in China and Japan. It is also common in India, although, probably, not a native of that country. The seeds resemble those of the Kidney Bean, and are used in the same way. The Japanese prepare from them a substance called *Miso*, which they use as butter.

“Soy is made by mixing the beans softened by boiling with an equal quantity of wheat or barley roughly ground. The mixture is covered up, and kept for 24 hours in a warm place, to ferment. The mass is then put into a pot, and covered with salt, the salt used being in quantity about equal to each of the other ingredients. Water is poured over it; and it is stirred, at least once a day, for two months, after which the liquor is poured off and squeezed from the mass, filtered, and preserved in wooden vessels. By long keeping, it becomes brighter and clearer. A Chinese sauce, called *Kitjap* (Ketchup), is often sold in Britain as soy, but is very inferior to the true soy.”

1005. Saito, Akio. 1868. [Chronology of soybeans in Japan, 1700 to 1868, the last half of the Tokugawa / Edo period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 16. Feb. p. 10-11. [Jap]

• **Summary:** 1707 May—The Tokugawa shogunate government (*bakufu*) passes a law to lower the prices of goods. Shops selling high-priced tofu are punished. But tofu makers argue that although the price of soybeans has dropped, the prices of other ingredients such as nigari and oil have risen.

1709—Kaibara Ekken (1630-1714) writes *Yamato Honso*, in which he discusses the shapes and use of the 1,362 products from Japan, China, and other countries. He notes that among the five crops (*go-koku*), soybeans are the second most widely produced after rice.

1712—Kaempfer, the German physician and naturalist who stayed in Japan during 1691-1692, writes *Nihon-shi* in the Netherlands. In the book he discusses soybeans and includes a very accurate illustration of the soybean. This draws the attention of other European scholars.

1722—Kinzanji miso becomes popular in Edo (today's Tokyo).

1724 Feb.—The Tokugawa shogunate government commands that various goods, such as sake and shoyu [soy sauce], should be lower in price because the price of rice has decreased.

1726—The amount of shoyu imported to Edo from the Osaka-Kyoto area (*kudari shoyu*) is about 132,000 kegs (*taru*). Note: The average keg held 9 shô = 16.2 liters = 4.28 gallons (U.S.). Thus, 132,000 kegs = 564,960 gallons or

2,138,400 liters.

1730—The amount of shoyu imported to Edo from the Osaka-Kyoto area increases to 162,000 kegs.

1739—A French missionary living in China sends some soybean seeds to France for the first time. Attempts are made to grow them at the botanical garden, but the weather is not good and they fail. Later unsuccessful attempts were made to grow soybeans in Germany in 1786 and in England in 1790. There is another theory which says that the soybean went to Europe through Russia.

1748—The cookbook titled *Ryôri Kasen no Soshi* is published. It is the first cookbook which introduces the present form of tempura batter.

1753—The Swedish naturalist Linne (Linnaeus; 1707-1778) gives the soybean its first scientific name.

1770—Sugita Genpaku (lived 1733-1817) discusses the nutritional value of foods and uses the word *eiyo* (meaning “nutrition”) for the first time in Japan.

1782—The book *Tofu Hyakuchin* (One hundred rare and favorite tofu recipes) is written by Ka Hitsujun (his pen name) of Osaka. He introduces about 100 tofu recipes. The next year he publishes a supplementary volume, *Zoku Tofu Hyakuchin*. He divides tofu recipes into five different categories according to their special characteristics, like common, regular, good, very good, and fantastic (*jinjohin*, *tsuhin*, *kahin*, *myohin*, and *zeppin*). In his *jinjohin* category, he includes 36 recipes such as *Kinome Dengaku*, *Kijiyaki*, *Dengaku*, etc.—showing that these were common recipes of the period. Over the next several years, many books with the word “Hitsujin” at the end of the title appear.

1783-1787—The terrible famine of the Tenmei period (*Tenmei no Dai Kikin*) occurs. It is worst in Oou province, where several hundred thousand people die of starvation. Many farm villages are abandoned.

1788—At about this time the word *nukamiso* first appears.

1802—Takizawa Bakin (lived 1767-1848) writes *Kiryo Manroku*, a travel book, and in it he states: “Gion tofu is not as good as the Dengaku of Shinzaki, and Nanzenji tofu is not better than Awayuki in Edo. He criticizes tofu as a famous product from Kyoto (*Kyoto meibutsu tofu*) in his writing.

1804—Takahashi Fumiueemon (or Bunueemon) on the island of Shodoshima starts making shoyu; he starts selling it in 1805.

1810—Choshi Shoyu receives an order from the Tokugawa Bakufu (*Gozen Goyo-rei*).

1818—There are now 10 miso manufacturers in Edo (today's Tokyo). Yomo Hyobei's miso shop in Shin Izumi-cho (presently Ningyo-cho 3-chome, Nihonbashi, Chuo-ku, Tokyo) has a prosperous business. In some funny poems (*Senryu*) this shop is mentioned: “With sake and miso their name is ringing in the four directions” (*“Sake, miso de sono na mo shiho ni hibiku nari”*). And: “This shop is surrounded by nested boxes for food, and these boxes are used for red

miso” (“*Jûbako ni torimakaretaru shiho-ga-mise*”). His red miso and his fine sake made with water from a waterfall (*takisui*) are very popular.

1822–Pounded natto (*tataki natto*), an instant food made of chopped natto, sells for about one-fifth the price of tofu on a weight basis. The restaurant Sasa no Yuki in the Negishi area of Edo, becomes well known for its tofu cuisine.

1832–Shoyu production in Noda reaches 23,000 koku (1 koku = 180 liters or 47.6 gallons), compared with only 17,000 koku in Choshi. Thus Noda passes Choshi in shoyu production.

1839–Shibata Kyuo (1783-1839), a follower of Shingaku, writes *Zokuzoku Kyuo Dowa* in which he pens words that later become famous: “In a place where the cuckoo can sing freely, you have to walk 3 *ri* (1 *ri* = 2.445 miles or 3.924 km) to buy your sake and 2 *ri* to buy your tofu” (*Hototogisu jiyu jizai ni naku sato wa, sakaya e san ri, tofu-ya e ni ri*). Shingaku, founded by Ishida Bangai, is a popular teaching of the time combining Shinto, Buddhism, and Confucianism (*Jugaku*). It emphasizes that “to understand heart/mind is the most important thing.”

1845–Inari-zushi becomes very popular in Edo. It originated around Hiranaga-cho (presently Sadacho 1-chome, Chiyoda-ku, Tokyo). It is made with deep-fried tofu pouches (*abura-agê*) stuffed with rice or okara and sells for 7 *mon* each.

1851–There are now 140 miso manufacturers in Edo. Half of them are in the Hongo area of Tokyo.

1853–Kitagawa Morisada (born 1810) writes *Morisada Manko*, the story of his life during the Edo period. In it he says of tofu: “In the Kyoto-Osaka area it is soft, white, and delicious, but in Edo [today’s Tokyo] it is hard, not white, and not tasty.” Of miso he says: “In the Kyoto-Osaka area many people make their own miso each winter, but in Edo people buy red miso and Inaka miso (from the countryside), and nobody makes their own miso.” Concerning the sale of natto (*natto-uri*) he says: “Cook soybeans, ferment them overnight, then sell them. In the old days, natto was sold only in the winter, but recently it has also come to be sold in the summer.”

1857–Soybean varieties brought back from Japan by the Perry Expedition are distributed to the U.S. Commissioner of Patents.

1858–Eitaro, a Japanese confectionery shop in Nihonbashi, Edo, starts selling Amanatto [sugar-sweetened red beans] made from Kintoki Sasage for the first time. Sasage is a type of cowpea [*Vigna sinensis*].

1864–For the first time shoyu made in the area around Edo (*Kanto shoyu*) is permitted to use the term “highest quality shoyu” *saijo shoyu* to describe the product.

1865–Inflation in Edo. The prices of rice, sake, miso, oil, vegetables, fish, etc. skyrocket. The Tokugawa Shogunate (*Bakufu*) orders people to lower their prices and forbids holding back or buying up goods. Address: Norin Suisansho,

Tokei Johobu, Norin Tokeika Kacho Hosa.

1006. White, William Nathaniel; Van Buren, J.; Camak, J. 1868. Gardening for the south: or, How to grow vegetables and fruits. New York, NY: Orange Judd and Co. 444 p. See p. 238.

• **Summary:** “Japan pea.-(*Soja hispida*). This is an erect-growing, rough-hairy, annual Leguminous plant, with a woody stem, growing some three feet high, branching near the ground, with ternate leaves, resembling those of the Kidney bean. There are three varieties; those with white, red, and yellow seeds.

“They are planted at the same time with Kidney beans in rows 3 feet apart and 2 feet in the row, leaving but one plant in the hill; cultivate as corn. The peas, when ripe, after soaking over night, are prepared for the table like Kidney beans, and are largely used for preparing the soy sauce of Japan and China.” Address: 1. Athens, Georgia.

1007. Lea and Perrins. 1869. Classified ad: Lea and Perrins’ Worcestershire Sauce... *Times (London)*. April 10. p. 2, col. 6.

• **Summary:** “Lea and Perrins’ Worcestershire Sauce, pronounced by connoisseurs to be ‘the only good sauce.’ Sold wholesale by Crosse and Blackwell, and retail by grocers and oilmen universally.” Address: [England].

1008. Jephson, Richard Mounteney; Elmhirst, Edward Pennell. 1869. Our life in Japan. London: Chapman and Hall. xviii + 428 p. Illust. No index. 23 cm. Facsimile edition reprinted in 2002 by Ganesha Publishing (London) and Edition Synapse (Tokyo). Series: Japan in English, Vol. 14.

• **Summary:** This is largely a silly book, that tries to be amusing, but ends up being foolish. It’s about Englishmen riding horseback and hunting in Japan, while taking many opportunities to belittle Japanese culture and religion—although there are some parts of Japanese culture that they appreciate. The authors arrived in Japan on 9 May 1866 after having been in Hong-Kong for a year. At breakfast in Japan, one of them, “suddenly changing his tone to one of reckless indifference,... tell the cook to make some more of that grill, with no end of Cayenne pepper and Worcestershire sauce in it!” (p. 62).

“Extreme cleanliness characterises not only their dwellings, but their food, manner of cooking, serving it, &c. As an instance to show how well assured we became of this, we may mention that on more than one occasion, when returning home late at night, we have partaken of the delicate seaweed soup that is hawked about in the streets of every town, and that without any fear of either the materials of the soup itself, or the cups we drank out of, being less clean than at our own table. When you come to consider that the price of the soup rendered it accessible to the meanest coolie,...” (p. 381). Note: This may well have been miso soup with

wakame.

“They consume little or no meat, except in the form of soups;...” (p. 381).

“The first Japanese dinner we ever went to, caused us more wonderment at the time, and appeared to possess more novelty, than anything we had ever seen before. This was an entertainment given at Nagasaki by some of the chief officers of Prince Satsuma to the British Admiral and his friends” [on 28 July 1866] (p. 382). Every aspect of the 40-course dinner is described in great detail. “The drink was a spirit called *saki*, which is extracted from rice.” (p. 383). It is consumed hot.

The Bill of fare, describing briefly each of the 40 courses, is given; it includes “1. Bitter Green Tea (whipped),” hot *Saki*, seaweed, salted plums, “14. Soup of fish and seaweed,” and “27. Soup of Vermicelli, with ‘Soy’ [probably sauce] and Red Berries.” (p. 385-86). Address: Englishmen.

1009. Martens, Georg Matthias von. 1869. *Die Gartenbohnen. Ihre Verbreitung, Cultur und Benuetzung. Zweite vermehrte Ausgabe* [Garden beans. Their distribution, culture, and utilization. 2nd expanded edition]. Ravensburg, Germany: Druck und Verlag von Eugen Ulmer. 106 p. See p. 103-05. With 12 color plates. 28 cm. [94* ref. Ger]

• **Summary:** The author discusses the soybean under the name *Soja hispida* Moench, gives a botanical description of the species, then and gives a classification of 13 varieties that he had secured from various sources, of which he apparently grew but one. He grew that one by his window in Stuttgart, having obtained it from the village of Daguiga, near the city of Aigun [or Ai-hun, in northeast Heilungkiang province] on the Amur River. He planted the seeds on May 23 and they were ripe by Sept. 24. He describes their area of distribution in East Asia, from the 50th north latitude in Siberia down to the Moluccas near the equator, but notes that their center of cultivation is Japan, where they are made into a type of butter named Miso, and a famous sauce named Soja that stimulates the appetite (*eine Art Butter, Miso genannt, und eine berühmte, den Appetit reizende Sauce, die Soja*,...). He considers these two delicacies fit for gourmets and epicures. The sauce was introduced to Europe by the English. In China, the beans are cooked to a white, thick paste (*Brei*), tofu (*Teu hu*), one of the most popular foods there.

In Europe, with suitable care, soybeans can be made to ripen / mature as far north as 53° north latitude, near Berlin. Thus, during the last continental blockade [first, of the British, by Napoleon, based on his 1806 Berlin Decree and 1807 Milan Decree; then in 1807 the British retaliated with their own sort of blockade], which is still an infamous memory, in the lands that at that time were part of the French empire, the soybean was prized and cultivated for a while as a coffee substitute (*als Kaffeesurrogat*). Later the milk vetch (*Kaffeewicke*; *Astragalus baeticus* L.), the chufa or

earth almond (*Erdmandel*; *Cyperus esculentus* L.), and other coffee substitutes were used, but they have all been long since forgotten—except for chicory [*Cichorium intybus*; the thick roots of this perennial herb are dried, ground, and roasted, then used to flavor or adulterate coffee].

Martens divides the species into 3 subspecies based on the form of the seed, under which the varieties are named according to the color and size of the seed. In this, he creates an entirely new system for classifying and naming soybeans.

I. *Soja elliptica* Martens. Seeds oval. 1. *S. elliptica nigra*. Seeds black and elongated; obtained through his son from Shanghai and Paris. 2. *S. elliptica castanea*. Seeds brown and elongated; obtained from Chefoo (China), Venice (Italy), and Berlin. 3. *S. elliptica virescens*. Seeds greenish yellow and elongated; obtained from Shanghai and Paris. 4. *S. elliptica lutescens*. Seeds yellow; brought by Mr. Schottmueller from Chefoo as “true Chinese oilbeans.”

II. *Soja sphaerica*. Seeds globose/spherical. 5. *S. sphaerica nigra*. Seeds black, large; obtained from Yokohama and Nagasaki, Japan. 6. *S. sphaerica minor*. Seeds black, small; obtained from Japan and Sumatra. 7. *S. sphaerica virescens*. Seeds greenish; obtained through his son from Yokohama as “Ao mame” and from Shanghai. 8. *S. sphaerica lutescens*. (The *Soja pallida* of Roxburgh). Seeds pea-colored to pea-yellow, large; obtained from Dr. Schuebler in Oslo (Christiana), Norway, as “New Japan peas,” under which name they have been recommended and popularized in the United States. 9. *S. sphaerica minima*. Seeds yellow, small; obtained through his son as “Shiro mame” from Yokohama.

III. *Soja compressa*. Seeds compressed. 10. *S. compressa nigra*. Seeds black and flat, the largest of all soybeans; obtained as “Kuro Mame” from Yokohama. 11. *S. compressa parvula*. Seeds black, small; obtained via Schottmueller from Chefoo. 12. *S. compressa virescens*. Seeds greenish; obtained from Chefoo and from Berlin as *Soja ochroleuca* Bouché. 13. *S. compressa zebrina*. Seeds brown banded with black like a zebra; obtained from the Berlin Botanic Garden.

Note 1. This is the earliest document seen (Aug. 2002) which states clearly that soybeans have been (or can be) used as a coffee substitute (*als Kaffeesurrogat*). It is also the earliest German-language document seen (March 2001) that mentions soy coffee.

Note 2. This is the earliest document seen concerning soybeans in Norway. It is not clear whether or not the soybeans were being grown in Norway at this time.

Note 3. This is the earliest German-language document seen (May 2009) that mentions tofu, which it calls *Teu hu*.

Note 4. This is the earliest German-language document seen (April 2012) that uses the term *die Soja* to refer to soy sauce.

Note 4. This is the earliest document seen that (Aug. 1999) that divides the species into 3 subspecies based on the form of the seed, under which the varieties are named

according the color and size of the seed. Martens is the first to use a number of such terms in connection with the soybean, such as “nigra” “castanea,” “virescens,” “lutescens,” “elliptica,” “Soja elliptica,” “Soja pallida,” etc.

Note 5. This is the earliest document seen (Feb. 2007) that uses the word “nigra” to refer to black soybeans.

Note 6. This is the earliest document seen (July 2001) in any language that contains the word “Chefoo,” a port city in Shandong province, presently named Yantai (Wade-Giles: Yen-t'ai), and long associated with soybeans and soybean cake.

Note 7. Also discusses *Psophocarpus tetragonolobus* Dec. (p. 101). Address: Doctor der Naturwissenschaften, Germany.

1010. The Indian cookery book: A practical handbook to the kitchen in India, adapted to the three presidencies; Containing original and improved recipes in every department of Indian cookery... By a thirty-five years' resident. 1869. Calcutta, British India: Wyman & Co. 2 p. + 1 + 123 p. See p. 49, 79, 81. 19 cm. 1st edition.

• **Summary:** Recipe 156 for “Rolled mutton” (p. 49) states: “add a tablespoonful each of vinegar, mushroom catsup, soy, and lemon pickle, and a teacupful of port wine;...”

Recipe 312, “To make a quart bottle of fish or meat sauce,” directs: “To half a bottle of vinegar put one ounce of cayenne, two cloves of garlic, one tablespoonful of soy, two of walnut, and two of mushroom catsup. Let it stand six days, shaking it frequently: then add the remaining half of the bottle of vinegar, let it stand another week, strain, and put it into small bottles.”

Recipe 329, “Jelly for cooked birds, meats, or made dishes” notes: “; then, with a dozen cloves and the juice and rind of a lemon, boil it again, adding a tablespoonful of soy or any other dark-coloured, rich, and well-flavoured sauce;”

“Lea & Perrin’s Worcestershire sauce” is mentioned on pages 35 and 76; plain Worcestershire on pages 41 and 45. “Catsup” is mentioned on 9 pages, of which 8 are “mushroom catsup” and 1 is “walnut catsup.” “Harvey” sauce is mentioned only once (p. 41).

In 1880 a very similar edition was published but with different pagination (123 p.). The publishers were: Calcutta: Thacker, Spink, and Co. Bombay: Thacker & Co. Madras: Higginbotham & Co. It had a recipe index. Address: Calcutta, India.

1011. Wright, A.S. 1869. Wright’s book of 3000 practical receipts: or, Complete book of reference... New York, NY: Dick & Fitzgerald. 359 p. See p. 231. 19 cm. *

• **Summary:** Page 231: “Harvey’s Sauce. Quin sauce, 48 parts; soy [sauce], 16 parts; cayenne, 1 part. Mix and steep for one week, then pour off the clear liquid.”

Note: On spine: *Wright’s American book of 3000 practical receipts*. First published in 1852 under title: *The*

American receipt book. Address: USA.

1012. *New York Times*. 1870. The Chinese. Jan. 2. p. 5.

• **Summary:** From the *St. Louis Democrat* [Missouri], Dec. 30. About 250 Chinamen arrived on Tuesday night. “The scene at the depot at the time the train arrived is said to have been ludicrous in the extreme. The word was given to John to ‘go ashore,’ and at once there was a deafening clamor and confusion of tongues... The chatter resembled that of a council of monkeys, but all were good-natured. After getting on board the [steamer] *Mississippi*, the Celestials ‘simmered down,...’ and were soon dreaming of their far-away homes across the Pacific, and the wives and children left behind.

“Yesterday the lemon-colored travelers were visited on board the *Mississippi* by thousands of our citizens, who were anxious to see what they looked like.” “All wore the national pig-tail...” They were going to work on a railroad in Texas.

It was found necessary to establish a Chinese store in the vicinity of the place of labor. As a result of negotiation, the following goods were bought in Texas: “foo chuck, or bean curd sticks [dried yuba sticks], 10 boxes, or 400 pounds;... 10 boxes soy [sauce], 10 jars catsup,...” “The men are to receive \$30 coin per month.”

Note 1. This is the earliest English-language document seen (Oct. 2008) that uses the term “foo chuck” or the term “bean curd sticks” to refer to yuba.

Note 2. This entire article is written in a condescending and racist tone.

Note 3. This is a rare example of Chinese consuming “catsup.” What is this sauce made from? Is it the traditional Cantonese catsup? Are the yuba and the catsup imported? Probably.

1013. *Times (London)*. 1870. Worcester Cathedral restoration. July 4. p. 9, col. 3.

• **Summary:** Messrs. Lea and Perrin have promised to give 250l. [£250] each. Lord Sandys has promised 200l.

Note: Although this article does not mention Worcestershire sauce, it shows that one Lord Sandys, probably not the one who is said to have given Messrs. Lea and Perrin the original recipe for Worcestershire sauce, lives in Worcestershire (See Keogh 1997, p. 29-30). Address: [Worcestershire, England].

1014. *Argus (The) (Melbourne, Victoria, Australia)*. 1870. Tuesday, December 13, 1870. Dec. 13. p. 4-5. See p. 5.

• **Summary:** In Melbourne: “Three other cases before the District Court yesterday... Some time was occupied in hearing a couple of cases in which the defendants were charged with selling spurious Worcestershire sauce, bearing an imitation of the label of Lea and Perrins, the well-known manufacturers. James Dunlea and James Nicholson, of 107 Elizabeth-street, and Thomas and Richard Fogarty, of Queensberry-street, Hotham, were charged,

on the information of Wm. R. Virgoe, jun. [agent for Lea and Perrins], with having on the 20th November last sold certain bottles containing, an article called Worcestershire sauce, together with a forged or counterfeited trade-mark, knowing the same to be the forged or counterfeited trade-mark of Lea and Perrins, used by them in an article known as Worcestershire sauce.

"The evidence showed that the bottle sold by Dunlea and Nicholson was labelled in very close imitation of the genuine, the words 'equal to' being inserted unpretendingly in much the same manner as *à la* was used for Wild's Carlisle ale, but that sold by the Fogarty's shopman was not a close imitation, and in fact the imitation seemed to consist in calling the contents 'Worcestershire sauce.' The defence was that there was no proof of a guilty knowledge on the part of the defendants. After hearing the evidence, the Bench said they did not feel disposed to impose a penalty in these cases. On the one hand, no person who viewed the bottles could come to any reasonable conclusion other than that they were a gross and scandalous imitation; but, on the other hand, the evidence did not show that the defendants had been knowingly aiding and abetting and gaining by the fraud. If any further sales took place the case could be very easily presented to the Bench again with a knowledge of the fraud on the part of the defendants. The facts were beyond dispute, but the great difficulty was in bringing home to the defendants that they had acted with a knowledge of and had profited by the fraud. The cases were, therefore, dismissed."

Note 1. This is the earliest document seen (March 2012) that uses the word "trade-mark" (or "trademark") in connection with Worcestershire sauce.

Note 2. An article titled "Trade-mark prosecutions," describing a different case related to Lea and Perrins' Worcestershire sauce, appeared 3 days later in this newspaper on Dec. 16 (p. 7).

1015. Cowieson's Warehouse. 1870. Classified ad: Sauce. *Scotsman (Edinburgh)*. Dec. 23. p. 1.

• **Summary:** "Sauce (Lea & Perrin's Real Worcester), 2s. 6d..."

"Sauce (Harvey's Worcester), 9s. Doz.; Indian Soy [sauce], Chutnee, Mixed Pickles,..." Address: [Edinburgh].

1016. *Morning Post (New York City)*. 1870. Lea & Perrins Sauce. Dec. 23. [1 ref]

• **Summary:** Discusses cases against certain parties in this city for manufacturing and selling a counterfeit article of Lea & Perrin's Worcestershire Sauce.

1017. *Press (The) (New York City)*. 1870. About Sauce (Letter to the editor). Dec. 26. [1 ref]

• **Summary:** "To the editor of *The Press*."

"In the issue of the *Morning Post* of the 23d inst. there is an error in what is stated in reference to the cases against

certain parties in this city for manufacturing and selling a counterfeit article of Lea & Perrin's Worcestershire Sauce. The fact that a counterfeit sauce was made and sold in this community was abundantly proven. The man A.A. Smythe, who was the manufacturer of the article, pleaded guilty to the charge, and was sentenced by the Court in May last.

"In reference to the case of Henry Pohl, tried Thursday last, the evidence him showed conclusively that he had been dealing in the counterfeit article and his acquittal was owing to a mere technicality. Thomas R. Patton, who is still under bail, will be tried in due course. John Duncan's Sons, special agents for the sale of Lea & Perrin's Worcestershire Sauce in the United States, intend to prosecute, to the full extent of the law, all persons whom they have or shall hereafter discover engaged in making or selling a counterfeit of Lea & Perrin's Sauce."

1018. Chalmers, John. 1870. An English and Cantonese pocket-dictionary, for the use of those who wish to learn the spoken language of Canton Province. 3rd ed. Hong Kong: London Missionary Society's Press. iv + 146 p. See p. 69. 19 cm. [Eng; Chi]*

• **Summary:** On page 69 is the Cantonese term for soy sauce, *shi-yau*. A 5th edition was published in 1878 in Hongkong, and a 7th edition in 1907 in Hongkong.

1019. Croly, Jane Cunningham. 1870. Jennie June's American cookery book: Containing upwards of twelve hundred choice and carefully tested receipts... New York, NY: The American News Company. vii + 379 p. Index. 19 cm.

• **Summary:** Soy [sauce] is used as an ingredient in the following recipes: Mock turtle soup (p. 25). Berkshire sauce (p. 101). A sauce for made dishes (p. 101).

The recipe for "Tomato soy" (p. 123-24) contains no "soy" sauce; the word "soy" does not appear in the body of the recipe, only in the title.

Worcestershire sauce is used as an ingredient in two recipes: Calf's head hash (p. 61). Roast ducks ("Make a rich gravy, into which put a table-spoonful of Worcestershire sauce," p. 85-86).

A quotation on the title page by the English author John Ruskin (1819-1900) states: Cookery "means the knowledge of Medea, and of Circe, and of Calypso, and of Helen, and of Rebekah, and of the Queen of Sheba. It means the knowledge of all herbs and fruits and balms and spices—and of all that is healing and sweet in the fields, and groves, and savory in meats—it means carefulness, and inventiveness, and watchfulness, willingness, and readiness of appliance. It means the economy of our great-grandmothers, and the science of modern chemists—it means much testing and no wasting—it means English thoroughness, and French art, and Arabian hospitality, and it means in fine, that you are to be perfectly and always 'ladies'—'loaf givers.'"

Note: This is a remarkable book by a remarkable woman. Born in England, she was the daughter of a Unitarian preacher, whose “unpopular beliefs reportedly led to the stoning of their house and the impetus for the family’s move to the United States in 1841.” She became a pioneering American woman journalist, author, feminist (in the woman’s club movement), and author of *The History of the Woman’s Club Movement in America* (1898) (MSU biography). Address: Author of “Talks on Women’s Toppics,” etc..

1020. Maclay, Robert Samuel; Baldwin, Caleb C. comp. 1870. An alphabetic dictionary of the Chinese language in the Foochow dialect. Foochow: Methodist Episcopal Mission Press. xxiv + 1107 p. See p. 773. 23 cm (8 vo.). [7 ref. Eng; Chi]

• **Summary:** Each Chinese character has a number, in parentheses directly above it. Below it is the Mandarin pronunciation. To the upper right of the first character for a certain sound in the Foochow dialect is written that sound. Tones are given for each character.

In the text below, we give the page number and the Mandarin pronunciation, followed by the Foochow pronunciation in parentheses.

Introduction (p. vii): “The work contains 928 different syllabic divisions or sections, as written in Roman letters and numbered in the text. This of course does not include all the distinctions arising from difference in tone.”

Page 95 Chiang (Chiong): “A sauce, pickle, brine or condiment, made of salt and sugar [sic], used in cooking; relishes, seasonings, like oilmen’s stores; salted preparations: com., *tién chiong* sweet condiments; *chiong heong* or *chiong hwong taing* a shop where condiments are sold; *chiong e* sauces, condiments; Coll. *tau chiong* a bean relish.

Page 234 Fu (Ho): Corrupted, rotten, spoiled. Coll. *tau ho* bean curd; *ho p’iêng* thin slices of curd; *ho kang* dried bean curd [pressed tofu].

Page 401 Chüan (Kwong): *kwong chiêng* rolls of glutinous rice (in thin crusts of bean-curd).

Page 435 K’o (K’o): To cook thoroughly. *k’o tau ho* to cook bean curd thoroughly.

Page 596 Ya (Nga): A germ, plumule, bud, or sprout. *tau nga* bean sprouts.

Page 763 Ssu [Shu] (Seuk): A general term for edible kinds of pulse.

Page 773 Shih (Sié): Salted eatables, as beans, etc., dried and used as relishes... *sié iu*, soy [sauce]; *iu sié* soy-beans or residual grains; *tau sie kiong* a sauce of salted beans and ginger; *sié iu ch’iong*, a soy [sauce] factory.

Page 783 Shao (Sieu): Coll. *sieu king chio* Sieuhing bean curd.

Page 847 Tou (Tau): Beans, peas, legumes. *tau sié* salt-bean relish; *tau ho* bean curd; *tau kang* (coll. *tau kwang*) cakes of bean curd; *tau nga* bean sprouts, made by covering

so as to heat or ferment; *tau ho tea* “curd chopsticks”—the film [yuba] from the surface of the curd [hot soymilk] made into rolls [probably dried yuba rolls]; *tau ho peng* a bean-curd press; *peng tau leng* crushed beans; *tau chio* fermented bean-relish.

Note: This is the earliest document seen (Nov. 2011) that uses the term “fermented bean-relish” or the term “salt-bean relish” (with or without hyphens) to refer to fermented black soybeans (*douchi*).

Soy is also mentioned on pages 157 right side (“to diffuse the soy by tossing”), p. 227 right (flavored with soy), p. 257 right (Sort of pork balls seasoned with soy and unions), p. 365 right (“scalded with seasoning of soy, &c.”), p. 557 left (“to fry with a seasoning of oil, soy, etc.”).

Note: The word Foochow is also spelled Fuzhou (pinyin), and Fuhtchou. Robert S. Maclay lived 1824-1907. Address: Rev., D.D., of the Methodist Episcopal Mission; 2. Rev., A.M., of the American Board Mission [Foochow, China].

1021. Williamson, Alexander. 1870. Journeys in north China, Manchuria, and eastern Mongolia: With some account of Corea. 2 vols. London: Smith, Elder and Co. Vol. 1, xx + 444 p.; Vol. 2, viii + 442 p. Illust. No index. 19 cm.

• **Summary:** This is a travelogue by a man whose purpose is “the distribution of the Scriptures and books and tracts in the Chinese language throughout the interior of North China. While his main interest is religious and moral (he is very critical of idolatry, ancestor worship, opium smoking, *fung shui* / geomancy, etc.), he also records many observations concerning the daily life of the people. Unfortunately the book has no index.

In volume I, Chapter 7, titled “Province of Shan-tung [Shandong], is a section on agriculture which states (p. 110): “Pulse is divided into three classes, each comprehending several varieties. The first is the common pulse, embracing the yellow and black varieties. The one is chiefly used for the manufacture of bean-cake and oil, and the other for feeding cattle. The second class comprises the small blue bean, the Kiang-teu, the small beans, including the variegated, purple, and black, and the Wang-teu, which has a bitter taste. This latter is sown in autumn like wheat, and comes originally from Manchuria. The third class, is the kitchen-bean, embracing the eyebrow bean, the monthly bean, the long-pod pea, and the fragrant bean. From pulse they also make a sauce of excellent quality called ‘soy,’ and also a bean-curd which is much used for food (Footnote: Regarding the manufacture of bean-cake, bean-oil soy, and bean-curd see *Medical Missionary in China*, p. 63-69. Dr. Lockhart).”

In describing his journey from Peking to Che-foo in November, he states (Vol. 1, p. 202-03): “Here we met many of their extraordinary wheelbarrows moving along on dry ground with a sail set; each barrow having a great wheel in the centre, finely balanced. Those we saw were laden

heavily, and had a large sheet of cloth set on a frame-work in front; many of these sails were so rigged as to be capable of being raised or reefed at pleasure, the ropes or braces being attached to a hook close to the driver. We have never seen these wheelbarrows without pity; the strain to the men who manage them is enormous: indeed, we have never witnessed human beings under such heavy labour. We met many with fourteen bean-cakes on one barrow, equal to seven small donkey-loads."

Also mentions ground-nuts (p. 113) in Shan-tung. In Shan-si, in the war-torn town of Hoa-chow, he "could get nothing to eat but bean-cake curd [tofu]; and no dishes to eat even that in" (p. 370).

Volume II includes extensive travels in Manchuria. "Pulse [probably the soybean] is grown in all directions, and is one of the most important crops; there are several varieties, as in Shan-tung, and the purposes for which it is used are much the same" (p. 42). "Oil is extracted from several plants, chief among which is the *Sesamum*, which yields an oil used much in cooking. Next is hemp, the oil of which is used both for cooking and in lamps" (p. 43). Castor oil is also used; soy is not mentioned.

In central Manchuria: "Among the agricultural products, pulse stands first in importance as an article of food and of export;... it is sown in May and reaped in October" (p. 64). "We found the poppy under cultivation in all quarters... Natives told us that it was much more profitable than pulse or any kind of grain... Sad is the havoc this drug is making in China, and the worst is yet to come" (p. 65).

Appendix C (p. 437-38) concerns agricultural observations made by the author in 1868 in and around Chefoo. For example, on May 5, rice, pulse, and sesamum are sown. Sept. 7—Sesamum reaping. Oct. 8—"Barley sowing; pulse and yellow beans reaping; peanuts."

Appendix D (p. 439-42) contains two lists of plants collected by the author in 1869. The first is from Shan-tung. Among the Leguminosae are "*Glycine* sp." and "*Medicago sativa*" [alfalfa]. The second is from North China and Manchuria. Under Leguminosae the peanut is mentioned, but not the soybean.

Note 1. Rev. Alexander Williamson lived 1829-1890.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term "bean-cake curd" to refer to tofu.

Note 3. This is the earliest English-language document seen (March 2007) that uses the term *Medicago sativa* to refer to the scientific name of alfalfa. Address: Rev., B.A., Agent of the National Bible Society of Scotland, Lochwinnoch, near Glasgow, Scotland.

1022. Wood, John George. 1870. The natural history of man: Being an account of the manners and customs of the uncivilized races of men. Vol. 2 of 2. London: George Routledge and Sons. viii + 864 p. See Vol. 2, p. 808, 810.

Illust. Index. 25 cm.

• **Summary:** One of the nations deemed "a partial civilization" by the author is China. In discussing chopsticks he states (p. 808-10): "The adroitness displayed by the Chinese in the use of these implements is worthy of all admiration. I have seen them pick up single grains of rice with the chopsticks, dip them in soy [sauce], and carry them to the mouth with perfect precision;..."

"As a rule, every Chinaman who can afford so cheap a luxury has his chopstick-case hanging from his girdle." "Sometimes, however, a wealthy man will carry a much more complicated set of table apparatus, a very good specimen of which, kindly lent by Mr. Wareham, is shown in the illustration. First we see a cylindrical case suspended by a strap, and, on examining it, we find that the top and bottom are moveable, and slide up and down the strap. Within this case are the usual chopsticks, the knife, and the toothpick, but beside them there is a spoon for eating soup, a neat little quatrefoil saucer for soy, and a peculiar two-pronged fork, with its prongs united in the middle by a floriated ornament." Address: Rev., M.A., F.L.S., etc., etc.

1023. Yeats, John. 1870. The natural history of commerce. With a copious list of commercial terms and their synonyms in several languages. London & New York: Cassell, Petter and Galpin. xvi + 436 p. See p. 191. Index. 19 cm.

• **Summary:** In Part II: The Commercial Products of the Vegetable Kingdom, in Chapter 1 on Food Plants, in section 7 (p. 191) on Miscellaneous Food Plants, we read: "Soybean (*Soja hispida*; natural order *Leguminosae*).—A sauce or catsup, as thick as treacle and of a clear black colour, called Soy, which is much esteemed, is made from the beans of this plant by the Chinese, and sent to us from India in considerable quantities. From 500 to 600 gallons are annually imported."

Note 1. This is the earliest English-language document seen (Feb. 2007) that contains the word "soybean" (or "soybeans"), written as one word.

The soybean seems to be a little-understood afterthought in this book. In this chapter it is grouped with onion, truffles, morel, and carrageen or Irish moss. It is not listed under soy, *Soja*, *Dolichos*, or *Glycine* in the chapters on leguminous plants (p. 137) or oleaginous plants (p. 204). Nor is it listed in the index nor in the lengthy etymological appendix.

Note 2. The soy sauce described by Yeats as "catsup, as thick as treacle and of a clear black colour" might be a sweet soy sauce (*ketjap manis*) from the Dutch East Indies. It is certainly not the more widely used Japanese soy sauce (shoyu).

The author, a Doctor of Law (LL.D.) is also a "Fellow of the Geological Society of London, of the Royal Geographical Society, Member of the Society of Arts, etc. Assisted by several gentlemen."

Also in Part II, p. 207 we read: "Sesame oil... is

frequently used for the adulteration of balsams and volatile oils." Address: Peckham, London, England.

1024. Lowell, James Russell. 1871. *My study windows*. Boston, Massachusetts: James R. Osgood and Company. 433 p. See p. 25. Jan. No index. 19 cm.

• **Summary:** In Chapter 2, titled "A good word for winter," we read (p. 25): "... a discourse on the probability of making missionaries go down better with the Feejee-Islanders by balancing the hymn-book in one pocket with a bottle of Worcestershire in the other..."

Note 1. James Russell Lowell, an American essayist and poet, lived 1819-1891.

Note 2. According to the *Bibliography of American Literature* under Lowell, this book was first published in 1871 by James R. Osgood and Co. of Boston. It went through 4 printings during the period Jan. 20 and August 21 of 1871, each with minor changes but no changes in pagination. Address: A.M., Prof. of Belles-Lettres in Harvard College.

1025. *New York Times*. 1871. Proposals (Ad). Feb. 2. p. 7.

• **Summary:** "Proposals in duplicate will be received by the undersigned until 12 M [Midnight] Saturday, March 4, for the following Subsistence Stores:... 240 bottles of Worcestershire Sauce, packed 12 in a case, imported 'pints.'... Major W.W. Burns, Chief C.S. Department of East." Address: Army Building, Corner of Houston and Greene sts., New York City.

1026. Stanton & Co. 1871. Classified ad: Direct importation. *Chicago Tribune*. Dec. 21. p. 1.

• **Summary:** "India Soy [sauce], Mushroom Catsup, Walnut do. [ditto = Catsup], Kato's Gensis [sic] Sauce,... China Soy, in elegant vases, Royal Table Sauce, in elegant vases, Soho do., John Bull do., Athenæm do." Address: Indiana-Av. & Twenty-Second-St.

1027. Balfour, Edward. 1871. *The Cyclopaedia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures*. 2nd ed.: Soy [sauce]. Madras, India. Printed at the Scottish and Adelphi presses. See vol. 1, p. 426, 707, 709, 277 (near end of book). 26 cm. Reprinted in 1985 by International Book Distributors, Dehra Dun, India. [6 ref]

• **Summary:** Page 426: Bhut, Hind. [Hindi]. Said to be the Soy bean, the *Soja hispida*.

Butters, vegetable (p. 707): "Mijo of Japan [Miso of Japan]. Butter from *Dolichos soja*."

Page 709: "Butwas, Hind. Glycine." Note: It is not clear whether or not this refers to the soybean.

The section on "Cochin-China" [today's south Vietnam] states (p. 277, near end of book): "They eat vermin, and the

flesh of the crocodile; hatched eggs with them are a delicacy, and their favourite sauce is a kind of soy, in part, at least, composed of the juices of putrid fish, and which, both from taste and odour, would be intolerable to any other people." Address: L.R.C.S.E., Inspector General of Hospitals, Madras Medical Dep. [India].

1028. Merck, Klemens. ed. 1871. *Neustes Waaren-Lexikon fuer Handel und Industrie* [Newest dictionary of products and commodities for trade and industry]. Leipzig, Germany: Verlag von Otto Spamer. 568 p. See p. 493. [Ger]

• **Summary:** Soya is a brown, salty liquid, imported from China and Japan, and used as a seasoning on roasts (*Braten*), sauces, fish, and other foods, but which, in order to be pleasant, must be used sparingly. This article is prepared from a small bean of the legume family named *Dolichos Soya*. The beans are cooked, mixed with roasted wheat in salt water, and allowed to stand for 2 to 3 months. A type of fermentation takes place, and the process apparently resembles that of pickling cabbage or cucumbers. Finally, the liquid is pressed out of the ripened or fermented mass and filtered. The product comes into the trade sometimes in corked glass bottles, and sometimes (from Japan) in small kegs (*Fässchen*). The Japanese product is the better of the two; it is used daily by the people in Japan. The product is, in general, of rather inconsistent quality; the best products are recognized by their aroma and taste. It is presumed that great adulteration takes place with this product. In England, an investigation was undertaken by shaking some of the product in a glass. If a shiny, yellowish-brown film did not form on the surface, the product was considered to be of poor quality. In 1867, England imported 11,493 gallons of this sauce and, of that, exported 2,166 gallons.

Also discusses: *Cyperus esculentus* (*Erdmandeln*, p. 125), peanuts (p. 135), and sesame oil (p. 484).

The full subtitle reads as follows: *Beschreibung der im Handel vorkommenden Natur- und Kunsterzeugnisse, namentlich der Kolonial-, Material-, Droguerie- und Farbwaaren, Mineralien- und Bodenprodukte, chemisch-technischer und anderer Fabrikate. Unter Mitwirkung bewährter Fachmänner bearbeitet von...* [Description of natural and artificial products in commerce, especially of the colonial materials, drugs, and dyestuffs, minerals, and other products of the earth / agricultural products (*Bodenprodukte*), chemical-technical and other manufactured goods. With the assistance of well-known experts].

Note 1. *Bodenprodukte* ("products of the earth") probably includes cultivated agricultural products and noncultivated commercial products such as berries, mushrooms, hay, and perhaps even firewood. Note 2. The 4th edition of this book was published in 1890. Address: [Germany].

1029. Orr, N. (Mrs.). 1871. *De Witt's Connecticut cook book*

and housekeeper's assistant, containing... New York, NY: Robert M. De Witt, Publisher. 192 p. See p. 64. Illust. No index. 17 cm.

• **Summary:** In the section on "Pickles" is a recipe (p. 64) titled "To make Soy [sauce]. Take two quarts of soja beans (*Soja hispida*) and boil them until soft, add two quarts of bruised wheat, or wheaten grits; keep them in a warm place twenty-four hours, then add a half teacupful of table salt and one gallon of water. Put the whole into a stone jar and keep it tightly closed for three months, frequently shaking it, and then press out the liquor, and bottle for use.

"This is the real Oriental soy. The seeds of this plant, to be cultivated, only require a sheltered situation and to be grown like any other garden bean. It gives a fine flavor to many sauce and made dishes."

Note: The writer realizes that soy sauce is made with soja beans and wheat, but she is not aware of koji. It is hard to imagine how the resulting product would have looked and tasted.

On the same page is a recipe for "Tomato catsup. Boil and press through a hair sieve, half a bushel of fine ripe tomatoes. Add one quart of vinegar, one teacupful of salt, one tablespoonful of cloves, two of black pepper, one of cayenne pepper, two ounces of allspice and six good sized onions.

"Mix all together and boil three hours. Bottle without straining." Address: [USA].

1030. Smith, Frederick Porter. 1871. Contributions towards the materia medica & natural history of China. For the use of medical missionaries & native medical students. Shanghai, China: American Presbyterian Mission Press, and London: Truebner & Co. vii + 237 p. See p. 88, 202-03. 24 cm.

• **Summary:** This book, based in part on the famous *Pen-ts'ao kang-mu* by Li Shih-chen (1578-1597), contains a listing of medicinal plants arranged alphabetically by either their popular English name or scientific name. Chinese characters for the plant name, the romanized Chinese name, and key related terms are also given immediately after the main entry. There is no index. The soy bean is listed under "*Dolichos soja* (*Hwang-ta-tau*; characters = Yellow + large + bean), (*Mau-tau*; characters = hairy + bean).—The hairy, short pods of this Leguminous plant are eaten, when freed from the valves. They are mixed with vinegar and sesamum-oil, and drank as a cooling draught in summer. The ripe, ovoid, yellow beans are used to make bean-curd (*Tau-fu*), a substance largely consumed by the Chinese when vegetables are not very plentiful. It is the cheese of the Chinaman. The beans are ground and pressed to produce the bean-oil, or pea-oil, as it is sometimes miscalled by foreigners. The beans are said to be laxative, peptic [promoting digestion] and nutrient. Bean sprouts (*Tau-ya*), are the germinating beans of this plant, artificially raised in large quantities for food in winter (p. 88).

Note 1. This is the second earliest English-language document seen (Feb. 2000) that refers to soy sprouts, which it calls "Bean sprouts (*Tau-ya*)..."

Note 2. This is the earliest document seen (Feb. 2000) that uses the word "laxative" in connection with soy beans.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the term "cheese of the Chinaman" to refer to tofu.

Note 4. This is the earliest English-language document seen (Sept. 2006) that uses the term "pea-oil" ("as it is sometimes miscalled by foreigners") to refer to soybean oil

Also on p. 88, under *Dolichos trilobus* (*Koh*) is a description of kuzu. "The *Pachyrizus trilobus* is sometimes included under this name... A fibre resembling linen, called (Chinese characters) *Koh-pu* or *Kung koh*, of a yellow color, very fine and durable, and much prized in Hankow, is obtained from the climbing branches. The best of this cloth comes from Wu-chang hien (Hupeh), and from Kwang-sin fu in Kiangsi. The root is eaten, although to some extent deleterious, if not thoroughly cooked. A kind of arrow root (Chinese characters), called *Koh-fen*, is made from the root in Ngan-king fu (Nganhwui), Kwang-sin fu (Kiangsi) and at Teh-ngan fu (Hupeh). Emetic, diaphoretic and antiphlogistic properties reside in the root, which is given in fevers, exanthemata and rashes of all kinds, and in bloody fluxes [excessive abnormal discharge from the bowels]. Every part of the plant is officinal" [medicinal].

Soy sauce (p. 202) is listed under "Soy (*Tsiang-yú*)—The condiment known by this name, derived from a Chinese synonyme used by the Japanese, is a black, thin liquid, having an agreeable, saltish flavour, and frothing up of a yellow colour when very slightly shaken. It is the universal sauce of the Chinese and Japanese, and is largely exported to India and Europe as a convenient menstruum for other flavouring substances used as condiments. The yellow beans of the *Dolichos soja* are boiled very soft, and mixed with any cereal flour in varying proportions, and allowed to ferment and become mouldy. Salt and tea, or boiling water, are then added, and the mixture is then exposed to the sun and dew of the open air for three weeks or a month, care being taken to avoid rain. The liquid becomes much thicker, darker and more uniform in consistence, and after constant stirring is then strained and kept for use. Bran is sometimes used in making it. Large quantities are both sold from the shops and made at home by the Chinese. It is considered to provoke the appetite, and to correct any injurious quality of food. It is laxative, cooling, and an antidotal, according to Chinese estimation. It is sometimes daubed upon burns, scalds, eczematous and leprous sores."

Note: This is the earliest English-language document seen (April 2012) that uses the term "*Tsiang-yú*" to refer to the Chinese word for soy sauce.

Under "Maccaroni [Macaroni] (*Mien-kin*)," following the description of the basic kind made from wheat flour

(which is “a part of the diet of priests and those fasting from animal food”), we read: “A kind of macaroni, very much like foreign macaroni, is made from bean-curd and called *Tau-kin* (bean + muscle, sinew, or tendon).”

Under “wheat,” the author discusses the grain itself, “wheaten flour,” and “wheaten starch,” but he does not mention wheat gluten. Nor are azuki beans (*hsiao-tou*) listed. Bretschneider harshly criticizes this book: “Of little value, unreliable.” But Rev. G.A. Stuart, M.D., in his *Chinese Materia Medica* (1911) states on the title page “Extensively revised from Dr. F. Porter Smith’s Work.” Smith lived 1833-1888. He wrote the preface in Nov. 1870 from Hankow, China. Address: Medical missionary (from England) in central China [Hankow].

1031. *New York Times*. 1872. Worcestershire sauce—Rival manufacturers in court. Feb. 2. p. 7.

• **Summary:** “Yesterday morning Mr. John P. Duncan, of the firm John Duncan’s Son, grocer, of Union-square, appeared before justice Dowling, at the Tombs Police, and proffered [proffered] a complaint against Messrs. James Stevens and Edward Cole, composing the firm of Stevens & Cole, carrying on business at No. 500 Washington-street, charging them with forging the trade-mark of ‘Lea & Perrin’s Worcestershire Sauce’ and selling a counterfeit sauce put up in exact imitation of the genuine article, of which Duncan & Son are the sole agents in this country.

“The accused were arrested later in the day and arraigned. They both waived examination, and were committed for trial at the Court of Special Sessions in default of \$1,000 bail each. Mr. Duncan stated that his firm intended to prosecute all persons found manufacturing or selling the alleged spurious sauce, and propose to make the complaint against Messrs. Stevens and Cole a test case.”

1032. House, E.H. 1872. A Japanese statesman at home. *Harper’s New Monthly Magazine* 44(262):589-600. March. See p. 598.

• **Summary:** The statesman is Kenzo Hiroasawa, who is at home in Yeddo [Edo, today’s Tokyo], Japan.

“Raw fish!” The writer forces himself to try it. “But is it utterly revolting and untenable? Hardly so. Do I like it, then? Truly, not too well. But I willingly admit it might be worse, especially as it is deftly mitigated by pungent soy. I do not know its name, but it is like salmon in aspect, and in taste like nothing in my particular prior experience”

1033. *Hartford Daily Courant (Connecticut)*. 1872. A Chinese dinner. May 8. p. 1.

• **Summary:** From Saint Paul’s Magazine: “The first course,” writes Laplace, ‘was laid out in a great number of saucers of painted porcelain... All these *et ceteras*, including among the number a liquor which I recognized to be soy [sauce], made from a Japan bean and long since adopted by the

wine drinkers of Europe to revive their faded appetites or tastes, were used as seasoning to a great number of stews which were contained in bowls, and succeeded each other uninterruptedly.”

1034. Young, Alexander. 1872. Chinese food and cookery. *Appletons’ Journal (New York City)* 8(181):291-93. Sept. 14.

• **Summary:** “The Chinese pork has a shining, flabby appearance which is not attractive to foreign eyes, and its rank, coarse taste does not invite renewed attention from the wary stranger. Cut into thin slices and fried in soy, which relieves the gross flavor of the meat, it is not absolutely repulsive” (p. 291 R.2).

“Among vegetables, of which there is great variety, peas and beans are in high favor. Some kinds of beans are made into soy [sauce], by boiling and powdering the kernels, and fermenting them with yeast; others are boiled and ground, and mixed with water, gypsum, and the juice of yellow seeds, forming bean-jam” (p. 292 R.6). Note: This “bean-jam” seems to be bean curd / tofu!

“The Chinaman, believing that cookery is the test of civilization, regards the carving processes of European and American society as conclusive proof of barbarism. An Englishman’s mode of feeding, he says, allies him to the savages of Formosa; the chief labors of the slaughter-house being transferred to the dinner-table, and the principal work of the kitchen being performed by the stomach. ‘In remote ages, before we became civilized,’ said a polite Chinaman to a correspondent of the *London Times*, ‘we used knives and forks as you do, and had no chopsticks. We still carry a knife in our chopstick-case, but it is a remnant of barbarism—we never use it. We sit down to table to eat, not to cut up carcasses’” (p. 292 C.5).

1035. McBean and Sons. 1872. Classified ad: Co-operative prices. *Times (London)*. Sept. 19. p. 12, col. 3.

“Sauces... India soy [sauce], 8d.”

1036. *New York Times*. 1872. Bankrupt notices. Sept. 19. p. 7.

• **Summary:** “United States District Court, Southern District of New York.—In the matter of William B. Fiske and C.D. Lawrence, bankrupts. Notice is hereby given that the undersigned, assignee in bankruptcy of the above-named bankrupts will sell at public auction” the assets of the bankrupts, including “52 cases Worcestershire sauce... William H. Jackson, Assignee.”

1037. Buckle, Thomas Henry; Taylor, Helen. 1872. The miscellaneous and posthumous works of Henry Thomas Buckle. 3 vols. London: Longmans, Green, and Co. See vol. 3, p. 24. 23 cm.

• **Summary:** In *Common Place Book* (p. 24) under “1485. The soy [sauce] of the Japanese first used in Europe in the

eighteenth century,” are excerpts from four early sources that discuss soy:

“The Japanese soy is also prepared of beans, and turned sour in casks. They say that three years are required for preparing the best soy” (*Golownin’s Captivity in Japan*, 8vo, 1824, vol. iii. p. 157).

“Thunberg (*Travels in Japan*, London. 1795, vol. iv. p. 121) says, ‘Soy sauce, which is everywhere and every day used throughout the whole empire, I might almost say in every dish, and which begins even to be made use of in Europe, is prepared from soy beans (*Dolichos Soja*) and salt, mixed with barley or wheat.’”

“In 1679, Locke, in his *Journal*, mentions at London, ‘Mango and saio, two sorts of sauces brought from the East Indies’ (*King’s Life of Locke*, 8vo, 1830, vol. i. p. 249).

“At iv. 107, Thunberg says, ‘The soy is much better than that which is brewed in China.’ The Chinese highly value the Japanese soy, of which they consume immense quantities (see *Dobell’s Travels through Kamtchatka, &c.*, 8vo, 1830, vol. ii. p. 325).

“On Soy, see Crawford’s *History of the Indian Archipelago*, Edinburgh, 8vo, 1820, vol. i. p. 370.”

Henry Thomas Buckle (1821-1862) was an English historian, the author of *History of Civilization in India*.

1038. Doolittle, Justus. 1872. A vocabulary and hand-book of the Chinese language, romanized in the Mandarin dialect. 2 vols. in 3 parts. Foochow: Rozario, Marcal, and Company. London: Trubner & Co. New York: Anson D.F. Randolph & Co. Reissued in 1878. [Eng; Chi]

• **Summary:** In vol. 1, part 1, p. 272: “Ketchup, (a kind of sauce) shih yu.” Note: The two Chinese characters (2 Cc) are printed to the left of their romanized form “shih yu.” “Shih” means “fermented black soybeans.” We would translate “shih yu” as “fermented black soybean sauce.”

In vol. 2, parts 2 and 3. Page 36: Dip in the soy and eat it (Cc).

Address: Rev.

1039. Hepburn, James C. 1872. Japanese-English and English-Japanese dictionary. 2nd ed. Shanghai: American Presbyterian Mission Press. xxxi + 632 + 201 p. 28 cm.

• **Summary:** This is Hepburn’s 2nd Japanese-English dictionary. The words are arranged alphabetically by their romanized spelling. Each word is written in three ways. After the romanized word (main entry), written in uppercase letters with diacritical marks (which we have largely omitted

below), the same word is written in katakana, then again in Chinese characters. Then comes an abbreviation of the part of speech (n. = noun; v. = verb, etc.). Finally, one or more definitions are given.

This 2nd edition is 162 pages longer than the original 1867 edition; the Introduction is 19 pages longer, the Japanese-English section 74 pages longer, and the English-Japanese section 69 pages longer.

We will not repeat definitions that are identical to those in the 1867 edition. For new spellings, the 1867 spelling will be shown in parentheses. No new soy-related words were found in this 1872 edition. Soy-related words and terms in the 1872 edition: Adzuki (replaces Adzki) [azuki]. Amazake. Daidzu (replaces Daidz) [Daizu]. Hiriodzu (replaces Hiriodz) [Hiryozu]: A kind of food made of *tofu* fried in oil.

Note 1. This is the earliest English-language document seen (May 2012) that contains the term *Hiriodzu* (the modern spelling is *Hiryozu*) which refers to deep-fried tofu treasure balls.

Kinako.

Kiradzu. Koji: Barm or yeast made by the fermentation of rice or barley, in the process of making sake and soy [sauce]. Koji-buta: A shallow box for holding barm. Miso. Miso wo suru: To rub *miso* in a mortar. Natto.

Nigari. Sashi (verb). Sashimi. Shitaji (replaces Sh’taji). Note 2. This is the earliest English-language document seen (April 2012) that uses the word “shitaji” [spelled like this] to refer to shoyu or soy sauce.

Shoyu. Tofu: A kind of food made of beans, bean curd. Umeboshi (*hakubai*).

Yuba [hot water + leaf]. Yu-dofu.

The English-Japanese part of this dictionary starts after p. 558 and is titled “An index; or, Japanese equivalents for the most common English words.” Separately numbered to p. 132, it includes: “Barm, Kôji; tane.” “Soy, Shôyu.”

Terms NOT mentioned include Abura-age, Aburaage, Aburage, Atsu-age, Daitokuji natto, Edamame (or Eda mame or Yedamame), Ganmodoki, Hamanatto, Hiya-yakko, Kori-dofu, Koya-dofu, Nama-age, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 2. The author apparently still did not realize that the various soyfoods he defined (with the possible exception of hiriodzu and soy sauce) were made from soybeans.
Address: M.D., LL.D.

1040. Mogi, Fusagoro. 1872. [Scroll from Mogi Fusagoro with preface by Mogi Keizaburo to Shoda Bunueemon on the founding of a Noda Shoyu brewery]. 2 p. Unpublished manuscript. Translated by W.M. Fruin, 1983. p. 307-08. Original in Shoda Shoyu Company Archives, not far from Noda. [Jap; Eng]

• **Summary:** Gives a detailed recipe for making shoyu, including the amount of each ingredient and the month in which each step is performed. To make the *best* quality

shoyu: “Mix together: First year, January, 2 koku (95.2 gallons) of the *best* grains. First year, April, 2 koku. First year, October, 2 koku. Second year, March, 2 koku. Ferment the above mixture for an average of 16½ months from January of the first year and press before November of the second year. Note the importance of starting the shoyu at the coldest time of the year and of not adding all ingredients at the beginning.

Three alternative recipes are given using lower quality grains. The fermentation times are 15 or 19 months from July of the first year. Income and expenses are calculated. Costs of raw materials for 1,200 kegs of the best quality shoyu are 50 koku soybeans for 250 ryo (unit of currency), 50 koku wheat for 167 ryo, and 200 hyo akaho salt for 67 ryo. Note: A hyo is apparently a small sack of salt. Shoda later became famous as a cereal milling company. Nisshin separated off from Shoda. Address: Noda, Japan.

1041. Stoeckhardt, Adolph; Senff, Emanuel. 1872. Untersuchung von chinesischen Oelbohnen [Investigation on Chinese oilbeans (soybeans)]. *Chemische Ackersmann (Der)* 18:122-25. [Ger]

• **Summary:** “On a trip to England, Mr. Berndt, a manufacturer of velvet in Deuben [in Saxony], made the acquaintance of an English seaman, who told him many things about Manchuria, in China, where he had often been. He explained, among other things, that in northern China several varieties of beans are cultivated, and from them is obtained an oil (*ein fettes Oel*) which, like our cottonseed oil, is used as a food oil (*Speiseöl*), and also a type of cheese (*eine Art Käse*) [tofu], which is widely used as food. Finally, from this bean, one can make a type of soy sauce (*eine Art Soya*), which can also be used with foods. Later Mr. Berndt shared with me two small samples of these beans, which were sent to him by post from Hongkong through the arrangement of Mr. C. Eckardt; one was yellowish white and one black. The former, egg-shaped, had somewhat the size and color of small, pale peas; the latter was significantly smaller, shiny black, and of somewhat flattened, egg-shaped form. Both belong to the genus (*Gattung*) Phaseolus.”

Note 1. This is the earliest German-language document (April 2001) seen that uses *Käse*, the German word for “cheese,” to refer to tofu.

A table (p. 122) gives a laboratory analysis, conducted by Assistant Senff, of the two beans. It showed the following percentage composition (Yellowish white / black): Crude oil (ether extract, *Aetherauszug*) 20.53 / 16.88. Nitrogen-containing substances (*stickstoffhaltige Substanzen*) 38.54 / 38.04. Nitrogen-free extract (*stickstofffreie Extractstoffe*) 24.61 / 27.79. Cellulose (*Rohfaser* = crude fiber) 5.13 / 5.53. Minerals (ash) 4.50 / 4.62. Water 6.69 / 7.14. Note 2. This is the earliest document seen (April 2002) that mentions the term “nitrogen-free extract,” which includes starch, sugar, gums, and the like. The nitrogen-free extract and fiber soon

came to be classed together under the name of carbohydrates. This is also the earliest document seen (Dec. 2001) that clearly mentions fiber in soybeans, or the fiber content of soybeans.

“The composition of these beans is actually of surprisingly high grade, in part because of the high content of oil which takes the place of starch, and also because of the high nitrogen content. The chemical composition of lupine seeds (*Lupinensamen*) has already provoked lively astonishment, since in these, unlike the seeds of other known legumes, we find no starch, but rather a large amount of oil and protein (*eine reichlichere Menge von fettem Oel und Proteinstoffen*). So we are confronted with the Chinese oilbeans (*chinesischen Oelbohnen* = soybeans) in which the unique characteristic of the lupine seeds seem to be expressed in a higher potency, as shown in the following comparison.” A table shows that most beans and peas contain 30-35% starch, 1.5-3% oil, and 24-26% protein. Lupine seeds contain no starch, 5-8% oil, and 30-35% protein. But the seeds of the Chinese oilbeans [soybeans] contain no starch, 16-20% oil, and 38-39% protein. The oilbeans are thus shown to be the most protein-rich livestock fodder; they also have a high respiration value (*Respirationswerth*). They seem even more important because these two main components are also suited for the human diet. The use of the oil as food oil (*die Verwendung des Oels als Speiseöl*) is confirmed, and the use of the proteins is not unlikely, since they consist largely of plant casein, through the application of salt and aromatic plants and subsequent fermentation, may well produce a tasty cheese, like that made from milk casein. Note 3. This is earliest document seen (May 2008) that clearly mentions starch in soybeans, and states that they contain none.

Note 4. This is the earliest German-language document seen (May 2008) which refers to soybeans as *chinesischen Oelbohnen* = “Chinese oilbeans.”

“The high nitrogen content of the beans may also be confirmed through an analysis of their cake (presscake?). Upon inquiry to professor Völcker [Voelcker] in London I received the answer that he could not state for sure that the beans could be used to make a type of cheese, however he has investigated the oilcake (‘Chinese Oilbean Cake’) and found the following percentage composition compared to rapeseed cake: oil 5.32 / 8-9. Nitrogen-containing substances 45.93 / 27-28. Nitrogen-free extract 24.52 / 32-25. Cellulose 5.71 / 15-16. Minerals (ash) 5.70 / 6-7. Water 12.82 / 12-15.

“Concerning the preparation of soy sauce (*Soya*), this indispensable table seasoning among the people of India and seafarers, a trusted friend who is very familiar with Oriental trade conditions, informs me that ‘according to tradition, certain fungi, fruits, and parts of fish (especially also parts of the crablike sea-spider) are added to it, in a very complicated and long process that lasts several months.’ From another source I learned the following: ‘Soy sauce (*Soya*) is prepared

from an oil-rich bean that grows in China. During the process it is mixed with other ingredients. Thereby a significant percentage of good-tasting oil is obtained and the residue is used as an excellent fodder for cows. Can any of my valued readers provide more specific information on the above?"

Note 5. This is the earliest document seen (May 2008) containing mention of soybean cake in the western world. It also the earliest document seen (May 2008) containing an analysis of the cake.

Note 6. This is the earliest document seen (July 2000) concerning soybeans in Hong Kong. This document contains the earliest date seen for soybeans in Hong Kong (1872). Soybeans were probably also being grown at that time in Hong Kong, but we cannot be certain of this.

Note 7. Mr. Carl Berndt of Saxony, is mentioned several times by Prof. Friedrich Haberlandt in his classic *Die Sojabohne* (1878). In part 1, page 4, Haberlandt states that Carl Berndt, a velvet manufacturer at Hainsberg-Deuben in Saxony, was one of the first people in Germany who attempted to cultivate soybeans. He had no success. "He wrote me about his efforts as follows: 'I had received 8 piculs of those beans [Note 8. A picul is a Chinese unit of weight = 133.33 pounds] (some green and some yellow), which I obtained through an official order of Governor (*des Minister-Präsidenten*) Dr. Weinlich of Shanghai via our local consul. I sent samples of those all over with the request that the recipient inform me of the results of his agronomic trials. Unfortunately I have waited in vain and I assume that the outcome was as unfavorable as it had been in my case and in my neighborhood. Although some gardeners and I managed to raise a few plants and harvest a few seeds, they rotted after being replanted and therefore could not germinate.'" Pages 10-11 of Haberlandt note that the first analysis of the composition of soybean seeds that became known in Germany was carried out by (Mr.) Senff using seeds obtained directly from Japan by Mr. Berndt. The results of this analysis were first published in 1872 in the journal *Chemischer Ackermann* ("Chemical Farmer," p. 123). The tests showed soybeans to contain on average 38.29% protein and 18.71% oil. Page 14 of Haberlandt describes a letter that Carl Berndt wrote to Prof. Haberlandt. And in part 4, page 79 of Haberlandt states that Carl Berndt conducted soybean trials in 1877 in Deuben with 300 seeds; these trials succeeded beyond all expectations.

Note 9. This is the earliest document seen (Sept. 2002) that mentions the use of ether or any other solvent for extracting soybean oil. The extraction was on a laboratory scale. Ether is a light, volatile, flammable liquid (hydrocarbon), also used as an anesthetic.

Note 10. This is the earliest German-language document seen (Sept. 2006) that mentions soybean oil, which it calls *ein fettes Oel*.

Note 11. This is the earliest German-language document seen (Aug. 2003) that uses the term *Stickstoffhaltige*

Bestandtheile to refer to nitrogen-containing constituents / protein in connection with soybeans. Address: Acad. Laborat Tharand.

1042. Syrski, S. 1872. Landwirthschaft in Japan [Agriculture in Japan]. In: Karl von Scherzer, ed. 1872. *Fachmaennische Berichte ueber die oesterreichisch-ungarische Expedition nach Siam, China und Japan. (1868-1871)* [Expert Reports on the Austro-Hungarian Expedition to Siam, China, and Japan]. Stuttgart: Verlag von Julius Maier. Appendix (Anhang), p. 175-227. See p. 175, 186, 190, 207. Index. 25 cm. [Ger]

• **Summary:** Page 186 gives the prices of 1 *shô* (*schio* = 1.825 liters) of various staples. A Tempo is apparently a Japanese unit of currency and a kr. is an Austro-Hungarian unit of currency: Fava beans (*Rosssbohnen, Sora-mame*) 4 Tempo (18 kr.), azuki (*Adsuki*) 10 Tempo (45 kr.), soybeans (*Daidzu; Dolichos soja*) 6 Tempo (27 kr.), Kintoki, with red seeds 5 Tempo (22 kr.) [Note: Kintoki is an abbreviation of "kintoki azuki," which is a large variety of red azuki beans], barley 3 Tempo (13 kr.), wheat 6 Tempo (27 kr.), sesame 10 Tempo (45 kr.). Note: This is the earliest German-language document seen (Jan. 2005) that mentions azuki beans, which it calls *Adsuki*.

Page 190 notes: The pickled beans (*Bohnensulze*), called "Miso" in Japan, is prepared from Daizu, a variety of *Dolichos*, together with wheat- and barley meal/flour, plus some added salt. The seasoning soy sauce (*Soia*) is likewise made from soybeans (*Daidzu-Dolichos*) and wheat meal with the addition of salt, and sprinkled on many foods... Essentially the diet of Japanese peasants consists of rice and the above-mentioned miso, therefore of an easily digestible carbohydrate (*aus einem leicht verdaulichen Kohlenhydrate*) and a strong nitrogenous substance (*stickstoffhaltigen Substanz*, protein), which is made easily digestible through processing. Concerning the nutritional value of their most important foods, Japanese peasants believe that fish, eggs, and poultry give the most strength (*Kraft*). These are followed by miso and vermicelli made from wheat flour, then rice and potatoes. They believe that buckwheat gives but little strength.

The section titled "Legumes" notes: A green *Dolichos* variety (*Dolichos unguiculatus* according to Thunberg, called Jaenari in Japanese) is planted in the fields of central Japan in June and harvested at the beginning of October. A *Dolichos* variety (*Dolichos soia*; called *Daidzu* in Japanese) is planted in southern Japan in April and harvested in July. In central Japan this crop is planted between rows of wheat as they near maturity in May, and harvested in September. The ground is not manured (*nicht gedüngt*); the plants make use of the fertilizer (*Düngungsmaterial*) already applied for the wheat. As a rule, 6 *shô* of seed-beans yield a crop of 120 *shô* on a field of 300 *tsubo*.

Note: Rein (1889, p. 57) states: "According to Scherzer,

six Shô of seed-beans of the early-ripening Shiro-mame are credited with a crop of 120 Shô on 300 Tsubo of land. This means a harvest of only 20-fold, or, taking account of the seed lost in sprouting, about 12 pods of two beans each to every plant."

"This type of Dolichos, as is well known, is the main ingredient in the seasoning soy sauce (*Soia*) and the aspic or pickle (*Sulze*) miso (*"Misso"*).

"A black variety of Dolichos, called Kuro-mame in Japanese (i.e. black soybeans) is planted in the area around Nagasaki in April on land fertilized with ashes (*auf einem mit Asche gedüngten Boden*), and in central Japan in May two seeds are laid in a hole between the rows of wheat. It is harvested in August or September in southern Japan, and in October in central Japan, and used rather widely as a food."

Note 1. Scherzer lived 1821-1903.

Note 2. This is the earliest document seen (Feb. 2005) concerning soy in connection with (but not yet in) Hungary.

Note 3. This is the earliest document seen (Oct. 1999) that mentions the use of fertilizers for growing soybeans.

Note 4. This is the earliest document seen (Aug. 2001) that mentions carbohydrates in connection with soybeans.

Note 5. This is the earliest German-language document seen (April 2012) that uses the word *Soia* to refer to soy sauce. Address: PhD.

1043. Duncan's (John) Sons. 1873. Caution (Ad). *New York Times*. Sept. 19. p. 7.

• **Summary:** "Lea & Perrins' Worcestershire Sauce. Buyers of this sauce are cautioned to avoid the numerous counterfeits and imitations offered for sale. John Duncan's Sons, New-York." Address: Agents for the United States, New York.

1044. *Chicago Daily Tribune*. 1873. The Japanese at table. Oct. 12. p. 5.

• **Summary:** "From the Far East: If bread is the staff of life with Europeans, so is rice with Asiatics. It is the staple food of the people, and with a little soy [sauce] or pickle, or some other simple condiment, is often the only food of the lower classes in Japan... It is strikingly curious to see them eat for the first time..."

"A small table about 9 to 12 inches square and 6 to 9 inches high is placed sometimes in the middle of the feeders, sometimes one to each person. On this table are two or three small dishes,—perhaps one has some slices of cold fish, another some pickles, lily root, green ginger, and horseradish [wasabi], another a little soy, and so on... ever and anon there is a pause to take a slice of fish, which is rendered more palatable by being dipped in the soy."

1045. *Manchester Guardian (England)*. 1873. Commercial markets: London Produce Market, Tuesday. Nov. 5. p. 6.

• **Summary:** "Japan Soy [sauce].—410 cases chiefly sold at

12s."

1046. *New York Times*. 1873. How we live: The way the money goes. Where the extravagance begins—Private life and hotel life contrasted... Nov. 22. p. 4.

• **Summary:** The dinner menus of 3 restaurants of different classes are listed. The section titled "House below Union Square" states: "Tuesday, Nov. 18, 1873... Relishes: Assorted pickles, apple sauce, cranberry sauce,... walnut catsup, horseradish, Worcestershire Sauce, olives, chow-chow..."

1047. *Manufacturer and Builder (New York)*. 1873. Notes & queries. 5(11):263-64. Nov. See p. 264.

• **Summary:** "[801] Worcestershire sauce [homemade].—This is quite a complex condiment. It is made of wine vinegar, 1½ gallon; walnut catsup, 1 gallon; mushroom catsup, 1 gallon; Madeira wine, ½ gallon; Canton soy [China], ½ gallon; moist sugar, 2½ pounds; salt, 19 ounces; powdered capsicum, 3 ounces; pimento, 1½ ounces, coriander, 1½ oz.; chutney, 1½ oz.; cloves, 3/4 oz.; mace, 3/4 oz.; cinnamon, 2/3 ounce; asafoetida [asafetida], 6½ drachams dissolved in 1 pint brandy 20° above proof. Boil 2 pounds hog's liver for 12 hours in 1 gallon of water, add water continually so as to keep up the quantity of one gallon; mix the boiled liver thoroughly with the water, strain through a coarse sieve, and add this to the above mixture. It is self-evident that no chemical examination could ever detect the presence of half the above organic products."

Note 1. This is the earliest document seen (March 2012) that contains a recipe for Worcestershire sauce.

Note 2. This is the earliest document seen (March 2012) that contains a recipe for Worcestershire sauce in which soy sauce is used as an ingredient.

1048. Balfour, Edward. 1873. *The Cyclopaedia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures*. 2nd ed.: Soy [sauce]. Madras, India. Printed at the Scottish and Adelphi presses. See vol. 5, p. 517. 26 cm. Reprinted in 1985 by International Book Distributors, Dehra Dun, India. [6 ref]

• **Summary:** The section titled "Soy" (p. 517), which is about soy sauce, states: "Tsiang-yu, Chinese. Soya [sic, shoyu / shōyu], Japanese. This well-known sauce is made from the *Soja hispida* which grows in China and Japan. In Java it is procured from the *Phaseolus radiatus*, the green gram, haree moong or putchay payroo of India. The beans are boiled soft with equal quantities of wheat or barley, and left for three months to ferment; salt and water are then added when the liquor is pressed and strained, 1,108 piculs of soy were shipped in Canton in 1844, for London, British India and Singapore; 100 jars, or about 50 gallons of soy were received at Liverpool in 1850. Its price is about 6s. per gallon in the London market, and the Japan soy is superior to the

Chinese. Genuine soy is well flavoured, thick, brown, and clear; and when shaken in a glass, it should have a coat on the surface of a bright yellowish-brown colour. It is obtained from Canton; but the best is exported from Japan, by way of Batavia.”

Note: This is the earliest English-language document seen (April 2012) that uses the term “Tsiang-yu” to refer to the Chinese word for soy sauce.

“Good soy is agreeable when a few years old, the Japan soy is superior to the Chinese. Large quantities are shipped for England and America. The *Dolichos* bean is much cultivated in Japan, where various culinary articles are prepared from it, but the principal products are a sort of butter termed mico, and a pickle called sooja. The flavour and ingredients of soy vary considerably, even among the people who make it, and much of that exported is supposed to be more or less adulterated.”

Note: This is the earliest document seen (Oct. 2001) concerning adulteration of (or with) a soy product—in this case of soy sauce.

“Peas and beans form important objects of culture, and the condiment called soy (a word derived from the Japanese soya), is prepared chiefly from a species of *Dolichos*. One of the commonest modes of making this condiment is to skin the beans, and grind them to flour which is mixed with water and powdered gypsum, or turmeric. The common Chinese eat few meals without the addition of one form or other of the ‘bean’ curd, or ‘bean’ jelly. The soy was at one time largely used as a condiment in the several countries of Europe but has latterly been displaced with others.”

The next entry is “Soy Bean, Anglo-Jap. *Soja hispida*” (which see).

Soy is not mentioned at Bean Curd, Beans, Legumes, or Leguminosae. Address: L.R.C.S.E., Inspector General of Hospitals, Madras Medical Dep. [India].

1049. Balfour, Edward. 1873. *The Cyclopaedia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures*. 2nd ed.: Soja, *Soja hispida*. Madras, India. Printed at the Scottish and Adelphi presses. See vol. 5, p. 458. 26 cm. Reprinted in 1985 by International Book Distributors, Dehra Dun, India. [2 ref]

• **Summary:** “*Soja*, a genus of plants belonging to the natural order Leguminosae. *Soja hispida* (Moench), *S. japonica* (Savi), the *Dolichos soja*, (Linn.), is a native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to form a favourite dish called ‘ten-hu,’ or ‘tau-hu’ [tofu], which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome. The Japanese call the seeds ‘miso,’ and put them into soup, of which they sometimes partake three times a day. They

likewise prepare with them the sauce termed ‘sooja,’ which has been corrupted into ‘soy.’ Soy is only sparingly used as a sauce in Great Britain. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation.—*Eng. Cyc.*”

“*Soja hispida*, Moench, W.&A., Grah. *S. japonica*, Savi. *Dolichos soja*, L., Roxburgh. *Garu kulay*, Bengali. *Sahuca* bean, English. Soy-bean, English. *Bhut*, Punjabi.

“This plant grows in the N.W. Himalaya, in Nepal, at Taong Dong, in China, Japan and the Moluccas. It is found in the Sutlej valley between Rampur and Sunnam at an elevation of 6,000 feet. It is cultivated in many parts in the north of India. This is the well-known Chinese bean, which constitutes such large article of trade between the northern and southern parts of China. Of all vegetable substances, it is richer in nitrogenous or flesh-forming matter than any yet discovered, The *Sahuca* bean, is the white *Soja hispida*. *India Museum.*”

Note: This is the earliest English-language document seen (Aug. 2003) that uses the word “nitrogenous” in connection with the soybean—to refer to its protein. Address: L.R.C.S.E., Inspector General of Hospitals, Madras Medical Dep. [India].

1050. Beecher, Catharine Esther. 1873. *Miss Beecher’s housekeeper and healthkeeper: Containing five hundred recipes for economical and healthful cooking; also, many directions for securing health and happiness*. New York, NY: Harper & Brothers, Publishers. 482 p. See p. 35, 110-11. Index.

• **Summary:** In Chapter 4, Soups, the introduction titled “General directions” (p. 35) states: “If you flavor with wine, soy [sauce], or catsup, put them into the tureen, and pour the soup upon them, as the flavor is lessened by putting them into the soup-kettle.”

Chapter 21, “On setting tables and preparing various articles of food for the table,” has an introductory section where we read: “Pickles are served especially with fish, and Soy is a fashionable sauce for fish, which is mixed on the plate with drawn butter.”

Note: Drawn butter is ghee (also called clarified butter), which is simply melted butter with the upper and lower sediments removed. To make it: Melt butter completely over low heat. Remove from heat and allow to stand for several minutes as the milk solids settle to the bottom. Skim the butterfat off the top, then strain the clear yellow liquid into a container, and serve. Address: New York.

1051. *Collections of the Georgia Historical Society*. 1873. Letters from Sir James Wright: An account of the exports from the Port of Savannah in Georgia to foreign plantations between the 5th January 1772 and the 5th January 1773. 3:157-378. See p. 176. [2 ref]

• **Summary:** A table (p. 176) shows exports from the port

of Savannah, Georgia, to foreign plantations between 5 Jan. 1772 and 5 Jan. 1773. “Soy in quart bottles, 5 dozen. Sago powder, 110 lbs.”

First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished. \

1052. Douglas, Carstairs. 1873. Chinese-English dictionary of the vernacular or spoken language of Amoy, with the principal variations of the Chang-chew and Chin-chew dialects. London: Truebner & Co. xix + 613 p. 28 cm.

• **Summary:** The Preface notes that the written language of China is uniform throughout the whole of China, but it is pronounced differently when read aloud in the different parts of China. Various spoken languages of China have already been studied by Western residents in China: the Mandarin, the Hakka, the vernaculars of Canton and Amoy, etc. The Amoy vernacular is believed to be spoken by 8-10 million people. Chinese characters are not used in this dictionary.

Abbreviations (at start of parentheses): R. = Reading or literary style as to sound or meaning. C. = Chang-ebew dialect. Cn. = Chin-chew dialect.

Soy-related terms include: chiap (R. id.), (Cn. tsap; p. 46 L.2) “juice, sap, gravy, etc. kôe-chiap, brine of salt or pickled fish, &c.” kē (Amoy = kôe; p. 201 L.7) “Pickled fish or shell fish.” kē-chiap (implied; p. 46 L.2).

hû (p. 156 R.3) tâu-hû “bean-curd shaped into squares (from the pulpy ‘tâu-hoe’), but not yet pressed. See tâu.

kôe-chiap (p. 242 L.4) “Brine of pickled fish or shell fish.”

tâu (p. 480 L.3) “pease or beans, pulse.” tau-khe “bean-cake from north China used as manure.” tâu-iû “soy [sauce].” tâu-chiû “a thick sauce made from pulse.” tâu-sî “salted beans” [fermented black soybeans]. tâu-hoe “soft bean curd not yet pressed or shaped.” tâu-chiû or tâu-hû “bean-curd shaped but not yet pressed.” tâu-hû-phê “bean curd made into thin sheets [yuba] for wrapping around eatables.”

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term *tâu-hû-phê* to refer to yuba.

te tâu-hû “to shape the pieces of ‘tâu-hoe’ into pieces of ‘tâ-hû.’” tâu-koa “bean-curd that has been pressed in a cloth.” tâu-jú “bean-curd that has been pressed in a cloth then cut into smaller pieces and salted.” tâu-kiâm or tâu-che or tâu-thâu “refuse from manufacture of bean curd” [okara].

Note 1. A new, revised edition of this work was published in 1899 in London by Presbyterian Church of England. A supplement by Douglas and Barclay was published in Shanghai in 1923. In some cases, the 1923 edition is bound at the back of the 1873 edition. The 1873 edition is dedicated to Rev. James Legge, D.D., a Christian missionary and Chinese scholar.

Note 2. This is the earliest English-language document seen (Oct. 2001) that mentions okara, which it calls “refuse

from manufacture of bean curd,” along with its Chinese vernacular names.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the term “cake” or “bean-cake” to refer to ground, defatted soybeans.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the many terms such as “tâu-hoe,” “tâu-hû-phê,” “tâu-koa,” or “tâu-jú” to refer to the many uniquely Chinese varieties of tofu.

Note 5. This is the earliest English-language document seen (April 2012) that contains the terms “kôe-chiap” or (by implication) “kê-chiap” to refer to pickled fish or shell-fish. These terms are said by some to be the ancestors of the Malay word *ketjap* / *kecap* meaning soy sauce.

Note 6. Schlegel (1894, p. 143 footnote) gives the character for *Kê-tsiap* but the 1873 ed. of Douglas’ dictionary gives no Chinese characters for any of the words defined. Address: Rev., M.A., LL.D. Glasgow, Missionary of the Presbyterian Church in England.

1053. First Presbyterian Church. 1873. Presbyterian cook book, compiled by the ladies of the First Presbyterian Church, Dayton, Ohio. Dayton, Ohio: Printed by Oliver Crook & Co. 136 + [81] p. No index. 22 cm.

• **Summary:** This cookbook contains 2 recipes with “soy” in the title but no soy used as an ingredient. Moreover, soy is not even mentioned in the body of the recipe. Celery soy (p. 40. The main ingredient by far is tomatoes {1 peck = 8 quarts}, followed by onions, and celery). Currant soy (handwritten near back of book on unnumbered page. The main ingredients are 5 lb. ripe currants, 3 lb brown sugar, and ½ pint vinegar).

Note: This is an early charity cookbook, published to benefit a charitable cause. The category began after the Civil War (MSU introduction).

1054. Harland, Marion. 1873. Common sense in the household: A manual of practical housewifery. New York: Scribner, Armstrong & Co. 556 p. Index. 20 cm.

• **Summary:** Worcestershire sauce is used as an ingredient in 15 recipes in this book. The first three of those are: Beef soup (brown) (“a teaspoonful of Worcestershire sauce,” p. 37). Vermicelli soup (p. 38-39). Giblet soup (“A little Worcestershire sauce is an improvement,” p. 40-41).

There is also a recipe for “Imitation Worcestershire sauce” (p. 195) with these ingredients: “3 teaspoonfuls cayenne pepper, 2 tablespoonfuls walnut or tomato catsup (strained through muslin), 3 shallots minced fine, 3 anchovies chopped into bits, 1 quart of vinegar, half teaspoonful powdered cloves.” Note: This is the earliest document seen (Feb. 2012) that contains a recipe for Worcestershire sauce or “Imitation Worcestershire sauce.”

A recipe for “Green tomato soy” contains no soy sauce used as an ingredient. Moreover, “soy” is not even

mentioned in the body of the recipe. The ingredients: “2 gallons tomatoes, green, and sliced without peeling, 12 good-sized onions, also sliced, 2 quarts vinegar, 1 quart sugar, 2 tablespoonfuls salt, 2 tablespoonfuls ground mustard, 2 tablespoonfuls black pepper, ground, 1 tablespoonful allspice, 1 tablespoonful cloves.” “Mix all together and stew until tender, stirring often... Put up in small glass jars. This is a most useful and pleasant sauce for almost every kind of meat and fish.”

Note: “Marion Harland, the pen name of Mary Virginia Terhune (lived 1830-1922), was among the most popular cookery authors of her day.” She was also a renowned southern novelist (MSU introduction and biography).

1055. Hepburn, James C. 1873. Japanese-English and English-Japanese dictionary. Abridged by the author. New York: A.D.F. Randolph & Co.; London: Trübner & Co. vi + 330 + 206 p.

• **Summary:** “Preface: In order to render the Dictionary more portable and convenient in size, the Author has thought it best to abridge the larger work and bring it out in its present form. In so doing, he has omitted the Chinese and Japanese characters, the synonyms, and the examples showing the use of the words, excepting such as contained a peculiar idiom, and which could not be included in a definition. All the native Japanese words, with the exception of those which were rarely used or obsolete [such as Yu-dofu], have been retained; as, also, all the words derived from the Chinese which are in current use.”

“The Second, or English and Japanese, Part, has not been abridged or altered from the original, except in the correction of such typographical errors as were met with.”

Note 1. New words in this edition that are not in the 1867 edition are preceded by “**.”

Soy-related terms: Adzuki: A small red bean. Amazake: Sweet sake, a kind of fermented rice. Daidzu: A large white bean. Soja hispida. Hiriodzu: A kind of food made of tofu fried in oil.

Kinako: A kind of food made of beans. Kiradzu: The refuse of beans left in making tofu. Koji: Barm or yeast. Koji-buta: A shallow box for holding barm. Miso: A kind of sauce made of beans.

** Moromi: The grounds left in making soy [sauce], used as an article of food.

Note: This is the earliest English-language document seen (April 2012) that contains the word “Moromi.” However the definition is poor. The word *moromi*, which is often translated as “mash,” is the stage in making soy sauce (it has a consistency resembling apple sauce) before the liquid shoyu (soy sauce) is pressed out, leaving behind the shoyu presscake or residue (which could be called “grounds”).

Natto: A kind of food made of beans. Nigari: The brine formed by the deliquescence of salt. Sashimi: Raw fish cut

in thin slices and eaten with soy. Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Tofu: A kind of food made of beans. Yuba: A kind of food made of beans.

Terms NOT mentioned include Aburage, Abura-age, Aburaage, Daitokuji natto, Edamame (or Eda mame or Yedamame), Hamanatto, Hiya-yakko, Koya-dofu, Kori-dofu, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 2. The author apparently did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans. Address: M.D., LL.D.

1056. Heuzé, Gustave. 1873. Les plantes alimentaires [Edible plants. 2 vols.]. Paris: Librairie Agricole de la Maison Rustique. Undated. See Vol. II, p. 381-82. 27 cm. [soy ref. Fre]

• **Summary:** Vol. II, Part II concerns “Leguminous plants with pods.” In Book 2, titled “Dolic or dolique” (p. 371+), Chapter II (p. 373-83) concerns “Species and varieties.” The soybean is in the second major group, “Dwarf dolics” (p. 380), as follows: Variety “15.—Japanese soybean (*Dolic du Japon. Dolichos soja*, Linn.; p. 381-82) states: Synonyms: *Dolic soja. Soja japonica*, Sav. *Dolic à café* [the coffee bean]. *Soja hispida*, Moench.”

A botanical description in French follows: “The stems, which are from 65 to 100 cm tall, are hispid / hairy, straight, straight, and rust-colored. The leaves have three cordiform folioles, equipped with stipules; flowers violet, sessile [attached directly by the base], in short clusters, straight and axillary [growing from an axil]. The pods are lightly curved, slightly pendulous, very short, bumpy, and covered with rust-colored hairs. The seeds are oval, shiny, compressed, clear nankeen (*nankein clair*; brownish yellow) in color, and almost dull.

This variety is cultivated in China, Japan, and Asia. Its flowers are white, purple, or violet, according to the variety.

The types that are most widely cultivated, after the core / main type [nankeen colored], are two: 1. The black soybean (*Le soja noir, Soja hispida*). 2. The yellow soybean (*Le soja jaune, Soja ochroleuca*).

The Japanese transform the seeds of this dolic into a paste (*miso*), with which they make a sauce (*soja*), which they use to prepare various foods.

This species is an annual; in France it has been called *pois oléagineux* (“oil peas”). It was introduced here from China by Mr. de Montigny. It is cultivated in some points in the departments of Ariège and of Haute-Garonne. It grows rapidly and is quite resistant to drought.

Also discusses: *Dolichos tetragonolobus* L. Synonyms: *Pois carré* (in Europe). *Psophocarpus tetragonolobus* DC. In India it is known as *mourou-kouavré* (p. 377). Gustave Heuzé lived 1816-1907. The book is undated, but the date usually given in catalogs is 1873 (less commonly as 1872). Address: Member of the Central Society of Agriculture of France. Adjunct inspector general of agriculture.

1057. *American Agriculturist*. 1874. The Japan pea. 33(2):63-64. Feb. With one engraving.

• **Summary:** “The Southern seedsmen have advertised and southern journals have had articles in relation to the Japan Pea... we last spring obtained from Mark W. Johnson, dealer in seeds and agricultural implements, Atlanta, Ga. [Georgia], a sample of these peas... This fall we have received a sample of the same pea from L.L. Osment, Cleveland, Tenn. [Tennessee], who says they are ‘unsurpassed for table use.’

“The plant grows to a height of three or four feet, and is hairy in all its parts... Mr. Johnson, who sent us the seed, wrote ‘not desirable for table use.’ Remembering to have seen the same thing some years ago in the garden of a friend near Boston we wrote him for his experience. He writes: ‘They may be delicious to the celestial palate, but my wife found them hard to cook and I found them hard to eat—never getting soft no matter how long they were boiled.’ Thus far we think the weight of evidence is against their utility as a table vegetable. As an agricultural crop, they are highly promising, at least in localities where the seasons are sufficiently long to mature them. Mr. Johnson speaks highly of the wonderfully prolific character of the pea, and its excellence as a food for stock. It is so much esteemed in some quarters that it has received the rather extravagant name of ‘Southern Relief Pea.’ Mr. Osment claims it to have produced 200 bushels to the acre. From the manner in which the pods set upon ours we should judge the yield would be very large. This pea is deserving the attention of cultivators as a fodder crop and for plowing in as a fertilizer. As to what the pea is botanically we are not quite sure; it does not belong to the proper Pea (*Pisum*), but is very near the Chinese Soy Pea, and is probably a form of that or a closely related species. The Soy Pea (formerly *Soja hispida*, but now *Glycine Soja*) is cultivated in China, Japan, and other parts of the east, and is used to make the sauce called Soy, which was formerly more used than at present.”

A handsome illustration (engraving; p. 64) shows “The Japan Pea” by J.W. Fasel. Note 1. This document contains the earliest illustration seen (Aug. 1996) of the soybean in the USA.

Note 2. This is the earliest document seen (Aug. 2011) that clearly refers to soybeans in Tennessee, or the cultivation of soybeans in Tennessee. This document contains the earliest date seen for soybeans in Tennessee, or the cultivation of soybeans in Tennessee (summer 1873).

Note 3. This is the earliest English-language document seen (Feb. 2002) that uses the terms “Soy Pea” or “Chinese Soy Pea” or “Southern Relief Pea” to refer to the soybean.

Note 4. This is the earliest English-language document seen (March 2008) which states that the scientific name of the Japan pea is probably *Glycine Soja*, previously *Soja hispida*—that is, the soybean.

Note 5. This is the earliest document seen (Jan. 2000)

stating that a seed dealer in the USA (Mark W. Johnson in Atlanta, Georgia) is selling soybeans for seed use. Line 1 implies that earlier advertisements exist.

Note 6. This is the earliest English-language document seen (July 2002) that describes “plowing in” soybean plants in the USA for use as a fertilizer [green manure] to improve the soil.

Note 7. Starting with this article, and continuing until after World War II, some writers incorrectly referred to the scientific name of the cultivated soybean as *Glycine soja*, whereas that is actually the scientific name of the wild soybean.

Note 8. This is the earliest document seen (Nov. 1998) that uses the word “promising” in connection with the soybean as an agricultural crop—in any country worldwide.

1058. *Chicago Daily Tribune*. 1874. The courts:

Counterfeiting of Worcestershire sauce. March 3. p. 2.

• **Summary:** “Worcestershire sauce. John W. Lea, C.W. Lea, and J.D. Perkins [sic, Perrins], copartners as Lea & Perkins [sic, Lea & Perrins], of Worcester, England, and the manufacturers of the well-known ‘Worcestershire Sauce,’ filed a bill in the United States District Court against Charles Hastings.

“Complainants assert that they are the original manufacturers of the ‘Worcestershire Sauce’, and have been for the past thirty years [i.e., since about 1844]. Their sauce is put up in bottles with the name blown in, and with a red label constituting their trade-mark, having their names and the words ‘Worcestershire Sauce’ printed thereon. A white label, smaller in size, containing directions, is also pasted on each bottle. These wrappers of different character are put around each bottle. They have lately ascertained that one Charles Hastings, of Chicago, is manufacturing an article similar in outward aspect to their own. The labels and wrappers are so much alike that none but an expert would be likely to detect the difference. They claim that their trade and reputation are seriously affected; that the imitation of Hastings is very close, and he is selling his production as genuine. An injunction is therefore asked and an account.

“Filed with the bill are two affidavits... and the other by Henry M. Collyer, counsel in the present case. Hastings has sold his firm his imitations as such, but alleging that it is as good as the original. Mr. Collyer, who is from New York, states that he has been as the attorney for Lea & Perkins [sic, Perrin], engaged for some years in prosecuting infringements of their sauce. Some time ago he visited Hastings at his manufactory, No. 211 South Halsted street, representing himself as desirous of purchasing some of the defendant’s sauce. Hastings told him that the price of the cases was \$30 for those containing small sized bottles, and \$55 for those containing the larger size. Collyer noticed that the bottles were labeled like the genuine, the wrappers identical, and the bottles packed in hay, like Lea & Perkins’. Hastings

stated that he sold his manufacture as the genuine; that no one would know the difference; that he had sold to Farwell, Steele, & Pratt, to Phil Conley, of the St. Charles Hotel, and others, and thought his article was nearly as good as the original. Collyer however states that the component parts of the imitation are poor and often disgusting, and it does not cost so much as the original.”

“Altogether, the imitation, as a bank-detector would say, is a ‘very dangerous counterfeit.’”

1059. *Chicago Times*. 1874. The U.S. Circuit Court: Worcestershire sauce. March 3. p. 7, col. 5.

• **Summary:** “The manufacturers of this palatable article, Messrs. John W. Lea, Charles W. Lea, and James D. Perrins [sic, Perrins], all of whom are subjects of the British crown, filed a bill in this court on yesterday, in which they set forth in a boastful sort of way, that they are the only persons living, who have any show of right to manufacture stuff of this kind. They state that they have been accustomed, for some years past, to manufacture it with great care and in large quantities, and afterward to put it up in bottles, each of which is adorned with an elegant label bearing their firm name and trade mark. No other persons have any right to use these bottles or labels, or any like them, but yet one Charles Hastings, of Chicago, has dared to get up a compound in imitation of the one they prepare, and put it up in bottles similar to theirs, with similar labels, similar directions for use, etc., all of which is unlawful, as they think, and able to do them great injury. They, therefore, ask that he may be compelled to answer their bill; to give an account of all profits he may have made from the manufacture, and to turn the same over to them, and also that he may be enjoined from further trespassing on their just rights.”

Note: This is the earliest reference seen (Feb. 2012) to Worcestershire sauce in a Chicago newspaper.

1060. *Grocer (The) (London)*. 1874. Sauces: Lazenby, Harvey’s, Clarence’s (Ads). 25(636):iv, 211-12. March 7.

• **Summary:** On page iv are three small (1 by 3 inch) ads for sauces, including the address of each company; none of them claim to contain soy, and the first two warn against inferior imitations. (1) “E. Lazenby & Son’s pickles, sauces, & condiments.” (2) Harvey’s Sauce. Caution. “Bears the label used so many years, signed ‘Elizabeth Lazenby.’” (3) Clarence’s celebrated sauce. “Pronounced by connoisseurs the only good sauce. It improves appetite and digestion, and is unrivaled for its flavour. Wholesale, Crosse and Blackwell; and may be had of Grocers and Italian Warehousemen.” In pints and half-pint bottles.

On pages 211-12 is a buyers’ and sellers’ directory. Under “Pickle and sauce manufacturers” are listed (with address) J. Burgess, Carter Hales & Co., and Jacob Stower & Son. Under “Sauce manufacturers” is listed only Goodall, Backhouse, & Co.

Note 1. Lea & Perrins does not advertise their Worcestershire sauce in this magazine and they are not mentioned among pickle and sauce manufacturers.

Note 2. An Adulteration Act has been enacted to protect consumers. Isaac Hatch & Co. of Bristol has a large ad for “Adulteration Detectors.” This is “A very powerful microscope, so constructed as to show the slightest admixture of any substance with Tea, Coffee, Cocoa, Mustard, Pepper, Spices, and every article of manufacture.” One confectioner was charged with selling “adulterated lozenges.”

One ad is for “E.M. Bagot’s Pure Extract of Meat” (March 14, p. xiii). It is used by the Admiralty, the Royal Victoria Hospital, etc. and is “pronounced to be superior to ‘Liebig’s Extractum Carnis,’ and is considerably less in price.” Another ad (March 28, p. 2) is for “Liebig Company’s Extract of Meat.” “As ‘stock’ for beef-tea, soups, made dishes and sauces; gives fine flavour and strength. Invariably adopted in households when fairly tried. Caution. Genuine with the fac-simile of Baron Liebig’s signature, in blue, across Trade Mark Label.” Note: The book *Popular Fallacies Explained and Corrected*, by A.S.E. Ackermann (1923, p. 43) contains numerous quotations arguing that “Liebig’s Extract of Meat” and “Beef-tea” possess only slight nutritive properties. They are salty stimulants—not proteid foods.

Another ad (March 14, p. xiv) is for Greenwich sperm candles. The company Wilkie & Soames, of Greenwich, London, S.E., manufactures paraffine [paraffin], sperm, and stearaffine candles, hard soaps, saponified stearine, and tallow oil.

1061. *Grocer (The) (London)*. 1874. Price current. Saturday, March 7, 1874. 25(636):209-10. March 7.

• **Summary:** “Articles in the following List subject to duty are quoted with the duties paid as annexed...” “Soy” [sauce] is £1 and 5 pence, with a duty of 1 pence.

Also on the list are linseed oilcake, rape oilcake, many different oils and fats (not including oil from soybeans), small pearl sago, sauces, and pickles. Butter is measured in firkins. In the category “Provisions” are butter, Canadian butters, Irish butter, bacon, Irish bacon, ham (beware putrid hams), pickled meats, pork (in barrels), dressed hogs, lard, beef, Australian meats, cheese, American cheese, and eggs. Widely used oils (see Supplement, p. 5) are linseed oil, rape oil, olive oils, Florence oil, refined cotton oil, cocoanut oil, palm oil, fish oils (incl. sperm oil, which is now expensive), colza. Among the seeds (p. 6 and later issues) are “Dutch hempseed,” rapeseed, cloverseed, canaryseed.

Note 1. This is the earliest English-language document seen (Nov. 2005) that contains the term “linseed oilcake” or the term “rape oilcake.”

Note 2. This is the earliest English-language document seen (Nov. 2005) that uses the term “cotton oil.”

Note 3. This is the earliest English-language document seen (Aug. 2003) that contains the word “hempseed” (or “hempseeds”).

1062. **Product Name:** Mellor’s Worcestershire Sauce.

Manufacturer’s Name: Mellor & Co.

Manufacturer’s Address: Malvern, Worcestershire [England].

Date of Introduction: 1874. March.

Wt/Vol., Packaging, Price: Bottle.

New Product–Documentation: Ad in *The Grocer* (London). 1874. March 28. p. xii. “Mellor’s Worcestershire Sauce. Ask for Mellor’s Sauce and observe the green guarantee labels on every bottle. Sold by wholesale vendors everywhere. For foreign agents, see names on labels. Registered. The only sauce sold genuine at half price. One-shilling bottles for sixpence. Two-shilling bottles for one shilling.” A small illustration (line drawing) shows the bottle.

Note 1. The ad does not state that this brand contains soy sauce.

Note 2. Lea & Perrins does not advertise their Worcestershire sauce in this magazine and they are not mentioned among pickle and sauce manufacturers.

1063. *Chicago Daily Tribune*. 1874. The courts: Another imitator of Worcestershire sauce. April 3. p. 3.

• **Summary:** “More Worcestershire-sauce troubles. Judging from the suits of infringement of patents brought here, Chicago must be a flourishing place for bogus manufactures. Especially does this appear to be the fact in regard to counterfeits of Lea & Perkin’s [sic, Lea & Perrins] ‘Worcester Sauce.’ About six weeks ago Lea & Perkins filed a bill against a party on Blue Island avenue, and yesterday two more cases were commenced, one against Charles Lutz [Leitz] and William Lewis, the other against Edward Cole.”

The complainants state that “Charles Lutz has for some time been engaged in the manufacture of an imitation of their sauce. The labels employed by him... state that the sauce was manufactured by ‘Lewis & Co.,’ of Worcestershire and London. A circular, which is issued by the spurious firm, states that they are the only manufacturers of the genuine Worcester sauce, and warns the buyer of spurious imitations, designating, with cool effrontery, the original makers, Lea & Perkins [sic], as imitators. An affidavit filed by H.M. Collyer, the counsel” for Lea & Perrins describes how about 6 weeks ago he “formed the acquaintance of this Charles Lutz at No. 85 Washington street. Lutz pretended that he imported all his sauce in bottles from England, and that it was true blue [genuine].” Collyer, however, found that the sauce was made in “the basement of a brick block on the southeast corner of State and Kinzie streets. Here he saw Lutz engaged at work with a large kettle, in which the sauce was made, with barrels to hold it when boiled, and numerous bottles, labels, and boxes for it preparatory to shipment.”

“In the case against Cole, it is alleged that he was formerly engaged with a party named Stevens in New York. The labels of that firm set out in glowing colors the excellence of their article, the ‘Gold Medal Worcester Sauce,’ which is represented as having taken sundry prizes at various places, and as being employed to aid the digestion of majesty herself in England. Stevens appears to be a myth, and Cole, after having been sued in New York, has flown to, what he considers, a more congenial climate in Chicago.” But he has now been found and caught again.

1064. *Manchester Guardian (England)*. 1874. Commercial markets: London Produce Market, Thursday. April 24. p. 7.

• **Summary:** “Drugs.—54 cases Malabar cardamums, partly sold, at 3s. 4d... 100 casks China soy [sauce], partly sold, at 1s. 6d. for thick;...”

1065. Davis, Rebecca Harding. 1874. Earthen pitchers: Chapter XV. *Scribner’s Monthly* 7(6):714-21. April. See p. 717.

• **Summary:** “‘Though I never approved of girls eating meat. It ruins the complexion. “You ought to have spent the day with me. I was putting up tomatoes, canning catsup and soy. Of course, you don’t know how to make good soy?”

“‘I’m afraid not.”’

1066. Duncan’s (John) Sons. 1874. Sauces. Trade-mark: Worcestershire sauce (Ad). *New York Times*. May 16. p. 6.

• **Summary:** “Supreme Court—General term. John W. Lea et al. against Sundry Counterfeiters. ‘When it is apparent that there is an intention to deceive the public by the use of the name of a place and the word descriptive of an article, such deception will not be protected by the pretense that these words cannot be used in such a manner as to constitute a ‘trade mark.’

“‘Where words and the allocation of words have, by long use become known as designating the article of a particular manufacturer, he acquires a right to them as a trade-mark, which competing dealers can not fraudulently invade.

“‘The essence of the wrong is the false representation and deceit, on proof of which an injunction will issue.’

“The concluding words of the judge’s decision are: ‘The order appealed from should be modified and the injunction extended so as to prohibit the use of the words ‘Worcestershire Sauce’ on the bills, labels, and wrappers of the defendant.’

“Lea & Perrins’ celebrated Worcestershire Sauce.

“Pronounced by connoisseurs to be the ‘only good sauce,’ and applicable to every variety of dish.”

Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. ‘Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most

wholesome Sauce that is made.'

"Sold Wholesale and for Exportation by the Proprietors, Lea & Perrins, Worcester, England; and Retail by Dealers in Sauces generally throughout the World.

"Ask for Lea & Perrins' Sauce. All parties infringing on the above will be prosecuted by Messrs. Lea & Perrins."

A large illustration of a bottle of Lea & Perrins Worcestershire Sauce, with the label in plain view, appears in the middle of the ad.

Note 1. This is the earliest document seen (March 2012) that mentions the Supreme Court in connection with Worcestershire Sauce.

Note 2. This is the earliest document seen (Feb. 2012) concerning Worcestershire Sauce with this illustration, or with this format or text. Address: New York.

1067. *Chicago Daily Tribune*. 1874. The courts: Miscellaneous business transacted yesterday. May 19. p. 2.

• **Summary:** "A few months ago, it will be remembered, Lea, Perrin & Co. filed bills in the United States Circuit Court against various Chicago parties for infringements of their Worcestershire sauce. Among the unfortunates who were detected and enjoined from further manufacturing any spurious imitation of the plaintiffs' brand were Charles Leitz [Lutz] and William Lewis.

"Yesterday Leitz, his occupation being gone, filed a bill against his partner, Lewis, for a dissolution of partnership. Leitz states that in February last, he formed a copartnership with Lewis in the business of manufacturing table-sauce, perfumes, soaps, pomades, etc. The firm name was to be 'Charles Leitz, agent for Lewis & Co., London,' and was to continue five years. Complainant was to provide the capital...

"It is now alleged that the business of the firm has never been successful, and that Leitz has lost a good part of the \$1,800 contributed by him. Lewis has neglected his duties, overdrawn his share of the profits, and even converted large amounts to his own use out of the goods manufactured for sale..."

1068. Duncan's (John) Sons. 1874. There is no relish in the world which is so universally liked... (Ad). *New York Times*. Dec. 24. p. 6, col. 6.

• **Summary:** "There is no relish in the world which is so universally liked as Lea & Perrin's [sic] famous Worcestershire Sauce. Unfortunately, much that is counterfeit and worthless is sold in this country. Messrs. John Duncan's Sons are the most reliable agents for the pure sauce."

Note: This is the earliest document seen (Feb. 2012) that contains the title or opening sentence ("There is no relish...") repeated many times hereafter. However, subsequently it was always deceptively attributed, "From New-York Times," as if were a statement or evaluation of the sauce by the *Times*, whereas, in fact, it was originally a sentence published as an advertisement in the *Times* by John Duncan's Sons, the

New York agent for Lea & Perrins. Address: New York.

1069. Hoffmann, J.J. 1874. Ueber die Bereitung von Schoju, Sake und Myrin [On the preparation of shoyu, saké and mirin]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens (Yokohama)* 1(6):8-11. Dec. [Ger]

• **Summary:** The author was the first Westerner to make a scientific study of the shoyu process, of which he gives an accurate and detailed 2-page description: Soybean sauce (*Bohnensauce- Schoju*)—shoyu—is for the Japanese almost as indispensable as rice and is used as widely as tea or tobacco. The rich man and the beggar use it in the same way, but with differences in quality, as the main seasoning at their meals, and in no household, in fact at no meal may it be absent.

It is made in large factories, and in countless stores in all cities and towns throughout the entire island empire, it is stocked and sold in small wooden kegs.

It is made with soybeans, indeed very high protein, starch-free small soybeans (*Dolichos Soja* jap. Nagatamame), plus wheat, salt, and water in the same proportions by volume. Small kegs are used to measure the ingredients. The beans and grains are used in the same condition of dryness.

Before the basic raw materials are mixed, the soybeans are cooked in large iron kettles for half a day. The wheat is roasted in large containers (*Steingefaessen*) and then cracked into grits / pieces using a small hand-mills. Then the moist beans are mixed with the wheat grits on a firmly packed clay floor, then to them is added a fermentation starter culture consisting of wheat kernels covered with mold spores. The mixture is filled into rectangular wooden trays each about 2-3 inches deep, and these are placed and stacked in a closed room that resembles a large bakery oven.

Here the wooden trays stay for 3 days, during which time an effort is made to keep the room evenly warm throughout. During the cold seasons of the year the room is heated with a small charcoal burner. In this way the plant seeds gradually become covered with mold spores and develop their capacity to produce diastase enzymes. In cold weather, the room may be kept closed on the 2nd and 3rd days, but on warm days it may be vented using the door and windows during the 2nd and 3rd days to prevent overheating. To determine the suitable temperature, no thermometer is used; the feel of the maker is used instead.

On the 3rd day the contents of the wooden trays are thickly covered with a mycelium of mold. The contents of the trays is now transferred into large wooden vats (each of 20-30,000 liters capacity) and mixed with water and table salt. The contents of each vat is mixed with a wooden plunger as the fermentation proceeds. The process typically begins at the start of winter. The fermentation typically last for 3 to 5 years. The 3-year material is a dirty brown whereas the 5-year material is pure dark-brown in color.

The 3- and 5-year products are then mixed in equal

proportions. The 5-year material adds its pleasant aroma, but it has a somewhat unpleasant bitter taste. This is masked with the 3-year material which has a nice flavor but less aroma.

This mixture is now filled into sturdy cotton bags, each 2 feet long and ½ foot wide. These are then pressed with a very primitive angle press consisting of a long lever arm weighted at the end by large stones. The shoyu (*Schoju*) from the first pressing is the best and most expensive type, but it is usually not sold as such. Rather it is dispensed preferentially to those with advanced orders. It has the strongest aroma and a beautiful dark-brown color. When put in a glass and shaken it makes a fat-glistening ring.

The shoyu presscake (*Rueckstand*) is mixed with salt water and some days later, after frequent stirring, repressed. This shoyu is very clear with little aroma, so it is mixed with a good dark-brown shoyu and with some sweet sake (*suessem Sake*).

The wooden kegs in which shoyu is sold are everywhere the same having a capacity of 18 liters or 4.76 gallons (1 *to*). In new kegs, the shoyu keeps for only a few months; it keeps longer in older kegs. There are four grades of shoyu. The prices are 6 German marks for grade 1, 4 marks for grade 2, 3 marks for grade 3, and 2 marks for grade 4.

As an article for export, shoyu has not gained much significance, despite great efforts. During shipping there is a buildup of mold which impairs the good flavor and aroma. The best varieties of shoyu are, however, very pleasing to the taste of most Europeans, and at the same time very effective in stimulating the appetite and digestion. For these reasons and because it is completely harmless / safe, shoyu is preferred to many European products [such as meat extracts] that serve the same purpose.

Hoffman then describes how sake is made; yet nowhere in either of these two parts of the long article does he mention the word *koji*, even though he describes it. He learned all of this at the famous shoyu-mirin factory of Mr. Sagamia Monjiro in Nagareyama, 5 German miles north of Yedo / Edo [today's Tokyo].

Note 1. The date on the title page is Nov. 1876, but Hoffmann's paper was not presented until 1878. This is the earliest document seen (Oct. 2001) that is a study of several fermented foods, including one made from soybeans—shoyu.

Note 2. This is the earliest document seen (April 2012) that describes how to make soy sauce (actually shoyu) on a commercial scale.

Note 3. This is the earliest German-language document seen (April 2012) that uses the term *Schoju* or the term *Bohnensauce* to refer to shoyu or soy sauce. Address: Prof., School of Medicine, Tokyo Univ., Japan.

1070. Cre-Fydd. 1874. Cre-Fydd's family fare: The young housewife's daily assistant, on all matters relating to cookery and housekeeping... New ed. [7th], revised. London: Simpkin, Marshall, and Co. cxcvii + 340 p. Index.

• **Summary:** The author is a woman. The recipes that call for soy [sauce] in this 1874 edition are identical to (and on the same pages as) those in the 1863 ed, except for: Piquant sauce (p. cxcv). Address: Great Britain.

1071. Williams, Samuel Wells. 1874. A syllabic dictionary of the Chinese language; arranged according to the Wu-Fang Yuen Yin, with the pronunciation of the characters as heard in Peking, Canton, Amoy, and Shanghai. Shanghai, China: American Presbyterian Mission Press. lxxxiv + 1252 p. 28 x 22 cm. [8 ref. Eng; chi]

• **Summary:** In this dictionary, the Chinese characters are arranged alphabetically. Each main character, written large, has the pronunciation written below it, and the meaning written in English to the right. Below these are numerous compound words in which the character appears, followed by a definition of each. No pronunciation is given for compounds or combinations of several characters, such as teu-fu [doufu], which makes the dictionary hard to use. The main radical relating to soya is no. 151, Teu, 7 strokes, referring to pulses and sacrificial vessels (p. 874).

Page 145, under fu (rotten, corrupt, spoiled), lists the characters (teu-fu) for “bean curd; low policeman and underlings are named teu-fu-kwan because they live on and are no better than this curd; and also the teachers in low government schools.”

Page 764, under shi, lists the characters for “salted beans” [fermented black soybeans], “salted beans and flour,” “soy [soy sauce; shi yu in Chinese or shoyu in Japanese], an English word probably derived from this name.”

Note: This is the earliest English-language document seen (Nov. 2011) that uses the word “shi” to refer to fermented black soybeans.

Pages 874-75, under teu, list the characters for “legumes of every kind, pea, beans,” “bean-curd jelly” [tofu].

Page 968, under tsiang [ch'iang], lists the characters for “a relish made of salt mixed with bean or other kinds of flour, and water, and allowed to remain until cured; it is used as a condiment; relishes, sauces, condiments; salted preparations,” “a dry relish,” “a shop for sale of oilman's stores, and condiments,” “bean sauce, this is the basis of most of the Chinese relishes,” “vegetables seasoned in soy.”

On page 839, under ta (big), there is no listing for ta-teu, the soybean. On page 252, under hwang (yellow), there is no listing for hwang-teu, the yellow soybean. On page 580, under mao (hair), there is no listing for mao-teu (fresh green soybeans). Thus it seems that the compiler of this dictionary was unaware of the soybean.

Page 1111, under yiu, lists the character for oil in various combinations. When preceded by the character for “fragrant” it refers to “sesamum, gingilie, or benne oil,” made from the seeds of *Sesamum orientale*. Soybean oil is not specifically mentioned.

Note: This is the earliest English-language document

seen (Feb. 2005) that uses the word “benne” to refer to sesame seeds. Address: United States Legation, Peking.

1072. Goode (H.W.) and Co. 1875. Classified ad: Indian condiments. *Times (London)*. Jan. 12. p. 2, col. 6.

• **Summary:** “Nepaul and Cayenne Peppers, Curry Paste, Indian Soy [sauce], Chutnies, Guava Jelly, Pineapple Jam, &c.,...” This ad also appeared in the May 4 issue (p. 14, col. 1).

Note: The meaning of the word “Indian” could be much broader than it is today (Oct. 2010); it could extend from British India on the west to the Dutch East Indies (today’s Indonesia) on the east. Address: Chinese Warehouse, 32, King William-street, London-bridge [London].

1073. Duncan’s (John) Sons. 1875. Trade mark: Worcestershire sauce (Ad). *Buffalo Commercial Advertiser (New York)*. Feb. 4. p. 4, col. 5. Thursday evening.

• **Summary:** “Lea & Perrins’ celebrated Worcestershire Sauce. Pronounced by connoisseurs to be the ‘only good sauce,’ and applicable to every variety of dish.

“Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. ‘Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.’

“Sold Wholesale and for Exportation by the Proprietors, Lea & Perrins, Worcester, England; and retail by dealers in sauces generally throughout the world.

“Ask for Lea & Perrins’ Sauce. At the breakfast table it imparts the most exquisite relish and zest to hot or cold meat, fowl, fish, broiled kidney, &c.

“At the dinner table in soup, with fish, hot joints, game, and in all gravies, it gives a delightful flavor.

“At the luncheon and supper tables it is deemed indispensable to those familiar with its estimable qualities.

“From *New York Times*. There is no relish in the world which is so universally liked as Lea & Perrins famous Worcestershire Sauce.” An illustration shows a bottle of the Sauce.

Another small advertisement of “this delectable condiment” is found on page 3, col. 1. The quotation from *The New York Times* is repeated. Address: New York.

1074. Lea and Perrins. 1875. Classified ad: Caution—In consequence of spurious imitations of Lea and Perrins Sauce,... *Times (London)*. March 15. p. 1, col. 2.

• **Summary:** “... which are calculated to deceive the public, Lea and Perrins have adopted a new label bearing their signature, Lea and Perrins, which will be placed on every bottle of Worcestershire Sauce after this date, and without which none is genuine.—Crosse and Blackwell, Soho-square, Agents for the Proprietors.—November 1874.”

Note 1. This is the earliest document seen (Feb. 2012)

that mentions the plan to use the Lea & Perrins’ signature on the labels of their bottles to distinguish their genuine article from imitations. However the signature itself is not shown.

Note 2. This small published ad is the earliest document seen (Dec. 2005) concerning unfair practices or deception in connection with a soy product.

Note 3. This ad also appeared in the April 19 issue (p. 1, col. 1).

1075. Duncan’s (John) Sons. 1875. Sauces. Trade-mark: Worcestershire sauce (Ad). *New York Times*. March 26. p. 11.

• **Summary:** This ad is identical to that in the *Buffalo Commercial Advertiser* (4 Feb. 1875. p. 4, col. 5). It also appeared in the April 23 issue (p. 8) of the *New York Times*. Address: New York.

1076. Renard, Édouard. 1875. La pêche et la pisciculture dans l’Extrême Orient [Fishing and fish culture in the Far East]. *Bulletin de la Societe d’Acclimatation* 22:281-99. June. [Fre]

• **Summary:** Contents: Malaysia and the Indian Archipelago (*Archipel Indien*; probably Dutch East Indies). Cochinchina. China. Japan.

Mr. Dabry de Thiersant (p. 292) has written a magnificent work about fish farming (*la pisciculture*) in China, where all fish are classified into two large categories: (1) The cyprinids (family Cyprinidae, *Kia-Yü*) such as carp, etc., which are herbivores and which they raise in artificial ponds and in regular ponds (*les pièces d’eau, dans les étangs*). (2) Marine fish, and even some that live in fresh water, such as pike and perch, are called *Ye-Yu* or wild fish (*poissons sauvage*). These latter are often the bane of Chinese aquaculturists, who use every possible means to get rid of them when they are accidentally introduced into their fish ponds (*viviers*).

Note: This is the earliest European-language document seen (Nov. 2002) concerning fish farming or aquaculture; however soybeans are not mentioned.

In Japan, people of the upper classes (the officers, feudal lords {*daimyo*}, etc.) eat carp entirely raw. Removed from the water, it is served on the table on bamboo leaves—still alive. What are our colleagues at the Society for the Protection of Animals going to say about such a barbaric process? When all the meat has been cut from the bones so that only a skeleton is left, these thin slices of fresh carp meat, dipped in shoyu (*trempées dans la soya*), constitute one of the most savory dishes of Japanese epicures (*Lucullus*, p. 295).

Note: Lucullus, a Roman general who lived 117-58 B.C., was known for the splendor of his banquets.

Also discusses: Sea vegetables in Japan—kombu, fucus, and agar (*Isinglass*) (p. 296-97). Address: France.

1077. Duncan’s (John) Sons. 1875. Trade mark:

Worcestershire Sauce. Lea & Perrins' celebrated (Ad). *Montgomery Weekly Advertiser (Montgomery, Alabama)* Advertiser and Mail section dated Tuesday, July 27. 1st page (unnumbered).

• **Summary:** "Pronounced by connoisseurs to be the 'only good sauce.' And applicable to every variety of dish.

"Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester; May, 1851. 'Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.'

"Sold Wholesale and for Exportation by the Proprietors, Lea & Perrins, Worcester, England; and Retail by Dealers in Sauces generally throughout the World.

"Ask for Lea & Perrins' Sauce. At the Breakfast Table it imparts the most exquisite relish and zest to Hot or Cold Meat, Fowl, Fish, Broiled Kidney, &c.

"At the Dinner Table in Soup, with Fish, Hot Joints, Game, and in all Gravies, it gives a delightful flavor.

"At the Luncheon and Supper Tables it is deemed indispensable to those familiar with its estimable qualities.

"From *New York Times*. There is no relish in the world which is so universally liked as Lea & Perrins famous Worcestershire Sauce. An illustration shows a bottle of the Sauce.

Note: Inexplicably, the date of the "Advertiser and Mail" section is several days earlier than the date of the *Montgomery Weekly Advertiser*. Address: New York.

1078. *Punch (London)*. 1875. Note by a cockney naturalist. 68:77. Aug. 28.

• **Summary:** "The common blackbeetles (*Scarabæus niger*), which so abundantly infest the culinary regions of Cockaigne, are alleged to be agreeable, although profuse, in flavour, provided they be delicately larded before crimping, and then fricasseed or simply fried. Care should specially be taken not to injure their antennae, which, when crisp with egg and breadcrumbs, exquisitely tickle the palate of the gourmet, and provoke him to the liveliest of gastronomic feats. There lurks in vulgar minds a savage prejudice against these interesting insects, by reason, very likely, of the popular impression that at times they have been manufactured into Soy [sauce]. But this may be assumed to be mere idle superstition, and Soyer, the great chef, wisely set his face against it, remarking, as he did so, '*Honi Soy qui mal y pense*.'"

1079. Lea & Perrins. 1875. Lea & Perrins' is the only genuine Worcestershire Sauce (Ad). *Atlanta Constitution (Georgia)*. Oct. 3. p. 3.

• **Summary:** A tiny ad. Note: This is the earliest reference seen (Feb. 2012) to Worcestershire sauce in a Georgia newspaper.

1080. Kirkland (O.A.) & Co. 1875. Landlord's sale of malt vinegar, Bass & Co.'s ale, bottles, corking machine, etc., being the stock and fixtures of a bottling establishment. *Sun (Baltimore, Maryland)*. Oct. 16. p. 3.

• **Summary:** "By virtue of a warrant of distress, issued by Justice McCaffray... 100 gallons English Malt Vinegar, 60 doz. Bass & Co.'s Ale, 50 doz. Philadelphia Ale, 15 gallons China Soy [sauce], 30 gallons Vinegar Garlic,..."

Note: This soy sauce was going to be bottled, then sold. Address: Auctioneers, 79 West Fayette street [Baltimore].

1081. *New York Times*. 1875. Life in hotels: A phase of American boarding. Oct. 31. p. 5.

• **Summary:** The dinner "bill of fare" [menu] is given to help the reader get a better idea of life in hotels. It includes: "Relishes: Mixed pickles, olives, celery, chow chow, horse-radish, Worcestershire Sauce, currant jelly, lettuce, tomatoes."

1082. Ripley, George; Dana, Charles A. eds. 1875. The American cyclopædia: A popular dictionary of general knowledge. Vol. 13. New York, NY: D. Appleton and Company. See p. 203.

• **Summary:** Under the entry for "Pea" we read (p. 203): "The Japan pea, at present widely advertised as a most valuable plant for its seeds and fodder for the southern states, is a species of *soya*, very near the soy pea, *S. hispida*, if not a form of it."

1083. *Notes and Queries (London)*. 1876. Lea & Perrins. 5(106):39. Jan. 8. Fifth Series.

• **Summary:** "In consequence of Spurious Imitations of Lea & Perrins' Sauce, which are calculated to deceive the public, Lea & Perrins have adopted a New Label, bearing their Signature, thus—...

"Which will be placed on every bottle of Worcestershire Sauce, after this date, and without which none is genuine... Retail by dealers in Sauces throughout the world.—November, 1874."

1084. *Boston Daily Globe*. 1876. Worcester sauce (Ad). March 10. p. 8.

• **Summary:** "This well-known table sauce for game, steaks, roasts, soups, etc. is manufactured by William Espenmuller, 28½ Indiana Place; is composed of the best and most delicate ingredients, and is said to be superior to all others in the market. It is now mostly used by first class hotels, restaurants and families. The price has been reduced to \$1.50 per gallon, delivered to all parts of the city."

Note: This is an early "Worcester sauce" made in the United States.

1085. *New York Times*. 1876. The household. April 28. p. 9.

• **Summary:** Because of the lively interest in this department

of *The Sunday Times*, the usual number of receipts [recipes] are printed. They include Tomato catsup, from R.A.M. The receipt for “The Cornish method to marinate shad” includes 1½ tablespoons of Worcestershire sauce, from J.L.V.

1086. *Trade Marks Journal (The) (Great Britain)*. 1876. List of applications for the registration of trade marks: Harvey’s sauce. 1(9):198-99. June 28.

• **Summary:** On 11 Feb. 1876, Walter Lazenby, 18 Trinity St., St. Mary Newington, Surrey (just southeast of London), and 90 & 92 Wigmore Street, Middlesex (just east of London), applied for seven trademarks. Four of these were for “Sauces and condiments,” and each was in the form of an entire, decorative label.

The first (No. 2167) reads: “Harvey’s Sauce for Fish, Game, Steaks &c. Prepared from the Original Receipt, only at E. Lazenby’s Fish Sauce Warehouse, No. 6, Edwards St., Portman Square, London. NB. None is genuine unless signed by me, Elizabeth Lazenby.” This Mark has been used for 16 years before 10 Feb. 1876 (i.e., since about 1850).

The 2nd (No. 2168) reads: “E. Lazenby & Son of the original warehouse, No. 6, Edwards St., Portman Sq., now called 92 Wigmore St., and 18 Trinity St., S.E., London. Notwithstanding the change in name of Edwards Street ordered by the Board of Works, every Bottle of the celebrated Harvey’s Fish Sauce prepared by E. Lazenby & Son, still bears the label used so many years.”

No. 2169 is named “Lazenbys Harveys Sauce,” since July 9th 1858. Note: This is the earliest English-language document seen (April 2012) that contains the term “Harveys sauce” (spelled without an apostrophe).

The bottom half of No. 2170 reads: “Harvey’s Sauce—Caution: The admirers of this celebrated Sauce are particularly requested to observe that each bottle bears the well-known Label, signed ‘Elizabeth Lazenby.’ This label is protected by perpetual injunction in Chancery of the 9th July, 1858, and without it none can be genuine.”

No. 2173 is “Metropolitan Sauce, for fish, game, steaks, &c... Mathews & Son of St. Paul’s Works, London.” This Mark not used prior to 13 Aug. 1875.

“Under the Trade Marks Registration Act, 1875.” Address: England.

1087. *Times (London)*. 1876. High Court of Justice, July 26, Chancery Division. (Before the Master of the Rolls.) *Lea v. Millar*. July 26. p. 11, cols. 1-2.

• **Summary:** “This bill was filed by Messrs. Lea and Perrins, of Worcester, to restrain the defendant from using the name ‘Worcestershire’ in connection with a sauce made and sold by himself under the style or firm of Richard Millar and Co., such name being claimed by the plaintiffs as exclusively belonging to the sauce manufactured by themselves from a recipe imparted to their predecessors in business by a nobleman of the county about the year 1835.”

“The defence was that the name had become common property... The plaintiffs’ counsel declined to contest that part of the case any further, and addressed themselves to the subsidiary question, whether the defendants had infringed the plaintiffs’ rights by imitating their wrappers and labels. In the result,

“The Master of the Rolls said that he was of the opinion that the plaintiffs’ case had wholly failed, and that Messrs. Lea and Perrins would have been better advised if they had not instituted the suit... It appeared to his Lordship to be established that Messrs. Lea and Perrins’ predecessors in business either invented or obtained the recipe for an article to which they gave the name of Worcestershire sauce, and that they were the first persons to sell an article by that name. This was about the year 1836, and within a very few, probably not more than two, years afterwards other people, of whom one Batty seemed to be the first, began to sell an article under the same name. Indeed the name, within a very few years after it was first used by Messrs. Lea & Perrins, appeared to have become a common name in the trade;...”

The “plaintiffs’ sauce was sold at a shilling, and the defendant’s at 6d. or 4½d. per bottle, according to the conscience of the retail dealer.”

No damages appear to have been sustained. The “defendant’s article was sold in any inferior class of shops and to a lower class of customers than those who were accustomed to buy Messrs. Lea and Perrins’ more expensive compound.”

“His Lordship of opinion that that the plaintiffs had not shown due diligence in prosecuting infringers, and... had in November, 1874, adopted a new label bearing their own signature as the distinctive mark, and had in the most public manner abandoned the old label, which they now sought to protect. His Lordship then dismissed the bill with costs.” Address: [England].

1088. Rauch, A. 1876. Die Soya [The soybean]. *Fundgrube (Die) (Monatschrift fuer die gesammten praktischen Beduerfnisse und Interessen des taeglichen Lebens, von Dr. A. Rauch, Bamberg)* 3:177-78. Oct. [Ger]

• **Summary:** The soybean (*Soya hispida* or *Dolichos Soya*; many German writers use the name “Soja”) is a creeping and climbing bean (*rankendes Bohnengewaechs*) that is native in Japan, and in all of southern Asia, especially in China, is likewise widely cultivated, like the common bean in Germany. The seeds, which are distinguished by an especially good taste, are used as very popular food in the countries where soybeans are grown, which is found at almost every meal. They are also part of a significant commercial product, since they are used to make a strong sauce, which is much sought after in fine kitchens / cuisine. In England, for example, each year more than 1,200,000 lb (12,000 Zentner) of the beans and significant quantities of the Soya sauce*, which is made in China, are imported.

Footnote: **Some sauces sold as ‘Soya sauce’ in England do not contain any of the actual sauce.”

In Europe, various attempts have already been made to acclimatize the soybean. But these have so far been unsuccessful, in that the plants, at best, flower, but never bear seeds. “Previously I received several seeds of various soybean varieties from Japan, from my longtime friend, honorable [Philipp] v. Siebold, who died at an early age. However my attempts to cultivate them was unsuccessful. The plants came up, and some of them bloomed, but so late (in September) that none ripened seeds.

“I was therefore quite astonished to read an article in the *Wiener Landwirthschaftliche Zeitung*, by Dr. Haberlandt, professor at the Royal College of Agriculture in Vienna (*Wiener Hochschule für Bodencultur*); he reported that soybean cultivation at the Agricultural Experiment Garden (*landw. Versuchsgarten*) in Vienna, during the summer of 1875, had completely succeeded.” Describes the pioneering work of Friedrich Haberlandt with soybeans in Austria.

Note: Bamberg is a city in Bavaria, in south central Germany on the Regnitz River 30 miles west of Bayreuth. Address: Germany.

1089. Griffis, William Elliot. 1876. *The Mikado’s empire*. New York, NY: Harper & Brothers, Publishers. 625 p. Illust. Index. Map. 23 cm. [25+* ref]

• **Summary:** Book 1. History of Japan from 660 B.C. to 1872 A.D. Book 2. Personal experiences, observations, and studies in Japan, 1870-1874.

This is a remarkable book, beautifully written by an American teacher and traveler in Japan who loves the culture and the people, who lived and traveled widely among them in both the countryside and cities during his four years in Japan (29 Dec. 1870 to 25 July 1874), and who speaks Japanese. He has a deep knowledge of many aspects of Japanese history, including the history of Japanese religions (incl. Buddhism). He was invited to Japan to organize a scientific school on the American principle in Fukui, Ichizen, and to give instruction in the physical sciences. This is the 1st of 18 books he wrote about Japan. He returned to Japan in 1926 to receive the Order of the Rising Sun.

Among the Aino [Ainu] in Hokkaido [Yezo] (p. 31): They sit, like the Japanese, on their heels. Their food is mainly fish and sea-weed, with rice, [soy] beans, sweet-potatoes, millet, and barley, which, in Southern Yezo, they cultivate in small plots.”

Describing the Japanese origin myth, with the Sun Goddess (Amaterasu), Izanami, Izanagi, etc. (p. 48-49): “The God of Clay and the Goddess of Fresh Water married. Their offspring was Naka musubi. From his head grew the mulberry and silk-worm, and from his navel sprang the five cereals, rice, wheat, [soy] beans, millet, and sorghum.” “Reporting the matter in heaven, Amaterasu was angry at Sosanoö, and degraded her (the Moon-goddess) from joint

rule, and condemned her to appear only at night, while she, the Sun-goddess, slept. Amaterasu then sent a messenger the second time to see whether the Food-goddess was really dead. This was found to be the case. Out of the dead body were growing, millet on the forehead; silk-worms and a mulberry-tree on the eyebrows; grass on the eyes; on the belly, rice, barley, and large and small beans.” Note 1. Large beans are soybeans; small beans are azuki.

Page 208: The native sauce, *shō-yu*, made of fermented wheat and beans, with salt and vinegar, which the cunning purveyors of Europe use as the basis of their high-priced piquant sauces [such as Worcestershire sauce], was made and used as early as the twelfth century. The name of this saline oil (*shō*, salt; *yu*, oil) appears as ‘soy’ in our dictionaries, it being one of the three words (soy [sauce], bonze, moxa) which we have borrowed from the Japanese.” Note 2. The author’s derivation is incorrect; *shō* does not mean “salt,” but rather *hishio* or *jiang*, which is the mash, having the consistency of applesauce, before the liquid is pressed out.

Page 357: In the cooper shops is a “dazzling array of wood-work, so neat, fresh, clean, and fragrant... There are two coopers pounding lustily away at a great rain-tank, or saké-vat, or soy- tub” [vat]. An illustration shows two coopers at work hooping a vat.

At the pagan temple (p. 381): “Several old women have stands, at which they sell holy [soy] beans, pious pease, and sanctified rice. These are kept ready in tiny earthen saucers. The orthodox buy these, and fling them to the cloud of pigeons that are waiting on the temple eaves, and fly, whirring down, to feed. Ten thousand sunbeams flash from their opaline necks...”

Page 420: “The village houses were built of a frame of wood, with wattles of bamboo smeared with mud, and having a thatched roof. Within, the floor was raised a foot or so above the ground, and covered with mats. When the rooms had partitions, they were made of a frame of wood covered with paper, and made to slide in grooves. In the middle of the floor was the fire-place. From the ceiling hung pot-hooks, pots, and kettles—one for tea, one for rice, another for radishes, beans, or bean-cheese [tofu]. In these villages good-nature and poverty seemed to be the chief characteristics of the people.”

Page 426-27: “The seller of fish, vegetables, oil, and bean-cheese, each uttering his own trade trade-cry, ambled on.”

Page 455: “Men or women itinerants carry a small charcoal brazier under a copper griddle, with batter, spoons, cups, and shoyu sauce, to hire out for the price of a cash each to the little urchins, who spend an afternoon of bliss making their own griddle-cakes and eating them.”

Note 3. This is the earliest English-language document seen (April 2012) that uses the term “shoyu sauce” (regardless of capitalization or hyphenation) to refer to soy sauce.

Page 496: "... a shop to which the *élite* of the epicures of Yedo [today's Tokyo] resorted daily for the delicacy of eels fried in soy [sauce]. The appetizing odor was wafted" into the neighborhood.

Page 516: "May 1st [1871]—During the past month I have made many excursions on horseback through the country round, staying overnight at the village inns. Sasaki and Iwabuchi have been my companions. I have seen the paper manufactories, oil-presses, the sake breweries, soy-vats,..."

Page 542: Jan. 22d, 1872. For dinner: "Rice, bean-cheese, daikon, mushroom, fish, are served."

Azuki beans (red beans, small beans) are also mentioned on pages 454 and 469. The population in 1872 was 33.3 million. On pages 587-88 is a sort of bibliography.

William Elliot Griffis lived 1843-1928.

Note 4. This is the earliest English-language document seen (Jan. 2008) that uses the term "bean-cheese" (hyphenated, with a space before the word "bean") to refer to tofu. Address: A.M., Late of the Imperial Univ. of Tokyo; presently in New York.

1090. Imperial Japanese Commission to the International Exhibition at Philadelphia (1876). 1876. Official catalogue of the Japanese section: And descriptive notes on the industry and agriculture of Japan. Philadelphia, Pennsylvania: Published by the Japanese Commission. 130 p. 24 cm.

• **Summary:** The Preface (p. 3) begins: "Never until the year 1873, had Japan participated to any great extent in the various European International Exhibitions. Up to that time she had been merely represented by some of the provincial governments, acting independently of the central Government. However, the Government determined to be worthily represented at the Vienna International Exhibition of 1873,..." But Japan was well prepared for the Philadelphia Centennial Exhibition.

Under classes of "Agricultural products" (p. 32, 34): Class 621—Peas, beans, etc. (incl. Soya, adzuki). Class 650—Sea weeds (incl. Vegetable isinglass [agar, kanten]). Class 657—Flour and starch (incl. Kudzu {*Pueraria thunbergiana*}). Class 659—Wines and other kinds of drinks (incl. Sake, Soy {a kind of sauce}).

Page 71 discusses relief painting in lacquer: "The lacquer can even be carved, and, finally, the artisan can incrustate mother-of-pearl shell, ivory, thin metal, or anything he likes into the lacquer. By mixing a sort of paste made of [soy] bean powder, or the white of eggs, with the lacquer, he can thicken it to such an extent as to give it a kind of plasticity, admitting the possibility of making impressions which remain visible after hardening."

In the long chapter titled "Descriptive notes on the industry and agriculture of Japan (p. 37-117) is section on "Agricultural products. Classes 620-21—Cereals, vegetables, etc." (p. 104-06). Beans, generally referring to soy beans,

are mentioned many times. "Manures of a mineral nature consist of marls, shells and ashes; those of vegetable origin of inferior kinds of beans and peas or their residues, of [soy bean] oil-cakes, the residues of sake-brewing,..."

"The excellent kinds of beans and peas, which are made into a kind of cheese [tofu] and a peculiar mixed dish called 'misso' [miso] afford the necessary nitrogenous substances, and to a certain extent form the substitute for meat; the Soyu [shoyu; soy sauce] also belongs to this kind of food, and is frequently mixed with other dishes. With regard to animal food, it is limited almost exclusively to fish, poultry and eggs. But a change has already been effected to a certain extent in the larger towns, where butcheries have been established. An experiment of sheep farming was commenced one or two years ago" (p. 106).

Note: This is the earliest English-language document seen (April 2012) that uses the word "Soyu" (regardless of capitalization) to refer to shoyu or soy sauce.

Under "Class 657, 658—Flour, starch, etc. we read (p. 110-11): "It has been mentioned above that the various kinds of beans constitute a very important element of the national diet. Some of the preparations made of beans and peas are worthy of a short notice. In preparing the 'Tofu,' white beans are soaked in water, ground between two stones, strained through a sieve and afterwards boiled. The contents of the kettle are then filtered through cotton cloth and the residue pressed out. The liquid [soymilk], which may be considered as an alkaline solution of legumine, is precipitated by successive additions of the bitter lye [nigari] which runs off from sea-salt by deliquation, and which is mostly composed of magnesium salts. The precipitate is legumine with a small percentage of legumine-composits [-composites] and a large proportion of water. The 'yuba' is also made by boiling the above-mentioned legumine solution in an open kettle, with a slight addition of ash-lye. The insoluble skins which form upon the surface of the boiling liquid, are taken off and dried. Another kind of preserved food is the 'misso' [miso]. White beans are first boiled, pounded in a mortar to form a paste, then mixed with fermenting rice and salt, whereupon the whole mixture is placed in tubs and left in some cool place; at the end of a month it is ready for use. In mentioning the various preparations made of beans, the 'Soy' or, as the Japanese call it, 'Soyu' [shoyu] should not be omitted; but as it belongs rather to the produce of fermentation, the process will be described under the head of Class 660 [Alcohol and malt liquors].

One page 112 we read: The soy, or 'soyu,' is made of a small bean, the 'Dolichos soja,' or 'Soya hispida,' to which are mixed wheat, salt and water. The beans are first boiled, and the wheat bruised and steamed; both are then mixed with a small addition of fermenting wheat, placed in flat wooden boxes and kept for several days at a fixed temperature in a special room. At the end of three days, the mass [koji] is all covered with fungi and partly with roots of germination.

After having been mixed with a salt-lye, which has been prepared hot and allowed afterwards to cool down, and to depose certain impurities, the mashings are now removed to enormous coops [vats] in which they are kept for several years. Experience has shown that the best soy is produced by mixing equal quantities of mashings of three years and five years' standing. This mixture is transferred into bags of thick cotton-cloth, placed in large boxes, and then submitted to pressure—at first only to a slight pressure, which yields the best soy, and afterwards, however, to a gradually increasing pressure, the separation of the last portions being assisted by an addition of salt water.

“The soy forms a very important condiment for all kinds of dishes, and is consumed in large quantities. In 1874 the production amounted to 1,506,402 hectolitres!

An interesting term in the Index (p. 129) is “Bean-cheese,” which refers to tofu (p. 110).

Also: Use of hemp (*asa*) for manufacture of cloth (p. 77, 113). The tea ceremony (p. 108). Sea weeds, incl. cultivated nori and Asakusa nori in Tokio bay, kanten or vegetable isinglass, and fu (that resembles carrageen [carrageenan] moss and is used in the sizing of the warp of silk goods) (p. 109). Kudzu (p. 110). Sake (p. 111). Address: Japan.

1091. Kitchiner, William. 1876. *The cook's oracle*: Containing receipts for plain cookery on the most economical plan for private families. London: Houlston & Sons. 424 p. Index. 18 cm. [30+* ref]

• **Summary:** The title page states: (1) These recipes are the “result of actual experiments instituted by the late William Kitchiner, M.D.” (2) 56,000 books have been printed. The section titled “The magazine of taste” (No. 390, p. 284) contains a list of 28 “useful flavoring materials.” No. 28 is “Soy” [sauce]. The others include: Brandy, curacao, salad sauce, pudding catchup, sauce superlative or double relish, walnut pickle, mushroom catchup, vinegar, oil, mustard, curry powder, etc.

Note: This book was first published in 1817, with the title *Apicius redevivus; or, The cook's oracle...* The 7th edition was published in 1823. This edition may have been published in 1869 rather than 1876; the date is not clear in the book. William Kitchiner lived 1775?-1827. Address: M.D., England.

1092. Morrison, William T. 1876. *An Anglo-Chinese vocabulary of the Ningpo dialect*. Revised and enlarged. Shanghai, China: American Presbyterian Mission Press. xv + 559 p. See p. 37, 442. 22 cm. [Eng; Chi]

• **Summary:** “Bean-curd (p. 37), deo-vu + two Chinese characters; tsiang-deo-vu + three Chinese characters and tones are given.

“Soy [sauce] (p. 442), tsiang-yiu + two Chinese characters and tones.

Note: William T. Morrison lived 1834-1869. Address:

Rev., D.D., Formerly missionary in Ningpo.

1093. Philadelphia International Exhibition, 1876. Official catalog of the British section. 1876. London: Printed by George E. Eyre and William Spottiswoode. Part I. 424 p. Published by authority of the Lord President of the Council. 23 cm.

• **Summary:** The book contains an interesting chapter titled “Exhibitions—Their origin and progress.” Prior to 1851 there had been many local exhibitions worldwide, dating back to Biblical times. The first international exhibition was held in London in 1851. To date there have been five international exhibitions: London (1851, 1862), Paris (1855, 1867), and Vienna (1873). These have been attended by a total of 32,959,097 visitors. The Annual International Exhibitions at South Kensington in 1871, 1872, 1873, and 1874 did not realize the expectations of their promoters; public interest rapidly died out and the scheme was abandoned. The first exhibition of the Japanese Empire was held at Kiôto (Kyoto) and contained the objects destined for the Vienna exhibition of 1873. This Kyoto exhibition opened on 17 April 1872 and was so successful that the original limit of 50 days was extended, and the Exhibition did not close until the end of July. The next year the Mikado (emperor) decreed an exposition on a much wider basis, presenting a comparison between the past and present, and even affording a glimpse into the future of Japan. Note 1. This is the earliest document seen (Aug. 2011) that contains the Japanese word “Mikado,” meaning Emperor of Japan.

In terms of classification of products, Agriculture is Department VI, in the agricultural building. Agricultural products are classes 620-629; cereals, grasses, and forage plants are class 620, and leguminous plants and esculent vegetables are class 621. Animal and vegetable products are classes 650-662; preserved meats, vegetables, and fruits, dried or in cans or jars. Meat and vegetable extracts is class 656. Vegetable oils is class 662. Horticulture is Department VII, in the horticultural building.

Note 2. This is the earliest English-language document seen (May 2006) that contains the term “vegetable extracts” (or “vegetable extract”). The context shows that they resemble meat extracts. It would be very interesting to know of what and how they are made, and how they are used. By 1896 a type of soy sauce named “Dr. Lahmann's Japan Soja” was described as a “vegetable extract.”

An alphabetical list [directory] of exhibitors includes Crosse & Blackwell (Soho Square, London; classes 656, 660, 662), and Lea & Perrins.

On page 246 is the following: “Cl. [Class] 656, 203. Lea & Perrins, Sauce Manufacturers, Worcester, Worcestershire Sauce. (917) Exhibitors, New York, 1853 (Medal).”

On page 77 begins a “List of articles of produce and manufactures chargeable with duty on being imported into the United States.” A table titled “Of articles of produce and

manufactures chargeable with duty on being imported into the United States” shows (p. 289) that the duty on “Soy” [sauce] is 35 per cent. This is the only reference to soy seen in this book.

Note 3. This is the earliest document seen (April 2001) that contains a directory including listings related to soy. Address: England.

1094. Satow, Ernest Mason; Masakata, Ishibashi. comps. 1876. An English-Japanese dictionary of the spoken language. London: Trübner & Co.; Yokohama, Japan: Lane, Crawford, & Co. xv + 366 p.

• **Summary:** Page 295: Soup, n. [noun] (flavored with soy [sauce]) *tsuyu*; *sui-mono*; (made with miso) *otsuke*; *miso-shiru*; *o mi otsuke* (the last used only by women).

Soy, n. *shōyu* (c).

Note 1. The symbol “(c)” denotes that the word which precedes it is of Chinese origin. However, the word *shōyu* is not of Chinese origin, but rather of Japanese origin.

Note 2. This is the 2nd earliest English-language document seen (April 2012) that uses the term “*shōyu*” to refer to soy sauce. Address: 1. Japanese Secretary to H.M. Legation at Yedo; 2. Imperial Japanese Foreign Office.

1095. Blavet, A. 1877. *Le Soja Hispida* et *le Cicer Arietinum* [The soybean and the chickpea]. *Moniteur Horticole* (Belgium) No. 1. p. 7. Jan. [Fre]*

• **Summary:** Even though not shining among the first rank of the food species, these two legumes are of real interest for our vegetable plots. For some time now, based on favorable trials conducted in France, they have been recommended very seriously to all those who are interested in the important question of food. We believe, therefore, that it would be useful to our readers to give a brief description of these two vegetables which are still almost unknown in our country.

The *Soja Hispida* or *Dolichos Soja* belongs to a genus that is very closely related to the genus *Glycine*, and certain botanists even lump them together. It is an annual hairy (*hispide*) plant, about 1 meter in height when erect. Its leaves are trifoliate, consisting of three leaflets or folioles. Its flowers are violet, arranged in clusters (*en grappes ascillaires*), followed by oblong pods, slightly arched, each containing from 2 to 5 oval seeds, a little compressed. It originated in Asia.

In Japan, in China, and in tropical Asia (I might add in Mexico), these seeds are eaten as a vegetable [green vegetable soybeans]. In these regions, it can be said that the culinary art owes them a lot, because they enter into the preparation of all the sauces. Among other things, they are made into the celebrated Soy [sauce], so sought after by Asiatic gastronomes, and which is also known and used in Europe to enhance the taste of certain dishes, and especially beef, whose digestion it uniquely facilitates. The soybean (*le Soja*) is also said to be an important oil-bearing plant.

In October 1878 we had two soybean plants growing in our plot of vegetables at the Universal Exposition [in Vienna]. One member of our society asked Mr. Vilmorin what he knew about this plant. He replied: About eight years ago [i.e., in 1870] I saw it appear, then it was not spoke about again. Anyway, the visitors [at the Exposition] paid such high honors to our two plants, that all we were left with was the stems [because the visitors had stripped off the pods and seeds].

You know better than anyone how much perseverance and stubbornness it takes to propagate a novelty, regardless of its excellence. You have to convince, particularly at the beginning, you have to overcome the bad will, the habits, the distrust, the jealousy, the incompetence, the conviction that it is impossible to do better... and whatever! This the first year I gave the soybean (*le Soja*) to market gardeners / vegetable growers (*maraisiers*); a certain number of them did not wait for the plant to reach maturity before putting it on the compost pile. They called it an obscenity which took up room unnecessarily. They came to a hasty conclusion / judgment, as you can tell.

Others who thought about it more gave the plant the opportunity to bear fruit, but the failed to write a report about its cultivation.

Finally, only two people understood that this very accommodating legume was not out of place. Yet one must add that this was thanks to the presence of a ship-owner (*armateur*), who had eaten it in Mexico. He was very fond of this product, and it is to this fact that the plant was given the honor of being cultivated on a large scale in one of the châteaux where one of our two gardeners happened to be.

Note: This is the earliest document seen (Feb. 2009) concerning soybeans in Mexico, Central America, or Latin America. It is not clear whether or not these soybeans were cultivated in Mexico (they may well have been) or where they came from (they may well have come from China on a Manila galleon as part of the China trade).

It's the same kind of thinking. Without the laudable perseverance of one of our horticulturists, our excellent Etampes soybean (very early), would never have come to our attention. What if it had been grown by a market gardener who just brought some of it to our market without thinking for years to give it the least extension to its cultivation.

The first year it was sold for 12 francs per liter.

1096. Haberlandt, Friedrich. 1877. Der Anbau der rauhaarigen Sojabohne [The culture of the hirsute soybean (Continued—Document part II)]. *Landwirtschaftlichen Versuchs-Stationen* 20:247-72. [5 ref. Ger]

• **Summary:** Continued from p. 253. Prof. Dr. Kulisz (p. 253, 257) in Tetschen-Liebwerd in Böhmen [Bohemia, now in the Czech Republic] planted 150 seeds of 3 varieties. Despite snow, rain, and frost in May, 98 plants survived, yielding 660 seeds. The tallest plant was not over 50 cm high.

Dr. Nicolaus Dimitriewicz (p. 253, 257-58), a former student at the Royal College of Agriculture in Vienna, and now a farmer (*Oekonom*) in Bukovina [Bukowina or Bucovina, a former Austrian crownland, now (2005) divided between the Ukraine and Romania]. He received 100 seeds which he sent to 6 farmers he knew in four nearby locations in the district of Kotzman (*des Kotzmaner Bezirks*).

Note 1. As of 1994, Kotzman is the town and district of Kitsman in the southwestern Ukraine, just north of the border with Romania. Also spelled Kotzmann, Cotman, Cozmeni, Kosman, Kozmeny, or Kucmeh, it is located 19 miles northwest of Chernivtsi (also spelled Chernovtsy, Chernowitz, or Czernowitz).

The seeds were planted late, on April 20 or later, and some were killed by frost. Others, protected from the frost, grew fairly well. For example, the second farmer harvested 669 seeds from 19 plants. The 64 plants which survived yielded less than 2.821 kg of seed. Note 2. This is the earliest document seen (Feb. 2001) concerning soybeans in the Ukraine, or the cultivation of soybeans in the Ukraine (one of two documents). This document contains the earliest date seen for soybeans in the Ukraine, or the cultivation of soybeans in the Ukraine (20 April 1876). The source of these soybeans is unknown.

And A. Schnorrenpfel (p. 253, 258), Administrator of *Gutswirtschaft* at the Agricultural Academy in Proskau (*Landwirtschaftlichen Akademie Proskau*) [now named Proszkow, in today's southwest Poland] in Preussisch-Schlesien [Prussian Silesia, a Prussian province later divided into upper- and lower Silesia]. He planted 50 seeds of two varieties in late April.

Note 3. Proszkow is a market town located 7 miles southwest of Oppeln (now Opole), in southwest Poland at north latitude 50°40'.

Note 4. This is the earliest document seen (Feb. 2005) concerning soybeans in Poland, or the cultivation of soybeans in Poland (one of two documents). This document contains the earliest date seen for soybeans in Poland, or the cultivation of soybeans in Poland (20 April 1876). The source of these soybeans was Prof. Haberlandt in Vienna.

Joh. Stua (p. 263-64), of the Technolog. Laborat. der k.k. [kaiserlich-königliche] Hochschule für Bodencultur [Imperial-Royal College of Agriculture] in Vienna, conducted a detailed nutritional analysis of the yellow Mongolian, yellow Chinese, and brownish-red (*braunrothe*) varieties. The first 3 columns of a full-page table (p. 264) show percentages in air-dried soybeans of (1) the original soybean seed sample, (2) soybeans grown the first year, and (3) soybeans grown the second year. Columns 4-6 show the same information adjusted as if the soybeans had a 10% water content. For each variety, data are given for water, protein, fat, nitrogen-free extract (*Stickstofffreie Extractivstoffe*), crude fiber, and ash (*Aschenbestandtheile*). Note 5. This is the earliest German-language document seen

(Oct. 2004) that mentions red soybeans (actually brownish-red) or that uses the word *braunrothe* to refer to the color of soybeans. In many other documents by or about Prof. Haberlandt, the term “reddish-brown” (*braunrothen*) is used to describe the color of a type of soybean he obtained from China.

Tomaszek (p. 263) wrote Haberlandt that he was astonished by the high oil and protein content of the soybeans he grew and harvested and had analyzed by a chemist at the sugar factory. So he had the analyses repeated by Prof. K. Zulkowski of the technical university at Brünn, and got similar results. Zulkowski found (table, p. 263) that the air-dried seeds of yellow soybeans from China contained 16.99% fat, 40.19% protein, and 6.43% nitrogen. The brownish-red soybeans from China contained 16.68% fat, 44.93% protein, and 7.19% nitrogen. Note 6. This is the earliest document seen (April 2003) that mentions Zulkowski.

These analyses are in close accord with those published by Senff in 1872 (table, p. 265). Soybeans are compared with lupins and other legumes.

On pages 270-71 Haberlandt discusses food uses of soybeans. “The soy sauces, which were imported from India and spread from England over Continental Europe, could in no way awaken a favorable opinion of the flavor of the soybean, for these sauces have a strong flavor of browned (*gebräuntem*) sugar, perhaps also mixed with other ingredients, so that the soybean's own flavor is completely masked (*verdeckt wird*). Because of their complete lack of starch, soybeans do not become soft through cooking, so it is necessary to crush and rub the half-soft cooked seeds before their further preparation... Best would be a use [of soybeans] which imitates that of corn kernels (*Maiskörner*), from whose flour the people of southern Europe prepare their beloved dish, Polenta. Soybeans roasted at 160°F taste delicious and surpass all other plants that have heretofore been used as coffee substitutes.”

Note 7. Tables from this article are described in a separate record. Address: Mittheilungen aus dem landwirthschaftlichen Laboratorium und Versuchsgarten der k.k. Hochschule fuer Bodencultur in Wien [Vienna].

1097. Brewer, Ebenezer Cobham. 1877. Errors of speech and of spelling. Vol. 1. London: William Tegg and Co. lii + 752 p. See p. 550.

• **Summary:** An entry on p. 550 reads: “Ketchup, *ket'.tchup*, sauce made from mushrooms. (E. Ind ketjab).”

Note: This is the earliest document seen (April 2012) that contains the word “ketjab,” used as an alternative spelling of “ketchup.” Address: Rev., LL.D., Trinity Hall, Cambridge [England].

• **Summary:** Page 122: Tau fu: bean curd.

Page 354: Liang, leung: pickle or soy.

Page 615: Shi yau: soy [sauce].

Note: *Shi-yau* is, more precisely, “fermented black soybean sauce.”

Page 707, 710: Tau peng: bean cakes. Tau fū no or tau fū fa: bean-curd jelly [tofu curds]. Tai tau or pak tau: soy-bean, Soja Hispida.

Page 739: Tau fu to: beancurd knife.

Page 783: Tsiang, tseung: pickle, preserve in sauce. Tau tseung: bean sauce. Tseung siu ts’oi: vegetables seasoned with soy.

Page 906: Tseung ün: a soy or pickle factory.

Note: This is the earliest English-language document seen (April 2012) that uses the term “bean sauce” to refer to soy sauce. Address: Hongkong (Ph.D. Tübingen [Baden-Württemberg, Germany].

1099. Henderson, Mary F. 1877. Practical cooking and dinner giving: A treatise... New York, NY: Harper & Brothers, Publishers. 376 p. Illust. Index. 20 cm.

• **Summary:** Worcestershire sauce is used as an ingredient in 4 recipes in this book: To bake a fish with wine (p. 103-04). Sauce aux fines herbes (p. 128). Fricassee of chicken (“a tea-spoonful of Worcestershire sauce,” p. 174). Deviled chicken, with sauce (“two table-spoonfuls of Worcestershire sauce,” p. 175).

The section titled “Salads” begins (p. 219): “In an English book it is told of a famous French salad-dresser who began very poor, and made a fortune by dressing salad for dinners in London. He would go from one place to another in his carriage, with a liveried servant, and his mahogany case. This case contained all the necessities for his business, such as differently perfumed vinegars, oils with or without the taste of fruit, soy [sauce], caviar, truffles, anchovies, catchup, gravy, some yolks of eggs, etc... A Frenchman thinks he cannot eat his dinner without his salad. It would be well if every one had the same appreciation of this most wholesome, refreshing, and at the same time most economical dish.” Mary Foote Henderson lived 1842-1931. Address: St. Louis, Missouri.

1100. Houghton, Ross C. 1877. Women of the Orient: An account of the religious, intellectual, and social condition of women in Japan, China, India, Egypt, Syria, and Turkey. Cincinnati, Ohio: Hitchcock and Walden; New York, NY: Nelson and Phillips. 496 p. Illust. Index. [10* ref]

• **Summary:** In Chapter 4, “Education” is a long passage quoted from an article in the *Leisure Hour* [date, author, and title not cited] (p. 88-90) which contains “a translation of one of the very few Chinese works designed for the instruction of women.” Page 90: “The third important thing is, do not

waste rice or flour; be careful of the soy [sauce], vinegar, oil, and salt; in the day of plenty think of a day of want, that when that time comes you may not have to beg.”

In Chapter 12, “Woman’s position and life in the household,” notes (p. 241): “The domestic position of an average Japanese woman is superior to that conceded to her sisters in other Eastern countries. Although she does not enjoy all the rights and privileges secured to a married woman in a Christian land, still she is treated as the companion rather than the slave of her husband, and her likes and dislikes are, to a considerable degree at least, respected. She is, however, without legal rights, and her evidence is not admissible in a court of justice.”

Concerning Japanese food (p. 242-43): “A favorite relish is ‘soy,’ a strong sauce composed of pepper [sic] and fermented black beans.”

Illustrations show: (1) A Japanese family at dinner (p. 242). (2) A Japanese lady (p. 243). Address: Rev., A.M., St. Louis, Missouri.

1101. Leunis, Johannes. 1877. Synopsis der Pflanzenkunde: Ein Handbuch fuer hoehere Lehranstalten... Zweite gaenzlich umgearbeitete Auflage... 3 vols. [Synopsis of botany: A handbook for institutions of higher learning... 2nd ed. 3 vols.]. Hannover: Hahn’sche Buchhandlung. See vol. 2, p. 412. [Ger]

• **Summary:** Volume 2 (*Zweiter Theil*) is devoted to botany, bound with vol. 1, and arranged by plant families. Under legume family (*Leguminosae*, *Huelsenpflanzen*) are the papilionaceae (*Schmetterlingsblüter*, p. 374+) within which we find the genus *Dolichos* (p. 412), which includes *D. pruriens*, *D. Lablab*, and *D. Soja* (the soybean). Symbols indicate that the genus contains plants with therapeutic or medicinal value (*Apotheker-oder Arzneipflanzen*) and that the soybean alone is a commercial plant (*Handelspflanze*).

Concerning the soybean we read: *Dolichos soja** L. (Footnote 5: *The term *Soja* or *Sooja* is used by the Japanese to refer to a sauce {*Tunke*} in which soybeans {*die Soja-Bohnen*} are used) or *Soja japonica*** Savi (Footnote 6: **Japanese)

Note 1. This is the earliest German-language document seen (April 2012) that uses the word *Tunke* to refer to soy sauce.

The Japanese Soybean (*Japanische Sojabohne*). Cultivated in its native Japan and now also throughout all of southern Asia, because the beans taste good and also serve for the preparation of a piquant, brown, thick, sauce, which is very popular on foods, and in India is added to almost all foods and is also imported to Europe and used to improve sauces or extracts (*Brühen*) and also as a sauce for roasts (*Braten-Sauce*); however the Soya that is now in commerce in Europe is not made from soybeans but rather made by us from other materials, namely from molds (*Pilzen*).

Also discusses: Alfalfa (p. 382-83). Lupines (p. 410).

Voandzeia (p. 411). Almonds (p. 414).

Note 2. Leunis lived 1802-1873. His portrait (an illustration) faces the title page of Vol. 1. This book was published after the author's death by A.B. Frank, lecturer in Botany at Leipzig University. Volumes 1-2, 1230 pages, have no index. Vol. 3, mostly about algae, has an index. Address: PhD, late Prof. of Natural History at the Josephinum in Hildesheim [near Hannover, Germany] (weiland Professor der Naturgeschichte am Josephinum in Hildesheim).

1102. Shōyu shūsetsu [Collected theories on shoyu]. 1877. Japan. [Jap]*

• **Summary:** Book on shoyu production showing the wide variation in formulas used. For a translation of several parts, see Fruin 1983 (p. 26-27).

1103. *Boston Daily Globe*. 1878. Japanese ways: An entertaining lecture at Horticultural Hall, yesterday, before the Free Religion Association, by Professor E.S. Morse. Feb. 15. p. 5.

• **Summary:** Prof. Morse, gave "in an off-hand way his impressions of that country, with whose ways he seems to have fallen in love." "There are many beautiful fish caught on the coasts; and the Professor said that they were excellent eaten raw, and advised his hearers to try some raw fish, sliced, with soy sauce, and see if they did not like it. 'The Japanese use neither butter, milk, bread, nor cheese.'"

"Kindness to animals is a great characteristic; no bird is ever shot at, no animal ever beaten, and on all the highways you will find stones, erected centuries ago, directing men to water their horses here."

1104. *Mittheilungen der Section fuer Acclimatisation des Landwirthschaftlichen Central-Vereins des Herzogthums Braunschweig*. 1878. Die Soya-Bohne [The soybean]. 2(1):31-32. Feb. [1 ref. Ger]

• **Summary:** Note: Braunschweig (Engl. Brunswick) is a former duchy and capital city in north-central Germany, about 35 miles east of Hannover (Engl. Hanover), now part of Lower Saxony.

One cultural trial with the soybean was conducted by the head man (*Hauptmann*) C. Rambousek of Zborow [Austria]; his report follows: "The soybean (*Soyabohne*) seeds were of two varieties: Brown seeded (from China) and yellow seeded (from Mongolia); both came originally from the Vienna World Exposition (*Wiener Weltausstellung*) [of 1873]. On 2 May [1877] I obtained 60 brown and 60 yellow seeds of *Soya hispida*, which were planted immediately in rows spaced 40 cm apart, with 21 cm. between seeds in each row, in a sandy clay soil relatively rich in humus, over detritus / diluvium. The climate was quite wet.

"All the seeds sprouted, and the plants developed quickly and powerfully. Without needing any support, they grew to a height of 82 cm. Flowering began at the end of

June and seemed to continue without end. The initial stage of seed-bearing is enormously rich, an often on branches there were 4-5 pods, with usually 2-3 seeds per pod. The seeds began to ripen in mid-September, and the plants were cut toward the end of October. They yielded 1,759 completely hard brown seed weighing 281 gm, and 2,805 yellow seeds weighing 536 gm. These seeds were the same size and color as those that were planted.

"Because of the high nutritional value of the seeds, as well as the high fodder value of the stems, I am convinced that this oilseed has a solid future as a forage plant."

1105. Lea and Perrins. 1878. In consequence of spurious imitations of Lea and Perrins' Sauce,... (Ad). *Observer* (London). April 28. p. 8.

• **Summary:** "... which are calculated to deceive the Public, Lea and Perrins have adopted a new label, bearing their Signature, 'Lea and Perrins,' which signature is placed on every bottle of Worcestershire Sauce, and without which none is genuine. Sold Wholesale by the Proprietors, Worcester; Crosse and Blackwell, London; and Export Oilmen generally. Retail, by dealers in sauces throughout the World."

Note: No signature is displayed. Address: Worcester, England.

• **Summary:** Items to be auctioned include: "Lazenby's Chetna [Chutney?] and King of Oude Sauce, Indian Soy [sauce], Capers,..." Address: Auctioneers & Valuers [Edinburgh].

1107. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* (Yokohama). 1878. Sitzung in Tenkoin, Yedo, am 22ten Juli 1878 [Meeting in Tenkoin, Tokyo, on 22 July 1878]. 2(16):271. July. [Ger]

• **Summary:** "Concerning Dr. Langgaard's communication on tofu, Mr. Kempermann remarks that in his opinion tofu is mainly a food of the wealthy; for the poor seem to place great significance on sugars [carbohydrates], and in times of great shortages of rice, sugar consumption will be considerable.

"Dr. Langgaard remarks that shoyu plays a very insignificant role as a source of nutrients. Shoyu contains a great deal of salt and serves mainly as a seasoning. It is important to mention, concerning shoyu, that, especially when it is used in fresh condition, at one and the same meal, only small quantities can be enjoyed.

"After this, Mr. Netto pointed out that tofu consumption depends on the price of fish. In Kosaka* the poorest people eat tofu when they must forego the enjoyment of fish."

* Note: The meaning of the term "Kosaka" is unclear.

The only known place by that name is a relatively unknown village in Akita prefecture, in northeastern Japan. Address: Japan.

1108. Atkinson, R.W. 1878. Brewing in Japan. *Nature (London)* 18:521-23. Sept. 12. [Eng]

• **Summary:** The author, interested in the new science of microbiology, describes a visit to saké breweries situated in Hachioji about 30 miles from Tokiô (Tokyo). This sake contains 12-15% alcohol by weight. He gives a detailed description of how koji is made from tane koji, then how sake is made from koji. He believes the mold used to be *Mucor racemosus*.

“At the present time, when the history of the origin and development of the lower forms of life [microorganisms] is occupying a great deal of attention, any facts which increase our knowledge of the growth of such bodies should be welcomed. In our breweries the growth of the yeast-ferment is tolerably well understood, or, at least, has been well observed and described... Those living in Japan, however, have the opportunity of seeing a mode of fermentation which differs in many particulars from that employed in Europe. The subject is now under investigation, and at present I am not able to explain accurately what takes place.

“Saké is the general name given to the alcoholic liquid prepared by the fermentation of rice... This liquid is prepared on the large scale only in certain parts of the country, the most famous district being that near Ozaka [sic, Osaka], one of the Treaty Ports. It is, however, often prepared on the small scale in private houses. The winter is the only season during which brewing operations are conducted.”

“The brewing commences with the preparation of the ferment [starter culture]. For this purpose, at the end of the previous brewing season a quantity of a green mould is produced upon rice by exposing steamed rice mixed with a certain proportion of the ash of some tree, and over which the spores of this fungus have been scattered in a well-closed chamber, which I may term the ‘fungus chamber.’ This is a small room about 7 ft. high by 6 ft. broad, by 8 ft. long, well lined and covered with straw and matting, so that its high temperature may be kept up for a considerable time. In this chamber the rice and spores are left for about ten days, the atmosphere being kept quite moist by the vapour given off from the steamed rice, and at the end of that time the grains are found to be covered with a green fungus full of spores, and apparently the same kind as is found growing upon putrefying organic substances. The temperature of the chamber when examined was 25°C., that of the external atmosphere being 13°C. This product is called, in Japanese, *tane* or seed.

“When prepared at the end of the season it is preserved until the next by being placed in bags, and inclosed in wooden boxes between layers of a mixture of equal parts of lime and wood-ashes.

“When it is required to commence operations, a similar method is adopted to that just described, that is, a quantity of steamed rice is placed on wooden trays in the ‘fungus chamber,’ but not mixed with any wood-ashes, and then *tane* (spores) is scattered over it, and the chamber kept closed for a period varying from two to four days. At the end of this time the rice-grains are found to be covered with large quantities of fine hair-like threads, the mycelium of the fungus added. In this state it is called ‘kôji.’”

“The actual fermentation is divided into three stages, called respectively *beginning*, *middle*, and *end*...” After a fermentation in large tuns of about 15 days, the alcoholic liquid is drawn off and the “residue is placed in bags and subjected to pressure in a lever press, the clear liquid which is expressed being added to that which is clarified. It is now placed in boilers and heated up to about 60°C, after which it is kept in the store vats and carefully sealed up.

“The saké in the store vats contains about 15 per cent. of alcohol, and this fact shows that the fermentation is different from that effected by the *Mucor racemosus*, as described by Fitz. In his experiments he found that the presence of 4½ to 5½ per cent. of alcohol killed the ferment, whilst in the process above described, we find the ferment acting in such a way as to produce 15 per cent.”

Note 1. This is the earliest English-language scientific article seen in which koji is discussed in detail.

Note 2. This is the earliest document seen (Sept. 2001) that alludes to enzymes in connection with koji, however neither the word “enzymes” nor “enzyme” are used. Instead the noun “ferment” is used to refer to the active principle in the koji. Address: Prof., Univ. of Tokio (Tokyo), Japan.

1109. *New York Times*. 1878. Information wanted. Dec. 8. p. 9.

• **Summary:** “A receipt [recipe] for a sauce of the same quality as Worcestershire sauce.”

1110. *Chicago Daily Tribune*. 1878. The courts:... The Worcestershire-Sauce case. Dec. 18. p. 5.

• **Summary:** “Worcestershire sauce: Another case of considerable general interest was that of Lea & Perrins [sic, Perrin], of London, England, against Frank Deakin, agent of Miller & Co., England. This was a suit to prevent the defendants from infringing complainants’ trade-mark of ‘Worcestershire Sauce.’, The case was very bitterly contested, and a very large amount of testimony was taken. The brand of sauce sold by defendant was imported from England, and was marked ‘Improved Worcestershire Sauce.’

“The Judge, in deciding the case, said the evidence showed that there had long been known a sauce called Worcestershire sauce, used for a table condiment. It was a generic term used by various persons and probably was first used by some party in Worcestershire, England, to designate has brand of sauce. But sauces of that name were

manufactured in other places than Worcestershire, and it would not be fair that parties residing in that place should now have a monopoly of the name. The complainants had been aware that the term was used by rival firms, and for years had taken no steps to prevent it, thus giving a tacit acquiescence to the use of such name. Finally, however, they filed a bill against Miller & Co., in London, to prevent the use of the words 'Worcestershire sauce,' but were defeated, their right to the use of such trade-mark being declared invalid. That decree was a bar to any action in this country on the same grounds for the same relief, and the bill would therefore be dismissed."

1111. Ahlburg, H. 1878. Das Koji und die Hefe [Koji and the yeasts: About *Eurotium oryzae*]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens (Yokohama)* 2(16):252-55. In: Korschelt 1878. Ueber sake... [2 ref. Ger]

• **Summary:** Contents: Observed facts. Discussion of the genera *Mucor*, *Aspergillus (flavus)*, *Botrytis*, *Eurotium (Oryzae)*, *Monilia flava*. Address: Japan.

1112. Chalmers, John. 1878. An English and Cantonese dictionary, for the use of those who wish to learn the spoken language of Canton Province. 5th ed. Hongkong: Printed by De Souza & Co. xi + 258 p. 18 cm. [Eng; Chi]*

• **Summary:** On page 69 is the Cantonese term for soy sauce, *shi-yau*. A 5th edition was published in 1878 in Hongkong, and a 7th edition in 1907 in Hongkong.

1113. Commission Imperiale à l'Exposition Universelle de Paris, 1878. 1878. Le Japon à l'Exposition Universelle de 1878 [Japan at the Universal Exposition of 1878]. Paris: Publiè sous la Direction de la Commission Impériale de Japon. 2 volumes in one. 26 cm. Preface by M. Matsugata. Facsimile edition (preservation photocopy) reprinted in 1998 by BookLab, Inc. [Fre]

• **Summary:** Part I (159 p.) is about the geography and history of Japan. Part II (192 p.) is about art, education and teaching, industry, production, agriculture, and horticulture in Japan. The Preface is by M. Matsugata, Head of the Imperial Department of Agriculture and President of the Japanese Commission to the Universal Exposition of 1878.

In Part II, the section on "Fermented beverages—Condiments" contains a long section on "Shoyu" (p. 124-25). It gives a brief description and discusses the ingredients (equal parts dehulled wheat, soybeans, and salt; the best salt comes from Ako in the province of Harima), purifying the salt by dissolving then heating it in water, and stirring the mash (2 or 3 times a day from June to September), aging for 15, 20, or sometimes 30 months to obtain shoyu. The mash is then pressed in cotton sacks, and the resulting liquid is boiled, cooled, allowed to settle, then stored in small wooden tubs. The residue from the first pressing can be used to

make a second-grade shoyu, which can be mixed in varying proportions into different grades of shoyu.

Note 1. This is the earliest French-language document seen (April 2012) that uses the term *shoyu* to refer to soy sauce.

In the section on "Agriculture," the subsection on "Cereal grains" (p. 133) discusses both soybeans and azuki beans (*Phaseolus radiatus*). "The soybean (*Le Mame*) or *Soja Hispida* is comprised of several varieties: The green soybean (*l'Awo mame*), the white soybean (*le Shiro mame*), the black soybean (*le Kuro-mame*), the yellow soybean (*le Ki mame*), *Konrinza mame*, *Ichia mame*, and the saddled soybean (*Kurakake mame*). Some of these different varieties are early maturing and some are late.

"The soybean finds numerous uses, for it can be eaten cooked, ground into flour, or used for the manufacture of shoyu, miso, or tofu. The bean, its seed coat, pod, leaves, and stem serve as feed for horses. Lately it has been used on a trial basis to feed sheep, and the results proved that it was the best feed that one could give to them.

"Tofu is made with two kinds of boiled soybeans: White and yellow. After being pressed and hardened, it will last for a long time. Yuba is a somewhat similar product, made with the same ingredients. Note 2. This is the earliest French-language document seen (March 2004) that contains the word *Tofu*.

"The black soybean speckled with white (*Gan Kui mame* [*Gankui*]) is one of the best varieties to eat."

The azuki ("*L'Azuki ou Phaseolus radiatus*") includes the early and late types, and comes in several varieties such as the *Hine no Azuki*, the *Dainagon Azuki* (*le Dai Nagon Azuki*), the *White Azuki* (*Shiro Azuki*), etc. Sweet azuki bean paste (*L'An*), is widely used in confectionery, is made by mixing the Azuki and sugar. One cake made from it is called *Yokan*. Azuki flour (*farine de l'Azuki*) is used to remove greasy stains from fabric / cloth. The *Yaye Nari*, a green bean (*haricot*), is used in the same ways as the azuki bean (p. 135). Note 3. This is the earliest French-language document seen (Jan. 2005) that uses the word "Azuki."

Also discusses: Sea vegetables (many individual types with both Japanese and scientific names, p. 127-29). Kudzu (*Pueraria thumbergiana* [sic, *thunbergiana*], starch from the roots and fodder from the leaves, p. 139; fibers used to make cloth, p. 153). Hemp seeds (p. 139). Sesame seeds and sesame oil (*Goma*, p. 145). Peanuts and peanut oil (*Tojin mame*, p. 145). Hemp as a fiber plant (p. 151). Address: Paris, France.

1114. Haberlandt, Friedrich. 1878. Erste Abtheilung [Part 1, pages 10-15 (Document part)]. In: F. Haberlandt. 1878. Die Sojabohne [The Soybean]. Vienna: Carl Gerold's Sohn. ii + 119 p. [4 ref. Ger]

• **Summary:** "The value of soybeans results from their high content of the most important nutrients. The first analysis

that made the composition of these seeds known in Germany was carried out by [Mr.] Senff using seeds obtained directly from Japan by Mr. [Carl] Berndt. The results of this analysis* (Footnote: *See the journal *Chemischer Ackermann* ("Chemical Farmer") 1872, p. 123) showed that 100 parts of air-dried soybeans have the following composition:" A table (p. 11) based on two samples and their average shows: Water 6.91%, protein 38.29%, oil (*Fett*) 18.71%, nitrogen-free extract 26.20%, crude fiber 5.33%, and ash (minerals) 4.56%.

A second table (p. 11) which compares the nutritional composition of soybeans, common beans (*Fisole*), peas, lentils, fava beans (*Pferdebohne* = *Vicia faba* = "horse beans") and yellow lupins, shows that soybeans have a much higher content of protein (38.29%, followed yellow lupins at 35.32%), oil (18.71% followed by yellow lupins at 4.97%), and ash (minerals, 4.56%, followed by yellow lupins at 3.78%).

"There are few statements in the pertinent literature concerning soybean utilization. But there is no doubt that, in their native countries, they have heretofore been used exclusively as foods. In *Synopsis der Pflanzenkunde* ("Synopsis of Experience with Plant Culture;" 1877, Hannover, Vol 2, p. 413), Dr. Johannes Leunis says that soybeans taste good and are also used to make a thick brown sauce, which is added to almost all foods in India, China, and Japan, and is also an article of commerce in Europe, used to improve sauces and gravies. However the sauce now available in Germany is said to be made of other ingredients rather than soybeans, namely mushrooms. From England, where this soy sauce is imported from India by the firm Grosse [sic, Crosse] & Blackwell in London, its use is spreading to the continent and is available in Vienna. Kaempfer, who describes the soybean plant so excellently in the classic work on his travels, also gives detailed information about its use as foods in Japan, which has since appeared in numerous other writings, such as Oken's *Allgemeine Naturgeschichte aller Stände* ("General Natural History of All Places") [1841] vol. III, part 3, page 1661."

Haberlandt then quotes in their entirety Kaempfer's descriptions of miso and soy sauce (about 200 words each). He also indicates a vague knowledge of tofu.

"It is reported that in China a type of food is made from the oilcakes or perhaps from soybeans directly, that superficially resembles a soft cheese or Quark (a European white unfermented cheese; *nach dem weichen Käse oder dem Quark ähnliche Speise machen*) presumably the original mush is subjected to a fermentation process and then mixed with pepper and other spices. A large part of China's population is said to use this staple food." Note 1. This is also the earliest German-language document seen (Feb. 2004) that uses the word "Quark" in connection with tofu.

He goes on to describe the chemical composition and uses of the oil presscake in China.

Page 14: "Since the oil content (*Oelgehalt*) of the soybean is lower than that of other oilseeds, it must be assumed in advance that its application for the production of oil (*Oelgewinnung*) must be disregarded. This also became evident through a test which Mr. Carl Berndt conducted on the rest of the soybeans that hadn't been used for agronomic trials. He was kind enough to give me the following report: 'Although I should have expected that one could not determine the full quantity of oil from a relatively small quantity of seeds, I was still astonished that there was not more than 6%. The analysis had resulted in 16 to 18%, and therefore the mechanical quantity was estimated at 10-12%.

"Actually it was quite difficult to locate an oil miller who would clean his mill sufficiently that one received pure oil. Moreover, these people didn't proceed with the interest and care that are necessary, since I found lots of oil in the presscakes, indicating that they had not been pressed sufficiently. In terms of quality, I am more satisfied than I had expected to be. I had someone prepared baked goods where oil was used in the recipe and I could not detect the slightest after-taste. As a cross-check, I had another part of the baked goods prepared with Provenzer oil, but I could not tell the difference between the two.

"To what extent the [soybean] oil could be used for industrial [non-food] purposes, especially as a mordant (*Beize*) for the dyeing of Turkish-red, which uses very old, spent oil (that is soluble in carbonic potassium) can only be established when a sufficient quantity of oil becomes available."

Note 2. This is the earliest document seen (Oct. 2001) concerning special industrial uses of soybean oil as a non-drying oil, as a mordant for dyeing. Address: Hochschule fuer Bodencultur, Vienna, Austria.

1115. *Hamburger Garten- und Blumenzeitung*. 1878. Die Sojabohne [The soybean]. 34:238-39. [2 ref. Ger]

• **Summary:** The section titled "Feuilleton" (light reading) states that the soybean (*Soya hispida* Moench), which is a common food in East Asia, is used on the English ships that travel there in the form of a very popular prepared, sharp, mustardlike sauce—according to the *Communications of the Royal Imperial Agricultural Society for Kärnten* (*Mittheilg. der k.k. Landwirtschaftsgesellschaft für Kaernten*) [also called Carinthia, an Austrian crownland; now a state of southern Austria, bordering on Italy and Yugoslavia]. The soybean can be considered as a new crop plant for Kärnten, since in previous years, it has done well at the Agricultural School (*Landesbauschule*) in Ehrenhausen, with abundant yields of pods and seeds. From 20 seeds that were planted, 19 plants grew and yielded 5,800 completely developed seeds that were harvested—a 235-fold increase. The plant that grows like a bushbean is darker than the previous one. The trifoliolate leaves are a little more pointed and longer.

Nothing has yet been communicated concerning their

taste and utilization. However Prof. Haberlandt's chemical investigations showed they have a greater nutritional value than our other indigenous legumes. Moreover the soybeans grown in Europe have a greater nutritional value than the original Asiatic soybean seeds.

Also discusses: *Prunus mume* Siebold and Zuccarini, the tree fruits from which *umeboshi* are made (p. 238).

1118. *Proceedings of the American Pharmaceutical Association*. 1878. Report on the progress of pharmacy. 25:25-334. See p. 236-37. Held in Sept. 1877 in Toronto, Ontario, Canada.

• **Summary:** In the section titled "Materia medica: Vegetable drugs" (p. 116-237), a subsection titled "Useful Plants of the Chinese Province of Shantung" (p. 234+) begins: "From a recent report on the geography and natural history of the province of Shantung, published in Hong Kong, the 'Journal of the Society of Arts' extracts some interesting details, which are copied in 'Ph. J. Trans.,' July 8th, 1876, p. 26. The following useful plants are mentioned:

Page 236: "*Soja Hispida*.—The bean cheese or bean curd, so common in many parts of China, is made from white or yellow beans steeped in cold water till they are soft, when they are deprived of their skin by pressing them between the fingers, after which, they are reduced to pulp, by pounding them in a mortar or pressing them under a millstone; the pulp is passed through a sieve, and then some *lu-shui*—[nigari] the residuum of sea-salt or nitre, or a gypsum solution is added, which coagulates the albumen; the water is taken off by pressure in linen cloth loaded with stones; this liquid is carefully thrown away, being said to be poisonous. The cake so obtained is salted, and sold fresh in the streets, or dried to the consistence of hard cheese. Flour for food is also made from these beans, as well as sauce or soy.

"This sauce, now extensively used in Great Britain and America, is prepared by steeping the beans in water for one hour; they are then half dried in the sun and mixed with

wheat flour and allowed to ferment, being placed for that purpose in a hot damp place. The mould which develops itself in abundance on the beans is scraped off, the beans are then dried and put in salted water, which has been properly boiled and cooled (to expel air). The brown and black color of the sauce so obtained is supposed to be produced by a microscopic fungus resembling the ergot of rye, whose properties the soy is said to possess.

"These kind of beans are very extensively used in the manufacture of the now famous bean cake, which appears to be exported in enormous quantities. The beans being thoroughly crushed under heavy stone wheels turned by mules, are heated under water and the cakes compressed between iron hoops. The pressure is slowly and gradually increased by driving wedges with an enormous stone suspended as a pendulum and acting as a ram. The oil which runs from them into a kind of well, is black and very dense; it has a disagreeable smell, and is used for illuminating purposes, and for calking boats, and being mixed with lime it makes a kind of putty. A foreign firm at Nenchawang [sic, Newchwang], sometime ago, tried to extract oil from the beans by the more powerful and expeditious means of a hydraulic press, but the resistance to a sudden pressure was so great that hardly any oil could be obtained."

The next section (p. 236-37) is titled "*Sesamum orientale*, *Arachis hypogaea*, *Cannabis sativa*, *Ricinus communis*" [sesame, peanuts, hemp, castor]; these are among the oil-producing plants of Shantung province.

1119. Tyree, Marion Fontaine Cabell. 1878. Housekeeping in old Virginia: Containing contributions from two hundred and fifty ladies in Virginia and her sister states,... Richmond, Virginia: J.W. Randolph & English. 528 p. Index. 20 cm.

• **Summary:** Soy [sauce] is used as an ingredient in 2 recipes in this book: Roast veal and chicken-bone soup ("Color with a little soy or catsup," p. 79). Mushroom sauce, for fried or broiled fish ("This makes a nice flavoring for any sauce or gravy mixed with soy or lemon pickle," p. 203).

Worcestershire sauce is used as an ingredient in 4 recipes in this book: Clear tomato soup (p. 83). Raw oysters (p. 93). Cat-fish chowder or hog-fish (p. 99). Kidneys grilled (p. 148).

Note: Written by the granddaughter of Patrick Henry, this book contains more than 1,700 "favorite recipes from 250 famous families of Virginia." Address: St. Louis, Missouri.

1120. Wernich, Albrecht Ludwig Agathon. 1878. Geografisch-medicinische Studien nach den Erlebnissen einer Reise um die Erde [Geographical-medicinal studies based on the experiences of a trip around the world]. Berlin: Verlag von August Hirschwald. x + 423 p. See p. 85. No index. 23 cm. [3 soy ref. Ger]

• **Summary:** Chapter 5, titled "Japan—Food value and foods"

contains a long discussion of the soybean (*Dolichos Soja*) and soyfoods (p. 84-87) including tofu (*Bohnenkäse oder Bohnengefaultes*) and shoyu (*Soja oder Schoju*), with two long quotations. Soybeans are rich in protein and almost free of starch. They can be roasted to taste like nuts and used in baked goods.

Endnote No. 35 (p. 411) states that miso soup (*Misoschiru*) or shoyu soup (*Schio-ü-schiru*) are part of the typical Japanese breakfast. Miso is made from beans, barley, and salt; shoyu is made from beans, wheat, and salt. The soup typically contains small amounts of vegetables (such as varieties of potatoes), beans, cabbage and mushrooms, turnips or carrots, onions, etc. weighing a total of about 170 gm. The main dish at breakfast is rice (weighing about 470 gm). Also included are fish or an egg, salt-pickled vegetables, and 100 gm of tea.

Also discusses *Pueraria Thunbergiana* (kuzu, p. 87). Total references: 162. Albrecht Wernich lived 1843-1896. Address: Docent for Special Pathology and Therapy at Berlin University.

1121. *Kogyo Tokei-hyo (Census of Manufacturers)*. 1878--.. Serial/periodical. Tokyo: Japanese Ministry of International Trade and Industry (MITI), Research and Statistics Dept. (Tsusho Sangyo Daijin Kanbo Chōsa Tokei-bu). Annual. [Jap]

• **Summary:** Contains statistics concerning Japan's industries and commodities. For example, in the report for the year 1987 (published in June 1989) under miso we find "124111 Miso (Including powdered or spray-dried miso). Total production in Japan: 641,337 tonnes. Value in million yen: 138,960. ??" Similar figures are given for each of Japan's 47 prefectures, listed from north to south, starting with Hokkaido and ending with Okinawa. The four largest producing prefectures are Nagano 186,316 tonnes (29% of the total), Aichi 63,294 tonnes, and Shin (?) 34,282, and Aomori 32,145 tonnes.

Note: The powerful and influential publisher, MITI, is called Tsūsan-sho in Japanese. Address: Tokyo, Japan.

1122. *Canada Medical Record (The) (Montreal)*. 1879. "Soy" has always been a mystery to me,... 7:167. March.

• **Summary:** "... as I fancy it has been to most other people who have dealt in or used it. I was, therefore, anxious to see a soy factory, and taking a boat one day we proceeded two or three miles up the river to where one was in operation. I found that the principal ingredient or base is a white [soy] bean known as 'paktoh,' which, so far as I could judge, is very like any other small white bean. These are boiled, heavily salted, and put into big earthen jars, holding, perhaps, half a barrel each, where they are allowed to remain for about ten days, during which period fermentation takes place. They are then mashed up with a species of olive [sic], which is picked and boiled, and this mixture is placed into

neat cloth bags, into which water is poured and allowed to percolate. The liquid is then taken out, placed in clean jars, and thickened with a heavy-bodied Chinese molasses, and this is soy."

1123. *Sarnia Observer (Ontario, Canada)*. 1879. Farm and garden: Household recipes. May 30. p. 7.

• **Summary:** "Worcestershire sauce.—One quart of *thin* tomato catsup made and spiced the usual way, with the addition of cayenne pepper and a sufficient quantity of crushed garlic, added to the catsup while boiling and before it is strained, to give it a decided garlic taste. Then add enough soy sauce—to be obtained at almost any good grocery store—to make the catsup a deep chocolate color; two tablespoonfuls will probably be sufficient."

Note 1. By 1879 "soy sauce" was apparently available "at almost any good grocery store" in the area of Sarnia, in southwestern Ontario. Sarnia is located where the upper Great Lakes empty into the St. Clair River.

Note 2. This is the earliest document seen (Feb. 2010) concerning soybean products (soy sauce) in Ontario, Canada. This document contains the earliest date seen for soybean products in Ontario (May 1879); soybeans as such have not yet been reported.

1124. *Bulletin Trimestriel de la Societe des Sciences, Agriculture et Arts de la Basse-Alsace (Strasbourg)*. 1879. M. Fuehrer lit un compte-rendu d'un mémoire qui a été publié dans la *Wiener Landwirthschaftliche Zeitung* par M. le professeur Hecke sur la fève soja [Mr. L. Führer reads a report of an article on the soybean published in the *Wiener Landwirthschaftliche Zeitung* by Prof. Hecke]. 13(3):355-62. Meeting of 3 Sept. 1879. M. Rod. Turckheim, residing. [1 ref. Fre]

• **Summary:** Gentlemen, I should inform you of the report published in the journal *Wiener Landwirthschaftliche Zeitung* by Prof. Hecke on the agronomic trials done in Austria, Bavaria, and Silesia of the bean, introduced following the Universal Exposition of Vienna and known to former botanists by the name *Dolichos* bean of Japan (*Dolic du Japon*) [the soybean]. The beans of this plant are used in Japan to make a type of sauce that is served as a condiment called *Soja*. The plant was first placed in the botanical system in the genus *Dolichos*, from which it takes its name, and which is found in Theophrastus, from a variety of beans having very elongated pods. This genus, differing from true beans (*haricots*) only because their carina (*carène*) is not twisted in a spiral, contains 60 species, all exotic, including *Dolichos lablab*, the famous Egyptian lentil for which the patriarch Esau had to give up his right of primogeniture [to his younger brother Jacob]. Our plant had taken the name of *Dolichos soya* within the genus, and later, the genus *Dolichos* having acquired too many species, it served as a model for a particular genus known as *Soja hispida* [the

soybean]. Note 1. In botany, the word “carina” refers to the two conjoined lower petals of a bean, pea, or other legume flower that enclose the stamen and style. It is derived from the Latin word *carina*, meaning the hull or keel of a boat.

Soy sauce (*la sauce du soja*) was well known in Europe; it was even stylish (*à la mode*) at the turn of the century [ca. 1800] in London and Paris, but no one there had the plant. It was only after the Universal Exposition of Vienna where *Dolichos* beans of all [sic, several] countries figured, that the attention of some farmers and notably that of Professor Haberlandt had been called to these beans. Some agronomic trials were done; it was soon recognized that the species or varieties coming from Japan and north China were those that could adapt themselves most easily to the climate of central Europe, and the yellow variety was recognized as being preferable to any other.

Let us also recall that at last April’s meeting, our colleague Mr. Wagner made a rather large distribution of seeds coming from his own crop. It will be then possible to obtain exact information on the merit of the new legume.

The journal *Isis*, which also contains an article on soy (*soja*), publishes a table comparing the composition of different edible beans. It compares the water, albumin, non-protein extracted material, and ash content of the soybean, haricot bean, pea, lentil, broad bean / faba bean (*fève*), and lupine.

It is certain that a great number of plants have been extolled for agriculture and we should have expected marvelous results. Yet very few justified the reputation that had been made of them, and in the majority of cases the plants in use for centuries prevailed over their new competitors. But it is not less true that to agronomic trials of exotic plants we owe wine, potatoes, tobacco, and many others. These trials would merit encouragement then, even if of 50 new plants only one succeeds, and could improve our agriculture. It is for this reason that I wish to call the Society’s attention to another plant which I mentioned earlier—the *Dolichos lablab* or Egyptian lentil (*le lentille d’Égypte*).

Note 2. Mr. L. Führer is a member of this Society and responsible for publishing the Bulletin and for the “Initiative / Information Commission” (*commission d’initiative*). Address: Basse-Alsace, France.

1125. *Sydney Mail (Australia)*. 1879. Household: Dainty dishes. Oct. 11. p. 596.

• **Summary:** “Sauce au diable.—Mix well together the following ingredients: 1 oz. of cayenne, 1 oz. of pounded sugar candy, 6 anchovies, 6 cloves, and 6 small eschalots all pounded, one quart of vinegar, 1½ gill of soy, 1½ gill of mushroom ketchup. Shake often; in ten days it is fit for use. Let it stand for two or three days to get clear, then bottle for use.”

1126. Warington, Robert. 1879. Agricultural chemistry in Japan. *Chemical News (The)* 40(1039):195-96. Oct. 24.

• **Summary:** “In the International Exhibition, now being held at Sydney [Australia], a collection of soils, manures, and agricultural products is shown by the Imperial College of Agriculture in Tokio, Japan. Accompanying the collection is a descriptive catalogue, compiled by Mr. Kinch, the Professor of Chemistry at the College, in which a short account is given of the various products exhibited, with chemical analyses of the majority of them. The catalogue contains in all about 80 analyses of Japanese products. The whole of this important work has been accomplished in the laboratory of the College, under the superintendence of Mr. Kinch, and is certainly highly creditable to the Institution.”

The section titled “Soy Bean (*Glycine [Soja] hispida*)” (p. 195) mentions miso, tofu, and shoyu. Address: M.R.C.S. Eng.

1127. *Chicago Daily Tribune*. 1879. Injunction bonds. Nov. 25. p. 12.

• **Summary:** Several years ago, Lea & Perrins, “manufacturers of ‘Worcestershire Sauce,’ filed a bill against Deakin here to prevent him from infringing their trademark or Worcestershire, to denote a kind of sauce. Deakin’s attorney, Mr. C.E. Pope, went to work in a most energetic manner, and collected enough testimony to show that Lea & Perrine [sic, Perrin] had no exclusive use of the above word so as to give them any exclusive right thereto, and, on a final hearing, their bill was dismissed by Judge Drummond for want of equity.

“When the suit was begun a temporary injunction was granted under a bond for \$5,000, and subsequently another bond for a like amount was given at the defendant’s motion. After the bill was dismissed, Deakin began two suits on these bonds to recover the damages for the issuance of the injunction.” Deakin received no compensation.

1128. *Bulletin de la Societe d’Acclimatation*. 1879. IV. Bibliographie. II. Journaux et revues. 1879. 3e fascicule.—*Le Soja hispida* [IV. Bibliography. II. Journals and Revues. 1879. 3rd volume of *Le Soja hispida*]. 26:666-71. Nov. [Fre]

• **Summary:** This section contains a summary of the main articles from other periodicals that are connected with the work of the Society for Acclimatization. In the *Bulletin de la Société des Sciences de la Basse-Alsace* (1879, Vol. 3) is an article titled *Le Soja hispida*.

“In the meeting of 3 Sept. 1897, Mr. Fuehrer read the report of a scientific treatise published recently by M. Hecke on the agronomic trials conducted in Austria, Bavaria, and Silesia [Part of Austria-Hungary in 1879; part of Poland after 1945] of a legume which would have been introduced following the Vienna World Exposition of Vienna, the *Soja hispida*, and from the seeds of which is made, in Japan, a type of sauce that is served as a condiment.

“According to this work, soy sauce (*la sauce du Soja*) was well known in Europe, and it would have even been stylish, at the beginning of this century, in London and Paris, but no-one possessed the plant. It was only after the Vienna Exposition that the attention of some agriculturists, and especially that of Professor Haberlandt, were called to this legume. Some cultural trials were conducted; it was quickly recognized that the varieties originating in Japan and northern China could be best adapted to the climate of central Europe, and the yellow variety was recognized as preferable to all others. The good yields produced by the soybean led to its good acceptance by farmers; even more, chemical tests showed that this legume contained one-third more protein than other protein-rich indigenous legumes. And it contained 6 to 10 times more oil. It could even be classified as an oilseed. The author believes that it should be introduced as a food. He took as an example the diet of a family of workers from Silesia, and he concluded that by replacing 3 kg of potatoes (of 9 consumed per day) and 1 kg of rye flour (of 2.21 kg consumed) with only one kg of soybeans, this family would find itself adequately nourished.

“Let’s add again, to analyze this treatise, that in 1878 the plant was attacked by the fungus *Septoria sojae*, and by the caterpillars of the Belle-Dame (*Vanessa cardui*) and well as by the nocturnal moth (*Acronycta rumicis*; *Noctuelle de la Patience*). Rabbits searched avidly for soybeans, chickens like the soaked seeds, and sheep are very fond of the straw, which has 203 times the nutritive value of the straw of peas.

“However, we must note, the introduction of this plant into Europe is not as recent as was thought in Vienna. In April 1854, Mr. de Montigny, the French consul at Shanghai, sent back the first seeds to the Society for Acclimatization in France, and they arrived under the name ‘oil peas of China’ (*Pois oléagineux de la Chine*). This plant belonged to the legume family and to the genus *Soja* (Moench), a relative of *Dolichos*; its species was *Soja hispida*. Let us add that in the report that had preceded the creation of the *Jardin du Bois* at Bologne, read at the meeting of 7 May 1858, Mr. F. Jacquemart verified that the naturalization of this legume was complete.

“At this time, in effect, the plant was imported and its cultivation had succeeded. It had been reproduced from seeds produced in France. The role of acclimatization was finished. Now it was up to agriculture and industry to see what role it could play, to study whether it could be used in place of peas, lentils, and haricot beans, or whether it could render services other than those of these similar legumes. Each introduction takes a long time, and many obstacles must be overcome before a newly discovered plant can be claimed a success. We will watch with pleasure as the horticulturists occupy themselves anew with *Soja hispida*. We should add that if Mr. Quihou declares to have tried the cultivation of this legume many times without success (this Bulletin, 1873, p. 489), Mr. Blavet verifies that it has been cultivated

for three years at Étampes (Seine-et-Oise) (Footnote: Seeds harvested at the Garden of Hyères and sent by the Society for Acclimatization to the Horticultural Society of Étampes on 29 Nov. 1874). It is found there growing very rustically and giving extraordinary yields; the pods are very easily threshed with a flail, and the pea weevil (*la Bruche des Poids*) has not yet attacked it (*Bulletin de la Société d’Horticulture d’Eure-et-Loire*, 25 Feb. 1879). Note: Eure-et-Loire is a department in north-central France.

“We would not need to return to the numerous studies published on the subject of soya in our *Bulletin*, especially from 1855 on; but since much more will be said about this new plant, perhaps we owe it to our colleagues to save them some research.

“The soybean (*Le Soja*) is an essential oilseed, but one which is also used for food.

“This bean is cultivated on a large scale in the fields of north China, where the climate is quite similar to that of our colder provinces, and much commerce is based on the products made from it:

“1. The oil, which is preferable to colza- and to rape-seed oil (*de Colza et de Navette*). However it has a taste of dry legumes and leaves an aftertaste of beans or peas. Yet, with the addition of a small proportion of lard, it becomes quite similar to commercial second-grade olive oils.

“2. The residues from making the oil, which form soybean cakes, used by the Chinese to fatten their livestock and fertilize their fields.

“3. A food for the poor, quite similar to fresh white cheese, called *fromage à la pie* in France, which is generally fried in oil—including soybean oil.

“4. A seasoning (*assaisonnement*) much appreciated by the rich. In this case, the paté of soybeans (*la pâte de Pois*) [tofu] is subjected to fermentation, after the following have been added to it: pepper, salt, powdered bay/laurel leaves, and powdered thyme and other aromatic substances. During the fermentation, the producer sprinkles soybean oil on the paté. After several days of fermentation, the preparation is ready. It (fermented tofu) is a powerful digestive (aid to digestion) and an aperitif, which no one can resist because it is extremely tasty (Report by Baron de Montgaudry, *Bulletin*, 1855, p. 16).” (Continued). Address: France.

1129. *Journal de la Société Centrale d’Horticulture de France*. 1879. Procès-Verbaux: Séance du 13 Novembre 1879 [Verbal proceedings: Meeting of 13 Nov. 1879]. 1:685-88. Nov. Third Series. See p. 686-87. [3 ref. Fre]

• **Summary:** The meeting, presided over by Mr. Hardy, began at 2:00. The correspondence read by the secretary consisted of only one letter from Mr. Blavet, President of the Society of Horticulture at Etampes, to M. Laizier, president of the committee on kitchen-garden crops (*Culture potagère*); he reported on the chemical composition of soybean seeds (*graine du Soja hispida*).

With respect to Soya (*Soja*), Dr. Baillon gave a lecture (based on a note he wrote) in order to provide information about this plant in response requests, especially from Mr. Vavin as follows: He discussed Englebert Kaempfer's book *Amoenitatum exoticæ* (1712) (about *Daidzu* and *Mame* [soybeans], soy sauce, miso, koji, and saké), Linnaeus, Moench [1794], and Savi (1824).

"At the time of Jacquin [1781, 1786], the soybean was cultivated in Austria. Proposals were made to plant it on a large scale as a oil-yielding plant (*plante oléagineuse*). Since the start of this century, it has been grown in all [sic, many of] the botanical gardens, where it bore seeds very well."

• **Summary:** "Finest Dehesa raisins [from Malaga, Spain], finest Layer figs,... Catawba grapes, Malaga grapes,... Mexican beans, Japanese soy sauce, Scotch jams and marmalades." This ad also appeared in the Dec. 18 and 25 issues of this newspaper. Address: Northwest corner 15th and I sts. northwest [Washington, DC].

1131. Atkinson, R.W. 1879. The chemical industries of Japan. No. 2.—Ame. *Transactions of the Asiatic Society of Japan* 7:313-22.

• **Summary:** Although *amé* "is best known to foreigners in the form of a sweetmeat much esteemed by children," it is also largely used "in the manufacture of *mirin* and *shoyu*. In a viscous liquid form, sold out of jars in shops, it is called *midzu-ame*, with the best variety of the latter called *awa-ame*."

The basic starch-containing raw material is either millet (Jap. *awa*), or *mochigome* (glutinous rice), or the common kind of rice called *uruchi*. The *ame* made from rice is much sweeter than that made from millet. The late Dr. Ritter wrote in detail of *ame* in a paper published by the German Asiatic Society in 1874 [See: *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* (Yokohama) 1(5):3-5. July]. A detailed description of the process for making *ame* is then given. Address: B.Sc., London.

1132. Kinch, Edward. 1879. Japan: A classified and descriptive catalogue of a collection of agricultural products exhibited in the Sydney international exhibition by the Imperial College of Agriculture, Tokio, Japan. Tokyo: Agricultural Bureau (Naimushô), Home Dept. 65 p. 20 cm. [Eng]

• **Summary:** Each item that was displayed is numbered. All chemical / nutritional analyses give percentage composition unless otherwise stated. The chapter on "Manures" begins (p. 4): "The principal manures used in this country are human excrements both solid and liquid, which are collected with the greatest care and applies to the land whilst in a more or

less advanced state of decomposition. The excreta are often made into a compost with dried grass.

The section titled "vegetable manures" (p. 7-13) gives analyses of rape cake (*abura kasu*), malt dust (*ame kasu*), sesamum cake (*goma kasu*), rice beer residues (*sake kasu*), soy [sauce] residues (*shoyu kasu*; water 16.37%, ash 4.96%, organic matter 78.67%), rice cleanings (*nuka*), and barley bran (*fusuma*).

Note 1. This is the earliest English-language document seen (May 2012) that contains the term *shoyu kasu* (in italics, without diacritics) which it defines as "Soy residues," and the earliest that gives its composition.

The chapter on "Foods" begins (p. 16): "By far the most important national food is rice, *Kome*; more than one half of the cultivated land of the Empire is devoted to paddy fields, *Ta*, and besides the rice grown on this irrigated land a considerable quantity is grown on the dry fields, *Katake*." *Mochi-gome* or glutinous rice, is specially used for making the new years' cakes, *Mochi*.

The many kinds of leguminous plants include: Peas, field and haricot beans, vetches, lupins; soy beans *Glycine* (*soja*) *hispida*, *O-mame* or *Daidzu*; fol. lanceolata (*Midzu-kugiri*); *Phaseolus radiatus*, *Adzuki* or *Shodzu*; *P. radiatus* v. *pendula*, *Tsura-adzuki*; *P. radiatus subtriloba*, *Bundo*; Horse gram, *Dolichos uniflorus*, *Sasagi*; Gram, *Dolichos umbellatus*, *Hata-sasagi*; Overlook pea, *Canavalia incurva*, *Nata-mame*; Ground nut, *Arachis hypogæa*, *Rakkasho* or *Tojin-mame*.

"Also should be mentioned the sesamum, *Goma*, the oil of which is extensively used in cooking; *Perilla ocymoides*, *Ye-goma*; and rape, *Brassica sinensis*, *Abura-na*, which is cultivated for its seed, the oil being used for burning." Also list (with scientific and Japanese names, p. 17-18) the principal root crops, fruits, sea weed and lichens, fungi, and starch.

Next: Chemical analyses of rice, wheat, rye, "red bean—*Adzuki*—*Phaseolus radiatus* (large variety and small variety)."

Note 2. This is the earliest English-language document seen (March 2006) that uses the word *Shodzu* (or *shôdzu* or *shôzu* or *shodzu* or *shozu*) or the word "red" or the term "red bean" to refer to the azuki bean, or that gives its scientific name as *Phaseolus radiatus*, or that reports the existence of large and small varieties, or that uses the word *Bundo* to refer to a variety of azuki bean.

Then (p. 22-26): "44. Beans. *O-mame*, *Daidzu*. *Glycine* (*soja*) *hispida*. White round soy bean. Miso *mame*. Percentage composition (table): Water 11.32, albuminoids 37.75, fat 20.89, fibre 1.50, ash 3.86, starch and soluble cellulose 24.58. Total 100.00.

"This bean is met with in several varieties of different colour and size, but they differ little in composition. It is vegetable which approaches nearest in chemical composition to animal food (meat), containing as it does one fifth of its

weight of fat and often two-fifths of nitrogenous matter. It is an extremely valuable adjunct to the food of a people who subsist so largely on a purely vegetable diet, of which the bulk is rice so rich in heat producers—starch, and poor in flesh formers—albuminoids.

“*Shoyu*, *Miso*, and *Tofu*, are made from these beans, and enter largely into the food of the nation.

“45. *Miso*. *Shiro-miso* or white miso. From Osaka. Percentage composition: Water 50.73, fibre 12.93, ash 6.58 (containing 5.4 per cent of common salt), sugar 17.54, albuminoids 5.64, soluble carbohydrates 6.58. Total 100.00. Soluble in water 35.88 per cent.

“46. *Miso*. *Aka-miso* or red miso. From Osaka. Percentage composition: Water 50.40, fibre 8.25, ash 12.50 (containing 12 per cent of common salt), sugar 0.61, albuminoids 10.08, soluble carbohydrates 18.16. Total 100.00. Soluble in water 34.71 per cent.”

Note 3. This is the earliest English-language document seen (March 2009) that uses the term “*Shiro-miso*” refer to white miso (and vice versa) or “*aka-miso*” to refer to red miso (and vice versa).

“In the preparation of *Miso* the beans are boiled, pounded in a mortar into a paste and mixed with fermenting rice, *Koji* (see *sake*) in various proportions, and with more or less salt, and the mixture is placed in tubs and left in a cool place for about a month. It will be seen that one variety, white miso, contains much sugar, derived from the *koji*, and little salt; whilst the other variety contains very little sugar and much more salt.

“47. *Tofu*. Percentage composition: Water 89.29, ash 0.48, fibre 1.01, nitrogenous substances 4.87, non-nitrogenous substances 4.35 (containing 3.32% fat). Total 100.00.

“This food is made by boiling the white soy beans, *Shiro-mame*, in water after they have been soaked, ground and strained through a sieve. The solution is filtered through cotton cloth and the residue pressed; the liquid, containing legumin in solution, is precipitated by the addition of the brine which runs off from sea salt during its deliquescence in the air. The precipitate constitutes *Tofu*.”

Note 4. This is the earliest English-language document seen (Oct. 2008) that uses the word “legumin” to refer to the water soluble protein in soybeans than can be precipitated by a coagulant to make *tofu*.

“48. *Kori tofu*. Percentage composition: Water 18.75, ash 1.60, nitrogenous substances 48.80, non-nitrogenous substances, chiefly fat 30.85. Total 100.00.

“Prepared from the above [*tofu*] by exposing it to the air during frost, until it freezes, and afterwards thawing in the sun, by which the greater quantity of the water is removed.

“49. *Soy* [sauce]. *Shoyu*. Specific gravity 1.1996. Grams per litre: Total solid residue 359.888, ash 195.168 (principally common salt), sugar 31.034, albuminoids 41.000, free acid expressed as acetic acid 6.200.

Note 5. This is the earliest document seen (Jan. 2008) that uses the term “specific gravity” in connection with soyfoods—in this case soy sauce.

“Manufacture of *Shoyu*. *Shoyu* is made from the soy bean, *Glycine (soja) hispida* q.v. together with wheat, salt and water. Equal parts of beans and wheat are used. A small part of the wheat is mixed with *Koji* (see *sake*) and allowed to ferment. The remainder is roasted and the beans are also roasted. The roasted beans and wheat are then mixed together with the fermenting wheat, placed in shallow wooden boxes, and kept for some days, at a fixed temperature, in a warm chamber with thick walls, until the whole mass is covered with fungus. It is very important that the temperature of this chamber should be kept at the proper point. By these processes, part of the starch of the wheat is converted into dextrin and sugar, and lactic acid and acetic acid are formed. It is then mixed with salt lye, the proportion used being about 4 *go* of salt to 12 *koku* of water to extract 1 *koku* of the fermented product. The mashings are removed to large vats and there kept for at least 20 months and generally for 3 or 5 years. The better qualities of *shoyu* are kept the longer times. It is found that the best soy is produced by mixing that kept for 5 years with that kept for 3 years. After it has been kept a sufficiently long time, it is strained through thick cotton bags and the residue pressed in the same manner as in *sake* pressing. Before filtering, honey is sometimes added in the proportion of 10 *kin* to 1 *koku* of *Moromi* or mixed soy, in order to give it a sweet taste. Occasionally a sweet sake, obtained by taking 1 *koku* of *koji* to 7 *to* of water and 1 *to* of steamed rice, mixing them together and steaming for two hours, is added instead of honey. The residue obtained on pressing *moromi* is again mixed with salt and water, in the proportion of 8 *to* of salt to 1 *koku* of water and again pressed, this yields an inferior *shoyu*. Sometimes water is added to this second residue and it is again pressed. The residue first obtained is sometimes used as food, and the last residue as manure. One *koku* of the mixture, *moromi*, produces 4 *kuwamme* of residue at the first filtration and about 3.5 *kuwamme* of residue at the second and third. The *shoyu*, after pressing, is allowed to settle for two days in large tanks, and then drawn off and again filtered. *Shoyu* is a very important condiment, it is mixed with a great many kinds of food and is produced and consumed in very large quantities.

“1000 *Go* = 100 *Sho* = 10 *To* = 1 *Koku* = 4.929 Bushels. 1 *Kin* = 1.325 lbs. 1 *Kuwamme* = 8.28 lbs.

Note 6. This description of how *shoyu* is made contains several major errors.

Finally, there are chapters on alcoholic liquors (with emphasis on sake or “rice beer, sometimes called rice wine”), sweet liqueurs (*mirin*, *homeishiu*, *shiro-zake*), food adjuncts (incl. salt, vinegar, spices, herbs, and perhaps *shoyu*), edible sea weeds (20 varieties, with both Japanese and scientific names, and an analysis of each), tea, tobacco, fodder, animal

foods, dye stuffs, oils and waxes, and starch (incl. *kudzu*, *Pueraria thunbergiana*).

Note 7. This is the earliest document seen (July 2008) concerning soybean products (tofu, dried-frozen tofu, and shoyu) in connection with (but not yet in) Australia.

Note 8. This is the earliest English-language document seen (Aug. 2003) that uses the word “nitrogen” in connection with soy—and with protein.

Note 9. This is the earliest document seen (July 2008) by Edward Kinch (1848-1920) that mentions soy. Kinch was born on 18 Aug. 1848 at Henley-on-Thames, Oxfordshire, England, the 3rd child of Charles Kinch and Emma Plumbe Kinch. He was baptised there on 12 Dec. 1845 in St. Mary’s church. Kinch was a chemist, specializing in agricultural chemistry. In 1869 he became assistant professor at the Royal Agricultural College (RAC) in Cirencester (in southwestern England). From 1876 to 1881 he was a professor of agricultural chemistry at the Imperial College of Agriculture in Tokyo, Japan. Then from 1881 to 1915 he was professor of chemistry at the RAC in Cirencester. He married Edith Shirley Huntington in 1889 in Pembroke district, Pembroke, Wales. They had two children, William (born ca. 1886) and Dora Ann (born ca. 1893). He died on 6 Aug. 1920 in Haselmere, Surrey, England.

Note 10. This catalog was displayed at the Sydney International Exhibition, held in Australia in 1879. The Sydney International Exhibition was Australia’s first international exhibition, a showcase of invention and industry from around the world. An imposing Garden Palace was constructed in the Botanic Gardens as a home for the exhibition. Address: F.I.C., F.C.S., &c., Prof. of Chemistry. Imperial College of Agriculture, Komaba, Tokyo, Japan.

1133. Voss, Johann Heinrich. 1879. Poetische Werke [Poetic works. Vol. 1]. Berlin: Gustav Hempel. 16 cm. [Ger]

• **Summary:** Vol. 1 of this book is divided into 3 parts (Theilen): (1) Luise: A long pastoral poem, (2) idylls (*Idyllen*), and (3) songs (*Lieder*). These are followed by a biography of the poet, then annotations on the first 3 parts. Soy sauce is mentioned in Part II, Idyllen, on page 78. A section titled “Der Abendschmaus” (The evening feast or banquet) contains the line:

“Young Calcuttans... with your sharp soy sauce from Jakarta (*Junge Kalkuten herum, mit scharfer Batavischer Soja*).”

Then in the “Annotations to the Idylls (*Anmerkungen zu den Idyllen*)” (p. 96), the poet notes: “Page 78: Soy sauce, a strong sauce, which is prepared in the East Indies from soybean juices, that are simmered then fermented together with brine and spice, is also prepared in Europe from preserved fungi [starter culture].” In German: “*Soja, eine kräftige Tunke, die in Ostindien aus dem gequollenen und in Gährung uebergelenden Sojasafte, mit Salzlake und Gewuerz, in Europe auch aus eingemachten Schwämmen*

bereitet wird.”

No year of publication is given in this book. It is set in hard-to-read Gothic type [gotische Schrift] (also called black-letter type, Fraktur [die Fraktur], or Sütterlinschrift). The poet was born on 20 Feb., 1751 in Sommersdorf in the area of Wahren near Mecklenburg in what is today eastern Germany. He died in 1826 at the Univ. of Heidelberg. Address: Germany.

1134. Duncan’s (John) Sons. 1880. Display ad: Great reduction in price: Lea & Perrins signature on the bottle of the genuine Worcestershire sauce. *San Francisco Chronicle*. Jan. 5. p. 2, col. 4.

• **Summary:** Printed to the left of the bottle: “It imparts a most delicious taste and zest to soups, gravies, fish, hot and cold joints.

Printed to the right of the bottle: “Extract of a Letter from a Medical Gentleman at Madras [India], to his brother at Worcester, May, 1851. ‘Tell Lea & Perrins that their Sauce is highly esteemed in India, and is in my opinion the most palatable as well as the most wholesome Sauce that is made.’

“Sold and used throughout the world. Travelers and tourists find great benefit in having a bottle with them.”

Large illustrations show: (1) The “Lea & Perrins” signature. (2) A bottle of the sauce.

Note 1. This ad appeared in the Jan. 26 and March 1 issues of this newspaper (both on p. 2). After that, no ad for Worcestershire sauce was seen until 1889.

Note 2. This is the earliest document seen (Feb. 2012) that shows the actual “Lea & Perrins” signature in an ad for this sauce. Address: Agents, 26 College Place and 1 Union Square, New York [City].

1135. *New-York Tribune*. 1880. A new vegetable from China. Feb. 8. p. 4.

• **Summary:** From The Globe: “Some experiments carried on by two or three Austrian and German horticulturists [including Friedrich Haberlandt of Vienna] have brought into notice an almost forgotten plant which was introduced into Europe from China nearly thirty years ago, but whose existence, and whose products have been undeservedly lost sight of. This is the *Soja hispida*, a species of leguminous plant, somewhat resembling in habit and appearance the well-known pea. Unlike the latter, however, it has two distinct uses—industrial as well as alimentary. It is highly prized in China and Japan, and is said, indeed, to take its scientific title [Soja] from the Japanese name of the sauce—sooja—which is made from its seeds.”

Chinese are referred to as “the Celestials.”

1136. Carrière, E.-A. 1880. Le soja hispida [The soybean (*Soja hispida*)]. *Journal d’Agriculture Pratique* 44(14):479-83. April 1. [Fre]

• **Summary:** Page 480 notes that in 1874 the *Jardin*

d'Acclimatation in France received soybeans from Mexico and distributed them to various societies. Illustrations show: (1) A plant, pod, and seed of *Pois oléagineux de la Chine* (soybean; Fig. 35, by L. Rouyer). (2) A plant and pods of *Soja hispida* (soybean) with many pods clustered around the stem, and a cluster of 7 pods to the upper left of the plant (Fig. 36, by Thiebault). (3) A cluster of three leaves of *Soja hispida d'Etampes* one-fourth its natural size (Fig. 37).

(4) Two large pods and one seed of *Soja hispida d'Etampes* (full size; Fig. 38).

(5) A dry plant of *Soja hispida d'Etampes* with pods on the stems, one-ninth its natural size (Fig. 39).

A table (p. 482) compares the composition of different seeds as analyzed by various chemists. The soybean was analyzed by Levallois of *l'Institut agronomique*.

Pages 482-83: A quotation from *Amoenitatum exoticarum* by Engelbert Kaempfer (1712) mentions miso, soy sauce, koji, and sake.

Page 483 states: "Today the soybean is cultivated in Hungary and probably in Austria. One farmer, Mr. Jules-Robert of Seelowitz, in Moravia [a separate crownland of Austria, but after 1945 part of Czechoslovakia], cultivates it on a very large scale (30 hectares or more each year). He lets some of the plants ripen / mature for harvest as seeds (soybeans); he cuts the others before they mature and mixes them with corn (*maïs*), then ensiles the mixture in a semi-dry state." Note 1. This is the earliest document seen (June 2008) that mentions silage or ensilage in connection with soybeans. It is also the earliest document seen (April 2003) that mentions the use of corn and soybeans together to make silage. All of the early research on the use of soybeans in silage was done in France.

The last paragraph states: "Soybean seeds can be ordered from MM. Vilmorin et Cie, 4, quai de la Mégisserie, Paris."

Note 2. Note 2. This document contains the earliest date seen for soybeans in Mexico (1874). It is not clear whether or not these soybeans were cultivated in Mexico (they may well have been) or where they came from (they may well have come from China on a Manila galleon as part of the China trade).

Note 3. Theodore Hymowitz, Prof. of Plant Genetics, Univ. of Illinois, referring to this reference and to the reference from the year 1651 by Francisco Hernandez mentioning the mung bean, writes (8 May 1989): "The existence of soybeans or mungbeans or even the knowledge of these crops in Mexico at that time is of course no surprise to me. From about 1565 and for the next 250 years ships left Acapulco for Manila (Philippines) and returned. All sorts of goods were moved West to the East and vice versa across the Pacific Ocean. Hernán Cortés [Cortes] (1485-1547, the Spanish explorer and conqueror of the Aztec empire in Mexico) started a plant introduction garden in Mexico City in 1621 and requested that seed be sent to him." Hymowitz

added by phone (27 May 1989): "There is no log of what was grown in that garden, but there is the account of Cortés' friend, which is at the University of Illinois rare book room. It is in old Spanish, handwritten."

Note 4. The illustrations in this article were reproduced in many later books and articles by other authors. Address: France.

1137. Carrière, E.-A. 1880. *Soja hispida* [The soybean (*Soja hispida*)]. *Revue Horticole: Journal d'Horticulture Pratique* (Paris) 52:153-57. April 16. Excerpted from *Journal d'Agriculture Pratique*, 1 April 1880. [2 ref. Fre]

• **Summary:** This is a reprint of an article by the same author first published on 1 April 1880 in *Journal d'Agriculture Pratique* 44(14):479-83. All the five illustrations (line drawings) and one table in the original article are reproduced here. Address: France.

1138. Grisard, Jules. 1880. Extraits des procès-verbaux des séances de la société. Cinquième section. Séance du 6 Avril 1880 [Excerpts of verbal proceedings from meetings of the society. Fifth section. Meeting of 6 April 1880]. *Bulletin de la Société d'Acclimatation* 27:320. April. [Fre]

• **Summary:** The president, Mr. Eug. Vavin, insists on the great interest presented by the soybean (*Soja hispida*) cultivated as a common legume, but he does not believe that the manufacture of cheese [tofu] from the soybean would be of any great interest, especially among members of the Society. Mr. Vavin is convinced that this legume will be widely disseminated and grown within several years, not only because of its fine taste, which will invite research on its uses as a food, but even more because it has the precious advantage of not having been attacked by the broad bean beetle (*bruche* [*Bruchus rufimanus*]).

"Mr. Paillieux observes that this plant can be used in animal feeds; he rejects its use for making [soy] sauce, but believes that it can be used to advantage in the preparation of cheeses, for it contains a large proportion of casein, 35 per cent." Address: Secretary, France.

1139. Duncan's (John) Sons. 1880. Worcestershire sauce: The great sauce of the world (Ad). *Washington Post*. May 13. p. 3.

• **Summary:** Below the title of this display ad is the signature "Lea & Perrins." "Signature is on every bottle of genuine Worcestershire Sauce. Imparts the most delicious taste and zest to soups, gravies, fish, hot & cold meats, game &c.

"Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. 'Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome sauce that is made.'

"Sold and used throughout the world." In the center of the ad is an illustration of a bottle of Lea & Perrins

Worcestershire Sauce with the front label in plain view.
Address: New York.

1140. *Washington Post*. 1880. The increasing desire to visit the various countries of the world... May 13. p. 4.

• **Summary:** "... and observe the different habits and modes of living, indicates a growing intelligence. The observing traveler will notice the different style of houses, dress, social customs, the change of air, water, cooking etc., at the poles and in the tropics, but all over the world, in every clime, the renowned Lea & Perrins' Worcestershire Sauce will be found the same appetizing and delicious, when used on meats, game, fish, in soups, gravies, etc., retains its original excellence in all countries, and is known and prized everywhere.

Note: This is the earliest reference seen (Feb. 2012) to Worcestershire Sauce in the *Washington Post*. It seems to be an early "advertorial."

1141. *New York Times*. 1880. Ten days in the Arctic: The *Yukon* cruising on the Alaskan coast. May 22. p. 8.

• **Summary:** The writer is exploring aboard the U.S. schooner *Yukon*. "The Cape Lisburne folks live in half-underground huts... They wear labrets of bone, ivory, stone, glass &c. One shiftless individual had a pair of Worcestershire sauce bottle stopples in his lower lip instead of the usual form of labret; '*de gustibus non est disputandum*' [there is no disputing about tastes] evidently rules the fashionable world here. Two labrets are the correct thing; one under each corner of the mouth in the lower lip."

Note 1. Cape Lisburne is on the northwest coast of Alaska, on the Chukchi Sea.

Note 2. A labret (a word first used in 1857) is an ornament worn in a perforation of the lip.

1142. Sempolowski, A. 1880. Zur Kultur und Verwerthung der Sojabohne [On the culture and use of soybeans]. *Fuehlings Landwirtschaftliche Zeitung* 29(5):278-81. May. [Ger]

• **Summary:** It is well known that Prof. Dr. Fr. Haberlandt, who obtained soybeans in 1873 at the Vienna Exposition (and unfortunately died at too young an age), conducted many soybean trials in order to find varieties that yielded well in Austria and bordering countries. The best varieties proved to be the yellow-seeded ones that originated in Mongolia. Later, in other areas many more trials were conducted.

"I conducted my first trials with soybeans two years ago [i.e., in 1878] at 53-53° north latitude. The yield was satisfactory, however I had to let the harvested plants finish ripening indoors." Further trials were conducted in former years in several places in Posen [Poznan; a very old city and province in west central Poland, part of Prussia 1793-1918]. A table (p. 279) shows where soybeans were grown

(at Oswiezem, Twno, Zabikowo, Prusinowo, and Zabikowo), the number of seeds planted, the dates of planting (April 24-May 15) and harvest (Oct. 4-16), the seed spacing, yield (in kilograms and number of seeds), seeds harvested per seed planted (maximum 146 to 1, minimum 22 to 1), and quality of the harvested seed. This table shows the extraordinary fruitfulness of the soybean.

"In China and Japan, soybean seeds are used as food. Almost daily they are enjoyed as vegetables, like our beans (*beinahe tagtäglich als Gemüse, gleich unseren Bohnen, genossen wird*), or they can be used to prepare various sauces, which are known as tasty and digestion-promoting additions to the other dishes and which have been shipped to Europe." The process for making soy sauce is described. Soybeans are used as a source of oil, especially in the provinces of Newchwang and Cheefo, where there are many oil mills. The method for pressing out the oil is still very primitive (see a report on the agricultural part of the Paris Exhibition of 1878; Berlin 1879, page 57). Soybean cake is used as fertilizer on sugar plantations. Cooked soybeans are also tasty, as in a salad with oil and vinegar, or in soup. It must be noted that it takes a long time to cook soybeans until they are soft—at least 24 to 48 hours. A table shows the nutritional composition of soybeans (9.23% water and 33.35% protein). Because the leaves and hulls are also quite nourishing, the soybean has a great future as a fodder plant. Address: Dr.

1143. Lea & Perrin. 1880. Lea & Perrin's [sic] (Ad). *Chicago Daily Tribune*. June 15. p. 8.

• **Summary:** "The increasing desire to visit the various countries of the world, and observe the different habits and modes of living, indicates a growing intelligence. The observing traveler will notice the different styles of houses, dress, social customs, the change of air, water, cooking, etc. At the poles, in the tropics, and all over the world, in every clime, the renowned Lea & Perrin's [sic] Worcestershire Sauce will be found the same, appetizing and delicious, when used on meats, game, fish, in soups, gravies, etc. Its retains its original excellence in all countries and is known and prized everywhere."

1144. *Southern Farmers' Monthly (The)*. 1880. A Chinese vegetable. 3(6):170. June.

• **Summary:** "Some experiments recently carried on by two or three Austrian and German horticulturists, have brought into notice an almost forgotten plant which was introduced into Europe from China, nearly thirty years ago, but whose existence and whose products have been undeservedly lost sight of. This is the *Soja hispida*, a species of leguminous [leguminous] plant, somewhat resembling in habit and appearance the well-known pea. Unlike the latter, however, it has two distinct uses—industrial as well as alimentary. It is highly prized in China and Japan, and is said, indeed, to take

its scientific title from the Japanese name of a sauce sooja—which is made from its seeds... The peas are boiled for about 20 minutes, and furnish a dish which is highly relished, not only by the Celestials, but by Europeans who have tasted it. It is said to resemble in flavor the green pea, but lacks its sweet taste... The sauce has a high reputation among the Chinese and Japanese, not merely as a condiment, but as a medicinal agent. Chemical analysis of the seeds show [sic, shows] them to be very rich in proteine.

“The oil is available for many uses—for burning in lamps or even as a substitute for olive oil. Being somewhat of a siccative [drying] nature, it is not adapted for a lubricant, but is for that reason useful as a substitute for linseed oil in the manufacture of paints and in other similar industrial arts. Finally, to complete the list of virtues of this Celestial pea, the haulm [stem or stalk] gives an excellent fodder for cattle and horses.”

Note 1. This is the earliest document seen (June 2001) that mentions the use of soybean oil in paints (or varnishes or enamels). First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished. The editor of this periodical in 1880 was L.C. Bryan.

Note 2. This is the earliest document seen (Sept. 2001) concerning the use of soybean oil as a lubricant—for which use it is not suitable.

Note 3. This is the earliest English-language document seen (Aug. 2003) that contains the term “proteine” (or “proteines”) in connection with soy.

Talk with Ted Hymowitz. 1991. Sept. 16. After 2½ weeks of searching he has just found that this “Dr. Emerson” was Dr. Gouvenneur Emerson (lived 4 Aug. 1795–8 July 1874), a surgeon on the ship “Superior” that went to China. He received his M.D. degree from the University of Pennsylvania, and was a member of the American Philosophical Society, and of the convention which resulted in the formation of the American Medical Association. He never married. The source of this information is: *Who Was Who in America: Historical Volume, 1607-1896. Rev. ed.* 1967. Published by Marquis Who’s Who Inc., Chicago, Illinois. 689 p. See p. 239. Address: Editor, Savannah, Georgia.

1145. Greev, Edward. 1880. What the Japanese eat. *Frank Leslie’s Popular Monthly (The American Magazine)* 10(2):164-74. Aug.

• **Summary:** A very interesting article with many large illustrations. On page 171 we read: “We quitted the dealer in vermicelli, etc., and entered a shop devoted to the manufacture of *tofu* (bean-curd, or cheese), a national dish. It is semi-gelatinous, white, delicious and wholesome. Yuba is another sort of paste food, made from white beans. Misso [miso] is a white bean paste, mixed with fermented rice and salt. It requires a Japanese-trained stomach to digest this.

Note: This is the earliest English-language document seen (March 2009) that uses the term “bean paste” (not preceded by the word “soy” or “soya”) to refer to miso.

“Soyu [shoyu] (soy), a sauce made with boiled beans and wheat, was also sold at this establishment. The mess is fermented until it is a mass of fungi, then cooled and salted with hot lye. It is next transferred to enormous vats, in which it is kept for several years, then pressed in bags made of thick cotton cloth. The brown juice that runs from the horrible mass is soyu, and is not only palatable, but wholesome. The Japanese flavor dishes with it, and use it as we do vinegar, for pickling. It tastes like mushroom catsup.

“I had seen the process of soy-making, therefore declined to visit one of those establishments; whereupon my guide took me to a candy factory. As a nation, the Japanese are not large consumers of sugar.”

Mentions many other Japanese foods and beverages including saké (rice-wine or rice-beer); he describes how it is made. Illustrations: (1) Seven Japanese men and women seated on tatami mats around a low table having a meal; in the background is a large painted wall. (2) A Japanese butcher’s shop, as seen from outside. (3) A salt vender and house servant, carry goods at both ends of a shoulder pole. (4) The *Pelor japonicum*—a curious Japanese fish. (5) A dealer in dried fish with a man carrying goods on a shoulder pole. (6) Japanese entertaining European guests, seated in chairs at a raised table. (7) A rice warehouse near Tokyo. (8) A saké shop at New Year’s with a large crowd of men. (9) A Japanese tea house.

1146. *Gardeners’ Chronicle (London)*. 1880. The cultivation and uses of the soy bean (*Soja hispida*). 14:369-70. Sept. 18. [1 ref]

• **Summary:** “The cultivation of the Soy Bean (*Soja hispida*) is being strongly recommended in France as a green vegetable.” Planting instructions are given.

“The greatest use to which the plant is put in China and Japan is in the preparation of soy [sauce] and of food from the ripe seeds. The manufacture of shoyu, or soy, is thus described in a descriptive catalog of agricultural products of Japan exhibited at the late Sydney International Exhibition [Australia; held in Oct. 1879]. Equal parts of Beans and Wheat are used...” The koji is made in shallow wooden boxes. “The mashings are removed to large vats, and kept there for at least twenty months, but more often for three or five years, the better qualities being those that are kept for the longer periods. The best soy is produced by mixing that kept for five years with that kept for three years. After it has been kept a sufficiently long time, it is strained through thick cotton bags, and the residue submitted to pressure. Before filtering honey is sometimes added. The residue is again mixed with salt and water and again pressed, the yield being soy of an inferior kind. Sometimes water is added to this second residue, and is again pressed. The residue first

obtained is occasionally used as food, and the last residue as manure.”

Note 1. It seems from the above text (and seems likely in itself) that both shoyu and the catalog describing the shoyu were exhibited at the Sydney International Exhibition of 1879. Address: England.

1147. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages [The soybean, its chemical composition, varieties, culture, and uses]. *Bulletin de la Société d'Acclimatation* 27:414-71. Sept.; 27:538-96. Oct. 28 cm. [73 ref. Fre]

• **Summary:** One of the most important and original of the early publications on soya in Europe. Its in-text bibliography on soya was the largest of any published up to that time.

Contents: Part I: Introduction and extracts on soybeans and soyfoods from 30 articles published previously in the *Bulletin of the Society for Acclimatization* from 1855 to 1880 (pages 414-430). 1. Soybean botany (p. 430-31). 2. The soybean in Japan (p. 431-42); Engelbert Kaempfer and his writings on miso and shoyu, information on soya from a document titled *Japan at the World Exposition of 1878* (*Le Japon à l'Exposition universelle de 1878*, written in French by a Japanese, p. 29-33), recipe for making shoyu in France, tofu. 3. Soya in Cochinchine (French Indochina, p. 442-46); Black soybeans. 4. Soya in China (p. 446-51): Soy oil (*Huile de Soya*), tofu (*le fromage de soya, teou-fou*), soy sauce (*tsiang-yeou*; In London, England, it is sold under the name of “India Soy” at Cross & Blackwell, Soho-Square {p. 451}). 5. Soya in Austria-Hungary (p. 452-71): Starting with soybeans at the World Exposition of Vienna in 1873, includes a long, in-depth discussion (with many excerpts) of Prof. F. Haberlandt's book *Le Soja*, published in Vienna in 1878.

Tables in Part I show: (1) The chemical composition (in both their normal and dry states) of Chinese soybeans (*pois de Chine*), tofu (*fromage de pois*), and tofu curds (p. 427). (2) The yield of tofu. 120 gm of soybeans yields 184 gm of tofu (p. 427). (3) The weight and nitrogen content of the different components when tofu is made from soybeans (p. 428). (4) The Japanese names of 23 soybean (*mame*) varieties and a very brief description of their characteristics (p. 435-36; e.g., 1. *Go-guwatsu no mame* {5th month bean}. 2. *Use mame* [*sic*, *Wase mame*] {early}. 3. *Nakate mame* {half season}. 3a. *Okute mame* {late}. 4. *Maru mame* {round}. 5. *Shiro teppo mame* {white, like a pistol bullet} 6. *Kuro mame* {black}. 7. *Kuro teppo mame* {black, like a pistol bullet} 8. *Koishi mame* {small stone}. 9. *Awo mame* {Ao, green}. 10. *Kage mame* {shade, shadow}. 11-15. *Aka mame* {red; 1 of same species, two of different species}. 16-18. *Tsya mame* {*Cha*, tea colored}. 19. *Kuro Kura Kake mame* {black saddled}. 20. *Aka Kura Kake mame* {red saddled}. 21-23. *Fu iri mame* {striped, variegated, mottled; see *Uzura mame* = speckled like quail eggs}). This nomenclature was taken from a

Japanese work titled: “Explanation, with figures, of trees and plants recently determined / identified.”

(5) The romanized Chinese names of six types of soybeans and a French translation of each (e.g., *Houang-teou* = *Soya jaune*) (p. 447). (6) Two analyses of soybean seeds, reprinted from *Chemischer Ackersmann*, 1872 (p. 458). (7) The chemical composition of three soybean varieties, including Yellow of Mongolia, Yellow of China, and Reddish-Brown of China; the composition of the original seeds and the first generation seed is given for each type (p. 460-61). (8) The chemical composition of reddish-brown, yellow, and black varieties of soybeans (p. 469-70; data from M. Schroeder, Mach, and Caplan, published by F. Haberlandt). (9) Weight of 1,000 seeds for four generations grown out in Vienna. Original seeds: 81.5 to 105 gm. First generation: 110.5 to 154.5 gm. Second generation: 141.8 to 163.6 gm. Third generation: 116.0 to 151.0 gm.

Contents (continued), Part II. 6. The Soybean, by Count Heinrich Attems (p. 538-60): Soybean culture and harvest, uses, and preparation of whole soybeans. Practical soybean culture trials on a grand scale, in the domain of the archduke Albert, an extract from a booklet by Edmond de Blaskovics titled “The Soybean, Its Culture, Use, and Value as Forage” (Vienna, 1880). Excerpts of six articles on soya from the *Wiener Landwirtschaftliche Zeitung* (*Viennese Agricultural Journal*) (Jan. 1879 to June 1880) (p. 548-54). Excerpts of ten articles on soya from the *Oesterreichisches Landwirtschaftliches Wochenblatt* (*Austrian Agricultural Weekly*) (March 1879 to Feb. 1880) (p. 554-59).

7. The soybean in France (p. 561-76): History (starting with Buffon, who became director of the *Jardin des Plantes* [Royal Garden, also called *Jardin du Roi*] in 1739), varieties grown, cultivation, utilization (mainly as forage plant for livestock and as an oilseed for oil and meal), accessory uses (miso, Japanese-style soy sauce {*shoyu*}, Chinese-style soy sauce {*tsiang-yeou*}, Japanese-style tofu {*tô-fu*}, Chinese-style tofu {*téou-fou*}, fermented black soybeans {*téou-che*}, and soy coffee {*café de Soja*}, white fermented tofu {*fromage blanc*}, red fermented tofu {*fromage rouge*}, green vegetable soybeans {*des graines fraîches, écossées encores vertes, comme le Haricot flageolet*}, whole dry soybeans {*les graines sèches comme le Haricot blanc ordinaire*}).

8. Conclusion and tables showing French analyses of soybeans (p. 576-78). Appendixes (p. 579-96): Summaries of letters to the Society describing 27 cultural experiments with soybeans conducted during late 1880 at various locations in France, Switzerland and Algeria. (Note: Though the publication date of this appendix is given as Oct. 1880, some of the letters are dated as late as 21 Nov. 1880). Reprint of a 2-page letter from Eugene Simon, former French consul in China, on soybean farming in China (p. 591-93). Reprint of a description by Eugene Simon, based on the description of a Chinese, of how tofu is made in China (p. 593-94). A French translation of a 1781 article by Isaac Titsingh on preparation

of soy sauce in Indonesia (p. 594-95). And some information about soybeans from the ancient Chinese herbal *Pên Ts'ao Kang Mu* (p. 595). Reprints of 2 letters from Eugene Simon in China, on soya and tofu in China. French translation of a 1781 article by Isaac Titsingh on preparation of soy sauce.

Note 1. We find it surprising that this superb work contains no illustrations of a soybean plant, or of any part of the plant, or of any foods made from soybeans; the only illustration (p. 569) is a cross section of an empty pit into which one could put a mixed silage that contained 20% soybean plants. The distance a-b is 3 meters; f-g is 2 meters; e-f is 0.5 meters; a-e is 1 meter; i-h is 0.4 meters.

Note 2. This is the earliest French-language document seen (Dec. 1999) that uses the term *Huile de Soya* to refer to soybean oil.

Note 3. This is the earliest document seen (March 2001) that has a bibliography of more than 50 references concerning soybeans.

Note 4. This is the earliest European-language document seen (Sept. 2004) that mentions the Japanese soybean types *Nakata-mame* or *Okute mame*.

Note 5. This is the earliest French-language document seen (April 2012) that uses the term *tsiang-yeou* to refer to Chinese-style soy sauce. Address: France.

1148. Kinch, Edward. 1880. Contributions to the agricultural chemistry of Japan. *Transactions of the Asiatic Society of Japan* 8(Part 3):369-415. Oct. See p. 392-93, 398-401, 413-15. Reprinted in March 1907 as a monograph. [29 ref]

• **Summary:** "Of vegetable manure the principal are sea-weed, the residues from different manufactures, e.g. rape cake, sesamum cake, cotton cake and other oil residues, as from camellia seeds, the residues from the manufacture of *shōyu*, *ame* [rice syrup], *sake*, *shōchu*, indigo etc." (p. 392). [Note that soybean cake is not mentioned].

"The oil cakes, *ame kasu* (malt dust, the residue from the manufacture of *ame* from rice, millet and malt of wheat or barley) and *shōyu kasu* [The residue from the manufacture of *shoyu*] are the most valuable. These manures should not be applied in quantity at the seed time in an unmixed state, owing to their fermenting and also attracting and harbouring insects, which attack the seeds and young plants." Rape cake (*Abura kasu*) and Sesamum cake (*Goma kasu*) are also mentioned.

There are original analyses (p. 393) of 6 samples of "Soy [sauce] residues, *Shōyu kasu* Residue from the manufacture of *Shōyu* from beans and wheat." These vary over an extremely wide range. Nitrogen content ranges from 1.27% to 5.20%, and ash is 0.57% to 11.53%.

"Soy bean, sometimes called Japan pea, *Glycine hispida* (Moench) also known as *Soja hispida*: of this many varieties of different colour and size, etc. are met with, but as far as is known, they differ but little in composition. They are known collectively as *Daidzu* or *O-mame*; a common white round

variety is known as *Miso-mame* and *Shiro-mame*; other names of varieties are *Awo-mame*, *Kuro-mame*, *Ki-mame*, *Ichiya-mame*, *Kurakake-mame* and *Korinza* (p. 398).

Note 1. This is the earliest English-language document seen (March 2008) which states clearly that the present scientific name of the Japan pea is *Glycine hispida* (Moench)—that is, the soybean. Actually, however, the correct scientific name since 1873 had been *Glycine hispida* (Maxim.)

"This bean approaches more nearly in its proximate chemical composition to animal food than any other vegetable known. It contains about one-fifth of its weight of fat and nearly two-fifths of nitrogenous matter. It is extensively cultivated in the north of China and also grows in the Himalayas. In China it is compressed for the sake of its oil, and the residual cake is used for food and also extensively as a manure. In Japan it is used in the preparation of *Shōyu*, *Tōfu*, *Miso* and also of *Yuba*, and in these various forms enters to a considerable extent into the food of the nation, to which it is a most valuable contribution, supplying as it does the alimentary principles—albuminoids and fat—in which the staple food, rice, is deficient: it also contains a much larger percentage of the necessary mineral matters than does rice. Of late years this bean has been grown experimentally in different parts of Germany, with success. The haulm and leaves which furnish a valuable fodder, and a variety is cultivated specially for that purpose and known as *Kari-mame*.

"The composition of a sample of the white round variety known as *Miso-mame* was found to be: Water 11.32%, ash 3.86%, fat 20.89%, albuminoids 37.75%, fibre 2.00%, starch etc. 24.08%. Total: 100%" (p. 398). Note 2. This and each of the following nutritional analyses appear to be original, not cited from earlier sources.

A table then contains an analysis of each of the following 4 products: *Shiro-miso* from Osaka, *aka-miso* from Osaka, *to-fu* [tofu], and *kori to-fu* [tofu]. The composition of *aka-miso* was found to be: Water 50.40%, ash 12.50% (incl. 11.00% common salt), sugar 0.61%, nitrogenous matter 10.08%, fibre 8.25%, soluble carbohydrates 18.16%. Total: 100%.

The composition of *to-fu* was found to be: Water 89.29%, ash 0.48%, fat 3.32%, nitrogenous matter 4.87%, fibre -, soluble carbohydrates 2.04%. Total: 100%.

The composition of *kori to-fu* was found to be: Water 18.75%, ash 1.60%, fat 28.80%, nitrogenous matter 48.80%, fibre -, soluble carbohydrates 2.05%. Total: 100%.

There follows a discussion (p. 398-400) of foods that can be made the soy bean (*miso*, *kōji*, *tōfu*, *kōri-dōfu*, and *shōyu* or soy), and a description of how each is made. "*Miso* is made by mixing the boiled beans with *Kōji* (rice ferment used in *sake* brewing) in various proportions, and with more or less salt, and keeping the mixture in tubs in a cool place for about a month. It will be noticed [from the table above]

that one variety contains much sugar, derived from the *Kôji*, and little salt, and the other much salt and little sugar.

“*Tôfu* is made by pounding the soy beans after soaking in water, then straining through a sieve and boiling in water. The solution is filtered through cotton cloth and the residue pressed; the strained liquor, containing vegetable casein or legumin, is precipitated by brine. *Nigari*, formed by the deliquescence of common salt. The precipitate pressed and cut into cakes is *tôfu*.”

Note 3. This is one of the earliest English-language documents seen (Jan. 2004) that uses the word “tofu.” This is the earliest document seen (Jan. 2004) that uses the word “cakes” in connection with tofu.

Note 4. This is the earliest English-language document seen (Oct. 2008) that mentions “vegetable casein” in connection with soybeans or tofu, or that equates “vegetable casein” with “legumin” (the word *Kinch* used in 1979), the water soluble protein in soybeans that can be precipitated to make tofu.

“*Kôri-dôfu* is prepared from the above by freezing it and afterwards exposing to the sun, when, in the process of thawing, the greater quantity of the water is removed, leaving a horny spongy residue.

Note 5. This is the earliest English-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls “*kori to-fu*” or *kôri-dôfu*. This is also the earliest document seen (May 2012) that uses the word “spongy” to describe the texture of dried-frozen tofu.

“An example of *shôyu* or soy was found to have a specific gravity of 1.199 and to contain per litre: Total solid residue 359.88 grms., ash 195.16 grms., sugar 31.03 grms., nitrogenous matters 41.00 grms., free acid, expressed as acetic acid 6.20 grms. The ash is chiefly common salt, but contains a quantity of phosphates derived from the mineral matter of the beans and kept in solution by the acetic acid formed.”

“The [shoyu] mashings are removed to large vats and there kept for many months, usually twenty, and frequently for 3 or 5 years. The better qualities of *shoyu* are kept the longer times. It is found that the best soy is produced by mixing that kept for five years with that kept for three years. After it has been kept a sufficiently long time, it is strained through thick cotton bags and the residue pressed. Before filtering, honey is sometimes added in the proportion of 10 *kin* to 1 *koku* of *moromi* or crude soy, in order to give it a sweet taste. Occasionally a sweet sake, *ama-sake*, prepared by taking, 1 *koku* of *koji* to 7 *to* of water and 1 *to* of steamed rice, mixing them together and steaming for two hours is added instead of honey. The residue obtained on pressing *moromi* is usually again mixed with salt and water, and pressed; this yields an inferior *shoyu*. Sometimes water is added to this second residue and it is again pressed. The residue first obtained is sometimes used as food and the last residue as manure.

“The *Shoyu* after straining is allow[ed] to settle for two days in large tanks, then drawn off and filtered; before sale it is heated to incipient ebullition, otherwise it quickly goes bad.

“The quantity of nitrogenous matter in solution in *shoyu* appears to increase with the length of time elapsing before filtering the *moromi*.”

Note 6. *Webster's Dictionary* defines ebullition as “the act, process, or state of boiling or bubbling up.”

Also contains detailed information on and chemical composition of adzuki beans or *shôdzu* (*Phaseolus radiatus*), daikon, sea-weeds (incl. three types of Asakusa nori (*Porphyra vulgaris*), kobu (*Laminaria saccharina*) [konbu, which Thunberg and Kaempfer also discussed], wakame, arame or kokusai, awo-nori or ohashi-nori, hijiki, Irish moss or carrageen, tokoroten-gusa or agar agar, kanten or tokoroten, and funori), and sake.

At the end of the article is the summary of a discussion. Professor Atkinson made some remarks about *shôyu*. He said that Mr. Isono, a graduate of the University of Tôkiyô, had made analyses of *shôyu moromi* at various periods (after 3, 10, and 20 months), which are printed in full, together with an analysis of Kikkoman shoyu. “It was interesting to observe the disappearance of the glucose, and the gradual increase of the soluble nitrogen from the first sample to the last. The greatest change took place between the third and the tenth months. but, after the removal of the greater part of the glucose and dextrin, converted into alcohol and lost by evaporation, very little alteration occurred, except in the color of the liquid, which became darker.”

Note 7. This is one of the earliest English-language documents seen (May 1999) that contains an accurate description of miso; it also contains very early information on the composition of different types of miso.

Note 8. This is the earliest English-language document seen (Dec. 2000) that uses the term “chemical composition” in connection with the soy bean.

Note 9. This is the earliest English-language document seen (Nov. 2003) that uses the term “sesamum cake” to refer to sesame cake.

Note 10. This is the 2nd earliest English-language document seen (April 2012) that uses the term “*shôyu*” to refer to soy sauce.

Note 11. This is the earliest English-language document seen (July 2001) that contains the word “fibre” in connection with soy beans. The fibre content of one variety of soy bean and one miso variety are given.

Note 12. This is the earliest English-language document seen (July 2003) that uses the Japanese word “Goma” to refer to “sesame.”

Note 13. This is the earliest English-language document seen (Nov. 2005) that contains the term “cotton cake.”

Note 14. This is the earliest English-language document seen (April 2012) that contains the word “Kikkoman.”

Note 15. This is the earliest English-language document seen (May 2012) that contains the term *shôyu kasu* (in italics, with diacritics) which it defines as “Residue from the manufacture of *Shôyu* from beans and wheat.” Address: Prof. of Chemistry, Imperial College of Agriculture, Komaba, Tôkiyô.

1149. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages: Le soja en France [The soybean, its chemical composition, varieties, culture, and uses: Soya in France (Document part)]. *Bulletin de la Société d'Acclimatation* 27:561-76. Oct. [Fre]

• **Summary:** Page 561: “Historical—Buffon [Comte Georges-Louis Leclerc de Buffon, lived 1707-1778] became director of the *Jardin des Plantes* [Royal Garden, also called *Jardin du Roi*] in 1739. Shortly thereafter French [Catholic] missionaries in China sent him specimens and seeds of most of the important plants of that country. Soybeans or their seeds were almost certainly among their shipments, and without being able to prove it, we have no doubt on this subject. Be that as it may, we have recovered from the Museum [of Natural History] a sachet which, in 1779, contained soybean seeds. It bears the following dates of harvest: 1834, 1836 to 1841, 1843, 1844, 1846, 1847, 1849, and 1850 to 1855 inclusive. Then 1857 to 1859, 1862, 1865 to 1867, 1870, 1871, 1873, 1874, 1877.

“In fact, soybeans have been cultivated at the Museum very probably since 1740, certainly in 1779, and more recently from 1834 to 1880 without interruption. The plant has always germinated and borne fruit as desired, cultivated like haricot beans (French green beans), without any particular problems. It has proved its hardiness and the small influence which changes in atmospheric conditions have on it.

“Since 1855, the abundant distribution of soybean seeds ceaselessly by the Society for Acclimatization, has allowed soybean agronomic trials to be conducted throughout France. But it is difficult, if not impossible, to obtain information about trials made before 1855.

Mr. Blavet, president of the Horticultural Society of Etampes, has uncovered an interesting document in a brochure titled *Seance publique de la Société d'Agriculture de l'arrondissement d'Etampes* (Public session of the Agricultural Society of Etampes), for the year 1832, page 84. One chapter bears the title “Report by Mr. C. Brun of Beaumes, member of the Agricultural Society of Etampes, chevalier of Saint-Louis, doctor on the faculty of sciences of France, of some agronomic trials conducted by him in 1821, on various species of cereal grains, on his property of Champ-Rond, near Etampes [Seine-et-Oise], France.” A final note says: The heat of the summer of 1821 was so favorable to exotic plants that I saw the following plants bear fruit abundantly in my outdoor garden at Champ-Rond, near Etampes: the *Dolichos* of China (*le Dolichos de la Chine*;

perhaps *wistaria*), the soybean (*Dolichos Soja*), and *Dolichos Lablab* (also called hyacinth bean). The Niouelle (?) of Senegal showed here for the first time its long pods (*épis*), etc.” Note: This is the earliest document seen (April 2000) that describes the 1821 soybean experiment by Mr. C. Brun of Beaumes.

“The duty of the Museum, as a public-interest organization is to distribute seeds, either as a pure gift or as part of an exchange, to persons who request them. Undoubtedly, therefore, trials have been made at various early dates, but we have no record of them.

“Starting in 1855 a large number of participants received seeds from the *Société d'Acclimatation* and experimented with them. Most of these people did not report the results of their trials, as they were obliged to. Others, however, did, including Messrs. Vilmorin, Delisse, Lachaume, etc. But their cultivation did not lead to any progress, so the soybean was not established a permanent crop in France.

“In 1868 Mr. Chauvin, vice-president of the Society of Horticulture at Côte-d'Or [a department in eastern France], cultivated several soybean varieties there, and the culture has continued there to this day.

“In 1874 the Society of horticulture of Etampes received soybean seeds from the Society for Acclimatization, and began experiments that continued until 1880. One can find them mentioned in the Introduction to the Etampes livestock reports. Their cultivation is direct with great zeal by Mr. Blavet, president of the horticultural society of that area.

During the same period, one Dr. H... brought the best soybean varieties from Japan and cultivated them. He failed in this trial because his soybeans were late-maturing types. He then restricted himself to cultivating yellow soybeans from China. He encountered no more difficulties and he made *Sho* [perhaps *shoyu*, or Japanese-style soy sauce] by himself for use in his home.

“In 1878 we received seeds of two soybean varieties. One, from Japan, had white flowers and very pale yellow seeds with a greenish hue. The other, from China, was yellow and belonged to the *Houang-téou* [“yellow soybean”] series; they were among the seeds received from Mr. Montigny and other donors, and have been cultivated at the Museum, at Etampes, at Marseilles, and a little bit all over. (Footnote: These varieties look a little different on the outside, but their chemical composition, usage, and cultivation are the same).

“The seeds from Japan give us nice green foliage, but the plants do not mature their seeds. The Chinese variety succeeds in France as it does anywhere else.”

In 1879 a yellow variety received directly from China matured well and was harvested at Marseilles. In 1880 Vilmorin-Andrieux & Company introduced into France one of the varieties tested by Haberlandt in Austria, which variety has proven well adapted to French conditions.

On pages 564-65 the author attempts a sober appraisal as to why a plant with such obvious merits, that has been

known in France for over 140 years, is still virtually unknown. Established institutions such as the Museum of Natural History and the government had taken exasperatingly little interest in aiding the private efforts of the Society to introduce new plants. Chemical analyses, demonstrating the nutritional superiority of the soybean, had been lacking until about 1855, when Frémy [Freymy] confirmed that the soybean contained oil. Messrs. Champion and Lhôte have given an incomplete analysis [published in 1869]. But the classical books on agricultural chemistry, the works of our professors, which make known the chemical composition of the seeds of our typical legumes, omit information on the soybean. There was a general resistance, especially on the part of the establishment, to growing new crops and using new foods. And finally the basic approach of the Society in introducing soya first and foremost as a human food was questioned.

“Our point of departure has not been successful. Soya has been presented simply as a new legume. But it is more difficult to cook than other legumes, The flavor is good, but not superior. Fresh, it takes lots of time to shell. Dry, it requires pre-soaking for 24 hours in water that is not hard. If one is ignorant of its nutritive properties, there would be little incentive to grow it, and one would keep growing the traditional legumes instead.

“The people of Austria-Hungary have been wiser. Having already acquired incontestable proof of the value of soya for livestock fodder, they have no other objectives. They seem at the very least to have considered as secondary the utilization of soya for human nutrition. Therefore as soon as they had enough seed, they cultivated large areas, while we were still cultivating the furrows between the rows in the kitchen garden for use as food.

“The seeds will soon be found in all the good markets of southern Germany. The small farmer will then find them (soybeans) all around him at low prices. In eating them, he will find himself strengthened. Then he, in turn, will plant them himself.”

Page 567 continues: “We tried to introduce soya as a food plant for the garden rather than as a fodder and oilseed. We started where we should have finished. If we persist in this direction we shall fail. Soya will fall back into oblivion, while in southern Germany, the Danube provinces, central Russia, and Italy, it will soon be widely grown and serve as a source of riches.”

Note: This document contains the earliest date seen for soybeans in France, or the cultivation of soybeans in France (very probably in 1740, certainly in 1779). The source of these soybeans was French missionaries in China. Address: France.

1150. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages: Appendice [The soybean, its chemical composition, varieties, culture, and uses: Appendix (Document part)]. *Bulletin de la Societe*

d'Acclimatation 27:579-96. Oct. [Fre]

• **Summary:** The first appendix contains summaries of letters to the Society describing 27 agronomic trials with soybeans (*Culture expérimentale de Soja or Soya*) conducted during 1880 (using soybean seeds distributed by the Society) at various locations in France, Switzerland, and Algeria. (Note: Though the publication date of this appendix is given as Oct. 1880, some of the letters are dated as late as 21 Nov. 1880). These letters were received from the following people:

1. Charles Coffin, jardinier en chef au château de Brunehaut, near Etampes (Seine-et-Oise)—18 Sept. 1880.
- 2-3. Oliver Lecq, at Templeuve (Nord)—20 Oct. 1880 and 30 Oct. 1880.
4. M. Boursier, at Chevrières (Oise)—3 Nov. 1880.
5. M.C.T. at Arras (Pas-de-Calais) 12 Nov. 1880.
6. M.D. at Genlis (Côte-d'Or)—12 Nov. 1880.
7. M.J.S. at Sautin, near Péronne (Somme)—14 Nov. 1880.
8. M.G. at Juvigné (Mayenne)—14 Nov. 1880.
9. M.D. at Saint Lager (Rhône)—14 Nov. 1880.
10. M.L. at Fresnoy, near Hesdin (Pas-de-Calais)—15 Nov. 1880.
11. M.D. at Presles-et-Thierny, near Laon (Aisne)—15 Nov. 1880.
12. M.H. at Montpellier (Hérault)—15 Nov. 1880.
13. M.B. at Andenas, commune d'Alluy, near Chatillon-en-Bazois (Nièvre)—16 Nov. 1880.
14. M.P. at Muides, near Mer (Loir-et-Cher [a department in north-central France])—16 Nov. 1880.
15. M.R. at château de Minillet, near Bornel (Oise)—16 Nov. 1880.
16. M.C. at Montgarny (Meuse)—16 Nov. 1880.
17. M.B. at la Chaise, near Barbezieux (Charente)—17 Nov. 1880.
18. M. de S. at Saint-Sulpice-sur-Lèze, near Noé (Haute-Garonne)—16 Nov. 1880.
19. M.B. at Saint-Riquier, near Abbeville (Somme)—18 Nov. 1880.
20. M.D. at Courtivron (Côte-d'Or)—18 Nov. 1880.
21. M.P. at Merville (Haute-Garonne)—19 Nov. 1880.
22. M. de docteur Hénou at Cornières, near Annemasse (Haute-Savoie)—18 Nov. 1880.
23. M.A. Sicard, vice-président de la Société d'horticulture de Marseille (Bouches-du-Rhône)—19 Nov. 1880.
24. M. le docteur Bertherand at Alger [Algiers, Algeria]—19 Nov. 1880.
25. M.L. at Monségur (Gironde)—21 Nov. 1880.
26. M. le docteur Coutaret at Roanne (Loire)—20 Nov. 1880.
27. M.G. at Donneloye (Switzerland {in Canton Vaud, Bezirk Yverdon, southwest Switzerland})—18 Nov. 1880.

Note 1. The report from Dr. Bertherand from Algiers, dated 19 Nov. 1880, reads: “The breeding nursery (*jardin d'essais*) cultivated soybeans (Soya; *Glycine hispida*) many years ago. Soya does rather well here, but its seeds are hard and remain tough. It is possible that it will not be able to compete in the diet with the common haricot for a long time.” Note: This is the earliest document seen (Aug. 2009) concerning soybeans in Algeria, or the cultivation of soybeans in Algeria. This document contains the earliest date seen for soybeans in Algeria, or the cultivation of soybeans in Algeria (many years before 19 Nov. 1880; perhaps before 1860 when M. de Montigny is said to have introduced the soybean to Algeria (see Eprémèsnil 1860)).

The appendix section ends with: (1) Reprint of a 2-page

letter from Eugene Simon, former French consul in China, on soybean farming in China (p. 591-93); (2) Reprint of a description by Eugene Simon, based on the description of a Chinese, of how tofu is made in China (p. 593-94); (3) A French translation of a 1781 article by Isaac Titsingh [Titsing] on the preparation of soy sauce in Indonesia (p. 594-95); and (4) Some information about soybeans from the ancient Chinese herbal *Pên Ts'ao Kang Mu* (p. 595). Address: France.

1151. Mene, Édouard. 1880. Des productions végétales du Japon [The vegetable products of Japan]. *Bulletin de la Societe d'Acclimatation* 27:644-66. Nov. [3 soy ref. Fre]

• **Summary:** This is part of a longer article, published in several issues, which is an excellent review of earlier publications and work. This part begins with a section on legumes. Among the legumes discussed are *Vicia Faba* (*sora mame*, *otafuku mame*, *okakura mame*), *Dolichos unguiculatus* (*sasaghe* [*sasage*, present name: *Vigna unguiculata* (L.) Walp. subsp. *unguiculata*], incl. *Jin-roku Sasaghe*, *Yuhuté Sasaghe*, *Heritori-yu-roku-Sasaghe*), *Canavalia* (*nata-mame* = *C. incurva* [sword bean], *shiro-nata mame* = *C. lineata*), *Haricot* (*Phaseolus vulgaris*, incl. *Ingen mame* and *azuki* [*Phaseolus radiatus* var. *subtrilobata*]), sesame, etc. The author saw samples on display at the Japanese Ministry of Agriculture and at the Exposition at Champ-de-Mars in France.

“Soy sauce (*Le Shoyu*) (p. 648-49): This condiment, so appreciated by the Japanese, had samples displayed in the class of fermented beverages. It is often made with wheat flour and beans (*haricots*), but more often with boiled soybeans (*pois*).

“Chinese Soye or Soya (*Le Soye ou Soya chinois*) is the same condiment, but more especially made with red beans (*haricots rouges*). Note: Clearly the author did not realize that soy sauce is made from soybeans (not from haricot beans or peas, nor from azuki beans).

Note: This is the earliest French-language document seen (April 2012) that uses the words *Le Soye* or *Soya Chinois* to refer to soy sauce.

“In Canton, it is made in the following way: the red beans are cooked in water for one hour; thrown in a sieve and drained; next the beans are sprinkled with wheat flour and carefully spread out on a wood plank that is put in a warm and humid place that favors the development of considerable mold; after four or five days the mold is taken off and the beans, after having been dried in the sun for 24 or 48 hours, are washed in cold water; salt and water are added, and the mixture is exposed to the sun for two weeks. It is then boiled for half an hour, adding for flavor a bit of star anise, regular anise, and orange peel; the mixture is then filtered through a basket and finally bottled as *Soya*.”

There follows a short section titled “Peas” (*Pois, Pisum sativum*), including *Endo mame*. Next comes a detailed but

somewhat confused discussion of soybeans (*Pois oléagineux, Soja hispida*) and a listing (often repetitive) of many different types and colors, as follows (p. 649-50): “There was also a variety of soybeans (*Pois oléagineux, Soja hispida*), an early soybean (*mamé*), one with large hanging pods covered with red hairs, and one with large, yellowish-white seeds.

“The principal varieties of *Soja* and *Soja hispida* indicated in the watercolors of the Tokyo Bureau of agriculture were: 1. *Soja* with white flowers, a yellowish-white bean of medium size with white pods. 2. Early green *Soja*, a large yellowish-white bean with large pods covered with red hairs. 3. *Soja blanc*, with large yellowish-white seeds. 4. *Grand Soja blanc*, a large, yellowish-white bean with rather long greenish pods. 5. Green *Soja*, a yellowish-white bean of medium size with little green pods and the stem scattered with brown hairs. 6. *Kinoshita-mame*, a small yellow bean with little hairy pods. 7. Red *Soja*, a red bean of medium size with green, velvety leaves and red flowers. 8. Black *Soja*, a black medium-sized bean. 9. *Kouro-hiro mame*, a large black oval bean [*kouro* = *kuro* = black]. There are also varieties called: 10. *Awo-mame*, a large, greenish-white bean [*awo* = *ao* = green]. 11. *Shiro-mame*, *Kuro-mame*, *Kuro-kake mame*, *Kinname* (*Glycine soja*), *Kouringa*, and *Ichia-mame*.

“In the collection of beans at the Exposition of Champ de Mars the following soybeans were found: 12. *Daizu* (*Soja hispida*), a round yellowish bean of medium size. 13. *Shiro-daizu*, a large yellowish bean [*shiro* = white]. 14. *Oshiro-daizu*, a very large yellowish bean, twice the size of *Shiro-daizu*. 15. *Akayendo*, a medium-sized yellowish bean. 16. *Awo-mame*, a large, greenish-white bean (variety of *Glycine*). 17. *Aokuro-daizu*, a large greenish bean speckled with black. 18. *Thya-iro-mame*, a large, reddish-brown bean (variety of *Glycine*) [*Thya-iro* = *cha-iro* = brown]. 19. *Shiro-mame*, a white bean speckled with grey (variety of *Glycine*). 20. *Aka-daizu*, a large red bean [*aka* = red]... 21. *Kouro-daizu*, a large black bean.”

Near the end of this subsection we read (p. 651): “In China, an oil is extracted (*on extrait*) from soybeans (*pois oléagineux*, literally ‘oil peas’); it is used for both cooking and illumination. The green or black peas are often used to color rice wine. Mixed with beans (*haricots*) and wheat, they form the base for the manufacture of soy sauce and of tofu (this latter condiment is composed of two species of boiled beans). With soybean seeds (*Avec les graines de Soja*) the Japanese also prepare a sort of pap (*bouillie*) which for them takes the place of butter and which they call *Miso*. The leaves and branches of the soybean serve to nourish goats and sheep.” Address: France.

1152. Jevne (C.). 1880. Holiday goods: Bill of fare for ye joyful festivity of ye Xmas ‘80 (Ad). *Chicago Daily Tribune*. Dec. 5. p. 5, col. 2.

• **Summary:** “Pickles, Cross & Blackwell’s,... Catsups,

Capons.

“Sauces: Worcestershire, Halford, Royal Sultana, John Bull, Chili, India Soy [sauce], Tabasco, Soho, Athenæm, Chutney... Essence of Anchovies, Harvey’s Fish Sauce, Reading Sauce, Salad Cream, Salad Dressing, Curry Powders.” Address: 110 & 112 Madison-st.

1153. Bishop, Isabella Lucy (Bird). 1880. Unbeaten tracks in Japan: An account of travels on horseback in the interior, including visits to the aborigines of Yezo [Hokkaido] and the shrines of Nikkô and Isé, by Isabella L. Bird. 2 vols. New York, NY: G.P. Putnam’s Sons. See vol. I, p. 232, 237-38.

• **Summary:** The section titled “Notes on food and cookery” (p. 232-40) states: “Some fish are fried in the oil of the *Sesamum Orientale*, which produces an odour which makes one fly from its proximity. Eels and other dainties are served with soy (*shô-yu*), the great Japanese sauce, of a dark brown colour, made from fermented wheat and beans with salt and vinegar [sic], and with a dash of *saké* added to give it a higher flavour” (p. 232).

Buddhist teachings on the sacredness of life have, in some parts of Japan, been effaced by contact with foreigners. There some people eat wild birds and fowl. “Seaweed is a common article of diet and is dried and carried everywhere into the interior. I have scarcely seen a coolie make a meal of which it was not a part, either boiled, fried, pickled, raw, or in soup” (p. 234). *Brinjal* or egg-plant are among the many vegetables pickled. Confections consist of sugar-coated [azuki] beans, and *yokan*—made from seaweed. Mochi is a small round cake of unbaked rice dough.

“The common people are also fond of ‘a pot-boil of birds’ in which a little soy and *mirinshu* are added to the water” (p. 237).

“The chief kinds of soup used by the middle classes are bean soup [miso soup], egg soup, and clear soup. The latter is of two kinds, one water and salt, the other water and soy” [sauce]. Among the lower classes there are many kinds, most of which taste like dirty water with a pinch of salt, and contain cubes of bean curd, strips of dried fish, cuttlefish, etc... Carp is used with bean soup only...” (p. 237-38).

Note: This is the earliest English-language document seen (July 2011) that uses the term “bean soup” to refer to miso soup.

In formal entertainments, the highest of the three classes is *san no zen* in which three small tables of eatables are provided to each guest. The first table includes rice, and “bean soup with carp.” Each table contains from 8 to 12 bowls or dishes (p. 238).

Note 2. The author, Mr. J.F. Bishop, lived 1831-1904.

Note 3. Yezo (also spelled Yezzo, Yeso) refers to Hokkaido, Japan’s northernmost main island. Address: Author [England].

1154. Gray, John Henry (Mrs.). 1880. Fourteen months in

Canton. London: Macmillan and Co. xiii + 444 p. Illust. No index.

• **Summary:** Dedication: “To my husband, John Henry Gray, M.A., LL.D., Archdeacon (late of Hong Kong), whose long residence of Canton, and intimate acquaintance with its inhabitants, enabled me to see and learn so much of their manners and customs.”

This book is composed of letters written to the author’s mother and friends. The Introduction describes how she left Liverpool on 13 Jan. 1877, arrived in New York, traveled across the USA to San Francisco, embarked on the S.S. *Belgie* for Hong Kong via Yokohama and Tokio, Japan. She stayed in Canton from April 1877 to June 1878, in close contact with the people—especially upper-class ladies.

At a feast, with her husband, in a large hall (p. 83-84): “Immediately in front of each of us were four very small plates containing pepper, salt, soy [sauce], and sugar. Chopsticks, a porcelain spoon with a large bowl and a very short handle, a tiny porcelain wine cup, and a little two-pronged fork were placed before each guest.”

Page 86: “Do you remember that Henry said he was determined that I should eat dog, cat, and rat very soon after my arrival in China?” She describes how (unwillingly) she ate a little piece of dog’s flesh at one restaurant; she could not bear to touch the other two dishes. A Chinese friend also ate them “and said he did not find them disagreeable” (p. 87).

At another banquet (p. 88-89), many tiny dishes were placed in the centre of the table, including: “Minute plate with soy in it.” The many dishes served included: “10. Turtle soup... 11. Hashed dog. 12. Stewed black cat. 13. Fried rat. 14. Maccaroni [Macaroni] soup.”

The Grays received an invitation to a luncheon with the Howqua family. Mrs. Gray, who was not feeling well, gives a detailed description of the meal: “Mrs. Howqua rose from her chair, dipped a piece of duck, at least two inches square, which she held in her chopsticks, into the little basins containing soy and mustard, and put the whole as a *bonne bouche* into my mouth” (p. 200).

1155. Special catalogue of the Ningpo collection of exhibits for the international fishery exhibition, Berlin, 1880. Preceded by a description of the fisheries of Ningpo and the Chusan Archipelago. 1880. Shanghai, China: Statistical Dept. 132 p.

• **Summary:** In the section titled “International Fishery Exhibition, Berlin, 1880,” is a subsection (p. 3) on the “Food” of Ningpo: “The great staple of the food of the fishing population consists of rice, generally the glutinous kind called *Ngo mi*, and fish... The condiments are the black sauce called ‘soy,’ or a red one made from shrimps pounded in salt water. Salt is largely used, as well as a kind of cheese made from beancurd, and called *toufu*.”

Note: This section is translated into German (p. 94) under *Nahrungsmittel*; the words *Soya* and *Tou fu* are used.

Another subsection (p. 15-16) on “River fishing” with cormorants in Ningpo (on the Ningpo river), China. Under “Feeding” we read: “The young birds are at first fed with a mixture, in equal parts, of beancurd and raw eel’s flesh cut fine... At the end of a month the down begins to be covered by the larger feathers, and the quantity of fish-flesh fed to them is increased, while that of beancurd is reduced. A second month elapses, and the young birds, having grown to double their original size, are fit for the market; a male fetches \$1 or \$2, and a female half as much.”

“After fishing two or three hours the birds are allowed to come on board and rest. At the end of the day the hempen ring is loosened or removed altogether, and they are either allowed to fish for themselves, or are fed by the hand of their master. Seizing the birds one after another by the upper mandible, the fisherman thrusts into their throats a handful of small fish and a ball of beancurd, as large as his fist, the ingurgitation of which he helps with the other hand by stroking the neck of the bird, who seems to enjoy it, as he promptly returns for a second supply. The entire scene is most ludicrous.”

1156. Walker, Francis A. ed. 1880. International Exhibition, 1876 [at Philadelphia]. 10 vols. Washington, DC: Government Printing Office. 24 cm. No index.

• **Summary:** This, the sixth international exhibition and the first held outside of Europe, also celebrated the 100th anniversary of America independence. Unfortunately the many volumes covering this exhibition are extremely poorly organized and difficult to use. They contain no indexes, either for the entire set or for each volume. The table of contents of each volume does not match the actual contents of that volume. Since there seems to be no logical sequence, one must look page by page.

In Vol. I (p. 600), the section on “Animal and vegetable products (used as food or as materials)” includes: Class 650–Sponges, sea weed. Class 655–As musk, civet, ambergris. Class 656–Preserved meats, vegetables, and fruits. Dried, or in cans or jars. Meat and vegetable extracts. Class 662–Vegetable oils.

The next section, “Textile substances of vegetable or animal origin” (p. 600) includes hemp, flax, jute, ramie, and silk. Note: This is the earliest English-language document seen (June 2002) that uses the term “animal origin.”

In Vol. IV, Groups III-VII (1880), is a section titled “Group IV. Animal and vegetable products, and the machinery for their preparation” (p. 2) by Ryland T. Brown. In Group IV, under “Reports on Awards” (p. 94-95) we read: “487. Lea & Perrins, Worcestershire, England. Worcestershire sauce. Report.—Commended for the following reasons: 1. Excellent taste. 2. Very carefully prepared.” “496. Naga-oka Zenpachim Tokio, Japan. Sauces. Report.—The Shoyu sauce, to be used with meat and fish for the purpose of flavoring gravies and soups, is excellent; the preparation is

most careful, and it recommends itself strongly for its purity and flavor.”

The 11th volume (bound in 2 volumes) in the series of reports on the International Exhibition of 1876 is titled “Report of the Board on behalf of United States Executive Departments at the International Exhibition, held at Philadelphia, Pennsylvania, 1876.” For more details, see the Official Catalog of the British Section in the exhibition. Address: Chief of the Bureau of Awards.

1157. Watt, Alexander. 1880. Electro-metallurgy: Practically treated. 7th ed., enlarged and revised. London: Crosby Lockwood and Co. x + 236 p. See p. 176. Illust. Index. 18 cm. Series: Weale’s Rudimentary Series.

• **Summary:** The chapter titled “Test for gold” states (p. 176): “85. As lead edges or mounts of cruet-frames, candlesticks, soy-frames, and similar plated goods are very troublesome to electro-plate, except in the hands of a very experienced person, it is frequently advantageous to adopt a plan commonly pursued, namely, to have the edges cast in brass or German silver, the old edges or mounts removed, and the newly-cast edges soldered upon the article.” Address: F.R.S.S.A., Lecturer on electro-metallurgy, etc. [England].

1158. Nanrido Eiraku. 1880? Nenjuban saisen: Shirôto ryôri. Sassoku hôchô [Year-round recipes: Speedy cooking for amateurs]. Publisher unknown. Undated. Japanese summary by Kawakami 1978. [Jap]

• **Summary:** Written in the Kyoto-Osaka area of western Japan some time during the 1800s, this book quoted the *Tofu Hyakuchin*. It lists daily home recipes, including tofu recipes and some using shoyu. Kirazu, the early term for okara, is mentioned. The recipes are listed according to the season in which they are best prepared.

1159. Wein, Ernst. 1881. Die Sojabohne als Feldfrucht [The soybean as a crop]. *Journal fuer Landwirtschaft* 29:563-613. Supplement (*Ergänzungsheft*). A 50-page supplement at the end of volume 29. Apparently also published as a monograph in 1887 in Berlin. [7 ref. Ger]

• **Summary:** This work, which draws heavily on the research of Prof. Friedrich Haberlandt, contains practical instructions for the farmer who wants to grow soybeans and offers a compilation of current research findings.

Contents: 1. Characteristics of the soybean (*Soja*) and its varieties (p. 3-5). 2. General suggestions for the cultivation, growth, care, harvest etc. of the soybeans (*Sojabohnen*) (p. 5-9). Tables show (for yellow soybeans): Emergence of 100 soybeans at various dates in May and June based on depth of planting (p. 7). Depth of planting, weight of the seeds of 100 plants, weight of the straw of 100 plants, and weight of 100 seeds (p. 7).

3. Chemical composition of the soybean plant. Tables give the composition, including maximum and minimum

values, of the following varieties, based in part on earlier published sources: (1) *Soja hispida tumida*, Var. *pallida*, yellow soybean (16 sources). (2) *Soja hispida tumida*, Var. *castanea*, brown soybean (8 sources). (3) *Soja hispida tumida*, Var. *atrosperma*, black round soybean (2 sources). (4) *Soja hispida platycarpa*, Var. *melanosperma*, black oblong soybean (2 sources). Also: (5) Composition of five legumes: peas, beans, lupine, yellow soybean, brown soybean. (6) Composition of straw (5 sources, incl. Schwachöfer of Vienna, Caplan of Vienna, Weiske of Proskau). (7) Composition of soybean hulls (*Hülsen*) (4 sources). (8) Comparison of the composition of soybean hulls and straw with the composition of wheat hay, pea straw, bean straw, and lupine straw based on data from E. Wolff's tables. (9) Composition of the ash of soybean straw based on data from Schwachöfer of Vienna.

4. What yields can be expected from the soybean and which varieties (yellow, brown, or black) are suited to cultivation? Weight of 100 seeds (those planted and those harvested): *Soja pallida* (15.37 gm / 16.39 gm). *Soja castanea* (13.81 gm / 13.78 gm). *Soja atrosperma* (12.26 gm / 11.44 gm). *Soja melanosperma* (9.19 gm / 7.93 gm). 5. How do soybean yields compare with those of other legumes? 6. What fixed position or rank does the soybean claim in the achievement of maximum yield, and how does one obtain the best seedstock (as for next year's planting). 7. Soil and manuring (*Düngung*, including fertilizer trials with Chili saltpetre / saltpeter [nitrate of soda or sodium nitrate from Chile] {*Chilisalpeter*} and sulphate of ammonia / ammonium sulfate {*schwefelsaures Ammoniak*}). 8. Animals and parasites that harm the soybean. Note: Regular saltpeter is potassium nitrate. 9. Is the cultivation of soybeans in Germany to be recommended? 10. Utilization of soya. 11. Summary of the main results and closing words.

Soya is a superior fodder material. Haberlandt organized field trials in all parts of the Austro-Hungarian empire and many surrounding countries. It should be noted that the introduction of this fodder plant to Germany, primarily in Bavaria, was undertaken by Professors Braungart in Weihenstephan and Lehmann in Munich. Unfortunately, there was bad weather during the early years of attempted introduction.

Concerning harvesting: If you can pull out the plants easily by hand, which is possible when the soil is soft, this is the best way to harvest them. If that is not possible, you can take them out with instruments / tools (*Instrumenten*), which enable you to cut the plants close to the ground, since soybeans have very low pods (*Früchte*)—7-9 cm above the ground. For this reason you should not use mowing machines (*Mähmaschinen*), based on the experience they have had in Hungarian-Altenburg with large-scale cultivation.

The author gives original analyses of the nutritional composition of various soybeans, including oblong black soybeans grown in Munich, Germany, and at the Agronomic

Institute in Paris, France.

Section headings include: Is the soybean recommended for cultivation in Germany? Use of the soybean. Miso paste and a brew, the soju. Preparation of shoyu taken from Haberlandt.

Professor Hecke of Vienna gave the following recipe for the preparation of a puree: Take 1 part soy meal [probably whole soy flour] or soya schrot and 2 parts fresh potatoes. Cook each separately, then mix to form stiff paste. Add salt and braised (*geschmorte*) onions. The addition of fat and milk is unnecessary since the soybeans contain lots of fat and protein. This dish tastes excellent, like Hecke said (Wein 1881). Franz Mark of Budapest proposed the use of soybean as a coffee substitute. Blaskovics was a soy bean pioneer in Europe (Wein 1888).

Note 1. This material was also published as a book in 1881 by Verlag Paul Parey in Berlin. Ted Hymowitz got a copy from Prof. Dietrich Werner, a German interested in soybean history.

Note 2. The author uses two words, *Soja* and *Sojabohne*, to refer to the soybean. Address: Munich, Germany.

1160. Smith & Dewar. 1881. Sales of household furniture: Saturday, 5th March at one, within 79 George St., entirely without reserve. *Scotsman (Edinburgh)*. Feb. 26. p. 12.

• **Summary:** "Important cellar of high-class bottled wines, champagnes, brandies, whiskies, and liqueurs (the Property of an Edinburgh Gentleman,...) and consisting of over seven hundred dozens."

"Miscellaneous.—Sauterne by Schroder & Schyler, Old Marsala [wine, from around the city of Marsala, Sicily], Old Wedderburn Rum, Old Dry Muscatel in Antique German Flasks, Five Cases Finest Chinese Ginger, Six Jars Chow Chow [a relish made of different vegetables that are pickled in a jar and served cold], Genuine Japan Soy [sauce] from Jeddo [Edo, today's Tokyo]: Quarter Cask Brandy... Cigars.—Two Cases Manila Cheroots and Cigars, 1877."

Note: In legal contracts, the term "without reserve" is frequently used in conditions of sale at public auction, that the property to be offered for sale, will be sold without reserve (i.e., no matter how low the best price offered). Address: Auctioneers & Valuers, 79 George St., Edinburgh [Scotland].

1161. Organov, N. 1881. Soia ili maslichnyi gorokh (*Soja hispida* *) [Soybean or oil-bearing plant (*Soja hispida* *)]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg (Transactions of the Imperial Free Economic Society)* 1(2):184-198. Feb. [3 ref. Rus]

• **Summary:** The asterisk in the title refers to a footnote (p. 184) which states: Some call this plant "Chinese beans"; in Austria they call them "Haberlandt's beans." Haberlandt is responsible for the successful cultivation of such useful soybeans in Germany. Thanks to Haberlandt, soybeans also

became known in Russia. In 1877, Haberlandt sent about 50 soybeans to I.G. Podoba; from these soybeans we have already (1881) obtained 15 pounds of soybeans. This article is based on a brochure by Haberlandt [his superb book, *Die Sojabohne*, 1878], plus the scarce information from the Russian agricultural literature.

The origin of the soybean is in Asia (India, China, Japan, Mongolia). Large quantities of numerous varieties are cultivated there. Soybeans are also grown in the Caucasus, Tunisia, and Algeria, as well as in southern and central Europe. Many attempts have been made to cultivate soybeans in Europe, but more were unsuccessful. Attempts were made in: Hohenheim [Germany]—unsuccessful. Bamberg [southern Germany], by Dr. A. Rauch, who obtained the seeds from their native country—unsuccessful. Germany, by Carl Berndt, using seeds from Shanghai—unsuccessful. France, where soybeans are more commonly known as *pois oleagineux*. 1872—During the Franco-Prussian War [1870-1872, France lost], Sergeant Otto Wehrman found soybeans in the botanical garden of Montigny near Metz and brought them to Germany, where in 1875 attempts to cultivate them were again made.

In 1877 Prof. Haberlandt (Austria) cultivated soybeans received from Capodistria in Istria [Istria or Istrian Peninsula; as of 2003 divided between Croatia and, at its base, Slovenia]. In Istria, soybeans were used to make coffee. They were also cultivated in Dalmatia [as of 2003 largely in Croatia] and southern Italy.

Such methods of cultivation resembled experimental gardening of horticultural and hothouse plants rather than scientific research on the acclimatization and growing capabilities of soybean plants.

The soybean plant has been well known and well documented by botanists and travelers since the last [18th] century. Kaempfer called the soybean *Daidzu* or *Mame*. Linnaeus called it *Glycine soja*. Jacquin—*Dolichos soja*. Dr. von Siebold and Zuccarini *Soja Japonica*, Sav. and *Soja hispida*, Mönch. Each name represents a different variety of soybeans [sic].

A footnote (p. 181) states: The famous essay by Kaempfer, titled *Amoenitatum exoticarum politico-physico-mediarum*, describes his travels in Persia and Central Asia in 1712. The essay includes descriptions and uses of soybeans in Japan, China, India, and other places.

Knowledge of and interest in soybeans in Europe expanded during and after the 1873 Vienna World Exhibition. Twenty varieties of soybeans were obtained by Haberlandt, who planted them in 1875 in the Vienna Botanical Garden.

A description of Haberlandt's studies (p. 186) includes favorable growing conditions, a description of planting, and identification of different soybean varieties. In 1876, there were only 7 interested people or organizations who wanted to continue Haberlandt's research on soybean cultivation.

However by 1877 Haberlandt's successful results interested more people (up to 160). These people received samples of soybeans from Haberlandt and reported their results back to him. Footnote (p. 187): The results of Haberlandt's experiments and those of the colleagues to whom he sent samples were published in the 1878 brochure [sic, book] *Die Sojabohne: Ergebnisse der...*

Describes the physical appearance of soybeans.

Page 188 proposes uses for the soybean in Europe, as food for people, feed for livestock, soybean oil, coffee, and soy sauce. Quotations from Oken (p. 189-90) discuss various uses of soybeans, including a description Miso (a substitute for butter) and Shoyu (a sauce added to fried meat), and how each is made. In China, soybeans are used to prepare a soft cheese or cottage cheese (tofu). A footnote (p. 188) is a reference to a book: Oken. 1841. *Allgemeine Naturgeschichte für aller Staende*. Vol. 3, p. 1661. Page 190 continues with comments on the great nutritional value of soybeans when used as food. A quotation from Dr. F. Leithner [of Krems, lower Austria, on the Danube River, 38 miles west-northwest of Vienna] describes his positive experiences in preparing soybeans as dinner for his guests. Prof. W. Hecke recommended that soybeans be combined with potatoes to make a kind of porridge. A quotation from Dr. Eduard Mach [of St. Michele, South Tirol] describes the taste of soybeans. Other food uses of soybeans proposed by Haberlandt: a substitute for peas in pea sausages, chocolate substitute.

Three tables (p. 191) show the nutritional value / chemical composition of soybeans. (1) The first analysis of the composition of soybeans (soybean seeds) in Germany was conducted by Senff, who obtained the seeds from Japan [from Mr. Berndt]. Their average chemical composition is given. (2) Mr. A. Tomaszek / Tomasek [in Napagedl in Mähren / Moravia, a region in today's Czech Republic] gives the following composition percentages for two types of soybeans from China, grown by him in 1876: yellow (column 1) and dark red (col. 2). (3) Further analysis by Tomaszek / Tomasek shows extremely high concentrations of fat and nitrogen [protein] for the two types of soybeans shown in table (2).

Three more tables (p. 192) give a more detailed analysis, by the Technical Laboratory in Vienna, of three soybean varieties: yellow (from Mongolia), yellow (from China), and dark red (from China). There are three columns: Original soybean sample, soybeans grown the first year, and soybeans grown the second year. For each variety, data are given for water, protein, fat, nitrogen-free extract, crude fiber, and ash.

A table (top of p. 193) shows the chemical composition of seven types of legumes: Peas, lentils, wild beans, yellow lupins, haricot beans, broad beans [*Vicia faba*], Chinese beans (soya), and soya beans. For each legume, data are given for water, protein, fat, nitrogen-free extract, crude fiber, and ash. The data for the first five legumes come from

Emil T. Wolff. The data for the broad beans and Chinese beans (soya) come from J. Kuehn / Kühn. The data for the soya beans come from Zulkowski.

A quotation from Carl Berdt includes details on soybean composition, and discussion of the uses of soybean oil (including in bread). A table (p. 193-94), based on the research of Prof. Völker [Voelcker, of London] gives the percentage composition of dried soybean oil-cake (Chinese oilbean cake). A table (2 columns) by Caplan (p. 194) gives the chemical composition of soybean pods, and of the leaves and stems. Another table (p. 194-95) gives an analysis by Zulkowski of the composition soybean straw and chaff dried at two temperatures: air-dried, and dried at 100°C. A table (p. 196) shows the mineral composition of soybeans.

Pages 197-98 summarize: (1) Cultural trials and harvest information by Attems with Mongolian yellow and Chinese brownish-red soybeans. He was satisfied with the results and sees a future for soybeans. (2) Harvest results of Tomaszek. (3) Harvest results of Prof. Kulisz. Continued.

Note 1. This is the second earliest Russian-language document seen (Nov. 2002) concerning the soybean.

Note 2. This is the earliest Russian-language document seen (Sept. 2006) that mentions soy oil.

1162. *New York Times*. 1881. Hints for the household: A chapter upon crabs and lobsters. March 6. p. 9.

• **Summary:** "The crab may be served cold in his shell... or he may come to the table mixed with an equal portion of grated cocoa-nut, a saltspoonful of curry powder, a little salt, and a dash of walnut or Worcestershire sauce. The chief dish of the feast shall be a bisque of crab."

1163. *New York Times*. 1881. Healthful-Palatable. March 31. p. 4.

• **Summary:** "The chief pleasure of life is the enjoyment of good health, which is largely promoted by wholesome and appetizing food... A legion of articles are presented to the public for flavoring, many of which are deleterious to health and offensive to taste, but the popular Lea & Perrins' Worcestershire Sauce is approved by all. On meats, game, fish and in soups, gravies, etc., it is indispensable. Half a century's test [i.e. since 1831] in the different countries of the world pronounce it the best sauce extant."

1164. Atkinson, R.W. 1881. On the diastase of koji. *Proceedings of the Royal Society of London* 32:299-332. Read by Prof. A.W. Williamson on 10 March 1881. [6 ref]

• **Summary:** Contents: Summary. Section I. Preparation of the *kôji*. II. Action of water on *kôji*. III. Action of *kôji* extract upon some carbohydrates: Cane sugar, maltose, dextrin, gelatinised starch. IV. Changes which the rice grain

undergoes by the growth of the fungus: Preparation of the *kôji*, action of water on *kôji*, change which the rice grain undergoes by the growth of the fungus.

"I feel that some apology is needed for using the Japanese word *kôji*, but as there is no foreign product in any way resembling it, I have thought that there would be less danger of confusion arising by retaining the Japanese word than by using the word 'malt.' As will be seen from the following description, the nature of this substance is quite different from that of malt, so that the use of that word might lead to erroneous impressions."

Extract of *kôji* causes the inversion of cane-sugar. It also effects the hydration to dextrose of maltose and dextrin. Curve A. Extract of *kôji* breaks up the starch molecule into maltose and dextrin; the maltose is quickly hydrated, and the products after some time are dextrin and dextrose" (p. 299).

The substance which the Japanese call *kôji* is widely used as a fermenting agent in Japan, "but it is something differing from such a body as 'barm or yeast,' by which Dr. Hepburn translates *kôji* in his invaluable dictionary. Its principal use is in the production of *saké*, the alcoholic liquid which is everywhere consumed in Japan..."

"Another use to which *kôji* is applied is in bread-making. It is also employed in the manufacture of the famous sauce 'Soy' [sauce], which is likewise a product of fermentation, though its preparation is much more complicated, and has not yet received an explanation" (p. 300).

"The Japanese prepare a kind of sweetmeat by the action of malt-extract upon steamed rice or millet, and this product, called *âmé* (*amé*), from the examination of a large number of specimens, was found to contain 68 to 94 per cent. of maltose."

Page 327 notes that Mr. Watanabe is preparing to conduct an investigation into the chemistry of the 'Soy' manufacture. He is aware that "the diastase of *kôji* resembles that of malt in one respect, that its activity is lessened by the presence of certain bodies, such as common salt."

The koji "manufactory" with which Prof. Atkinson is most familiar is the one at Yushima, in Tokio [Tokyo]; Mr. Jihei Kameyama is the proprietor. "It consists of a long arched passage, cut in the thick bed of clay which underlies Tokio at a depth below the surface of 15 to 20 feet." In this manufactory, "there are in all four of these underground passages, only one of which is used during the summer, as very little koji is made during that season. The height is rather less than 4 feet, the breadth about 7 or 8 feet, and from the entrance, reached by descending a vertical shaft, it extends about 25 or 30 feet in one direction, then bends off nearly at right angles for about the same distance."

"That the growth of the [koji] fungus takes place with great vigor is shown not only by the rise in temperature, but by the rapidity with which it removes oxygen from the air." The oxygen is replaced by carbonic acid... The rice contained

14.2 per cent. of water and the *kôji* 29.5 per cent; thence 85.8 parts of dried rice yielded 76.35 parts of dry *kôji*, that is, 89 per cent., and thus a loss of weight occurs amounting to 11 per cent. of the dry rice used. This loss consists mainly of starch, which is oxidised to carbonic acid and water..."

The large amounts of carbonic acid formed in the underground koji passages must be removed by ventilation. "The only means adopted of effecting a change of air consists of a square shaft about 8 inches in one direction and 6 inches in the other, leading from the anterior end of the passage into the open air above. It will be evident, therefore, that as the ventilation depends upon the difference of temperature between the inner and the outer air, it will be much better in winter than in summer. In fact it is in the spring and early summer that the [work] stoppages occur." Lacking air, "the growth of the fungus must be much less active, and perhaps this is one reason why the production of *kôji* in the summer is almost abandoned."

"The *kôji* prepared in the manner just described consists of grains of rice bound together in lumps by the interlacing threads of mycelium."

Note 1. This is the earliest English-language document seen (March 2002) with the word *koji* in the title.

Note 2. This is the earliest document seen (March 2002) that mentions diastase in connection with koji. However neither the word "enzyme" nor the word "enzymes" appear in this paper. Address: Prof., Analytical and Applied Chemistry, Univ. of Tokio (Tokyo), Japan.

1165. *Toronto Daily Mail (Canada)*. 1881. The days of salad. A chapter for epicures. April 6. p. 3.

• **Summary:** From the London Globe: "The Duke... was a great friend of Dumas the Father—Father of the best novels, travels, cookery books that were ever published." Giorgio Ronconi, the celebrated Duke of Ferrara, sometimes used to retired to Dumas' private chambers in Paris, "where the following salad was always ready for him. Dumas himself describes it as a salad of high fantasy,... And here shall follow the great novelist's recipe for making the salad, or rather the mixture..."

"I place," says Dumas, "in my salad bowl for two guests the yolk of an egg, and stir it in oil till it becomes a paste. To this paste I add chervil, minced tunney, pounded anchovies, mustard of Maille, a large spoonful of soy [sauce], gherkins, and the whites of eggs, also minced. Then dilute the whole with the best vinegar I can procure, and my servant stirs it; while over all I cast a pinch of "paprico," an Hungarian pepper. And there," says the most conceited but delicious novelist that ever lived, "you," meaning the world in general, "possess the salad that so astonished poor Ronconi."

Note: Alexandre Dumas (père = father; 1802-1870), of France, is best known for his famous historical novels of high adventure, including *The Count of Monte Cristo* and *The Three Musketeers*.

1166. Hawkins (Robert J.) & Co. 1881. Tomorrow (Thursday), the 1st August at Twelve o'clock. Grocer's stock and fittings... (Ad). *Scotsman (Edinburgh)*. April 25. p. 2.

• **Summary:** "Pickles, Sauces, &c. Piccalilli, Mixed Pickles,... Anchovies, Anchovy (Burgess' Sauce), Cayenne, Currie, Harvey's King of Oude, Lobster and Shrimp Sauces, Real Indian Chutney, Bengal Indian Soy [sauce], Soyer's Relish, Mushroom Catsup,..." Address: Wine & Spirit Merchants, Main Street and Edward Street, Newbridge and Curragh Camp [Ireland].

1167. Renouard, Alfred. 1881. Sur l'introduction du soja hispida en Europe [On the introduction of the soybean to Europe]. *Association Française pour l'Avancement des Sciences, Comptes Rendu* 10:945-51. April. Session of 17 April 1881, Algiers. [3 ref. Fre]

• **Summary:** Contents: Introduction. History. Cultivation and harvest. Soya as a forage plant. The edible soybean [food uses]. "The soya, or rather the *soja hispida* is a plant that is cultivated at many locations in Europe, but whose name is not well known here, and which has only been cultivated for several years. Japan has long known the specialties of its cultivation. There it is well known under the name of *o'mamé* and from it is extracted, from the roasted seeds, the sauce called "japonaise," which is found in the commerce of Europe, where it enjoys a good reputation.

History: At the Exposition of Vienna, in 1873, the Japanese government exhibited, for the first time, the soya as a forage and food plant. Some Austrian scholars, including Prof. Haberlandt of the Institute of Agronomy at Vienna, then studied the composition of this oilseed and perceived that it would make an excellent forage. In 1877 trials started in Austria. In 1871 the Society for Acclimatization in Paris sent several samples of soya seeds to M. Blavet, president of the Horticultural Society of Étampes. He grew the crop and sent samples to other departments and abroad. Later the seed house of Vilmorin coined the name "Soya of Etampes" (*soya d'Étampes*). But it does not seem that these laudable efforts have been crowned with success. Mr. Paillieux of the National Society for Agriculture, Mr. Saint-André, director of the Agronomic Station at Montpellier, Mr. Vavin of the Society for Acclimatization, have all worked with soya and are still working for the propagation of this useful plant.

"In the region of Nord, it is to a Frenchman, who actually lives in Moravia, that we owe the actual propagation of soybean culture: Mr. Julius Robert, who cultivates nearly 3,000 hectares at Seelowitz. Last year he made a gift of several hundred liters of soybeans to the Society of Farmers of Nord. At the instigation of Mr. Corenwinder, several farmers tried them. The results obtained by the first experimenters were, in general, satisfying, but we should not yet make a final judgment as to the plant's definite acclimatization. Nearly 30 farmers from around the town of

Lille are proposing to plant soybeans again. Free samples, provided to our society by Mr. Olivier Lecq (of Templeuve), an agent for Mr. Robert and those who conducted the first trials, have been rapidly distributed. Today we can consider the soybean as definitely well tested in our department.

“Cultivation and harvest of soybeans: Mr. Yossida [Yoshida], a Japanese man from Tokyo, was sent to the town of Lille by his government to work seriously on cultivation and preparation of flax / linseed. He told us that there were at least 100 varieties of soybean in Japan. A Japanese book titled *Explanation, with Illustrations, of Trees and Plants Newly Determined*, mentioned 25 very distinct varieties of soybeans. The Chinese herbal only cited five varieties, which seems to prove that the soybean is native to Japan.

“In France, we barely know 2 or 3 varieties: the yellow and the brown soybean for temperate climate, and the black for the warm climate. It is the yellow variety that was tried in the department of Nord, and also, by the way, the one that has been cultivated at the Museum since 1790; there we can observe that it comes up well but it does not produce seeds every year” (p. 946).

“In the department of Nord the soybean, can be harvested toward the end of September or during October. However, in warmer countries or regions, the harvest can begin in August or September.”

“The harvest ought to be done like that of the like the dwarf bean (*haricot nain*), in the department of Nord, in ripping out the stalks entirely, then suspending them from poles in an open field, the bundles of soybeans tied just above the top of the roots [hung upside down]. The plant thus dries rapidly, if the weather does not pose an obstacle to it. When the soybeans are well dried out, they can easily be stored: they are not attacked by weevils (*bruches*) that cause, as everyone knows, so much damage to beans, peas, lentils, etc.”

In 1879 in Austria trials were conducted by Mr. de Blackowicz [Edmund v. Blaskovics] under orders from the Hungarian Ministry of Agriculture. In 1879 he obtained an average yield of 1,699 liters/hectare (range: 237 to 3,262).

Mature and well dried, the soybean constitutes an excellent feed for animals in France. On this subject, comparative experiments on the nutritional value of air-dried soybean pods and dead leaves were conducted in 1879 by Messrs. Weiske, Delmel, and Schulze at the Proskau agronomic station.

In total, 1,000 gm of pods were fed to each of two sheep, from Jan. 8-15 then from Jan. 16-23. One table shows percentage of each nutrient in the pods digested by each sheep (p. 948). A second table shows the percentage of each nutrient in the dead leaves digested by each sheep (p. 949).

“Finally, the soybean has been fed to animals after having been ensiled in a mixture with various forages. The fermentation which these forage crops undergo changes the composition of each. For example, in mixing soya with

maize (which contains only 4-5% protein), the protein content of the mixed silage is increased. The following analysis, made in 1879 at Lobowitz (Bohemia) in the agricultural laboratory of the prince of Schwarzenberg, is of a forage composed 80% maize on the stalk and 20% soya on the branches. A table (p. 949) shows: Moisture 8.62%, fatty materials 2.33%, cellulose 43.94%, nitrogen-free extracts 27.56%, proteins 8.75%, and ash 8.80%.

On the farm of Mr. Julius Robert, the cattle being fattened were fed as follows (per head per day). A table (p. 949) shows—in February: Hay 3 kg. Soya and maize ensilage 5 kg. Corn flour 1 kg. Beet peels 40 kg. Chopped straw 6 kg. Salt 80 gm. The amount of soy and maize silage fed in March and April were increased to 8 kg. The next table (p. 950) shows that the cattle gained (on average) 633 kg in Feb., 654 kg in March, and 690 kg in April. The increases in weight gain in March and April must be due entirely to the marked increase in the amounts of soy and maize silage fed during those two months.

The article concludes: “To make from the soybean what the Japanese and Chinese make from it is the least important part of the question; because we think that Europe will leave them with their soy butter (*mizou* [miso]), their sauce (*soyo* [shoyu]) and their cheese [tofu]. It is not surprising that people tried to make cheese; the legumine [a kind of protein] which the soybean contains in large proportion, is, as we know, analogous to casein and undergoes the same chemical reactions. By the way, all these products, except the sauce, are detestable to the European palate.

“Next year I shall give an account of the results obtained during three years of trials in the department of Nord” [in far northern France on the border with Belgium].

Contains eight tables from earlier publications by other authors.

Note: This is the earliest French-language document seen (April 2012) that uses the word *soyo* to refer to soy sauce. Address: The Younger (*fils*), Civil engineer, manufacturer at Lille, secretary general of the Industrial Society of Nord [a department in northern France] (Ingénieur civil, Manufacturier à Lille, Secrétaire général de la Société industrielle du Nord).

1168. *Tropical Agriculturist (Ceylon)*. 1881. New and old tropical products. 1(1):2, 71. June 1. [1 ref]

• **Summary:** “From a recent Price Current of Messrs. Lewis & Pat of London, we transcribe a list of products” imported from various parts of the world.”

A long table has three columns: (1) Imported from China, Japan and the Eastern Islands. (2) Quality. (3) Quotations. The entry for “Soy” [sauce] gives the quality as “Good” and the quoted price as 1s. 10d.” [1 shilling 10 pence].

1169. Roman, E. 1881. Correspondance: Sur le Soja

[Correspondence: On the soybean]. *Nature (La) (Paris)* 10(425):115. July 25. Letter. [Fre]

• **Summary:** “The soybean (Le Soja or Soya), of which you have spoken in previous issues of *La Nature*, is a very interesting plant and destined to play a major role in our agriculture, but it is not new, and its introduction [to Europe?] should not be attributed to Italy [but rather to France]. The [Natural History] Museum was already in possession of its seeds in 1779, but at that time it was nothing but a curiosity. It has been cultivated there up to 1880 inclusive.

“It is now grown not only in Italy but also in Austria-Hungary, where its cultivation seems to have undergone a major development, and in France at various points, especially at Etampes and at Montpellier. Likewise, I had some planted at Orange [capital of Vaucluse in southeast France] this year.

“This plant is probably destined to play as important a role in the future as the potato. Its qualities, which have already been confirmed in France by many experimenters, leave no room for doubt. *La Revue Horticole* has already published several articles on soya; and Mr. Paillieux has written a brochure on this subject (published by *la Maison rustique*).

“Although it seems incredible, soya a hardy plant in France, especially from the latitude of Paris southward, grows in any soil, even the driest, and can provide us with the following: 1. An excellent forage, that is good for fattening cattle. 2. Seeds similar in shape to small haricot beans, but containing 37% protein, 20% fat, and only 3% starch.

“None of our French legumes has an equal chemical composition. The nutritional composition of soya is much better than that of haricots and lentils. It comes close, in that respect, to that of cheeses and could possibly replace the famous dry pepper sausage (*saucisson aux pois*).

“Cooked with rain water and certain precaution, those beans can make a nice dish similar to haricots.

“From it, the Chinese make milk (*du lait*), various cheeses (*divers fromages*), oil, a condiment (*Indian Soy* [sauce]), etc., etc.

“In France, people have envisioned roasting the seeds to make imitation coffee.

“I immediately tried it to check the idea and, although I am very choosy when it comes to coffee, I recognized that the flavor and properties of this decoction of soya were quite similar to those of an average quality coffee. It goes without saying that a cup of soy coffee, well prepared, is immensely preferable to what we are served under the name of mocha in 75% of publish establishments.

“Mixed with milk, the decoction of soya is, in my opinion, better than the coffee with the best aroma. For some time now, we have been drinking this soy coffee with milk every morning. The awareness of these properties of soya

would be very useful to the poorer classes, for it actually costs 1.20 French francs per kg at Vilmorin, and this price will certainly drop by more than half when soya comes to be extensively cultivated.

“You can see from the above that soya is one of the most valuable plants and that its cultivation merits encouragement in France. It is doubtful that, to start with, we will develop all of the applications mentioned above. But we could—and this is the advice given by those who introduced it—cultivate it first for use as forage. Animals are not sensitive to routine; they accept with pleasure anything savory that one offers them, and have already adopted the soybean. Once the plant is extensively cultivated and well known, we will gradually come to take advantage of all of its qualities.”

Note: This is the earliest French-language document seen (Oct. 2003) that uses the word *lait* to refer to soymilk. Address: Ingenieur en chef à Périgueux.

1170. Van Buren, Thomas Broadhead. 1881. The food of the Japanese people. Yokohama, Japan: Printed at the Japan Gazette. 19 p. No index. 24 cm.

• **Summary:** Contents: Introduction (meat eating countries vs. Japan). Cerealia (cereals). Leguminous plants. Tubers and roots. Herbaceous food-plants. Ame. Leading food plants (with Japanese name, scientific name, and parts eaten; incl. kudzu, udo, konnyaku, and daikon). Sauce.

Most civilized people are and always have been meat-eaters. “So universal has meat-eating been among the dominating races that it has become a generally received opinion that animal flesh is a necessity to a well-developed physique. The praises of beef are sung wherever Occidental civilization has penetrated. It is not only a popular belief, it is as accepted scientific opinion, that a considerable percentage of animal flesh must enter into the nourishment of any well-fed people.”

“The food of Japan, with a population of 36,000,000, or about that of Great Britain and Ireland, engaged in every branch of human industry, presents a complete contrast to all this. Here they are essentially vegetarians, animal flesh being largely prohibited by religion, and its general use made impossible by reason of its comparative scarcity and consequent high price.” Until a few years ago, their “isolation prevented the introduction of new food-plants adapted to their climate...”

In Japan there are little more than 1,000,000 head of cattle. Of these, only the cows (not more than 600,000) are eaten; male cattle are used only as beasts of burden. Thus in Japan there are less than 2 head to every 100 people, compared with 73 head in the United States. Of the 36,000 cattle slaughtered last year in Japan, “more than one-half were consumed by foreign residents and the foreign naval and merchant marine. The Japanese army and navy also consume considerable beef. It is therefore safe to say, as I have already intimated, that beef does not enter into the food

of the mass of the people to any appreciable extent. Mutton and pork, outside of the treaty ports, are almost unknown. Of barnyard fowls, geese, and ducks there is a large variety. The wildfowl, consisting of pheasants, quail, woodcocks, grouse, ducks and geese are also abundant, but these, as well as eggs, on account of their high prices, can scarcely be said to enter into the diet of the common people at all, except upon rare occasions. Fish is more largely eaten. The variety of fish is very large... A very considerable percentage of the catch is dried." "At present it may be said that one-half the people eat fish every day, one-quarter two or three times a week, and the balance perhaps once or twice a month.

"Even with these exceptions the food of the masses is fully or even more than 90 per cent. vegetable." The Japanese exhibit "endurance of body and power of intellect to a very considerable degree, while deprived of the usual nutriment held to be essential to such developments."

The main cereals of Japan, in descending order of the quantities produced, are rice, barley, millet, rye, and Indian corn. The three main varieties of millet are extensively cultivated and used: First class is *Setaria Italica* (Italian millet). Second class is *Panicum miliaceum* (Indian millet). Third class is *Panicum frumentacum* (Called "hiye" [hie] in Japan).

"Leguminous plants. Perhaps in no country in the world are beans and pease comparatively so extensively cultivated as in Japan. There are more than 40 varieties. That known as the soy-bean is especially important, as it is rich in those nutritive properties which are wanting in rice, and is invaluable in a country where meat is almost entirely lacking in the diet. The composition of this variety, known as Miso-mame, is as follows (table): Water 11.32%. Ash 3.86%. Fat 20.89%. Nitrogenous matter 37.75%. Gluten 2%. Starch and sugar 24.08%. Its "proximate chemical composition approaches more nearly to animal food than any other known vegetable." Tables showing the composition of lean and fat beef are then given for comparison.

"I know it is held by scientists that, while these plants show a great chemical likeness to beef, the action upon the human body is not the same, being much less valuable. I can only repeat that here is a race of people of good physique, of stalwart and well proportioned, although not tall, frames, and of cheerful dispositions, who daily perform tasks requiring great strength and endurance, who eat almost exclusively this vegetable food, and who, without any of the comforts of our western homes, and undergoing extreme exposure unknown to our people, live about the average lives of the laborers of Europe and America, with a table expenditure of about one-sixth or one-seventh that required by the latter."

All classes of Japanese also consume many algæ and other sea plants, including many species of chondrus and Fucus-laminaria. Instead of sugar they use *ame*, "made from malted barley and rice or millet, the malt converting the starch of the rice or millet into dextrine and maltose, and

producing the product varying from a thick sugar or honey up to a hard candy. The food value of this article is very great, and, as it is sold at a low price, its consumption is large. A table shows the composition of two grades of *amé*, first and second (cheaper).

Sauce enters very largely into the preparation of Japanese food for the table. The most widely-used kind is made as follows: "'Shoyu,' known to us as 'soy' [sauce], the one almost exclusively employed is made from wheat and the shoyu bean [soy bean] (ground) in equal proportions of one *sho* each (a *sho* is about 1 quart, 1 pint, and ½ gill). The materials are mixed and boiled, after which the mass is steamed in a basket or box prepared for the purpose, with a perforated bottom. When the steaming process is finished it is put in a cask and left until a green yeast is produced. The compost is then taken with salt water. After standing a good length of time the liquid is strained, and the sauce is ready for use. It has a rather pleasant flavor, and is said to be the basis of most of the renowned sauces [such as Worcestershire] prepared in England. The refuse is fed to cattle."

Note: This is the earliest English-language document seen (April 2012) that uses the term "shoyu bean" (regardless of capitalization) to refer to the soybean.

The last 6 pages (p. 14-18) contain a "List of plants used for food, or from which food is obtained in Japan." They are arranged by families. For each species is given: Botanical name, Japanese name(s), and remarks. Under Leguminosae [sic, Leguminosae], Papilionacea [Papilionaceae], we read: *Glycine soja* (S. & Z.), Tsuru mame; No mame, seeds. *Glycine hispida* (Moench) or *Soja hispida* (Miq.), Oname; daidzu, Soy bean; seeds; many varieties. *Dolichos soja* (L.), Japan pea. *Glycine hispida* f. lanceolata, Midzukugiri.

The section on legumes (p. 15) also discusses: (1) *Arachis hypogea* (L.), Rakkasho, Tojinmame, Ground-nut; earth-nut; fruit. (2) *Vicia faba* (L.), Sora mame, Broad beans; seeds = *Faba vulgaris*. (3) *Pisum sativum* (L.), Yendo [Endo], Pea; seeds; two main varieties; midori yendo [endo] and saya yendo [endo], the latter eaten for the pod. (4) *Pueraria thunbergiana* (Benth.), Kudzu, root, starch = *Dolichos hirsutus* (Th.). (5) *Canavalia incurva* (D.C.), Nata mame, seeds = *Dolichos incurvus* (Th.). (6) *Phaseolus radiatus* (L.), Adzuki-Shôdzu, seeds. *Phaseolus radiatus* var. pendulus (Savatier), Tsuru-adzuki, seeds. *Phaseolus radiatus* var. subtrilobatus (Sav.), Bundo-Yayenari, seeds. (7) *Dolichos umbellatus* (Th.), Sasage, Adzuki-sasage, seeds. (8) *Alyosia subthombea* (Miq.), No-adzuki; Hime-kudzu, seeds.

Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the term "broad beans" (or "broad bean") to refer to *Vicia faba*.

Note 2. This is the earliest English-language document seen (March 2006) that uses the word "Yayenari" (or "Yayenari" or "Yaenari" or "Yae-nari") to refer to a variety of azuki beans. Address: United States Consul General of

Japan, Kanagawa.

1171. *New York Times*. 1881. Editorials [Vegetable food in Japan]. Sept. 10. p. 4, col. 6.

• **Summary:** “So universal has meat-eating become among the dominating races, remarks our Consul-General at Yokohama, that the praises of beef are sung wherever Occidental civilization has gone, and it is not only a popular belief, but an accepted scientific opinion, that any well-fed people must use animal food considerably; to have meat to eat frequently is reckoned the best proof that the common laborer in a country is well favored. Japan, with a population of 36,000,000, equal to that of the United Kingdom, engaged in very diversified industry, presents a complete exception to the rule as to food. The scarcity of animal food in consequence of the nonintercourse policy, and its almost unnecessary prohibition by the religious faith, have made a nation of vegetarians, except as to fish, which is not forbidden as ‘flesh.’

“There are now in the country hardly more than 1,000,000 cattle; of these, as emasculation is not practiced, the males being used for breeders, only 600,000 cows can be looked to as food, and there are less than 2 head to each 100 people, against 73 head in this country. Of the 36,000 head slaughtered in 1880, the foreign residents and the foreign marine consumed more than half. Outside of the treaty ports mutton and pork are almost unknown; there is an abundance of fowls, both wild and barn-yard, but the common people cannot pay for them. The supply and variety of fish, however, are very large, over 200 kinds being used as food, and the Government is actively working to increase both. Already probably one-half the people eat fish once a day, one-quarter several times a week, and the rest several times a month. Still the food of the masses is more than nine-tenths vegetable, and the list of this has been made long by their necessity-sharpened wits. Of cereals, rice is the most important, occupying more than half the tilled area in the Summer; barley, millet, wheat, rye, and corn rank next in the quantity produced.”

“Beans and peas are more extensively cultivated in Japan than anywhere else, and there are over 40 varieties. One—the soy bean or Nirva-mume—contains 20 per cent fat and 60 of nitrogenous matter, starch, and sugar, and closely approaches meat both in composition and in its action on the body. The sweet potato, being very prolific and cheap, ranks next to rice in importance, 16,000,000 bushels being the last reported production... A surprisingly large list of wild plants and sea-weeds is utilized as food. The place of sugar is considerably supplied by a preparation made from millet or rice and malted barley, the starch of the rice or millet being converted by the malt, and the product varying from a thick sugar or honey up to hard candy, being cheap and in large consumption.

“Sauce, so-called, enters very largely into use with

food plants; its name is shoyu, known to us as soy [sauce]. The kind almost exclusively used is made from wheat and the shoyu bean ground in equal parts. It is boiled and steamed, then left to ferment; after being then dried in the sun it is allowed to stand awhile in a cask of salt water, is then strained and is ready for use, the refuse being fed to cattle. Its flavor is pleasant, and it is said to be the basis of most of the celebrated sauces put up in England. The proof of the pudding being in the eating, it is interesting to note the testimony that the Japanese—a race of good proportion, physique, and strength, whose comforts are much less and whose exposure is much greater than in case of Western nations—live an average life, in length and health fully up to that of the European or American, with a table expenditure of not more than one-sixth or one seventh that of the latter.”

Note 1. Much of this editorial is borrowed from a recently published booklet titled *The Food of the Japanese people*, by Thomas B. Van Buren (1881). However both the meaning and source of the meaningless term *Nirva-mume*, which is said refer to the soy bean, remain a complete mystery.

Note 2. This is the earliest article on soy seen (Aug. 2002) in the *New York Times*. It is also the earliest document seen (Aug. 2002) that is an example of major media coverage of soyfoods in North America.

1172. *Gardener's Monthly and Horticulturist*. 1881. The soy bean. 23(275):337. Nov.

• **Summary:** “This—the Soja hispida—has been under culture in American gardens ever since Commodore Perry's memorable expedition to Japan. But no one seems to have known the use of it, and so it soon disappears, as, in the usual way of cooking it, any ordinary bean is better. Among Mr. Dreer's Japan collection at the State Fair [probably Pennsylvania] we noted that it again appeared, and we are moved to give the following from the *Gardener's Chronicle*, as showing how to use it:

“The greatest use to which the plant is put in China and Japan is in the preparation of soy [sauce] and of various kinds of food from the ripe seeds. The manufacture of shoyu, or soy, is thus described in a descriptive catalogue of agricultural products of Japan, exhibited at the late Sydney International Exhibition [Australia; held Oct. 1879]. Equal parts of beans and wheat are used; a small part of the wheat is mixed with koji, which is an alcoholic [sic] preparation from rice, and allowed to ferment; the remainder is roasted, and the beans are also roasted. The roasted beans and wheat are then mixed together with the fermenting wheat, placed in shallow wooden boxes, and kept for some days at a fixed temperature in a warm chamber with thick walls, until the whole mass is covered with fungus. It is very important that the temperature of this chamber should be kept at the proper point. By these processes part of the starch of the wheat is converted into dextrine and sugar, and lactic acid and acetic

acid are formed. It is then mixed with salt lye. The mashings are removed to large vats, and kept there for at least twenty months, but more often for three or five years, the better qualities being those that are kept for the longer periods. The best soy is produced by mixing that kept for five years with that kept for three years. After it has been kept a sufficiently long time, it is strained through thick cotton bags, and the residue submitted to pressure. Before filtering, honey is sometimes added. The residue, after pressing, is again mixed with salt and water, and again pressed, the yield being soy of an inferior kind. Sometimes water is added to this second residue, and it is again pressed. The residue first obtained is occasionally used as food, and the last residue as manure. (See *Gardeners' Chronicle*, vol. xiii., new series, pp. 178, 209, 242.)

“Shoyu, or soy, is a very important condiment; it is mixed with a great many kinds of food, and is produced and consumed in very large quantities. Regarding the use of the soy bean as a vegetable in Japan, the writer of the foregoing remarks on soy says: ‘It is the vegetable which approaches nearest in chemical composition to animal food (meat), containing, as it does, one-fifth of its weight of fat, and often two-fifths of nitrogenous matter. It is an extremely valuable adjunct to the food of a people who subsist so largely on a purely vegetable diet, of which the bulk is rice, so rich in heat producers—starch, and poor in flesh formers—albuminoids.’”

1173. Penhallow, D.P. 1881. Meiso [Miso]. *Kansas City Review of Science and Industry* 5(7):437-41. Nov.

• **Summary:** “It is well known that the Japanese are a rice-eating people, with whom this article, meiso, is perhaps, the most important of all their foods, but it is not so generally known that the flesh of animals could hardly be considered a regular article of food until within the past few years, and even now, with the great mass of the people, meat is seldom used. Thus for centuries, these people have lived almost wholly without that which western people consider so important a source of nitrogen. It seems, however, that the demands of nature were recognized and met by obtaining from the vegetable kingdom what they failed to secure from the animal, and thus it is we find them consuming enormous quantities of beans prepared in a great variety of ways. Some of the important preparations from beans are cheese, or tofu—a white, curdy mass strongly resembling cottage cheese, unflavored with salt, and held in high estimation. It is prepared in a variety of ways, but almost invariably forms a part of every meal as a constituent of soup. Cake—a stiff, jelly-like confection made by straining boiled [azuki] beans and incorporating with a large proportion of sugar. Pickles—beans in the pod and frequently on the stem [edamame], pickled in a strong brine; they are eaten without further preparation. Sugared beans—roasted beans enveloped in a heavy coating of sugar, and sold as a confection. Shoyu,

or Soy—a liquid of dark color and salty flavor, made by fermenting a mixture of salt, beans, and roasted wheat or barley. It is largely eaten with fish and rice. There are other modes of preparation which we will pass over with the exception of meiso, which forms the subject of this article.

“The pasty mass manufactured and sold under this name constitutes one of the most important of the preparations from beans, and enters largely into the diet of all classes as a basis for soup, or, in various forms, as a sauce for fish and meat. In composition it consists of:

“Salt—4.5 to = 2.30 bushels.

“White [soy] beans—1 *koku* = 5.13 bushels.

“Rice—4 to = 2.05 bushels.

“Salt.—The salt employed is of a very crude sort. It is obtained from sea water by evaporation under the influence of solar heat, and as no attempts are made to secure any special degree of purity, it is consequently contaminated with other salt’s and its specific value thereby lessened. Sticks, straw—especially from the coarse bags in which it is transported—and dirt are also always to be found, and as no efforts to cleanse or purify, beyond removal of the larger fragments of straw, etc., are made at the factory, the product into which such salt enters has a rather uninviting appearance. It is always used dry.

“Beans.—The ordinary white [soy] beans appear to be used in preference to any others. They are prepared by boiling for about six hours, when the fire is drawn and they are allowed to cool in the boiler. The next morning they are removed from the boiler and placed in mash boxes which measure 10 x 3 x 1 feet, where they are thoroughly reduced and mixed with the rice and salt by means of a round pole used as a pestle.

“Rice.—White rice, or that which has been well cleaned, is soaked in cold water for two days. It is then well drained and transferred to a boiler containing fresh water, when it is steamed for three hours. While yet hot, it is taken to a warm room and allowed to remain under the influence of a warm, moist air for four days, when the whole is found to be covered with an abundant growth of fungus.

“The room in which this operation is performed usually measures about 10 x 20 feet, is constructed of mud walls—eight or ten inches in thickness, and is made as close as possible with the exception of one small window to admit light for the workmen, and a door through which to enter. The only moisture in the room is that which comes from the moist rice, but a constant temperature of 80°F. is maintained by means of a large charcoal fire at each end of the room. It is regarded that a warm, moist air, undisturbed by draughts, is quite essential to the success of the operation, though darkness is not deemed requisite, the absence of windows being more a matter of economy than anything else. The production of the fungus is usually regarded as the critical part of the whole manufacture, and failure sometimes occurs. No reason could be obtained from the Japanese why the

subsequent fermentation is dependent upon the presence of the fungus; that its production is an essential part of the process was all the information that could be obtained.

"At the end of four days, the rice is taken out into a large airy room and spread upon straw mats, 3 x 6 feet, and allowed to cool for one and a half hours. It is then transferred to small trays which measure 18 x 8 x 8½ inches, for convenience in handling, when it is allowed to cool as rapidly as it can. Whether the rice now dries or remains moist appears to be a matter of indifference. As soon as thoroughly cooled, it is incorporated with the salt and beans. It is generally customary, however, to prepare the rice in large quantities once in four days, and thus have a stock always on hand. In that case, as soon as cooled, it is mixed with the salt and placed in large storage vats, where it is tamped solid by the feet, and will then keep without trouble for two months.

"When all the ingredients have been thus prepared, they are placed, cold, in the mixing boxes already described, and thoroughly incorporated into a stiff, pasty mass by means of a long mixing rod. This mixture is then placed in large vats having a capacity of about seventeen koku or eighty-seven bushels. Here it is packed solid by the feet and allowed to undergo a very slow fermentation. Every effort is made to keep the temperature of the mass down as low as possible, and if, during the summer, the heat of fermentation gets too great, the whole mass spoils. It is then mixed with roasted wheat and by further fermentation converted into shoyu or soy. Sometimes the mixture fails to ferment properly, when it is taken out and mixed with a fresh portion of beans. The fermentation is allowed to continue six months in summer and eight months in winter, at the end of which time the meiso is ready for the market.

The result of these various operations is a stiff, pasty mixture of repulsive appearance and disagreeably sour odor, and though it would hardly find favor with Americans or Europeans, possibly excepting epicures, it seems to be in great demand with the Japanese.

"The factory where these facts were obtained employs six men, and the annual produce amounts to from 900 to 1,000 koku, equal to 4,617 to 5,130 bushels. The cost of the various ingredients and the finished product is as follows: *

"Beans, 1 koku—5.13 bu—6 yen.

"Rice, 1 koku—10 yen.

"Salt, 1 koku—5.40 yen.

"Total cost of meiso per koku—7.13 yen.

"Market price per koku—13.20 yen.

Footnote (*): "Prices for 1880; probably somewhat higher at present. Yen, gold, is equal to the U.S. dollar." Continued. Address: Prof., late of the Imperial Agricultural College of Japan [Tokyo].

1174. Penhallow, D.P. 1881. Meiso [Miso] (Continued—Document part II). *Kansas City Review of Science and*

Industry 5(7):437-41. Nov.

• **Summary:** Continued: "The mouldy rice, prepared as described, constitutes the yeast of the Japanese, and is used for all the purposes, including bread-baking, for which we would employ ordinary yeast. Its production is, therefore, of considerable importance, as upon it depends the manufacture of meiso, saki (fermented liquor), vinegar, and shoyu. It, therefore, becomes evident that, the principal interest of this entire manufacture centers in the fungus which develops upon the rice, because of the variety of forms which may be developed from its spores under different conditions of warmth and moisture, and also exposure to the air.

"In order to obtain some satisfactory evidence on this interesting subject, the various products—mouldy rice, meiso, yeast, and vinegar—were submitted to microscopical examination. A sample of meiso was taken from a vat where fermentation had been in progress for some time. It was noticed that the temperature was so low that the whole mass felt cold to the hand, and thus whatever fermentation was in progress, must have been going on at a very slow rate. On examination, there appeared numerous spore-like bodies, similar in form and size to the spores from the mouldy rice, which they doubtless were. In addition, there were many short and irregularly branched filaments in all stages of growth from the spore. Nothing was seen which could be called yeast-plant proper, or *S. cerevisiae* [*Saccharomyces cerevisiae*].

"A sample of freshly made vinegar showed the liquid to contain a very large number of spermatia-like bodies, while masses of the true vinegar-plant were also numerous. The cells of these measured one seven-thousandth of an inch in diameter. No true yeast-plant was to be found, though this may possibly have been due to the degree of saccharine exhaustion as well as the low temperature of the fermentation. A sample of vinegar, containing a good surface growth of the vinegar-plant, was kept for three weeks, in the hope that fruit might appear and thus furnish one more link in the chain of evidence; but none appeared, although the net-work of cells constantly and rapidly increased, and further observations were interrupted by departure for home.

"Yeast made in the ordinary way, but using the mouldy rice to start the ferment, showed the familiar forms of the true yeast-plant. The fungus on the mouldy rice proved to be our old friend *Penicilleum* [*Penicillium*].

"These observations furnish us with a practical illustration of the fact that these vegetable structures of low degree of organization, are not necessarily constant in form and structure, but are liable to vary greatly under different conditions of temperature, moisture, and exposure, and that they are associated with fermentation of varying rapidity as well as with products which are more or "less dissimilar. They furnish one instance of the effect which environment has upon the individual.—*The Kansas City Review* [of Science and Industry. 1881. Vol. 5, No. 7, p. 437-41. Nov.].

Address: Prof., late of the Imperial Agricultural College of Japan [Tokyo].

1175. *Tropical Agriculturist (Ceylon)*. 1881. The soy bean, a new feeding stuff. 1:567. Dec. 1.

• **Summary:** This is reprinted from *British Mail [Masl]*. “Mr. Wamford [Warnford] Lock has drawn attention to the soy bean of China and Japan, *Glycine soya* (*Soja hispida*), sufficiently familiar as the source of the eastern sauce of that name, and affording a valuable oil (bean oil), which is the subject of an article in the new ‘Industrial Encyclopaedia.’ It is attracting considerable attention among Continental agriculturists, and has recently been experimented on with regard to its value as a food for milch cows and fat cattle. As a forcing food for milch cows, the soy bean is superior to grains; for fat cattle, it is less adapted, and ranks second to grains.

“The plant can be cultivated in Central and Eastern Europe, and similar localities, especially in unfavourable years, when other crops are backward. For growth as a field crop it is recommended to be sown in rows 18 in. apart in the middle of May.

“The qualities of the beans grown in diluvial [deposited by a flood] and alluvial [deposited by running water] soils are shown by the following analyses [alluvial given in parentheses]:—Water 15.20 (19.50), fat 16.21 (17.94), protein 28.63 (25.94), non-nitrogenous extractive matter 30.84 (33.16), fibre 4.38 (4.45), mineral matter 4.74 (8.82).

“The straw or haulm of the plant is practically worthless for neat cattle, but the husks and leaves, mixed with mashed food, or even alone, are readily eaten. It has also been found that the chopped beans, soaked for 12 hours in water containing a little salt, are greedily taken by cattle, and that few pass through undigested.

“According to M. Roman, a French savant, the cultivation of the soja or soya, has of late years been largely developed in Austria-Hungary, Italy, and parts of France. This plant is extensively cultivated by the Chinese, who make a cheese and various dishes from its fruit. When roasted the seeds form an excellent substitute for coffee, and altogether M. Roman thinks that the plant will pay better than the potato. At present the retail price of the soja beans is sixpence per pound, but as the plant becomes more extensively cultivated, they will no doubt be reduced in price.”

Note 1. This journal is published by the Dept. of Agriculture, Peradeniya, Ceylon.

Note 2. This is the earliest English-language document seen (March 2001) that uses the term “substitute for coffee” in connection with soy coffee.

Note 3. This is the earliest English-language document seen (Aug. 2003) that uses the word “protein” in connection with soybeans.

1176. Henderson, Peter. 1881. Henderson’s handbook of plants. New York, NY: Peter Henderson & Co. 412 p. See p. 95, *Glycine*. Index. 27 cm. [1 ref]

• **Summary:** “*Glycine*: from *glykys* sweet; referring to the taste of the roots of some of the species. *Linn. Diadelphia-Decandria*. Nat. Ord. *Fabaceae*.

“A small genus, nearly all of which are tender climbing plants, producing axillary flowers, singly or in racemes, white, yellow, or rose; they are only adapted for greenhouse culture. There is one species, *G. soja*, that is a hardy annual, a native of Japan, that produces seeds like small kidney beans, which the Japanese use in large quantities, either in soup, or in making a sauce called soija or soy, this sauce being used in many of their dishes. The *Wistaria* was formerly incorrectly called *Glycine*.”

Note 1. This is the earliest document seen (Dec. 2004) by Peter Henderson or his company that mentions the soybean. However, there is no indication that he is selling any of the plants or seeds described in this book.

Note 2. This book is divided into two parts: (1) A description of different plants, listed alphabetically, and (2) a useful “Glossary of botanical and general horticultural terms and practices, with synopses of the natural orders, etc.” Includes terms such as: Corolla, dicotyledons, papilionaceous, soil, and sowing. Peter Henderson lived 1822-1890. Written on the title page: “Author of *Gardening for Profit*, *Practical Floriculture*, *Gardening for Pleasure*, etc. etc.” A description of each book is given on p. 412.

Also discusses: *Sesamum*. Bene Plant. *S. Orientale*, a native of the East Indies, “is the Bene Plant of our gardens, and of domestic medicine, being used with excellent results in severe cases of dysentery. It is now grown for that purpose in the vicinity of New York and other large cities... In the Southern States and in Africa this species was, and is yet to some extent, considerably grown for the oil the seed yields, which oil will keep many years without acquiring any rancid taste or smell. When first made it is quite heating, and is used as a stimulant; but after two or three years it becomes quite mild, and is used as a salad oil. The seeds are used by the negroes for food, which they prepare in various ways. In Japan, the oil is used as we use butter in cooking.” Address: 35 Cortland St., New York.

1177. McBryde, John M. 1881. Experiments with corn and other crops. *Report of the Experimental and Other Work of the School of Agriculture, Horticulture & Botany of the University of Tennessee* 2:142-76. See p. 172. For the session 1880-81.

• **Summary:** The section titled “Soja bean” (p. 172) states: “This plant (*Soja hispida*) is, according to some, a comparatively recent import from Spain. The plant is really a native of the East Indies [Southeastern Asia, incl. India, Indonesia, Malaysia, and the Malay archipelago], where it is largely grown as a staple article of food. It is beginning to

attract attention in several countries of Europe.

“This bean is an essential ingredient of the celebrated Soja Sauce. The seed contains about 34 per cent. of albuminoids and the straw about 9 per cent. It is therefore regarded as ‘the vegetable which approaches nearest in chemical composition to animal food (meat) containing, as it does, one-fifth of its weight of fat and about two-fifths of nitrogenous matter.’

“A small quantity of seed was procured last spring and planted on April 27th, in drills 2½ feet apart. They came up very well” and the plants stood the drought well. The yield, in view of the drought and abundant weeds, “was a remarkably good one. The plant is both hardy and prolific, and will probably give a heavy crop in a favorable season.”

Note 1. The soybean may have been grown in Spain at this time.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “Soja Sauce” (or “soja sauce”) to refer to soy sauce.

Note 3. Other crops discusses in this article: Indian corn, dhurra, sorghum, drooping sorghum, Johnson grass or Means’ grass, rye, barley, upland rice, millets, buckwheat, teosinte, prickly comfrey, tobacco. Address: Prof. of Agriculture, Horticulture and Botany, Knoxville, Tennessee.

1178. Paillieux, Auguste. 1881. *Le soya, sa composition chimique, sa culture et ses usages* [The soybean, its chemical composition, culture, and uses]. Paris: Librairie Agricole de la Maison Rustique (26 Rue Jacob). 126 p. 28 cm. [42 ref. Fre]

• **Summary:** This is largely a reprint in book form of Paillieux’s excellent article by the same title published in the September and October 1880 issues of the *Bulletin de la Societe d’Acclimatation*. The arrangement of text on the pages is somewhat different from (and clearer than) the earlier publication, and it contains small amounts of new information—as on p. 87-88.

Note 1. This is the first book about the soybean published in French and the second book on the soybean published in the western world; the first was by Haberlandt in 1878. This book contains only one unimportant illustration, the same one found in the preceding articles.

2. In France (Dec. 2011) there is “une Rue Paillieux” at Crosne. Since it is on the same page on the Web as Nicolas Auguste Paillieux—http://jacques.colliard.pagesperso-orange.fr/JournalFamille/Salats_MJEa.html—it is probably the same Auguste Paillieux. Address: Membre de la Societe d’Acclimatation, France.

1179. Phares, David Lewis. 1881. *Farmer’s book of grasses and other forage plants, for the southern United States*. Starkville, Mississippi: Published by the author. J.C. Hill, printer. 148 p. See p. 19. 22 cm.

• **Summary:** “*Glycine hispida* Japan pea: This bean (it is

not a pea) came under my observation some twenty-five years ago [i.e. in about 1856], as the Japan Pea. It was then cultivated to a limited extent for a few years; but ceased to attract attention till the close of our civil war; when it was again widely sold as the Southern Relief Pea. The catalogues name it *Soja hispida*. Though not a climber, it may be the *Dolichos Soja*, or Soy bean of China and Japan.

“In this country, this bean is probably not esteemed so highly as it should be either for the table or for forage. Few people bring it to the table more than once; for when prepared as other beans it is inedible and disgusting. But when the ripe seeds are soaked from twelve to twenty-four hours they may be cooked so as to afford a most delicious and nutritious dish. The soaking changes the shape of the bean from globose to oblong.”

“This is probably the Sooja or Miso of Japan so much used in soups in that country. The soy or sauce made from these seeds is used three times a day, as salt with us, in nearly all dishes. The favorite Chinese curd-like dish, *Teu hu*, also is made of these beans.”

Phares lived 1817-1892. He resided in Mississippi in 1881, and says that he observed soybeans being cultivated in about 1856, but it is not clear that they were being cultivated in Mississippi, either in about 1856 or at the time this letter was written. Later documents (Riley 1909) prove that soybeans were grown in Mississippi as early as 1857.

Note 1. This is the earliest American document seen that uses the term “*Glycine hispida*” to refer to the soybean.

Note 2. This is the earliest document seen (April 2008) that mentions the soybean in connection with the U.S. Civil War. Address: A.M., M.D., Prof. of Biology, A&M College of Mississippi, Sanitary Commissioner for the State at large of Mississippi.

1180. Thurber, Francis Beatty. 1881. *Coffee: From plantation to cup. A brief history of coffee production and consumption*. New York, NY: American Grocer Publishing Co. xiv + 416 p. No index.

• **Summary:** This book contains a very long Appendix that covers many different subjects unrelated to coffee. In the section titled “Chinese notes” (p. 279+) is a subsection on “Canton manufactures—Sweetmeats, preserved ginger, soy, etc.” which includes the following (p. 294): “‘Soy’ has always been a mystery to me, as I fancy it has been to most other people who have dealt in or used it. I was therefore anxious to see a soy factory, and taking a boat one day we proceeded two or three miles up the river to where one was in operation. I found that the principal ingredient or base is a white bean known as ‘paktoh,’ which, so far as I could judge, is very like any other small white bean. These are boiled, heavily salted, and put into big earthen jars, holding, perhaps, half a barrel each, where they are allowed to remain for about ten days, during which period fermentation takes place. They are then mashed up with a species of olive [sic],

which is picked and boiled, and this mixture is placed into neat cloth bags, into which water is poured and allowed to percolate. The liquid is then taken out, placed in clean jars, and thickened with a heavy-bodied Chinese molasses, and this is soy. Thinned down with water, the Chinese use it as a sauce, and although when thick it is rather disagreeable than otherwise, when thin it has certainly a toothsome flavor and gives a zest and relish to meats, fish, etc. Most of the soy manufactured here is shipped to England, where it is used in large quantities as a base for the manufacture of sauces.”

Note: Maybe the soy sauce used to make Worcestershire sauce in England came from Canton! In what other sauces was it used in England at this time?

1181. Wein, Ernst. 1881. Die Sojabohne als Feldfrucht: Zusammenstellung der vorliegenden Cultur- und Duengungsversuche fuer den praktischen Landwirth [The soybean as a crop: Compilation of the existing cultivation and fertilizer trials for the practical farmer]. Berlin: Verlag von Paul Parey. 50 p. [7 ref. Ger]

• **Summary:** This book is identical in content to a 50-page article also published in 1881 in *Journal für Landwirtschaft* (29:563-613)—which see for table for contents and details. However a dedication page states that the book is dedicated to the director of the Bavarian agricultural research station, Dr. Julius Lehmann. A forward notes that it was written in Munich, i.e., South Germany. Address: Munich, Germany.

1182. *Rural New-Yorker*. 1882. Notes from the experimental grounds of the Rural New-Yorker [The Hairy Soja Bean]. 41:9-10. Jan. 7.

• **Summary:** A large, excellent illustration (line drawing, by W. Scranton of the *Rural New Yorker*) shows three leaves, several clumps of pods, 3 seeds, and the upper stems of soja bean plant.

“The Hairy Soja Bean [“Hairy” is based on the German term “rauhaarigen”], of which an original sketch is now presented,... was first brought to our notice by Professor Geo. H. Cook of the Rutgers Scientific School of New Brunswick, New Jersey... he says that when in Munich in 1878, he saw the Soja Bean in cultivation as a new crop, and probably a desirable addition to our forage products. It was seen in the grounds of the Bavarian Agricultural Experiment Station, and was in very vigorous growth. The gentleman in charge gave him a few seeds; and seeds of several other varieties of the same plant were procured at Vienna by Mr. James Neilson. Both planted them and gathered crops of the different kinds in 1879. The following is a translation of a part of a paper sent out from the Bavarian Experiment Station to those who were growing and testing the capabilities of the new plant: “Two years ago Professor Haberland [Haberlandt], of Vienna, an untiring botanical experimenter, introduced to us a plant whose pleasant-tasting seeds are rich in albumen and fat in very digestible forms.

This plant is the Hairy Soja Bean (*Soja hispida*, Moench). Professor Haberland found samples of the seed at the Vienna Exposition among the agricultural products of China, Japan, Mongolia, Transcaucasia and India... Its seeds, boiled or roasted, have a pleasant taste, and form an almost daily part of the food in India, China and Japan.”

Experiments were made in various parts of Bohemia, Moravia [both in the Czech Republic as of Jan. 1993], Southern Austria, Styria [the capital of Graf in today’s Austria], Hungary and Upper Silesia in 1876. The next year 135 trials were made under various climatic influences from the well-ripened seeds from these crops. Professor Schwackerhofer, of Vienna, has analyzed the original and the harvested seed, and the Soja straw.

The article then summarizes two articles on soybeans, one from *La Nature* in France (July 1881) and another from *Gardener’s Chronicle* in London (18 Sept. 1880).

“Seeds of the Soja Bean were sent to us by Mr. James H. Gregory [seedsman] of Marblehead, Massachusetts, at our request, last winter.” The *Rural New-Yorker* grew them, and concluded: “While the leaves and stems were quite green our cattle eat them with evident relish but the relish was less apparent as they ripened—and they were refused entirely after being cut and dried. From the above test we should never raise the Soja Bean as a fodder plant. Many kinds of the cow-pea, as may be seen from our reports in these columns during 1880, will yield five times the amount of vine and leaves.”

1183. *Otago Witness (New Zealand)*. 1882. Gleanings. Jan. 21. p. 7.

• **Summary:** “M. Roman, a French engineer, states that the cultivation of the interesting plant, the soja or soya, has been largely developed in Hungary and in various parts of France. He thinks that it may in the future become as important an article of food as the potato. It grows in any soil, even the driest; and the plant is an excellent fodder for cattle. The seeds are very nutritious and have the form of small kidney beans. An agreeable soup [miso soup] may be made of them. The Chinese use them for various kinds of cheese [tofu, fermented tofu], to make a condiment with oil [soy sauce? The second character in basic Chinese word for “soy sauce,” *jiang-you*, means “oil”], &c. In France the seeds are roasted like coffee, and M. Roman says the decoction of the soja bean is very similar to that of average coffee.”

Note 1. This article also appeared (again in the “Gleanings” section) in the May 6 (p. 7) issue of this newspaper.

Note 2. This is the earliest document seen (March 2010) concerning soybeans (the soja or soya) in connection with (but not yet in) New Zealand.

1184. Kraevskii, -. ed. 1882. *Peterburskago sobranii sel’skikh khoziaev: 16-go fevralia 1882 goda* [St. Petersburg

meeting of agriculturists: 16 Feb. 1882]. *Golos* ("Voice") (St. Petersburg, Russia; Newspaper) No. 72. March 18. p. 5. [Rus]

• **Summary:** This full-page article begins: Head of the meeting: "Our colleague, K.A. Skachkov, who is well acquainted with China and its agriculture, will present his report about the soybean and its use in Chinese agriculture."

K.A. Skachkov: He notes the previous mention of soybeans by A.V. Sovetov. Soybeans are considered "new" only in Europe; they have existed for centuries in China and Japan, where they are well documented in monographs on soybeans. He discusses soybeans in northern China (methods of cultivation, climate, yield) and uses of soybeans in China and Japan such as soy sauce (*tsiap yu*), jiang (after processing soybeans to make jiang, which is fermented, the jiang is used to pickle the roots of vegetables which, being well salted, are eaten between meals and called *jiang-tsai*), soybean prices in Russia, and various types of tofu (*age-dofu*, *yaki-dofu*, etc.). He notes that in China soybeans are not sold in raw form (?), but can be obtained from factories.

After the talk, the head of the meeting asks if there are any questions or comments; various Russian participants (not only Skachkov) answer the questions. First, K.A. Skachkov comments on the preparation of tofu; the "60-day" soybean is best planted during the latter half of June in Russia.

E.I. Ragozin, asks: "What are the practical uses of the soybean for us [in Russia]? How can it be used in our agriculture? Can it be used only as feed for livestock or can it play a more important role? It is very interesting to discuss the theoretical possibilities of soybeans, but in my opinion it would be better to put them to use." A.V. Sovetov replies that, as he has discussed in a previous report, the soybean can be used as both livestock feed and human food. "It is of high nutritional value and contains twice as much nitrogen as meat, but only 18% fat. The answer to the question of how soybeans can be assimilated into Russian agriculture (and how successfully it can be bred here) lies in numerous experiments and trials of actually growing this plant here. Podobas has already proven that it can be grown in the far southern region of Russia (Tavricheskaia), as has Chernoglazov in the Poltavaskaia region and Levanda in the Kiev region. However, I do not know how far north soybeans can be grown, although I have heard of trials in the Voronezhkaia region."

A.S. Ermolov: "My cultivation of soybeans in the Voronezhkaia region was not successful. I know that they are not acclimatized to withstand frost." Again A.V. Sovetov replies that soybeans can handle a light spring frost, but an early fall frost kills soybean plants just as it does pea plants. As Podobas reports, it can survive temperatures 2-3°C below zero. Discusses successful times and temperatures for soybean cultivation.

A.S. Ermolov: "Nevertheless, the soybean plant is fairly easily acclimatized. I talked about this matter with Friedrich

Haberlandt, who agrees with me. It is just a matter of obtaining the right varieties."

Head of the meeting: "I would like to add that with time and patience, plants can be gradually acclimatized to almost any environment." A.V. Sovetov, in agreement, adds: Cucumbers and pumpkins, which are warm-weather plants, have been acclimatized to the colder climates of northern Russia. Likewise with beans. E.I. Ragozin adds that he cultivates beans here in the St. Petersburg region.

A.S. Ermolov concludes that soybeans can be cultivated perfectly well in at least southern Russia. However, he still questions how soybeans can be used in Russia. None of the other agriculturists at this meeting have told the society how they use the soybeans they grow, so Ermolov suggests listening to the ideas Sovetov has and will present.

A.V. Sovetov: Soybeans can be used to make: Soybean broth, a substitute for beans or peas, soybean potato cakes, a mixture with rice or corn. Soybeans have a very high nutritional value. They can also be used as a feed for livestock, or as food for the army or navy.

Head of the meeting: Difficulties in cultivating this plant should not prevent us from trying.

E.I. Ragozin: Would it be possible for me to obtain and attempt to cultivate the 60-day bean plant? A.V. Sovetov: Of course, but this 60-day bean plant is not a soybean plant, so the previous statements may not apply to it. Head of meeting: Closing remarks.

1185. J.R.F. 1882. The soy bean (*Soja hispida*). *Garden (The)*. July 29. p. 93.

• **Summary:** "A good deal of attention has lately been directed to this plant in consequence of the enormous extent to which it is cultivated in China for the sake of the small seeds which it produces, and which are known as Soy Beans. These vary considerably in size, shape, and colour, according to the variety of the plant which produces them... These seeds contain a large quantity of oil, which is expressed from them in China and used for a variety of purposes. The residue is moulded with a considerable amount of pressure into large circular cakes, 2 ft. or more across, and 6 in. or 8 in. thick. This cake is used either for feeding cattle or for manuring the land; indeed, a very large trade is done in China with Bean cake (as it is always called) for these purposes. The well-known sauce called soy is also prepared from seeds of this Bean. The plant generally known as *Soja hispida* is by modern botanists referred to *Glycine Soja*."

An excellent illustration shows a mature soy bean plant bearing many pods, plus a close-up of three pods to the lower right of the plant. Address: England.

1186. D'Utra, Gustavo. 1882. *Soja* [Soya]. *Jornal do Agricultor (Brazil)* 4(7):185-88. Sept. 16. [Por]

• **Summary:** The name of this plant comes from the Japanese. The soybean was cultivated at the Bahia School

of Agriculture in 1882. He notes that Soja and Daidso are Japanese names, that the Japanese use soybeans to make a paste called miso, which can be used as a substitute for butter, and a sauce called sooia or soja, which can be used to season meat.

The Chinese also use the soybean (*a soja, Dolichos sinensis*), also known as the bean of the Indies (*feijao das Indias*) a food known as *kitjap* [soy sauce].

Sr. Dias da Silva Junior (the editor of this journal) has distributed soybean seeds free of charge.

Note 1. This is the earliest document seen (May 2009) concerning soybeans in Brazil or South America, or the cultivation of soybeans in Brazil or South America or Latin America. This document contains the earliest date seen for soybeans in Brazil or South America or Latin America, or the cultivation of soybeans in Brazil or South America or Latin America (1882). The source of these soybeans is unknown.

Note 2. This is the earliest Portuguese-language document seen (April 2012) that uses the word *sooia* or the word *soja* or the word *Kitjap* to refer to soy sauce. Address: Engenheiro-Agronomo, Rio de Janeiro, Brazil.

1187. Fox & Co. 1882. English sauces! (Ad). *Hartford Daily Courant (Connecticut)*. Sept. 20. p. 2, col. 4.

• **Summary:** “L. & P. [Lea & Perrins] Worcestershire Sauce, Bengal Chutney Sauce, Harvey Sauce, Anchovy Sauce, Mushroom Sauce, India Soy [sauce], John Bull Sauce. Wholesale and retail.” Geo R. Clark, Jas. H. Parker [proprietors].

Note: This ad also appeared in the Sept. 22 (p. 2) issue of this newspaper. Address: 17 Central Row.

1188. Mene, Édouard. 1882. Des productions végétales du Japon [The vegetable products of Japan]. *Bulletin de la Societe d'Acclimatation* 29:466-90. Sept. See p. 477-90. [40 soy ref. Fre]

• **Summary:** This excellent review of earlier publications and work, which is largely about the soybean, contains 40 references to earlier publications, many of them from the *Journal of the Society for Acclimatization* and from early European botanists. Much of the information is taken from earlier issues of this periodical and from the book *Le Japon a l'Exposition universelle de 1878*.

Contents: The soybean (*Soja hispida*, *O mame: Daizu*, p. 477). The wild soybean (*Glycine hispida*, *Soja hispida*, p. 477; it is found in the wild in the coastal regions of the island of Kyûshû. Called *Tsuru-mame* and *Nô-mame* by Franchet and Savatier. Soybeans in the catalog of the Japanese Universal Exposition of 1878: No. 24—The black soybean (*Kuro-mame*), No. 25—The white soybean (*Shiro-mame*), No. 26—The green soybean (*Ao-mame*), No. 37—The black soybean speckled with white (*Gankui-mame*). Where the soybean is cultivated: Not only on the island of Japan, but also in India, on the island of Ceylon, on the

Malacca peninsula (i.e., Malay Peninsula), on the Philippine islands, in Borneo, Java, in the Kingdom of Siam, in Cochinchina, at Tong-King [Tonkin, formerly in North Vietnam] and throughout China, but mainly in Mongolia and in the provinces of Honan, Shengking [Liaoning], Shantung, and Shansi.

Note 1. This is the earliest document seen (May 2010) concerning soybeans in Malaysia, or the cultivation of soybeans in Malaysia. This document contains the earliest date seen for soybeans in Malaysia, or the cultivation of soybeans in Malaysia (1882). The source of these soybeans is unknown.

Note 2. This is the earliest document seen (May 2010) concerning soybeans in the Philippines, or the cultivation of soybeans in the Philippines. This document contains the earliest date seen for soybeans in the Philippines, or the cultivation of soybeans in the Philippines (1882). The source of these soybeans is unknown.

Note 3. This is the earliest document seen (May 2010) concerning soybeans in Siam (renamed Thailand in 1938), or the cultivation of soybeans in Siam. This document contains the earliest date seen for soybeans in Siam, or the cultivation of soybeans in Siam (1882). The source of these soybeans is unknown.

Note 4. This is the 2nd earliest document seen (May 2010) concerning soybeans in Siam Vietnam, or the cultivation of soybeans in Vietnam. This document contains the 2nd earliest date seen for soybeans in Vietnam, or the cultivation of soybeans in Vietnam (1882). The source of these soybeans is unknown.

The Chinese exposition (class 73) contains samples of all the varieties of soya cultivated in the provinces of the empire: No. 2991 and 3000—Green, white, black, yellow, striped / streaked / variegated (*panachés*), and red soybeans. Source: Chinese customs at Newchwang. No. 3014-3016—Yellow, black, and green soybeans. Source: Customs at Tientsin [Tianjin]. No. 3058 to 3061—Yellow, green and black soybeans., from the customs at Chefoo [Yantai]. No. 3091. Yellow soybeans, from the customs at Chinkiang [Zhenjiang]. No. 3103 to 3109—White, red, black, and yellow soybeans from the customs at Shanghai. No. 2135 to 3128—White, black, red, and green soybeans from the customs at Wenchow [Wenzhou]. No. 3152 to 3156—White, green, and black soybeans from the customs at Takow [Kao-Hsiung].

At the Japanese exposition (class 74, condiments and stimulants) are samples of miso and shoyu from Tokyo and the province of Hizen, especially the town of Nagasaki.

The Chinese exposition also contains in class 74 (condiments and stimulants) samples of soy sauce [*soye, soya*] called *Tsiang-yeou* from the Chinese customs at Chefoo, Ning-po, Wenchow, and Canton. The Chinese often add aroma in the form of star anise, green anise, and orange rind. Chinese soy sauce is made with yellow soybeans called *Houang-téou*.

Descriptions of how to make shoyu, miso, tofu, and soybean oil based on earlier European publications (p. 479-83).

In France, Mr. Vilmorin and Dr. Adrien Sicard (of Marseilles), both of whom are involved with soybean cultivation, have prepared soy cheese (*fromage de Soja*) numerous times. Dr. Sicard has made both the white cheese and the red cheese; the latter is rolled in a powder made by grinding red sandalwood (*santal*; *Pterocarpus santalinus*), mace, and cinnamon (p. 482).

In China, quite a few soy oil factories are found at Calfond in Henan, at Tsinan in Shantung, and at Tayeurn in Shanxi. But the center of soy oil production in China is Ning-po in Zhejiang / Chekiang. From the port of Ning-po and from a port on the island of Tcheou-chan [Zhoushan?] a large number of junks, carrying only soy oil, depart. Two other manufacturing centers are Newchwang and Chefoo (p. 483).

There follows a long section on the introduction and acclimatization of the soybean in Europe (p. 484-89) based on earlier European documents.

The next section, about kudzu (*Pueraria Thunbergiana*, p. 489-90) cites 9 early references, including *Le Japon a l'Exposition universelle de 1878*, vol. II, p. 153). Address: France.

1189. Lea and Perrins. 1882. In consequence of imitations of Lea & Perrins' Sauce... (Ad). *Illustrated Sporting & Dramatic News* (The). Oct. 14.

• **Summary:** "... which are calculated to deceive the Public, Lea & Perrins beg to draw attention to the fact that each Bottle of the Original and Genuine Worcestershire Sauce bears their Signature, thus [the Lea & Perrins signature is written].

"Sold wholesale by the Proprietors, Worcester; Crosse and Blackwell, London; and Export Oilmen generally. Retail by Dealers in Sauces throughout the World."

Note: This ad, containing an illustration of a bottle of Lea & Perrins Worcestershire Sauce, is 2.5 inches wide and 2.75 inches high.

1190. Giliaranskii, V.P. 1882. Monografiya Kitaiskago maslichnago gorokha "Soja hispida" [Monograph on Chinese oil-bearing pea plant *Soja hispida*]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg* (Transactions of the Imperial Free Economic Society) 3(3):269-71. Nov.; 3(4):435-50. Dec. [10 ref. Rus]

• **Summary:** Part I (Nov.): Soybeans were introduced to Russia to increase the country's food production. Discusses the nutritional value of soybeans. Haberlandt introduced the cultivation of soybeans to Europe, and his trials proved that soybeans could be successfully grown in various European countries. However Podobas was the first who practically / experimentally proved the success of soybean in Europe.

Podoba also installed a laboratory partner named Fein in southern Russia. The first popularizer was A.V. Sovetov, who initiated further projects and data collection.

Giliaranskii began his work in 1881 when he received 5 soybean seeds from his director, Nikolai Pavlovich Ill'inu, who also allowed Giliaranskii to use his equipment and laboratory. In 1880 the Asian Department of Foreign Ministry (of Russia) obtained soybean samples by demand. In the same year, crop information about soybeans was received from the Consulate.

In the text, Giliaranskii then cites five documents that were helpful to him in compiling this article: (1) Organov, N. 1881. *Soia ili maslichnyi gorokh (Soja hispida *)* [Soybean or oil-bearing plant (*Soja hispida* *)]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg* (Scholarly Works of the Imperial Free Economical Society 1(2):184-198. Feb.; 1(3):304-325. March). (2) The publications of Dr. Bretschneider, who was on a mission to Peking. (3) La Planta *Soja hispida*, by Geerts, a report from a mission to Japan. Chapters 3 and 4 from Part 1; Chapters 4 and 5 from Part 2 (translation from French), including much information about soy sauce and miso. (4) The famous book: Haberlandt, Friedrich. 1878. *Die Sojabohne: Ergebnisse der Studien und Versuche ueber die Anbauuerdigkeit dieser neu einzufuehrenden Culturpflanze* [The soybean: Results of studies and trials on the potential for growing this newly introduced crop plant]. Vienna, Austria-Hungary: Carl Gerold's Sohn. ii + 119 p. (5) *Oesterreichische Monatsschrift für den Orient* (Vienna). 1881. *Die japanische Sojabohne als Nahrungsmittel* [The Japanese soybean as a source of food]. 7(12):204-05. Dec. 15.

Part II (Dec.): Chapter 1. Oil of soybean seeds (*Maslo semian soi*). Bretschneider discusses the taste and use of soybeans in Russia. Karl Brendt is mentioned again. Giliaranskii states: "My yield included 40 *zlotnik* (1 *zlotnik* = 4.26 gm) of oil, produced from the variety of seeds received from Mr. Podobas. The oil was extracted using sulfuric ether. I had about 4 lb of soybeans, which I ground in a coffee mill. Then I immersed the flour in ether in a test tube for 4-5 days. Almost all of the oil was extracted. I also extracted the oil using carbon bisulphide, but the yield was 1.5% less than with sulfuric ether.

"I also tried to extract the oil using petroleum ether, but again the yield was unsatisfactory. In addition, the petroleum ether dissociates from the soybean oil, thus changing the latter's smell and taste. The product known as *rigolen*, which has a boiling point of 35°C, would be the best solvent of all, it is impossible to obtain in St. Petersburg.

"The oil I extracted using sulfuric ether had a clear, heavy yellow color, similar to olive oil in color and viscosity... however as time passes, under certain conditions, it becomes black in color." Through his experiments, Giliaranskii proved that soybean oil contains nitrogen. Sato and his experiments are mentioned (p. 436-37).

A table (p. 437-38) gives the percentage composition of soybean cake (water, protein, fat, nitrogen-free extract, cellulose, ash), with two columns based on the research of Völcker (1872) and J. Kühn (see Pott 1889, p. 490). Soybean oil cakes, known in English as “bean-cakes,” are an important export from the port of Newchwang to southern China, especially to Syamou (?). Discusses the price of soybeans.

Chapter 2. Uses of soy sauce (in China, as well as Europe). Methods of preparing soy sauce are described in numerous Chinese and Japanese publications, but also in European publications such as: (1) *Etude pratique du commerce d'exportation de la Chine*, by N. Rondot (1848, Renard, p. 188). (2) *Chinese Commercial Guide*, by W. Williams (1863, Hong Kong, p. 139). (3) Newspaper article by K.A. Skachkov in *Golos [Voice]* (No. 72, 1882). The main ingredients used in making soy sauce are yellow soybeans (*Soja hispida*, Shiro-daizu or Teppo-mamé or Shoyu-mamé), wheat koji, salt, and water. A detailed description of the process is given. Amazake is sometimes added to soy sauce to give variation in the flavor. Kinch's analysis of Geerts' data (p. 443) gives the relative density of soy sauce as 1.199. The density of soy sauce solids is 359.88 gm/liter. A table (p. 443) gives the density (in gm/liter) of soy sauce constituents as follows: Ash 195.16. Sugars 31.03. Albumen 41.00. Acids 6.20.

Chapter 3. Sauce *miso* or *dai-dzu-ko*. Describes seven different types of Japanese miso and how each is made: 1. Original miso or *shiro miso*—white with little salt. 2. *Chu-miso*—very salty. 3. *Aka-miso*—red, prepared with koji. 4. *Nagoya-miso*. 5. *Kinzanji-miso*—made with soybeans, eggplant and gingerroot. 6. *Mugi-miso*—made with barley and soybeans. 7. *Kogane-miso*—a type of *aka-miso*. A table (p. 445) compares the nutritional composition of *shiro-miso* and *aka-miso*.

Chapter 4. Tofu. Chinese name: doufu. English name: bean-curd. Japanese name: tofu. Yellow soybean varieties (*Gogwatsu-mamé*, *Wase-mamé*, and *Natsu-mamé*) are widely used in Japan to make tofu. A table (p. 447-48) gives the percentage composition of tofu, with two columns based on the research of Kinch (1880) and Geerts (1876). Tofu is seen as an excellent alternative for dairy cheeses.

Chapter 5. Preparation and composition of dried-frozen tofu (*kori-tofu*) and other types of tofu (dried cheeses). A table gives the nutritional composition of *kori-tofu* (based on Kinch 1880). Also discusses *agé-tofu*, *abura-tofu*, and *yuba*. Describes the method for preparing *yuba*, which is eaten in soups in Japan. Several tables were summarized by Nikitin in Russian (1900) and German (1901). Address: USSR.

1191. Paillieux, Auguste. 1882. Yaye nari.—*Phaseolus radiatus* L. [Azuki bean, or Yaye nari]. *Bulletin de la Societe d'Acclimatation* 29:641. Nov. [Fre]

• **Summary:** Mr. Paillieux, vice-president of the Society,

is presiding at the meeting on 6 June 1882. He offers the members present the seeds of various edible plants, about which he gives the following information: “The Yaye nari belongs to a race of beans which are very esteemed in Japan and which bear the name Azuki, *Phaseolus radiatus* of Linnaeus. The varieties of Azuki are numerous. I cultivate the summer (*Natsu*) azuki, which is early and red. I have given up on the autumn (*Aki*) azuki, which is late. This spring, for the first time, I planted the white (*Shiro*) azuki.

To these names one must add those cited by the Japanese author of *Japan at the Universal Exposition of 1878*, that is to say the Hine [Hime] no azuki, Dai nagon [Dainagon] azuki, and the Yaye nari. An, a sweetened bean paste widely employed in confectionery, is made with the azuki and sugar. The cake or confection named *yokan*, according to several authors, is also made with the azuki. Azuki flour is also used to remove fat or grease from fabrics.

“I have eaten a puree of summer azuki and I found it very delicious. It does not have a flavor like our Haricot beans, but more like a mixture of Haricots and lentils.

“I received from my helpful correspondent a sweetened dish named *yokan*, and I had some prepared for me by Mr. Mamoz. It is rather tasty, and it could be a popular confectionery product if it could be sold at a low price, however sugar is very expensive in France.

“I have not yet tasted the Yaye nari, of which I present some seeds to you today. Last year I planted only a few bunches, but the importance of its culture in Japan and China is without doubt. Seeds have been sent to M. Vilmorin Andrieux and Co., and to Mr. Faivre, of Beaune. It seems to mature earlier than the summer azuki. I believe therefore that it is now time to plant the seeds I am offering to you. I would be very grateful if you would let me know next year what results you obtained.

“I would like to take this occasion to say several words about an operation that is very widely used in Japan and in China. I believe it is applied to both the soybean and to the azuki.

“Be that as it may, in Japan, the azuki is soaked in water and then allowed to sprout, in a warm dark place, in earthenware vessels. Then they are washed with a large quantity of water to remove the seed coats, and the sprouts are consumed under the name of *Moyashi* (“eye and legs”). It goes without saying that one cooks them first in salted water and then in shoyu. They are rather tasty, and this is an easy way to provide a fresh vegetable in winter.

“I am indebted for this information to Dr. Hénon, Abbot David and Abbot Perny, and of course Mr. Eugène Simon; they have told me that the etiolation of germinating seeds is widely practiced in China and yields a good food.” Address: France.

1192. *Indian Agriculturist (The) (Calcutta)*. 1882. The Japan Pea in India. Dec. 1. p. 454-55. [2 ref]

• **Summary:** “If all accounts of this vegetable be true, it is a most important addition to the stock of Indian food, and fodder plants.” An American paper writes of it: -

“The Japan Pea is the most productive as well as good food for all kinds of stock; horses, cattle, sheep, and hogs will eat the peas, stems, and leaves, if harvested before fully matured, and cured like all other hay, with as much relish as they do corn. Then, there is no pea for the table—it is soaked in water the night before cooking—that has a more exquisite flavour. They grow on a stout bushy stalk from two to three feet high, somewhat resembling the cotton plant. The main stalk, as well as the branches of the limbs, are literally loaded with small pea-pods, filled with little yellow peas, similar in colour, size, and flavour, to the English garden pea. The way to get the greatest yield is to plant in hills two and-a-half feet each way, allowing but one stalk to the hill to remain after the first working. That will give you 6,960 stalks to the acre, and on ordinary land, cultivated the same as corn, will average at the lowest estimate a pint of shelled peas to the stalk, or a fraction over 108 3/4 bushels per acre. With high cultivation and good soil, it would be an easy matter to double that yield: besides, there is no other crop that will yield more hay to the acre. It is a sure cropper, neither wet nor dry weather materially interferes with the quantity or quality of the yield.’

“In a paper on the Soy bean, as the Japan pea is sometimes called, Mr. Kinch, Professor of Chemistry at the Royal Agricultural College, Cirencester, says, that it is worth more than a passing notice, as it is the vegetable which approximates most nearly, in its chemical composition, to animal food:

“The Soy bean is extensively cultivated in the north of China, whence it is exported to the southern provinces; it is here pressed for the sake of its oil, and the residual cake largely used as food for man and beast, and also as manure. In Japan it is known by names signifying the bean, and from it are made not only soy [sauce] but a paste, known as *miso*, which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water, and precipitating it with brine. These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, nitrogenous matter, fat, and also in mineral constituents. The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso*. The soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, Reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then, numerous

experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw, on different kinds of animals, have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others, at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy... The kinds most suited for cultivation there are the yellow, brown, round black, and long black varieties, especially the first three named.’”

“Taking into account the great richness of these beans in valuable food constituents, their easy digestibility, the value of the straw, and the great probability of some variety being able to be acclimatized without great trouble, this *soja hispida* is worth consideration. The bean would form an exceedingly useful addition to the food of the poorer classes, as a substitute for a portion of the animal food which in the kitchens of the labouring classes is so wastefully cooked. One use it has already found, not altogether to be recommended, viz., after roasting, as an adulterant of, and substitute for, coffee.’”

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term “bean cheese” by itself (with a space before the word “bean,” and where it is not preceded by the words “soy,” “soya,” “soja,” etc.) to refer to tofu. Address: India.

1193. *Waikato Times* (Waikato, New Zealand).1882.

Gleanings: The soy bean. Dec. 7. p. 3.

• **Summary:** “A recent number of the *Agricultural Students Gazette* (Royal Agricultural College, Cirencester [England]) contains an article by Prof. E. Kinch on the Soy bean (*Soja hispida*). This bean, of which there are a dozen or more varieties known in the East, is very largely used as an article of food in Japan and China, where it is manufactured not only into soy [sauce], now exported in considerable quantities to Europe, but also into bean cheese [tofu] and other forms of food...”

“Prof. Kinch is trying to grow one of the varieties in the Botanic Garden at Cirencester, and though our climate is probably too uncertain, and the temperature often too low for most of the varieties to attain perfection, if any of them could be acclimatized, a valuable leguminous crop would be added to our present list.”

1194. Mason, Francis. 1882-1883. Burma, its people and productions: or, Notes on the fauna, flora, and minerals of Tenasserim, Pegu, and Burma. 2 vols. Rewritten and enlarged by W. Theobald. Hertford, England: Published by order of the Chief Commissioner of British Burma, by S. Austin & Sons. 19 cm.

• **Summary:** The previous edition of this work was published in 1860. This edition is greatly enlarged and expanded. In

Volume II (published in 1883), on page 513, in the section on Leguminosae, under *Glycine* we read that *Glycine soja* is cultivated in Ava. "Erect. Flowers in small axillary clusters. Pods 1-1½ in. long, almost falcate. Seeds 3 lines long, slightly compressed, pale-coloured.

"The word 'soja' is a variation of the Japanese 'soya,' whence our word 'Soy,' for a sauce prepared in China and Japan from the seeds of one or more species of *Dolichos* or allied genera."

Note 1. Pickering (1879, p. 763) states: "Westward, *S. hispida* was observed by Mason in Burmah."

Note 2. This is the earliest document seen (May 2010) that clearly refers to soybeans in Burma or the cultivation of soybeans in Burma. This document contains the earliest clear date seen for soybeans in Burma or for the cultivation of soybeans in Burma (1883). The source of these soybeans is unknown.

Note 3. Ava is a ruined city on the Irrawaddy River, in Sagaing division, 6 miles southwest of Mandalay. Founded in the 14th century, it was the capital of Burma for 400 years. In 1783 it was replaced by Amarapura, but was again the capital from 1823 to 1837.

Ground nuts (*Arachis hypogaea*) [peanuts] are mentioned under "Order Leguminosae" (p. 491). The Burmese name is given as Mye-leh. "Indigenous to South America, but cultivated all over the East for its edible kernels and the oil extracted from them, which is excellent" (p. 500). In the index of vernacular names of Burmese plants, the name of the peanut is given as "Myeh-peh" (p. 713). Address: Rev. D.D., M.R.A.S.

1195. Figuiet, Louis; Gautier, Emile. 1882. Le soya [The soybean]. *L'Année Scientifique et Industrielle (Paris)*. p. 391-93. [Fre]

• **Summary:** For a long time, French agriculturists have worked to introduce this new leguminous plant which has distinct advantages over its close relatives, the haricot bean and the pea.

The soya, or soja, is of Chinese or Japanese origin. For more than a century, the Museum of Natural History in Paris has possessed specimens. The Society for Acclimatization has spread / disseminated the seeds throughout France, but distrust and apathy have always led to the abandonment of the cultivation of this plant, which nevertheless grows very well in our climate.

More intelligently, Austria tried importing this plant in 1873, and it had soon spread throughout Austrian territory. In Italy and Bavaria it was also grown here and there.

A brief botanical description of the plant is given.

In China and Japan the soybean is used in various forms as a food. An oil is extracted from it which, in part, serves domestic needs. But the two principal forms in which it is used are *shoyu*, a type of sauce or condiment, and *to-fu* [tofu] or *téou-fou* of the Chinese, which has the appearance and

certain qualities of *fromage à la pie* (the French term for a fresh dairy cheese resembling cream cheese).

Many people believe that the Chinese eat a diet composed only of rice; however it is clear that they also have their "cheese." An interesting brochure by Mr. Vallieux contains all of the information necessary to make tofu (*fromage de soja*). Doctor Picard has perfected this process and has arrived at a type of tofu (*fromage de soja*) that resembles Roquefort cheese [probably fermented tofu].

The dry seeds of the soybean (*de soja*) can be eaten as such, just like haricot beans; they furnish an excellent purée, and offer none of the inconveniences of haricots.

They can also be roasted, in the guise of coffee. The aroma and the properties of the decoction of roasted soybeans would be completely analogous to those of coffee of medium quality, very superior, consequently, to all that are served under the name of coffee in many public establishments.

The pods, stems and leaves are fed to cattle and horses. Eaten like green clover growing in the fields, these parts of the plant produce very rapid fattening; this is easily explained when one examines the chemical composition of the plant.

Cultivation of soybeans is possible throughout the southern part of France; but in the north and in countries which are somewhat cold, they require a great deal of care and attention.

In summary, because of its completely unique nutritive qualities, the soybean is a plant whose cultivation should be expanded as much as possible.

1196. Griffis, William Elliot. 1882. Korea: The hermit nation. New York, NY: Charles Scribner's Sons. xxiii + 462 p. See p. 270. Illust. Map. Index. 23 cm. 8th ed. 1907. [99* ref]

• **Summary:** An excellent, early history of Korea by a fine historian. Contents—3 parts: I. Ancient and medieval history. II. Political and social Korea. III. Modern and recent history.

Chapter 30, "Housekeeping, diet, and costume" states (p. 270): "Among the poorer classes, a cooked fish is rarely seen on the table; for no sooner is it caught than it is immediately opened and devoured. The raw viands are usually eaten with a strong seasoning of pepper or mustard, but they are often swallowed without condiment of any sort. Often in passing along the banks of a river, one may see men fishing with rod and line. Of these some are nobles who are not able, or who never wish to work for a living, yet they will fish for food and sport. Instead of a bag or basket to contain the game, or a needle to string it upon, each fisher has at his side a jar of diluted pepper, or a kind of soy [sauce]. No sooner is a fish hooked, than he is drawn out, seized between the two fingers, dipped into the sauce, and eaten without ceremony. Bones do not scare them. These they eat, as they do the small bones of fowls."

Note: This is the earliest document seen (April 2012)

that mentions Korean soy sauce, which it calls simply “soy.” Address: Ithaca, New York. Formerly of the Imperial Univ. of Tokio, Japan.

1197. Hanausek, T.F. 1882. Die Sojabohne [The soybean]. *Irmischia Botanische Monatschrift. II* No. 7. p. 44-45. [13 ref. Ger]

• **Summary:** In 1867 11,493 gallons of soy sauce were imported to England, and England then exported 2,166 gallons. Address: Dr., Germany.

1198. Merck, Klemens. 1882. Klemens Merck’s Warenlexikon fuer Handel, Industrie und Gewerbe. Dritte, gaenzlich umgearbeitete Auflage [Klemens Merck’s dictionary of products and commodities for trade, industry and commerce. 3rd completely revised edition]. Leipzig: Verlag von G.A. Gloeckner. lvi + 687 p. See p. 539-40. Forword by Prof. Dr. Carl Birnbaum. Index. 24 cm. [Ger]

• **Summary:** The entry for “Soya” (p. 539-40) is almost identical to that in the 1871 edition, with these differences: (1) The opening line begins: “Soya, is a brown, sharp liquid, imported from China and Japan...” (2) At the end, no import or export figures are given. Rather, this 1882 entry ends: “The product is listed in the Tariff Schedule (see end of book) under No. 25p 1.”

Also discusses: *Cyperus esculentus* (Erdmandeln, p. 118), peanuts (p. 118-19), sesame seeds (p. 525-26), and sesame oil (p. 526).

The full subtitle in German reads as follows: *Beschreibung der im Handel vorkommenden Natur- und Kunsterzeugnisse unter besonderer Beruecksichtigung der chemisch-technischen und anderer Fabrikate, der Drogen- und Farbewaren, der Kolonialwaren, der Landesprodukte, der Material- und Mineralwaren. Herausgegeben unter Mitwirkung von Dr. C. Birnbaum, Lorenz Brauer, Dr. Paul Degener, etc.* (Description of Natural and Manufactured Products in Commerce / Trade, with Special Consideration for Chemical-Technical and Other Products, Drugs, Dyestuffs, Products from the Colonies, Agricultural Products, Household Goods, and Minerals. Published in Cooperation with Dr. C. Birnbaum,...).

In 1884 a second, slightly revised printing of the 3rd edition appeared. The page numbers cited above did not change. Address: [Germany].

1199. Smith, John. 1882. A dictionary of popular names of the plants which furnish the natural and acquired wants of man, in all matters of domestic and general economy. Their history, products, & uses. London: Macmillan and Co. ix + 457 p. See p. 386. 23 cm.

• **Summary:** “Soy (*Glycine Soja*, better known as *Soja hispida*), a small, erect, trifoliate, hairy plant of the Bean family (Leguminosæ), native of India and China. It is cultivated for its seeds, which are made into the sauce called

Soy in India, and the residue or cake is extensively used for manure in China.” Note: The residue from making soybean oil is widely used for manure in China, but the residue from making soy sauce is usually too salty for that use.

Also discusses (alphabetically): Agar-agar (see Ceylon moss), almond tree, Ceylon moss (seaweed), *Cyperus* (incl. *C. esculentus*. “The taste of the roots when roasted is compared to potatoes. It is by some used as a coffee substitute), dulse (*Rhodomenia palmata*, seaweed), earth pea or ground nut (*Arachis hypogæa*; an allied plant is *Voandzeia subterranea*), flax (incl. linseed oil), *Fucus* (genus of sea-weeds), gingilie oil (from *Sesamum indicum*), Goa bean (the seeds of *Psophocarpus tetragonolobus* are so called in India), hemp (*Cannabis sativa*, the seeds are used for feeding caged birds), Job’s tears (*Coix lachryma*), kelp (see *Fucus*), linseed oil (see flax), lupin (*Lupinus albus*, also yellow lupin and blue lupin), medick or lucerne (*Medicago sativa*) [alfalfa], quinoa (*Chenopodium quinoa* or *C. anthelminticum*), seaweeds (plants of the order Algæ), and sesamum (the seeds of *Sesamum indicum*).

The author, John Smith, lived 1798-1888. Address: A.L.S.

1200. Spon, Edward N.; Spon, Francis N. 1882. Spons’ encyclopaedia of the industrial arts, manufactures, and commercial products. Vol. 5: Soy. London and New York: E. & F.N. Spon. p. 1537-2142. See p. 1814. Edited by Charles G. Warnford Lock.

• **Summary:** In the section titled “Spices and condiments” we read: “Soy.—This useful condiment [soy sauce], said to form the basis of almost all the popular sauces [such as Worcestershire sauce] made in Europe, is prepared by the Chinese and Japanese from the fruit of *Glycine Soja* [*Soja hispida*], which holds an important place among the oil-yielding plants, and has been described under the article on Vegetable Fatty Oils (p. 1378). The condiment is prepared by boiling the beans with an equal quantity of roughly-ground barley or wheat, and leaving it covered for 24 hours to ferment; salt is then added in quantity equal to the other ingredients, water is poured over, and the whole is stirred at least once daily for two months, when the liquid is poured and squeezed off, filtered, and preserved in wooden vessels, becoming brighter and clearer by long keeping. Its approximate value in the London market is 2s. 3d. to 3s. a gallon for Chinese, and 2s. 4d. to 2s. 5d. for Japanese. [Note: The Chinese sauce is more expensive]. It is not specified in the trade returns, but doubtless forms the chief item in the unenumerated spices imported from China.”

Note 1. This is the earliest English-language document seen (Sept. 2003) that contains the term “fatty oils”—which refers to edible oils that are liquid at room temperature (see also p. 1360).

Note 2. This is the earliest English-language document seen (Sept. 2006) that contains the terms “oil-yielding” or

“oil-yielding plants” in connection with the soybean.

Also discusses: Varnish–Hempseed oil (p. 2024).
Address: England.

1201. Williams, Samuel Wells. 1882. *The Middle Kingdom: A survey of the geography, government, literature, social life, arts, and history of the Chinese empire and its inhabitants*. Revised ed. 2 vols. New York, NY: C. Scribner’s Sons. 2 vols. Illust. 24 cm.

• **Summary:** In volume 1, in Chapter 6 titled “Natural History of China,” the section on legumes (p. 365) states: “The leguminosæ hold an important place in Chinese botany, affording many esculent vegetables and valuable products. Peas and beans are probably eaten more in China than any other country, and soy is prepared chiefly from the Soja or Dolichos. One of the modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum, or turmeric. It is eaten as a jelly or curd, or in cakes, and a meal is seldom spread without it in some form.”

In Chap. 13 titled “Architecture, dress, and diet of the Chinese,” the section on “Vegetables eaten by the Chinese” (p. 773) states: “The Chinese have a long list of culinary vegetables, and much of their agriculture consists in rearing them. Leguminous and cruciferous plants occupy the largest part of the kitchen garden; more than twenty sorts of peas and beans are cultivated, some for camels and horses, but mostly for men. Soy is made by boiling the beans and mixing water, salt, and wheat, and producing fermentation by yeast; its quality is inferior to the foreign. Another more common condiment, called bean curd or bean jam, is prepared by boiling and grinding black beans and mixing the flour with water, gypsum, and turmeric.”

In volume 2, Chapter 20 titled “Commerce of the Chinese,” states (p. 396): “Soy is a name derived from the Japanese *sho-ya*; it is made by boiling the beans of the *Dolichos soja*, adding an equal quantity of wheat or barley, and leaving the mass to ferment; a layer of salt and three times as much water as beans are afterward put in, and the whole compound stirred daily for two months, when the liquid is pressed and strained. Another method of making the condiment has already been mentioned in Volume I., p. 365.”

Samuel Wells Williams lived 1812-1884. Address: Prof. of the Chinese Language and Literature at Yale College, Author of Tonic and Syllabic Dictionaries of the Chinese Dictionary.

1202. *Washington Post*. 1883. Talmage on evolution: “An anti-Bible, anti-science, anti-commonsense doctrine.” Jan. 15. p. 1.

• **Summary:** In the Brooklyn Tabernacle, New York, on the morning of Jan. 14, Rev. T. DeWitt Talmadge, preached upon “Evolution,” using the biblical text of I Timothy, verses 6 and 20. Nowadays the air is filled with talk of evolution as

advocated by Charles Darwin and Herbert Spencer.

“A dinner is given at Delmonico’s last November in honor of the great original discoverer of evolution. And the guests sat around the table eating beef and turkey and roast pig; according to the doctrine of evolution eating their own relations, slicing their own cousins, picking the bones of their own uncles, and thrusting the carving fork into the bosom of their own blood relations, dashing Worcestershire sauce and bedaubing mustard all over members of their own family,...” Address: New York.

1203. *Los Angeles Times*. 1883. The city. March 11. p. 0_4.

• **Summary:** “Chutney sauce, Worcestershire sauce, and a great variety of such things always to be had at Burch & Boal’s, opposite the postoffice.”

Note: This is the earliest document seen (Feb. 2012) in the *Los Angeles Times* that mentions “Worcestershire sauce.”

1204. Chernoglazov, L.A. 1883. K voprosu o Kitaiskom maslichnom gorokhe [On the question of the Chinese oil-bearing pea plant]. *Trudy Imperatorskago Vol’nago Ekonomicheskago Obshchestva, St. Petersburg (Scholarly Works of the Imperial Free Society)* 1(3):305-09. March. [Rus]

• **Summary:** Contents: Soybeans are successful in Russia. Success in Penza, Russia. Appropriate climate. Soybeans noted for excellent acclimatization ability. Appropriate soil for soybeans. Author’s method of cultivating soybeans. Planting soybeans and their growth. Harvesting soybeans. Uses of soybeans: Food, chaff, straw, enrichment of soil. Preparation of foods from soybeans: Soy sauce, miso, soup, flour, bread, potato pancakes. The writer prepared these foods from soybeans, then fed them to his co-workers. Note: He also sent these foods to this periodical to have them analyzed for their nutritional value. However, before the analyses could be conducted, the expiration date had passed. Conclusion: Incl. use of soybeans as a food for the army.

Note: Alternate Journal Name entry: *Trudy Vol’nogo-Ekonomicheskago Obshchestva* (Scholarly Works of the Free Economical Society). Address: Butenkovskaya Station, Poltavskaya region [Ukraine].

1205. Geerts, A.J.C. 1883. Observations on Kinch’s list of plants used for food. *Transactions of the Asiatic Society of Japan* 11(Part 1):31-35. April. [3 ref. Eng]

• **Summary:** Note 1. Geerts is referring to the article by Kinch titled “List of plants used for food or from which foods are obtained in Japan,” on pages 1-30 of this issue of this periodical.

“Prof. Kinch seems not to have been acquainted with the list of 447 economical plants, published in 1826 by Ph. Fr. von Siebold in the *Transactions of the Batavian Society of Arts and Sciences [Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen]*, Vol. XII,

under the title of ‘*Synopsis plantarum oeconomiarum universi regni Japonici*,’ for Mr. Kinch mentions only the more imperfect list given by Thunberg in his *Flora Japonica*. Further, several articles written on the subject of economic Japanese plants, published by von Siebold in the Journal of the Royal Dutch Society for the Advancement of Horticulture, during the years 1844-45-46, etc., might be perused with advantage by those who wish to study the practical side of Japanese economic plants.

“In Karl von Scherzer’s work, *Fachmaenische Berichte ueber die oesterreichisch-ungarische Expedition nach Siam, China und Japan*, Stuttgart, 1872, there is an extensive article by Dr. S. Syrski, on Japanese horticulture and economic cultivated plants, pp. 175-220. Several interesting observations on the mode of culture, time of sowing, planting, and harvesting, will be found there.”

“As a preliminary catalogue Mr. Kinch’s list may be useful for those persons who do not possess the botanical literature on the Japanese flora, but as a practical indication for horticulturists the list is deficient. Note 2. Chinese characters (or katakana) are given for each for the following Japanese terms.

“For instance the plant *Dai-dzu* or *O-mame*, the Soja hispida, Moench, has in Japan five distinct cultivated varieties and eleven or perhaps more sub-varieties, viz:

“I. White or slightly yellow beans, *Haku-dai-dzu*. 1. Very early variety with very small bean. Harvest in July. *Goguwatsu-mame* 2. Early variety with small white bean, *Wase-mame* or *Natsu-mame*. These [first] two varieties are also called *Bai-to* or *Tofu-mame* and serve especially for preparing *To-fu* [tofu]. 3. Middle early variety with somewhat larger round beans, *Nakate-mame*. Much used for preparing miso. 4. Late variety with round and hard beans, *Okute-mame*. 5. Late variety, with smaller, perfectly round and hard beans, *Maru-mame*. Can be kept a very long time and is much used as food for horses. 6. Late variety, with large, perfectly round, and very hard beans, *Teppo-mame* or *Aki-mame*. Is much valued for the preparation of *Shoyu* [soy sauce].

II. “Black beans, *Koku-dai-dzu* or *Kuro-mame*. 1. Middle late variety, with round, small, hard, black beans, *Kuro-mame*. 2. Middle late variety, with round, large black beans, *Kuro-teppo-mame*. 3. Late variety, with flat, elliptic, black beans, *Go-ishi-mame* or *Kuro-torokusun* or *Hachi-bu-name* or *Tamba-kuro-mame*. These kinds [in category II.] are eaten in a boiled mixed with sugar as *entremets*.

“III. Brown beans, *Katsu-dai-dzu*. 1. Round reddish brown beans, *Aka-mame*. According to the size the Japanese distinguish even six subvarieties of this brownish Soya-bean. The reddish kinds are far less cultivated than the white and black varieties. 2. Light brownish-red and round beans, *Cha-mame*. According to the more or less intense colour the Japanese distinguish three sub-varieties of *Cha-mame*. They are rarely cultivated. [Both these types] are eaten with sugar

in a boiled state” (p. 34).

Note 3. This is the earliest English-language document seen (Oct. 2004) that mentions red or reddish soybeans (actually brownish-red).

Note 4. This is the earliest English-language document seen (Feb. 2007) that contains the word “Soya-bean” or (“Soya-beans”).

“IV. Greenish or blue-greenish beans, *Sei-dai-dzu* or *Aō-mame*. 1. Round, middle-sized greenish beans, *Aō-mame*. The Japanese distinguish two sub-varieties, viz., α. *Sei-hi-to* with the epidermis only of a green colour, but white inside [and] Beta. *Nikuri-Sei*, which are outside and inside of a greenish colour. 2. Light green round beans, *Kagemame*. [All] are only cultivated in the provinces of Ise, Iyo, Harima, Idzumo [Izumo], Omi. Eaten with sugar in a boiled state.

Note 5. This is the earliest English-language document seen (Oct. 2004) that uses the term “light green” to describe the color of a soybean.

“V. Spotted beans, *Han-dai-dzu* or *Fu-iri-mame*. 1. Greenish, flat, oblong beans with a black spot at the navel. *Kuro-kurakake-mame*. Relatively rare and only cultivated in Nagato [an old province on the southwest tip of Honshu, Japan; as of 2003 part of Yamaguchi prefecture], Idzumo [Izumo] and the environs of Kiyoto [Kyoto]. 2. Yellowish-green, flat, and slightly oblong beans, with a dark brown spot at the navel. *Aka-kura-kake-mame*. Rare. 3. Yellowish-green beans with many dark spots. *Furi-mame* or *Udzura-mame*. Rare. Cultivated in Harima province.”

Note 6. This is the earliest English-language document seen (Oct. 2004) that uses the term “Yellowish-green” to describe the color of a soybean.

Note 7. This is the earliest English-language document seen (Sept. 2004) that uses the word “spots” (or “spotted” or “spotting”) or the term “reddish brown” to describe the color of soybean seeds.

Note 8. This is the earliest English-language document seen (June 2009) that discusses the color of many soybean varieties.

Note 9. This is an excellent, original article, which gives the names of many Japanese soybean varieties for the first time in English or any other European language. That information is largely derived from Iinuma (1861 and/or 1874).

1206. *Brisbane Courier (Queensland, Australia)*. 1883.

Imports (A special charge is made on consignees’ announcements inserted in this column). June 9. p. 4.

• **Summary:** “Venice, s. [steamer], from Hongkong: 46 cases merchandise,... 47 boxes soy [sauce],... 1 bag seaweed,... 18 packages preserved ginger, 5 boxes bean curd, 15 boxes sauce, 8 baskets ginger,... 10 boxes bean cake,... 5 boxes bean stick” [dried yuba sticks].

Note 1. Bean cake, which is apparently a food, is probably fermented tofu, but could possibly be dried frozen

tofu. If it is fermented tofu, this is the earliest English-language document seen (Oct. 2011) that mentions fermented tofu, which it calls “bean cake.”

Note 2. These goods are clearly for Chinese customers in Australia.

Note 3. This is the earliest document seen (Jan. 2010) that clearly mentions yuba being imported or exported.

1207. Kenny, W.J. 1883. Account of a secret trip to the interior of Korea [in 1875]. *Transactions of the Asiatic Society of Japan* 11(Part II):141-47. Sept. [Eng]

• **Summary:** Translated from the Japanese. Page 142: 19 March 1875 near Pusan. “The food was rough and coarse, and assailed my nose with such a stench that indicated that it was putrid. One glance at it was quite sufficient to create a bitter taste in the mouth. To give a specimen or two of the dishes—one was herrings and shrimps pickled in salt (the latter cut in small pieces), exceedingly offensive to the smell. The soup or broth, made of bean sauce (Daidzu [soybeans] {a large French bean [sic]} and wheat are boiled, then mixed together, pounded and made into lumps; these are piled up, with straw between, for several weeks, after which they are again taken out, and, when dried, are ready for use), is thick like mud. With the exception, perhaps, of the pickled shrimps, I could not bring myself to eat any of these dishes.” Note: This bean sauce may have been Korean-style miso, *doenjang*, however it does not typically contain wheat as an ingredient.

Page 144-45: March 27... “In this house I stopped about a fortnight. Their food was rice or pulse, sometimes mixed, half and half, with wheat; and as to vegetables (they rarely used cultivated vegetables, but generally picked young shoots of wild herbs), they steam them, dip them into vinegar and soy [sauce], and then use them. During the fortnight or so I remained at this house I never saw them eating meat once. It is ‘said that even the middle and higher classes find it difficult to eat meat, and can only eat salt fish. The articles of food are for the most part rancid in smell. They make no particular change in their garments for inside and outside wear. Their bodies and limbs are impregnated with filth; their clothing is a nest of vermin.”

1208. Dohme & Duffy. 1883. Positive facts (Ad). *Atlanta Constitution (Georgia)*. Nov. 10. p. 8.

• **Summary:** “We have just received a very large stock of the following goods:... China Soy [sauce], Mushrooms, Prince Albert Sauce,... Walnut, Tomato, Worcestershire and Mushroom Sauces,...”

Note: This ad also appeared in the Nov. 11, 13, 14, and 17 issues of this newspaper. Address: 88 Whitehall Street [Atlanta].

1209. Elgin, -; Kincardine, -. 1883. Customs tariff of China: Printed copy forwarded to the Department by Consul-

General Denny of Shanghai. *Monthly Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 36. p. 384-92. Dec. [Eng]

• **Summary:** The section titled “II. Tariff on exports” gives the duty on “Beans and pease” and on “Bean cake” (p. 387), Seaweed, Sesamum seed, and Soy (p. 389).

Under “Rules,” section IV (near bottom of page 390) discusses “* The export of pulse and bean cake from Tangchow and Newchwang, under the British flag is prohibited. From any other ports they may be shipped, on payment of the tariff duty, either to other ports of China or to foreign countries.”

The footnote states: “Pulse and bean cake may henceforth be exported from Tangchow and Newchwang, and from all other ports in China open by treaty, on the same terms and conditions as are applied to other produce by the regulation bearing the date of 5th December last;...” regulation

Note: The title on this issue is: “Consular Reports on Commerce, Manufactures, etc.” Address: Shanghai, China.

Hannover, Germany: Hahn'sche Buchhandlung. Vol. 1, xv + 994 p. Vol 2, xxii + 1002 p. See vol. I, p. 836. Vol. II, p. 130-32. [Ger]

• **Summary:** In the section on Phaseolus: “51. Soja* Moench. *Soja or Sooja is the Japanese name of the sauce (*Tunke*) for which soybeans [Soja-Bohnen] are used.

Soja hispida [hispida means rough] Moench. (S. japonica [japonica means Japanese]). Savi (Dolichos Soja. L.). The Japanese soybean. An annual, upright plant, indigenous to Japan and now cultivated throughout eastern Asia, because the beans are equal in protein to lupins, taste good, and are also used for the preparation of a piquant or pungent, brown, thickish sauce, which is used in India with almost all meals, and is also sold in Europe to improve broths and as a grilling, roasting, or baking sauce. However the soy sauce (*Soja*) presently sold commercially in Europe is not made from soybeans, but rather from other materials, namely from fungi / mushrooms (*Pilzen*), and it is made by us. The plant also grows in our climate although it often does not bring its seeds to ripeness / maturity. Therefore recommendations to grow it are uncertain.

“52. Dolichos L.” Address: Germany.

1211. Giliaranskii, V.P. 1883. Monografia kitaiskogo maslichnogo goroxa (Soja hispida) [Monograph of Chinese oil-bearing pea plant (Soja hispida)]. St. Petersburg, Russia: Printing House of “Obschestvennaya Pol'za” Union. 48 p. 20 cm. [1 ref. Rus]

• **Summary:** Contents: Foreword. Part I: Natural history of *Soja hispida*. 1. Soybean history (including I.G. Podoba's

experiments). 2. Plant description. 3. Soybean varieties. 4. Summary table of soy varieties cultivated in Japan. 5. Cultivation of soybeans. 6. Physical and physiological properties of soybean seeds. 7. Chemical composition of soybean seeds.

Part II: Soybean processing and utilization. 1. Soybean oil. 2. *Shoyu* [soy sauce]. 3. *Mi-so* [miso] sauce. 4. Vegetable cheese *to-fu* [tofu]. 5. Dried vegetable cheese *Kori-tofu* [dried-frozen tofu] and other varieties of *tofu*. Address: First Class Technologist/Production Engineer, St. Petersburg, Russia.

1212. Koenig, Franz Joseph. ed. 1883. *Chemie der menschlichen Nahrungs- und Genussmittel*. Vol. 2. *Zweite sehr vermehrte und verbesserte Auflage* [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. 2nd ed.]. Berlin: Verlag von Julius Springer. xviii + 816 p. See p. 371-72, 387. Illust. Index. 25 cm. [5 ref. Ger] • **Summary:** In the section on “Legumes” is a subsection titled “Soybeans” (*Sojabohne*) (p. 371-72) which begins with short summaries of Haberlandt (1878) and Wein (1881). The first table, based on calculations by Wein, shows that, on a per hectare basis, soybeans yield about 1/3 more protein and about ten times as much vegetable oil as common beans or peas. The second table gives the average chemical composition of 43 soybean varieties analyzed by König, and first published in detail in Vol. 1, p. 103-04. The range: Protein 26.5 to 40.0%. Oil 14 to 19%. The third table gives the average analysis of the ash found by Edward Kinch in 1882. The soybean is unique among legumes in its combination of a high oil content with an even higher protein content. Moreover, its straw makes a nutritious fodder for cattle. “The soybean is therefore highly recommended for cultivation in Germany, and efforts should be made to find ways of producing good-tasting foods from it.”

In China and Japan, soybeans have long been used to make human foods such as miso (*Misobrei*), shoyu (*Soohu*), and tofu (*Tofu*). The fourth table gives the nutritional composition of five soy products as determined by Edward Kinch: White miso, red miso, fresh tofu, frozen tofu, and soybean cake. While some of these products may not be suited to German tastes, E. Wein has used soybeans to prepare a tasty German dishes, including a soup like that made from beans and peas, a salad like that made from garden beans, or by cooking soybeans with potatoes or rice, a purée, which resembles Italian “Polenta” and has been called “Sojenta” by Haberlandt (1878). The taste of dishes made from soybeans reminds one of somewhat of almonds or chestnuts, but even more of garden beans. A soybean flour (*Mehl*), similar to the flour made from beans and peas, has already been made for kitchen use from soybeans (see p. 387).

The section titled “Legume flours” (*Leguminosenmehle*) (p. 387) contains a table that gives the nutritional

composition of such commercial flours: Bean flour (*Bohnenmehl*), pea flour (*Erbsenmehl*), lentil flour (*Linsenmehl*), and soybean flour (*Sojabohnenmehl*). The latter contains: Water 10.23%, protein 25.69%, oil / fat 18.83%, carbohydrate 38.12%, cellulose (*Holzfaser*) 2.75%, ash 4.36%. On a moisture-free basis: Nitrogen 4.58%, carbohydrate 42.45%.

Also discusses: Lecithin in egg yolks (not in soy, p. 223, 233). Composition of vegetable oils, incl. olive, linseed, poppyseed, hempseed, rapeseed, white sesame, black sesame, cottonseed, peanut, palm kernel, coconut (p. 325). Lupins (yellow or blue, p. 373-75). Almonds (p. 495, 497). Agar-Agar (p. 496-97). Peanuts (p. 495, 497). Coffee substitutes (not incl. soy, p. 607). Address: Head, Agricultural-Chemical Experiment Station, Muenster in Westphalia, Germany (Vorstehrer der Agric.-Chem. Versuchsstation Muenster in Westphalia).

1213. Okoshi, Narinori. 1883. A sketch of the fisheries of Japan (Fisheries exhibition literature). London: William Clowes and Sons, Ltd. 43 p. See p. 22, 24. Index. 22 cm.

• **Summary:** Section VI, titled “Fish cookery” (p. 22) begins: Cookery of fish is almost an art in Japan.” In the first mode of preparing raw fish, “the flesh of the fish is cut in thin slices and arranged on a plate very neatly in the form of waves,... and it is served with sauce (shoyu), mashed raw turnips [grated daikon], horse-radish [wasabi], and generally some fresh vegetables cut in small pieces and sea-weed.”

“The most essential element of our cookery of either fish or vegetables is the sauce known here under the name of Japanese shoya, properly called *shoyu*, which is extracted from beans and koji; hard dried fish [katsuobushi] is also greatly used” (p. 24).

Note 1: This paper was presented on 23 Oct. 1883 at the International Fisheries Exhibition, London. Also gives statistics on sea vegetables (p. 8-9, 11-12, 14).

Note 2. This is the earliest English-language document seen (April 2012) that uses the word “shoya” or the term “Japanese shoya” to refer to shoyu or soy sauce. Address: Member of the Japanese Consulate in London [England].

1214. Pogson, Frederick. 1883. *Manual of agriculture for India*. Calcutta, British India: Thacker, Spink and Co. 296 p. See p. 280-81. Index. [1 ref]

• **Summary:** Chapter 14, “Field pea crops, including the Japan pea” states (p. 184): “The Japan pea assumes the form of a bush from two to three feet in height. In the plains it should be sown after the rains cease. Drills should be made three feet apart, and a single seed should be sown at every three feet; the spot where the seed is sown being manured as for beans. The botanical name of the Japan pea is *Soya Hispida*. It is half pea and half bean in appearance, with singular leaves, and pods somewhat like the pods of the *Cajanus sativa* or *Urhur Dall* [Dahl] of the next chapter.”

In the Appendix (p. 267+) is a section titled "Japan pea" which states (p. 280-81): "A small supply of this pea-bean was received by the writer in the spring of 1882. It was freely distributed in Dehra, but failed entirely as a hot-weather crop. A few seeds sown at Mussoorie grew to the height of two feet, and bore pods very much resembling those of the *Urthur Dall* (*Cajanus sativa*). At the writer's request a supply of the seed was sent to Simla, and the result is given beneath.

"The Government of India has decided on the cultivation of the Japan pea being extended in this country, and with this view it has suggested that further experiments should be made in suitable places. This bean or pea has its natural habitat in China and Japan, it also grows in Mongolia, and in India in the Himalayas, and within the last few years it has been cultivated experimentally in several European countries, under the name of the Soy bean. It is a vegetable, which approaches most nearly in its proximate chemical composition to animal food. The Soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then numerous experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw on different kinds of animals have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy.

"In Japan it is known by names signifying THE bean, and from it are made not only soy [sauce] but a paste, known as *miso*, which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. These foods are most valuable additions to the dietary of the Oriental nations, and especially the Japanese, who use so little animal food. They tend to supply the deficiencies of the staple food, rice, in nitrogenous matter [protein], fat, and also in mineral constituents. The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso*.'—Vide '*Simla Argus*,' 18th November, 1882."

Note: Simla was a hill station in British India. The *Argus* was a periodical published at Simla, a hill station in British India in the 1880s. The *Simla Argus* Press published a few books at the same place and time. Address: Lieutenant, Her Majesty's Bengal Army, Dehra Doon; Honorary Member Agri-Horticultural Society of India.

1215. Royal Gardens, Kew (England). 1883. Official

Guide to the Museums of Economic Botany. No. 1. Dicotyledons and gymnosperms. London: Printed by Eyre and Spottiswoode, for H.M. Stationery Office. 153 p. See p. 43. 19 cm.

• **Summary:** "No. 174. Soy Beans (*Glycine Soja*, Sieb. and Zucc.). An annual cultivated largely in India and China. From the seed the Chinese prepare a sauce known as Soy; a quantity of oil is also expressed from them, and the residue after the expression of the oil is extensively used for feeding cattle, as well as for manuring the land in China. It is made into large circular cakes similar to that exhibited, weighing about 60 lb."

Note: This is the earliest edition of the *Official Guide to the Kew Museums* or the *Official Guide to the Museums of Economic Botany* (Kew, England) in which the soy bean is mentioned. It is not mentioned in the 1871 or 1875 editions. Address: Kew, England.

1216. Scheube, Botho. 1883. Die Nahrung der Japaner [The food of the Japanese]. *Archiv fuer Hygiene* p. 352-83. [3 soy ref. Ger]

• **Summary:** In the Japanese diet, rice plays the most important role. From a special type of glutinous rice, the Japanese prepare their beloved rice cakes, called mochi, which are found in every house during the New Years festival. The Japanese bake no bread, yet *Fu* (made from wheat gluten) could be considered a kind of bread. The process for making it is described.

Legumes, beans and peas, also are important in the Japanese diet. Countless types are cultivated, but the most important is the remarkable soybean (*Sojabohne*—*Glycine hispida*), on account of its richness in nitrogen [protein] and fat, and its relatively low starch content. The most important foods made from soybeans are tofu, miso, and shoyu; a detailed description is given of the process by which each is made. Two analyses of shoyu, by Ogata and by Kinch, give its composition. Beans and peas are also eaten as vegetables by the Japanese, and bean meal [probably kinako] is used in the preparation of many kinds of cakes.

On pages 361-67 are many tables containing descriptions of the diets consumed by various individual Japanese persons, usually for three days or three meals. For each is given: The age and approximate weight of the person, the foods consumed, and the weight (in grams) of each food consumed each day. Tofu (*Bohnenkäse*), miso soup (*Miso-Suppe*), and wheat gluten cakes (*fu*) appear with rice (and/or sushi or mochi) and tea in most diets. The word *Bohnenauce* (p. 362) appears to refer to shoyu (soy sauce).

Botho Scheube lived 1853-1923. Address: Docent, Univ. of Leipzig, Germany.

1217. *New York Times*. 1884. History of Worcestershire sauce. Feb. 9. p. 3.

• **Summary:** "From the *London World*: Although inferior in

money-making power to a pill, a sauce, too, can make the guineas roll briskly in, and notably has this been the case with Lea & Perrins's Worcestershire. A scrutiny of the label will show that it is prepared 'from the recipe of a nobleman in the county.' The nobleman is Lord Sandys, and Messrs. Lea & Perrins's connection with the sauce came about rather curiously.

"Many years ago Mrs. Grey, author of 'The Gambler's Wife' and other novels, well known in their day, was on a visit at Ombersley Court, when Lady Sandys chanced to remark that she wished she could get some very good curry-powder, which elicited from Mrs. Grey that she had in her desk an excellent recipe, which her uncle, Sir Charles, Chief-Justice of India, had brought thence and given her. Lady Sandys said that there were some clever chemists in Worcester, who perhaps might be able to make up the powder; at all events, when they drove in after luncheon they would see.

"Messrs. Lea & Perrins looked at the recipe, doubted if they could procure all the ingredients, but said they would do their best, and in due time forwarded a packet of the powder. Subsequently the happy thought struck some one in the business that the powder might, in solution, make a good sauce. The experiment was made, and by degrees the thing took amazingly. All the world, to its remotest ends, now knows of Worcestershire sauce as an article of commerce; and, notwithstanding that, in common with most good things, it is terribly pirated, an enormous trade is done in it. The profits, I am told, amount to thousands of pounds a year, and I cannot but suppose that liberal checks, bearing the signature of Lea & Perrins, have passed from that firm to Mrs. Grey, to whom it is so indebted for its prosperity."

Note: This is the earliest document seen (Feb. 2012) that mentions Lord Sandys in connection with Lea & Perrins or Worcestershire sauce. Note that it was published in the USA where people knew little about Lord Sandys or about the history of this product or its manufacturer.

1218. *Brisbane Courier (Queensland, Australia)*.1884.

Imports (A special charge is made on consignees' announcements inserted in this column). April 8. p. 4.

• **Summary:** "Suez, A.C.J. and S.S.S. Company's s. [steamer], from Hongkong direct: 2,432 bags rice, 50 cases oil, 50 cases Chinese oil, 10 cases China oil,... 10 boxes bean curd,... 8 boxes salt beans [probably salted black soy beans; fermented black soybeans],... 54 boxes sauce,... 5 boxes bean sauce [perhaps soy bean sauce],..."

Note: The ambiguous term "bean sauce" is used in 4 issues of this Australian newspaper from 8 April 1884 to 8 March 1897.

1219. *Times (London)*.1884. Japan at the health exhibition. Aug. 28. p. 2, cols. 4-5.

• **Summary:** "The last foreign court completed at the

International Health Exhibition [in London] is that of Japan." In a few days, a Japanese restaurant will be opened. "Two Japanese cooks have accompanied the Commissioners, and here the visitor will be able to make the acquaintance of some of the dishes which find a place on the *menus* of the Parisians of the East. Sweet-tasting bamboo sprouts, sweetmeats and confectionary of fanciful appearance; *saké*, 'the wine of the country,' a fermented drink made of rice and containing 11 to 12 per cent. of alcohol, the nutritious *miso* made from soy beans and fermenting rice [koji], frozen *tôfu* [sic, dried frozen tofu] or bean curds, tangle [kombu], salted mushrooms, dried shrimps, cured bonito, laver [nori], various edible sea-weeds, orange vinegar, and several soys [soy sauces], are among the good things which those who are adventurous in dietary may enjoy."

1220. *Times (London)*.1884. The Health Exhibition Japanese restaurant. Sept. 17. p. 4, col. 6.

• **Summary:** The Nippon Rioriya, modeled after the eating houses in Tôkio, is hard to find at the exhibition. "Taking advantage of the concession to European prejudices the Commissioners have made in providing spoons, instead of obliging him to drink his soup like tea from the bowl, the adventurous diner-out will find that he has before him a savoury compound called on the card *misoshiru* [miso soup]. This is made, as the root word denotes, from *miso*, a fermented mixture of soy beans, wheat, and salt." He may also enjoy "a piece of plump sole stewd in soy" [sauce], the "brown soy-coloured beans and strips of *kikurage*, or ear-shaped mushrooms," the *wanmori* which includes "pieces of a soaked *fu*, a kind of biscuit made from the glutinous part of wheat flour. The gravy in which these *pièces de résistance* are floating is thickened with a transparent starchy substance, obtained from the root of a climbing plant (*Pueraria Thunbergiana*), called by the Japanese *kuzu*."

"One other relish must be noticed, the sliced root of the burdock, salted and preserved in *miso*."

1221. International Health Exhibition, London. 1884. The Health Exhibition Literature. Vol. XVII. London: William Clowes and Sons, Ltd. 749 p.

• **Summary:** Also cited as: (1) "Catalogue of the exhibits of Japanese Food Products at the International Health and Education Exhibition, held in London, 1884." (2) "Japan. International Health Exhibition A. Descriptive catalogue..." (3) "London, International Health Exhibition, London. 1884. The Health Exhibition Literature. Vol. XVII."

A map of the "International Health Exhibition, London, 1884" (p. 537-38), which was held at the Royal Albert Hall in South Kensington, on Exhibition Road near the High St. Kensington Station; gives an overview of the hall and surrounding roads and railway stations. The title of the section related to food is "Japan. A descriptive catalogue of the exhibits sent by the sanitary bureau of the Japanese

Home Department,” prepared under the direction of K. Nagai, Commissioner, and J. Murai, Assistant Commissioner. There follows a 2-page Introduction by Kiuchiro Nagai, dated Sept. 1884. Then a table of contents of five groups; Group I is food. Then a table of Japanese weights and measures. Pages 545-71 begin: the “Descriptive catalogue.” Group I—Food. Detailed information and / or chemical analyses are given of the following: are given: (7) Soy bean (*Glycine hispida*) *O-mame*. (7A) *Phaseolus radiatus*. Adzuki. (192) Dried fruit of *Lagenaria vulgaris*—*Kan-pio* [*kanpyo*], cook with soy sauce. Mushroom (*Agaricus campestris*). *Shii-take* [*Shiitake*], cook with soy sauce. Kanten, vegetable isinglass, cook with soy sauce. Frozen konniaku [*konnyaku*]. Minoboshi daikon, cook with soy sauce. Fu, nama-fu, yaki-fu (roasted) (Wheat gluten). Kuzu starch. Buckwheat soba, cook with soy sauce. (203) Hijiki sea weed (*Cystoseira* species), cook with soy sauce. (204) Ogo sea weed (*Gigartina* sp.), cook with soy sauce. (205) Wakame sea weed (*Alaria pinnatifida*), cook with soy sauce. (206) Agar-agar (*Gelidium corneum*. Tengusa). Use to make tokoroten or kanten. (207) Tangle (*Laminaria japonica*). Kombu [*konbu*]. (208) Laver, dried (*Porphyra tenera*). *Asakusa-nori*. (209) Awonori, dried (*Enteromorpha compressa*).

(210) Frozen bean-curd. *Kôri-tôfu*. “Preparation.—It is made by steeping soy beans in water and then grinding them, after which the refuse is removed by boiling and dissolving it in a little oil. This refuse is called ‘Kiradzu’ [*kirazu*] or ‘Unohana.’ The liquid remaining after taking away such refuse [*soymilk*] is put into a kettle and again boiled. Upon the surface of the water [*sic*, *soymilk*] there forms a thin substance [*film*] like wet paper; this is skimmed off and dried. It is called ‘Yuba’ (lit., bean-curd skin), the taste of which is very agreeable. When it [*the soymilk*] begins to bubble up brine is sprinkled over it in order to stop the bubbles, and it is put into a special wooden box, then thrown into a cotton cloth bag and coagulated into long square shapes, which is bean-curd.”

Three tables follow: (1) “Analysis of bean curd” [*tofu*]. (2) “Analysis of dried bean-curd” [*dried frozen tofu*]. (3) “Analysis of refuse of bean-curd” [*okara*].

Note 1. In the description of making *tofu* (above), *yuba* is removed during the *tofu*-making process. If this description is correct, and also applies to the process used for making *tofu* in China, it could help explain the origin of the unusual Chinese term “bean curd skin” (*doufu pi* or *fu pi*).

(211) *Yuba* (Skin of bean curd; “*Yuba* is made during the process of making bean curd, and is a thin, yellow, transparent substance”).

Note 2. This is the earliest English-language document seen (May 2012) that uses the term “bean-curd skin or the term “Skin of bean curd” to refer to *yuba*.

(213) *Somen* (Vermicelli), cook with *shioyu* (soy sauce).

Note 3. This is the earliest English-language document seen (April 2012) that uses the term *shioyu* to refer to *shoyu* /

soy sauce.

(228) *Umeboshi* (Salted and dried plums). (229) *Miso* (a fermented substance made from soy beans and yeast [*koji*]). *Miso-ai*, *Sansho-miso*, *shoga-miso*, *wasabi-miso*, *togarishi-miso*, *goma-miso* [*sesame miso*], *keshi-miso*, *katsuwo-miso*. (229a) *Konomono* [*Kô-no-mono*] (Vegetables pickled in fermenting mixture of bran and salt (incl. *Nukamiso-dzuke* (pickled in salt and bran), *Takuwan-dzuke* (radishes pickled in salt and bran), *Shiwodzuke* (salted), *Shio-oshi* (salted and pressed), *Kasudzuke* (pickled in sake residue), *Misodzuke* (pickled in miso), &c.)). *Takuwandzuke* [*Takuan* pickles]. (229b) *Kasu-zuke* (mentions miso soup). (230-35) *Shoyu* (Soy) and how it is made [p. 21 of section]. Chemical analysis of *Kikkoman shoyu*. Eight chief brands of *shoyu*. (236) *Mirin* (a kind of sweet liquor), with *koji*. *Sembei* [*senbei*], with miso. (242) *Yokan*, three varieties. (246) *Midzu-ame* [*mizuame*]. Frozen *mochi*.

Class III—Prepared animal substances. Dried cod fish, cooked with soy [*sauce*]. Beef *tsukudani*, cooked with soy [*sauce*].

Class IV. Beverages. Sake (wine), made with *koji* (yeast). “*Koji* (yeast) is used for brewing Sake in Japan, almost like malt used for brewing beer in western countries...”

Class VI. Cookery practically demonstrated. *Nippon Ryoriya* (Japanese restaurant), incl. *misoshiru* (miso soup), and *konomono*. Address: England.

1222. International Health Exhibition, London. 1884.

(210) Frozen bean-curd. *Kôri-tôfu* (Document part). In: International Health Exhibition, London. 1884. *The Health Exhibition Literature*. Vol. XVII. London: William Clowes and Sons, Ltd. 749 p. See p. 560-61.

• **Summary:** “It is made by freezing common bean-curd. Bean-curd is made of *Daidzu Glycine (soja) hispida* and contains a large quantity of vegetable albumen. This is one of the most frequent kinds of food of the middle and lower classes of the people of Japan; it contains an abundance of nourishment, and Hygeists recommend its use. However, bean-curd is indigestible as in passing through the process of freezing, it undergoes a change. Ordinary bean-curd is not a safe eatable to remove to a distance, as it spoils very readily: therefore, frozen bean-curd only is exhibited here with explanation of the ingredients of the common curd.

Preparation.—It is made by steeping soy beans in water and then grinding them, after which the refuse is removed by boiling and dissolving it in a little oil. This refuse is called “*Kiradzu*” or “*Unohana*.” The liquid remaining after taking away such refuse is put into a kettle and again boiled. Upon the surface of the water there forms a thin substance [*yuba*] like wet paper; this is skimmed off and dried. It is called “*Yuba*” (lit., bean-curd skin), the taste of which is very agreeable. When it begins to bubble up brine is sprinkled over it in order to stop the bubbles, and is put into a special

wooden box, then thrown into a cotton cloth bag and coagulated into long square shapes, which is the bean-curd.

“Analysis of bean curd: Nitrogen 0.76%. Fat 2.36%. Water 90.37%. Ashes [ash] 0.76%.

“Analysis of dried bean-curd [moisture free]: Nitrogen 8.09%. Fat 24.59%. Ashes [ash] 7.79%.

“Analysis of refuse of bean curd [kirazu or unohana]: Albumen 3.664%. Fat 0.837%. Glucose 0.266%. Starch 2.630%. Cellulose 2.896%. Other non-nitrogenous substances 6.156%. Water 85.660%.

“Use.—Bean curd is prepared for eating by boiling it or holding it over a fire; it is usually eaten with soy [sauce] and various condiments. It easily digests and is suitable food for adults, for infants, or for invalids, but it cannot be preserved for more than a day or two, owing to its perishable nature, whereas frozen bean curd does not easily spoil and can be preserved for a length of time, but it is indigestible and furnishes less nourishment than the unfrozen.” Address: England.

1223. International Health Exhibition, London. 1884. (230-235) Shoyu (soy) (Document part). In: International Health Exhibition, London. 1884. *The Health Exhibition Literature*. Vol. XVII. London: William Clowes and Sons, Ltd. 749 p. See p. 565.

• **Summary:** “Shoyu is a mixture of soy beans, wheat, salt and water; the quantity of soy beans and of wheat being the same. The mode of preparing it, is to thoroughly boil, after washing in a cask with water, 50 *koku* of [soy] beans and to parch about 50 *koku* of wheat, in a pan for a little while, and thoroughly boil it after grinding on stone mill. When these two substances are mixed together and kept in *Oka-muro* (a warm room) for about four days the substances are converted into a yellow flower-like matter; this is yeast [sic, koji]. This yeast is then thrown into a mixture of 120 *koku* of water and of 6 *kuwanme* of salt. It is afterwards thoroughly cooled, boiled in a large kettle, and stirred with a bamboo instrument twice a day in summer and once a day in winter. After the lapse of three years the sediment is poured into a bag, then put into a small tub, and is submitted to strong pressure by means of a bar, at the end of which hangs a heavy stone. The fluid expressed is poured into a kettle and submitted to a heat of not more than 80°C; it is again removed to a large tub and set away for a night, when it becomes of a deep black colour and acquires a very delicious taste.

“Use.—Shoyu is one of the most valuable foods, and is in daily use. Mixed with several kinds of food it imparts to them a delicious flavour. It is universally liked and is really indispensable in the Japanese kitchen. The quantity of shoyu annually consumed in Japan is extremely large, and of late years the article has been exported.

Analysis of Kikkoman Shoyu from Noda (province Shimosa) by Isono Tokusaburo B.Sc.—1,000 c.c. of Shoyu contains following constituents:—Specific gravity 1.199. Total

residue 421.706. Ashes 175.864. Chlorine 94.001. Glucose 53.226. Dextrin 54.710. Alcohol 1.650. Volatile Acid 1.920. Fixed Acid (as SO₃ [sulfite]) 13.031 Nitrogen 17.208

“The following eight are the chief kinds of Sho-yu:—1. Sho-ji. 2. Sashimi. 3. Yamasa. 4. Yamajin. 5. Yamada. 6. Yigamisa [Jigamisa]. 7. Yamadai. 8. Yamataka.” Address: England.

1224. *Gardeners' Chronicle (London)*, 1884. Japanese food vegetable products. 22:781-82. Dec. 20. New Series.

• **Summary:** “The Japanese Commission at the late International Health Exhibition have produced an excellent catalog of their exhibits, which contains a great deal of valuable information on the production and uses of the specimens in question. In the first group, devoted to food products, a series of analyses is given of the principal grains and pulses, fungi, cucurbitaceous fruits, &c.”

“*Kori-tôfu: Frozen Bean Curds*.—It is made by freezing common Bean curd, which is made of Daidzu (Glycine [Soja] hispida), and contains a large quantity of vegetable albumen. This is one of the most frequent kinds of fruit of the middle and lower classes of the people of Japan; it contains an abundance of nourishment, and hygeists [hygienists?] recommend its use. Bean curd is indigestible, but in passing through the process of freezing it undergoes a change. Owing to the Bean curd spoiling very readily, it is not suitable for carrying long distances. It is made by steeping Soy Beans in water and then grinding them, after which the refuse is removed by boiling and dissolving it in a little oil. The liquid remaining after taking away such refuse, is put into a kettle and again boiled. Upon the surface of the water a thin substance, like wet paper, forms, this is skimmed off and dried and known as ‘Yuba,’ the taste of which is very agreeable. When it begins to bubble up brine is sprinkled over it in order to stop the bubbles and it is put into a special wooden box and afterwards thrown into a cotton-cloth bag and coagulated into long square shapes, which is the Bean curd.

“Bean curd is prepared for eating by boiling it, or holding it over a fire. It is usually eaten with soy [sauce] and various condiments; it is easily digestible and is suitable food for adults, infants, or invalids, but it cannot be preserved for more than a day or two owing to its perishable nature, whereas frozen Bean curd can be preserved for a length of time, but it is indigestible and furnishes less nourishment than the kind first named. The “yuba” or skin of the Bean curd is used as a food adjunct, with boiled Rice, by most persons, by boiling or warming over a fire and salting it.”

Other Japanese foods described in detail in this early article are Ginkgo biloba (Ginnan, the fruit of the maidenhair tree), Lagenaria vulgaris (Kau-pio, a dried fruit), Agaricus campestris (Shii-take [Shiitake] mushrooms), Gelidium corneum (Agar-agar or Kanten), Frozen Kouniaku [Konnyaku], Katakuri Starch, Kuzu Starch (from the root of

Pueraria Thunbergiana), Warabi Starch, Hijiki (*Cyrtoseira* sp.), Ogo (*Gigartina* sp.), Wakame (*Alaria pinnatifida*), Tangre [Tangle] or Kombu (*Laminaria japonica*). “It is used as a food by boiling with soy, sugar, mirin, &c., or served in soup”), Laver, dried–Asakusa-nori (*Porphyra vulgaris*) [Note that items from Hijiki to Laver are sea vegetables], Umeboshi: Salted and dried plums.

Continued in the issue of 10 Jan. 1885.

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the terms “frozen,” or “Kori-tôfu,” or “Bean Curds,” or “Frozen Bean Curds” to refer to frozen tofu.

Note 2. This is the earliest document seen (Jan. 2010) concerning the use of soya in infant foods or infant feeding.

Note 3. This is the earliest English-language document seen (Dec. 2006) that uses the word “Umeboshi” or the term “Salted and dried plums” to refer to umeboshi salt plums.

Note 4. As of 1975, the scientific name of the shiitake mushroom was *Lentinus edodes*. It had been cultivated and used as human food for centuries in China and Japan. It is not used much in most developing countries, nor in the West where the common champignon *Agaricus bisporus* (*A. brunnescens*) is the mushroom of commerce. One important advantage of shiitake is that it can be cultivated on wood.

Note 5. This is the earliest English-language document seen (Oct. 2008) that uses the term “vegetable albumen” to refer to soy protein.

1225. Hills & Smith. 1884. Christmas! (Ad). *Hartford Daily Courant* (Connecticut). Dec. 22. p. 2.

• **Summary:** “Imported Sauces–Bengal Hot Chutney, Anchovy, Reading, London Club, John Bull, Beef Steak, Worcestershire and China Soy [sauce]. Catsups–Mushroom, Walnut, Shrewsbury and Tomato.”

Note: This ad also appeared in the Nov. 11, 13, 14, and 17 issues of this newspaper. Address: 368 Asylum Street (Batterson’s Block).

1226. Cohn, Ferdinand. 1884. Ueber Schimmelpilze als Gaehrungserreger [On molds as instigators of fermentation]. *Jahres-Bericht der Schlesischen Gesellschaft fuer Vaterlaendische Cultur* (Breslau/Wroclaw) 61:226-30. For the year 1883. [Ger]

• **Summary:** In this lecture, presented on 31 May 1883, Prof. Cohn named the species *Aspergillus oryzae*. A synonym is *Eurotium oryzae* Ahlburg. Thom and Raper (1945, p. 261) note that “The name *E. oryzae* with an incomplete description for the saké organism was published by Korschelt, in Dingler’s Polytechnisches Journal 230:330. 1878, as taken from a letter from ‘Herr Ahlburg.’”

On page 227 Cohn notes: “In the winter of 1883 I obtained some grains of tane kosi [sic, tané koji] (the so-called mother-yeast of the Japanese rice wine, saké) from Shinkizi [Shinkiji] Nagai, a native of Tokyo who was staying

in Breslau as a student of agriculture. I prevailed upon this intelligent and industrious young man, under my supervision, to make sake using the tané koji and methods he had learned in Japan. After a number of unsuccessful trials, we met with excellent success. The Japanese methods are, although used for hundreds of years, so rational, that they can hardly be improved based on a scientific understanding of the process. Tane Kosi are grains of rice which are overgrown with the mycelium and spore bodies (*Fruchttraegern*) of *Aspergillus oryzae*, the splendid rice mold with its greenish-yellow conidia.”

“Another fermentation product made by *Aspergillus oryzae* is the well-known soy sauce (*Sojasauce*). This was also prepared at our institute by Mr. Shinkizi Nagai using the Japanese method. This soy sauce was prepared from soybeans (*Sojabohne*, *Dolichos Soja*) that have recently been cultivated here. Soybeans are different from our typical beans in that they have a very low content of starch and are very rich in fat and ‘Cheese-stuff’ (literally *Kaesestoff*, Legumin, vegetable casein) [i.e., protein]. Because of this fact, the soybean is used to make cheese [tofu] in Japan.”

A detailed description of the process for making soy sauce is then given.

Note 1. This is the earliest German-language document seen (April 2012) that uses the term *Sojasauce* to refer to soy sauce.

Note 2. Breslau is the German name for Wroclaw, a city in southwest Poland. Address: Prof., Dr.

Address: Japan.

1228. Hanausek, Thomas Franz. 1884. Die Nahrungs- und Genussmittel aus dem Pflanzenreiche: Nach den Grundsätzen der wissenschaftlichen Waarenkunde fuer die Praxis und zum Studium [Foods and food adjuncts (stimulants / enjoyables) from the vegetable kingdom: On the principles of scientific study of food products in practice and theory]. Kassel: Verlag von Theodor Fischer. xiv + 485 p. See p. 99. Incl. 100 illust. and tables. 19 cm. Vol. 5 in the series *Allgemeine Waarenkunde und Rohstofflehre*. [8 soy ref. Ger]

• **Summary:** This book describes how to analyze commercial products (chemically, microscopically, etc.) to determine their composition and to detect adulteration. Chapter III (p. 75-105) is titled “The legumes and their starches” (“*Die Huelsenfruechte und ihre Stärke*”). Section 8 (p. 99-103) within that chapter is titled “The soybean” (“*Die Sojabohne*”). The author discusses soy sauce and how to tell when it is adulterated, miso and how it is made in Japan, and the use of the soybean as a coffee substitute. He gives the weight of seeds according to data from Haberlandt,

lists different varieties according to a classification by Harz (1880, 1885), describes the shape and structure of the seeds, gives a microscopic analysis of the shape of the cells in a cross-section of the seed coat. An illustration (line drawing of a microscopic image, p. 101) shows a “Cross section through the soybean,” with the following cell types labeled: pa = palisade cells (*Pallisadenzellen* {*Palisadenzellen*}), s = hour-glass cells (*Säulenzellen*), p and p' = outer and inner parenchyma layer (*Aeusserer und innere Parenchymschicht*), h = hyalin stria (*hyaline Streifen*), gew = seed tissue (*Samengewebe*). Starch-bodies are missing.

Note 1. This is the earliest document seen (Feb. 2002) that describes use of a microscope to examine soybean cells or that contains an illustration of those microscopic cells.

The author presents a chemical analysis and description of the seeds. He notes that no trace of starch can be found in soybeans, a characteristic shared by lupins, one of the infallible criteria for detecting both, and an indication of the high nutritional value of the soybean. Peanut seeds are also discussed on p. 103.

On pages 417-31 Hanausek gives a detailed analysis of coffee substitutes. On page 424, in the subsection on “Coffee substitutes made from the seeds of legumes,” he notes that this type is rarely found any more, but that the soybean may be used.

Note 2. Under the term “Genussmittel” (food adjuncts {stimulants / enjoyables}), Hanausek includes: Tobacco, tea, cocoa, coffee, kola nuts, cacao, Guarana* (paste from the seeds of the shrub or bush *Paullinia sorbilis* Mart. (*P. Cupana Kth.*) used in north Brazil), Tschan (Chan)* (made from the fruits of a type of sage plant in Guatemala), betel nuts, opium, and hashish. (* = not in a German dictionary).

Hanausek lived 1852-1918. Address: Krems an der Donau (Krems on the Danube), Austria.

1229. King, Lord. 1884. The life and letters of John Locke, with extracts from his journals and common-place books. London: George Bell & Sons. viii + 503 p. See p. 133-34. Index. 18 cm. Original edition 1829.

• **Summary:** In the section titled “England.–1679,” Locke described—apparently for a foreigner about to visit England—various foods and condiments which ought to be enjoyed in London: “Puddings of several sorts and creams of several fashions, both excellent, but they are seldom to be found, at least in their perfection, at common eating-houses. Mango and saio are two sorts of sauces brought from the East Indies.”

Note 1. Saio almost certainly refers to *shoyu*. For details, see original 1829 ed. The author’s full name is “Lord Peter King King” or “Peter King, 7th baron King.”

Note 2. John Locke, an English philosopher, lived 1632-1704. Address: Ockham [England, 24 April 1829].

1230. Lesley, J. Peter. ed. 1884. Early proceedings of the

American Philosophical Society for the Promotion of Useful Knowledge, compiled by one of its secretaries from the manuscript minutes of its meetings from 1744 to 1838. Philadelphia, Pennsylvania: Press of McCalla & Stavely. 875 p. See p. 24-25, 29, 32-33, 35. Illust. Index (p. 713-875). 24 cm.

• **Summary:** Minutes: “1769. Jan. 16 at the College [with 41 present, including Bartram]. “Sample of Chinese Vetches, six bottles of Soy and six pounds of powdered sago presented with a letter from S. Bowen of Georgia.” (p. 24).

“1769. Jan. 20 at the College. (37 present). The sago, Soy & Vetches ‘lately introduced into Georgia by S. Bowen’ with his letter & description were ‘deferred until the laws were passed and committees formed.’”

“1769. Feb’y 3. At the college. (24 present)... The Soy and Sago of S. Bowen were referred to the Com. Nat. Hist. & Chem. [Committee of Natural History and Chemistry], and the Vetches [soybeans] to the Com. Husb. & Am. [Committee of Husbandry and American] Improvements.”

“1769. March 3. College. [29 present, incl. Bartram]. The S. Bowen’s Communication Committee then reported, that thanks be returned ‘especially for his ingenious account of the Chinese Vetches...’ The Other Committee [Natural History and Chemistry] were recommended to ‘make some experiments on’ the respective qualities of the samples of Soy & Sago, & report. Ordered that some... Vetches be distributed to... Pemberton, J. & J. Bartram, J. Morgan, J. Rhea, Abel James, T. Clifford, J. Gibson & G. Roberts.” Thus Samuel Bowen’s soybean seeds were distributed to eight farmers; all probably lived in Pennsylvania. It seems extremely likely that at least one of the 8 farmers grew the soybeans during 1769.

At the meeting of 1769 April 21. Mr. S. Bowen of South Carolina [sic, Georgia] was elected a new member of the Society (p. 35).

The first three presidents of this illustrious society were: Benjamin Franklin (Jan. 1769 to April 1790), David Rittenhouse (Jan. 1791 to June 1796), and Thomas Jefferson (Jan. 1797 to Jan. 1814).

Concerning Monsieur Le Comte de Buffon of Paris: On 1768 Sept. 20 he was proposed as a corresponding member, then on 1768 Oct. 18 chosen as a member (p. 17-19). In 1779 he sent the Society the first 2 volumes of his *Histoire Naturelle des Oiseaux* (Natural History of Birds). On 1787 Sept. 21 he sent a letter of thanks for election and certificate of membership. Also mentioned are Col. Henry Laurens (p. 72, 152), and James Mease (p. 14, 232, 288, 320, etc.).

On 1768 Dec. 20 two societies were merged and given a new name: “The American Philosophical Society, held at Philadelphia, for promoting Useful Knowledge” (p. 20-21).

Note 1. This document contains the earliest date seen for soybeans in Pennsylvania (16 Jan. 1769), and (probably) for the cultivation of soybeans in Pennsylvania (spring 1769). The source of these soybeans was Samuel Bowen

of Georgia, who brought them from China, and had them planted in Georgia in May 1765.

Note 2. The editor of this publication, Peter Lesley, lived 1819-1903. The Society, among whose founders in 1743 were Benjamin Franklin and John Bartram, met in Philadelphia for the purpose of promoting useful knowledge.

Note 3. In 1982, while reading through this book in search of something else, Jack Harlan, professor of agronomy at the University of Illinois (Urbana-Champaign), chanced to read the entry in the minutes for 16 January 1769. His curiosity was piqued, for he knew that the earliest date of the introduction of soybeans from China to North America was generally thought to be 1804. Who was this S. Bowen? Why was his name not better known? Harlan mentioned his accidental discovery to his colleague and former student, Theodore Hymowitz, also a professor of agronomy at the same university. Hymowitz was also intrigued. Working together, they pieced together the fascinating, and previously unknown story of how Samuel Bowen introduced the soybean to North America in 1765 (see *Economic Botany*, Dec. 1983, p. 371-79). Address: Librarian of the Society, Philadelphia.

1231. Lincoln, Mary Johnson. 1884. *Mrs. Lincoln's Boston cook book: What to do and what not to do in cooking*. Boston, Massachusetts: Roberts Brothers. xiv + 536 p. Illust. Index. 20 cm.

• **Summary:** Worcestershire sauce is used as an ingredient (often optional) in 8 recipes in this book: Mock turtle soup (p. 137-38). Fish chowder (p. 155-56). Remnants of cooked fish (p. 169-70). Scalloped oysters (p. 177). Devilled lobster (p. 183). Tartar sauce (Hot for broiled fish, p. 194). Veal cutlets (p. 240-41). Salamis of game (p. 270).

In the section titled "Explanation of terms used in cookery" is the earliest definition of soy [sauce] found in a U.S. cookbook (p. 506): "Soy. A Japanese sauce prepared from the seeds of *Dolichos Soja*. It has an agreeable flavor and a clear brown color. Used to color soups and sauces."

In the section on "Bread and bread making" we read (p. 42): "*Health-Food Flour*.—A still better method of converting wheat into flour, and one which is indorsed by leading scientists and physicians, has been recently introduced by the Health Food Company of New York. Only the choicest kinds of wheat are used. The outer husk is first removed by moistening the grain, and subjecting it to a gentle rubbing by what is termed the 'attrition process.' This softens the woody fibre of the outer bran, which is easily removed by sifting, but does not affect the hard gluten coats. The grains are dried, then pulverized into various grades by a compressed cold-air blast, which dashes the grains into atoms with tremendous force. This is called *whole-wheat flour*, the name indicating that the whole of the gluten, or nutritive part of the flour, is retained. It is not sifted like other flours, but pulverized into all the varieties of *crushed wheat*, *coarse*

granulated and *fine granulated wheat*; each variety, even the finest flour, containing all that is valuable as food. Bread made with this flour has been found, after repeated trial, to be sweet and agreeable to the taste, light and spongy in texture, with none of the objectionable features of Graham bread, and answering fully all the demands of perfect nutrition.

"Cheap inferior Graham flour, made of poor flour mixed with bran, is worse than no food at all." "The Arlington, the Franklin, and some other brands of whole-wheat flour, are highly indorsed by those familiar with them."

Note: Perhaps the most influential cookbook published in America before 1900, and "one of the most innovative, original cookbooks of all time, and precursor and predecessor of the most-enduring American cookbook, Fannie Farmer's *Boston Cooking School Cook Book* (1896)." "One reviewer at the time wrote: 'It is the trimmest, best arranged, best illustrated, most intelligible, manual of cookery as a high art, and as an economic art, that has appeared.'" "Lincoln's methods, often referred to as 'scientific cookery,' required cooks to understand systematic measurements, nutrition, digestion, and the chemistry of cooking, as well as the basics of keeping an orderly kitchen and serving as a gracious hostess."

Mary Johnson Lincoln lived 1844-1921. In the late 1870s, when her husband suffered from failing health, she "worked as a domestic to maintain an income... It was at this time that the Woman's Education Association (WEA) of Boston decided to establish a cooking school—the Boston Cooking School—which would become the most famous of the first American cooking schools." Lincoln wrote that the determining influence in its organization "was the return of Mrs. Sarah T. Hooper... who had seen the work at the South Kensington School on her way through London, and came home filled with enthusiasm to have similar work in Boston, especially for the benefit of the poor and those who would work out as cooks.' Hooper, an active member of the WEA, became the first president, and hired Joanna Sweeney and Maria Parloa to teach classes." Lincoln soon became a teacher as well (MSU biography). Address: Boston Cooking School, Boston, Massachusetts.

1232. Yûeki shôyu seizô-hô hiketsu [Secrets of making fine, profitable shoyu]. 1884. Japan. [Jap]*

1233. *Gardeners' Chronicle (London)*, 1885. Japanese food vegetable products. 23:51. Jan. 10. New Series.

• **Summary:** This is the conclusion of an article begun in the 20 Dec. 1884 issue. "Soy. Two preparations from the Soy Bean (*Glycine soja*), besides that already referred to, deserve mentioning—namely, miso, a fermented substance; and shoyu, or soy itself. The first is a curious preparation, described as follows:—There are many ways of making miso, differing very little from each other; the kind containing the largest quantity of yeast is considered the best. The usual mode

is after soaking Soy Beans in water for about two hours to put them into a suitable vessel and steam them; then, after mixing them with salt and yeast, they are removed to wooden plates; then the ingredients are very evenly mixed, the liquid is put into casks, and is then left untouched for upwards of a year. Another method is to soak a quantity of yellow Soy Beans in water for a night, then boil them in a large kettle, and as soon as the water in the kettle has evaporated, and the beans show a reddish-yellow colour, they are removed to a mortar and pounded, after which they are placed on mats. When they are thoroughly cooled they are shaped into balls as large as hand-balls, cut with a knife into flat pieces about an eighth of an inch thick, and placed on mats shaped like scales of fish. As soon as mould appears upon them they are taken, crushed into small pieces, and exposed to the rays of the sun for a day or two. When nearly dry, salt and water are added to them, and the whole is pounded in a mortar and then left in a cask for a month or two, and sometimes longer, when the preceding process will be repeated. Finally, if it is sealed up in casks it will never deteriorate. It is in prime condition when three years old. It forms one of the most necessary articles of food in Japan, and has been used from time immemorial, both by nobles and men of inferior rank. It is made into a soup, and is one of the courses served up as a principal article of everyday diet. The mode of preparing the soup is to rub the miso around an earthen bowl, into which a suitable quantity of water has been poured. It is then filtered through a sieve, and vegetables added according to taste; the whole is then boiled and served up. Miso is also used to give an agreeable flavour by mixing it with other food, and it is likewise mixed with condiments, as Japanese Pepper, Ginger, Horse-Radish, Chillies, Sesame, Poppy seeds, &c.

“Soy [sauce] or *Shoyu*, is perhaps the chief product of the Soy Bean. It consists of a mixture of these Beans, Wheat, salt, and water. The mode of preparing it is to thoroughly boil, after washing in a cask with water, fifty parts of Beans, and to parch about fifty parts of Wheat in a pan for a little while and thoroughly boil it, after grinding on a stone mill: when these two substances are mixed together and kept in a warm room for about four days, the substances are converted into a yellow flour-like matter: this is yeast. This yeast is then thrown into a mixture of salt and water, and afterwards thoroughly cooled, then boiled in a large kettle, and stirred with a Bamboo instrument twice a day in summer, and once a day in winter. After the lapse of three years, the sediment is poured into a bag then put into a small tub and submitted to strong pressure by means of a bar at the end of which hangs a heavy weight. The fluid expressed is poured into a kettle and submitted to a heat of not more than 80°; it is again removed to a large tub and set away for a night, when it becomes a deep black colour, and acquires a very delicious taste.

“Soy is one of the most valuable foods, and is in daily use; mixed with several kinds of food it imparts to them a delicious flavour. It is universally liked, and is really

indispensable in the Japanese kitchen. The quantity annually consumed in Japan is extremely large, and of late years the article has been exported.”

• **Summary:** This is a reprint of a two-part article originally published in *Gardeners' Chronicle* (London; 20 Dec. 1884 and 10 Jan. 1885). It describes: Fruit of the maidenhair tree (*Ginkgo biloba*), *Langenaria vulgaris* or kau-pio [kanpyo, kampyo?], *Agaricus campestris* or Shii-take [shiitake] mushrooms, agar-agar or kanten, frozen kouniakou [konnyaku], katakuri starch, kuzu starch, warabi starch, umiboshi [umeboshi]: salted and dried plums, kasadyuke (kasuzuke, made from white melons), and two preparations from the Soy Bean: miso, and shoyu or soy itself. For details, see the original articles. Address: London.

1236. Grisard, Jules. 1885. Cinquième section. Séance du 10 Mars 1885 [Fifth section. Meeting of 10 March 1885]. *Bulletin de la Société d'Acclimatation* 32:321-25. May. [Fre]

• **Summary:** Mr. Paillieux gives a lecture on two subjects: Shoyu (*Le Shoyu*) and *Le Haricot radié* (which appears to be a confused mixture of the green mung bean and the red azuki bean). “In 1880 I published in this bulletin an extended article about the chemical composition, varieties, culture, and uses of the soybean (*du Soya*)... Today I would like to call your attention again to *Shoyu*, a precious sauce which the Japanese could not live without, and to provide the means to taste it by distributing to each of you some small flasks that contain a sufficient quantity of it.

“You do not have to thank me for my generosity; these flasks were given to me by MM. J. de Vigan and Company, a large house importing Japanese and Chinese products...”

“I beg you not to confuse *Shoyu* with *India-Soy*, which is sold in London and even in Paris; the latter is only a poor imitation.

Note: Where and how is India-Soy made? What are the major differences in sensory qualities between the two sauces?

“*Shoyu* is not a condiment in the sense that we normally attach to this word. It does not have a pungent, heating taste like pepper, mustard, chili peppers, etc. To the contrary, it is refreshing. MM. de Vigan can speak of it with reason and precision, for they consume a bottle a week of it, as much for their children as for themselves.

“The Japanese put *Shoyu* on all that they eat, and according to all appearances, we would be tempted in France

to make an immoderate usage of it when we begin to use it.

"I shall not speak to you of Japanese cuisine, which to me is strongly suspect, but I shall tell you that for me *Shoyu* can, in many cases, replace meat stock, quite a unique thing, but that explains itself perhaps by the notable proportion of fat that soybeans contain.

"A teaspoon of Shoyu in an ordinary broth makes it much better. It does wonders in *court-bouillon* for the cooking of fish. It combines advantageously with beefsteak stock. In a salad with cold meat, it has a very good effect. Finally, it is incomparable in scrambled eggs (*oeufs brouillés*).

"The house Potel and Chabot, whose chef is our colleague Mr. Lhermitte, served the table of the Japanese mission in 1878. He assures me that Shoyu is excellent in bean salads and unsurpassed with eggs, whatever the mode of preparation.

"You see that it is not necessary to be Japanese to multiply the uses of Shoyu. When a first-rate chef (*cordon-bleu*) has it, his/her cooking is transformed and becomes so much better that one does not perceive the use made of the famous sauce, at a moderate dose.

"Here, gentlemen, is a recipe for preparing Shoyu, made in France by my excellent correspondent Dr. Hénon who had learned it in Japan:

"Take two parts naked barley or wheat and three parts soybean (*Daïdzu* (*Soya*)). Next soak for a day and a night in soft (non-calcareous) water. Then steam until completely cooked. The grains need not pop open but must be tender. Mix the two grains then spread them out in beds 2-3 cm high in wooden trays that are kept in a place that is fairly warm, neither too dry nor too humid. The grains will mold in 12-15 days, according to the season. The best time is spring or autumn. The mold must be greenish blue, thick and resembling velvet.

"The big red or black molds are worthless; discard them as soon as they appear. When the grains are completely covered with mold and form a solid mass, expose them to the sun. When they are dry, rub them between the hands and sift them to get rid of the powder (mold spores?) produced by the moldy debris (*la poussière produite par les débris des moisissures*). At this time, take two parts salt for three parts molded grains; place in barrels or earthenware vases with a sufficient quantity of water to cover all with 3-4 inches of liquid."

"Stir the mixture up from time to time and wait three to six months, then filter the sauce through a sieve. It can be stored in casks or bottles for several years, and for my taste, replaces broth or meat stock quite well in cooking.

"I do not know," adds my correspondent, 'how much Shoyu is exported from Japan or how much is consumed in that country, but it is the basis of Japanese cuisine. It replaces butter, oil, fat, and meat stock. All beans, fish, and pasta ordinarily are accompanied by Shoyu. There is not a village,

no matter how small it may be, that does not Shoyu makers in it. In addition, it is made often in particular houses.

"During my sojourn in Japan, the price of Shoyu varied, according to its quality, from 8-12 *sen* (40-60 centimes) per *sho*, that is, 1.80 liters.'

"I published two other procedures, practiced in industry, that present notable differences with the household recipe that I just gave you.

"In one it is said that the grains ought to ferment in hermetically-sealed chambers, with the exception of two windows placed at the height of a man which allow surveillance of the operation.

"In the other, they prescribe a particular preparation of the salt destined for production of Shoyu.

"I do not give you the text of these documents. They are rather drawn out and are found in the report I published on soybeans. I do not want to abuse your kind attention."

At the end of the meeting, Mr. Paillieux distributed Shoyu to the attendees. Address: Secretary, France.

1237. *Brisbane Courier* (Queensland, Australia).1885.

Imports (A special charge is made on consignees' announcements inserted in this column). June 23. p. 4.

• **Summary:** "De Bay, s. [steamer], from Hongkong:... 30 cases 20 boxes, 10 packages and 38 bundles tea, 10 cases eggs, 4 boxes opium, 50 cases oil, 2,693 bags and 2 boxes rice, 5 boxes wine, 1 box beans,... 2 boxes beansticks [probably dry yuba sticks],... 29 cases soy [sauce],... boxes bean cake [fermented tofu],... 4 boxes bean sauce,... 4 boxes sauce beans, 4 packages ginger,..."

Note: This is the earliest English-language document seen (May 2012) that uses the word "beansticks" to refer to what are probably dried yuba sticks.

1238. *New York Times*.1885. Wants to get his judgment. July 3. p. 1.

• **Summary:** "Chicago, July 2.—Five or six years ago Lea & Perrins, an English firm, manufacturers of Worcestershire sauce, filed a petition to prevent Frank Deakin from infringing on their trade mark. For a time they obtained an injunction, but it was dissolved, Judge Drummond holding the trade mark invalid. Deakin subsequently, after many vicissitudes, obtained a decree for over \$9,000 against Lea & Perrins. Their sureties on the injunction bond not having been able to collect the amount, he has filed a creditor's bill against Lea & Perrins, their New-York agents, and all the leading wholesale grocery firms of this city, to reach any money the grocers may owe to Lea & Perrins for goods bought of the latter. Among the defendants are Franklin MacVeagh, the new Government Director of the Union Pacific Railway; L.C. Pardee, and C. Jevre."

1239. Balfour, Edward. 1885. The Cyclopædia of India and of eastern and southern Asia, commercial, industrial,

and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 3rd ed.: *Glycine hispida*, Benth. London: Bernard Quaritch. See vol. 1, p. 1213. 26 cm.

• **Summary:** *Soja hispida*, Moench, from *Glycys*, sweet, the roots and leaves of most of the species being so. An annual herb of India, China, and Japan; the main ingredient of the Soja condiment. *G. Soja*, Sieb, is said to be distinct from *G. hispida*.

There follows a detailed description of *Glycine Sinensis* [Wisteria or Wistaria], considered one of the most beautiful plants in Chinese gardens. Address: 2 Oxford Square, Hyde Park, London [England]. Founder of the Madras Muhammadan Library; of the Government Central Museum, Madras; of the Mysore Museum, Bangalore [India].

1240. Balfour, Edward. 1885. The Cyclopædia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 3rd ed.: Leguminosae. London: Bernard Quaritch. See vol. 2, p. 697-98. 26 cm.

• **Summary:** “Leguminosae is a name of the Fabaceae or bean tribe, q.v. Leguminous and cruciferous plants occupy the largest part of the Chinese kitchen garden; many sorts of peas and beans are cultivated, and the pods and seeds of two species of *dolichos* are eaten, and the beans of another species made into soy by boiling and powdering the kernels and then fermenting them with yeast, and mixing other ingredients, according to the taste of the maker or purchaser. Peas and beans form important objects of culture, and the condiment called soy (a word derived from the Japanese Soya) is prepared chiefly from a species of *dolichos*. One of the commonest modes of making this condiment is to skin the beans and grind them to flour, which is mixed with water and powdered gypsum or turmeric. The common Chinese eat few meals without the addition of one form or other of the bean-curd or bean-jelly. The soy was at one time largely used as a condiment in the several countries of Europe, but has been displaced for others. See Fabaceae. [‘The bean tribe, leguminous plants.’ Soy is not mentioned.]” Address: 2 Oxford Square, Hyde Park, London [England]. Founder of the Madras Muhammadan Library; of the Government Central Museum, Madras; of the Mysore Museum, Bangalore [India].

1241. Balfour, Edward. 1885. The Cyclopædia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures. 3rd ed.: Soy [sauce]. Benth. London: Bernard Quaritch. See vol. 3, p. 715. 26 cm.

• **Summary:** This entry is shorter than and different, in parts, from its counterpart in the 1873 edition. New text: “Chinese

use *Soja hispida* pulse when ripe for the manufacture of an oil, and give the remnant of the grain, together with stalks and leaves of the plant, as a food for cattle. Its cultivation has become general in Syria [sic, Styria], Dalmatia [in Croatia], and Hungary. In the two former countries, the grain, after being allowed to ripen, is threshed out and roasted, and then employed for making coffee. In China, the grains are soaked till they swell and become soft, and then cooked like the small sort of beans. In other places, the seeds are set in a very damp, watery soil, and kept in darkness until they sprout up into a long white stalk, 4 or 5 inches high, which is then cut and served up after the manner of a salad. A sort of cheese, consumed in quantities by the poorer people both in China and Japan, is made from *Soja hispida*.

Note: This appears to be the earliest document seen (June 2007) concerning soybeans in Syria, or the cultivation of soybeans in Syria. However, Balfour got his information about Syria, Dalmatia, and Hungary from Friedrich Haberlandt’s classic book *The Soybean (Die Sojabohne)*, the only early work in which Dalmatia and Hungary are both discussed. The third place, however, is Styria (Steiermark in German), not Syria! The next earliest reliable document concerning cultivation of soybeans in Syria was published in 1975, and describes soybean trials in Syria in April 1974. Address: 2 Oxford Square, Hyde Park, London [England]. Founder of the Madras Muhammadan Library; of the Government Central Museum, Madras; of the Mysore Museum, Bangalore [India].

1242. Kenney-Herbert, A.R. (Arthur Robert; pseudonym “Wyvern”). 1885. Culinary jottings. A treatise in thirty chapters on reformed cookery for Anglo-Indian exiles, based upon modern English, and continental principles,... 5th ed. Madras, India: Higginbotham & Co.; London: Richardson and Co. x + 553 p. Index. First edition published in late 1878 or 1879. 4th ed. was 1883.

• **Summary:** The need for “... a more modern description than that time-honoured and, in its day, excellent work ‘*Indian Domestic Cookery*’ [Riddell 1849] must have been long felt by the busy housewife of Madras” (p. 1)

“All native cooks dearly love the spice box, and they all reverence ‘Worcester Sauce.’ Now, I consider the latter too powerful an element by far for indiscriminate use in the kitchen, especially so in India where our cooks are inclined to over-flavour everything. If in the house at all, the proper place for this sauce is the cruet-stand where it can be seized in an emergency to drown mistakes, and assist us in swallowing food that we might otherwise decline” (p. 16). Note: Throughout this book (it is mentioned on 7 pages) it is called “Worcester Sauce.”

“Amongst sauces I consider ‘Harvey’ the best for general use; Sutton’s ‘Empress of India,’ is a strong sauce with a real flavour of mushrooms; Moir’s sauces and “Reading sauce” are very trustworthy, and there are others

which, no doubt, commend themselves to different palates, but I denounce ‘Worcester sauce’ and ‘Tapp’s sauce’ as agents far too powerful to be trusted to the hands of the native cook. Sutton’s essence of anchovies is said to possess the charm of not clotting, or forming a stoppage in the neck of the bottle. I have a deep respect for both walnut and mushroom ketchup, soy [sauce], and tomato conserve” (p. 28).

This book contains three chapters titled “Sauces.” All of the recipes are written in prose form rather than in modern recipe form with a list of ingredients followed by the process. Yet recipe names and amounts are given.

“Harvey sauce” is mentioned on 8 pages, always favorably. “Ketchup” is mentioned on 26 pages; of these 19 mention “mushroom ketchup” and 3 mention “walnut ketchup.”

Note: The author, under his real name, also wrote a popular book on vegetarianism (1904-1907). Address: Colonel, Ooyacamund [Udagamandalam, a popular hill station in the Nilgiri Hills, in today’s southeast Indian state of Tamil Nadu].

1243. Koibuchi, Chûho. 1885. *Shôyu kashizeisoku* [Tax regulations concerning shoyu used in making Japanese-style confections]. Kôfu [Yamanashi prefecture], Japan: Published by the author. Unpaginated (7 chô) 19 cm. [Jap]*

• **Summary:** Note: This may include the use of shoyu in making rice crackers (*o-senbei*).

1244. Mene, Édouard. 1885. *Des productions végétales du Japon* [The vegetable products of Japan]. Paris: Au Siège de la Société Nationale d’Acclimatation. 592 p. Index. 24 cm. [34 soy ref. Fre]

• **Summary:** The title page states in small letters: *Extrait du Bulletin de la Société Nationale d’Acclimatation*, indicating that much of the material in this book is based on articles previously published in this French-language Bulletin. However many other early books on Japanese agriculture have also been consulted and are carefully cited.

In the Introduction, the author explains that he was appointed by the Society for Acclimatization to prepare this report on the vegetable products of Japan which had been exhibited at the Universal Exposition of Paris in 1878—in two parts. Those displayed by the Japanese firm Trocadero, and those displayed in the galleries of the palace at Champ-de-Mars. The author and many others were deeply impressed by this exhibition.

Grains (class 69, p. 31): Wheat or rice are mixed with beans or peas and fermented to make shoyu and miso. Shoyu is one of the most widely used condiments in Japanese cuisine. The method of production is described briefly. Among the condiments displayed in class 74 were a number of flasks of shoyu from Tokyo.

Legumes (p. 40-47): Discusses soybeans, tofu, azuki

beans (*Phaseolus radiatus* var. *subtrilobata*, p. 42-44; incl. yayenari, red, white, black, and yellowish azuki, Dainagon azuki, azuki flour, an, yokan), shoyu, soybeans (*Pois oléagineux*, *Soja hispida*, p. 45-46; incl. Kuro-mame {Black soybeans}, various colors and shapes of dry soybeans {green, yellowish, large yellowish, greenish black, brownish red, white, large red}).

There is also a special, long section on soybeans (*Soja hispida*. *O mame*: *Daizu*; p. 270-83) and soyfoods. In the Japanese exposition, the display of useful products (*tableau des productions utiles*) designates: No. 24. *Kuro-mame*. Black-seeded soybeans, the size of an average sized haricot bean. No. 25. *Shiro-mame*. White-seeded soybeans, spotted / flecked / speckled / mottled (*tachetées*) with gray. No. 26. *Ao-mame*. Greenish-seeded soybeans. No. 34. *Gankui-mame*. Black-seeded soybeans, flecked with white.

The soybean (*Le Soja*) is cultivated in Japan, India, Ceylon, the Malacca peninsula [today’s Malaysia], the Philippine islands, Borneo, Java, the kingdom of Siam, Cochin China, Tongkin (*Tong-King*), and throughout China, primarily in Mongolia and in the provinces of Henan / Honan, Liaoning (*Shenking*), Shandong / Shantung, and Shanxi / Shansi (*Chan-si*).

The Chinese exposition (class 73) contained samples of all the varieties of soya cultivated in all the provinces of the empire. Nos. 2991 to 3000. Green, white, black, yellow, striped or variegated, and reddish soybeans, provided by the Chinese customs office at Newchwang. Nos. 3014-16. Yellow, black, and green soybeans from the customs office at Tientsin. Nos. 3058-61. Yellow, green, and black soybeans from customs at Yantai / Chefoo. No. 3091. Yellow soybean from customs at Chinkiang. Nos. 3013-19. White, red, black, and yellow soybeans from customs at Shanghai. Nos. 3125-28. White, black, red, and green soybeans from customs at Wenzhou / Wenchow. Nos. 3152-56. White, green, and black soybeans from customs at Kao-hsiung (*Takow*).

The soybean is one of the plants most widely used in Japan and China for both food and industrial purposes. As indicated previously, shoyu, miso, and tofu are indispensable to the Japanese diet. Samples of these products were displayed in the Japanese exhibit in class 74 (condiments and stimulants); they came from Tokyo and from the province of Hizen, mainly from the town of Nagasaki. In the Chinese exhibit, also in class 74, were samples of (*soye*) or (*soya*) which are similar to Japanese shoyu but are called *Chiang-yu* (*Tsiang-yeou*) in China. They were provided by the customs offices at Yantai / Chefoo, Ning-po, Wenzhou / Wenchow, and Canton. For aroma, the Chinese often add star anise, green anise, and orange peel. Chinese soy sauce is made from yellow soybeans (*Houang-téou*).

Note: This is the earliest French-language document seen (April 2012) that uses the term *Chiang-yu* to refer to soy sauce.

Note: This is the earliest document seen (Jan. 2006)

describing a soy sauce made with star anise, green anise, orange peel or other spices or herbs outside of Indonesia.

A detailed description of the method for making Japanese shoyu is given, excerpted from the book *Le Japon à l'Exposition universelle de 1878* [Japan at the Universal Exposition of 1878] (1878, vol. II, p. 124). Additional excerpts concerning shoyu, miso, and tofu are taken from: Simon 1862, Kaempfer 1712, *Bulletin of the Society for Acclimatization* 1880 (p. 248), and Champion 1866.

In France, Mr. Vilmorin and Dr. Adrien Sicard (of Marseilles), who are both involved with soybean cultivation, have prepared soy cheese (*fromage de Soja*) numerous times. Dr. Sicard has made both the white cheese [probably tofu] and the red cheese; the latter is rolled in a powder made by grinding red sandalwood (*santal*; *Pterocarpus santalinus*), mace, and cinnamon (p. 276).

One of the most important soy products is the oil, which is obtained from the seeds—especially the large yellow soybeans that the Chinese call *Houang-téou*. The Japanese do not make soy oil (*huile de Soja*) but in China manufacture of this product gives rise to considerable commerce. Fremy (1855) found that soybean seeds contain 18% oil. The oil is a drying oil, yellow in color and with a special odor and a taste of dried legumes, similar to that of peas. It is used in cooking and illumination. In China, quite a few soy oil factories are found at Calfond in Henan, at Tsinan in Shantung, and at Tayeurn in Shanxi. But the center of soy oil production in China is Ning-po in Zhejiang / Chekiang. From the port of Ning-po and from a port on the island of *Tcheou-chan* [*Zhoushan*?] a large number of junks, carrying only soy oil, depart. Two other manufacturing centers are Newchwang and Chefoo. There follows a detailed description (p. 276-77) of how soy oil is obtained from soybeans.

Another common use is as fermented black soybeans (*Chi*) which (according to Stanislas Julien) contain soybeans mixed with ginger and salt. Kiu-tsee is a fermented soy product made in Canton; it contains red rice, soybeans, and the leaves of *Glycosmis citrifolia*. The Chinese also make a pasta and a sort of vermicelli from soybean seeds named *Hou-mi-téou*.

The stems and leaves make excellent forage. Black soybean seeds are often mixed with chopped soybean hay and fed to horses and mules in northern China and Manchuria.

In Japanese and Chinese medicine, black soybean seeds, ground and made into a decoction, are used to combat asthma attacks.

There follows a long history (p. 277-83) of the introduction of the soybean to Europe (starting at the Jardin des Plantes in Paris, in 1740 or 1779) and its acclimatization, based largely on articles from the *Bulletin of the Society for Acclimatization*. It includes a summary of the work of Prof. Haberlandt in central Europe.

Also discusses: Japanese plum trees (*Prunus mume*)

and umeboshi salt plums (p. 52-54, 466-67). Sesame seeds and sesame oil (p. 54-55). Amaranths (p. 63-64). Job's tears (*Coix lacryma*; p. 214-15). Kudzu, kuzu powder, and kuzu cloth (*Pueraria Thunbergiana*; p. 283-85). Peanuts and peanut oil (*Arachis hypogaea*, *Tojin-mame*; p. 286-87). Sesame seeds and sesame oil (*Sesamum indicum*, *Goma*; p. 518-20). Hemp and hemp oil (*Cannabis sativa*, *Asa*; p. 558-59). Address: Médecin de la Maison de Santé de Saint-John de Dieu [Paris, France].

1245. Official report of the Calcutta International Exhibition, 1883-84. 2 vols. 1885. Calcutta: Bengal Secretariat Press. See Vol. I, Part I, p. 270. 23 cm.

• **Summary:** On the title page: "Compiled under orders of the Executive Committee."

In Vol. I, Part I (which is 489 pages), page 270 states: "(6) Glycine Soja, (S. & Z.)—The Soy Bean.

"This is known in the vernacular as *Gari-kulay*, Beng. [Bengali]; *Bhat*, *bhatwan*, Hindi; *Tsu dza*, Naga. This plant is densely clothed with fine ferruginous hairs, is sub-erect; met with in the tropical regions and the outer Himalaya, from Kumaon to Sikkim, the Khasia and the Naga Hills to Upper Burma. Dr. Stewart mentions a field of bhat having been observed in Bissahir in the Panjab [Punjab; probably in today's Pakistan], altitude 6,000 feet. The plant is chiefly met with in a state of cultivation. Dr. Roxburgh first saw it from seed received from the Moluccas in 1798."

Note 1. The reference to "Dr. Stewart" almost surely refers to John Lindsay Stewart who wrote important books in 1867, 1869, and 1874 (plus at least 6 scientific articles) on the plants of the Punjab and north-west India. Two of these books have now been scanned in "full view" but we can find no statement resembling the one above attributed to Dr. Stewart. In 1864 Dr. Stewart was appointed the first Conservator of Forests in the Panjab. He died on 5 July 1873 in Dalhousie at age 41.

"De Candolle views it, and apparently correctly, as a native of Cochin China, Japan, and Java. But he remarks that "it is of modern introduction into India." "There are no common Indian names" for it. This seems to be a mistake; the plant is well known in India under the names given above. In Manipur and the Naga Hills it is one of the most abundant of pulses. Its Naga name is *Tsu dza*, a name not unlike *Soja*, but at the same time it may be viewed as related to the old Chinese name *Shu*. The Soya most likely reached India from China, passing by way of Assam. But while it cannot be said to be wild on the Naga hills, from the existence of so large a percentage of Japan and Java plants on those hills, the Soya might quite probably have had its most western home on the mountain tracts bordering on Assam. The importance of these hill tracts in settling questions of the nativity of cultivated Indian and Chinese plants has not been fully appreciated, and we might fairly anticipate that many statements at present accepted as facts

will be considerably modified with an extended knowledge of the wild and cultivated plants of the Assam and Chinese frontier. The thorough exploration of this region is very desirable.

Note 2. This document contains the 2nd earliest date seen for the cultivation of soybeans in north east India (1885).

Note 3. This is the earliest document seen (Sept. 2010) concerning the cultivation of soybeans in Manipur, or in Nagaland, both North East Indian states which shares a long border with Assam.

“This pulse is an important article of food in Tibet. It is made in India into a sauce called “Soy.” The advisability of extending its cultivation on the Himalayan tracts was pressed on the Government of India in 1882 by Professor Kinch, and the attention of local Governments also was called to it.”

Note 4. This is the earliest document seen (Sept. 2010) concerning soybeans in Tibet, or the cultivation of soybeans in Tibet. This document contains the earliest date seen for soybeans in Tibet, or the cultivation of soybeans in Tibet (1909). The source of these soybeans is unknown—as, unfortunately, is the author’s source of this information about soybeans in Tibet. Note that the lowest elevations in Tibet are about 12,000 to 15,000 feet, and the summer temperatures are quite cold. It seems unlikely that soybeans would grow under these conditions.

Note 5. Is it possible that soya is really “an important article of food in Tibet?” If so, what is the author’s source of information? We have seen no such source? Is it cultivated there? In what form is it consumed? Roasted soy flour might be used like *tsampa* (roasted barley flour).

In the section on “The oils, oil-seeds, soap...” we read (p. 305): “Very extensive collections of oilseeds were shown, especially those collected by the Chamber of Commerce, Bombay... The following may be enumerated as the most interesting and useful oils:...” Among the 71 oils listed, No. (36), page 308 is: “*Glycine Soja*, (Sieb.).—The Soy Bean. Large quantities of this seed are annually consumed in the manufacture of an edible oil.”

Other oils include: “(9) *Arachis hypogaea*, (Linn.).—The Ground-nut or Earth-nut. This may be described as a modern industry; the oil, as a substitute for olive oil, having within the past 30 or 40 years developed in an almost unprecedented manner.” France is a major importer of the nuts.

On the last two pages of Vol. I, Part I is a “Vernacular notice,” whose “Translation” is given. It begins: “It is hereby brought to the notice of the general public that an Exhibition of all things worthy to be shown from all countries of the world will be held in Calcutta on the Maidan from the 4th of December 1883 till the 1st of March 1884.” The frontispiece shows an aerial view of the Exhibition.

Note 6. Maidan, which means literally “open field,” is the largest urban park in Calcutta. As of Oct. 2010 it still exists, is widely used, and is the home to numerous

play grounds, including the famous cricketing venue Eden Gardens, several football stadia, and the Kolkata Race Course.

“(26) *Cocos nucifera*, (Linn.).—The Cocoa-nut.” “(68) *Sesamum indicum*, (Linn.).—Gingelly or Sesame Oil.” Address: Calcutta, Bengal [British India].

1246. Paillieux, Auguste; Bois, D. 1885. *Le potager d’un curieux. Histoire, culture et usages de 100 plantes comestibles, peu connues ou inconnues: Soya* [The inquisitive person’s kitchen garden. History, culture, and uses of 100 edible, little-known or unknown plants]. Paris: Librairie Agricole de la Maison Rustique. 294 p. See p. 261-65. 2nd ed. 1892. 3rd ed. 1899, p. 575-625. [1 soy ref. Fre] • **Summary:** The five-page section on Soya (p. 261-65) discusses its use primarily as a vegetable. For more about its broader uses, see Paillieux’s 1881 book titled *Le soya, sa composition chimique, sa culture et ses usages*. This section discusses: Englebert Kaempfer’s writings: “In Japan, this plant is named *Daidso* and surnamed *Mame*, that is to say a food grain *par excellence*.” Cultivation trials with four varieties conducted by the Society for Acclimatization: (1) Soybean from China, cultivated in Hungary, imported by MM. Vilmorin-Andrieux and Co. The seed color is pale yellow and the hilum is brown. This is the earliest maturing variety we have seen. (2) Soybean of Etampes. These seeds were distributed in 1874 by the Society for Acclimatization. The seeds are light yellow and the hilum is white. The plant is beautiful, very strong and very productive, but a little late in maturing. (3) The green soybean, originating from Japan, has rather roundish green seeds and a brown hilum. Its is not as early as the soybean from China, mentioned above. (4) The light green soybean, with a white hilum, has somewhat flattened seeds. It has come to us from both Japan and China. Its pods mature rather late. Vilmorin is importing more varieties, including a brown one. The variety in their 1880 catalog seemed a bit late.

There follow instructions for planting, cultivating, and harvesting soybeans (*Soya*). When the soybeans are fully developed, but before the pods begin to dry, they should be picked. At this stage they are as good as fresh flageolets—though the pods are a bit difficult to remove.

In the dried state, soybean seeds make a good food. Their taste is sweet and very agreeable. We have prepared them like ordinary white haricot beans. They should be soaked for 24 hours before cooking in water that is not hard, or in distilled water. For best results, add 3 grams per liter of soda crystals [sodium bicarbonate].

Soya is without doubt the best of all the coffee substitutes. Many housewives serve a mixture of coffee and chicory each morning for breakfast. But [ground] roasted soybeans need not be mixed with anything. It gives a good coffee *au lait* whose aroma resembles that of Mocha—though it is not as strong. The soybean is cultivated in Tyrol [Tirol]

and the Istrian Peninsula under the name of “coffee bean,” and we suppose this is also the case in Dalmatia and the south of Italy.

Mr. Heuzé in his book *Edible Plants (Plantes alimentaires)* gives the soybean the name *Dolic à café* (the coffee bean) and says that it is cultivated in some points in the departments of Ariège and of Haute-Garonne; we have not been able to verify this. Recently we learned from Mr. Faivre, of Beaune, that the soybean had been introduced, about 12 years ago, at Allery, a commune in Saône-et-Loire [in east central France] by Father Cretin (*M. l'abbé Crétin*), and that its seeds were used like coffee beans by many families in the country.

Mr. Faivre, an ardent and generous propagator / spreader of soya, sent us some seeds of the plant cultivated at Allery. They are brown and identical to those recently imported by Vilmorin. Finally, the engineer and head of one of our departments wrote us that he enjoys Soya each morning for breakfast, and that he prefers it to Mocha. He recommends roasting the seeds lightly.

If gardeners will set aside a little space for Soya each year in their gardens, they will obtain, at no extra expense, the coffee needed each morning by their families.

There is much more we know and could say about Soya. Worldwide, it occupies a place equal to wheat, corn, and potatoes. Indeed, it makes an excellent forage. It contains 18% oil. The cake, which remains after the oil is extracted, makes a powerful fertilizer. Under various forms, these seeds become part of the daily food of hundreds of millions of people. They are also used to feed animals, especially millions of horses and mules.

As numerous analyses have demonstrated, they constitute the richest and most complete food that one can desire. We recommend to the reader the recent work, done with great care by Pettet and Schou, in *Revue des Industries Chimiques et Agricoles* (1882).

Contents: Introduction. Discussion of individual plants arranged alphabetically by their French names. For each plant is given, below the French name: Scientific name, early sources, and plant family. Some of the plants discussed include: Amaranth (*Amarantus oleraceus*). *Glycine apios* (legume family). The peanut (*Arachis Hypogaea*; *Arachide*, *Pistache de terre*) (p. 20-23). Daikon or Japanese radish (*Raphanus Sativus*, L. var; *Daikon ou radis du Japon*). Azuki bean (*Phaseolus Radiatus*; *Haricot radié*) (p. 102-07; The section titled “A Java” mentions seasoning a dish with *Ketjap*, which it calls *la sauce noire*, or “black sauce”). Glutinous yam (*Dioscorea Batatas*; *Igname*). Konnyaku (*Amorphophallus Rivieri*; *Koniaku*). Kudzu (*Pueraria Thunbergiana*; *Kudzu*) (p. 154-64). White melon of Japan (*Cucumis Melo*; *Shiro uri*; *Melon blanc de Japon*). Myoga (*Zingiber mioga*; *Mioga*). Udo (*Aralia cordata*; *Oudo*). White quinoa (*Anserine Quinoa*; *Chenopodium quinoa*; *Quinoa blanc*) (p. 242-45). Chufa (*Cyperus esculentus*;

Souchet comestible, *Souchet sultan*, *Amande de terre*) (p. 256-61). Soya (*Dolichos Soja*; *Soja hispida* Moench; *Glycine Soja*; *Soya*) (p. 261-65). Bambarra groundnuts (*Voandzeia subterranea*; *Voandzou*) (p. 272-74). Table of contents (by both French name and scientific name). Address: 1. Member of la Société nationale d'Acclimatation; 2. Préparateur au Muséum. Member of the Société Botanique de France.

1247. The sacred books of China; The texts of Confucianism, translated by James Legge. Part III. The Li Ki, I-X. 1885. In: Max Mueller, ed. 1885. The Sacred Books of the East, translated by various scholars. Vol. XXVII. Oxford, England: At the Clarendon Press. [Eng]

• **Summary:** Vol. 27 of this series contains parts I-X of the *Li Ki*, and vol. 28 contains parts XI-XLVI. In vol. 27, page 27 states: “The rules for bringing in the dishes for the entertainment are the following:—The meat cooked on the bones is set on the left, and the sliced meat on the right; the rice is placed on the left of the parties on the mat, and the soup on their right; the minced and roasted meat are put outside (the chops and sliced meat), and the pickles and sauces inside;”

Note 1. Sauces apparently refers to those made with soy (See Swann 1950, p. 434 footnote).

Note 2. An index to all the Sacred Books of the East was published in 1988 in Deli, India, by Motilal B/Vanarsidass.

1248. Welch, Adonijah Strong. 1885. Report on the organization and management of seven agricultural schools in Germany, Belgium, and England. Washington, DC: Government Printing Office. 107 p. See p. 73-77. Made to Hon. George B. Loring, U.S. Commissioner of Agriculture.

• **Summary:** The last section is titled “The Royal Agricultural College at Cirencester, England,” where the author visited on 8 Feb. 1884. The subsection titled “Work of the laboratory” (p. 73) describes seven types of current original research, including: “7. On the soy bean (*Soja hispida*), its chemical composition and value as a food.

“The following is a detailed account of Prof. Edward Kinch’s description and analyses of the soy bean of China. I append his entire report of the results of this interesting investigation, because it not only shows the character of the work done in his laboratory, but indicates that this bean may be profitably grown in some parts of the Western States. Indeed, the same bean was grown on the experimental grounds of the Iowa Agricultural College last year, and showed a very large yield.”

Prof. Kinch’s report, titled “The Soy bean,” states: “This bean, sometimes known as the Japan pea and China bean, is the seed of the *Soja hispida*, Miquel (*Glycine hispida*, Moench; *Dolichos Soja*, Linné; *Glycine Soja*, Jaquin), a plant of the natural order Leguminosae,...” suborder Papilionaceae, and tribe Phaseolæ. Its natural habitat appears to be China and Japan; it also grows in Mongolia and in India, in

the Himalayas, and within the last few years it has been cultivated experimentally in several European countries. This bean is worth more than a passing notice, as it is the vegetable which approaches most nearly in its proximate chemical composition to animal food. This will be seen later on. There are a great number of varieties of the soy bean known, which differ to some extent in the shape, size, and especially in the color of the seed, and in a few minor particulars, but which seem to vary comparatively little in chemical composition. Dr. C.O. Harz has classified the principal varieties as follows:

“Group I.—*S. hispida platycarpa*. 1. *olivacea*. 2. *punctata*. 3. *melanosperma* (a. *vulgans*. b. *nigra*. c.

renisperma. d. *rubro-cincta*). 4. *platysperma*. 5. *parvula*.

“Group II.—*S. hispida tumida*. 6. *pallida* (Roxburgh). 7. *castanea*. 8. *atrosperma*.

“These names sufficiently indicate the nature of the variety as far as the seed is concerned. The soy bean is extensively cultivated in the north of China, whence it is exported, to the southern provinces; it is here pressed for the sake of its oil and the residual cake largely used as a food for man and beast, and also as a manure.

“In Japan it is known by names signifying the bean, and from it are made not only soy [sauce] but a paste known as *miso*, which is in constant request at nearly every meal, *tofu*, or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. An analysis of it is given below.

“These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, in nitrogenous matter, fat, and also in mineral constituents.

“The Buddhist priests, who are strictly forbidden to use animal food, consume considerable quantities of these beans, principally in the form of *miso*. The soy bean first attracted attention in Europe in 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, reporter on the products of India, called attention to it in the Catalogue of the Exhibits of the Indian Museum. Since then numerous experiments have been made on the European Continent on its growth, and also feeding experiments with the bean and its straw on different kinds of domestic animals have been prosecuted. Such experiments have been carried on by Wolling and Wein, at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieski, and others, at various stations in Germany, Austria, and Hungary, and experiments have also been made in France and in Italy.

“The proximate chemical composition of some of the different varieties, grown in different places, is now given and compared with some other foods of vegetable and animal origin.”

Table 1, titled “Percentage composition of the soy bean,” gives the percentage of six constituents (water, nitrogenous matter [protein], fat, carbohydrates, fiber, and ash) in seven different types of soy beans: Pale yellow (from Japan, China, Germany &c., India), brown, round black, and long black.

“It has been shown by Levallois (*Comptes-Rendus*) that the soybean contains a special variety of sugar, many of its properties resembling mellitose; this constitutes about 10 per cent, of the soluble carbohydrates. Of the nitrogenous matters nearly all is in the form of albumenoids; a small quantity, about 1 per cent., appears as a peptone-like body, and about one-tenth to two-tenths per cent. is non-albuminoid.”

Table 2, titled “Percentage composition,” compares the percentage content of the six constituents listed above for six foodstuffs: Peas, [common] beans, lupins, lentils. lean beef, and fat mutton.

“These analyses show the greater richness of the soy beans in nitrogenous matter and in fat than the common bean and pea, and that, when the water is equalized, it more nearly approaches meat in proximate composition. The only leguminous seed of common occurrence, which contains more oil than this bean, is the earth-nut or ground-nut, *Arachis hypogaea*, which is now so largely cultivated abroad for its oil and its cake. In order to compare the soy bean straw with hay and with other straws of like nature, the following average analyses are given:

Table 3 (untitled) compares the percentage content of the six constituents listed above for six feeds: Meadow hay, bean straw, pea straw, lentil straw, soy bean straw, soy bean hulls.

“A special variety of *Soja hispida* is cultivated in some parts of Japan as a fodder crop and cut just as the pods are fully formed. The hay made from this is much relished by horses, cattle, and sheep. A sample of a crop grown on the Imperial College of Agriculture Farm, Komaba, Tokiyo, gave on analysis: Water 15.0%, nitrogenous matter 19.8%, fiber 35.9%, ash 6.8%, carbohydrates and fat 22.5%. Total 100.0%.

“It will be seen that this hay exceeds even lentil straw in the amount of nitrogenous matter it contains.” Continued. Address: LL.D., Ames, Iowa.

1249. Zhang Zhidong; Miao Chuansun. 1885. *Shun tian fu zhi* [Gazetteer for the Peking metropolitan area (Shun Tian)]. China. Revised ed., 1889. [Chi]

• **Summary:** Wade-Giles reference: *Shun T'ien Fu Chih*, by Chang Chih-tung and Miao Ch'üan-sun. Qing dynasty. Hummel (1944): The author (1837-1909) was an official and reformer, native of Nan-p'i, Chihli. In 1877 he completed his term of office in Szechuan and returned to Peking, where he was engaged until 1881 as chief editor of the gazetteer of the Peking metropolitan area, entitled *Shun-t'ien-fu chih*, 130 + 1 chüan. The work was later completed under the chief editorship of Miao Ch'üan-sun and was printed in 1885. A

revised edition appeared in 1889.

Bo (1982): In the 50th volume of this work, it is said that “ch’ing chiang” is soy sauce.

1250. Hills & Smith. 1886. Olives! (Ad). *Hartford Daily Courant (Connecticut)*. Jan. 7. p. 4.

• **Summary:** “Imported Sauces! Worcestershire, Watkins, Anchovy, China Soy [sauce], Reading, John Bull, Harvey, London Club, Cashmere Chutney, Indian Mangoe Chutney.”

Note: This ad also appeared in the Jan. 8 and 15 issues of this newspaper. Address: 368 Asylum Street (Batterson’s Block).

1251. Scott, J. George (Shway Yoe). 1886. The Chinese brave. *Asiatic Quarterly Review (London)* 1(1):222-245. See p. 227. Jan.

• **Summary:** The Chinese are fighting the French. From Aug. to Nov. of 1884 “there was a seemingly endless stream of Chinese marching on the north-east frontier of Tongking” (p. 222).

Page 227: “The men lived in tents, or more often in rough and ready thatched huts built of branches of trees,... From ten to thirty men lived in each hut, and each section had its cooking pots, meals, and other arrangements in common, the fireplace being the primitive three bricks... The braves lived far from badly, according to their modest ideas of good living... Vegetable gardens sprang up in the neighbourhood. Numbers of peddlers with refreshment stalls followed the troops and ministered to the wants of the epicure by the supply of the bean-curd [tofu], the salt fish, and brews of different kinds of vegetables, from nettles to bamboo shoots, in which the peasant delights. The officers had their ragouts of chickens and ducks; their jars of soy [sauce], and peanut, and other oils; their bottles of wine, mostly in old champagne quarts, with Chinese labels of a magniloquence calculated to convert a teetotaler. On the whole, the Chinese armies were far from badly off.”

1252. Sunshine, Susan. 1886. Woman and home: Silk stockings as lares and penates. *Los Angeles Times*. June 13. p. 3.

• **Summary:** “Deviled crabs: Take cooked crabs and pick the meat up fine; make a mayonnaise salad dressing, with plenty of mustard and vinegar and cayenne pepper, a pinch of tyme [thyme] and a little finely chopped onion; season with Worcestershire sauce, mix with your meat,...”

1253. Forman, Allan. 1886. New York’s China-town: A dinner in Mong Sing Wah’s restaurant. *Washington Post*. July 25. p. 5.

• **Summary:** This restaurant is at 18 Mott Street. The proprietor is a “Celestial Delmonico.” “The only condiment is seow [Cantonese: *shi-yau* or *si-yau*, meaning “fermented black soybean sauce”], a sort of Celestial cousin to

Worcestershire sauce, and, in fact, its probable original. The evolution of Worcestershire sauce was somewhat as follows: Seow was taken from China to India, where hot spices were added to tickle the palates and livers of the English East Indians, who relished Chili sauce, army powder and red pepper. There it was known as soy [sauce]. From the East Indies to England, where it was still more spiced and flavored and patriotically called Worcestershire sauce. But the average Chinaman uses but little flavoring in his food, he prefers the natural taste.”

Includes 4 illustrations, three of the restaurant and one titled “Position of the hand while using the chop sticks.”

Note: This is the earliest English-language document seen (Sept. 2008) that mentions “chop-suey.” The Chinese host orders “Chow-chop-suey” and several other dishes with Chinese names at the restaurant.

1254. Tamari, Kizo. 1886. Vegetables in Japan. *Transactions of the American Horticultural Society* 4:77-80. For the year 1886.

• **Summary:** “Peas and beans are so numerous in varieties that they can not be easily described. Besides common cultivated peas and beans, we have asparagus beans with long and tender pods, ensiform beans [shaped like a sword blade], many kinds of kidney beans and soy beans (*soya hispida*), etc. Some [such as soy beans] are used green, in pod, and the seeds are mostly used for making different kinds of cakes [confections] or as parched beans [soynuts]. The most important crop among our pulse is the soy bean. The annual product is about the same as that of wheat, viz.: eleven and one-half [11.5] million bushels. This large amount is consumed in three different forms in our culinary uses, viz.: miso, shioyu [shoyu] and tofu. The first and second are made of the beans, wheat or barley, common salt and water; the first in the form of paste, and the second a liquid, commonly called Japanese sauce. The third is a white mass, made by coagulating extract juice of the bean with a solution of epsom [sic, Epsom] salts. This is called Chinese cheese by the English.

“Tofu is very extensively and commonly used, especially among those living apart from the seacoast, and where they can not get fresh fish, this is cooked and used as a substitute for fish. This bean is exceedingly rich in nitrogenous substances. It contains about thirty-seven per cent. of albuminoids, or over three times as much as wheat, barley, or oats, and one and a half times as much as peas or beans. So far, our people are the most extensive consumers of pulse of any people in the world. It seems to me that it is caused by the demand for nitrogenous food, which was almost excluded from animal food besides fishes on our table.”

Note 1. The latter refers to the fact that Buddhism in Japan prohibits the consumption of four-legged creatures.

Note 2. This volume is a report of the seventh annual

meeting, held at Cleveland, Ohio, September 7th to 10th, 1886. Address: Japan.

1255. *Brisbane Courier (Queensland, Australia)*. 1886.

Imports (A special charge is made on consignees' announcements inserted in this column). Nov. 20. p. 4.

• **Summary:** "Tannadine, from Hongkong: 10 baskets and 6 chests bean sticks [probably dried yuba sticks],... 1 basket bean curd [tofu], 10 baskets [soya] bean sauce, 3 baskets salt bean [probably fermented black beans / fermented black soybeans],... 6 boxes preserved plums,... 4 boxes beans,... 15 chests soy [sauce], 1 chest Joss sticks,..."

1256. *Chemist and Druggist (London)*. 1886. 55 253. A.D.–Sauce... 29:723. Nov. 27.

• **Summary:** "Sauce similar to some of the popular relishes may be made as follows:—Boil 24 lbs. of hog's liver for twelve hours with 10 gallons of water, frequently renewing the water. Chop the liver, work with the water, strain, and mix with the following: White vinegar 15 gallons. Walnut ketchup 10 gallons. Mushroom ketchup 10 gallons. Madeira wine 5 gallons. Table salt 25 lbs. Canton soy [China] 4 lbs. Allspice, powdered, 1 lb. Coriander, powdered, 1 lb. Mace, powdered, ½ lb. Cinnamon, powdered, ½ lb. Asafoetida [Asafoetida] (dissolved in brandy) ¼ lb."

1257. Church, Arthur Henry. 1886. *Food-grains of India*. London: Published for the Committee of Council on Education by Chapman and Hall, Ltd. 180 p. See p. 140–44. Illust. Index. 27 cm. 35 plates, with Fig. 26 being of the soybean. South Kensington Museum science handbooks. With 23-page supplement, 1901. Reprinted in New Delhi, India in 1983 by Ajay Book Service. [17 ref]

• **Summary:** "The soy-bean. *Glycine Soja*, Sieb. and Zucc. *Synonyms*—*Soja hispida* (Moench.); *Dolichos Soja* (Linn.); *Soja angustifolia* (Miq.). *Hind.* [Hindi]—Bhat, Bhatwan. *Punjab* [Panjabi]—Bhút. *Beng.* [Bengali]—Gari-kulay. *Naga*—Tsu-dza.

"This important bean is the seed of *Glycine Soja*, a small, sub-erect, trifoliate, hairy annual, with pods generally 3 to 4-seeded. It belongs to the natural order Leguminosae, sub-order Papilionaceae, tribe Phaseoleae, and sub-tribe Glycineae; 5 genera are included in this sub-tribe. *Glycine* contains about 12 species, chiefly Australian, but 3 are Indian, namely *G. javanica*, *G. pentaphylla*, and our present species.

"The soy-bean forms a considerable article of food in China and Japan. Since 1873 it has been successfully grown, as an experiment, in some of the warmer parts of Europe. It is widely spread in the outer Himalaya, and tropical regions from Kumaun to Sikkim, and the Khasir [Khasia / Khasi Hills], and the Naga Hills to Upper Burma. It is often cultivated, rather largely in Busti and Gorakhpur [in today's Uttar Pradesh], Patna, and Purniah [Purnea] Districts [both in

today's northeast India].

"This crop is generally grown by itself; the seeds are sown from June to September; the harvesting takes place between November and January. It is consequently a kharif crop. The seeds should be placed at a depth not exceeding 1 to 1½ inch; 18 plants may be left, after weeding and thinning, to the square yard. A peaty soil, or one rich in organic matter, suits the plants best; a calcareous soil is also favourable to its growth. Sulphate of potash is a good manure, nitrogen may be supplied either as nitrate of soda or, in the case of soils poor in organic matter, in the form of rape or mustard cake, but it is rarely needed, while large applications of nitrogenous manure exert a distinctly injurious effect upon the yield of beans. So far as we know, this very important, vigorous, and productive pulse is not attacked by any insect or parasitic fungus."

A full-page illustration (p. 141) shows the upper part of a soy-bean plant, with flowers and a lengthwise cross section of one of the pods.

"Very few vegetable products are so rich as this bean at once in albuminoids and in fat and oil, the former constituent amounting to 35 per cent., and the latter to 19. The cultivation of the pale large-seeded varieties should be extended."

A table titled "Composition of soy-beans" (p. 143) shows that the seeds contain 35.3% protein, 18.9% fat, 4.6% ash, 11.0% moisture. "The nutrient-ratio is here about 1:2, while the nutrient-value is 105. Potash forms nearly one-half, and phosphorus-pentoxide one-third of the ash of the soy-bean. Ripe soy-beans require long soaking, preferably in warm water, in order to render them soft.

"In China and Japan three preparations are extensively made from the soy-bean. Soy sauce is the best known of these, but more important are the soy or bean cheeses, and a kind of paste. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers and 7 per cent. of oil. The soy-bean may also be grown as a fodder plant. If cut just when the pods are fully formed it makes an excellent hay, superior to that of the lentil."

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the word "cheeses" or the term "bean cheeses" or (by implication) "soy cheeses" to refer to tofu.

Webster's New Geographical Dictionary (1988) defines Bengal (earlier Bengal Presidency) as a former province in northeast British India, and now a region encompassing West Bengal, India, and Bangladesh. The capital was Calcutta, located on the Hooghly River about 90 miles from its mouth. Calcutta is now the capital of West Bengal, India. Dhaka (Dacca) is the capital of Bangladesh. Bangladesh was formerly East Bengal (part of India, 1700s–1947), then East Pakistan, 1947–1971. It became Bangladesh in 1971.

This one of the earliest document seen (March 2001) that clearly refers to soybeans growing in Burma, but it is not clear whether these are cultivated or wild soybeans.

Page 127 discusses “The Pea-Nut. *Arachis hypogaea*, L.” Six local vernacular names are given. “This plant is probably of American origin, although it has long been cultivated in India, on the West Coast of Africa, and in many other tropical countries. There is a similar plant, *Voandzeia subterranea* [Bambara groundnut], allied to *Vigna*, which grows under the same conditions.” The composition of pea-nuts (in 100 parts and in 1 pound) is given. “Half the weight of pea-nuts is oil... Pea-nuts, after the greater part of the oil has been extracted by pressure, yield a cake well adapted for feeding cattle.” An excellent full-page illustration (line drawing, p. 126) shows the pea-nut plant with seeds growing under ground and details of flowers and seeds.

Note 2. This is the earliest document seen (March 2001) that mentions *Voandzeia subterranea*. Webster’s *Third New International Dictionary* has an entry for “voandzeia: [NL, from Malagasy *voandzou*]. A genus of tropical creeping herbs (family Leguminosae) with trifoliate leaves and small axillary flowers.” We later learn that one species, *Voandzeia subterranea* (L.) Thouras, is called the Bambara groundnut. The Bambara are a Negroid people of Upper Niger.

Note 3. This is the earliest English-language document seen (Oct. 1999) that contains the term “nitrate of soda” (as a fertilizer) in connection with soy-beans. It was later renamed “sodium nitrate.”

Note 4. This is the earliest document seen (Oct. 2002) that uses the word “kharif” to refer to the rainy season in South Asia.

Note 5. A long, positive review of this book appeared in the *Times of India* (25 Dec. 1886, p. 4), which mentioned that even though Church had never been to India, he derived his knowledge from reliable sources. The word “soy-beans” appeared twice in the review. Address: Prof. of Chemistry, Royal Academy of Arts, London.

1258. Gordon Cumming, C.F. (Constance Frederica). 1886. *Wanderings in China*. 2 vols. New edition. Edinburgh and London: William Blackwood and Sons. Illust. Index. 21 cm.

• **Summary:** The author is a Protestant Christian; she praises Christian mission work in China and sees all Chinese (except Christian converts) as heathens and idolaters. She traveled in Hong-Kong and China in late 1878 and 1879. Each entry is dated, like a journal.

Volume I: In describing a Chinese feast on the island of Nantai, she notes that beef is prohibited by Confucianism on utilitarian grounds; however sea-weed and “almonds with bean curd” are among the many delicacies served. All manner of delicate little dishes “were scattered about the table for the guests to play with between courses, and each was provided with a tiny silver plate for mustard, soy [sauce], or any other condiment” (p. 220-23). A footnote on

delicacies of old states that in the late 1500s at Launceston, England, porpoise was served with furmenty [frumenty; a dish of wheat boiled in milk and usually sweetened and spiced], almond-milk, sugar, and saffron (p. 222).

She describes a vegetarian meal at Kushan Monastery, noting that butter is considered as unfit for food, and milk is fit only when curdled and sweetened (p. 260).

Volume II: In a delicious vegetarian dinner at the Tien-Dong Buddhist Monastery, “pea-nuts” were served on the first tray. “Of course the whole was entirely vegetable [vegetarian], though some portions of corn-husk and other things tasted so very much like meat and preserved fish that we found it difficult to persuade ourselves that such was not the case” (p. 39). From vendors with portable street ovens in Peking: “Bean pudding in a crust of mashed potatoes, fried in oil, seemed to be in great demand...” (p. 281).

“But the favorite food here [Peking] is a cake made of bean curd. Common small beans are ground between two granite millstones like a hand quern. As the upper stone is turned, water is poured on, and a creamy white fluid oozes out, which flows into a tub, and is boiled with salt. The froth is skimmed off, and the curd is tied up in a cloth, put under pressure, and so formed into square cakes [tofu], which really taste rather like our own curds. They are generally, however, fried in oil, or else eaten with soy, which is a sauce obtained from the same bean when fermented.” (p. 282).

“Every now and again among the curious vehicles dragged noisily along the street, came a gigantic wheelbarrow, laden with wicker oil jars. It seems that the manufacture of oil from the yellow and white pulse bean is one of the great industries of Northern China, and thousands of junks are annually employed in transporting the oil and bean-cake to the Southern Provinces. The beans are first crushed in oilmills, whose revolving stone wheels are turned by bullocks. Some mills are so large as to employ about sixty bullocks. The beans are then steamed, and when very hot are (by a somewhat elaborate process) subjected to great pressure whereby the oil is expressed. It is filtered through a cloth, and is then generally poured into large jar-shaped baskets, each made to contain a hundred pounds of oil. They are lined with tough paper, which is glued to the wicker-work by a strong varnish, and is quite oil-proof. The narrow mouth of the jar is then covered with the same varnish paper, and no further packing is required even for a sea voyage. The oil, which is clear and pale, is used both for lamps and for cooking purposes.

“The bean-cake which remains after the oil has been expressed, is used as manure for the land, but is never given to cattle, who, however, are largely fed on the bean itself. As the aforesaid very popular pulse curd and soy sauce are both prepared from the same bean, it must be allowed that it holds an important place among the vegetable products of the land” (p. 283).

Miss Constance Frederica Gordon Cumming, a woman,

lived 1837-1924. A portrait photo of the author appears as the frontispiece of each volume. Address: Author and world traveler.

1259. Hepburn, James Curtis. 1886. A Japanese-English and English-Japanese dictionary. 3rd ed. Tokyo: Z.P. Maruya & Co., Limited. Yokohama, Shanghai, Hongkong & Singapore: Kelly & Walsh, Limited. London: Trübner & Co. 962 p. 22 cm.

• **Summary:** “During the fourteen years which have elapsed since the publication of the last edition of this Dictionary [in 1867], the Author has kept it constantly before him, correcting errors, improving and enlarging the definitions, and adding new words and illustrations, according as his time and other important engagements allowed him. But owing to the amazing changes and rapid advancement of the Japanese in every department, he has found it difficult to keep pace with the corresponding advance of the language in the increase of its vocabulary. He has endeavored, however, to collect these words, examine, classify and define them. Many, no doubt, have escaped his notice. Still there is an addition of more than ten thousand words to the Japanese and English part.”

New soy-related definitions in this edition, not found in or changed from the 1867 edition: Aburage: Anything fried in oil or grease, especially fried *tofu*. [fried tofu].

Amazake: Sweet *sake*, a kind of drink made of fermented rice.

Azuki: A small red bean, *Phaseolus radiatus*. Daizu: A kind of large white bean, *Soja hispida*.

Hiriôzu: A kind of food made of *tôfu* fried in oil.

Kinako: A flour made of beans.

Kirazu: The refuse of beans left in making *tôfu* [okara].

Note 1. This is the earliest purely English-language document seen (Aug. 2011) that uses the word “Kirazu” to refer to what is now called “okara” or “soy pulp.”

Koji: Barm or yeast made by the fermentation of rice or barley in the process of making *sake* or *soy* [sauce].

Miso: A kind of sauce made of beans, wheat and salt.

Miso wo suru: To rub miso in a mortar.

Sake: A fermented liquor brewed from rice. Sake wo kamosu: To brew sake. Sake ni yô: To be drunk. Sake no uye ga warui hito: One who behaves disorderly because of drink. Sake ni oboreru: To be addicted to drink [alcohol].

Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Syn. [Synonym]: Shitaji.

Tamari: Soy, *shôyu*. Note 2. This is the earliest English-language document seen (April 2012) that uses the word “Tamari” to refer to a type of Japanese soy sauce,

Tofu: A kind of food made of beans, bean curd.

Unohana: The *Deutzia scabra*; also refuse of beans from making *tofu*. Yuba: A kind of food made of beans, the skin of bean curd.

Terms listed unchanged from the 1867 edition include

Natto, and Yu-dofu.

No listing is given for: Daitokuji natto, Edamame [Yedamame], Hamanatto, or Okara.

The “English and Japanese dictionary,” which starts on page 771-73, contains the most important English words with numerous examples. Included are: Bean: Mame. Spec. Azuki, sora-mame, daizu, endo, ingen, sasage. Bean pod: Mame no saya. Bean curd: Tôfu.

Soy: Shôyu.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the word *Unohana* to refer to okara. Address: M.D., LL.D., Yokohama, Japan.

1260. Kew (England) Royal Botanic Gardens. 1886.

Official Guide to the Museums of Economic Botany. No.

1. Dicotyledons and gymnosperms. 2nd ed., revised and augmented. London: Printed by Eyre and Spottiswoode, for H.M. Stationery Office. 173 p. See p. 48 for soy. 19 cm.

• **Summary:** In the section titled “Leguminous order (*Leguminosæ*)” (p. 43-65), Case 28, No. 174 (p. 48) is about “Soy Beans (*Glycine Soja*, Sieb. and Zucc.). An annual, cultivated largely in China and India. From the seed the Chinese prepare a sauce known as Soy; a quantity of oil is also expressed from them, and the residue, after the expression of the oil, is extensively used for feeding cattle, as well as for manuring the land in China. It is made into large circular cakes similar to that exhibited, weighing about 60 lbs.”

Also mentioned in this section are Sunn hemp of India, lupins, indigo, tragacanth, ground nuts, gram or chick pea, lentils, (*Pueraria Thunbergiana*, the Ko of China or Kuzu of Japan), ordeal beans of Old Calabar, green gram of India (*Phaseolus Mungo*), and Bambarra ground nut (*Voandzeia subterranea*). Address: Kew, England.

1261. Kihara, Hakushô. 1886. Sake shôyu tsukurioke yôsekihyô [Chart showing the volumes of various sizes of containers (kegs) for sake, shoyu]. Tokyo: Takasaki Shûsuke. 176 p. 20 cm. [Jap]*

• **Summary:** Note: At this time, both sake and shoyu were sold in wooden kegs called *oke* in Japanese.

1262. Lanessan, J.-L. de. 1886. Les plantes utiles des colonies françaises [Useful plants of the French colonies]. Paris: Imprimerie Nationale. 990 p. See p. 710. [Fre]

• **Summary:** Dau-nanh is the name of the soybean in Cochinchina. Gives a botanical description of “*Dolichos Soia* or *Soja* L.—Annual, erect, fuzzy stalk, simple with ascending branches; ternate, oval velvety leaves; purplish flowers in simple bunches, axillary; calyx with five sharp divisions, the upper ones shorter;... oblong wings; slightly carinate; ten stamens, nine shorter; hispid hanging pod; whitish oval beans.

“In Japan they prepare with these beans and some

meat broth a sauce of great renown, *Sooju* or *Soja*, that the Chinese and Vietnamese also use to stimulate their appetite. They also make a white purée resembling coagulated milk, called *Teu-bu* [tofu] in China, where it is highly appreciated. Although it is rather insipid, it is neither disagreeable nor indigestible.”

Note: Meat broth is not used in preparing shoyu, which acquires a hearty, meaty flavor through the fermentation process. Address: Professeur Agregé d'Histoire Naturelle a la Faculte de Medecine de Paris, France.

1263. Rein, Johann Justus. 1886. Japan: Nach Reisen und Studien, im Auftrage der Koeniglich Preussischen Regierung dargestellt [Japan: Travels and researches undertaken at the cost of the Prussian government. Vol. II.]. Leipzig, Germany: Verlag von Wilhelm Engelmann. 679 p. See p. 5, 65-70, 123-27, 185, 649. Illust. Indexes (1 German and Latin, 1 Japanese). 2nd ed. 1905. [9 ref. Ger]

• **Summary:** A superb book, showing the high German art of studying other cultures. The many illustrations are either beautiful wood engravings (*Holzschnitte*), real photographs, or actual samples of paper or textiles (glued in). In the chapter on “Food plants” (*Nährpflanzen*), the following is a partial contents of the section on “Pulse or leguminous plants” (*Hülsenfrüchte oder Leguminosen*, p. 65-71): Introduction to crops cultivated in Japan. 1. The ground-nut and ground-nut oil. 2. The soybean: “Among the pulse of Japan (and not the less of China), the soy-bean ranks first in extent, variety of use, and value; and chemical analyses prove the empirical judgment is well founded. In point of nutriment, the soy-bean is of all vegetables the nearest to meat. It contains nearly two-fifths of its weight in legumin rich in nitrogen, and nearly one-sixth in fat. The soy-bean is to the inhabitants of Japan what their *garbanzos* (chick-peas) are to the Spanish, and their *feijao preto* (black beans) to the Brazilians. The author then describes the characteristics of the soy-bean, the work of Haberlandt with soy-beans in Austria, and the yields that he and his co-workers obtained.

“In Japan the varieties of soy-bean are distinguished—according to colour, as white (more properly yellowish), black, brownish red, green, and spotted; according to duration of growth [maturity] as early-ripening, middle-ripening, and late-ripening; according to form, as spherical, ellipsoidal, kidney-shaped, and compressed laterally; and according to use, as to those which serve primarily in making Shôyu (soy), Tôfu (bean-cheese), and Miso (a sort of sauce), and those eaten in any plain shape.”

Soy-bean varieties in Japan include: 1. “White (pea-yellow) soy-beans, Japanese Shiro-mame or Haku-daidzu. To this division belongs an early-ripening sort with very small seeds, called Goguwatsu-mame [Go-gatsu], or ‘five-months-kind,’ because it ripens in the fifth month of the old Japanese calendar, our July; also another small-seeded, early-ripening variety, the Wase-mame or Natsu-mame, that is, early and

summer-bean. These two are also called Tôfu-mame, because they are used chiefly in making Tôfu. Another sort serves to produce Miso. It is called Nakate-mame, ‘middle-late bean,’ its time of maturity occurring half-way between that of the early and late kinds. Its seeds are round and somewhat larger. The late ripening varieties, Okute-mame (late-bean), Maru-mame (bullet-bean), and Teppô-mame (gun-bean), or Aki-mame (autumn-bean) have, as their names indicate, mostly bullet-shaped seeds, which become harder and larger than the early ones. The variety last named is used in making Shôyu, while Maru-mame is valuable as horse-feed.

2. Black soy-beans, Japanese Kuro-mame or Koku-daidzu. These are eaten boiled with sugar, as an entrée, or as a relish to rice. There is a middle-late sub-species, with round, elliptical seeds, Kuro-mame, in short, and another like it with big, bullet-shaped beans is called Kuro-teppô-mame. And again there is a late-ripening sort with flat, elliptical seeds under several names.

3. Brown soy-beans, Japanese Katsu-daisu (thirsty soy-bean) are much less grown than the white and black sub-species, and are used like the latter. They are distinguished as Aka-mame, red soy-beans, round, reddish-brown in colour, in different varieties, and Cha-mame, tea beans, three light-brown sorts of small extent and significance.

4. Greenish or bluish green soy-beans, Japanese Ao-mame or Sei-daisu, are eaten mostly boiled and with sugar, like the black and brown-red varieties. And, with the brownish sorts, they are much less widely grown than the black and yellowish. The Japanese distinguish the following sub-species of Aô-mame [sic, Ao-mame]:—(a) Sei-hito,—epidermis green, inside a whitish yellow. (b) Nikuri-sei,—greenish throughout. Both sub-varieties run from roundish-ellipsoidal to a bullet roundness, are of medium size, and remind one of green peas. (c) Kage-mame, with pale green, round beans. 5. Speckled soy-beans, Japanese Furi-mame or Han-daidzu. This group is not important. Its cultivation is confined to a small area, in a few provinces. Its sub-varieties are known as:—(a) Kuro-kura-kake-mame, with a black spot on the saddle (eye), otherwise greenish; flat and with the outline of an egg. (b) Aka-kura-kake-mame, with a brown spot on the saddle (eye), otherwise yellowish-green, flat and drawn out long. (c) Furi-mame or Udzura-mame, speckled or spotted soy-bean, yellowish-green with many dark flecks. A rare variety, grown only in a few places, especially in Harima.

“Early-ripening soy-beans are sown as early as April in Southern Japan, in Central Japan during May. Those that ripen in autumn need much more warmth, and are sown, as a rule, one month later... Late-ripening Daidzu is also a favourite for planting along the edge of fields and on the new-built dykes of rice-fields.”

Returning to the work of Haberlandt: “At the end of his above-mentioned treatise, Haberlandt summed up in five noteworthy propositions, the results of his experiments with

the soy-bean and of its chemical analysis. His conclusions are as follows:

“(a) The acclimatization of the early-ripening sorts, particularly those with yellow and reddish brown seeds, appeared to have fully succeeded in Central Europe.

“(b) The seeds obtained were larger, heavier, and handsomer than those from Eastern Asia, the chemical composition, however, remaining unchanged.

“(c) The soy-plant resists light spring frosts better than our young beans, and endures greater dryness in summer than most leguminous plants, though otherwise much like other kinds of beans.

“(d) It is distinguished by heavy crops, besides furnishing, in its stems and leaves, either green or dried, a nourishing feed, of which cattle are very fond.

“(e) In their high percentage of protein and fat, they far excel all other pulse in nutritive quality; and when properly prepared are second to none in flavour.

“After such favourable judgments, it might have been expected that the soy-bean, at least in the warmer regions of the Austro-Hungarian monarchy, would soon become popular and generally cultivated. The result, however, was quite otherwise. The hopes which he had aroused in behalf of this plant seem to have disappeared with Haberlandt, who died in 1878.

3. Azuki beans (many varieties are named and described).

Two tables (p. 73-74) show the following: (1) Analysis of 10 different numbered samples of soybeans, empty pods, and straw and leaves. Eight are from Haberlandt's book *Die Sojabohne* [The Soybean] (1878), two are from Caplan, and one each from Mach, Senff, Levallois, and Kinch. (2) Comparative composition of 9 different legumes, including soybeans, azuki beans, common peas, broad beans / faba beans, lentils, yellow lupins, and peanuts. The soybean has by far the most crude protein, is second in fat (after peanuts), and is average in (minerals).

Foods made from soybeans (p. 123-27): Shoyu (*Shôyû*, *die japanische Bohnensauce*, auch *Soja*). Miso (made with rice koji [*Kôji* oder *fermentierender Reis*]). Tofu (*Tôfu*, *Bohnenkäse*, made with *Shio-no-nigari* (*Salzbitter*)) incl. dried-frozen tofu (*Kori-tôfu*, *gefrorener oder Eis-Tôfu*).

“Kori-tôfu, frozen or ice-Tôfu, is the spongy, horn-like substance that remains when common Tôfu is allowed to freeze and then thawed and dried in the sun, thus getting rid of most of its water. By Yuba [Yuba] is meant a third preparation, consisting of brownish, tough skins (*Häuten*), made by boiling the dissolved legumine of the Tôfu-process, with the addition of some wood-ashes, and then taking away in succession the skins that rise” (p. 126-27; see Rein 1889).

Note 1. This is the earliest German-language document seen (Oct. 2008) that contains the word Yuba.

The section on “Oil plants and their products” (p. 176-89) gives details on 13 plants and the oil obtained from them,

including: 1. Rapeseed oil. 2. Mustard oil. 3. Camellia oil. 4. Cottonseed oil. 5. Peanut oil. 6. Sesame oil. 7. Perilla oil (*Perilla ocymoides*). 11. Hempseed oil. Soybean oil is not one of these. However a table (p. 185) gives the average composition of various Japanese oilseeds (Source: E. Wolff et al.; Ollech 1884): Rapeseed, peanuts, cottonseed, sesame (brown and white), hemp seeds, shelled beech-nuts, and soybeans.

Note 2. Volume 1 was published in 1881. The title of volume 2 is *Land-und Forstwirtschaft, Industrie und Handel*. Johann Justus Rein lived 1835-1918.

Note 3. This is the earliest German-language document seen (Feb. 2004) that uses the term “kori-tôfu,” or “gefrorener Tôfu,” or “Eis Tôfu” to refer to dried-frozen tofu.

Note 4. Also discusses: Ame, midzu-ame, and barley malt syrup (p. 121-22). Fu, or baked wheat gluten cakes. Hemp, hempseed, and hempseed oil (p. 88, 177, 184-85). Kudzu (p. 75, 199, 217). Peanuts and peanut oil (p. 176-81, 185). Sea-weeds—especially marine algae (p. 93-96). Sesame seeds and oil (p. 88, 176-78, 181-82, 185). Address: Prof. of Geography, Univ. of Bonn, Germany.

1264. Yule, Henry; Burnell, Arthur Coke. 1886. *Hobson-Jobson: Being a glossary of Anglo-Indian colloquial words and phrases, and of kindred terms; etymological, historical, geographical, and discursive*. London: John Murray, Albemarle Street. xlviii + 870 p. See p. 651 (“soy”). 23 cm. [1166* ref. Eng]

• **Summary:** “Soy, s. A kind of condiment once popular. The word is Japanese *si-yau* [sic] (A young Japanese fellow-passenger gave the pronunciation clearly as *shô-yu*—A.B.), Chinese [Cantonese] *shi-yu*. It is made from the beans of a plant common in the Himalaya and E. Asia, and much cultivated, viz. *Glycine Soja*, Sieb. and Zucc. (*Soya hispida*, Moench.) boiled down and fermented.”

The authors then quote passages relating to soy from Lord King's *Life of John Locke* (1679), Dampier (1688), Ovington (1690), Kaempfer (1712), and Thunberg's *Travels* (1776).

Yule lived 1820-1889. A small illustration shows Arthur Burnell (lived 1840-1882).

Contents: Dedication to Sir George Yule, C.B., K.C.S.I. Address: 1. Living in Palermo; 2. Madras Civil Service, one of the most eminent modern Indian scholars.

1265. *Mataura Ensign* (Otago, New Zealand). 1887. The household. 6(636):2. Jan. 21

• **Summary:** “Worcestershire Sauce—Mix together 1½ gallons white wine vinegar, 1 gallon walnut catsup, 1 gallon mushroom catsup, ½ gallon Maderia [Madeira] wine, ½ gallon Canton soy [sauce; from China], 2½ pounds moist sugar, 19 ounces salt, 3 ounces powdered capsicum, 1½ ounces each of pimento and coriander, 1½ ounces chutney,

3/4 ounce each of cloves mace and cinnamon, and 6½ drams of assafoetida [asafoetida] dissolved in 1 pint brandy 20 above proof. Boil 2 pounds hog's liver for 12 hours in 1 gallon of water, adding water as required to keep the quantity; then mix the boiled liver thoroughly with the water; strain it through a coarse sieve. Add this to the sauce."

1266. Tahara, R. 1887. Shôyu bunseki setsu [Theory of shoyu analysis]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 61. p. 80-89. March. [Jap]

• **Summary:** The earliest study on the flavor of shoyu, and a very early study on the composition of shoyu.

1267. Hills & Smith. 1887. Relishes! (Ad). *Hartford Daily Courant (Connecticut)*. April 8. p. 4.

• **Summary:** "Imported Sauces: Worcestershire, Reading, John Bull, China Soy [sauce], Harvey, Beefsteak, Essence Anchovy, London Club, Mango Chutney and Cashmere Chutney, Mushroom Catsup, Walnut Catsup and Shrewsbury Catsup." Address: 368 Asylum Street (Batterson's Block).

1268. *Chemist and Druggist (London)*. 1887. Trade report. 30:590-93. May 14. See p. 593.

• **Summary:** This section begins: "Note to Retail Buyers:—It should be remembered that the quotations in this section are invariably the lowest net cash prices actually paid for large quantities in bulk." Commodities are listed alphabetically by name. These are prices on the London market.

"Soy is still selling steadily at 1s. 4d. per gallon for good China."

1269. Osawa, Kenji; Ueda, Keiji. 1887. Shokumotsu shôka no ryôhi (zokkô) [The quality of digestion of foods (continuation)]. *Chugai Iji Shinpo (Medical News, Foreign and Domestic, Tokyo)* No. 177. p. 16-21. Aug. [Jap]*

• **Summary:** A digestion experiment with tofu continued for two days, October 28-29, 1885. The subject, K.U., weighed 51.45 kg at the beginning and 49.36 kg at the end of the experiment. The diet consisted of tofu with some shoyu and starch. The following percentages of the basic nutrients were digested: Protein 96.1%. Fat 97.4%. Carbohydrates (incl. fiber) 88.4%. Ash 72.4%. Address: Physiological Institute, University of Tokyo.

1270. *Chemist and Druggist (London)*. 1887. Trade report. 31:326-29. Sept. 10. See p. 329.

• **Summary:** This section begins: "Note to Retail Buyers:—It should be remembered that the quotations in this section are invariably the lowest net cash prices actually paid for large quantities in bulk." Commodities are listed alphabetically by name. These are prices on the London market.

"Soy.—China has advanced to 1s. 3d. per gallon on the spot lately; while sales have been made 'to arrive' at 1s. 5½d. per gallon."

1271. Kellner, O.J. 1887. Zusammensetzung Japanischer landwirthschaftlicher und technischer Producte und Materialien [Composition of Japanese agricultural and technical products and materials]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens in Tokio (Yokohama)* 4(35):205-22. Sept. See p. 205, 208-09. [Ger]

• **Summary:** The introduction (p. 1) contains a list of publications on agricultural chemistry and chemical nutritional physiology published by this laboratory under Dr. Kellner's direction. These include investigations of seeds, hay, straw, manures, and technical products (alcoholic drinks and shoyu).

A large table (p. 8, probably based on Kellner's research) gives the German name, botanical name, Japanese name, and nutritional composition of 12 leguminous seeds and oilseeds (on a dry-weight basis, plus their ash), including soybeans (*Sojabohne*, *Soja hispida*, *daizu*), shelled peanuts (*Erdnuss*, *Arachis hypogaea*, *Nankin mame*), and sesame seeds (*Sesam*, *Sesamum orientale*, *goma*).

A discussion of the soybean (p. 209) notes that it is widely cultivated in Japan and also used to make a variety of other products that resemble those made from milk. Soybeans are not often consumed directly, but are used in the preparation of tofu (*Bohnenkäse*), miso, and shoyu sauce. A small table gives the nutritional composition of three additional soybean varieties that are used for shoyu production. They all contain less protein and more fat than the soybean from the previous large table.

Another large table (p. 215) gives the German name, botanical name, Japanese name, and nutritional composition of 12 plants purchased at a market in Tokyo, including: kuzu (-, *Pueraria Thunbergiana*, *kudzu*), peanuts (*Erdnuss*, *Arachis hypogaea*, *Tojin-mame*), and soybeans (*Sojabohne*, *Soja hispida*, *kari mame*). The soybeans contain 13.67% water. Their dry matter contains 18.11% raw protein, 3.07% ether extract [crude oil], 39.16% crude fiber, etc.

Other large tables give the composition of kudzu (p. 217), kombu (*Laminaria japonica*, p. 219), okara (*Tofukuchen*, *Tofurückstände*, p. 221), and various alcoholic beverages (p. 221, including sake {made from koji}, mirin, shirosake (white sake), white Kofu wine, and Sakurada beer brewed in Tokyo). A small table (p. 221) gives a nutritional analysis of three samples of shoyu, including the specific gravity (density relative to water), dry matter, organic matter, ash, and acid (as acetic acid). Address: PhD, Tokyo.

1272. *Chemist and Druggist (London)*. 1887. The manufacture of Japan soy. 31:613. Nov. 12.

• **Summary:** "At a recent meeting of German chemists a Mr. Erich communicated a paper on the preparation of Japan soy, a product of which the details of manufacture are as yet imperfectly known. Soy has been manufactured in Japan for

over a thousand years, and forms a very considerable article of consumption in that country and throughout the East. There are many factories of the condiment in the country, one of the largest being at Tokio, where considerably over one million gallons are specially prepared for export every year. The principal ingredients known to be used in the manufacture of soy are a very hard long-awned variety of barley, common salt, soya beans (*Dolichos soya*), a specially prepared ferment, and water. The soy beans are roasted like coffee, the barley is partly roasted and partly malted. The roasted parts of the barley and the beans are soaked in cold water, cooled, and preserved by the addition of a liberal dose of common salt. To this are added first a diastase solution, and afterwards a specially prepared ferment, which causes an extremely slow fermentation, but without any considerable formation of carbonic dioxide or alcohol. The degree of strength of the soy depends upon the time used in the process of manufacture, which varies from one to three years. If kept cool and out of the light soy can be kept good for a very long time, but the action of light and the free access of air cause fermentation.”

1273. *Chicago Tribune*. 1887. Dishes for the dinner: Astrological character of Greek and Roman gastronomy. Nov. 27. p. 28.

• **Summary:** Contains various recipes in sentence-style format. One describes how to prepare birds in jelly. “A tablespoon of Indian soy [sauce] will add to the brightness of the color.”

1274. *Scientific American*. 1887. The manufacture of Japan soy. 57(24):373. Dec. 10.

• **Summary:** “At a recent meeting of German chemists a Mr. Erich communicated a paper on the preparation of Japan soy, a product of which the details of manufacture are as yet imperfectly known. Soy has been manufactured in Japan for over a thousand years, and forms a very considerable article of consumption in that country and throughout the East. There are many factories of the condiment in the country, one of the largest being at Tokio, where considerably over one million gallons are specially prepared for export every year. The principal ingredients known to be used in the manufacture of soy are a very hard long-awned variety of barley, common salt, soya beans (*Dolichos soya*), a specially prepared ferment, and water. The soy beans are roasted like coffee, the barley is partly roasted and partly malted. The roasted parts of the barley and the beans are soaked in cold water, cooled, and preserved by the addition of a liberal dose of common salt. To this are added first a diastase solution, and afterward, a specially prepared ferment, which causes an extremely slow fermentation, but without any considerable formation of carbonic dioxide or alcohol. The degree of strength of the soy depends upon the time used in the process of manufacture, which varies from one to three years. If kept

cool and out of the light, soy can be kept good for a very long time, but the action of light and free access of air cause fermentation.”

1275. Gillette, Fanny Lemira. 1887. White House cook book: A selection of choice recipes... Chicago, Illinois: R.S. Peale & Co. 521 p. + [5] leaves of plates. Illust. Index. 26 cm.

• **Summary:** Worcestershire sauce is used as an ingredient in 9 recipes: Game soup (p. 26). Fish soup (p. 38). Baked halibut (p. 49). Roast wild duck (p. 85-86). Roast beef pie with potato crust (p. 103). Roast loin of veal (p. 111-12). Pork tenderloins (p. 129-30). Fish sauce No. 2 (p. 139). Brown sauce (p. 142). “Soy” [sauce] is not mentioned.

Peanuts are mentioned in 4 recipes: German custard. Roast chestnuts. Nut molasses candy. Candy roly poly.

Note: The term “White House” in the book’s title is a marketing ploy; the book contains no information about White House cookery except for a few photos of White House First Ladies. Later editions, however, were co-authored by White House steward Hugo Ziemann. Fanny Lemira Gillette lived 1828-1926 (MSU introduction). Address: New York City.

1276. Hepburn, James C. 1887. A Japanese-English and English-Japanese dictionary. Abridged by the author. Second edition. Revised and enlarged. Tokyo: Z.P. Maruya & Co., Limited. Yokohama: Kelly & Walsh, Limited. London: Truebner & Co. vi + 330 + 962 p. 16 cm.

• **Summary:** Soy-related definitions include: Dengaku: A kind of food made of baked *tôfu*.

Go: [Soy] Beans mashed into paste for making *tôfu*; also used by dyers to limit colors. Mame no go: [Soy] bean paste.

Go-koku [Gokoku]: The five cereals—wheat, rice, millet, beans, and sorghum.

Hitashi-mono [Hitashimono]: Beans or vegetables boiled or steeped in *shôyu* [shoyu].

Irimame: Parched peas [sic, parched soybeans = soynuts].

Kirazu: The refuse of beans left in making *tôfu*.

Mamemaki: The ceremony of scattering parched [soy] beans about to drive out evil spirits on the last evening of the old [lunar] year.

Toshi-koshi [Toshikoshi]: The crossing from the old to the new year; the ceremonies observed on the last day of the year,... when parched [soy] beans are scattered after sundown to drive off noxious influences and evil spirits. The parched beans used this evening, if kept and eaten when the first thunder of the new year is heard, are supposed to protect against lightning.

Tsui-na (*oni yarai*): The ceremony of driving evil spirits out of the house by scattering parched beans about on the last evening of the old year.

Yô-kan [yokan]: A kind of confectionery made of sugar and [azuki] beans.

Yuba: A kind of food made of beans.

James Curtis Hepburn lived 1815-1911. Address: M.D., LL.D., Tokyo, Japan.

1277. Parloa, Maria. 1887. *Miss Parloa's kitchen companion: A guide for all who would be good housekeepers*. Boston, Massachusetts: Published by Estes and Lauriat, for The Clover Publishing Co. 966 + [10] p. Illust. 22 cm. 19th ed.
• Summary: The section on “Relishes” states (p. 91): “Soy is a sauce made in China and Japan, it is a thick reddish-brown liquid, and is used in many fish sauces.”

In the section on “Cereals,” the subsection titled “Graham” (p. 93-94) says: “Graham is one of the most uncertain of the bread materials with which we have to deal. A large part of it is made by mixing a poor quality of flour with coarse bran. In buying graham, select that containing a rather fine bran, which does not separate readily from the flour when shaken in the hand. The Health Food Company [of Battle Creek, Michigan] makes an excellent graham; and when there is any doubt as to the quality of the ordinary graham, it would be wise to purchase that sold by this company.” Note: This company was founded and run by Dr. John Harvey Kellogg. This is the earliest document seen (Jan. 2009) concerning the pioneering work of Dr. J.H. Kellogg with health foods.

Under “Olive Oil” (p. 96): “Unless you have a good cool cellar, it will be best to buy oil in small quantities... oil loses its fine flavor if the bottle be opened often. Rae's Lucca oil is very reliable;...”

The chapter on “Soups” states (p. 109): Maigre soups are those made without meat, and are especially appropriate for fast days. Some of them are good enough for any season, and make a pleasant change from meat soups.

Under the recipe for “Pearled wheat mush” (p. 581): “The Health Food Company sells a nice quality of pearled wheat.”

Under the recipe for “Granulated-wheat muffins” (p. 809): “Mix together in a sieve, and rub through it, three cup-fuls of fine-granulated wheat meal, such as is made by the Health Food Company, four table-spoonfuls of sugar,...”

The recipe for “Green tomato soy,” which is a type of homemade ketchup, does not call for “soy” [sauce] as an ingredient. It is followed by two recipes for “Tomato ketchup”—which also use no soy. Address: Founder of the original cooking-school in Boston; Principal of the School of Cookery in New York; and author.

1278. Smithsonian Institution Board of Regents. 1887. *Annual report of the Board of Regents of the Smithsonian Institution*. Part II. Washington, DC: The Institution. xviii + 771 p. See p. 73-74. Illust. Index.

• Summary: Part II is “United States National Museum.” Otis T. Mason is curator of this museum (p. 63). Under “Report of the Department of Ethnology,” accessions are

listed by country. Under “Japan,” is a list of 304 “Japanese articles used chiefly in the former times. (Following mainly Dr. Klemm's classification, Smithsonian Report, 1873.)” Both the Japanese name of these items and a translation of that name are enumerated. These include various kitchen utensils:

“113. Saji, wooden spoon... 125. Suribachi, a bowl for rubbing Miso, (fermented mixture of soy beans, wheat, and salt)... Misokoshi, a [bamboo] sieve for filtering miso. 154. Misoshiru wan, Miso soup bowl. 155. Hira, flat wooden bowl for fish and vegetables... 167. Shoyutsugi, Shoyu pourer... 182. Misoshiruwan (see No. 154).” Address: Rev. and author [England].

1279. Cornwell (G.G.) & Son. 1888. *Sauces* (Ad). *Washington Post*. Jan. 22. p. 2.

• Summary: “Anchovy Sauce. Harvey Sauce. John Bull Sauce. Soho Sauce. Shrimp Sauce. Indian Soy Sauce. Worcester Sauce... Halford Sauce. Tobasco Pepper Sauce. Mushroom Catsup. Walnut Catsup. Shrewsbury Tomato Catsup. Gordon and Dilworth Tomato Catsup.”

Note: This ad appeared 17 more times in this newspaper during 1888 from Jan. 24 to Feb. 12. Address: [1412 and 1414 Pa. {Pennsylvania} Av., Washington, DC].

1280. *Good Housekeeping*. 1888. *Housekeeping in foreign lands*. IX. In China—the native plan. 6(9):216-27. March 3.

• Summary: From Fan Qui: “The tables are about six inches higher than those used by us, and the diners sit closely packed round like sardines in a box. Before each guest is placed a pair of chopsticks, a spoon and a saucer of soy, a sauce prepared by fermenting peas or beans. No table-cloth is ever used, and napkins are unknown. In the center stands a huge bowl of rice, with a ladle in it, and the other dishes are placed round it in bowls.”

1281. *Good Housekeeping*. 1888. *Housekeeping in foreign lands*. XI. Dining with Chinese Mandarins. 6(13):306-07. April 28.

• Summary: From Fan Qui: “The table was laid only on one side, facing the improvised theater, and before each guest's seat was a pair of ivory chop sticks, a porcelain spoon, and a round, enameled dish about a foot in diameter, divided into six or seven compartments, containing small delicacies such as bamboo shoots, young garlic, *kway chee* or melon seeds salted, and other nicknacks [knickknacks] to eat during dinner. In front of each guest also was a small bowl of soy, a sauce made from the soy bean, somewhat resembling catsup, which is to be seen on every Chinese table, and in which the viands are dipped from time to time as the meal progresses.”

1282. Lecerf, Ch. 1888. *Sur la valeur alimentaire du Soya hispida* [On the nutritional value of the soybean (Continued—Document Part II)]. *Bulletin de la Societe de Medecine*

Pratique de Paris p. 442-49. Meeting of April 26. Presided over by M. Laburthe. [Fre]

• **Summary:** Continued from page 444: Finally, this bean is the base of a sort of sauce that has now jumped the boundaries of Asia and whose consumption is widespread among the well-to-do classes (*les classes aisées*) of North America, England, and Holland. This is the *Tsiang-yeou* [pinyin: *jiangyou*] of the Chinese, the *Shoyu* of the Japanese, the *Ketjap* of Batavia and Java, the India-Soy of the Americans and the English, and the *Zoya* of the Dutch. This product is a liquid of a darker or lighter brown, depending on the quality, obtained by the fermentation of cakes (*gâteaux* [of koji]) made of grilled barley and boiled soybeans. These cakes, after fermentation, are dissolved in water with salt, and left alone for 2 and even 3 years [for a 2nd fermentation], then pressed in sacks. The liquid that flows out is *Shoyu*; it has a taste and a smell that are reminiscent of meat extracts. In Japan it replaces butter, oil, fat and meat sauces. Everything—vegetables, fish, noodles—is ordinarily seasoned with *shoyu*. It is the object of an important industry: in Nagasaki, there are more than 10 factories that produce 1,200,000 kg/year for consumption. The most sought-after quality is that of Tokio (Yédo). It is from this city that originates the sketch that I have the honor to present you.

Composition: According to analyses communicated by Mr. Pellet to the Academy of Sciences in May 1880, here are the composition of two soybeans, the first from China and the second harvested in France. Table 1 (p. 445) gives the percentage of macro- and micronutrients in each. The Chinese soybeans contain 16.4% lipids (*matières grasses*), 35.5% protein (*matières protéiques*), and 4.8% ash (*cendres*) vs. 14.12%, 31.75%, and 5.15% for the French. Table 2 (p. 446) gives the composition of the ash for the two soybeans as follows: phosphoric acid, potash, lime / limestone, and magnesia. It shows that the phosphoric acid and potash represent about 75% of the weight of the ash. Table 3 (p. 446) compares the composition of 100 soybeans harvested at Nice and analysed by Levallois, with the composition of 100 grains of wheat analysed by Isidore Pierre. The soybeans contain about 2.8 times as much nitrogen (protein).

To the analyses done by Mr. Pellet, we must add some slight corrections: according to the analyses made by Mr. Müntz, at the Agronomic Institute (*l'Institut agronomique*), the starchy and sugary materials [carbohydrates] have been increased to 6.40%, the nitrogenous materials [protein] to 36.67% and the fatty materials to 17.00%.

The sugary material, contained in the soybean (*Soya*), constitutes a particular sugar that, like cane sugar, only reduces to Fehling's solution / liquid after having been inverted by sulfuric acid, as Levallois discovered as well.

Its rotary power is much higher than that of cane sugar. Exact degree measurements are given.

Let us now compare the compositions of wheat, beans, potatoes, according to Boussingault, with that of soybeans.

Table 4 (p. 446-47) gives percentages of starch and sugared principles, nitrogenous materials, fatty materials, water, potash, and phosphoric acid.

This comparison shows the superiority of soybeans over these vegetable products, even over wheat, for if the ash of it appears richer in phosphoric acid, we must take into account that wheat furnishes 2.41% ash while soybeans give more twice the weight of ash, 5.15%.

The liquid prepared with soybeans in Japan, *shoyu*, was analyzed at the official laboratory in Tokio (no. 1 [on table 5]). I duplicated the analysis (no. 2) to reassure myself that shipment [to France] had not altered its composition. Table 5 (p. 447) shows, nearly identical values for the two sauces, in terms of density, dry extract, ash, nitrogenous materials, salt (NaCl), phosphoric acid, and potash.

As these analyses show, *shoyu* contains about a third of its weight in solid matter, half of which is formed of minerals. Of the latter (minerals), table salt (NaCl) is found in the proportion of 9/11 [i.e., 82% of the minerals is NaCl], phosphoric acid 2%, and potash 3%. Nitrogenous materials represent about a tenth of the total solid matter.

Conclusions: The analyses that I just cited make the considerable value of soybeans from a nutritional point of view stand out. Its richness in protein (*matières protéiques*), in fact [make it] a vegetable meat (*une chair végétale*), and this meat would be superior, as a concentrated food, to [real] meat. In fact, here is a comparison of percentage compositions (*compositions centésimales*) of soybeans and beef that has had its fats and oils removed [probably in the laboratory]. Table 6 (p. 447) compares water, protein, fat, potash, and phosphoric acid.

These figures need no commentary; they are quite eloquent by themselves and make comprehensible how in Japan a handful of this bean suffices to nourish a vigorous man.

One could, advantageously use soybean flour as a powerful food, in a small volume, with debilitated individuals. It is, like milk, a type of complete food, joining the plastic element, represented by protein, the respiratory element, fat, and salts, in which phosphoric acid and potash dominate.

The almost total absence of starchy materials, and the insignificant quantity of sugar that this grain contains, indicates it quite naturally as the best base for bread or rusks for the use of diabetics.

I have the honor to present to the Society some samples of bread and rusks made with soybeans.

Finally, *Shoyu*, that combines a significant proportion of nitrogenous materials [protein] with a rather strong quantity of sodium chloride, could be usefully administered to consumptives [people having tuberculosis], who would find there, beside highly nutritious materials, to compensate for / offset the weakening caused by the loss of salt (*déchloruration*) to which they are subject.

Note: This is the earliest document seen (March 2010) which is of practical importance concerning the use of soy in diabetic diets.

Discussion: Mr. Roussel—Could Mr. Lecerf please give us some information about the cultivation of soya and tell us if this plant can be acclimatized in France.

Mr. Lecerf—The Soya grows rather well in the same geographical area as corn / maize. The essential requirement for it to bear seeds, is that neither light nor heat be obstructed. Fertilizer is not necessary for it. Even fresh manure is harmful to it, it grows well in all types of terrain, and all atmospheric variations support its growth.

It is planted from the middle to the end of April. It yields about 600 to one [600 seeds from every seed planted]. It is harvested about the end of October. One indispensable precaution is to space the plants from 0.25 to 0.5 meters apart, according to the richness of the soil, by putting several seeds in the same hole, but not to let them develop as a single clump.

Mr. Duchaussoy—I am very happy with the communication by our colleague. I have cultivated Soya for several years. The first year, the harvest had been average, but the second year I harvested almost nothing. I attribute this to the cold, humid weather. Has Mr. Lecerf not observed that the odor of the Japanese *liqueur* [soy sauce] recalls that of the extract of belladonna? [deadly nightshade, which is dark purple; he is being sarcastic].

Mr. Lecerf—The odor of this *liqueur* made from Soya, which the Japanese call Shoyu, is somewhat reminiscent of buckwheat bread, or better still of meat extracts.

Mr. Bardet—I would like to ask Mr. Lecerf if it is not possible to modify the color of the bread [which is too dark], and if there is no butter in the bread [i.e., did he add some butter to his soy bread to make it taste better, or is he “buttering up” the whole subject].

Mr. Lecerf—This bread, being made with only soy flour, could not have its color modified by the addition of other types of flour, which would detract from its value as a bread that contains little or no starch.

Mr. Léon Petit—The bread that was presented to us had an excellent flavor. Mr. Lecerf has accomplished a true *tour de force* in masking the bitter taste, so difficult to avoid when one uses Soya flour—a taste due to the oil contained in the seeds.

1283. Petit, Léon. 1888. L’huile de soya. Son emploi en médecine comme purgatif à petite dose [Soy oil. Its use in medicine in small doses as a purgative]. *Bulletin de la Société de Médecine Pratique de Paris*. p. 449-52. Meeting of April 26. Presided over by M. Laburthe. [Fre]

• **Summary:** Kaempfer first introduced soybean seeds into Europe from Japan, where they are used to make *miso* and *shoyu* (a black and limpid liquid). These two are indispensable condiments in the Japanese diet. They also

make a vegetable cheese, tofu, which is usually eaten fresh, and of which the people are very fond.

In Cochinchina, soya occupies a major place in the culinary art. The Chinese do not consume milk; instead, they crush the soybean and obtain from it a liquid, rich in casein and oils, which they use like we use the milk from cows’ goats, or sheep. From it, they also make white cheeses, red cheeses [fermented tofu], and a sauce, *Tsiang-Yéou* (*jiangyou* or soy sauce), which are greatly appreciated. For my part, I have had the occasion to taste this condiment several times and I admit that I do not share, in this regard, the enthusiasm of the Chinese. Much more, soya enters in the preparation of a ferment used for making spirits and wines.

Nothing could be easier than obtaining soybeans; in France, they germinate as easily as haricots. They contain 30-35% protein and make excellent forage.

The soybean has been tested as a forage plant, either alone or mixed with hay, oats, barley, sugar beets, etc. Mr. Paillieux, a distinguished agriculturalist, even conducted various trials in using the soybean for human food.

He cooked the seeds, like one cooks haricot beans, after they had been soaked in distilled water. He also roasted soybean seeds to make a sort of coffee. He successfully reproduced the various Japanese and Chinese food preparations. He even tried to make a flour by grinding the beans, but this flour degenerated [rancidified] because of the large quantity of oil and fat that it contains.

It is possible that if this oil were extracted, the soybean oilcake (*le tourteau de Soya*) could be ground / reduced into flour which would contain more than 40% nitrogenous materials [protein] and would have no bad [after]taste. But unfortunately, this flour would have a rather high net cost, because of the manipulations that its production would necessitate, unless a use for soybean oil, which is the object of an enormous traffic in China, is found. This very limpid oil, which has a beautiful yellow color like olive oil, leaves a little acrid taste in the mouth which is not disagreeable. It possesses very obvious drastic qualities. I had a liter at my disposition, and I observed that with a minimum dose of 10 gm, you obtain a very energetic purging [like diarrhea], without any type of abdominal pain / colic (*colique*). I hope, before long, to receive a certain quantity of soybean oil that I shall place at the disposition of those of our colleagues who would like to test it as a purgative.

Note: The writer is the only person ever to ascribe a “purging” or “purgative” property to soy oil.

There follows a question and answer session. Mr. Terrier asks: Can Mr. Lecerf provide us with some information about the use of this oil in China and Japan? Mr. Petit responds: I believe that the Chinese and Japanese use this oil only for therapeutic purposes. Soy sauce (*La liqueur de Soya*) is widely employed in England as a condiment. Mr. Lecerf adds: I know nothing about how the Chinese and Japanese use soy oil as a medical substance; but, as I

said, this oil is of the highest rank among the oils consumed throughout China. I would say to Mr. Petit that the *India Soy*, which the English consume, is a product which contains only a small proportion of soybeans; it is made with considerable quantities of barley and rice [sic], and it comes from China. However *Shoyu*, which I present to you, is originally from Edo [Tokyo, Japan]. Like that from Batavia [Jakarta] (*Ket-Jap* [ketjap, kecap]), it is made with from equal parts wheat and soybeans (*Soya*).

Mr. Gillet de Grandmont asks: Very precise and extensive information on the cultivation of soybeans can be found in the *Annals [Bulletin] of the Society for Acclimatization*. This bean, which I have tried to use for food, does not soften easily upon cooking; it always retains a very disagreeable, acrid taste. I could hardly stand it, except consumed in the form of a salad after cooking.

Mr. Lecerf replies: In the fresh state [as green vegetable soybeans], soybeans are not hard and their taste is even agreeable. In the dry state, it is easy to render them less tough, by adding a small quantity of sodium bicarbonate [baking soda] to their cooking water, and by taking care to soak them in water 24 hours in advance. Address: M.D., 2 Rue Casmir-Delavigne, Paris.

1284. *Chicago Tribune*. 1888. Breakfast and dinner: Hints for preparing delicate salads, sauces, and soups. May 6. p. 14.

• **Summary:** “An East India sauce is recommended and approved for fish. Mix well together a gill [$\frac{1}{2}$ cup] of Indian soy [sauce], a gill of Chili vinegar, half a pint of walnut catsup, and a pint of mushroom catsup. Shake it vigorously, and place it in small bottles,…”

1285. Suchi, Tokutaro. 1888. Shibô no eiyôtaki kôyô [Digestion experiments with rice and tofu]. *Tokyo Igakkai Zasshi (J. of the Tokyo Medical Society)* 2(9):457-62. May; 2(10):511-20. June? [Jap]

• **Summary:** K. Oshima (1905, p. 153) reports that T. Suchi, age 21 and in good health, conducted these experiments upon himself. “The amount of fresh rice and fresh tofu eaten per day was exactly the same in both experiments. In cooking the tofu 40 cubic centimeters of shoyu and 10 gm of sugar were used each day. In experiment No. 17 the tofu used was fried in rapeseed oil by the investigator himself, the amount of oil thus used being carefully weighed.” Urine and feces were collected and analyzed.

Digestion experiment No. 16 continued for 7 days, Nov. 18-24, 1887. Suchi weighed 41.30 kg at the beginning and 41.51 kg at the end. The diet consisted of rice and tofu. Suchi digested 95.2% of the protein (*tanpakushitsu*) in the diet, 96.5% of the fat, 98.3% of the carbohydrates, and 77.2% of the ash.

Digestion experiment No. 17 continued for 6 days, Nov. 29 to Dec. 4, 1887. Suchi weighed 41.42 kg at the beginning and 41.47 kg at the end. The diet consisted of rice, tofu, and

vegetable oil. Suchi digested 94.2% of the protein in the diet, 93.9% of the fat, 99.5% of the carbohydrates, and 78.9% of the ash.

Note: This is the earliest Japanese-language document seen (Aug. 2003) that uses the term *tanpakushitsu* to refer to protein in connection with soybeans. Address: Physiological Institute, Tokyo University.

1286. Lea and Perrins. 1888. *Lea & Perrins Sauce* (Ad). *Chicago Tribune*. June 1. p. 8.

• **Summary:** “Lea & Perrins, the original and genuine Worcestershire Sauce, has been before the public over half century [i.e., since at least 1838]. Like all popular favorites, it has long been the standard of comparison and the pattern for counterfeiters, who not being able to imitate its excellence, offer to the public, imitations in bottling, labels and style of putting up.

“They dare not counterfeit the signature of Lea & Perrins, which is on the red label of every genuine bottle, and of which this is a facsimile.” The signature is shown in large script.

“To be sure of obtaining the genuine article, see that the above signature is on the label.”

1287. *Journal de Medecine de Paris*. 1888. Revue des sociétés savantes: Pains, biscottes et liqueurs de Soya hispida [Review of learned societies: Soy bread, biscuits, and soy sauce]. 14(23):912-14. June 3. Meeting of April 26. [Fre]

• **Summary:** Mr. Lecerf presented samples of bread, biscuits, and sauce obtained by him from the soybean. He briefly describes soybean cultivation and yields. He then answers questions by Mr. Duchausoy about shoyu, by Mr. Bardet about soy bread (which contains only soy flour and no butter; the only oil or fat in the bread is that contained naturally in the flour).

The British consume large amounts of soy sauce which they call *India soy*. The shoyu presented here originated in Edo, Japan; like that of Batavia [Jakarta, in today's Indonesia] (called *Ket-Jap*), it is made with a mixture of equal parts wheat and soybeans.

Mr. Gillet de Grandmont says that the soybean is hard to soften by boiling and has a very disagreeable flavor. Mr. Lecerf replies that fresh soybeans are not hard and their flavor is not disagreeable. Dry soybeans should be soaked for 24 hours, then cooked in water that contains baking soda. Address: Paris, France.

1288. *Chicago Tribune*. 1888. An eel dinner in a Tokio cafe. An appetising meal that is manipulated with chop sticks. June 9. p. 16.

• **Summary:** From Rumah in St. Louis Globe Democrat: “A specialty of Tokio houses of refreshment is eel houses.” “We celebrated a recent anniversary day by an eel dinner at a famous eel house.”

"The feast began with a soup or stew of eels, the bottom of the bowl being filled with a delicate white curd [tofu], and the flavor of the dish being as mild and evasive as flaxseed tea... The plain broiled eels are called white eels, and after them came black eels, or eels dipped in soy [sauce] before and during the broiling. They acquire a rich brown tint and a most piquant flavor by this treatment, and the soy, or bean sauce, with which the Japanese always improve their fish and birds, might be used in the same way in other countries. Japanese soy is the foundation of Worcestershire sauce, and is much better before it is charged with all the spices and cayenne that convert it into the English condiment."

1289. *Law Journal (The) (England)*. 1888. The Birmingham Vinegar Brewery Company v. The Liverpool Vinegar Company: Chancery Division, North J., June 11. 23:99-100. Notes of cases, June 23.

• **Summary:** "Trade-name—Unauthorized use—Injunction.

"This was a motion by the plaintiffs for an order restraining the defendant company and one Holbrook from selling or representing any goods manufactured by the defendant company as being 'Holbrook's Worcestershire Sauce,' ..."

"The plaintiffs and their predecessors in business were manufacturers of sauces, and in the year 1870 they engaged the defendant Holbrook as their traveller. In the year 1875 they manufactured and sold a sauce (at the suggestion of the defendant Holbrook) under the name of 'Holbrook's 'Worcestershire Sauce,' and the sauce had acquired a reputation in the market under that name. This arrangement continued down to December, 1887, when Holbrook left the employ of the plaintiffs and entered into some arrangement with the defendant company, under which he assigned to the defendant company the right to use his name in connection with sauces manufactured by them.

"The defendant company had recently issued advertisements, stating that they were the sole proprietors of 'Holbrook's Worcestershire Sauce,' and that they had purchased from Holbrook the right to manufacture the sauce bearing his name.

"The plaintiffs now moved for an interlocutory injunction."

Note: A sauce with this same name was being advertised and sold as recently as 1966 (*Pacific Islands Monthly*, PIM, Vol. 37, p. 52. "Holbrooks Worcestershire Sauce"), 1980 (*Rainbow's End: A Memoir of Childhood, War and an African Farm* [in Rhodesia], 2008, p. 118. "Holbrook's Worcestershire sauce"), and 1999 (*Drum: A Magazine of Africa for Africa*, p. 109. "Holbrooks Worcestershire Sauce").

1290. Kellner, O.J. 1888. Researches on the composition and digestibility of Japanese feeding stuffs. *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(2):1-45.

July. See p. 25-29, 39-45. [3 ref. Eng]

• **Summary:** Section "V. Hay of soy beans (karimame)" (p. 25-29) describes experiments feeding soy bean hay to sheep (rams). "This hay is considered the best coarse fodder in this country. It is usually cured, when the pods have developed their normal size but the leaves are still green. A specimen of such hay was examined in 1883 by Mr. M. Ota."

In part "II. Soy bean (daizu)" (p. 39-45), Kellner notes: "Although the soy beans are somewhat expensive owing to their principal utilization as human food (tofu, miso and shoyu), it may happen that small proportions of them are resorted to in the feeding of the live-stock, for the purpose of supplementing the protein of a ration otherwise too poor in that nutrient." Soy beans, apparently raw, were fed to sheep. Feces ejected, water drunk, and live weights were measured. The article concluded: "The specimen of soy beans examined by us contains the following proportions of digestible nutrients, percent of the dry matter: Crude protein 34.30, fat 18.25, fiber 9.09; nitrogen-free extract 19.65; the last 2 total 28.74.

"Of all raw vegetable products, earth nuts perhaps excepted, the soy beans are the richest in the most valuable nutrients, protein and fat, and contain them in a highly digestible form."

Note 1. This is the earliest English-language document seen (April 2008) that uses the term "human food" in connection with soy beans.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term "crude protein" (or "crude-protein" or "crude proteins") (one of two documents). Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

1291. Egasse, M. 1888. Le soja et ses applications économiques et thérapeutiques: Matière médicale et thérapeutique [Soja and its economic and therapeutic applications: Medical and therapeutic subject-matter]. *Bulletin General de Therapeutique Medicale, Chirurgicale, Obstetricale et Pharmaceutique* 115:433-48. Nov. 30. [28 ref. Fre]

• **Summary:** This is a review of the literature, especially the use of soy in diabetic diets. The author was one of the first Westerners to suggest the therapeutic use of soybeans in diabetic diets. Illustrations show: (1) A soy bean plant (from Vilmorin 1883, p. 434). (2) Two views of a soy bean and a cross section of soy bean seed (both from Blondel, p. 435). Discusses (with 11 tables) the work with soybeans of Haberlandt in Austria-Hungary, Steuff in Germany, Schroeder (a chemist) in Napagedl [in Mähren / Moravia, a region in today's central Czech Republic], Capan [sic, Caplan] in Vienna, Pellet in France, P. Muntz, A. Levallois, Stingl and Morawski, E. Kaempfer, Eug. Simon, Champion, L'hôte and Champion, Mr. Lecerf, Mr. Dujardin-Beaumetz

and Mr. Bourdin at Reims (soy bread), and Mr. Lailleux in Algeria.

Blondel (1888) reports the absence of starch in all parts of the soybean seed (p. 435).

“Soybeans are used above all to prepare foods: in Japan, miso and shoyu (*le soju*), in China an imitation of milk (*une imitation du lait* [soymilk]) and a cheese (*un fromage* [tofu]) greatly appreciated by the common people” (p. 441).

“Throughout China, soybeans (*les graines du soja*) are also used to prepare a milklike / lacteal emulsion (*une émulsion leiteuse*) which replaces milk and which is obtained by crushing the seeds, soaking them in water, and simply passing the liquid through a fine sieve. The [soy] milk, this liquor (*liqueur*), only looks like [dairy] milk, but since [dairy] milk is extremely rare, this liquor supplements the milk [i.e., soymilk supplements dairy milk] from the alimentary point of view” (p. 443). Note: This is the earliest French-language document seen (Oct. 2003) that uses the term *une imitation du lait* or *une émulsion leiteuse* to refer to soymilk.

“The applications of soybean seeds for the feeding of diabetics is not numerous. Yet we know, via an oral communication from Mr. Lailleux, former intern at the hospital in Algiers, that a certain number of diabetic Arabs under treatment at the hospital of Dey, in Algiers, have seen, under the influence of a dietary regimen based on soybean pap, that not only did the content of sugar in their urine diminish by a considerable proportion, but also the condition of their sores was improved, a condition which like all of its type had resisted other treatments employed. If this fact can be verified again, either with soy pap or soy bread, the therapy would have found in soybeans an aid of great utility in the ordinary treatment of diabetes mellitus, which is so difficult for most patients to stand, especially because they must abstain from starches for which they generally show such a strong appetite” (p. 447). Address: France.

1292. *Bayerische Gewerbe-Zeitung* (Nuremberg). 1888. Japanische Soja [Japanese soy sauce]. No. 23. p. 538-40 [Dec.]. [Ger]

• **Summary:** Under the trade name of “Japanische Soja,” a peculiar product has also recently become known in Germany. Used as a seasoning with different dishes, it is said to enhance their good taste and nutritive value, and also to stimulate ones appetite. It is a slightly thick, dark reddish-brown liquid with a piquant, pleasant, salty and aromatic taste.

The main constituent of this product is the meal of the soybean (*das Mehl der Sojabohne*), an East Asian plant that sometimes grows wild and is sometimes cultivated. Its kidney-shaped seeds are used daily in Japan in the food of the poorer classes (The soybean has also found practical uses in Germany) or they can be prepared as soya extract or gravy (*Sojabrühe*) which is added to many foods instead of butter

or meat.

The production of shoyu (*Soja*) is successful even in large factories, as well as in small shops, and the process is apparently thousands of years old. A measure of the extraordinary amounts of shoyu used in Japanese households is that fact that one company, which is widely known in Europe, at its head factory in Japan employs about 2,000 workers who produce about 1 million gallons = 4,543,500 liters of shoyu. This company, named Tokyo Shoyu Kaisha, in addition to its head factory in Tokyo, has some 48 distilleries (*Brennerien*) throughout the country and a steamship to carry their products to the capital. After many years of effort, it has found a way to preserve the product so it is suited for export to foreign countries, despite many previous unsuccessful attempts.

The way of manufacturing shoyu, about which there have previously been only sketchy reports, is essentially as follows: Dehulled soybeans are dried, then roasted like coffee beans, so they do not lose their aroma during transport. A very hard type of wheat is used in unpolished form; part of it is roasted with the soybeans. A specific quantity of fresh wheat is malted (*gemalzt*), and from this an infusion (*Aufguss*) is prepared, similar to that in our distilleries. In a separate vat, the roasted beans and wheat are combined with cold water and soaked for a long time, during which an artificially very low temperature and the abundant addition of cooking salt [NaCl], the fermentation is allowed to proceed. After a certain time, the diastase solution, which is prepared from the malt, is added to the whole; it is stirred now and then, and left alone. As soon as a certain stage of development is reached, which usually can be recognized from experience by the color of the condiment, a special kind of yeast (*Hefe*) (unknown outside Japan) is added. Under the prevailing conditions, namely of low temperature and high salt content, this yeast causes a very slow fermentation—supposedly without the development of carbonic acid and without alcohol as an end product.

According to the difference in the content of the extract and in the quality of the raw materials, three kinds [of moromi] are manufactured: The lowest quality is allowed to ferment for one year, the middle quality for two years, and the highest quality for three years. During this time the vats [of moromi] remain untouched [and are not stirred].

After being separated from the dregs / sediment (*Bodensatz*), the soy sauce (*Soja*) is ready for use. It is stored in cool rooms in tightly-closed porcelain bottles (*Flaschen*); it stays good for several years. With the entrance of air or light, a slow fermentation continues but without recognizable changes during many weeks. Through the slow fermentation in a strong salt solution, according to several chemical analyses, the rather considerable protein of the [soy] beans and barley is made soluble. The dark color is caused by the strong roasting of these materials. In recent years, public attention has been drawn from various sides to

the agricultural value of soy sauce, and its introduction or importation for general use has been recommended. With potatoes, as in Japan with rice, it can form a true food of the people. To that end, it should be made available in small quantities to purchase for only a few pennies. In addition, it seems that, because of its ability to stimulate and promote digestion, it can improve the taste of soups and sauces, all kinds of meat and fish, vegetables, etc. It is better suited than the often-used strong spices, whose sharpness / harshness is not good for everybody.

Either during cooking or at the table, add soy sauce to the dishes according to taste.

In order to avoid the formation of a thin film of salt [sic, yeasts] on the surface of bottled soy sauce (even though it is not detrimental), you should store bottles of soy sauce lying on their sides [rather than upright].

1298. Leuillieux, Abel. 1888. Le "Soya hispida," sa valeur alimentaire, ses indications ["Soya hispida," the soybean: Its nutritional value and indications]. Paris: Imprimerie de A. Davy. 53 p. 8vo. [21 ref. Fre]

• **Summary:** Contents: 1. Historical and botanical description. Soya (*Le Soya*) in Japan: Miso (according to Kaempfer), shoyu (*Le Soju*, *Shoyu*), soybean varieties (23, soy oil, tofu), Japan at the exposition of 1878, practical recipe in France by the correspondent of the Horticultural Society of Paris (*Société d'Horticulture de Paris*), soy cheese or tofu (*fromage de daizu* (*To-ju*)), soya in China, soy oil, fermented tofu (*Le fromage de Soya*, *Teou-Fou*) (white fermented tofu, red fermented tofu), soya in Cochinchina (black soybean), soya in France (history), preparation of soya for the table. Letter from Maurice Dupuy (chemist at Vienna, June 1888, to M. Lecerf; nutritional value of *Soya hispida*, nutritional composition of 2 samples). Conclusions. Bibliography. Address: M.D. Faculté de Médecine, Paris; Former student at the Industrial and Agronomic Institute of Nord [Ancien élève de l'institut industriel et agronomique du Nord].

1299. White, Sallie Joy. 1888. Housekeepers and homemakers. Boston: Jordan, Marsh & Co. vii + 260 p. No index.

• **Summary:** The Preface states: The 26 chapters in this book have all appeared previously in *The Boston Herald*. The author gives special thanks "to my devoted teacher and friend, Mrs. Mary A. Lincoln, under whose training I learned so much that has been of inestimable value to me in my housekeeping experience."

In the chapter "About breads" (p. 10-22) we read (p. 19-20): "For those who like hygienic food, I will give here the rule for 'Dr. Trall's Perfect Bread.' Some of you may

not know that Dr. Trall was, for a long time, the apostle of 'plain living;' and that although he did carry his notions to the extreme, as any early advocates of a movement are pretty sure to do, yet he did have a very good influence on the American people in regard to better and more careful preparation of food. This 'perfect bread' is nothing more nor less than the hard Graham rolls which are used by hygienists. It is perfectly healthful, and is highly relished by those who have become accustomed to it, whose appetites are healthful and natural, and who require or crave 'no spice but hunger.' It is made by simply mixing cold water, the colder the better, with good Graham or whole-wheat flour,..." Another recipe for a "fine Graham Bread follows (p. 20-21).

Chapter 4, titled "Cereals and health foods" (p. 28-45) indicates that many of America's early health food products and recipes were based on cereal grains, and special ways of processing them. "Health foods" are mentioned on pages 28, 31-32, 34-36. Products made by "The Health Food Company" of New York are highly praised and mentioned on pages 30 ("The best grain preparations are without much question those prepared by the Health Food Company"), 31 ("The Health Foods, as they have come to be understood, are the new methods of preparing cereals used by the Health Food Company of New York, and introduced by them"), 69 ("The whole wheat that is prepared by the Health Food Company of New York makes very nice gems..."), and 208 ("These [whole wheat crisps] are made from the fine granulated wheat flour that is prepared by the Health Food Company, and are at once healthful and palatable").

Whole-wheat flour is mentioned on pages 20, 31-32, 34, 41, 69, and 208.

In chapter 10, "Made-over dishes" [how to use leftovers] (p. 94-106) the author states that seasoning is the key to success. Worcestershire sauce is mentioned on pages 96-98, 101, and 103. Chapter 19 is titled "Pickles and catsups" (p. 179-99). Catsup is mentioned on pages 100 (walnut catsup), 103, 190, 194 (tomato catsup; "Lemon, oyster, and mushroom catsups are delicious:..."), 195 (mushroom catsup), 196 (grape catsup), and 197.

On pages 191-92 is a recipe for "Tomato soy" which (despite the name) uses no soy sauce or other soy ingredients, and which "is not unlike piccalilli" ("Green-tomato sauce").

1300. *Pharmaceutische Centralhalle fuer Deutschland*. 1889. Japanische Soja [Japanese soy sauce]. 30(3):44-45. Jan. 17. New series: Vol. 10. Extracted from Bayerisches Industrie- und Gewerbeblatt. [1 ref. Ger]

• **Summary:** Japanese soy sauce (*Japanische Soja*) is a thick, dark-brown liquid, with a piquant, pleasant, salty taste and an aromatic fragrance. Coming from Japan, it has recently been recommended as an addition to meals, not only to make foods taste better but also to enhance their nutritional value.

In Japan, soy sauce is made in large factories, the largest

of which employ 2,000 workers. A description of the process is given. For the best quality soy sauce, the fermentation process should take three years.

1301. Jackson, John R. 1889. Notes on new and little-known vegetable oils. *Chemist and Druggist (London)* 34:114-15. Jan. 26.

• **Summary:** Many new vegetable oils have come to the writer's attention during the past 2-3 years. None should be condemned until it is thoroughly tested for possible valuable properties that could be utilized. Liverpool is the main port at which they arrive from around the world.

One of these "*Glycine Soja*, Siëb. and Zucc. This is an annual leguminous plant largely cultivated in India and China, the seeds of which are known as Soy beans, and are the source of the well-known sauce of that name. About 17 per cent of oil is obtained from them in China by simple pressure; this oil is described as having an agreeable flavour and odour, and is similar to most of the sweet oils used for culinary purposes. At one time it was used largely in China for burning in lamps, but the introduction of petroleum from America has much diminished its use. It is a drying oil, and as such might be found useful as a substitute for linseed oil." Address: A.L.S. [Associate of the Linnaean Society], Curator of the Museum, Royal Gardens, Kew [England].

1302. *San Francisco Chronicle*. 1889. Classified ad: Lea & Perrins' sauce. Jan. 31. p. 2, col. 3.

• **Summary:** "Lea & Perrins, the original and genuine Worcestershire Sauce, has been before the public over half a century. Like all popular favorites, it has long been the standard of comparison and the pattern for counterfeiters, who not being able to imitate its excellence, offer to the public imitations in bottling, labels and style of putting up.

"They dare not counterfeit the signature of Lea & Perrins, which is on the red label of every genuine bottle and of which this is a facsimile" (the signature is written in large cursive script).

"To be sure of obtaining the genuine article, see that the above signature is on the label. [American Analyst]."

Note: An illustration near the bottom of the ad shows the "Lea & Perrins" signature.

1303. Osawa, Kenji. 1889. Shôka shiken tsuika [Additional investigations on digestion]. *Chugai Iji Shinpo (Medical News, Foreign and Domestic, Tokyo)* No. 211. p. 6-8. Jan. [Jap; eng+]

• **Summary:** Experiment no. 18 was a digestion experiment with rice and tofu, plus small amounts of starch (kuzu powder), shoyu, and sugar. It was conducted for 3 days, June 20-22, 1887. A table shows the amount and nutritional composition of each food used. The following percentages of the basic nutrients were digested: Protein 95.2%. Fat 94.8%. Carbohydrates 98.8%. Ash 83.4%. The author concluded

that mixed foods (except for fat) are more easily digested than single foods. Address: Physiological Institute, Tokyo University.

1304. Stift, A. 1889. Beitrag zur Kenntniss der Sojasauce [Contribution to the knowledge of soy sauce]. *Zeitschrift fuer Nahrungsmittel-Untersuchungen und Hygiene (Oesterreichische Chemiker-Zeitung)* 3(1):33-34. Jan. [Ger]

• **Summary:** The following figures for soy sauce are the result of three analyses, based on the method used by B. Proskauer for meat peptones: Solids / dry matter 34.52%. Fat 0.31%. Of those: Organic matter 11.18%. Ash 23.34%.

Protein 4.50%: Of those: Insoluble protein 0.09%, soluble protein 2.08%, peptone {pepton} 0.96%.

In 100 parts ash are found: Table salt (NaCl, *Kochsalz*) 2.20%, potassium 7.05%, phosphoric acid 0.73%. sulfuric acid 2.80%.

The table salt content (NaCl) comes from the moromi mash (*der Maische*), but the amount still tolerable to the palate is not surpassed. Soy sauce is really a condiment (*Genussmittel*), but because of its high protein content, it has a certain nutritional value.
