Date of Introduction: 1922. January.

New Product–Documentation: The Japanese American Directory. 1922. p. 335. Ad (¼ page). This business is at the same address as Yasuhara Shoyu and is apparently owned by the same man, Yasuhara Kinzo (or Kanezo or Kei).

Phone: Main 5650, Home 11938 (the same phone number as Yasuhara Shoyu). Note: In this same boxed ad, Mr. Yasuhara advertises his other enterprises. He is a wholesaler and retailer of Japanese and western foods, and also runs the Yasuhara Hotel at 235 Jackson St.

2405. Noda Shoyu K.K. 1922. Tenka ippin. Saijô shôyu [The best under heaven. The No. 1 shoyu (Ad)]. In: Nichibei Shinbun-sha. 1922. *Japanese-American Directory (Nichibei Jushoroku)*. Page 19 near front. [Jap]

• **Summary:** Ad (half page). All in Japanese. Near the center is a photo of a large (18 liter = 1 to) keg of Kikkoman shoyu, with bamboo hoops, tied with rice-straw rope. Address: Chiba-ken (prefecture), Noda-chô (machi=town) [Japan].

2406. *USDA Bureau of Plant Industry, Inventory*. 1922. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1917. Nos. 43890 to 44445. No. 50. 83 p. Jan. 30.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. Fabaceae. (*Glycine hispida* Maxim.)

“44203-44238. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received February 9, 1917.

“44209-44214. ‘From Malanyu, Chihli Province, China, November 25, 1916.’

“44209. ‘(No. 2337a.) *Huang tou*, meaning “yellow bean.” An early-maturing medium-sized yellow variety of soy bean, primarily used to make bean curd.’ (Meyer.)

“44210. ‘(No. 2338a.) *Huang tou*, meaning “yellow bean.” A late-maturing medium-sized yellow variety used for oil production and in making bean curd and sauce.’ (Meyer.)

“44211. ‘(No. 2339a.) *Ta ch’ing tou*, meaning “large green bean.” A pale-green variety, used in bean curd and sauce manufacture.’ (Meyer.)

“44212. ‘(No. 2340a.) *Ch’ing tou*, meaning “green bean.” A green variety, often used as an appetizer with meals when slightly sprouted and salted or when fried and salted.’ (Meyer.)

“44213. ‘(No. 2341a.) *Ch’ing tou*, meaning “green bean.” A green variety, slightly different from No. 2340a [S.P.I. No. 44212]. Used as an appetizer with meals when slightly sprouted and salted or when fried and salted.’ (Meyer.)

“44214. ‘(No. 2342a.) *Hei tou*, meaning “green bean.” A small, shining, black soy bean, generally used, when boiled, as a food for hard-working horses, mules, donkeys, and oxen, mixed with chopped straw and kaoliang grains.’ (Meyer.)” Address: Washington, DC.

2407. Oshima, Kokichi. 1922. Promising development of soya bean sauce: Studies on the protease of the *Aspergillus oryzae-flavus* group and its role in shoyu brewing. *American Food Journal* 17(1):30-31. Jan. [10 ref]

• **Summary:** “Editor’s note.—The author of this article has been engaged for some time in experimental work in the laboratories of the Pathological Division of the Bureau of Animal Industry and the Microbiological Laboratory of the Bureau of Chemistry, U.S. Department of Agriculture. He is studying in Europe at the present.”

The article begins: “Shoyu (soya bean sauce) is a most important seasoning in Japan and China, where it is widely used instead of vegetable or meat extract and salt. It is a fermented product made from soya beans, wheat and salt which are acted upon by *Aspergillus flavus* and related forms. The finished product contains about 20 per cent sodium chloride, 5 per cent glucose and 3 per cent protein cleavage products. Being highly palatable, nutritious and cheap, it will probably be used more and more extensively in many countries.”

Note. This is the earliest English-language document seen (April 1912) that uses the term “soya bean sauce” to refer to soy sauce.

From “analysis of ‘moromi’ at different ages and from the fact that *Aspergillus flavus* and related forms which are used in ‘shoyu-koji’ preparation, produce a very strong proteolytic enzyme, it may be assumed that the protease from such *Aspergilli* is the most important one.”

A table (p. 30) shows three different species of *Aspergillus* and their characteristics: *Aspergillus oryzae*. Amylase production: strong. Growth: quick. *Aspergillus effusus*. Amylase production: very weak. Growth: slow. *Aspergillus parasiticus*. Amylase production: very weak. Growth: quickest.

“Influence of cooking on glycinin digestibility [by protease enzymes]: In ‘shoyu’ brewing soya beans are generally cooked 2 to 3 hours in open kettles. Cooking in the autoclave [pressure cooker] at 15 pounds pressure for 1½ to 2 hours is coming into vogue.”

“Summary: 1. Proteolytic enzymes prepared from *Aspergillus oryzaeflavus* group can digest native proteins such as beef muscle, egg white, glycinin, edestin and casein as well as paoepton [peptone ?] with the production of amino acids... The glycinin is favored by the presence of sodium of sodium chloride because the salt keeps the protein in solution...”

Acknowledgment: “The author is greatly indebted... to Drs. William N. Berg, Margaret B. Church and Charles Thom.

“Many thanks are due to Dr. Jokichi Takamine, in whose laboratory many practical experiments were made on Taka-diastase.” Address: Was at USDA Bureau of Chemistry Microbiological Lab. Now studying in Europe. By 23 Feb. 1923 he is in Sapporo, Japan.

2408. Adolph, William Henry. 1922. How China uses the soy bean as food. *J. of Home Economics* 14(2):63-69. Feb. [11 ref. Eng]

• **Summary:** This article is quite similar to a 1920 article by Adolph and Kiang titled “The nutritive value of soy bean products,” published in *The National Medical Journal of China* (6:40-49). It combines a review of the literature with the author’s personal experience in China and a summary of some studies conducted in the Shantung Christian University laboratory on soy bean products. “The soy bean is probably the most universal article in the Chinese dietary. When the Chinese finds it necessary to distinguish between the soy bean and other varieties of bean, he refers to the soy bean as the yellow bean (*hwang dou*), and this is the name most common throughout the orient... The use of the soybean in China dates back to the beginning of China’s agricultural age under the Emperor Shen Nung. It is mentioned in the *Ben Tsao Gang Mu*, the ancient materia medica, written by Shen Nung himself in the year 2838 B.C.”

“The soy bean as such is not very largely used as food in China, but it is the source of a number of products. It would be impossible to make a complete list of all these. The best known and the most important are the bean milk, bean curd, bean sauce (soy), bean sprouts, bean oil, and bean cake. The student of nutrition is particularly interested in the bean curd or ‘bean cheese.’” There are four agents employed in China to make soy bean curd, often called Chinese cheese. “These are: (1) *lu*, the solid residue prepared by the evaporation of salt bittern; (2) gypsum; (3) *swan giang*, the soured bean milk whey remaining from the previous coagulation of bean curd; and (4) vinegar.

“In spite of the tremendous consumption of bean curd in China, the industry does not center in large factories, but myriads of small shops, as numerous as our own candy stores and fruit stands, make and supply the daily needs in bean curd for the millions throughout the Chinese republic. Every small town has at least one bean curd shop. Good bean curd must be manufactured fresh every day. The coagulated curd is white in color and resembles our cottage cheese. After coagulation it is pressed between cloths, cut up into squares or moulded into cakes about five inches in diameter and an inch thick, and sold to the Chinese housewife. A cake of the size indicated costs approximately \$0.01 in U.S. currency. The cakes of bean curd may also be salted and dried, yielding a product which resembles our cream cheese.

“Tradition says that the manufacture of soy bean curd was originated in China in 164 B.C. during the reign of the Emperor Han Wen, by a man named Liu An, the duke of Hwai Nan. The common Chinese name for soy bean curd is *dou fu*, often romanized *tofu*; and the classical name is *li chi*, probably meaning ‘the morning prayer.’ It is interesting to note that in China at the present day the bean curd is made in the early hours of the morning, and sold at daybreak.

“Liu An was a great friend of the Buddhist monks, and it seems quite probable that he invented this bean curd in order to provide a change or delicacy to break the monotony of the monastic ration. As a matter of fact, bean curd is a real

delicacy if carefully made and well cooked. Chinese who are connoisseurs on the subject assert that when so prepared it has the taste of pig's brain. Americans and Europeans eating Chinese food often eat carefully prepared bean curd thinking it is pork. With sugar it produces a dish like custard. Prepared with salt it resembles scrambled eggs.

"The Tsinan variety of bean curd is made exclusively with the use of *lu* as a coagulating agent. In the following table the analyses of bean curd are compared with that of common cottage cheese."

Table II gives an analysis of both fresh and dried soy bean curd, and compares them with cottage cheese. Table III gives an analysis of the ash of soy bean curd and soybeans.

Soy bean milk is discussed and Table IV gives its composition (4.22% protein, 1.87% fat), plus that of cow's milk (3.3% protein, 4.0% fat) and bean milk whey.

"Soy bean sprouts. Soy beans soaked in water and allowed to sprout are much relished as a vegetable by the Chinese. Very considerable quantities of soy bean are used in this way. The sprouts are usually cooked in oil, and produce a dish which appeals very strongly to the taste of Americans in China. It is strongly recommended for use as a vegetable on the American table." Table V shows that soy sprouts contain 5.7% protein and 0.8% fat.

"The soy bean cake is the press-cake which remains behind after the removal of the soy bean oil in the press mill. The orient has used soy bean cake for cattle feed and for fertilizer. It is of note that it contains a high percentage of nitrogen, but, economical though the Chinese have been, they do not seem to have attempted to convert it into a human food. Only recently has it been very seriously suggested that both in the occident and in the orient this rich nitrogenous material should be converted into some form of food for human consumption. During the north China famine of 1920-1921, the soy bean cake was actually used in the starvation diets to bolster up a failing food supply."

"Discussion: The Chinese people make practically no use of dairy products, and the bulk of the people consume very meagre amounts of meat. Yet in spite of this they have lived for centuries on what appears to be a remarkable well-balanced diet by the use of the soy bean..."

"A number of interesting examples are found in China of the use of bean curd as an agent for growth. One of the writer's Chinese colleagues, whose home is in Anking, has observed that dealers in birds employ bean curd as the sole food for infant birds. The birds are robbed away from their nests immediately after they are hatched, and are then fed bean curd to tide over the infantile period till able to feed themselves. Still more interesting is the case of the true Buddhist monk who from birth is consecrated to the priesthood, and is carried through the period of childhood growth on a rather heavy diet of bean curd... The country monastic diet is noted for its high content of soy bean products..."

"The Chinese coolie... in spite of the scanty intake of meat and the constant exposure to overwhelming sources of infection, still does possess a wonderful resistance. The diet of the average coolie contains a surprisingly large amount of beans and bean products..."

"A common saying in some parts of China terms 'bean milk the poor man's milk, the bean curd the poor man's meat.' This simply indicates the extent to which bean curd has been incorporated into the diet of the Chinese..."

"Soy bean propagandists have been especially enthusiastic over the introduction of soy bean curd into America. Dr. Yamei Kin, a Chinese dietitian, has become particularly well-known as an exponent of bean curd on her visits to the United States."

Note 1. This is the earliest document seen (Feb. 2004) that uses the terms "poor man's meat," or *li chi*, or *dou fu*, or "bean cheese" or "Chinese cheese" to refer to tofu. Use of the word "bean cheese" is confusing, since it could also refer to fermented tofu (also called "Chinese cheese" or "bean cake").

Note 2. This is the earliest document seen (Aug. 2003) that uses the term "poor man's milk" to refer to soymilk. Address: Assoc. Prof. of Chemistry, Shantung Christian Univ., China.

2409. *San Francisco Chronicle*. 1922. Chronicle shipping news. March 11. p. 19.

• **Summary:** The section titled "Shipping notes" states: "The peanut market was flooded yesterday with the arrival of 2,600 bags of peanuts from the Orient on the steamer Melville Dollar. Other items of the cargo were 1,130 bags of linseed cake, 2,900 bundles of rattan, and camphor, soya beans and dried fish."

"The Japanese steamer Hague Maru, arriving here from the Orient, brought 1,000 cases of tea and a miscellaneous cargo of oil, gum damar, soy [sauce], dried fish, bamboo ware and porcelain."

March. [6 ref. Jap]

Address: Jozo Shikensho. 1. Gishi; 2. Gishu.

2411. Kirkman, Laura A. 1922. Efficient housekeeping: Chinese chop suey in the guest luncheon menu. *Los Angeles Times*. April 15. p. II8.

• **Summary:** One of the ingredients is "'Soye' (the Chinese Worcester sauce)." Recipes are given for both Chicken chop suey and Pork chop suey. The ingredients for each include "1

tablespoon of soye.”

“To adapt these recipes for our table without any of the real Chinese ingredients, simply drop the Chinese ingredients, use a few drops of Worcester sauce instead of soye:...”

2412. *USDA Bureau of Plant Industry, Inventory*. 1922. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from October 1 to December 31, 1917. Nos. 45221 to 45704. No. 53. 86 p. April 17.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. Fabaceae. (*Glycine hispida* Maxim.)

“45263-45320. From China. Seeds collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received October 6, 1917. Quoted notes by Mr. Meyer.

“45269-45295. [Note: these numbers are nearly all said to be late-ripening varieties of soy beans; they come from a region greatly resembling in climate the Gulf States (southern parts). They should therefore be tested in districts where cotton and rice are grown.]

“45269. ‘(No. 2401a. Hankow, Hupeh Province. March 7, 1917.) *Huang tou* (yellow bean). A small to medium-sized, yellow soy bean, used mostly as a human food in the form of bean curd.’

“45270. ‘(No. 2403a. Changsha, Hunan Province. May 16, 1917.) *Huang tou*. A small to medium sized, yellow soy bean.’

“45271. ‘(No. 2403a. Changsha, Hunan Province. May 16, 1917.) *Huang tou*. A small, yellow soy bean, used almost exclusively for bean-curd production.’

“45272. ‘(No. 2404a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou*. A small, yellow soy bean, said to ripen in early August. Used like the preceding number.’

“45273. ‘(No. 2405a. Changsha, Hunan Province. May 16, 1917.) *Huang tou*. A small to medium-sized, yellow soy bean. Used like the preceding numbers.’

“45274. ‘(No. 2406a. Ichang, Hupeh Province. May 24, 1917.) *Huang tou*. A medium-sized, yellow soy bean with a dark hilum. Said to be a medium late ripener.’

“45275. ‘(No. 2407a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou*. A large yellow soy bean.’

“45276. ‘(No. 2408a. Changsha, Hunan Province. May 16, 1917.) *Huang tou*. A medium-sized, yellow soy bean.’

“45277. ‘(No. 2409a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou*. A very small variety of yellow soy bean.’

“45277. ‘(No. 2409a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou*. A very small variety of yellow soy bean.’

“45278. ‘(2410a. Wuchang, Hupeh Province. March 9, 1917.) *Hsia huang tou* (small yellow bean). A very small variety of yellow soy bean.’

“45279. ‘(No, 2411a. Ichang, Hupeh Province. March

24, 1917.) *Huang tou*. A small, greenish yellow soy bean.’

“45280. ‘(No. 2412a. Ichang, Hupeh Province. March 24, 1917.) *Huang tou* A small, greenish yellow variety of soy bean, used almost entirely in bean-curd production.’

“45281. ‘(No. 2413a. Shuichaipang, Hupeh Province. April 2, 1917.) *Hsiao huang tou* (small yellow bean). An exceedingly small variety of yellowish soy bean, used in making bean curd.’

“45282. ‘(No. 2414a. Changsha, Hunan Province, May 12, 1917.) *T’ien ch’ing tou* (field green bean). A medium-large, pale-green variety of soy bean; rare. Eaten as a sweetmeat when roasted with sugar; it is then a very tasteful, wholesome and nourishing product.’

“45283. ‘(No. 2415a. Changsha, Hunan Province. May 16, 1917.) *Ch’ing tou*. (green bean). A dull pale-green variety of soy bean.’

“45284. ‘(No. 2416a. Changsha, Hunan Province. May 16, 1917.) *Ch’ing tou*. A small, green soy bean, often used as an appetizer with meals, when slightly sprouted, scalded, and salted. Also eaten as a fresh vegetable when having firm sprouts 3 inches long.’

“45285. ‘(No. 2417a. Ichang, Hupeh Province. March 24, 1917.) *Ch’ing pi tou* (green skin bean). A dark-green soy bean of medium size, used like the preceding number. The beans are also eaten fried in sweet oil with salt sprinkled over them as an appetizer before and with meals.’

“45286. ‘(No. 2418a. Hankow, Hupeh Province. March 7, 1917.) *Ch’ing tou*. A medium-sized, dull-green variety of soy bean, used in the same way as the preceding number.’

“45287. ‘(No. 2419a. Ichang, Hupeh Province. March 24, 1917.) *Ch’ing p’i tou*. A medium-sized variety of green soy bean, often speckled with black. Eaten like No. 2416a. [S.P.I. No. 45284].’

“45288. ‘(No. 2420a. Changsha, Hunan Province. May 16, 1917.) A rare variety of soy bean of pale-green color, with brown splashes.’

“45289. ‘(No. 2421a. Changsha, Hunan Province. May 12, 1917.) *Ch’a hua tou* (tea-flower bean). A peculiar variety of soy bean, of dull brown color, said to ripen very late. Locally much eaten when roasted with salt sprinkled over, like salted peanuts. Very nourishing and appetizing. Well worth introducing to the American public as a new, wholesome, and nourishing sweetmeat.’

“45290. ‘(No. 2422a. Ichang, Hupeh Province, March 24, 1917.) *Hei tou* (black bean). A medium-large, black soy bean, used when boiled, as a food for hard-working field animals and for oil production; it is also eaten by the poor.’

“45291. ‘(No. 2423a. Hankow, Hupeh Province. March 7, 1917.) *Hei tou*. A medium-sized, black soy bean, used like the preceding number.’

“45292. ‘(No. 2424a. Wuchang, Hupeh Province, March 9, 1917.) *Hei tou*. A medium-sized variety of black soy bean; said to be an early ripener. Used like No. 2422a. [S.P.I. No. 45290].’

“45293. ‘(No. 2425a. Wuchang, Hupeh Province. March 9, 1917.) *Hsiao hei tou* (small black bean). A small, flat, black soy bean, used when boiled, salted, and fermented as the main ingredient in a sauce; also fed, when boiled, to water buffaloes.’

“45294. ‘(No. 2426a. Changsha, Hunan Province. May 16, 1917.) *Hei tou*. A small, flat soy bean of shining black color, used like the preceding number.’

“45295. ‘(No. 2427a. Changsha, Hunan Province. May 16, 1917.) *Hei tou*. A small, round variety of soy bean of dull black color; used like No. 2425a [S.P.I. No 45293].’

“45449/45476. From Soochow, China. Seeds presented by Prof. H. Gist Gee, of the Soochow University, through Dr. Yamei Kin. Received October 27, 1917. Quoted notes by Prof. Gee.

“45470. ‘*Ya tou* (soy beans for sprouts).’”

Other non-soy species of Chinese seeds presented by Dr. Yamei Kin (Peking, China) are listed and described on p. 18-19; they are pai ts'ai, chestnut, muskmelon, cucumber, squash, radish (*Raphanus sativus*), and spinach. Address: Washington, DC.

2413. *Washington Post*. 1922. Bean that is a cow. April 28. p. 23.

• **Summary:** “The world’s demand for soy beans is steadily increasing, and China’s export of them bids fair soon to surpass in value that of its silk output. There are more than 1,000 varieties of soy beans, from which an experiment station at Kung-chu-ling, in southern Manchuria, has chosen one as the best of all. It is nearly spherical, yellow in color,” and the size of a small pea. It yields 22% of its weight in oil when crushed. “The soy bean yields milk and butter (or products equivalent for table use), as well as a great variety of other edibles, including a famous sauce [soy sauce]. Taken all in all, the soy bean is one our most versatile vegetables.”

2414. *San Francisco Chronicle*. 1922. Shipping notes. May 1. p. 19.

• **Summary:** “The principal items of cargo arriving here on the Japanese steamer Persia Maru from the Orient were 750 gunnies, 1,745 rolls of matting, 150 barrels of oil, 215 bales of raw silk, 13,029 mats of rice, 63 packages of silk goods, 968 packages of shoyu, 651 cases of canned crab, 306 cases of firecrackers, 133 cases of tea and 108 packages of tin.”

2415. Eddington, Jane. 1922. Tribune Cook Book: Vegetarian chop suey. *Chicago Daily Tribune*. May 2. p. 24.

• **Summary:** A new recipe. “To make it most like the chop suey use one tablespoon of soy sauce or any of the heavy and syrupy commercial sauces.”

2416. *Christian Science Monitor*. 1922. Coolie trackers of the Yangtze River, philosophers of great brawn and courage. July 1. p. 9.

• **Summary:** These men use long tow ropes to pull boats or junks upstream along a 100-mile stretch of gorges on the Yangtze west of Ichang. It takes about 25 trackers to pull a houseboat 15-20 miles a day against the current. The happiest time of day for these “half starved” men is “chow time” at noon. They gulp down rice and return to work within 15 minutes. A vegetable soup is often included. “The basis of the soup is boiled beans, peas, or bean curd. Bean curd is a high protein food made by grinding soya beans under water, adding a little gypsum water and allowing the material to stand all night. A thick white curd settles out. It is sold wet or dried and smoked. The smoked product in three-inch squares and inch thick keeps very well; these are the kind used aboard the boats.”

“The captain’s contract with the men calls for a catty (1 1/3 lbs.) of pork a month. No other meat is served on the trip... The poorer Chinese families buy meat in two-ounce lots at long intervals. It is a luxury and not a necessity. The wealthy Chinese are heavy meat eaters, but the real workers live on a practically vegetable diet. The only condiment of the trackers is dried capsicum peppers ground in soya bean sauce.” Note: It is not clear whether this sauce is *jiang* or soy sauce (*jaingyou*). Five photos show the boats and trackers.

2417. *San Francisco Chronicle*. 1922. Chronicle shipping news. July 20. p. 20.

• **Summary:** The section titled “Shipping notes” states: “The cargo of the Japanese steamer Mandasan Maru, arriving from Yokohama, consisted in part of 6,586 chests of tea, 1,041 packages of groceries, 2,560 tubs of shoyu, 1,478 cases of canned crab, 2,420 sacks of beans [probably soy beans], 1,875 sacks of linseed cake, 3,808 bags of bean cake.”

2418. Willaman, J.J. 1922. Soy bean, the most perfect crop plant: Used in the United States only in recent years—Many products can be made from it. *American Food Journal* 17(7):11-12. July.

• **Summary:** Contents: Introduction. Exceptionally high in protein. Soy bean one of the newest foods in the U.S. Soy bean cheese [tofu] (This long section is based on an article by Prof. Adolph in the February issue of the *Journal of Home Economics*). Experiments have shown high vitamin content. Shoyu one of the best known products (largely based on an article by K. Oshima in *American Food Journal*, Jan. 1922, p. 30-31).

Tables: (1) “Analysis of soy bean curd compared with cottage cheese.” Values are given for “Soy bean curd, Cottage cheese, and Dried soy bean curd.” (2) “Analysis of ash of soy bean curd (in percentage of water-free portion). (3) Composition of soy sauce.

(4) Yields per acre, lbs. protein per acre (digestible), and calories per acre from various crops. The soy bean produces twice as much protein per acre as any other crop. On the latter point, soy beans, yielding 16 bushels per acre, produce

294.7 lb of digestible protein per acre. Beans (yielding 14 bu/acre) produce 157.9 lb of protein. Corn (yielding 25 bu/acre) produces 147.0 lb of protein. Peanuts (yielding 34 bu/acre) produce 126.2 lb of digestible protein per acre. A photo shows the soy bean plant with roots. Address: Minnesota Agric. Exp. Station.

• **Summary:** Following Dakin’s butyric acid method, Onuki isolated from 100 gm of dry protein matter, 5.47 gm of Beta-hydroxyglutamic acid, but was unable to determine from which individual protein it was derived and the full amount present. Address: Nōgakushi, Shoyu Kenkyusho-in.

2424. Nemzek, L.P. 1922. The production and use of soya bean oil in the United States with a brief history of their development. *Paint Manufacturers’ Association of the U.S., Educational Bureau, Scientific Section, Circular No. 155*. 14 p. Sept. Also in *Oil, Paint and Drug Reporter* 102(20):33, 50. Nov. 6, 1922.

• **Summary:** “An address to the Corn Belt Seed Growers’ Association, Columbia, Missouri, September 1, 1922.” An excellent overview. Contents: Introduction: Importance and value of soybean oil, imports of the oil into the United States (table from 1913-1921 showing pounds and dollar value), its promotion by the Educational Bureau. Linseed failure demonstrates need. Exposure tests show value of soya oil: Paint exposure tests begun in May 1911 in connection with the Institute of Industrial Research were conducted to establish its suitability for making paint, enamel, and varnish. Experiment stations spread propaganda. Beans can be grown throughout the country: Two types of soya bean oil manufacture, by hydraulic press or expeller. Cotton and linseed mills well situated to crushing. Average oil content 19 per cent. Suggested specifications. Chemical constants: Physical properties of the oil. Drying properties. Price fluctuation (incl. table, monthly, Jan. 1920 to Dec. 1921). Yield per acre. Food value of soya bean: Various uses in China and Japan. Importation of beans. Diversified market (incl. table of soya bean prices, 1913-1921). Wholesale prices of soya beans. Market for cake and meal (incl. table comparing composition of soya bean meal, cottonseed meal, and linseed meal).

“American agriculture is gradually adopting the growing of the ‘Soy Bean,’ as it is still quite generally known. Each year witnesses an increased interest its development. This year there has been a remarkable increase in production and a similar increase in the number of inquiries concerning different points relative to the possibilities of the Bean and the utilization of the products derived from it, namely: the oil and the cake or meal. The progress in production is fairly well illustrated by the recent announcement that oil will be crushed from beans grown in Central Illinois. A weekly output at the start of from twenty-five to thirty cars is expected.”

“In view of the fact that there are hundreds of varieties, many of which differ in only a few minor respects from others, it was necessary after making preliminary tests, to eliminate many of them in order to bring the number down to a practical working basis. There is really nothing to be gained by growing so many different varieties. The number was reduced to about fifteen already popular varieties, namely:—Mammoth, Medium Yellow, Ito San, Holly Brooks [Hollybrook], Haberlandt, Peking, Wilson, Auburn, Black Eyebrow, Arlington, Tokio, Mikado, Virginia, Sable, and the Yellow Manchurian bean, which growing tests showed were very satisfactory” (p. 4).

“In 1916 there were produced in this country in the neighborhood of one hundred thousand gallons of Soya Oil. The largest part of this quantity was produced by the Elizabeth City Oil [& Fertilizer] Company, and the New Bern Cotton Oil and Fertilizer Mills.” (p. 7).

“In China and Japan, millions of tons of soya beans are consumed as food.” “Soya meal... finds application in human

food in connection with wheat flour and other substances like Corn and Rye meal.

"In China soya beans are used for human consumption as vegetables like marrow-fat beans and in the preparation of soups. They are prepared especially as substitutes for meat and as substitutes for chocolate and coffee. They also enter into the manufacture of cheese and in the macaroni preparations.

"One of the best known uses for them is in Soy, the Chinese sauce, manufactured extensively in Hong Kong. The process is simple. It consists merely of grinding the bean and mixing the bean with water and Chinese yeast. The mixture is then allowed to stand for three to four months, the resultant liquor being the sauce.

"Soya beans are also the basis for many modern table sauces.

"Large quantities of the beans are consumed in the form of oil used for lubricating purposes for the greasing of axles and in connection with much of the Chinese machinery. It is also used as a lamp oil instead of kerosene oil. The refined oil is frequently used for preserving sardines, and in place of lard and Cotton Seed oil for cooking.

"During the last five years a considerable tonnage of Soya Beans has been imported for crushing in this country. Some of the beans have been crushed in the Cotton Seed oil mills in the South..." (p. 10). Address: [Paint Manufacturers' Assoc. of the U.S., Philadelphia, Pennsylvania].

2425. Takahashi, Teizô; Sano, Yonesaburo. 1922. On the budding fungi of "shoyu-moromi." *J. of the College of Agriculture, Tokyo Imperial University* 7(2):119-55. Oct. 15. [45 ref. Eng]

• **Summary:** Contents: Introduction. The film-forming *Zygosaccharomyces*. Non-film forming *Zygosaccharomyces*. Asporogenic *Zygosaccharomyces* (?): Fermenting faculty. *Torula*: Film-forming variety, non-film forming varieties (7 varieties). Red yeast. *Willia*. *Mycoderma*. *Saccharomyces*. *Oidium* and *Sachsia*. Summary.

The author claims to have found two new varieties of film forming *zygosaccharomyces* and one new variety of non-film forming *zygosaccharomyces*. He proposes to call the latter *Zygosaccharomyces soja var. saccharoraffinosum*. He has also isolated four new varieties of asporogenic *zygosaccharomyces*. Of the various organisms studied, *zygosaccharomyces* produce the most alcohol. This paper was submitted in Jan. 1915. Ten photos (plate VII; last page) show the budding fungi of *Shoyu-Moromi*, including asporogenic *Zygoasaccharomyces*, *Mycoderma*, and *Torula*. Address: Japan.

Address: Jozo Shikensho. 1. Gishi; 2-4. Moto Kenshuin.

2428. **Product Name:** Soy Sauce.

Manufacturer's Name: La Choy Food Products (Importer). Made in China.

Manufacturer's Address: Detroit, Michigan.

Date of Introduction: 1922.

Wt/Vol., Packaging, Price: Bottle.

New Product–Documentation: Ad in *Soybean Digest*. 1944. Sept. p. 12. "Genuine soy sauce." Soybean Blue Book. 1947. p. 72-73. The 2¼ by 3½ inch display ad is titled: "Genuine Soy Sauce" from "LaChoy Food Products, Archbold, Ohio. Division of Beatrice Foods Company."

Shurtleff & Aoyagi. 1982. History of Soy Sauce. p. 105. "One of the earliest importers and marketers of soy sauce in America was La Choy Food Products. The company was founded to produce mung bean sprouts in Detroit, Michigan, by Mr. Ilhan New (a Korean) and Wally Smith. Soon they were doing a booming business and by 1922 they were importing fermented soy sauce from China in wooden barrels to use as a seasoning in their Asian food products. In the early 1930s they began buying HVP soy sauce from Huron Milling Co. (now Hercules) and A.E. Staley, and selling it in small bottles as La Choy Soy Sauce."

Note 1. See also the history of Oriental Show-You Company, which was started in 1918 in Detroit, Michigan, by Shinzo Ohki, a Japanese man, who began by importing shoyu and tea from Japan. In late 1922 he moved his business to Columbia City, Indiana, and began making his own shoyu there in 1924.

Joe Staudt. 1985. Horizons (Beatrice Grocery Group). Summer. p. 1-7. In 1920 Wally Smith and Ilhan New, two friends from the University of Michigan, founded La Choy Foods in Detroit. Their first product was bean sprouts. In 1922 the business was incorporated as La Choy Food Products. The first La Choy-owned plant was built in Detroit in 1937. The Archbold, Ohio plant was built on its present site in 1942. The Company's long association with Beatrice started in 1943, when La Choy was bought by the Chicago-based company and became Beatrice's first non-dairy operation.

Note 2. This is the earliest record seen (April 2012) concerning La Choy.

Note 3. This is the earliest record seen (Sept. 2005) concerning the work of Koreans overseas with soy.

2429. **Product Name:** [Nishii Super Shoyu, and Miso].

Foreign Name: Nishii Super Shoyu, and Miso.

Manufacturer's Name: Nishii Super Shoyu.

Manufacturer's Address: Renovacion 101-A, La Victoria, Lima 13, Peru.

Date of Introduction: 1922.

Ingredients: Water, soybeans, wheat, salt.

Wt/Vol., Packaging, Price: 750 ml bottle.

How Stored: Shelf stable.

New Product–Documentation: Nishii Shoyu, located in the Victoria district of Lima, Peru, is owned by Mr. Shinji Kawakami, age 75, the second-generation Japanese owner. The outside and inside of his shop, and the process by which he makes 5 tonnes/week of shoyu in the traditional hand-made way, are shown. He also makes miso. A close-up shows the 750 ml bottle and its colorful label, orange, blue, and green on yellow. One bottle costs the equivalent of about 300 yen.

Talk with Mr. Kawakami by phone. 1991. March 21. His uncle founded this company at this location in 1922. He is the second generation owner. He runs it as an “individual business” so there is no real company name. His address is shown above. His phone is 14-31-81-05.

Letter from Marco Kamego of Kikko Corporation S.A. in Peru. 1998. Feb. 13. The present manager of this company is Mr. Cesar Kawakami.

Note 1. This is the earliest known commercial soy product made in Peru, or in South America, or in all of Latin America.

Note 2. This is the earliest document seen (May 2009) concerning soybean products (shoyu and miso) in Peru. This document contains the earliest date seen for soybean products (shoyu and miso) in Peru (1922); soybeans as such had not yet been reported by that date.

2430. Noda Shoyu K.K. 1922. [Report on activities, 1921-1922]. Mimeographed. 6 p. Unpublished manuscript in Kikkoman Corporation Archives. [Jap]*

• **Summary:** For a list of many other early documents in the Kikkoman Company Archives, see Fruin (1983), Notes. For 1918-1929, see especially p. 333. Address: Noda, Japan.

2431. Ri-Koheki. 1922. Chôsen shôyu miso oyobi tôfu no seihô ni tsuite [The processes for manufacturing shoyu, miso, and tofu in Korea]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 17(11):45-46. [Jap]
Address: Chosen Sotokufu Iin Yakuzai-shi.

2432. **Product Name:** Loma Linda Smoke (Seasoning).
Manufacturer's Name: Sanitarium Food Co. (Changed name to Loma Linda Food Co. on 6 Feb. 1933).
Manufacturer's Address: Anderson Street, Loma Linda, California.

Date of Introduction: 1922.

Ingredients: In 1973: Toasted soy powder, dried yeast, soy sauce, condensed wood smoke.

Wt/Vol., Packaging, Price: By 1969: 2.5 oz shaker bottles.

New Product–Documentation: Ad in *Health* (Mountain View, CA). 1934. April. p. 33. The product is now named Smoteen.

Today's Food. 1961. Summer. p. 6. “Smoke.”

Loma Linda Food Co. 1969. “Wholesale Price List.”
Smoke is now sold in 2.5 oz shaker bottles, which retail for \$0.30 each.

Interview with Charlotte Van Gundy Holmes. 1981. She says that this was produced as an imitation of the soy-based Smoein developed several years earlier by her father, T.A. Van Gundy, at La Sierra Industries in nearby La Sierra, California.

Karen Misko. 1973. *SeVa Longevity Cookery Cookbook*. p. 101. “Smoke: smoked seasoning spice made from toasted soy powder, dried yeast, soy sauce and condensed wood smoke. It is used for flavoring soups and sauces (Loma Linda Foods).”

Talk with Ty Myers of Washington state. 2004. Jan. 30. His aunt, who also lives in Washington, has a bottle of Smoke with some of the product still in it. She had it when he was a boy, and he is now age 40. He tried some not long ago. A powder, it adds a delicious smoky flavor when sprinkled on almost anything. Ingredients include soybeans and yeast. It comes in a glass bottle, 3 inches tall, with a shaker top and a metal cap. The design looks like it was made in the 1940s. He will send color photos to Soyfoods Center.

Note 1. This is the earliest known commercial soy product made by Loma Linda Foods or its predecessors.

Note 2. This is the 2nd earliest known commercial roasted soy flour in the Western world (after Smoein).

2433. Togano, Meiji-ro. 1922. Shôyu miso no sokujô ni tsuite [Rapid manufacture of shoyu and miso. I-III.]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 17(3):7-9; 17(4):4-8; 17(5):14-16. [Jap]
Address: Nihon Jozo Kogyo K.K., Senmu Torishimari Yaku, Nôgaku-shi, Japan.

2434. **Product Name:** Miso, and Shoyu.
Manufacturer's Name: Tsuruda Miso Shoyu Seizo-sho (Tsuruda Miso & Shoyu Mfg. Co.).
Manufacturer's Address: 472 Jackson St., San Jose, California. Phone: 5539.

Date of Introduction: 1922.

New Product–Documentation: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan (Directory of Japanese in the USA)*. p. 208.

San Jose City Directories. 1927-1936. The first listing, in 1927, says: Tsuruda Co., Nabutaro Tsuruda, mgr. Food

products. 472 Josefa, San Jose. In 1929 the company name had changed to Tsuruda Bros. (Nabutaro and Tsuneo). Yasua and Yoshio were factory heads. In 1932 the occupation first changed to condiment manufacturers from food products. In 1936 the listing was: Tsuruda Bros. Mitsuo Tsuruda, mgr. Condiment mfrs, 472 Josefa.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. Started by Mr. and Mrs. Tsuruda, this company was shut down during World War II and never resumed.

2435. Fritsch, Jean. 1922. *Fabrication et raffinage des huiles végétales: Manuel à l'usage des fabricants, raffineurs, courtiers et négociants en huiles*. Troisième édition entièrement refondue [Manufacture and refining of vegetable oils: A manual for the use of manufacturers, refiners, brokers, and wholesale merchants. 3rd ed., completely reset]. Paris: Desforges-Librairie Générale Scientifique et Industrielle. xiv + 723 p. Illust. Index. 25 cm. [16 ref. Fre]

• **Summary:** Chapter 2, "Drying oils (*Huiles siccatives*)" contains a section on "Soybean oil (*Huile de Soja hispida; Huile de pois*)" (p. 368-76). Its contents: Origin (Incl. miso, shoyu, tofu). Manufacture (China, Japan, above all Formosa). Physical and chemical properties. Table showing such properties, with 16 references. Applications and uses. Residues (soybean cake remaining after the oil is pressed from soybeans; *le tourteau de soja*).

Also discusses: Margarine (p. 232-33). Peanut oil (*Huile d'arachide*, p. 238-48, 699-701). Colza oil (Coleseed oil, *Huile de colza*), rapeseed oil (*Huile de navette*), and rubsen oil (*Huile de rabette*) (p. 265-72, 652). Sesame oil (*Huile de sésame*, p. 273-81, 705-06).

Note 1. The first edition of this work was published in 1905, and the second edition in 1914.

Note 2. This is the earliest document seen (March 2005) that uses the English word "coleseed" or the term "coleseed oil" to refer to rapeseed or to rapeseed oil, respectively. Address: Ingénieur-Chemiste.

2436. Kodama, Shintaro. 1922. *Arudehido no kagaku*. IV. *Shōyu-chū ni sonzai suru 1, 2 no shin arudehido ni tsuite* [The chemistry of aldehydes. IV. • **Summary:** Japan: Kanagawa-ken, Kamakura-gun, Kamakura-cho. USA: 208 N. Wabash Ave., Chicago, Illinois. He came to the USA in 1901. In 1911 he graduated from the commercial department of an American college or university. He worked as a tea maker and marketer and is presently president of Toyo Shoyu K.K. Address: San Francisco, California.

2439. Shin Sekai-sha. 1922. *Zaibei Nippon-jin kan* [Directory of Japanese in the USA]. San Francisco, California: Shin Sekai-sha. See p. 19, 41, 50-51, 207-08, 234, 238, 346, 357, 409. [Jap] Address: San Francisco, California.

2440. **Product Name:** Maru-sho brand Miso, Shoyu [Soy Sauce].

Manufacturer's Name: Tsuruda Goshi-gaisha (Tsuruda Limited Partnership). Miso, Shoyu Seizo-sho. Renamed Tsuruda Kyodai Goshi-gaisha in 1930 (Tsuruda Brothers Limited Partnership).

Manufacturer's Address: 472 Josefa St., San Jose, California. Phone: San Jose 5539.

Date of Introduction: 1923. January.

New Product–Documentation: The Japanese American Directory. 1923. p. 138. Ad (¼-page) at bottom middle of same page (all in Japanese) says the company makes Marusho (or possibly Marumasa) brand miso and shoyu. Marusho is their registered trademark (*toroku shohyo*). Also in 1925. p. 4. Full-page ad (all in Japanese). The company now makes and sells koji. Tsuruda (probably not Tsuruta) Goshi-gaisha makes Maru-sho brand miso, shoyu, and koji. 473 Josefa St. (probably is 472 Josefa), San Jose. No phone number listed. A large illustration shows Maru-sho brand shoyu in a 30 oz. glass bottle, and a keg, Maru-sho brand miso in the same size keg, and Maru-sho koji in a wooden box. Also in 1924 directory, p. 143. Address is now 472 Josefa St. Also in 1924, p. 143. Also in 1925, p. N-114. Also in 1926, p. N-111. Still 472 Josefa. Full-page ad (identical to that of 1923) also in 1926, p. N-113. Also in 1930 directory, p. 116. New company name: Tsuruda Kyodai Shokai. Miso, shoyu. 472 Josefa St., San Jose, California. Phone: Ballard 5539. Also in 1932 directory, p. 112, plus ad (¼ page) on same page, bottom right. Makes Maru-sho brand miso, shoyu, and koji. Also in 1934 directory, p. 116. Also in 1936 directory, p. 140.

2441. *Christian Science Monitor*. 1923. Recipes from many places. Jan. 5. p. 18.

• **Summary:** “American chop suey:” Add “salt, pepper, and

soy sauce to season.”

2442. *Atlanta Constitution (Georgia)*. 1923. Dairen rivals Boston as great bean city: Japan’s ice-free port in Manchuria, all-year-round shipping point for soy product of vast fields has grown from mud village. Jan. 21. p. 54.

• **Summary:** “Dairen and Boston—the world’s premier bean towns.” Dairen lives not on but by beans; it is the port of the greatest bean country in the world.”

“Steamers come in an endless procession to Dairen wharves to carry away countless tons of [soy] beans, thousands of gallons of [soy bean] oil and the sauce you eat on your chop suey when you visit ‘Chinatown,’ and shiploads of great cartwheel-like disks of bean cake from the oil mills. The thousands of gallons of soy bean oil which leave Dairen annually, compete actively in world markets with American cottonseed oil as an olive oil substitute.”

“To the Chinese it is Talien-wan; the Russians, who thought in 1899 they had established there their long-sought ice-free Pacific port, called it Dalny.” The Chinese (and Japanese) characters mean “great connections,” and “it is truly a connecting link between the China that was and the Japan that is.”

“Russia, great power of the West, left Dalny at the end of the Russo-Japanese War an unhealthy, overgrown village with streets of mud. Japan, apt pupil of a more western West than Russia, gave the newly christened town paved streets, 20th century sanitation, forest-clad hills, electric lights and street cars, and an efficient municipal government.

“Politically, Dairen is the seat of administration of Japan’s 99-year lease over the Kwang-tung or Liaotung peninsula [1,220 square miles], which forms the southern extremity of Manchuria,... It would be difficult to conceive of a port in a relatively undeveloped region of the world more strategically situated.”

Japan “also has a 99-year concession for the South Manchurian Railway, which extends several hundred miles to the north through the center of Manchuria’s almost matchlessly fertile plains. ‘Railway’ must be taken in something of a Pickwickian sense... In addition to its road it operates a line of ocean steamers and great warehouses, develops power, runs mines and manages lands.” The railroad has all the conveniences of U.S. trains; it even has all-Pullman trains.

2443. *Quebec Daily Telegraph (Canada)*. 1923. Chop suey. Jan. 29. p. 4.

• **Summary:** This recipe, by Bertha E. Shapleigh, of Columbia University, calls for “2 tablespoons Soyu Sauce.”

In the instructions is a section which reads: “Soy bean sauce: The Shoyu or Soyu Sauce is the Worcestershire of China. It is made from the soy bean and gives the characteristic flavor found in Chinese food. If it cannot be purchased, use Worcestershire, one tablespoon, and a little

salt. The Soyu sauce is salty and where used, no other salt is required.”

Note: This is the earliest document seen (March 2012) that refers to soy sauce as “the Worcestershire of China.”

2444. Nakai, T. 1923. Inshokuhin toku ni shôyu-chû no beeta nafutooru no shin kenshutsu-hô [A new method for detection of beta-naphthol in foods and especially in shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 491. p. 17-26. Jan. (Chem. Abst. 17:3059). [Jap]

• **Summary:** About 1 part of Beta-naphthol in 500,000 can be detected with a reagent prepared by dissolving molybdic acid (5 gm) in concentrated sulfuric acid (100 cc). The naphthol is extracted from soy sauce by shaking the sauce (100 cc) with 200 cc of a mixture of ether and petroleum spirits (1:1) for 30 minutes, evaporating the solution to dryness, and dissolving the residue in warm water (7 cc); or better by distilling the sauce (100 cc) and collecting the distillate in fractions of 7 cc, the third and fourth fractions being used for the test. On adding the molybdic acid reagent to the solution along the wall of the vessel in a thin stream, a violet-red zone is developed between the two solutions when Beta-naphthol is present. α -naphthol gives no coloration with this reagent.

2445. Oshima, Kokichi; Church, Margaret B. 1923. Industrial mold enzymes. *Industrial and Engineering Chemistry* 15(1):67-70. Jan. [13 ref]

• **Summary:** “A new method for quantitative estimation of protease is described in this paper. Many strains of the *Aspergillus flavus-oryzae* group, which were separated from tane-koji used in shoyu manufacture and related industries, showed individually the production of amylase and protease of widely different strengths... Even on soy-bean flour, which contains no starch, strong amylase is produced.”

The molds were cultivated on various media, including “soy-bean milk agar.” “Experiments here show that extracellular and intracellular enzymes are the same, and after a certain period of growth all enzymes are excreted.”

On page 68 is a reproduction of an interesting label, written in both Japanese and English, on an envelope containing “commercial mold ferment.” The English-language portion reads: “Pure Cultured *Aspergillus Soja*. Registered Trade Mark.” Illustrations show conidiophores of *Aspergillus*.

Photos show: (1) A worker in or near a koji room with koji trays inoculating the ingredients for making soy sauce with the mold ferment, *Aspergillus flavus*. (2) A series of modern, brick-walled koji rooms with wooden doors. Address: 1. Hokkaido Imperial Univ., Sapporo, Japan; 2. Bureau of Chemistry, USDA, Washington, DC.

2446. *Miami Daily Metropolis (Miami News)*, 1923. Chop suey. Feb. 9. p. 5.

• **Summary:** Note: This recipe first appeared in the *Quebec*

Daily Telegraph (Canada) on 23 Jan. 1929, p. 4. It calls for “2 tablespoons Soyu Sauce” and has a section in the instructions titled “Soy bean sauce,” which begins: “The Shoyu or Soyu Sauce is the Worcestershire of China.”

2447. Piper, Charles V.; Morse, William J. 1923. The soybean. New York, NY: McGraw-Hill Book Company, Inc. xv + 329 p. Feb. Illust. Index. 24 cm. Reprinted unrevised in 1943 by Peter Smith Publishers, New York. [563 ref]

• **Summary:** This is the first comprehensive book about the soybean written in English, and the most important book on soybeans and soyfoods written in its time. Contains an excellent review of the world literature on soybeans and soyfoods with a bibliography on soy that is larger than any published prior to that time (563 references), a good description of the present status of the soybean worldwide based on the authors’ extensive contacts, and a great deal of original information. It quickly became a key source for people and organizations working with soybeans and soyfoods in all countries, and a major factor in the expansion of the soybean in the western world. Because of its scope and influence, Soyfoods Center considers the year of its publication to mark the end of the “Early Years” of the soybean worldwide. It remained in print until about 1986.

Contents: Preface. 1. Introduction: Name of the plant, origin, literature, use by the Chinese and Japanese, present importance, future prospects in the U.S., recognition of the possibilities. 2. The commercial status of the soybean: Manchuria and China, Japan, Europe, U.S., other countries, summary of imports and exports of soybeans and soybean oil. 3. Botanical history of the soybean: History prior to Linnaeus’ “Species Plantarum” 1753, Linnaeus’ misunderstandings of the soybean, Prain’s elucidation, other and the correct botanical name.

4. Agricultural history of the soybean: Vernacular names of the soybean, China, Korea, and Japan, India and neighboring regions, Cochin China, Malayan region, early introduction into the United States, later U.S. introductions, the early introduced varieties (grown in the USA by 1898—Ito San, Mammoth, Buckshot, Guelph or Medium Green, Butterball, Kingston, Samarow, Eda, Ogema or Ogema), soybean in Europe, varieties grown in Europe and identification, Hawaiian Islands, Australia, Africa, Argentina (p. 50), Canada (“Soybeans are grown in very small quantities in Canada and then usually as a forage crop”), Philippines, Egypt, Cuba (p. 52), British Guiana, Mauritius (p. 53), present culture distribution. 5. Culture of the soybean: Climatic adaptations, soil preferences, water requirement, preparation of seed bed, time of planting, methods and rate of seeding, seeding for pasturage, depth of seeding, inoculation, fertilizer reactions, cultivation, soybeans in mixtures (with cowpeas, sorghums, Sudan grass, Johnson grass, millet, corn, or sunflowers and corn).

6. Harvesting and storage of soybeans: harvesting

soybeans for hay, silage, for the seed, seed yields, proportion of straw to seed, storing seed, separation of cracked from whole soybean seed, viability of soybean seed, pedigreed, inspected, registered, and certified seed. 7. Composition of the soybean: Proportions of stems, leaves and pods, composition of plant and seed, nutritive and mineral constituents, forms of nitrogen in soybean nodules, factors affecting oil content of seed. 8. Utilization of the soybean: Diversity of uses (a chart, p. 129, shows 59 products that can be made from soybean seeds, and 6 more that can be made from soybean plants), soybeans for green manure, pasturage, soiling, ensilage, hay, straw.

9. Varieties: Japanese, Manchurian, botanical classifications, vital characteristics, descriptions of important varieties, key for identification, breeding and improvement, genetic behavior, oil content.

10. Structure of soybean seeds. 11. Soybean oil: Methods of extraction [Manchurian, and solvent], American oil mills, methods of shipping and marketing, prices, utilization in soap manufacture, food, paint manufacture, miscellaneous. 12. Soybean cake or meal: Feeding value, composition, use for feeding for dairy cows, cattle, swine, sheep, poultry, digestibility, injurious effects, fertilizer.

13. Soybean products for human food: Food value of the soybean, digestibility of the soybean and its products, mature or dry soybeans, immature or green soybeans (a “nutritious green vegetable”), soybean flour, digestibility of soybean flour, soybean bran (p. 225-26), soybean sprouts, soybean coffee, soybean or vegetable milk [soymilk] (preparation, composition, residue from the manufacture of vegetable milk [okara], utilization of soybean milk, condensed vegetable milk, vegetable milk powder, fermented vegetable milk), vegetable casein, tofu or soybean curd (names and brief history, method of manufacture, coagulating agents, manufacturing yields, digestibility, utilization of bean curd and manufactured products, bean curd brains or *tofu nao*, dry bean curd or *tofu khan*, thousand folds {*chien chang tofu*}, fried bean curd {*tza tofu*}, Fragrant dry bean curd {*hsiang khan*}, frozen tofu {*kori tofu*}, Chinese preparation, various dishes), natto, hamananatto [hamanatto], yuba, miso, shoyu [soy sauce], confections. 14. Table dishes of soybeans and soybean products: mature or dry beans, flour, tofu, sprouts (86 recipes). 15. Enemies of the soybean: bacterial, mosaic, fungous [fungus], and nematode diseases, insects, rodents. This last chapter is a comprehensive review of the literature on soybean diseases and insects published before 1922.

The Preface begins: “The soybean, also known as soya or soja bean, has assumed great importance in recent years and offers far-reaching possibilities of the future, particularly in the United States. It is, therefore, desirable to bring together in a single volume the accumulated information concerning this crop...

“The aim has been to present the information so as to make it useful from both agricultural and commercial

standpoints, not omitting, however, much that is mainly of historical or botanical interest...”

The introduction begins: “There is a wide and growing belief that the soybean is destined to become one of the leading farm crops in the United States.”

Note 1. C.V. Piper lived 1867-1926. Note 2. This is the earliest English-language document seen (July 2003) that uses the term “soybean bran” to refer to soy bran.

Note 3. This is the earliest document seen (July 2003) in which Piper or Morse describe natto, Hamananatto [Hamanatto], yuba, or miso.

Note 4. This book was published by March 1923 (See *Ohio Farmer*, 10 March 1923, p. 313). Address: 1. Agrostologist; 2. Agronomist. Both: United States Dep. of Agriculture, Washington, DC.

2448. Read, Bernard E. comp. 1923. Botanical, chemical, and pharmacological reference list to Chinese materia medica. Peking, China: Printed by the Bureau of Engraving and Printing. v + 38 p. Feb. 28 cm.

• **Summary:** Contents: Chemical and pharmaceutical references (45 entries; p. i-ii). Botanical literature (17 entries; p. iii). Bibliography of materia medica and medical botany other than cited in this reference list (47 entries; p. iv-v). Note: For these first three parts, column 1 is the abbreviation; column 2 is the full title.

The rest of this book consists one long table (p. 1-38) composed of four columns. (1) Chinese names (The name of each materia medica substance written in Chinese characters). (2) Romanized Wade (The Wade-Giles romanization of the Chinese name; the table is sorted alphabetically by this column). (3) Botanical references (such as the scientific name of a plant, or terms like “soy oil,” “rice congee,” or “rice gruel”). (4) Chemical & pharm. references (Abbreviations of references to documents containing information about this plant or other substance).

Chiang Yu—Soy oil appears on p. 3. References: (1) USDA Office of Experiment Stations, Bulletin No. 68, p. 36 (1899). (2) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (3) J. of the College of Agriculture, Tokyo Imperial University 1:97 (16 June 1909). (4) J. of the College of Agriculture, Tokyo Imperial University 1:89 (16 June 1909).

Huang Ta Tou—*Glycine hispida* [The yellow soybean] appears on p. 11. References: (1) Matsumura, J. *Shokubutsu-me-i*, Tokyo, 1915. (2) *China Medical Journal* 35:247 (1921). (3) Martindale and Wescott, *Extra Pharmacopoeia*, London, 1921, p. 824, 1913. (4) *Pharmaceutical Journal* (London), II, p. 120, 1913. (5) Loureiro, J. *Flora cochinchensis*, 1790, vol. II, 1844, 1912. (6) *Pharmaceutical Journal* (London), II, p. 154 (1912). (7) USDA Office of Experiment Stations, Bulletin No. 68, p. 33 (1899). (8) Wehmer, C. *Die Pflanzenstoffe*, Jena, 1911, p. 362.

Pai Tou—*Soja hispida* [The white soybean] appears on

p. 11. References: (1) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (2) Wehmer, C. Die Pflanzenstoffe, Jena, 1911, p. 362. (3) American J. of Physiology 19:468 (1907). (4) J. of the American Chemical Society 20:419 (1898).

Ta Tou—Glycine hispida M. [The soybean] appears on p. 11. (3) Bretschneider, E. Botanicon sinicum, 1881, 1892, 1895. (4) Giles, H.A. A Chinese-English dictionary, 1892

Ta Tou Ch'in—Bean relish appears on p. 30. No references.

Ta Tou Huang Chüan—Bean sprouts appears on p. 30—References: (1) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (2) USDA Bureau of Plant Industry, Bulletin No. 107 (?), p. 28. (3) China Medical Journal 35:247 (1921).

Note 1. The references in this book are very cryptic and hard to understand, even after careful analysis. The book also contains quite a few typographical errors, inconsistencies, and mistakes.

Note 2. Other interesting substances mentioned in this book are: Mung beans (p. 4; *Phaseolus mungo*). Laminaria and Sargassum (p. 7, 15; types of sea vegetables, like kombu). Amarantus (p. 9). Sesame seeds (p. 10; *Sesamum indicum*). Fermented nonglutinous rice (p. 12). Job's tears (p. 12; *Coix lachryma*). Kudzu (p. 13; *Pueraria hirsuta*). Daikon (*Raphanus sativus*). Umeboshi plum (p. 19; *Prunus mume*). Address: Dep. of Pharmacology and Physiological Chemistry, Peking Union Medical College.

2449. Lea and Perrins. 1923. Lea and Perrins' Sauce (Ad). *Times* (London). March 20. p. 16, cols. 6-7.

• **Summary:** At the top of this display ad is an illustration of Worcestershire sauce being poured from a Lea and Perrins' bottle onto slices of bacon on a plate of bacon and eggs. Below that: "The eggs addressed the bacon thus:—'People hail the man who discovered that jelly went with a saddle of mutton, but some have not yet learned the joy of eating us with just a drop of Lea & Perrins' Sauce.'"

At the left in a sidebar: "Free. A cookery book that contains 150 delightful dishes. New ideas for soups, salads, curries and ragouts—new fish, egg and casserole dishes... Sent free on receipt of a penny stamp to cover postage. Lea & Perrins, 2 Midland Rd., Worcester." An illustration shows the cover of the booklet titled "Kitchen Recipes for Lea & Perrins' Sauce." Across the bottom of the ad: "The original Worcestershire. 'The first thing to reach for.'" Address: [England].

2450. Bidwell, Emelia. 1923. Kitchen recipes: The chef's suggestions for seasoning over one hundred and fifty dishes with Lea & Perrins' sauce. Worcester, England: Lea and Perrins. 46 p. 18 cm. *

• **Summary:** A booklet of recipes advertising Lea & Perrins' Worcestershire Sauce. Address: [England].

2456. Piper, Charles V.; Morse, William J. 1923. Photographs and illustrations (Document part). In: Piper and Morse. 1923. The Soybean. New York: McGraw-Hill. xv + 329 p.

• **Summary:** Photos show: (Fig. 1) Typical soybean plant (p. 1). (2) Plant of wild soybean (p. 2). (3) A fleet of junks engaged in carrying soybeans to Newchwang, Manchuria, from different points in the interior, taking away bean oil and bean cake to other places * (p. 6). (4) Soybeans in sacks brought to a bean center by horses in winter in Manchuria (p. 8). (5) Chinese bean cart loaded with beans in wicker containers in Manchuria (p. 8).

(6) Type of cart and method of hauling soybeans with a horse in Manchuria (p. 10). (7) Manchurian farmers hauling the bean crop to market in winter on sleds (p. 10). (8) Plants of a soybean variety from India (p. 38). (9) Plants of the wild soybean from Soochow, China, grown at the Arlington Experimental Farm, 1908 (p. 38). (Fig. 15) Soybeans grown on the edges of a rice field in southern China * (p. 58).

(16) A man in a field of the Peking variety of soybean grown in rows and cultivated (p. 61). (17) A broadcast field

of soybeans showing how weeds have overrun the field (p. 61). (18) The ordinary grain drill furnishes a most convenient method of seeding in rows or broadcast (p. 63). (19) Soybeans and corn grown in alternate rows for pasturage; a man in a hat stands between the rows (p. 65). (20) The roots of a soybean plant, showing abundant development of nodules (p. 66).

(21) A man standing in a plat of soybeans without inoculation (in the foreground) and an adjacent plat which had been inoculated, in the background (p. 67). (22) A man seated on a cultivator pulled by two horses doing the last cultivation on a field of soybeans (p. 79). (23) Soybeans and sorghums grown in mixture for forage purposes (p. 80). (24) A field of soybean and Sudan grass grown in mixture for hay (p. 81). (25) A field of soybeans and corn grown in the same row for ensilage (p. 82).

(26) Soybean hay on frames. Under favorable weather conditions, hay can be successfully cured in this manner (p. 86). (27) A field of mature soybeans ready to cut for seed (p. 90). (28) Harvesting soybeans for seed with a bunching attachment on the mower (p. 90). (29) Self-rake reaper used in cutting soybeans for seed (p. 91). (30) Soybeans cut for seed with binder and soybeans placed in shocks for curing (p. 92).

(31) The ordinary gasoline threshing outfit which may be used in threshing soybeans (p. 92). (32) A special bean harvester used in gathering the soybean seed from the standing mature plants and also cleaning it (p. 94). (33) A special bean harvester by which the plants are cut, thrashed, and cleaned (p. 94). (34) A special soybean harvester used to gather soybean seeds from the standing mature plants, and which can be adjusted to level or ridged cultivation. On one side is written "The Little Giant Bean Harvester," manufactured by Hardy & Newsom, La Grange, North Carolina (p. 95). (35) Method of storing soybean seed awaiting shipment in Manchuria. The beans in sacks are stacked under Chinese mats (p. 98).

(37) Pasturing a corn and soybean mixture with sheep (p. 133). (38) Thrashing soybeans from the field and baling the straw (p. 141). (39) The larger plant is the Guelph or Medium Green which is very pubescent, while the smaller plant is a nearly smooth variety from Japan (p. 149). (40) Pods of soybeans showing the range in size and shape (natural size; p. 151).

(41) Seeds of the most important varieties of soybeans now grown in the United States showing the wide range in size and shape of seed. The name of each of the 20 varieties is given. A side view and a ventral view of each pair of seeds is given (p. 152). (42) Seeds of a black and white variety (Widower) from Korea. The white is due to the splitting of the outer later of the testa. A side view of six varieties is shown (p. 155). (43) A field of the Biloxi soybean, which requires a long season to mature (p. 163). (44) A man standing in a field of the Virginia variety of

soybeans (p. 170). (45) Seeds of a natural soybean hybrid showing peculiar types of coloration (p. 175). (46) Pods of soybeans, hairy and smooth (p. 176). (47) A sterile soybean plant obtained from a natural hybrid (p. 176). (49) Seeds of an artificial soybean hybrid, showing peculiar types of coloration (p. 181). (56) An old style Chinese oil bean press, Manchuria (p. 195). (57) Coolies at Newchwang, Manchuria, carrying loads of soybeans from the junks to big stacks, where they are kept until the factory needs them for oil manufacture * (p. 196). (58) "Seeds and pods of the Hahto variety of soybeans, the seeds being especially valuable as a green vegetable" (p. 222). (59) Baskets of sprouted, small yellow soybeans and sprouted mung beans * (p. 226). (60) Men making soymilk, working with machinery with which the soybeans are ground and the milk strained. Note the 2 grinding stones and the cloth strainers suspended from the ceiling over the tub. The cabinet with rack for bottles is noted in the background (p. 228). (61) Motor stone mill for grinding soybeans in preparing tofu with brass water tank, funnel reservoir, stones, and brass guard (p. 229). (62) Delivery coolies holding baskets full of bottles showing the way soybean milk is delivered by the factory in Changsha, China (p. 231). (76) A courtyard filled with large earthenware containers with cone-shaped wicker tops for ripening soy sauce mash [in Ichang (I-ch'ang or Yichang), Hupe / Hupeh / Hubei province, China]; a small, strong basket is placed into each, with its rim just above the surface of the mash. The soy sauce collects or accumulates in each basket and is then dipped out, ready for consumption * (p. 251). (77) A man standing next to an iron cauldron in which soybeans are boiled for the manufacture of soy sauce (p. 252). (79) Fermenting room for yeast and soybeans in preparation of soy sauce (p. 253). (80) Rows of pots with cone-shaped wicker lids filled with soybean and wheat mixture for soy sauce * (p. 254). (81) A box press in which sacks of fermented soybeans are placed for pressing out the liquid forming soy sauce * (p. 254). (82) A man next to a kettle for boiling the soy sauce. After it is boiled, the sauce is ready to be placed in kegs at left side (p. 255). (83) Rows of soybean sauce in jars ready for shipment (p. 255). (84) Root of a soybean plant showing rootknot caused by the nematode (*Heterodera radicicola*) (p. 285).

Note: * means photo by Frank N. Meyer in China or Manchuria.

Illustrations (line drawings) show: (Fig. 48) Flower of the soybean enlarged. Front view. Side view. Parts of the corolla, standard, wing, one of the keel petals. Stamens. Pistil (p. 177). Figures 50-55, from Kondo (1913) are described at Kondo.

Maps show where the soybean is extensively and successfully grown in: (Fig. 10) The Orient (p. 51). (11) North and South America (p. 52). (12) Europe and Africa (p. 53). (13) A map of Manchuria shows the soybean districts and seed production of different localities (p. 56). (14)

An outline map of the United States shows the areas with shading to which the soybean is especially adapted as to varieties and purposes (p. 57).

A diagram (Fig. 36, p. 129) shows the various ways in which the plants and seeds of soybeans are utilized. Level 2: The first two categories are seeds and plants.

Level 3: Under seeds: Food products, oil, and meal. Under plants: Hay, ensilage, soiling.

Level 4: Under food products: green beans and dry beans. Under oil: Glycerin, explosives, enamels, varnish, food products, waterproof goods, linoleum, paints, soap stock, celluloid, rubber substitute, printing inks, lighting [illumination], lubricating. Under meal: Human food, stock feed, fertilizer. Under forage: Hay, ensilage, soiling.

Level 5: Under green beans: Green vegetables, canned, salads. Under dried beans: Soy sauce, boiled beans [from whole dry soybeans], baked beans [whole], soups, coffee substitute, roasted beans, vegetable milk, breakfast foods. Under soap stock: Soft soaps, hard soaps. Under oil—food products: Butter substitute, lard substitutes, edible oils. salad oils. Under meal—human food: Breakfast foods, diabetic foods, flour, infant foods, macaroni, crackers, [soy] milk.

Level 6: Under dried beans—vegetable milk: Cheese, condensed milk, fresh milk, confections, casein. Under meal—human food—flour: Bread, cakes, muffins, biscuit.

Level 7: Under cheese: Fresh, dried, smoked, fermented.

2457. Piper, Charles V.; Morse, William J. 1923. Early introduction of the soybean into the United States (Document part). In: Piper and Morse. 1923. *The Soybean*. New York: McGraw-Hill. xv + 329 p. See p. 39-41.

• **Summary:** “There are fortunately fairly complete records for the early history of the soybean in the United States. The facts emphasize the difficulties with which a new crop wins its way to recognition.

“The earliest records.—The first mention of the soybean in American literature is by Mease (1804), who writes ‘The soybean bears the climate of Pennsylvania very well. The bean ought therefore to be cultivated.’

“Thomas Nuttall (1829) grew a variety with red flowers and chocolate brown seeds in the botanic garden at Cambridge, Massachusetts, and from his observations wrote a brief account concerning it. He writes:

“‘Its principal recommendation at present is only as a luxury, affording the well-known sauce, soy, which at this time is only prepared in China and Japan.’

“In the same journal two years later, November 23, 1831, is an account of the successful culture of the plant at Milton, Massachusetts, the seed having been obtained from Nuttall.

“No further mention of the plant in America literature appears until 1853, when a brief account appeared under the name ‘Japan pea’ by Ernst [of Ohio] (1853), as follows:

“‘The Japan pea, in which so much interest has been

manifested in this country for a year or two past, from its hardihood to resist drought and frost, together with its enormous yield, appears to be highly worthy of the attention of agriculturists.’”

“The Perry Expedition to Japan.—The Perry expedition in the year 1854 brought back two varieties of ‘soja bean’ from Japan, one ‘white’ seeded, the other ‘red’ seeded. These, together with the Japan pea, were distributed by the Commissioner of Patents in 1854, (Browne 1854) and, thereafter frequent references to the plant occur in agricultural literature under such names as Japan pea, Japan bean, and Japanese fodder plant. Most of these articles speak of the plant as the Japan pea, none of them as the soy or soja bean. It is apparent from the early accounts that there were at least two Japan peas, one early enough to mature in Connecticut (Patent Office Report, 1854, p. 194), the other very late (American Agriculturist, 1857, vol. 16, p. 10). Judging from all the accounts, we suspect that the early Japan pea may be the Ito San variety, which, however, has red flowers, while the late variety may be the Mammoth. The Ito San is still occasionally called the Japan pea, while the introduction and source of the Mammoth has never been definitely determined. From these early accounts the Mammoth may well be the ‘white-seeded’ soja bean obtained by the Perry expedition. The ‘red-seeded soja bean’ was, probably, the adsuki bean (*Phaseolus angularis*), as no red-seeded soybean is known.

Later Introductions.—Prof. G. H. Cook, of New Brunswick, New Jersey, obtained seed of the soybean at the Bavarian Agricultural Station [in Germany] in 1878. In the same year Mr. James Neilson obtained seeds of several varieties at Vienna, Austria. Both of these gentlemen planted the seeds and gathered crops of the different varieties in 1879. These varieties were without doubt some of those grown and distributed through Europe by Professor Haberlandt of Vienna.

“A yellow-seeded soybean was grown at the North Carolina Agricultural Experiment Station in 1882 and reported on in some detail. The source of the variety is not given, but by implication it is the same as the variety stated to be grown by a number of persons in the State, and is probably the Mammoth.

“Two varieties, one black seeded, the other with white seeds, were grown at the Massachusetts Agricultural Experiment Station in 1888.

“In 1890 Prof. C. C. Georgeson (1890) secured three lots of soybeans from Japan which were grown at the Kansas Agricultural Experiment Station in 1890 and subsequently.

“Prof. W. P. Brooks, (1890) of Amherst, Massachusetts, brought with him from Japan in 1889 a number of soybean varieties, including the Medium Green or Guelph, and the Ito San. It is quite certain that other importations of soybeans from Asia were made by others, but no definite records have been found.

“Since 1890 most of the agricultural experiment stations have experimented with soybeans and many bulletins have been published dealing wholly or partly with the crop.”

2458. Piper, Charles V.; Morse, William J. 1923. Tables (Document part). In: Piper and Morse. 1923. *The Soybean*. New York: McGraw-Hill. xv + 329 p.

• **Summary:** Tables: (1) Acreage, production and yield of soybean seeds in the United States. Gives statistics for each for 1918, 1919, and 1920 for 14 states, other, and total. The states are listed in descending order of soybean acreage in 1921, as follows: North Carolina, Virginia, Alabama, Illinois, Ohio, Kentucky, Missouri, Tennessee, Wisconsin, Indiana, Georgia, Pennsylvania, S. Carolina, Mississippi.

(2) Estimates of soybean production of Manchuria for various years (in million tons): 1906 = 0.6. 1907 = 0.6 to 0.9. 1908 = 1.150. 1909 = 1.150. 1910 = 1.4. 1913 = 1.2 1921 = 4.52.

(3) Cost of production of soybeans per acre in Manchuria, 1910. (4) Monthly capacity of steam oil mills at Newchwang, Manchuria, 1917. (5) Export of soybeans, bean cake, and bean oil from the principal ports of South Manchuria, 1909 to 1913, inclusive. (6) Five-year averages of acreage, production, and yield per acre of soybeans in Japan. (7) Amount and value of soybeans imported by Japan. (8) Importations of soybean cake and bean oil into Japan. (9) Quantity and value of exports of soybeans and soybean oil from Japan to foreign countries, 1913 and 1914. (10) Quantity and value of exports of miso (bean cheese) and shoyu sauce, 1903 to 1907, inclusive. (11) Quantity and value of imports of soybeans, bean cake, and bean oil by European countries, 1912 to 1914, inclusive. (12) Comparative prices per ton of cottonseed and soybeans in European markets, 1911 to 1914, inclusive. (13) Quantity and value of soybeans, soybean cake, and soybean oil imported into the United States, 1910 to 1920, inclusive. (14) Quantity of imports of soybeans in the world's trade, 1920-1919 inclusive. (15) Quantity of imports of soybean oil in the world's trade, 1910-1919 inclusive. (16) Quantity of exports of soybean oil in the world's trade, 1910-1919 inclusive. (17) Quantity of exports of soybeans in the world's trade 1910-1919 inclusive. (18) Acre yields of seed and hay of soybeans at different dates of planting at Arlington Farm, Virginia. (19) Yields of soybeans variously spaced. (20) Acre yields of soybean hay and seed when planted at different rates. (21) Germination of soybeans at different depths of planting at Arlington Farm, Virginia. (22) Influence of nodules on the composition of seed. Michigan Experiment Station. (23) Effect of various nitrogenous fertilizers on the yield of soybeans. Massachusetts Experiment Station. (24) Effects of different phosphatic fertilizers with and without lime. Rhode Island Experiment Station. (25) The influence of different potash salts on yields of soybeans. Massachusetts Experiment Station. (26) Effects of different kinds of lime on

the yield of soybeans. Massachusetts Experiment Station. (27) Effect of fertilizers on soybeans. Delaware Experiment Station. (28) Composition of hay of Mammoth soybean at different stages of development. Arlington Farm, Virginia. (29) Comparison of the loss in moisture in 10-lb. samples of green forage of ten varieties of soybeans when air dried. Arlington Farm, Virginia. (30) Tons of soybean hay to the acre at different experiment stations in the United States. (31) Bushels of soybean seed to the acre at different experiment stations in the United States. (32) Relative yields of straw to seed in different varieties of soybeans. Ohio Experiment Station. (33) Viability of soybean seed. (34) Proportions of stems, leaves, and pods. (35) Nutritive constituents contained in each part of the soybean plant. After Lechartier. (36) Composition of the different parts of the soybean plant at different stages of growth, at Arlington Farm, Virginia. (37) Total weights of mineral materials in 1,000 kilos of dry forage. After Lechartier. (38) Mineral Materials in 1,000 kilos of dry forage. After Joulie. (39) Percentages of nitrogen, phosphoric acid and potash contained in different parts of the soybean plant at different stages of growth, at Arlington Farm, Virginia. (40) Composition of soybean seed compared with that of other legumes. (41) Composition of common American varieties of soybeans. (42) Percentage composition of the different parts of soybean seed. After Lechartier. (43) Percentage composition and comparison of the amino acids of the protein of the soybean and of cow's milk. (44) Percentage composition of the nitrogen-free extracts of the soybean. (45) Starch content of commercial varieties of soybeans in the United States. (46) Maximum, minimum, and average of the more important constants of soybean oil from 48 varieties, compared with those of other well-known oils. (47) Comparison of the more important constants of soybean oil by different observers. (48) Constants for soybean oil. (49) Composition of the ash of the soybean seed. After Pellet. (50) Mineral content of the soybean seed compared with those of cowpea, navy bean, and peanut. (51) Oil content of soybeans gathered at various stages of maturity. (52) Oil content of soybeans as affected by partial defoliation. (53) Oil content of soybeans as affected by partial removal of very young seed pods. (54) Oil content of soybeans of large and small size seed from the same plant. (55) Oil content of soybeans planted at intervals of two weeks in 1911, at Arlington Farm, Virginia. (56) Varietal differences in the oil content of soybeans grown at Arlington Experiment Farm, Virginia, in 1907, 1908 and 1910. (57) Oil content of soybeans grown under different environmental conditions. (58) Oil and protein content of soybean varieties grown under different environmental conditions. (59) Fertilizing constituents of soybeans contained in crop and roots on one acre. Connecticut (Storrs) Experiment Station. (60) Yields of hay of different legumes and content of fertilizing ingredients. Michigan Experiment Station. (61) Fertilizing

constituents of soybeans cut at different stages of growth. Arlington Farm, Virginia. (62) Data and results of soiling experiments with milch cows. Iowa Experiment Station. (63) Soybean soiling experiment with milch cows, Pennsylvania Experiment Station. (64) Analyses of soybean, soybean and corn, and corn silages. (65) Digestibilities of soybean and other silages. (66) Digestible nutrients in 100 lb. of air-dry substance. (67) Digestible nutrients in 100 lb. of soybean straw and in other roughages. (68) Fertilizing constituents of soybean straw compared with those of wheat, oats, barley, and rye. (69) Number of seeds per bushel and weight in grams of 100 seeds of the most important varieties. miso. (102) Composition of shoyu or soy sauce. (103) Composition of soybeans of the same variety dried, soaked, and roasted.

2459. *USDA Bureau of Plant Industry, Inventory*. 1923. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from April 1 to May 31, 1920. Nos. 49797 to 50647. No. 63. 99 p. March.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. Fabaceæ. (*Glycine hispida* Maxim.)

49828-49833. "From Yokohama, Japan. Beans presented by Robert Fulton & Co. Received April 2, 1920. Quoted notes by Mr. Fulton:

"49828. 'Kuro mame (black soy bean).'

"49829. 'Kuro Teppo mame (round, middle-late, black soy bean).'

"49830. 'Nakate mame (middle-late, white soy bean), seed larger than Wase mame.'

"49831. 'Okute mame (late white soy bean).'

"49832. 'Shiro daizu (white soy bean).'

"49833. 'Wase mame (summer bean), small seeded early white.'

"49834. From Aizu Wakamatsu, Japan. Beans presented by Rev. Christopher Noss. Received April 2, 1920. 'Ogon daizu (golden soy bean).'

(Noss.)

"The oil of the bean is used for frying, as a butter substitute, for lubricating, for water-proofing clothes, for medicine, and in the manufacture of soap, candles, guncotton, and artificial rubber. The residue after the oil has been extracted has been used for cattle feed, but is now mixed with wheat flour for food purposes. The entire bean is slightly roasted, pulverized [to make kinako], and mixed with flour to make light cakes and to give flavor to boiled rice; it is cheaper and more nutritious than flour. (Adapted from Parry, *Travel Sketches, Japan Advertiser, January 25, 1920.*)

"49911/49921. From Techow, Shantung, China. Seeds presented by Miss Alice Reed through Prof. Henry Conrad, Grinnel College, Grinnel, Iowa. Received April 21, 1920. Quoted notes by Miss Reed.

"49918-49920.

"49918. 'Black bean.'

"49919. 'Yellow bean.'

"49920. 'Large green bean.'

"50382/50387. From Foochow, Fukien [Fujian], China. Seeds collected by C.R. Kellogg. Received May 27, 1920. Quoted notes by Mr. Kellogg.

"50385. 'Yellow bean from Hokchiang (Futsing).'

"50440-50441.

"50440. 'Deu tz (bean). The only yellow soy bean known here and the one referred to when beans are spoken of unless some other variety is definitely mentioned. A field crop; clay preferred. Usually planted right after rice is reaped, making a rotation of rice in the spring and beans in

the fall.'

"50441. '*U deu* (black bean). The only other type of soy bean grown here. Rather heavier yielder and more vine than the yellow, but not grown very much. A field crop preferring medium-heavy clay soil. Collected at the farm of Lee U. Ken.'

"50522-50524. From Mukden, China. Seeds presented by Albert W. Pontius, American consul general. Received June 7, 1920. Market beans requested for the Office of Forage-Crop Investigations.

"50522. '*Hei tou* (black).' 'A small flat shining black bean used when boiled, salted, and fermented as the main ingredient in a sauce; also fed, when boiled, to water buffaloes.' (*Frank N. Meyer.*) For previous introduction, see S.P.I. No. 45294.

"50523. '*Hsiao chin huang tou* (small golden yellow bean).'

"50524. '*Pai mei tou* (white-crested bean).' A late maturing bean, yellow with a 'white eyebrow.' For previous introductions, see S.P.I. No. 30745.

"50531/50539. From Keijo, Chosen (Korea). Seed presented by Miss Katherine Wambold. Received June 21, 1920.

"50535-50536.

"50535. '*Kong Bean.*' For previous introductions, see S.P.I. No. 42059.

"50536. '*Kong bean*; this is used for making sauce.'" Address: Washington, DC.

2460. Church, Margaret B. 1923. Soy and related fermentations. *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• **Summary:** This long and very informative paper, with its excellent bibliography and review of the literature, is the third earliest study seen of a fermented food published by a USDA researcher. The focus is on Japanese fermentations because of the laboratory's contact with Japanese researchers, such as Dr. T. Takahashi and Dr. G. Kita. "The experimental work reported here was conducted under the direction of Charles Thom, mycologist in charge, Microbiological Laboratory, Bureau of Chemistry."

Contents: Introduction. Work of previous investigators. Experimental work: Apparatus, material, preparation of ingredients, shoyu-koji, peanut press cake koji, shoyu-moromi. Proportions of ingredients. Yields. Chinese soy sauce. Peanut sauce. Relation of enzymic activity to soy processes. Manufacture in the United States. Related fermentations (Miso, soy cheese [fermented tofu], natto). Summary. Bibliography. "Soy sauce is a dark-brown salty liquid made by the fermentation of soy beans with, as a rule, some additional starchy component. It is widely used as a seasoning throughout Japan, China, and Java [Indonesia], and has been introduced into the Philippines and Hawaii* (* = See letter from C.W. Carpenter, Sept. 23, 1918). Where the

occidental would use a vegetable or meat extract and salt, the oriental daily uses soy sauce. Americans are familiar with soy sauce as it is used in the Chinese-American restaurants and as an ingredient which produces the characteristic flavor of the Worcestershire type of sauce." In Japan, the process of preparing "shoyu-koji," a mold-fermented product made from "tane-koji," takes 3 to 4 days. "The mold-fermented material is emptied into a strong brine, thus producing a mash. Constant daily attention is given to aeration, even distribution, and stirring of the solid ingredients. Progressive changes take place over a period of from six months to several years, until at last the mature 'moromi,' as the mash is designated by the Japanese, is produced. These changes are due partially to the activity of bacteria and yeasts, but chiefly to the enzymes of the mold introduced into the mash with the koji."

"Experimental work: The Department of Agriculture had certain strains of the *Aspergillus flavus-oryzae* group of molds known to be used in making soy sauce. Through the courtesy of W.T. Swingle, of the Bureau of Plant Industry, a can of commercial Japanese rice *tane-koji* designed for shoyu manufacture was also received. Dr. Gen-itsu Kita brought additional samples of shoyu *tane-koji* under sterile conditions directly from Japan. Provided thus with soy beans, wheat, and the mold ferment, experiments with soy sauce were undertaken by the Bureau of Chemistry in 1918.

(1) "Apparatus: The apparatus was made according to specifications drawn by Doctor [T.] Takahashi, of the Imperial University of Tokyo, who worked in the bureau for a month." "The usual Japanese koji room (fig. 2) is 32½ feet long, 11 feet wide, and 7 feet high. The walls are thick, and in the more modern factories are built of brick, which does away with fluctuations in the temperature from without. At one end of the room is an entrance and at the opposite end a window. In the ceiling several openings provide means of escape for the carbon dioxid [dioxide] and the damp air. Steam pipes along the floor make it possible to warm the room in cold weather. The ceiling is built with many layers of straw in order that the condensing moisture may be absorbed. One disadvantage of such a ceiling is that infection always occurs in the wet straw. A large area of infection directly over the piles of koji trays is detrimental to the production of sweet koji. In modern buildings, therefore, the surface of the ceiling is coated with cement. When a cement ceiling is used the condensed water drops on the trays of koji, which also is harmful... The burning of sulphur is useful in combatting any infection of a koji room."

Material: "The mold ferment employed in shoyu-koji manufacture is *Aspergillus flavus* Link, occasionally *A. oryzae* (Ahlb.) Cohn, or strains intermediate between the two species." "Certain Japanese manufacturers add cultures of pure yeast belonging to the genus *Zygosaccharomyces* at the time of placing the first mold-fermented material in the brine."

Preparation of ingredients: While soaking the soy beans, the water should be changed at intervals of several hours to prevent the formation of spore-forming rods, which cause heating and souring. The spores of these bacilli are on the beans as they come from the field. "After being soaked for 20 to 24 hours the swollen beans are cooked in an open kettle or under pressure until they are soft enough to be easily pressed flat between the thumb and finger. This desired softness can be obtained by autoclaving at 15 pounds pressure for 50 minutes and also by much longer cooking in an open kettle. Autoclaving under pressure has the advantage of sterilizing the material." After roasting, the wheat is crushed or cracked. It is important to "reduce some portions of the kernel to a fine powder or dust." The cooked beans and cracked wheat are "mixed in large trays or on mixing tables." Hot beans "may be cooled with a draft of air directed over a thinly spread layer." These "two ingredients need to be thoroughly mixed, so that the wheat dust may form a coat over each bean. The lower water content thus induced on the exterior of the beans makes them better adapted to mold growth than to bacterial growth."

"Shoyu-koji—Ripening: After the beans and wheat are thoroughly mixed, a very small quantity of previously molded material, such as mature rice koji (tane-koji), some shoyu-koji, or a pure mold culture, is thoroughly mixed into the ingredients. The whole mass is then distributed into the small flat koji trays (Plate II, inserted between pages 4 and 5) which are immediately placed into the koji fermentation room before they cool further. Each tray holds about 1.8 liters, or about 2 quarts of raw material. The koji trays are placed in tiers along the wall of the room (Fig. 3)." They are usually stacked in a zigzag fashion to ensure adequate aeration. This is extremely important "because moisture and the lack of oxygen induce the development of mucors and bacteria, and are said to cause the diastatic enzyme to develop at the expense of the proteolytic enzyme. In some localities in Japan no such trays are used, but a broad straw mat with which very good koji can be secured." "The koji room or compartment is kept at a temperature of 24° to 25° C., with a definite humidity." Continued. Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

2461. Church, Margaret B. 1923. Soy and related fermentations (Continued—Document part II). *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• **Summary:** Continued from p. 9. Shoyu-koji: Ripening. The temperature of the koji starts at 24–28°C. Eighteen hours after the trays have been stacked in the koji room, they should be examined; the temperature inside the koji should be 27 to 29°C. "Any higher temperature is due to serious bacterial contamination, or to unsatisfactory conditions of temperature and humidity in the koji room. At the end of 18 hours the koji is stirred, the bottom being brought to the top and the

beans are broken apart. Thorough stirring is necessary, for the beans and wheat are now bound by the mycelium or white threads produced by the shoyu-mold." Sporulation must not have begun. "This immature koji should be spread out and exposed by stirring until it has cooled down to 24° or 25° C. (70–72°F) or lower." The koji should now be heaped in two piles extending the length of the tray (Plate II, B). "The material should come in contact with the sides of the tray as little as possible, since condensed water on the surface of the saturated wood induces bacterial growth when absorbed by the tray or retained by the beans and wheat."

The trays are left undisturbed in the koji room for 6–7 hours. The temperature of the room should be just under 30°C while that of the koji should be 27–29°C. "The mycelial growth is now heavier but no sporulation should be evident. At the end of this second incubation period, the koji is stirred thoroughly a second time, the beans and what being broken apart. The mass is cooled below 24°C. After this stirring, four furrows, running the short way of the tray and forming three heaps, are made (Plate II, C). The trays of koji are again placed in the koji room."

"When examined at the end of 40 hours, 12 to 14 hours after the second stirring, the surface of the koji should be a clear 'flavus' or yellow color from the fruiting heads of *Aspergillus*... The temperature of the best koji should now be not much above 35°C, although 35° to 36°C is permissible... Mature koji has a clear yellow to yellow-green color on the surface and throughout the whole mass. If well ripened, it may be lifted from the tray as one entire block.

"The koji may become infected with *Rhizopus nigricans* if the atmosphere of the koji chamber is moist to the point of condensation as drops. A little *Mucor* or *Rhizopus* is disregarded in the material, unless a bad flavor or odor is also present. It is poor practice, however, to allow the *Rhizopus* to enter..."

Proportion of wheat: Japanese shoyu requires "at least one part of prepared wheat to three parts of prepared beans. This proportion of wheat is somewhat less than equal parts of the unprepared ingredients by volume."

"Color: Mold-ripened soybeans and wheat are usually clear yellow when prepared by the Japanese method for shoyu-koji. This coloration is due to pigments of the spores or seedlike bodies of the mold. Occasionally the color of the mass of beans and wheat is yellowish green. The reason for this variation is not easily defined."

"Bacterial count: Condemnation of batches of koji may be readily based on the presence or absence of an ammoniacal odor or evidence of putrefaction. Any odor of ammonia or of putrefaction, any sticky condition, or any appearance of rottenness in koji is due to bacterial and not mold activity. The bacteria involved in the ripening of shoyu-koji in these experiments belong to the *Bacillus mesentericus* and *B. vulgatus* groups." These are aerobic spore formers. The spores of these bacteria, which grow if the bean soaking

water is not changed, can survive pressurized cooking at 15 pounds for 30 minutes.”

The author successfully made koji from “commercial peanut press cake.”

“Shoyu-moromi: The shoyu koji when mature is emptied into a tub of brine. In the experimental work conducted in cooperation with Dr. T. Takahashi one-half of a 65-gallon wooden cask was used for the tub or vat. The brine was a solution of commercial salt at a strength of 20° to 22° B [Baumé, a measure of specific gravity]... Each tub of moromi was inoculated on the first day with four flasks (450 cubic centimeters of wort extract broth and 5 per cent sodium chlorid in each) of a yeast culture of *Zygosaccharomyces* sp... In Japan sea salt is used. It is said that one part of the sea salt to two parts of water by volume gives a brine from 20° to 22° B., presumably because of the coarseness of the native Japanese sea salt.”

Three different batches of experimental shoyu-moromi were made. Two were kept at the ambient temperature of the laboratories (20-24°C). Mash C was made with a weaker brine and kept at a higher temperature. These mashes were stirred daily for 1 hour. “Also a blast of air was bubbled into the material in order to supply oxygen for the microorganisms present.” The ripening lasted 10 months. Mash C was of inferior quality. “Doctor Takahashi stated that shoyu A compared favorably with the best commercial shoyu of Japan, while others thought that it resembled the heavy soy made by Japanese housewives in the country districts... The highest quality of shoyu in Japan is said to go under the label ‘Mogi’ or ‘Kikkoman,’ but chemical analyses in König (1904) and in the Bureau of Chemistry records indicate no consistent chemical composition.”

Bacteriological examination: The main bacteria in this shoyu-moromi seemed to be *Bacillus mesentericus*. “In January 1920 two lots of sauce were started. One was composed of soy beans and wheat and the second of peanut press cake and, for the most part, wheat as a starchy substance.” Dr. Edwin LeFevre of the Bureau of Chemistry helped with the bacteriological analyses.

Proportions of ingredients: Table 3, prepared by Dr. Takahashi, shows the proportion of ingredients by volume used in Japan to make 3 grades of shoyu: Best, good, and common. For the best grade use 100 parts (by volume) each of soy beans and wheat, 90 parts of Japanese sea salt, and 180 parts of water.

Yields: When pressed in sacks with a hydraulic press under 1,250 pounds per square inch for 23 hours, 100 liters of moromi yields, on average, 78.7% shoyu and 21.3% residue.

Note: This is the earliest document seen (April 1912) that describes how to make fermented soy sauce on a commercial scale—that will actually work. All known previous descriptions omitted the “mold culture” or koji stage. Address: Microanalyst, Microbiological Laboratory,

Bureau of Chemistry [USDA].

2462. Church, Margaret B. 1923. Soy and related fermentations (Continued—Document part III). *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• **Summary:** Continued (p. 20): Relation of enzymic activity to soy processes: During the ripening of the moromi, the essential factors are diastatic and proteolytic enzymes produced by the mold. But what part do the enzymes of the bacteria play? “Increasingly great numbers of bacteria in the koji cause an undesirable flavor in the final soy sauce.”

Manufacture [of soy sauce] in the United States: Making soy sauce is a complex, subtle, and difficult process. “If this were not true the process would not be regarded as secret, as it so generally is in the Orient.” Church was interested in helping a soy sauce industry to develop in the USA. “The majority of soy sauce makers and manufacturers in the Orient employ purely rule-of-thumb methods which have been handed down and individually perfected by more or less successful experience. Accurate knowledge of the reasons for the steps involved in the process as practiced is not common.”

“Of the almost innumerable ways in which soybeans are used in the Orient as more or less elaborately prepared foods, soy sauce seems to offer prospects of more immediate adoption in the United States than any other product...”

“Soy sauce has already gained a strong foothold with frequenters of Chinese-American restaurants.

“Table sauces containing soy sauce as an ingredient are to be had in a great variety of grades and flavors. They also present an unlimited field for further variation. Concentrated forms of seasoning, such as yeast and vegetable extracts suitable as meat substitutes in flavoring soups and other prepared dishes, are receiving consideration by manufacturers.”

“The manufacturers of table sauces and condiments interested in soy sauce are among the largest and best known firms of the United States... One company at least in the United States manufactures a wholly domestic product.”

Related fermentations (Miso, soy cheese [fermented tofu], natto). Summary. Bibliography. Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

2463. Church, Margaret B. 1923. Soy and related fermentations: Chinese soy sauce (Document part). *USDA Department Bulletin* No. 1152. 26 p. May 12. See p. 18-19. [27 ref]

• **Summary:** “The primary difference between the soy sauce of Japan and that of China, judging from the department’s contact with Japanese and Chinese scientists and travelers, is that Japan has a generally standardized commercial product, while the soy of China is made on a smaller scale, varying with the locality and the producer to a much greater extent. Small-scale production, however, gives a choice product

of uniform quality from certain factories or localities. The underlying principles of the Japanese and Chinese soy industries are the same. The Chinese soy-sauce manufacture has been discussed by Prinsen Geerligs" (1896) and Groff (1919). A long summary of Groff's article is given. Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

2464. Church, Margaret B. 1923. Soy and related fermentations: Peanut sauce (Document part). *USDA Department Bulletin* No. 1152. 26 p. May 12. See p. 19-20.
• Summary: The writer tried making a product resembling soy sauce, but made using peanut press cake instead of soy beans. "The possibility of substituting peanut press cake for soy beans in sauce was investigated. The koji fermentation was carried out as with soy beans and wheat." "After having been brought to a suitable water content and practically sterilized, the cake was ground into strings about one-half inch in diameter in an electrically driven food chopper. The roasted and ground wheat was quickly mixed with the strings of peanut press cake, the mixture was inoculated with the mold ferment desired, and the koji process was carried out as usual. The ripening of the peanut press cake koji was completed in a shorter period than when whole soy beans and wheat were used."

"The peanut press cake koji was made into a moromi having an initial salt content of 11 to 12 per cent sodium chlorid. Evaporation through January to September, 1920, increased the salt content gradually." The final sauce contained about 19% sodium chlorid.

"The quality of the peanut sauce was very satisfactory." It "combined the natural taste of the peanut with a mild meaty flavor."

This is the earliest document seen (April 2001) that mentions a non-soy sauce resembling soy sauce but made from another legume—in this case peanut press cake. Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

2465. Church, Margaret B. 1923. Soy and related fermentations: Photos (Document part). *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• Summary: Photos show: (1) Experimental koji room (wooden cabinet type) used in Bureau of Chemistry with doors, trays on racks, electric plate, thermometers, and tube for blast of cool air (p. 3).

(2) Exterior of Japanese koji room (brick-walled with large doors) (p. 4).

(3) Large wooden tubs of shoyu-moromi in Japan, with beans floating on the surface of the mash (inserted between pages 4 and 5).

(4) A courtyard filled with large earthenware containers with cone-shaped wicker tops for ripening soy sauce mash in Ichang (I-ch'ang or Yichang), Hupe [Hupeh / Hubei],

China; a small, strong basket is placed into each, with its rim just above the surface of the mash. The soy sauce collects or accumulates in each basket and is then dipped out, ready for consumption.

(5) Three different stages of shoyu-koji in wooden trays, each 17 by 8 by 2½ inches deep. This koji, "overgrown with a white mycelium of mold ferment," must be stirred and heaped at regular intervals (plate 2).

(6) Interior of a Japanese koji room, with many wooden trays stacked one upon the other (p. 5).

(7) Comparison in volume of two piles of beans, before and after soaking (p. 7).

• **Summary:** "Dairen, a Japanese city in Manchuria, according to reports, is the port of what is becoming the greatest bean-raising country of today. The product, also used in making soy-bean sauce and soy-bean oil, is exported to various markets. The soy-bean sauce is familiar to patrons of 'Chinatown' restaurants."

2469. *Boston Daily Globe*. 1923. Foods from all the world in Boston shops. June 24. p. A8.

• **Summary:** "Strange Chinese dishes:... Their soy sauce for meats and vegetables is quite well known,..."

2470. Brook, Harry Ellington. 1923. Care of the body. *Los Angeles Times*. July 8. p. XI30-35. Sunday magazine.

• **Summary:** The section titled "What workers eat" begins (p. 32): "Dr. Josiah Oldfield, an eminent English physician, has been investigating the diet of the world's workers. He obtained the following information from foreign legations in London:"

"From the Consulate General of Japan: Rice, barley, wheat, vegetables, miso soup (miso is prepared from the soya bean), sou [soy; soy sauce or shoyu] (Japanese sauce which is indispensable for cooking purposes), fish (fresh or salt, wet or dried), vegetables are chiefly cooked with soy, salt, sugar, etc. Rice is taken in the place of bread. Flesh-meat does not form an important part of the Japanese dietary."

After discussing food consumption information from 13 countries, Brook concludes: "These people are better nourished than the Americans, who subsist mainly on lean meat, bread made from refined white flour and refined white sugar, with tea and coffee and little vegetables"

2471. *Manchester Guardian (England)*. 1923. The winter hoard: Sauces and pickles. Aug. 27. p. 4.

• **Summary:** "At this time of year the wise housewife will see to the replenishing of the shelves in her store cupboard. Not only should jams and jellies be made, but various kinds of sauces, pickles, and chutneys..."

After the recipe for "Tomato ketchup" is a recipe for "Worcester sauce" as follows: "1 pint Indian soy [sauce]. 1 oz. ground black pepper. ½ oz. powdered mace. ½ oz. bruised cloves. ½ oz. cayenne. ½ oz. peeled garlics. 8 oz. shallots. 2 quarts vinegar.

"Put the mixture into a large brown jar and let it stand for a fortnight, closely covered. At the end of the time turn the mixture into a large pan and simmer for three-quarters of an hour. Then strain and bottle for use."

Note: Soy sauce is the main ingredient in homemade Worcestershire sauce in a British newspaper.

2472. Church, Margaret B. 1923. Re: USDA research on mold cultures. Letter to Kokichi Oshima [Hokkaido Imperial Univ., Sapporo, Japan], Aug. 28. 2 p. Typed, without signature (carbon copy).

• **Summary:** "We received the cultures that you spoke of sending in your letter of May 23... we have every intention of continuing careful studies of *Aspergilli*, *Penicillia*, and other common saprophytic molds. Above all we were pleased to receive the cultures as they assured us that you still had within you the same spirit of open generous cooperation as we had learned to appreciate in you in the States."

"You spoke of Mr. Konno telling you of a fever-like sickness occurring among workers where *Aspergillus flavus* and *A. ochraceus* were prevalent. Would you keep your ears open for such reports and when possible run down the truth of such instances? Molds are being used in this country more than previously in their limited way and fields, and they are used more extensively in your country than mine because of shoyu and katsuo-bushi." Address: Microanalyst [Biological Lab., Bureau of Chemistry, USDA, Washington, DC].

2473. Ishio, M.; Endo, Y. 1923. Shôyu to forumuarudehiido to no kankei ni tsuite [On the relation between shoyu and

formaldehyde]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 498. p. 628-37. Aug. (Chem. Abst. 18:298). [Jap]

• **Summary:** The small amount of formaldehyde present in soy sauce, either intentionally added or derived from the caramel used for coloring the sauce, gradually decreases on keeping, and at last entirely disappears. This is attributed to combination of the aldehyde with amino acids present in the sauce. The decrease is proportional to the amount of amino acids in the sauce. Address: 1. Igakushi, Japan.

2474. *Tropical Life (England)*. 1923. Billiard balls at present being grown at the Royal Botanic Gardens, Regent's Park, N.W. [Soya bean cultivation in London]. 19(8):119. Aug.

• **Summary:** This summary of an article in the *Daily Mail* (London) notes that the soya beans, which are growing nicely, could be made into billiard balls, knife- and umbrella handles, buckles and beads, cheese [tofu], flour, table-oil, cake, sauce, soap, lubricating and illuminating oil, glycerine, paint, varnish, celluloid, printing ink, waterproofs [waterproof gear and cloth], explosives, and linoleum.

The soya beans are being grown by Mr. J.L. North, curator of the Royal Botanic Gardens (See "Our Friend" in the Jan. 1923 issue). North, who is known as London's soy wizard, has been growing soya beans for 9 years [i.e., since 1914]. Since there is so little room for them in the Gardens, he is experimenting at Chiswick [in the Greater London borough of Hounslow] with 17 species from Europe and America. He believes they are of great importance to England—a country that grows no oil plants.

Address: Marukin Shoyu K.K., Moto Gishi-cho, Japan.

2477. Slosson, Edwin E. 1923. Catching up with China. *Scientific Monthly* 17:283-85. Sept.

• **Summary:** The soy bean "was first introduced to America in 1804, but it was a hundred years before we could be induced to take it seriously... But in the last ten years it has rapidly come to the front as one of our major crops and is likely in the next ten years to go ahead of oats in acreage in some of our states... The latest bulletin of the Department of Agriculture lists fifty different uses for soy products, and doubtless Yankee ingenuity can and will add more when we get our minds to working on it.

"Even the Japanese have not exhausted their ingenuity in this field, long as they have been at it. A Japanese scientist named Sato has invented a new plastic which he has called, according to American precedent, 'Satolite.' It is made by precipitating the protein with sulphite, hardening it with formaldehyde, and molding it under heat and pressure into combs, buttons and whatever we make from hard rubber or celluloid or the casein of milk.

"The soy bean is rich in protein and fat, and lacking in starch; in that more like animal than like vegetable food. You can make a milk out of it by simply soaking the dried beans till soft, then crushing fine in a meat grinder, boiling in three times the volume of water for half an hour and straining through cloth. If you do not like the flavor you can add vanillin or something else. This vegetable milk sometimes agrees with children when cow's milk does not. It can also be used for cakes and custards.

"The soy milk may be made into curds and cheeses of various sorts which form a large part of the diet of orientals, but for which we have not yet acquired a taste. Soy meal has come into common use in America, not only as a cattle food, but also for bread and pastry mixed with three parts wheat flour.

"Soy sauce has long been familiar but quite unknown to us. We did not recognize it under its aristocratic English name and its added flavors. But when the high cost of living drove us to the chop sueys, we became acquainted with the cruet of brown salty sauce called 'shoyu,' and we found, as the Chinese had found thousands of years before, that a sprinkling of it would make tasty a large lot of rice and serve as substitute for meat, both in taste and nutriment. Soy sauce is of several sorts. If you want it strong take the Korean. If you want it sweet take the Japanese. It is made by fermentation and the flavor depends upon the way it is brewed and the length of time it is left to ripen. To suit the palate of a Korean connoisseur the jars must be exposed to the sunshine by day and covered by night for a period of thirty years. We Americans, when we get to making it, will undoubtedly speed up the process.

"So far the oil is the most in demand of the soy products. The beans contain from 18 to 20 percent. of a fine palatable oil, which we have imported at the rate of a hundred thousand tons in a year, but which we are now growing for ourselves. It can take the place of cottonseed oil in vegetable substitutes for lard and butter, and of linseed oil in paints. Formerly the oil went mostly to Germany and England, but the war made a shift in the currents of Pacific trade, and we learned to appreciate its value. But we have a lot to learn yet before we catch up with the orientals in the utilization of this multifarious bean."

Toronto Daily Star (Canada). Oct. 11. p. 6.

• **Summary:** “Harvey’s Worcestershire Sauce bottle 11¢.”
“We sell for less.” The address of each of the 17
groceries is given.

2479. Carqué, Otto. 1923. *Rational diet: An advanced treatise on the food question*. Los Angeles, California: Times-Mirror Press. xvi + 540 p. Illust. 24 cm. [104* ref]

• **Summary:** The preface of this book begins: “The aim of this book is to disseminate a better knowledge of diet and its relation to health and disease, in plain non-technical language, understandable to all who seek more scientific information on this vitally important subject.” The author advocates a vegetarian diet, with dairy products and eggs consumed in small amounts—if at all; their pros and cons are discussed on pages 324-340.

In the chapter on “Flesh Foods,” pages 353-54 state: “Writing to his friend Firmus, who had abandoned the Pythagorean doctrine in order to eat meat, the philosopher Porphyry, living in the third century, said: ‘I cannot believe that your change of diet is due to reasons of health, for you yourself have constantly affirmed that a vegetable diet is much more suitable than any other, not only to give perfect health, but even a philosophic and balanced judgment, as a long experience had taught you.’

“And Seneca, who, after studying the problem of nutrition for many years, had adopted vegetarianism, wrote: ‘Struck by such arguments, I also have given up the use of flesh of animals, and at the end of a year my new habits have become not only easy to me, but most agreeable; and it even seems to me that my intellectual aptitudes have become more and more developed.’

“Isaac Newton adhered strictly to a vegetarian regimen while performing the prodigious intellectual work which made his name immortal. Among the modern philosophers and artists who have followed or advocated a rational vegetarian regimen may be mentioned: Shelley, Byron, Thoreau, Tolstoi [Tolstoy], Richard Wagner, Tagore, Maeterlinck, Alexander Pope, and George Bernard Shaw.”

Chapter V, “Cereals, Legumes, and Miscellaneous Food Products,” contains a section titled “Beans,” which is largely devoted to soy beans (*Dolichos soya*) (p. 316-318). It discusses green vegetable soybeans (“Soy beans, when about three-fourths grown, make a most palatable and nutritious green vegetable, like the green pea or the lima bean.”), soy flour, soy bean milk, bean cheese (tofu), and soy sauce.

Note: This is the earliest document seen (Nov. 2010) in which Otto Carqué mentions or discusses soybeans or soyfoods.

Concerning the wastefulness of the animal as a converter of feed to food, page 361 contains a long quotation from an article in the prestigious journal *Science* titled “The cost of roast pig,” by Prof. Henry P. Armsby (1917).

In extensive tables of food composition, the composition

of soy beans is given on page 504. The author lived 1867-1935. Address: Los Angeles, California.

2480. Yoshida, Hisao. 1923. *Shōyu no nōdo ni tsuite* [On the concentration of shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 1(4):313-16. [Jap]
Address: Osaka Koto Kogyo Gakko, Koshi, Japan.

2481. Kikkoman. 1923-1954. [Monthly and annual soy sauce exports from Japan (1923-54)]. Noda: Kikkoman. Statistical tables. 22 p. [Jap; eng+]

• **Summary:** In 1923, some 11,720 koku of shoyu [soy sauce], worth 799,022 yen, were exported from Japan. (Note: 1 koku = 180 liters or 47.6 gallons). Of this, 5,307 koku went to the USA and Hawaii (3,330 koku to the USA), 709 koku to Canada, 5,108 koku to Asia (incl. 2,311 koku to Canton and 1,447 koku to China), and 201 koku to Europe. In 1924 total exports increased to 13,149 koku.

A table shows Kikkoman’s exports of shoyu by country from 1938 to 1944. In 1938 Kikkoman exported 80 tonnes (metric tons) of shoyu to Peru and Argentina. In 1939, the peak year, 10,658 tonnes were exported; of this 4,444 tonnes (41.7% of the total) went to the USA and Hawaii, 2,680 tonnes went to Manchuria, and 2,098 tonnes to China.

Another table shows total Japanese exports of shoyu by country from 1938 to 1944. In 1939, the peak year, 34,838 tonnes (metric tons) were exported; of this 4,351 tonnes (12% of the total) went to the USA and Hawaii, 293 tonnes went to Canada, 50 tonnes to South America (Peru and Argentina), 63 tonnes to Europe (Holland), and 30,081 tonnes to Asia (incl. 9,550 tonnes to Karafuto, 5,803 tonnes to Taiwan, 4,620 tonnes to Manchuria, 4,295 tonnes to China, and 1,336 tonnes to the Philippines).

Another table shows exports of shoyu from Japan after World War II (1949-1954) to various countries and regions by Kikkoman and by all Japanese shoyu makers. Roughly 85% of Japan’s exports were by Kikkoman. The total increased from 6,066 koku in 1949 to 9,316 koku in 1954; of the 1954 figure, 7,009 koku went to the USA and 1,476 koku to Asia. Another table shows exports of shoyu from Japan to major cities from 1949 to 1954 by Kikkoman and by all of Japan. In 1954, worldwide, the cities receiving the most shoyu were: San Francisco 2,033 koku, Honolulu 1,926 koku, Los Angeles 1,504 koku, Okinawa 1,376 koku, Guam 647 koku, Vancouver (BC, Canada) 414 koku, New York 381 koku, Seattle (Washington state) 290 koku. Address: Noda, Japan.

2486. Ackermann, Alfred Seabold Eli. 1923. Popular fallacies explained and corrected (With copious references to authorities). 3rd ed. London: Old Westminster Press; Philadelphia, Pennsylvania: Lippincott. xvi + 984 p. See p. 287-88. Introduction by Richard Gregory. Index. 21 cm. [1 ref]

• **Summary:** In the section titled “Fallacies connected with the animal kingdom. (c) Insects” is a subsection (p. 287-88) titled “That Soy is made from ‘Black-beetles.’” which states:

“Sailors have a notion that soy [a kind of sauce prepared in the East from the soy-bean (*Soja hispida*)] is made from cockroaches; and, however absurd the belief may appear, the reason for it is worthy of investigation.

“The Chinese at Canton have a large soy manufactory and they are particularly solicitous to obtain cockroaches from ships, from which circumstances sailors immediately conclude that it is for the purpose of making soy from them. But it is better established that cockroaches are used by the Chinese as a bait in fishing. The infusion of cockroaches is also used in medicine, and Mr. Webster, surgeon of H.M.S. *Chanticleer*, states that common salt and water, saturated with the juices of the cockroach, has all the odour, and some of the flavour and qualities, of soy; so that the sailors’ notion, after all, may not be far from the truth,”—J. Timbs, F.S.A., *Popular Errors*.

“Sir,—Will you allow me to say a word upon the extraordinarily interesting article in your issue of to-day upon the wonder-working soya bean?

“In these days, when each of one of us is concerned to

get the greatest possible return in nourishment from the least possible outlay of cash upon food-stuffs, I think it ought to be far more widely known than it is that soya flour—a staple food in the Far East these 2,000 years and more—is among the most highly nutrient products that the earth brings forth. Soya flour is actually higher in protein value than the germ of wheat. Without suggesting any revolutionary changes in our national dietary—when even the hardened cynic will allow might be improved upon—I think all those in general who have the national welfare at heart, and in particular all thrifty housewives, might well ponder upon the following merits, all fully proven, of soya.

“An admixture of 5 to 10 per cent. of soya flour to our ordinary wheaten flour, baked in the customary manner, raises the nutritive value of the loaf from 10 to 25 per cent. above that of any bread—including wholemeal—ordinarily consumed by our British public. The soya bread is also delicious, most digestible, and retains its moisture far longer than our normal breads. I speak from first-hand experience.”

“H.C.M.”

Note: Ackermann was born in 1867. Address: 17, Victoria St., Westminster, S.W. 1 [England].

2487. Beeton, Isabella Mary (Mayson). 1923. Mrs. Beeton’s cookery: Practical and economical recipes for every-day dishes, and general cooking instructions in marketing, trussing, cookery, etc., invalid cookery, labour-saving, carving, etc. New edition. London and Melbourne: Ward, Lock & Co., Ltd. 256 p. See p. 136. With 100 illust.

• **Summary:** Contains a recipe for Worcestershire Sauce (p. 136), which reads: “Worcester Sauce. Ingredients—1 quart of best brown vinegar, 6 tablespoonfuls of walnut ketchup, 5 tablespoonfuls of essence of anchovy, 4 tablespoonfuls of soy, ½ a teaspoonful of cayenne, 4 finely-chopped shallots, salt. Method—Put all these ingredients into a large bottle, and cork it closely. Shake it well 3 or 4 times daily for about 14 days, then strain the sauce into small bottles, cork them tightly, and store in a cool, dry place. Time—2 weeks.”

Note: This is the earliest document seen (April 2012) that contains a recipe for Worcestershire sauce with soy sauce as an ingredient. Note also that vinegar is by far the most abundant ingredient.

The author lived 1836-1865. Address: England.

2488. Bottari, Fulvio. 1923. La soja nella storia, nell’agricoltura e nelle applicazioni alimentari ed industriali [The soybean in history, in agriculture, and in food and industrial applications]. Torino & Genova, Italy: S. Lattes & Co. 243 p. Preface by Prof. Oreste Mattiolo (R. Università di Torino). With 34 illust. 22 cm. [25 ref. Ita]

• **Summary:** Contents: Preface. Reason for the work; its scope and limits. Part I: The origin and history of the soybean. Reason for this history, the origin of the soybean and its early dissemination, soya (including production

statistics) in Oriental countries (China, Manchuria, Japan, Formosa, Korea, French Indochina), how the soybean was introduced to Europe, the cultivation of soya in France, Soya in England, Austria, Germany, Denmark, Holland, Russia, Sweden, Alsace-Lorraine (now in northeast France), Spain, Italy, America, Conclusion.

Part II: Cultivation of soya. Part III: Soya in the feeding and nutrition of humans and animals. 1. The analysis and physiology of metabolism as an element in the study of nutrition. 2. Soybean forage in the feeding of animals. 3. Soybeans (*il grano di soja*) and soy products in the feeding of humans and animals: Commercial and nutritional value and digestibility of the soybean, how to prepare and cook whole soybeans, soy broth, thick soups, salads, and meat dishes, soy purée, soybean cakes, soybean sprouts, roasted soybeans (soynuts), soy coffee, soy chocolate, soy confections, special foods for diabetics and tuberculosis patients, the soybean as a feed for animals.

4. Flour, pasta, and bread in feeding. 5. Soymilk (*il latte di soja*) and its use in the feeding of animals and humans. 6. Tofu (*il formaggio di soja*). 7. Soy oil and oil-cakes (*panelli*). 8. Condiments and sauces: Natto, miso, soy sauce (*le salse*, called *Schogon* [sic] in Japan, *Tsinag-Yeou* [sic] or *Tao-yu* in China, *Ketjap* in Java, and *Tuong* in Annam). 9. Enzymes (I fermenti, incl. urease). 10. Conclusions.

Part IV: Industrial applications of soya.

Part V: General conclusions.

The first test of the lactation of calves with soymilk was conducted in the winter of 1916-17 by the Bonafous Institute in Turin. The results were splendid, and have encouraged eminent pediatricians such as Dr. Casalini, Prof. Dr. Alberto Muggia (teacher of clinical pediatrics at the University of Turin), and Dr. Enrico Gasca (vice director general of infants at Turin) to extend their experiments (p. 6).

In Italy vegetable oil production has decreased steadily from 1870 to 1920. Attempts were made to grow sesame, peanuts, and rapeseed, and to import oils from abroad. During World War I, unrefined soy oil was introduced to the market in large quantities, but its unappealing taste disgusted consumers and for a while nothing more was heard of it. Then in 1921 it began to be introduced again, but this time it was refined at Italy's national oil works. The good results obtained encouraged the Italian oil milling company, Sairo, and other oil works to make great progress in soy oil production. Several thousand quintals (i.e., several hundred metric tons) of the best soy oil, sold under the name "refined oil from seeds," were introduced in the first half of 1922 by the national oil works of Genoa.

Returning to the early history of soya in Italy, we find that in 1848 some missionaries brought soybean seeds and a little soil to Italy from Japan. They waited for the cultivation for several years, then nothing else was said. In 1880 the Italian Ministry of Agriculture recommended the cultivation of soybeans as a fodder crop for the future, as was being

done in the USA, but their suggestion received no attention. In 1918, according to Mattei, a test of soybean culture was done at the Colonial Garden of Palermo on a parcel of 300 square meters.

Since 1912, after seeds had been brought by foreign delegates to the International Exhibition at Turin in 1911, repeated experiments with soybean cultivation have been conducted at the Bonafous Agricultural Institute in Turin, with the goal of developing two well adapted varieties, one for fodder and one for seed. Their green variety is for fodder and their yellow one for seed.

From 1920 the directorship of the cultural work was given to the head professor at the Institute, Venzio Manvilli, also professor of the Germano Sommeiller Technical Institute, professor the faculty of agriculture, University of Turin. They worked with seeds already selected from the institute and with those obtained from Prof. Don Ricaldone, and from Tientsin, China, directly. Others who have done important work with soya in Italy are Paolo Bottari (with soymilk at the Bonafous Institute), Tamanini Guido, Mossello and Bellia, Prof. Cav. Giov. Batt. Allaria, Dr. Mose Miccinelli

A table (p. 31) shows soybean and cotton hectareage and production in Korea from 1909 to 1917. Soybean hectareage increased from 277,776 ha to a record 487,134 ha. Soybean production grew from 1,991,126 quintals (1 quintal = 100 kg or 0.1 metric tons) to a record 3,816,498 quintals.

Page 35: "Prof. Rouest of Luxey (Landes) in France wrote us on 30 Nov. 1921. 'I have finished only the period of acclimatization of the soybean. It remains for me to propagate it a little everywhere. The experiments of 1921 were extended in all the Departments, being viewed from an industrial and commercial point of view. I must now study which variety adapts among those I am cultivating. Soy flour will not be able to be made until we have many thousands of hectares under cultivation, and then we will be able to think of other applications as well... Actually the firm Hendeberth de Lion sells its flour, originating in China, at 10 French francs per kg, a prohibitive price.'"

Page 206: At the pediatric congress held in Milan in Sept. 1922, the question of lactation (feeding children) with vegetable milk was discussed in a favorable way, proposed by Prof. Muggia and sustained by the illustrious Prof. Berghius, Director of the Pediatric Clinic of the University of Padua, and by Prof. Francioni of Bologna. We can also add that experiments on lactation are proceeding in Italy at the pediatric clinics of Turin, Bologna, Padua, Genoa, and Florence, and also at the Infant's Dispensary in Turin.

Photos show: (0) An infant fed soymilk in Turin in 1921, together with a table showing its weight gain from 18 July 1921 until 14 Jan. 1922 (p. 7). (1) Three different varieties of soybean plants (p. 70). (2) 2 soybean plants up close (p. 71). (3) The leaves of 3 different varieties of soybean plants (p. 72). Note 1. Quite a bit of the historical and non-Italian information in this book comes from Léon Rouest’s 1921 book *Le soja et son lait végétal: Applications agricoles et industrielles*.

Note 2. This is the earliest Italian-language document seen (Jan. 2012) that mentions natto, which it calls “il Natto in Giappone che corrisponde al Tao-Teche della Cina.” Address: Dr. of Economic and Commercial Science, Turin [Torino], Italy.

2489. Kellogg, John Harvey. 1923. *The natural diet of man*. Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]

• **Summary:** This classic of vegetarian literature contends that a vegetarian diet is the natural diet of man. Contents: 1. Man not naturally a flesh-eater: Modern civilized life unnatural and unbiologic, animal dietaries, lessons from the monkey, porcine wisdom in diet, animals classified by diet, the ancient family of primates, all mammals originally vegetable feeders, when germ diseases were unknown, kinship of higher apes and men, flesh-eating never a universal human custom.

2. Twenty popular delusions about flesh foods: D-1. That meat is superior as a blood-making food, and, hence, is needed in anemia. D-2. That meat is essential as a flesh-building food. D-3. That a flesh diet is essential to support severe or prolonged activity; that is, promotes endurance. D-4. That flesh-eating is necessary to produce physical courage. D-5. That vegetarian races are inferior physically and mentally to races using a mixed diet. D-6. That flesh foods are more refined and more easily digested and, hence, more nutritious than are foods of vegetable origin. D-7. That man is naturally omnivorous. D-8. That flesh foods are stimulating and thus supply an element needed especially by brain workers. D-9. That beef tea is a useful nutrient. D-10. That a meat diet is required to prevent or cure gastric acidity. D-11. That a meat diet is desirable in tuberculosis. D-12. That a meat diet is necessary in diabetes. D-13. That a flesh diet is essential in the treatment of obesity. D-14. That meat is required in beri-beri. D-15. That meat is essential as a “building-up” or restorative food. D-16. That meat is needed by growing children. D-17. That meats are needed as a stimulus to appetite. D-18. That the beef industry is a necessary part of our national economic system. D-19. That a meat diet is necessary to insure reproductive activity. The law of diminishing returns versus flesh-eating. D-20. That

meat is a harmless luxury.

3. Scientific objections to the use of meat: Human liver not adapted to meat diet; important differences between meat and milk; meat deficient in vitamins and food lime; Eskimos eagerly seek vegetable food; ill effects of meat diet on Arctic explorers; meat saturated with tissue poisons; meat readily putrefies, natural foods do not; the poisons of meat; meat extracts; why viscera are especially objectionable; bacteriology condemns meat as food; vast numbers of bacteria in meat; putrefactive products of meat; why physicians forbid meat in cases of kidney disease and high blood pressure; how flesh-eating causes constipation.

4. Diseases due to flesh eating: Tuberculosis in animals, cancer from meat eating, cancer rare and appendicitis unknown among flesh abstainers, meat-eating causes disorders of nutrition, acidosis from a flesh diet, a meat diet and scurvy, meat eating and arteriosclerosis, pernicious effects of a meat diet experimentally proven, recognized meat contraindications, the peregrinations of a deadly parasite, typhoid germs in meat products, flesh poisoning, no protection for meat-eaters, oyster poisoning, converting sewage into food.

5. Experimental evidence against flesh eating: McCollum’s experiments, Dr. S. Weir Mitchell endorses the meatless regimen, an eminent scientist on meat diet, Fauvel’s observations, greater endurance of flesh-abstainers, the death rate reduced by meatless diet, flesh-eating does not develop intelligence, meat-eating and race degeneracy, meat-eating a city habit, non-meat diet best even for carnivorous animals, the Scotchman’s dog, the effects of a meat diet on rats, the effects of a flesh diet on rabbits, flesh-eating animals short lived. 6. The ethical argument.

7. Historical facts and authoritative opinions: Biblical teaching about flesh eating, apostles who were flesh abstainers, the Essenes were flesh-abstainers, the diet of the ancient Greeks, King Cyrus a flesh-abstainer, Julius Caesar’s army ration, diet of Peruvian soldiers, diet of athletes of ancient Greece, ancient philosophers were flesh-abstainers, Plutarch’s essay on flesh-eating, fleshless diet of a Roman emperor, meatless diet endorsed by Gautier, views of Seneca, diet of the ancient Sumerians [today’s Iraq], eminent modern flesh abstainers, vegetarian monks, Thoreau on the fleshless diet, a Chinese statesman’s experience, the views of two great naturalists, the poet Shelley a food reformer, a child’s natural repugnance to meat, Liebig on the advantages of a non-flesh diet, Sylvester Graham’s diet reform movement.

8. Interesting facts concerning the dietary habits of various peoples. 9. The marvelous adaptation of the natural diet to human needs. 10. How to discard meats comfortably and safely.

11. Is the disuse of meat advisable from a practical standpoint? The U.S. Department of Agriculture shows the use of less meat to be safe and economic, the importance of planting nut trees, avoidance of meat is necessary to change

the intestinal flora, vegetable substitutes for meat, the recent low protein movement in the United States, the half century experience of the Battle Creek Sanitarium with a fleshless diet.

12. Newspaper and magazine misinformation: An “eat-more-meat” campaign, Professor Fisher of Yale University [Connecticut] refuses to support the “eat-more-meat” campaign of the [Chicago, meat] packers, pernicious piffle.

Soy is mentioned in many places. The section titled “Flesh-eating never a universal custom” states (p. 33-34): “According to Mori, the Japanese peasant of the interior is almost an exclusive vegetarian. He eats fish once or twice a month and meat once or twice a year... The soy bean is held in high esteem and used largely in the form of *miso*, a purée prepared from the bean and fermented; also *to-fu*, a sort of cheese; and *cho-yu* [shoyu, soy sauce], which is prepared by mixing the pulverized beans with wheat flour, salt, and water and fermenting from one and a half to five years. The Chinese peasant lives on essentially the same diet, as do also the Siamese, the Koreans, and most other Oriental peoples. Three-fourths of the world’s population eat so little meat that it cannot be regarded as anything more than an incidental factor in their bill of fare.”

Page 45: Complete “proteins are found in milk and eggs as well as in most nuts, peanuts, and the soy bean...”

Page 73: “The protein of milk, of the soy bean, and of nuts is known to be superior to meat as a source of body nitrogen.” Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

2490. Kellogg, John Harvey. 1923. The soy bean (Document part). In: J.H. Kellogg. 1923. The New Dietetics: A Guide to Scientific Feeding in Health and Disease. Revised ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1021 p. See p. 315-21. 24 cm.

• **Summary:** This section is quite similar to that in the 1921 first edition of this book, but on different pages. Changes appear on the following pages: 316 (addition of a paragraph stating that the soy bean is a highly valuable food for persons suffering from diabetes), 318 (deletion of the statement that the writer “has for twenty-five years made use of milk prepared from the almond and other nuts.”), 320-21 (addition of a table, supplied by William Morse of the USDA, giving the composition of soy beans sprouts and mung bean sprouts). Address: Battle Creek, Michigan.

2491. Kellogg, John Harvey. 1923. The natural diet of man (Continued). Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]

• **Summary:** Continued: Page 74: “Vegetable extracts (yeast extracts and soy sauce) are now prepared which are finer in flavor than the best meat extracts...”

Page 191: “Complete proteins are found in the almond and also in the soy bean and the peanut, a fact which

accounts for the large use of the soy bean and the peanut in China and other Oriental countries as a supplement to a diet of rice and green vegetables.”

Page 198: “The soy bean contains more protein than does beef, and 20 per cent of oil.”

Page 282: G. Yukawa reports that the diet of Japanese monks “consists exclusively of vegetable products, rice being the staple, supplemented with soy beans and vegetables. The diet contained an average of 70 grams of protein, 15 grams of fat, 514 grams of carbohydrates, an average energy intake of 2,500 calories. The experimenter concluded that the absolute vegetarian diet of the Buddhist monks of Japan is entirely adequate to maintain perfect health.”

Page 285: “Some years ago (1899) the Emperor of Japan appointed a commission to determine by investigation whether it was necessary to add meat to the national dietary to improve the physique of the race, especially to increase their stature. As regards the use of meat, the commission reported ‘that the Japanese had always managed to do without it, and that their powers of endurance and their athletic prowess exceeded that of any of the Caucasian races. Japan’s diet stands on a foundation of rice.’ The rice diet of the Japanese is supplemented by the free use of peanuts, soy beans, and greens, which supply all that rice lacks to constitute a wholly sufficient bill of fare.”

Page 306: “The experiments of McCollum and numerous others have in recent years demonstrated the entire feasibility of living exclusively upon a diet of purely vegetable origin. It is only necessary to make such a selection of foodstuffs as will supply the body with all the elements necessary for complete nutrition; and this may be easily done, as has already been indicated. It has also been shown that two widely used legumes, the soy bean and the peanut, as well as nuts, supply complete proteins and may be used in supplementing the incomplete proteins of cereals and vegetables. This fact explains the great rôle played by the soy bean in the bills of fare of the Orientals.”

Pages 313-14: “Certain proteins known as complete proteins, when taken into the body in proper quantities may be wholly utilized in tissue building, because they contain exactly the elements needed, no more and no less, for the building of muscles, nerves, glands, and other nitrogenous tissues.” “The protein of the soy bean, the peanut, the almond, and various other nuts has, however, been shown to be of high quality, practically equal to the protein of flesh... When meat is discarded, it is evidently necessary that care be taken to supply in its place an adequate amount of protein derived from the soy bean, the peanut, the almond, or other nuts, or from milk or eggs. Four or five ounces of soy beans, peanuts, or almonds afford an abundance of protein for a day’s ration. See also p. 320.

Page 322: “But even in the absence of milk and eggs, an abundant supply of protein could be readily secured by

the planting of peanuts and the soy bean, two remarkable legumes which, pound for pound, supply more nourishment than beef or pork and of finer quality.” “Nuts, together with the peanut and the soy bean, afford a protein which is equivalent to that of meat at a cost far below the cost of meat proteins. For example, an acre of very ordinary ground will produce twenty bushels, or twelve hundred pounds of soy beans, which contain 40 per cent, or four hundred and eighty pounds of excellent protein. It takes an acre of ground and two years to produce seventy-five pounds of dried protein in the form of beef. The same land will produce in the same length of time nearly one thousand pounds of soy bean protein. In other words, an acre of ground devoted to soy beans will produce more than thirteen times as much protein as the same ground used as a pasture for fattening steers...”

Page 338: The section titled “The recent low protein movement in the United States,” notes that the daily protein requirement for a person weighing 120 pounds could be “provided by 2½ pints of milk or by 6 ounces of almonds, 5 ounces of peanuts, 6 ounces porterhouse steak, 6 ounces navy beans, 4 ounces soy beans, 5 ounces lentils, 5 ounces black walnuts.”

Page 359: “Animals furnish us a good object lesson on this subject. Compare the agility, alertness, curiosity and intelligence of the fruit-eating chimpanzee with the dull stupidity of the lion and the tiger; or the vivacity and progressiveness of the rice- and soy-eating Japanese, with the dull-witted, decaying Eskimo.”

Nuts are discussed favorably on pages 56, 297, 327-31 but neither peanuts nor peanut butter are mentioned specifically.

Dr. Kellogg was a pioneer in promoting the importance of dietary fiber. The following terms appear: Bran or wheat bran (p. 40, 155, 157, 201, 301). Bulk, bulky, or bulky diet (referring to “roughage”) (p. 70, 135). Cellulose (p. 57, 70, 297, 303). Constipation (p. 10, 66, 135-138, 148, 157, 161, 332, 382). Roughage (p. 57, 135, 297, 301). But none of the following terms appears in the index: Laxative, laxatives.

The author lived 1852-1943.

Note: This is the earliest English-language document seen (June 2004) that contains the term “natural foods” and that also discusses soy. Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

2492. Kempfski, Karl E. 1923. Die Sojabohne: Geschichte, Kultur und Verwendung unter besonderer Beruecksichtigung der Verhaeltnisse in Niederlaendisch-Indien [The soybean: History, culture and use, with special attention to the situation in the Netherlands-Indies]. Berlin: Paul Parey. 88 p. Illust. Index. 22 cm. [101 ref. Ger]

• **Summary:** Contents: Introduction. Some remarks on the soybean’s early history. Overproduction of soybeans in Manchuria after the Russo-Japanese War—English oil mills make their first trials. Soybean production in Manchuria.

Soybean production in Korea. Soybean production in Japan. Soybean production in America—Soybean meal and soybean milk are introduced. Soybean production has also expanded in Africa, British India, and the Philippines. The introduction of soybean cultivation to Europe. The many uses of the soybean in Europe. Uses of soy oil. Old and new methods of obtaining soy oil. Soybean production and use of soybeans in the Netherlands-Indies. Appendix: Descriptions of how the most important soybean products are manufactured: In Java (tao-hoe [tofu]), tempeh, ketjap [soy sauce], tao-tjong [or tao-jiung, a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], in China and Japan (soy sauce, miso, tofu, frozen tofu, natto, soymilk) (p. 62-68). Supplements: I: Soybeans in Manchuria. II; Hansamuehle [Hansa Muehle] in Hamburg, Germany. III: *The Soybean* by Piper and Morse.

Note the extensive, early bibliography. Unfortunately, it contains many errors.

This book is largely a review of the literature, but with some original information, especially on Indonesia and Germany. In 1923 Java imported 150,000 to 200,000 tons of soybeans and had a population of 35 million. The area of soybeans planted in Java (including Madura) increased from 157,600 ha in 1918 to 164,700 ha in 1922 (p. 32). In 1921, 67.3% of Java’s soybean acreage was in Central Java, 20.7% was in East Java, and only 5.7% was in West Java. (p. 35). Large quantities of soybeans are imported to the Netherlands-Indies from Manchuria: 35,105 metric tons (tonnes) in 1920, rising to 95,742 tonnes in 1922. From these and local soybeans are made tempeh [spelled like this!], tofu (*tahoe*; *Bohnenkäese*), soy sauce (*Ketjap*, *Sojasauce*), etc. In Java, mostly black soybeans are grown. To make tofu yellow, it is cooked in an extract of the *Curcuma* root / rhizome. Sometimes it is also sun-dried or fried/roasted (*gebraten*). Tempeh is inoculated with a piece of tempeh from a previous fermentation, and often fried in coconut oil. Detailed descriptions are given of the production of soy sauce (*ketjap*; which is made from black soybeans) and Indonesian miso (*taucho*; *tao-tjong*). The author (p. 64) states that ketjap and tao-tjiung are both inoculated using *Hibiscus tiliaceus* (hibiscus) leaves, called *waroe* in Java. Today Germany, like America, produces fresh and dried soymilk, fresh and dried soya cream, meat analogs, and soy sauce (p. 25).

This book contains 17 interesting, old photos.

Descriptions of those reproduced from other periodicals are omitted. (1) A soybean field on the farm Kikai Nojo near Sempo-Station, Korea, owned and run by Mr. Moegling (p. 12). (2) A combine used for harvesting regular beans in California in 1918 (p. 19). (3) Many hydraulic presses in a modern American oil factory (p. 29). (4) The equipment used in steaming the soybeans before they are crushed in an American “steam mill” type oil mill (p. 31). (5) The interior of a British oilmill (p. 33). (6) The electrical generators in a modern oilmill (p. 34). (7) Soybeans being harvested

manually at Madioen [Madiun, in East Java], Java (p. 48). (8) Harvested soybeans being dried on racks in a field in Java, and carried away by one worker (p. 48). (9) Workers dividing up the harvest in Java (p. 50). (10) Threshing soybeans with bamboo flails in the courtyard of a small farmer in Java (p. 51). (11) Selling soybeans in a small market in Central Java (p. 51).

Tables show: (1) Imports of soybeans to Germany from 1910 (43,500 tonnes) to 1912 (more than 125,200 tonnes) (p. 24). (2) Soybean acreage in Java (including Madoera) from 1918 (157,600 ha) to 1922 (164,700 ha) (p. 32). (3) A breakdown of soybean area in Java in 1921 (of 226,186 bouws) into West Java (12,980 bouws), Central Java (152,154 bouws), and East Java (61,082 bouws) (p. 35). Note: 1 bouw = 1.754 acres (Johnstone 1975). (4) Imports of Manchurian soybeans to Java (including Madoera) and other parts of the Dutch East Indies (mainly Sumatra) from 1920 to 1922 (p. 36). (5) Yields (average or range) of soybeans in various countries: Germany, Italy, British Indies, Manchuria (incl. China and Korea), Japan, America (up to 2,700 kg/ha), Java (p. 52). (6) Comparison of the nutritional composition of soybeans, peas, and regular beans (*Phaseolus* varieties) (p. 53). (7) Comparison of the nutritional composition of soya cheese (*Sojakäse*, tofu), beef, and lean pork (p. 53). (8) The prices of white and of black soybeans in Java during January and December 1922 and the same two months of 1923 (in Gulden) (p. 56). (9) Comparison of yields, price, costs, and profit for peanuts (*Katjang tanah*) and soybeans in Java (p. 57-58). (10) Nutritional composition of canned frozen tofu (based on E. Senft) (p. 68). (11) Exports of soybeans from five Manchurian ports (Dairen, Antung, Newchwang, Suifenhö [Suifenhe], and Sansing) in 1919, 1920, and 1921 (p. 70). (12) Exports and value of soybeans from all of China to four countries (Netherlands, Russia, Japan, Dutch East Indies) in 1919, 1920, and 1921 (p. 72). (13) Exports of soybean oil from five Manchurian ports (Dairen, Antung, Newchwang, Suifenhö [Suifenhe], and Harbin) in 1919, 1920, and 1921 (p. 72). (14) Exports and value of soybean oil from all of China to five countries (England, Netherlands, Belgium, Japan, USA) in 1919, 1920, and 1921 (p. 72). (15) Exports of soybean meal from four Manchurian ports (Dairen, Antung, Newchwang, Suifenhö [Suifenhe]) in 1919, 1920, and 1921 (p. 73). (16) Exports and value of soybean meal from all of China to three countries (Japan, Russia, USA) in 1919, 1920, and 1921 (p. 73). (17) Names of the five major railway lines in Manchuria (South Manchuria Railway, Chinese Eastern Railway, Peking Mukden Line, Kirin-Changchun Line, Saupingkai-Taonan Line) (p. 74). (18) Amounts (in tons) of soybeans, soybean cake, and soy oil (*Sojaöl*) shipped over the South Manchuria Railway, and the Chinese Eastern Railway in one year (p. 74). (19) Railway transport and production amounts of the mills (in tons) in Dairen and Newchwang of soybeans, soybean cake, and soy oil (*Sojaöl*) during the year 1921 (p. 74). Address:

Agricultural Expert in Poerbasari te Pengalengan, Java.

2493. Lewis, William S.; Murakami, Naojiro. eds. 1923. Ranald MacDonald: The narrative of his early life on the Columbia under the Hudson's Bay Company's regime; of his experiences in the Pacific Whale Fishery; and of his great adventure to Japan; with a sketch of his later life on the western frontier, 1824-1894. Spokane, Washington: Published for The Eastern Washington State Historical Society by The Inland-American Printing Co. 336 p. 25 cm. [127* ref]

• **Summary:** Ranald MacDonald was born on 3 Feb. 1824 at Fort George, a great trading post located at the mouth of the Columbia River, owned by the Hudson's Bay Company, and formerly called Astoria; this area is now in Oregon. His mother was an Indian (he believed that she was a daughter of the great Chinook Chief Com-comly) and his father, Archibald, was a Scotch highlander; he was born a British subject. His mother died a few months after his birth and he was raised by his mother's sister. In Sept. 1825 his father remarried and he was raised by a stepmother, Jane Klyne. He worked with the Hudson's Bay Company, of which his father was chief trader and chief factor. The Oregon Treaty of 1845 made him a citizen of the United States.

"In March 1833 a Japanese junk laden with crockery..., blown across the Pacific, was wrecked about 15 miles south of Cape Flattery [on the northwest coast of Washington] and all of the seventeen men on board lost except three who were seized and held as slaves by the local Indians... These Japanese were subsequently rescued from the Indians in May, 1834, by Captain William McNeil—the Boston skipper—on board the Hudson's Bay Company ship 'Llama' and taken to Fort Vancouver." Numerous primary sources for this information published in the 1830s are cited. The kind Dr. John McLoughlin attempted to return these shipwrecked Japanese to Japan via London (England), and Macao, China—but Japan would not accept them. These were apparently the first Japanese in the U.S.A. and the incident inspired MacDonald to travel to Japan to learn more about the Japanese. At age 24, in July 1848, he arrived in the Japan Sea on the American whale ship 'Plymouth' under captain Edwards. He then left the whale ship alone in a small boat. After going ashore on 3 small islands (Teure, Yankeshiri, Rishiri) inhabited by Ainu off the coast of Yesso (Yezo, now called Hokkaido), he landed at Soya on the northernmost tip of Hokkaido. Then, treated as a prisoner, he was sent on the ship Tenjinmaru to Nagasaki and saw the small island of "Dessima" (Deshima, Dejima) in the harbor. He was confined to a sort of prison which he was never allowed to leave and made to wait about 7 months until the next Dutch ship arrived. During this time he taught English to various eager pupils and interpreters. He was the first English instructor in Japan. His best student was the brilliant Yeanosuke Murayama, who was already fluent in Dutch. He

stayed in Japan until 26 April 1849 when he was removed on the American ship 'Preble' under commander James Glynn.

While in Japan MacDonald compiled a glossary or dictionary of about 550 Japanese words and their English equivalents. Among these were tofu (he wrote "tove"; see p. 288), and shoyu [soy sauce] (he wrote "shon" or "son"; see p. 297). After further travels to China, India, Australia and Europe, he returned to America in 1853 to live his later years in his native homeland near the Columbia River, in the Pacific Northwest.

Note: This book is extremely well written and carefully documented, with extensive scholarly footnotes. There are numerous appendixes, a glossary, and two bibliographies. One of the appendixes (II-C, p. 280-84) is a deposition taken by commander Glynn on 30 April 1849; it tells of MacDonald's life and the story of his stay in Japan up to that time. It appears in U.S. Senate, Executive Docket, 32nd congress, 1st session, No. 59, p. 25-28.

An illustration (p. 208) shows Maruyama and Tokojiro, two Japanese men in Edo period dress. Both pupils of Randal MacDonald, they were the chief interpreters in negotiations with Commodore Perry.

Footnote 238 (p. 209) states: "During the period of exclusion, Occidental knowledge of Japan was derived through the Dutch. Three physicians attached to the Dutch factory at Nagasaki contributed principally to this knowledge of Japan: Englebrecht [Englebert] Kaempfer (Japan 1690-1692), author of a "*History of Japan and Siam*," London, 1727; Charles Peter Thunberg (Japan, 1775-1776), author of *Travels in Europe, Africa and Asia*; and Philip [sic, Philipp] Franz von Siebold (Japan 1822-1830), author of *Nippon, an Archive towards the description of Japan*. In addition to these, three directors of the Nagasaki factory, Isaac Titsingh, J. F. van Overmeer Fisscher and G. F. Meijan, furnished further information. Additional information was received through Russian sources from the published account of Georg Heinrich von Langsdorff, a German physician attached to the Reasanoff expedition (1804), and from Captain Vasili M. Golownin's *Memoirs of His Captivity in Japan, 1811-1813*.

"In like manner whatever Japan received of the material civilization of the Occident during these years was obtained principally through the Dutch." Address: 2. Head, School of Music, Imperial Univ., Tokyo. Formerly head of the Dep. of Foreign Languages at the Imperial Univ.

2494. Moore, Alice. 1923. Chinese recipes: Letters from Alice Moore to Ethel Moore Rook. Garden City, New York: Doubleday, Page & Co. 113 p. 10 x 13 cm.

• **Summary:** The Preface (p. viii to ix) states: "The Chinese use no butter, no milk, no cheese, and no bread." "One of the most startling differences between this cuisine and ours is the complete absence of salt. Its place is taken by a sauce made from the soy, or soya, bean. The beans are allowed to

ferment in big pots for two months under the blazing sub, an enormous amount of salt and other seasoning is added during the process and the result is an inexpensive brown sauce which is very salt [sic, salty?] and very appetizing. It is much like Worcester sauce of which it is the base. Soy may be had in bottles or in imported brown jugs.

"The fat used in these recipes is always sesame oil, made from the sesame seeds. It has a more delicate flavour than peanut oil which is sometimes substituted. Like soy sauce, it is inexpensive, like it also it gives a piquant flavour to ordinary dishes."

Page 3: "North (the Chinese use the points of the compass always, and always correctly, I mean in front, right being east) is a dish of Chinese (Soy) sauce."

This book contains 66 recipes. On page 104-05 is a recipe for Buddha Dish, which calls for "½ cup of fried bean curd and ¼ cup of soy sauce."

Note: A review of this book in the *New York Times* by Nicolas Poussin (16 Dec. 1923, p. BR20) begins by asking if anything will ever dethrone the French culinary art, then adds: "But Alice Moore,... who has lived a dozen years in China, eaten all manner of things in the East and Near East and is familiar with American and European cooking, awards the palm for delicious cookery to the Chinese. Again and again she emphasizes her conviction that the Chinese are 'past masters of the culinary art' and the best cooks in the world." Among the dishes "declared to be delicious by the author [Poussin] are... tea eggs—made by soaking hard boiled eggs in a concoction of hot water, soy sauce, tea leaves and cinnamon..."

2495. Photos showing the process of making shoyu at Noda Shoyu Co. (later Kikkoman) in Noda, Japan. 1923.

• **Summary:** (1) Wheat being roasted in a shallow round metal container (like a large wok) over a wooden fire.

(2) Soybeans being steamed in a large wooden steamer set over a caldron.

(3) "Fermentation room: wooden vats holding fermenting soy sauce; note the planks on which the moromi stirrer would stand to perform his task."

(4) Running the mature moromi (mash) into strong sacks in preparation for pressing out the sauce.

(5) An older method of extraction and pressing, using many large stones at the end of a long wooden lever press; bags filled with moromi are in the porous-bottom wooden box near the fulcrum.

(6) Another method of pressing: "a windless type of device for applying pressure to a porous-bottom box (*age-fune*) in order to separate sauce from lees" (residue).

(7) Yet another method of pressing using a sort of windlass urned under foot.

(8) A modern method of pressing using hydraulic presses. Taken in 1923.

(9) A room partly filled with the presscake or residue

remaining after the soy sauce has been pressed out.

(10) Soy sauce being run into wooden kegs to be sold.

(11) A line of bottles being filled with soy sauce. Bottles [and cans] were introduced by Noda Shoyu in 1923.

(12) Shallow wooden boats on the Tone River waiting to carry shoyu downstream to Tokyo. A railway had largely taken over this function, starting in 1911.

(13) Typical homes of factory workers in Noda.

These photos were sent by W. Mark Fruin (via Kikkoman) to Soyfoods Center in 1983 with permission to publish them. The photos are from the Kikkoman archives in Noda, Japan. Mark thinks that some of them may have been taken at Kikkoman's small *Goyo Gura* where the shoyu made for the Imperial Household was always made by hand. Several of the photos appeared in Fruin's classic history of Kikkoman titled *Kikkoman: Company, Clan, Community* (1983, Harvard University Press). See p. 32, 34.

2496. Sensemann, Harley Le Roy. comp. 1923. Catalogue of graduates, non-graduates, officers, and members of the faculties, 1837-1921. Ann Arbor, Michigan: University of Michigan. viii + 1379 p. See p. 235, 257.

• **Summary:** Page 235—Graduated in 1917: "Mitsuji Kiyohara, AB, Secy. and Treasurer of Oriental Show-You Co., 208 N. Wabash Ave., Chicago, Illinois."

Page 257—Graduated in 1919: "Wallace Julian Smith, A.B., La Choy Corp., 12507 Oakman St., Detroit, Michigan."

Note: This is the earliest document seen (Oct. 2008) that mentions La Choy, a fairly early importer and manufacturer of soy sauce in the USA. Address: Univ. of Michigan.

2497. Watson, Ernest. 1923. The principal articles of Chinese commerce (import and export) with a description of the origin, appearance, characteristics, and general properties of each commodity; an account of the methods of preparation or manufacture together with various tests, etc., by means of which the different products may be readily identified. Shanghai, China: Statistical Dept., Inspectorate General of Customs; sold by Kelly & Walsh [etc.]. xi + 630 p. Illust. 28 cm. The Maritime Customs. II. Special Series No. 38.

• **Summary:** Section II, titled "Oils, fats, and waxes" (p. 76-149) contains detailed definitions of the following: Bean oil (*Tou-yu* or *Oleum dolichos*) obtained from the soya bean of China, and the residual meal (*tou-ping-fên*) (p. 85-86). "In China bean oil is used as a food; for cooking purposes; for mixing with lacquer; in making varnish and printing ink; in soap making; and, to a slight extent, as an illuminant, although for this purpose it has been almost superseded by kerosene. It is also used in water proofing cloth and paper for making umbrellas and lanterns. In foreign countries, where the demand for the oil is practically unlimited, bean oil is used chiefly in the manufacture of soap and in preparing salad oils. On account of its drying properties bean oil is not

very suitable for use as a lubricating oil.

"Bean oil appears in Chinese commerce packed in wooden tubs, paper-lined baskets, or in earthenware jars, of no standard weight. It is exported in great quantities from many of the northern ports, particularly from Dairen and Newchwang, and, to a smaller extent, from Hankow and other Yangtze ports."

Section VI, titled "Miscellaneous products" contains a long subsection on "Beans, Soya" (*Tou*) (p. 320-21). "Soya beans, or 'soy beans'... are cultivated in enormous quantities in Central Manchuria... It is estimated that about 1,600,000 tons are produced annually in Manchuria alone... The beans are small,... the yield per acre being from 1,100 to 1,600 pounds [18.3 to 26.6 bushels]. Several varieties are grown in China and are commonly classified by the Chinese according to form, colour, size, use, and other characteristics. The best known of these varieties are (with Chinese characters for each term): -

(1) Yellow beans (*huang-tou*), subdivided into *pai-mei-tou* or 'white eye-brow bean,' so called from the whiteness of the prominent hilum; *chin-yüan-tou* or 'round golden bean'; and *hei-ch'i-tou*.

(2) Black beans (*wu-tou*), subdivided into (*ta-wu-tou*) or 'large black bean'; (*hsiao-wu-tou*) or 'small black bean'; and (*pien-wu-tou*) or 'flat black bean.'

(3) Green beans (*ch'ing-tou*), subdivided into two varieties, one of which has a green epidermis and green interior, the other a green epidermis and yellow interior.

Three subspecies [of soya beans], yielding very small beans, are known as: (*hsiao-pai-tou*) or 'small white bean'; (*hsiao-hung-tou*) or 'small red bean'; and (*hsiao-lü-tou*) or 'small green bean.'" Note 1. The writer may be mistaken in calling these last three subspecies of soya beans. They are probably white azuki beans, red azuki beans, and mung beans.

Soya beans "are valued chiefly as a source of bean oil, but are also extensively used as food, either whole or ground to flour in making beancurd, bean milk, bean sauce, or 'soy,' and salted relish (*ta-tou-shih*) [fermented black soybeans], which is used both as a food and as a medicine. The black beans, which are not much used as food because they are supposed to make the body too heavy, are used in medicine, to impart strength and vigour, as a carminative, and also as an antidote for vegetable poisons, such as aconite, croton oil, etc. The hulls of green [soy] beans are applied to smallpox ulcers and other sores; the bruised leaves of the plant are used in treating snakebite; the flowers are used in treating diseases of the eyes. Young bean sprouts (*tou-ya*) are used as a vegetable food." Details are given on the following products made from soya beans: "Beancurd (*tou-fu*), bean milk (*tou-fu-chiang*), bean sauce (see under 'soy'), and bean vermicelli (*Fen-ssu*, *Tou-fen-ssu*, *Hsi-t'iao-mien*, or *Kua-mien*.—A very famous vermicelli made in the Chefoo district, from beans most of which are originally imported from

Manchuria).

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the term “salted relish” to refer to fermented black soybeans.

The section titled “Soy (*Chiang or Chiang-yu*)”—with Chinese characters for each term) states: “Soy is a sauce made in China from the soya bean (*Soja hispida*). In preparing it, a quantity of beans are slowly boiled, an equal quantity of coarsely ground wheat or barley being added. The mixture, after being allowed to ferment for some time, is put into a jar with an equal amount of salt, a few aromatics, and three times as much boiling water as there were beans at first; the whole is then allowed to stand for several weeks exposed to the sun, after which the liquor, which constitutes the soy, is separated by pressing and straining the mass. The finished product is afterwards packed into jars or bottles ready for the market.

“Soy is thin, and, in colour, very dark brown or almost black; it becomes brighter and clearer on being kept, has an agreeable salty flavour, and produces a yellowish froth when even slightly shaken. It is much used by the Chinese as a sauce and condiment, as it creates an appetite and is supposed to counteract the injurious properties of contaminated food; it is also used in medicine as an application for burns, scalds, eczema, leprosy sores, etc. Soy is often exported from China to foreign countries, where it is extensively used in the manufacture of many European sauces.”

Also discusses: Groundnut oil (*Hua-shêng-yu*), also called peanut oil, earth-nut oil, and arachis oil (*Oleum arachis*) (p. 105-06). Hemp-seed oil (*Ma-yu or Ma-tzu-yu*) (p. 106).

Sesamum-seed oil (*Chih-ma-yu or Hsiang-yu; Oleum sesame*) also known as “gingelly oil,” “teel oil,” or “benne oil” (p. 133-35). Groundnuts (p. 421-22). Wheat gluten (*Mien-chin*, p. 574). A second edition was published in 1930. Address: Chief Appraiser, Chinese Maritime Customs.

2498. Photograph of Shinzaburo Mogi. 1923? Undated.

• **Summary:** He is a member of the Kikkoman Mogi clan. Various later records tell the story of his life and work in the United States. In 1923 he was treasurer of Oriental Show-You Co. and resided at 6210 Dorchester Ave., Chicago, Illinois. Neither the date nor place of this photo are known.

2499. Loew, Oscar. 1924. The soy bean, a superior crop. *Porto Rico Agricultural Experiment Station, Agricultural Extension Notes* No. 64. p. 1-2. Jan. 15.

• **Summary:** “The soy bean originated in Eastern Asia and has been introduced during the past 30 years into different countries of the world. It can be grown successfully even in a rather poor soil, in the absence of nitrogenous manure, provided the specific root-nodule bacteria are present. This plant is far superior to other leguminous crops, even those

very rich in protein, as the lupin, which it equals in protein and highly surpasses in fat content. In fact, the soy bean is richer in fat than all other leguminous crops and is, therefore, sometimes called the oil bean. The soy bean does not contain alkaloids and bitter tasting matters like the lupin...”

A table compares the nutritional composition of the pea, common bean, lupin, and soy bean. “From the analyses it would appear to be of great advantage for the people of Porto Rico to replace the common bean now serving as an essential part of the daily food, by the soy bean, it providing a higher percentage of protein and fat... Since the Soy bean needs prolonged boiling until it reaches a sufficient degree of softness, it is best soaked for a day in water to which some soda and common salt are added (about a teaspoonful of each to half a liter) followed by washing two to three times with fresh water and then boiling for an hour or so. The taste of this dish is very agreeable.

“In Japan the soy bean serves for several preparations, called ‘tofu,’ ‘yuba’ and ‘miso,’ which might be prepared in Porto Rico. Also, a dressing or condiment similar to the English Worcestershire sauce, is prepared from the seeds.” The preparation of tofu is described. It is “generally fried like cakes and represents an excellent food.”

“The milky liquid can also doubtless be used as a suitable nutrient, but it can never replace the mother’s or cow’s milk for children, since the lime content is exceedingly small and the protein differs widely from the casein of the milk.

“In our trials with soy beans at the Experiment Station, Mayaguez, the results at first were disappointing. This was found to be due to the fact that the soil was not inoculated with the proper bacteria for assimilating nitrogen for the roots. We now have inoculated soil, and before planting on ground new to this crop inoculating material should be secured from the Station for mixing with the seed at the time of planting. When the soil is once inoculated it will remain so for all succeeding crops.”

Note: Who was Dr. Oscar Loew and how did he learn about soyfoods? From 1897 to 1906 he was a Professor of Agricultural Chemistry at the Imperial University of Tokyo, Japan, where he wrote articles about soy sauce, tofu, soymilk, and yuba. In 1911 he was in Munich, Germany, where he wrote an article about soymilk. When he speaks of “our trials with soy beans at the Experiment Station, Mayaguez,” he seems to indicate that he was living at the Station in Porto Rico in about 1924. Address: Mayaguez, Porto Rico.

2500. Slosson, Edwin E. 1924. Soy. *Scientific Monthly* 18:109, 111. Jan.

• **Summary:** “The recent rise in restaurant prices has sent economical Americans flocking to the chop sueys, where a savory and satisfying meal can still be obtained for a small sum. The Chinese, in their efforts to keep three hundred

million people above the starvation point for three thousand years, have been forced to figure closely on food values... With us Americans meat has been the main part of the meal with vegetables on the side. With the Chinese this is reversed, and meat has in many cases been reduced to a condiment...

"The chief difficulty of a vegetarian diet is to get a sufficient amount and variety of proteins. Beans and peas are the richest in proteins, but they are not of the sort and proportion found in meats and needed for our muscle-making.

"But there is one exception and that is the soy-bean... The soy bean resembles animal foods in being rich in fat and protein and devoid of starch. What is more remarkable, the soy bean contains a dozen kinds of protein compounds that are the same as those found in milk. In fact a 'vegetable milk' can be made from soy beans and from this vegetable curds and cheese. These form a large part of the diet of Chinese and Japanese who abstain from animal food either because they are Buddhists or because they are poor. By milking the soy bean they can get ten times as much lacteal fluid per acre as if they pastured cows on the land. Italian physicians who used soy milk as infant food during the war report that it was better tolerated than cow's milk by some of the babies.

"The soy milk products have not yet come into use with us, but the American patron of the chop suey has acquired a taste for another product of the bean, the little glass cruet of brown sauce that seasons the rice. It looks and tastes like meat extract, such as we use in making beef tea, and is really much like it in composition and nutritive value. This shoyu or soy sauce is made by long fermentation and ripening of a mixture of beans and wheat in brine. The longer the process the better the product. Six months or a year may suffice for the masses, but to suit the taste of the Oriental connoisseur it must be sunned for five years or even thirty, the jars being patiently uncovered every day and covered every night or whenever it rains. Over two million barrels of soy sauce are made in Japan every year."

[soy] bean sauce, plum sauce, dried flat fish..."

2507. F.H.H. 1924. A spring week-end at Choshi on the Cape Cod of Japan. *Christian Science Monitor*. May 6. p. 9.

• **Summary:** Describes a trip from urban Tokyo to rural Choshi. The tip of the promontory that juts out into the Pacific Ocean is crowned by a tall lighthouse of white stone, constructed 50 years ago. The pride of the neighborhood, the emblem "figures on all Choshi products, from the labels

on the bottles of the excellent shoyu (soy sauce) to the bath towels that the Japanese inn presents to each departing guest.”

Note: Choshi is a city located near the tip of a promontory on the Pacific Ocean, in Chiba prefecture, Japan. It lies almost due east of Central Tokyo, and is the easternmost city in the Greater Tokyo Area. The Tone River runs through it. Address: Special to the Monitor.

2508. *Los Angeles Times*. 1924. China has most things Chinese but chop suey isn't to be found there. May 25. p. 12.

• **Summary:** Although most Americans believe that chop suey is a Chinese dish, it cannot be found there—excepts perhaps in the American quarter of Shanghai.

The invention of chop suey is attributed to the genial Li Hung Chang, who, during a visit to the USA, was at a loss when asked to entertain some American guests who wanted to enjoy a Chinese banquet.

“His cook, collecting such ingredients as were available, concocted a dish to which he gave an exotic tang by adding a piquant sauce made from the soya bean.” When asked what the dish was called in China, “his merry eye happened to light upon the chop sticks and the bottle of soya sauce, and he answered ‘chop soya,’” which has been corrupted into chop suey. He communicated his discovery to his compatriots in San Francisco, where America's chop suey is thought to have started.

So what do Chinese eat? They “eat enormously and yet so economically that what is wasted in the United States would feed 60,000,000 Chinese in comparatively luxury.” “The cost of feeding one adult in China averages two cents a day. A coolie never drinks milk or eats butter. He seldom tastes sugar or meat.” His typical diet is described. A Chinese laborer, eating a simple diet derived from plants, accomplishes a prodigious amount of work.

“Two cubic inches of bean curd, four walnuts, five peanuts, fifteen roasted beans, and twenty melon seeds make a meal, says Prof. Edward Alsworth Ross...” [Source: Thomas Steep in the *New York Tribune*].

Note: The rest of this article is highly condescending and racist.

2509. *Toronto Daily Star (Canada)*. 1924. Chop suey just hash says a Chinese girl: Thrown together in desperation by waiter in Washington years ago. A guest liked it: Came back for some more and smart proprietor went into business. July 18. p. 11.

• **Summary:** Purports to describe the origin and early history of chop suey, according to Eva C. Chang in the *New York Tribune*. She says chop suey was invented in the USA, and few Chinese living there like it. “The only thing that gave it a Chinese flavor was the Chinese bean sauce [soy sauce] or chiu yiu sauce, bamboo shoots, water chestnuts and bean sprouts.”

2513. Kamper's. 1924. New arrivals at Kamper's (Ad). *Atlanta Constitution (Georgia)*. Sept. 24. p. 2.

• **Summary:** “La Choy Sprouts, jars—50¢. La Choy Shoyu Sauce, bottles—40¢.”

Note: This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest that uses the term “La Choy” to refer to a U.S. company that makes and sells Oriental foods. The new term appears in 2,504 documents between 1924 and the present, including 18 in the 1920s, etc. Address: Atlanta, Georgia.

2514. *Japan Magazine (The): A Representative Monthly of Things Japanese*. 1924. Japanese child games: The “Oden-ya.” 15(1):10-11. Sept.

• **Summary:** Page 10: “Oden is a kind of Japanese popular food.” Among the many things it contains are *yaki-dofu* (broiled beancurd), *ganmodoki* (bean-curd fried with condiments), potatoes, etc., which are cooked in a soup of soy [sauce], after which they are skewered and eaten, usually with mustard. The seller of *oden* is called *oden-ya*.

In this game, “boys and girls imitate this familiar food hawking in their play. It is an outdoor game [played] by at least 6 or 7 children.

“There are two taggers chosen at first. One hawks *oden* and another buys, the rest forming the *hanpen*, *chikuwa*, *konnyaku*, *yaki-dofu*, *ganmodoki* and potatoes respectively. The *oden-ya* arranges in a line these foods beside him, waiting for one coming to buy them...”

Note 1. This is the earliest English-language document seen (May 2012) that contains the term *yaki-dofu* or the term “broiled beancurd.” Both refer to grilled tofu.

Note 2. This is the earliest English-language document seen (May 2012) that contains the word *ganmodoki* (written as one word); it refers to deep-fried tofu burgers.

Note: This remarkable periodical was founded by Baron Hirayama, P.C., in 1910.

2515. Matsuoka, Chokichi. 1924. Japanese soy and method of making the same. *U.S. Patent* 1,514,554. Nov. 4. 3 p. Application filed 3 Dec. 1923.

• **Summary:** Crushed soy bean is extracted with boiling water, and the extract is treated with salt and *Aspergillus* and fermented at 30°-50°C for 3 weeks. The product is filtered and sterilized by heating at 100°C. Address: Los Angeles, California.

2516. Nishiwaki, Yasukichi. 1924. Soja-Bereitung mit *Oidium lupuli*, *Aspergillus oryzae*, und *Rhizopus japonicus* [Preparation of soy sauce with cultures of *Oidium lupuli*, *Aspergillus oryzae*, and *Rhizopus japonicus*]. *Zentralblatt fuer Bakteriologie. Series 2*. 63(1/8):28-30. Nov. 27. [2 ref. Ger]

• **Summary:** The author reports experiments concerning the production of soy sauce using three different types of mold: *Oidium* [one of the early names for *Neurospora* before the sexual stage was described in 1927], *Aspergillus* (the mold generally used in soy sauce production in Japan), and *Rhizopus* (the mold widely used to make tempeh). Surprisingly, the soy sauce fermented with *Oidium* was considered to be the best quality. It can also be used to make good quality miso. The quality of soy sauce made with *Rhizopus* molds was considered to be poor, and the yield of soy sauce was low. Onchom is not mentioned. Address: Professor, Technischen Hochschule zu Osaka, Japan.

2517. *Bean-Bag (The) (Lansing, Michigan)*. 1924.

Manchuria: Home of the soy bean. 7(6):11-12. Nov.

• **Summary:** This article is based on (and quotes widely from) a bulletin released by the National Geographic Society (Washington, DC).

“Manchuria’s major crop is the soy bean—and it is soy bean sauce which lends flavor to chow mein, chop suey, yakamin [sic], and other American versions of Chinese cooking.

“The soy bean’s rise from obscurity, only 15 years ago, to its present importance is a wonder of modern commerce.”

“Not only does the soy bean provide a sauce which is the Worcestershire of China, but it also masquerades as cheese [tofu], candy, fertilizer, flour, oil for lighting and lubricating and it does further duty in waterproofing umbrellas and cloth.

“The Japanese use it widely [in the form of kinako, or roasted soy flour] as the basis of confectionery. In this form it is highly palatable and the Japanese consider their candies and pastries more wholesome than ours—indeed they are appalled by the quantity of sugar which Americans consume.”

“Only a fraction of the bean oil that comes to this

country is used in edibles. Much of it is utilized in making soaps, paints, lubricants and toilet powders. After oil is extracted from beans and the residue is made into bean cakes. These are manufactured extensively in Mukden. They are retained in the east, and serve as fertilizer and cattle feed both in China and Japan.

“Aware of its enormous soy bean crop, and its heavy yield of sorghum and millet, the visitor expects to see great farms of these products. The Manchurians, like most Chinese, are gardeners rather than farmers. The vast aggregate of these grains and vegetables come from patches of an acre or so. Tens of thousands of farmers with tens of thousands of the primitive plows, shaped like crude shovels, turn up millions of ridges, and drop seeds into the loose earth. Then they run a roller over their patches and wait until it is time to spread their beans or their grain on clay floors. They thresh the grain with flails or with oxen to trample it.

“Southern Manchuria has the best railroads in China; some of the busiest cities, such as Mukden, Harbin, Kirin, and Port Arthur; and its general prosperity is high.”

2518. Cullison, W.V. 1924. The soy bean and commerce. *Oil Miller* 20(3):17-18, 20-22. Nov. Reprinted from The Staley Journal.

• **Summary:** Contents: Introduction and history. Three methods of producing soybean oil: Old hydraulic method, extraction process using “light petroleum naphtha” [naphtha], and by the Anderson Expeller mill (continuous process). Crude soy bean oil. Use of oil in hard soaps and paints. Soy bean meal: Soy bean flour as food. Food uses of soy beans in China and Japan: Soy bean or vegetable milk, tofu or soy bean curd, miso or soy bean paste, soy bean sauce (shoyu). Soy beans and the farmer: North Carolina led in acreage until 1923, when Illinois gained first place. Growing soy bean. history of the soybean, uses, methods of oil production, and uses for the oil and meal.

“The soy bean has been grown in the United States since 1804, under the names of Coffee bean, Japan pea, Soja, Soy, Soya and Stock pea. During the period of the Civil War the soy bean was used rather extensively in the southern States as a coffee substitute. For a considerable while seedmen sold certain varieties under the names Coffee Berry and Coffee Bean.

Note 1. This is the second earliest document seen (Nov. 2005) which states that soybeans were used as a coffee substitute during the Civil War in the United States.

The 2nd process for producing soy bean oil is the “Extraction Process wherein the ground seed is leached with light petroleum naphtha, which dissolves the oil, leaving a meal containing less than 4 per cent oil. The naphtha extract is distilled, the naphtha recovered and used over again, and the soy bean oil obtained as a residue from this distillation.”

“The demand and market for soy bean products, especially the oil, is here and now. Whether or not this

demand will be filled by American grown beans, or by beans and oil imported from Manchuria depends upon the American farmer.”

A map shows where soy beans are produced in the USA. A flow sheet shows the basic steps in making soy bean oil, meal, and other chief products. A photo shows a line of expellers, powered by overhead belts, as they “extract soy bean oil.”

Note 2. This article says nothing about the A.E. Staley Manufacturing Company’s work with soybeans. Address: Research Chemist, A.E. Staley Mfg. Co., Decatur, Illinois.

2532. Sheffield plate. 1924.

• **Summary:** During the 18th century, there was a demand for objects of beauty for the table that were less costly than solid silver and better in appearance than pewter. In 1742 Bolsover made a discovery that led to the manufacture of Sheffield plate. He found a way to make an imitation silver by beating out a thin layer of silver, placing it on a copper foundation, then using heat to fuse the two metals. This soon became a great and prospering trade. This article concerns what is known as the “copper mount” period, which ended in about 1790.

Fortunately a few of the original manufacturers catalogues have survived. A very fine one, issued by Nathaniel Smith & Co., contains many illustrations showing the various objects made by this firm—including some “charming cruet-frames, and frames for soy bottles...”

2533. Tanaka, Y. 1924. Shôyu koji no saikô ondo ni tsuite [Maximum temperature during the production of shoyu koji]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 19(4):43-46. [Jap]

Address: Kumamoto Zeimu Kantoku Kyoku Gijutsukan, Japan.

• **Summary:** Name of company with diacritics is: Minami Manshû Tetsudô K.K. Kôgyô-bu. Nômu-ka. This important, major work was written by Yoshitane Satô. Contents: Photos (on unnumbered pages at the front of the book) show 16 scenes of soybean transportation, storage, and processing in Manchuria, as follows: (1) Mule drivers whipping mules trying to pull carts loaded with large sacks of soybeans over muddy roads. (2) Cylindrical osier storage bins for soybeans. (3) Row upon row of sacks of soybeans piled high in storage near docks. (4) Soy sauce being made in a courtyard;

each earthenware jar is covered with a woven conical lid.

(5) The inside of a huge and modern soy sauce plant. (6) Wooden kegs and glass bottles of Yamasa shoyu. (7) Soy sprouts growing in round woven baskets. (8-11) Soy oil being pressed using vertical screw presses [as an alternative to hydraulic presses]—four views. (12) Boilers used in a soybean mill. (13) A wooden barrel of soybean oil being sealed. (14) Soy oil packaged in many small containers, each surrounded by a wicker basket. (15) Round soybean cakes stacked high on railway flatcars. (16) The inside of a modern soy oil factory.

Contents: 1. Current status of soybean production and consumption: A. Production: Overview (p. 2), Japan (p. 4), Korea (p. 12), Manchuria (p. 16), China (except 3 eastern provinces, but including Eastern Inner Mongolia, p. 31), USA (p. 34), British colonies (p. 37), European countries (p. 40). B. Consumption: Japan (p. 41), Korea (p. 52), Manchuria (p. 57), China (p. 59), Dutch East Indies (Indonesia, p. 60), USA (p. 61), European countries (p. 63).

2. Characteristics of soybeans: A. From a physical sciences viewpoint (p. 67): Structure (overview, cotyledons, hypocotyl, seed coat), contents of each system (p. 70), appearance (p. 73; color, gloss, shape, size, hilum (*fusuma*) color, young plumule leaf color, ratio of seed to seed coat). B. From chemical viewpoint (p. 82): General composition, structure of each component (p. 109; protein, oil, carbohydrate, ash/minerals, vitamins). C. Appearance and relationship between oil and protein content (p. 126): Oil and protein color related to color, glossiness, shape, size, hilum color, young plumule leaf color. D. Evaluating soybean quality (p. 140): Overview, key points (sizes, shapes, colors, glossiness, hilum color, young plumule leaf color, ratio of seed coat to seed, dryness of seed, volume, weight, smell, mixing of different varieties, ratio of imperfect seeds, amount of other types of seeds), collection of materials for testing, testing and evaluating commercial soybeans.

3. Soybean usage and processing (p. 175). A. One view of main usage of soybeans. B. Nutritional value of soybeans as food (p. 183): Nutritional value of soy protein. C. Processed soyfoods (p. 208): Soy sprouts (p. 208), natto (*itohiki nattô*, p. 212, Hamanatto, p. 224), types of tofu (regular tofu [*nama-dôfu*, p. 226], *kori-dofu* or *koya-dofu*, p. 240, aburaage, p. 245, tofu curds [*tofu nô*, p. 247], hard tofu [*tofu-kan*, p. 247], fragrant hard tofu [*kô-kan*, p. 248], *senchô tofu*, p. 249, fermented tofu [*nyûfu* or *funyû*, p. 249]), *tofu-p'i* or yuba (p. 256), soymilk and artificial cow's milk, p. 259, soybean flour raw, or roasted (kinako, p. 263), shoyu (p. 266; overview of miso and shoyu, Japanese traditional regular shoyu, p. 267, Japanese traditional special shoyu and tamari, p. 269, Chinese soy sauce, p. 272, recent shoyu research and development, p. 274), miso (p. 280; Japanese traditional regular miso, Japanese traditional special and processed miso, p. 282, Chinese miso, recent miso research and development, p. 285). D. Soybeans as feed or fodder (p. 287;

green soybeans as feed, p. 290): Fresh forage, dried forage or hay. E. Soybeans as manure or fertilizer (*hiryô*, p. 297; in the Kaijô area of Manchuria, have been roasted and steamed, and mixed with compost, and used for green manure (*ryokuhi*) or soybean cake (*daizu kasu*). This method has also been used in the northeastern provinces (*Tohoku Chiho*) of Japan in rice fields). F. Soybeans as oilseeds (p. 302). G. Use of soybean protein in industrial products (p. 304).

4. The soy oil extraction industry (p. 305): A. Methods of removing the oil (origins, traditional methods, hydraulic pressing, extraction method, p. 340). B. Advantages and disadvantages of each method (p. 348). C. The soy oil industry in Manchuria (p. 357): History of development, important places for soy oil on the Manchurian Railway, economic condition of the Manchurian oil industry (p. 420), oil extraction in Japan (history, p. 437, commercial factories, p. 442, development of these factories, p. 451).

5. Soybean meal or cake and its composition (p. 464). A. The varieties of soybean meal or cake and the composition of each. B. Evaluation of quality (p. 473). C. Soybean meal or cake as a fodder (p. 478): Feeding value and digestibility, incorrectness of the theory that there are bad effects from feeding soybean meal or cake (p. 479). D. Soybean meal or cake as a fertilizer (p. 490). E. Soybean meal or cake as food (p. 504): Use as a raw material for shoyu production (p. 506), use to make soy flour (p. 509). F. Soybean meal or cake as a source of protein in industrial products.

6. Soy oil and its processing (p. 526). A. Characteristics of soy oil: Composition, physical characteristics (p. 535), chemical characteristics, testing and evaluating soy oil (p. 564), the quality of commercial soy oil products (p. 577). B. Refining soy oil (p. 587). C. The use and processing of soy oil (p. 631): Overview, refined soy oil as a food, substitute for salad oil, or for deep-frying oil, as an illuminant, as a cutting oil, lard substitute, margarine, in paints, soap, hardened oil, for waterproofing, substitute for petroleum oil, glycerin, fatty acids, stearine.

7. Exports and imports of soybeans, soybean meal or cake, and soy oil (p. 708). A. Manchuria. B. Manchurian exports. C. China. D. Japan. E. Korea. Appendix: Bibliography of soybeans (Japanese-, German, and English-language works; p. 748). List of photos.

Note 1. This is the earliest Japanese-language document seen (Oct. 2011) that mentions fermented tofu, which it calls *nyûfu* or *funyû*.

Note 2. This is the earliest Japanese-language document seen (Feb. 4) that uses the term *itohiki nattô* to refer to natto. Address: Dairen, Manchuria.

2535. **Product Name:** Oriental Show-You Sauce (Japanese-style Fermented Soy Sauce), and Mung Bean Sprouts.

Manufacturer's Name: Oriental Show-You Co.

Manufacturer's Address: Columbia City, Indiana.

Date of Introduction: 1924. January.

New Product–Documentation: Letter from Shinzo OHKI of “Oriental Show-You Company (Brewers- packers- Distributors, Columbia City, Indiana)” to Shinzaburo MOGI of Noda Shoyu Co. 1928. Nov. 2 (Bound in Log of Dorsett-Morse Expedition to East Asia, p. 51). States that Mr. Ohki visited the Noda Shoyu factory in 1917.

L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal*. June 25. p. 14. “Soy bean—The magic plant. Article XI.” “Oriental Show-You Company, Columbia City, Indiana: Show-You sauce.” A photo shows Commercial Soyfoods Products in William Morse’s Office. 1936; Gray. 1936. All About the Soya Bean. p. 123; International Inst. of Agriculture. 1936. *Le Soja dans le Monde* [The Soybean in the World]. See: Manufacturers of edible soy products. p. 206. Show-You Sauce. Soybean Blue Book. 1947. p. 73; 1955. p. 106. Company name is now written “Oriental Showyou Co., Inc.” Columbia City is in northeast Indiana, southwest of Warsaw and northwest of Fort Wayne. Chicago is about 100 miles to the northwest.

Ad in: Hokubei Shinpo-sha. 1948. *Nyuyoku Benran: Tsuketari jushoroku, 1948-1949 nendo* [New York Japanese American directory: 1948-1949]. Ad p. B-14. Oriental Show-You Company. Manufacturers of Oriental Show-You (Ad). Columbia City, Indiana.

Thomas’ Wholesale Grocery... Register. 1955. July. p. 1474. Soy sauce. Indiana, Columbia City: Oriental Show-You Co.

Interview with Esta Keirn. 1981. Dec. 5. The Oriental Show-You Company began production began production of Japanese-style fermented soy sauce (shoyu) in Columbia City, Indiana, in 1924. The company had been started in 1918 in Detroit, Michigan, by Shinzo Ohki, a Japanese man, who began by importing shoyu and tea from Japan. In 1922 Mr. Ohki went to Japan to learn the method for making shoyu, then late that year he moved his business to Columbia City and by 1924 was making shoyu, along with mung bean sprouts. Chow Mein noodles, Chop Suey, and Jigg’s Corn Beef and Cabbage. The company was quite small, making about 12,000 gallons of shoyu a year; this was sold mostly in the Midwest, and only east of the Mississippi River. In 1932 Mr. Esta Keirn joined the company and soon became production manager. In 1963 Beatrice Foods (which had sold La Choy HVP soy sauce since the early 1930s) acquired the company.

2536. The Nanking cook book: An enlargement and revision of The American Red Cross book of recipes for the use of Chinese foodstuffs. 1924. Shanghai, China: Published by the Woman’s Auxillary of The University of Nanking. Printed at the Presbyterian Mission Press. 165 p. 22 cm. Published with the permission of the Nanking Chapter of the American Red Cross.

• **Summary:** The “List of foodstuffs” (p. 160-64) is a long table with three columns: English name, Chinese

name (characters), and Notes. The foodstuffs are listed alphabetically by English name. Under “Beans” (p. 160) are listed: Hwang [Huang] deo = soya bean. Also tsang deo, ma deo, si gi deo, and giang deo.

Under “S” is “soy sauce.” Address: Nanking, China.

2537. **Product Name:** Yamaizumi Shoyu.

Manufacturer’s Name: Yamaizumi Miso Shoyu Seizo-sho.

Manufacturer’s Address: 1436 Cahuenga Ave., Hollywood, Los Angeles, California.

Date of Introduction: 1925. January.

New Product–Documentation: The Japanese American Directory. 1925, p. S-44 (directory, New phone number: HEmpstead 3666) and p. S-110 (directory, Yamaizumi Miso Shoyu Seizô-sho, 1436 Cahuenga Ave., Hollywood. Phone: HEmpstead 3666). Ad (¼ page), p. S-234. Yamaizumi Miso Shoyu Seizô-sho. Note: This is the first entry that mentions “shoyu.” Also in 1926, p. S-35 (directory) and p. S-75 (¼-page ad).

Ad (¼ page) in The Japanese American Directory. 1930. p. S-41. Yamaizumi Miso, Shoyu Seizô-sho is located at 1506 Fishburn St., City Terrace, Los Angeles, California. A large illustration shows the company logo. The source of the Yamaizumi brand (*Seizô hanbai moto*). There follows a poetic message in Japanese: Like a mountain spring, daily spring out our highly acclaimed sweet white miso (*shiro miso*), shoyu, chop suey sauce, koji, Kanro (sweet) Koji, and Japanese-style Kyushu pickles (*Kyushu-zuke*). The directory entry (p. S-53) contains the same name, address, and phone number. Note: City Terrace is about 3 miles east of downtown Los Angeles, near today’s USC Medical Center.

Also in 1932, p. 346 (directory; name is given as Yamaizumi Miso Seizô-sho. New phone number: ANgelus 6336). Note: The word “Shoyu” is no longer in the company name; they apparently no longer make shoyu. However, the use of a shorter company name in the directory than in the ad may reflect space limitations in the free directory. Also in 1934, p. 297. Ad (1/8 page). Yamaizumi Miso Shoyu Seizô-sho. Note: “Shoyu” is back in the company name. 1532 Fishburn St., City Terrace, Los Angeles. Phone: ANgelus 6336. Also in 1936, p. 374 (directory; Yamaizumi Miso Seizô-sho) and p. 375 (¼-page ad; company name: Yamaizumi Miso, Koji Seizô-sho). Also in 1937, p. 320. Also in 1938, p. 348. Also in 1939, p. 339.

The Japanese American Directory. 1940. p. 326-27. Listed in the category “Foodstuff Factory.” Yamaizumi Miso Seizô-sho (Yamaizumi Miso Koji Mfg. Co.), 1532 Fishburn Ter., Los Angeles, California. Phone: ANgelus 6336. The address has changed, but not the phone number. Also in 1941, p. 328.

Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. (Based on an interview with Noritoshi Kanai, president of Miyako Oriental Foods). The company started in 1948 under the direction of Mr. Nagai, a craftsman from Fukuoka,

Japan. During the 1960s their business declined, and in 1972 they started repacking Marufuku-brand miso imported from the American-Hawaiian Soy Company in Honolulu, and selling it in America under the Yamaizumi brand. In 1975 Miyako Oriental Foods bought the rights to the Yamaizumi brand from Mrs. Nagai and the Yamaizumi company ceased operations.

Note: This is the earliest record seen (April 2009) related to Miyako Oriental Foods.

2538. **Product Name:** Miso, and Koji.

Manufacturer’s Name: Yasuhara Shoyu Seizo-sho (Yasuhara Soy Sauce Mfg. Co.).

Manufacturer’s Address: 219-221 Jackson St., Los Angeles, California. Phone: TUCKER 1458.

Date of Introduction: 1925. January.

New Product–Documentation: Ad (1/8 page) in The Japanese American Directory. 1925. p. S-49. All in Japanese. Yasuhara Shoyu Seizôsho, 219-21 Jackson St., Los Angeles, California. Phone: TUCKER 1458. Owner: Kei Yasuhara. In addition to soy sauce (shoyu), also makes miso and koji.

Same ad in 1930. p. S-40. The directory entry (p. S-53) contains the same name, address, and phone number. Also in 1932, p. 346 (directory) and p. 347 (1/8-page ad). Also in 1936, p. 374 (directory).

The Japanese American Directory. 1940. p. 326-27. Listed in the category “Foodstuff Factory.” In characters: Yasuhara Shoyu Seizô-sho. In English: Yasuhara Shoyu Mfg. Co., 219 Jackson St., Los Angeles. Note: They were not listed in this directory in 1937, 1938, or 1939. They apparently no longer make miso or koji. Also in 1941, p. 328.

2539. May Co. (The). 1925. Grocery store (Ad). *Los Angeles Times*. Jan. 23. p. 8.

• **Summary:** “Listed below are many of the rare, out-of-the-ordinary delicacies to be found in this complete Grocery Store—helpful suggestions for the discriminating hostess.”

“China and Japan: Jasmine tea. Hong Kong ginger in crocks. Shoyu sauce. Boiled bamboo shoots.”

“Imported health foods—from Dr. Huedebert, Paris; Dr. Charasse, Marseilles; Brusson Jeune, Ville Mur—for diabetes, dyspepsia, constipation, indigestion and reducing weight.” Includes Aleurone bread muffins, Gluten bread, Levulose powder, Mignonettes of gluten—small bread balls for soup.

“Battle Creek Sanitarium Health Foods [Michigan]. These famous preparations will also be found in our Health Food Section, and include Colax, an agar biscuit; Lacto auxiliary food; Lacto Dextrine, antitoxic food; Casein-Gluten Flour, a superior food; Canned fruits, vegetables for restricted diet; Charcoal tablets; Vegex—the wonderful vitamine food.” Address: Broadway at Eighth. Grocery store—Fourth Floor [Los Angeles].

2540. Kurono, Kanroku. 1925. [On the future of shoyu brewing]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 1(13):1011-22. [Jap]

2541. Lea and Perrins. 1925. A steak and—Lea & Perrins' Sauce (Ad). *Times (London)*. March 18. p. 5, col. 7.

• **Summary:** “‘What may I get you, Sir?’ The waiter turned to my friend.

“‘Tigers!’ replied the little man fiercely, ‘Tigers! Why, I’ve killed scores of them. Shooting big game my dear fellow is a passion with me—I revel in it. I was born for it.’” The long dialogue ends with this: “The waiter interposed. ‘Pardon me, Sir, but you said steak and -?’”

Below this: “Lea & Perrins Sauce.” At the top of this display ad is a stylized illustration of a waiter, dressed in a black tuxedo, with a white napkin draped over his left forearm. Address: [England].

Address: Tsuchida Jozo Joshu, Japan.

2544. Tsugano, Akijirō. 1925. Y-ji gata shōyu sokujiō-hō [Y-form method of quick shoyu brewing]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 2(10):904-07. [Jap]
Address: Nōgaku-shi, Japan.

2545. Haskell-Adams Co. 1925. Chop Suey at home! La Choy Chinese food products (Ad). *Boston Daily Globe*. June 23. p. A17.

• **Summary:** “Now you can serve genuine Chinese Chop Suey at home, using La Choy imported ingredients and recipes. La Choy Sprouts, Chow Mein Noodles, Sub-Kum, Soy Sauce and Brown Sauce are the necessary materials for a wide variety of Chinese dishes. Write for recipe booklet.

An illustration shows a man in a coat and tie seated alone at a dining table with a plate and metal vessel in front of him. In the background a woman in an apron is carrying a steam bowl toward him. Address: Wholesale grocers, Cambridge, Massachusetts.

2546. Ochse, J.J. 1925. Tropische groenten. Geteelde en in ‘t wild groeiende gewassen, die door de Indische bevolking worden gegeten [Tropical vegetables: Cultivated and wild plants eaten by the Indonesian people]. Weltevreden: Uitgave en Druk Volkslectuur. 215 p. July. See p. 92-95. Illust. Also listed as series #686. [Dut]

• **Summary:** This is the original Dutch-language edition,

which was revised in 1931 as *Indische Groenten* and translated into English in 1931 as *Vegetables of the Dutch East Indies*. Ochse lived 1891-1970. After describing the plant, the author notes that there are two varieties of soybeans: one is yellowish brown and the other is black. The first is used to make tempeh and tofu; the second to make ketchup. Very popular soy products in the Indonesian market are tofu and firm tofu (*tahoe* and *takoah*). Also discusses *tao tjo* (Indonesian-style miso; has a consistency like paste or porridge), *tao dji* (fermented black soybeans), *témpé*, and *ontjom*. The process for making each of these soyfoods is described.

Illustrations show: (1) A young soybean plant with leaves and pods (half size).

(2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Note: This is the earliest document seen (April 2001) that contains the word *takoah*. Address: Buitenzorg [Bogor], Java.

2547. Morse, W.J. 1925. Re: Soybeans mentioned in Mr. Bain's letter to Dr. Taylor. Letter to Walter B. Lydenberg, Office of Forage Crops, BPI, USDA [Washington, DC], Aug. 13. 2 p. Handwritten, with signature on lined paper.

• **Summary:** Morse is writing from Lafayette, Indiana. “Dear Lydenberg: Am sending herewith statement relating to soybeans mentioned in Mr. Bain's letter to Dr. Taylor. I spoke to you regarding this matter the day I left and advised I would send to you. I wish you would have it typewritten and submitted to Dr. Piper for attention. Am also sending Mr. Bain's letter and I wish you would bring the matter to Dr. Piper's attention as soon as possible so that he may get the material in a form as he sees fit to Dr. Taylor and Secretary Jardine.

“Have had an excellent trip so far. Spent yesterday at the soybean sauce factory and count it as one of the most profitable days I have ever had on a trip.”

Note: The soy sauce factory Morse visited was probably the Oriental Show-You Co. in Columbia City, Indiana, founded by Shinzo Ohki in 1918 in Detroit, Michigan. He moved the company to Columbia City in 1922 and began making fermented soy sauce there in 1924.

“I find very great interest in our [illegible].

“Will mail you in a day or two some material which I wished to have mimeographed. With best wishes,...”

Location: National Archives, College Park, Maryland. Record group 54—Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup—Div. of Forage Crops and Diseases. Series—General Correspondence, 1905-29. Box 92—Morgan-Morse.

Sent to Soyinfo Center by Matthew Roth of Rutgers Univ., March 2012. Address: Lafayette, Indiana.

2548. Evelyn, Mary. 1925. Strengthening foods. *Manchester Guardian (England)*. Sept. 28. p. 6.

• **Summary:** “The following foods are useful in cases of debility and in convalescence from illness:—Almonds, meat (beef and mutton),... chestnut, chocolate, cream, eggs,... potatoes, raisins, salmon, soy sauce, sugar,...”

Note: This is the earliest reference seen (Sept. 2008) to “soy sauce” (or “soya sauce”) in the *Observer* (London) (1791-2003) or the *Manchester Guardian* (1828-1959) as they have been digitized by ProQuest.

2549. Meharry, Charles L. 1925. Second annual field meeting: Illinois—September 1, 1921. *Proceedings of the American Soybean Association* 1:42-46.

• **Summary:** “The Second Annual Field Meeting of the National Soybean Growers’ Association was held on 1 Sept. at the University of Illinois and at the A.P. Meharry Farm near Tolono, Illinois, the University of Illinois Extension Service, the Champaign County Soybean Growers’ Association cooperating in arranging and conducting the program. The Champaign County Soybean Association and the Champaign County Farm Bureau furnished transportation and lunch was served by the Crittenden Unit of the Champaign County Farm Bureau.

“More than 1,600 people representing 35 counties in Illinois, 9 counties in Indiana, 3 counties in Kentucky, one county each in Missouri, Ohio and Wisconsin and the United States Department of Agriculture assembled at the South Farm of the University of Illinois, where representatives of the Extension Department explained the various soybean experiments, and the use and place of soybeans in rotations for Corn Belt conditions. Field plot tests of varieties suitable for different uses, soil types and latitude were inspected and the characters and behavior of each variety discussed. A special feature of variety demonstration was a test of sixteen varieties secured from each of ten different states... Visitors were then shown the work of Dr. Woodworth and others who are developing new varieties through selection and breeding. Dr. Woodworth discussed quite fully the principles of breeding and their application to natural and artificial crossing.”

“At 10:30 the visitors started in automobiles for the A.P. Meharry Farm near Tolono... After arrival at the farm, several hay varieties, Illinois 13-19 (Ilsoy), Virginia, Mongol (Mid-west [Midwest]) and others were inspected. Several large fields of the Manchu, A.K., and Mongol (Midwest) for seed production were viewed.”

“At noon a cafeteria lunch was served in the grove. In addition to the regular lunch, the A.P. Meharry Farm served a number of soybean dishes, including baked soybeans, soybean coffee, soybean milk, and soy sauce. An exhibit of soybean products consisting of soybean oil, soybean oil meal and flour, various paints and varnishes, soaps and photographs of various operations in the soybean field was

furnished by County Agent C.H. Oathout.

“After luncheon President Riegel called the meeting to order, and Professor J.C. Hackleman, Illinois Extension Specialist in Farm Crops, presided.

“Mr. Charles L. Meharry welcomed the visitors to the A.P. Meharry Farm and spoke briefly of the place and importance of soybeans on the Meharry Farms.

Mr. Henry J. Waters, former President of the Kansas State Agricultural College, addressed the growers on the economic distress of the times and the economic situation at the close of the World War.

Professor E.J. Kinney, of the Kentucky Experiment Station, told briefly of the soybean in Kentucky...

For Kentucky conditions the Mammoth Yellow was recommended for forage and the Haberlandt for seed.

“Mr. Charles Caldwell, soybean grower of Kentucky, told briefly of ten years’ experience with soybeans.”

“Mr. Taylor Fouts, soybean grower of Indiana, stated that he had been growing soybeans for a great many years, and emphasized their value as a soil-building leguminous crop on poor soils, especially where clover fails. He suggested that while corn is King of the midwest crops, the soybean would be known as the Queen, when we realize the wonderful possibilities and many uses of the crop.

Note: This is the earliest English-language document seen (July 2007) that uses the word “Queen” to refer to the soybean.

“Mr. C.E. Carter, of the Missouri Experiment Station, reported on the soybean situation in Missouri... The Morse and Medium Yellow (Midwest) are regarded as the best seed varieties and Wilson and Virginia as the best forage sorts.

“Professor George M. Briggs, of the Wisconsin Experiment Station, praised the performance of soybeans in his state.”

“Mr. W.J. Morse, of the United States Department of Agriculture, gave a general review of the soybean situation in the United States. He stated that the interest in soybeans has increased very rapidly during the past few years, not only in the Middle West, but also on the Pacific Coast, in New England and throughout the Northern and Southern States.”

“Mr. O.L. Cunningham, Kentucky, reported that soybeans were so generally grown and favored in Fulton County that soybean demonstrations were not essential. Of the 20,000 acres of corn, at least 16,000 acres were said to be planted with soybeans. The Mammoth Yellow variety was grown with late corn and the Haberlandt with early corn for pasturage. In Fulton County the corn is cut off and the hogs allowed to pasture the soybeans.

“Mr. C.B. Newton, Ohio, reported on soybeans growing in Ohio.”

“Mr. W.E. Riegel, manager of the A.P. Meharry Farm, in a brief talk, stated that there was a place for soybeans on every farm to produce whatever amount of feed could be fed upon the farm, and that farmers should produce their protein

feed instead of buying tankage, cottonseed meal and other high-priced feeds. It was also thought that soybeans should be developed as a human food in the United States as already had been done in the Orient.”

“Chairman Hackleman emphasized his belief that the farmer should think of the soybean crop as a feed, forage, and pasture crop, and as a legume to enrich the soil. He made the point very emphatically that farmers should not depend on growing the soybean crop for seed alone, and more converts are needed to soybeans for their value on the farm. When the farmers get this attitude towards the crop, the seed crop will take care of itself.

“A demonstration of threshing soybeans followed the program of speakers. Several loads of unhulled beans of the 1920 crop were threshed to demonstrate that the proper adjustment of an ordinary grain separator is all that is necessary to successfully thresh beans. The growers were shown the necessary adjustments and attachments in the way of different sized pulleys which reduced the cylinder speed without reducing the speed of the remainder of the thresher.

“The growers and guests after a unanimous vote of thanks to the hosts of the A.P. Meharry Farms departed about sundown.”

Four small photos (p. 41) show “The Second Annual Field Meeting of the Association at the A.P. Meharry Farm near Tolono, Illinois, September 1, 1921.” (1) Men standing in a field with silos and barns in the background. (2) People and children standing around luncheon tables covered with white table cloths. (3) Many men seated on the ground under trees, wearing white dress shirts (some wearing straw hats) and listening to a speaker. (4) Men standing around talking under trees. Address: Acting secretary.

2550. Wilson (R.G.) and Co. Pty. Ltd. 1925. The best house for groceries (Ad). *Argus (The) (Melbourne, Victoria, Australia)*. Nov. 4. p. 8.

• **Summary:** “Dried yeast: To convenience people we import regularly stocks of Royal Yeast Cakes, 5 tablets in a packet.” Note: These are probably use for baking, typically bread, muffins, etc. at home.

Seasonable goods: Biscuits, Lindebooms,... Tabasco Sauce, 2/3 [2 shillings 3 pence]; India Soy, 1/6; China Soy, 1/6;...

“These can be suitably packed and sent to any part. If desired we can prepay all charges. Postal maximum is 11 lb. gross.”

Note: This is the most recent of 283 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term “China Soy.” Address: 56-58 Elizabeth Street (East Side) [Melbourne]. Phone: Cent. 612, 613, 11003.

• **Summary:** Shodoshima is an island in the inland sea of Japan off the coast of Okayama. It has long been known as a traditional center of shoyu brewing. During the 1970s and early 1980s its shoyu was imported to the USA by natural foods companies. This article contains no production or financial statistics. Address: Nagoya Koto Shogyo Gakko Seito, Japan.

2555. Ishida, A. 1925. Shôyu-chû no isseibun ni tsuite (roishin) [One component of shoyu: Leucine]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 20(6):33-35. [Jap]

• **Summary:** The beautiful crystal that was extracted from shoyu was an unpure form of leucine, an amino acid. Address: Jozo Shikensho, Japan.

2556. Kinoshita, Asakichi; Matsumoto, K.; Takada, R.; Onoie, S. 1925. Shôyu moromi ni nyûsan-kin no tenka shiken [Addition of lactic acid bacteria to shoyu moromi (mash)]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 93. p. 237-45. Address: Nôgaku Hakase.

2561. **Product Name:** Marumasa Soy Sauce.

Manufacturer's Name: Marumasa Soy Co. (Marumasa Shoyu Factory).

Manufacturer's Address: 616 Cooke St., Honolulu, Oahu, Hawaii. Phone: 814911.

Date of Introduction: 1925.

Ingredients: Soy beans, wheat, salt, caramel coloring, monosodium glutamate, and 1/10 of 1% of sodium benzoate, a chemical preservative.

Wt/Vol., Packaging, Price: 1 pt 8 oz bottle.

How Stored: Shelf stable.

New Product–Documentation: Polk-Husted's Directory of Honolulu and the Territory of Hawaii. 1925. Marumasa Soy Co., 616 Cooke, Honolulu. 1927 Directory. Address given as 618 Cooke.

Hawaiian Japanese Annual & Directory. 1936-37, p.

2567. Buckley, Francis. 1925. A history of old English glass. London: Ernest Benn Limited. xxviii + 154 p. Plus 60 plates on unnumbered pages at end. Foreword by Bernard Rackham. Illust. Index. 28 cm. [2 ref]

• **Summary:** The foreword states: Following the pioneer work of the late Albert Hartshorne, Mr. Buckley has given long hours of toil to the patient exploration of written records; official documents, newspapers and books of all kinds have yielded to a mass of information which has enabled him to make clear much that was obscure, and to add greatly to our knowledge and understanding of a worthy English art." On p. xii is a list of titles and years of 18th century newspapers he has searched—a formidable job!

Chapter XI, "The development of glass-cutting in England: Bottle forms," includes a good discussion of cruets during the 1700s.

Appendix I, well indexed, contains references and quoted text regarding the cut glass trade in England during the late 1600s and 1700s. They are listed by city, and within each city chronologically. The four earliest documents that mention cruets are dated 1702-17, 1706, 1710, and 1711 (p. 143-44). The word is spelled cruets, cruits, crewits, and crewets.

The two references to "Soy cruets" are as follows: (1) *Bath and Bristol Chronicle*. 1768. Oct. 20. "To be sold by hand at the Sadler's Arms in Bath, the stock in trade from a glass cutter in London, consisting of a great variety of cut engraved and gilt glasses:" Incl. "Soy Cruets" (p. 122-23).

(2) *Bristol Journal*. 1774. June 4. "Sale... crewet frames with ground glass castors and silver tops, Soy ditto" (p. 134).

Two plates show cruet bottles in the Victoria and Albert Museum: (1) Plate XLI, four early cruet bottles, 1727-1760. No. 4 is a silver mounted and mallet-shaped cruet, diamond faceted, of a type common in 1752 and later (see p. xxiii for explanation). (2) Plate XLII, four later cut bottles, 1760-1800. No. 1 is a silver-mounted cruet (London 1798). No. 4 is a Sheffield plate-mounted cruet, probably from Whittington 1775-1785. Address: England.

2568. Canning Age food packers directories: Listing the packers of preserved foods in the United States, Canada, Hawaii, and Porto Rico. 1925. New York, NY: Canning Age. 229 p. See p. 68.

• **Summary:** Page 68: "La Choy Food Products, Inc., Oakman Blvd. and Richton St., Detroit. Specialties."

2569. Carqué, Otto. 1925. Natural foods: The safe way to health. Los Angeles, California: Carqué Pure Food Co., Inc.

359 p. Illust. Index. 20 cm.

• **Summary:** Contents: Part I: Fundamental facts about food and health. 1. The old and new conceptions of the cause of disease. 2. Drug medication, vaccination, and serum therapy. 3. Nature's healing factors: Sunlight, fresh air, exercise, rest, water, the importance of natural foods for life and health, why denatured foods (white flour, refined sugar, candies, etc) are injurious. 4. The constituents of food considered in the light of modern physiology and biology: Proteins, carbohydrates, fats and oils, cellulose, fruit acids are organic acids, organic salts, the alkaline or base-forming elements (iron, sodium, calcium, magnesium, potassium, manganese, and aluminum), the acid-forming elements (phosphorus, sulphur, silicon, chlorine, fluorine, iodine, bromine, arsenic), the vitamins. 5. Rational soil culture essential for the production of superior foods. 6. The conservation of vital force (stimulants, narcotics, elimination of waste, quality of foods, prolongation of life, alkaline and acid-forming foods). 7. Why the calorie theory is misleading. 8. Fruit, man's best friend (the fruit of the tree, sulphured and unsulphured fruits). 9. Nuts—Nature's most concentrated foods. 10. Vegetables—Nature's blood purifiers (Great hygienic value of green leaves, proper soil fertilization most essential to vegetable culture, loss of organic salts in cooking, classification of vegetables—5 classes). 11. Cereals and legumes (Cereals falsely called "The staff of life," whole grain products are the best, the great waste of food elements by modern milling processes, legumes—an important food). 12. Milk and dairy products (Milk not a perfect food for adults). 13. Meat—the least essential and most expensive of all foods (the vegetarian alternative).

Part II: Practical dietetics. 14. How to live well on less food. 15. The feeding of infants and children (lactation, almond milk, soy bean milk). 16. The rational preparation of foods. 17. Rational food combinations (importance of simplicity of eating, the mono-diet and its advantages). 18. Simple and well balanced menus for all seasons. Appendix: Tables and statistics. A1. Analyses showing the amount of sodium, calcium and iron in foods. A2. Amount of food materials necessary to supply one ounce of protein. A3. Amount of calories contained in one pound and one ounce of 200 food products. A4. Average time required for gastric digestion of foods. A5. Annual consumption of sugar, soft drinks, salt, spices, coffee, tobacco, drugs, alcohol, etc., in the United States. A6. Regulations for the enforcement of the Food and Drug Act. Important information about chemical preservatives and artificial colors.

The Preface (and the book) begins: "Two powerful superstitions are impeding the welfare and progress of the human race. The one is the conviction that disease is an entity, a mysterious something that attacks us without warning from the outside, either in the form of germs or as inclemency of weather. The other—perhaps the more harmful of the two—is the belief that for each disease specific

remedies must be found, such as drugs, serums, vaccines, glandular extracts, etc., and that, when we are afflicted, we have to submit to a specialist's treatment or even to the affected parts or organs."

The average individual tries "to shift the responsibility for his sins of omission or commission to some imaginary cause, rather than to hold himself accountable for the violation of nature's laws." There is "almost universal ignorance of the fact that disease is merely an effort on the part of nature or the universal life force to restore normal conditions in the organism. Our present system of commercialism has taken advantage of this situation by misleading people through clever advertising to persist in their errors in order to maintain the demand for drugs and serums, proprietary medicines,..."

Chapter 11, "Cereals and Legumes," briefly discusses many types of soyfoods—soy sprouts, milk, flour, tofu, soy sauce, and oil (p. 142). Page 196 discusses the use of soy bean milk and almond milk for feeding infants and children. Chapter 16, titled "The Rational Preparation of Foods," contains a long and detailed section on soy beans (266-71), with subsections on boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts. Home preparation of each is described. Miso, yuba, natto, and hamananatto are also mentioned (p. 268). Soy-related recipes include: Baked soy beans (p. 269). Soy bean loaf. Soy bean croquettes. Soy bean bread (p. 270).

Chapter 9, about nuts, states: "The making of nut butters is not a difficult process. At present peanuts and almonds are chiefly used for this purpose... The blanching of peanuts and almonds is now done on a large scale by special machinery, and the blanched nuts can be procured in nearly all the larger cities." Break the blanched nuts into small pieces by running them through the Climax Grater or a food chopper. Put them into a moderately hot oven for a few minutes to make them dry and crisp, then run them through a tightly adjusted nut mill to create a "smooth, palatable nut butter." A large table (p. 122) compares the composition of various nuts and nut butters (almond butter, peanut butter) with meat, cheese, eggs, cow butter, and whole wheat bread. "The pecan contains the largest amount of fat, about 70%, closely followed by the hickory nut, brazil nut, filbert and pine nut, which all contain over 60% of fat. The pignolia imported from Spain ranks highest in the amount of protein, containing nearly 34%; the peanut comes next with 29.8%; the butter nut, almond, pistachio, all contain over 20% protein, excelling the best cuts of meat in that respect. The almond does not contain any starch as is, therefore, the nut best suitable for infants, especially in the form of almond milk." Chufa contains 3.5% protein and 31.6% fat.

The section titled "Fruit and nut confections" (p. 212-15) discusses and has recipes for natural candies and confections.

The section titled "How the American people deplete

their vitality by their favorite poisons: The tremendous waste of our material wealth" (p. 328-43) discusses (p. 338-43): The amount spent in 1924 on each of 15 "adulterated foods and drinks and of poisonous stimulants and narcotics" (\$5,040 million) compared with the amount spent on foods and vegetables (\$850 million, or 16.8% as much). Refined sugar. Coffee. Tobacco. Condiments, etc. Alcoholic beverages. Drugs. Regulations for the enforcement of the Food and Drug Act (due to untiring efforts of Dr. Harvey W. Wiley, former chief of the Bureau of Chemistry, USDA). Sodium benzoate and sulphur dioxide. Salt. Saltpeter. Boric acid and borax. Saccharine. Mineral and coal tar dyes. Laxity in enforcement of the Pure Food Law.

On pages 344-47 is information about the Carque Pure Food Company (incorporated 1912) and its founder and owner Otto Carque, including a brief biography of Otto, a list of leading Carque food products, and a full page photo of the company's new home at 729 Seward St., on 1 Oct. 1925 (2 story brick building).

The food products are arranged by groups: Fruits: Sun-dried and dehydrated, without bleaches or preservatives (Black mission figs, white Smyrna-type figs, prunes, dates, olives, raisins, apricots, peaches, pears). Nuts: Fresh, selected and unroasted (almonds, walnuts, Brazil nuts, pecans, pignolias, pistachios, peanuts). Confections: Of assorted fruits, nuts and honey, without sugar, salt, glucose or preservatives (delectables, fruit nuggets, Kandy-Andy). Stamina and laxative foods (Nut-Fruto, Prunola {prunes and olives}, fruit laxative). Nut butters: Ground from whole nuts, uncooked and unsalted (almond, nut cream, peanut). Cereals and products: Made from re-cleaned whole grain (wheat flour, yellow corn meal, brown rice, breakfast food, crackers). Miscellaneous (olive oil, strained honey, raw sugar, fig-cereal breakfast drink {instead of coffee}). Price list and descriptive circulars on request.

Note: This is the earliest English-language document (or book) seen (June 2004) with the term "Natural foods" in the title that also discusses soy. Address: Los Angeles.

2570. La Choy Food Products, Inc. 1925. La Choy book of Chinese recipes. Detroit, Michigan: La Choy Food Products, Inc. [10] p. 9 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

2571. Lecourt, Henri; Nachbaur, Albert. 1925. La cuisine Chinoise [Chinese cuisine]. Peking: Published by the authors. 141 p. (on double leaves—unnumbered). 26 cm. [Fre]

• **Summary:** The section titled "Sauces fermentés et condiments" notes that this 8th chapter is the indispensable complement to the preceding recipes, for it discusses the condiments and fermented sauces which are widely used in Chinese cuisine and which are included in almost all the recipes in this book. Here you will find the recipe for *mienn*

tsiang (Cc = Chinese characters given) [mian jiang], a sauce of wheat flour fermented with salt, more commonly known as *t'ienn mi tsiang* [tian mian jiang].

Each person should be able to make the famous *ts'ing tsiang* (Cc), also known as *tsiang yeou* [jiang-you; soy sauce], which is used in almost all the recipes mentioned.

The generic sauce is *tsiang* (Cc) [jiang], which refers to a fermented sauce of soya or beans, a condiment used for seasoning. This product is the base of all fermented things.

2572. Mogi family creed adopted (Early event). 1925.

• **Summary:** In "The Kikkoman Chronicles" (1998, p. 37-38) author Ronald Yates states: "More than 70 years ago, the Mogi families and the Takanashi and Horikiri families adopted a written family code of business. It is an informal 17-point document that has played an important role in Kikkoman's corporate governance since eight families merged to create the company [Noda Shoyu Co.] in 1917. This creed "is evidence of tradition and loyalty—qualities still highly regarded in Japan and Asia,..."

"The Mogi family creed is much more ambitious than one of those pithy vision statements that so many companies create... it remains a document that members of the Mogi family still conduct their professional and private lives by. It reads:

"1. Family members should recognize that harmony is of utmost importance. Harmony fosters mutual respect which permits family members to focus on prosperity in business and on the longevity of the fortunes of the families.

"2. Worshipping and respecting a Supreme Being is the foundation for nurturing virtue. Keeping faith nourishes your own mind.

"3. Loyalty and patriotism are an obligation. Respect and serve your country and observe the fundamental character of your country.

"4. Family members should recognize that courtesy is a fundamental element. If, as a senior member, you lack courtesy, junior family members will not give allegiance to you. If junior members lack courtesy, there may be serious repercussions. Mutual courtesy will result in a self-governing, peaceful family.

"5. Always keep in mind that virtue is the origin and wealth is its product. Do not judge a person by his wealth or lack of wealth.

"6. Strict discipline should be maintained. value each employee with fairness. Demand the utmost in diligence. The hierarchy in any organization must be maintained.

"7. Human resources are the most valuable treasure of a company. Each employee should be treated without personal prejudice and be placed in the most appropriate position according to his capability and achievements. Each employee should be respected and his self-worth should be maintained or enhanced.

"8. The education of our children is our responsibility

to our nation and to our community. The body and the mind should be trained with moral, intellectual, and physical education.

"9. Benevolence should be extended to all living things. Benevolence is the source for discipline and the mother of virtue. Words are the door to both fortune and misfortune. A harsh tongue can hurt others and also yourself. A kind demeanor will make you feel at ease, even in times of turmoil. Be careful of each word you speak.

"10. Simplicity and frugality have been the time-honored tradition of the family for generations. Live within your means.

"11. True profit comes from hard work and maximum effort. Speculation is not the best road to follow. Business which is done contrary to social order and by taking advantage of others' weakness should be prohibited.

"12. Competition is essential to progress. Excessive and unethical competition should be avoided.

"13. Any judgment should be made clearly and fairly. Rewards and penalties should be fully recognized. Rewards will encourage challenges and penalties will discourage thoughtless mistakes.

"14. When beginning a new business, consult with family members. Do not make decisions by yourself. You should recognize that absence of a business loss is akin to making a profit.

"15. Do not fall into debt carelessly. Do not act as a guarantor for any loan. Never lend money to make a profit.

"16. Give as much money from your personal earnings as possible. Never ask for a reward or think highly of yourself.

"17. Do not decide important matters by yourself. Always consult with the people who have a direct interest in the subject matter prior to making a decision. Shared decision-making results in people having a positive attitude toward their work."

Letter (e-mail) from Kikkoman corporate office via Kikkoman Sales USA. 2012. May 14. The Mogi 17-point family creed was written in 1925.

2579. Horvath, A.A. 1926. Soy sauce as a stimulative agent in the development of beriberi in pigeons. *National Medical J. of China (Shanghai)* 12(2):176-77. April. [Eng]

• **Summary:** Abel and Kubota found that histimine is one of the substances that accounts for the stimulating action of soy sauce on the intestinal plain muscle, and that it also plays an important rôle in digestion as a dilating agent for the capillaries of the gastric and intestinal mucosa. Recently Kubota found that in vitro peptic and tryptic digestion of foods is stimulated from four to eight times by soy sauce. Soy sauce also possesses a strong amylolytic function.

In an investigation, 7 pigeons were fed on polished rice and water, the latter containing five per cent of Pekinese soy sauce. Five control pigeons were fed on polished rice and pure water. Within one month five of the seven experimental pigeons developed beriberi and of the controls none.

Therefore soy sauce in some way stimulates the development of beriberi in pigeons. Address: Chemical Lab., Dep. of Medicine, Peking Union Medical College, Peking, China.

2580. Yamada, Masakazu. 1926. Yûki enki bunri ni nafutooru o no ôyô ni tsuite (jiamin no shin bunri-hô) [Application of naphthol yellow to the isolation of organic bases. (A new method for the isolation of diamines)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 2(4):246-67. English abstract bound in the back. Vol. 2, No. 4. p. 39-41. [10 ref. Jap]

• **Summary:** The author applied to sake and shoyu the method proposed recently by A. Kossel and K.E. Gross (*Z. Physiol. Chem.*, 135, 167-74, 1924) for the isolation of arginine and aphthol yellow. He was able to obtain much crystalline precipitate in the shoyu, but none in the sake. This precipitate was easily recrystallized from boiling water in beautiful rosettes, which were found to be the mixture of the double salts of putrescine and cadaverine with the naphthol yellow. The precipitation in shoyu was caused by “salting out.” The author also used naphthol yellow to precipitate bases (cadaverine picrate) from tamari shoyu, Hatcho miso, inaka miso, and natto. Address: Nôgaku-shi, Japan.

2581. Yamada, Masakazu. 1926. A new method for the isolation of diamines. *J. of the Agricultural Chemical Society of Japan* 2(4):39-41. April. Whole issue no. 19. [Eng]

• **Summary:** 1.08 g kadaverin pilerat is obtained from 1 kg of natto.

Note: At the top of p. 39 is written: “Abstracts from original papers.”

2582. *Volksernaehrung (Die) (Berlin)*. 1926. Ueber den Wert der Sojabohne [The value of the soybean]. 1(16):262. June 20. [Ger]

• **Summary:** As the result of thorough cultural trials in Silesia (*Schlesien*) [in Germany], Inspector Locke comes to the following conclusion: “The soybean, the Orient's most important and oldest crop, is, in its ground state, a superb feed concentrate and deserves without question to be cultivated in our homeland (Germany). It would be desirable if many farmers would decide to start cultivating soybeans.”

“The soybean is rich in protein and fat. The oil presscake serves as a feed concentrate and in the production of baking aids. In addition, it serves as the raw material for making an excellent seasoning [soy sauce]. Its utilization is therefore similar to that of the lupine, a versatile crop, and its cultivation on appropriate soil is worthwhile and profitable.”

2583. Eddington, Jane. 1926. *Tribune Cook Book: Soy sauce*. *Chicago Daily Tribune*. July 7. p. 38.

• **Summary:** “Soy sauce is what made chop suey a strange and secret thing for some years, years ago. It is made in China and Japan, most of it in the latter country.” A recipe

is found in: Church, Margaret B. 1923. "Soy and related fermentations." *USDA Department Bulletin* No. 1152. 26 p. May 12. Several quotations from this bulletin are given.

2584. *Times of India (The) (Bombay)*. 1926. Imports [at Bombay harbour]. July 10. p. 7.

• **Summary:** "S.S. Tacoma Maru, from Nagoya [Japan], Agents:—O.S. Kaisha.

"From Osaka—90 bales grey cotton sheeting... 125 cases red lead, 20 cases soys, 20 cases Japanese soys, 5 cases glass tubes..."

Address: Osaka Jozo Gakkai, Riji, Japan.

2587. Morse, W.J. 1926. The distribution of soybeans in the United States. *Proceedings of the American Soybean Association* 1:132-37. Seventh annual field meeting. Held 9-12 Aug. in Mississippi.

• **Summary:** "The soybean, according to our earliest records, was first grown in the United States in 1804 and until about 1880 was considered chiefly as a curious plant from the Orient. Since about 1880, when the soybean was first looked upon as having agricultural possibilities, the crop has greatly increased in acreage, production and utilization.

"Available statistics show that about 500,000 acres of soybeans were grown in 1917 and more than 2,500,000 acres in 1924. The production of seed increased from about 3,000,000 bushels in 1917 to more than 9,500,000 bushels in 1924. The statistics for 1924 also show that about 1,200,000 acres were grown for hay, about 1,000,000 acres for pasturage and silage, and more than 500,000 acres for seed.

"What has been the cause of this marked increase in acreage and utilization of the soybean crop? The development of varieties, adapted to a wide range of conditions and uses, undoubtedly, has been one of the most important factors. The number of varieties has been increased extensively in the past fifteen years. Soybeans vary widely in their adaptation to climate and soil. Some varieties are especially suitable for fertile land, others for less productive land; some for a seed crop, others for

forage; some for planting with corn for pasturage or silage, others for planting with sorghum or Sudan grass. One may, however, find a few varieties or even a single variety adapted to the climate of a certain section, which will fill all of the local requirements of the crop.

"Other factors, such as improved methods and greater use of inoculation, improved and more economical methods of planting, culture and harvest, and successful results in extensive feeding trials by experiment stations, without doubt, have played no small part in extending the popularity of the soybean. A careful study of the history of the development of the soybean in the United States shows, however, very clearly that increased acreage and utilization of the crop has followed increased development of varieties.

"At this point—for it fits well into a logical discussion of the adaptability and distribution of the soybean in our country—I wish to pay a brief tribute to a man, who, more than two decades ago, very frequently prophesied that the soybean would, in the not distant future, be one of our major farm crops, especially in the eastern half of the country. I refer to Dr. C.V. Piper of the Office of Forage Crops of the United States Department of Agriculture, who passed away last February. Dr. Piper was responsible for the many hundreds of introductions received from the soybean regions of the Orient. Not only was Dr. Piper interested in the development of new varieties, and he held this of the greatest importance, but he also urged a greater utilization of the soybean, as an oil crop, for human food in various forms, and a more general use for pasturage and forage purposes. We, of the Association, owe much to Dr. Piper, and I know of no greater tribute to the man than to carry on his work and fulfill his prophesy."

"The culture of the soybean is confined at present, almost entirely, to the eastern half of the country. The states, however, bordering the west bank of the Mississippi River are increasing their soybean acreage. The distribution and adaptability of the soybean, perhaps, will be more clearly understood if we draw a line from Canada through the center of North Dakota, South Dakota, Iowa, Kansas, and Oklahoma, which is about the 99th meridian west. Then from the Atlantic Ocean at the northern border of North Carolina let us extend a line west and along the northern borders of Tennessee, Arkansas, Oklahoma, New Mexico, Arizona, and take in the southern third of California. We now have the country divided into four sections, the northeast, southeast, northwest and southwest." There follows a discussion of each of these four sections. Concerning the southwest section:

"In the irrigated districts of California, especially the orange section and the river valleys of Arizona, the soybean has proved a valuable summer cover crop. In California, the Virginia variety has given best results while in Arizona, the Ootootan and Laredo are used mainly. Variety tests in eastern New Mexico show that the soybean has possibilities for

forage and seed.

"In California and Arizona the soybean seldom develops seed normally, although an excellent growth of forage is produced. This abnormal development of seed is undoubtedly due to the prevalence of extremely hot weather during the period when the seed is forming."

The greatest increase in soybean acreage and utilization has been in the northeastern section of the United States, especially in the Corn Belt area. "In this region the soybean is used mainly for pasturage, hay and ensilage, although considerable quantities of seed have been crushed during the past two or three years for oil and oil meal in the Corn Belt states. Food companies in this section have for several years manufactured special soybean flour products. Such concerns have increased to a considerable extent during the last few years. Soybeans are now being made into breakfast foods, soy flour, soy sauce, bean curd, and special flour preparations for various purposes. Two of the most recent developments are the manufacture of soy sauce and bean curd. Soy sauce, especially, has found a very favorable and extensive market throughout the United States." Address: USDA, Washington, DC.

2588. Nishiwaki, Yasukichi. 1926. "Tapioka" oyobi tōmorokoshi o komugi daiyo genryō toshite shiyō suru shōyū jōzō shiken hōkoku [Shoyu brewing using tapioca and corn as substitutes for wheat]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 4(1):34-37. Aug. [Jap]
Address: Osaka Jozo Gakkai, Kaicho, Japan.

2589. Zlatarov, Asen. 1926. Die Soja und ihre Verwertung als Nahrungsmittel [The soybean and its use as food]. *Fortschritte der Landwirtschaft* 1(7):543-47. Sept. 1. [8 ref. Ger]

• **Summary:** On this document, the writer's name is written "Prof. Dr. Assen Zlataroff."

In Bulgaria as elsewhere in Europe, people have started to plant lots of soybeans. The soybean can serve as a source of healthy and rich nutrition, but also as a new source of income. There is much recent interest in Hungary and Germany.

Tables show: (1) Thirteen nutritional analyses of soybeans planted in Bulgaria between 1917 and 1922. (2) Nutritional analyses of black beans (non-soy), black peas, white beans, white lentils. Garbanzo beans (Chick-peas / chickpeas / *Kichererbsen*). And soybeans (*Soja*). The soybean is low in purines. (3) Soy oil constants (yellow variety, ether extract), including specific weight, saponification number, Reichert-Meissel number, iodine number, Hennersche number. (4) Nutritional composition of Papuda beans in 4 districts of Bulgaria in 1920 and 1921. (5) Weight of distilled water absorbed by 100 gm (800 beans) of soybeans after seven lengths of time ranging from 15 minutes to 12 hours. (6) Nutritional composition of soymilk

(*Sojamilch*). (7) Comparative nutritional composition of various mammalian milks: Human milk, cow's milk, buffalo milk, sheep's milk, goat's milk. (8) Nutritional composition of tofu (*Tevu-fou*, *Sojakäse*, based on previous analyses by Champion and Lhote, Prinsen, and König {both fresh and dry}). He notes that tofu resembles quark. (9) Nutritional composition of soy casein (*Kaseo-Sojain*).

The value of the soybean as food: In China and Japan the soybean is used in large quantities as food. These foods include soymilk, soya cheese (*Sojakäse*), soya casein (*Sojakasein*), soybean meal, natto, miso, shoyu (*Schoyou*), Tao-you, Indonesian-style soy sauce (*Ketjap*), Vietnamese-style miso (*Tuong*), *Kiju-tze*, soya coffee (*Sojakaffee*), soya salad (*Sojasalat*), etc.

The soybean as a vegetable (green vegetable soybeans).

He then describes briefly how to make various soybean food products (based on Li Yu-ying and Grandvoinnet) including soya flour (*Sojamehl*), soy dumplings (*Sojajlösse*), soymilk (*Sojamilch*, discovered by the Chinese philosopher Whai Nain-Tze), tofu (*Sojamehl*, made by coagulation of soymilk; he calls it *Sojamilchquark*, *Sojakäse*, *Tevu-fou* and notes that in China it is called "The meat without bones"). As far as taste is concerned, the writer has tasted tofu and he finds that this fresh cheese tastes very nice and the type of cheese made from it (by Li Yu-ying) such as Roquefort, Gruyere, Holländer, etc. are in no way inferior to the renowned real cheeses. Making tofu could be a new industry, which would be a good source of income for the nations where the soybean thrives and conducive to the nutrition of the people. Fresh tofu has many uses in cookery. With eggs it makes a fine omelet, likewise cheese dumplings and sausages. All these products have a fine taste and are very nutritious. In 1921 Dr. Assen Zlataroff (a nutritionist) and J. Trifoneff wrote (in Bulgarian) a brochure on the soybean, its cultivation, composition, and food value. Address: Sophia Medizinisch-chemisches Institut, Bulgaria.

2590. *Chinese Economic Bulletin*. 1926. Soy manufacturers in Peking. 9(289):135-37. Sept. 4.

• **Summary:** "Soy" is a word of Japanese (rather than Chinese) origin. It refers to a dark brown liquid sauce (soy sauce; known in Chinese as *tsiang-yu* [pinyin: *jiang-you*]), made from a semi-liquid substance known in Chinese as *tsiang* [*jiang*]. Both are used as table condiments in China although the liquid soy sauce is more popular. "To avoid confusion, the word 'sauce' in this article will stand for *tsiang* and 'soy' for *tsiang yu*."

"In Peking there are about 140 soy manufacturers most of whom, however, are grocers doing soy manufacturing on a small scale as a side line. The large manufacturers, who confine their operations exclusively to soy manufacturing number only about a dozen or two, being divided into native and southern groups. The products of the former taste stronger than do those of the latter." Two kinds of sauce

(*tsiang*) are turned out by Peking soy manufacturers. The 'soy sauce' (*t'ou-tsiang* [*dou-jiang*]) is made from a mixture of wheat and soy bean, whereas 'wheat flour sauce' (*mien-tsiang*) is made from wheat flour. "Commercially, the former is far more important than the latter, because all the soy consumed in Peking households is made from soy sauce.

"The manufacture of soy or soy sauce requires a long process of fermentation. It begins with the boiling of soy beans." After the beans are cleansed of impurities [foreign matter] they are boiled in a big iron cauldron having a capacity of 4-6 piculs of beans. "After they are thoroughly boiled, they are mixed with wheat flour, the proportion being 100 catties of flour to every 140 catties of beans. he admixture is ground in a crude stone roller mill and cast in wooden molds into rectangular pieces about 8-9 inches long and half an inch thick. These are known as *hwang chih* (literally "yellow child"), and they are then placed in a dark and not well ventilated room and covered with matings to start the fermentation process. After a week or so the *hwang chih* are dried in the sun for 30-40 days. After they are perfectly dried, the minute fungi growing on the *hwang chih* are removed by brushing and the *hwang chih* are then placed in big earthenware vessels known as *kongs* into which salt is poured; typically 50 catties of salt is dissolved in 200 catties of water for every 100 catties of dried *hwang chih*. After the *hwang chih* are dissolved in an earthenware container, the contents are constantly exposed to the sun. The vessel is covered only on rainy days since rain water tends to spoil the taste. According to the manufacturers, the taste of the sauce or soy depends entirely upon sunning. The longer the contents of the vessel are exposed to the sunshine, the better the taste. To make the sunning thorough in every part of the vessel, the contents are stirred with a wooden spade every morning. The stirring must not be done at a later hour or the sauce would turn sour.

The manufacture of the 'wheat flour sauce' is done by the same process. *Hwang chih* made of wheat flour goes through the same process of fermentation and absorption in the earthenware vessel, the only difference being that a smaller quantity of salt is used. the sauce so made has a sweetish taste. The best seasons for manufacturing sauce are spring, from February to May, and autumn, from September to October, during which time weather conditions are always favorable for the preparation of *hwang chih*. The summer months are too hot and humid for making *hwang chih*. The temperature at which the *hwang chih* will ferment best and other particulars are known only to the expert manufacturers by personal experience. Into these secrets no outsider can pry; they are too jealously guarded.

"The best kind of sauce or soy is made from *hwang chih* prepared in the autumn and made into sauce the next spring." But this approach takes a much loner time for the sauce or soy to become marketable. "The spring crop of *hwang chih* yields much quicker returns and hence leaves

the manufacturer a broader margin of profit. For this reason, most of the sauce or soy is made from *hwang chih* of the spring crop.

When the sauce (*tsiang*) has been sunned to a certain degree, generally for several months or longer, it is removed from the earthenware vessel, placed in cotton cloth bags and pressed in a wooden press. The liquid squeezed out is soy (*tsiang-yu*). The process is extremely simple; no other ingredients are needed to complete the manufacture. Generally 350 catties (3.5 piculs) of soy can be obtained from 240 catties of *hwang chih*. High grade soy is made chiefly from old sauce, or sauce made in the previous year. Soy made new sauce (made in the same year) does not taste so good. The soy sold retail by the grocers on the market is generally diluted with water.

As a side line soy manufacturers also prepare pickled vegetables for the market. The vegetables are put into cloth bags and put into the vessel containing the sauce during the process of converting the *hwang chih* into sauce. At a certain time the bas are taken out and the vegetables are ready for the market. The pickling is usually done in wheat flour sauce. The vegetables so prepared include cabbage, mustard, radish, turnip, ginger, cucumber, and egg plant. This branch of business is not so profitable as formerly, owing to the high cost of the vegetables.

Some of the soy manufacturers also make vinegar from *kaoliang*, millet, barley, and other related cereals. Two types of vinegar are made by Peking soy manufacturers.

Most of the big soy manufactures in Peking have a long history. Yung Fu Fang, Pei Hsu Tai, and Liu Pi Chu have been in existence since the Ming Dynasty [1368-1644]. Quite a few others began their business operations in the early Manchu dynasty [1644-1912]. The comparatively new ones are a century or so old. About 40% of the soy manufacturers in Peking are owned by Shantung capitalists, another 30% by Shansi proprietors, while the rest are opened by people from various districts in Chihli province. The first requirement for a soy manufacturing plant is a spacious compound to accommodate the numerous earthenware vessels. A big plant has more than 1,000 such vessels on its premises. This is why most of the plants are located in the less populated in the less populated quarters of the city where rents are cheap.

The earthenware vessels (*kongs*) used by soy manufacturers are of several types. "The *nan kongs*, imported from the southern provinces, are the best. The *tung kongs*, made by Tangshan potters, fetch a lower market price. The *Tzechow kong*, made in Tzechow, Chihli province, is of the cheapest kind. The size of the various types of *kong* is not uniform. A *kong* is generally over three feet high and a little less than three feet (Chinese measure) in diameter. The value of a *kong* increases with age. The oldest *kong* is said to be the most efficient in making sauce or soy.

"A big soy manufacturer employs between 70 and 80 operatives who are occasionally reinforced by extra job and

during the busy seasons. In each soy manufactory there is an expert who directs the whole staff. The pay of this expert is about \$160 a year with food. Most of the soy manufactory hands are natives of Tanghsien. They meet once in the spring of every year at certain temples, where they offer sacrifices to their patron saints and hold some socio-religious festivities.

"The soy manufacturers dispose of their products to the local wholesalers wholesale, although they also do retail business themselves. The current wholesale quotations for soy bean sauce (*tsiang*) is from \$7 to \$8.50 a picul, and for soy (*tsiang-yu*) \$6 to \$20. The retail prices are from 24 to 28 coppers a catty for soy bean sauce, 48 coppers a catty for wheat flour sauce, and 16 to 64 coppers a catty for soy. Pickled vegetables are sold for 12 to 20 cents a catty. The price of soy has advanced nearly 100 per cent in the past twelve months, and the price of pickled vegetables by 70 per cent in the past five years."

2591. Associated Press (AP). 1926. 'Sukiyaki' appears chop suey's rival. *Hartford Courant (Connecticut)*. Sept. 27. p. 8.
• Summary: "Boston—The American public long ago accepted chop suey, chow mein, and even foo young (with various spellings) but sukiyaki has still to make itself generally known."

Boston [Massachusetts] has one Japanese restaurant (opened within the last 3 months, on the South End) compared with more than 20 that serve Chinese dishes. Ingredients in sukiyaki include "squares of yellow bean cake" [tofu] and some "soy bean sauce." Later the hostess brings "toasted cracker cakes with a seaweed leaf wrapped about each as a special delicacy."

2592. Kawakami, Tojiro. 1926. Shôyu jôzô genryô toshite mugi tokuni komugi no garasu-shitsu funshitsu-shu no tokusei ni tsuite [On the special glass-type of wheat used as a raw material in shoyu brewing]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 4(2):107-13. Sept. [Jap]
 Address: Hiroshima Jozo Shikenjo, Gishi, Japan.

2593. Salazar, Leopoldo G. 1926. The manufacture and chemical control of some soybean products under Los Baños conditions. *Philippine Agriculturist* 15(4):219-31. Sept. [12 ref]

• Summary: "The Chinese and Japanese manufacture a large variety of food products from the soybean, among which may be mentioned soy sauce or *toyo*, bean curd or *tokua*, soybean milk, flour, salad oils, and lard substitutes.

"Of these products, the sauce and curd are the most important. To the Americans the sauce is known as *soy sauce*, to the Japanese as *shoyu*, to the Chinese as *ch'au yau*, or drawing oil; to the Filipinos as *toyo*. The curd, cake, or cheese is known as *teou-fu* and *tao-hu* in China; *tofu* in Japan; and *tokua* in the Philippines. Soybean cheese is a misnomer as the product is obtained without any ripening

process.

"The objects of this work were: (a) to determine the possibility of preparing *toyo* [soy sauce] and *tokua* [tofu] under Los Baños conditions; and (b) to determine the time at which the *toyo* contains the highest percentage of nitrogen. This work was performed in the laboratory of the Department of Agricultural Chemistry, University of the Philippines, Los Baños, Laguna, from April, 1924, to February, 1925."

A review of the literature shows that in the Philippines, only three prior investigations on this subject have been reported, those of Barrett (1911), Gibbs and Agcaoili (1912), and Gibbs, Agcaoili, and Shilling (1912). A photo shows the hand-turned stone mill and other tools used for making *tokua*, following the method used by the Chinese in Manila. The residue left after making *tofu* (*okara*) is called "*sapal*," and that left from soy sauce is called "*tahuse*."

"After 8 weeks of fermentation, the *toyo* was found to be ready for the first drawing. Analyses showed that the *toyo* prepared in the laboratory compared favorably in composition, odor, and flavor with the superior grade product of the market."

Note 1. This is the earliest document seen (Feb. 2004) that uses the word "*tokua*" to refer to *tofu*.

Note 2. This is the earliest English-language document seen (March 2007) that uses the word "*sapal*" to refer to *okara*.

Note 3. This is the earliest English-language document seen (March 2007) that uses the word "*tahuse*" to refer to the residue left after making soy sauce. Address: College of Agriculture, No. 231, the Philippines.

2594. Kamper's. 1926. Special canned goods sale (Ad). *Atlanta Constitution (Georgia)*. Nov. 5. p. 2.

• Summary: In the section "Imported canned foods" we read: "La Choy [Mung] Bean Sprouts—No. 2 cans. Regular 35¢. Special, 3 for 93¢; dozen—\$3.72." Address: Atlanta, Georgia (four stores).

2595. *Chinese Economic Bulletin*. 1926. Soy industry in Foochow. 9(301):316-17. Nov. 27.

• Summary: Soy manufacturers in Foochow [pinyin: Fuzhou], the capital of Fukien [pinyin: Fujian] province, "total about 250, including 100 in the city and suburbs and 150 in the surrounding villages. The leading ones are Kwo Pen-yi (Cc = Chinese characters given), Tang Sen-hsing (Cc), and Tung An (Cc), the first two capitalized at upward of \$100,000, and the third a little below \$50,000. Mr. Kwo is an experienced soy manufacturer of Yuki (Cc), and Mr. Tang of Kwantow (Cc [pinyin: Guantou]). The former started the Foochow branch manufactory at Shangtuwei (Cc), Nantai (Cc), in 1920, and the latter at Tientangchieh (Cc) in 1925. Tung An is the oldest establishment in Foochow, having been operated at Howyangli (Cc), Nantai, by a Chuanchow (Cc)

man for about half a century.”

“These manufacturers are organized into two guilds: The City Guild (Cc) and the Nantai Guild.”

The small manufacturers try to compete with the large manufacturers by offering a better product, but so far they have not been successful.

“Soy is a sauce manufactured from soya beans. The name ‘soy’ is derived from the Japanese *shoyu*, the Chinese name being *shi yiu* (Cc [for fermented black soybean sauce]) *chiang yiu* (Cc [for soy sauce]). The raw material used, especially by the manufacturers in Kwantow, is the green [soy] bean from Newchwang, sold in Foochow at \$10 per 100 catties. The Foochow manufacturers, however, prefer the yellow [soy] beans from Tengchow (Cc), Shantung province, where they are cheaper than the green variety by several hundred cash per hundred catties.

“The method of manufacture is briefly as follows. The beans are first cooked, then mixed with wheat flour and table salt, and put in a slightly closed wooden jar. The contents of the jar are afterward sprinkled with salt solution, and then transferred into a porcelain *kong* [earthenware vessel], in which they are hard pressed. Finally they are heated in the sun: the longer they are exposed to sunlight, the better the taste of the soy produced.

The soy [sauce] produced in Foochow is inferior in quality to the Kwantow product. The general processes of manufacture are practically the same, the only difference being in details, which remain a commercial secret among the manufacturers.”

Other reasons for the superiority of Kwantow soy sauce “may be enumerated as follows: (1) Absence of adulterants. Soy [sauce] is generally divided by its color into two kinds, the light color soy and the dark color soy. The former is pure and has a pleasant taste; it is sold at 1,280 cash per catty. The latter is adulterated with molasses, so as to reduce the cost of manufacture; it is therefore much cheaper in price, not exceeding 32 cash per oz.

(2) Longer exposure to the sun. The Foochow manufacturers are less spacious and less sunny than the Kwantow manufactories. The soy in the former is exposed to the sun for eight or nine hours a day, while the soy in the latter is exposed from sunrise to sunset.” This partly accounts for the superior quality of the Kwantow soy.

(3) Long period of preservation. Having been prepared, the soy should remain in the sun for a year before being sold. Old soy is better than fresh soy, as old wine is better than new. However, small manufacturers cannot afford to keep their output for such a lengthy period and often sell it after a few months.

“While Tang Sen-hsing and Kwo Pen-yi confine their business to soy, the Tung An also deals in the following: Table salt; *chiang* [jiang] (Cc) a semi-solid soy, distinguished from *chiang-yiu*, which is a liquid soy; distiller’s grain; vinegar; dried bean curd [probably Chinese-style pressed

tofu, *doufu-gan*], pickled bean curd [probably fermented tofu]; salt eggs; salt vegetables and melons; prawn oil; samshu; sesame seed oil; salt turnip; &c. Tang Sen-hsing and Kwo Pen-yi are the best soy makers in Foochow, while Tung An produces excellent pickles.

“Soy and pickles in store are kept in porcelain *kongs* or sometimes wooden barrels. Soy to be transported to other cities is packed in glass bottles or bamboo bottles, the former having a capacity between half a catty and two catties, the latter between three catties and ten catties.

“Owing to the increase in the price of salt from \$6 to \$8 per 10 catties, soy manufacturers in Foochow have raised the price of soy by 16 cash pr catty in May. Prices of other products have also been advanced by the following rates. Dried bean curd, from 8 cash to 10 cash a catty. Pickled bean curd, from 20 cash to 24 cash a catty...”

• **Summary:** Note: On four pages (unnumbered) from the front of this issue are two interesting photos: Top half of page: Many Japanese students from an Osaka technical school, celebrating its anniversary, standing behind a table with a labeled bottle in front of each. Based on the sampling containers in front of each, the students on the left appear to have sake bottles, whereas those on the right seem to have shoyu bottles. Lower left: A pyramid-shaped stack of labeled wooden shoyu kegs, each tied with rice straw ropes. The labels include 11 different brands, including Yamasa. Address: Nihon Jozo Kogyo Kabushikigaisha Senmu Torishimariyaku Shacho Nogakushi, Japan.

2613. Allen, Paul W. 1926. Industrial fermentations. New York, NY: The Chemical Catalog Co., Inc. 424 p. See p. 123-27. Chap. 14, Soy-Bean Sauce Manufacture. [10 ref]

• **Summary:** Chapter 14. Soy-Bean Sauce Manufacturer. The chapter is chiefly a series of quotations from M. Church of the United States Department of Agriculture, on the preparation of soy sauce and the possibilities for the industry in the U.S. Other authorities are cited on the industrial applications of the fungus used in soy sauce. Address: Prof. of Bacteriology, Univ. of Tennessee.

2614. Freshel, Maud Russell Lorraine (Mrs.). 1926. The

golden rule cook book: Six hundred recipes for meatless dishes. Originated, collected and arranged by M.R.L. Freshel. New ed. New York, NY: Dodd, Mead and Co. 323 p. Illust. Recipe index. 21 cm.

• **Summary:** This important, well written, early vegetarian cookbook was first published in 1908 under the title *Six hundred recipes for meatless dishes*. The author's full name was Mrs. Maud Russell (Lorraine) Sharpe; thus her maiden name was Maud R. Lorraine. Born in 1867, she sometimes writes her first name "Emmarel."

This 1926 edition is very similar to the 1908 edition except for four things: (1) There is a new publisher, Dodd, Mead in New York. (2) The copyright page uses the 1910 copyright date, but lists a 4th printing in Feb. 1926. (3) The Preface is titled "Preface to the Fifth Edition." (4) At the end of the Preface we read: "M.R.L.F., New York, Feb., 1926." Address: Providence House, Chestnut Hill, Massachusetts.

2615. Kirtland, Lucian Swift. 1926. Finding the worth while in the Orient. New York, NY: Robert M. McBride & Co. xii + 462 p. See p. 77. Illust. Index. 20 cm.

• **Summary:** This is guidebook to Asia—but with the author's favorites clearly expressed. In Chapter 1, "Japan, Land of the Rising Sun," the author is discussing Nara and its many festivals year-round. However, certain dates are of major importance (p. 77). On the nights of February 2 and 3 all three thousand lanterns in the Park are lighted. On the second of these two nights the townspeople go "to the Kasuga-no-Miya shrine for the ceremony known as 'bean scattering,' everyone taking the precaution to be present as he or she becomes safeguarded against harm from evil spirits for a year."

Note: This is the earliest English-language document seen (Sept. 2011) that uses the term "bean scattering" to refer to *mame maki* (in Japan at the lunar New Year).

In the section titled "The Japanese menu," soy sauce is mentioned (p. 23).

Chapter 3 (p. 113-28) is titled "Manchuria, the kingdom of the soya bean." Page 113 states: "Manchuria's three provinces never were part and parcel of the Chinese empire. China 'proper' stops at the Great Wall. When the Manchu dynasty seized the Dragon Throne of China, it retained Manchuria as a private affair. The emperors did not lump their ancestral provinces in the common pool... They sought to keep the Chinese and everybody else out."

2616. Mayerhofer, Ernst; Pirquet von Cesanatico, C. eds. 1926. Lexikon der Ernährungskunde [Dictionary of dietetics]. Vienna, Austria: J. Springer. viii + 1205 p. Illust. 25 cm. [Ger]*

• **Summary:** Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu [soybeans], fu [dried wheat gluten cakes], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu

fried in vegetable oil], natto—Bohnenkäse, Tofu—Sojatopfen, Tonyu—Sojamilch [soymilk], azuki [small red beans], kwansen-fu, kinako—Sojabohnenmehl, geröstet, amasake [amazake]—unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu—Sojasauce, yuba—eine Bohnenspeise. Note that a number of these terms are Japanese.

Note 1. This is the earliest German-language document seen that mentions amazake, which it calls "amasake."

Note 2. This is the earliest document seen (Aug. 2002) in any language that uses the term *tonyu* (or *tônnyû* or *tonyû*) to refer to soymilk.

2617. Saito, Akio. 1926. [Chronology of soybeans in Japan, 1900 to 1926, last half of the Meiji period and all of the Taisho period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 12-14. [Jap]

• **Summary:** 1901—Crushing of soybeans starts in Japan. Owada Seisakusho of Tsuruga, Fukui prefecture, Japan, starts making soy oil and soybean cakes using the press method (*assaku-ho*).

1901—Nakahara Kota is issued a patent on his process for making dried-frozen tofu indoors in a freezer (*jinko kôri-dofu*). This makes it possible to produce a good-quality product year round. This year there are 453 makers of dried-frozen tofu in Nagano. Nagano prefecture encouraged production of this product during the Russo-Japanese War as a side home industry.

1901—Soybean production in Japan reaches 525,000 tonnes, topping 500,000 tonnes for the first time.

1905—After Japan's victory in the Russo-Japanese War, it is said that maybe, because of the victorious mood, tofu makers start to blow a horn while selling tofu.

1905—At about this time, soybean cake (*daizu kasu*) passes fish cake to become the main fertilizer for crops in Japan.

1905—Shin Sawamura (lived 1865-1931) discovers the main natto bacteria and names it *Bacillus natto* Sawamura.

1906—Neda Tadamasa of Akita prefecture develops a new type of soybean. Named the Akita, it is a cross between Shiroasaya and Itoi's Ani.

1907 March—Nisshin Mamekasu is founded (initial capitalization is 3,000,000 yen). The next year its soybean crushing plant in Dairen, Manchuria, starts to operate. In 1918 the company merged with Matsushita Mamekasu to become Nisshin Seiyu K.K.

1908—At about this time the retail price of tofu in Tokyo is 1 *sen*. The average cake of tofu weighs over 100 monme (1 monme = 3.7656 gm or 0.1325 oz), so over 376 gm. In 1982 the average price of tofu is 100 yen per cake and the average cake weighs 300 gm.

1914—The Mogi Saheiji family in Noda starts to sell shoyu in 1-sho bottles (1 *sho* = 1.805 liters or 3.81 pints). Before this time a ceramic sake bottle (*tokkuri*) was used.

1914—Yamada Hikozaaburo of Nagano prefecture succeeds in making dried-frozen tofu (*Koya-dofu*) for the first time in the *Shimi-dofu* area.

1915—From this year until 1919, the soybean oil industry in Japan is in a period of prosperity. In 1914 Japan produces 7,105 tonnes of soy oil and 92,325 tonnes of soybean cake. Just 5 years later, in 1919, these figures have risen about 13-fold to 30,658 tonnes of soy oil and 353,288 tonnes of soybean cake. Soybean cake becomes very widely used in Japanese agriculture.

1918—The mayor of Tokyo, Tajiri Inataro, recommends that people eat low-fat soybean cake cooked with rice (*mamekasu meshi*) to protect themselves from the rapidly increasing price of rice; he himself eats this dish every day. Hiroetsu? Takako (a woman educator, lived 1867-1949) cooked soybean cake and rice (*mamekasu gohan*). Dr. Saei Tadasuke (1876-1959, a nutritionist) introduces an inexpensive meal (it costs 3 *sen* 5 *rin* for 5 people) using tofu and fish bones for breakfast and dinner at the Inexpensive But Nutritional Cookery Seminar (*Eiyo Anka Ryori Koshukai*). This year 30-50% of Japanese don't have enough to eat. The demand for beef tendons and okara increases. The price of high-quality meat increases faster than the price of tofu.

1919—Artificially cultured pure-culture natto starts to be used. Hanzawa Jun of Hokkaido University (1879-1972), using this method, invents a new “Sanitary Natto Container” (*Eisei Natto Yoki*) made of thin slabs of wood (*kyogi*). He also founds the “Natto Container Improvement Association” (*Natto Yoki Kairyo-kai*)

1919—Soybean production in Japan reaches 502,200 tonnes, and soybean imports rise to 168,000 tonnes. Production of soybean oil reaches 8,853,600 gallons or 33,573,000 liters, equal to that of rapeseed oil.

1919—A machine or kit for making tofu or soymilk easily at home (*kateiyo tonyu-ki*) is marketed.

1920—Soybean production in Japan reaches a record 559,000 tonnes.

1920—Tsugano Akisaburo of Tokyo invents a quick method for fermenting shoyu (*shoyu sokujo-ho*). By adding salt water to soybean koji to make moromi, he is able to make shoyu in less than 10 days.

1922 April—The oil production department of Suzuki Shokai [which went bankrupt in 1922] becomes independent and founds Hohnen Oil Co., Ltd. (*Hohnen Seiyu*).

1923 Sept.—The Great Kanto / Tokyo Earthquake (*Kanto Daishinsai*) strikes. 70% of the miso factories in the area are burned down, causing a shortage of miso. But miso makers in other parts of Japan use this opportunity to ship their miso to Tokyo, and the people of Tokyo come to realize the good taste of miso made elsewhere in Japan.

1924—Kodama Shizutoshi? (or Shintaro) invents another quick method for fermenting shoyu (*shoyu sokujo-ho*) using acid or alkali to hydrolyze soybeans or soybean cake to make

shoyu.

Note: This is the earliest document seen (April 2001) that mentions shoyu made by acid hydrolysis. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

2618. Takenobu, Y. 1926. Japan Year Book. Tokyo: The Japan Year Book Office. 626 + 162 p. Index. 23 cm. [360* ref]

• **Summary:** The total area of Japan proper is 147,652 square miles (382,861 square kilometers). Japan's population (as of Oct. 1925) was 59,736,704. A large area of Japan is very mountainous, and it is estimated that the cultivated area is about 6 million hectares. According to Prof. Shimizu of Keio University the population density per square kilometer of cultivated area in Japan is much larger than various European countries. Japan 969. Belgium 394. Italy 305. Netherlands 273. England 226. Germany 195. Switzerland 168. France 108. Spain 90.

In chapter 29, Agriculture, the section titled “Beans, potatoes and sweet potatoes” (p. 449) begins with a graph showing the production (in 1,000 koku; 1 koku = 180 liters) of these crops from 1921 to 1923, inclusive. Soybean production decreased from 4,261 koku in 1921 to 3,434 koku in 1923. The text continues: “Among subsidiary farm crops there is perhaps nothing that plays so important a part in the Japanese kitchen as soy beans. The three daily articles of diet for all classes, viz., soy [sauce], miso and tofu are manufactured with this bean either in part or wholly. The ‘tofu’ (bean curd) is one of the most popular articles of diet, being cheap and highly nutritious; the ‘miso’ makes Japanese soup and is used in various other ways. The ‘soy’ is indispensable in Japanese cooking. Then for extracting oils, as manure, and food for horses beans are equally important. The supply being insufficient, a large quantity comes in from Manchuria and Korea. In Japan, Hokkaido is the principal centre of the production. Red beans [azuki], also very extensively produced in the northern island, are used for making confectionery.”

In the section on “Breweries” (p. 512+) the subsection titled “Soy” [meaning shoyu or soy sauce] (p. 514) states: “For soy the prefecture of Chiba, which is contiguous to Tokyo municipality, heads all other places on the list as to output. Parched wheat mixed with salt and beans is a principal ingredient. The process is still far from scientific, requiring about 12 months before the liquid is ready for sale. It is also costly, as it does not much admit labor-saving appliances. To obviate these disadvantages have been tried several patented processes, but most of them have failed. In 1917 the leading soy manufactures of Chiba-ken combined and formed the Noda Soy Co., capital ¥7,000,000 p.u. with capacity of about 250,000 ‘koku’ i.e. about 60 per cent. of the total output of the Prefecture.”

A table (p. 514) shows production of sake, beer, and soy from 1919 to 1922 (year ending in March). Production of soy

(in 1,000 koku) grew from 2,940 in 1919 to 3,268 in 1922. Address: Prof. at the Waseda Univ. and late of the "Japan Times".

2619. Tetsudo Shounyukyoku. 1926. Shio satô shôyu miso ni kansuru chôsa [Survey concerning salt, sugar, shoyu, and miso]. Tokyo: Tetsudo Shoun'yu Kyoku. 1 vol. 23 cm. Series: Juyo Kamotsu Jokyo, no. 9. [Jap]*

• **Summary:** This is a Japanese government publication. Address: Japan.

2620. Thom, Charles; Church, Margaret B. 1926. The Aspergilli. 1st ed. Baltimore, Maryland: Williams & Wilkins Co. ix + 272 p. See p. 64, 198-207. [250* ref]

• **Summary:** In this work, with its good bibliography, the authors "sought to bring together all of this taxonomic literature, as published before that date, and to present a critical opinion as to the proper relationship of the species described, whether retained in the genus or placed elsewhere. Some 350 names were thus accounted for, but the actual number of species accepted as known in culture or probably determinable from existing literature was given as 69 (p. 252). These were more or less arbitrarily considered in 11 groups."

Chapter 6 titled, "Enzymic and fermentative activities of Aspergilli and their industrial significance" (p. 58-75) includes sections on koji (incl. Takamine, Taka diastase), diastase, protease, soy fermentation (incl. soy sauce), and miso (with 7 references). Address: Microbiological Lab., Bureau of Chemistry, USDA.

2621. Togano, Meiji-ro. 1926. Saishin shôyu miso jôzô-hô [Principles of modern shoyu and miso brewing]. Tokyo: Jôzô Hyôron-sha. 1052 p. [Jap]*

2622. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(2):175-92. Feb. [25 footnotes. Eng]

• **Summary:** Contents: Soybean cake, soybean meal, and soybean flour for food: Soybean press cake, soybean extraction meal, soybean flour (Berczeller, *Soyama*, *Aguma*, *Ehrhorn*), *Sojawurze* (*Suppenwurze*, Maggi cubes), digestibility of soybean flour, value for infants, some medical aspects of the use of soybean flour, soybean flour in diabetes (incl. Sarton).

Concerning soybean extraction meal (p. 177-79): This meal is shipped in bags and traces of benzene are easily removed. The process used at the Suzuki extraction plant in Dairen (the only extraction plant in Manchuria) is described; the solvent is benzene. "A new extraction plant (at the Borodin-Takata Alcohol Factory) is now under construction at Imienpo, in North Manchuria. By the new process, beans are first pulverized, then operated upon with alcohol, for the extraction of the oil content... The owner claims that 'there

is no foreign taste left which would make the oil or the bean cakes unsuitable for human food.'" Analyses conducted at the S.M.R. Co. Central Laboratory, Dairen, show that this "bean meal" contains: water 7.90%, protein 57.04%, oil 3.41%, carbohydrates 16.92%, coarse fibre 8.63%, and ash 6.69%.

"The solvent method of extraction, involving the use of benzene or gasoline, is used by many of the large oil mills in European countries, especially England." Mills in the USA do not yet use the solvent method; they use traditional hydraulic and expeller processes. "The new process used by the Hansa Mill at Hamburg (Germany) called the Bollmann process, is so economical that the profits of bean milling can be enormously increased. By this process the beans are first pressed and then extracted. The extracted meal is utilized for the manufacture of a highly valuable soybean flour for food (Footnote: But extracted soybean meal (flour) does not contain any fat soluble vitamin, as shown by Hornemann [1925]). The oil is submitted to refining, during which crude lecithin is extracted. It is purified and sold in a form of pure lecithin.

(Footnote: "The soybean contains 1.64 per cent lecithin (an organic phosphorus compound), the price of which in China is about \$18.00 (Mex.) per pound. It shows that the value of the lecithin contained in soybeans is greater than the market price of the beans themselves. Extracted soybean meal is therefore deprived of lecithin, which is a highly valuable food constituent, especially for the nervous system. Ordinary beans (navy beans, etc.) contain only 0.81 per cent lecithin)" (p. 178).

Note 2. This is the earliest English-language document seen (March 2001) that contains the term "crude lecithin."

Page 182 states: "Soybean flour is also utilized in the manufacture of breakfast foods and can be used in the preparation of vegetable milk and bean curd."* (Footnote: *) "In the United States some very good breakfast foods and an excellent finely powdered soybean milk powder "Soy Lac" is made by J.A. Chard, Soy Products, 263 W. 12th St., New York City, who has been experimenting for some time with soybeans.)" Note 3. This Soy Lac appears to be the first commercial soymilk made in America.

Berczeller (p. 183-84): "A few years ago the Hungarian food physiologist, Prof. L. Berczeller, elaborated a process for manufacturing a soybean flour containing a large percentage of fat. This does not become bitter if kept for over a year, and has a very pleasant taste. The process is patented in nearly all the countries of the world. Its chemical composition is given in the above table and its food value in a previous chapter. This flour contains the expensive fat-soluble vitamin which is deficient in the food of the white race. It is of yellow colour, has a sweet, agreeable nutty taste, and does not produce obesity, notwithstanding the fact that it contains a high percentage of fat. According to Berczeller, the uses of this soybean flour "O" are as follows:

“1. As roasted flour, with an equal part of wheat flour for soups or vegetables;

“2. For pastry, 10-15 per cent soybean flour is mixed with wheat flour. In this case no eggs or only a few need be added. The soybean flour gives to the dough a beautiful yellow colour;

“3. As an addition to meat, 25-50 per cent of soybean flour can be mixed with chopped meat for meat balls, sausage stuffing, etc.

“4. All sorts of flour dishes can be baked with the addition of soybean flour. The taste of the dishes thus prepared becomes better and the nutritive value higher (besides the economy in butter, eggs and sugar);

“5. The addition of even 5 per cent soybean flour in making wheat bread causes a much longer keeping capacity of the bread in a fresh state, the fat preventing the bread from getting stale;

“6. The soybean flour can be used also on a large scale in the foodstuff industry, and in different ways; e.g., in the manufacture of paste products (as a substitute for eggs), cakes, biscuit products, milk-bread (10-16 per cent soybean flour instead of milk), sausages and pastry products (as a substitute for meat).

“Berczeller’s soybean flours can be manufactured with little trouble in rice mills or pea mills, where they are decorticated. Eighty-five per cent of soybean flour can be recovered from soybeans. The residue forms a valuable food for animals. According to Berczeller, the cost of production of soybean flour in a European country is as follows:

“One ton of soybeans: 245 shillings. Ten per cent milling expenses: 25 shillings. Total: 270 shillings. Subtracting the value of the bran: 20 shillings. Cost of 850 kg of soybean flour: 250 shillings. Or one ton costs: 294 shillings.

“According to Berczeller, soybean flour is an ideal concentrated food for soldiers, sailors, tourists, etc., in the form of biscuits, etc., because it furnishes a substitute for animal foodstuffs which spoil easily. Berczeller points out that soybean flour is not a substitute for wheat flour but a natural vegetable complement to wheat flour, and one which can be substituted for expensive animal foodstuffs for lowering the living rates [cost of living] of humanity to a degree that could not be reached either by potatoes, maize, or by intensive farming. Austria and Hungary are planning to start a very intensive utilization of Berczeller’s soybean flour. This flour, being cheap and easy to manufacture in native rice mills, may be of great importance to China.”

Note 1. This is earliest document seen (May 2010) showing that Dr. A.A. Horvath was aware of the work of Prof. Berczeller, who patented a process for improving the flavor / palatability of soya flour.

Page 185 states, in a discussion of soybean flours: “In Bollmann’s process the oil is completely removed from the soybean material and the flour is therefore deprived of both the lecithin and the fat soluble vitamin.”

Sojawurze (p. 187-88): “The profit from Ehrhorn’s process could be much increased if part of the soybean flour were used for the manufacture of products similar to beef extracts, called in German ‘Suppenwurze.’ They are able to give to soup the taste and flavour of beef bouillon. They are used extensively in Germany, e.g., the well-known ‘Maggi’ cubes, and were manufactured in large quantities in pre-War and War time from soybean flour at the Aguma factory under Ehrhorn’s supervision.”

Reprinted in 1927 as part of an 86-page monograph titled “The Soybean as Human Food” (Peking, China). Address: M.D., Peking Union Medical College, China.

2623. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(3):298-309. March. [24 footnotes. Eng]

• **Summary:** Contents: Soybean milk for food: Introduction. Preparation of soybean milk. Properties (Yu-P’i is Chinese for yuba; Laxa). Market prices. Composition. Nutritive value. New methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama). Some dietetical advantages and applications of the soybean milk. Condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard). Soybean cake, soybean meal and soybean flour as material for soybean milk. Yu p’i and yu ba (yuba; also fu chu).

“In 1905, Li Yu-ying submitted a paper on the subject [of soybean milk] to the 2nd International Milk Congress in Paris, in which he emphasized that the introduction of soybean milk to Western countries ‘will be highly beneficial to public health as well as to the budget of the poor.’ Also by those who advocate and urge a vegetarian diet, a very strong case can be made for this Oriental substitute” (p. 298).

According to Prof. Laxa: “Soybean milk, supplemented with lactose and inoculated with a culture of yoghurt [yogurt] bacteria, coagulates at 40° C. in 4 hours and gives a curd-like acid mass” (p. 300).

“Market prices. In Peking soybean milk is sold in small bottles in portions of about 200-220 cc. labeled ‘Bean milk, a Chinese product, the most nourishing food, made by...’ For such a bottle, delivered daily, the big factories of Peking asked in 1925 \$1.00 (Mex.) per month. One liter of such milk costs, therefore, about 15 cts. (Mex.)... A fine soybean milk powder, called *Soy Lac*, has recently been prepared in America by Chard” (p. 300-01). Note: This company (Chard) was first referred to by Piper and Morse in 1916 in *USDA Bulletin* No. 439, “The soy bean, with special reference to its utilization for oil, cake, and other products.” *Soy Lac* is mentioned again by Horvath on p. 307.

A table (p. 302) compares the composition of soymilk made in 3 locations (Tsinanfu, China; Peking, China; and Japan) with that of human, cow, and goat milk. Human milk has the lowest protein content (1.25%) and ash content (0.25%); soymilk has about the same protein content as

cow's milk (3.3%) but an ash content (0.40%) which is higher than that of human milk but lower than that of cow's milk. Footnote: "To supplement the deficiency of the soybean milk in mineral constituents [such as calcium], it is recommended by von Noorden and Salomon to add to it the salt mixture of Pirquet, which consists of: sodium chloride, 0.3 gm.; potassium chloride, 1.1 gms.; calcium glycerophosphate, 1.7 gms.; magnesium lactate, 0.5 gm.; ferrum glycerophosphate, 0.1 gm. This mixture is called *Nemssalz*. If diluted in 1 liter of water it gives the same percentage of salts as in women's milk" (p. 302).

"In Germany the Soyama factory (in Frankfurt) manufactures soybean fresh milk (mostly from soybeans), soybean normal cream, and also condensed bean milk and cream. Soyama bean milk looks like cow's milk, contains the same constituents, even in larger amount and in a state of finer dispersion. Only its taste is different. According to Fuerstenberg, Soyama milk can be qualified as a special, very valuable dietetic nutrient. The high lecithin content of this preparation adds to its value too" (p. 306). A table (p. 306, based on the analyses of Dr. G. Popp of Frankfurt) shows the nutritional composition of 6 types of Soyama milk and cream preparations: Normal milk. Milk for diabetics. Milk for baking purposes. Normal cream. Cream for diabetics. Cream extra rich in fat (especially for diabetics). "According to von Noorden and Salomon, Soyama preparations may be kept as long as almond milk and Paranut milk. Soyama milk looks just like cow's milk. By keeping, cream separates and it must be shaken before using" (p. 306).

"In using Soyama milk and cream preparations, v. Noorden confirms the following statement of Fischer (for vegetable milk in general): '1. In the stomach soybean milk gives a much finer flocculent precipitate than does cow's milk, produced by acid or even rennet. 2. The ingestion of soybean milk results in a feebler (smaller) secretion of gastric juice; the period of secretion is also shorter. 3. The period of stay in the stomach of the finely flocculent precipitate of the soybean milk is shorter than that of the casein-fat coagulum of cow's milk. 4. The peristaltic motion of the stomach is less after the ingestion of soybean milk and more coordinated than in the case of cow's milk, as shown by X-ray investigation'" (p. 307).

"On the basis of these observations soybean milk is recommended by v. Noorden in cases of gastric and duodenal ulcer, states of peritoneal irritation, hypersecretory conditions of the stomach, disturbances of the motility of the stomach, uric acid diatheses, kidney disturbances, conditions with edema where a food poor in sodium chloride is required, Basedow's disease, cholecystitis, cirrhosis of the liver, diabetes, and in cases where a very nutritious diet is required" (p. 307).

"Soybean milk powder will undoubtedly have a successful future in the Orient as well as in European countries and the United States. Its great advantage in

comparison with cow's milk powders is its cheapness. Soybean milk powder can be easily stored and transported... It is believed that at present some of the commercial milk powders contain an admixture of soybean milk powder" (p. 307-08).

"*Yu P'i* and *Yu Ba* are the Chinese and Japanese names of the pellicula formed on the surface of soybean milk when the latter is gently heated. Good *Yu Ba* has a bright yellow color when properly dried. The best *Yu Ba* is that obtained after the first heating. In repeating the heating of the remaining soybean milk, pellicules of gradually inferior quality and color are obtained. As much as 30 pellicules can be secured from the same portion of soybean milk. In China, a product called *Fu Chu* is manufactured in a way similar to *Yu Ba* (Footnote: See this journal, Vol. VIII, 1926, p. 179). Recently an improved method for the manufacture of *Yu Ba* was patented in Japan, consisting in the use of an electric fan adjusted over the surface of a kettle containing the soybean milk heated to a temperature of 90°C.

"*Yu Ba* has a great nutritive value, as it contains a high percentage of protein and fat,..."

A table (p. 309) gives the nutritional composition of five types of yuba: Common yuba, Kyoto yuba, Shimada yuba, Peking yuba, and *Fu chu*.

Note: The values for *Fu chu* are based on those previously reported by Adolph. *Fu chu* contains much more water (53.68%) than any of the other four types of yuba; common yuba contains only 21.85% and Peking yuba only 9.15%. So it is either fresh or reconstituted.

"In Japan, Kyoto and Nikko are noted for *Yu Ba*. *Yu Ba* is in much demand in China and Japan and is used in numerous ways as an essential ingredient in many very palatable dishes. Its price is high and therefore yuba is used only by the rich."

Reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China). Address: M.D., Peking Union Medical College, China.

2624. Horvath, A.A.; Liu, Shin-Hao. 1927. The effect of soy sauce on blood sugar and phosphorus. *Japan Medical World* 7(4):105-08. April 15. [18 ref]

• **Summary:** "Introduction: Shoyu, or soy sauce, is a dark-brown, moderately thick liquid, very popular in China and Japan as relish or condiment to increase the flavor and palatability of the diet (Footnote: The now famous Lea and Perrins Worcestershire Sauce is a highly spiced soy sauce). In order [sic, odor] and taste it is not unlike a beef extract of good quality."

"Summary: 1. In rabbits, subcutaneous injections of Taka-Diastase gives no definite results for conclusions, but seems to be capable of affecting the blood sugar in both directions. 2. In men the results of oral administration of soy sauce are varying and at present no definite conclusion concerning the effect of soy sauce on blood sugar and

phosphorus can be drawn. But in some cases soy sauce seems to be capable of affecting the blood sugar and blood phosphatides.” Address: Dep. of Medicine, Peking Union Medical College, Peking, China.

2625. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(4):415-25. April. [34 footnotes. Eng]

• **Summary:** Contents: Soybean curd (tofu) for food: Preparation and types (“The Chinese classical name for *tofu* is *li chi*, probably meaning ‘the morning prayer’”), historical, present state (of *tofu* in China), chemical composition, digestibility, utilization (incl. frozen *tofu* and fried *tofu*).

Fermented soybean products for food. Soy sauce: Kibiki and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

Tofu—Historical (p. 416): “The manufacture of soybean curd (*tofu*) was started in China in 164 B.C., during the reign of the Emperor Han Wen, by a man named Liu An, the duke of Hwai Nan. Liu An was a great friend of the Buddhist monks, and it seems quite probable that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration (Adolph). *Tofu* was introduced into Japan from Korea for the first time during the Toyotomi government, and Buddhist priests and some other people used it for their daily food among others before it was generally used in Japan.

Tofu—Utilization (p. 418-19): “Both the composition and the digestibility of *tofu*, therefore, prove it to be a very nutritious food material. In the Orient *tofu* forms a very popular and almost indispensable dietary article for the Buddhist priests, as well as the strict adherents to Buddhism, who eat no animal food [i.e., are vegans]. A common saying in some parts of China terms ‘bean milk the poor man’s milk, and bean curd the poor man’s meat.’ *Tofu* is also called ‘the meat without the bones.’

Note: This is the earliest English-language document seen (Dec. 2010) that contains the phrase “the meat without the bones.” Note that it refers to *tofu* and not to soybeans.

In Indo-China the daily consumption of *tofu* by an adult is about 3/4 of a pound. *Tofu* in its various forms is also used very extensively by all classes of Japanese. In the interior of the country where fish cannot be easily obtained, it is a most important source of protein.

“In the Orient *tofu* is eaten in a fresh condition simply with a little *shoyu*, though it is also frequently cooked in soup. Fried *tofu* is also a very popular article of food. Rape-seed oil, sesame oil or soybean oil are generally used in frying.

“*Tofu* may also be prepared for preservation and transportation. For this purpose fresh *tofu* is cut into smaller pieces and exposed to severe cold weather, to remove the water by freezing, and is then dried in an oven. As thus prepared it can be preserved for several years. When the *tofu*

is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the *tofu* porous and it may be easily dried. If it is not frozen, it is difficult to dry and the resulting material is dense and horn-like. The *tofu* also cooks very well if cooked in diluted soy sauce and smoked in the same manner as meat. The resulting product forms in the Orient the basis for the manufacture of various ‘artificial meat’ preparations.*” Footnote: * “In Germany, the Soyama factory prepared during the Great War [World War I] a meat supplement from soybeans. It was cheaper than beef, contained less carbohydrates and had a nutritive value of about 1500 Calories in 1 kilo.”

“In Peking, at the Kai Cheng Bean Products Company, various preparations manufactured from *tofu* may be purchased, such as different kinds of soybean meat, soybean sausages, etc. The company has established a restaurant in Peking (at 86 Morrison Street, the name is written in Chinese characters) where one can get a Chinese dinner of numerous dishes prepared mostly from soybean products (chicken meat, pork, ham and beef, manufactured from *tofu*). Also discusses Dr. Yamei Kin.

A note at the end of this April issue states: “A reprint of Dr. Horvath’s paper in booklet form may be obtained from the Bureau of Economic Information. Price \$1, Peking Currency.—Ed.” Thus, these six articles were reprinted in 1927 as part of an 86-page monograph titled “The Soybean as Human Food” (Peking, China). Address: M.D., Peking Union Medical College, China.

2626. *Wall Street Journal*. 1927. Large increase noted in soy-bean planting: Acreage of 500,000 in 1917 has grown to 2,600,000, principally in the corn belt states. May 26. p. 15.

• **Summary:** “Largely increased acreage and production of soybeans in the United States in the last decade indicate that the crop is destined to become of great economic importance.” Of the more than 2,600,000 soybean acres last year, about 520,000 acres [20%] were for seed production. Total soybean production last year was 6,517,000 bushels. “No other crop has advanced so rapidly from a position of minor to major importance.”

The most dramatic increases in recent years have been in the corn belt states and in a few southern states, according to the United States Department of Agriculture. Illinois, the leading state in soybean acreage, with more than 700,000 acres, is followed by Missouri, North Carolina, Indiana, and Tennessee.

In the future, soybeans will be used increasingly for the production of oil and meal. Soybean oil can be used like almost all other vegetable oils. Oil mills in the major production centers “now crush large quantities of domestic beans, and find ready markets for oil and meal.”

Companies making soybean food products have recently increased greatly; the beans can be processed

to make breakfast foods, crackers, soy sauce, bean curd, wafers, soy flour, and special flour preparations. Soy sauce is now widely sold in the USA. Soybean oil is increasingly used to make soaps, paints, varnishes, lubricating oils, linoleum, waterproof goods, printing ink, and solid oils [by hydrogenation]. Oil cake, which remains after the oil is extracted from the beans, is a valuable livestock feed.

The discovery that soybeans can be efficiently harvested using a “combined harvester and thresher” has given addition impetus to soybean production. Its value in crop rotations insures the soybean an increasing role in American agriculture.

2627. Horvath, A.A. 1927. The soybean as human food. Peking and Shanghai, China: Chinese Government Bureau of Economic Information. Booklet Series No. 3. 86 p. May. Reprinted from Chinese Economic Journal, Sept. and Nov. 1926, and Jan. to April 1927. No index. 21 cm. [38 ref]

• **Summary:** A very original and important book. Contents: Preface by Macey F. Deming, Tappan New York, from an address at a meeting of the National Soybean Growers’, held at Washington, DC, Sept. 1925. Introduction. 1. General ingredients of the various Manchurian beans. 2. Composition of some Japanese soybeans and of the common American varieties. 3. Value of the soybean as food. 4. Soybean oil for food. 5. Refined soybean oil: As substitute for salad or frying oil, as substitute for hardened oil and lard (hydrogenation), in oleomargarine and vegetable butters. 6. Whole soybean as food: Immature or green soybeans, mature or dry soybeans, the digestibility of the boiled soybean seeds, boiled soybeans as a food of predominant importance in China, soybean coffee, soybean chocolate, soybean sprouts.

7. Soybean cake, soybean meal and soybean flour for food: Soybean press cake, soybean extraction meal, soybean flour (Berczeller, Soyama, Aguma, lecithin, Ehrhorn), Sojawurze (Suppenwurze, Maggi cubes), digestibility of soybean flour, value for infants (p. 53, based on the research of Dr. Ruhrah in the USA), some medical aspects of the use of soybean flour, soybean flour in diabetes. 8. Soybean milk for food: Introduction, preparation of soybean milk, properties (incl. inoculation with a culture of yoghurt [yogurt] bacteria to give a curd-like acid mass), market prices, composition, nutritive value, new methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama), some dietetical advantages and applications of the soybean milk, condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard), soybean cake, soybean meal and soybean flour as material for soybean milk, yu p’i and yu ba (yuba; also fu chu).

9. Soybean curd (tofu) for food: Preparation and types (classical name is *li chi*), historical, present state (of tofu in China), chemical composition, digestibility, utilization. 10. Fermented soybean products for food. Soy sauce: Kibiki

and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

On page 9 we read: “An industry which promises to be of importance in a further utilization of the soy bean is the manufacture of ‘vegetable milk.’ At the present time a factory in New York State is being equipped for this purpose.” Address: Peking Union Medical College, China.

2628. Kurono, Kanroku; Katsune, Ei. 1927. Shôyu no shikiso no kagaku-teki sosei [Chemical composition of coloring matter of shoyu]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 3(5):594-613. May. [25 ref. Jap]

• **Summary:** Includes a discussion of Soyamelanin acids (*Soyamelaninsaeure*). Address: Okura-sho Jôzô Shiken-jô.

2629. Macy’s. 1927. Macy’s groceries (Ad). *New York Times*. June 12. p. 26.

• **Summary:** “Maggi seasoning: Our own imported from Switzerland. A product that greatly improves the flavor of gravies, soups, sauces, meat, and vegetable dishes. 30 ounce bottle \$3.49; 13½ ounce bottle, \$2.39; 6 3/4 ounce bottle, \$1.39; 3¼ ounce bottle, 66¢; 1 3/4 ounce bottle 44¢.”

Note: Several earlier documents suggest that miso was used as an ingredient.

2630. Davis Company. 1927. Factory disposal sale (Ad). *Chicago Daily Tribune*. July 5. p. 11.

• **Summary:** “New merchandise from 2,133 factories priced as low as 50¢ on the dollar.” “Specials from our food shop” includes: “La Choy Chow Mein Noodles. No. 2 cans, each, 22¢.” Address: Detroit, Michigan.

2631. Gallagher, Patrick. 1927. Deadly blow held aimed at American industries in China: Quick action is indicated to safeguard huge United States tobacco trade. Increase in impost tariff is announced. *Washington Post*. July 17. p. 4.

• **Summary:** “Chinese are rapidly overtaking Americans as cigarette consumers.” Most of China’s imports of cigarettes and leaf tobacco are from America. The United States now has on the scene two officials thoroughly capable of dealing with this American trade crisis. One is Julean Arnold, doyen of American envoys of commerce and United States commercial attache in China.

“Meanwhile the practical Japanese have resumed physical possession in Shantung. One reason is Shantung’s salt deposits. Japan needs that salt for her Sakhalin fish industries and her Manchuria soya industries.”

2632. Gonzalez, B.M. 1927. Education and agricultural promotion in Japan. IV. Promotion of agriculture. *Philippine Agriculturist* 16(2):67-71. July. [1 ref. Eng]

• **Summary:** Contents: Introduction. Intensification of culture. Land reclamation. Land adjustment. Price regulation.

Rice conservation. Agricultural experiment stations.

The Central Experiment Station was first organized in 1890 as an experimental farm of the Department of Agriculture. Address: Delegate from the Univ. of the Philippines and the Government of the Philippine Islands to the Third Pan-Pacific Science Congress.

2633. Nagaki, Kyosaburo. 1927. Shōyu no kabi ni tsuite [On the mold of shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 4(12):1048-51. [Jap]

Address: Okayama-ken Shoyu Jozo Dogyo Kumiai, Gishi, Japan.

2634. *USDA Bureau of Animal Industry, Service and Regulatory Announcements*. 1927. United States Department of Agriculture Service and regulatory announcements. July. p. 41-42. For June 1927.

• **Summary:** The first section, titled “Changes in directory: Meat inspection granted” includes: “322. Mandarin Sauce Co. (Inc.), 750 Ceres Ave., Los Angeles, California.”

Note: This company may well make soy sauce, but we cannot be certain.

2635. Morse, W.J. 1927. The present outlook of the soybean industry in the United States. *Proceedings of the American Soybean Association* 1:167-71. Eighth annual field meeting. Held 9-12 Aug. in North Carolina.

• **Summary:** “In 1907, the soybean was considered but a minor crop in America, less than 50,000 acres being devoted to its culture. North Carolina had the largest acreage at that time, and produced at least 90 per cent of the seed, possibly more.”

Note: This is the earliest document seen (May 2008) that gives statistics for soybean production in the USA before 1909. It is also the earliest document seen (May 2008) that mentions the number “50,000 acres” in connection with the year 1907—statistics that were repeated by many subsequent publications. Yet we have been unable to find Morse’s source for these earliest baseline statistics. He may have somehow derived the figures from those in: U.S. Department of Commerce, Bureau of the Census. 1913. Thirteenth census of the United States taken in the year 1910. Volume V. Agriculture, 1909 and 1910.

“Not more than six varieties were being grown [in America]. The most important of these were the Mammoth Yellow, Ito San, Ogemaw, and Medium Green, varieties limited as to soil and climatic conditions, and also as to purpose. At this time, it seemed unlikely, to all except a few soybean enthusiasts or ‘soybean cranks’ as they were then called, that the soybean would ever amount to much more than a minor or emergency crop. Several experiment stations had conducted tests with the crop as pasture, hay and silage, and with the seed as a concentrated feed... One soybean enthusiast, the late Dr. C.V. Piper, then Chief of the Office

of Forage Crops, United States Department of Agriculture, had a remarkably clear vision of the great potential value of the soybean as a major crop in American agriculture. After studying the soybean in the Orient, it seemed to Dr. Piper that more and better varieties were essential to meet the widely diverse conditions found in the United States... Through the Office of Foreign Plants, therefore, numerous introductions were made from the soybean regions of China, Manchuria, Korea, and Japan.”

“The soybean undoubtedly will be utilized primarily for forage purposes, and by forage purposes is meant as hay, pasture, ensilage, and soilage.”

“To me, the production of soybean seed for oil and oil mill appears to be one of the bright spots in the future of the soybean which will firmly establish it as a major crop. Increasing imports of soybeans, soybean oil, and soybean cake from China and Japan, in spite of a tariff on the beans and oil, indicate a ready market for these products in the United States. Soybean oil is a strong competitor of other vegetable oils and is used extensively in the manufacture of butter and lard substitutes, paints, enamels, waterproof goods, rubber substitutes, linoleum, and edible oils; and constantly new uses are being found for this valuable oil.”

“Soybean seed is employed for various other purposes and its uses, no doubt, will further increase. There are established in the United States several factories for the manufacture of soy sauce, which in previous years was imported in large quantities from China and Japan.” Address: USDA, Washington, DC.

2636. *New York Times*. 1927. Weird food for gourmets: Paris scientists test with relish the new gastronomic discoveries of the year. Sept. 18. p. SM18.

• **Summary:** Those who enjoy dining at “foreign restaurants and tasting strange dishes would have relished the opportunity of attending the dinner that the Société Nationale d’Acclimatation [Society for Acclimatization] recently offered to its members in Paris.” Some of the dishes were of exotic origin and all were extremely rare.

Dr. Gauducheau has developed a recipe for roasted chicken, called “inter-sauced” chicken, in which the sauce is injected into the veins of the chicken after the blood has been removed. He gets the “best results from sho-yu [shoyu], the juice of the Soja bean, and from nuoc-mam, the juice of salted fish prepared by the Annamites” [from today’s central Vietnam].

2637. *Toronto Daily Star (Canada)*. 1927. Odd queries answered. Oct. 6. p. 33.

• **Summary:** “Q. How is plain chop suey made?

“A. Use 8 pork chops, 3 stalks celery, 2 cups of mushrooms and 2 large onions.” Plus other ingredients. Chop, blend and fry “until brown, then add the mushrooms, onions and celery, 1 tablespoon of Worcestershire sauce,

3 of bean sauce [soy sauce] and 1 cup of wheat sprouts, if desired.” Stirring constantly, cook until brown and thick.

History, utilization, culture. 4 vols.]. Paris: Paul Lechevalier. See vol. 1, p. 119-30. Vol. 3, p. 153-55 (shoyu). (Encyclopedie Biologique, vol. I, III, VII, XVII. Fourth edition of Le Potager d'un Curieux by Paillieux and Bois). Illust. Index + Index of Illust. 25 cm. [12 ref. Fre]

• **Summary:** Vol. I. Phanérogames légumières. The section on the soybean (*le Soya*) (p. 120-130), discusses the history of the plant in various countries, the oil and its uses, the preparation of soybean cheese and soy sauce, the nutritive value of the soybean, the place of the soybean in the culture of various countries including the United States, yields of various varieties, and use as a forage crop.

At its annual lunch on 15 May 1911, following its tradition of introducing new products from little-known plants, the Society for Acclimatization (in France) served samples of various soyfoods (*plusieurs préparations à base de Soya*) prepared by Mr. Li Yu-Ying, technical director of a factory established on the outskirts of Paris for the preparation of various products from this legume: vegetarian ham (*jambon végétal*), soy cheese (*fromage de Soya*), soy preserves (*confitures de Soya*), soy bread (*pain de Soya*), etc. (p. 126).

Vol. III. Plantes à épices, à aromates, à condiments. The section on shoyu (p. 153-155) describes soy sauce and its preparation. Note: Désiré Bois lived 1856-1946. Address: Prof., France.

2641. **Product Name:** [HVP made from hydrolyzed soybean meal. Used in Maggi seasoning cubes].

Foreign Name: Sojawurze.

Manufacturer's Name: Ehrhorn Co.

Manufacturer's Address: 1 Bergstrasse, 36, Harburg on the Elbe, Germany.

Date of Introduction: 1927.

New Product–Documentation: Horvath. 1927. The Soybean as Human Food. p. 42-53. Extracts similar to beef extracts are use to season soups. “They are used extensively in Germany, e.g. the well-known ‘Maggi’ cubes, and were manufactured in large quantities in pre-War and War time from soybean flour at the Aguma factory under Ehrhorn’s supervision. Ehrhorn claims that his new patent soybean flour is very suitable for the manufacture of such ‘Suppenwurze.’ He calls the new product ‘Sojawurze.’ Its appearance and taste is very similar to a fluid meat-bouillon extract, but may also be easily obtained in a dry state. The manufacturing process takes only 10 hours. The bean flour is hydrolyzed in a chemical way. A hundred kilo of Ehrhorn’s flour gives 200 kilo of such ‘Wurze,’ specific gravity 1.25. According to Ehrhorn, the market price for such ‘Suppenwurze’ in Europe is very high in comparison with the cost of its production from soybean flour.”

• **Summary:** A brief but good introduction to soybeans and soybean products including soybean meal, soybean flour, soybean oil, bean milk [soymilk], to-fu, frozen to-fu, soy sauce, and mizo [sic, miso] or tsiang [jiang].

“When boiled with gypsum or chlorate of magnesia bean milk curdles, and is known as ‘to-fu.’ Its constitution varies dependent upon the method of preparation employed. Fresh soy curd contains on the average, 8% protein and 3% fat. ‘To-fu’ when smoked or fried, owing to loss of water, becomes somewhat allied to meat, thereby substantiating the Chinese proverb that—‘to-fu is meat without bones.’”

Note: This is the earliest English-language document seen (Jan. 2011) that contains the phrase “meat without bones.” Note that it refers to tofu and not to soybeans.

“Frozen ‘to-fu’ prepared during the cold season contains up to 50% protein. Bean curd is almost totally assimilated, and may be used in the preparation of a considerable number of European dishes, the recipes for which have been published by the U.S. Department of Agriculture. The Chinese prepare an unlimited number of dishes based upon

this comestible, including artificial meat. In order to obtain the specific taste of meat, smoking soybean sauce is used.”
Address: Manchuria.

2650. Kellogg, John Harvey. 1927. The new dietetics: A guide to scientific feeding in health and disease. 3rd ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1031 p. See p. 188-93, 322-28. Illust. Index. 24 cm.

• **Summary:** This is an encyclopedia of food, diet, and nutrition. Earlier editions were published in 1921 and 1923. The author, a physician and a vegetarian, lists his credentials on the title page: “Fellow of the Royal Society of Medicine of Great Britain, of the American Medical Association, Member of the American Economic Association, and of the National Geographical Society, Member of the Société d’Hygiène of France, Late Member of the Michigan State Board of Health, Editor of “Good Health,” Superintendent of the Battle Creek Sanitarium, President of Battle Creek College.

Table XIV (p. 188) lists soy beans as a food rich in lime (calcium), containing 0.46%. Pages 189-93 discuss “Acids and bases of food—The acid alkaline balance.” It begins: “As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman, of Columbia University, foodstuffs differ in relation to their acid and basic contents. In certain foods, bases or alkalies predominate, while in others the mineral acids predominate.

“The waste products of the body are predominantly acid; consequently it is desirable that the foodstuffs should be predominantly basic. If acids predominate in the ration, and this condition continues for a considerable period of time, the effect will be to disturb the nice balance between acids and bases which is normally maintained in the body fluids and which is essential for life. A deficiency of alkalies constitutes acidosis.

“It is necessary that the alkalinity of the blood should be constantly maintained as the only means by which the acid wastes of the body which are constantly accumulating as the result of all sorts of vital work may be promptly removed.” All flesh foods leave highly acid residues. Eggs are also acidic, though less strongly than meat. Cereals and bread are acidic, though much less so than meats. Milk is slightly alkaline. Most fruits, and all green and root vegetables are strongly basic and tend to alkalinize the tissue fluids... Generally it is better to select foods which afford a large basic margin so as to add to the alkali reserve of the body, which always tends toward diminution, especially in old age. A strongly basic diet is especially indicated in cases of arteriosclerosis and disease of the kidneys, in fevers, in pregnant women, in all forms of acidosis, and in old age...

“At the present time all physiologists are agreed that the highest degree of physical vigor and efficiency may be maintained on a diet which excludes flesh foods and physiologists the world over are unanimous in advising a

curtailment rather than an increase in meat consumption.”

Table XVI (p. 192-93) is titled “Excess of acid or alkali in one ounce and in 100 calorie portions of common foodstuffs.” The Soy bean has an excess of base (alkali), 12.0 units per 100 calories or per 1 ounce.

In the chapter on Legumes, pages 322-28 give a detailed and accurate discussion of the soy bean and various soyfoods, including the history and nutritional composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, and soy bean sprouts. On the first page, Dr. Kellogg states: “The soy is the best of all beans.”

In the chapter titled “Infant Feeding,” under “Vegetable Milk” (p. 956), Dr. Kellogg states: “The Chinese have for ages made from the soy bean a preparation which so closely resembles the dairy product that it may not inappropriately be called vegetable milk. A much better preparation is made from walnuts, almonds, and even peanuts... Milk prepared from walnuts and almonds is used in China, the Philippines and throughout the Orient, as a food for nurslings for whom a wet nurse can not be provided. This custom prevails extensively in those Asiatic countries in which cow’s milk is but little used.

“A nut milk commonly known as ‘Malted Nuts’ has been made in this country for more than thirty years and has come into extensive use... These plant protein milks render great service especially in the treatment of infants and invalids who are sensitized to cow’s milk. They are also valuable resources in the treatment of colitis in infants and in cases in which change of the flora is found difficult, so that the suppression of all animal proteins becomes necessary.”

Also discusses quinoa, kaoliang, and the adsuki bean.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “alkalinize” to refer to making a food more alkaline. Address: Battle Creek, Michigan.

2651. Khorbat, A.A. 1927. Maslianichnye (soevye) boby kak kormovoe i pishchevye rastenie [Oil-bearing (soy) beans as fodder and food plants]. Kharbin (Harbin): Obschestvo Izucheniia Man’chzhurskogo Kraia. Torgovo-Promyshlennaia Sektsiia. [Society for the Study of the Manchurian Area. Trade and Industry Section]. Series D, No. 7. 126 p. [Rus]
Address: Harbin, Manchuria.

2652. Lovell, Philip M.; Press-Lovell, Leah. 1927. Diet for health by natural methods: Together with health menus and recipes. Complete instructions for the cure of the sick without the use of drugs. Los Angeles, California: The *Times-Mirror* Press. xiii + 428 + [7] p. No index. 21 cm.
• **Summary:** Part I: Treatment and diet, by Dr. P.M. Lovell. Part II. The preparation of health foods, by Leah Press-Lovell (recipes, p. 129-428). Some of the recipes in this book first appeared in the “Care of the Body” section of

the *Los Angeles Times*, which Dr. Lovell has edited for the past few years. “This is the pioneer health department of any newspaper in the country, undoubtedly the most widely read and unique, in so far as it advocates drugless, natural therapy” (p. 4). “This book is based on vegetarian principles. Meat recipes... are not included.” Many reasons for this are given. Meat includes fish and fowl (p. 8-9).

Soy-related: “Soy sauce or shoyu is made from soy beans and can be bought at Japanese stores. It gives a tasty flavor to gravies and to cereals” (p. 134). Chop suey (3 types), each served with “Soy bean sauce” (p. 290-91). Soy gravy (with soy—also called soy sauce or shoyu, p. 305). Chapter 14, “Legumes” (p. 366-70) discusses chick peas (Garvanza), lentils, peanuts, and “Soy beans: Best known in China and India. Rich in oil. Contain almost no starch. Require slow cooking to bring out flavors. Hulls are difficult to digest. Therefore remove them by rubbing through a colander.” “About the soy bean: The soy bean is very important in the Orient. When three-fourths grown it makes a nutritious green vegetable [yes] known as ‘bean sprouts’ [no]. Products of soy beans re soy bean flour, soy bean milk, soy bean cheese (tofu), soy sauce, soy bean oil, sprouts, etc. Soy bean products can be bought at Japanese and Chinese grocery stores.” Contains 3 recipes: Soy roll or bread (replace 25% of the whole wheat flour with soy flour in any whole wheat bread recipe). Soy bean porridge (cook 1 cup soy bean flour with 3 cups water for 2 hours in a double boiler. Cool, slice, roll in corn flour and bake with butter or oil to make croquettes). Soy bean croquettes. Soy bean milk (made from soy bean flour, p. 420; also almond milk and cocoanut milk).

Also discusses: Of the general advice given to patients, “the subject of diet occupies the leading position” (p. viii). Agar flakes (vegetable gelatine) are better than animal gelatine (p. 135). Almonds—How to prepare almond milk, cream, and meal (p. 152). Cocoanut—To prepare cocoanut milk. Peanuts—How to prepare raw peanut butter (p. 153). Garvaza [garbanzo] beans and meal (p. 308-09). Nut loaf (Vegetable turkey) (with peanuts, p. 315). Carqué’s unfermented whole wheat bread (p. 351). Carqué’s unleavened fruit bread (p. 351). Recipes using Graham flour (different from whole wheat flour, p. 356-59).

Ads on the last 7 (unnumbered) pages are for: (1) Lovell Health Offices. (2-3) Lovell’s drugless health library (39 titles on diseases and health problems; pocket edition size). (4) Health of the Child, by Dr. Philip M. Lovell. (5) Carqués California Pure Natural Food Products: Fruits—sun-dried and dehydrated without bleaches, fumigants or preservatives (incl. black mission figs), nuts, confections, stamina and laxative foods, nut butters, cereals and products (incl. soy bean flour), miscellaneous. wheat nut bread (See p. 32-33, 104). (7) The Cary Health Cooker (for steaming and baking; Elmer E. Cary Co., Los Angeles).

Note: This is the earliest published document seen (April 2004) that gives the address of Cubbison's Cracker Co. as 3419 Pasadena Ave. Address: 1. Dr., drugless practitioner, Health Offices, 238 Chamber of Commerce Bldg., 1151 So. Broadway, Los Angeles, California; 2. His wife. Phone: WEStmore 8275.

2653. Maliareffsky, G.I. 1927. [Manufacture of Chinese soy sauce in North Manchuria]. *Vestnik Manchzhurii (Manchuria Monitor)* No. 12. p. 56-61 + additional photographs. Russian edition. [Rus]
Address: Manchuria.

2654. Morse, W.J. 1927. Soy-bean output increasing in United States. *Yearbook of Agriculture (USDA)* p. 671-73. For the year 1926.

• **Summary:** In 1917 less than 500,000 acres in the U.S. were devoted to soy beans for all purposes. From this land about 2,283,000 bushels of seed were produced.

"As an article of food, the use of the soy bean in the United States has been very limited. For many years a few food companies have manufactured special soy-bean flour products. The number of such concerns producing soy-bean food products has increased to a considerable extent during the last few years. Soy beans are now being made into breakfast foods, crackers, wafers, soy sauce, bean curd, soy flour, and special flour preparations for various purposes. One of the most recent developments is the manufacture of soy sauce and bean curd from domestic grown beans. This has been found a most profitable industry in some parts of the Corn Belt, and soy sauce has now a fairly extensive market in the United States." Address: USDA, Washington, DC.

2655. Nadkarni, Krishnarao Mangeshrao. ed. and pub. 1927. *The Indian materia medica*. 2d ed. Bombay, India: K.M. Nadkarni. 5 + xviii + 1142 + clxix + lxxxviii p. Index. 20 cm.

• **Summary:** The body of this book (1142 p.) appears to be titled *The Indian Materia Medica with Ayurvedic, Unami & Home Remedies*. Soybeans are mentioned in three different places, almost as if each was thought to be different plant.

Page 313-14. "305. *Dolichos Soja*—(English—Soya bean, German—Soja bohne, Bengali—Gari kulaj, Hindi—Bhatwan, Kumaon—Bhut) is a species cultivated in some part of India for its seeds which are eaten and which contain a high percentage of protein and fat."

Page 399: "396. *Glycine Soja* & *G. Hispida* are species (English—Soya bean, Hindi—Bhatwan, Bengali—Gari kulaj, Kumaon—Bhut, Eastern Terai—Khajuwa) met with on the tropical Himalayas from Kumaon to Sikkim and Khassia

and Naga Hills. A decoction of the root is said to possess astringent properties."

Page 803: "886. *Soja Hispida* or *Glycine Soja* (English—Soya bean; Soy-bean) has taken the place of meat in the diet of Chinese, Japanese and other Asiatics. Its notable characteristics are its large proportion of assimilable protein and fat, and its lack of starch and small content of sugar. Being so highly nutritious, it is not adapted for use as a side-dish, like ordinary vegetables, but, like meat, supplies a chief food. Among the preparations mentioned as common in China and Japan are 'tofu' resembling cottage cheese; 'Shoyu or Soya' which has been soaked to remove the skin and then boiled and seasoned; 'Miso' or soy-bean milk, prepared by soaking pulverized beans and straining; and 'Natto' obtained by fermenting the boiled beans. The lack of starch gives the beans favour as a diabetic food, and soy-bean meal and soy-bean bread have been prepared. The beans have been also tried as a coffee substitute—(Popular Science Siftings). For more particulars see also *Dolichos Soja* etc."

Also mentions *Sesamum indicum* (p. 788-90). Sanskrit.—Tila. English—Gingeli. French—Sesame. German—Sesom [Sesam]. Hindi, Cashmeri, Punjabi & Bengali—Til. Mahrathi & Konkani—Teel. Telugu—Nuvvulu; Guvvulu. Tamil—Ellu. Canarese—Uru-Ellu. Malayali—Karuellu.

The author was born in 1864. A 3rd edition was published in 1955. First published in 1908 under the title "Indian Plants and Drugs." Address: India.

2656. Wong, Nellie C. 1927. *Chinese recipes*. New York, NY: Published by the author. 28 p. unnumbered. 20 x 15 cm. Handsewn with pink cord.

• **Summary:** One of the first pages states: "Recipes from 'The Only Place in Peking.'" The Nellie Wong Tea Shop, Peking, China. Addition copies of this book for your friends may be had from my little store 1226 Amsterdam Avenue, or from my printer." Signed: Nellie C. Wong.

The page titled "Explanatory notes" states: "Soy bean sauce and ginger are universally used in China for seasoning. Soy bean sauce in many instances takes the place of salt."

All of these supplies may be obtained in New York City at the Chinese Grocery, Quong Yuen Shing and Company, 32 Mott Street, Chinatown; The Cathay Tea Garden, 164 East 86th St.; Yeong's Restaurant, Broadway and 48th St.; or the College Inn, Broadway near 124th St.

This booklet contains 28 recipes, printed by the American Rehabilitation Committee in New York. Has a Chinese coin knotted into the binding cord.

2657. Y.W.C.A. 1927. *Chinese cook book*. Peking: Young Women's Christian Association. 41 p. 23 cm.

• **Summary:** In the section on "Soups," (p. 3) is a recipe for Egg soup which calls for "Soy sauce (Chiang yu)" and "1 teaspoon epicurean powder (Ajinomoto powder, a Japanese

powder procurable in bottles).”

On the same page, the recipe for Spinach soup calls for “Bean curd diced (1 piece 3 in. square). Add salt and chuang yu to 4 cups of boiling water... Be careful not to break the bean curd by stirring.”

A recipe for “Bean curd soup” (p. 6) begins: “Buy *hsin tou fu* (new / fresh bean curd less than 6 hrs. old that has not been pressed into cakes)” [i.e. fresh soymilk curds].

In the chapter on “Meats” (p. 12), the recipe for Shredded beef calls for “Soy sauce” and “Black chuang yu.” The recipe for Meat-vegetable dish to be served with Shao ping (p. 14) calls for “Tou Fu Kan (Dry bean curd [pressed tofu], 5 flat cakes, 2 inches in diameter).” The recipe for Spiced mutton (p. 14) calls for 2 tsp. “Soy bean paste.”

On pages 39-41 is a “Vocabulary” with three columns: Name in English. Romanization of Chinese name (Wade-Giles) with accents. Name in Chinese characters. Soy related words: Bean curd–*tou fu*. Bean curd (dry)–*tou fu kan*. Bean curd pickled–*chiang tofu fu*. Soy bean paste–*hei chuang*. Soy bean oil [sic, sauce] (black)–*hei chuang yu*. Soy sauce–*chiang yu*. Address: Peking, China.

• **Summary:** Contents: Introduction. Methods used for the quantitative estimation of amylase and protease, a formula to determine digestibility, and precautions in the use of Van Slyke’s method. Enzymes found in *Aspergillus oryzae*. Conditions influencing enzyme production. Properties of protease from *Aspergillus oryzae*. Properties of amylase from

Aspergillus oryzae. Disinfectants for preserving the amylase solution of *Aspergillus oryzae*. General summary.

“There are at least four large manufacturing industries in Japan, in the manufacturing process of which *Aspergillus oryzae* is of the first importance... The total yearly quantities of these products are approximately as follows: Sake (rice wine) 4,500,000 ‘koku’ (=813,000 kilolitres). Shoyu (soy sauce) 5,000,000 ‘koku’ (=902,000 kilolitres). Miso (soy cheese [paste]) 450,000,000 ‘koku’ (=1,690,000 kilograms). Shochu (distilled alcoholic liquor calculated as 95% alcohol) 220,000 ‘koku’ (=39,700 kilolitres).” Address: Chemical Lab., School of Fishery, Hokkaido Imperial Univ., Japan.

2667. Houck, Bertha Anne. 1928. Gastronomic adventures. *Los Angeles Times*. May 13. p. K12.

• **Summary:** About the many restaurants of foreign-born Americans visited by the writer in Los Angeles. “The last compromise which foreign groups make to the customs of an American city is in their food.”

Chinese restaurants are found on San Pedro street, south and east of the Plaza. “A vegetable soup is safe to start with, being a watery, peculiar dish with strange and delightful vegetables and soya bean curd it. Each dish is prepared to be eaten with rice as American eat bread, for soya bean sauce, which is used extensively, is too strong to be pleasant without it.”

“Japanese food is similar to Chinese, but, because of the Buddhistic laws against the taking of life, no meat except fish, is eaten. As with the Chinese, soya is the important flavoring. Suimono, a bean-curd soup, a broiled fish and an omelette, or boiled chestnuts and rice, form the typical Japanese dinner.” Japanese restaurants are “found in the Japanese section on First street, east of Los Angeles street, or on Weller street, just south of First street.”

2668. Grey, Egerton Charles. 1928. *The food of Japan*. Geneva: League of Nations, Health Organization. 161 p. May. Index. 22 cm. [82 ref. Eng; fre]

• **Summary:** Detailed information and analysis. Contents: Preface. 1. Quantity of food in Japan: Exports, imports, production and consumption of food in Japan in the year 1925. 2. Quality of food in Japan: Definition of quality. 3. Distribution of food in Japan: Natural and artificial distribution. 4. Chemical composition of Japanese foods as consumed: Methods of analysis. 5. Chemical composition of Japanese food as purchased. Appendices: I. Literature relating to the chemical and physical properties of the food of Japan, with list of authors. II. Food materials and the plants and animals serving as sources of food in Japan.

Table 7 (p. 25) shows the amounts of major foods consumed in Japan. The percentage of the total food consumed is: Rice 50.83%, barley 10.15%, potatoes 8.63%, wheat 6.63%, soy bean 4.76%, other beans 3.71%, other cereals 3.24%, fish 1.72%, seaweed 1.23%.

On page 54, the author discusses the “Alkalinity of the ash [of foods]. This figure is of considerable importance as indicating the capacity of the food material to produce alkali in the body.” On pages 61-111 the author lists the nutritional composition of all major Japanese foods, grouped by food type: 1. Cereals and cereal products. 2. Legumes, pulses, and legume products. 3. Roots, greens, and other vegetables. 4. Mushrooms and seaweeds. 5. Fruits, nuts, and seeds. 6. Vegetable oils. 7. Other vegetable products. 8. Dairy products. 9. Eggs. 10. Meat and animal fat. 11. Fish. 12. Condiments, beverages, etc. The name of each food is given in both English and French, usually with a brief explanation.

In a table (p. 65-69), in category “II. Legumes, pulses, and legume products,” the section titled “Fresh legumes” includes (p. 64-65): Edamame (Soy bean in pod) = *Fève de soya en cosse*. The section titled “Dry legumes (pulses)” includes (p. 64-67): Azuki (Small red bean) = *Petit haricot rouge*. Dainagon (Small red bean) = *Petit haricot rouge* Ao daizu (Soy bean [with green seed coat]) = *Fève de soya*. Kuro daizu (Black soy bean) = *Fève de soya noire*. Shiro Daizu (White soy bean) = *Fève de soya blanche*. Rakkasei (Pea nut) = *Pistache de terre*.

The section titled “Bean products” includes (p. 66-69): Aburage (Fried-bean curd) = *Pâte de haricots frite*. Aka miso (Soy-bean paste) = *Pâte de fèves de soya*. Gammodoki (Fried-bean curd) = *Pâte de haricots frite avec mixture*

d’algues marines. Kinako (Soy-bean powder) = *Poudre de fèves de soya*. Kori tofu = *Pâte de haricots séchée*. Namaage (Fried-bean curd) = *Pâte de haricots frite*. Natto (Fermented soy bean) = *Fève de soya fermentée*. Sarashian (Red-bean powder) = *Poudre de haricot rouge* [Sarashi-an from azuki beans]. Shiro miso (White soy-bean paste) = *Pâte blanche de fève de soya*. Tofu (Soy-bean curd) = *Pâte de fèves de soya*. Tofu kasu (Soy-bean residue) [okara] = *Déchets de fèves de soya*. To nyu (Soy-bean milk) = *Lait de fève de soya*. Yuba.

Note 1. This is the earliest English-language document seen (May 2012) that contains the word *gammodoki*; it refers to deep-fried tofu burgers, or that contains the word *namaage*, which refers to deep-fried tofu cutlets.

Also: Mushrooms and seaweeds includes (p. 73-75): Arame, Asakusanori [Asakusa nori], aonori, hijiki, kanten, kombu, mozuku, ogonori, tororo kombu, wakame. Fruits, nuts and seeds includes (p. 77): Asanomi (Hemp seed), Goma (sesame, white and black). Vegetable oils includes (p. 79): Daizu yu (Soy bean oil) = *Huile de fève de soya*.

Condiments includes (p. 92-93): Hamana natto [fermented black soybeans]. Kiriboshi (Dried daikon). Misozuke [miso pickles]. Narazuke. Shoyu [soy sauce]. Takuan (Pickled radish). Umeboshi (pickled plum) = *Prune confite*. Beverages includes (p. 92-93): Amazake. Mirin (fermented rice). Sake (Rice wine).

For each food, the following values are given in both English and French: Water, protein (N x 6.25), fat, carbohydrate, ash, calories, alkali value, total nitrogen, water-soluble nitrogen, phosphoric acid (anhydrous), sodium chloride (salt), water-soluble ash, water-insoluble ash, alkalinity due to soda and potash, alkalinity due to lime and magnesia, calcium oxide, ferric oxide, factor for converting to dry food.

Note 2. In Japan, the typical person is well aware of which foods are alkaline (*arukari-sei*) and which are acidic (*san-sei*). The alkaline foods are generally considered more healthful and health-protecting. For the alkaline values given by Grey for many basic Japanese foods, see SoyaScan Notes. 1991. Sept. 20.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term “soy-bean paste” to refer to miso.

Note 4. This is the earliest English-language document seen (June 2009) that uses the term “Edamame” to refer to [green] soy beans in their pods.

Note 5. This is the earliest English-language document seen (Feb. 2004) that uses the term “kori tofu” to refer to dried-frozen tofu.

Note 6. This is the earliest English-language document seen (Dec. 2006) that uses the term “pickled plum” to refer to umeboshi salt plums.

Note 7. This is the earliest English-language document seen (Nov. 2011) that uses the term “Hamana natto” to refer to fermented black soybeans.

• **Summary:** Printed in bold letters across the bottom of this display ad: "Make sure of the original Worcester [sic, Worcestershire] sauce! Say 'Lea & Perrins, please.'" An illustration at the upper left shows a waiter (standing) looking down at a gentleman seated, with a table napkin in both hands. Address: [England].

2673. Buckley, Francis. 1928. Great names in the history of English Glass. V. Thomas Betts. *Glass (Redhill, Surrey, England)* 5(7):299-300. July. [1 ref]

• **Summary:** Thomas Betts' accounts show that in 1753 he made "1 Pr. [Pair] Cut Soy Cruits." In 1755 he made "1 P. Cutt Soy Cruits" and "3 Soy Cruits Stopt [Stoppered]."

Glass cutting and engraving was introduced to England in about 1718, and that business was first conducted by expert Bohemians hired for that purpose by the London Glass-sellers. One of the first Englishmen to gain fame as a glass-cutter was Thomas Betts of London. In 1738 we first hear of him at a shop in Bloomsbury, where he started business as a glass polisher or grinder of glass for mirrors. Shortly after 1738 he took to the more delicate cutting of table glass using machines; we find him at the King's Arms Glass Shop, Charing Cross. At first he wisely employed a Bohemian glass cutter, but by 1744, when this man unexpectedly deserted him, Betts had been initiated into the practical side of artistic glass-cutting. When he died in 1767, his reputation as a glass-cutter had already begun to spread.

Note: This document contains earliest date seen (Feb. 2004) for soy cruets. Address: [England].

2674. Oota, Kiyoshi. 1928. Shôyu no bôbai-ryoku to kagaku

kôzô ni kansuru shiken [Relation between the antiseptic action and chemical structure of shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 5(12):914-29. (Chem. Abst. 23:1697). [16 ref. Jap]

2675. Togano, Meiji. 1928. Shôyu, miso oyobi kyarameru seizô-hô [Production methods for shoyu, miso, and caramel]. *Kojo Kenkyu-kai, Sokki-roku (Factory Research Society, Collected Notes)* No. 38. 46 p. July. [Jap]

• **Summary:** On this document, Kôjô Kenkyu-kai is translated as "Japan Workshop Committees Association;" They published this lecture. The author's last name is romanized as "Tsugano."

2676. Wu, Hsien. 1928. Nutritive value of Chinese foods. *Chinese J. of Physiology, Report Series* No. 1. p. 153-86. July. Issue title: Metabolism. [7 ref. Eng; chi]

• **Summary:** The nutritive value of many Chinese foods (water, protein, fat, ash, crude fiber, carbohydrate, calories) is given (with the English name, scientific name, and name in Chinese characters), including the following: wheat gluten, sesame seed (p. 155), yellow soy bean, black soy bean (large or small), green soy bean, soy bean sprout (yellow or green), soy bean flour, soy bean curd, soy bean dregs [okara], bean curd (doufu-gan, boiled in salt and spices and partially dried), oil skin ([yuba], from boiled soy bean milk), bean curd skin ([yuba], dried, or rolled like bamboo), soft bean curd, soy bean milk (p. 156), smoked bean curd, sheet bean curd, fermented bean curd, pickled bean curd, soy bean (fresh) (Characters: hair + bean = mao tou), wild soy bean, red gram bean (red small bean, *Phaseolus mungo* [azuki bean], p. 157), cucumber pickled in soy bean paste (p. 175).

Condiments: Thick soy bean paste, thin soy bean paste, fermented soy bean, fermented bean (dried), thin soy bean sauce (white), thick soy bean sauce (white), thin soy bean sauce (black), thick soy bean sauce (black), soy bean sauce ("chemical"), sweet flour paste (p. 176).

Table 4 (p. 180) gives the calcium, phosphorus, and iron content of some Chinese foods in percentages of edible portion, including the following: Wheat gluten, job's tear, yellow soy bean, black soy bean, red gram bean [azuki], green soy bean (fresh), soy bean flour, soy bean milk, bean curd (Southern style and Northern style).

Table 5 (p. 182) lists foods as sources of vitamins A, B, C, or D, including the soy bean (an excellent source of vitamin B).

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word "doufu-gan" (or "doufu gan") to refer to Chinese-style firm tofu. Address: Dep. of Biochemistry, Peking Union Medical College, Peking, China.

2677. Oshima, Kokichi. 1928. Shôyu kôji daiyô-hin toshite no kani kanzô ni tsuite [Liver of crab as a substitute for

shoyu koji]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 6(1):21-24. [Jap]

Address: Hokkaido Teikoku Daigaku, Suisan Senmon-bu, Kyoju Nôgaku hakase, Japan.

2678. Good Housekeeping. 1928. Confidence creates sales: Everywoman's magazine. Every manufacturer's market (Ad). *New York Times*. Sept. 24. p. 10-11.

• **Summary:** "Ask any of the more than 1,600,000 progressive *Good Housekeeping* families what monthly page in the magazine serves them as a Buying Directory. They will reply out of their satisfactory experiences: '*Good Housekeeping's Index of Guaranteed Advertisements!*'"

"Herewith we present a list of advertisers in October *Good Housekeeping*..."

The category "Food products" includes Grape Nuts, Kellogg's All Bran, La Choy Chinese Food Products, Lea & Perrins' Sauce, etc. Address: New York, Chicago, Boston, Detroit, San Francisco.

2679. Dyson, G. Malcolm. 1928. Mould food of the Far East. *Pharmaceutical J. and Pharmacist (London)* 121:375-77. Oct. 20.

• **Summary:** Discusses *Aspergillus* molds, soya sauce or shoyu, shoyu-koji, tane-koji, the shoyu-yeast (a strain of *Zygosaccharomyces*), the sodium salt of glutamic acid (which imparts a meat-like flavor to these purely vegetable preparations), *aji-no-moto*, red miso and white miso (*shiromiso*), natto, the protein-splitting powers of the enzymes secreted by the molds mentioned above.

Red soya cheese is a type of tofu. The ripened curd is immersed in a brine and the maturing is finished by a purple mold—*Monascus purpureus* (Went.)—which imparts a red color to the finished tofu.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "Red soya cheese" to refer to fermented tofu. Address: Ph.D., A.I.C.

2680. Dorsett, P.H.; Morse, W.J. 1928. Agricultural explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon (Log—unpublished). Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished typescript log. Illust. Partially indexed. 28 cm.

• **Summary:** Also called the "Log of the Dorsett Morse Expedition to East Asia" and (by the National Archives) "Dorsett-Morse Expedition to the Far East, 1929-31," this is one of the most important documents ever produced on soybeans and soyfoods. Covering the period from late 1928 until 1932, it consists of 17 volumes of typewritten unpublished manuscript plus handwritten notebooks.

The two explorers, who were gone on the expedition for a little more than two years, initially planned to be gone

for about three years. They took 3,369 photos of which 95% appear in the report; the original prints are pasted on the pages, each with a number and a caption. The first negative number is #43196 (p. 238) and the last is #46514. The last numbered page of the report is #8818, but most of the index pages are not numbered and some special reports at the end of the main report each start with page 1.

The first quarter of the pages (to about page 2,500) are indexed, using 4 separate indexes. The only original and 2 microfilm copies were at the American Soybean Assoc. (St. Louis, Missouri), however as of Aug. 2011 they are on permanent loan to Rare and Special Collections at the National Agricultural Library (Beltsville, Maryland)—which also has 7 photograph albums that accompany the 7 log books. A list of the missing pages has been compiled. One photocopy of a microfilm copy is at the Soyinfo Center (Lafayette, California). One microfilm copy is at the National Archives in Washington, DC, in Records of the Bureau of Plant Industry, Soils, and Agricultural Engineering, Record Group 54. See: "National Archives Microfilm Publication No. M840. Expedition Reports of the Office of Foreign Seed and Plant Introduction of the Department of Agriculture, 1900–1938." Rolls 16-20, volumes 56-73. These microfilm rolls may also be available for viewing or duplication at one of the various regional branches of the National Archives (e.g. San Bruno, California).

A brief itinerary of the trip is as follows: 1929 Feb. 18—The party of 5 people leaves Washington, DC, for Los Angeles by train. It consists of Morse, his wife Edna, their daughter Margaret (age 7), Dorsett, and his daughter-in-law Ruth (Bobbie; the widow of Dorsett's son, she served as Dorsett's secretary and general helper).

March 1—They sail from San Francisco to Yokohama on the S.S. *President Grant* of the Dollar Steamship Lines. March 29—Arrive in Yokohama, proceed directly to Tokyo, establish headquarters with rooms at the Imperial Hotel, and hire an interpreter, Mr. Suyetake, who works with them for the next 2 years. May 21—The Morses go to Hokkaido, the Dorsetts to Kyoto, by sleeper train. Morse returns to Tokyo.

Aug. 17—The entire party arrives in Hokkaido and establishes headquarters in Sapporo to study soybeans. Oct. 8—Leave Hokkaido for the Northeast Provinces, then arrive in Tokyo on Oct. 15. Oct. 22—Arrive in Keijo (Seoul), Korea, then take many side trips. Note: 1929 Oct. 29—Great Depression begins in USA with stock market crash. Dec. 8—Return to Japan via Kyushu, then to Tokyo to study soyfoods. They buy and photograph many!

1930 April 1—Travel by steamer to Dairen, Manchuria, where they set up headquarters. Dorsett very sick from April 11 to June 11; taken to a Japanese hospital in Dairen, he almost dies of double pneumonia. Morse does the work of both men and does not inform USDA of Dorsett's critical condition. June 24—Morse takes a quick trip to northern Korea, via Mukden and Antung (Tan-Tung), to look for

Zoysia grass.

July 1—Returns to Manchuria via Mukden. July 21. Dorsetts leave for Peking by train; Morses and Mr. Suyetake stay in Dairen. Aug. 21—Morse party travels to northern Korea, staying in Heijo (Pyongyang / P'yongyang); takes a 4-day side trip to Seoul. Sept. 28—Morse returns to Dairen, Manchuria.

Oct. 19—Morse party leaves Dairen, arriving in Peking the next day. Nov. 9—Morse party returns to Dairen. Nov. 30—Morse arrives in Harbin, north Manchuria, then passing through Mukden, returns to Dairen. Dec. 18—Morses leave Dairen for Japan, passing through Kobe on Dec. 21 and arrive in Tokyo on Dec. 23.

1931 Jan. 12—Travel to Kyoto, Himeiji, and Tatsuno Shoyu. Jan. 16—Visit Okazaki and Hatcho miso. Jan. 17—Return to Tokyo. Feb. 17—Morse party leaves Tokyo by boat for the USA, arriving in San Francisco on March 4. March 15—Dorsett party leaves Peking for Tientsin, Shanghai, and Hankow. March 27. Dorsetts sail from Shanghai to San Francisco.

Note 1. The title of this report is puzzling since the expedition never went to Taiwan, Singapore, Java, Sumatra, or Ceylon. It was proposed several times that they visit these places, but the plans did not work out.

Note 2. This is the earliest log (unpublished) seen (Oct. 2001) that mentions soy. Address: Agricultural Explorers, USDA, Washington, DC.

2681. Ohki, Shinzo. 1928. Re: Introducing William J. Morse to Noda Shoyu Co. Letter to Mr. Shinzaburo Mogi of Noda Shoyu at 133 Onden, Aoyama, Tokyo, Nov. 2. 2 p. Typed, without signature (carbon copy). Typed. Bound in Log of Dorsett Morse Expedition to East Asia, p. 51-52. [Eng]
• **Summary:** “This is to introduce you to Dr. [sic] W.J. Morse of the Bureau of Plant Industry, U.S. Department of Agriculture. Dr. Morse has been investigating soybeans for a number of years and has written a book entitled ‘Soybeans with Dr. Piper’ [sic, ‘The Soybean’], which book I presented to you before you left the United States... I wish you would direct him to Noda Shoyu Company and show him the wonderful plant your company is operating... He also wishes to visit some company manufacturing Tofu.”

Note: Mr. Ohki's company makes fermented, Japanese-style shoyu in Indiana. On the next page (p. 52) of the Log, in a similar letter to Noda Shoyu Company in Noda, Japan (with the same date, translated from Japanese into English), Mr. Ohki notes: “When I visited your factory in 1917, I was greatly impressed by the magnitude of your plant, as well as the improved machineries [sic] you are using.”

Note: This is the earliest document seen (Sept. 2011) concerning the Dorsett-Morse Expedition to East Asia. Address: Oriental Show-You Company, Brewers-Packers-Distributors, Columbia City, Indiana.

2682. Kinoshita, Asakichi; Isawa, Shinobu; Tanigawa, S. 1928. Shôyu to tamari no setchû jôzô shiken [Intermediate method of brewing, shoyu and tamari]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 6(4):277-89. [Jap]
Address: Jozo Shikensho. 1. Gishi; 2-3. Joshu (Assistant).

Address: Jozo Shikensho. 1. Gishi; 2. Kenshuin; 3. Joshu.

2699. Oshima, Kokichi. 1928. Shin gyo-shôyu ni tsuite [A new fish shoyu]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 23(4):2-6. [Jap]
Address: Hokkaido Teikoku Daigaku, Suisan Senmon-bu, Kyoju Nôgaku hakase, Japan.

2700. Babinski, Henri (Ali-Bab). 1928. *Gastronomie pratique: études culinaires suivies du Traitement de l'obésité des gourmands* [Practical gastronomy: Culinary studies aimed at treating the obesity of gourmands. 5th ed.]. Paris: Ernest Flammarion. 1281 p. 29 cm. [Fre]*

• **Summary:** The author (whose pseudonym is Ali-Bab) refers to soy, Worcestershire, catsups, tabascos and other such frequently bought condiments as "sauces violentes" which mask out all other flavors.

2701. Babinski, Henri (Ali-Bab). 1928. *Gastronomie pratique: études culinaires suivies du Traitement de l'obésité des gourmands*. Huitième ed. [Practical gastronomy: Culinary studies aimed at treating the obesity of gourmands. 8th ed.]. Paris: Ernest Flammarion. 1281 p. 28 cm. [Fre]
• **Summary:** In the chapter titled *Pâtes. Légumes secs. Légumes verts* is a recipe (p. 874) for *Soja au jus* which calls for 1,000 gm soy sprouts (*germes de soja*), 100 gm veal or poultry, 40 gm butter, 40 gm white wine and salt and pepper (to taste).

In the chapter on *Salades* (Salads), after the recipe for Salad of salsify are two notes (p. 957): In the same spirit, one can prepare salads of artichoke hearts, of *crosnes* (an edible tuber), of soy sprouts (*germes de soja*), etc.

One can also add relish to a salad with a little Worcestershire sauce, to taste.

Various editions of this book were published but all those from 1928 on have the same number of pages (1283 p.): 2nd ed. 1912. 3rd ed. 1923. 5th ed 1928. 8th ed. 1950. 9th ed. 1967.

The *Joy of Cooking* (1963, p. 542) states that the author "refers to soy, Worcestershire, catsups, tabascos, and other such commercial condiments as 'sauces violentes,' which mask out all other flavors." Note 1. We have been unable to find the page on which this statement appears.

Note 2. The author, whose real name was Henri Babinsky, was of Polish ancestry, born in 1855 in Paris and died in 1931. The 1st edition (314 p., 20 cm) was published in 1907 by the same publisher in Paris. The 2nd edition (636 p., 26 cm) was published in 1912.

2702. Ducceschi, V. 1928. *La soja e l'alimentazione nazionale* [Soya and the Italian national diet]. Milano, Italy: Francesco Vallardi. x + 246 p. (Biblioteca Encyclopaedia Vallardi). [117 ref. Ita]

• **Summary:** Contents: 1. Introduction. 2. Natural history of the soybean. 3. Chemical composition of soybean seeds. 4. Biological value of the nutrients contained in soybean seeds. 5. Foods furnished by the soybean and their digestibility: Whole soybeans, soy oil, whole soy flour, bread made with soy flour, pasta, soy milk and cheese (Il latte ed il formaggio di soja [tofu]), fermented products (sauces; natto, miso, koji, soy sauce {called *shoyou* or *soyou* in Japanese, *tsiang-yeou* in Chinese}). 6. Medical and therapeutic applications of the soybean. 7. The economic problem of soybeans. 8. Conclusion.

Note 1. This is the earliest Italian-language document seen (April 2012) that uses the words *shoyou*, *soyou*, or *tsiang-yeou* to refer to soy sauce.

Note 2. This book's large bibliography contains more errors than any other soy-related bibliography ever seen. Address: University of Padova, Italy.

2703. Hikosaka, Itarô. 1928. *Hompô shôyu-gyô no hattatsu to sono rôdô mondai: Noda rôdô sôgi no ichi kenkyû* [Development of Japan's shoyu industry and its labor problems: A study of the great Noda strike (1927-28)]. Noda: Tamotsu Kato. 44 p. Series: Noda Rodo Daisogi Shiryo Shusei. Reprinted 1973 by Ron Shobo in Nagareyama, Chiba prefecture, Japan. [Jap]

2704. Lewis, Norman. 1928. *Samples, demonstrations and packaging: Their use in advertising*. New York: The Roland Press Company. vii + 250 p. See p. 215. Illust. Index. 22 cm. • **Summary:** In Chapter 19, "Designing the regular-sized package," the section titled "Packages of all kinds" states (p. 214-15): "The La Choy Assortment Package is made up of individual packages of ingredients used in the making of chop suey and other Chinese dishes." Address: Vice-President, Chappelow Advertising Co., author of "How to Become an Advertising Man".

2705. Maliareffsky, G.I. 1928. *Preparation of Chinese soy bean sauce in North Manchuria. Vestnik Manchzhurii (Manchuria Monitor)* No. 1. p. 11-12. English edition. [Eng] • **Summary:** Combined with the Russian text, this 10-page document contains 15 black-and-white photos. Discusses the process, technology, and equipment used to make fermented soy sauce in Manchuria in the late 19th and early

20th centuries. Photos show: Materials used. The Li-tung Company at Fushiatien. Boiler house with vats where beans are dried for fermenting. Earthen pots containing corn 'miso' during fermentation. Coopers shop where vats are made. Rye for making into koji. Grinding stones for crushing rye koji. The wood press. Address: Harbin, Manchuria.

2706. Matsuoka, Komakichi. 1928. *Noda dai rôdô sôgi* [The great Noda strike]. Tokyo: Kaizosha. 415 p. [Jap]*

• **Summary:** This is the most detailed account ever written of the strike against the Noda Soya Sauce Co., today's Kikkoman.

2707. Matsuoka, Komakichi. ed. 1928. *Noda sôgi no shin'in keika oyobi genjô. Kaisha no kodai ?? ni kyôkô no sen?? o ??su* [The Noda strike]. Japan: Nihon Rodo Sodomei Kanto Rodo Domeika. 24 p. Series: Noda Rodo Daisogi Shiryo Shusei. Reprinted in 1973 by Ronshobo in Nagareyama, Chiba prefecture, Japan. [Jap]*

2722. *Japan Advertiser*. 1929. Farm experts talk to Pan-Pacific Club: W.D. Morse and T.H. Dorset [sic, P.H. Dorsett] are here to study agricultural conditions. April. 13. [Eng]

• **Summary:** At this talk in Tokyo, Morse notes that has been working at the USDA on the soybean and other Oriental crops for 22 years. He is interested in their utilization and adaptation. Soybean cultivation in the United States has increased tremendously during the last ten years. One of Morse's principal tasks in the Orient is to find soybean varieties with a low oil content, which will not produce soft pork.

"I doubt if we will ever use the soy bean as you use it here. We are using the soy sauce; we have a Japanese who has established a factory, and his shoyu sauce is becoming quite popular all over our country. He is also canning little bean sprouts, as we can peas and beans."

Note 1. Reprinted in the Log of the Dorsett Morse expedition to East Asia, p. 628-29. The Japanese date on this article is Taisho 13, first month, 9th day.

Note 2. The Japanese man to whom Morse is referring is probably Mr. Shinzo Ohki of Oriental Show-You Company in Columbia City, Indiana. The "bean sprouts" he made were mung bean sprouts.

2723. Dorsett, P.H.; Morse, W.J. 1929. Soy sauce (shoyu) in Japan, China, and Manchuria (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 655 (16 April 1929). "A representative of

a Shoyu Sauce Company called on us and wished to give us a demonstration of a new process of soy sauce manufacture. This company had developed a chemical compound which when added to the regular soy sauce doubles the amount and makes an excellent soy sauce.” However, in exchange, the company wanted the Americans’ endorsement to use in advertising. He was politely refused.

Page 847 (May 2). Visited the soy sauce and rice wine experiment station [*Jozo Shikensho*] at Nishigahara. Met Prof. Dr. K. Kurono, who was said to be in charge. His young assistant took them through the soy sauce factory and rice winery. “We were able to get considerable data about the making of soy sauce as all the various steps involved were in operation and we were able to obtain seed of the soybeans and wheat used especially in making soy sauce.

Page 1222 (May 27). Dr. Ito made arrangements for Morse to visit a large soy sauce factory on the outskirts of Sapporo, Hokkaido. The Tomoe Shoyu Factory consisted of several large buildings covering several acres. Morse was shown through the entire plant. The wheat and soybeans are grown in Hokkaido, but each consists of a mixture of varieties; samples were sent to the USA. This factory uses the most modern machinery and methods. “In one of the large vat rooms more than 120 vats were counted in which the wheat and bean mash [*moromi*] is cured for about 18 months. The mash from which the soy sauce was pressed out is sold as cattle and hog feeds around Sapporo. The manager was interested in the possibility of selling soy sauce in the United States.” A photo shows the outside of the factory’s headquarters in Sapporo.

Note 1. This is the earliest English-language document seen (July 2011) that contains the term “bean mash” or the term “wheat and bean mash.” The latter almost certainly refers to *moromi*.

Page 3341 (24 Dec. 1929). “Today [in Tokyo] Morse and Suyetake went to call upon soy sauce and natto manufacturers for the purpose of getting acquainted and also if possible to arrange for getting still and motion pictures of their places, equipment, and operations.”

Page 3499 (9 Jan. 1930). They got six good photos of steps in the making of soy sauce at the Noda Shoyu Co. It is probably “the first time that such a picture has been made.” “Detailed notes and descriptions of these soybean products will be found in the special report on soybean and soybean products which is a part of this report.”

Page 4341 (March 11). A photo (neg. #45026) shows numbered specimens of various ingredients (in bottles) used in the manufacture of soy sauce, including soybeans, wheat, soy mash [*moromi*], malt from curing tub, soy sauce, soy sauce oil, and a small wooden cask. Purchased in Tokyo.

Page 4356. Photo (neg. #45033) of “a small quantity of mash left after the sauce has been pressed out. It is known locally as ‘shoyu kasu.’ It is used for feeding hogs and cattle and also for a fertilizer.”

Page 4357 (March 17). “About 11 a.m. we went to the Yamasa Shoyu Factory at 576 Nakano-machi, Tokyo, Japan. There we met Mr. S. Yamaguchi, the manager, who allowed us to make pictures in the factory culture room and storage and curing sheds.”

Pages 4358-4366. Photos (negatives #45034-42) of Yamasa Shoyu Sauce Factory in Tokyo. 1. Hydraulic press with thin bags for pressing out the sauce. 2. Factory interior, incl. cookers, pump, large casks. 3. Interior of wheat roasting and preparation room, with roaster, pile of small [*koji*] trays, huge wooden rafters. 4. Interior of culture room, with lines of small boxes [*koji* trays] on both sides. 5. Large iron double-boilers in which soy sauce is cooked [*pasteurized?*]. 6. Storing and aging room containing 4 rows of 16 casks each, taken at level of rim of casks. Each cask is about 8 feet across and 8-10 feet deep. The company has 8 such rooms and all are kept at full capacity. 7. Storage and curing shed (same room), taken from ground level. 8. Pile of “roasted wheat mixed with bacterial germs for shoyu sauce.” Note 2. Actually, this contains soybeans and *koji* mold spores, about to be put into trays to make *koji*. Morse failed to understand these two basic facts. 9. Small wooden casks “ready for filling with shoyu sauce.”

Page 5649-50 (28 Aug. 1930). Heijo, Chosen [Pyongyang, North Korea]. Morse visited the branch office of the Grain Inspection Office of the Neian Nando Prefecture to learn about soybeans. Last season (1 Nov. 1928 to 1 Nov. 1929) some 263,090 bags of soybeans (of 2 bushels each) were inspected and shipped out from various points in the prefecture. “The Noda Soy Sauce Co. obtains most of its soybeans from here. The beans are shipped entirely to the Main Island [Honshu, Japan] for miso, soy sauce, and natto. Note 3. Chosen has been a Japanese colony since 1910.

Pages 6339-43 (3 Nov. 1930). In Peiping [Beijing], China. After tiffin they visited the Lan Hsin Chai “soy sauce, soy jam [*chiang / jiang*], and pickle” factory of Mr. Wang in the outer city to the southwest—not far from Hsuan Wumen Street. It is about 300 years old and many of the large earthen glazed jars are the same age as the establishment.

Note: This is the 2nd earliest English-language document seen (Nov. 2011) that uses the word “jam” to refer to *chiang / jiang*.

Pages 6341-45 (negatives #46157-61) show photos of this factory. 1. Side view “of one of a number of old Chinese lever soy sauce presses.” 2-3. Other views of soy sauce press, with jar in foreground. 4-5. Many large earthen jars, some covered with reed grass matting, in outdoors compound / courtyard.

Page 6802 (16 Dec. 1930). At Dairen, Manchuria, Morse met Dr. Kato at the Central Laboratory of the South Manchuria Railway Co. Concerning Japan, Dr. Kato said Ajimoto [a type of HVP] was made from wheat proteins, not soybean proteins. However, in and around Kyoto a product named Soyamint was very similar to Ajimoto but was made

(2) Vol. 11 p. 6341

(1) Vol. 11 p. 6341

from soybeans.

Pages 7008-09 (21 Jan. 1931). In Tokyo, Morse visited the Institute of Physical and Chemical Research, where he met Dr. U. Suzuki, Prof. of Biological Chemistry at Tokyo Univ. "With reference to Soyamint, Dr. Suzuki advised that it is a soy sauce substitute—one half chemical and one-half fermentation" [i.e., a mixture of equal parts HVP and

fermented shoyu].

Pages 7035-36 (24 Jan. 1931). In Tokyo, Morse "learned that soy sauce is prepared in nearly 12,000 establishments throughout the Japanese Empire and in addition it is made in private homes, especially farm homes. When 5 koku [1 koku = 47.6 gallons or 180 liters] (liquid measure) of soy sauce are made, a permit must be obtained from local authorities. Various sections in Japan are noted for brands of soy sauce such as Noda, Chiba Prefecture, for its "Kikkoman" and 'Higeta' soy sauces. In the Kwansei [Kansai, Osaka-Kyoto] district the 'Marukin' soy sauce is made while in the Tatsuno district [in western Japan's Hyogo Prefecture] the light colored [*usukuchi*] soy is made. The various brands are made in slightly different ways regarded as trade secrets by the various companies. Many experiments by chemical laboratories are being conducted to make artificial soy sauce and also to shorten the period of fermentation.

"Considerable quantities of Japanese soy sauce are exported, China being the chief market. Recently America and Europe have made increasing demands. In shipping to some countries, especially America, condensed soy sauce is exported, then water added and bottled."

Pages 7066-67 (30 Jan. 1931). In Tokyo, Morse has been trying for some time to locate the company that makes Soyamint. Finally, Mr. Suyetake found that it was made by the Japan Fertilizer Co. Morse visited the main office and met one of the directors, Mr. Koshiro Horie, who said that "his company supplies 65% of the commercial fertilizers used in Japan. One of the principal by-products of the manufacture of fertilizers is used with soybean oil meal in producing an artificial soy sauce. The process of manufacture is more or less secret so that it is not possible to visit the factory. As yet 'Soyamint' is not on the market in large quantities as it is of only recent manufacture. It is said that soy sauce can be made in slightly over one month with this process, allowing one month for curing. It has quite a different flavor from that of soy sauce and it may take some time to establish it on the market. It can be produced much more cheaply than the ordinary soy and being cheaper may help it to take more quickly with the poorer classes." Mr. Horie gave Morse some literature about Soyamint and promised to send samples of two grades of commercial products which differ principally in specific gravity. Address: Agricultural Explorers, USDA, Washington, DC.

2724. Morse, W.J. 1929. Re: Soybeans and Japan. Letter to R.A. Oakley, USDA, Washington, DC, April 27. 3 p. Handwritten, with signature on hotel letterhead.

• **Summary:** "Have been thinking about writing you for more than two weeks but just couldn't get around to it. Sure do keep busy night and day... As we are sending our first lots of seed, bulbs, etc. in which are many soybeans, adzuki, etc., thought I had better write about the planting.

"Before leaving Washington, I explained to Mrs.

Donavan about taking small samples of each number as it came for our sample cases. All of the soybeans can be grown at Arlington Farm [Virginia] even if they are not planted before June 20.” He gives planting instructions for the adzuki beans, mung beans, cowpeas, hyacinth beans (*Dolichos lablab*), jack beans and sword beans; they “can be planted at the Sandhill in Columbia, South Carolina, and also at McNeill, Mississippi.”

“This trip has more than opened my eyes on the soybean plan. Soy sauce, the green vegetable bean, and possibly miso are the only products now used extensively in the Orient that have possibilities in the United States as foods. The oil industry, of course, will be our great development... I just saw an article in one of the daily papers here where soybean oil meal led all fertilizers used in the Japanese Empire and is the largest imported one... The main object in the Orient as I see it is to obtain as many varieties as possible to fit in our diversified conditions and then work out the other problems so they fit in with the sections.

“I have taken about 500 feet of motion picture films with the DeVry which Dr. Pieters bought for me and have had very good results.”

Location: National Archives, College Park, Maryland. Record group 54—Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup—Div. of Forage Crops and Diseases. Series—General Correspondence, 1905-29. Box 93—Morse-Napier. Folder—Morse, W.J.-#4 F.C.I.

Sent to Soyfoods Center by Jacob Jones of Purdue Univ., Aug. 1998. Address: The Imperial Hotel, Tokyo, Japan.

2725. Morse, W.J. 1929. Re: Impressions of Tokyo, Japan. Letter to Lena and John Morse (his parents), Washington, DC, May 10. 10 p. Typed, without signature (carbon copy).
• **Summary:** “Dear Folks, Well things have been going so fast since I last wrote that I hardly know where to begin and so much that to tell it all would take a book, seems to us that there is always some festival going on, a holiday or something.

“On May 5 was the boy’s festival and one sees fish, paper or cloth, flying from houses where there is a boy.” Describes a visit to an experiment station to see the manufacture of soy sauce (experiments carried on in a small factory size) and many journeys in the Japanese countryside. Morse is struck by the beauty of the countryside, temples, gardens, and flowers, and by the strong smells in villages from the “manure pits” containing well-rotted night soil (human excrement). Signed: Will, Edna and Margaret—Morse, is wife and daughter. Address: Imperial Hotel, Tokyo, Japan.

2726. Dorsett, P.H.; Morse, W.J. 1929. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea),

Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Pages 1009-10 (14 May 1929, Tokyo). “Copied from Mr. Morse’s diary. In the afternoon we went to Matsuzakaya store to look over bean products and as a result we secured seventeen different soybean products. We found that they had 20 different forms of miso, a product which we think may have possible value at home.”

Page 1053 (16 May 1929, Tokyo, Japan). A photo shows a natural sized picture of a small wooden box of miso. The Japanese name is given but is illegible.

Page 1054. “Natural sized picture of a small wooden box of miso. Native name: “Kansai miso.” It is made in the Kansai district [the Kyoto-Osaka area] and is used in making miso soups (neg. #43659).

Page 1068. Photo of a “small wooden box of ‘Edomiso’ [Edo miso] which is made in the Tokyo District. Miso which is quite salty is used in making soups. In the city, miso soup is used for breakfast, which in the country miso soup is used for lunch and supper.”

Page 1070. Photo of a small wooden box of “Shiromiso” [shiro miso], meaning white miso. “This form contains rice and is used in making miso soup.”

Page 1202 (26 May 1929, Sapporo, Japan). Mr. Morse visited the Hokkaido Agricultural Experiment Station at Koton. Mr. Takatsugo Abiko explained that “The soybeans grown in Hokkaido are used entirely for food purposes such as natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans.”

Page 2004 (29 July 1929). Morse visited the Saitama Experiment Station at Urawa, Saitama prefecture. Met Mr. Tadashi Hashigawa, who is in charge of the soybean work of this prefecture, which is third in soybean acreage in the Japanese Empire. His main work is developing varieties to be used for making soy sauce, tofu, miso, and natto. This station grows about 50 varieties, nearly all yellow-seeded and medium in size.

Page 2445-46 (19 Sept. 1929). Visited the Tokachi Branch Experiment Station in Hokkaido. Met Mr. Seiji Kawase and Yoshio Fujine. 60% of the crops grown in Hokkaido are legumes; of these, field beans are first, followed by soybeans, then field peas. The Tokachi district is very well adapted to soybean culture. There are five grades of soybeans plus a special grade for beans that will be used for soy sauce, miso, etc. Of the 1,837,325 bushels of soybeans produced in Hokkaido, 58% is exported [to outside of Hokkaido] and 42% is consumed in Hokkaido as follows: Miso 9%, soy sauce 9%, seeding 6%, tofu and other products 18%. In 1923 Hokkaido was Japan’s leading soybean producing region with 17% of the nation’s production, followed by Ibaragi [Ibaraki] 5%, Saitama 5%, Nagano 4%, Kumamoto 4%, Aomori 4%, Niigata 4%, etc. Address:

Agricultural Explorers, USDA, Washington, DC.

2727. Dorsett, P.H.; Morse, W.J. 1929. Tofu and other soybean products in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 1051, 1056 (16 May 1929). Tokyo, Japan. A photo shows: “Nearly natural sized picture of a package of dried bean curd or tofu. Native name is ‘Koya tofu.’ The fresh bean curd is first frozen and then dried. This dried form of curd is used in general cooking with vegetables and meats.” The front label on the rectangular package is attractive (neg. #43661).

Page 1057. A photo shows: “Section of a large bamboo culm [the round, hollow stem] which has been transformed into a package for holding (for sale commercially) vegetable pickles. The handle is of kudzu vine. The stopper is of cedar [hinoki], *Cryptomeria japonica* (neg. #43662).

Page 1059. “Slightly larger than natural sized picture [photo] of a package of roasted soybeans imbedded in very small rice flour cakes. Beside the package are some of the beans in the rice cakes. This article of food is known as ‘Mame taro’ [as written on the label]. The skin of the bean is dyed green. These are eaten as confections and may be had at all confectionary stores” (neg. #43664).

Page 1060. “Natural sized picture of rice flour cakes in which are imbedded small black seeded soybeans. Native name is ‘Mameiri abura age kaki mochi.’ Meaning roasted beans on fried rice cakes” (neg. #43665).

Page 1064. Two packages of mungbean noodles or vermicelli obtained from the Matsuzakaya Department Store. The vermicelli is known in Japanese as ‘Tomen’ [sic, Harusame] (neg. #43669).

Page 1065. “Natural sized picture [photo] of a sample of sugared soybeans (native name ‘Sato Daidzu’) and of a sample of roasted soybeans (native name ‘Nori-mame’ or daidzu) over which, during the last stage of roasting, finely cut [nori] seaweed is scattered. Both products are used as confections and are to be had at all confectionary stores” (neg. #43670).

Page 1067. “Natural sized picture of roasted soy beans imbedded in very small rice flour cakes. The skins of the beans are dyed green” (neg. #43672).

Pages 1201-02 (26 May 1929). While visiting the Hokkaido Agricultural Experiment Station at Kotoni, Sapporo, Mr. Morse notes: “The soybeans grown in Hokkaido are used entirely for food purposes, such as natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans.” Address: Agricultural Explorers, USDA, Washington, DC.

2728. Dorsett, P.H.; Morse, W.J. 1929. Hama Natto and Daitokuji Natto in Japan and salted soybeans in Peiping, China (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 1053 and 1055 (16 May 1929). Tokyo, Japan. A photo shows: “A little more than one-half sized picture of a box of Natto—native name ‘Hama Natto.’ It is made in the Hamamatsu District [Shizuoka Prefecture, central Japan]. It is known as dry natto. The beans are soft and of a flavor like dill pickles. The beans are eaten as a relish. D. & M. #246” (neg. #43660).

Note 1. This is the earliest English-language document seen (Nov. 2011) that contains the term “Hama Natto” (unhyphenated, regardless of capitalization); it refers to a type of traditional Japanese fermented black soybeans.

Pages 3229, 3230, and 3231 (10 Dec. 1929, Kyoto). Contains long lists of the vegetables and fruits seen in the Kyoto morning market. “We got two nice soybeans, one a fine large black one, the other as nice a yellow one as we’ve seen.”

“We then went to a Natto manufacturing place near an old temple known as Daitokuji. Here we tried out a kind of natto [Daitokuji natto = fermented black soybeans] which we think might take with the American people, also miso, both are different from any we have previously seen. A detailed account of the manufacture of these products is to be found in our special report concerning the soybean and its products.”

Note 2. This is the earliest document seen and the earliest English-language document seen (Nov. 2011) that mentions Daitokuji as a place that manufactures fermented black soybeans in Kyoto, Japan, near the old temple named Daitokuji. Daitokuji is a Rinzaï Zen Buddhist temple in northern Kyoto. Here “Daitokuji natto” have long been made as both a seasoning in the vegan diet of the monks and as a well-known souvenir for tourists.

Page 3231. “We left Kyoto on the 10:14 p.m. train and are due to arrive in Tokyo about 9:00 a.m. tomorrow morning, Wednesday, December 11, 1929.” Pages 3469 and 3483 (8 Jan. 1930). Tokyo, Japan. A photo shows: “Box of dried form of Natto sold under the name of ‘Hama-natto.’ Purchased at the railway station of Hamamatsu, Japan, December 11, 1929. This form is only made in the Hamamatsu district. Eaten as it is, when one drinks tea. Box 7½ inches long and 4¼ inches wide. D. & M. #3442” (neg. #44743).

Page 3484. “Box of soybean ‘Natto’ purchased from a Natto factory in Kyoto, Japan, December 10, 1929. Native name ‘Tsubunatto’ [Tsubu-natto; slightly crushed natto] or

'Daitokuji' Natto. This is a dried form of Natto, commonly known as 'Hamanatto,' and is only made in Kyoto and Hamamatsu, Japan. The name 'Daitokuji' Natto is taken from the Daitokuji Temple, of which a priest first made this product. Generally eaten when drinking tea. Box is 7 inches long and 4 inches wide D. & M. #3071" (neg. #44744).

Page 3486. Box of Natto, known as 'Hamanatto,' purchased at a small store in Tokyo, Japan, December 24, 1929. This is a dried form of Natto and is made in Hamamatsu, Japan. Hamanatto is eaten when one drinks tea. Box 6 inches wide; 7½ inches long. D. & M. #3073" (neg. #44746).

Page 6264 and 6274 (24 Oct. 1930). Peiping, China. P.H. Dorsett. A photo shows: "Soja max. Salted soybeans... Life sized pictures. Dry form, D. & M. #47531; moist form D. & M. #47530. Dry form consists of small flat black beans cured like string natto and then dried. Moist form, soybeans cured like string natto" (neg. #46124). Note 3. Natto (stringy natto) is unknown in modern China. The salted black soybeans may well be fermented black soybeans (fermented, salted black soybeans).

Page 6945 and 6946 (13 Jan. 1931). Kyoto, Japan. "Notes by Mr. W.J. Morse... We were taken to the Chemical Laboratory where Mr. Katagiri is doing some work on soybean products, especially soy sauce. Concentrated soy sauce is shipped to the United States in rather large amounts and then diluted and bottled. We were shown a sample of soyamint which is a practical soysauce product and made in about three months. It is said that the soybeans are treated with an acid solution, then neutralized and rice Koji added. After three months of curing, the soy sauce is ready for use.

Note 4. This is the earliest English-language document seen (April 2012) that contains the word "soysauce" (spelled as one word).

"After lunch we went to the Taitokuji [sic, Daitokuji] Temple where the famous Taitokuji Natto [sic, Daitokuji Natto] is said to have been originated by one of the Temple priests more than 400 years ago.

"Mr. Sekkai Ota, one of the temple priests, very kindly explained the history of the dried form of Natto as well as the whole process of its manufacture. This form of Natto will keep indefinitely and is eaten when sprinkled with a mustard sauce or sweet liqueur. The Hamamatsu Natto is made in the same manner but is allowed to dry more."

Page 6947 (13 Jan. 1931). Soybean Natto. Photo shows: "Group at the Kyoto Imperial College of Agriculture: Prof. Matsumoto, Prof. Kamikawa, W.J. Morse, U.S. Department of Agriculture, Washington, D.C. and Mr. Sekkai Ota, Priest of the Taitokuji [sic, Daitokuji] Temple at Mr. Morse's right, who explained the method of manufacture of Taitokuji [sic] Natto. A dried form of Natto originated at the Temple more than 400 years ago" (neg. #46446). Address: Agricultural Explorers, USDA, Washington, DC.

2729. Dorsett, P.H.; Morse, W.J. 1929. Natto in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 1179 and 1180 (25 May 1929). Sapporo, Japan. "Copied from Mr. Morse's diary:..." "After our visit with Dr. Ito we went to the Natto Laboratory of which Dr. [Jun] Hanzawa is in charge. We were given bulletins regarding the history, making and varieties of Natto, and served bottles of different sizes of Nattokin [Natto bacteria] (liquid pure culture) for the making of different kinds of Natto. We were then shown the various forms of Natto and taken through the various rooms and given detailed information on the various steps involved in the production of natto."

Page 1202 (26 May 1929). Sapporo, Japan. Mr. Morse visited the Hokkaido Agricultural Experiment Station at Koton. Mr. Takatsugo Abiko explained that "The soybeans grown in Hokkaido are used entirely for food purposes such as Natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans."

Pages 2003 and 2004 (29 July 1929). A letter from Mr. Ryerson dated 3 June 1929 noted that at least some of the colored motion pictures were good. "He wrote as follows: 'The last material received from Vitacolor was a great improvement. The azalea scenes were gorgeous.'"

"We were deeply grieved to note in the same letter the following paragraph concerning Dr. Galloway: 'Dr. Galloway has had to give up and go home. He will be leaving for a cooler section within a week. His nerves have gone back on him and he is facing the same siege that he had 10 years ago, much to the regret of all of us.'"

Mr. Morse added: "A visit was first made to the Saitama Experiment Station located at Urawa, Saitama Prefecture. We met here Mr. Tadashi Hashigawa, Agricultural Engineer, who is in charge of the soybean work of the Saitama Prefecture, which is the third in acreage of soybeans in the Japanese Empire. The work with soybeans consists mainly of developing varieties for seed to be used in making soy sauce, tofu, miso, and natto. This station is growing about 50 varieties nearly all yellow-seeded sorts with seed of medium size. In looking over these varieties in the trial grounds we found some very excellent varieties that no doubt will have value in the United States from southern Virginia southward. Especially North Carolina, Tennessee, and the upper delta of Mississippi. Mr. Hashigawa promised to send us samples of seed of all the varieties being grown at the station."

Page 3341 (24 Dec. 1929). "Today Morse and Suyetake went to call upon soy sauce and natto manufacturers for the purpose of getting acquainted and also if possible arrange for getting still and motion pictures of their plants, equipment

and operations.”

Page 3479 (8 Jan. 1930). Tokyo, Japan. *Soja max.* soybean. Photo of: “Three specimens of ‘String Natto’ [itohiki natto], one package (made of rice straw) unopened; one opened; and the natto without the package. These were purchased at a Natto factory, Tokyo, Jan. 6, 1930. The [rice-straw] packages are 15 inches long and 2½ inches wide. String natto is eaten after having mixed it with a mustard paste” (neg. #44739).

Note: This is the earliest English-language document seen (Jan. 2012) that uses the term “String Natto” to refer to natto or *itohiki natto*, or that uses the word “string” in connection with natto.

Pages 3925, 3929 (18 Feb. 1930). “It is one year ago today since we left Washington for Japan... We have found much of interest in connection with our special line of work, much more even than we expected, and therefore the time has passed all too quickly...”

“Morse and Suyetake searched for soybean products today, and were successful in bringing in a collection of two dozen things slightly or entirely different from those previously secured.”

Page 3929. Photo shows: “Small triangular packages, one as purchased, the other unwrapped. They contain string Natto. The native name is ‘Hygienic Miyako Natto.’ There is at one side a small triangular paper containing dried mustard; this is inclosed [sic] with the Natto. Purchased in Tokyo, Feb. 16, 1930. Soybean dish measures 3 inches across” (neg. #44937).

Pages 6822-23 (22 Dec. 1930). Kyoto, Japan. Mr. Morse’s notes. At the Imperial Agricultural College they met Isawo Namikawa, Professor of Horticulture, who said that Kyoto is noted for several special soy products such as white miso, soy sauce, and natto.

Page 6937 (10 Jan. 1931). Tokyo. Notes by Mr. Morse. Spent most of the day in the Shinjuku district looking up soybean products. “More String Natto in rice straw packages was observed in this section than any we have visited.” Address: Agricultural Explorers, USDA, Washington, DC.

On the ethylester of fatty acid and free fatty acid in shoyu]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 5(5):458-70. May. [7 ref. Jap]
Address: Jozo Shikensho.

2731. Morse, W.J. 1929. Japan travel notes, April 5 to May 17. Handwritten manuscript. 27 p. Unpublished manuscript.
• **Summary:** Morse wrote these notes by hand in ink, early in the trip to East Asia, in a personal unlined notebook that was about 9 cm (3.62 inches) wide and 14.5 cm (5.75

inches) high. Most of the pages are unnumbered, no date or place is given for many of the entries, and the handwriting is occasionally faded or hard to read.

The purpose of this notebook and how Morse used it is unclear. These may have been his field notes that he used each evening as the basis for his official typewritten USDA trip report. Or was this a personal diary in which he kept personal observations that would not become part of the official report? This seems less likely.

This is apparently the first notebook in a series of many that Morse wrote. He kept the notebook after the trip and in April 1986 his daughter, Mrs. Walter A. Thalman (22 Interlaken Dr., Eastchester, New York 10709), who kindly photocopied it for Soyfoods Center.

Here are some quotations: “After a few minutes, we were served tea and cigarettes. Dr. Anda told us where the soybean work is being conducted. The soybeans are grown mostly in northeastern Japan, and specially on the island of Hokkaido where considerable breeding work is being done. At the Imperial Station in Tokyo, much chemical work is being done in the study of the manufacture of shoyu sauce and miso.

“After a visit to the Exper. Station we went to Ueno Park to visit and look over the cherry trees. The trees are in bud and should be in full bloom in about one week. Many of the trees are very large and quite old.”

Food show: The International Food Show was being held in the large building in the park [Ueno]. A small admission fee was charged. The show lasts from April...

“Soybean products: The manufacture of shoyu or soy sauce was shown in several different booths. In one booth, samples of soy sauce made by the various soy manufacturers was shown in various sized bottles and kegs. In another booth, the ingredients used and the method of manufacture were shown. Large yellow soybeans were shown, a bottle of wheat, a bottle or jar of the rice ferment [sic, wheat ferment, koji], the product consisting of roasted wheat, cooked soybeans, after addition of the ferment. Then a jar of the product after the addition of salt and water, and curing for a certain length of time [shoyu moromi]. Then a jar of the sauce was shown which was pressed out of the preceding jar. The cake or ____ which was left after pressing out the liquid was shown.

“Tofu or bean curd: The different materials used in the manufacture of bean curd were shown. 1st were shown a bushel tub of large yellow soybeans (sample sent to Washington as coming from the national food show). 2nd was shown the beans soaking in water. 3rd was shown the bean milk. 4th was shown a jar of magnesium sulfate water used in precipitating the protein of the tofu milk (as it is called in Japan)... salts in precipitating the protein. Then were shown the blocks of tofu or bean curd. Many kinds of bean curd are made, depending on the amount of pressing. The soaking of beans in warm water or longer soaking in

cold water. The amount of the water added in making the bean milk. Tofu is not made in large factories, but in small factories or stores scattered throughout the city. Small dealers or hucksters with the two tubs one at each end of a pole slung over their shoulder. Tofu (blocks) are in these tubs and the huckster has his route passing along blowing a horn which has a peculiar sound. He also passes back in alleys to his customers, leaving his tubs on the street. He cuts off from the slabs of bean curd whatever amount his customer desires."

"Buddha's Birthday. Hibiya Park, Tokyo. April 8, 1929."
 "... it is quite generally agreed that the Buddha was born in the sixth century B.C. The birthday is known as Hanamatsuri or Floral Festival..." Address: USDA, Washington, DC.

• **Summary:** From a correspondent. "In professional wrestling all the wrestlers engaged in any particular contest belong to one or other of the great wrestling companies or schools. In addition to fees, these schools are financed by generous admirers, and even during a match there are frequent interruptions while it is announced that this or that patron has given to a favorite giant or to the school in general, say, 10 bottles of *saké*, five sacks of rice, a barrel of *Shoyu* sauce, a few legs of pork,..."

2734. Morse, W.J. 1929. Letter from Dr. [sic] Morse. Tokyo, Japan, July 20, 1929. *Proceedings of the American Soybean Association* 2:50-52. Tenth annual field meeting. Held 22-23 Aug. at Guelph, Ontario, Canada.

• **Summary:** This letter from W.J. Morse was read before the 1929 convention of the American Soybean Association at Guelph, Ontario, Canada. This is the first annual ASA meeting he has missed. He begins with a brief description of the "Oriental Agricultural Exploration Expedition" headed by Mr. P.H. Dorsett and himself. They plan to study soybeans in Japan first. "The largest soybean section is the Island of Hokkaido which has an acreage of 215,212 [planted to soybeans] and produces 3,184,245 bushels of beans" [yield = 14.8 bushels/acre].

"On our arrival and after establishing headquarters in Tokyo, we first began to look up varieties which we might send back to the United States for the 1929 planting. We succeeded in packing up about 100 lots which are now growing in the variety plots at Arlington Farm [Virginia].

In hunting out this seed, we were very much surprised to find the soybeans listed with the garden beans and as garden beans. For the most part these are grown as green vegetable beans. These sorts are black, brown, greenish yellow, and yellow seeded varieties of early, medium, and late types. Some of the yellow seeded varieties are listed as most suitable for bean curd, soy sauce, miso, natto, and confectionery purposes, such as sweet bean paste, candied beans, roasted beans (like our peanuts), and sugared beans." Note: Azuki beans, rather than soybeans, are usually used to make "sweet bean paste" in Japan.

"It is amazing, the extent to which the soybean is used for food in Japan. Whether or not it can be used in the United States in all of the ways used here is extremely doubtful, that is for human food." There is no doubt that American soybeans will be used mostly to produce oil and oil meal. "It may interest you to know that the beans produced in Japan are used entirely for human food, green manure, and planting purposes. The grain varieties have seed of higher quality than those produced in Manchuria and are not used for oil and oil meal production as [are] the beans of Manchuria. The great soybean oil and meal production of the Orient is confined almost entirely to Manchuria.

"Another thing which surprised us greatly was the extent to which soybeans are used for green manure purposes in the rice paddies." The plants are turned under in the mud after water has been run into the paddies.

"Another extensive use of the soybean is for bean curd, or tofu, which is manufactured only... in small shops scattered about the cities and country villages. This curd is used in many ways, being the meat of the poorer classes. It is used, however, quite generally in making bean-curd soup [miso soup with tofu] which is sometimes served at breakfast and nearly always at supper. The bean curd is peddled about from house to house by men with two tubs suspended from a bamboo pole over their shoulders. The sound of the little horn of the bean curd man as he announces his coming has become quite a familiar sound to our ears as we go along the streets or hear him pass under our office windows.

"Soy sauce is manufactured on a very large scale and is universally used by the Japanese, rich and poor. We have had the pleasure of visiting the large experimental laboratory of an experiment station given wholly to soy sauce and *saké* experiments. In Hokkaido we visited a soy sauce factory, the buildings of which covered several acres. In one of the curing vat buildings where the mash is allowed to cure for about 18 months, we counted ninety large vats.

"Soybeans are used to a very considerable extent for confectionery purposes. The large black, brown, and green seeded varieties are used in making sweet bean paste which is put up in small thin slabs and then done up in very attractive packages. Roasted beans, similar to our roasted peanuts, may be found at nearly all confectionery stores. Roasted beans are also sugar coated and others are sprinkled

with small pieces of sea-weed during the roasting, which gives an appearance of mottled beans (rather a familiar sight to our mid-west farmers). Then, there are the candied beans, that is, beans which have been boiled in syrup.

“Miso and natto are two forms of bean foods in which the beans are first cooked and then treated with certain bacteria [sic, microorganisms]. Miso is used largely in soups which are consumed at breakfast. Both of these foods are quite largely used.

“Other products used for food are roasted soybean flour, soybean vermicelli, pickled green beans in the pod, yuba—the film produced by boiling soybean milk, and dried frozen bean curd.” Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term “dried frozen bean curd” to refer to dried-frozen tofu.

Note 2. This is the earliest English-language document seen (Dec. 2005) that contains the term “roasted soybean flour.”

“Another surprising thing is the very extensive use of the soybean as a green vegetable bean. As early as May, small bundles of plants with full grown pods were seen on the market. At the present time the market is virtually flooded with bundles of plants with full grown pods, the seeds of which are also full grown. The pods are boiled in salt water and the beans eaten from the pods.

“During the past two weeks we have visited large sections near Tokyo where soybeans are grown for green vegetable purposes. The beans are grown in rows 2 feet apart and in 95 per cent of the cases there are other crops planted between the bean rows, such as early cabbage, onions, lilies (for the edible bulbs), late varieties of soybeans, late plantings of soybeans, and other early truck crops.” Address: USDA, Washington, DC.

2735. Nouvelle, Georges. 1929. Les emplois du soja [Uses of soybeans]. *Annales Coloniales (Les)* No. 137. Sept. [Fre]*

2736. Lovell, John H. 1929. Soy bean as a honey plant. *Gleanings in Bee Culture* 57(10):646-48. Oct.

• **Summary:** The soy bean “belongs to the same family as the pea, bean, and clovers, plants which produce their seeds in a legume or pod.”

“Up to the present time it has been cultivated chiefly as a hay or forage crop; but, with our population increasing twenty times faster than the food production, it must soon become important as a food for the human race.

“Soy beans, before they have fully ripened, may be shelled and used as a green vegetable like green peas. A few hills might well be planted in every garden. They may also be canned and used in winter, or they may be sprouted and the sprouts used like asparagus tips, to which, however, they are much inferior. The dried beans when cooked also make a palatable dish, and more than 100,000 bushels are packed annually by American canning factories. As the seeds are

used as a substitute for coffee, soy bean is often called coffee berry.”

“By boiling the crushed beans in water a vegetable milk may be obtained, which may be used in making cakes and custards... From the milk a curd or cheese [tofu] is prepared, which is on sale in the Chinese markets of America. This may be flavored with fruits and jams and made into puddings, and used for sandwiches and luncheon novelties.

“But of all the preparations made from the soy bean, none is more widely distributed or better known than soy sauce, a dark brown liquid which in odor and taste resembles a good meat extract. In Japan alone the annual production is more than 2,000,000 barrels. While it is largely consumed by the Chinese and Japanese it has been introduced into both Europe and America and may be purchased at all Chinese markets.”

There is conflicting evidence as to whether or not soybean flowers are a source of sugar-rich nectar from which bees make honey. The soy bean plants “grown in my garden, had small inconspicuous flowers, with the corolla hardly visible. They were odorless and apparently nectarless and wholly unattractive to bees. Plants under glass from which all insects were excluded formed pods in great abundance which were well filled with large seeds. The soy bean is self-fertile and not dependent on bees for pollination.

“The flowers, the young leaves, and the stems are densely hairy as can be seen in the illustration [photo], but the older leaves are smoother. The specific name *hispida* was evidently selected because of the roughness of the stems. But this coating of hairs is not sufficient to defend the plants from insect attack.”

“If it is honeydew which is stored by the bees from soy bean, then the erratic, scattering and infrequent reports of honey flows would be fully explained.” Note: Honeydew is a sugar-rich sticky substance, secreted by aphids and some scale insects as they feed on plant sap.

“Therefore without more reliable evidence than is at present available, the writer does not think that soybean should be ranked as a honey plant.”

A photo shows the upper part of a soy bean plant with stems, leaves, and blossoms. Address: Waldboro, Maine.

2737. Dorsett, P.H.; Morse, W.J. 1929. Miso in Chosen (Korea) (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** * = Best photos. Page 2965 (14 Nov. 1929). Again visited the Shariin Agricultural Experiment Station near Shariin and met Dr. Takahashi, the director, who demonstrated the common Korean practice of planting soybeans in 4' hills on ridges among the other crops.

"In the afternoon we visited a nearby village and tried photographing scenes and operations in the making of soybean mash balls for the home manufacture of soybean miso and soy-sauce.

Note: This is the earliest English-language document seen (July 2011) that uses the term "soybean mash balls" to refer to what in Korean are called *meju* and in Japanese are called *misodama*.

Photos (p. 2966-67) show women planting soybeans on the side of ridges using a small, short-handled hoe.

Photos (p. 2968-69) show close-up views of "Tenjan [doen jang = Korean soybean jang], soy sauce, and Kanjan [Kanjang = Korean soy sauce]; back row, left to right, two balls of freshly made bean mash, on the right, two made three weeks or more ago, these are pretty well cracked and covered with mould."

Note 1. Each ball is wrapped in straw which is joined and twisted at the top.

Note 2. This is the earliest document seen (April 2012) that uses a Korean name for Korean-style soybean jang (miso), or that uses the word "Tenjan" to refer to Korean-style soybean jang.

Note 3. This is the earliest English-language document seen (April 2012) that uses the word "Kanjan" to refer to Korean-style soy sauce.

Same photo but with a crock of miso in the back. Photo of Korean planting soybeans using a large plow and oxen.

Page 2972 (14 Nov. 1929). Shariin, Chosen [Korea]. * "Pouring boiled soybeans into a wooden mortar for crushing" (neg. #44570).

Page 2973. "Crushing the boiled soybeans in a wooden mortar for use in making Miso balls for the growing of curing bacteria" [sic, koji mold] (neg. #44572).

Page 2974. "A Korean farmer's wife working the mashed soybeans into balls similar to the ones in the background, which are already more than two weeks old and are full of molds and bacteria, which apparently are

necessary for the making of miso" (neg. #44575).

Page 2975. "A nearby view of the new and the old. From left to right, the first two are the newly made miso bean balls and the two with the [rice straw] strings tied about them are more than two weeks old. They are cracked and already pretty well covered with moulds of various kinds and also, presumably, bacteria of various kinds" (neg. #44576).

Note: The various types of traditional Korean miso and soy sauce are made from a dried soybean koji called *meju*, which is prepared in much the same way as Japan's *miso-dama*. The word *jang* is closely related to the Chinese word *chiang* [pinyin: *jiang*]. Traditional Korean miso and soy sauce contain no wheat, rice, barley, or other grain. For details, see *The Book of Miso*, 2nd ed., by Shurtleff & Aoyagi (1983, p. 245-47). Address: Agricultural Explorers, USDA, Washington, DC.

2738. O'Brien, Harry R. 1929. Soy beans for profit: Combines and a cash market cause acreage to mount. *Country Gentleman* 94(11):19, 120-21. Nov.

• **Summary:** "While soy beans have been known in this country for 125 years, it was about fifty years ago that they were first grown in North Carolina as a farm crop and about 25 years ago when they were first introduced into the Middle West. In 1917 it was estimated that perhaps 500,000 acres were being grown for all purposes. Since then the acreage has increased annually until in 1928 around 3,000,000 acres were being grown in twenty or more states. Rapid as this growth may seem, it has been handicapped by difficulties of harvesting and lack of a commercial market for the beans.

"But within the past two years the situation has been radically changed" because of the combine harvester and the new cash market provided by the Peoria Plan and A.E. Staley. "These things I learned when late in the past summer I drove my car for more than 1200 miles through the Midwest to get the details of what was stirring in soy beans... There are soy beans everywhere, I found."

A star performer in many roles, "Soy beans offer another cash crop for the farmer. They are about immune to chinch bugs and the corn borer. Planted in corn, they shade the ground and protect the corn from the chinch bugs.

"Then there is the use being made of soy beans in industry, as beans, as oil, as meal. The oil is expressed out of the beans by the same process used with cottonseed. A ton of beans yields roughly from 1600 to 1700 pounds of cake or meal and from 250 to 300 pounds of oil.

"The beans are usable for coffee substitutes, soups, baked beans, confections, meat substitutes, vegetable casein, vegetable milk and cheeses. There are now several factories in this country making soy sauce. I know of one plant making chocolate out of soy beans.

"The oil is suitable for use in soap stocks, enamels, varnishes, paints, rubber substitutes, linoleum, waterproof goods, celluloid, explosives, glycerin, salad oil, lard

substitutes and edible oils.

“Soy-bean meal, in addition to use as livestock feeds, is used for flour, diabetic foods that are supplanting gluten flour, infant foods, macaroni, breakfast foods, fertilizers and adhesive glue. Much of the glue used in furniture veneering is coming from soybean meal.

“Such are some of the qualities of this many-sided farm legume.” The author then gives five reasons why soy beans have made such rapid growth in the past ten years: 1. Farmers have tried them and liked them, and the news has spread. 2. The influence of the agricultural colleges, experiment stations, extension services, and county agents. Experiments have been conducted on varieties, and methods of growing and feeding. 3. There have been “certain focal points where a few farmer pioneer enthusiasts grew them for seed and from these points the acreage has spread in concentric circles. There are a dozen of these points.”

4. Improved harvesting methods; “and this is a story that is tied up with that of another focal point, Christian County, Illinois, where Claire E. Hay was county agent from 1918 to 1928. Hay knew beans from boyhood. When he came to Christian County chinch bugs had been bad for several years. So Hay began boosting soy beans as a means of outwitting the bug.

“Now in Christian County among the biggest growers of soy beans are the Garwood brothers, Frank and Harry. They had heard of combine harvesters being used out West for harvesting and threshing wheat in one operation in the field. They had a hunch that maybe this same machine would work with soybeans. Some Indiana farmers had rigged up a homemade affair that had already been used.

“But the manufacturers were skeptical. Two firms turned them down, refused to sell a combine for such a purpose. But a third did sell, and in 1924 what was possibly the first combine ever used in Illinois for any purpose, surely for beans, came to the Garwood farms and a public demonstration was held.

“To most people’s surprise, the combine worked. So in one day the Garwood brothers had revolutionized soy-bean harvesting. Other growers were quick to seize on the idea, as were wheat and oat farmers too.”

5. The newest development is the creation of a commercial market for soy beans. “Lack of a market was holding back farmers from growing the soys. So a committee of three count agents, headed by Hay, called on A.E. Staley, a feed manufacturer of Decatur, and asked him to use soy beans in his feeds. Staley built an oil mill, began buying beans and a commercial market was opened up.

“Oil mills were built later at Peoria and Bloomington. These mills have bought the beans and thus Illinois has taken the lead in growing them.

“The next step in the story came when along in 1927 Hackleman at the University of Illinois figured out that the marketing of soy beans would be much more stabilized if

farmers could grow them on contract for the mills. He and Doctor Burlison, chief in agronomy, suggested this plan to H.A. Atwood, a feed manufacturer in Peoria. The idea simmered on and several conferences were held.

“In the spring of 1928 Illinois farmers were faced with a wholesale killing out of their winter wheat. A conference was called at Urbana in April to consider what to recommend as an emergency crop, to which farmers, county advisors and feed manufacturers were invited. The advisors said that soy beans was [sic] the logical crop but there was no use to urge them because of a lack of a market.

“Mr. Atwood announced that his firm stood ready to contract at a guaranteed price for a million bushels of beans or the crop from 50,000 acres. A firm at Bloomington was associated with him in the offer.

“Back of the offer was the Grange-League-Federation, representing New York dairy farmers, which farm organization buys its feeds from Mr. Atwood’s firm. The G.L.F. representative said in effect that if the Illinois farmers would grow the beans, the farmers of New York would buy the feed made out of them.

“The outcome was that a minimum price of \$1.35 per bushel was set, based on farm cost-account records from four states in comparison with the price the G.L.F. had been paying for other protein feeds. County advisors circulated blank contracts through Farm Bureau membership lists, and 1344 farmers signed up to deliver beans from 48,444 acres, which, when marketed, totaled about 1,200,000 bushels of beans [24.77 bu/acre yield]. After paying freight and handling charges, the crop netted farmers around \$1.20 a bushel.”

A large photo shows two farmers, each with a team of four horses pulling a piece of farm machinery, on the farm of Finis Fouts, Deer Creek, Indiana. The first is cutting soy beans with a binder. The second, 10-15 feet behind, is drilling wheat for the next crop. Address: Central Ohio.

2739. Dorsett, P.H.; Morse, W.J. 1929. Year’s end in Tokyo, Japan. Early 1930 in Korea (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 3341 (24 Dec. 1929). “Today Morse and Suyetake went to call upon soy sauce and natto manufacturers for the purpose of getting acquainted and also if possible arrange for getting still and motion pictures of their plants, equipment and operations.

“Dorsett worked at the office packing seed and making packages to go in the next outgoing diplomatic pouch...”

“The streets of Tokyo are a-blaze with colored banners, price lists, decorations and gaily dressed women and

children.” All this in preparation for the New Year. “The streets and stores are packed from early morning until late at night.

“At the Matsuya Department store on the Ginza, they have a spruce Christmas tree in the stairway well which looks to be fully... 50 feet or more in height. It is really very attractive and beautiful.”

Page 3369 (31 Dec. 1929). “Introduction cards were finished on the 1,003 samples of soybeans secured from the Suigen Agricultural Experiment Station, Suigen, Chosen [Korea]. These samples showed a wide range in size, color and shape of seed, and also in the color of the hilum. Some most excellent and interesting varieties are included in this collection.

“One of the most interesting is a very small seeded yellow sort, the seed being about the size of a mung bean. This is the smallest seeded variety of soybean we have ever seen and it should prove valuable as a bean for sprouting. We are in hopes that in this collection will be found the high oil strains for our oil mills and low oil strains for our hog and cattle feeders in the United States. All in all we consider the collection the most interesting and valuable in our exploration work thus far.” Address: Agricultural Explorers, USDA, Washington, DC.

2740. Chung, H.L.; Ripperton, J.C. 1929. Utilization and composition of Oriental vegetables in Hawaii. *Hawaii Agricultural Experiment Station, Bulletin No. 60*. 64 p. Dec. • **Summary:** Soybeans are discussed as follows: (1) Large or soybean sprouts (*Glycine hispida*) (p. 3-4). Chinese name: Dai-tau-nga. Japanese name: Not given. A photo shows these sprouts, together with “Small or mungo bean [mung bean] sprouts (*Phaseolus aureus*). The stem and root are 3 to 3½ inches long. “The large bean sprouts are prepared daily for the vegetable market in Honolulu. The sprouts are obtained by germinating the soybean” for 4-6 days. “The beans are washed, submerged in water in a container for 24 hours, and then drained. A damp cloth, sack or grass-woven mat is placed over the container. A fresh supply of water is added to the container at 6-hour intervals during the 24 hour period to prevent the beans from heating. In the market the sprouts are kept submerged in water so that they may retain their crispness and succulency.” A recipe is given for “large bean sprouts” with pork.

Green soybeans in the pods (p. 42-43). Chinese name: Chang-wong-tau. Japanese name: Daizu or soya mame. This “is a rather unusual Orient-grown vegetable. Unlike the snap bean, green soybeans are sold in their pods attached to the plant. The plants with their pod-laden branches are tied in bunches of 4 to 10. Each plant is about 15 inches long and has very hairy stems and leaves. The pods also are hairy and are borne in clusters. Each pod contains three to four seeds. The soybean is an all-season crop in Hawaii. It makes its best growth, however, in April. It requires about 75 days from the

date of planting to reach the green-pod stage.”

“*To cook plain.*— Wash one-half pound fresh soybean pods, and boil until they are soft. Season with soy sauce and sugar, and serve in the pod. The beans are removed for the pods when eaten.”

A photo shows two uprooted soybean plants with pods attached.

Other vegetables of interest are also described, each with a photo: Ginger bracts (*Zingiber mioga*). Japanese name: Mioga (p. 12). Mugwort (*Yomogi*, p. 19). Perilla (*Perilla frutescens*). Japanese name: Shiso (p. 20). Cowpeas (*Vigna sinensis*). Japanese name: Sasage. Goa beans (*Psophocarpus tetragonolobus*). “Although the Goa bean, also known as asparagus pea and winged bean, has long been known and used in the Orient, it has only recently been introduced into Hawaii, where it is as yet little known” (p. 40). Chinese name: See-kok-tau. Japanese name: Not given. Note: This is the earliest document seen (Aug. 2006) giving the name “winged bean” as one of the names of *Psophocarpus tetragonolobus*.

Kudzu (*Pueraria thunbergiana*, *P. hirsuta*, *Dolichos japonica*). Chinese name: Fan-kot. Japanese name: Sasage. Oriental radish (*Raphanus sativus longipinnatus*). Chinese name: Loh-bak choi. Japanese name: Daikon. Yam (*Dioscorea batatas*). Also known as Chinese yam, Chinese potato, and cinnamon-vine. Chinese name: Tai-sue. Japanese name: Naga-imo.

In the section titled “Composition” (p. 57-63), tables give nutritional analyses of all foods discussed in this bulletin, including calcium, phosphorous, iron, and “alkalinity” (expressed as cubic centimeters of normal acid solution required to neutralize excess of base per 100 grams of fresh vegetable). The analysis of the green soybeans is with the pods removed. Address: 1. Agronomist; 2. Chemist. Both: Honolulu, Hawaii.

2741. *Gazette (Indiana, Pennsylvania)*. 1929. Soybeans.

• **Summary:** This article seems to be based on a USDA press report of early 1929: “W.J. Morse, forage-crop specialist, Bureau of Plant Industry, U.S. Department of Agriculture, who has been in Japan for several months collecting new varieties of soybeans, reports that to date he has collected more than 5,000 lots, representing every type of soybeans grown in Japan.”

“Samples from every lot of seed collected by Mr. Morse will be planted at the United States experiment farm at Arlington, Va. [Virginia], this spring, and when the seed is harvested tests will be made for oil content. In this way it is hoped that selections may be made which will ultimately develop into varieties with a wide range of oil content.

“Mr. Morse writes that the Japanese use the soybean in a number of ways in their diet. They grind the beans and make flour, they serve the green beans as we would green lima beans, and they cook the dried beans in a manner similar

to navy beans. Besides this, they make soy sauce, soybean curd [tofu], beverages, and bean sprouts from the soybean. He believes that the use of soybeans as a human food in this country will increase steadily.

“Mr. Morse is now spending the winter in Tokio [sic], studying the Japanese methods of utilizing soybeans. While he expects soybeans to grow in favor as a feed for livestock and food for people, he feels that the largest future development of the crop in the United States will be in the utilization of the oil and meal in industry.

“Samples of the seed collected in Japan will be sent to some of the State experiment stations for trial, but will not be available for distribution to individuals.”

2745. **Product Name:** Shoyu.

Manufacturer's Name: American-Hawaiian Soy Co., Ltd.

Manufacturer's Address: Mauka, end Banyan, Honolulu, Oahu, Hawaii.

Date of Introduction: 1929.

New Product–Documentation: Polk Husted Co.'s Directory of Honolulu and the Territory of Hawaii. 1928-29. Note that this may be a new name for American Soy Brewing Co. Ltd., which existed by 1912 on Banyan St.

Hawaiian Japanese Annual & Directory. 1936-37, p. 47. Hirazô Iinuma (from Niigata prefecture), shoyu company, Banyan St. (Box 838), Honolulu. Also, p. 71 lists Tsutomo Kimura (from Yamaguchi) as a worker at this shoyu company on Banyan St. Also, p. 90 lists Seitarô Masuhara (from Tokyo), residing at 30 N. Vineyard St., in “shoyu sales.” But the company whose shoyu he sells is not given. Also, p. 108 lists Shinichi Morita (from Yamaguchi prefecture) as a worker at this shoyu company on Banyan St.

1955 Polk's Directory. Address is now 274 Kalihi in Honolulu. 1967-68 Directory. Listed as American Hawaiian Soy Co. Ltd., 274 Kalihi St. They are under the category of “Soy Bean Products”. This is the first time this category

appears in the Honolulu directories. 1987. Appears in all Honolulu directories up to the present.

2762. Yoshino, E. 1929. [Reports on brewing shoyu]. *Minami Manshu Tetsudo K.K. (South Manchuria Railway Co. Experiment Station)* 14:75-, 95-. [Jap]*

2763. Yoshino, E.; Seki, K. 1929. [Preparation of soy sauce from soybean cake. II]. *Minami Manshu Tetsudo K.K., Chuo Shikenjo Hokoku (South Manchuria Railway Co., Central Research Institute, Report)* 14:21-22. [Jap]*

• **Summary:** As a potential outlet for soybean cake, an attempt has been made to prepare soy sauce. The product brewed from the cake and kaoliang, wheat bran, etc. at 24-32°C for 100 days was comparable to the commercial material. At room temperature the rate of decomposition was too low to be practicable. The yield was improved by the addition of soybean oil.

2764. Yoshino, E.; Seki, K.; Yamamoto, K. 1929. [Preparation of soy sauce from soybean cake. III. Composite Y-type fermentation]. *Minami Manshu Tetsudo K.K., Chuo Shikenjo Hokoku (South Manchuria Railway Co., Central Research Institute, Report)* 14:22-23. [Jap]*

• **Summary:** Koji was prepared from soybean cake and wheat separately, and the fermentation products of different ages were united to form a material of satisfactory color, flavor, etc.

2765. *Directory of the Bureau of Animal Industry (USDA)*. 1929. Meat-inspection establishments, by stations. Corrected to March 1. See p. 34.

• **Summary:** Stations are arranged alphabetically by city. Page 34: “Columbia City, Indiana (Substation of Chicago, Illinois). 110. Oriental Show-You Co.” Note: Lack of an asterisk (*) indicates that they do not do slaughtering. So they apparently buy meat and use it in their food products.

This same company also appears in: Corrected to April 1, 1930 (p. 36). Corrected to April 1, 1930 (p. 36). Corrected to Feb. 16, 1932-1937 (p. 36). Corrected to July 1, 1937 (p. 36), etc.

2766. Ferrée, Christian Johan; Tussaud, J.T. 1929. The soya bean and the new soya flour. London: William Heinemann (Medical Books) Ltd. xi + 79 p. Illust. No index. 22 cm. Revised translation from the Dutch by C.J. Ferree and J.T. Tussaud of *Die Sojaboon en Duurzaam Sojameel*. [29 ref]

• **Summary:** Contents: Foreword, by Sir Wm. Arbuthnot Lane, President of The New Health Society. Preface, by C.J. Ferrée (London). 1. Introduction. Literature. Name of the plant. Origin. Botanical particulars. Assimilative power of the soya plant. Inoculation. Soil requirements. Production and cost. 2. General ingredients of the various Manchurian beans. Composition. The value of soya protein. Vitamin in

the soya bean. Digestibility of the soya bean and its products. 3. Use in China and Japan: Bean sauce, soy, or shoyu, Chinese chiang (paste), tou-fu or beancurd, beans consumed as a table vegetable, bean refuse and bean cake are used as a fertiliser and for fattening hogs, bean oil is used as an illuminant (where it has not been superseded by kerosene), as a substitute for lard in cooking, and as a lubricant for greasing axles and parts of native machinery, miso and natto. First imports into Europe. Exports during the last five years from China and Japan. Imports during the last five years into Europe and America. The increasing rate of its cultivation. Manchuria—Production. Estimate of the world's production of the soya bean. London the principal market. Future importance.

4. America. Australia. South Africa. Other British possessions and protectorates. Java (Dutch East Indies). Europe. 5. Unsuccessful experiments with soya flour. Ordinary soya flour. Extracted soya flour. Dr. L. Berczeller's discovery. The new soya flour. Comparison with other cereal flour and other foods. Comparison in price with other cereal flour and other foods. Comparison in price of soya protein compared with other cereal foods. Comparative analysis of cereals. 6. Soya milk. Vegetable casein. Lecithin. 7. Increase in food value. Savings. Industrial application in foodstuffs. The importance of Dr. L. Berczeller's soya flour for the food industry. Soya flour and the food laws. Uses of soya flour in: Bread, pastry, cake, biscuits, confectionery, sausages, infant foods and food for invalids, cocoa, chocolate, soup cubes, pudding flour. Uses in the kitchen. Soya flour recipes (for flour made using the Berczeller process), soya flour for diabetics, recipes for diabetics.

The Preface states: "In the following pages the writer has endeavoured to give an account of the numerous uses to which the soya bean has so far been put, and to visualise its future service to humanity through the means of a totally new and practical process by which this legume... may in future be used as an important article of food for general consumption throughout every quarter of the globe.

"In compiling the details relative to the soya bean flour, with which this brief summary principally deals, he trusts that he has succeeded in giving sufficient data to enable the reader to fully realise its value as a staple food from the economic point of view, as well as from the more domestic standpoint, so that the important fact may be fully realised that a new foodstuff of a very valuable nature... has now been brought within the reach of all nations to serve them in a most practical manner as an economic article of food."

The book includes statistics on the imports and exports from 1923 to 1927 of "soya beans, soya oil, and soya cake in various countries including China, Japan, England, France, Germany, Holland, Norway, Denmark, Sweden, and USA.

The "new soya flour" is that developed by Dr. Berczeller. This book repeatedly praises that flour. "A few years ago Dr. Laszlo Berczeller, a Hungarian physiologist

in Vienna, succeeded scientifically in finding a method which enables us to prepare from the soya bean a digestible and pleasantly flavoured flour without detracting from its nutritive value, and this method entirely succeeds in preserving all the good qualities contained in the bean itself. Physiological experts and analysts withhold no praise, as the following extracts will show: -" There follow words of praise from: (1) Dr. Alfred Schwicker, M.P., Royal Hungarian State Institute, Central Depot for Experimental Chemistry. (2) Dr. Stefan Weisser, King's Counsellor, Royal Veterinary Physiological Experimental Station, Budapest. (3) Prof. A. Durig., The Physiological Institute, University of Vienna.

Marakujew (1928) estimates the production of soya beans in "Manchuria at 6 million tons at the utmost, the production of the whole of China at 16 million tons, and he is led to this figure by the conclusions of the Economic Bureau of the South Manchuria Railway, which estimates that the Manchurian crop in 1927 amounted to 37.1 million koku (5.88 million English tons), of which 2.6 million tons originated from South Manchuria, 3.3 million tons from North Manchuria" (p. 32). A table (p. 33) gives estimated world production of soya beans from 1923 to 1929 (6.6 million tons, forecast). The leading producers in 1929 (in million tons) are: China 5.250. Japan 0.580. USA 0.250. Java and Dutch East Indies 0.120. Other Asiatic countries 0.400. A soya milk factory was recently established in Denmark (p. 54). Although this book contains a bibliography of 29 references, most are very incomplete.

Photos show: (1) A soybean plant with roots, pods, and leaves. (4) Nodules growing on soybean roots. (5) One pod and seed each from inoculated and uninoculated soybean plants. (7) An immense field of soya beans in Manchuria. (8) Soya beans awaiting shipment, in house-shaped stacks under tarps, at Dairen. (13) Seeds of the most important varieties of soya beans now grown in the United States. (10) Two horses and a farmer cultivating a field of soybeans. (11) Harvesting soya beans. (12) Well selected, clean soybean seeds.

A map (frontispiece) shows where soybeans are cultivated worldwide. An illustration (facing p. 2) shows "Shen-Nung, Emperor [of China] in 2838 Before Christ, called 'The Heavenly Farmer.' Reproduced from a print in a Vienna museum."

One bar chart compares the nutritional composition of soya flour with that of cereals and animal products, and other foodstuffs (p. 13), another compares the calories (p. 46), and a third compares the cost of 1,000 calories (p. 48). Marakujew (probably spelled Marakiev or Marakuyev), in "The Export of Manchurian Soya Beans and its Finance" (1928, in Russian, probably an article rather than a book) "estimates the production of Manchuria at 6 million tons at the utmost, the production of the whole of China at 16 million tons, and he is led to this conclusion by the Economic Bureau of the South Manchuria Railway, which estimates that the Manchurian crop in 1927 amounted to

37.1 million kobu (5.88 million English tons), of which 2.6 million tons originated from South Manchuria, 3.3 million tons from North Manchuria. According to the calculations of this bureau, the home consumption of North Manchuria is something like 40 of the production, viz., 1.3 million tons; the remaining 2 million tons are for export. The exports of South Manchuria were estimated at 1 million tons" (p. 32). Address: London.

2767. Machida, Tatsujirô. 1929. *Rôdô sôgi no kaibô* [An analysis of labor strikes]. Tokyo. [Jap]*

• **Summary:** This book gives special attention to the strike against the Noda Shoyu Co. (today's Kikkoman). The author was a member of the board of the Harmonization Society and was directly concerned with the conciliation of the dispute. Address: Japan.

2768. Sprecher von Bernegg, Andreas. 1929. *Tropische und subtropische Weltwirtschaftspflanzen; ihre Geschichte, Kultur und volkswirtschaftliche Bedeutung. II. Teil: Oelpflanzen* [Tropical and subtropical plants in international commerce; their history, cultivation, and economic significance. Vol. II. Oilseeds]. Stuttgart: Verlag von Ferdinand Enke. See vol. 2, p. 128-70. Illust. Index. 25 cm. [48 ref. Ger]

• **Summary:** The soybean (p. 128-70). Contents: Introduction. Name, place of origin and history. Description of the plant: Systematic, morphology, varieties, selection. General conditions for growth: Climate, soil. Cultivation of the plant: Planting, care. Harvest and storage. Composition and products. Utilization: As a fodder plant, as a coffee substitute, industrial non-food uses, as a food (as a green vegetable, soy sprouts, soy chocolate, soymilk, casein, tofu and soybean quark {*tofu oder Sojabohnenquark*}, natto {*Buddhistenkäse*}, hamananatto, yuba, miso, shoyu or soy sauce {*Sojasauce*}). Production and trade.

Concerning green vegetable soybeans, the author states: "Three-quarter ripe soybean seeds yield a good, green vegetable (*Dreiviertelreife Sojabohnen geben ein gutes, grünes Gemüse*)." Address: PhD, Titularprofessor an der Eidgenössischen Technischen Hochschule, Zurich, Switzerland.

2769. Thorpe, W.A. 1929. *A history of English and Irish glass*. 2 vols. London: The Medici Society; Boston: Hale, Cushman & Flint. Illust. Index. 27 cm. [200+* ref]

• **Summary:** A superb book. Appendix II (p. 308-09) is titled "Thomas Bett's Accounts: From the bills in the possession of Mr. Ambrose Heal, printed by Mr. Francis Buckley, in *Glass*, Vol. V, p. 300 (July 1928)." Entries, starting in 1747, are listed chronologically. At 1752 is the first mention of any cruets cut by Betts. At 1753 we read: "1 Pr. [pair] Cut Soy Cruets. 6 shillings."

At 1755 we read: "1 P. [pair] Cut Soy Cruets. 5

shillings... 3 Soy Cruets Stopt. 7 shillings 6 pence."

On page 309 are some explanatory notes: In 1738 Betts is first mentioned as a cutter of fine glass; he had a shop at Charing Cross [London] called the King's Arms Glass Shop. He died in 1767. "Stopt = with stoppers." "Soy cruets = bottles for soy, a sauce made from beans (Chin. *shi* = salt beans, *yu* = oil)."

In 1677, the word "cruets" or "cruits" was spelled "crewitts" (p. 127).

Volume II of this set consists of glossy photos. Some show "cruet-bottles" (plates 137, 151, 154), but none show soy cruets. Address: The Victoria and Albert Museum, London, England.

2770. Wilson, Sadie Mai. 1929. *What do you know about China? A source book of materials*. Nashville, Tennessee: Cokesbury Press. 266 p. Illust. 20 cm. [56* ref]

• **Summary:** In Chapter 7, "Recipes," the section titled "Home life in China: Dining," states (p. 256): "The Chinese are rated among the best cooks in the world... Vegetables are cut up and stewed in oil (usually [soy] bean oil), or with meat that has first been cut into small pieces."

"Soy-bean sauce is a favorite seasoning."

"It should be understood that the people of China have never heard of chop suey, which is an American concoction."

Page 257: "A more elaborate menu might consist of oranges, water chestnuts, peanuts (fried in oil and served cold), watermelon seeds, rice, salted chicken cold, salted pork, clover leaf and bamboo, fish with rich gravy, shark's fin, and fermented bean-curd soup. In a Chinese meal, the fruits and sweetmeats come first, and if there is soup, it comes last."

Page 258: "Peanut oil, sesamum seed oil, and soy sauce are used instead of butter." Address: Assoc. Secretary of Missionary Education, General Sunday School Board, Methodist Episcopal Church, South.

2771. Dorsett, P.H.; Morse, W.J. 1930. *Visit to the Noda Shoyu Company, Ltd. in Chiba, Japan* (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Pages 3465-67 (7 Jan. 1930). "Today we really got started on our work of looking up and getting information about soybean products. In accordance with plans made yesterday, we left Tokyo this morning (Ueno Station) at 8:15 for Noda-Machi, Japan, where we arrived at 9:45. We went direct to the office of The Noda Shoyu Company, Ltd., of Noda-Machi, Prefecture of Chiba, Japan, makers of the famed Kikkoman Shoyu.

"This company embracing 19 plants, is one of, if not the

largest plants in the world brewing shoyu sauce. According to their literature, Kikkoman Shoyu was first brewed by Mr. Saheiji Mogi, in the second year of Meiwa [sic, Hoei?] (corresponding to the year 1704) in Noda-Machi, Japan.

"We met Mr. Ota, one of the assistant directors, we also met Mr. Hichizaemon [Shichizaemon] Mogi, President and Director, also a Mr. Jutaro Namiki. We spent about 1½ hours with these gentlemen in the office. Then Mr. Ota and Mr. Namiki showed us over one of their large plants. It impressed us as an up-to-date modern institution. We were in the grading and mixing room. They have 30 incubating chambers or curing rooms where the germ on the 50-50 mixture of soybean and wheat mash is grown.

"The cement vats, or aging vats, of which there are 1,500 under one roof, are made of cement and are 12 feet square and about 8 feet in depth.

"In the manufacture of shoyu sauce, this concern uses annually about 20,000 bushels of soybeans, primarily from Manchuria, and also 20,000 bushels of wheat, Japanese grown when available. They import from Australia. This year, however, they are getting their supply of wheat from Canada.

"They have 200 square (about 4 ft. by 4 ft.) hydraulic presses and 200 oblong ones about 4 ft. by 6 ft. They age their shoyu sauce 1½ years in the curing vats."

Page 3466-68. Photos show: (1) Racks of small trays, outdoors, each about 2 inches deep, 18 inches long, and 10-12 inches wide, used to cure soybean and wheat mash [koji] for making shoyu sauce (neg. #44709). (2) A nearby view of the interior of one of the small trays (neg. #44710). (3) Many round bundles of cask stock of spruce, stored outdoors. The wood will be used to make kegs for storing shoyu sauce. A part of one warehouse of the Noda Shoyu Co. is in the background (neg. #44711). (4) A horse pulling a cart on a railroad track. On the cart are bundles of spruce stock that will be used to make soy sauce casks (neg. #44712). (5) A nearby view of portions of ricks or bundles of short pieces of spruce for staves, tops and bottoms of small casks for shoyu sauce (neg. #44713).

Page 3474. A 5 by 7-inch photo (taken Jan. 9) shows: 1. Small bottle (with label) of soy sauce made by Noda Shoyu Co., and materials used in its manufacture. 2. Salt from Formosa. 3. Mixture of boiled beans and crushed roasted wheat with white mold [shoyu koji]. 4. Mixture of boiled soybeans and cracked wheat after one day in fermentation room. 5. Cracked roasted wheat. 6. Roasted wheat. 7. Wheat (Canadian). 8. Soybeans (Manchurian variety). (neg. #44734).

Page 3475. Photo of *Pueraria Thunbergiana*. Kudzu. Five "small packages of kudzu flour purchased in a store in Tokyo, Japan, December 24, 1929. This flour is made from kudzu roots and is used in making soups." Each package is 7/8 inches wide; 3½ inches tall.

Page 3482. A photo shows three identical bottles of

Kikkoman brand soy sauce, each from a different angle so that all parts of the label are visible. Each bottle is 7½ inches tall and 2 inches in diameter, and holds one-fifth liter of sauce. Obtained on Jan. 7 from the Nodashoyu Co. [Noda Shoyu Co.]. D&M item #3074. This company is the largest in the Orient (neg. #44742). Address: Agricultural Explorers, USDA, Washington, DC.

2772. Morse, W.J. 1930. Re: Soybean products collected. Trip to Manchuria and China. Letter to Dr. E.A. Hollowell, Office of Forage Crops, USDA, Washington, DC, Jan. 12. 2 p. Typed, with signature on USDA letterhead.

• **Summary:** "Dear Holly: I have your letter of December 16 with reference to the soybean products and the more I collect over here the less inclined I am to loan them out... In my last such experience, I fitted up a soybean product exhibit for some sort of health food show in New York City and I never did get it back although we had considerable correspondence about it. As I recall I even took it up with the Secretary [of Agriculture] because they wanted it for a permanent exhibit and so I was out a nice exhibit which it took me considerable time to get up. After that I would not let anything go out unless I had several products of the same kind but it cured me of fixing up exhibits for any one or letting out products or pictures that I could not easily duplicate.

"Therefore, even with Dr. Burlison I do not know of any of the products we have in the office that I care to let out..."

"Last week we visited a large soy sauce factory [almost certainly Kikkoman] at Noda-Machi, about a three hours' run from Tokio... They use twenty thousands of bushels of soybeans annually and the same amount of wheat."

"I was rather anxious about the work but as you state if the Arlington [Farm in Virginia] work can be arranged, you and Lee can hold things until I return. I think that this can be arranged so that Lee will not be over-loaded with the work now on hand and the new introductions we are sending in..."

"Dorsett is making pictures of the various [soybean] products as they are collected and making pictures that can not be beat.

"The beancurd, miso and natto factories are mighty interesting and we are getting lots of good data and pictures as well as samples of the varieties of beans used. The beancurd factories are only small places but they are very numerous and each has its own way of making the curd."

Address: Jôzô Shikenjo gishi.

2774. Morse, W.J. 1930. Soybean utilization. *Farmers' Bulletin (USDA)* No. 1617. 27 p. Jan. Revised 1932.

• **Summary:** Contents: Introduction. Soybeans for human food: Dried beans ("The Easycook and Hahto varieties, however, cook fully as soft as other beans." Also used as a substitute for coffee or for salted peanuts), green or vegetable beans ("The Hahto and Easycook varieties have been found especially valuable for use as green beans"), soybean flour, soybean oil, soy sauce, soybean sprouts, soybean vegetable milk ("used so extensively in China." Also mentions the residue [okara]), soybean curd. Soybeans for livestock: For swine, dairy cattle, beef cattle, sheep, poultry. Soybeans for oil: Methods of processing beans for oil, utilization of soybean oil. Soybean meal: Soybean meal for human food, soybean meal for stock feed, for swine, for dairy cattle, for beef cattle, for poultry. Soybean meal as a fertilizer. Miscellaneous uses of soybean meal. Soybeans for hay: Soybean hay for dairy cattle, for beef cattle, for horses and mules, for sheep, for swine, for poultry. Soybeans for pasturage: Swine, sheep, or poultry on soybean pasturage. Soybeans for silage. Soybeans for soilage [green crops for feeding confined animals; a term first used in 1928]. Soybeans for soil improvement. Soybean straw: Feeding value, and fertilizing value of soybean straw.

"Soybean milk in the form of a powder is a commercial product in some European countries, and in parts of the United States it has been used in special feeding cases" (p. 5). "In many cities in the United States having a large oriental population fresh bean curd may be found in the Chinese and Japanese markets" (p. 6).

Photos show: (1) Six men steaming soybeans while making miso in Japan. (2) Muffins made from wheat flour and soybean flour. (3) Making soy sauce in a Chinese courtyard. (4) Grinding soybeans with a stone mill to make soybean milk in China. (5) "Blocks of freshly made bean curd, 'tofu,' as sold in the markets of the Orient." (6) Loading soybean oil in tanks at a soybean oil mill, Harbin, Manchuria. (7) Soybean cakes awaiting shipment at a Manchurian port. (8) Hogs in a field of soybeans. (9) "Pasturing soybeans and corn with sheep is a common practice in the Corn Belt states." (10) Corn and soybean plants growing together for use as silage; a boy is standing by the plants. (11) "A fine growth of soybeans to be used for soiling." Address: Senior Agronomist, Office of Forage Crops and Diseases, Bureau of Plant Industry, Washington, DC.

• **Summary:** This is the 1930 continuation of a superb bibliography of 2,424 citations listed chronologically by year, and within each year alphabetically by author. Part 1, 1929, covers the years 1729 to 1920 and contains 1,655 references. At the end of the last installment (1930) there is a complete author index. Address: Japan.

2776. Potter, Paul. 1930. Soy beans find place in menus of Americans: Oriental countries know their worth. *Chicago Daily Tribune*. Feb. 28. p. 17.

• **Summary:** "Soy beans, utilized for ages in oriental countries in the preparation of numerous fresh, fermented, and dried food products, are gradually finding a place on the American table." Soy bean flour has long been used in diabetic diets and in a gruel for infants allergic to cow's milk. In recent months food manufacturers have begun to make soy sauce, breakfast foods, and edible oil from soy beans. W.J. Morse, who pioneered the soy bean's adaptation to the corn belt, says the 1929 crop is worth \$70 million. Soy bean oil is becoming an important ingredient in the manufacture of soap, paints, linoleum, rubber substitutes, and glycerin.

2777. Dorsett, P.H.; Morse, W.J. 1930. Visit to the Nippon Jojo Kogyo & Co. Ltd. and Mr. Togano in Tokyo, Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Pages 4337-39 (15 March 1930, Tokyo, Japan). "In our study of soy sauce manufacture, we received information about a factory manufacturing an artificial soy sauce. A visit was made to this factory which is known as Nippon Jojo Kogyo & Co., Ltd., 102 Omoto-cho, Koishigawa-ku, Tokyo. We were taken to the office of the President, Mr. Togano, who was a student at the Nishigahara Agric. Experiment Station Soy Sauce Laboratory. Mr. Togano made a special study of soy sauce brewing under Dr. Kurono, Chief of the Soy Sauce Laboratory, and is recognized as an expert on the brewing of this sauce.

"It was learned through Mr. Togano that his method of manufacture is not an artificial one but merely a different method whereby only one-sixth of the time is required in the curing, and less wheat is required. Mr. Togano in his investigations found that by certain changes in the old method of making soy sauce, economy in time or curing and in amount of wheat used could be gained. In the old method, the cracked roasted wheat and steamed soybeans are mixed

and treated with the rice culture. In the improved method the cracked roasted wheat and the steamed soybeans are treated separately with the culture, and then mixed. The treatment of the roasted wheat is a secret process and has been patented in Japan and the United States.

“After the mixing of the treated soybeans and roasted cracked wheat, salt and water are added. This mixture is then placed in the curing vats, and only 20 days of curing are required for a good quality of soy sauce. However, the mixture is left in the tubs for 60 days before being removed for pressing out the sauce. This time is one-sixth of that used by other soy sauce factories, as most of them cure the mash for at least one year and in some cases, a year and a half is allowed.

“Three grades of the ordinary sauce are manufactured by the Nippon Jojo Kogyo & Co. A special brand known as “Marujo Kanro Shoyu” [a brand of saishikomi] is also made. This sauce is much heavier than the common sauce and is made by adding to the soybean-roasted wheat mixture, the ordinary sauce instead of salt and water. Note: This is the earliest document seen (April 1912) that mentions “Kanro Shoyu” or “Marujo Kanro Shoyu” or any type of saishikomi shoyu. Yet the word “saishikomi” is not used.

“The Nippon Jojo Kogyo Co. soy sauce sells much cheaper than that of other factories. A two litre bottle sells for 45 sen, whereas the soy sauce of other companies sells for 60 sen for two litre bottle. This company has four factories in the Tokyo District, and has several more distributed about in different parts of the Japanese Empire. There is also a large factory near Hongkong, China. This company uses about 150,000 koku (750,000 bushels) of soybeans yearly in the manufacture of soy sauce at its four Tokyo factories.

“Mr. Togano asked much about the soy sauce and soybean situation in the United States. He advised that he sells considerable rice culture for soy sauce manufacture in Los Angeles, Chicago and San Francisco. From information gathered, he evidently has looked into the proposition of starting a soy sauce factory in the United States.

“The advertising of products by this firm is the most extensive of any of the firms putting out soybean products we have yet seen in Japan. Attached herewith is a folder used in advertising. The wrestler represents the health and strength of the Japanese people while the cask of soy sauce he is holding represents the health and strength of Japanese foods for the people.”

A label of the company’s Maru-Jo soy sauce (in a wooden keg) appears on p. 4339. A sumo wrestler is holding a large keg of the product over his head. On his right leg is written “miso” and on his left leg, “shoyu.” Address: Agricultural Explorers, USDA, Washington, DC.

2778. Dorsett, P.H.; Morse, W.J. 1930. In Dairen, Manchuria (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea),

Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 4525 to 4526 (10 April 1930, Dairen, Manchuria). “This morning we called at the office of Mr. K. Matsushima and a little later, in company with Mr. Yoshitane Sato of the Bureau of Agriculture of the South Manchuria Ry. [Railway Co.; S.M.R.] we visited the soybean exchange.

“Here, as in all other grain exchanges, of which we have had an opportunity to see everything, pandemonium raged on the floor of the chamber.

“The room looked to be 40 feet or more in width and 75 or so in length, with a gallery extending around the entire room.” Of the 100 members, 60 are Chinese, 30 Japanese and 10 are of other nationalities—Russian, Danes, British, etc.

Page 4526. “From the exchange, we went to one of the research laboratories of the Agricultural Branch of the S.M.R., where we met Mr. Takamori, also the assistant director of the Bureau of Economic Research, Mr. Igarashi. These gentlemen offered to assist in any way possible; both speak good English and understand a good deal. We next visited Dr. Y. Nakanishi, Secretary of the Soybean Oil Association.”

“After lunch we visited a good sized shoyu sauce factory and looked over the plant, including culture chambers and ageing mash vat rooms. They demonstrated for us their method of vat mash stirring by compressed air. It is a simple method. The air passes through a one-inch pipe to the bottom of the tank, as the pipe is moved about over the bottom the air expelled from the pipe forces its way up through the mash, which gives the impression of boiling. The practice appears to be much more effective and easier than the hand or paddle method of stirring the mash which is pretty generally followed.

“The refuse left after pressing out the soy sauce is sold for cattle feed (we understand primarily for hog feeding). It is also resoaked and used for making a much inferior and cheaper grade of soy sauce, for which this concern has quite a demand.”

Page 4541 (15 April 1930, Dairen). In the morning visited Mr. Satoh of the S.M.R. with reference to soybean oil mills and soap factories using soybean oil in Dairen. Arrangements were made to visit the oil mill of the Mitsubishi Trading Co.”

“This Oil Company crushes about 300,000 tons of soybeans yearly, producing about 270,000 tons of bean cake and about 30,000 tons of bean oil.”

Page 4542. “For Japanese trade, where bean cake is used chiefly for fertilizer, and to a slight extent for poultry feed, the cakes are ground into a very coarse meal. Permission was given to take any pictures we might wish within the mills or mill yard.”

Page 4543 (16 April 1930, Dairen). “In the morning

visited the Mangylku Soap Mfg. Co. where crude soybean oil and hydrogenated soybean oil are used in the manufacture of soap.”

“Mr. Satoh suggested that we get in touch with Dr. Satoh, botanist and author of the bulletin [on wild legumes which shows 28 genera and 102 species] as he might be of assistance to us in our collections of wild legumes in Manchuria, North China, and Chosen” [Korea].

Page 4546. “The wild soybean is very abundant throughout this vicinity.” “Mr. Nakatomi assured us of his hearty cooperation in our studies of Manchurian agriculture.”

Page 4558 (21 April 1930, Dairen). “This morning we went to the office of Mr. Satoh of the S.M.R. and found a package of fifteen varieties of soybeans that had been sent to us from the S.M.R. Experiment Station at Kungchuling. This station is the principal soybean breeding station and the varieties sent us represent selected varieties from their 1929 variety test of over five hundred varieties.” A table gives the D. & M. number, varietal name, and use of each of the 15; the three uses are grain, forage, and pasture.

“In the afternoon samples of different forms of soy bean oil cake and oil cake meal were received from Mr. Yoshida, manager of the Mitsubishi Soybean oil Mills.” They are:

(1) “Coarse flakes. Made for export to Japan for cattle feed and fertilizer. Moisture 11%. Protein 44%. Fat 7.5%.” (2) Finely cracked like cracked corn. Made for export to Japan for cattle feed; 10%, 44.5%, 7%. (3) Coarse meal for export to the United States for cattle feed. 9.11%, 45.6%, 7%. (4) Finely ground meal for export to the United States. 9.10%, 45.6%, 7%. (5) Medium coarse flakes for export to Japan for poultry feed. 10%, 44.5%, 7%. (6) Coarse flakes for export to Japan for fertilizer. 11%, 44%, 7.5%.

Page 4565 and 4566 (25 April 1930, Port Arthur, Manchuria). “We then visited the museum and looked over the agricultural exhibits of the Kwantung Province. The Nisshin Oil Mills of Dairen has rather an extensive exhibit of various forms of soybean oil and oil cake. The Manchuria Paint Co. has a very good exhibit of many kinds of paints, enamels, varnishes and plastic paints in the manufacture of which soybean oil was used.” Address: Agricultural Explorers, USDA, Washington, DC.

• **Summary:** Page 36-37. “Pioneers of tofu and konnyaku production in America. A person named Chieto HIRATA, who lived in Sacramento, California, imported konnyaku from Japan. He came to the USA in about 1891. He is one of the old timers who transmigrated Hawaii. A native of Hiroshima prefecture in Japan, he was very clever and business-minded. In 1893 his wife began a company making konnyaku in Sacramento, California. Shortly after that she started making tofu.

“Footnotes: (1). Mr. Hirata is presently engaged in business in Korea. (2) Since the Chinese were the most skilled in making tofu, only recently [in the last 20 years] have Japanese started specializing in its production. There are many who claim to be the first; I am afraid of making any errors.”

2781. Shen, Chennen. 1930. The importance of soybean. *China Critic (The)* = *Chung-kuo Ping-lun Chuo Pao (Shanghai)* 3(18):416-19. May 1. [Eng]

• **Summary:** Contents: Introduction. Domestic consumption of soybeans. Foreign consumption of soybeans. Future prospects.

Soybean, called yellow bean in China, is “cultivated in all parts of the country, but most abundantly in Manchuria. While in 1913 the export of soybean amounted only to about ten percent of the total export and ranked next to silk and tea in importance, it has in sixteen years increased five times in value, risen to twenty percent of the total export and taken the premier place in our export trade! No other commodity has ever experienced such an overwhelming prosperity in such a short time in the history of China.”

“Everybody knows that we Chinese live on rice and wheat. But not everybody realizes that we live just as much on soybeans. The soybean is consumed in large quantities by the northerners as well as by the southerners. Its numerous forms of preparations are common articles of food found in every household. Recent scientific investigations have shown that the soybean satisfies a particular requirement in the Chinese dietary.”

The human body is like a machine. It needs carbohydrates and fats for fuel and motive power, and protein for repairing worn-out parts. A table compares the nutritional composition of soybean, rice and wheat. “It is evident that soybean is entirely different from either wheat or rice. Whereas wheat and rice supply carbohydrates in the form of starch, soybean is mainly the source of protein. It is interesting to note that the poorer class of people in

China consumes very little meat but seems to have sufficient amount of protein. Remembering that every Chinese takes a large amount of soybeans in various forms of preparation, we can readily understand how the protein requirement is satisfied. As soybean contains more than twice as much protein as does any meat and is much cheaper, we can satisfy our protein requirement at one-tenth of the cost of meat."

Exact data regarding soybean production in China are lacking. "The Manchurian crop is more accurately estimated at 5,200,000 tons [probably metric tons] in 1928. The production of soybean in all other provinces has been estimated at 2,000,000 tons by Horvath and 10,000,000 tons by Marakujew [in Russian]. The total exports of soybeans, soybean oil and soybean cake is about 3,500,000 tons, leaving 3,750,000 to 11,750,000 tons for domestic consumption. The consumption per capita is thus 20 to 65 lbs. per year. These two figures at least represent the two extremes. Marakujew's figure is probably nearer to the actual. These 65 lbs. of soybean are used: -"

1. As soybean oil. 2. As soybean milk, "a very popular drink in China," "which is to the Chinese as cow's milk is to the Westerners." The process for making this milk is described briefly and a table compares its nutritional composition with human milk and cow's milk. The composition of the three are "very similar. One of the products of "soybean milk is the pellicula (Cc = Chinese characters given) (doufu-pi [yuba]) which is a thin sheet coagulated on the surface of the milk when it is heated. It is especially rich in protein and fat and used as a table delicacy."

"4. As soybean curd (Cc: doufu), one of "the most universal preparations" of the soybean. "It is relished by the poor as well as the rich. When a coagulating agent like gypsum is added to the bean milk, a thick mass separates out." "It is very similar to meat in chemical composition." A table compares the composition (only protein, fat, and carbohydrate on an "as is" basis) of soybean curd, beefsteak, pork chops, and eggs. "Although the protein content of 'tofu' is only half of that of meats, we see the economy of it even if we have to use a double quantity of it. The solid bean curd (Cc: doufu gan) is more like meat as it contains less water than 'tofu' and is also extensively used in China.

"4. As soy sauce, another popular soybean preparation..." "Other fermentation products like the fermented soybeans (Cc: douchi) and the fermented 'tofu' (Cc: furu) serve similar purposes." Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "fermented soybeans" to refer to these Chinese-style "fermented black soybeans."

"5. As a vegetable. Cooked [green vegetable] beans are also used by the Chinese but not very extensively. Experience has taught us that the cooked whole beans are not so digestible as 'tofu' or other preparations. However, soybean sprouts, obtained by germination in water, are

highly digestible and contains the antiscorbutic vitamin C, which is lacking in the original seed."

"The chief demand for soybean in foreign countries is for the oil and the bean cake." The oil is used for either edible or technical [industrial] purposes and the cake is used as a fertilizer or as cattle feed. "The soybean owes its popularity to its resemblance to cottonseed oil which is widely used in making soap, lard [substitutes] and oleomargarine. The first shipment to Europe was attempted by Japanese in 1908. It was warmly received..."

"Due to its peculiar smell, the raw soybean oil is rarely used in western countries for cooking. But now it is possible to refine this oil and render it entirely palatable to the western taste. It has been put on the market as salad and cooking oils. By the process of hydrogenation, the liquid oil can be transformed into a solid fat, which is an excellent substitute for animal lard" [or butter].

"Thus we see that in a period of twenty years, soybean has extended its usefulness from the Chinese dietary into industries of world-wide importance and is now one of the most valuable agricultural products not only of China but of the whole world."

"In Germany and Denmark artificial milk is regularly manufactured from soybean and sold on a commercial scale. Soybean milk powder is also being manufactured.

"The soybean curd has also a good future, as it can be used to make meat substitutes. Artificial meat has been prepared by a German soybean factory.

"The biggest possibility in the popularization of soybean as a food is the soybean flour. From the bio-chemical point of view, white bread made from the wheat flour is deficient in protein and vitamins. Therefore a substance like soybean should be a valuable addition to the wheat flour. In fact, half a dozen kinds of soybean flour are already on the market in Europe and America."

"The phenomenal rise of the soybean as a universal article is not a matter of accident: It is the result of years of intensive scientific research. We should be thankful that we Chinese are not only the biggest consumer but also the biggest producer of this valuable article. But in the face of keen competition at the present time, we should look out lest this leguminous seed should fall into the same pit as did our silkworm and the tea plant. Up to the present we have been benefited by the researches of foreign countries and also the laboratories of the South Manchuria Railway and the Chinese Eastern Railway, whose immediate interests are not purely Chinese. Are we going to lead the world in soybean production? The future is by no means bright. Already the Chinese soybean oil mills are suffering due to their out-of-date equipment and inefficient process. America is rapidly increasing the acreage for soybean planting. When the American soybean crop is big enough to supply herself and other countries, China will have a difficult battle to fight. China should take an active part in studying and widening

the usefulness of soybean as a food and as an industrial raw material.”

2782. Dorsett, P.H.; Morse, W.J. 1930. Soybean chiang and salted black beans in Manchuria and China (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** * = Best photos. Page 4620 (2 May 1930, Hsiungyaocheng, Manchuria). The South Manchuria Railway agricultural experiment station here is testing about 60 soybean varieties under the direction of Mr. Kaneyasu Hisatake [Japanese name], agricultural engineer. “About 90% of the soybeans planted in this area consists of a greenish yellow variety called *Te-cha-chin* which is used for oil and is also utilized by the farmers for bean curd, miso, and other food purposes.” Page 4641 to 6142 (May 8, Kungchuling, Manchuria). Mr. Kanda [Japanese name] is director of the Kungchuling experiment station. Kungchuling is the center of a very extensive soybean growing section and the experiment station is doing much work with the improvement of native [indigenous/domestic] soybean varieties. Over 500 varieties are under test yearly and more than 2,000 varieties have been experimented with. “The great range in size, color, and shape of the seed was very interesting.” Visited “some Chinese stores where Chinese soybean miso and soy sauce were sold. The Chinese miso is more liquid (like a thin paste) than the Japanese and not ground, but both taste very much alike.”

Page 6252 to 6255 (23 Oct. 1930, Peiping, China). Went to the “pickle factory of Chang Shun Kung, where we got information about soybean jam [*chiang / jiang*], pickles, etc.” Photos taken at the factory of Mr. Chuang Shun Kung: (1) “View across soybean jam and pickle jars covered with matting.” Factory buildings in the background. (2) “Looking along a portion of a line of large earthen jars filled with soybean jam [*chiang*].* These jars hold about 800 cattles of jam.” (3) Same factory. Mr. W.J. Morse standing by the end jar in one of the rows of jars.* (4) “The end and half the length of a dry brick of wheat and soybeans, curing stock for Chinese jam made of soybeans.” This product is used in making soy sauce and three forms of soybean jam or paste. Chinese name *Ton chih* [sic, *Tou chih*] meaning “salted beans” [fermented black soybeans]. Note: This is the earliest English-language document seen (Nov. 2011) that uses the word “jam” or “soybean jam” to refer to *chiang / jiang*.

Pages 6339, 6344 to 6345 (3 Nov. 1930, Peiping, China. P.H. Dorsett’s notes). “After tiffin we went to the soy sauce, soy jam and pickle establishment of a Mr. Wang in the outer city to the southwest. This establishment is some 300 years old and many of the large earthen glazed jars are of the age

of the establishment.” Photos of Mr. Wang’s Lan Hsin Chai Soy Sauce Factory: (1) “View from the northeast corner of the compound just in front of the soy sauce pressing room, looking over the large earthen jars of jam [*jiang*], pickles, etc.” Some jars are covered with reed grass matting or conical lids.* (2) Another view from the southwest corner of the compound.

Note: This is the earliest English-language document seen (July 2003) that uses the term “soybean jam” or “soy jam.” Address: Agricultural Explorers, USDA, Washington, DC.

• **Summary:** Contents: Introduction. Part 2: The relationship between ripening of shoyu moromi and the buffer action (p. 336-39). Part 3: The effect of buffering action on yeasts in shoyu moromi (p. 339-42). Part 4 The effect of buffering action on bacteria in shoyu moromi (p. 432-).

2784. Morse, W.J. 1930. Utilizacion de la soya [Utilization of soya]. *Cuba (Santiago de las Vegas). Estacion Experimental Agronomica, Circular No. 69.* 40 p. May. Translation by Emma L. Sena of USDA Farmers’ Bulletin 1617. [Spa]

• **Summary:** In the introduction, Ing. Francisco B. Cruz, Director of the Agronomic Experimental Station, E.C., praises an imported soy oil named “Aceite comestible de Soya.” A full-page ad for this product (just before p. 36), apparently with the brand name Excelsior, is also shown. Address: USDA, Washington, DC.

2785. *Fortune*. 1930. Soy beans: Which may be glue, milk, cheese, sauce, varnish, axle grease, fertilizer, soap, soup, buttons, artificial leather, enamel. 1(5):102, 104. June.

• **Summary:** Discusses the history of the soybean in various countries. Its uses in the United States are outlined. A plastic named Satolite is used to make combs and buttons. In “Paris there is a cheese factory that makes Roquefort [Roquefort] from soy bean curd.” Soy bean “milk has more proteins than cow milk and little danger of contamination. Its flour contains four and one-half times more fat, four times more proteins, half as much water, and nearly half as many carbohydrates as the flour of wheat. These chemical ingredients make it a food, more interesting, perhaps, than palatable. Though the milk is supposed to be good for one (it arrests cases of retrogression, causes normal growth), it has generally to be drunk sweetened with sugar. Soy bean sauces are better spiced. (For the Chinese taste Lean & Perrins Worcestershire is too hot. The Chinese themselves make their sauces by exposing the crushed bean to sunlight and actually melting it. Certain Korean sauces are thus matured thirty years before they are considered palatable.) But if the

bean's chemical make-up only indirectly contributes to its success as human food, it is nevertheless the basis of the bean's industrial importance. Because of its nitrogen, the bean is valuable as fertilizer and also as poultry and stock feed. And the bean's hereinbefore mentioned oil has proved of value to many a manufacturer of paints, enamels, lacquers, and even explosives."

The Anglo-Chinese Company at Harbin and the Suzuki Mill at Dairen, both of which use chemical solvent extraction, have succeeded in extracting virtually all of the oil from the soybean; Manchuria's traditional crude stone presses were able to extract only about half the soybean's oil content.

"Perhaps the greatest economic and industrial triumph of the soy bean occurred, oddly enough, in Denmark. Until some thirty years ago this pleasant country was more than self-supporting in the production of cereals, especially wheat. But U.S. mass production and low prices made for perilous and in some cases disastrous competition, even in Denmark's home markets. The Danes bethought themselves of raising live stock, imported the soy bean (using the oil for its usual purposes), and used it as feed for their live stock and poultry. Today 70 per cent of Denmark's export trade consists of live stock and animal products: milk, butter, cheese, bacon, ham, eggs, and the like. And for their country's regained economic health Danes give thanks to the soy bean..."

"In the United States the paramount importance of soy bean is still its agricultural use. But it is significant that 75 per cent of the soy bean oil consumed in United States is being used by paint and varnish industries and in manufacture of linoleum, oil cloth, artificial leather. Lesser quantities are utilized in printer's ink, liquid soaps. Few soy beans are imported into this country."

Note: This is the earliest English-language document (Feb. 2007) seen that contains the term "mass production."

2786. Wong, Nellie Choy. 1930. The story of chop suey. *Christian Science Monitor*. July 25. p. 6.

• **Summary:** The true story of the origin of chop suey, which is seasoned with "soy-bean sauce." It was originated in the USA by the chef of Minister Li Yuan Hung when Minister Li was Minister in America. In Cantonese, "chop" means a mixture of everything and suey means "small."

Note: According to the *Oxford English Dictionary*, the term "chop suey" first appeared in English in 1888.

2787. Dorsett, P.H.; Morse, W.J. 1930. Tofu, soybeans in the pod, and soybean sprouts in Peiping, China (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 5431 and 5432 (13 Aug. 1930). "We visited an open street market in the northwestern part of the city this morning." Vegetables include: (1) "Soybeans in the pod, quite abundant." Also: "Pea sprouts. Soybean sprouts." "In the afternoon we went to the Temple of Heaven grounds and got more seed..."

Page 5434. Vegetable market scene. Hei Tan Pai Lou, Peking. Cucumbers, eggplants, soybeans,... displayed on the ground for sale" (neg. #45540). At the same market, photo of bean curd. "This Chinese bean curd looks firmer than the Japanese curd" (neg. #45541).

Page 5435. "Peiping. Square cakes of brown bean curd. The cakes of white curd are put into cold soy sauce and when the combination is brought to a boil the cakes are of a brown color" (neg. #45543).

Pages 5436 and 5437. Four photos taken in an open-air show: "Southern soybean curd, Peiping. This curd appears quite firmer than the ordinary curd. The curd, that is the grain, appears to be finer and is considered much better than ordinary curd. It also sells for more money." (2) "White and brown cakes of soybean curd in a Chinese market." (3) "To the left is a pile of shredded soybean curd, on the right a pile of the sheets of curd from which the shredded curd is made" (negs. #45544-46). Note: Pressed tofu sheets are called (in Wade-Giles transliteration) *pai-yeh* or *ch'ien-chang p'i*. Pinyin: *Qian zang pi*. Tofu is pressed into very thin sheets that look like a 6-to-12-inch square of canvas.

Page 5455 and 5456. Letter dated 14 Aug. 1930 written by P.H. Dorsett in Peiping to W.J. Morse. c/o Yamato Hotel, Dairen, Manchuria. "Yesterday we visited an open street fruit and vegetable market which extends for several blocks along Chien-men [Chienmen] Street. It was surely an interesting experience. We saw bean curd at quite a number of stands, also soy sauce. The curd was in several different forms. The white, in somewhat thinner and smaller pieces, small pieces in different forms fried, also round and square brown cakes which they call dry curd [*doufu-gan*]. It is not really dry but is pressed much dryer than the ordinary curd and can readily be handled without breaking. The brown color, we learned, is the result of putting the curd in cold soy sauce and bringing the sauce to a boil."

Pages 5779 and 5780 (18 Aug. 1930). Letter from Mr. W.J. Morse in Dairen, Manchuria, to Mr. P.H. Dorsett, c/o U.S. Legation, Peiping, China. "Today by mail I sent you all of the negatives of pictures that I have taken up to date. The negatives were sent in two lots—one of the 3¼ by 4¼ and the other of the panoramas. Tomorrow I will send you the field reports to date which may be destroyed after they are copied in the report.

"I am planning to go to Korea for two to three weeks in the very near future to complete our movie story of the soybeans as well as the still picture story. We lack the connecting links—scenes of varieties, fields, methods of culture and harvesting—and I hope to get these if possible in

a short time to complete the whole soybean story of Korea. I also desire to get some data on the growing varieties for you will recall that we did not see the beans growing at all. The Manchurian maturing season soon will be here and again I want to take notes on varieties and make a complete story of the Manchurian soybean. You can rest assured that I am going to collect all possible data, seed and products of the crop. I trust that my allotment holds out for I do not want to miss anything.”

“I regretted very much to learn of Dr. Harvey Wiley’s death [on 30 June 1930] as I knew him very well. Several years ago he came to see me about soybeans for his dairy farms up at Bluemount [Note: After leaving government in 1912, Wiley raised dairy cows became head of the laboratories at *Good Housekeeping* magazine]. I started him with the Virginia as a silage bean and it was a great success. He became quite a soybean man and occasionally came around to talk soybeans with me.

“Your comments on the bean-curd at the Chinese market are very interesting and I hope to be able to see some of these different things when I come down to [China] some time this fall. I doubt if I will find anywhere in the Orient such a collection of products as we picked up in Japan last year. You will note in the field reports being sent you that lately we have stumbled across a few new products and we are always on the lookout for new ones.” Address: Agricultural Explorers, USDA, Washington, DC.

2788. Kellogg, John Harvey. 1930. Soybeans as human food. Paper presented to the American Soybeans Grower’s Association, Sept. 11. 20 p.

• **Summary:** Dr. Kellogg shows that he has an excellent knowledge of the world literature on soybeans and soyfoods, much of which he summarizes in this speech. “Many years ago (1899), the United States Department of Agriculture, called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited to the purpose. At that time the soybean was not grown to any extent in this country, I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution of the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have since been made and consumed. But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats.” The author discusses his belief that primitive man subsisted wholly upon plant products (i.e. ate a vegan diet “according to Prof. Elliot of Oxford University, Prof. Ami of Montreal, and other distinguished paleontologists”), and the nutritional value of soybeans and their basic-ash quality. “All meats yield a highly acid ash. The excess of acid in these foods produces a lowering of the alkalinity of the blood and tissue fluids

when they are freely used, a condition which is known as acidosis.” He also discusses soya sauce (which is now being manufactured in the USA), miso (which like soy sauce has a flavor resembling that of the osmazomes found in meat and meat sauces), roasted soy nuts (resembling roasted peanuts), pressure cooking whole soybeans, adding soy meal (flour) to breads, soymilk being distributed in bottles in parts of China and Japan, soy cheese [tofu], and the many health benefits of soy milk described in the medical literature, the many health problems caused by consuming flesh foods.

“Von Noorden, the world famous German physician, has demonstrated that the soy bean is of very great service in changing the intestinal flora.” Note: This is the earliest document seen (June 2003) concerning soy and changing the intestinal flora. It is also the earliest document seen (June 2003) that uses the phrase “changing the intestinal flora” in connection with soy.

“In spite of the frantic efforts of vested interests to promote the uneconomic live-stock industry, it will no doubt gradually disappear as a true science of agriculture is developed and the country becomes more densely populated. The conversion of vegetable into animal protein by feeding to steers and pigs, is one of the most wasteful of all human activities. Armsby has shown that 100 pounds of digestible vegetable protein are required to produce 3 pounds of meat protein...”

Discusses Stefansson’s absurd so-called meat-eating experiment, which was really a publicity stunt. Stefansson took no more than 20% of his calories in the form of lean or muscle meat. The rest of his diet was fat. “Excessive meat consumption is one of the begetting sins of the people of this country. Our per capita meat consumption is 5 ounces per day, just 5 times that of Italy (1.0 oz.) and ten times that of North China (0.5 oz.), while the average native of South China eats no meat at all, and is one of the hardiest and most industrious of workers.”

“Thanks to the efforts of our efficient Plant Introduction Bureau, the soybean is beginning to get a start toward recognition and appreciation in this country; but it is evident that a plant possessed of such superlative values and such astonishing versatility and adaptability should receive far more serious attention than has heretofore been given it by the agriculturalists of this country... There can be no doubt that it is destined to play a large part in the feeding of America’s millions...”

Note: This is the earliest English-language document seen that uses the term “soy nuts” to refer to soynuts. Address: Battle Creek, Michigan.

2789. Morse, W.J. 1930. La utilizacion de la soja en diversas industrias [The utilization of soya in various industries]. *Hacienda (La) (Buffalo, New York)* 25:298-301. July; 25:347-49. Aug; 25:394-96. Sept. [1 ref. Spa]

• **Summary:** This is a translation of USDA Farmers’ Bulletin

1617, but with excellent new illustrations. Contents: Introduction. Soybeans in the human diet: Whole dry soybeans, green vegetable soybeans, soy flour, soy oil, soy sauce, soy milk, tofu (*cuajada de soja*). Soybeans in the feeding of domestic animals. Soy oil: Extraction, use. Soybean cake: as a human food, as a livestock feed, as a fertilizer. The value of soybean forage. Soybean in silage. Soya as green forage. Soybeans for the improvement of soils. Soybean straw.

This article contains many interesting photos: 1. A man with a hand turned stone mill in China grinding soybeans to make soymilk. 2. Soybean cakes stacked and partly covered with tarpaulins at a port in Manchuria. 3. Earthenware vats used for making soy sauce in a courtyard in China. 4. Steamed soybeans being cooled to make miso in Japan. 5. Soybeans intercropped with corn. 6. Manchurians outside a soy oil factory in Dairen. The equipment was installed by the French Oil Mill Machinery Co. 7. Carrying round soybean cakes in a cart at the same factory. 8. A soybean mill at Yokohama, Japan. 9. An Anderson Expeller for the extraction of soy oil. 10. A tractor pulling rotary disks for cultivating soybeans in the USA. 11. Harvesting soybeans with a tractor in the USA. 12. A tractor pulling a harvester-thresher combine in the USA. Address: USDA, Washington, DC.

2790. Morse, W.J. 1930. Soybeans in the Orient. *Proceedings of the American Soybean Association* 3:96-100. Eleventh annual field meeting. Held 10-12 Sept. 1930 in Illinois.

• **Summary:** This letter (which appears on pages 5196 to 5199 of the unpublished Dorsett-Morse Log) was written by William Morse on 20 July 1930 from Dairen, Manchuria, to Dr. W.L. Burlison, President of the American Soybean Growers Assoc. at the University of Illinois. It describes the travels of Dorsett and Morse as agricultural explorers for the USDA, studying soybeans and soyfoods, in Manchuria, Japan (Hokkaido and Tokyo), and Korea (Seoul).

"It is recalled that last season the use of the soybean as a green vegetable was described. Throughout the season, it was found that the green vegetable was a very popular food with the Japanese from one end of the Japanese Empire to the other. The vegetable soybean is classed as a garden bean and as such is extensively grown by the Japanese truck farmers."

The authors were in Hokkaido from mid-August until early October, and they visited all the principal soybean sections. "The Obihiro station in the eastern part of the island [of Hokkaido] is conducting the most extensive work in breeding and variety testing. We succeeded in collecting a very large number of varieties and selections of this northern region as well as information on culture, harvesting, threshing, insect pests, and diseases. To supplement this material, we obtained a large number of still and motion pictures of very interesting scenes of the Hokkaido soybean industry."

They arrived in Korea on 20 Oct. 1929 and established headquarters at Keijo (Seoul). "We found Korea to be a most interesting country and different from anything we had seen in Japan. One of the most amazing things was the extent to which soybeans are grown. Almost equally amazing was the large number of native Korean soybean varieties we found in the various sections and at the experiment stations. At the Suigen Experiment Station, they have more than one thousand native Korean varieties and selections under test. The authorities were very generous and gave us samples of each. In addition to this collection, we obtained a few hundred samples from Korean farmers, grain merchants on village market days and from village and city grain dealers. The Korean Department of Agriculture added about 300 samples to our collection by obtaining seed of the principal varieties from the village agricultural societies in each of the prefectures of Korea.

"Altho the Koreans do not use the soybean as extensively for food as do the Japanese, considerable quantities are used and in quite different ways. The beans are used principally boiled with other grains such as millet or kaoliang. They are also used in making miso and soy sauce, but these products are made quite differently from those of Japan or China. Soybean sprouts are found very abundantly in all of the markets and at all of the small food stores. The beans produced in Korea are for the most part excellent quality and are largely shipped to Japan for the manufacture of miso, soy sauce, bean curd, and natto. Soybeans when soaked with chopped millet or kaoliang straw are used universally for feeding oxen and cows, the common work animals of Korea.

"We left Korea about the first week of December [1929] for our Tokyo headquarters and collected seed samples and products as we went along. From the latter part of December until the latter part of March, we put in full time collecting soybean products and learning of their use and manufacture. We succeeded in collecting a large number of interesting products, as the Japanese use the soybean very extensively in their daily diet. In the making of cakes, candies, and numerous other confections, the roasted soybean is used in a similar manner to the peanut in America. Of course, soy sauce, miso, bean curd, and natto are the principal soybean products and the ones most extensively used. As an example of the large use of miso, which is used as a breakfast soup with vegetables and also in preserving fish, vegetables, and meat, we visited three large miso factories in the Tokyo district and found that each produced about one million pounds of miso yearly. In addition to these three large factories, there were numerous small factories scattered thruout the same district.

"As the planting time was approaching in Manchuria, we left Tokyo the latter part of March and arrived in Dairen, Manchuria, the first of April... This country is the real land of the soybean and Dairen, the real city of the soybean. In 1929,

29.2 percent of the total cultivated area of Manchuria was devoted to the growing of soybeans, producing more than 178,000,000 bushels of seed, thus leading all other crops in acreage and production. The Port of Dairen handles about eighty (80) percent of the exports of beans, bean cake, and bean oil.

Note: This is the earliest document seen (Aug. 2011) that uses the term “land of the soybean” in connection with or to refer to Manchuria.

“The planting season for soybeans in Manchuria begins about the first of May and extends to about the 25th of May in some northern sections. We, therefore, had an opportunity before the planting season, to study the methods of grading, storage and transportation of [soy] beans, bean cake and bean oil in the oil mills. The storage yards and warehouse yards of the South Manchurian Railway cover several hundred acres and the immense quantities of bags of beans and bean cakes stored in the open storage yards and in the warehouses are well worth seeing...”

“We had rather expected to find a large number of products made from beans, bean cake, and bean oil but our findings thus far have been very meager. The oil is used in the manufacture of soaps, paints, lard substitutes, and salad oils, but only a very few factories are engaged in producing these products. The beans are used chiefly for oil and oil cake, but during the last three or four years, the demand of European mills for beans has had a serious effect, not only on the Dairen soybean oil mills, but also on the oil mills throughout North and South Manchuria. In Dairen, at the present time, only about forty-five soybean mills are active during the crushing season, whereas four years ago there were about ninety. The oil cakes are for the most part shipped to the Japanese Islands for feed and fertilizer (chiefly fertilizer), to China and the East Indies for fertilizer, and to America and Europe for cattle and poultry feed.”

“Our experience in the field up to the present time has been the study of methods of planting and cultivation practiced in different sections of North and South Manchuria.”

“We have collected quite a large number of seed samples during our travels thus far in Manchuria and have obtained some very interesting types. It may interest the members to know that we have visited Yingkou (Newchwang), the source of the Virginia and Wilson varieties... At the Kunchuling Experiment Station, more than one thousand varieties and selections have been tested but at the present time only five hundred are under test. The Manchurian varieties do not succeed in the Japanese Islands or Korea and neither do the Japanese varieties succeed in Manchuria or Korea...”

“With this letter we are sending some lantern slides illustrating various scenes of the soybean industry in oriental countries... With best wishes for a most interesting and successful 1930 meeting.”

Note 2. This is the earliest English-language document

seen (Feb. 2004) that uses the term “vegetable soybeans” (not preceded by the word “green”) to refer to green vegetable soybeans.

Note 2. This letter was reprinted in *Soybean Digest* (April 1945, p. 11-12). Address: USDA, Washington, DC.

2791. Morse, W.J. 1930. Utilizacion de la soya [Utilization of soybeans]. *Revista de Agricultura, Comercio y Trabajo (Cuba)* 11:43-60. Sept. [Spa]

• **Summary:** This is a translation of *USDA Farmers' Bulletin* No. 1607 titled “Soybean Utilization” (Morse, Jan. 1930). With an introduction by Ingeniero Francisco B. Cruz, Director de la Estacion Experimental Agronomica, de Santiago de las Vegas, Cuba. Translation by Emma Lopez Seña. Contents: Introduction. Soybeans for human food: Dried beans (*los frijoles secos*), green or vegetable beans (*los frijoles verdes*), soybean flour (*la harina de soya*), soybean oil (*aceite de soya*), soy sauce (*salsa de soya*), soybean sprouts (*vástagos de soya*), soybean vegetable milk (*leche vegetal de soya*), soybean curd (*cuajada de la soya*). Soybeans for livestock: For swine, dairy cattle, beef cattle, sheep, poultry. Soybeans for oil: Methods of processing beans for oil, utilization of soybean oil. Soybean meal: Soybean meal for human food, soybean meal for stock feed. Soybeans for hay. Soybeans for pasturage. Soybeans for silage. Soybeans for soilage. Soybeans for soil improvement. Soybean straw.

Note: This is the earliest Spanish-language document seen (June 2009) that uses the term *frijoles verde* to refer to green vegetable soybeans. Address: USDA, Washington, DC, USA.

2792. May Company. 1930. The May Company's market: The world's finest foods moderately priced (Ad). *Los Angeles Times*. Oct. 19. p. B26.

• **Summary:** “Genuine soy sauce: the Worcester of China: from black soy beans—75¢.”

“‘Maggi’ seasoning. Vegetable essence from Switzerland. For salad, soup, stew!—90¢. Also in \$5 bottles.

Note: Several earlier documents suggest that miso was used as an ingredient in Maggi.

2793. Dorsett, P.H.; Morse, W.J. 1930. Soybean sprouts, soybean milk, bean mash [okara], and bean curd [tofu] in China (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 6252 (23 Oct. 1930, Peiping, China). P.H. Dorsett's notes. “Today we went to the market and saw a number of bean curd [tofu] dealers, also those handling soybean sprouts.”

Pages 6264 to 6268, and 6275 (24 Oct. 1930). P.H. Dorsett's notes. "Tomorrow we plan to visit one of the many places around Peiping engaged in bean sprouting and the making of other bean products."

Page 6265. Photo shows soybean sprouts in a market in Peiping (neg. #46113).

Page 6266. Photo taken in same market. "At the extreme left, back, soybean sprouts and string beans, in front soybeans, cauliflower and radishes. At the back left are dry bean curd [dofu-gan, pressed tofu] and Chinese cabbage" (neg. #46114).

Page 6268 (bottom). Peiping. "Most of the baskets contain a greater or less amount of sprouted soybeans; they show in three baskets."

Page 6275. A photo shows: "Soja max. Fried soybean curd. Peiping [Beijing], China. Between 3/4 and life sized picture. Small squares of fresh bean curd are fried in deep fat (sesame oil). Sometimes several of these fried squares are strung on pieces of grass. D. & M. #7256 (neg. #46125).

Page 6276. "Almost life sized picture. Round and oblong pieces of fresh bean curd fried in soybean sauce for 5 hours. The cakes are dark reddish brown. Chinese name 'Toufu kan' [dofu-gan] meaning 'dry bean curd'" (neg. #46126).

Page 6277. "Peiping, China. Life sized picture. Small squares of bean curd that have been boiled in soy sauce for 5 hours. Cakes are dark reddish brown" (neg. #46127).

Page 6280 (25 Oct. 1930). Peiping, China. "In the forenoon we went to the bean sprouting place of Mr. Chang Tzu Hsien, in the southwestern part of the city. His sprouting house or room is just back of the large public well where water is pumped by coolies and sold to big wheel-barrow men for a few coppers per load. Mr. Hsien sprouts mung beans, yellow and green soybeans; about six days are required to sprout the beans. He uses large earthen bowls are wide shallow jars, about two feet at the bottom, three feet on top and 16 to 20 inches deep, in which to sprout the beans.

"About 1 peck of dry beans are required to make one of the above vessels full of sprouts. Green soybeans are grown and sold with shorter sprouts than either the yellow soy or mung beans. We were told that the best beans for sprouting come from the Kalgan region [Zhangjiakou, a city in Hebei province of North China, adjacent to Beijing to the southeast], but that on account of the price he cannot afford to use these and so he gets his stock from the southeast of

Peiping [Beijing].

"The beans are first soaked overnight in hot water and then put into vessels and sprinkled two or three times a day with cold water.

"Mung bean sprouts sell for two cents Mex. per cattie. Yellow soybean sprouts for three and one-half cents per cattie. Green soybean sprouts sell for four cents per cattie.

We next went to the Chi Shun Hung Co., 8 Lien Hua Ssu Street, Peiping, soybean curd and milk manufactory where we spent some little time getting information and pictures.

"Mr. Hao produces both dry and fried curd and milk. He sells soybean milk in about 10 ounce bottles at 1.00 Mex. per bottle, one bottle each day, delivered to his customers. He makes square and round cakes of soybean curd. The are from one-half to three-quarters of an inch thick and about three inches in diameter. These are called dry curd because most of the water is pressed out. They also fry these cakes in soybean oil.

"Mr. Hao also told us that the soybeans from the Kalgan region make the best curd, but that on account of their expense he cannot afford to use them, and buys his from local growers in the vicinity of Peiping.

"In the afternoon we finished up the nearby pictures of soybean products and then took the negatives made in the field and at the hotel to the Hartung Photo Shop to be developed and printed."

Page 6282. Peiping, China. "Wheel cart with baskets used by the peddler of sprouts of mung beans and soybeans" (neg. #46132). "Side view of wheel cart and baskets used by the peddlers of sprouts of soybeans and mung beans" (neg. #46133).

Page 6283. "Small grass baskets or forms for shaping fresh bean curd into small round cakes and then from which excess water is pressed out" (neg. #46134). "Small grass basket forms used in shaping small round cakes of soybean curd for pressing out moisture and the cakes are then fried in soy sauce" (neg. #46135).

Page 6284. "Basket of square and round cakes of fresh soybean curd from which excess water has been pressed. These cakes are now fried in soy sauce for five hours" (neg. #46136). "Tub of bean mash [okara] left after straining out the soybean milk which is used in the manufacture of bean curd" (neg. #46137).

Note: This is the earliest English-language document seen (July 2011) that uses the term "bean mash" to refer to okara.

Page 6288 (27 Oct. 1930). P.H. Dorsett's notes in Peiping. "Early this morning we visited the mung bean sprouting of Mr. Chang, at 66 Pei Yang Shih Kou, Peiping. This gentleman uses tubs in which to sprout his mung beans. The tubs are 12-14 inches across, 24 inches long, and 18-20 inches in height, with about eight small holes in the bottom for draining off surplus water..." The process is described and photos given.

Page 6289. "In the afternoon we called on the establishment of Mr. Chiang who makes what is locally known as 'Southern bean curd.' He uses yellow soybeans. The milk is boiled three times. This curd seems quite different from that ordinarily seen."

Page 6792 (14 Dec. 1930). Peiping en route to Kalgan, China. P.H. Dorsett's notes. "Owing to the fact that when the Morses were in Peiping in November, and Morse, Suyetake, Liu and I, while looking up soybean products, learned that the best soy and mung beans for use in sprouting and making bean vermicelli come from the Kalgan region, we thought it worth while to go there for a collection of soybeans, mung beans and other legumes." Address: Agricultural Explorers, USDA, Washington, DC.

2794. Mo, Fenn. 1930. Chinese recipes. San Francisco, California: Fenn Mo. 14 p. Nov. 18 x 14 cm.

• **Summary:** Title page reads: "To Do Mo (Miss Donaldina Cameron) and her Chinese daughters, whose gracious hospitality has taught many friends to appreciate more than rare viands." Contains 12 recipes. Jacqueline Newman of New York, who owns the book, notes: The book is held together with silk thread. It may be the first item of Donaldina Cameron House Presbyterian Church in San Francisco. The recipe for Chicken with Chestnuts calls for "2 tablespoons Bak Yow Sauce (Soy Sauce)."

Note: This is a collection of recipes by different people.

2795. Dorsett, P.H.; Morse, W.J. 1930. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Unpublished log.

• **Summary:** Page 6820 (21 Dec. 1930, Kobe, Japan. Mr. Morse's notes). "Mr. Saito at Dairen had advised us that there were many places in Kobe where meat was preserved in soybean miso." Had no difficulty in finding three such places, where "we found the men busy in packing meat in white miso. In the Kobe and Kyoto districts white miso is manufactured quite extensively. Small meat shops are the only establishments putting up the miso-preserved meat. For this product beef is used and white miso. Small slices of beef about the size of the palm of the hand and about ¼ inch thick are placed on a layer of miso (about ¼ inch thick), then a layer of miso and another layer of meat. About 1½ pounds of beef are packed with miso in each tub which sells for two yen. The meat is best after being preserved in miso about 7-10 days and does not keep well after two weeks except in rather cold weather. Miso preserved meat is always boiled. White miso is always used for preserving fish and meat (beef) while red miso is used for preserving vegetables, the red miso being considered too salty for meat. Several meat

shops were visited and we always found the same products and same methods of preserving the beef. Apparently this product is very popular in the Kobe district. At one of the shops we were advised that there are some miso-meat preserving places in the Tokyo district." Photo: Small tubs of miso preserved meat displayed in front of a meat shop in Kobe.

Pages 6822-23 (22 Dec. 1930, Kyoto, Mr. Morse's notes). At the Imperial Agricultural College they met Isawo Namikawa, Professor of Horticulture, who said that Kyoto is noted for several special soy products such as white miso, soy sauce, and natto. Kyoto soy sauce is lighter in color, not so heavy, and not quite as salty as soy sauce made in other parts of Japan. "In looking around Kyoto in our little spare time we saw no places where meat is preserved in miso."

Pages 6931-32 (7 Jan. 1931). Morse went to the Imperial Department of Agriculture in Tokyo and met the director, Mr. A. Manabe, who provided information, statistics, and recent publications on soybean acreage, production, utilization, and industries in Japan, Chosen [Korea], and Taiwan. These are the most complete yet received. Mr. Manabe stated that soybean acreage and production is gradually decreasing in Japan proper. This is due mainly to the increased acreage of more intensive farming, especially truck crops and rice. However the acreage of soybeans for green manuring purposes is increasing rapidly, especially in the southern half of the main Island and Kyushu Island.

Japan proper produces more than 2,500,000 koku of soybeans but uses over 7,500,000 koku; the difference is imported from Chosen and Manchuria. The soybeans imported from Manchuria are "are of much lower quality than beans from Japan proper and Chosen and are used primarily for the manufacture of soy sauce, miso, bean oil and bean cake. The beans from Japan proper and Chosen are utilized primarily for food, such as bean curd (Tofu), confections, flour and green vegetable beans. The following table gives the ratio in percent of soybean utilization in Japan:

Miso 22.7%. Soy sauce 22.7%. Bean oil and bean cake 21.6%. Bean curd [tofu] 15.4%. Green vegetable beans 0.8%. All other food uses 6.0%. Feeding purposes 6.2%. Green manure 2.5%. For planting [seed] 1.6%. Miscellaneous uses (other than food) 0.5%. Note: These figures total 100%. Thus, 22.7% of the soybeans used in Japan are used to make miso, 22.7% are used to make soy sauce, 21.6% are crushed to make soybean oil and cake, etc.

Page 6937 (10 Jan. 1931, Tokyo, Notes by Mr. Morse). Spent most of the day in the Shinjuku district looking up soybean products. "More String Natto in rice straw packages was observed in this section than any we have visited. At the stores we found considerable quantities of fish preserved in white miso and also fish preserved in sake mash. The latter is said to keep much longer than the miso preserved fish and if it keeps long enough might afford a good article of export

to the United States, for undoubtedly it would prove far less harmful than some of the products [alcohol] now used in violation of the 18th amendment... Nearly all food stores carried a variety of vegetables preserved in red miso.”

Page 6943 (12 Jan. 1931, Kobe). Visited a large miso meat preserving place that packs 5,000 to 6,000 tubs of miso preserved meat yearly. The proprietor said that about 3,000,000 tubs are sold each year in the Kobe district. The small tubs, costing 70 sen each, hold about 2 pounds of beef. The Kobe district is noted for its fine quality of beef. Photos (p. 6946-47) show these small flat tubs.

Page 6945-46 (13 Jan. 1931). Kyoto, Japan. Visited a large miso factory, where both red and white miso are made. White miso is manufactured quite extensively in the Kyoto and Kobe districts; it keeps only about 1 month in the summer, but about 3 months in the winter. A table shows the most famous forms of miso made in Japan: Sendai miso—red. Kanto miso—red. Okazaki miso—black. Country miso—red. Kinzanji miso—red. White miso—white.

Pages 7003-04 (19 Jan. 1931). Tokyo, Japan. Morse's notes. “At evening supper we had for dinner beef preserved in white miso. After broiling, the flavor of the meat reminded one of that of the sugar cured hams of the Southern States. The meat had been cured just eight days and was well flavored through.”

Page 7116 (29 Jan. 1931). In a letter to Dorsett in Peking, Morse states that the broiled, miso preserved beef was “delicious” and tasted like ham. “I also had some white miso preserved fish. Although it was good, I did not care nearly so much for it as I did the beef.” Address: Agricultural Explorers, USDA, Washington, DC.

2796. Kellogg, John Harvey. 1930. Soybeans as human food. I. *Good Health (Battle Creek, Michigan)* 65(12):5-7. Dec. Continued Jan. 1931. Paper first read at the meeting of the American Soybean Assoc., held 11 Sept. 1930 at Urbana, Illinois. [1 ref]

• **Summary:** Contents: Introduction. An age-long esculent. The soybean is richer in protein than beefsteak. An extraordinarily versatile food. The soybean replaces milk and eggs as well as meat in China.

“Many years ago (1899), the USDA called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited for this. At that time the soybean was not grown to any extent in this country. I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution to the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have been since made and consumed.

“But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats. As a matter

of fact, the protein rich foods of vegetable origin, such as nuts, which the soybean resembles, as Professor Sherman of Columbia University suggests, are not meat substitutes, but are the original meats for which the flesh of animals became a substitute when the glacial cold of the Ice Age drove our prehistoric forbears into the caves and grottoes of Southern Europe.

“The proteins of the soybean are, according to McCollum, distinctly more valuable from the point of view of nutrition than are those of the other legumes. The work of my own laboratory as well as that of others has shown that this bean is almost unique among seeds in its vitamin content.” Address: Battle Creek, Michigan.

2797. Matsumoto, K. 1930. *Shōyu jōzō ni kansuru saikin-rui ni tsuite*. IV. Tokuni shōyu jōzō genryō ni fuchaku seru saikin-rui [Microbes involved in shoyu brewing. IV. Especially those adhering to basic raw materials]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 109. p. 1-87. Dec. [7 ref. Jap] Address: Jozo Shikensho, Gishi.

2798. **Product Name:** [Kanemasa brand Soy Sauce, Koji, Japanese-Style Pickles].

Foreign Name: Kanemasa Shoyu, Koji, Tsukemono.

Manufacturer's Name: Fujimoto Miso, Shoyu Seizo-sho (Fujimoto Miso & Soy Sauce Manufacturing Co.).

Manufacturer's Address: 238 Jackson St., San Francisco, California. Phone: DOuglas 1216.

Date of Introduction: 1930.

New Product—Documentation: The Japanese American Directory. 1930. p. A-11 (full page ad. The top of this ad is in bold English: “Fujimoto Co. Main office cable address ‘Fujimoto’ ‘San Francisco.’ Importer. Manufacturer. Exporter. 238 Jackson St., San Francisco, California.” The rest of the ad (75%) is in Japanese: Fujimoto Shokai. Makes Kanemasa brand shoyu, miso, koji, and Japanese-style pickles, *tsukemono*) and p. 18 (directory; new company name: Fujimoto Miso, Shoyu Seizō-sho, 238 Jackson St., San Francisco. Phone: DOuglas 1216. Note: The company has apparently started to make shoyu / soy sauce). In the lower right corner of the ad is a capped bottle (it looks like a modern 1-liter/quart beer bottle) of something named *katsu shio-mizu* (“energy/active salt water”); it could be nigari. But why isn't it named simply “nigari.” And if it is nigari, why isn't it sold as a solid, which weighs much less and is more compact?

Also in 1932 directory, p. 17, but the name has returned to Fujimoto Miso Koji Seizō-sho. Same address and phone (Douglas 1216).

2799. Fukai, Tōshi; Nakajima, W. 1930. *Shōyu hakkō to shiyu no kankei*. II. Kōkyū shibosan-rui no kōbo no zōshoku hakkō yokusei sayō ni tsuite (1) [Relation between oil and

shoyu brewing. II. On the influence of first-class fatty acids on the growth of yeast and fermentation]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 25(1):34-36; 25(2):42-44; 25(3):43-47; 25(4):45-50; 25(6):36-43. [Jap]

2823. Bragg, Paul Chappius. 1930. Professor Bragg's live food cook book and menus. Hollywood, California: National Diet and Health Association of America; and, Live Food Products. 170 p. No index. 24 cm.

• **Summary:** About raw food and vegetarianism. Contents: 1. Why I write this book. 2. Our daily food, is it nourishment or poison? 3. There are no meat recipes in this book. 4. Poisonous white sugar. 5. Dairy products not human food. 6. Coffee and tea are drugs. 7. Don't use condiments. 8. Salt—The enemy of life and health. 9. Pure food. 10. Don't use aluminum cooking ware. 11. Gas, indigestion and stomach trouble. 12. Acknowledgment of recipes and suggestions from other health food writers. 13. Salads. 14. Fruit salads. 15. Salad dressings. 16. Directions for making nut butter and nut milk. 17. Relishes. 18. Soups (incl. Carque's nut milk soups, made with his nut milk). 19. Cooked vegetables. 20. Meat substitutes and main dishes. 21. Desserts. 22. Breads and bread foods. 23. Sauces and gravies. 24. Drinks. 25. Health confections. 26. Health sandwiches... 30. Baby's diet from birth to 18 months. 31. Diet schedule for the growing child.

Chapter 1 (p. 11) states: “The drug doctor has been a failure. After hundreds of years of his reign there is still universal sickness and suffering which, instead of abating, is unmistakably on the increase.”

Chapter 12 (p. 26) acknowledges: “A few of the recipes in this book were taken from the works of some of the most prominent men in the field of Natural Living. I have considered, in giving a cook book to my people, that they should have, not only my own favorite recipes, but also the best of other men who have experimented along this line. I have therefore included recipes from the books of: Dr. John T. and Mrs. Vera Richter, the leaders of the Raw Food movement in the West. Dr. Philip M. Lovell, distinguished editor of the most widely read Health column in the world, the Care of The Body section of the *Los Angeles Times*. Dr. Henry Lindlahr, the great pioneer Nature Doctor. And Otto Carque, chemist, research worker and crusader in the fight

for natural foods.”

Chapter 16, “Directions for making nut butter and nut milk,” begins with a long passage from *Natural Foods: The Safe Way to Health*, by Otto Carqué (1925). It contains recipes for: Cocoanut milk. Nut milk (made by mixing 1 level tablespoon nut butter with 1 cup warm water, plus a little honey or sweet fruit juice if desired). Almond milk for infants. Nut cream (made from unroasted nut butter, warm water, and honey). Combination nut butter (peanuts, pignolias, cocoanuts). Apple and almond butter. Nut meal.

Chapter 20, titled “Meat substitutes and main dishes” (p. 111-18), contains largely cooked dishes, and makes widespread use of the “Battle Creek Sanitarium product, Protose, being available at most fancy grocers.” Vegex and Savita are also widely used in recipes. Soy sauce is used to season Vegetable chop suey (p. 114). It “may be purchased at a Chinese store or any fancy grocers.”

The National Diet and Health Association of America is located at 1109 North Hudson, Hollywood, California.

Note: This is the earliest document seen (March 2007) by or about Paul C. Bragg that mentions soy. No juicer is mentioned in this book. A portrait photo (just after the title page, p. 5) shows handsome “Prof. Paul C. Bragg.” Address: Professor, California [Los Angeles].

2824. Fuggles, N.R. 1930. Soy bean selection in Trinidad, together with investigations of nodule formation in college soil. Dissertation presented for the Associateship of the Imperial College of Tropical Agriculture. 27 p. 1929-30.

• **Summary:** Contents: A. Part I: Selection. 1. Introduction. 2. Aim of investigations. 3. Work achieved in the last two years. 4. Current year’s work (1929-30). 5. Field management. 6. Selection work. 7. Conclusions and suggestions for future work.

B. Part II: Inoculation. 1. Introduction. 2. Investigations 1929-30. 3. Conclusions and suggestions for future work. C. Bibliography. D. Appendixes: I. Rainfall graph. II. Sketch of the position of continuous growth plot of inoculated & uninoculated beans.

Soybeans can be used to make many food products, including oil, flour, biscuits, milk powder, chocolate, soy sauce... The black varieties are not greatly favoured as they give a bad coloured cake and have a lower oil content.”

“In Trinidad during the past two years in which investigations on Soy Bean have been going on, the plant has definitely grown once the seed has germinated and good sets of pods have been obtained... The difficulty in Trinidad has been in inducing germination in the seeds. Germination was poor in 1927-28 and again in 1928-29, which while in 1929-30 it has been bad enough to cause the loss of certain selections (p. 8). The bad germinating power of the seed under Trinidad conditions seems to be the limiting factor in its growth here. It has been suggested that the bad germination is due to some fault in the storage

of the seed, combined with its high oil content, but different strains showed considerable difference in their powers of germination.”

In Trinidad, the soy bean recommends itself as a cover crop on sugar cane estates for three main reasons: (1) It is a legume and this brings to the soil much nitrogen by nodulation; (2) It produces high yields of a bean which gives valuable products; (3) Of the products one, oil, can bring in a monetary return. The other, as a cake, yields good feed for the stock on the estate.

A Chinese strain of soy beans from the Usine Ste. Madeline has been introduced as a cover crop with some success. Although prolific, it has an undesirable black seed. This year, further trials of the Venezuelan and Darjeeling [India] strains will be conducted.

“Conclusion: The acidity of the soil on the College plots is not in itself sufficient to prevent nodulation of the plants. When the seed has been inoculated nodules will develop although at first only in small quantities. Liming, while increasing the pH value of the soil, does not seem to increase the power of the bacteria to infect the plants more strongly. The bacteria, once established in the soil, can stand the dry season and inoculation every year for several years seems to be indicated.

Thanks “to Professor E.E. Cheeseman for his help and suggestions in the foregoing investigation.” A rainfall graph shows that there was little rain from late November until early January. Address: Trinidad.

2825. Fujimoto Shokai. Fujimoto Co. 1930. Fujimoto Co.: Importer, manufacturer, exporter (Ad). In: The Japanese American News. 1930. The Japanese American Directory (*Nichibei Jûshoroku*). No. 26. p. A-11. [Jap; Eng]

• **Summary:** Ad (full page). The top ¼ of this ad is in English. Fujimoto Shokai’s factory (238 Jackson St.) makes Kanemasa brand shoyu, miso, koji, and Japanese-style pickles (*tsukemono*). The San Francisco Branch (Shiten; 1640 Post St.) also imports and exports Japanese- and Western-style foods and goods. Main office cable address: “Fujimoto” San Francisco. Address: Factory: 238 Jackson St.; Office: 1640 Post St. Both: San Francisco, California. Phone: Factory: DOuglas 1216. Imports: WEst 0733 & 0734.

2826. Shôyu seizô no hajimari: Yamamori Kôhei [The origin of shoyu production (by Japanese in America): Yamamori Kohei]. 1930. In: Shakuma WASHIZU, ed. 1930. *Zaibei Nihonjin Shikan* (History of Japanese in America). Rafu Shinpo-sha, 1619 Laguna St., San Francisco, California. See p. 38. [Jap]

• **Summary:** In about 1897 Mr. Kohei Yamamori started making shoyu in San Jose, California (on North 6th St.). The prospects looked good since good quality wheat, soybeans, and salt could be purchased inexpensively. But he ran into business problems and had to work in a Japanese grocery

store in San Francisco to earn some money while continuing to run his shoyu business. Eventually the business failed, but in about 1907 many other shoyu makers started in various other parts of the country. This time, some succeeded, but others failed. Address: San Francisco, California.

2827. Watson, Ernest. 1930. The principal articles of Chinese commerce (import and export) with a description of the origin, appearance, characteristics, and general properties of each commodity; an account of the methods of preparation or manufacture; together with various tests, etc., by means of which the different products may be readily identified. 2nd ed. Shanghai, China: Statistical Dept., Inspectorate General of Customs; sold by Kelly & Walsh [etc.]. ix + 630 p. Illust. Index. 28 cm. The Maritime Customs. II. Special Series No. 38.

• **Summary:** The first edition was published in 1923. There are sections on “bean oil” (*tou-yu*), the residual meal from the extraction process (*tou-ping fên*), and cakes (*tou-ping*; p. 85-86), soya beans (p. 320-21) including yellow, black, and green varieties, beancurd [tofu], bean milk (*tou-fu-chiang*), bean sauce (see soy sauce), and bean vermicelli. The latter product, named *fên-ssu*, *tou-fên-ssu*, *hsi-t’iao-mien*, or *kua-mien*, is a “famous vermicelli made in the Chefoo district from [soy] beans, most of which are originally imported from Manchuria. It is exported in great quantities from Chefoo to Hongkong, South China, and the Straits Settlements, and forms a favourite and very nutritious food.”

Soy or *chiang-yu* (p. 538) is the name for a “sauce made in China from the soya bean (*Soja hispida*). In preparing it, a quantity of beans are slowly boiled, an equal quantity of coarsely ground wheat or barley being added. The mixture, after being allowed to ferment for some time, is put into a jar with an equal amount of salt, a few aromatics, and three times as much boiling water as there were beans at first; the whole is then allowed to stand for several weeks exposed to the sun, after which the liquor, which constitutes the soy, is separated by pressing and straining the mass. The finished product is afterward packed into jars or bottles ready for market.”

“Soy is thin and, in colour, very dark brown or almost black; it becomes brighter and clearer on being kept, has an agreeable salty flavour, and produces a yellowish froth when even slightly shaken. It is much used by the Chinese as a sauce and condiment, as it creates an appetite and is supposed to counteract the injurious properties of contaminated food; it is also used in medicine as an application for burns, scalds, eczema, leprosy sores, etc. Soy is often exported from China to foreign countries, where it is extensively used in the manufacture of many European sauces.”

“Wheat gluten (*mien-chin*) is prepared in China by washing starch and is used as a nutritious food. The Chinese also prepare “dextrin” (*mai-ch’ao*) from wheat,

using it chiefly as a medicine, and considering it to be very nutritious, antifebrile, and quieting...” Address: Tariff Expert, Chinese Maritime Customs.

2828. *Los Angeles Times*. 1931. Why import soy? We can grow this bean to perfection. Jan. 11. p. J6.

• **Summary:** This article seems to be based on: Morse, W.J. 1927. “Soy beans: Culture and varieties.” *USDA Farmers’ Bulletin* No. 1520. 34 p. April. It begins: “Californians are accustomed to thinking of the soy bean as a cover crop. It is interesting to note that in its native land, Manchuria, this use of the soy bean is of small importance.” There the soy bean is used mainly as a food product; only the by-products, such as bean cake and straw, are used as fertilizer.

Food products include a paste [*jiang*], fermented for about 2½ months, soy [sauce], bean curd [tofu], dry bean curd cakes, bean curd wafers, flour, and “milk.” The expressed oil is used locally mainly for illumination [in lamps]. The better grades are used for cooking and the poorer grades for lubricating, for making printer’s ink and varnish, and “as a waterproofing material in the manufacture of cloth, paper umbrellas, and lanterns.”

The bean cake is used to fatten pigs and cattle. In Japan, the cake is used as a fertilizer for mulberry trees and rice fields. “In Manchuria the cake is crushed and mixed with oil and arsenic and placed on the roots of trees to poison insect pests.” This insecticide is used to kill the pests that injure the wild trees where silkworms live.

The soy bean was grown in the United States as early as 1804, but only as a curiosity. In Europe it was mentioned as early as 1790. The soy bean first became known worldwide during the war between Russia and Japan [1904-05]. During the war, the May troops quartered in Manchuria created a large demand for soybeans as food. Local farmers increased their acreage. But after the war they found they had a surplus that was too great for the demand in the local market or the Orient. The price dropped and a trial shipment was sent to London. The timing was perfect, since English vegetable oil mills were running part time because of a small crop of cottonseed and the failure of linseed in the USA and the Argentine. For the rest of that season, the English mills ran full time on soy beans.

2829. Morse, W.J. 1931. Visit to Kyuemon Hayakawa Miso Co. in Okazaki, Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. See p. 6997-7000. Unpublished log.

• **Summary:** W.J. Morse took notes and photos of his visit to Okazaki on 16 Jan. 1931. He was told by an innkeeper in Okazaki that there a “two factories in Okazaki making

the famous Okazaki black miso... We found the Kyuemon Hayakawa Miso Co. factory about 3 miles from the inn. The master of the factory took us through the plant and explained each step of manufacture. Okazaki miso is made entirely from soybeans while other forms of miso are made from rice and soybeans. It takes twenty months to cure black miso. This company sells about 50,000 kan yearly.

"Okazaki miso keeps indefinitely and is used in making soups and preserving vegetables. At breakfast at the inn this morning we had black miso soup and found it had a much better flavor than red miso soup. The black miso is also sometimes used in making forms of soy sauce [tamari] by adding water."

Photos (p. 6999-7000) show: A large wooden cask or tub filled with Okazaki black miso and held together by many wide braided bamboo hoops. The cask is several feet taller than the miso maker (wearing an apron with a crest symbol or *mon* on the front) standing next to it. The top of each cask is piled high with about 1,200 pounds of stones to weight the miso (3 photos).

Page 7031 (17 Jan. 1931, Tokyo). In a letter to Dorsett in Peiping, China, Morse comments on the two factories making black miso in Okazaki.

Page 7053 (27 Jan. 1931). Morse notes in a cover letter accompanying two parcels sent from the American Consulate in Tokyo to Mr. K.A. Ryerson, Foreign Plants, B.P.I. [Bureau of Plant Industry], Washington, DC: "Of the products the most interesting is the famous Okazaki Black Miso under [product] numbers 6670 and 6671 which were obtained on a recent trip to Okazaki to learn the process of manufacture. This form of miso is the only one made wholly from soybeans as other forms are made with soybeans and rice. Black miso has been made at the same factory for about three hundred years and no improvements have been made in the methods of manufacture." Address: Agricultural Explorers, USDA, Washington, DC.

2830. Morse, W.J. 1931. Re: Sayonara. Outline for part of a "special report" on soybeans in the Orient (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. Feb. 16. Unpublished log.

• **Summary:** Pages 7231 and 7232. Letter dated 16 Feb. 1931 from Mr. W.J. Morse, c/o American Consulate, Tokyo, to Mr. P.H. Dorsett, c/o Wagons-Lite Hotel [Wagons Lit Hotel, or *Grand Hotel des Wagons-Lits*], Peiping, China.

"Our last night in Japan and this is my 'Sayonara' letter in the Orient. Two years tomorrow or rather day after tomorrow we left Washington, DC, and embarked on agricultural exploration work. After two years I agree with the words I often heard you say:

"It's a great life"—if you don't weaken. Morse quotes the entire poem.

Note: This poem was created by cartoonist Gene Burns and syndicated by the *New York Evening Telegram* from 1915 to 1919; the phrase became a rallying cry for American soldiers during World War I.

"At odd times I have been raking over the accumulation of data collected in Japan, Korea, Hokkaido and Manchuria and written up tentative outlines which I want to revise somewhat going back [to the USA]. I am enclosing a copy of the one on Manchuria which you may glance over to see the kind of data I have been collecting. It is not for the report (quarterly) but merely an outline for separate reports and I thought you might be interested. I may have gotten myself in 'Dutch' [in trouble] getting so detailed information on the soybean in the soybean country of the world (and where they look on America as their soybean enemy), but I secured it here, there and everywhere."

Note 1. The "Agricultural Report on Manchuria" mentioned above was finished by Morse in 1932 and titled "Soybeans—Manchuria." It contains 181 pages (28 cm = 8½ x 11 inches), 174 numbered photos with excellent captions, and 28 tables. Typewritten, but never published, it was attached to the end of this long log. A detailed description is given. This report on Manchuria is probably only a part of the "special report" referred to on pages 3230, 3497, 3555, and 6196 of this main report, since that "special report" promised to contain detailed information on the processes used to make different soyfoods such as miso, shoyu, yuba, and tofu. Morse apparently was never able to find the time or will to write the complete "special report," however this part of it is very detailed, useful, and impressive.

Note 2. Talk with Knowles A. Ryerson. 1983. Aug. 28. W.J. Morse definitely did not write the entire special soybean report he intended to after returning from his trip to the Orient. Why? He got swept up in the growth of the U.S. soybean production and processing industries and had no one to help him with his work during the Great Depression. He was swamped! Address: Agricultural Explorer, USDA, Washington, DC.

2831. Given, Meta. 1931. Quick cooking is secret of Chinese dishes: This tells about Oriental culinary methods. *Chicago Daily Tribune*. Feb. 27. p. 17.

• **Summary:** Typical Chinese foods include [mung] bean sprouts, and soy bean products of various kinds. "Soy sauce, which is made from the soy bean, is an indispensable flavoring or seasoning with the Chinese. They also obtain from soy beans a curd [tofu] that looks very much like our cottage cheese." A photo shows Mrs. James Loo in her kitchen.

2832. Buckley, Francis. 1931. Fine old English glasses. XIV.—Miscellaneous articles: Cruet bottles, plates, rummers,

carafes. *Glass (Redhill, Surrey, England)* 8(2):65-66, 71. Feb.

• **Summary:** Only gradually were the old fashioned casters of silver displaced and superseded by glass cruet bottles. Even then, in the fashionable sets, the glass bottles were always “mounted with caps and handles of silver or Sheffield plate. It is this hybrid nature of the cruet bottle, the combination of silver and glass work, that is mainly accountable for its rejection by collectors of silver and glass alike.”

For cruet bottles, sets of silver casters in stands seem to have come into fashion in the early 1700s; “one of the first sets that included glass bottles is dated 1719. Even then the two bottles in the set had little cutting on the sides. Perhaps the need for bottles of glass was occasioned by the inclusion on the caster stand of Vinegar, Oil and Soy, for which silver bottles were obviously unsuited. Eventually, the old casters for sugar, pepper and mustard (which was scattered in powdered form originally) gave way to glass casters and a glass mustard pot, restoring harmony to the contents of the cruet stand.”

A photo shows two cruets, both in the Victoria and Albert Museum. Address: [England].

2833. Kellogg, John Harvey. 1931. Soybeans as human food. II. *Good Health (Battle Creek, Michigan)* 66(2):20-22. Jan.

• **Summary:** Contents: Introduction. How to cook the soybean (in a stone jug in salt water under pressure). The extraordinary supporting qualities of the soybean (nutritional value, gives stamina). The soybean combats acidosis (basic-ash quality). A wonderful vegetable milk from the soybean (relieves food allergy caused by dairy milk). The great value of soymilk as a remedy. The easy digestibility of soy milk. The soybean, the vegetable analogue of meat.

A large photo (p. 21) shows soybean sauce being made commercially in Japan. Address: M.D., Battle Creek, Michigan.

2834. Omura, Osamu. 1931. Shôyu no gurutamin-san ni tsuite [On glutaminic acid of shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 9(2):81-82. [2 ref. Jap]
Address: Kyûshû Teikoku Daigaku Nôgaku-bu, Yukawa Kyôju Kenkyû-shitsu.

2835. United States Department of Agriculture (USDA), Office of Information, Press Service. 1931. U.S. plant explorer collects new soybean varieties in Orient (News release). Washington, DC. 2 p. March 28.

• **Summary:** “After a two-year search for new varieties of soybeans in Japan, Korea, and Manchuria, Wm. J. Morse of the U.S. Department of Agriculture has returned from the Orient with a collection of about 4,000 lots of seed and more than 300 samples of products made from soybeans.

“Mr. Morse, who is in charge of soybean investigations for the Bureau of Plant Industry, hopes that some of the

many varieties represented in his collection will meet the needs of the wide range of industries using soybeans in this country.”

Note: This is the earliest document seen (Aug. 2011) stating that W.J. Morse is “in charge of soybean investigations” (or “head of soybean investigations” or “director of soybean investigations”) at USDA.

“Oil manufacturers, he says, want soybeans with high oil content, whereas farmers who feed hogs want low oil content. Packers discriminate against hogs fed or pastured on soybeans because of the soft pork which results from the oil. Few varieties of soybean grown on a large scale in this country have an oil content less than 15 per cent or more than 20 per cent. Some of those grown in Manchuria, however, run as high as 22 per cent in oil...”

“The manufactured products in Mr. Morse’s collection range from high-quality oils to beans specially treated to drive devils away during certain religious festivals [*mame-maki* at *Setsubun*].

“‘Next to rice,’ he says, ‘the soybean is the principal food crop in the Far East, and it is the principal source of protein in the Oriental diet. No one variety is adapted to all parts of the Orient, nor is any one variety suited to all the many uses to which the beans are put. For instance, certain varieties are grown solely for oil, those that thrive in Manchuria being noteworthy for their high oil content. Other varieties are planted with a view to making soy sauce, a condiment already in favor in the United States, bean curd, used by Buddhists as a meat substitute, or miso, a common ingredient of Japanese soups. Some varieties are grown to provide a green vegetable that is to the eastern table what green peas are to the western table. Part of the crop in certain sections is roasted for use as a coffee substitute or in confections where it answers the same purpose as peanuts in American candy and cakes.’

“The beans were gathered from a wide territory varying greatly in climate and in cultural conditions. As soon as they reached Washington [DC] they were sent to the experiment farm at Arlington, Virginia, for observation and quarantine. When it has been determined that they harbor no insect pests or plant diseases the beans will be grouped and sent to the department’s field stations, each group to the section best suited to its growing requirements, and planted. Recommendations for their ultimate introduction into the United States will depend on the results of these field tests. If they do as well here as in their native fields, Mr. Morse says, some of these new introductions will probably become staple sorts here.” Address: Washington, DC.

2836. Kinoshita, Asakichi; Tanigawa, S. 1931. Yushutsu muke shôyu jôzô shiken [Tests on shoyu brewing for export]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 111. p. 173-80. March. [Jap]
Address: Jozo Shikensho. 1. Gishi; 2. Moto Joshu.

2837. Kinoshita, Asakichi; Tanigawa, S. 1931. Assaku mamekasu-rui shiyô shiken [The use of various soybean presscakes as a raw material for shoyu]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 111. p. 181-89. March. [Jap]
Address: Jozo Shikensho. 1. Gishi; 2. Moto Joshu.

2838. Rokusho, B. Assignor to South Manchuria Railway Company. 1931. [Seasoning material]. *Japanese Patent* 90,551. March 3. [Jap]*

• **Summary:** A material similar to Japanese sauce is prepared by partially hydrolyzing soy-bean cake with diluted acids or alkalies, mixing with other ingredients for the sauce and keeping it under proper conditions for formation of amino acids, etc.

2839. Tihon, L. 1931. A propos d'une variété nouvelle de soja O-too-ton [Concerning a new variety of soybean, O-too-ton]. *Bulletin Agricole du Congo Belge* 22(1):120-23. March. [Fre]

• **Summary:** "The management of the plantations has sent us, in the chemical laboratory [at Leopoldville, Belgian Congo], a rather important sample of seeds of the soybean variety O-too-ton [Otootan], recently introduced from Atlanta, Georgia, USA, to the botanical garden at Eala. At the time of a former shipment of two other varieties, we have pointed out in the report of our studies (10 October 1928) the interest in this legume and given some generalities concerning its cultivation and possibilities for various uses." Tables compare O-too-ton with the former two varieties (Jaune [yellow] and Violette) in terms of size, weight, chemical composition, and mineral content. A detailed analysis of the oil of the yellow soybean is given.

The author then discusses the physiological value of the soybean and its by-products. It contains about twice as much protein as locally-consumed beans and much more oil. It can therefore help in improving the diet of the indigenous people, which is deficient in protein (*albuminoides*). It is also a rich source of vitamin E and other key nutrients. As noted in the author's previous report, the people of East Asia use the soybean to make a milk, a curded milk (probably tofu), and various fermented foods such as miso and soy sauce. Various studies have shown the milk to be very nutritious and digestible.

"The information given above has been, in large part, extracted from the *Bulletin de la Société d'Hygiène alimentaire et d'Alimentation rationnelle de l'homme* (Vol. 18, no. 1, 1930)."

Note: This is the earliest document seen (Aug. 2003) stating that vitamin E is found in soybeans. Address: Director, Laboratoire de Chimie, Leopoldville [Congo Belge].

2840. McCoy, Frank. 1931. Health and diet advice: The Oriental vegetable meat. *Los Angeles Times*. April 7. p. A6.

• **Summary:** For centuries Chinese and Japanese have been living on a diet that contains very little meat. They have been able to do this by using the soy bean to supply a large amount of the protein in their diets. "This bean is superior to all other dried beans inasmuch as it contains little or no starch and a very large amount of balanced protein." A table shows the high food value of soy bean flour by comparing its composition with that of spring wheat and lean beef. Soy beans almost always contain less than 2% starch, "the mature beans having no starch. This is one of the reasons why soy bean flour is often preferred over other flours in the diet of those suffering with diabetes." It is not possible to make bread of "entire soy bean flour" because it tends to agglutinate instead of forming a paste.

"The Chinese make a kind of cheese [tofu] of the soy curd which closely resembles our cheese in appearance and food value, but has an entirely different flavor. The Japanese prepare a vegetable milk by grinding the soaked beans and boiling thirty minutes in three times their bulk of water and then straining. This milk compares favorably with cow's milk and is often used for feeding infants."

Soy beans tend not to cause flatulence "because they do not contain much of the hemicelluloses which are abundant in other beans. The carbohydrates of the soy bean seem to be much more digestible."

Also from soy beans the Japanese manufacture a sauce known as shoyu. "This is made by mixing cooked and ground soy beans with salted water and inoculating the mixture with a rice ferment. The sauce tastes a good deal like a salty meat extract."

There follows a recipe for making soy bean muffins using soy bean flour, baking powder, salt, egg, and milk. No wheat flour is used. Address: Dr., author of "The Fast Way to Health".

2841. Udo, S. 1931. Shôyu no aji ni kansuru kenkyû. I. [Studies on the taste of shoyu. I.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 7(4):322-27. [12 ref. Jap]

2842. Horvath, A.A. 1931. The soy bean as human food. *Industrial and Engineering Chemistry, News Edition* 9(9):136. May 10.

• **Summary:** Contents: Historical background. Properties and uses. Growing interest in soy bean preparations in different countries. Soya foundation proposed.

This article begins: "The soy bean is a plant of early cultivation in China. Its use dates back to the beginning of China's agricultural age under the Emperor Shen Nung. It is mentioned in the *Ben Tsao Gang Mu*, the ancient 'Materia Medica' written in the year 2838 B.C. This bean is remarkable for its richness in oil (average 20 per cent),

protein (average 40 per cent), and ash (average 5.5 per cent), and the almost complete absence of starch.

“Since time immemorial the soy bean has been the most universal article in the Chinese dietary. It is also extensively used for food in Korea, Japan, Indo-China, the Philippine Islands, the Dutch Indies, Siam, and India. The Chinese make practically no use of dairy products, and the bulk of the people consume a very meagre amount of meat. Yet, in spite of this, they have lived for centuries on what appears to be a remarkably well-balanced diet by the use of the soy bean.”

Also discusses: Soy bean milk, tofu, fried tofu (“called in China ‘the meat without the bones’”), miso, chiang, Worcestershire sauce (“liquid soy sauce... when spiced, is sold under the label ‘Worcestershire sauce.’”), W.J. Morse of the USDA, soy bean foods in Europe, Prof. Berczeller, and work at the Physiological Institute of the University of Vienna under Prof. Durig and Dr. Wastl.

“In Russia, the soy bean is fondly called ‘our young revolutionary Chinese ally.’ ‘Plant soy beans and you plant meat, milk, egg omelets,’ is the newspaper cry. Efforts have been made all year to introduce soy bean dishes to restaurants and homes. A Soy Institute was recently organized in Moscow, as well as a special exhibition of soy foods at which 130 varieties of soy dishes, including cutlets, pastry, salads, candy, and beef, were shown. A dinner, prepared entirely of soy beans, was served to representatives of trade unions, factories, Red Army, and the Soviet press. The food was unanimously declared excellent...”

“Soya foundation proposed: There are reasons to expect that the United States will become the leader in introducing the soy bean in the daily diet of the white race. An important step should be the establishment of a soya foundation in order to promote the creation of a national soya food research institute.” Address: Health Section, Bureau of Mines, Pittsburg, Pennsylvania.

2843. Wong, Nellie Choy. 1931. Two unique Chinese meals. *Christian Science Monitor*. Aug. 28. p. 10.

• **Summary:** The meals are a light luncheon and a dinner. The luncheon includes a recipe for “Chow mein, Cantonese style,” which is seasoned with “1 tablespoonful of soy-bean sauce.” The six-course dinner has “Course One—Soy-bean curd soup.” The ingredients include “2 squares soy-bean curd” and “2 teaspoonfuls of soy-bean sauce.” Two other dinner recipes are also seasoned with soy-bean sauce.

2844. Saito, Kendô. 1931. Shôyu kôji yori bunri seru Endomyces kin ni tsuite [Endomyces fungi isolated from shoyu koji]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 9(9):632-33. [Jap]
Address: Rigaku Hakase, Osaka Kôgyô Daigaku, Jôzôgaku Kyôshitsu, Osaka, Japan.

2845. Horvath, A.A. 1931. The soybean. *Co-operative*

Manager and Farmer 21(2):38-40. Oct. Address delivered at the laboratory of the Harshaw Chemical Co., Cleveland, Ohio. 21 May 1931. [2 ref]

• **Summary:** “The following address was delivered by Dr. A.A. Horvath at the laboratory of The Harshaw Chemical Company, 1945 East 97th St., Cleveland, Ohio, May 24th, 1931.

“Twelve years ago [i.e., in about 1919] I had the good fortune to go to China and my first impression was that Occidentals have a number of things to teach the Chinese, but I have found that we have more to learn from them than we have to teach them. If we consider what nation was able to preserve its national character and its independence for a long period of time we must come to the conclusion that really the Chinese nation is the only nation which exists after 5,000 years. So we have to learn from the Chinese how to live and how to live in a reasonable way. China has suffered not once but many times from severe economic depressions but has recovered from them and I think we must pay more attention to the way the Chinese live and what they are using as food.”

“During the Civil War in this country, soybeans were roasted and used by the Southerners. They were called ‘coffee beans’... Soybean flour is used in ice cream. It is said that manufacturers are using it for the same reasons,—better taste, more smooth and better keeping qualities. (See article in *Journal of Confectioners and the Ice Cream World* of August, 1930).” Prof. Abel of Johns Hopkins found soy sauce stimulated digestion of carbohydrates.

“The soybean is peculiar for its richness in phosphorus and also richness in a certain substance, lecithin. This lecithin is an organic compound of phosphorus and belongs to a group of lipoids. Soybean contains around 1.6 per cent lecithin. This substance is one of the constituents of egg yolk and is the one which gives it its high value. It is a necessary constituent for the building up of the nervous system of human beings. Dr. Levine, of the Rockefeller Institute in New York, found that in soybean there is cephalin, a constituent of the human brain, and so we have two particular substances, which are used as material for the building of our nervous system.”

The Chinese soak soybeans overnight and then grind them between millstones, to get a cream. This cream is filtered through cheesecloth, then diluted with water and boiled. “They get a milk such as almond milk which is made from sweet almonds. Soybean milk contains oil and protein necessary to emulsification.

“This soybean milk has been used in China since time immemorial and in the streets of Peking one can see men carrying bottles labeled similar to our milk here. This soybean milk, if kept at room temperature for hours, will turn acid and coagulate. Curds are formed exactly as curds are formed in ordinary milk. But the Chinese cheese [tofu] is made not by turning the milk acid but by curdling it in a

special way. They use the mother liquid from sea water after table salt manufacture [nigari] or a little plaster of paris" [calcium sulfate].

2846. Webber, P.A. 1931. Facts concerning the soybean. *Madison Survey (Madison, Tennessee)*. Nov. 18. p. 177-78; Nov. 25. p. 181-82.

• **Summary:** "The soy bean is the only seed, as far as we know, which contains both the water soluble and the fat soluble vitamins."

"In 1917 during the World War, a special committee appointed by the Department of Agriculture, while searching for a cheaper source of protein for human consumption, discovered the soy bean. Shortly afterwards, soy bean in the form of flour was manufactured and this has been on the market now for some time. The entire soy bean ground into flour contains double the amount of protein and calories present in beefsteak."

"The soy bean is also very rich in lecithin. It has been clearly shown the soybean oil contains fat soluble vitamins A, D, and E."

A soybean milk can be prepared "in the same way as almond milk... Many tests have been made in the pediatrics departments of various universities in the United States showing that soybean milk can be used as the only source of protein in the nutrition of young infants." Also gives details on tofu. "In the Orient, 'tofu' forms a very popular and almost indispensable dietary article. This 'tofu' can be used in many different dishes, taking the place of meat or eggs. It is delightful as a constituent of roasts, omelets, etc."

"In Russia the soybean is taking prominence in the dietary of the people there. 'Plant soybeans and you plant meat, milk, egg omelets,' is the newspaper cry. A Soy Institute was recently organized in Moscow as well as a special exhibition of soy foods at which one hundred thirty varieties of soy dishes, including cutlets, pastry, salads, candy, and beef were shown. There is every reason to believe that the United States will become the leaders in introducing the soybean in the daily diet of the white race."

"The following are a few of the ways in which it is being prepared and used in the United States at the present time: Soybean flour is being used by large bakeries as a constituent of bread, rolls, pastry for pies, cakes, etc. Baby foods are coming on the market containing certain percentages of soybean milk. Chocolate malted milk containing a good per cent of soybean products is now manufactured and sold by several companies. For some time, manufacturers of diabetic foods have been placing on the market productions made largely from the soybean. The soy sauce, otherwise known as Oriental 'Shoyu' has been popularized by the Chinese chop suey restaurants, and is now being used in many dishes made in the home. The bean curd is being canned and manufactured in various other ways and sold on the market. Powdered soybean milk has become a commercial product."

"For several years the Health Food Department of the Nashville Agricultural Normal Institute has been experimenting with this most interesting legume, and is now offering two basic products which may be used in many nutritious and appetizing dishes: the soy cheese and soybean flour. These two products have been used in scores of recipes tested out at the Madison Rural Sanitarium, the Nashville Vegetarian Cafeteria, and other health food places. Just recently several different recipes for the use of soybean flour bread, rolls, and cakes have been perfected. These with other recipes, will be sent free to those who inquire for them."

"A move to substitute vegetable proteins for animal proteins is a move in the right direction, and there is no plant so promising as the soybean. A soybean research foundation has been suggested. Large space at the coming World's Fair in Chicago [Illinois] will do much to bring this important but neglected food to the attention of the American people."

Note: This article was reprinted as a little 8-page booklet (15 x 9 cm, undated) by T.A. Van Gundy of La Sierra Industries. This shows that Van Gundy was aware of the pioneering work of Madison Foods at an early date. On the last page of the booklet is the following paragraph which does not appear in P.A. Webber's original article: "For some time the founders of La Sierra Industries, Arlington, California, have been experimenting with this most interesting legume and are now prepared to offer a number of products which may be used in many nutritious and appetizing dishes: canned soys, soy soup, soy flour, soy cheese, soyco (a coffee substitute), smoein (vegetable smoked meat), soy breakfast food and soy-loaf." What a shame that this little booklet is not dated! At least we know it was printed after November 1931. Address: PhD, Madison, Tennessee.

2847. *Washington Post*. 1931. Timely tested recipes from the Bureau of Home Economics, Department of Agriculture. Nov. 29. p. MF12.

• **Summary:** A recipe for Chicken chop suey with fried noodles calls for "4 tablespoons soy sauce."

2848. **Product Name:** La Choy Soy Sauce.

Manufacturer's Name: La Choy Food Products.

Manufacturer's Address: Detroit, Michigan.

Date of Introduction: 1931. November.

Wt/Vol., Packaging, Price: Glass bottle.

New Product–Documentation: W.L. Burlison and O.L. Whalin. 1932. *Journal of the American Society of Agronomy* Aug. p. 594-609. "The production and utilization of soybeans and soybean products in the United States." See p. 608. "La Choy–soy sauce" is listed as a soybean product produced in the United States.

W.L. Burlison. 1936. *Industrial and Engineering Chemistry* 28(7):772-77. July. "The Soybean: A Plant Immigrant Makes Good." See Table II, p. 775. States that La

Choy-Soy sauce was on the market during the latter part of 1931.

Ad in *Soybean Digest*. 1944. Sept. p. 12. "Genuine soy sauce." Soybean Blue Book. 1947. p. 72-73. The 2¼ by 3½ inch display ad is titled: "Genuine Soy Sauce" from "LaChoy Food Products, Archbold, Ohio. Division of Beatrice Foods Company."

Shurtleff & Aoyagi. 1982. History of Soy Sauce. p. 105. "One of the earliest importers and marketers of soy sauce in America was La Choy Food Products. The company was founded to produce mung bean sprouts in Detroit, Michigan, by Mr. Ilhan New (a Korean) and Wally Smith. Soon they were doing a booming business and by 1922 they were importing fermented soy sauce from China in wooden barrels to use as a seasoning in their Asian food products. In the early 1930s they began buying HVP soy sauce from Huron Milling Co. (now Hercules) and A.E. Staley, and selling it in small bottles as La Choy Soy Sauce. In 1942 the company moved to Archbold, Ohio, and the next year was acquired by Beatrice Creamery Co. (now Beatrice Foods) which by 1944 was advertising the soy sauce widely. In 1963 Beatrice/La Choy acquired the Oriental Show-You company and began making and marketing their first fermented soy sauce. In 1981 La Choy was the world's largest Chinese food plant... Their fermented soy sauce, which accounted for 10-15% of their fermented soy sauce sales, was sold under the brand Oriental Soy sauce. In addition to the traditional soybeans, wheat, salt, and water, it also contained HVP, corn syrup, caramel color, and sodium benzoate preservative."

Joe Staudt. 1985. Horizons (Beatrice Grocery Group). Summer. p. 1-7. In 1920 Wally Smith and Ilhan New, two friends from the University of Michigan, founded La Choy Foods in Detroit. Their first product was bean sprouts. In 1922 the business was incorporated as La Choy Food Products. The first La Choy-owned plant was built in Detroit in 1937. The Archbold, Ohio plant was built on its present site in 1942. The Company's long association with Beatrice started in 1943, when La Choy was bought by the Chicago-based company and became Beatrice's first non-dairy operation.

Note: This is the earliest known HVP soy sauce sold at retail in the United States. With this product began the long battle (still fierce in 2004) concerning the definition of soy sauce. In our opinion, U.S. regulations should have required that the La Choy product be labeled "imitation soy sauce"—but soy sauce was a minor product in America in the early 1930s, the nation was in the midst of the Great Depression, and nobody cared very much about soy sauce terminology.

2849. *Argus (The) (Melbourne, Victoria, Australia)*. 1931. A Chinese luncheon. Dec. 5. p. 8.

• **Summary:** The recipe for Tomato-flower soup calls for "one teaspoonful of soy-bean sauce;..."

The recipe for Chow-mein, Cantonese style calls for

"one tablespoonful of soybean sauce." Later in the same recipe it is also spelled "soy-bean sauce."

2850. *Argus (The) (Melbourne, Victoria, Australia)*. 1931. A Chinese dinner. Dec. 12. p. 8.

• **Summary:** "Last week were published directions given by Nellie Choy Wong in the 'Christian Science Monitor' for the preparation of a Chinese light luncheon. The following are her directions for preparing a Chinese dinner. The ingredients may be bought at Chinese shops in Melbourne: -

"Course One.—Soy-bean Curd Soup.

"Course Two.—Mung Chi..."

There follows a recipe for "Soy-bean curd soup" that includes "2 squares of soybean curd." "Season with soy-bean sauce, salt, and pepper to taste."

Note: This is the earliest document seen (Oct. 2009) stating that soybean curd [tofu] is available in Australia. That strongly implies that it was also being made in Australia, probably in the area of Melbourne, primarily for the Chinese community living there.

2851. Harada, Taichi. 1931. Preparation of *Aspergillus oryzae* enzymes. *Industrial and Engineering Chemistry* 23(1):1424-27. Dec. [29 ref]

• **Summary:** *Aspergillus oryzae* enzymes are widely used in the food and textile industries in the Far East. They are used to make soy (Shoyu) sauce, miso, and saké. The source of the enzymes [koji] contains two important enzymes—diastase and protease. This paper describes "certain properties of *Aspergillus oryzae* enzymes which were obtained by Takamine's method" (described in this journal, 1914). Address: Dep. of Biochemistry, New York Post-Graduate Medical School, Columbia Univ., New York, N.Y.

2852. Morse, W.J. 1931. Utilization of soybeans and soybean products in Oriental countries. *J. of the American Society of Agronomy* 23(12):1067. Dec. Presented as part of Symposium on Soybeans. Leader: W.J. Morse.

• **Summary:** Manchuria, the largest soybean-producing country in the world, had a production of more than 5,000,000 tons of which more than 400,000 tons were used for food, 253,000 tons for feed, and 225,000 tons for seed. The remainder, more than 4,000,000 tons, was used in the production of oil and oil meal and for export. Japan in 1929 used over 39,000,000 bushels of soybeans of which only 13,000,000 bushels were grown in Japan proper, the difference being imported from Manchuria and Korea. The following shows the various ways in which this large amount of beans was utilized by the Japanese people: Miso, 22.7%; soy sauce, 22.7%; soybean oil and oil cake, 21.5%; bean curd, 15.4%; confections, 6.1%; forage, 6.2%; green vegetable beans, 0.8%; green manure, 2.5%; seed, 1.6%; miscellaneous, 0.5%.

Note: This is the earliest document seen (Oct. 2001)

that gives industry or market statistics on green vegetable soybeans by geographical region. Address: USDA, Washington, DC.

2854. Photographs of the Amano Brothers / T. Amano Co. soy sauce factory in Vancouver, British Columbia, Canada. 1931-1937. Vancouver, British Columbia, Canada.

• **Summary:** These four photocopies of black-and-white photos were sent to Soyfoods Center in 1981 by T. Amano Co. of British Columbia, with permission to reprint. (1) Ca. 1928-31 showing the end and roof of a building (at far left) with a sign that reads “Amano Brothers. Shoyu Bean Sauce.” A street is in the foreground. (2) A sign about 12 feet long in the lower window of a building, ca. 1935. The three lines read: “T. Amano Co. Manufacturer of soya bean sauce. Bean & rice products.” (3) The inside of the shoyu plant in 1937 showing many wooden vats and koji trays. A board walkway along the side of three tanks is used by the person stirring the moromi. A wooden ladder leans against a fourth vat. No people are present. (4) Five Japanese men working in the shoyu plant. Three are standing on top of or near the top of the vats, apparently stirring the moromi. A fourth, wearing

suspenders, is standing on the floor (see next page). Address: Vancouver, British Columbia, Canada.

2865. Ochse, J.J. 1931. Vegetables of the Dutch East Indies. Buitenzorg (Bogor), Java: Archipel Drukkerij. xxxvi + 1005

p. See p. 366, 389-93, 398, 407-08, 732, 943-71. An entirely revised and greatly enlarged second edition of his *Tropische Groenten* (1925). Translated by Mr. C.A. Backer. Illust. 25 cm. Index. [10 ref. Eng]

• **Summary:** This translation (by Mr. C.A. Backer, the reputed ex-Botanist for the flora of Java) of Ochse's classic "may be taken as an entirely revised and much enlarged second edition of '*Tropische Groenten*' (Tropical Vegetables), which booklet was published in July 1925." The author, a Dutchman who confined his research to Java and Madoera, described the tempeh-making process in detail, saying that the mold used was *Aspergillus oryzae* and that it was obtained from a former batch of tempeh.

Page 366 discusses ontjom (tépépé boongkil in Javanese), tetépépé, and dagè, all made from peanuts. Page 372 notes that the pigeon pea (*Cajanus cajan*) can be used to make tépépé bosok.

Pages 389-93 discuss the soya bean, which has various names in local languages. Malay: Katjang djepoon or Kedele. Javanese: Dekeman or Dekenan, Dele, Demekan, Gadele, Kedele, Kedoongsool, or Dangsool. Sundanese: Kadele, Katjang booloo, Katjang djepoon, Katjang kadele. Madura: Kadhele, Kadhellée, or Kedeleh. A description of the plant is given.

Illustrations show: (1) A young soybean plant with leaves and pods (half size). (2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Soybeans come in two main forms: Light yellowish-brown seeds, and black seeds. The latter are used to make *ketjap* (Indonesian soy sauce). "Of the ripe seeds *pélas* (Jav.) is made, by mixing them with grated young coconut [coconut], salt, and other ingredients. The mixture is wrapped in a banana leaf and steamed.

"The seeds can also be roasted and afterwards pounded. The *boobook* [*bubuk*, roasted soy flour], *boobook* or *boobookan* (Jav.) is eaten in the shape of powder, usually with the addition of lombok and other ingredients.

"The seeds are mixed with a porridge of rice-meal and water and afterwards fried in coco-nut oil. This dish is called *rempeyek* (Jav.). It consists of brown slices in which the black *kedele*-seeds are scattered. *Rempeyek* is eaten either as a delicacy or with the rice table. "Tépépé [tempeh, p. 391] is a much used product. In East- and Central-Java it takes the same place as the ontjom in West-Java. It is prepared in much the same way as *ontjom*, and the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligs, which is transmitted by *ragi*. The seeds are cooked and, after they have cooled, put in a basket. By stirring, rubbing and even by treading, coupled with repeated washing with fresh water, one tries to remove the testa [seed coat / hull] from the seeds. When this has been done, the seeds are put on hurdles (*sasak*) covered with banana- or waroo-leaves. Now the so-called *beeang*, i.e. rests of the

fungus used for a former batch, is sprinkled over them and the mass is turned over on other *sasaks*. The *tépépé*-cakes treated in this way are kept indoors and after two or three days the fungus has spread sufficiently for giving a light grey colour to the cakes, which then are soft and dry and ready for use. They are sold on the markets either cut into small pieces or divided at pleasure, according to the amount of money the buyer wishes to spend. *Tépépé* is used, fried, in the *sayor* or prepared with all sorts of ingredients.

"Other products for the native market are *tahoo* [tofu] and *takoäh* [pressed tofu; Chinese: doufugan]. Both are eaten either boiled or cut into small slices, fried and added to *gado-gado* or, lombok rawit being added, as a side dish.

"For the preparation of *tahoo* or *takoäh* the seeds are soaked, ground fine, boiled and pressed through a cloth. The juice which is pressed out is mixed with salt, vinegar, coconut milk or with unburned gypsum (so-called *batoe tao*), imported from China. By this treatment a white gelatinous mass is formed, which, after cooling, can be cut into pieces."

"Wet *tahoo* does not keep well for a long time. For this reason it is soon made into *takoäh*. For this purpose the *tahoo* is cut into pieces, folded in pieces of cloth, pressed in order to remove part of the water and next boiled in a decoction of koonir [turmeric]. The product obtained in this way has an intense yellow color and is a much relished delicacy, especially with lombok rawit [fiery dwarf chilies]."

Taotjo [Indonesian-style miso] is a porridge made of soybeans and rice meal. The soybeans are soaked, dehulled (the testa removed), cooked, and left to cool. Then they are mixed with the meal of rice (regular or glutinous), which has been previously roasted. "The porridge obtained in this way is poured on winnows (*tampah* [winnowing trays]) covered with waroo-leaves, sprinkled with *ragi* or *beeang*, probably of *Aspergillus Wentii*, Wehmer, and covered with leaves. The filled *tampahs* are piled on each other and left alone till the cakes are very mouldy. Then they are dried in the sun, soaked in brine and mixed with sirup of *arèn* [sugar palm] and with *tapè* [*tapai*; a sweet fermented cake] of rice or glutinous rice. Next the porridge is placed out of doors. After the seeds have become soft by this treatment, which takes three or four weeks, the *taotjo* is ready for use.

"*Taotjo* must be boiled, otherwise the smell is too strong. It is eaten with cooked or raw vegetables. It is used for dressing some dishes of meat or fish, whilst it is also a material of which diverse side dishes are made."

Note 1. This is the earliest English-language document seen (March 2009) that uses the word "taotjo" to refer to Indonesian-style miso.

"According to De Bie (1901), *tao djee* [*tao dji*; *doushi*, *douchi*] is *taotjo* alternating with layers of cooked whole *kadelè*-seeds. This stuff is put into a pot or basin with some salt and boiled *arèn*-sugar. The mass is left to itself during a few days till the *taotjo* has become pervaded by the salt and the sugar and has assumed a uniformly brown colour. Note 2.

Tao djee [*doushi*] is fermented black soybeans, which are not the same as *Taotjo* [Indonesian-style miso]. De Bie (1901) seems to have made a mistake.

“Of the black *kadelè*-seeds *soya* [soy sauce] is made, exclusively by the Chinese and the natives. First the seeds are cooked in a strong solution of salt. After diverse manipulations the cooked seeds are mixed with *arèn*-sugar and so-called *soya*-condiments and the mixture is concentrated till the salt begins to crystallize. By diluting this product with more or less water one obtains the diverse qualities of *kètjap* or *soya* found in commerce.”

The “Pemimpin Pengoesaha tanah” of 15 Jan. 1915 lists various ingredients that can be used with black soybeans in making *ketjap*. “Young seedlings, obtained, like *taogè* [*taugé*, soy / bean sprouts], by fermenting, are called *ketjambah kedele*; they are cooked and eaten as *petjel* (Jav.) with the rice (*ganteng*, Jav.)”

“Finally young leaves of *Kadele* can be eaten, raw or steamed, as *lalab*.

Page 398 describes *dagè* and *témpé bengook* made from these seeds of the velvet bean (*Mucuna pruriens*). Roasted tempeh are also discussed.

Pages 407-08 states that the seeds of the *Katjang oji* (rice bean) can be used for the preparation of tempeh.

Pages 414-15 state that, when they have no soybeans, the Chinese use mung beans (*Katjang eedjo*) to make tofu and takoah, but they are most widely used to make mung bean sprouts (*taogè*). Page 634 mentions *témpé bosok* (overripe tempeh) made with the foul-smelling bruised leaves of the plant *Paederia foetida*. Page 732 also mentions overripe tempeh.

Note 2. This is the earliest English-language document seen (Dec. 1998) which contains detailed information about tempeh, or which refers to tempeh as “*témpé*.”

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the word “*tahoo*” or the word “*takoah*” to refer to tofu. Address: Buitenzorg (Bogor), Java, Indonesia.

2866. Ochse, J.J. 1931. Indische Groenten [Vegetables of the Dutch East Indies]. Buitenzorg (Bogor), Java: Department Landbouw. 1005 p. See p. 388-92. Index. Illust. 27 cm. [10 ref. Dut]

• **Summary:** For details, see the English-language translation, also published in 1931.

Under soybean utilization, the following food products are discussed in detail on pages 390-92: Tempeh (*tèmpè*), tofu (*tahoe*) and firm tofu (*takoä*), Indonesian-style miso (*taotjo*), fermented black soybeans (*tao dji*), and Indonesian-style soy sauce (*kètjap*). “*Témpé* is a much used product. In East- and Central-Java it takes the same place as the *ontjom* in West-Java. It is prepared in much the same way as *ontjom*, the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligs, which is transmitted by

ragi.”

On pages 943-970 is an alphabetical “List of Vernacular Names of Objects, Properties or Actions.” For example: *Kedele oongaran* (p. 390, Jav.) is a soybean plantation on a sawah, immediately following the paddy [rice] harvest. *Kedele apeetan* (p. 390, Jav.) is the second harvest of the year or the second plantation in the same year of *Kedele* (soybeans; *Glycine Soja*). Address: Buitenzorg (Bogor), Java.

2867. Takenobu, Yoshitaro. ed. 1931. Kenkyusha’s new Japanese-English dictionary. Tokyo: Kenkyusha. xvi + 2266 p. 24 cm.

• **Summary:**

Food words that are not related to soy:

akameshi: see *sekihan*.

amanatto: sugared red beans [a very popular snack of cooked azuki beans coated with sugar].

amazake: a sweet drink made from fermented rice.

an: bean jam. *an no haitte iru*: stuffed with bean jam. *an o ireru*: to stuff with bean jam. *an ni kurumu*: to cover with bean-jam.

anko: bean-jam = *an*.

azuki: a red bean; an India bean. *azuki meshi* [*azuki gohan*]: rice boiled with red beans. *azuki-iro*: reddish brown, russet.

azuki-aisu: iced bean-jam.

azuki-gayu: red-bean gruel.

beni-shôga: red pickled ginger.

kaiseki: a light [vegetarian] meal served before (a) ceremonial tea.

kaisô: seaweeds, marine plants; algae; seaware (*hiryô-yo*). *kaiso-hai*: ash from kelp. *kaiso-fun*: kelp meal [for food].

konbu: (sea) tangle; kelp; a devil’s apron. *Laminaria*. *kizami konbu*: sliced tangle. *konbu-maki*: a tangle roll. *tororo konbu*: scraped tangle. *konbu-cha*: a sea-weed drink [tea].

mochi: rice-cake. *mochi o tsuku*: to pound steamed [glutinous] rice into cake. *mochi wa mochi-ya*: Every man has his forte = A specialist has his own strength (= strong point). = Every man to his trade.

nankin-mame: a groundnut. (American) a peanut; a monkey nut.

nori: laver, sloke. *hoshi (ajitsuke) nori*: dried (seasoned) *nori*. *ao (Asakusa) nori*: green (Asakusa) *nori*. *nori no tsukudani*: laver boiled down in soy [sauce].

okowa: = *kawa-meshi*, *sekihan*. Note 2. *Okowa* is usually made by cooking azuki beans with glutinous rice, whereas *sekihan* is made by cooking azuki beans with regular (nonglutinous) rice.

sekihan: rice boiled together with red beans; cooked rice and red beans.

shiruko: red bean soup with rice cake. *shiruko-ya*: a *shiruko* store; a bean-soup house.

wakame: *wakame* seaweed. *Undaria pinnatifida*.

zôni: rice cakes boiled with vegetables. zôni o iwau [to celebrate]: take the New Year's breakfast of rice cakes boiled with vegetables.

Words or terms not mentioned: Daitokuji natto. Hamananatto. Hamanatto. Misuzu. Address: General editor, Japan.

2868. Takenobu, Yoshitaro. ed. 1931. Kenkyusha's new Japanese-English dictionary. 2nd ed. Tokyo: Kenkyusha. iv + 2280 p. 19 cm. Title also in Japanese: *Shin Wa-Ei Daijiten*. [Eng; jap]

• **Summary:** The first edition of this dictionary (titled *Takenobu's Japanese-English Dictionary*) was published in 1918. In 1931, Kenkyusha undertook a major revision in the dictionary by expanding upon former entries and adding newer ones. The British diplomat George Sansom, who later became a renowned historian of Japan, was a major contributor to and editor of this 2nd edition.

Soy related words:

abura[a]ge = aburaage or aburage: fried bean-curd. [Tonbi ni aburaage o sarawareta yôni]: with a stupid look of surprise. [literally, as when a kite {a bird of prey} snatches away your aburaage]. This is the earliest English-language document seen (May 2012) that contains the word *aburaage*. It refers to deep-fried tofu pouches.

atsuage: not listed.

age [tôfu]: fried bean-curd.

ama-miso: not listed.

Daitokuji-natto: not listed.

daizu: a soya (soy) bean. [daizu kasu]: a [soy] bean cake [a co-product of soy bean oil].

daizu abura: not listed.

dengaku: baked bean-curd daubed with miso. [dengaku-zashi ni sareru]: to be transfixed; be pierced through (with a spear).

eda-mame: green soy-beans.

ganmo: not listed.

ganmodoki: not listed.

Hamana-natto: not listed.

Hama-natto: not listed.

hiryoze: not listed.

[inari-zushi]: a kind of 'sushi' (fried bean-curd stuffed with boiled rice).

kinugoshi no: strained through silk cloth [no mention of tofu].

kogori-dôfu: not listed.

koi-kuchi [shoyu]: not listed.

kôji: malt (mugi); yeast; leaven (kôbo); [kôji-ya]: a maltster [a maker of kôji]. [kôji ni suru]: [to] malt.

kôri-dôfu: frozen bean-curds.

kuro-mame: a black soy-bean.

miso (chomiryô = seasoning): bean paste; miso.

[miso shiru]: miso soup.

[miso o kakeru]: to put miso on (some food); (shuppai suru): to make a mess (sad work) of it; put one's foot in it.

[]: mash the miso.

[]: to speak meanly of (a person); speak of (a person) in the most disparaging terms; say everything bad about (a person); denounce scathingly (roundly).

[]: a pretty mess you have made of it. [miso mo kuso mo isshoni suru]: his ideas are confused; He confuses one thing with another. [miso no miso kusaki wa, jô miso ni arazu]: The secret of art lies in concealing art [Akiko never heard this saying].

misokoshi: a miso strainer. [misokoshi de mizu o sukuu]: weave a rope of sand; attempt impossibilities [literally, to try to scoop up water with a miso strainer].

miso-mame: a soja (soy) bean.

miso-zuke: anything pickled in miso.

momen: cotton [no mention of tofu].

nama-age: not listed.

nattô: fermented soy-beans.

nigari: bitter, brine. [nori no tsukudani]: laver boiled down in soy [sauce].

oboro: not listed.

okabe: not listed.

okara: not listed.

saishikomi [shoyu]: not listed.

shimi-dôfu: not listed.

shiro-shoyu: not listed.

shitaji: soy [shitaji sosogi]: a soy pot [soy sauce dispenser].

shôyu: soy [sauce].

tamari: (a kind of) soy.

tôfu: bean-curds; tofu.

[tofu itcho]: a piece (cake) of bean-curds.

[tofu-ya]: a bean-curds dealer (seller).

[kare ni iken shita totte, tôfu ni kasugai da]: advice to him is like water sliding off a duck's back. It is a mere waste of words (It is just as well to pour water into a sieve) to advise him.

[tofu-ya e ni ri, saka-ya e san ri to iu tokoro da]: there is no human habitation within five miles of the place. [It's out in the boondocks].

unohana: (1) Flowers of the *Deutzia scabra*. (2) [tofu no kara]: bean-curd refuse.

usukuchi shoyu: not listed.

yaki-dôfu: broiled bean-curd.

yuba: dried bean-curds [sic, the film that forms atop soymilk when it is heated]. Address: General editor, Japan.

2869. Togano, Meiji. 1931. Saishin shôyu miso jôzô-hô [Brand-new methods of brewing shoyu and miso]. Tokyo: Jôzô Hyôron-sha. 1052 + 13 p. Illust. 22 cm. [Jap]*

• **Summary:** This is apparently a revision of the 1926 edition, with 13 additional pages, separately numbered.

2870. Wenham, Edward. 1931. *Domestic silver of Great Britain and Ireland*. New York, London, Toronto: Oxford University Press. xxiii + 186 p. Plus 95 plates on unnumbered pages at end. See p. 87, 142. Illust. Index. 26 cm. [15* ref]

• **Summary:** Chapter 5, titled “Traditions of table silver,” in the section on “Standishes and inkstands” states (p. 87) that “no few snuffer-trays, soy-frames, and other like pieces have been adapted by the addition of bottles or silver holders.”

Chapter 10, titled “Methods of forging old silver marks,” discusses genuine hall-marks and notes (p. 141-42) that “snuffer-trays and soy-frames can be and are made into attractive inkstands,... so long as buyers fail to examine them...”

Note 1. “Soy-frames” are holders for high-quality glass bottles containing soy sauce. Note 2. A “hallmark” (a word first used in 1721) is derived from Goldsmith’s Hall in London, where gold and silver articles were assayed (tested) and stamped. A hallmark is this official mark attesting to the purity of an article. A leopard’s head for London, a crown for Sheffield, etc. Address: Formerly editor of *The Antiquarian* and of *Arts and Decoration Quarterly*, and managing editor of *Arts and Decoration* [England].

2871. Yang, Ximeng; Tao, Menghe. 1931. *A study of the standard of living of working families in Shanghai*. Peiping: Institute of Social Research. 86 + lvi p. See p. xxxii. 23 cm. Series: Social Research Publications, Monograph No. III. Facsimile edition reprinted in 1982 by Garland Publ. Co. (New York). [40 ref]

• **Summary:** Note 1. On the title page, the authors’ names are given as Simon Yang and L.K. Tao.

Contents: Part I: General results. Part II: Statistical tables.

In Part I, section IX is titled “The standard of living food” (p. 47-55). The 2nd most important type of food, after “(a) Cereals and products” is “(b) Legumes and products,” which states (p. 48): “Of beans, the young soy bean (Chinese characters: mao dou) formed the principal kind, but among the bean products, bean sprouts, bean curds of various makes and mung bean starch were consumed in considerable quantities.”

Page 49: “(g) Fat and oil: Bean oil [soy] formed the most important article in this class, of which the average consumption was 4.78 catties (2.8 kg) per family per month. Lard, the second in order, lagged far behind...”

“(h) Condiments: Salt and soy sauce were the principal articles of this class.”

Page 50: Whereas rice accounts of 44.6% of total expenses, legumes and products account for only 7.6%. More rice and legume statistics appear on page 53.

In Part II, “Statistical tables,” six long tables mention soy as follows: I. “Average quantity of and expenditure for the principal articles purchased per family per month, by

income groups” (p. ii-iii): Yellow soy bean sprouts, 0.15 expenditures. Soy bean curd, 0.26. Sheet bean curd, 0.18 [pressed tofu sheets, pai-yeh or ch’ien-chang]. Bean curd, fried, 0.10. Bean curd, dried [doufu gan] 0.16. Soy bean oil, 1.19. Soy bean sauce 0.38.

II. “Average quantity of and expenditure for the principal articles purchased per family in each of the twelve months under investigation (p. viii-xxx): There are entries for: Yellow soy bean sprouts, 1.87 annual expenses. Soy bean curd, 3.14. Sheet bean curd, 2.15. Bean curd, fried, 1.19. Bean curd, dried [doufu gan] 1.95. Yellow soy bean, 0.38. Young soy beans with pods [mao dou, edamame], 0.81.

III. “Average quantity of and expenditure for the “other” articles of food purchased per family in a year” (p. xxxii, xxxvii). Bean curd, fermented, odorous, 0.05 annual expense [ch’ou toufu]. Soy bean milk, 0.17. Fried beans, with salt, 0.21. Fermented bean curd, fried, 0.05. Bean curd skin, 0.02. Bean curd, fermented, with fragrant malt, 0.05. Bean curd, frozen, <0.005 [tung-toufu, ping-toufu]. Bean curd skin, cooked in skein forms, <0.005. Dried bean curd, fried, 0.005. Bean curd, fermented, 0.6. Soft bean curd, 0.05. Soy bean dregs, 0.02 [okara?]. Sheet bean curd, in skein [netlike] forms, > 0.005. Soy bean paste, 0.01.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the word “odorous” or the term “Bean curd, fermented, odorous” to refer to *ch’ou toufu*.

VI. “Average quantity and fuel value of food consumed per family in a year” (p. l-li). This table has 6 columns. (1) Classes and articles of food. (2) Quantity, total (grams). (3) Quantity of protein, grams. (4) Quantity of fat, grams. (5) Quantity of carbohydrates, grams. (6) Fuel value, calories. Note 2. For soy products we will give only the quantity / amount purchased each year per person in grams. Yellow soy bean sprouts, 34,229. Soy bean curd, 55,080. Sheet bean curd 8,34. Bean curd, fried, 6,163. Bean curd, dried, 13,218. Yellow soy bean, 2,407. Mung bean sprouts, 15,257. Note 3. The weight of mung bean sprouts purchased was less than half (44.5%) the weight of yellow soy bean sprouts purchased. Young soy beans with pods, 7,180. Bean curd, fermented, odorous, 364. Soy bean milk, 6,963.

At the end of the book is a very interesting bibliography of the best books on China’s economic and social development, divided into these periods: China during the interregnum [Republic of China] (1912-1949). Modern Chinese economy: The late imperial period (late 19th and early 20th centuries), the agrarian economy, foreign trade and investment, 20th century economic development, labor and the economy. The wartime economy and postwar problems.

Note 4. This book would have been much more useful if the Chinese names of these foods (in both Chinese characters, and transliterated) had been given. We are unsure of the exact identity of: (1) Fried beans with salt. Are these salted, oil-roasted soybeans? (2) Bean curd fermented with

fragrant malt vs. bean curd, fermented, odorous. Address: China.

2872. Mason, Walt. 1932. Rippling rhymes: The approach. *Los Angeles Times*. Feb. 3. p. A4.

• **Summary:** America is in the midst of the Great Depression. A bum approaches the writer and says: "I'm badly busted, I am broke in seven styles. I would like to buy a collar and a pint of Canton soy; if you stake me with a dollar it will fill my life with joy."

Note: This is the most recent English-language document seen (April 2012) that contains the term "Canton Soy," which apparently refers to soy sauce made in Canton, China.

Over de beteekenis van de sojaboon als handelsproduct [On the commercial significance of the soybean as a commodity]. *Landbouw (Buitenzorg, Java)* 7(9):571-96. March. English-language summary, p. 743-74. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel. Afdeeling Landbouw. p. 5-30, 177-78. [1 ref. Dut; eng]

• **Summary:** "Annually Java requires considerable quantities of the soybean, about one half of which is imported... On Java the soybean is used principally for the preparation of soy sauce (*soja of ketjap*), tahoe, tempe, and taotjo (various dietary preparations). Our investigations have proven that the Java-grown soybean can be used for making ketjap, tahoe and tempe just as effectively as the imported soybean. In western Java the manufacturers of soy prefer the imported article, those in central and eastern Java prefer the home-grown bean. This preference, which must be attributed chiefly to habit and conservatism, is also partially to be ascribed to the fact that in western Java but little of this article is grown, whilst in central and eastern Java the production is much more considerable, which causes the former region to be more dependent upon the imported article than the latter districts. For the preparation of tahoe a certain preference is indeed shown for the imported bean, in view of the greater keeping properties of the article prepared therefrom; nevertheless, the soybean grown on Java is also widely used for that purpose. The same holds good for the preparation of tempe, where the imported article is preferred chiefly on account of its larger size. Generally speaking, the imported kinds of soybean are preferred for the preparation of tahoe and tempe because they satisfy to a greater extent the demands of the manufacturers, and also because they are readily obtainable. Taotjo, however, is practically exclusively prepared from the imported bean.

"The general conclusion is that the imported soybean can be replaced, if not entirely, at a rate to a very great extent by the soybean grown on Java, thus indicating that the furtherance of its cultivation in this country can only be of

advantage...

"The principal import harbours are Semarang [Central Java], Sourabaia [Surabaya], Tandjong Priok, Tjilatjap, and Cheribon." Address: 1. fd. Hoofd van Afdeeling Handel te Buitenzorg; 2. Vakkundig Ambtenaar bij de Afdeeling Handel, Java.

2874. Blumenthal, Saul; Thuor, L. 1932. Worcestershire sauce manufacture. *Fruit Products J. and American Vinegar Industry*. March. p. 207, 223.

• **Summary:** "Most people who are uninformed about the preparation of Worcestershire Sauce are generally under the impression that it is a very simple matter to make this product. This is not so, however. A Worcestershire Sauce of good quality represents a combination of nourishing foods, the essential ingredients being soy sauce, vinegar, extractions of spices and seeds, sugar, salt, water, beef extract, gums and other less important ingredients. The soy sauce is made from soybeans, abundant in proteins and amino acids. Its flavor is characteristic of the taste of the Orientals.

"The soy sauce is the fundamental ingredient of Worcestershire Sauce. A discussion of the method of making the sauce in the Orient may be of interest to the reader." A description is given, but it is not clear in which country this soy sauce is made; it is probably made in China since so much molasses / sugar is added. "As a rule, the above natural soy-sauce is diluted with blackstrap molasses and exported to America. The extent of the dilution depends upon the price paid for the sauce. The United States Department of Agriculture has no definitions or standards for Soy-sauce. Therefore, one must depend entirely upon the chemical examination to find out how much soy-sauce is present and also upon the organoleptic examination. The findings, given below, show the average chemical examination of soy-sauce shipped into this country over a three-year period: Total solids 77.5%, protein (N x 6.25) 1.93%, ash 9.4%, salt 3.13%, reducing sugars 19.62%, cane sugar 29.70%, corn syrup 0.00%.

"The following is a typical formula for a good quality Worcestershire Sauce. This makes 100 gallons. Cider vinegar 50 gallons, spiced vinegar 10 gallons, soy-sauce 15 gallons, walnut catsup 15 gallons, pure lime juice 1 pint, terpenless [sic, terpeneless] oil of lime 30 drops, sugar 10 pounds, table salt 15 pounds, water to the 100 gallon mark, Galagum C 6 pounds." Details are given on how to make the spiced cider and the walnut catsup used in the Worcestershire Sauce recipe. The latter contains 3 gallons of soy sauce, the main ingredient other than water.

"The spices are thoroughly mixed with the vinegar and allowed to stand for several weeks before use. In transferring the required amount of this spiced vinegar to the main formula run same through several layers of cheese cloth to remove large pieces. Mix in the other ingredients in the order described in a wooden tank with a stirring paddle. Run

through a 20 or 30 mesh screen to filter out solid particles, then fill the finished sauce into bottles or kegs.” Address: Shirley Laboratories, New York.

2875. Donath, W.F. 1932. De voedingswaarde der sojaboon en enkele daaruit bereide specifiek Indische voedingsmiddelen [The food value of soybeans and some specifically East Indian foods prepared from them]. *Landbouw (Buitenzorg, Java)* 7(9):705-40. March. English-language summary, p. 759-61. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel. Afdeling Landbouw. p. 139-74, 193-95. [48 ref. Dut; eng]

• **Summary:** Discusses the composition of the soybean. “In contrast with Manchuria, where it is a common article of diet, the soybean is rarely used as such in these parts; but by means of various operations, among which is the action of certain fungi, several products are prepared from it.

“These products, such as *tempe kedelee*, *taotjo*, *tahoe*, *taokoan* and *ketjap* are important items in the native diet. Except for the last mentioned, the preparation of these products is such that the albumins are preserved practically intact, so that, especially in *tempe*, as we were able to point out, the biological albumin value is very high...

“*Soymeal*, which is prepared by removing the husks and then pounding what is left, has the drawback that it tastes somewhat bitter and, in consequence of the high percentage of fat, soon becomes rancid... Berczeller, however, seems to have succeeded in obtaining an improved soy meal...

“Finally, in discussing the importance for the native diet of these beans and the products prepared from them, the author arrives at the conclusion that it is especially the albumins that are important, the people being practically vegetarian and these foods being, in addition, rich in carbohydrates.

“Thus the author expresses his approval of the fact that of late years the *Department of Agriculture, Industry and Commerce* has advocated the growing of the soybean and the consumption of the products prepared therefrom.”

Note 1. This is the earliest English-language document seen (the summary) (Sept. 2005) that contains the word “soymeal,” which apparently refers to whole (full-fat) soybean flour.

Note 2. This is the earliest document seen (April 2001) that contains the word *taokoan*. Address: Hoofd van het Analyseelaboratorium te Buitenzorg, Java.

2876. Dugard, Jean. 1932. La valeur alimentaire et industrielle du soja [The food and industrial value of soya]. *Genie Civil (Le)* 100(17):419-20. April 23. [3 ref. Fre]

• **Summary:** Contents: Introduction. *USDA Farmers’ Bulletin* No. 1617, by W.J. Morse. Botanical characteristics of the soybean. Composition and food value of the soybean. Products derived from soya eaten by humans: Tofu, soy oil,

shoyu [soy sauce] (called “soy” in English), soy flour, soy sprouts, miso, natto. The use of soya as forage. Industrial uses of soy oil and cake. The soybean in western Europe: Hansamuehle in Hamburg, Germany; Englehardt & Cie. in Frankfurt, Germany (making powdered soymilk, soy caseine, soy lecithin, etc.); Soybean cake used for animal feed in England, Denmark, Holland, Sweden, and—above all—in Germany, where more than 2 million tons/year are consumed.

2877. Lovell, Philip M. 1932. The care of the body. *Los Angeles Times*. April 24. p. I20. Sunday magazine.

• **Summary:** In the section titled “Soy bean” (p. 21) the following letter is reprinted in full: “Torrance, California. Dear Dr. Lovell. In the health section of the *Los Angeles Times Magazine* several weeks ago I read an article about soy beans.

“As a Japanese farmer I raised and used soy beans for many years but since coming to this country I have not seen soy beans grown. I believe this is too bad, as I believe soy beans are a valuable crop.

“For many centuries the people in Japan used this product for their main supply of protein. They also used it for nitrogen for their lands.

“Contrary to common belief, the Japanese have not used much fish for their diet and no animal meat at all, for Buddhism does not recommend its followers to kill and eat their fellow animals.

“Many due to Buddhism or the difficulty in transporting fresh fish, did not use much fish. The only thing they could depend upon for the protein was a cake made of soy beans, called tofu. We also make a sauce of the soy beans [soy sauce].

“In the Orient this is a staple crop. The farmers raise it as one of the rotating crops. I should really like to see more soy beans raised here but on account of the lack of popular usage there is not much demand for them.

“Could you give me more information about the use of this product which would appeal to the popular taste? I would appreciate it very much.

“Sincerely yours, Tatsuo Inouje [Inouye].

Lovell responds that, as he has stated before, 80% of the people worldwide are “vegetarians, either by religion or economic necessity.” The Japanese are a progressive race. What they have accomplished during the past 70-80 years is “a miracle of the century. Yet they have done it essentially on a vegetarian diet.”

The soy bean has replaced animal protein for the Japanese and for most followers of Buddhists and Confucianism. “It is the roast beef of the Orient. It contains twice as much protein as the richest of meats. It is a very fine food indeed. The health food stores are slowly building up a sale for it. Recently I ran across a soy bean bread. I believe the average health food store can procure it.” Address: N.D.

[Naturopathic Doctor].

2878. Safeway Stores. 1932. Safeway's ambassadors visit with you (Ad). *Los Angeles Times*. April 29. p. A3.

• **Summary:** This large ad includes: "Soy sauce. Mandarin. 5½ oz. bottle—25¢."

"Peanut butter. Max-i-muM brand. 2 lb. jar—19¢."

"Safeway Stores: Distribution without waste."

2879. Squirrell, W.J.; Laughland, J. 1932. Soybeans in Ontario. *Ontario Department of Agriculture, Bulletin No. 366*. 16 p. April.

• **Summary:** Contents: Origin and importance. Description. Composition. Climatic adaptation. Rotation. Soil and soil preparation. Manures and fertilizers. Varieties. Seed selection. Inoculation. Harvesting. Threshing. Uses of the crop: Hay, as a soiling crop, ensilage, pasture, soil improvement, ripe seed, straw, soybean oil, meal, other products. What farmers think of soybeans (Extracts from reports by 21 men who have grown and fed the crop from the following places (mostly counties): Durham, Dundas, Brant, Elgin, Frontenac, Grenville, Halton, Hastings, Kent, Lambton, Middlesex, Oxford, Perth, Simcoe, Welland, Wellington).

"Soybeans were first tested in the experimental plots at the Ontario Agricultural College in 1893 and first distributed for co-operative tests from the College to farmers in 1901."

"More than one hundred varieties of soybean have been tested for fodder and grain production by the Field Husbandry Department of the Ontario Agricultural College. Some of these varieties matured sufficiently early to be successfully grown in Ontario. Many, however, are too late for the climatic conditions of the Province and do not even reach the best fodder conditions before the arrival of killing frost."

Two tables (p. 6-7) show the average results for 6 years in testing 21 varieties of soybeans for fodder and for grain by the Department of Field Husbandry at the Ontario Agricultural College. In each table the varieties are sorted by descending yield of green fodder or grain [seed]. The varieties are: O.A.C. No. 211, Habaro No. 20405 (Wash. [Washington, DC]), Ito San Soja, Black Eyebrow (Jeffrey), North's, Minnesota No. 167 (Minnesota Exp. Station), Manchu, Early Yellow (O.A.C. No. 111), Elton, Medium Green (O.A.C.), Mandarin, Chestnut, Tsurunoko, Oyaji, Shiro Kotsubu, Early Yellow, Black Ontario, Quebec No. 92, Black Manchurian (Jeffrey), Brown, Ogema. For fodder, the "O.A.C. No. 211, which stands first with an average yield of 10.16 tons of green fodder per acre for the 6-year period, is a plant selected strain, developed by the Ontario Agricultural College, from the Habaro variety and is the only variety of soybeans eligible for registration in Canada." The plants were cut on Sept. 7. For grain/seed production Black Ontario has the highest average yield over the 6 years

at 28.47 bushels/acre, followed by North's (28.42), O.A.C. No. 211 (27.73), and Black Manchurian (Jeffrey; 27.12). The plants were cut for harvest between Sept. 23 and Oct. 9. The Black Ontario was received from a grower in the Manitoulin Island in 1924. It produces small, black grain and straw of medium length. "The O.A.C. No. 211 has proven to be the best general purpose soybean tested at the College."

Soybean oil "is used in the manufacture of soaps, paints, rubber substitutes, printers ink and other articles. It is also used as a salad oil and as a substitute for butter and lard."

"In China and Japan soybeans are used in many ways as human food. The green pods, dried seed cakes, soy sauce and soybean milk, all have their place. In America soybean flour is made into cakes, biscuits, muffins, and being low in starch it has a special place as a diabetic food."

The article contains 11 photos, including one of 2 horses pulling a rotary hoe, and fields of soybeans growing in Peel, Welland, Dundas, Kent, Middlesex, and Lincoln counties. Address: Dep. of Field Husbandry, Ontario Agricultural College, Guelph.

2880. Cruz, Aurelio O.; West, Augustus P. 1932.

Composition of Philippine soy beans and soy-bean oil.

Philippine J. of Science 48(1):77-88. May. [32 ref]

• **Summary:** In 1930 the Philippines produced 4,218 tons of soybeans. In 1911 O.W. Barrett, Chief of the Division of Experiment Stations, Philippine Bureau of Agriculture, strongly encouraged the Philippine Agriculturist to "to take up soy bean culture in earnest." But 20 years "after this advice was given we find the Philippines are producing an annual yield of only a few thousand tons of soy beans although, as shown by experiments, this is a very suitable and appropriate crop for this country. With this idea in view," in 1931 staff members of the Philippine Bureau of Science wrote various newspaper articles to popularize soybeans and gave a display of food products made from soy beans at carnival in Manila.

A short survey of the nutritional factors of soy beans is given. The Philippine beans are rich in fats (20%), proteins (39.1%), and carbohydrates (24.96%). The oil had iodine value 128.4, saponification value 193.3, unsaponifiable matter 1.0%, unsaturated fatty acids (corrected) 81.5% (iodine value 151.3), saturated fatty acids (corrected) 12.65%. The composition of the fatty acids is given as: (α-)linolenic 2.1%, linoleic 53.0%, oleic 30.1%, palmitic 8.9%, stearic 3.8%, and arachidic 0.6%. Address: Bureau of Science, Manila.

2883. Williams, Edward Thomas. 1932. China yesterday and to-day. 5th ed., revised. New York, NY: Thomas Y. Crowell Co. xxiv + 743 p. Illust. (plates). Portraits. Map. Index. 22 cm. Previous editions were 1923, 1927, 1929. [369* ref]
• **Summary:** This remarkable, sympathetic and very comprehensive book has been revised to May 1932. The author has lived for many years in China, starting before the downfall of the Manchu Dynasty, and for 35 years has had close association with Chinese affairs. The 1st edition was published in 1923. While focusing on the Era of Reform (1902-1911) and the period of the Chinese Republic, established on 1 Jan. 1912 by Sun Yat-sen, the book contains many interesting features and appendixes, including a chronology of "Important dates in Chinese history" (p. 673-680a), and a lengthy bibliography.

In Chapter 8, "The Craftsman," the section titled "Bean curd" states (p. 174-75): "I stopped at a neighboring door to watch a great, lazy-looking water buffalo turning a heavy mill-stone grinding beans. In a shop down the street the bean flour was being cooked, mixed with a little gypsum and turmeric to curdle it. The cooked paste, wrapped in cloths, was placed in a cheese press from which, after it should be properly solidified, it would be taken, cut into small cakes, and exposed for sale. It is the cheese of the Chinese and a very popular article of diet, rightly so, indeed, in a land where meat is too dear a luxury to be the daily food of the poor. There are several varieties of this bean-curd; one known as the 'stinking bean-curd' rivals the choicest cheeses of Europe in odor.

"At an oil-mill another variety of [soy] beans was being ground and pressed for its oil. The refuse finds a ready sale for fertilizing purpose. Vegetable oils are in great demand in China for culinary and other domestic purposes, animal fats not being abundant enough to supply the need. Besides [soy] beans, cotton-seed, rape-seed, peanuts, a variety of tea, or camellia seed, hemp-seed, sesamum, seed of the castor oil plant and nuts of the wood-oil tree are all used for this purpose. The oils of the cotton, rape, beans, hemp and peanut are all used in cooking, and the bean and rape-seed oils are also used for lamps [illumination]. The lamp of the poor man is merely a shallow cup with a spout at one side, like the classic lamp of ancient Rome. A piece of rush pith is placed in it for a wick. The soja bean is used for making soy, the common sauce of the rich and poor alike. It is said to have been suggested to the English [for] the manufacture of their Worcestershire and other sauces."

Note: This is also the earliest English-language document seen (Oct. 2011) that contains the term "stinking bean-curd." Address: Agassiz Prof. of Oriental Languages and Literature, Univ. of California, Berkeley, California; Formerly American Chargé d'Affaires, Peking, China; Recently Chief of the Division of Far Eastern Affairs, Department of State (U.S.).

2884. Yukawa, Matao; Omura, Osamu. 1932. Shôyu no okishigurutamin-san ni tsuite [On oxyglutaminic acid of shoyu]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 8(5):584. May. [Jap]
Address: Kyûdai Nohaku [Kyushu Univ., Dr. of Agriculture], Japan.

2885. Krauss, F.G. 1932. Soybeans, their culture and uses in Hawaii. *Hawaii Agricultural College, Extension Service, Agricultural Notes* No. 24. 4 p. June 21.

• **Summary:** Contents: Introduction. Cultural methods. Fertilization. Inoculation. Time to plant. Distances to plant and rate of seeding. Varieties. Harvesting. Soy beans for soil improvement.

"The soy bean is destined to become an important supplementary crop in Hawaii's increasingly diversified agriculture." "As human food, the soy bean may be cooked either green or dried like snap or shell beans, and as such offer possibilities for canning commercially. The mature seeds are also ground into culinary meals and bolted for flour. The Orientals utilize vast quantities of soy beans for the manufacture of a number of nutritious and highly-priced foodstuffs, including the well-known tofu, miso, and soy sauce. The Japanese of Hawaii import about \$70,000 worth of the beans annually from Japan for the above purposes, the manufacture of which could be greatly extended if the soy bean were grown locally. A considerable amount of soy bean cake meal is also imported for poultry and dairy stock feeding. It is estimated that Hawaii could consume to advantage at least a half million dollars worth of soy bean products annually if the crop were grown extensively enough."

2886. Meade, Mary. 1932. Dessert served first at real Chinese dinner: The birds nest soup is second course. *Chicago Daily Tribune*. Aug. 24. p. 14.

• **Summary:** "China, for thousands of years mysterious, inscrutable, aloof, today has taken up a new job—that of counselor and inspiring genius in many of America's swankiest cuisines."

"Miow, an oil like our peanut oil, seow, a black salty sauce [Cantonese: *shi-yau* or *si-yau*, meaning "fermented black soybean sauce"], and queow, a thick, black, molasseslike flavoring sauce, are one or all found in most chow meins, chop sueys and war meins."

A recipe for Chop suey with pineapple states: "Let the

mixture simmer for fifteen minutes, then stir in enough seow or seasoning sauce to flavor,..."

2887. Burlison, W.L.; Whalin, O.L. 1932. The production and utilization of soybeans and soybean products in the United States. *J. of the American Society of Agronomy* 24(8):594-609. Aug.

• **Summary:** Contents: Introduction. Acreage. Yield per acre. Acreage harvested for beans. Acreage harvested for hay. Acreage harvested with livestock. Imports of certain soybean products. Production of important oils in the United States. Net imports of oils and fats into the United States. Import duties levied on soybeans and soybean products. Utilization of soybeans in United States. Soybean products. Summary.

"Soybean acreage harvested for beans has expanded rapidly in the United States since 1925, reaching an estimated production of approximately 18,000,000 bushels for 1931. More than half of the acreage grown each year has been cut for hay. The acreage harvested with livestock has not shown any increase since 1927.

"Imports of soybeans and soybean cake and meal have always been of minor importance. Soybean oil imports represented significant quantities at the close of the World War, however, but have since diminished to negligible amounts as import duties have become effective. The imports of such competing oils as cocoanut and linseed have been of greatest importance.

"Approximately one-fourth of the soybean oil being utilized in the United States is going into paints and varnishes, another one-fourth is finding its way to the soap kettle, nearly one-fifth is being used in edible products, and about one-eighth is being consumed in linoleum and water-proofing products. The number of commercial products being placed on the market that contain soybeans or soybean products is increasing rapidly. A most encouraging feature of soybean progress has been the research development in utilization of soybeans and soybean products within the last two years and the corresponding expansion in demand along commercial lines." Contains numerous statistical tables illustrating these facts. Tables show: (1) Production of soybeans harvested for beans, selected states and the United States, 1924-31, 1,000 bushels. (2) Total equivalent solid acreage of soybeans, selected states and the United States, 1922-30, 1,000 acres. (3) Yield in bushels per acre. (4) Acreage of soybeans harvested for beans, selected states and the United States, 1922-31, 1,000 acres. (5) Acreage of soybeans harvested for hay, selected states and the United States, 1922-30, 1,000 acres. (6) Acreage of soybeans harvested with livestock, selected states and the United States, 1922-30, 1,000 acres. (7) Imports into United States of soybean oil, soybean meal and cake, and soybeans, 1915-31. (8) Domestic production of soybean oil and other oils and fats from domestic materials, 1916-30, 1,000 pounds. (9) Net imports of animal and vegetable oils and fats, with special

reference to soybean oil and five other kinds of vegetable oils, oil equivalent being used for imported materials, United States, 1916-30, 1,000 pounds. (10) Exports of soybean oil and other leading vegetable oils, United States, 1919-31, 1,000 pounds. (11) Duties levied on soybean oil, soybean cake and meal, and soybeans by the tariffs of 1909, 1913, 1921, 1922, and 1930. (12) How the 1929 and 1930 crops of soybeans were utilized in the United States. (13) Utilization of soybeans and soybean products in the United States, 1930 crop. (14) List of soybean products produced in the United States.

Table 13 (p. 607) "Utilization of soybeans and soybean products in the United States, 1930 crop." The 13,323,000 bushels of soybeans were used as follows: Crushed 4,800,000 bu, seed 4,623,000, feed 3,500,000, ground 400,000 (half used for feed and half for food). The 37,200,000 lb of soybean oil was used as follows: Edible: Oleomargarine 750,000 lb, lard substitutes [shortening] 500,000, other food products 4,750,000. Industrial uses: Paint and varnish 9,000,000 lb, soap kettle 8,500,000, linoleum and oil cloth 4,000,000, other 3,500,000. Increased stocks including oil equivalent 5,700,000. The 110,000 tons of soybean meal was used as follows: Commercial feeds 89,100 tons, other feed 20,000, edible soy flour 850, diabetic foods 50. The 100,000 tons of soybean meal was very small compared to its competing products: Cotton seed meal 2,350,000 tons, and linseed oil meal 1,750,000.

Table 14 (p. 608) "List of soybean products produced in the United States." The accompanying text states that this list "does not pretend to be complete. Attention is called to the large number of food products actually being placed on the market in the United States from soybeans at the present time. This list has grown rapidly during this last year." The extensive list includes commercial food, feed, and industrial products derived from soybeans. Some products have brand names and others only generic names.

"Food products—USA: Soybean flour. Soybean meal flour. Refined edible soybean oil. Soybean salad oil. Chocolate bars (30% soybean flour). Cocoa (up to 60% soybean flour). Sausages (up to 50% soybean flour). Bread (7½% soybean flour). Rolls (10% soybean flour). Macaroni (20% soybean flour). Soybean muffins. Soybean cookies. Soybean doughnuts. Vegetable shortening. Infant foods. Diabetic foods. Oleomargarine. Lard substitutes. Filled sweets. Soybean sprouts. Soybean cheese. Soybean milk. Soybean buns. Soybean ice cream [perhaps that served in Sept. 1930 in Illinois at the American Soybean Association's annual meeting]. Soya cream biscuits. La Choy-soy sauce. Soyolk (flour). Soy biscuits. Soy flour. Vi-Zoy. Lektizoy. Zoy soup. Zoybeans (cooked beans). Bacon and Zoy beans. Zoy bouillon. Soy bean biscuit. Casein gluten flour. Non-fat mayonnaise. Fatless spread. Fluffio.

Canadian food products: Milqo (soy milk). Vi-Tone (chocolate). Soya flour. Soyex-Malt-Cocoa drink. Soyex.

Macaroni

"Feed products: Cake or meal. Commercial feed. Dairy feed. Hog chow. Poultry chow. Dog chow. Chicken chowder. Steer fatena. Calf chow. Lay chow. Rabbit chow. 34% protein chow chow. 24% protein chow chow. Chick startena. Chicken fatena. Ollelene. Grainola.

"Industrial uses: Paint. Varnish. Enamels. Oil cloth. Linoleum. Printers ink. Glycerine. Celluloid. Lauxtex plastic wall coat. Lauxein waterproof soybean glue. Lauxein emulsifier (all 3 made by I.F. Laucks, Inc., Seattle, Washington). Soap (liquid). Soap (potash). Core binders. Rubber substitutes."

Note 1. This is the earliest document seen that mentions the following commercial soy products: La Choy-soy sauce. Soyex-Malt-Cocoa drink. Zoybeans (cooked beans). Lauxtex plastic wall coat. Lauxein waterproof soybean glue. Lauxein emulsifier. All were on the market by late 1931.

Note 2. This is the earliest English-language document seen (Feb. 2008) that uses the term "vegetable shortening" to refer to shortening made without animal products. Address: Univ. of Illinois, Urbana.

2888. Shikazono, Naohara; Tomoda, Yoshinori. 1932. Daizu kasu kasuibunkai butsu to shōyu no hikaku kenkyū [Comparative studies on shoyu and the hydrolytic product of soybean cake, "Soyament"]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 35(8):892-94. Aug. English abstract in Supplemental Binding 35(8):368B-69B. Aug. [Jap; eng]

• **Summary:** Soya and "Soyament" (obtained by hydrolysis of soybean cake with concentrated hydrochloric acid, neutralization, and fermentation with wheat koji) contain, respectively, moisture 68.42%, 57.53%; ash 17.24%, 20.87%; fat 2.34%, 1.42%; protein 6.94%, 15.25%; carbohydrate 5.06%, 4.93% Analysis of total, protein-, and amino-nitrogen shows that Soyament contains more amino-acids than does soya. Address: Dep. of Applied Chemistry, Faculty of Engineering, Tokyo Imperial Univ., Japan.

• **Summary:** This is a French-language summary of a German-language article from *Allgemeine Oel- und Fett-Zeitung* (Oct. 1932). Address: Chimiste de l'Institut Colonial de Marseille [Marseilles], France.

2893. Woodruff, Douglas. 1932. A gourmet's tour around old England: Every part of the tight little isle has its own tasty dishes, some of which the holiday season recalls. *New York Times*. Dec. 25. p. SM8. Sunday magazine.

• **Summary:** Worcestershire: No other county in England has a china so delicate and popular. No other county has the tomb of the famous King John. "And no other county has invented and popularized such a sauce, an imperious blending of cayenne, anchovy, soy and vinegar and walnut ketchup that overpowers and obliterates the quiet flavors of whatever may be eaten with it."

"It is even said, but not altogether truly, that Worcestershire sauce is the defensive mechanism of envious Worcester men driven mad by the odors of that [Shropshire] pie.

A map shows England and its favorite regional or local foods—including Worcestershire Sauce. Address: London.

2894. Stewart, C.L.; Burlison, W.L.; Norton, L.J.; Whalin, O.L. 1932. Supply and marketing of soybeans and soybean products. *Illinois Agricultural Experiment Station, Bulletin* No. 386. p. 425-544. Dec. [34 ref]

• **Summary:** Loaded with statistics, graphs, tables, maps, and photos, this is one of the best reports on soybeans in America published to date. Contents: Introduction. The supply of soybeans and soybean products: Domestic production of soybeans, production of soybeans in Illinois, soybean varieties in Illinois, costs and returns in producing soybeans, imports of soybeans and soybean products (soybeans, soybean oil meal and cake, soybean oil, net imports, exports including reexports, export-import balance), import duties levied on soybeans and soybean products, supply of soybean oil and competing oils and fats. Consumption of soybeans and soybean products: Disposition of the domestic crop, utilization as beans, utilization of soybean oil meal, utilization of soybean oil (in food and industrial products), methods of processing soybeans for consumption (expeller, hydraulic press, solvent extraction), competition from other oils, distribution of gathered soybeans by uses. Practices in marketing soybeans and soybean products: Sources of market information, time of movement, varieties marketed in different sections of Illinois, selling soybeans for seed, selling soybeans for industrial uses (the Peoria Plan of 1928-29, Grange League Federation Exchange of Ithaca, New York, the Soybean Marketing Association of Illinois formed in Oct. 1929 {p. 490-91}), selling soybean oil and oil meal (National Soybean Oil Manufacturers Association of Chicago). Elements of cost in marketing soybeans: Marketing mill beans, processing beans, marketing seed beans, exporting beans. The inspection system and soybean grades. Special considerations applying to the valuation of soybeans and soybean products: Use-values of soybeans and soybean products in feeding, derivative products as factors in the market valuation of soybeans. Prices of soybeans and soybean products: Prices of seed beans, prices of soybean oil, prices of soybean oil meal, use as affected by prices. Meeting the price risks in marketing. International trade in soybeans and soybean products. Summary. Literature cited. Sources of data.

"In Manchuria in 1930 there were 13 districts in which over 40% of the crop land was devoted to soybeans, the highest proportion being 65%. The proportions for the three Manchurian provinces as units were as follows: Kirin (eastern) 33.2%; Hailungkiang [Heilungkiang] (northern) 30.7%; and Liaoning (southern) 22%." Some soybeans were grown in Inner Mongolia.

Illinois was the largest soybean producer in 1924, followed by North Carolina, Missouri, and Indiana. "Few soybeans were grown in Illinois previous to 1890, when J.C. Utter of Mt. Carmel, Wabash county, began production of this crop. Frank Hurrelbrink of Taylorville, Christian county, known because of his work with the Hurrelbrink variety of soybean, started his work in 1897. He has grown soybeans continuously since that time, experimenting with many varieties. C.A. Rowe and his father, of Jacksonville, Morgan county, grew soybeans about 1899. Somewhat

earlier than this the late Ralph Allen of Delavan, Tazewell county, became interested in soybeans and furnished seed beans to Illinois farmers as well as to interested persons in other states, in Hawaii, and in Alaska. C.L. Meharry of Attica, Indiana, who owns a large tract of land near Tolono, Champaign county, Illinois, has been an active soybean grower since 1909. The year following the Meharry venture, John T. Smith, also near Tolono, began to grow soybeans on a very limited scale, and in 1921 undertook active production. During the last decade soybeans have become an increasingly popular crop on Illinois farms."

Of the 1915 U.S. soybean crop, 52% of the entire crop acreage was used for hay, 15% was grazed, 4% was plowed under, and only 29% was harvested for beans; 18.2% was used for seed, 0.9% for human food, and 9.9% as beans for feed.

In 1930 some 11,975,000 bushels of soybeans were gathered or harvested in the U.S. Of these soybeans, 40.1% were crushed, 33.6% were used as seed, 23.0% were used whole directly as feed, 1.7% were ground and used as feed, and 1.7% were ground and used as food.

From the soybeans crushed in 1930, some 37,200,000 lb of soybean oil were produced. Its four main uses were: (1) Paint and other industries: Paint and varnish 24.2% of the total oil, linoleum and oil cloth 10.8%, other uses 9.4. (2) Soap kettle 22.8%. (3) Edible uses: Oleomargarine 2.0%, lard substitutes 1.3%, other food products 12.8%. (4) Increased stocks including oil equivalent 16.7%.

In 1930 some 110,000 tons of soybean meal resulted from crushing. Of this, 76.5% was used in commercial feeds, 13.6% in other feeds, 0.8% as soybean flour for food, 0.045% as infant and diabetic foods, and 9.0% as other uses including glue.

Page 460 lists the types and brand names of many commercial soybean food, feed, and industrial products. Consumption of soybeans as foods has increased appreciably since 1930. U.S. food products include chocolate bars (30% soybean flour), cocoa (up to 60% soybean flour), sausages (up to 50% soybean flour), bread (7½% soybean flour), soybean cheese, soybean milk, soybean ice cream, Soya Cream Biscuits, La Choy Soy Sauce, Soyolk (flour), V-Zoy, Lektizoy, Zoy Soup, Zoybeans (cooked soybeans), Bacon and Zoy Beans, Zoy Bouillon, Soy Bean Biscuit, etc. Canadian food products are: Milqo (soy milk), Vi-tone (chocolate), Soya Flour, Soyex-Malt-Cocoa Drink, Soyex, Macaroni.

"In the foreign trade of the United States imports of soybean oil have appeared since 1910 and of soybeans since 1914. The United States exported domestic soybeans to Europe in quantity for the first time during the fall of 1931, more than 2 million bushels being shipped from the 1931 crop." Address: 1, 3-4. Dep. of Agricultural Economics; 2. Dep. of Agronomy. All: Univ. of Illinois.

2895. Toa-Keizai Chosakyoku (East-Asiatic Economic Investigation Bureau). 1932. Manchuria year book 1932-33. Tokyo, Japan: Toa-Keizai Chosakyoku. 530 p. [Eng]

• **Summary:** The Preface begins: “Those who have been following the development of events in Manchuria since the fateful September of 1931 will not fail to understand in what circumstances we have compiled this volume... The last issue, which was the first published, appeared in November, 1931, while Manchuria was in a chaotic condition, but the manuscripts for it were completed before the Sino-Japanese dispute over Manchuria occurred in September.” There was the establishment of Manchukuo in March, the signing of the Japan-Manchukuo protocol in September, and the despatch [dispatch] of the League [of Nations] Commission of Enquiry and the publication of its report.”

Chapters 2 and 3 give a Japanese version of the history of Manchuria, in four periods, from 311 B.C. to the present, and of its administration.

In Chapter 7, “Agriculture,” the section on “Agricultural products” contains tables: (2) Agricultural production of 9 major crops in 1930 (incl. soya beans) in three provinces, total, Kwantung Leased Territory and South Manchuria Railway (S.M.R.) Zone, and grand total. (3) Cultivated area classified by crops, 1930. (4) Production of ordinary crops, 1924-1930. (5) Cultivated area of ordinary crops, 1924-1930. (6) Production index of ordinary crops, 1924-1930. (7) Index number of cultivated area of ordinary crops, 1924-1930. (8) Percentage of production and cultivated area of ordinary crops, 1924-1930. (9) Production and cultivated areas of ordinary crops classified by districts, 1930. (10) Value of exports of agricultural products (Haikwan taels), raw products and manufactured goods. (11) Exports of agricultural products (metric tons and Haikwan taels), 1921-1930. (12) Exports of principal agricultural products classified by destination (metric tons and Haikwan taels), 1930. (13) Amount of soya beans and cereals consumed in the three eastern provinces, 1930 (as food, fodder, or seed; in South and in North Manchuria). (14) Percentage of agricultural products shipped to the markets (in South and North Manchuria). Map of distribution of crops [and railways] in Manchuria (p. 111). Sub-section titled “Soya beans” (p. 110-12). A photo (facing p. 112) shows Soya bean at Tailai, piled in sacks near a railway. The soybean is the principal resource of Manchuria in terms of both production and acreage. In recent years, the annual production has reached more than 5 million tons, which is 60% of world soybean production.

Chapter 12, “Industry,” includes table (6) Manufacturing production in the Kwantung Lased Territory and the S.M.R. Zone, 1926-1930 (both volume and value). Products include [soya] bean oil, [soya] beancakes, miso, and soy [sauce]. In Section 2, “Oil and fat industry” is a subsection (p. 188-97) titled “Oil milling” with these contents: Introduction. Diagram of utilization of soya beans. History. oil extraction

methods, table (7) “Beancake producing capacity of oil mills per 24 hours, 1925-1931” (in major cities), table (8) “Beancake production in Manchuria (1,000 pieces), 1926-1930, in major cities and regions, table (9) “Exports of beans and bean oil from Dairen, Antung, Yingkow and Vladivostok, 1920-1931,” table (10) “Exports of soya beans, beancake and bean oil (1927-1931),” table (11) Exports of beancake classified by ports, 1929-32,” table (12) “Export of beancake classified by destination, 1929-1931” (Japan gets 62%), table (13) “Export of bean oil, 1931, by destination, “Solidified bean oil industry” [hydrogenated], table (14) “Production of solidified bean oil (by the Dairen Oil Fat Manufacturing Co., established 1916).” Miso and soy [sauce] manufacture (p. 230).

In Chapter 15, “Foreign trade, table (9) shows the “Quantity and value of exports at Manchurian ports (Value in H.K. taels). The main exports are soya beans, other beans, maize, kaoliang, and millet. The ports are Antung, Dairen [the main port for soya beans], Newchwang, Harbin, Aigun, Hunchun, and Lungchingsun. The main destination countries are British Empire, USA, Germany, France, Russia, Other countries, Total, Chinese ports, Grand total. Note that Japan is not mentioned; it is probably concealed within “Other countries.” The source of the statistics in table 9 is: Research Office of S.M.R. Co. *Trade Returns of North China*, 1930 and previous issues.

A large fold-out map at the end of the book shows all of Manchuria, incl. province boundaries, railways, steamer routes, and cables.

Leplae, Edmond. 1932-1933. *Traité d'agriculture générale et de cultures spéciales des pays tempérés, subtropicaux et tropicaux* [Treatise on general agriculture and special crops for temperate, subtropical, and tropical countries. 3rd ed. 2 vols]. Louvain, Belgium: Librairie Universitaire. Vol. 2, 796 p. See p. 306-07. 25 cm. [Fre]

• **Summary:** The author classifies the soybean among the leguminous forage plants, among starchy (*féculentes*) plants, and among oilseeds. “Soybean seeds have a nutritive value for humans greater than that of all other seeds, except peanuts.” The peoples of East Asia prepare soybeans and their flour in 100 different ways, many of which are now also known in Europe. The Chinese make from soybeans an artificial milk and a cheese [tofu]. Soy flour is easy to digest and can be mixed with wheat in making bread and pastries. The soybean is used in the production of so-called “English sauces” [such as Worcestershire], which are widely consumed in Europe and America. Finally, soybeans are imported into Europe at the rate of 600,000 tonnes/year and the oil is used to make soap and margarine. Address: Prof. à l'Univ. de Louvain, Directeur général de l'Agriculture au Ministère des Colonies.

• **Summary:** Contents: Introduction (preliminary notes). Part I: Cultivation and applications of soya. Chart of utilization of the soybean seed. Agronomic notes and details on soybean cultivation. Part II: Soya as a food. Nutritional value, soya as a vegetable (green vegetable soybeans; *Soja, como verdura*), soy sauce (*salsa de soja*), soymilk (*leche*), condensed soymilk (*leche concentrada / condensada*), powdered soymilk (*leche en polvo*), fermented soymilk (*leche fermentada*), soy cheese (*queso de soja*) [tofu], soy casein (*caseina de soja*), soy flour (*harina de soja*), soy bread (*pan de soja*), Soyolk (soy flour made by Dr. Berczeller), whole-grain soy bread (*pan integral*), soy flour tablets (*comprimidos*), pastries, biscuits, puddings, etc. (*pasteles, bizcichos, puddings*), soy oil (*aceite de soja*), fermented soy products (*productos de la soja fermentada: natto, miso, shoyu*), confectionery products (*productos de confiteria*), chocolate (*chocolate*), coffee (*café*), soy ferments/enzymes (*fermentos de soja*), products made by Caséo-Sojaïne (Caseo-Sojaïne de Paris). Soy as a livestock food. Appendix.

"As early as 1918 a Spanish public official, Don Julio de Palencia, the Spanish Consul in Shanghai, sent the State

Department (*Ministeria de Estado*) a magnificent report specifying the great attention that representatives of the principal countries of the world were giving to this crop [the soya bean], and the relevance that it would have in the agricultural economy of the future. What a pity that Spain has been the only civilized country to ignore the study of the soya bean and its exploitation on a large scale" [p. 5].

"Finally we must make public our thanks to the spokesmen of this foundation/board (*Patronato*) for the special work they have done in writing this booklet: Don José Maria de Soroa, secretary of the Special School for Agricultural Engineers (*Escuela Especial de Ingenieros Agrónomos*), and Dr. Don José Abadal, chief of the Bureau for the Inspection of Pharmaceutical Services of the Ministry of War (*Negociado de la Inspección de Servicios Farmaceuticos del Ministerio de la Guerra*)" [p. 6].

"In 1917 the Spanish Consul in Shanghai, Don Julio Palencia, sent to the State Department a study on cultivation of soya, proposing that tests be done to acclimatize this valuable crop to our country.

"In Motril and later at the southern agricultural station of Malaga, the agricultural engineer D. Arsenio Rueda has been cultivating soya for the past 10 years [i.e. since 1923] in plots of 5 ares [1 are = 100 square meters], obtaining 60 liters (each liter weighing 780 gm) in each one.

"The white as well as the black varieties give good results, though the white ones do best. The seeds have been distributed to farmers who have noticed that, even though at first the goats that were given them as food rejected them, after a few days of getting used to this grain preferred them to such an extent that one must avoid growing this plant near the herd's path lest the herd be attracted and devour it all.

"Although soya is a legume which draws many nutrients out of the soil (*esquilmante*), it has according to Mr. Rueda, sufficient interest since it allows usage of terrains where field beans cannot be used due to the invasion of the pest called *Orobanche speciosa*, commonly called 'Jopo.' This parasite does not attack soya...

"Besides the quoted trials, it has been more than 25 years since soy has been grown in Spain with success due to the interest and zeal that in their patriotic work, the agricultural engineer Mr. Eduardo Noriega undertook with his partner, Mr. Ortiz, on the farm of 'Jerez.'

"He was successful during many years using the yellow and black varieties, later on also cultivating it in the Spanish central region.

"We think it useful also to state in writing the following data about soy grown by Dr. D. Jose Abadal in Lerida during the years of 1925-1926.

"The experiment was done only out of curiosity, with the intention of seeing if it could be grown in said province. Japanese seeds of the hirsute soy variety, yellow seed, used as food for diabetes, were used. The planting was done in a garden with seeds that had been soaked for ten hours, with

no more care or fertilizers than those used for all the existing plants of that garden. The terrain of course was one of easy irrigation and located in Lerida where it is very hot all during the summer.

"This brief essay demonstrates that soy can be grown in irrigated terrain in very hot places and with little care.

"Fifteen years ago, the agricultural Engineer D. Jesus Andreu, in the province of Pontevedra [in the northwest corner of Spain, just north of Portugal, bordering the Atlantic ocean], did some tests with good results on growing soy as a forage plant.

"We also have news, though not concrete, of other successful tests done in the provinces of Madrid and Toledo." Address: 1. T.C. Farmaceutico Militar; 2. Ingeniero Agronomo e Ingeniero Sanitario, Spain.

2909. Au, Man Sing. comp. 1932. Chinese cookery. Honolulu, Hawaii: Creart Publications. 46 p. Index. 21 cm.

• **Summary:** Subtitle on cover: "Genuine Chinese dishes you can prepare in your kitchen." Chapter 1, "The nine-course dinner," states (p. 7): "A small plate is used to hold soyu [shoyu] or Chinese sauce. A morsel of food is picked up in the chopsticks, dipped into the sauce and then put into the mouth."

The section titled "Seasonings and gravies" (p. 10) notes: "Chinese sauce or soyu, used instead of salt, adds zest and delicacy."

"Bean sauce, which is mashed preserved white beans, comes in white and red varieties. The white sauce is salty, while the red has a sweet taste. Both give meat that strange 'aging' taste."

"Tou-see, a preserved and cured Chinese black bean [soybean], tones down the strong smell and taste of deep ocean fish when used with it."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Tou-see" or the term "preserved and cured Chinese black bean" to refer to fermented black soybeans.

On pages 33-34 is a section titled "Bean curd."

2910. Cottington-Taylor, D.D. comp. 1932. Subtle seasoning 1932: A little book of recipes. 5th ed. Worcester, England: Lea and Perrins Ltd. 70 p. Illust. Recipe index. 20 cm. 1st ed. Feb. 1926.

• **Summary:** A booklet of recipes advertising Lea & Perrins' Worcestershire Sauce, The sauce bottle, with its distinctive orange label, is shown on the front cover.

Contents: Subtle seasoning: Introduction. Domestic details: Cooking terms explained, menu making, marketing guide, table appointments, hints on entertaining, a lesson in frying, cooking temperatures, some facts on Lea & Perrins' Sauce. Recipes: Soups, fish dishes, vegetarian dishes, meat dishes and entrées, rechauffé [reheated] dishes, sauces, salads, snacks meals and sandwiches, sandwiches and

rolls. Lea & Perrins' Mayonnaise. Lea & Perrins' Salad Cream. Handy household hints. Address: Director of Good Housekeeping Inst. [England].

2911. La Choy Food Products, Inc. 1932. The art and secrets of Chinese cookery. Detroit, Michigan: La Choy Food Products, Inc. 15 p. 15 cm.

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home. A photo of each La Choy product appears on at least one page, and at least one of these products is called for in each recipe. The products and the page on which they appear are: Bean Sprouts (mung bean, canned, p. 4). Vegetables (canned, incl. sprouts, water chestnuts, bamboo shoots, mushrooms and sweet peppers, p. 5). Chinese Soy Sauce (in small table dispenser bottle, p. 8). Chow Mein Noodles (deep-fried, canned, p. 9). Cooked rice (canned, p. 12). Chop Suey (canned, p. 12). Brown Sauce (jar, p. 13). Without photos: Bamboo shoots, Kumquats, Water chestnuts (p. 14).

Concerning Soy Sauce (p. 8): "Brewed and aged by slow and painstaking processes according to the age-old Chinese recipe, this savory sauce is imported for you, and is now obtainable at your grocer's in sterilized and hermetically sealed bottles.

"LaChoy Chinese Soy Sauce is the essential seasoning and blending ingredient in nearly every type of genuine Chinese food. Being wholesome and pure, as well as highly palatable and nutritious, it is indeed a culinary need in every household. LaChoy Soy Sauce will add a piquant flavor to all soups, gravies, hashes and stews, and is a delightful condiment for use on steaks, chops, roasts and sea food. All salads are made more tasty by the addition of a few drops of this sauce to whatever dressing is used." There follows a recipe for "Egg Foo Yong." Address: 4461 West Jefferson, Detroit, Michigan.

2912. Lea & Perrins, Inc. 1932. Success in seasoning. New York, NY: Lea & Perrins. 49 p. Illust. (color). Index. 17 cm. Reprinted in 1934 and 1936.

• **Summary:** Recipes for using Lea & Perrins' Worcestershire Sauce. Contents: The art of serving appetizing meals. Appetizers. Soups. Fish. Meats. Eggs and cheese. Entrées. Sauces. Spaghetti and rice. Vegetarian dishes. Garnishes. Stuffings. Salads and salad dressings. Sandwiches. Bridge party and Sunday night supper dishes. Vegetables. Hot dishes for cold days. Relishes. Dishes men like. Items—Small but important [kitchen tips].

The inside front cover states: "Nearly a century ago, Lea & Perrins of Worcester, England, compounded a sauce from the recipe of an English nobleman, who had spent many years in India. They began production on a large scale, and its local importance was followed by ever increasing demand.

"Where the flag of civilization went, Lea & Perrins

Sauce, the Original Worcestershire, followed. Scarcely a ship left Britain without a supply among its stores. Soon the great hostelrys at the ports of call featured in their menu attractions. Branch distributing houses were established in all parts of the world, thus making it available at even the remotest points."

Note: Lea & Perrins, Inc., New York, NY, also issued the following leaflets and booklets, all of which are owned by the Texas Woman's University Library (Denton, Texas) and cataloged as Title: "Recipe leaflets collection. Corporate author: Lea & Perrins, Inc. Publication: New York, NY: Lea & Perrins, Inc. Year: 1934.

Success in seasoning (1934).

2913. Orosa, Maria Y. 1932. Soybeans as a component of a balanced diet and how to prepare them. *Manila (Philippines) Bureau of Science, Popular Bulletin* No. 13. 53 p. [16 ref]

• **Summary:** Contents: Introduction. The cooking of soy beans (89 Filipino recipes, p. 7-35), incl. roasted soy beans, soy-bean soups etc.—most recipes use whole soybeans, but quite a few use tofu (*tokua*), soy sauce (*toyo*), soy-bean flour, or soy-bean milk, and a few use *tahuri* (brine fermented tofu) or soy-bean sprouts. Some common foods made from soy beans and methods of preparing them (p. 35-53): Soy-bean milk, condensed soy-bean milk, soy-bean milk powder, soy-bean casein, soy-bean curd (tofu; *tokua* or *toqua*). *Tahuri* or *tahuli* (fermented tofu). Frozen tofu. Bean curd brains or *tofu nao*. Dry bean curd or *topu khan* (tofu-kan, dipped in burnt millet sauce and rubbed with fine salt). Fragrant dry bean curd. Thousand folds (thin layers of fresh tofu pressed in cheesecloth. "On standing, the thousand folds mold and develop a meatlike flavor. This is fried in sesame oil and served in place of meat"). Fried bean curd. Soy sauce (called by the Chinese "ch'au yau," or drawing oil; or "pak yau" or white oil; by the Japanese "shoyu"; and the Filipinos, "toyo"). Natto. Hamanatto (p. 49). Yuba. Miso. Soy-bean flour. Soy-bean oil (used in the manufacture of lard and butter substitutes; also in paints, printing inks, etc.). Soy-bean meal. Soy-bean coffee. Soy-bean sprouts.

Note 1. This is the earliest English-language document seen (Oct. 2008) that uses the term "soy-bean casein" (or "soy bean casein" or "soybean casein"), probably to refer to soybean protein.

"When and by whom the soy bean was first introduced into the Philippines, no one can ascertain. The Filipino people have long known some important soy-bean

preparations, such as soy sauce, or 'toyo,' bean curd, or 'tokua,' fermented bean curd or 'tahuri,' not knowing that they were prepared from this bean. The seed is known in some parts of the Philippines, where it is grown, as 'utao.'"

"The main object of this pamphlet is to encourage the Filipino people to use more soy beans, and preparations made from them as food" (p. 3-4).

"Soy beans are grown in some parts of the Philippines. According to Doctor Roxas, Director of the Bureau of Plant Industry, 2,481 tons were grown in Batangas in 1921 and 4,218 tons, in 1930. However, the importation of soy beans in 1924 was 4,657 tons. Doctor Roxas says that soybeans can be grown in all parts of the Philippines" (p. 6). "Immature soy beans may be cooked in the same way as lima beans (*patani*)" (p. 7).

"The soy-bean curd was first produced by Whai Nain Tze, before the Christian Era and was introduced into Japan from China by the Buddhists. It was introduced into the Philippines by the Chinese and has become a very popular food in Manila and in places where there are Chinese who manufacture it for sale. 'Tokua' on account of its high fat, protein, and mineral content, is called by the Chinese as 'meat without bone,' or 'the poor man's meat.'" The Chinese use burnt gypsum (about 1.5% by weight) as a coagulant. In some cases, the curds are wrapped in individual pieces of fine cheesecloth about the size of a small handkerchief, then pressed lightly for a few minutes. They are "unwrapped, spread on shallow bamboo trays (*bilao*) and partially dried at room temperature. Then they are dipped in a weak solution of turmeric to coat the outside in light yellow coloring. Some manufacturers soak the small cakes of curd in brine solution for a short time, then dip them in a solution of burnt sugar or molasses and bake them slightly before putting them on the market." 100 gm of dry soybeans typically yield 350 gm of tofu (*tokua*) (p. 41).

The section titled "'Tahuri' or 'Tahuli'" begins with 2 paragraphs and ends with a table very similar to those from Gibbs and Agcaoili (1912): "'Tahuri' is manufactured in China and exported to the Philippines in large stone jars or in small tin cans. There are some 'tokua' manufacturers in Manila that manufacture 'tahuri' for local consumption. Those that are imported from China are preserved in strong brine solution and the cakes are broken during the shipment so the liquid becomes like a thick emulsion containing pieces of the cured curd." It then contains a new paragraph: "In Manila, the Chinese method of manufacture is to pack the large pieces of soy-bean curd, about 5 inches long, 4 inches wide, and 2.5 inches thick, with much crude salt, in empty gasoline cans. The curd is allowed to cure for a period of several months. During the curing period the bean curd changes from white to a brownish yellow color and develops a peculiar salty flavor to which the Chinese and many Filipinos are educated" (p. 42). Note 2. No information about a fermentation microorganism or process is given.

"The bean curd brains known to many Filipinos as 'tojo' is the unpressed soy-bean curd. The method of making 'tojo' is almost the same as the method used in making 'tokua', only that a smaller amount of the coagulating agent is used, and the very soft but solid mass formed is left undisturbed in the wooden container until used. The Chinese used to peddle this preparation in a wooden pail-shaped container, through different parts of Manila, but on account of the Philippine Health Service regulations, this product is now sold in the markets only. / "The 'tojo' is served with a few tablespoonfuls of medium thick brown-sugar syrup, which gives it flavor, the 'tojo' being almost tasteless. Sometimes it is eaten with sweet oil, sauce, and vinegar, or with finely cut meat and spices." (p. 43).

"Dry bean curd: The fresh bean curd when dipped in burnt millet-sugar sauce and rubbed with fine salt will keep longer than the 'tokua' and is called 'topu khan.' This preparation is usually eaten in soups."

Fragrant dry bean curd or *hsiang khan* ("fragrant dry") has the consistency of smoked sausage. "It is made by subjecting the fresh bean curd to great pressure, which eliminates much of the water content. The pieces of semidry curd are soaked in a weak brine solution in which is dissolved burnt millet-sugar and to which is added powdered spices. The curd is then dried to hardness. This preparation keeps indefinitely and is used in soup making and in vegetable dishes" (p. 43).

Note 3. Cruz and West (1932, p. 78) state that as part of a campaign by the Bureau of Science to encourage the Filipino people to use more soy beans, Miss Orosa "has made excellent cakes, cookies, puddings, sauces, soups, custards, ice cream, and other tasty preparations from Philippine soy beans."

Note 4. The author pioneered the branch of the branch of the Home Extension Service in which home demonstrators helped women in solving their home problems. She started the organization as a food preservation unit under the Bureau of Science in 1923, starting with six home demonstrators that she herself trained. That group became the forerunner of the Home Extension Service in the Philippines. For details on her work see: In: *A Half Century of Philippine Agriculture*. Manila, Philippines: Liwayway Publishing, p. 236-37.

Note 5. This is the earliest English-language document seen (Nov. 2003) that contains the word "meatlike." Address: Chief, Div. of Food Preservation, Bureau of Science, Manila.

2914. Searle, Townley. 1932. *Strange newes from China: A first Chinese cookery book*. With 101 rare and choice Chinese recipes and decorations by the author. London: Alexander Ouseley, Ltd. 231 p. Illust. 22 cm.

• **Summary:** Page 83 states that "'Chow' means 'fry,' 'Too Foo' is 'Bean Curd,' and the 'Chop Suey,' although not real Chinese (see Encyclopedia) stands for almost any mixed dish." Soy-related recipes include: *Tou fu hah chi*

tong—Bean curd and prawn soup (p. 92; The author states: “In trying this recipe we used tinned prawns: Beneath the trade-mark of the tin was the following warning against infringement: ‘If any man imitate this mark, may his sons be thieves and his daughters prostitutes.’”). Tou fu yuk ming tong—Bean curd and meat soup (p. 93). Tou fu gai pin tong—Bean curd and sliced chicken soup (p. 95).

On pages 108-09 are the names and prices of many Chinese foodstuffs, including Chinese soya sauce (1 lb. or 3 lb. net)—\$0.25 or \$0.45 per jug, Chinese bean sauce—\$0.15 per can, Chinese red bean curd [fermented tofu]—\$0.18 per can, Dried Chinese beanstick [yuba]—\$0.22 per lb., Chinese bean cheese [fermented tofu]—\$0.50 per jar, Chinese bean cake [tofu]—\$0.30 per can.

Note: This is the earliest English-language document seen (May 2012) that uses the term “Chinese beanstick” or the term “Dried Chinese beanstick” to refer to dried yuba sticks.

The Encyclopedia (p. 215-17) contains descriptions or definitions of the following: Chop Suey (“an American ‘Pidgin English’ term originally coined in San Francisco...”). Tou foo (see Bean curd). Soya bean—*Glycine hispida* (“One of the most valuable foods in the world.” “Flour made from the soya bean has immense value as a foodstuff as it contains the only plant albumen which is equal in value to the very much more expensive animal albumen. The Chinese soak the beans in water, then roast them and eat them in much the same way as peanuts.” “It is claimed that the soya bean will soon become the chief food of the civilised world as it contains a large proportion of protein which is as valuable as the casein in milk...” “The best way to cook the soya is undoubtedly by means of a pressure-cooker...”). Bean sprouts (“come from the seeds of the soya and can be used as green vegetables all the year round.” Describes how to make them). Bean curd (“It is of about the same consistency as ordinary thick cream cheese and is ordinarily used fried with vegetables etc. in lard and in omelettes etc.”).

2915. Winton, Andrew Lincoln; Winton, Kate Barber. 1932. The structure and composition of foods: Vol. I. Cereals, starch, oil seeds, nuts, oils, forage plants. New York, NY: John Wiley and Sons; London: Chapman & Hall, Ltd. xiv + 710 p. See p. 512-24. Illust. Index. 24 cm. [67 soy footnotes] • **Summary:** Volume 1 of this 4-volume set contains 274 superb illustrations by the authors. The book is divided into three parts: I. Cereals. II. Oil seeds. III. Forage plants.

In the chapter on “Seeds of the pea family (Leguminosæ)” (p. 497+) the section titled “Soy bean” (p. 512-24) has the following contents: Scientific and common names. Introduction. Macroscopic structure. Microscopic structure: Spermoderm, hilum cushion, endosperm, embryo (palisade cells, oxalate crystals, starch, aleurone grains and fat), chief structural characters. Chemical composition: Changes in composition during growth, soy bean cake,

meal, and flour, proteins, carbohydrates, phosphorus-organic compounds, saponins, enzymes, mineral constituents, minor mineral constituents.

The chapter begins: “A native of the Far East, the soy bean has been cultivated since the dawn of civilization in China and Japan, where the seeds furnish millions of human beings with food. From the seeds are prepared soy cheeses (tofu, natto, miso [sic, none of these three are “soy cheeses”]), soy milk, and soy sauce, the latter being used in chop suey. Because of the absence of starch in many varieties soy bean flour has come into use in the Occident as a diabetic food. Soy bean oil is of growing industrial importance.”

An illustration by Winton (p. 512; Source: Winton 1906, p. 248) shows the outer portion of the soy bean seed in cross section, with each of the layers (X 160 magnification).

In the introductory section on “Forage legumes,” soy beans are discussed under the following headings (p. 642-45): Comparative macroscopic structure, comparative microscopic structure (table), comparative chemical composition of green fodder (p. 644) and of hay (p. 645). The section titled “Soy bean” (as forage plant, p. 666-67) has the following composition: Introduction. Macroscopic structure. Microscopic structure: Stem, petiole, petiolule, leaf, stipule, flower, chief structural characters. Chemical composition (values from Pellet, Schwackhöfer, and Haskins for: Total ash, potassium oxide, sodium oxide, calcium oxide, magnesium oxide, ferric oxide, phosphoric acid, sulfur trioxide, silicon dioxide, and chlorine).

Note: This is the earliest English-language document seen (Jan. 2004) that uses the word “petiolule” in describing the soybean plant.

This book also discusses: Lecithin (p. 8, 14). Kudzu starch (*Pueraria hirsuta* Schneider, p. 37). Gluten (p. 57-59, 72-73, 199-200, 211-25). Coix (Job’s tears, p. 100-04). Hemp seed (p. 413-21). Almond (p. 476-85). Peanut (p. 497-512, 642-43, 663-66). Linseed (p. 525-35). Sesame seed (p. 598-605). Alfalfa (p. 642-43, 646-59).

Note: Andrew L. Winton lived 1864-1946. Kate Grace Barber Winton was born in 1882. Address: 1. Sometime state and federal chemist; 2. Sometime state and federal microscopist.

2916. *Times (London)*. 1933. Official record of dealings. Jan. 12. p. 19, col. 5.

• **Summary:** The section titled “Banks and discount companies” contains the following entry: “Indust. of Japan (SOY), 43/-++.” Note: The meaning of this is not clear. This entry last appeared on 22 June 1938 (p. 27, col. 5).

2917. Hansen, Louis A. 1933. The soy bean as human food. *Life and Health* 48(2):21-23, 27. Feb. Also in J. of the Jamaica Agric. Soc., March 1933, p. 147-50.

• **Summary:** This is a good introduction to the soybean, based largely on information provided by Dr. A.A. Horvath

(until recently of the health section, U.S. Bureau of Mines) and William J. Morse (senior agronomist at the USDA Bureau of Plant Industry). Discusses: History of the soy bean in Asia (especially China), nutritional benefits, soy bean flour, soy bean milk, and soy sauce.

Photos show: (1) Two men standing in a field of tall soybeans. (2) A person grinding soybeans with a stone mill to make soy bean milk in China. (3) A “Chinese courtyard with pots of fermented soybeans and brine from which the well-known soy sauce is made.” (4) Steamed soy beans about to be made into miso in Japan.

Note: In 1968 Hansen wrote a book titled *From So Small a Dream*, about Madison College (Madison, Tennessee), which pioneered soyfoods in the United States.

2918. DeBoth, Jesse Marie. 1933. Chinese luncheons proving popular: Clever hostess finds chop suey or chow mein pleases. Prepared easily: Place cards in fantastic characters simulate Chinese lettering. *Toronto Daily Star (Canada)*. March 4. p. 26.

• **Summary:** A recipe for “Chop suey or chow mein” calls for “2 tablespoons soy sauce.” The word “soy sauce” is mentioned three times in the directions.

2919. DeBoth, Jessie Marie. 1933. New and different are these recipes: They are especially suited for birthday and other parties. Rainbow cake gay: Checkerboard ice cream provides many opportunities for novel color combinations. *Toronto Daily Star (Canada)*. March 16. p. 27.

• **Summary:** A recipe for Oriental shrimp omelette calls for “1 teaspoon Chinese soy sauce.” The word “soy sauce” is mentioned once in the directions.

2920. *Madison Survey (Madison, Tennessee)*. 1933. Soybean on exhibition at World’s Fair. March 22. p. 39-40.

• **Summary:** “According to Sherman R. Duffy, the soybean will be the only vegetable crop having an exhibit all to itself at the Century of Progress Exposition, and will occupy 6,000 square feet of space in the Agricultural Building.” The soybean is known to urban dwellers only as the “material from which chop suey sauce is made... In the soybean exhibit will be soybean flour, diabetic foods, infant foods, macaroni, breakfast foods, and a vegetable milk which is being used in a variety ways in the manufacture of foods and confections.”

• **Summary:** This early publication on soyfoods in Africa describes food uses and methods of preparing soymilk, in both condensed and powdered forms. Tunisia was a French protectorate from 1881 to 1956, when it became independent. France grew soybeans there, apparently at about the same time it started growing them in Algeria (p. 214).

At the exposition of Nanking in 1910 some 400 varieties of soybeans were assembled (p. 214).

In 1908 the firm of Mitsui was the first to try to transport, by sea, soybean seeds from Dairen to Liverpool. It was the beginning of a new industry in England (Liverpool and Hull), in Germany, Denmark (Copenhagen), and Holland (Rotterdam & Amsterdam).

A former Belgian missionary in Jehol (West Mongolia), Father De Preter (*Le T.R.P. Fl. De Preter, Supérieur de la Maison des Pères de Scheut à Yvoir*) has corresponded with the author about soybeans, tofu, and soybean cake in that city. Soybeans are not cultivated on the best soils, which are

reserved for wheat. One of his colleagues at Jehol, Father Cyr. De Puydt has worked to improve the soybean crop (p. 219).

Father De Preter has often helped in making tofu (*fromage de soja*), using magnesium chloride as a coagulant. If one uses calcium sulfate, the tofu is softer and the taste seems better. Father de Puydt has improved the manufacture of tofu by using magnesium salts (probably Epsom salts) in place of magnesium chloride. The tofu is eaten after being boiled in water or fried in fat. It is best when fresh. In winter, it is allowed to freeze [frozen tofu in northeast China] so that it can be kept for a long time; it becomes spongelike. But fresh tofu has a special aftertaste to which the European palate finds it difficult to get accustomed. This taste does not come from the coagulant but from the soybeans. When one eats more than two pieces of tofu in succession, one experiences indigestion. It does not produce gas like the beans. Notes that the factory of the Caséo-Sojaïne near Paris, of which Mr. Li Yu-ying is the director, makes tofu and various tofu products. Cooked with eggs, tofu makes an excellent omelet. Cooked with the juice of meat, it takes on entirely that flavor. It can be used to make patés or smoked. Use firm tofu and cook in a mixture of 4:1 water to soy sauce. Then smoke it like meat. This can, for example, replace ham or bacon in an omelet. Tofu paté has much the same consistency and taste as paté de foi gras. Thus, there are many ways that tofu can replace meat (p. 221-24).

Using caséine or légumine of soymilk, the French pioneered industrial soy protein isolates in 1911 (see Beltzer). They were used in various glues, and in coating paper (p. 224-25).

The margarine industry employs only the finest quality oils. Soy oil was not introduced to margarine manufacture in Europe until about 12 years ago [i.e., 1921], but it has rapidly taken an important place on account of its good properties and low cost. Describes how to make synthetic rubber from soy oil. One of the main uses of soy oil in Europe is in making soaps. Some is also used to make explosives. Mr. Tihon is the distinguished director of the Laboratory of Industry and Commerce at Leopoldville, Belgian Congo (p. 227-28).

Soybean cake (*Tourteau*): Father de Preter in Jehol has assured me that soybean cake is used there to nourish and fatten beasts. For horses, this cake has a surprising effect. If a horse, returning from a trip lean and exhausted, is put on a regimen of soybean cake, it will return to normal in 15 days (p. 230).

Just like the oil, the cake is more and more in demand in Europe, and in certain countries the effect of soybeans on the economy is quite remarkable. Until about 30 years ago, Denmark was a super producer of wheat. But Dutch products were defeated by the lower prices of American goods. Aided by soybeans, the Danes were able to expand their livestock. Soybeans are now imported, the oil is extracted and used to

make margarine, while the cake is used to feed livestock—some 18.5 million heads in 1926, not including poultry. The result has been the development of an enormous trade in animal products, butter, cheese, ham, bacon, lard, eggs and even livestock—all accounting for about 70% of Danish exports. Holland is in a similar position (p. 230-31).

In 1912 the “Dairen Mill Owners Association” was founded. By June 1923 all but 7 of the mills in Dairen were members of the association. The oil in the Suzuki mill is extracted using benzine solvent, the most modern method. 32 of the mills, mostly owned by Japanese, use hydraulic presses, while those owned by the Chinese generally use hand-turned screw presses (p. 231-32).

A large table (p. 323) shows exports of soybean seeds, cake, and oil from the ports of Dairen, Newchwang, Vladivostok, and total, from 1908 to 1917. During this time, because of Manchurian mills, the amount of seed decreased, while the exports of cake and meal increased.

Condiments: Shoyu (*shoyou*) is the main one. Several processes for making soy sauce are described in detail. Lea & Perrins Worcestershire Sauce is nothing but a highly seasoned soy sauce (p. 234).

Continued (p. 365): Mr. L. L’Heureux is director of the chemical service of the Belgian Congo. Let’s see what the soybean is doing in the Congo. M. Tihon of Leopoldville, said in an interesting report titled *A propos du soja hispida*: Encountered 30 years ago [i.e., about 1903] at Stanleyville by commander Lemaitre, it figured in the collection of the botanical garden of Eala and was the object of experiments at Sankuru in 1914-15 (p. 365).

In this report, Tihon analyzed 3 varieties of soybeans from the plantations of Eala. The soybean would be good for all our [Belgian] colonies; it could replace meat and be used in the rations of black workers (p. 366-67).

Soymilk: Describes how to prepare it and its properties. According to Prof. Laxa of Prague, fresh soymilk has an acid reaction. Mentions the work of Li Yu-ying. Notes that by adding lactose and a bacterial culture, Yogourth [yogurt] can be made from soymilk (p. 370).

In Peking, soymilk is sold in small bottles of 200-220 cc carrying the title *Lait de pois—Un produit chinois. La nourriture la plus nourrissante. Préparé par ____*. In 1925 one bottle of soymilk daily cost 1 dollar Mex per month. In 1919 in Shanghai, Peking and Dairen, Chinese companies furnished hospitals and private individuals 8-10 oz of concentrated soymilk in bottles (p. 371-72).

A table (p. 373) compares the composition of 3 types of soymilk with mother’s milk, cow’s milk, and goat’s milk; all but the cow’s milk (87.00%) contain 90.71% water. The soymilks are: (1) From Tsinan fu, China. (2) From Peking, China. 3. From Japan. The soymilk from Peking was low in fat, so yuba had probably first been removed from it (p. 372).

In China, soymilk is habitually drunk sweetened with sugar. Li Yu-ying reports that one of his parents was

nourished from birth with soymilk and for 37 years he has always been in excellent health (p. 374).

A new method for making soymilk. In 1916 Prof. Laxa of Prague develop a method for making soymilk in homes in Europe. The cost of a liter of soymilk in Prague in 1916 was estimated by Laxa as being about 40 centimes if it was homemade. Before the war, there was in London a soymilk factory which intended to place its products regularly on the market. Plans were made to construct two other plants, one in Manchester and one in Liverpool. The synthetic milk syndicate launched a soymilk on the market that was adapted to European tastes. The syndicate's factory, established in Liverpool, used the method of F. Goessel to make 100 liters of soymilk using the following formula (which is given). A Dutch patent (No. 2122 of Sept. 1917) and a Japanese patent (No. 28346) are also cited (p. 375-77).

A table shows the composition of 6 types of Soyama soymilk according to the analyses of Dr. G. Popp of Frankfurt. The protein ranges from 2.5% to 3.77%. Normal soy cream contained 11.5% fat, whereas that which was extra rich for diabetics contained 30% fat. It is very difficult to tell the difference between tea, coffee or chocolate to which one has added Soyama soy cream compared with regular dairy cream (p. 379).

In using the Soyama milk and cream, von Noorden confirms the following statement of Fischer, who studied vegetable milks in general: 1. In the stomach, soymilk gives a flocculent precipitate which is finer [smaller clumps] than that produced by cow's milk. 2. The digestion of soymilk requires only a weak secretion of gastric juice; the period of secretion is therefore short. 3. The time that soymilk protein resides in the stomach is shorter than that of cow's milk protein. 4. The peristaltic action of the stomach is less after ingestion of soymilk and better coordinated. Therefore, based on these observations, von Noorden recommended soymilk over cow's milk (p. 380).

Hatmaker made powdered soymilk. A table shows its composition, as analyzed by a laboratory in Paris (p. 380).

Yu P'i and Yu Ba are the Chinese and Japanese names of yuba, respectively. Recently a new method for making yuba has been patented in Japan. It consists in the use of an electric ventilator placed above the surface of the cooking pot containing soymilk that is not heated above 90°C. A table (based on analyses of the Tokyo Laboratory of Hygiene, of Embrey, and of Adolph) then gives the nutritional composition of 5 types of yuba, including Fu Chu (dried yuba sticks) which (surprisingly) contain 53.68% water.

Note: Maybe this Fu Chu was either fresh or reconstituted yuba. Address: Directeur du Service Chimique du Congo Belge.

2926. DeBoth, Jessie Marie. 1933. Long, slow cooking makes better stew: Meat becomes tough and stringy if boiled fast. Pork chop suey: Chinese vegetables and soy sauce make

appetizing meal. *Toronto Daily Star (Canada)*. April 6. p. 30.

• **Summary:** A recipe for Pork chop suey calls for "1 tablespoon soy sauce." The word "soy sauce" is mentioned twice in the directions. "Serve soy sauce with the chop suey."

2927. Meade, Mary. 1933. Sukiyaki party is novel idea in entertaining: Japanese dishes are still as much of thrill to the hostess as to guests. *Chicago Daily Tribune*. April 30. p. D1.

• **Summary:** Among Nipponese foods, Sukiyaki is "the greatest temptation of all." One key ingredient is "soy sauce (sometimes known as chop suey sauce)." "Japanese diners are much nearer being vegetarians than we are." The writer gives a detailed recipe for Sukiyaki; the Otsuyu (soup) includes: "4 cups boiling water, ½ teaspoon ajinomoto {a powdered seasoning on the market}, ½ tablespoon soy sauce, etc.

Note: Tofu is not mentioned anywhere in this article.

2928. *Food Manufacture (London)*. 1933. The manufacture of soy in Japan. 8(5):161-63. May.

• **Summary:** Describes the process for making soy sauce, with 4 photos.

2929. Wieland's. 1933. Now-Chicago is calling: Delaware 6202 (Ad). *Chicago Daily Tribune*. June 9. p. 2.

• **Summary:** "Wieland's Shon-Ping Chop Suey. This delicious food of the Orient is prepared by Oriental chefs for discriminating Americans, in immaculate American kitchens... Delivered within 3 minutes of your phone call. 2 very generous portions with rice and soya sauce—60¢. 4 very generous portions with rice and soya sauce—\$1. Delivery charge is 15 cents additional. Why not order your Sunday dinner now?"

Also offers "Glori-Roast Chicken" and "Glori-Fried Chicken—\$1 each. 4 kitchens to serve you: 543 N. Dearborn. 4850 W. Madison. 4659 N. Clark. 552 E. 63rd St."

An illustration shows a telephone. Note 1. An example of Chinese-style fast food with home delivery—during the Great Depression. Note 2. This ad appeared 9 more times in this newspaper from June 11 to Sept. 6. Address: 543 N. Dearborn. Phone: DELaware 6202.

2930. Remy, W. 1933. Die Sojabohne in Japan [The soybean in Japan]. *Ernaehrung der Pflanze (Die)* 29(12):234-36. June 15. [Ger]

Address: Tokyo.

2931. *Boletin de Agricultura y Trabajo (Nicaragua Ministerio de Agricultura y Trabajo)*. 1933. Soya o soja (Soja Híspida Moench) [Soya or soja]. 5(48):19-20. June. 2nd Series. [Spa]

• **Summary:** Contents: Introduction and history of the soybean ("it is also called 'soya'"), with its extension in the United States. Climate. Soil. Fertilizer. Inoculation. Varieties

widely cultivated in the USA (Biloxi, Peking, Virginia and Wilson Five for hay and ensilage. Ito-San, Manchu, Mandarin, and Tokio [Tokyo] for seed. Hahto for use as a food legume at the table {*legumbre de mesa*}). Uses of the plant: Green manure, forage, pasture (*pastaderos*), hay, green forage. Food products made from the seeds: Flour, oil, soy sauce, cooked whole soybeans, coffee substitutes, soups, soybean roasts or steaks (*soyas asadas*), porridge or mush, soymilk (*leche vegetal*), condensed soymilk, fresh soymilk, casein, confections, soy cheese (tofu; fresh, dry, smoked, or fermented; *queso fresco, seco, ahumado, fermentado*). Food products: Dry soybeans (*semillas secas*) are used to make soy sauce, cooked soybeans, coffee substitutes, soups, roasted soybeans, vegetable milk [soymilk], condensed milk, fresh milk, casein, confections or sweets, and soy cheese ([tofu] fresh, dried, smoked, or fermented), and green vegetable soybeans (*semillas verdes*) are cooked and canned or served in salads. Enemies of the soybean.

Note 1. This is the earliest document seen (Feb. 2009) concerning soybeans in connection with (but not yet in) Nicaragua.

Note 2. This is the earliest Spanish-language document seen (Oct. 2011) that mentions fermented tofu, which it calls *queso fermentado*.

Note 3. This is the earliest Spanish-language document seen (June 2009) that uses the term *semillas verdes* to refer to green vegetable soybeans.

2932. Ishimaru, Yoshio. 1933. Shôyu jôzô ni kansuru saikin no kenkyû. I. [Research on the bacteria involved in shoyu fermentation. I.]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 11(6):439-65. [Jap]

• **Summary:** Discusses 28 species of bacteria involved in shoyu fermentation. The main genera involved are *Bacillus*, *Pediococcus*, and *Micrococcus* species. Part I discusses: 1. *Bacillus mesentericus vulgatus* var. *Soya* No. 1. 2. *Bacillus mesentericus vulgatus* var. *Soya* No. 2. 3. *Bacillus mesentericus vulgatus* var. *Soya* No. 3. 4. *Bacillus mesentericus fuscus* var. *Soya*. 5. *Bacillus mesentericus niger* var. *Soya*.

Note: This is the earliest document seen (Jan. 2009) which mentions that *Pediococcus* bacteria are involved in the shoyu fermentation. Address: Nôgaku hakase, Japan.

2933. USDA Bureau of Home Economics. 1933. Nutritive value of soybean and soybean products (Leaflet). Washington, DC. 2 p. June 10. [5 ref]

• **Summary:** Table 1 gives the nutritional composition and fuel value of soybeans and soybean products: Green shelled soybeans, soybean sprouts, dry whole seed soybeans or whole ground meal, soybean flour (sifted, from the whole bean, from the press cake), soybean curd or cheese (fresh), soybean milk, soy sauce. Includes recipes for: Whole wheat bread with soybean flour, and White bread made with

soybean flour. Mentions that Soyex Co., Inc., was at 60 John St., New York City, on 5 May 1931; An analysis of their flour made from whole soya beans is given.

Note: This is the earliest English-language document seen (June 2009) that uses the term “Green shelled soybeans” to refer to shelled green vegetable soybeans. Address: Washington, DC.

2934. *Christian Science Monitor*. 1933. Popular dishes of Japan. July 7. p. 6.

• **Summary:** “These Japanese recipes comes to us by way of a resident in the legation quarter of Peiping, China. We have been told that American and European residents in China enjoy Japanese food and often patronize Japanese restaurants there. Japanese food is nourishing yet light. The mainstays of their diet are fish and vegetables” [sic, rice].

The recipe for “Suimono, or Japanese consommé” calls for: “Soy sauce, which is easily obtainable from Japanese and Chinese grocers or other importers. If not, any good fish-and-meat sauce such as Worcestershire will produce a similar effect if desired.”

The recipe for Teriyaki states: “(A fish recipe whose name means merely ‘Broiled’ [sic, it means ‘shining broiled’ or ‘glazed broiled’]).

“Wash thoroughly and cut into pieces: 1 piece tunny fish or salmon of medium size. Soak [marinate] for about 10 hours in a mixture of: 1½ cups sweet white wine-flavoring (non-alcoholic) [perhaps mirin] and

“¼ cup soy sauce or other fish sauce, such as Worcestershire. Then broil the same liquid mixture over a slow fire for about 15 minutes, or until the fish appears done when poked lightly with a fork. The recipe need not be salted unless desired, as the soy or other sauce contains salt flavoring.”

The recipe for “Mitsu mame (‘Honeydew beans’)” states: “The sweet red beans known as *adzuki*, which are similar to our dried [kidney] beans and dried peas, are a predominant ingredient in many Japanese sweets.”

Note 1 The main ingredient in this teriyaki dish is fish, not beef or poultry.

Note 2. The teriyaki [sauce] is extremely simple compared with later recipes.

Also contains recipes for: Rice–Japanese style. Chawan mushi.

2935. Ishimaru, Yoshio. 1933. Shôyu jôzô ni kansuru saikin no kenkyû. II. [Research on the bacteria involved in shoyu fermentation. II.]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 11(7):576-96. [4 ref. Jap]

• **Summary:** Part II discusses: 6. *Bacillus subtilis* var. *Soya*. 7. *Bacillus noudiastaticus* var. *Soya* No. 1. 8. *Bacillus noudiastaticus* var. *Soya* No. 2. 9. *Bacillus alcaligenes* var. *Soya*. 10. *Bacillus megatheroides* var. *Soya*. 11. *Bacillus citreus* var. *Soya* alpha. 12. *Bacillus citreus* var. *Soya* Beta.

Address: Nôgaku hakase, Japan.

2936. Jozogaku Zasshi (*J. of Brewing, Osaka*).1933. Shoyo: Shoyu, daizu,... [State of commerce: Prices of shoyu, soybeans, etc.]. 11(7):649-51. July. [Jap]

• **Summary:** Gives the price of shoyu and soybeans at various places in Japan.

2937. Ishimaru, Yoshio. 1933. Shôyu jôzô ni kansuru saikin no kenkyû [On bacteria in shoyu brewing]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 9(8):859-904, 953-1004, 1143-83. Aug. [Jap]

• **Summary:** Sixteen aerobes and 12 anaerobes have been studied. Most of the bacteria produce ethanol, acetaldehyde, acetone, furfuraldehyde, ammonia, fusel oil, and methyl acetate. Note: Part II (p. 1143+) is titled: The significance of shoyu bacteria in practical applications. It has two parts: (1) Shifting paths and the rise and fall of shoyu bacteria during brewing. Address: Nôgaku Hakase.

2938. Ishimaru, Yoshio. 1933. Shôyu jôzô ni kansuru saikin no kenkyû [Research on the bacteria involved in shoyu fermentation]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 9(8):859-904; 9(9):953-1004; 9(10):1143-83. [3 ref. Jap]

• **Summary:** Discusses 28 species of bacteria involved in shoyu fermentation. The main genera involved are *Bacillus*, *Pediococcus*, and *Micrococcus* species. At the end of this 3-part article (after p. 1174) are several large tables, many numbered microscopic round photographs of the bacteria, and photos of the bacteria on a culture medium in 28 different test tubes.

Note: A similar if not identical series of articles was published in *Hakko Kogaku Zasshi* in 1933. Address: Nôgaku Hakase, Japan.

2946. Miller, Carey D. 1933. Japanese foods commonly used in Hawaii. *Hawaii Agricultural Experiment Station, Bulletin* No. 68. 43 p. Nov. See p. 1-10, 28-43. [18 ref]

• **Summary:** Contents (p. 1-10): Introduction. Soybean products. Edamame (green soybeans). Tofu (soybean curd). Kirazu (tofu residue) [okara]. Tonyu (soybean “milk”). Aburage (fried soybean curd). Miso (fermented rice and soybeans). Natto (fermented soybeans). Shoyu (soybean sauce). Koji (fermented rice). Pages 24-15: Kinoko (mushrooms). Fu (gluten cakes). Goma (sesame seeds).

Pages 28-43 (Ingredients and nutritional composition of prepared foods or recipes): Miso soup with tofu. Miso soup with wakame. Miso soup with daikon. Miso soup with milk. Tofu soup with lemon. Tofu shoyu soup. String bean shirae [shira-ae] (with tofu and miso). Carrot shirai. Konnyaku shirai. Eggplant with miso. Green onions with miso. Fish cakes with miso. Sesame seed sauce for vegetables (with shoyu). Nishime (with shoyu). Nigome (with aburage and shoyu). Kirazu with vegetables (with okara, aburage, shoyu). Noodles (somen or udon, with shoyu). Vinegar sauce for sushi. Inari-sushi (with aburage and shoyu). Maki-sushi. Appendix: Composition of some Japanese foods used in Japan.

Concerning edamame: “The Japanese use several varieties of fresh green soybeans. In Honolulu whole plants are purchased from the vegetable market. The pods are removed from the plants, placed in boiling salted water, and boiled for about 25 minutes. They are then drained and cooled, and the beans are kept in the pods until eaten. Often children eat them out of bags as they would candy. The fresh green soybeans appear to be an excellent food. They are good sources of calcium, phosphorus, and iron, yield a basic ash, and, as compared with other fresh vegetables and fruit, have a remarkably high protein content. Vitamin tests in progress at the nutrition laboratory of the Hawaii Agricultural Experiment Station show that the cooked beans are very good sources of vitamins A, B, and G. The more general use of green soybeans should be encouraged in the home, and their consumption may be increased by selling them in school cafeterias.”

Concerning Kirazu (tofu residue): “Kirazu, or the residue of the soybeans left when tofu is made, has a crude fiber content of 3 to 4 percent, contains 4 to 5 percent of the protein of the beans, more than 1 percent of the fat, and 5 to 6 percent of the carbohydrate. Only a small part of kirazu is used for human food in Hawaii, by far the greater part being used as hog feed. Kirazu, however, is a utilizable,

inexpensive food and might be more generally used than it is... Kirazu is used in combination with vegetables, or with fish, or dried shrimp, and seasonings.”

Concerning natto: Describes the process for making natto on a commercial scale in Honolulu. After cooking (without soaking) for about 8 hours in a large iron kettle, the “beans are thoroughly drained and placed on paper plates covered with wax paper. The plates are stacked one above another in large wooden boxes, covered with rice straw mats, and kept at a temperature of approximately 30°C. for 35 to 36 hours, when the product is ready for use... The fermented product is covered with a gray, slimy substance that forms strings or threads when the beans are pulled apart, indicating good quality... Although no molds or yeasts are added to the cooked soybeans, O.N. Allen, of the botany department of the University of Hawaii, who examined several samples of fresh natto from Honolulu, found 2 molds, 4 bacteria, and an aspergillus present. The enzymes of some of these organisms probably caused the conversion of a small part of the protein to simpler substances.”

Concerning Inari-sushi (p. 37): The “ingredients required for this dish are rice, water, salt, aburage, carrots, mushrooms, string beans, gobo, flaked bonito, water, sugar, shoyu, and vinegar sauce.” A detailed recipe is given.

Photos show the following (each food accompanied by its Japanese name written in both Chinese characters and *katakana*): Edamame, in the pods on the plant, and shelled in a dish. Tofu kasu [okara] on a plate. Tofu on a dish. Soymilk in a glass. Three triangles of aburage on a dish. Miso on a dish. Natto in a white rectangular commercial paper tray about 3½ by 6 by 1 inch deep. Koji on a plate.

Note 1. This is the earliest English-language document seen (June 2009) that uses the term “fresh green soybeans” to refer to green vegetable soybeans.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *kirazu* to refer to okara.

Note 3. This is the earliest document seen (July 2003) that mentions commercial natto production in Hawaii.

Note 4. This is the earliest English-language document seen (Jan. 2012) that uses the word “strings” or “threads” in connection with natto. Address: Specialist in Nutrition, Honolulu.

2947. Chachin, Toshio. 1933. Shôyu no vitamin B oyobi sono jôzô kôtei-chû no henka ni tsuite [Vitamin B and its change during the process of brewing shoyu]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 9(12):1297-1319. Dec. [17 ref. Jap]

• **Summary:** The quantity of vitamin B-1 decreased with progress of fermentation, becoming zero after the third month.

2957. **Product Name:** Staley Soy Sauce.

Manufacturer's Name: Staley (A.E.) Manufacturing Co.

Manufacturer's Address: Decatur, Illinois.

Date of Introduction: 1933.

New Product–Documentation: A.R. Staley. 1935. Food Industries. 7(2):66-67. Feb. "Soy Sauce Goes American."

L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal*. June 25. p. 14. "Soy bean—The magic plant. Article XI." "Staley Sales Corporation, Decatur, Illinois: Soy sauce." International Inst. of Agriculture. 1936. *Le Soja dans le Monde* [The Soybean in the World]. See: Manufacturers of edible soy products. p. 206. Soybean Blue Book. 1947. p. 73.

2958. Carqué, Otto. 1933. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. Los Angeles, California: Published by the author. 208 p. Index. 24 cm. [20+* ref]

• **Summary:** This manual of food reform discusses the importance of a simple vegetarian diet of natural foods, sunlight and sunbaths, fresh air, pure water, exercise and rest. Also talks about acid and alkaline foods, the influence of mind on health, the failure of synthetic foods, why refined sugar is injurious, the dietetic value of sea plants, table salt is unnecessary and harmful, fruit is man's best food, sulphured and unsulphured fruits, nut butters, food preparation, and the treatment of disease.

The germ theory of disease has not been proven since potentially harmful germs are omnipresent yet often fail to harm healthy individuals (Pasteur was a chemist and laboratory worker, not a physician. Germ action is always secondary; "when germs invade a living organism it is a sign that the organism is enervated and its chemistry perverted." p. 114-15).

The section titled "Fruit and nut confections" (p. 133-35) begins: "Fruit and nut confections made without refined sugar and glucose should take the place of candies." These "sweet-meats"... "should be the only kind of confections allowed to growing children, which have a natural craving for sweets." Recipes include stuffed dates, date caramels, nut fruitose, carob confection, raisin-nut balls, and honey cocoanut balls. For Nut fruitose: Mix dates, figs, raisins, almonds and walnuts. "Run through a food chopper twice. Press the mixture into a flat pan in a layer about 1 inch thick, let stand overnight, and cut into convenient sizes." Note:

Carque was a pioneer in the development of healthy, natural treats. The last recipe could be considered a forerunner of the less-healthy “nutrition bar” of the 1990s.

The next section, titled “Nuts and nut butters,” states that “salting and roasting greatly impair the nutritive value of nuts and prevent their proper assimilation. The proteins become coagulated by roasting, and the fats split into glycerine and free fatty acids, while the vitamins are destroyed. Nut butters made from salted nuts should, therefore, have no place in our dietary.” Rather, the peanuts or almonds should be blanched (scalded or parboiled in water or steam). “Since few people, on account of defective teeth, can masticate nuts well enough to be acted upon by the digestive juices, the mechanical emulsification of nuts by means of nut butter mills is quite dispensable.”

The section titled “Melba toast” and “Melbettes” (p. 156) states: “These are delicious dextrinized whole wheat products made by the Cubbison Cracker Co., Los Angeles.” Melbettes are also made from whole rye. “Calavo Melba Toast is another tasty whole wheat product; it contains the natural fruit fat of the California Avocado or Alligator Pear as shortening.”

The section titled “Natural whole rice” (p. 156) notes: “Whole rice, also called brown rice, contains the bran, cuticle, and germ of the cereal. In milling nothing has been removed but the husk and dirt.”

The section titled “The Soy Bean, a Remarkable Food” (p. 158-61) discusses boiled soy beans, soy bean milk, tofu (“it is called by the Chinese ‘the meat without a bone...’ Other preparations of the soy bean, which are but little known in this country, are *natto*, *hamananatto* [*hamanatto*], *Yuba* and *Miso*. The principal use of miso, which is a slightly [sic] fermented mixture of soy beans and rice or barley, is for making soups and for cooking vegetables”), soy sauce, soy bean sprouts, and various recipes. Under “Ready made soy bean products” (p. 161) we read: “As the preparation of the soy bean in the average household is often not convenient, the author has arranged to supply the following products at reasonable prices: Canned Soy Beans, Soy Bean Spread, Soy Bean Stew, Soy Bean Loaf, Soy Vegetable Onion Soup, Soy Bean Vegetable Bologna, Soy Bean Tasty Lunch, to which others will be added in the course of time. These products have met with ready approval, as they fill a long felt want for tasty, nutritious and wholesome vegetable protein foods to substitute meat and dairy products.”

The author’s signature appears at the end of the Preface. Address: Los Angeles, California.

2959. Century of Progress International Exposition. 1933. Official guide book of the fair. Chicago, Illinois: A Century of Progress. 194 p. See p. 178-79. Index. 23 cm.

• **Summary:** Under “List of fair exhibitors” (p. 179): “Oriental Show-You Company” (listed under “Reynolds Exhibits Corporation”).

2960. Fukai, Tōshi. 1933. Bankin shōyu jōzō kakōron [Modern shoyu manufacturing]. Tokyo: Chōmi Kenkyūkai [Chomi Kenkyukai]. 2 + 3 + 8 + 571 p. Illust. 23 cm. [Jap]*
• **Summary:** The author was born in 1888. Address: Japan.

2961. Hawcock, Emory. 1933. Practical and profitable Chinese recipes. New York, NY: J.O. Dahl. 32 p. 16 cm.
• **Summary:** The section on “Flavoring ingredients” (p. 6) states: “Thin soy, which is the essential flavoring medium used in all Chinese dishes, plays a most important part. This sauce takes the place of salt, as well as extracts, in all Chinese cooking. It is prepared in China by grinding and fermenting the soy bean with water and salt. The liquid thus produced is refined and clarified and sent to this country in Chinese earthenware pots or square tin cans. It is also sold in this country in different sized bottles with shaker tops for use at the table.

“Thick soy, which is used to color and slightly flavor soups, gravies and braised meats, is a caramel preparation similar to the many ones on the market to-day.

“Sesamum oil is the strongest and most pungent flavored oil used by the Chinese. It has a pronounced smoky, nut-like flavor and is made by [usually roasting] grinding and pressing the dried sesamum seeds.”

2962. Kincaid, Zoë. 1933. Tokyo vignettes. Tokyo & Osaka: The Sanseido Co., Ltd. [8] + 284 p. See p. 101. Illust. No index. 23 cm.

• **Summary:** Page 2: When the author is at her home in Tokyo: “Into the morning’s routine comes the call of the bean-curd seller, announcing to every household that he is at hand to supply its wants;...”

Page 67: “My hostess served me with soba... which the farmer had made himself, together with relish of seaweed, and soy [sauce] of their own manufacture.”

Pages 100-103: At the Kwannon Temple in Tokyo, seven old women sell soaked or sprouted beans and rice for a few small coins, and the visitors to the temple throw the food to the birds. “Well the doves know the ways of their benefactors, and divine prospective distributors of largess, for they watch with bright eyes for the bean scattering and fly from all directions to be in on the banquet! The charge for the contents of one bean tray is two sen.”

Page 209: “For breakfast there is soup made from slightly fermented beans, miso, thick with vegetables, tasty and hot. Later the tofu vendor runs thorough the streets calling out that he has white bean curd to sell.”

Page 212: Among the ingredients of oden were “fried bean curd.” Address: Tokyo, Japan.

2963. Morse, W.J. 1933. Soybeans now a major crop in United States; Few grown before 1898. *Yearbook of Agriculture (USDA)* p. 198-205. For the year 1933.

• **Summary:** Contents: Variety adaptation. Variety utilization (incl. bean curd, bean milk, soy sauce, miso (bean paste), bean sprouts, green vegetable beans, bean flour, roasted beans, bean confections, beverages, oil and meal, special fermented bean products). Soybean oil and meal industry. Soybean meal. Soybean oil. Soybeans for human food. Soybeans as an export crop.

“Variety adaptation: The Virginia, Laredo, Manchu, and Biloxi have a greater range than most other varieties. The Virginia, Mansoy, and Harbinsoy varieties excel on the less productive types of soil, while on better soils the Mansoy and Harbinsoy give inferior results.

“Since the Department of Agriculture began to introduce soybean varieties more than 7,000 samples of beans have been collected from Japan, Chosen [Korea], Manchuria, China, Taiwan (Formosa), Java, Sumatra, and India. There are more than 2,000 distinct types in this large collection, ranging from 75 to more than 200 days in reaching maturity. At present about 40 varieties are generally grown in the United States.”

“In Japan, where the soybean is used extensively as a green vegetable, more than 60 varieties, ranging in maturity from 75 to 160 days and differing in flavor, are grown solely for this purpose. The soybean is used in the United States primarily as forage, being preserved either as hay or silage, or cut and fed green as soilage, and is also pastured extensively with hogs and sheep.” Address: Bureau of Plant Industry, Washington, DC.

2964. Wong, Nellie C. 1933. Chinese dishes for foreign homes: A revised and enlarged edition of the popular “Chinese Recipes.” London: Kegan Paul, Trench, Trubner & Co. Ltd. xii + 98 p. Illust. 19 x 13 cm. Handsewn on exterior. Printed in Shanghai.

• **Summary:** This book contains 86 recipes. The Explanatory Notes (p. vii) begin: “Soy bean sauce and ginger are universally used in China for seasoning. Soy bean sauce in many instances takes the place of salt. Names and addresses of suppliers of Chinese foodstuffs in New York and London are given. Soy-related recipes include: Bean curd soup (p. 8). Shia-mi tao-fu (Fried shrimps with bean curd and soy bean sauce, p. 51). Soy bean sauce is also used to season Lobster chop suey, and Shrimp chop suey (p. 68-69).

A 1932 edition of this book was published in Shanghai by Kelly and Walsh, Ltd. (xii + 87 p.; 19 cm).

2965. Madison Food Co. 1933? Madison soy cheese. Madison, Tennessee. 6 p. Undated.

• **Summary:** Contains a brief introduction to tofu with 8 American-style tofu recipes. “The principal protein of the Soybean is much like the protein casein of milk, and when the bean is properly treated a milk quite comparable in appearance, taste, and food value can be manufactured from it. From this milk, when allowed to become acid, or when a

slight amount of a precipitating agent is added, a cheese can be prepared in consistency much like cottage cheese. This vegetable cheese (tofu) has been one of the principal articles of diet in the Orient for many centuries.

“In order that the people of America may have this most important food as an article of diet, a method of manufacturing and preserving has been perfected at the Madison Food Factory.

“For several years it has been used as a daily article of diet in the Madison Rural Sanitarium, Nashville Vegetarian Cafeteria, and many other Good Health places. It has proven its value as a diabetic food, and as a splendid meat substitute.”

Tofu recipes include: Soy cheese salad. Stuffed egg with soy cheese. Tomato soy sandwich. Soy sandwich filling. Soy croquettes. Soy cheese loaf. Soybean omelet. Soybean cutlets.

On the back panel is a list of “Health foods manufactured and distributed by Madison (Sanitarium) Food Company, Madison, Tennessee: Nut Meat, Vigorost, Peanut Butter, Fruit Sticks, Sterilized Bran, Psyllium Seed, Cereal Drink, Soy Flour, Soybeans (Dry), Malta (Malt Syrup), Soy Fruit Crackers, Soybeans (Canned with Tomato Sauce), Madison 3 Minute Breakfast Wheat, Sanitarium Baked Beans, Steamed Whole Wheat, Malted Breakfast Crisps, Whole Wheat Fruit Crackers, Sweetened Whole Wheat Crackers, Soybeans (Canned Plain), Soy Cheese (Bean Curd), Madison Fruit Candy, Regulose (composed of Lactose and Dextrine). Write for descriptive literature.”

Note that the company is now named “Madison Food Company.” Address: Tennessee.

2966. North American Mercantile Co., Inc. (Hokubei Boeki Kabushiki-gaisha). 1934. [Export & import company] (Ad). In: The Japanese American News. 1934. The Japanese American Directory (*Nichibei Jûshoroku*). No. 30. p. A-9. [Jap; Eng]

• **Summary:** Ad (full page). Japanese American Directory. 1934, p. A-9. Food and grocery wholesale. Yamasa Shoyu. Branch at 409 2nd St., Los Angeles. Address: 330-342 Front St., San Francisco, California. Phone: Garfield 3214.

2967. Narahara, Hanbei. 1934. Shôyu moromi no jukusei ni tsuite [On ripening of shoyu moromi]. *Jozogaku Zasshi* (*J. of Brewing, Osaka*) 12(1):57-63. [Jap]

2968. Tetsumoto, -. 1934. Chômiryô no chô-chifusu-kin oyobi korera-kin ni taisuru sakkinryoku [The sterilizing power of various seasonings toward typhoid Salmonella bacteria and cholera bacteria]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 10(2):123-27. [1 ref. Jap]

• **Summary:** Worcestershire sauce, an important constituent of which is soy sauce, is reported to have a strong sterilizing

action.

2969. Oriental Show-You Co. 1934. Display ad: The perfect hostess serves Oriental. *Christian Science Monitor*. April 6. p. 3.

• **Summary:** “Your bridge party, or lunch at home after the theatre, will be immensely if you serve Oriental Show-You foods—chop suey and chow mein—both in cans. Just heat and serve. Takes only a few minutes. You can rely on their true Oriental flavor. You might open a can of Oriental Show-You bean sprouts which, with mayonnaise, makes an intriguing salad. Don’t forget Oriental Show-You Sauce for seasoning.”

Illustrations show: (1) The company’s logo. (2) The NRA [National Rifle Association] logo. (3) A bottle of Oriental Show-You Sauce. (4) A Japanese Torii gate. Address: Columbia City, Indiana.

2970. *Miami Daily News*. 1934. Food products of soy bean urged for daily table use: Milk, cheese, roasts, bread and other preparations made from herb claimed to have high nutritive values. April 8. Sport section. p. 5. Sunday. Facsimile printed in *Back to Eden* by Jethro Kloss, 1982 ed.

• **Summary:** Two photos by Rinc above the article show: (1) A small insert portrait of Dr. Jethro Kloss. (2) His daughter, Mrs. Harry C. Engelhardt, standing next to her daughter, Joyce, age 5. The caption states that “Dr. Jethro Kloss is devoting his life to the dissemination of knowledge pertaining to soy bean milk.” Both his daughter and granddaughter were raised on this milk.”

“Dr. Kloss prides himself on having once been a ‘farmer.’ He is credited with having spent a fortune in philanthropic work, the greater part having gone toward introducing a bean which he feels is destined to eventually revolutionize the economic structure of this country and become of incalculable value in time of war.

“Approximately 6,000 persons recently heard Dr. Kloss in Bayfront park explain how he apparently performs miracles when he transmutes beans into 24 or more different foods which in addition to being delectable also retain various life-giving elements usually attributed to cow’s milk...

“He exhibited 21 articles made from soy beans and invited the public to taste them. These were soy bean milk, bread, pie, cakes, buns, cookies, roast, buttermilk, coffee, cottage cheese, cream cheese, yellow cheese, soy bean sauce, pancakes, broth, butter, ‘mashed potatoes,’ mayonnaise, soy bean roast not like that from meat, ice cream, sprouted beans. None of these contained white flour nor cane sugar, making such foods especially valuable for diabetics. Soy bean foods are also recommended for arthritis.

“He advocates the teaching of edible food preparation from soy beans as part of school curriculum and drew a parallel tending to show how the government spends millions to spread hog and other stock-feeding knowledge while

almost ignoring the phases which would create well-fed humans.

“Dr. Kloss pointed out that he was merely in this country revealing something which for centuries had been common knowledge throughout the Orient... He quoted Dr. S. [sic, A.] Horvath of the Rockefeller institute as one of the world’s leading authorities who said: ‘The Chinese nation exists today because of the use of the soy bean as a food.’”

A sidebar at the lower left of the article shows another portrait photo of Dr. Kloss and announces: “By the request of thousands who heard Dr. Kloss speak in Bayfront Park, he has consented to give further instructions in the preparation of the wonderful Soy Bean Products.

“He will give two food demonstrations in the Miami School of Applied Arts, 406 N.E. 2nd Ave., Monday afternoon at 2:30 and Monday evening at 8, April 9.

“Dr. Kloss makes more delicious table foods from soy bean than any one else known. The soy bean is a complete food, and is highly alkaline. Following is a partial list of the foods he makes:

“Soy bean milk, soy bean buttermilk, cottage cheese, ice cream, bread, buns, pies, cake, cookies, roast, coffee, pancakes, butter [probably soynut butter], mayonnaise, broth. These foods do not contain any cane sugar or other harmful ingredients. They are most economical, simple to prepare, and very healthful and inexpensive. The use of the articles would mean a great saving of money, and preserving of health. They must be seen and tasted to be appreciated.”

Note 1. This is the earliest document seen (March 2000) that mentions soy mayonnaise.

Note 2. This is the earliest document seen (March 2007) that mentions a “cream cheese” or “yellow cheese” made from soy beans (one of two documents).

Note 3. This is the earliest document seen (March 2007) that mentions Jethro Kloss’ work with soy bean ice cream.

Note 4. As of Nov. 1990 the *Miami Daily News* no longer exists. Its name was changed to the *Miami News*, it was owned by Cox, and it went out of business in about 1988. Back issues would probably be available at the Univ. of Miami.

Note 5. This is the second earliest document seen (March 2007) that uses the word “miracles” (or “miracle” or “miraculous”) in connection with soy beans. Address: Florida.

2971. Come and see: The wonders of the 20th century (Poster). 1934. Dr. Jethro Kloss, 500-44th St., N.W., Miami, Florida. 1 p.

• **Summary:** By special request Dr. [Jethro] Kloss is giving two more free lectures and food demonstrations at the Miami School of Applied Arts, 406 N.E. 2d Avenue, Monday, April 9, in the afternoon and evening. Following is a list of food Dr. Kloss prepares from the soybean. They do not contain any cane sugar, white flour, or other harmful ingredients:

Soy bean milk, bread, buns, pies, cakes, roast, buttermilk, ice cream, jelly, sauce, cream cheese, cottage cheese, yellow cheese, coffee, pancakes, broth, mashed potatoes, mayonnaise, butter.

“Learn to make this alkaline milk from soybeans, it taste’s [sic] better than other milks, and has a better analysis than cow’s milk, or goat’s milk. Dr. Kloss will show a table of comparative analysis prepared for him by Dr. LeClerc, Senior Chemist of the Government. This milk can be made in any home, and costs less than 2 cents per quart... Dr. Kloss’ ice cream made from the soybean milk is as delicious as any on the market, and very inexpensive and healthy. Learn to make these products in your own kitchens.”

Note: This is the earliest document seen (March 2007) that mentions a “cream cheese” made from soybeans (one of two documents). This cream cheese was developed by Jethro Kloss. Address: 500 44th St., N.W., Miami, Florida. Phone: Edgewater 1128-J.

2972. Morris, H.T. 1934. Story of soybeans. *Flour & Feed*. 34(11):9. April; 34(12):9. May.

• **Summary:** This two-part article begins with the [probably mythical] story of the A.E. Staley Company’s role in pioneering the soybean industry in America. The soybean first came to America in 1804. Then, about a half century ago [i.e. about 1884], “a missionary, returning to his home in America, brought with him some peculiar looking beans. These, by chance, fell into the hands of an observant chap [A.E. Staley] who was a tiller of the soil. Upon being told that these beans were the main crop of the Orient and furnished sustenance to both man and beast, the observer planted the seed and from actual experience saw that it enriched the ground and that livestock relished the beans and hay. Little did he realize that half a century later his intimate knowledge of the soybean would perhaps be a factor in shaping the destiny of the industry.

“The farms of Illinois had been worked overtime. The ground had been ‘corned to death.’” The observer “began to preach ‘diversify with soybeans.’ He was so sincere and intent that this gospel should be spread that through the Staley company [which he owned] a promotional department was created. This staff had one specific job—that of selling the farmers on the possibilities of soybeans. In conjunction with the Staley company, soybean trains were operated throughout the country—stopping at all stations and demonstrating soybeans and soybean products.

“From a comparatively few fields, the seed took root.” “Ten years ago, the Staley company built its first crushing plant with sufficient capacity to more than take care of all beans offered for sale. Prospects of an adequate supply of raw material, an organization, an up-to-date crushing plant and oil refinery, all called for action, as there had to be an outlet for the finished product. The same method of introducing soybeans was applied to soybean products” such

as soybean oil meal.

A portrait photo shows “A.E. Staley, Sr., Founder of A.E. Staley Mfg. Co., Decatur, Illinois.”

Note: This is the earliest document seen (April 2001) that tells the story of A.E. Staley first obtaining soybeans from a missionary. The story gets embellished each time it is retold during the years ahead. See especially: Staley. 1947. *The Wonder Bean*.

Part two of this article discusses: Soybean oil meal. Poultry rations. Milling methods. The writings of Dr. A. Horvath. Soybean milk, tofu, and soy sauce in China. Address: Staley Sales Corp.

2973. Morse, W.J. 1934. Utilizacion de las habas soya [Utilization of soybeans]. *Revista de Agricultura, Comercio y Trabajo (Cuba)* 14(52):77-90. April. [Spa]

• **Summary:** Contents: Introduction. Soybeans for human food: Dried beans, coffee substitute, toasted soybeans, fresh green or vegetable beans (*Habas frescas o legumbres*), soybean flour, soy sprouts (*retoños tiernos*), soy sauce, soybean vegetable milk, tofu (*cuajada o queso de habas soya*), soy oil. Soybeans for livestock: Soybeans for hay, for pasture, for ensilage, for fresh forage, for grain. Soybeans for oil. Soybean flour and cake. Soybeans for soil improvement. Address: USDA, Washington, DC, USA.

2974. Torres Herrera, José M. 1934. El haba soya, su cultivo y beneficio [The soybean, its culture and benefits]. *Boletín Agrícola (Medellin, Colombia)* 8(189):1180-92. April. [Spa]

• **Summary:** Contents: Introduction. Climatological conditions. Soils appropriate for this crop. Inoculation with bacteria. Preparation of the soil. Soya in crop rotations. Sowing the seeds. The work of cultivation. Calculation of the cost of production for 6,400 square meters (Data taken from the Palmira Agricultural Experiment Station, Bulletin No. 1; the cost is \$0.45 per arroba = ca. 25 lb). Soybean varieties (“Agriculturists interested in planting this crop which has no equal, can obtain seeds free of charge from the Pamira [sic, Palmira] Agricultural Experiment Station or the Antioquia Agricultural Society [Sociedad Antioqueña de Agricultores, Colombia]”). Production of seeds. Yields of various varieties. Harvesting and threshing of the grain. The uses of soya (*la soya*).

Utilization of the plant and seeds of the soybean (*de las habas soyas*): I. The plants as hay, pasture, green forage, ensilage, green manure. II. The seeds as: 1. Whole dry soybeans (*habas secas*, for making infant foods, flour, soup, butter, diabetic foods and breads, cooked whole soybeans, confections, health foods (*alimentos para sano*): soymilk, soybean roasts or steaks, soy sprouts. Breakfast foods: Vegetable curd or cheese (*cuajada o queso vegetal*), soy sauce, malted milk, soy coffee cakes, flour, livestock feed). 2. Green vegetable soybeans (*habas verdes*). 3. Soy flour (*harina de habas*). 4. Soy oil (*aceite de habas*).

Soya as human food. The composition of various legumes. Soy flour. Soy oil. Soy milk (*leche de soya*): Nutritional comparison of soy milk and cow's milk, powdered soymilk, fermented soymilk, tofu (*queso soya*), soy casein (*Caseína*).

Whole dry soybeans: Roasted soybeans (*habas tostadas*), soy coffee (*café de soya*), soy chocolate (*chocolate de soya*). Green-seeded soybeans (*habas soyas verdes o legumbres*): Soy sprouts, soy sauces. Edelsoya (soy flour made by Berczeller).

The value of soy forage. Soybeans in mixtures with other crops. Green manure. The concept of Dr. Uribe Echeverri, minister in Brazil.

Page 1180 states: "Climatological conditions. The soybean is suited to the temperate zones but it can become acclimatized to warmer climates and it has succeeded at the agricultural experiment stations of Valle de Cuaca and of Tolima and in various regions of the Intendencia del Chocó. It is probable that some varieties from England and from the north of Canada can acclimatize themselves in good conditions in our cold lands.

Note 1. This is the earliest document seen (May 2009) concerning soybeans in Colombia, or the cultivation of soybeans in Colombia. Note 2. No mention is made of soya in Nicaragua.

Note 3. This is the earliest Spanish-language document seen that uses the term *habas tostados* to refer to soynuts.

Note 4 This is the earliest Spanish-language document seen (June 2009) that uses the term *habas verdes* to refer to green vegetable soybeans. Address: Agrónomo Nacional de la Intendencia del Chocó [Colombia].

2977. Uchida, So; Shimoyama, K.; Hsu, T.T.; Toyoda, E. 1934. Constituents of waste fatty oil from soy-manufactory. I-II. *J. of the Society of Chemical Industry, Japan* 37(4):195B-97B. April. Supplemental binding to Kogyo

Kagaku Zasshi. [2 ref. Eng]

• **Summary:** In the production of soy [sauce], "fatty oils contained originally in the soy-bean and wheat separate out as an almost black coloured layer. This is called 'soy-oil,' and owing to its dark colour and strong odour characteristic to soy, it is less valued on the market. It is used chiefly as a raw material for manufacturing detergent soap, especially powdered soap. The other use is found in the mechanical workshop as a cutting oil."

The dark, mobile, odorous waste oil from soy [sauce] production consists largely of ethyl esters of higher fatty acids. The orange oil obtained after refining with concentrated sulfuric acid and Japanese acid clay deposited a white precipitate (ethyl esters of saturated fatty acids) on keeping at 0°C, and this had acid value 32.3, saponification value 193.2, unsaponifiable matter 1.4%, including a sterol, melting point 137-137.5°C (corrected). Hydrolysis yielded glycerol 2% and ethanol 9% (on the oil). Palmitic, stearic, arachidic (very little), oleic, linoleic, and linolenic (small amount) acids were identified. Address: Dep. of Applied Chemistry, Tokyo Technical Univ., Tokyo-Okayama.

2978. Chen, ?; Wang, ?; Feng, ? 1934. [How to shorten the soy sauce brewing process: Kwantou method]. *Kung Yeh Chung Hsin (The Industrial Research/The Industrial Center, Nanking, China)* 3(5):168-75. May. [Chi]

• **Summary:** Wang and Ni (1936, p. 285) state that the Kwantou method, one of the many methods developed to shorten the time require to make soy sauce, deserves special mention. This method, used in the Kwantou district of Fukien [Fujian] province, requires about 3 months. The superior flavor obtained is attributed to washing the mold mycelia from the culture after 12 days, followed by a second fermentation. "The Kwantou process of soy bean sauce manufacture uses soy bean alone as its raw material and carries out the fermentation at room temperature for not more than three months, yielding a product of high quality and of a flavor superior to that obtained by Togano's method. In spite of these superiorities, the Kwantou process is little known and it has not received the attention it deserves." Address: China.

2979. Pierce (S.S.) Co. 1934. Spring and summer mail order catalog. *The Epicure (Boston and Brookline, Massachusetts)* 48(1):1-72. May. Illust. Index. 28 cm.

• **Summary:** This company, which delivers fine specialty foods throughout New England, was established in 1831 and incorporated in 1894. Soy related items: Chinese foods—Ingredients for making Chop Suey: La Choy Soy Sauce (6½ oz bottle, \$0.23, p. 40). Flour and meal—Dietetic flour: Cellu Soy Bean Flour (5 lb tins, \$1.00, p. 43). Sauces—Worcestershire sauce: Lea & Perrins (large, \$0.57; small, \$0.29, p. 50). Note: Under "Sauces," no soy sauces are listed. But there is Harvey Sauce from Crosse & Blackwell, and

H.P. Sauce.

Vegetables—Dried vegetables, Beans: Soy (\$0.12/lb, p. 53).

Battle Creek Foods Department [Michigan] (full page, with photo and illustrations, p. 72)—Crackers: Soy Bean Biscuits (\$0.60/package). Soy Gluten Bread (\$0.35/tin). Flour: Soy Flour (\$0.35/14 oz tin). Vegetables: Soy Beans, Baked (\$0.18/11 oz tin).

Battle Creek Foods also offers: Psyllium seed. Bran-Gluten Flakes. Zo (a cereal rich in food iron and vitamin B). Kaffir tea (made from a shrub native to South Africa). Malted Nuts (“a vegetable substitute for milk, containing malt sugar”). Minute Brew (cereal beverage with coffee-like flavor). Bran biscuit. Gluten bread. Gluten biscuits. Rice biscuits. Nut butters: Almond butter and peanut butter. Savita (yeast extract, bouillon cubes, sal-Savita salt). Vegetable meats: Nuttolene, Nuttose, Protose, Saucettes. Vegetable gelatin (agar, flaked).

Note: Inserted in this catalog is an undated leaflet titled: “You are invited to attend a special demonstration of Battle Creek Special Purpose Foods, conducted by Miss Minnie Duffy, Oct. 12 to Oct. 17 at Park Grocery Co., 18-20 North Diamond, Mansfield, Ohio.” Small photos show: (1) Battle Creek Sanitarium. (2) Miami Battle Creek Sanitarium [Florida]. (3) Battle Creek Food Co. Address: Importers and Grocers, Boston and Brookline, Massachusetts.

1980. *Food Industries*. 1934. Men, jobs and companies: Industry. 6(6):282. June.

• **Summary:** Left column, bottom: “La Choy Food Products Co., Detroit, recently opened a Chicago [Illinois] factory, with French Jenkins as manager. Plants at New York, Boston [Massachusetts], Philadelphia [Pennsylvania], Cleveland [Ohio], and St. Louis [Missouri] are planned during the year.”

Note: These other plants never materialized.

1981. Takata, Ryôhei. 1934. Shôyu jôzô no ei-yôgaku-teki kôsatsu. IV. Shôyu-chû no kôkyû gan chisso seibun [Nutritional investigation of shoyu. IV. Nitrogenous compounds in shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 12(7):497-503. [7 ref. Jap]

Address: Raion Sekken K.K. Kenkyujo (Lion Soap Research Lab.).

1983. Takei, Toshiro. 1934. On the composition of “soy” [sauce] oil. I. *J. of the Society of Chemical Industry, Japan*

37(7):356B-57B. July. Supplemental binding to Kogyo Kagaku Zasshi. [Eng]

• **Summary:** “Soy oil is obtained as a by-product of soy [sauce] brewing. The oil is found floating on the surface of soy after pressing. It has dark brownish red colour and appears opaque on reflected light. Its odour bears resemblance to that of soy. It has hitherto been considered to be very difficult to bleach the color and remove the objectionable odour by either chemical or physical processes.

“Soy oil finds its chief industrial applications in lubricants and in manufacture of powdered soaps of low grade. Hitherto it has been believed that the oil is a mixture of the oils of soy-bean and wheat which are the chief raw materials of soy and contains some decomposition products.”

Three samples of the oil had acid value 39.15-45.19, saponification value 186.12-186.66, iodine value 102.13-132.12, density at 15°C 0.89266, refractive index at 20°C 1.4630, relative viscosity 13.155/16°C, flash point 76.5°C. The oil is soluble in ethanol at room temperature and consists chiefly of ethyl esters of various fatty acids with about 16% free fatty acids and a small amount (0.29%) of glycerol. It can be refined by distillation, typical fractionations being detailed. Address: Lab. of Lion Soap Co.

1984. Ford Motor Co. 1934. Menu of dinner served at Ford Exhibit, Century of Progress, August 17, 1934. Dearborn, Michigan. 1 p.

• **Summary:** “Tomato juice seasoned with soy bean sauce. Salted soy beans. Celery stuffed with soy bean cheese. Puree of soy bean. Soy bean cracker. Soy bean croquettes with tomato sauce. Buttered green soy beans. Pineapple ring with soy bean cheese [tofu] and soy bean dressing. Soy bean bread with soy bean relish. Soy bean biscuit [sic, biscuit] with soy bean butter. Apple pie (soy bean crust). Cocoa with soy bean milk. Soy bean coffee. Assorted soy bean cookies. Soy bean cakes. Assorted soy bean candy.”

Note 1. No mention is made of soy ice cream being served at this meal in Aug. 1934. Yet shortly thereafter, and definitely by Aug. 1935 soy ice cream for dessert was served at similar meals in the pine-panelled dining room in the Ford Engineering Laboratory (Strother 1961).

Note 2. A 1936 recipe book published by the Edison Institute describes how to make “Soy bean butter: Mix hydrogenated soy oil with salt, coloring matter and diacetyl to color and taste.” Thus this product is similar to today’s soy margarine.

Note 3. This is the earliest menu seen on which soyfoods appear prominently. Address: Dearborn, Michigan.

1985. Ishimaru, Yoshio. 1934. Shôyu no chozô-sei ni tsuite [On the preservability of shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 12(8):610-16. [Jap]
Address: Nôgaku hakase, Japan.

2986. Adriano, F.T.; Oliveros, S.B.; Santos, D.S.; Villanueva, E.R. 1934. The physical characteristics and chemical composition of various brands of toyo (soy sauce) sold in the Philippines. *Philippine J. of Agriculture* 5(3):171-86. July/Sept. [14 ref. Eng]

• **Summary:** Gives detailed descriptions of methods of manufacture of soy sauce, and an analysis of 21 samples (18 from Philippine factories, two from China, and one from Japan). Table 3 (p. 179) gives the brand name, and the name and address of the manufacturer of these 21 sample products. Most Philippine soy sauce is made in and around Manila using traditional Chinese methods, including large earthenware jars with conical, woven bamboo covers; these jars are left in the open for sunning. Most of the soy beans used are imported from China, the yellow variety being the most commonly used. When ready, the “brown liquid is siphoned off with a foot valve made out of bamboo at the intake end of the siphon. The drawn sauce may be boiled, but generally it is bottled without heat treatment to be sold as first-class toyo. The residue is brined and sunned again to obtain succeeding lower grades of toyo. The practice of admixing molasses is widespread. Of the 21 samples analyzed, 12 contained reducing sugars analyzing about 10%.

Toyo is not as widely used in the Philippines as it is in other Oriental countries because in the Philippines there is a counterpart of toyo, the native *patis* (a Tagalog word), which is a high protein extract from brine-fermented small fish and shrimps. But “with the growing consciousness of the real nutritive value of the soy bean as a human food, the increasing popularity of the properly made toyo is assured.”

Table 4 gives the physical characteristics and chemical composition of each of the 21 samples tested. The average specific gravity at 28°C is 1.2624. Total solids: 37.31%. Proteins: 4.56% (N x 6.25). Sucrose: 0.59%. Sodium chloride: 19.90%. Address: Labs. of Agricultural Chemistry, Bureau of Plant Industry, Manila.

2987. Cheng, Yu-Ching; Adolph, William H. 1934. Note on the preparation of d-glutamic acid. *J. of the Chinese Chemical Society* 2(3):221-24. Sept. [5 ref. Eng]

• **Summary:** “Summary: Very distinct improvements are shown to result from the application of copper or ferric chloride as catalysts in the preparation of glutamic acid from wheat gluten. Experiments also indicate the peanut press cake and soybean press cake are economical raw materials in the preparation of glutamic acid.” Address: Yenching Univ.

2988. Mogi, Masatoshi. 1934. Miso jôzô ni kansuru saikin no kenkyû ni tsuite. I. [Research on the bacteria involved in the manufacture of miso. I.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 10(9):983-96. Sept. English-language summary in Bulletin of the Agricultural Chemical Society of Japan 12:52-53, bound at

the back of Nippon Nogeikagaku Kaishi. [20 ref. Jap; eng]

• **Summary:** The value of miso production in Japan in recent years is more than 20 million yen per year. Address: Brewing Laboratory, Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

2989. Mogi, Masatoshi. 1934. Miso jôzô ni kansuru saikin no kenkyû ni tsuite. I. [Studies on the microorganisms in the manufacture of “miso.” I.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 10(9):983-996. [20 ref. Jap]

• **Summary:** All the organisms isolated appear to play a part in the maturation of miso. Address: Kikkoman.

2990. Kahn, Dorothea. 1934. Marko can cook in many languages: As chef of the International House, University of Chicago, he feeds students of 47 nationalities from his ‘melting pot of menus.’ *Christian Science Monitor*. Oct. 10. p. WM10.

• **Summary:** About Mr. Marko Yerkovitch, who ancestry goes back to Yugoslavia. A recipe is given for Egg foo yung, which includes “Soy bean sauce to flavor.”

“Now it wouldn’t do to give a Chinese recipe without a Japanese one to follow... Miss Doris Foresman, who is in charge of the catering department of the House, says she has learned to be very careful to serve Japanese soy bean sauce at Japanese parties, and Chinese soy bean sauce at Chinese parties.” There follows a recipe for Tempura (served with “Japanese soy bean sauce”).

2991. Laming (W.C.) & Co., Ltd. 1934. Display ad: Derive the great benefit of the Soya Bean by adding Kikkoman, the sauce without vinegar, to your diet. *Times (London)*. Oct. 10. p. 17, col. 1.

• **Summary:** “Nature has given to the World in the Soya Bean a vegetable food that contains valuable and essential properties for counteracting digestive and gastric disorders. And in Kikkoman scientists have produced from this natural food a piquant sauce that immediately appeals to the palate and which can be used with great benefit with your every meal. Get a bottle to-day and try it with Fish, Poultry, Joints, Savouries, Soup, etc. Kikkoman is highly concentrated and should, therefore, be used sparingly. Obtainable at all leading Grocers and Stores at 1/- [1 shilling] per bottle, or order direct, adding 3d. part postage [=for part of the postage]. Sole Distributors for U.K. (Trade enquiries invited).” A small illustration shows Kikkoman’s trade mark (see next page).

Note: This is the earliest document seen (Dec. 2005) in the *Times* (London) that mentions Kikkoman. A fairly similar ad appears in the 27 Feb. 1935 issue (p. 17, col. 1). Address: 29, Tooley St., London, S.E. 1.

product of the healthful soya bean. *Times (London)*. Oct. 24. p. 17, col. 7.

• **Summary:** “Kikkoman is the only product of its kind in the world. Made from the wonderful Soya Bean, it is an important Health Food that should be included in everyone’s diet. Kikkoman is a real tonic, appetiser and stimulant, increases vitality and is decidedly nourishing. Kikkoman adds to Soups...” Address: 29, Tooley St., London, S.E. 1.

2993. Koerber, Lili. 1934. Japanese banquet: Translated from the *Prager Tagblatt*, Prague German Language Daily. *Living Age (The)* 347:117-20. Oct. See p. 118.

• **Summary:** “At this point the girls begin preparing the main dish, the *skiaki* [sukiyaki]... Then they put a frying pan on the stove, cover it with a generous layer of fat and add green onions, beans that look like earth worms, sugar, soya-bean sauce, and finally pieces of meat.” Note 1. This is the earliest English-language document seen (April 2012) that uses the term “soya-bean sauce” to refer to soy sauce.

Note 2. This is the third in a series of three articles in this issue titled “A Mirror to Japan.”

2994. Laming (W.C.) & Co., Ltd. 1934. Display ad: The wonderful soya bean in its most delectable form. Kikkoman, the sauce without vinegar. Nature’s tasty tonic! *Times (London)*. Nov. 8. p. 17, cols. 1-2.

• **Summary:** “Kikkoman is the only product of its kind in the world. Made from the wonderful Soya Bean,...” Address: 29, Tooley St., London, S.E. 1.

2995. *Food Industries*. 1934. Promoting the product. 6(11):519. Nov.

• **Summary:** Page 282 (right column, top): “La Choy Food Products, Inc. will conduct an institute of Chinese cookery this winter.”

2996. Takei, Toshio; Tomiyama, Shin-ichi. 1934. On the composition of Tamari soy oil. *J. of the Society of Chemical Industry, Japan* 37(11):650B. Nov. Supplemental binding to Kogyo Kagaku Zasshi. [Eng]

• **Summary:** “Tamari soy oil is obtained as a by-product of Tamari soy [sauce] brewing. The oil is found floating on the surface of Tamari soy after pressing. Tamari soy is a sort of soy which is made from soy bean only. A large quantity of tamari soy is brewed in the prefectures of Aichi, Gifu, Miye [Mie], Shizuoka and Nagano. Tamari soy oil resembles soy oil in colour and in odour, yet these oils differ considerably from each other in viscosity. On account of its dark colour and strong odour Tamari soy oil is estimated at a low price.”

A sample, consisting of glycerides, ethyl esters of fatty acids, and free fatty acids (50%) yielded approximately 2.13% crude glycerin and 2.46% ethanol, and had (values for ordinary soy oil in parentheses) acid value 105.9 (41.9), saponification value 185.6 (186.3), iodine value 149.4

(102.1), refractive index at 20°C 1.4749 (1.4630), density at 15°C 0.9172 (0.8926), flash point 218°C (76.5°C), Redwood viscosity (50 cc at 20°C) 5 feet 57 inches (1 foot 17.6 inches).

Note 1. This is the earliest English-language document seen (Jan. 2000) with the term “soy oil” in the title. However it refers to the dark oil that rises to the surface during soy sauce fermentation, rather than to the clear vegetable oil to which it refers today.

Note 2. This is the earliest English-language document seen (March 2012) that uses the term “tamari soy” to refer to tamari soy sauce. Address: Lion Soap Co., Ltd.

2997. Torres Herrera, José M. 1934. El haba soya, su cultivo y beneficio [The soybean, its culture and benefits]. *Boletín de Agricultura y Trabajo (Nicaragua Ministerio de Agricultura y Trabajo)* 6(54):24-26. Aug.; 6(55):6-8. Sept.; 6(56-57):6-12. Oct/Nov. 3a Epoca. [Spa]

• **Summary:** The article begins with the following: “In previous editions of this bulletin we inserted various articles concerning the cultivation of soya; however, given the large importance of this legume, we decided to reprint this article by José M. Torres Herrera from the *Boletín Agrícola* of Medellín, Colombia” [April 1934. 8(189):1180-92]. The soybean variety Brazilian Yellow can be obtained in Sao Paulo for 10 cents gold at the most” (i.e., it is inexpensive).

Contents: Part I. Introduction. Climatological conditions for different varieties. Soils appropriate for this crop. Inoculation with bacteria. Preparation of the soil. Soya in crop rotations.

Part II. Sowing the seeds. The work of cultivation. Calculation of the cost of production for 6,400 square meters (Data taken from the Palmira Agricultural Experiment Station, Bulletin No. 1; the cost is \$0.45 per arroba = ca. 25 lb). Soybean varieties (“Agriculturists interested in planting this crop which has no equal, can obtain seeds free of charge from the Pamira [sic, Palmira] Agricultural Experiment Station or the Antioquia Agricultural Society [Sociedad Antioqueña de Agricultores, Colombia]”). Production of seeds. Yields of various varieties.

Part III. Harvesting and threshing of the grain. The uses of soya (*la soya*). Utilization of the plant and seeds of the soybean (*de las habas soyas*): The plants as hay, pasture, green forage, ensilage, green manure. The seeds as whole dry soybeans (*habas secas*, for making infant foods, flour, soup, butter, diabetic foods and breads, cooked whole soybeans, confections, health foods [alimentos para sano]: soymilk, soybean roasts or steaks, soy sprouts. Breakfast foods: Vegetable curd or cheese [cuajada o queso vegetal], soy sauce, malted milk, soy coffee cakes, flour, livestock feed), green vegetable soybeans (*habas verdes*), soy flour (*harina de habas*), soy oil (*aceite de habas*). Soya as human food. The composition of various legumes. Soy flour. Soy oil. Soy milk (*leche de soya*): Nutritional comparison of soy milk

and cow's milk, powdered soymilk, fermented soymilk, tofu (*queso soya*), soy casein (*Caseína*). Whole dry soybeans: Roasted soybeans (*habas tostadas*), soy coffee (*café de soya*), soy chocolate (*chocolate de soya*). Green-seeded soybeans (*habas soyas verdes o legumbres*): Soy sprouts, soy sauces. Edelsoya (soy flour made by Berczeller). The value of soy forage. Soybeans in mixtures with other crops. Green manure. The concept of Dr. Uribe Echeverri, minister in Brazil.

Note: No mention is made of soya in Nicaragua.
Address: Agrónomo Nacional de la Intendencia del Chocó [Colombia].

2998. Laming (W.C.) & Co., Ltd. 1934. Classified ad: Kikkoman.—The sauce for Christmas fare. *Times (London)*. Dec. 12. p. 1, col. 6.

• **Summary:** “Made from the wonderful Soya Bean. No Vinegar. Aids digestion, assists appetite, nourishes and tones the system. Unrivalled with hot and cold joints. Poultry, Savouries, Soups, and Salads. 6s. per half-dozen bottles, or singly at leading Stores and Grocers.” Address: 29, Tooley St., London, S.E. 1.

2999. Don Avon Marketeria Limited. 1934. Toronto's show place of fine foods (Ad). *Toronto Daily Star (Canada)*. Dec. 13. p. 7.

• **Summary:** In the upper right corner of the ad: “La Choy vegetables, tin—37¢. Chow mein noodles, tin—25¢. Bean sprouts, tin—28¢. “Soy Sauce, tin—15¢.”

Note: This soy sauce was probably made by La Choy in the USA.

A similar ad appeared in the Dec. 20 (p. 36) issue of this newspaper. In the upper left corner of the ad we read: “Imported delicacies: Bean sprouts, tin—15¢. Soy Sauce, bottle—28¢... La Choy vegetables—37¢.” Address: 837 Danforth Ave., Toronto.

3000. Carqué, Otto. 1934. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. 2nd ed. Los Angeles, California: Published by the author. 208 p. Index. 24 cm. [20+* ref]

• **Summary:** This so-called 2nd edition is identical to the first edition (1933) except that: (1) Two lines on the 2nd page of the Preface have been moved to the first page; both pages are unnumbered. (2) Two paragraphs, titled “Preface to the second edition” have been added to the end of the Preface and dated “November, 1934.” The author's signature again appears at the end of the Preface.

Note: The first 5,000 copies were exhausted in about a year. Address: Los Angeles, California.

3001. Yamaguchi, H.S.K.; Garis, Frederic de; Sakai, Atsuharu. 1934-1950. *We Japanese: Being descriptions of*

many of the customs, manners, ceremonies, festivals, arts and crafts of the Japanese, besides numerous other subjects. Yokohama, Japan: Yamagata Press. 592 p. 889 illust. Index. 21 cm.

• **Summary:** “Written with great style, this work brings traditional Japan to life in a way that no contemporary guide book can, explaining all the curious features of daily life in Japan.” This is a combination of 3 books. Book I (p. 1-183), written by Frederic de Garis for H.S.K. Yamaguchi, was first published in Dec. 1934. Book II (p. 183-375), written by Atsuharu Sakai for H.S.K. Yamaguchi, in June 1937. Book III (p. 377-592), with the same authorship as Book II, was first published in June 1949. All contain entertaining information on Japanese culture and foods.

They discuss: Red rice (*sekihan*, with azuki beans, p. 36). The Broken Needles Mass or Hari-Kuyo (p. 160, needles are stuck into tofu on Feb. 8 or Dec. 8), Sukiyaki (p. 264-66, incl. its origin and history), sembei (p. 267, senbei or rice crackers, incl. shoyu), Miso or bean-paste (p. 269-70), Shoyu or Japanese soy (p. 271-73, incl. Kikkoman, Higeta, Yamasa, Kagi-Yamasa, and Marukin logos and wooden kegs), Sekihan and hot water (p. 292, azuki beans as part of a taboo for Japanese girls), Setsubun or Bean-Throwing Ceremony (p. 554-55, mame-maki held on setsubun).

Note: This is the earliest English-language document seen (March 2009) that uses the term “bean-paste” (not preceded by the word “soy” or “soya”) to refer to miso. Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

3013. Adachi, Isamu; Sakurai, Shigeru. 1934. Nihon shokumotsu-shi [History of Japanese foods]. Tokyo: Yuzankaku. 480 p. [Jap]

• **Summary:** This is the best book seen on the history of Japanese foods. The following soyfoods are discussed: Firm tofu, soymilk and okara (p. 290-91; discusses the *Teikun Orai* by Iseno Teijo, tofu-kan, tofu-jiru = soymilk, setsurun-sai = okara), yuba (p. 336), shoyu and tofu (p. 370-71), unohana (okara, p. 377), tofu and natto (p. 382-83).

3014. Dominion Bureau of Statistics, Ottawa, Canada. 1934. Imports into Canada for consumption, years ended 31 March 1929 to 1933. *Trade of Canada*. Fiscal year ended March 31, 1933.

• **Summary:** Under Imports-Sauces-Soy, Soya (Table 36, p. 285), statistics are given from 1929-1932 for gallons and dollar value from United Kingdom, Hong Kong, China, Japan, Syria, United States. Japan was the leading supplier for all four years. In 1929, the peak year, 104,606 gallons were imported worth \$45,359. The leading supplier by far was the Japan (67,541 gallons), followed by Hong Kong (33,396 gallons). No statistics are given for soy sauce imports from Syria for 1929, 1930, 1931, or 1932. However, for total imports and for general tariff, under *montant*, a figure of 132 gallons is given for Syria.

Imports of peanut oil and soya bean oil [grouped together as one, so we cannot tell how much was soya bean oil] (p. 300). The United Kingdom was the leading supplier for all four years. In 1931, the peak year, 197,753 gallons were imported worth \$129,581. The leading supplier by far was the United Kingdom (118,480 gallons), followed by China (38,941 gallons).

Imports of soya beans, soya bean cake and soya bean meal, for use exclusively in the manufacture of cattle food and of fertilizers (p. 338, in cwt = hundredweights; 1 cwt = 112 lbs). China was the leading supplier for all four years. In 1933, the peak year, 46,129 cwt were imported worth \$57,097. The leading supplier was China (25,491 cwt), followed by the United States (15,899 cwt).

Imports of peanut oil and soya bean oil for the manufacture of soap, and peanut oil for canning fish [grouped together as one, so we cannot tell how much was soya bean oil] (p. 342). The United States was the leading supplier for all four years. In 1929, the peak year, 941,072 gallons were imported worth \$652,323. The leading supplier by far was the United States (743,866 gallons), followed by the UK (100,590 gallons) and China (96,616).

Note: This is the earliest document seen (Dec. 2007) concerning soybean products (soy sauce) in Syria. This document contains the earliest date seen for soybean products in Syria (1932); soybeans as such had not yet been

reported by that date. Address: Ottawa, Canada.

3015. *Manchoukuo Year Book (The)*. 1934. 1934. xxix + 852 p. See p. 234-35, 256-59, 267-79, 350-51, 396-97, 399-409, 466. Published by Minami Manshu Tetsudo Kabushiki Kaisha, Toa-Keizai Chosakyoku (South Manchuria Railway Co., East-Asiatic Economic Investigation Bureau), Tokyo. [Eng]

• **Summary:** Chapter 10, “Agriculture,” discusses soya beans in detail. Some 34% of the “value of the manufacturing products represent the products of bean oil mills using soya beans as raw material” (p. 234).

Table 1 shows that agricultural products occupy about 50% (of the value in Haikwan taels) of total exports from Manchuria during 1929, 1930, and 1931. Of the manufactured products, [soy] beancake, [soy] bean oil and bran, which are directly produced from agricultural raw materials, constitute 80% of the total (p. 235).

The South Manchuria Railway (S.M.R.) has played a leading role in developing Manchurian agriculture (especially [soy] bean production) and expanding exports. A table (p. 256) shows the SMR’s revenues from passengers and freight for selected years from 1907-1931. Freight revenues are, overall, about seven times as large as passenger revenues. The main source of freight revenues is coal, followed by [soy] beans and beancake (Source: SMRC Business Report). “The export of soya beans, beancake, and bean oil has increased three to four times in the past twenty years.” The SMRC as established an Agricultural Experiment Station where crops (such as beans) and animals have been improved, bringing much benefit to Manchurian farmers. SMRC’s work has contributed both directly and indirectly to the agricultural development of Manchuria by Han Chinese and by Korean settlers (p. 256).

Before the Manchurian incident, Japanese farmers were oppressed by the Northeastern military leaders and found it practically impossible to farm outside the South Manchuria Railway zone. Thus, before the Manchurian incident, only 730 Japanese households were engaged in agriculture in Manchuria. “The contribution made by Koreans to the development of agriculture in Manchuria cannot be overlooked... their entrance into the interior of Manchuria began only after the Russo-Japanese War” [1904-05]. A table (p. 257) shows the number of Japanese settlers and Korean settlers in Manchuria from 1908 to 1930. The number of Japanese settlers increased from 56,433 in 1908 to 288,784 in 1930. The number of Korean settlers increased from 51,070 in 1910 to 607,119 in 1930.

The Wanpaoshan incident happened just before the Manchurian incident (p. 257). Note: The Wanpaoshan Incident (Jap: *Manpozhan jiken*) was a minor dispute between Chinese and Korean farmers which occurred on 1 July 1931, prior to the Mukden Incident [best known in Japan as the Manchurian Incident]. Although the issue was trivial, it was

highly sensationalized in the Japanese and Korean press, and used with considerable propaganda effect to increase anti-Chinese sentiment in the Empire of Japan prior to the invasion of Manchuria [in Sept. 1931] (Source: Wikipedia, May 2009). As of May 2009 Mukden is known as Shenyang.

“The agricultural development in Mongolia was suddenly brought about after the Russo-Japanese War, and particularly after the establishment of the Republic of China [on 1 Jan. 1912], as the former policy of protecting the ancient kings of Manchuria was abolished, and the settlement of the Han [Chinese] race was encouraged. The Mongolians were more and more oppressed and obliged to retreat gradually to the inner desert districts, and the barren fields of Mongolia came to be rapidly cultivate by the Han settlers.

“Manchuria was made a great agricultural country by the joint efforts of the Hans, Japanese, Koreans, and Russians, with the Hans as the main factor; Manchuria came to have intimate relations with the world economy through its export agricultural products.”

Agricultural products in the three provinces of Fengtien, Kirin, and Heilungkiang: Among the legumes are soya beans, Indian beans, and green peas. Table 13 shows the cultivated area (hectares) and production (metric tons) of these crops: (1) In the three provinces: Soya beans: 4,102,990 ha and 5,124,760 metric tons. Other legumes: 353,190 ha and 54,467 metric tons. (2) In the Kwantung Leased Territory and South Manchuria Railway Zone: Soya beans: 31,923 ha and 17,595 metric tons. Other legumes: 54,467 ha and 160,193 metric tons. Statistics are also given in Table 13 for Kaoliang (#2 crop after soya beans in area and production), millet (#3), maize (#4), wheat (#5), etc. Soya beans account for nearly 30% of the total acreage (p. 258-59).

Table 22 (p. 267) shows that area and production of soya beans in 1933 was larger Northern Manchuria than in Southern Manchuria. A long section titled “Soya beans” (p. 267-70) gives details about all aspects of soya beans, bean oil, and beancake, including exports.

Table 23 (p. 278), titled “Exports of principal agricultural products,” gives statistics from 1922 to 1931 for quantity exported and value (in H.K. Taels) for 9 major products. The leading every year is either soya beans or beancake; bean oil is also important.

A section titled “Export of soya beans, beancake, and bean oil in recent years” (p. 279) includes Table 24, “Export of soya beans, beancake, and bean oil through the four ports of Dairen, Yingkow, Antung, and Vladivostok,” total tons and relative index from 1926-27 to 1932-33.

The Dairen Agricultural Company, established in 1929, brings Japanese immigrants to Manchuria and helps them to become land-owning farmers; it does not operate any farms directly (p. 300).

The origin of Japanese administration on the Liaotung peninsula, the southern end of Manchuria, started in 1905

during the Russo-Japanese War. In Nov. 1906 Japanese first began to administer agricultural programs in Manchuria by issuing the regulations for the Kwantung Government Agricultural Experiment Station, and the establishment of the agricultural experiment station at Dairen. This station is now located at Chinchow (Chin-chou, or Jinzhou, in Liaoning province, as of 2009) (p. 300-01). On p. 302 is a full page of references to Japanese documents that served as the sources for the tables in this chapter on agriculture in Manchuria. Almost all were compiled and published by the South Manchuria Railway Co. (SMRC).

Chapter 14, "Industry," begins with a "General outline" (p. 350-51). Although Manchuria is rich in natural resources, modern industry did not develop until about 30 years ago. Before that, small enterprises supplied the needs of immediate neighborhoods. With the eastern advance of Russian influence and the establishment of Russian administration in Manchuria near the end of the 19th century, several modern industries appeared. "Before any general industrial development could take place, however, the Russo-Japanese War (1904-05) broke out, and as the result of the war, Japan came to administer the Kwantung Leased Territory and the railway zone. Since that time modern industry has developed in Manchuria"—including oil milling. Industry in North Manchuria [where Harbin is located] is inferior to that in South Manchuria in capital and equipment. Discusses the North Manchuria Railway.

A section on "Chemical industry" (p. 396-409) discusses oil milling in great detail.

Page 466 shows miso and soy sauce production in Manchuria. The 17 Japanese-run plants make 2,800 tonnes of miso and 4,550 tonnes of soy sauce. The 44 Manchurian-run plants make no miso and 1,381 tonnes of soy sauce. The number of factories in each major city and the capital assets of the companies are listed. Dairen is the main center of Japanese miso and soy sauce production, followed by Mukden, then Port Arthur. Hsinking is the main center of Manchurian soy sauce production.

Note: This Year Book was published from 1931 to 1941 by Japanese interests (SMRC) to justify the Japanese occupation and development of Manchuria after the "Manchurian incident."

3016. McGuire, Ray F. 1934. Soybean values. Cedar Rapids, Iowa: Soybean Production Advisory Board. 15 p. [24 ref]

• **Summary:** Contents: Values as farm crop. Commercial possibilities. Valuable human food. Modern method of producing oil and oil meal. Utilization of soybean oil. Utilization of soybean oil meal. Soybean flour. Imports, exports and the tariff. Marketing soybeans, oil and meal. Potential markets. Production last year (in the United States). Graphs show the domestic production of soybean oil, 1927-1932, and the increasing seed production in Iowa 1924-1933. A map shows the principal soybean producing counties in

Iowa. Address: Iowa.

3017. White, William C. 1935. The Japanese in America: A close-up. Citizens or aliens, it is hard for them to join in the life of the country. *New York Times*. Jan. 6. p. SM9.

• **Summary:** Begins by describing "Little Tokyo," the Japanese section of Los Angeles—which is just 3 blocks from the main business section of Los Angeles. Includes a description of the chrysanthemum festival, drug, stores, newspapers, and restaurants which "serve hamburgers and hot dogs as well as soya bean curd [tofu] and rice."

About 135,000 Japanese live in America, and 97,000 of those (72%) live in California. Only about 6,000 live in New York. More than 45,000 live in or near Los Angeles, where they are considered a problem. They live by themselves in certain sections and have no social contacts with white Americans—except that their children attend public schools.

Significant numbers of Japanese began to arrive in California after 1880. By 1910 more than 80,000 had entered as immigrants. The 1906 "gentleman's agreement" stopped almost all Japanese immigration and the Congressional act of 1924 stopped it entirely. But all Japanese born in the USA (*nisei*) are American citizens, and this latter group now slightly outnumbers those immigrants born in Japan [*issei*]*—*who are barred by law from becoming naturalized citizens.

The average age of the *issei* in America is less than 45, yet they are prevented by law from owning land in most Western states. "The laws which prohibit marriages between any two races apply to them." Children offer one way of getting around the land laws. The parents simply buy land and register their children as the legal owners. Unlike German immigrants, for example, they make little effort to assimilate, yet they also take care of themselves and rarely appear on charity rolls.

The feeling in California against Japanese is based primarily on two issues: (1) They are believed (incorrectly) to have a high birth rate, which could lead to the "yellow peril." (2) They can live more simply than whites and therefore "undersell the whites" in goods and labor. There is growing conflict between Japanese-American youth, educated in American schools and often wanting to become part of American culture, and their parents—who want to keep Japanese culture alive.

"Within recent weeks there have been terroristic raids on Japanese families settled around Phoenix, Arizona. There have been similar affairs at various times in California. There have been night riders, occasional bombs. Part of the Arizona terror is directed at the fact that the Japanese, 750 of them, half of them born in this country and therefore American citizens, are making a living on land where white farmers, settlers from Oklahoma and Texas, have failed."

Note 1. See also interview: Tadano, Mary; Tadano, Michiko. 2002 "History of Showa Shoyu Brewing Co.: Sept. 17.

Note 2. This is the earliest document seen (Feb. 2012) that concerns the Tadano family (later makers of soy sauce) near Phoenix, Arizona—however it does not mention the family by name.

Photos show: (1) A Japanese religious ceremony in Los Angeles. (2) Japanese children in a Los Angeles classroom. Address: Los Angeles.

3018. Laming (W.C.) & Co., Ltd. 1935. Display ad: For greater health benefit from food—use Kikkoman, the sauce without vinegar. *Times (London)*. Jan. 18. p. 15, col. 1.

• **Summary:** “Made from the wonderful Soya Bean, rich in the valuable vitamins A, B and D, and acclaimed by experts as the most valuable vegetable food known to mankind, Kikkoman is at once a tonic, digestive, appetiser and nourisher. Ordinary food assumes a new health value when Kikkoman is added.” An illustration to the right of the text shows a bottle of Kikkoman sauce. Address: 10, Tooley St., London, S.E. 1.

3019. Ralston Purina Co. 1935. Soybeans: A cash crop. St. Louis, Missouri. 10 p. Prepared by E.F. Johnson. Jan. 23 cm.

• **Summary:** This booklet (also prepared by E.F. Johnson) is somewhat similar to that titled “Soybeans for beginners,” published by Ralston Purina in March 1934. Contents: Map of the Midwest showing the company’s soybean processing plants in St. Louis, Missouri, Lafayette, Indiana, and Circleville, Ohio. “Our soybean mills located to serve you best.” Introductory message from J.H. Caldwell, Vice-President of Ralston Purina Co. (15 Jan. 1935, St. Louis, Missouri). Soybeans—A cash crop: Introduction, three outstanding reasons for great interest in soybeans this year (1) Year-round cash market now established. (2) Chinch bugs leave soybean alone. (3) Soybeans can be planted on corn-reduction acres. Established markets necessary for expansion. Soybeans are an easy crop to grow: Seedbed preparation most important operation (weeds, stand, yield), a simple prescription for a good seed bed. Varieties recommended for commercial production (Dunfield, Manchou, Illini), recommended new varieties (Mandell, Scioto, Manchuria, Mukden. Note: Virginia, Wilson, Ebony, Pekwa and Kingwa are not recommended due to low oil content and less attractive meal). Growing soybeans commercially: Inoculation, solid or row seeding, rate of seeding, date of seeding, don’t plant too deep, cultivation. Harvesting: Combine method recommended, grain binders used in many sections, mowing machine and windrower preferred by some growers, use regular grain separator for threshing. Yield of grain (“Soybeans will yield from 20 to 40 bushels to the acre... Yields of 40 to 45 bushels per acre are not uncommon in Illinois”). Storing and marketing soybeans: Sell through your local elevator, value of meal and oil determines price of soybeans. Future outlook for soybeans in U.S.: Introduction, increased acreage next year anticipated,

wide diversity of use of soybean products: Flour, soybean oil meal, soybean oil, other uses (milk, cheese [tofu] bean sprouts, flavoring sauce, substitutes for coffee and peanuts). Using soybeans to check chinch bug movement. A soybean program. Ad: Use the products that make a market for your soybeans: “Three Purina soybean processing plants are located in the heart of the Soy Belt...” Soybean oil meal is used in Purina Chows.

Photos show: (1) E.F. Johnson (facing p. 1). (2) The 7-story Purina Mills plant at Circleville, Ohio, “complete with new modern soybean processing machinery” (p. 6). Purina Mills plants at Lafayette, Indiana, and St. Louis, Missouri (p. 7).

“Future outlook for soybeans in U.S.: Previous to 1934, 4,000,000 bushels was the largest amount of soybeans to be processed from a single crop. At least 9,000,000 and possibly 10,000,000 bushels of the 1934 crop will be processed into meal and oil... We predicted last year that the reduction in cotton-seed meal through the passage of the Bankhead Bill would result in a big increase in demand for soybean meal and in higher prices on soybeans. Both of these predictions have already been proven. The big increase in soybean meal this year still is far short of supplying the loss in cottonseed meal.” Address: St. Louis, Missouri.

3020. Laming (W.C.) & Co., Ltd. 1935. Display ad: Double the health value of food with Kikkoman, the sauce without vinegar. Made from the wonderful Soya Bean. *Times (London)*. Jan. 31. p. 17, col. 1.

• **Summary:** “Nature has given to the World in the Soya Bean a vegetable that contains valuable and essential properties for counteracting digestive and gastric disorders. And in Kikkoman scientists have produced from this natural food a piquant sauce that immediately appeals to the palate...” An illustration shows a bottle of Kikkoman. Address: 14, Tooley St., London, S.E. 1.

3021. Laming (W.C.) & Co., Ltd. 1935. Display ad: There is no adequate substitute for Kikkoman, the sauce without vinegar. *Times (London)*. Feb. 13. p. 15, col. 1.

• **Summary:** “Kikkoman is more than a condiment; it is an essential food item, made from the wonderful Soya Bean. Men-folk particularly appreciate its palate-freshening qualities.” An illustration shows a bottle of Kikkoman. Address: 14, Tooley St., London, S.E. 1.

3022. Barnett, Harold M. Assignor to S.M.A. Corporation, Cleveland, Ohio. 1935. Manufacturing of flavoring materials. *U.S. Patent* 1,992,462. Feb. 26. 4 p. Application filed 9 June 1933.

• **Summary:** “This invention relates to methods for the manufacture of flavoring materials from protein matter and, more particularly, to methods of treating protein materials capable of yielding appreciable quantities of glutamic acid.

"Protein materials of various kinds may be hydrolyzed to yield mixtures of amino acids which have a very characteristic meat-like flavor; this flavor being obtainable as the result of hydrolysis of proteins from purely vegetable sources as well as from animal proteins. The characteristic flavor, is found to be a property of the glutamates, particularly monosodium glutamate, although other amino acids also contribute to the 'bouquet' of flavor. Glutamates or a mixture of amino acids containing a considerable proportion of glutamates, constitute valuable condiments or sauces which may be used on food dishes, such as meats, soups, gravies, macaroni, rice, vegetables, etc., to improve the flavor of these. In addition to its value as a flavoring agent, monosodium glutamate has a certain food value in itself and is thought to be an aid to digestion."

Example (claim) 1. "A method of preparing a flavoring material which comprises, hydrolyzing protein matter in the presence of hydrochloric acid, and neutralizing the resulting hydrolysate to a hydrogen ion concentration of about pH 5.2 to 5.8."

Soy is not mentioned. Address: Garfield Heights, Ohio.

3023. Laming (W.C.) & Co., Ltd. 1935. Display ad: Derive the great benefit of the Soya Bean by adding Kikkoman to your daily food. *Times (London)*. Feb. 27. p. 17, col. 1.

• **Summary:** "Nature has given to the World in the Soya Bean a vegetable food that contains valuable and essential properties for counteracting digestive and gastric disorders... Kikkoman contains no Vinegar,..." Address: 14, Tooley St., London, S.E. 1.

3024. Monnier, Emile. 1935. Les préparations à base de graines de soja dans l'alimentation des Annamites [Preparations based on soybeans in the diet of the Annamites (of Central Vietnam)]. *Bulletin Economique de l'Indochine (Hanoi)* 38:66-86. Jan/Feb. Also in *Annales de Médecine et de Pharmacie Coloniales* (1935) 33. p. 34-57. [11 ref. Fre]

• **Summary:** An excellent, very precise and detailed discussion of the subject. Contents: Introduction, botany of the plant, nutritional composition, and utilization. Soymilk (used to make tofu—*le fromage de soja-dau-phu*). Tonkin soy sauce (*La sauce de soja = dau-tu'o'ng*. It is made by fermentation of a mixture of glutinous rice and roasted soybeans. It is made on a family level. It corresponds roughly to Japanese shoyu and Chinese soy sauce (*téou-yeou*). Describes exactly how it is made). Soy cream [yuba] (*La crème de soja = dau-phu-chuc*). It comes in the form of sheets. Address: Chef du Laboratoire de Chimie de l'Institut Pasteur, Hanoi.

3025. Staley, A.R. 1935. Soy sauce goes American: Formerly made by crude Oriental methods, now a scientifically controlled product. *Food Industries* 7(2):66-67. Feb.

• **Summary:** Describes Staley's American method of

manufacture. The soybeans are first run through high-pressure expellers to remove a portion of the oil before the fermentation process. When the fermentation is complete, the product is clarified, then goes to the barreling and bottling department. Photos show: (1) Filling wooden barrels (with metal hoops) with soy sauce. (2) Expellers in the Staley plant removing part of the oil from the soy beans. (3) Fermentation tanks, where the proteins of soy beans are converted to compounds that give the sauce its characteristic flavor. Address: Manager, Special Products, Staley Sales Corp., Decatur, Illinois.

3026. MacConkey, C.A. 1935. Soybeans. Ottawa, Canada: Div. of Research Information, National Research Council, Ottawa. 93 p. March. 28 cm. [152 ref]

• **Summary:** A very important and interesting book. In 1932 the first two sections of this report were prepared; in 1934 the third section was added in order to bring it up to date. Contents: Summary of Part I. Summary of Part II. Summary of Part III. Part I (p. 14): Cultivation, utilization and trade. Introduction. Cultivation: Varieties, differences, maturity, hardness, color of bean, climate, soil, seeding, harvesting. Production of oil and cake. Applications: Introduction, the plant (forage, hay, pasturage, silage, soilage, straw, soil improvement and fertilizer), the bean (grain, flour, soy sauce, bean curd [tofu], vegetable beans, other uses), the cake (cattle feed, flour, fertilizer, other uses), the oil (general, the soap industry, the paint and varnish industry, the food industry). The soybean industry in the United States: Importance of the crop, history and development (incl. Henry Ford who is said to have 10,000 acres under cultivation), standards (classes of soybeans), production of oil and cake, consumption of soybean oil, export trade in soybeans. Statistics of world trade: Beans (production, exports, imports [statistics, pre-war average {1909-13} + 1926-1931 for Germany, Japan, Denmark, UK and British Empire countries, Dutch East Indies, Sweden, Italy, Formosa, and Holland], consumption [net imports], prices), oil (production, exports, imports, consumption, prices), cake (production, exports and imports). Statistics of the German oil seed industry: Oil seeds in Germany [by far the world's largest soybean importing country and largest European producer of soybean oil] (imports and exports), vegetable oils (production, consumption and value), oil cake and meal (production, imports, exports, consumption and relative values), soybean experiment stations in Germany.

Part II (p. 56): Development in Canada. The difference between growing soybeans for forage and for seed. Present status of soybean cultivation in Canada. The future for soybeans on the Prairies. Extent of Canadian Experimentation. Varieties suitable for Canada. The climates of Manchuria and Canada. Planning the development of soybeans in Canada. Consumption of vegetable oils in Canada by industries. Consumption of oil cakes in Canada.

Firms engaged in the soybean industry in Canada. Casein in Canada.

Part III (p. 69): Survey of the Literature, 1931-34. Cultivation. Green manure. Breeding. Germination of seeds. Diseases and parasites. Soil. Manufacture of oil cake. Composition of the soybean. Properties and composition of soybean oil. Feedstuffs. Edible products. Detection in food (e.g. detection of soybeans in wheat flour, pasta, meat products, etc.). Inedible products. Economics. Table (p. 79-80)—Imports of soy products into Canada: Soy sauces (1931-1933), edible peanut and soyabean oil, peanut and soyabean oil for the manufacture of soap and peanut oil for canning fish, soybeans, soyabean cake and soyabean meal for use exclusively in the manufacture of cattle food and of fertilizers. References (102). Other references (Nos. 103-117). References not consulted (35).

The section titled “Development in Canada” (p. 56-62) states: “Soybeans are at present being grown for seed on a commercial scale in southern Ontario, chiefly in Kent and Essex Counties [the Niagara Peninsula]. Prior to 1931 the acreage under soybeans was about 1000 or 1500. The efforts of persons interested in establishing oil mills increased this to about 5000 in 1931 and to 6000 or 7000 in 1932. The average yield of seed has been about 23 bushels per acre, which is quite equal to yields in the U.S., while another variety, the A.K., has yielded at the rate of nearly 40 bushels per acre during a six-year test at Harrow, Ontario.”

“T.B. Macaulay, President of the Sun Life Assurance Company of Canada has been experimenting for a number of years on the growing of soybeans in the hopes of being able to make the western farmer more free from his dependence on wheat, and believes that he is near to discovering suitable varieties...”

“A statement appearing in the *Montreal Financial Times* (Nov. 18, 1932) reports that a number of varieties introduced from Urbana [Illinois] and tried in various parts of Alberta made an excellent growth of forage...”

“The work being carried out at T.B. Macaulay’s experiment farm at Hudson Heights, Quebec, is particularly worthy of mention. Here the testing of varieties has been in progress for 8 years. Mr. Macaulay’s method of approaching the problem consists in obtaining samples of hitherto untried varieties from the most northerly regions where soybeans grow and the earliest varieties from Asia and elsewhere... Mr. Macaulay has a new variety which he calls Toyonaga. It matures 5 days to a week earlier than the variety called Manchou, which is being grown to a small extent in southern Ontario.”

“Varieties suitable for Canada: Besides O.A.C. 211 which is the one outstanding variety that has shown itself suitable for cultivation in Canada albeit only in southern Ontario, a number of other varieties have been tried and experimented with such as Mandarin, Manchou, Wisconsin Black, Quebec 92, Quebec 537, Early Yellow, Early Brown,

and Manitoba Brown, but none of these have been very satisfactory.”

Table 29 (p. 60) gives a summary of current (1932) Canadian experiments with soybeans: Ontario Agricultural College (Guelph), grown for 39 years (i.e. since 1893), tested 125 varieties. Dominion Experimental Farms (Ottawa and Harrow, Ontario), 9 years, 100 varieties. Macdonald College (Quebec), 20 years, 16 varieties. Manitoba Agricultural College (Winnipeg), 10 years, 12 varieties. University of Alberta, Edmonton, 3 years, 7 varieties. Brooks (Canadian Pacific Railway Irrigation Experimental Station, Alberta), unknown number of years and varieties. Pointe Platin (Quebec, by J. deLothinière [deLothiniere]), unknown number of years and varieties. Hudson Heights (Quebec, by T.B. Macaulay), 8 years, 100 varieties. University of Saskatchewan, 10 years, 25 varieties.

Page 65 lists “Firms Engaged in the Soybean Industry in Canada.” The Soy Bean Oil and Meal Co-operative Company of Canada, Ltd., Chatham, Ontario; Canadian Soyabeans Ltd., Milton, Ontario; The Vitone Co., Hamilton, Ontario; Dominion Soya Industries, 355, Place Royale, Montreal, Quebec.

Note 1. This is the earliest document seen (Jan. 2010) that mentions Dominion Soya Industry, Ltd. (Montreal, Quebec, Canada) in connection with soybeans.

Table 33 (p. 67) gives “Consumption of oilseed cake and meal in Canada” for the calendar years 1926 to 1931. Figures (taken from *Trade in Canada*) are given for cottonseed, linseed, palm nut, soya and total. Consumption of soya cake and meal (in tons) were: 200 in 1926 (0.6% of total); 680 in 1927; 560 in 1928; 1,560 in 1929 (5.0% of the total); 1,190 in 1930; and 2,500 in 1931. The value in dollars rose from \$8,000 in 1926 to about \$50,000 in 1931. Apparently all of this soyabean cake and meal was imported.

Note 2. This is the earliest English-language document seen (Dec. 2005) that uses the term “soyabean meal” to refer to ground, defatted soybeans. Address: Div. of Research Information, National Research Council, Canada.

3027. Laming (W.C.) & Co., Ltd. 1935. Display ad: The healthful Soya Bean in Kikkoman. Doubles the value of your daily food. *Times (London)*. April 11. p. 17, col. 1.

• **Summary:** “Nature has given to the World in the Soya Bean a vegetable food that contains valuable and essential properties for counteracting digestive and gastric disorders... Kikkoman contains no Vinegar...” (see previous page). Address: 14, Tooley St., London, S.E. 1.

3028. Eaton (T.) Co., Limited. 1935. Wake up your appetite! (Ad). *Toronto Daily Star (Canada)*. April 23. p. 43.

• **Summary:** In the lower right corner of this full-page ad: “Make your own chop suey. It’s fun. It’s economical. It’s good—You can make it with La Choy.

“Vegetables (40¢), Bean sprouts (18¢), water, chestnuts

(65¢), Noodles (30¢).

“Serve it with Brown Sauce (35¢) or Soy Sauce (35¢).”

Address: College St., Toronto. Phone: AD. 5211.

3029. *Los Angeles Times*. 1935. Foreign “atmosphere” and fine food at home: Novel cafes discovered. April 25. p. B5.

• **Summary:** In the Japanese quarters of Los Angeles, several cafes specialize in sukiyaki—the “national dish that Americans know best. At one of the best, a Japanese girl, wearing a kimono, escorts you into a private room, separated by sliding panels in the true oriental fashion.

At one end of the table is a glowing brazier, surrounded by platters of sukiyaki ingredients. “Soon the pungent odor of soy bean sauce pervades the atmosphere as a dainty Japanese maid mixes the beef, soy bean cakes [tofu, probably grilled], bamboo shoots, Japanese horse-radish, green onion, etc., in the brazier.” Warm saki [sake] is served soon after the food. The girls will be more than happy, if encouraged, to return after the meal to play Japanese music on their peculiar stringed instrument.

3030. Chin, -; Lin, -. 1935. [The Togano or Y-type process of soy sauce fermentation]. *Kung Yeh Chung Hsin (Industrial Research, Nanking, China)* 4(4):170-73. April. [Chi]

• **Summary:** Most of the soy sauce research in recent years as been dedicated to finding a way to shorten the fermentation process. The one that deserves special mention is Togano’s process which has been widely used in Japan and which is recently introduced to China under the name of ‘Y-type’ process. Address: China.

3031. Ishimaru, Yoshio. 1935. Shōyu kōbo ni tsuite [On shoyu yeasts]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 13(4):295-318. April. [Jap]

3032. Bowdidge, Elizabeth. 1935. The soya bean: Its history, cultivation (in England), and uses. London: Oxford University Press. xii + 83 p. Foreword by Sir John T. Davies (Director, Ford Motor Co., Ltd.). Illust. 20 cm.

• **Summary:** Contents: 1. Introduction. 2. The soya bean in the East: Europe, United States, Canada. 3. Description of the plant: Results of experiments in England, the 1934 experiment in Essex, yields from the four varieties, description of the four varieties, composition of English and other varieties. 4. Culture of the soya bean: Soil requirements, inoculation of the seed, preparation of soil, rates of seeding, sowing seed, cultivation, fertilizers, harvesting the crop, threshing, storage, yields in various countries, soya bean prices. 5. Soya bean hay: Feeding values, time of cutting, soya straw, soya in the mixed crop (in mixed cropping plans with sorghum, maize, etc.). 6. Soya beans for soil improvement. 7. By-products of the soya bean: Oil and its uses, notes on experiments in breeding for oil, methods of extraction, soya cake and meal, results of

comparative feeding tests. 8. Food products of the soya bean.

This book describes the successful introduction and cultivation of soybeans in England. The Foreword notes (p. v): “In past years no sustained effort has been made to grow the plant on a large scale in England. The Royal Agricultural Society devoted several years to experiment at Woburn, but in 1914 they reported that the plant was quite unsuitable for growth in this country as it required more warmth than could be obtained here. The British Board of Agriculture reported in 1916 that ‘the Japanese and Manchurian varieties hitherto tested cannot be relied upon to produce seed in this country.’”

In the Preface (p. ix) Ms. Bowdidge acknowledges: “That very able and unique work *The Soybean*, by Messrs. Piper and Morse, has been my principal source of information.”

“Efforts to introduce the [soy] bean to English agriculture were begun in 1909 and given up in 1914, and except for the work of Mr. J.L. North nothing further has been done” (p. 9).

The section titled “Results of experiments in England” (p. 15-17) states: “One of the first attempts to acclimatize the soya bean in England began in 1914 at the Royal Botanic Gardens, Regents Park, when it was shown by Mr. North that certain varieties could be ‘advanced’ sufficiently to produce a mature crop towards the end of September. Many years devoted to careful selection of seed from the varieties in his collection had resulted in several early strains. In 1928, a hybrid was received from Canada which, on passing the experimental stage, was planted out on a number of small plots in various parts of the country. It proved to be a very reliable cropper and matured earlier than any of the sixty varieties previously under test. Planted in the first week in May it was harvested at the beginning of September, and reports of good results came from Middlesex, Essex, Berkshire, Oxfordshire, and Hampshire.

“The largest experimental test ever conducted in this country took place in 1933 at Boreham, Essex, when forty-seven different varieties of the soya bean originating from North America, Canada, Manchuria, and Japan were grown under observation. The selection included four varieties which had been acclimatized by Mr. North. Mr. North was engaged to supervise operations, and 50 lb. of his special seeds was purchased. The results obtained were most interesting.”

“There is no doubt at all that the four varieties acclimatized by Mr. North were a great success; two reached maturity on September 1st and two on September 6th. In many cases plants bearing between 300 and 400 seeds were harvested.”

“It has been found by Mr. North in the course of more than twenty years’ study of the subject, mainly with foreign beans grown in various parts of the country, that no variety of soya bean has any chance of success in England unless it matures in less than 100 days in America. Varieties requiring

this length of time in America need nearly a month more in this country and, owing to our colder spring weather, no advantage is gained by earlier sowing. Mr. North's seeds require 124 to 127 days to reach maturity in England but, if grown in America, they would only require 85 to 90 days.

The section on "The 1934 Experiment in Essex" (p. 17-23) notes: "The result of the 1933 experiment was so encouraging that it was determined that a further attempt should be made in 1934 to ascertain whether it would be possible to grow the plant profitably as a field crop and, with this in view, a field of nearly 20 acres was specially prepared for the acclimatized seeds from the 1933 crop."

Joseph Bramah, an English engineer, invented the hydraulic press in 1796, leading to a "great advance in the oil-extraction industry." All "old methods in the western world immediately gave place to the new appliance." More recently the method of solvent extraction has been developed; it is now used throughout the world and removes nearly all the oil from the seeds (p. 69).

"There is plenty of evidence as to the efficiency of soya meal in live-stock feeding, yet it does not appear to be used in this country as widely as its feeding value merits. The prejudice formed when it was first introduced in England as dairy food seems still to exist. It was thought at that time that the use of the meal might affect the taste of milk and butter; but, although this was disproved later, England remains a small user" (p. 72).

Food products of the soya bean (p. 80-83): "It is unfortunate that the inherent conservatism of English people to anything new has been the cause of past failures to popularize soya bean food products for consumption in this country. The bean contains iron, magnesium, calcium, and other mineral salts; phosphorus in the form of lecithin makes it valuable in cases of nervous disorders..."

"Soya 'sprouts,' which have been grown and used for centuries in the East, have recently been introduced as a green vegetable. The beans gathered before ripe and prepared in the same manner as green peas are a very satisfactory vegetable and the dried beans, if soaked for forty-eight hours, may be cooked like haricot or butter beans and make a most delicious and nutritious vegetable dish."

There is no doubt that soybean products are gradually becoming established in Western countries. We sometimes eat soybeans without knowing it. "The bean, when properly prepared by roasting, makes an excellent cereal beverage which looks, smells, and tastes like coffee; a sauce, appropriately seasoned with spices, is the so-called 'Worcester Sauce', and soya soups made from the bean taste like beef extract. During the late war, when Germany found herself on the verge of starvation, glutamic acid, produced from the soya bean, was used in German hospitals to form the basis of beef-tea, and it is said that the ground bean also was used at that time for the making of bread. Soya bread, made from properly prepared flour, is obtainable in England

and is stated to be of high nutritive value" (p. 81).

Soya flour has long been used in foods for diabetic persons requiring a low starch diet. "The flour contains more protein and fat, and less carbohydrates than ordinary cereal flours, and a certain variety manufactured in England is stated by the proprietors to contain 42 per cent. protein and 20 per cent. fat, having good keeping qualities, 0.13 per cent lecithin phosphoric acid and the vitamins A, B, D, and E. There are many food products on the London market under the names that conceal their soya bean origin. Just before the late war [World War I] an enterprising English firm was making great strides with soya products. Vegetable butter, biscuits, cocoa, milk chocolates and other confectionery, cream, cakes, bread, &c., proved quite a success until a war-time embargo placed upon the importation of soya beans put a stop to the business; the organizers eventually went to America! (p. 82).

The author concludes (p. 83): "The soya bean is by far the most valuable of all known beans and our farmers ought to make a serious effort to grow it. It has already been shown that the acclimatized bean will grow in this country, and if crops can be raised profitably and on a commercial basis, a service will be rendered both to the farmer himself and to the country."

Excellent photos show (see p. xiii): (1) A typical example of the soya bean plant grown at Boreham, County of Essex, in 1933. (2) The soya bean plant in full maturity. (3) Bags of English acclimatized soya beans harvested on Fordson Estates, Boreham, Essex, in 1933. Left to right: Brown 'C,' yellow 'J,' black 'O,' and green 'Jap.' (7) Aerial view of the soya bean field as it appeared on 29 Aug. 1934. (8) Soya beans inoculated the previous day being fed into the horse-drawn drill prior to sowing. (9) A man seated on an ordinary horse-drawn grain-drill, planting soya beans in rows wide enough to enable cultivation later on. (10) Six men stooping in a field, planting small quantities of different varieties of soya beans by hand in 30-inch rows. (11) A man walking beside a horse pulling a cylindrical roller, which helps to give the seeds a better growth and even stand. (12) Harvesting soya beans with a reaper and binder pulled by a tractor. (13) Threshing soya beans in 1934 with a mechanical 'Ruston' Thresher; many beans were split. (14) Loading sacks of soya beans onto an open-bed truck for conveyance to storage barns. (15) The first English rick of soya hay, grown in 1933. (16) Baled and trussed soya bean straw being ricked; a man is shouldering a bale atop the rick with a ladder propped against one side. (17) Heated cakes of crushed soya beans ready for hydraulic pressing at Erith Oil Mills, Ltd. (18) Soya bean cakes, after leaving the press, are passed through a paring machine where the edges are trimmed at Erith Oil Mills. Address: England.

3033. Dittes, Frances Linda. 1935. Food for life: The art and science of preparing food. Madison, Tennessee: Associated Lecturers, Inc. xii + 332 p. Spring. Recipe index. 23 cm.

• **Summary:** This early Seventh-day Adventist vegetarian cookbook contains more soyfoods recipes than any published up to this time. The author, a soyfoods pioneer born in 1891, first attended Madison College in 1910 and joined the faculty in 1912. She did her graduate work in nutrition, specializing in soyfoods nutrition, at George Peabody College for Teachers (in Nashville, Tennessee), from which she received her MA degree in 1929. This book was printed by the "Rural School Press" (Madison College's school press) and published in the spring of 1935.

Contents: Part I: Food and nutrition. Milk. The acid-base balance. Fruit acids. Balancing the food. Measuring food values. Menu planning. The art and science of food preparation (preceded by this quotation: "Food will be the medicine of the future"—Harvey W. Wiley). Food combinations. Condiments. Suggestions for flavoring. Garnishings. Measurements. Part II: Recipes (listed by recipe type such as breads {some recipes call for Crisco shortening}, soups, salads, desserts, etc.). One chapter titled "Dishes to take the place of flesh foods" (p. 149-65) contains many interesting recipes such as: Preparation of gluten. Gluten pot pie. Gluten loaf. Glutose (with 5 cups ground cooked gluten, plus potatoes, eggs, and cream). Cold sliced Nut Meat or Vigorost (Nut Meat is sold in 2-lb cans, Vigorost in 14 oz cans). Peanut roast. Chow mein (with soy cheese or Nut Meat). Boiled peanuts. Soy-related recipes are given below. Another chapter is "Nutritive value of the soy bean. Soy bean dishes" (p. 166-86).

Appendixes: A. Classification of carbohydrates. B. Canning. C. Sample menus. D. 100 calorie portions of foods. E. Approximate servings and values of a few common foodstuffs. F. Protein, calcium, phosphorus, and iron in 100 calories of food material. G. Ash constituents of foods in percentage of edible portion.

The author uses the term "soy cheese" to refer to tofu. Soy-related recipes include: Soy bread (20% soy flour and 80% white wheat flour; p. 96). Soy gems (18-20 muffins using soy flour; p. 108). Tomato-soy sandwich (with grated soy cheese; p. 114). Soy noodle soup (with grated soy cheese browned in butter; p. 122). Jellyed soy salad (with grated soy cheese; p. 138). Potato soy salad (with grated soy cheese; p. 138). Tomato and soy salad (with soy cheese). Waldorf soy cheese salad (with grated soy cheese; p. 139). Lentil-soy loaf (with soy bean puree; p. 157). Savory soy loaf (with soy cheese). Soy souffle (with grated soy cheese browned in butter; p. 159). To fu chi (deep-fried soy cheese stuffed with rice and seasoned with soy sauce). Soy gravy (with 3 parts soy flour and 2 parts white wheat flour).

The chapter titled "Nutritive Value of the Soy Bean" (p. 167-86) discusses the general nutritional composition, then

gives details on protein, fats (including lecithin), minerals (including tofu made with magnesium chloride or calcium sulphate). Recipes are given for: Cooked soy beans. Soy milk (after soaking 1 lb of Mammoth variety soy beans overnight in water, "Wash several times in hot water to remove undesirable taste."). Soy milk no. 2. Soy acidophilus milk. Soy bean cheese [tofu, curded with calcium sulphate]. Soy bean cake [okara] loaf. Browned soy cheese. Green soy beans. Escalloped green soy beans. Dried soy beans. Baked soy beans. Soy beans southern style. Roasted soy beans. Soy beans in tomato sauce. Chop suey (with soy cheese). Sauce (with soy sauce). Soy bean omelet. Lentil soy bean loaf (with soy bean puree). Soy bean loaf. Soy bean pie (with soy bean pulp). Soy bean meat. * = made with soy bean flour. Soy bean muffins*. Soy muffins*. Soy biscuits*. Soy bread*. Soy nut bread*. Escalloped onions with soy cheese. Baked rice with soy cheese. Escalloped potatoes with soy cheese. Spaghetti and soy cheese. Stuffed pepper with soy cheese. + = with soy cheese. Left-over croquettes+. Soy croquettes+. Soy cheese with rice. Stuffed baked potato with soy cheese. Soy fritters+. Soy cutlets+. Savory soy loaf+. Spanish chop suey+. Soy souffle (with grated soy cheese browned in butter). Cream of soy soup. Soy noodle soup+. Soy soup+. # = made with soy milk. Soy cream of tomato soup#. Soy cream of pea soup#. Soy cream custard#. Jellyed soy salad+. Waldorf cheese salad+. Potato soy salad+. Stuffed egg with soy cheese. Soy bean salad. Soy bean sprout salad. Soy Vegex sandwich+. Tomato-soy sandwich+. Egg and soy sandwich+. Soy and cucumber sandwich+. Celery and soy sandwich+. Banana soy sandwich+. Scrambled egg and soy cheese sandwich. Diabetic crackers (with soy meal). Diabetic pie crust (with soy meal). Diabetic soy bean mush*.

Vegetables: Soy cheese sauce (with grated soy cheese and soy sauce, p. 195). Steamed cucumbers with soy cheese (grated, p. 201). Escalloped onion with soy cheese (p. 204). Spinach with soy cheese sauce (and Vegex, p. 207).

Desserts (p. 215-36), Cakes (p. 237-53), Pies (p. 255-60), Cookies (p. 261-68), and Ice creams and sherbets (p. 269-74). Some of these sweet recipes use agar-agar, gelatin, Malta (malt syrup), Health Koko, and Crisco. Some desserts call for 1-2 cups sugar per 4 servings and 1 pound of sugar is used in an icing for pound cake (p. 242). No soy is used in any sweet recipes. Note: It is surprising that Ms. Dittes and Madison had not discovered the use of tofu or soymilk in ice creams, other desserts, or dressings. Nor is peanut butter mentioned.

The chapter titled "Milk" (p. 17-21) states: "Since milk is an important food constituent, especially for children, those responsible for planning dietaries should see that each child has one quart of clean milk or its equivalent each day; adults, about one pint... *Grade A* is a raw milk from cows free from disease, having a bacteria count of not more than 100,000 per cubic centimeter at the time of delivery. *Grade B* must be pasteurized and the bacteria count must not exceed

1,000,000 per cubic centimeter. It must also come from cows free from disease.” All other milk is Grade C.

The chapter titled “The acid base balance” (p. 23-24) states: “Most foods when burned in the body leave an ash in addition to the carbonic acid which is thrown off by the lungs. This ash may be either alkaline, neutral, or acid in reaction. The principal base-forming (alkaline) elements are calcium, potassium, magnesium, and sodium, while the chief acid-forming elements in foods are sulfur, phosphorus, and chlorine... A neutral or slightly alkaline condition will produce a feeling of buoyancy, health, vigor, and clear mental activity... In general, all fruits and vegetables (with a few exceptions) are potent in producing alkaline ash. Meat, eggs, breads, and cereals are acid-formers.”

The chapter titled “Condiments” (p. 51-52) states: “Spices, such as mustard, ginger, pepper, horseradish, curry, and cloves, are among the most irritating of the seasonings used. It would be better if these exciting substances were not added to the food... Vinegar contains acetic acid which is burned in the body with difficulty. Citric acid as found in the lemon juice is more easily oxidized in the tissues. Lemon juice, therefore, makes a good substitute for vinegar, both as to ease of oxidation and flavor.” Address: Director, Food and Nutrition, Nashville Agricultural Normal Inst., Madison Rural Sanitarium and Hospital, Madison, Tennessee.

• **Summary:** Nakazawa, in his bibliography on fermented foods, translates the title as “On the detection of the decomposed liquid of protein-containing materials added to soy sauce.” Note: This is earliest publication seen on HVP soy sauce. Address: Jozo Shikensho, Gishu.

3036. Fukai, Tōshi. 1935. Sosei amino-san eki no shūki-seibun ni tsuite. I. Rebyurin-san sono ta no yūki-san rui [On the component of odor in the decomposed liquid of protein containing materials I. On levulinic acid and other organic acids in HVP liquid]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 122. p. 59-65. June. [17 ref. Jap]

• **Summary:** This is earliest Japanese document seen that uses the term “amino-san-eki” (regardless of hyphenation), meaning “liquid hydrolyzed vegetable protein (HVP),” in connection with soy sauce. Address: Jozo Shikensho, Gishu.

3037. Kennedy, L.W. 1935. The soybean... A new American. *Purdue Agriculturist (Indiana)* 29(9):83, 86. June.

• **Summary:** “This article was written with the aid of material taken from an undergraduate thesis submitted by E.A. Johnson, ‘34 [class of 1934]. Products of the soybean are rapidly becoming more important to agriculture and various manufacturing industries of the nation.” Soybean oil meal is an important livestock feed for cattle, hogs, sheep, and poultry. It is also “used extensively in the making of glue, water paints, fertilizer, celluloid substitutes, [plastic] gear shift knobs, etc. Breakfast food, diabetic food, infant food, macaroni, crackers, bean curd, soy sauce, vegetable casein, and meat substitute are popular in the list of foods made from soybean oil meal. The meal possesses a nut-like flavor and lends itself well to be used as human food.”

Crude soy bean oil is dark brown in color and has a “beany” odor. It is largely refined to make special oils for use as paints, varnishes, glycerine, enamel, the waterproofing of cloth, fabrics, papers, and sandpapers, the making of oilcloth, shade cloth, rubber substitutes, printers ink, lubricants, hard and soft soaps, insecticides, foundry core oil, and lighting fuels. The food products, salads, edible oils, and lard and butter substitutes are also prepared by a commercial process from soybean oil. In 1930 about 6,000,000 pounds of soybean oil, or one-sixth of the domestic crop, were used in the preparation of edible products.

Note: This is the earliest document seen (Sept. 2001) concerning the use of soybean oil in insecticides or other crop-protecting chemicals (pesticides).

“A new auto body finish from soybean oil is the result of experiments made by the Ford Motor Company of Detroit, Michigan.”

Also discusses “the vegetable soybean” which can serve as a supplement to the garden pea or lima bean. “In China vegetable soybeans have long been used as a delicacy on the table. They may be used green, or canned, or made into salads.”

“Dried soybeans serve as a good substitute for coffee and peanuts when properly roasted and prepared. The dried beans are also used in preparing soy sauce, boiled beans, baked beans, breakfast food, soaps, and vegetable milk. From the vegetable milk, meat substitutes, infant food, confections, cheese, and fresh, dried, condensed, and fermented bean curd is prepared. Soybean milk has not received serious consideration in this country, but it has been successfully used as a food for growing infants in China.” Address: Class of 1936.

3038. Lager, Mildred. 1935. Food facts. Los Angeles, California: House of Better Living. 228 + 10 p. No index. 23 cm. [34 ref]

• **Summary:** Contents: 1. Purpose of food. 2. Classes of food. 3. Natural foods are best. 4. Acid-alkaline balance. 5. Minerals. 6. Vitamins. 7. Proteins. 8. Carbohydrates. 9. Fats.

10. Fruits. 11. Vegetables. 12. Beverages. 13. Better cooking. 14. Food combinations. 15. The mental side of health. 16. What is the “House of Better Living.”

Pages 67-68 contain a very positive section on soy beans and foods made from them, including whole soybeans, “curd cheese, resembling cottage cheese [tofu], and soy bean milk... Other soy food products are soy butter [no description is given; this is probably soynut butter from T.A. Van Gundy’s La Sierra Foods, but it could be margarine made from soy oil], soy loaf (combined with gluten), soy sandwich spread, soy bologna, soy oil, soy sauce, soy ready-to-serve breakfast foods, coffee substitute, as well as soy flour. Soy flour is yellow and fluffy, and can be used in all baking... Soy macaroni, noodles, spaghetti, bread, and pancake flour are also on the market. Soy beans are also sugar coated for candy and toasted as peanuts. They are a wonderful food for animals and have been used in that way in this country for years. Today the governments of Europe and America are devoting a great deal of attention to the soy bean as human food and the next few years will see an increased consumption, as well as many new soy products.”

Page 75 contains a nutritional analysis of soy beans.

In the chapter on Acid-alkaline balance (p. 22-25), foods with the most acid ash are egg yolk and oysters, followed by eggs, most fish and meats. Foods with the most alkaline ash are lima beans, string beans, dried beans, spinach, raisins, figs, dates, and dried milk, followed by soy beans, soy bean tea, and most vegetables. The author believes that one should keep an alkaline balance in the body. Sleep is a great alkalizer.

The subsection titled “Lima beans: states: “Dr. Sansum of Santa Barbara was instrumental in having lima bean flour made, and Bill Baker of Ojai, California pioneered this field, developing the original lima bean bread and lima bean pancake flour.”

This is not a vegetarian book. Meat and dairy products are discussed at length, and their consumption is not discouraged. However this is the earliest book seen that uses the term “natural foods” prominently—in this case as a chapter title.

Also discusses (see index for page numbers): Acidophilus milk, alfalfa (alfalfa tea has alkaline ash, p. 35), almonds, almond oil, aluminum, avocado, bran, carob beans, chufas, cottonseed, cottonseed oil, garbanzas, kephir, lentils, lima beans, linseed, margarine / oleomargarine, olive oil, olives, palm oil, palm kernel oil, peanuts, peanut oil, rape seed oil, sago, sesame oil.

Note 1. This is the earliest document seen (Sept. 2009) concerning Mildred Lager and soy.

Note 2. This is the 2nd earliest document seen (July 2005) that mentions a food or drink product (“alfalfa tea”) made from alfalfa. This is also the earliest English-language document seen (July 2005) that contains the term “alfalfa tea.” It was used for its alkaline ash. Address: House of

Better Living, 1207 West 6th St., Los Angeles, California. Phone: Mutual 2085.

3040. Matsumoto, Kenji; Dei, Shinpei. 1935. Nuno doko shiki tane kôji seizô to sono ôyô shiken [The manufacture of koji starter on cloth and its applications for soy sauce brewing]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 122. p. 193-204. June. [Jap] Address: Jozo Shikensho. 1. Gishi; 2. Moto Joshu.

3041. Chin, -; Lin, -. 1935. [The Togano or Y-type process of soy sauce fermentation]. *Kung Yeh Chung Hsin (Industrial Research, Nanking, China)* 4(7):384-89. July. [Chi]
• Summary: Most of the soy sauce research in recent years as been dedicated to finding a way to shorten the fermentation process. The one that deserves special mention is Togano’s process which has been widely used in Japan and which is recently introduced to China under the name of ‘Y-type’ process. Address: China.

3042. Holmes, Marie. 1935. Cooking chat: Milk drinking health measure for all the family—Timely recipes. *Toronto Daily Star (Canada)*. Aug. 31. p. 13.

• Summary: Includes: “Question: Would you be kind enough to tell me what is meant by ‘anchovies’ and ‘soy’?”

“Answer: Soy sauce is made from cooked soy beans, roasted wheat flour and salt.

“Anchovies are small fish...”

A small portrait photo shows Marie Holmes.

3043. Durkee Famous Foods, Inc. [Div. of The Glidden Company]. 1935. Soybean oil as a food product (Ad). *Proceedings of the American Soybean Association* p. 16.
• Summary: The top half of this full-page black-and-white ad is a photo showing containers and labels of the following: Durkee’s Worcestershire Sauce, Durkee’s Salad Dressing and Meat Sauce, Durkee’s Mayonnaise, Durkee’s Salad Aid, Durkee’s Oleomargarine.

The text states that soybean oil, when refined and hydrogenated, “forms a prominent constituent of vegetable shortening and oleomargarine.”

“One of the important products derived from the extraction process of obtaining soybean oil from soybeans is Lecithin. Lecithin is not only used in medical practice as a nerve food, but it is used in the baking and confectionery industries in assisting the application and proper spreading of icing and chocolate coatings, and also has other industrial uses as a vegetable dispersing agent.”

"In our opinion, the soybean is one lever the farmer can use to lift his living standard to higher levels." Address: Elmhurst [Illinois], Chicago, Berkeley [California].

3044. Morse, W.J. 1935. Green vegetable soybeans. *Proceedings of the American Soybean Association* p. 44-45. 15th annual meeting. Held 21-22 Aug. 1935 at Evansville and 23 Aug. at Lafayette, Indiana.

• **Summary:** "The green, immature soybean is used extensively as a green vegetable in oriental countries. Experiment stations in Japan have developed many varieties solely for use as green beans which are classified by growers and seedsmen as garden beans. About 60 such varieties have been collected during agricultural explorations in Japan by the U.S. Department of Agriculture. These varieties, which range from 75 to 170 days in maturity, have been found to differ markedly in flavor, ease of cooking, and soil and climatic adaptations. Cooperative studies with state experiment stations and special cooperators during the past two years indicate some very promising early, medium, and late green vegetable types for regions adapted to the soybean. The most valuable of these varieties are being increased by several state experiment stations for more extensive studies.

"For green vegetable beans, the soybean should be picked when the beans have reached full size and are still green and succulent. The green beans resemble young, tender Lima beans but they have a richer and more nutty flavor... The immature beans are difficult to shell but if first boiled for about 3 minutes they shell quite readily... The usual oriental way of cooking green soybeans is to boil the beans in the pods, in water flavored with soy sauce or salt and serve them to be eaten from the pod. Many people prefer to cook the beans in the pods, boiling them in salted water for 20 to 30 minutes. The beans then shell readily and may be used as a vegetable, in salads or in soups.

"When soybeans are planted in the garden for table use, it is best to use varieties recommended for green beans. One may, however, use the common varieties although they are smaller, not so easily cooked, and usually lack the distinctive flavor of green vegetable varieties. Green soybeans are not available before midsummer and for continued use, a succession of plantings of the same variety or of varieties of different periods of ripening would be desirable. The Hahto, a medium variety, is the only green vegetable variety at present handled by growers. The Rokusun, a late type, and two or three early Japanese varieties are being increased rapidly and should be in the hands of growers and seedsmen in the near future."

Note 1. This is the earliest document seen (June 2009) that mentions the soybean variety Rokusun.

Note 2. This is the earliest English-language document seen (June 2009) that uses the term "vegetable types" or "green vegetable types" or "green, immature soybeans" to refer to green vegetable soybeans. It is also the earliest

English-language document seen (June 2009) that with the term "Green vegetable soybeans" in the title. Reprinted in *Good Health*, Oct. 1937. Address: Bureau of Plant Industry, USDA, Washington, DC.

3045. Morse, W.J. 1935. Soybeans: Ancient and modern uses. *Proceedings of the American Soybean Association* p. 34-35, 37. 15th annual meeting. Held 21-22 Aug. 1935 at Evansville and 23 Aug. at Lafayette, Indiana. [1 ref]

• **Summary:** The soybean "was sown yearly with great ceremony by the Emperors of China and poets in the ages before the Christian Era extolled the virtues of the soybean in its services to humanity.

"The soybean was included in the 2nd class of drugs and was regarded as having many medicinal virtues. We learn from a materia medica written about 452 A.D. that the soybean was not poisonous but was a specific remedy for proper functioning of the heart, liver, kidneys, stomach and bowels. It was also used as a remedy for constipation, as a stimulant for the lungs, eradication of poison from the system, improving the complexion by cleaning the skin of various impurities, and stimulating the growth and appearance of the hair. We also find that the fresh or green bean was used as a remedy for the following: Dropsical affections, gastric fever, paralysis, bladder trouble, improper circulation of the blood, catarrh or improper flowing of the fluids of the vital organs, heart, liver, kidneys, stomach and bowels, chills and poisoning from eating aconite. Further, it is learned that when the bean was cooked in a powder or meal-like form, the taste was sweet and good and was a remedy for gastritis, fevers, tumorous swellings, paralysis, inability to digest grain foods, and abdominal dropsy. The yellow soybean was used to increase lung power, make the body plump, and beautify the complexion. The beans were also cooked until they were of an oily consistency, mixed with hog's fat and taken in the form of pills in order to fatten and increase the strength of the body, and as a remedy for hoarseness. The soybean was said to have a cooling effect on the human system. If the beans were boiled into a liquid form and eaten, they eradicated all poison from the system and cured gastric fever, paralysis, pains, and bladder troubles. Bean or soy sauce was considered an antidote for poison caused by eating fish, fresh meat, vegetables, mushrooms, etc. It was also said to cure poison from bites of worms, insects, and bee stings. The yellow, green, and white varieties were regarded as valuable foods for the use of mankind. The black beans were used for food and it was also customary when taking a long journey to feed the horse black beans in order to make it strong. In addition to the use of the beans, many references are made on value of bean sauce, bean milk, bean curd, and bean sprouts for various diseases and other bodily ailments. The stems and leaves of the young bean plants were boiled and eaten by the farming people. No mention is found of the use of bean oil so it is concluded the

crushing of beans for oil occurred at a much later date.

"In reviewing the old records, it is most interesting to find that many of the ways in which the ancient Chinese used the soybean as a remedy for human ills are now being found applicable to the same ailments by scientific research in America and Europe." Address: Bureau of Plant Industry, USDA, Washington, DC.

• **Summary:** "Made from the wonderful Soya Bean. No Vinegar. Appetising saline flavour. Aids digestion, nourishes and tones the system. Unrivalled for flavouring, cooking and table use. 6s. per half-dozen bottles, or singly at leading Stores and Grocers." Address: 14 Tooley St., London, S.E. 1.

3058. *Harijan*. 1935. More about soya beans. 3(46):366-68. Dec. 28. [1 ref]

• **Summary:** Mahadev Desai introduces the article by stating, "A friend who is now in America has brought together the following article information about soya beans collected by him from books and various institutions." Much of the information apparently came from the Bureau of Home Economics, Washington, DC. Under the subtitle "Soybean and soybean products for table use," it discusses the nutritional composition of soybeans, green soybeans and their varieties (including Hahto and Easy Cook [Easycook], with 3 recipes including ones for salted soya beans [soy nuts], and whole dry soybeans used in soup), soybean sprouts, soybean flour, soya bean sauce, soya bean milk,

and soya bean cheese (to fu). Details of how each food is prepared are also given. Continued in *Harijan* on 4 Jan. 1936. Address: India.

3059. Carque Natural Foods of California. 1935. Kar-Kay Hygienic Worcestershire Sauce (Ad). *House of Better Living (Newsletter, Los Angeles)* 1(3):3. Nov/Dec.

• **Summary:** "Wholesome natural meatless fluids, including Kar-Kay (imitation) vinegar, along with quality spices and pure vegetables enter into its competition."

A circular logo with diagonal slash through the middle shows the company's name. Note: This ad also appeared in the Jan. 1936 issue (p. 3).

3060. Chow, T.Y. 1935. Chemistry and manufacture of chemical soy sauce in China. *Chemistry (China)* 2:280-95. *

3061. Dominion Bureau of Statistics, Ottawa, Canada. 1935. Imports of soy products into Canada. *Trade of Canada*. *

• **Summary:** Imports of soy sauce to Canada from 1931 to 1933 have increased as follows: 1931: 75,325 gallons worth \$34,360; 1932: 78,311 gallons worth \$34,625; 1933: 85,737 gallons worth \$34,868.

See also imports of peanut and soyabean oil, edible.

Imports of soybeans, soyabean cake and soyabean meal for use exclusively in the manufacture of cattle food and of fertilizers: 1931: 50,085 cwt [1 cwt = hundredweight = 112 pounds in Canada] worth \$23,873 [Canadian dollars]. 1932: 38,393 cwt worth \$52,296. 1933: 28,992 cwt worth \$49,214. Address: Ottawa, Canada.

3062. **Product Name:** Durkee's Worcestershire Sauce, Durkee's Salad Dressing and Meat Sauce, Durkee's Mayonnaise, Durkee's Salad Aid, Durkee's Oleomargarine. **Manufacturer's Name:** Durkee Famous Foods, Inc. **Manufacturer's Address:** Elmhurst, Chicago, Berkeley. **Date of Introduction:** 1935.

New Product—Documentation: Ad in Proceedings of the American Soybean Assoc. 1935. p. 18. "Soybean Oil as a Food Product." Plants in Elmhurst, Chicago, Berkeley.

Note: This is the earliest commercial salad dressing seen in which soy oil is used as an ingredient.

3077. **Product Name:** [Light House brand Soy Sauce, Soybean Jiang, Fermented Tofu].

Foreign Name: Jiang-you, Dou-jiang, Furu.

Manufacturer's Name: Yeo Hiap Seng.

Manufacturer's Address: 410 Outram Road, Singapore 3, Singapore.

Date of Introduction: 1935.

How Stored: Shelf stable.

New Product–Documentation: Letter from Alan Yeo of Yeo Hiap Seng. 1982. April; YHS news release 1990. Oct.; Letter from Charles Yeo of Yeo Hiap Seng. 1984 and 1991. Yeo Hiap Seng started in China in 1900. In 1935, during the Japanese invasion of China, when life was difficult and unsettled in Fukien [Fujian] province, Yeo Keng Lian sent his eldest son, Yeo Thian In, to Singapore to investigate possibilities there. The son founded the Yeo Hiap Seng Sauce Factory at 410 Outram Road, Singapore 3. He was joined shortly by the rest of the family. The company continued to make the same three fermented soy products that it had made since 1900 in China. In 1947 the growing business was moved into larger quarters at 950 Dunearn Road, its present location. The move out of China was a wise one, for in 1949 the three Yeo Hiap Seng plants in Fukien were taken over by the Chinese Communists. By the mid-1940s, Yeo's quality soy sauce was a common sight in Singapore.

Note: This is the earliest known commercial soy product made in Singapore, or in Southeast Asia.

3078. Bragg, Paul C. 1935. Paul C. Bragg's personal health food cook book and menus. Burbank, California: Published by the author. Printed by Aetna Printing Co., Los Angeles. 201 p. No index. 24 cm.

• **Summary:** The Introduction to Chapter 22, titled "Meat substitutes or main dishes" states (p. 112): "Variety is the spice of life... Many people can live a vigorous, active,

healthful life on a strictly vegetable diet, particularly those who are not engaged in a hard mental occupation. Even then, vegetable proteins, such as soy beans and nuts, can be substituted for meat. To take the place of meat there are the vegetables rich in protein—peas, soy beans, lima beans, kidney beans, Mexican beans, and lentils, and there are on the market many meat substitutes made of nuts and grains. The Battle Creek Sanitarium [Michigan] product, 'Protose,' is available at most fancy grocers and health-food stores. 'Savita' is a seasoning which gives a delicious meat-like flavor to all vegetable cooking. 'Vegex' is a product similar to 'Savita,'...

"The vegetable diet is a very alkaline diet, and should be used three or four times a week by everyone. Vegetable foods are porous, furnish bulkage to the intestines, and enrich the body with valuable organic minerals that are very necessary to maintaining perfect health.

"Soy beans are a marvelous source of vegetable protein, and should be fed to the family several times a week, and they furnish a rich source of energy-building food. They can be soaked over night, and then baked in tomato sauce, with a small amount of onion and chopped mushrooms. The soy bean is a food that the American public has not yet cultivated." Surprisingly, neither this chapter nor this book contains any soy bean recipes! However Vegetable shop suey (p. 116) is served with Savita Gravy or Soy sauce.

Bragg urges his readers to eat "real, natural, live food" (including whole wheat bread—the staff of life) to eat simply with a small number of foods at each meal, only when hungry. Do not worry about combining foods. Avoid white sugar, coffee and tea, salt, seasonings and spices, aluminum cooking ware, alcohol, preservatives, dyes, and white flour. He believes that eating meat (rare and unfried), fish, and eggs are important for building perfect health. Note 1. The 1930 edition of this book contained no recipes using meat or dairy products.

Chapter 11 acknowledges the use of recipes and suggestions from several health food writers and men in the field of Natural Living: (1) Dr. John T. and Mrs. Vera Richter, the leaders of the Raw Food movement in the West. (2) Dr. Philip M. Lovell, distinguished editor of the most widely read health column in the world, the Care of the Body section of the Los Angeles Times [Sunday Magazine. Note 2. The section contained many fascinating ads]. (3) Dr. Henry Lindlahr, the great pioneer Nature Doctor. (4) Otto Carque, chemist, research worker and crusader in the fight for natural foods. (5) Fannie Merritt Farmer's *The Boston Cooking School Cook Book*.

The last three pages each contain a full-page ad for mail-order products available from Bragg at Box 428, Burbank, California: (1) Bragg Dextronized [sic, Dextrinized] (Toasted) Meal with Wheat Germ will keep your energy high and your weight right. 60 cents for a 2 lb. box. (2) "Drink health." An illustration shows a hand-turned Live

Food Juicer. Also mentions a large new book titled *Health Cocktails*, by Paul C. Bragg, "nationally famous Health Lecturer." The book "is full of live juice treats." Send \$5.95 for both, postpaid to Live Food Products Co., Box 428, Burbank, California. (3) O.K. Lax is a marvelous laxative for relief of constipation and cleansing agent for internal sanitation. 50 cents for one package. Address: P.O. Box 428, Burbank, California.

3079. Burkill, I.H. 1935. A dictionary of the economic products of the Malay Peninsula. 2 vols. Published for the Malay Government by Crown Agents, London. 2,400 p. See p. 1080-86.

• **Summary:** These two densely-written volumes might be described as updates to the works of Sir George Watt. In the Malay peninsula, the soy bean is generally known as *Kachang bulu rimau* or *Kachang jepun* [the Japan bean]. In Java it is called *Kachang kedele*, *Dele*, *Gadele*, *Dekeman*, or *Dekenan*; in Sundanese, *Kachang bulu*, *Kachang jepun*, or *Kedele*; in Sumatra, *Kachang rimau* or *Kachang ramang*; and in Siam, *Tua luang* or *Tua praluang* [accents are included by Burkill].

"The word 'soy' came from a Japanese name for this plant, through the Dutch, who made it [the word 'soy'] known to Europeans. The first account was a result of the residence of their embassy surgeon, Kaempfer, in Japan, in 1691 and 1692; the second of the long service of their merchant, his contemporary, Rumpf, in Amboina."

The soy bean "is frequently cultivated in Siam, and seems to be a familiar plant in Kelantan [a state of Malaysia bounded on the north by Thailand]. Repeated experiments have been made with it elsewhere in Malaya; the Chinese, indeed, continually make them, usually without success, their failure being conspicuous when any available seed is used, instead of seed of races known to stand more or less tropical conditions. In 1918 advantage was taken of experiments in the Philippine Islands, to try, in Singapore, races which succeeded there and grew well. Races from the warmer parts of the United States were on trial in Selangor [Malaysia] in 1922. In 1924 a Chinese race was successfully grown by settlers in villages in the southern parts of Pahang [a state of Malaysia, bounded on the north by Kelantan and Trengganu].

"The soy bean has long been cultivated in Java, and in recent times this cultivation has become almost universal except at the western end of the island, where the climate is most uniformly humid. Probably it came to Java from India, for the name by which it is most known is Tamil and the seed is flattened as are North Indian races, while the Manchurian races have round seeds."

Note: Roxburgh (1832), in discussing the earliest known date for cultivation of soybeans in India states: "Reared in the Honourable Company's Botanic garden [across the Hooghly / Hugli River from Calcutta] from seeds received from the Moluccas [in today's Indonesia] in 1798.

"In Java a soy crop immediately follows rice, and this was the rotation apparently which Spring found the Chinese to use in Pahang."

The seed of the soy bean is rich source of nutrients. It "replaces meat very largely among the Chinese; and as rations for Japanese troops has played a large part." Because the ripe seed contains little or no starch, it is widely used in diabetic diets. "A kind of artificial milk can be made from the seed, and is in common use in Japan and China... This milk has only three-quarters of the full food-value of cow's milk." Soy-bean coffee, made from roasted soy beans, "is sold regularly in Japan, and into the coffee can be put soy-bean milk. The Chinese germinate the beans and eat the seedlings.

Legumin, or vegetable casein is best made commercially from defatted soy beans. The casein is precipitated from the milky fluid [soymilk] by calcium sulphate. "The liquor is strained through muslin, and the precipitate treated with soda lye, which dissolves the casein; filtering gets rid of the impurities and acetic acid precipitates the casein from the filtrate in a more or less pure state. This casein is fit for use in all the industrial processes for which casein from cow's milk is used."

Soy beans can also be fermented to make *témpé* or "flavourings used in small quantities to make uninteresting dishes appetizing... *Témpé* is a food product made in Java from soy beans. It occupies a very important place in the diets of those who live in central and east Java." Detailed descriptions are given of two methods of preparation. (1) Initially, the seeds are parboiled then left soaking in water for 2-3 days. The "mush" [sic, cooked beans] is spread upon frames in flat cakes and inoculated with the fungus *Aspergillus oryzae* by the addition of some of the previous preparation. The cakes are wrapped in banana leaves; (2) This method requires greater care and time. "Meanwhile, a preparation of the fungus has been made in a somewhat elaborate manner, as follows: a portion of an older preparation is wrapped in a rather young teak leaf freely punctured with holes; this preparation is allowed to dry for two days, during which the fungus spreads to the teak leaf. Next, the soy-kernel mush [sic, the cooked soybeans] being ready, the teak leaf is emptied of its contents and sprinkled over the mush in order to convey the fungus. The mush is now put up in packets in banana leaves, heaped together, and covered up for twenty-four hours, after which it is exposed again to the air and cooled; the packets are then ready for sale." Note: This is the second English-language work to contain information about *tempeh*.

"The Chinese, throughout their own country and those domiciled in Malaysia, make a yet greater variety of preparations. Chief among these is *teou-fu* [tofu, usually precipitated with imported calcium sulphate]. "The 'teo-fu' does not keep well in a moist state, but can be treated for preservation. First, the cakes are colored yellow by a solution of turmeric or *Gardenia* flowers, then they are wrapped in

cotton cloth and submitted to pressure. Thus made drier, they keep better. The use of this preparation is spreading."

The Chinese also make *tao-cho* and soy *kechap* (each fermented with an *Aspergillus* mould). K. Heyne describes how *kechap* is made in Java using black soy beans, hibiscus leaves, and *Aspergillus oryzae* mold. Finally the sauce is boiled with Arenga sugar, star anise, and other flavourings until the solution is so thick that the salt begins to crystallize.

Large amounts of soy-bean oil ("kachang oil" [perhaps soy sauce]) are imported to Malaya. "In the East [East Asia] it is used chiefly as food, but has other uses such as lubricating, varnish-making, making printer's inks, waterproof goods (Chinese umbrellas and lamps) and also for illumination. A process was patented 20 years ago for making artificial rubber, starting with soy oil. Note: Burkill was a British authority on the flora of southern and southeastern Asia.

"Criminal use: The hairs on the pods seem to be capable of causing a certain amount of irritation within the digestive tract. Gimlette (Malay Poisons, ed. of 1929 p. 169) records a case of administration of them with food in a criminal attempt to poison. He calls them a substitute for bamboo hairs in such circumstances.

"Joss-sticks: Ash of the stem, mixed with resin of *Canarium*, is said to make joss-sticks in Indo-China (Crevost and Lemarié, Cat. Prod. Indochine, 1917 p. 106)."

3080. Crespi, Luis. 1935. La soja y su cultivo [The soybean and its cultivation]. Spain. 32 p. Series: Catechisms for Farmers and Cattlemen/Stock-Farmers (*Catechismos del Agricultor y del Ganadero*). 17 cm. [Spa]

• **Summary:** Contents: I: Cultivation of the soybean (*la soja*; p. 3-18): 1. Description of the plant. 2. Origin of the soybean. 3. Varieties of soybeans (*Variedades de sojas*): Early maturing, semi-late, late. 4. Needs of the soybean: In water, in soil, in fertilizer. Fixation of nitrogen from the air in soybeans. 6. Place in the rotation. 7. Preparatory work. 8. Planting: Carrying out the sowing, the necessary seeds, depth of planting. 9. The seeds sprout. 10. Cultural care. 11. Maturity. 12. Diseases (*enfermedades*). 13. Harvest: As a forage plant, as a producer of seeds. 14. Yield.

II: Applications of the soybean (p. 19-28). 1. Composition of the plant: Composition of soybean forage, composition of the seeds, composition of the straw (*la paja*). 2. The soybean in the feeding of animals: As a forage plant, as a plant that produces seeds, soybean cakes (*tortas de soja*), soybean straw. 3. The soybean as a human food. 4. Industrial products from the soybean (from the oil: paints and varnishes, soap). 5. The soybean as a fertilizer.

III: Geographic distribution: 1. Worldwide cultivation of the soybean. 2. The soybean in Spain.

The soybean as a human food (p. 27): The seed is rich in protein. Whole soybeans (*Semillas de soja*) can be used like French beans and peas, mature and dry, and toasted

like peanuts. The first two leaves of very small soybean plants (*Plantitas de soja*) can be used in salads or cooked. Soy flour can be used in bread, pastries, biscuits, or diabetic diets. Condiments, widely used in China and Japan, include natto, miso, tou-chiang, and shoyu. One can make soymilk (*leche de soja*), and use it to make soy cheeses (*quesos de soja*). The seeds of certain varieties can be roasted to make substitutes for cocoa or coffee.

Soybean cultivation worldwide (p. 29-30): In France, starting in 1880, the house of Vilmorin, started selling the variety Etampes. Also in 1880, the soybean was cultivated in Portugal in the Botanical Garden at Coimbra (in west central Portugal).

“The soybean in Spain (p. 30): Thirty five years ago [i.e. in 1900] my father tried cultivating soybeans in Pontevedra. [Note: Pontevedra is a province and city in the northeast corner of Spain, just north of Portugal, on the coast of the Atlantic Ocean. The city is near the mouth of the Ria de Pontevedra, at about 42.4° north latitude]. For two consecutive years, and using seeds of the variety Etampes from the House of Vilmorin seedsmen, he obtained identical results: excellent vegetation, but a small yield of seeds because the plants failed to fully mature.

“More than thirty years ago [i.e. before 1905], the count of San Bernardo tried growing the soybean, with excellent results, on his estate “El Alamillo,” at Ecija (near Seville).

“In 1910 the soybean was cultivated by Mr. Noriega in Jerez (near Cádiz {Cadiz}), and the results obtained seem to indicate that the harvest was of medium size due to the poor condition of the seeds; but the plant responded brilliantly, showing healthy growth and resistance to the drought.

“In 1917 the ambassador of Spain stationed in Shanghai forwarded to the Commercial Information Center of the Spanish Secretary of State three varieties of soybean seeds: small black, yellow, and green. These seeds were very probably used in cultural trials, even though we do not know the results that were obtained. In the same year Mr. Juan Abril reported in the periodical *Revista Ibérica* [*Iberian Review*] of his successful soybean trials conducted in Tortosa (in Tarragona province [in northeastern Spain]).

“Finally, during the years 1914 and 1915, Mr. Santiago F. Valderrama, the brigadier general from Artillería [Artillery], conducted soybean cultural trials in Montilla (in Córdoba / Cordova province).

“To his cultivation and enthusiastic encouragement of the cultivation of this plant in Spain, we owe the photograph on the cover of this little instruction book. It shows the top of a mature soybean plant grown by him in Montilla. Two more generations of soybean plants were cultivated in the same locality.”

Illustrations (line drawings) show: (1) Leaves of the soybean and the common bean (*judía* = *Phaseolus vulgaris*) (p. 4). (2) Flowers of the soybean and the common bean. (3) A soybean stem, with 3 leaves and 2 pods; an opened

soybean pod showing 3 seeds (p. 5). (4) An uprooted soybean plant, showing nodules on the roots, and abundant pods (p. 12). (5) Comparison of two soybean plants, with and without nodules. The one with nodules is larger and has many more and larger pods (p. 13).

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in Portugal, or the cultivation of soybeans in Portugal. This document contains the earliest date seen for soybeans in Portugal, or the cultivation of soybeans in Portugal (1880 at the botanical garden in Coimbra). The source of these soybeans is unknown. Address: Catedrático de Agricultura de Instituto-Escuela, Spain.

3081. Morphy, Marcelle. comp. and ed. 1935. Recipes of all nations. New York, NY: William H. Wise & Company. 824 p. 22 cm.

• **Summary:** Soy is mentioned frequently in the chapter on Japan. “One sauce reigns supreme in Japan—*Shoyu*, which replaces salt in many dishes and which is used in the cooking of almost everything: soup, fish, poultry, meat, and vegetables. It is the popular condiment with cold fish or meat and is added to salad dressing. It is made from the Soya bean seeds, wheat, and pure salt, and has a pleasant and distinctive flavor, unlike that of any of our European bottled sauces.”

Soy-related recipes include: Nan yoy kow yook (Broiled pork steamed with Chinese cheese [fermented tofu], p. 737). Misoshiru (miso soup with tofu and miso, p. 755). Misozuke (fish with red or white bean curd and red or white miso, p. 758). Seki han (with azuki beans, p. 759). Suki yaki [Sukiyaki] (beef and vegetables, with tofu and shoyu, p. 761). Yokan (Japanese cakes with azuki beans, p. 762). Misso (miso, homemade with soya beans, malt, and salt, p. 763). Tofu (dried bean curd, p. 763).

Miso is said to be made as follows: “The proportions are 1 bushel of Soya beans, 1 bushel of malt, and 3 bushels of salt. The beans are squeezed and mixed with the malt and salt and kept in a cask for 6 months to mature.”

Concerning tofu: “Cubes of tofu are frequently mentioned in Japanese recipes. Tofu is made by soaking the dry beans in water for a day, pounding them in a stone mortar, straining into square molds and mixing with brine. They are then boiled till they become hard and firm.” Address: Countess.

3082. Sia, Mary Li (Mrs. Richard H.P. Sia). 1935. Chinese chopsticks: A manual of Chinese cookery and guide to Peiping restaurants. Peiping, China: Printed by Peiping Chronicle. Published by the author. x + 106 p. 20 x 25 cm.

• **Summary:** Contains 100 recipes. The names of dishes, restaurants, and their addresses are in English and Chinese (with Cc = Chinese characters given). A recipe (p. 37) for “Steamed fish with black salted soy beans” (Cc tou ch’ih) calls for “1 T. [tablespoon] black salted soy beans, 1

small piece ginger, chopped, 1 piece garlic, chopped.” The instructions read: “Clean and smear fish with wine, salt, sugar and soy sauce mixture (which includes wine, salt, and sugar). Place on deep plate. Cover fish with black salted soy beans, onion, ginger, garlic and lard. Steam for 20 minutes.”

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term “Black salted soy beans” to refer to fermented black soybeans.

Tofu recipes: Bean curd and shrimp egg (p. 1). Bean curd and prawns (p. 30). Bean curd, eggs and chicken blood (p. 57).

Among Mutton Restaurants the Tung Lai Shun (p. 99) offers Huo-kuo (Hot Pots), including “Tou-fu (Bean Curd)... per plate .06.”

A full page menu (p. 100) for Vegetarian shen lung fan chuan (Cc). The price is \$6.00 per table; the price of each of the 12 dishes is also given.

A full page “List of foodstuffs” (p. 101) gives for each English name, Chinese name (in characters), Chinese name (in Wade-Giles romanization). Soy-related foods include: Bean curd (tou fu). Black salted soy bean (tou ch’ih).

3083. Thorpe, W.A. 1935. English glass. London: A. & C. Black Ltd. xvi + 301 p. Illust. Index. 22 cm. Series: The Library of English Art. [150+* ref]

• **Summary:** Soy is not mentioned in this excellent history of English glass. However cruets are often mentioned. By the late 1st century AD, decorative clear glass bowls were being made by Romans. Four such bowls found in England were made by the Romans in Italy or Alexandria. For example, one is ice-green, mould-pressed, fire-polish, ground rim, 7 inches diameter (p. 5). There was a slump in glass-making during the Middle ages. The period from 1592 to 1660 was the “period of monopolies.” After the English Civil War (1642-49) and the Commonwealth (1649-1660) came the rise of English crystal. Lead crystal was developed by Ravenscroft in 1675. The Worshipful Company of Glass Sellers had received a charter of incorporation in 1635 for the distribution of Mansell’s wares. In about 1665 the Company decided to have its own glass made in London. “Long cruets,” “Creuits—with or without feet,” and “cruets for oil and Vinegar” are first mentioned at about this time (p. 148-50). A biography of George Ravenscroft (1618-1681) is given (p. 154-60). He was interested in chemistry, and he may have made cruets (p. 160). Before 1696 there were five flint glasshouses in Stourbridge. “No one will deny that in metal and in cutting Stourbridge is technically the best in the world (p. 161, 232).

In the 1660s, John Green designed cruets (p. 174). An alliance with silver is seen in the cruet-set, silver with two lead-crystal bottles, in the Laing Art Gallery. The silver, fashioned by Charles Adam, has the London hall-mark of 1708. “The two glass cruets have vestigial string rims derived from the service-bottle and in form are Queen Ann

flint decanters marvered [i.e., rolled on a marver of flat slab] to fit sockets. This is one of the earliest extant sets with its original glass cruets... and its design would not be easy to improve” (p. 189, photo facing p. 170).

In the mid-1700s, cruet bottles were made in the Rococo style (p. 203). John Akerman made rococo cruets in about the 1750s. An illustration (facing p. 213) shows the trade card of Thomas Betts (ca. 1738-1748), London. There follows a biography of Thomas Betts (p. 213-15). “To Betts also we must attribute the main development of flat facetting in hollow diamond cuttings with their rococo curves and points, frequent in cruets, decanters, and port glasses; Betts sold... ‘cutt cruets stopt,’... ‘hollowed’ was a favorite word with him (p. 214).

The famous Jewish firm of Lazarus and Isaac Jacobs (fl. 1790), glassmakers to George III, were inclined to mark their gilt glass in cold... The same idea of form is evident in taper cruets made for cruet-sets during the 1780s and 1790s, and partly determined by their socket (p. 224-25).

Cut-glass snobbery was in existence as early as 1810, when Yorkshire glasshouses were producing Adam cruets (p. 232).

From 1832 George Bontemps, near Paris, was closely associated with Chance’s new process for making sheet glass [as for windows]. Address: Asst. Keeper, Victoria and Albert Museum, London.

3084. Laming (W.C.) & Co., Ltd. 1936. Display ad: Kikkoman shoyu: The sauce for epicures! Made from the healthful soya bean. *Times (London)*. Jan. 24. p. 15, col. 1.

3089. Khankhoje, Pandurang. 1936. El frijol soya, Glycine hispida, Max [The soybean]. *Campesino (El) (Mexico)* 1(7):14-15. March. Revista Mensual. [Spa]

• **Summary:** “In Mexico, various experiments for the introduction of the soybean were made starting in 1911. There were repeated sporadically, always with poor results, until the years from 1928 to 1932 and 1933 when in Chapingo and Jalapa, the acclimatization of five varieties was achieved. In the following years, seeds from these 5 varieties were grown and matured in the experimental fields of the Biotechnical Institute (*Instituto Biotécnico*). The varieties Virginia and Laredo also did well there; it was hoped they would soon produced seeds suited for each of our climates.”

Also discusses the importance, utilization (as oil, cheese [tofu], shoyu, and flour), and cultivation of the soybean.

A photo shows two Laredo variety soybean plants and one Virginia variety soybean plant.

Note: This is the earliest document seen (Feb. 2009) concerning the cultivation of soybeans in Mexico or Central America (one of two documents). This document contains the second earliest date seen for soybeans in Mexico (1911), and the earliest date seen for the cultivation of soybeans in Mexico (1911) or Central America. The source of these soybeans is unknown. Note, however, that soybeans may well have been cultivated in Mexico as early as 1874 (see Carriere 1880). Address: Ingeniero, Jefe de la Oficina de Genetica, Ecologia y Botanica, Direccion de Agricultura, San Jacinto, D.F [Mexico City, Mexico].

3090. Lager, Mildred. 1936. The House of Better Living Catalog. Los Angeles, California: Published by the author. March. 14 p. March. 28 cm. Second expanded edition, March 1938.

• **Summary:** On the front cover is a large illustration of the exterior of the House of Better Living, and a 4-stanza poem about the House by Mildred Lager. Below the poem we read: “Catalog. The most unusual store in Southern California. Owned and operated by Mildred Lager, food economist, author, and radio lecturer.”

The first section, titled “The origin of the House of Better Living!” (p. 1) begins: “Is it fate? Often the handicaps and obstacles that we have to overcome lead us into our life work, help us to find ourselves. A few years ago a young school teacher was forced to give up her chosen profession because of arthritis deformans. It was a severe obstacle to overcome, but it was that experience that led Mildred Lager into the study of foods and their relation to health, and led to the founding of the House of Better Living. No one *has* gained recognition as rapidly as Miss Lager. In a little over two years she has won her place among the ‘leaders,’ has received both national and international recognition, and has established the House of Better Living as an institution in Southern California... Her perfect radio voice reaches thousands who cannot attend her classes.

“Miss Lager is teaching the ounce of prevention, the health insurance that pays dividends in years of health and happiness. Her slogan is that Pure Air, Pure Water, Pure Food and Constructive Thought plus exercise and sunshine build health.

“The House of Better Living is more than a Health Food Store. It is a bureau of food information and a place and means where Miss Lager can conduct her classes free of charge—and *that* is her goal. Two years ago it seemed an impossibility—very few thought it would ever succeed. They did not know the sincerity and the spirit behind it... It is but two and a half years old. We cannot predict its future nor that of its charming founder—we can only wait and see, knowing that achievement and not time is the measure of success.—By one who has watched the growth from the start.”

At the top of page 2 in large letters: “The House of Better Living offers you: 1. The best of natural foods at reasonable prices. 2. Free delivery of all \$3.00 orders in Los Angeles. 3. Free cooking classes every Wednesday afternoon at 1:30. 4. Food classes Monday and Thursday afternoon at 1:30 (except during June, July and August). 5. Miss Lager’s Radio talks every Monday, Tuesday, Wednesday and Thursday morning at 7:45 over KFAC.”

Product categories and products mentioned include: Coffee substitutes (Soyco, Hollywood Cup, Breakfast Cup, Ficgo, Sipp). Broths (Vegebroth, Vegeminerol Broth Concentrate, Hauser’s Meatless Bouillon). Nut butters—Freshly ground (Soy Bean Butter, Almond butter, Cashew butter, peanut butter—dextrinized). Whole grain flour, meal, etc. (Soy Bean Flour, Bill Baker’s Prepared Lima Bean Pancake or Waffle Flour, Bill Baker’s Prepared Soy Bean Pancake or Waffle Flour {2 lb for \$0.30}, whole wheat flour, wheat germ, bran, buckwheat flour, dextrinized flour, gluten flour, breakfast cereals—to cook {Cubbison’s cracked wheat}). Ready to serve cereals (Soy bean breakfast food, wheat germ). Macaroni, noodles, etc. (Soy bean macaroni, garbanza shells). Legumes (soy bean {imported}, garbanza peas, natural brown rice, sesame seeds). Melba toast, crackers, cookies, etc. (Bill Baker’s Soy Toast {\$0.30/lb}, Cubbison’s Melba Toast, Cubbison’s Melbetts, Soy bean gluten cracker, Cubbison’s whole wheat crackers, Cubbison’s Whole Wheat Dunkeretts, Cubbison’s wheat soda cracker, Cubbison’s honey wheat cookies, Cubbison’s Melba cookies, Soy bean wafers, soy bean macaroons, Bill Baker’s 100% Soy Bean Fruit Cookies {\$0.18/dozen}, Bill Baker’s 100% Lima Bean Fruit Cookies {\$0.18/dozen}, Olson’s soy bean bread, sliced {\$0.12}, Bill Baker’s soy bean bread—unsliced {\$0.16}, Bill Baker’s Lima Bean Bread, unsliced {\$0.16}). Natural aids (Agar, flaxseed, psyllium, Burbank kelp, kelp, Green kelp, Santay sea greens). Oils (Soy bean oil, sesame oil, Lindsay Cold Pressed California Oil). Meat substitutes (11 products, 5 with “Soy” in the name, such as Soyatose). Soy bean products (25 products! Makers incl. La Sierra, Loma Linda, etc.).

The 27 different soy products are: La Sierra Soy Beans, plain or with tomato sauce; Loma Linda Soy Beans, plain or with Proteena; Soy Beans, imported; Soy Beans, roasted; Soy Bean Loaf (meat substitute); Soy Bean Bologna; Soy Bean Spread; Soy Bean Butter (like peanut butter); Loma Linda Soy Mince Sandwich Spread; Soy Bean Sauce; Soy Bean Milk; Soy Bean Oil; Soy Bean Noodles, Macaroni, and Spaghetti; Soyco (Soy Coffee); Soy Bean Breakfast Food; Soy Bean Sprouts; Soy Bean Flour; Bill Baker’s Prepared Soy Bean Pancake or Waffle Flour; Bill Baker’s Soy Bean Bread; Olson Soy Bread (sliced); Bill Baker’s Soy Toast; Bill Baker’s Soy Bean Fruit Cookies; Soy Bean Macaroons; Soy Bean Wafers; Soy Bean Gluten Crackers.

Photos show: (1) A portrait of Mildred Lager smiling (p. 1). (2) Mildred conducting a free cooking class in her kitchen

at The House of Better Living. Many men and women, all wearing hats, are seated around the perimeter of the kitchen (p. 6-7). (3) Packages of various “Bill Baker’s Soy & Lima Bean Products” including Lime Bean Wafers, Pancake Waffle & Biscuit Lima-Bean “Neat Flour,” Lima Bean Toast, Pancake Waffle & Biscuit Soya-Bean “Neat Flour,” Lima Bean Bread, and Soy Bean Bread” (p. 10).

A small ad (3½ by 2¼ inches, p. 6) by the Cubbison Cracker Co. (3417-19 Pasadena Ave., Los Angeles, California) states: “Dextrinized and whole wheat products: Melba Toast, Melbetts, Cracked Wheat, Whole Wheat Crackers and Cookies.” Note: This is the earliest document seen (June 2004) concerning the work of Sophie Cubbison with soyfoods.

A ¼-page ad (p. 12) titled “Hain 100% pure foods,” describes Vege-Jell Puddings, Mal-Ba-Nuts (a powdered beverage), Potassium broth, and Col-Lax (whose ingredients are: Powdered psyllium, Powdered agar, and lactose). Address: 1207 West Sixth St., Los Angeles, California.

3091. Narahara, Hanbei. 1936. Usukuchi shōyu to tanshoku shōyu ni tsuite [On usukuchi shoyu and usuiro shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 14(3):263-64. [Jap]

3092. Holmes, Marie. 1936. Cooking chat: The unexpected characteristic of Chinese cookery—soy sauce, native vegetables. *Toronto Daily Star (Canada)*. April 2. p. 35.
• **Summary:** In Chinese cookery, one finds “chopped meats and the smell everywhere of bean sauce” [soy sauce].

In the average Chinese home kitchen, “Chinese cookery owes much of its savoriness to the bean sauce and native vegetables.”

“Soy or bean sauce should be used to flavor soups or main dishes.”

One recipe calls for “1 tablespoon Chinese sauce”—apparently referring to soy sauce. A recipe for Chop suey calls for “1 tablespoon Worcestershire sauce.” A small portrait photo shows Marie Holmes.

3093. Holmes, Marie. 1936. Cooking chat: Parts of motor car and baby foods made from soy bean. *Toronto Daily Star (Canada)*. April 16. p. 34.

• **Summary:** A long article, with recipes, focusing on the rise of the soy bean in Canada’s public awareness.

“What’s all this talk about soy beans? Why are they bursting into headlines, causing heated debates in the House of Commons and revolutionizing the food and industrial world?”

“When a product whose name is foreign to most of us becomes the subject of much discussion publicly or privately, we are anxious to know why.”

“A small bean, known for thousands of years by the Chinese, is about to become the culture plant of the future. This ancient food with new importance is the soy bean.”

The story of the soy bean is a romantic one, for its origin dates back thousands of years to Manchuria and Mongolia [sic], where it is still largely grown today. Henry Ford is discovering new uses for it in the automobile industry. It is used [in the form of fermented soymilk] in the scientific formulas fed to the Dionne quintuplets. As many as 595 products are now made from the soy bean. Several of the 500 varieties of soy beans are now grown in Ontario, and are of high quality.

The soy bean is a rich source of oil, from which many industrial products have been developed, such as soaps, paints, varnishes, printers' ink, linoleum, and artificial leather. This oil is also rich in lecithin, which can be added to dye baths and to finishing solutions for artificial silks and for cotton. Soy bean glue is used to make furniture and plywood from pine trees.

The soy bean is also an excellent source of food, feed, and ammunition. "Dr. A.A. Horvath, probably the greatest chemical authority on the subject of the soy bean says: 'As an economical source of valuable and wholesome dietary elements it probably has no peer.'"

Pediatricians have found "soy milk" beneficial for feeding infants when mother's milk is not available. Roasted soybeans [soynuts] can be used as a peanut substitute. Flour made from the soy bean can replace part of the wheat flour in cakes, puddings, and breads, and because of its high protein and low starch content, is suited for diabetic and reducing diets. Soy bean cereals are now on the market.

"The hardy Mongolians, giants of strength and stature, have, through the ages, been nourished by the soy bean, the growing of which is the greatest industry of Mongolia [sic, Manchuria]."

The soy bean is widely used in Chinese cookery, in forms such as the famous soy sauce. And the soy bean is a rich source of high quality, low cost protein (and minerals)—rivaling that in milk, meat, fish and eggs.

Recipes: Vegetable casserole (with "1 cup soy bean cereal"). Raisin soy muffins (with "1 cup soy bean cereal"). Chocolate soy cake (with "½ cup soy flour"). Health pudding (with "2 tablespoons soy bean cereal"). Soy bean cookies (with "2 cup soy bean cereal").

A large photo, titled "Manufacture of new foods," shows a man (wearing a white lab coat) pouring a ladle of soy beans into the hopper of a mechanical mill.

A small portrait photo shows Marie Holmes.

3094. Kaempfert, Waldemar. 1936. The week in science: Chemistry's expanding field. *New York Times*. April 19. p. XX4.

• **Summary:** The section titled "In praise of soybeans" discusses a soybean symposium held in Kansas City [Missouri], incl. presentations by Dr. A.A. Horvath and Dr. N.F. True. Chinese have long made fermented "soy foods," including soy sauce—which is used in the USA to

season chop suey. In the USA soybean protein is use to coat and size paper. Soybean glue holds plywood together. Dr. H.E. Barnard, director of research for the Farm Chemurgic Council thinks artificial wool might be made from soybean proteins. "In a Wellslike glimpse of the future, Dr. Barnard saw the 'passing of the cow and the sheep' if the soybean lives up to his hopes."

3095. *New York Times*. 1936. Chemistry's expanding field: Notable papers presented in Kansas City [Missouri] meeting show wide scope of research. In praise of soybeans. April 19. Section 10. p. 4.

• **Summary:** The soybean was the subject of one of the symposiums at the American Chemical Society meeting last week in Kansas City, Missouri. Dr. A.A. Horvath of the University of Delaware's Agricultural Experiment Station stated: "In 1932 some 9 million pounds of soybean oil were used in soap-making." Dr. N.F. True discussed food uses of soybeans noting that the Chinese farmer "likes his soy foods fermented by molds, just as we like pickles and cheese fermented with the aid of bacteria. The soybean sauce that the Chinese waiter hands you with chop suey is a fermented soybean product, in case you don't know it."

Dr. E.F. Ware added that paint-makers use enormous quantities of soybean oil. "The buildings of Chicago's Century of Progress Exposition [in Illinois] were coated with soybean paints." "Soybeans can be used for every thing from hay to hairpins it seems."

Dr. H.E. Barnard, director of research of the Farm Chemurgic Council, said that "artificial wool might be made out of these same proteins." The Italians are now trying to make wool out of the casein of milk.

"There is a boon in soybeans as a result of all this chemical activity. About 5,000,000 acres in this country are given over to their cultivation. But the world's center for commercial [soy] beans is still in Manchuria." Today more than 60 soybean varieties are listed in seedmen's catalogues. "If the industrial and food uses of the soybean increase it will rank with corn as a major American crop in two decades."

A large photo shows a coolie in Manchuria carrying a large sack of soybeans on one shoulder.

Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "artificial wool" to refer to spun soy protein fiber used like a textile fiber (such as wool).

Address: Iwazaki Shōyu-ten Jikkenshitsu, Japan.

3097. *Agricultor Venezolano (El) (Ministerio de Agricultura y Cria, Caracas)*. 1936. El cultivo de la "soya" [The cultivation the soybean]. 1(1):24. May. [1 ref. Spa]

• **Summary:** A short paragraph at the top of the article states: We have translated the monthly bulletin of the Royal Bank of Canada [actually The Royal Bank of Canada Monthly Letter, April 1936] which discusses the extraordinary importance acquired recently by the soybean, an agricultural product whose cultivation is being tested in Venezuela. The intensification of this crop in our country can come to signify a new and important source of national wealth.

The article begins: “To many people, the soybean has an oriental flavour; they know it as the basic ingredient in some of the most famous English meat sauces [Worcestershire, etc.] and have heard that it is an important Manchurian export. Against this background it is something of a surprise to learn from the *Wall Street Journal* of February 17, 1936, that in the previous year it had become, from the viewpoint of cash return to the farmers, the fourth most important cereal crop in the United States. The crop of 1934 was about 50 per cent larger than that of 1933 and the crop of 1935 was doubled that of 1934.”

The many uses of the soybean are discussed, including soybean flour (with and without the original oil content of the seed), soybean milk, butter, cheese [tofu], and coffee. Among industrial uses, in 1934, 10 million lb of soybean oil were used by the paint industry in the USA. “In varnish and lacquers soybean oil is the principal base. The Ford car is finished with a soybean lacquer and the Ford Company is erecting a \$5,000,000 plant in Detroit [Michigan] to make soybean products. In soaps, glues, linoleums and rubber substitutes, the ingredients of the soybean have come to be of predominant importance.”

Canada. [1 ref]

• **Summary:** An overview of the rapid growth of soybeans in the United States, and their potential as a crop in Canada. “To many people, the soybean has an oriental flavour; they know it as the basic ingredient in some of the most famous English meat sauces [Worcestershire, etc.] and have heard that it is an important Manchurian export. Against this background it is something of a surprise to learn from the *Wall Street Journal* of February 17, 1936, that in the previous year it had become, from the viewpoint of cash return to the farmers, the fourth most important cereal crop in the United States. The crop of 1934 was about 50 per cent larger than that of 1933 and the crop of 1935 was doubled that of 1934.”

The many uses of the soybean are discussed, including soybean flour (with and without the original oil content of the seed), soybean milk, butter, cheese [tofu], and coffee. Among industrial uses, in 1934, 10 million lb of soybean oil were used by the paint industry in the USA. “In varnish and lacquers soybean oil is the principal base. The Ford car is finished with a soybean lacquer and the Ford Company is erecting a \$5,000,000 plant in Detroit [Michigan] to make soybean products. In soaps, glues, linoleums and rubber substitutes, the ingredients of the soybean have come to be of predominant importance.”

3100. *Chicago J. of Commerce and La Salle Street Journal*. 1936. Soy bean field study is urged: Illinois manufacturers advised to investigate possibilities for use. June 2. p. 12.

• **Summary:** “Illinois supplies considerably more than one-half of the entire yield of soy beans in the United States.”

“Some of the best known industrial uses for soy beans are soy bean milk, soy chocolate, soy sauce and other foods, including confectionery. It is used for feeding live stock by packing companies and baking companies substitute a portion of soy bean flour for wheat flour in bread. There is an increasing demand for soy bean oil in edible products, in paint, varnish, linoleum, soap and in foundries for core binding purposes. It is also utilized in glue.

“Horn buttons, insulation material, tool handles are being made in increasing quantities from the residue of soy beans after the oil has been extracted.”

“Fifth in State’s Crops: ‘The soy bean crop is now fifth among the various farm crops of the state, both in harvested acreage and in gross farm value.’”

3101. *Chicago J. of Commerce and La Salle Street Journal*. 1936. Etymology—Soy bean. June 20. p. 16.

• **Summary:** Many readers of the current series of articles in this newspaper have asked about the etymology of the plant’s name. “Also many, pointing to the different terms and spellings—soybean, soy bean, soya bean, soja bean, soja beban, sojox max, soja plant—which appear in the limited but highly specialized literature on the plant, ask what is the

correct term.”

For salted soybeans, the early Chinese used a word pronounced *shi* [fermented black soybeans]. Another word, *yu*, was given to the oil used as a condiment. Later the term *shi-yu* was applied to the plant and to the raw beans. “Outside of Manchuria the term became *shi-yau* [Note: This is the Cantonese term meaning “soy sauce”].

The rest of the article contains incorrect information about the etymology of the term “soy bean.”

Note: In 1689 John Ovington, who traveled to Suratt, in India, coined the word “soy” to refer to soy sauce.

3102. Breedlove, L.B. 1936. Soy bean—The magic plant: Source of manifold foods for man, woman, and child. Article X. *Chicago J. of Commerce and La Salle Street Journal*. June 23. p. 11.

• **Summary:** Introduction and composition of “soy milk” (also called vegetable milk and soya milk). Producing soy bean milk (method of Max Adler). Food for diabetics. Curd base for many dishes (To Fu). American soya sauce superior.

“Soy bean milk is now produced, on a factory basis, in this country by five companies, of which three offer the soy milk in powdered form.”

“The addition of magnesium or calcium salts or lactic acid to soy milk when hot, precipitates out a good part of the protein, forming a grayish white curd, leaving a yellow water liquid [whey]. This curd, after being drained and pressed, is the product known as ‘To Fu,’ which is an extensive article of diet among oriental, and also forms the basis for numerous fermented, smoked and dried cheeses in China and Japan. In all of the large cities of this country having a large oriental population such curd, made fresh each day, may be found in the food stores which cater to such populations.

Such cheeses or curds have not yet appealed to the occidental taste. They seem too strong in flavor and are of a sponge-like consistency... With the newer methods of conditioning the beans, it seems quite likely that the curds—not unlike cottage cheese—may be more palatable to the western taste.

“On the oriental table these curds, prepared in an infinite number of ways—it is said that most any self-respecting oriental chef knows at least 500 recipes—may appear in one form for an appetizer, in another form as the ‘meat’ course, in another as the salad, and in still another as the dessert.”

“American soya sauce superior: Soya sauce, used extensively by oriental peoples in cooking, as a relish or condiment to increase the flavor of all dishes and as an aid to food assimilation, is made by crushing and grinding a mixture of cooked [soy] beans and pulverized barley, inoculating with a culture known as rice ferment and leaving in vats for six to eighteen months to ferment. The juice is then drained and filtered, salt and spices added.

“The recipe for this dark-brown liquid, used on chop suey and other typical dishes, has been a closely guarded

secret handed down for generations in a limited number of Chinese families. However, within the last few years, the chemists of one American firm [Oriental Show-You Company, Columbia City, Indiana] discovered a more satisfactory recipe and the output of this factory, making the sauce from domestic beans, has so captured the market in this country among the oriental reared citizens that imports of the sauce have been greatly reduced.”

“Until very recently, when methods were found to remove the bitter taste, very little soy bean oil was used in this country for edible purposes. When properly treated, however, soy bean oil may serve in any one of the three important uses—either in lard substitutes, in margarin [margarine], or in cooking oils.” Address: Staff member, Chicago Journal of Commerce.

3103. Lajtha, Edgar. 1936. 5-cent ration for Japan: Scientist works it out for 500 daily menus after analyzing 6,000 foods. *New York Times*. June 28. p. X9.

• **Summary:** “Professor Tasasu Saiki, director of the Imperial Government Institute for Nutrition in Tokyo, broadcasts recipes for concentrated food, and he is paving the way for a peaceful revolution in Japan, the revolution of nutrition.” “Dr. Saiki also is preparing for time of war.” Recipes include Grasshoppers “served with soy-bean sauce...” He was formerly attached to the League of Nations Health Office at Geneva.

3104. Burlison, W.L. 1936. The soybean. A plant immigrant makes good. *Industrial and Engineering Chemistry* 28(7):772-77. July. [23 ref]

• **Summary:** Contents: Introduction and brief history. Description of the bean. Soybean culture. Industrial uses. Imports. Composition of soybean seed. Composition of soybean oil. Composition of soybean-oil meal. Methods of processing soybeans for consumption: Expeller method, hydraulic-press method, solvent extraction process. Disposition of the domestic crop. Products derived from soybeans. Industrial use of soybean oil. Soybean oil in the paint industry. Soybean oil as a core binder. Other uses for soybean oil: Lecithin, sulphonated oil. Plastic industry. Soybean glue. Further investigation needed.

This article begins: “The soybean is one of the oldest crops grown. It was described in a Chinese book on *Materia Medica*, *Ben Tsao Gang Mu*, written by Emperor Shen-Nung about 4800 years ago... Soybeans were introduced into the United States in 1804, yet a hundred years there were very few grown outside the southern states.”

The section titled “Products derived from soybeans” (p. 775) contains an extensive list of commercial food, feed, and industrial products derived from soybeans and compiled from letters received by the University of Illinois during the latter part of 1931. “This list is increasing from month to month.” Some products have brand names and others only

generic names. The following products were on the market in the USA and Canada at that time.

“Food products: Soybean flour. Soybean-meal flour. Refined edible soybean oil. Soybean salad oil. Chocolate bars (30% soybean flour). Cocoa (up to 60% soybean flour). Sausages (up to 50% soybean flour). Bread (7½% soybean flour). Rolls (10% soybean flour). Macaroni (20% soybean flour). Soybean muffins. Soybean cookies. Soybean doughnuts. Vegetable shortening. Infant foods. Diabetic foods. Oleomargarine. Lard substitutes. Filled sweets. Soybean sprouts. Soybean cheese. Soya cream biscuits. La Choy soy sauce. Zoybeans (cooked beans). Bacon and Zoybeans. Zoy bouillon. Casein gluten flour. Non-fat mayonnaise. Fatless spread. Soyex-malt-cocoa drink. Soybean milk. Soybean ice cream.

“Feed products: Cake or meal. Commercial feed. Dairy feed. Hog chow. Poultry chow. Dog chow. Calf chow. Rabbit chow. 34% protein chow. Chick Startena.

“Industrial products: Paint. Varnish. Enamels. Oilcloth. Linoleum. Printers’ ink. Glycerol. Celluloid. Lauxtex plastic wall coat. Lauxtein waterproof soybean glue. Lauxein emulsifier. Soap. Core binders. Rubber substitutes. Plastics.”

Photos show: (1) “A beautiful field of Illini soybeans, a variety extensively used for industrial purposes.” (2) “A soybean plant loaded with pods and ready for harvest.

Tables show: (1) “Utilization of soybeans and soybean products in 1930” For example: Soybeans ground for food: 200,000 bu (bushels). Soybean oil used in various edible products: Oleomargarine: 750,000 lb. Lard substitutes: 500,000 lb. Other food products: 4,750,000 lb. Soybean oil used in industrial products: Paint and varnish: 9,000,000 lb. Linoleum and oilcloth: 4,000,000 lb. Soap kettle: 8,500,000 lb. Soybean meal used in: Commercial feed: 84,100 tons. Other 15,000 tons. Soy flour for food: 850 tons. Infant and diabetic foods: 50 tons. Other uses, including glue: 10,000 tons.

Table 2: “Adaptability of soybean oil to various products.” Drying products: Paint, varnish, linoleum and oilcloth, waterproof goods. Soap products: Hard soaps (toilet, household, laundry), soft soaps (shampoos, automobile soaps). Edible products: Lard compounds, cooking oils, salad oils, fountain drinks, candy, mayonnaise, margarine. Miscellaneous: Foundry core oil, printers’ ink.

Note: A revised and considerably expanded version of this article, with the same title and author but a somewhat different format, was published two months later as *Illinois Agric. Exp. Station, Circular*, No. 461. 15 p. Sept. Address: Univ. of Illinois, Urbana, Illinois.

3105. Horvath, A.A. 1936. The soybean points the way to agricultural recovery. *Scientific Monthly* 43:63-69. July.

• **Summary:** “The soybean is a vivid example of a crop with an amazing diversity of industrial uses... In 1934 soybean oil constituted 11.6 per cent. of the world’s production of

vegetable oils. The United States production of soybean oil for the same year amounted to 1.6 per cent. of the total U.S. production of vegetable oils...”

“When hydrolysed by acids or enzymes, soybean protein is converted into soy sauce, which is used for bouillon extract preparations and has been for decades as the base of Worcestershire sauce.”

Soybean protein “is capable of taking the place of casein (which is much more expensive and is being imported to the U.S.) in a large number of industries, such as sizing for paper, glue (waterproof) and plastics, all of which are already in existence in our country. At the 1933-34 International Exposition in Chicago [Illinois] all exterior walls and sub-floors of the Hall of Science were constructed of plywood panels glued with soybean glue. To-day soybean meal is used by the Ford Motor Company for the manufacture of horn buttons, gear shift lever balls, light switch handles, distributor bases, distributor cover and window trim strips... With the completion of a new \$5,000,000 River Rouge plant for soybean plastics, the use of soybean meal will extend to making dashboards and probably also automobile bodies.”

Soybean meal can also be used for making floor coverings, for hardening and strengthening steel and iron, in water paints, as an emulsifier for asphalt in roads, and as an emulsifier for mineral oils for dormant sprays. Soya lecithin also has many applications. One million pounds of soya phosphatides are used annually in the margarine industry in Germany. It can be used for making and softening leather and for milling rubber to a powder.

In 1934 the main commercial uses of soybean oil were (in million pounds): Paint and varnish 10.4. Linoleum and oilcloth 2.8. Compounds and vegetable shortenings 2.7. Soap 1.35. Printing ink 0.059.

During the last decade “whole soya flour” has steadily gained in popularity. It “contains over 2 per cent. of phosphatides, nearly all the known vitamins, and an ash of high alkalinity.” Address: M.D., Chemist, Agric. Exp. Station, Newark, Delaware.

• **Summary:** The title pages states that this is the published version of the author's PhD thesis at the Mixed Faculty of General and Colonial Medicine, and of Pharmacy at Marseille. The thesis was presented and defended before the Faculty of Medicine of Marseille on 10 July 1936 to obtain the degree of Doctor of Pharmacy. The author was born on 19 Nov. 1905, at Sarzeau (Morbihan); he is a *Licencié ès Sciences, Pharmacien-Capitaine des Troupes Coloniales*.

Contents: 1. Introduction. 2. The soybean: Historical summary and overview. Soybean botany, the production of soya; its cultivation in Indochina, soybean commerce and trade, chemical composition of the soybean seed (analysis of soybeans from Tonkin), the chemical constituents of the soybean seed, soy oil, food use of soya in Europe, industrial uses of soya, soya in therapeutics and dietetics. 3. Soy-based food preparations from Indochina: Soymilk, the fermentation and preservation of soymilk, tofu (*dâu-phù*), soy sauce, yuba (La crème de soja, *dâu-phù-chuc*). 4. Conclusion.

3109. Thone, Frank. 1936. The soybean goes to town: Used in scores of products, from noodles and beer to steering-wheels and paint, Chinese bean shows versatility. *Science News Letter* 30(799):74-76. Aug. 1.

• **Summary:** Contents: Introduction. Food for recovery. Wallpaper and glue. Oil requires processing. Economical and efficient. For mixing with silage. Fifty varieties listed. A one-ingredient meal.

Under the latter heading (p. 75-76): "The beans themselves are boiled for the table, and eaten in a dozen other ways, including the succulent bean sprouts you fish for in your plate of chow-mein, and salted parched soybeans that are much like roasted peanuts. It is quite possible to make up a reasonably complete, appetizing meal out if soybeans alone.

"We are beginning to appreciate their value as food, too, in the Occident. Canned soybeans are on the market and soybean flour is at a premium among knowledgeable housewives.

"And finally there is our old friend, the soybean sauce of the chop-suey restaurants—that dark stuff in the hair-tonic bottles, that has such a tangy, salty taste. It is made by fermentation, and after proper aging is shipped to this country. That is, the cheaper kind of 'dragon's blood' comes here. The really choice varieties, aged in jars for years, with daily exposure to the sun, are for merchants and mandarins,

not export."

Three photos show: (1) Two men in a field of beans. "The crop looks good: in a soybean field down south." (2) William Morse standing in front of a cupboard in his office, with many shelves well filled with soybean products. (3) The upper part of a soybean plant, showing pods, leaves and seeds. Address: Dr.

3110. *Business Week*. 1936. Soybean sits pretty: Becomes so important that Chicago Board of Trade may establish futures trading. Aug. 8. p. 21-22.

• **Summary:** "The soybean is advancing so rapidly in importance among American Farm products that the Chicago Board of Trade is considering the establishment of soybean futures trading." Note: Soybeans were soon admitted by the CBOT. The first transaction, in October 1936, was for 5,000 bushels at \$1.20.

"Prime mover in the industrial development of soybeans has been Henry Ford and the Farm Chemurgic Council, which he sponsors. Not only has he found a multitude of uses for soybean products in the Ford car, but he has been instrumental in increasing use of it for human consumption. Latest figures show use of 560,000 bu. of soybeans in the production of a million Ford cars (more than ½ bu. per car)."

The soybean is used in certain soaps, and it is a fairly good drying oil for use in paints (11,000,000 lb in paints last year) and varnishes, with an iodine value of about 136 compared with 185 for linseed oil. "The oil is used in lard substitutes, margarin [margarine] and cooking oils, bakery goods—to mention but a few of a growing list. The familiar soya sauce for chop suey is an ancient product of the plant."

"Factors responsible for the sharp increase in 1935 acreage to 2,691,000 from 1,511,000 in 1934 included the AAA [Agricultural Adjustment Administration (USDA)] restrictions on production of other grains and the growing realization by farmers that soybeans are valuable as a source of nitrogen for land and suitable for rotating purposes." The competition of soybean oil with tung oil is discussed.

3111. Akabori, Shiro. 1936. Shôyu no kôki seibun ni tsuite. I. [On the aroma of soy sauce. I.]. *Nippon Kagaku Kaishi (J. of the Chemical Society of Japan)* 57(8):828-31. Aug. [7 ref. Jap]

Address: Osaka Teikoku Daigaku, Rigaku-bu, Kagaku Kyoshitsu.

3112. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries: Oceania (Document part). *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(8):294T-97T. Aug.

• **Summary:** "1. Commonwealth of Australia: A. Southern Australia. Apart from a very few trial plots, soya growing is not practised in this State as the conclusion has been reached

that local climatic and soil conditions are not suitable for this crop.

“B. New South Wales. Several years ago, the Department of Agriculture tried to introduce soya into the agricultural economy of the State, either as a green manure or forage or for the multiple uses of the seed. During the last 20 years, numerous varieties have been introduced and many trials have been carried out in all parts of the country. Generally speaking, the results were not satisfactory and efforts to introduce soya into the economy of the country were not successful. The growth of the soya plant was very poor and the yields in seed low. One of the reasons why soya does not succeed seems to be the absence of the bacteria of root nodules in the soil of this State. Utilised as a spring green manure, soya is inferior to cow peas in the coastal regions. In the Table-lands soya cultivation appears to give better results.

“C. Queensland. Soya has been grown experimentally in this country for a great number of years, but the results were more or less negative and the areas now cultivated with soya are almost negligible.

“A few very tall varieties, such as Biloxi and Ootoon, have proved to be suitable as forage, but they have not been adopted by farmers, who obtain forage more easily in cultivating cow peas or other leguminous plants.

“Trials in inoculating soya seeds do not appear to have given any results though other trials should be carried out in the agricultural districts before this crop can be said to be quite unsuited to this State.

“The internal market for soya and its derivatives is limited as it is supplied by imports from Manchuria and Japan.

“Owing to the abundant production of all kinds of feeds for live-stock, the use of soya will be difficult to establish unless it is utilised in crop rotation with cotton or maize.

“D. Victoria. No systematic attempts have yet been made to introduce soya growing into this State. Various trials previously made for experimental purposes showed that this crop was not of sufficient economic interest to replace the existing crops of leguminous plants.

“In 1933, however, the Department of Agriculture undertook a series of trials in soya growing in East Gippsland...

“Imports into Australia are of no great importance. In 1932-1933, 40,808 gallons of soya [soy sauce] were imported; value £1778. Of these imports 90% came from China. During the same period 12 tons of seed were imported from Japan; value £148.

“3. New Caledonia. Soya cultivation was introduced in 1928. No native varieties are grown, only foreign varieties, seeds of which were introduced on two occasions by the Chamber of Agriculture and the Administration. The principal variety is *Soja hispida*. Medium yields are obtained. There appears to be no future for soya as New

Caledonia is abundantly provided with similar products which are in current use.”

Note: This is the earliest document seen (March 2010) concerning soybeans in New Caledonia, or the cultivation of soybeans in New Caledonia. This document contains the earliest date seen for soybeans in New Caledonia, or the cultivation of soybeans in New Caledonia (1928). The source of these soybeans is unknown. The history and present status of the cultivated soybean, *Glycine max* is unclear. Address: Rome, Italy.

3113. Meade, Mary. 1936. Soy beans are new dish on American table. *Chicago Daily Tribune*. Sept. 9. p. 26.

• **Summary:** It has taken agricultural America a long time to discover the soy bean. For centuries it has been a valuable human food in the Asiatic diet, “but only within the last few years has it come to the American table. And in what variety!” We have fresh and dried soy beans. We are using soy bean flour to make breads, drinking a soy bean milk, and cooking many of our foods in soy bean oil. “There is a soy bean ‘coffee’ on the market, a soy bean butter, which resembles peanut butter, soy sauce, and a roasted soy bean which is eaten like peanuts and which is gaining in popularity every day.”

Soy beans are a valuable food, rich in “good quality protein and having a superior caloric content.” Their low starch content makes them valuable for diabetics. Describes how to cook fresh soy beans and dried soy beans.

“Among the most edible varieties of soy beans are Easycook, Mammoth Yellow, Manchu, Dunfield, and Haberlandt. All are light in color.” Gives a recipe for Soy bean nut bread; the nuts are chopped tree nuts.

3114. Ramsbottom, J. 1936. The uses of fungi. *British Association for the Advancement of Science, Annual Report*. Sept. 9-16. p. 189-218. See p. 206-08, 212. 106th year.

• **Summary:** This was an address to Section K (Botany) of the British Association for the Advancement of Science at Blackpool, Sept. 10, 1936. Discusses: Koumiss (effervescent drink), Egyptian Leben, Arrack, Japanese koji, shoyu, tamari, and miso, fermented tofu.

“There is a wide range of oriental foods produced by fermentation with *Aspergillus*. Chinese curd, To-fu, is made from soy-bean milk fermented with mould and ripened in brine. The curd is cut into squares which soon become covered with fungus. They are then placed in brine for further ripening. The curd is canned as white or red squares in a salty liquid.”

In Japan, four large industries are built on the use of *Aspergillus oryzae*. Their approximate total yearly output is as follows: Saké (rice wine) 812,000 kiloliters, shoyu (soy sauce) 902,000 kiloliters, miso (soy cheese) 1,690,000 kilograms, and shocho (distilled alcoholic liquor) [sic, shochu or shôchû, cheap spirits] 39,700 kiloliters. The annual

value of all the fermentation industries is approximately £40,000,000.

“Molds of the genus *Penicillium* play a large part in the ripening of the Camembert-Brie, and the Roquefort-Gorgonzola-Stilton series of cheeses. Milk is first coagulated with rennet or dried calf-stomach linings.” Also: Mycorrhiza, Takadiastase, production of glycerin and yeasts in Germany during World War I. Address: O.B.E., President of the Botany Section.

3115. Burlison, W.L. 1936. The soybean. A plant immigrant makes good. *Illinois Agricultural Experiment Station, Circular No. 461*. 15 p. Sept. First printed in *Industrial and Engineering Chemistry*. 1936. 28(7):772-77. July. [24 ref]
 • **Summary:** A shorter version of this article, with the same title and author but a somewhat different format, was published two months earlier in *Industrial and Engineering Chemistry* 28(7):772-77. July.

Contents: Introduction and brief history. Description of the soybean. Soybean culture. Industrial uses. Disposition of the domestic crop. Products derived from soybeans: Food, feed, and industrial products. Imports. Chemical composition: Soybeans, soybean oil, soybean oil meal. Methods of processing soybeans: Expeller, hydraulic-press, solvent extraction. Industrial use of soybean oil. Use of soybean oil in the paint industry. Soybean oil as a core binder. Other uses for soybean oil: Lecithin, sulphonated oil. Plastic industry uses soybean oil meal. Glue from soybean oil meal. Soybean oil meal for fertilizers. Further investigation needed.

The section titled “Products derived from soybeans” (p. 6-7) gives is an extensive list of commercial food, feed, and industrial products derived from soybeans. This list is almost identical to that published two months earlier. Address: Chief in Crop Production.

3116. Fors, Alberto J. 1936. El frijol soya, materia prima para la produccion de aceite [The soybean, raw material for the production of oil]. *Revista de Agricultura (Cuba)* 19(8-9):64-66. Aug/Sept. [Spa]

• **Summary:** Briefly describes the importance of the soybean as a raw material for the production of oil. At the end of the article are listed the products obtained from the soybean. These include 24 food products (incl. refined soy flour, refined soy oil, chocolate and cocoa with soya, sausages with soy flour, soy bread, soy macaroni, gluten flour and soy casein, soy lard (*mantecado de soya* = shortening), foods for children and diabetics, oleomargarine, soy sprouts (*retoños de soya*), soy cheese (*queso de soya* = tofu), biscuits made with soy cream, La-Choy soy sauce, soya bouillon, low-fat soy mayonnaise, soymilk), 6 concentrated feeds for domestic animals, and 14 industrial soy products (incl. paints, enamels, linoleum, glycerine, varnish, artificial adhesive rubber, candles, lubricants).

The article begins: “The soybean (*el frijol soya*) is a bush which grows to a height of, at most, 3½ feet, but its industrial possibilities and its agricultural worth are gigantic. One cannot explain why the cultivation of this plant in Cuba is still at the test stage. During the past year of 1935, the United States harvested not less than 24 million quintales [1 quintal = 100 pounds] of this bean. The soybean also does well in our climate and in the majority of our soils, with the advantage over the black bean that two crops per year can be harvested.

“We are importing for our consumption about 6 million kg of oil extracted from this bean which, with some industrial products derived from the same, represent an annual expenditure which approximates, on average, one million pesos. The soybean is not a future possibility: it is money in the hand of those who plant it. Cuba has oil extraction plants which can process all the soybeans we can harvest. Why don’t you plant soya? Not only do we import large quantities of soy oil, for we are large consumers of oils and fats, but we also bring in concentrated feeds for milk cows, chickens, and various other substances derived from the soybean.” The article ends with these words written in large letters: Plant soybeans! Address: Propaganda de la Inspeccion Provincial de Agricultura de la Habana. A Cargo de Ingeniero A.J. Fors.

3117. Ishimaru, Yoshio. 1936. Shôyu jôzô-jô kûki-chû no kinga ni tsuite [Microorganisms in the air in shoyu breweries]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 14(9):737-50. [Jap]

3118. Kibi, Masajiro. 1936. Shôyu jôzô-yo kôji-kin ni tsuite. I. Kakuchi jôzô-jô shiyô-kin no keitai [On the koji molds used in shoyu fermentation. I. Morphology of *Aspergilli* used for brewing in several provinces]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12(9):885-97. Sept. English-language summary in *Bulletin of the Agricultural Chemical Society of Japan* 13(8):130-31, bound at the front of *Nippon Nogeikagaku Kaishi*. [12 ref. Jap]

• **Summary:** The author isolated 54 strains of molds from many samples of koji, the starter used in manufacturing shoyu (Japanese soy sauce). Morphological and physiological investigations show that these molds belong to 28 varieties of *Aspergillus oryzae*. A table shows the morphological characteristics of these 28 varieties, including length of stalk in mm, and diameter of conidia in micrometers. General characters: Colonies green. Stalks colorless and not septate. Outer walls of stalks pitted or rough (except No. 6). Vesicles globose or subglobose. Sterigmata in 1 series. Conidia globose. Conidial wall smooth at first (except No. 6). Address: Yamasa Shoyu K.K. Kenkyusho, Biseibitsu Jikkenshitsu, Japan (Microbiological Lab. of Yuasa Shoyu Co.).

3119. Hermano, A.J. 1936. Soybeans a national food for Filipinos. *Agricultural Life (Exponent of Philippine Agriculture and Allied Industries)* 3(9-10):21-23. Sept/Oct.
• Summary: Rice is the chief staple food of the Filipinos. But the local diet would be improved by the addition of soybeans and their products. In April 1934 the Nutrition Research Laboratory, Bureau of Science, began to manufacture soybean milk. The method is described, the milk was used with good results in experiments with school children in Paco. Presently 8 liters/day of soybean milk are prepared for the Tondo and San Nicolas Community Health Social Centers.

The article concludes: "Various soybean products, like 'tokua' [tofu], 'toyo' or sauce, 'tahore' 'toho' 'tohu' and other products made by the Chinese are prepared in rather simple ways and could be easily made by the Filipinos."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the word "tahore" which probably refers to fermented tofu. Address: Chief, Nutrition Research Lab., Bureau of Science [Manila, Philippines].

• Summary: Abstracted from the *Bulletin of the Agricultural Chemical Society of Japan* 12(7):79 (1936). Cystine (German: cystin) is a crystalline amino acid that is widespread in proteins (as keratins) and is a major metabolic sulfur source.

3129. **Product Name:** [Kimlan soy sauce].

Foreign Name: Kinran.

Manufacturer's Name: Kimlan.

Manufacturer's Address: Taiwan.

Date of Introduction: 1936.

New Product–Documentation: Manufacturer’s Catalog. 1981? 15 p. Page 15 notes: “For over 40 years, Kimlan soy sauce has been the favorite of the Chinese people and now it is fast becoming a favorite the world over... Kimlan, established in 1936, is one of the most experienced soy sauce makers in Taiwan. It has grown to become Taiwan’s most popular soy sauce. As it has grown, production facilities were expanded in 1957, 1967 and 1970. Yet the expansion did not keep up with the demand. Therefore, in 1977, a totally new plant was built at Tao Yuan, Taiwan. Daily production is now 15,000 kg.”

3130. Product Name: Soyalex (Refined Soybean Cake Resulting from Alcohol Solvent Extraction).

Manufacturer’s Name: Manchuria Soya Bean Industry Co.

Manufacturer’s Address: Dairen, Manchuria.

Date of Introduction: 1936.

Ingredients: Soybeans.

How Stored: Shelf stable.

New Product–Documentation: Akagi. 1936. Bean Oil Industry in Manchuria.

Contemporary Manchuria 1937. “Bean Oil Industry in Manchuria.” p. 26. “Refined Bean Cake. (‘Soyalex’). The Refined Bean Cake is obtained after the oil content is extracted by the use of pure alcohol. It contains abundant protein and carbohydrate but no impurities and a negligible amount of water... Its use as a raw material for shoyu, miso, candy, or noodles adds a high degree of nutritive value.”

South Manchuria Railway Co. 1937. Bean Oil Industry in Manchuria. p. 2. “A new process of extracting oil by using alcohol as solvent was recently discovered by the Central Laboratory of the South Manchuria Railway Co. This method is now utilized by the Manchuria Soya Bean Co. at Dairen.” p. 4. This method produces the largest amount of oil of fine quality, and the best quality cake for use as food or feed. It is the only method that “produces priceless lecithin as a by-product.”

3146. Wang, Tiao-Hsin; Ni, Sung-Mou. 1936. Chemical studies on the manufacture of soy bean sauce by the Kwantou process. *Hua Hsueh Kung Ch'eng* (*J. of Chemical Engineering, Tientsin*) 3:284-96. [20 ref. Eng]
• **Summary:** Based on a thesis presented by Mr. Ni to the Faculty of Fukien [Fujian] Christian University in partial fulfillment of BA degree, January 1936. Because the importance of soy sauce, both economically and in the human diet, many scientific studies on its method of production have been carried out in recent years, in both Japan and China. "However the major amount of research on soy bean sauce was confined to the finding of means by which time for fermentation might be shortened, since either by the original Chinese or by the Japanese methods the time required to carry out fermentation was about 1 year. As a result of these efforts, about 120 new modifications on the process have been proposed and 110 of them patented. A critical study made by Togano (1931-34) on these modifications revealed that nearly all of them have but little practical value. The one that deserves special mention is Togano's process which has been widely used in Japan and which is recently introduced to China under the name of 'Y-type' process."

"The Kwantou process of soy beans sauce manufacture uses soy bean alone as its raw material and carries out the fermentation at room temperature for not more than 3 months, yielding a product of high quality and of a flavor superior to that obtained by Togano's method. In spite of all these superiorities, the Kwantou process is little known and it has not received the attention it deserves."

In the first stage of manufacture using the Kwantou process (the preparation of koji), the main changes are hydrolysis of the protein and carbohydrate of the bean meal by molds. The subsequent washing and soaking of the koji (unique to the Kwantou process) results in the removal of mold mycelia which would, if retained, give an unpleasant flavor to the sauce. The loss of enzymes is regained in the second fermentation. In the final fermentation, when the koji is mixed with common salt (NaCl) in wooden vats, further protein and carbohydrate decomposition occurs. Concentration of raw soy bean sauce by heating was accompanied by chemical changes which will be of much interest for further study. The fat constituent of soya beans has no important role in the processes of manufacture.
Address: Dep. of Chemistry, Fukien [Fujian] Christian Univ., China.

3147. **Product Name:** Yamajyu Shoyu.

Manufacturer's Name: Yamajyu Shoyu & Koji Miso Co.

Manufacturer's Address: 395 Buckle Lane, Honolulu, Oahu, Hawaii. Phone: 68772.

Date of Introduction: 1936.

New Product-Documentation: Directory of the City and County of Honolulu. 1938-39. p. 614. Yamajyu Shoyu & Koji Miso Co. (Taro Higa). Soy & Miso Manufacturers. Wholesale and retail. 395 Buckle Lane. Tel. 68772. Note: Taro Higa had the Yamajifu Shoyu & Koji Miso Co. the previous year. Wm. Higa. 1980. History of Miso Companies in Hawaii; Oda. 1983. Hawaii Herald. Oct. 7.

3148. Akabori, Shiro. 1936. Shôyu no kôki seibun ni tsuite. I. [On the aroma of soy sauce I. (Abstract)]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 12:A286. [1 ref. Jap]

• **Summary:** Abstracted from *Nippon Kagaku Kaishi* 57(8):828-31 (1936).

3149. Au, Man Sing. comp. and ed. 1936. The Chinese cook book: Covering the entire field of Chinese cookery in the Chinese order of serving. From nuts to soup. Reading, Pennsylvania: Culinary Arts Press. 47 p. See p. 39-40, back cover. Illust. by Warren G. Troutman. 24 cm.

• **Summary:** Compiled and edited for the American cook. The index is on p. 12-13. "A small plate is used to hold soyu or Chinese sauce. A morsel of food is picked up in the chopsticks, dipped into the sauce, and then put into the mouth" (p. 14).

Seasonings and gravies (p. 16-17). "The whole secret of what makes Chinese dishes unusually savory is the special seasoning and appetizing gravy. Items used for seasoning may be purchased in Chinese shops. Chinese sauce or soyu, used instead of salt, adds zest and delicacy." Chinese gravy calls for "Chinese sauce" as an ingredient. Soyu beef tongue (p. 32). Soyu chicken (p. 34).

The section titled “Bean curd–Tofu” (p. 39-40) states: “There are three forms of tofu, to be found almost daily in Chinatown shops. First, the Sai-Tofu–water tofu, which is a watery custard. Second, the Slab Tofu, which comes in a block about three inches square and half an inch thick. Third, the Yau-Tofu [deep-fried tofu], which is bean curd, cooked in hot boiling oil, much like the way doughnuts are made.” Tofu recipes: Pork hash tofu. Dried oyster tofu. Tofu far [fah = flowers]: “This is extra fine custard tofu.” Not always found in grocery stores, “it may be ordered from the tofu maker. Fill six cups with tofu-far. Melt Chinese brown sugar into syrup and pour over the custard.” Pork tofu. Soyu tofu. Tofu soup. Mullet tofu. Chop suey tofu. Bean sprout tofu. Fried tofu (“Brown one dozen slabs of tofu in frying pan”). Au Man Sing was born in 1906. Address: USA.

• **Summary:** “General Sadao Araki is, in many respects, the symbol of the movement that has pressed so strongly toward a military dictatorship... He came from a most humble home, and he worked as a boy for a manufacturer of *shoyu* (a Japanese sauce).” Address: Prof. of Political Science, Northwestern Univ.

3152. Gray, George Douglas. 1936. All about the soya bean: In agriculture, industry and commerce. London: John Bale, Sons & Danielsson Ltd. ix + 144 p. Introduction by James L. North. Late curator, Royal Botanic Gardens, Regent’s Park, London. Index. 28 cm. [19 ref]

• **Summary:** A comprehensive, early work on the soybean. Gray was a Scotch physician. Contents: 1. Introducing the soya bean. 2. The soya bean plant and its cultivation. 3. The soya bean as food: Dietetics, immature green beans, mature dried beans, soya bean coffee, soya bean chocolate, soya bean sprouts, soya bean milk, soya bean flour (incl. Berczeller flour, Soyvita bread made by Messrs. Wm. Beattie, Ltd., Glasgow), bean curd [tofu], soy (also called soya bean sauce, Chinese bean sauce, or shoyu), miso, fermented bean curd (p. 66-67). 4. Soya bean oil. 5. Soya bean trade. 6. The soya bean in agriculture.

Addenda: Soya bean products in the USA. Dieting and recipes. Statistics. India. Bibliography.

In the chapter on “Soya bean oil” we read (p. 75): “In England, the bean oil trade is carried on by the following firms:—The British Oil and Cake Mills Ltd., the ordinary shares of which are held by Lever Bros., Ltd., so that they are a branch of Unilever, Ltd.

“The Hull Oil Manufacturing Co., Ltd., Hull, now merged in the foregoing concern.

“The Premier Oil Extracting Mills, Ltd., Hull.

“Messrs. Wray Sanderson & Co., Hull.

“The Medina Refinery Ltd., Deptford, London.

“Messrs. J. Bibby & Sons Ltd., Liverpool.

“The Erith Oil Works Ltd., Erith” [Kent].

The first addendum, titled “Soybean products exhibited by the American Soybean Association” (at Washington, DC, p. 120-24) lists the following companies and each of the soy products that they manufacture: American Lecithin Corp. (Atlanta, Georgia), Archer-Daniels-Midland Co. (Milwaukee, Wisconsin), Armstrong Paint and Varnish Works (Chicago, Illinois), Battle Creek [Food] Factory (Battle Creek, Michigan), The Blanton Co. (St. Louis, Missouri), Cereo Co. (Tappan, New York), The Davies-Young Soap Co. (Dayton, Ohio), Detroit Graphite Co. (Detroit, Michigan), Eastern Health Food Stores Association (Washington, DC), Funk Brothers Seed Company (Bloomington, Illinois), Harshaw Essential Foods, Inc. (Cleveland, Ohio), Keystone Macaroni Mfg. Co. (Lebanon, Pennsylvania), Kloss, Jethro (Takoma Park, Maryland: Fresh [soybean] milk. Pumpkin pie [soybean milk and soybean flour]. Soybean cheese. Soybean bread [20% soybean flour]. Soybean buns. Soybean sprouts. Soybean cake), Laucks, I.F., Inc. (Bloomington, Illinois—home office, Seattle, Washington), Madison Food Company (Madison, Tennessee; Vigorost, Cheese [Tofu], Soybeans canned with Tomato, Soybeans canned plain, Dixie Fruit Crackers), Mead Johnson and Co. (Evansville, Indiana; Makes Sobee [Infant Formula]), Oriental Show-You Co. (Columbia City, Indiana), Paintcraft Co. (Galesburg, Illinois), Prince Macaroni Mfg. Co. (Boston, Massachusetts), Purina Mills (St. Louis, Missouri; makes Cresol disinfectant, Purina turkey and growing fattening chow, Purina lay chow, Purina egg chowder, Purina breeder egg chowder, Purina fitting chow, Purina rabbit chow, Purina chick Growena chow, Purina 34% cow chow, Purina chowder, Purina bulky cow chow, Purina 24% cow chow, Purina pig and hog chow, Protene all mash starting and growing food), Shellabarger Grain Products Company (Decatur, Illinois), Soyex Company, Inc. (Nutley, New Jersey), Staley Sales Corporation (Decatur, Illinois), The Stamford Rubber Supply Company (Stamford, Connecticut), Dr. Roy Monier, President, Board of Managers, State Hospitals (Jefferson City, Missouri), United Drug Company (Boston, Massachusetts), Vi-tone Company (Hamilton, Canada), Woolsey Paint and Color Co., C.A. (Jersey City, New Jersey), Bureau of Chemistry and Soils, Department of Agriculture (Washington, D.C.). Page 120 adds: “The exhibit also contained some 200 soybean products, mostly foods, brought from the Orient by Mr. W.J. Morse, Senior Agronomist, Department of Agriculture, Washington, DC, U.S.A.” Note: Morse and P.H. Dorsett were in East Asia from 1929 to 1931, when they collected many samples of

soybeans and soyfoods.

In the second addendum, recipes, the author notes that soy flour is widely used in diabetic diets. Two leading firms who make soy flour in England and who also incorporate it in various products are: Soya Foods, Ltd., Rickmansworth, Herts, and Dietetic Foods Ltd. 124 Victoria St., London, S.W. 1. "The former specialize in Soyolk which is flour prepared on the principles laid down by Professor Berczeller; it is a mealy powder, fatty to the touch. The latter firm are the sole distributors in Great Britain of the well-known 'Heudebert' Dietetic Food products, a French concern which makes different kinds of diabetic breads." The following recipes are then given; * = Calls for Soyolk soy flour: Soybeans, southern style. Soybean salad. Roasted soybeans [like dry-roasted peanuts]. Soybean croquettes. Soybean soufflé. Stuffing for baked fish*. White sponge pudding*. Shortbread*. Madeira cake*. Soya soup à la Reine (uses Heudebert soya flour). Soya chocolate (with soya flour). Soya vegetable soup (with soya flour). Soya bean sprout salad.

Note: This is the earliest English-language document seen (Feb. 2000) that uses the term "soya bean sprouts" to refer to these sprouts. Address: M.D. (Scotch physician) England. Late medical officer to H.B.M. Legation, Peking, China. Lieut.-Colonel, Retired.

3153. Institut International d'Agriculture (International Institute of Agriculture). 1936. *Le soja dans le monde* [The soybean in various countries of the world]. Rome, Italy: Imprimerie de la Chambre des Deputes, Charles Colombo. viii + 282 p. Bibliography, p. 276-82. No index. 25 cm. [90 ref. Fre]

• **Summary:** A superb early work, containing extensive original information, looking at developments with soybeans and soyfoods country by country, worldwide. Contents. Preface (p. 1). A. Culture of soy (*soja*; p. 4): 1. Botanical description, selection, classification of the varieties. 2. Culture properly said. 3. Enemies and illnesses.

4. Culture in the various countries: 4a. The Americas (p. 38): Antigua, Argentina, Bermuda, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, USA (gives details on all varieties grown, and describes production, history, varieties, and cultural practices in North Carolina, Illinois, Indiana, Iowa, Maryland, Massachusetts, Mississippi, Missouri, New York, Ohio, West Virginia, Wisconsin, Conclusion), Guadeloupe, Guatemala, British Guiana, Dutch Guiana, British Honduras [Belize], Jamaica, Barbados, Martinique, Mexico, Montserrat, Peru, Puerto Rico, El Salvador, Trinidad and Tobago, Uruguay.

4b. Europe (p. 101): Germany, the Danubian countries, Austria, Spain, France, Great Britain, Hungary, Italy, Netherlands, Poland, Romania, Switzerland, Czechoslovakia, Turkey, USSR.

4c. Asia (p. 128): Ceylon, China and Manchuria,

Cyprus, Federated States of Malaysia, British India (incl. Punjab, Bihar and Orissa, Burma, Berar, Madras Presidency, Bombay Presidency, Bengal (incl. Nepal, Bhutan, Sikkim, and the district of Darjeeling), Assam, North-West Frontier Province, United Provinces), Netherlands Indies, Indochina (incl. Tonkin, Annam, Laos, Cambodia, and Cochinchine), Japan, Palestine, Siam.

4d. Africa (p. 146): French West Africa, Algeria, Belgian Congo, Cyrenaica, Egypt, Eritrea, Madagascar, Morocco, Mauritius (Ile Maurice), Reunion (Réunion), Rhodesia, Anglo-Egyptian Sudan, Tripolitania, Tunisia, Union of South Africa.

4e. Oceania (p. 153): Australia, Fiji Islands, Hawaii, New Caledonia, New Zealand, Philippines.

B. Utilization of soya (p. 158): 1. The soybean in human nutrition and in industry: Whole soybeans, chart of the uses of whole soybeans, use of soya in the green state (green vegetable soybeans), soy sauce (*dau-tuong* of the Annamites, or *toyo*, named shoyu by the Japanese, or *chau-yau* or *chiang yoo* by the Chinese), condiments and sauces based on soya in the Netherlands Indies (*tempe*, *ontjom*, *tempemori* and *tempe kedele* [various types of tempeh and onchom, p. 168-70]), *tao tjo* [Indonesian-style miso], *tao dji* [fermented black soybeans], *ketjap*, *ketiap benteng* [Indonesian-style soy sauce], soymilk (*le lait de soja*), yuba (*crème de lait de soja*), tofu (*le fromage de soja*) and fermented tofu (*des fromages fermentés*, made by Li Yu-ying near Paris), soymilk casein (*caséine du lait de soja*, for industrial use, including vegetable albumin, or galalithe [galalith]) [isolated soy protein], and artificial wool), soy lecithin (*lécithine de soja*), soy flour (*la farine de soja*, incl. soy bread, soy pastries, and soy cocoa).

Note 1. This is the earliest document seen (Sept. 2010) that uses the term *benteng ketiap benteng* to refer to an Indonesian-style soy sauce.

2. Soy oil (p. 194): Food uses, industrial uses (including soaps, products resembling petroleum, paints, varnishes, linoleum, and artificial rubber), extraction, directory of U.S. manufacturers of materials and equipment for soybean processing, directory of U.S. and Canadian manufacturers of food products based on soya (*produits alimentaires à base de soja*, p. 205-06), directory of U.S. manufacturers of industrial soy products (p. 206-07).

3. Soybean in the feeding of domestic animals (p. 207): Forage, hay, silage, pasture, soybean seeds, the minerals in soybeans, soya as a feed for dairy cows, cattle, buffaloes, sheep, hogs, horses and mules, poultry.

4. Use of soya as fertilizer (p. 257). C. The trade of soya and of its by-products (p. 363): Production of soybeans in the principal countries, economic importance of soybean culture in the USA, soybean trade/commerce including tables of the major importers and exporters, and amounts traded annually in 1931-1934, price of soybeans, cost of production.

List by region and country of people and organizations

that responded to a questionnaire sent by IIA (p. 273-76). Bibliography of main publications consulted, listed by region and country of publication.

Reunion (*Ile de la Réunion*): “The soybean (Le Soja) is only cultivated as an experimental crop, on a few square meters at the agronomic station” (p. 148).

Fiji (*Iles Fidji*): Soybean cultivation is not yet practiced in this colony; however soybean seeds are currently being imported in order to conduct a trial.

New Caledonia: In 1928 soybean cultivation was introduced to New Caledonia.

Note 2. This is the earliest document seen (Dec. 2007) concerning soybeans in Bhutan, Costa Rica, Dominican Republic, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Morocco, New Caledonia, Palestine, Peru, or Réunion, or the cultivation of soybeans in Bhutan, Costa Rica, Dominican Republic, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Mexico, the Middle East, Morocco, New Caledonia, Palestine, Peru, or Réunion. It is also the earliest document seen (Dec. 2007) concerning soybeans in connection with (but not yet in) Cyprus; it is stated that soybeans are not grown on the island of Cyprus. Soybean culture is not practiced in the Italian colonies of Eritrea (Erythrée, now part of Ethiopia) or Cyrenaica (Cyrénaïque, now part of Libya).

Note 3. This document contains the earliest date seen (June 2007) for soybeans in Bhutan, New Caledonia, or Réunion, or the cultivation of soybeans in New Caledonia (1928), or Bhutan or Réunion (1936) (One of two documents).

Note 4. This is the earliest French-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempe” (p. 168). It notes that, in general, the indigenous people of the Netherlands Indies use soybeans mainly to make *tempe*, a product which, throughout central and eastern Java, takes the place reserved for *ontjom* in western Java. Tempeh is found in two forms: either in large flat cakes which are cut at the time of sale into small square morsels, or wrapped in folded banana leaves. A detailed description of the preparation of each of these two types of tempeh is given as well as another type of tempe, called *tempemori*, which is made with soybeans and coconut presscake.

Soybean culture is not known to be practiced in the following countries or colonies: Antigua, Barbados, British Honduras (renamed Belize in about 1975), Trinidad and Tobago. Address: Rome, Italy.

3154. Ishimaru, Yoshio. 1936. Shōyu jōzō-jō kûki-chû no kinga ni tsuite [Microorganisms in the air in shoyu breweries (Abstract)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12:A261. [1 ref. Jap]

• **Summary:** Abstracted from *Jozogaku Zasshi* 14(9): (1936).

3155. Iwasaki, Kazuo. 1936. Shōyu no kanshō sayô ni tsuite. I. Fuki, shōyu teki teisando sokuteihô ni taisuru ichi ginmi [On the buffer action of shoyu. I. Additional remark: A close examination of a method of measuring the acidity of shoyu by titration (Abstract)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12:A50. [1 ref. Jap]

• **Summary:** Abstracted from *Jozogaku Zasshi* 13(11):1087-99 (1935).

3156. Nishida, Kotaro. 1936. Ni, san tokushu jōzō butsu no kagaku-teki kenkyū: Sotetsu shōyu [Chemical studies on several specialty fermented products: Cycad shoyu (Abstract)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12:A324 (at rear of volume). [1 ref. Jap]

• **Summary:** Abstracted from Kagoshima Koto Norin Gakko Gakujutsu Hokoku 11:209-224 (1936). Address: Kagoshima.

3157. Read, Bernard E. 1936. Chinese medicinal plants from the “Pen ts’ao kang mu” of 1596. 3rd edition of a botanical, chemical and pharmacological reference list. Peking, China: Peking Natural History Bulletin. Sales Agent: The French Bookstore. xvi + 391 p. See p. 114-18.

• **Summary:** Contents: Introduction in Chinese. Introduction to the third edition (Shanghai 1935). Provincial abbreviations. Abbreviations for parts of plants. Bibliographical abbreviations (journals and books). Secondary references helpful to a study of Chinese materia medica. Comparative table of Western, Japanese, and Chinese dates (1868-1935). Table of classes, general, and species for which references are listed. Index of Romanized Chinese names modified from Wade’s system. Index of common English names, with foreign names given in italics. Latin index.

References related to soybeans are subdivided as follows (p. 114-18, 256): Soybeans, black variety (var. *nigra*; the fresh hulls used in medicine are known as *Ta Tou P’i*). Soybean sprouts, black variety (*Ta Tou Huang Chüan*). Bean relish, black variety (*Ta Tou Ch’ih*). Bean ferment, black variety (*Tou Huang*; *Natto* in Japanese). Yellow soybean (*Glycine soja* S. et Z., var. *flava*; *Huang Ta Tou*). Soybean oil (*Tou Yu*). Soybean sauce, yellow variety (*Chiang Yu*; thick or thin). Soybean paste (*Chiang*). Bean curd, yellow variety (*Tou Fu*). White soybean (*Glycine soja*, S. et Z., var. *alba*). Soy sauce made with wheat flour (p. 256).

References for azuki beans (red mung bean, *P. mungo*, L. var. *subtrilobata*, Fr. et Sav. [HN. Br.]) are given on page 122. References for wheat gluten (*Mien Chin*) are given on page 256.

This book is largely a list of references relating to plants listed in the *Pen Ta’ao Kang Mu*. It is not a translation or summary of the latter work.

Note: This is the earliest English-language document

seen that uses the term “the fresh hulls” to refer to soy bran. Address: PhD, Head of the Div. of Physiological Sciences, Henry Lester Inst. of Medical Research, Shanghai, China.

3158. Rombauer, Irma S. 1936. *The joy of cooking: A compilation of reliable recipes with a casual culinary chat*. Indianapolis/New York: Bobbs-Merrill Co. v + 628 p. Illust. by Marion Rombauer Becker. 24 cm.

• **Summary:** This is the first edition of *Joy* published by Bobbs-Merrill. Soy is not mentioned in the index; neither is “vegetarian”—although recipes for three “meatless” soups are given (p. 29-30). However soy sauce is used in: Chow mein with fried noodles (p. 96). Chicken chop suey (p. 96). Soy sauce is not mentioned as a seasoning for gravy, sauces, or soups—but Worcestershire sauce is (p. 248). Under “Soups” (p. 22) we read: “Canned bouillon and beef cubes are in general use, but Savita, a meatless Battle Creek product, is a better substitute...” The amount of meat and sugar used in this cookbook is surprising. Address: St. Louis, Missouri.

3159. Rouest, Leon; Guerpel, Henry de. 1936. *Le soja français et ses applications agricoles et industrielles* [The French soybean: Its agricultural and industrial applications]. Chateauroux, France: G. Langlois. xxiii + 99 p. 28 cm. [42 ref. Fre]

• **Summary:** Contents: Preface, by L Brétignière (Prof. at Grignon, Member of the Academy of Agriculture). Preface to the first edition, by Louis Forest (1921). Introduction to this new edition: Soviet Russia and the soybean (*le Soja*; includes the story of Rouest’s stay in the Northern Caucasus, Russia, from 1930 to 1933), Germany and Poland take up the soya question, the canons [guns] of Germany versus the Manchurian soybean, a secret contract to provide the weapons of war, organization of a Polish bank in Manchuria, Germany cultivates soybeans in Romania and Bulgaria in preparation for the war, France and the cultivation of soybeans.

1. What is soja? 2. History of the propagation of soja: Introduction of the soybean into France and Europe, the soybean is cultivated in central Europe, in Austria, in 1875, in France the soybean is the object of numerous trials from 1876 to 1881, its cultivation worldwide, the study and acclimatization of soya become generalized.

3. Botanical characters of the soybean: And the varieties of soybeans. 4. Chinese varieties: The soybean in China, the production of soya in China in 1916 and 1917, production of soya in the Far East during the year 1928, exportation of soya from the Far East to Europe.

5. Japanese varieties: The soybean in Japan, varieties of soya from Indochina and from other Asian countries. 6. The soybean in America: American varieties, cultivation of soybeans in Ohio, selection of soya using pure lines in Connecticut.

7. The soybean in Europe: Italy, Russia, France,

French climatic zones for the cultivation of *Soja hispida*, the Atlantic zone, the continental zone, the Mediterranean zone and climate, can the soybean be cultivated in all the French climates including those in the north, northeast, and northwest, speedy production of soybeans in view of agricultural production and of the creation of early varieties for the regions in north and northeast France.

8. Instruction for growing soja in France. 9. Soja in Manchuria. 10. Soja seeds. 11. Selection of soja. 12. Varieties of soja. 13. Different ways of planting soya seeds. 14. Soy yield. 15. Nitrogen fixation in soya seeds. 16. Tilling and preparing the earth. 17. Soja fodder. 18. Soja, striking and improving. 19. Harvesting soja grain. 20. Soja oil. 21. Soja oil-cake for animal feeding. 22. Vegetable milk, soja milk and industrial casein.

23. Soja in human food: Soy flour and its applications, soy bread with wheat, nutritional composition of soja compared to dry legumes, soy viewed as a dry legume to replace meat, comparative production of nutritive elements among the various legumes used for human food, comparative value in calories of the usual foods and of soja, preparation of soy soups and meals in compressed tubes, what varieties of soy can serve the special needs of human nutrition, Sojenta, potatoes stuffed with soy, force meat balls (*boulettes*) of rice and soy, bread of rice and soy, pudding of soy and rice, soy sprouts and their food value, fresh soy sprouts in a salad, soy sprouts with vegetables, soy preserves and confections, soy chocolate, soy coffee, soybeans conserved in containers, soy with smoked fish, soup with soy vegetable meat, soymilk soup, omelet with smoked soy vegetable ham, green soy sprouts, soy cake, soy force-meat fritters.

24. The utilization of soja in the Far East: Vegetable cheese (tofu), soy-based condiments, Japanese natto (2 types), Japanese miso, Chinese miso, soy sauce (*soyou* or *schoziou*), making soy sauce in Kwantung, China, making soy sauce in Japan, koji or molded rice.

25. The culture of soja in North Africa (Rouest has varieties that would grow and yield well in the French colonies of Tunisia, Algeria, and Morocco). 26. Opinions of some authors on soja. Conclusions. Bibliography on soja.

A small photo on the “Dedication” page shows Léon Rouest (born in Paris on 11 Nov. 1872).

Concerning soy in Russia (USSR) (p. 52-53): In Russia, the soybean has been known for quite a long time, specially in the Ukraine and Bessarabia, but it was never grown over a large area, and was given a back seat (low priority) in agriculture until after the revolution of 1917. It was not until 1926-27 that cultural trials were conducted on farms in the state of Northern Caucasus (*d’Etat du Caucase du Nord*). In the regions of Rostov-on-Don (*Rostow-sur-Don*; *Rostov-na-Donu*), Eisk (near Krasnodar), Stavropol, Prim-Koumsk, Yessentuki / Essentuki in the Kuban and Kuban River area of the North Caucasus region of southern Russia, the yields

were 11 to 16 quintals.

In 1927 there were 600 ha planted to soybeans, increasing to 17,000 in 1928, in the *kolkhoz* (collective) farms or the *sovkhoz* (state owned) farms.

In 1929-1930 and until 1932-1933 there were very laudable / praiseworthy efforts to propagate soybeans in favorable regions, especially in the North Caucasus, but the soils of this region, although they are very rich and well suited to soybeans are also very rich in bad weeds and the results obtained up to the present do not seem favorable. As I said earlier, the soybean is a technical plant of the intensive type which is well suited to the soil and climate of Russia, but is much less suited to the indolent character of peoples who are accustomed to cultivating only small areas. In spite of the remarkable efforts at mechanization, the peasants who submit to collectivization and who do not yet understand it very well, the cultivation of soybeans does not assume the importance hoped for. Address: France.

3160. Shoji, Kenjiro. 1936. Shōyu no kōki. I. [The flavor of shoyu. I. (Abstract)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12:A9-A10. [1 ref. Jap]

• **Summary:** Abstracted from *Rikagaku Kenkyu Hokoku* 14(9):872 (1935).

3161. Tezuka, Kaneko. 1936. Japanese food. Tokyo: Maruzen Co. Ltd. 84 p. See p. 28. 20 Cm. Half-title: Tourist Library: 14. [Eng]

• **Summary:** The chapter titled “Common everyday food” (p. 22+) notes that the three breakfast dishes are boiled rice, *misoshiru* (bean-paste soup [miso soup]), and *kô-no-mono* (pickles). With them are served “shell-fish *tsukudani* (foods boiled down in soy [sauce]), *shiokonbu* (the laminaria boiled in brine and soy), *nori* (laver), *nimame* (boiled beans [soy]), various kinds of bean-paste [miso] dishes, pickled plums [umeboshi], etc.” A brief description of how to make miso and miso soup is given (p. 24). Under “Dinner dishes” we read: The most simple of foods is bean-curd.” Fresh raw fish, “cut into shining thin slices (*sashimi*) is served with fresh grated radish or horse radish, and eaten dipped in vinegar or soy.”

The section titled “How Bean-curd is Made” (p. 28) states: “Tôfu (bean-curd) is made by soaking soy beans in water, mashing them, straining the mass through cloth and solidifying with the addition of magnesium chloride. It is a very nutritive food. The mush left over after straining *tôfu* is called *u-no-hana* (deutzia flowers) [okara] and is used in cooking vegetables.” A photo shows a “Vendor cutting bean-curd.”

A photo (p. 64) shows a hall full of Buddhist priests dining at Soji-ji temple, Tsurumi, Japan. In Japan, March 24 and Sept. 24 are national holidays—Spring and Autumn Worship of the Imperial Ancestors. To worship all the

Imperial Ancestors, the people hang out the Japanese flag and “to honor the spirits of their own ancestors, make *Inari-zushi* (vinegar-spiced rice wrapped in fried bean-curd) and *botan-mochi* (boiled rice slightly kneaded and covered with [azuki] bean jam). They offer these to the spirits of the dead by placing them before the Buddhist altar in the home and sending them to the family temple and the homes of relatives.”

The chapter titled “Japanese Cakes” notes that the two basic types are *higashi* (dried cake) and *namagashi* (undried cake). “*Namagashi* is made of [azuki] bean-jam for the most part. Bean-jam is just like a cream made of red beans and sugar. *Namagashi* is divided into *yôkan* and others.” *Yôkan* is made of bean-jam gelled with agar (Japanese isinglass). A photo (p. 83) shows a bean-jam factory and show case of products.

Note 1. Editorial note signed: Board of Tourist Industry, Japanese Government Railways.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the word “mush,” or the term *u-no-hana*, or the term “deutzia flowers” to refer to okara.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term “bean-paste” to refer to miso.

Note 4. This is the earliest English-language document seen (March 2006) that uses the term “bean jam” (or “bean-jam”) to refer to sweet azuki bean paste [*azuki-an*]. Address: Prof., Japan.

3162. Van Gundy, Dorothea. 1936. La Sierra recipes. Campus and Maitland, Ontario, California: Published by the author. 47 p. 19 cm.

• **Summary:** Most (but not all) of the recipes in this book call for soy-based ingredients. Contents: Dedication. “This book is lovingly dedicated to the memory of my father.” Foreword: “Due to the increase of disease in the animal kingdom, the diet should be as free as possible from these elements, including meat, eggs, and milk.” Approximate composition for La Sierra Products: Soy butter [soynut butter] (27.6% protein, 47.1% fats). Soy breakfast food. Soy flour. Cooked soy beans. Soy loaf. Milk. Bean sprouts. Soy cheese [tofu]. Soy spread. Soy bologna. Dry soy beans.

1. The soy bean as a human food: Nutritional value, varieties of soy beans, flour, soy milk, soy milk from flour, soy milk from raw beans, soy cream (made by homogenizing / blending equal parts of soy milk and soy oil or other vegetable oil), soy cheese, soy bean sprouts, soy sauce.

2. Soups: Incl. Soyament bouillon. Many use Soyament (Soy Sauce), soy milk, or soy cream. 3. Entrees. Recipes incl. Soy croquettes (with Soy Bean Pulp and Smoein). Walnut Loaf (with Smoein and soy milk). Soy protose (with soy butter and Mamenoko flour). Gluten patties (with Smoein). Soy cheese with tomato sauce. Soy cheese croquettes. Soy cheese and Soyament sauce. Baked macaroni

with La Sierra Vegetable Bologna. Soy loaf. Soy loaf a la king. Baked soy noodles. Chow mein (with La Sierra Soy Cheese). Lentil patties (with Smoein).

4. Sauces and gravies: Many use soy milk, Smoein, or soy sauce. 5. Vegetables. Incl. Creamed vegetables (with soy milk). 6. Salads and salad dressings. Soy recipes include: Carrot and soy cheese. Tomato and soy cheese. Pineapple and soy cheese. Stuffed celery (with soy cheese). Soy loaf salad. Cabbage and banana salad (with soy mayonnaise). Head lettuce (with soy butter dressing). Salad dressing (uses soy milk in place of eggs). Soy mayonnaise [Note: This is the earliest recipe seen for a soy mayonnaise]. Tomato mayonnaise (tomato juice beaten into soy mayonnaise). Thousand island dressing (with soy mayonnaise). Parsley and olive dressing (with soy mayonnaise; uses ¼ cup chopped olives, not olive oil). Soy cream dressing. Soy butter dressing [with soynut butter]. Cream golden dressing (with soy cream). French dressing (with soy oil or any vegetable oil).

7. Desserts. * = with soy milk. + = with soy cream. Cream rice pudding*. Rice pudding+. Blanc mange*+ [Blancmange]. Orange cream pudding+. Lemon fluff+. Fruit fluff+. Cream tapioca*+. Frozen pudding*+. Vanilla Ice Cream*+. Almond cream [Almond ice cream] (incl. 1 cup chopped almonds)*+. Strawberry sherbet+. Raspberry sherbet+. Butterscotch chiffon pie+. Lemon pie+. Banana cream pie*+. Pumpkin pie without eggs*. Soy pastry with soy flour. Soy cookies+.

8. Bread: Soy bread (with 4 cups entire wheat flour and 1 cup soy flour). Entire wheat bread (with 2 cups soy milk). Entire wheat sticks (with 3 parts wheat flour and 1 part soy flour). Corn meal crisps (with 4 parts corn meal, 3 parts wheat flour, and 1 part soy flour). Short cake (with 2 parts soy milk, 5 parts wheat flour, 1 part soy flour). Waffles (with 12 parts wheat flour, 2 parts soy flour, and 7 parts soy milk).

9. Sandwiches: Soy bean filling. Vegetable bologna. Soy delight filling (with soy[nut] butter). Soy cheese and raisin sandwiches. Soy butter (soynut butter thinned with tomato juice). Soy butter and honey. Soy cheese and olive [chopped green olives]. Soy spread [Made by La Sierra]. Sandwich salad (with many soy possibilities).

10. Beverages: "A very fine coffee substitute is made [by La Sierra] from the Soy Bean, and tastes remarkably like Coffee. It is particularly fine from an alkaline standpoint, and is particularly excellent to be used in connection with high alkaline diets." Soy-co (Beverage) Add 1 rounding teaspoon to 1 cup of water. "Percolate or boil until desired strength. Serve plain or with Soy Cream." Also delicious iced. Soy-co (Made with soy milk). Soy milk shake. Soy banana drink. Mamenoko drink (uses 3 tablespoons Mamenoko, which is processed soy flour). Soyament cocktail ("A very refreshing beverage may be made by using 1 to 2 tablespoons Soyament sauce to 1 cup of water").

11. Healthful confections: Beanut brittle (2 cups

each soy Beanuts and brown sugar). Victoria fudge (with soymilk).

Use of soy beans in the diet: Outline for 3 meals. Suggestion for 3 days' menus, using soy products.

La Sierra Industries manufactures the following 14 foods from soy beans: Canned soy beans, plain or with tomato sauce. Soy loaf. Soy vegetable bologna. Soy milk. Soy breakfast food. Soy butter [like peanut butter]. Soy-co (beverage) [coffee substitute]. Smoein (smoked meat flavor). Soy spread. Soy flour, raw and processed. Soy beanuts (parched soy beans).

Soyament brand bean sauce. This soya bean sauce is "prepared from soya beans by splitting up the bean protein by a special process which thoroughly decomposes it into Amino Acids. A number of Amino Acids, each possessing a sweet taste, is the most remarkable feature of the Soyament Sauce and makes it different from many of the so-called soy sauces... On sale at all grocery stores or write to Soya Bean Products Co., 3522 East Third St., Los Angeles."

In the section on "Soy milk" (p. 8) is a long quotation from Dr. [Walter] Siegmeister: "So well has the Soy bean served as a source of vegetable milk, that the records tend to show that it has proven superior to cow's milk in certain important respects. The most marked of these is the almost complete absence of rickets in China, which is quite probable in view of the fact that not only is the Soy bean rich in Vitamin D, but also in Calcium and Phosphorous, the chief requirements for healthy bone development."

Note: This is the earliest document seen (Dec. 2003) that mentions a soy-based shake. It is also the earliest English-language document seen (Dec. 2003) that uses the term "Milk Shake" to refer to a non-dairy soy milk shake or that contains the term "Soy Milk Shake" (p. 41). The recipe with that title states: "Soy Milk may be mixed with any of the fruit juices and beaten with a small amount of chipped ice. It fluffs up and is very palatable. Soy Milk and orange juice combine splendidly." Address: Dietitian, Box 203, Ontario, California.

3163. Jones Grain Mill. 1936? Natural foods: Catalog, recipes, information. Los Angeles, California. 74 p. Undated. 22 cm.

• **Summary:** On the cover is a white mill behind a mill wheel (unrealistic) on a mill pond. Contents: Foreword. Health recipes: Cereals (incl. Soy bean or Mamenoke {Mamenoka, Mamenoko} breakfast cereal), breakfast cakes (incl. soy hot cakes with soy milk and Mamenoka flour, soy waffles, soy bean griddle cakes), desserts, breads (incl. soy bean flour gems, whole wheat bread), candies. Vital information: Vitamins and minerals essential to life.

Price list (prices are given for each item listed on pages 46-72): Alberty products, Alvita products, Battle Creek Sanitarium Health Foods [Michigan] (p. 47-48), beverages—coffee substitutes (Loma Linda Breakfast Cup, Soyco {soy

bean coffee}, Javex {soy bean}, Carque's Soy Bean Coffee), books (by Dr. Benjamin Gayelord Hauser, Paul C. Bragg, Mrs. Alberty, Martin W. Pretorius, Otto Carque, Clark Irvine, Dr. Harry Finkel), Dr. Paul Bragg products, Jones Grain Mill Bakery (operated by Alberty Specialty Bakers), Burbank products, Carque's products, crackers and toast (Cubbison's bulk or packaged), honey, jams & jellies, juices (fruit & vegetable), KAL products, kelp products (products of the sea, incl. sea lettuce, dulse, Parkelp), Kovac products, Loma Linda Foods (Soy products: Soy beans—plain, tomato, or tomato and Proteena, Soy milk—8½ oz, No. 1, or No. 2, Soy Mince sandwich spread), macaroni & noodles (incl. soy bean macaroni, soy bean noodles), meat substitutes (incl. Simoein [Smoein], Soy loaf, Alfa Soy Spread, Soy Mince) McCollum products, maple syrup and candies, Martin Pretorius products, nuts and butters, Nature Ade products, Nutro Links (Santay, Swiss, Hauser), oils, olives, Radiance products, salts (vegetable, vegetized, and vegetablized), salad dressing and mayonnaise (made with lemon and vegetable oil), health sugars and sugar substitutes, seeds, soya bean products, teas.

The price list of "Soya bean products" (p. 72) reads as follows: "Breakfast Cereal with Carob Flour ([and soya beans] tastes like Grape Nuts), pkg., 25¢. Breakfast Cereal (prepared [with soya beans]), pkg., 25¢. Soya bean flakes, pkg., 30¢. Soya bean grits, pkg., 25¢. Soya bean bread, lb. loaf, 14¢. Soya bean melba toast, lb., 30¢. Soya bean wafers, lb., 40¢. Soya bean cookies (sweetened with dextrose), doz., 15¢. Soya bean coffee cakes (sweetened with honey), each, 5¢. Soya beans cooked: Soya beans (plain cooked), No. 2 can, 13¢. Imported soya beans from Manchuria, lb., 10¢. Pre-cooked soya beans (easily prepared in 30 minutes), lb., 15¢. Soya beans with tomatoes (ready to serve), No. 2 can, 15¢. Cooked soya beans with Proteena, No. 2 can, 15¢. Other soya bean products: Non-fattening [sic] soya bean oil (for all cooking purposes), pint, 40¢. Soya bean coffee, lb., 25¢. Soya bean flour, lb., 10¢; 3 lbs., 25¢. Dextrinized soya bean flour, lb., 15¢. Soya bean milk flour, lb., 60¢. Soya bean candy (with pure chocolate and Dextrose), lb., 50¢. Soya bean sandwich spread, 25¢. Soy sauce, 20¢. Soya bean loaf, No. 2 can, 25¢. Soya bean milk, No. 2 can, 15¢. Soya bean cheese (made from soya bean milk), lb., 30¢. Soya bean mince, 8-oz. can, 25¢. Soya bean spaghetti, lb., 25¢. Soya bean macaroni, lb., 25¢. Soya bean noodles, lb., 25¢. Soy beverage (Cocoalette), 10¢.

Ads include: Hollywood Cup (p. 20). Otto Carque Co. (Glendale, California, p. 30). Loma Linda Foods (p. 33, sells soy wafers, three styles of soy beans, liquid soy milk, soy mince). Vita-Pekan (p. 46, formula includes soya bean as a major ingredient). Alberty dried brewers yeast (p. 50). Kovac Laboratories (p. 67). Cubbison (p. 73, incl. Soya Toast, Soya Cookies, Soya Gluten Crackers).

Note: This catalog was probably published in 1933, since the company's location in Beverly Hills is not mentioned; it opened in 1934. Moreover, the book titled *Vital*

Facts about Foods, by Otto Carque was first published in 1933. Address: 322 So. Hill St. and 504 So. Broadway. Both: Los Angeles, California.

3164. **Product Name:** Maru-sho brand Shiro-miso, and Koji.

Manufacturer's Name: Tsuruda Company (Tsuruda Goshi-gaisha).

Manufacturer's Address: 1535 Laguna St., San Francisco, California. Phone: WE 6800.

Date of Introduction: 1937. January.

New Product—Documentation: The Japanese American Directory. 1937. p. 8 (directory; Importers of groceries. "Tsuruta Co.") and add (½-page; top 1/3 of ad is in English: "Tsuruda Company. Importers, manufacturer & exporters. 1535 Laguna St., San Francisco"). Also Tsuruta Goshi Gaisha in San Jose. Miso & Shoyu manufacturer. 472 Josefa St.; Ballard 5539. Note: This company appeared in San Jose in 1936. The ad is divided vertically into halves; one for San Francisco, the other for San Jose. The company spells its name "Tsuruta" in the romanized directory but "Tsuruda" in English part of its ad. Same in 1938. p. 6 (directory).

3165. Akabori, Shiro; Kaneko, Takeo. 1937. Shōyu no kōki seibun. III. Beta-methylmercapto-propionaldehyd ni tsuite [On the aroma of soy sauce. III. Beta-methylmercapto-propionaldehyde]. *Nippon Kagaku Kaishi (J. of the Chemical Society of Japan)* 58(2):236-37. Feb. [4 ref. Jap] Address: Osaka Teikoku Daigaku, Rigaku-bu, Kagaku Kyoshitsu.

3166. *Los Angeles Times*. 1937. Japan: Japanese make ritual of dining—Harmony of color stressed in dainty servings. April 21. p. B16.

• **Summary:** "Soya beans provide shoyu, the favorite sauce which replaces salt in many dishes and which is used in the preparation of meat, vegetables, soup, fish and poultry."

Gives six Japanese recipes including: Vegetable soup (*Misoshiru*) (with "tofu {dried bean curd}"). Beef and vegetables (*Suki Yaki*) (with "tofu {dried bean curd}" and shoyu).

3167. *Los Angeles Times*. 1937. Southland cafes: World's choicest menus found in Southland. April 21. p. B39, B41.

• **Summary:** Most of us who live in California have a favorite Chinese restaurant, where you can order the usual chop suey and chow mein, as well as the more typical Chinese dishes of distinction. The dollar dinner includes "almond chicken, made with bamboo shoots, water chestnuts, dried mushrooms, diced chicken and soy sauce." And there are crispy "fried shrimps which you dip into ketchup and mustard sauce,..." Or try the "bock choy served with Chinese cheese, which is really bean cake [tofu] fermented in wine and tasting much like Roquefort."

3168. *Contemporary Manchuria*. 1937. Bean oil industry in Manchuria. 1(1):15-42. April.

• **Summary:** Contents: Methods of oil extraction: Wedge system (round cake), screw system (round cake), hydraulic system (round cake or plate cake; the plate cake system, which is the most advanced method of pressure extraction, is used only by Nisshin Oil Mills at Dairen and Anglo-Chinese Trading Company {Kabalkin Oil Mills} at Harbin), benzine-benzol system, alcohol system (recently developed by Central Laboratory of the SMRC and now utilized by the Manchuria Soya Bean Industry Company at Dairen). Characteristics of the various extraction methods (merits and demerits): The hydraulic system is gradually displacing the screw system, the alcohol extraction system is the best and it produces priceless lecithin as a by-product, most of the soybean oil mills in Europe use the benzine system. Varieties of bean cake: Round cake (6 types), plate cake, flake cake [soybean meal], refined bean cake (Soyalex; extracted with pure alcohol. Its use as a raw material for shoyu, miso, candy, or noodles adds a high degree of nutritive value). Utilization of soya beans (a chart on page 27 shows many uses): Uses of soy beans, uses of bean cake (as fertilizer, for manufacturing shoyu, for making bean flour {*kinako*}, as raw material for Ajinomoto, in making liquid paint {Solite as invented by Mr. Yosei Suzuki and manufactured by the Solite Company at Dairen}, as a raw material for various protein products {including sizing for paper}), uses of bean oil (food oil, lard substitute, butter substitute or margarine, paint diluent, soap, glycerine and fatty acid, waterproof material {Tantalus}, petroleum substitute, gum substitute and other), lecithin. Factory construction expenses.

In the Far East, the solvent extraction system is used by only 3 firms: (1) The Honen [Hohnen] Oil Manufacturing Company with mills at Dairen (capacity 200 tons/day), Naruo (200 tons), and Shimizu (610 tons); (2) the Nikka Oil Manufacturing Company with its mills at Wakamatsu (200 tons); and (3) the Manchuria Soya Bean Industry Company with its mills at Dairen (100 tons). The total capacity of these 3 companies is 1,310 tons/day, of which Honen has 77%. Their combined annual production of Flake Cake [soybean meal] is about 270,000 tons, which is negligible in comparison with the total amount of round-cake production in Manchuria.

The latest method of extracting oil from soya beans is by the use of benzine or benzol as chemical solvents. The Honen Oil Mills at Dairen is the only one which uses this method at present.

Candies and noodles are already being manufactured from soybean flour. An experimental station of the Department of Agriculture and Commerce has experimented with the use of Flake Cake in the manufacture of shoyu and obtained encouraging results in terms of cost and quality.

3169. South Manchuria Railway Co. 1937. Bean oil industry in Manchuria. South Manchuria Railway Co., English Section. 37 p. April. 29 cm. See also original 1936 edition with same author and title. [Eng]

• **Summary:** Contents: I. Methods of bean oil extraction: Wedge system (round cake; the most primitive and small scale but still extensively used in remote interior districts), screw system (round cake; the most widely used method in Manchuria), hydraulic system (round or plate; the latter allows application of much greater pressure. Used only by the Nisshin Oil Mills at Dairen [capacity 150 tons/day of soybeans] and the Anglo-Chinese Trading Co. [Kabalkin Oil Mills] at Harbin, capacity 220 tons/day), benzine-benzol system (only used by Honen [Hohnen] Oil Mills at Dairen), alcohol system (a new process discovered by the Central Laboratory of the South Manchuria Railway Co. and now used by the Manchuria Soya Bean Industry Company at Dairen).

II. Characteristics of various extraction methods: 1. Comparison of wedge, screw, and hydraulic systems. 2. Comparison of round cake (hydraulic), plate cake, benzine extraction, and alcohol extraction systems: Constituent elements of bean cakes, merits and demerits of each type. Alcohol is considered the best. It gives the best quality oil and meal, and is the only system that "produces priceless lecithin as a by-product. The only demerit of this system at present is the high cost of production as compared with other systems. This is due to the large amount of capital required in the installation of machinery and plant and the necessity of using expensive alcohol as solvent." p. 5.

III. Varieties of bean cake. 1. Round cake: This is the original Chinese bean cake, which comes in several specialized forms: Fodder bean cake used as feed, "Pien Ping" (untrimmed cake), "Kuang Ping" (junk wharf cake), dried round cake (patented by the Dairen Soya Bean Industry Research Inst.), crushed cake, miscellaneous cakes. 2. Plate cake (rectangular). 3. Flake cake (from solvent extraction). In East Asia only 3 companies and 5 mills use solvent extraction. Daily capacity of these mills is as follows: Honen [Hohnen] Oil Manufacturing Co.—Dairen 200 tons, Naruo 200 tons, Shimizu 610 tons. Nikka Oil Manufacturing Co.—Wakamatsu 200 tons. Manchuria Soya Bean Industry Co.—Dairen 100 tons. The total annual production of flake cake is about 270,000 tons and is negligible in comparison with round cake production. 4. Refined bean cake ("Soyalex"). Resulting from alcohol extraction, it is considered to be the best quality for use in foods (shoyu, miso, candy, noodles) or feeds.

IV. Utilization of soya beans. 1. Uses of soya beans (a chart shows many uses): Foodstuff, animal feed, refined oil, lecithin. 2. Uses of bean cake: Directly as fertilizer (it contains nitrogen, phosphoric acid, and potassium, put is being replaced by ammonia sulphate), and as or animal feed. Processed for making foods such as shoyu, miso, bean

flour (“kinako”). To make Ajinomoto, Solite liquid paint, and various protein products such as paper sizing, celluloid substitute, or medicine. 3. Uses of bean oil: “The bean oil was used originally by the Chinese people for cooking, lighting, and lubricating (carts) purposes and the demand was limited within China. In less than 30 years, however, it began to occupy an important place in the world market.” The chief reasons are its relatively low cost and many potential uses for foods (lard substitute, butter substitute) or industrial products such as soap or paint, glycerine or fatty acids, waterproof material, petroleum substitute, gum substitute, etc. 4. Lecithin: Used for making leather, margarine, or restoratives. The alcohol extraction process produces lecithin, vitamins, and saponins as by-products. The yolk of an egg contains 7-10% lecithin. “The soyalex lecithin, obtained through the alcohol extraction method, is the most excellent lecithin produced through applied chemistry. It contains 3 to 10 times more lecithin than egg yolk and is more economical for general use.

V. Factory construction expenses: Machinery, installation, and building for a plant that can process 100 tons of soya beans per 24 hours. Screw system round cake, 102,880 yen. Hydraulic system round cake, 111,856 yen. Alcohol or benzine extraction, 719,365 yen.

Tables of statistics: Exports of soya beans, bean cake, and bean oil from 1926-1935: A. From individual ports (Dairen [by far the largest], Yingkou, Antung, Vladivostok, total). B. To various countries (Japan, Europe, China, USA, others, total). Value of exports in 1935 (M. yen; p. 36): Soya beans 130,053,055, beancakes 51,370,086, bean oil 20,132,208. Soya bean crop area and production in Manchoukuo, 1924-1935 based on statistics compiled by the Manchoukuo Dept. of Industry.

On the last page is written, Dr. Roy H. Akagi, S.M.R. Co., as if he were author.

Note: This is the earliest English-language document seen (March 2002) that uses the word “beancakes” to refer to ground, defatted soybeans.

3170. Holmes, Marie. 1937. Cooking chat: Artistic dishes delight Occidental when dining in Japanese manner. *Toronto Daily Star (Canada)*. May 20. p. 36.

• **Summary:** Several weeks ago, the writer was served a complete, authentic Japanese meal at a Japanese restaurant in New York City. Sukiyaki was cooked at her table. Over the simmering vegetables, the waiter poured “some soy or shoyu sauce,...” Floating in her delicious soup was “a little flower of pink bean curd, and a slice or two of white mushroom.” She finds that Japanese food is the most artistic in the world, and artistically served. “Since modern hostesses are turning more and more to dishes of other countries and, in fact, placing before their guests whole foreign menus,” now is a good time to start learning about the dishes of Japan. The recipes for a Japanese menu are given, including:

Beef sukiyaki (with “¼ cup soy sauce” and “1 square piece bean curd”) prepared in a frying pan. Japanese directions for Miyako sukiyaki (seasoned with “shoyu sauce”).

A small portrait photo shows Marie Holmes.

3171. *Popular Mechanics*. 1937. The bean that made good. 67:660-62, 120A, 122A. May.

• **Summary:** Photos show: (1) William Morse in his office at USDA in front of shelves of soybean food products. (2) Native 2-wheeled carts drawn by horses or mules (and widely used to carry soybeans) in front of storage silos in Manchuria. (3) “Soybeans from Japan used as green vegetables”—their pods. (4) A soybean storage yard Manchuria, with many horse-drawn wooden carts and tall cylindrical storage containers. (5) William Morse inspecting candied soybean products. (6) Two men in a hay-strewn field. (7) Boiled soybeans being crushed in a wood mortar in Japan. (8) Earthenware jars for making soy sauce in China; each is topped with a conical woven bamboo lid. (9) Two men, possibly including Morse, examining the root systems of soybean plants.

A chart (p. 120A) is titled “Soybean Utilization.”

This digital photo, with caption and date, was sent to Soyfoods Center by Joyce Garrison (William Morse’s granddaughter) of West Hartford, Connecticut (July 2004).

3172. *Revista de Agricultura (Cuba)*. 1937. El frijol que se ha hecho famoso [The bean that has become famous]. 20(4-5):30-36. April/May. [Spa]

• **Summary:** Describes the soybean, its history in the United States, the advantages of planting it, its uses as oil and vegetable milk, its use in industry, and prospects for the future. Contains eight photos: (1) William Morse of the USDA standing in front of many floor-to-ceiling shelves filled with food products made from soybeans. (2) Green vegetable soybeans in their opened pods. (3) Horse-drawn carts with sacks of soybeans and silos filled with soybeans in Manchuria. (4) William Morse pouring whole soybeans into his left hand from a can held in his right hand. On a nearby wooden box, apparently containing the same type of soybeans, is written in Japanese (from right to left) “*Hakka mamé*,” which means “peppermint soybeans.” (5) Two farmers in a field of shocked soybeans. (6) A Korean girl pounding soybeans in a tall wooden mortar. (7) A Chinese courtyard filled with vats of fermenting soy sauce, each covered with a conical braided bamboo lid. (8) Two farmers wearing straw hats inspecting soybeans in a field.

3173. Megee, C.R. 1937. Soybean production in Michigan. *Michigan Agricultural Experiment Station, Circular Bulletin* No. 161. 14 p. June.

• **Summary:** Contents: History, adaptation, and uses. A high protein emergency or annual hay crop. Digestible nutrients and feeding value per acre of soybeans and

other Michigan crops. Soybean oil meal. A supplementary protein feed. Soybeans for silage. A cash crop. Soybeans as a soil improving crop. Cultural practices: Varieties, time of planting, rate and methods of planting, inoculation, cultivation, harvesting for hay, harvesting for seed, threshing, storage of soybean seed. Industrial and commercial uses of soybeans: Soybean oil, soybean oil meal, dried beans, for human food.

“As early as 1902 and for 20 years afterwards, E.E. Evans of West Branch, Michigan, took an active part in introducing, breeding, and distributing varieties of soybeans. The Ogemaw is an introduction of Mr. Evans and is the result of a cross between his No. 6 Early Black and Dwarf Brown. Since 1918 the Michigan Agricultural Experiment Station has conducted numerous variety tests for both hay and seed production at East Lansing and at various points over the state” (p. 3).

Table 4, titled “Soybean variety adaptation” (p. 10) lists the following: Manchu, Ito San, Mandarin (Canada), OAC 211 (Ontario), Dunfield, Illini (Illinois), Mandell (Indiana), Sciota (Ohio), Cayuga (New York), Ogemaw (Early Michigan), Wisconsin Early Black, Virginia, Wilson, and Mammoth Yellow. For each variety is given the name, maturity, seed color, and adaptation. “The Manchu is the leading general-purpose variety for hay, seed, and commercial uses in Michigan.”

Under “Industrial and commercial uses of soybeans,” a table shows 10 industrial and food uses of soybean oil, 15 industrial and food uses of soybean oil meal (incl. diabetic foods, flour, crackers, soy milk, bean curd [tofu], soy sauce), and 12 industrial and food uses of dried beans (incl. roasted beans, coffee substitutes, soups, baked beans, boiled beans). “When soybeans are to be used as a green vegetable, the Easycook and Hahto are preferred because of their milder flavor.” Address: Section of Farm Crops, East Lansing.

3174. Radcliffe, Jack B. 1937. Soybean: The perfect protein. *Nature's Path* (New York City). June. p. 210.

• **Summary:** “Packed into the tiny soya bean is a wealth of nutrition; minerals, tiny vitamins, easily assimilated carbohydrates, and the greatest hoard of proteins that any food in the vegetable kingdom contains.” Just imagine. “A vegetable product equal to most, and superior to some animal products in proteins, the body building element in food, without which there would be no life.”

Unlike meat and fish, the soybean is one of those rare foods that alkalize the body. Milk and butter made from soybeans are better than their dairy counterparts. Its oil is equal to the best grade of olive oil. It is the world's leading source of lecithin, and the source of protein-rich soy flour, soy sauce, roasted soybeans, vegetables, cheese, etc. Dr. Kellogg is making increasing use of “soy acidophilus.”

3175. Horvath, A.A. 1937. Re: Hydrolysis of soybean

protein. Letter to Dr. John Harvey Kellogg, The Battle Creek Sanitarium, Battle Creek, Michigan, Aug. 13. 1 p. Typed, with signature on letterhead. [1 ref]

• **Summary:** “I have your letter of August 10-th with an inquiry regarding the hydrolising of soybean protein. As the hydrolysis of proteins of various nature for commercial purposes is usually done by acids under pressure at moderate heat, and since the Vitamins B-1 and B-2 are quite resistant to acids, one should not expect much destruction of these vitamins during such hydrolysis.

“I have been interested in the commercial angle of products of hydrolysis from soybean protein, and have done some work along lines of the manufacture of soy sauce and sodium glutamate by chemicals. If you feel that a closer cooperation between the Battle Creek Food Company [Battle Creek, Michigan] and myself would be profitable commercially, I would be glad to discuss it with you.”

Horvath plans to drive to Ontario, Canada, with his family to present a paper. “On Sept. 14-th I could stop for a day or two at Battle Creek (with my family) to discuss soya matters with you.” Address: Chemist, Univ. of Delaware, Agric. Exp. Station, Newark, Delaware.

3176. *Washington Post*. 1937. Lowly soybean startles capital as exhibit illustrates varied uses. Aug. 18. p. 15.

• **Summary:** “The soybean, chameleon of agriculture, made its formal debut in Washington [DC] last night when an exhibit of its wonders, mounted in a Pennsylvania Railroad car, stopped for two hours in Union Station.” It met with popular approval as shown by the continuous flow of visitors which filed through the car. The “spectators were all amazed to see one little bean pop up under so many different guises.”

A series of charts showed how the U.S. soybean crop has developed from 5,000,000 bushels in 1925 to 37,000,000 in 1935 and about 20,000,000 more [i.e., 57,000,000 bushels] this year.

Describes many of the different ways that soybeans can be used. Handfuls of roasted salted soybeans, courtesy of the American Soybean Association, were served to visitors. They tasted like a cross between peanuts and almonds. Madison Agricultural College, a Seventh Day Adventist institution in Madison, Tennessee, has developed a “number of meat substitutes, including an enticing ‘ham’ loaf, and a coffee substitute.

A series of harvest scenes showed how harvesting methods have changed. “The biggest step forward was the perfection of the combine, the forerunner of which was developed in 1925 by the late Harvey Spaulding Clapp, son of the late Moses Edwin Clapp, of Minnesota. Clapp grew soybeans on his Virginia estate, which used to be part of Mount Vernon. According to Russell G. East, general agricultural agent for the Pennsylvania Railroad and director of the exhibit, it was Clapp who conceived the idea of a machine which would beat the beans from the pods as the

plants stood in the field.” The plants are left standing and gradually turn to hay.

In 1804, the soybean was introduced to the United States from China, “where natives have grown it for roughly 5,000 years. Orientals use it solely for food. Soybean sauce is familiar to all lovers of Chinese dishes.”

3177. League of Nations Health Organization–Bandoeng Conference. 1937. Report of the Intergovernmental Conference of Far-Eastern Countries on Rural Hygiene. *International Conference of Far Eastern Countries on Rural Hygiene (Preparatory Papers)* Vol. 3, page 74-76. Held 3-13 Aug. 1937 at Bandoeng, Java. Published 8 Sept. 1937. Official No. C.H. 1235.

• **Summary:** In Chapter 4, titled “Nutrition,” section I discusses “Composition of food and methods of its preparation.” The soya bean and its uses in French Indo-China (today’s Vietnam) are discussed on pages 75-76. “Apart from rice and maize, one of the most important food crops in that Far East is the soya bean (*Glycine hispida*). This bean is rich in proteins and fatty matter, but has a very low carbohydrate content. Eaten in its natural state as a vegetable, or better still, in the form of a variety of appetising preparations in which the casein is partly disintegrated, the soya bean makes good the deficiency of fatty and nitrogenous matter in the native diet, which consists almost entirely of the rice carbohydrates.

“Its chief derivatives are nuoc-dâu, or soya milk; dâu-phu, a fresh soya cheese obtained by precipitating the casein of soya milk; dâu-tuong, or soya sauce, which is often used instead of nuoc-mam, especially in Tongking; and dâu-phu-chuc, or soya cream [yuba].

“Soya milk is a yellowish-white liquid with a slight smell of burnt bread and a peculiar flavor greatly appreciated by the Annamites. It is prepared by peeling the beans, pounding them in water, straining, and boiling up the resulting liquid.

“Soya cheese [tofu] appears in trade in the form of faintly yellowish-white rectangular cakes, weighing about 150 grammes each. Ten kg. of soya beans will produce 100 liters of milk, which in turn yield 300 cakes, or 45 kg., of cheese. This very cheap product, of which several thousand kilogrammes are sold every day in the Hanoi market alone, is eaten either raw with salad, or stewed with vegetables, or fried in oil.

“Soya sauce, or dâu-tuong, is a preparation obtained by fermenting a mixture of glutinous rice [*Oryza sativa glutinosa*, called ‘nêp’ by the Annamites] and roasted soya beans. It is a condiment both salty and sweet, which frequently replaces nuoc-mam, a relatively dear food, especially in regions distant from the sea.

“Dâu-tuong is commonly found in commerce in the form of a heterogeneous mixture, consisting of a liquid (nuoc-tuong) in which floats a somewhat coarse paste called

tuong-cai, made of incompletely powdered soya beans.

“Dâu-phu-chuc is prepared by drying the skin that forms on the surface of soya milk after prolonged heating. It is sold in shiny, pale yellow, crinkly sheets, and smells like cow’s milk. It is a food rich in proteins and fatty matter, and is consumed by the Annamites in small pieces, either in soup, or in pork, beef, or chicken stew.”

Note: This is the earliest English-language document seen that uses the term “Roasted soya beans” to refer to soynuts. Address: Geneva, Switzerland.

3178. A&P Food Stores. 1937. Fill up your pantry now! (Ad). *Hartford Daily Courant (Connecticut)*. Oct. 15. p. 17.

• **Summary:** “Ming Foy Soy Sauce–bot. [bottle] 10¢... Ketchup–Ann Page–14 oz. bot. 14¢.” “A&P established 1859.”

3179. *Nature’s Path to Health (Melbourne, Australia)*. 1937. Soy bean–The perfect protein. Sept/Oct. p. 34.

• **Summary:** “Packed into the tiny soya bean is a wealth of nutrition; minerals, tiny vitamins, easily assimilated carbohydrates, and the greatest hoard of proteins that any food in the vegetable kingdom contains. Think of it! A vegetable product equal to most, and superior to some animal products in proteins, the body building element in food, without which there would be no life. And this same Soya Bean, so rich in all the food essentials, produces an alkaline reaction in the body. It sounds almost unbelievable!

“The chief argument against a heavy meat diet is the acid reaction in the human system. So it is with all highly protein foods commonly used as meat substitutes–fish, eggs, etc.; but here is the most nearly perfect substitute for meat known to man, and it is one of the extremely rare foods which alkalize the body.”

“Milk and butter made from soya beans are richer and more satisfactory than dairy products. Its oil equals the best grade of olive oil.”

“Lecithin, in which the soya bean is rich, is a nerve, brain, and sex building food. Calcium builds bone, teeth, finger nails and accessories.

“From the seed comes meal and oil. Out of the meal can be made a flour for use of infants, macaroni, breakfast foods, bread, cakes... From the dried beans come soya sauce, soups, roasted beans, vegetable, milk, liquid and powder, cheese, soy cultures that taste like buttermilk, beverages, confections and so-called candy.

“Another valuable property of the soy bean is its high alkalinity, which amounts to twenty-four times that of cow’s milk. Concerning this point, Dr. Kellogg says: ‘We are certainly eating too much meat and not enough alkaline products.’ A meat diet is heavily charged with acids which lower the alkalinity of the blood and tissue fluids and tend to cause acidosis, thus inducing chronic fatigue, lowered resistance to disease, and setting up degenerative processes

in the liver, kidneys, blood vessels and other parts of the body. More people die in this country from these causes than from any other.” Address: Australia.

• **Summary:** Contents: Introduction. 1. Botanical characteristics and principal varieties. 2. Chemical composition of soya. 3. Alimentary physiology and the nutritional uses of soya: Seeds (energy value, protein, vitamins, use as a milk substitute), forage. 4. Different uses of soya: Agricultural, industrial (oil, casein, sterol), as human food (sprouts, tofu, fermented tofu, shoyu, miso, tuong of Annam, roasted soy coffee, soy bread for diabetics, the future of soya). 5. The economics of soya: Production, imports, exports. Conclusions. Address: Director, Station d’Agronomie et de Pathologie vegetale d’Avignon, France.

3185. Dominion Bureau of Statistics, Ottawa, Canada. 1937. Imports for consumption: Agricultural and vegetable products. *Trade of Canada*. Fiscal year ended March 31, 1936. See p. 283, 289, 299, 335, 340. [Eng; Fre]

• **Summary:** Table No. 37 (p. 283) gives figures (gallons and dollar value) for imports of soy sauce to Canada each year from 1932 to 1935 from United Kingdom, Hong Kong, China, Japan, Syria, and the United States. Total soy sauce imports (in gallons) were as follows: 1932 = 78,581. 1933 = 72,389. 1934 = 89,249. 1935 = 79,321.

Page 289 shows imports of soya beans in 1935 only from United Kingdom, Hong Kong, Japan, and United States. Some 259,460 lb of soybeans were imported worth \$7,822. The main source country was Japan, followed by the USA.

Page 299 gives import figures for soybean oil in 1934 and 1935 from United Kingdom, China, Germany, Japan, Netherlands, and the USA.

Page 335 shows imports of soya bean cake and meal from 1932 to 1935 from United Kingdom, China, and USA.

Page 340 shows imports of soya bean oil (and peanut oil) for the manufacture of soap in 1934 and 1935 from the United Kingdom, China, Denmark, Germany, Netherlands, and United States. Address: Ottawa, Canada.

3186. Fuji, Fugoro. 1937. Dainihon kaigai iminshi [Great history of Japanese immigration overseas]. Japan: Kaigai Chôsa-kai. See vol. 2, p. 21-22, 95. [Jap]*

• **Summary:** Pages 21-22 repeat the information from Morita 1915 about Haruhachi Shimada being the first to brew shoyu in Hawaii.

Page 95 in the “people” section states: “Nobuyuki Yamagami was born in 1882 and came from Fukuoka prefecture. He studied in Fukuoka and also in Tokyo. Later he developed ambition and traveled to England, France, Germany, and other European countries for several years. Next he went to Australia, and finally to the USA. In San Francisco he opened a seafood products store and studied foods. In 1905 in Honolulu, Hawaii, he founded Yamakami/Yamagami Shoyu Jozo-sho, which was successful. Later he changed the company’s name to Hawaii Shoyu Kaisha. He delegated the work to Tashiro Kumataro, and went to China for fun. In Korea he founded a soap factory and succeeded in getting orders from the army and navy. His shoyu was developed based on his original research, and suited for the tastes of modern people. He called it ‘kenfu,’ which means ‘wise wife/women.’ It became very popular. His elder brother, Sogen Yamakami/Yamagami, was a great Zen monk/priest. Also he was very famous for his great kindness to his parents.”

3187. Kale, F.S. 1937. Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes. 2nd ed. Baroda State, India: Baroda State Press. xxx + 375 p. Illust. (35 leaves of plates, described in a separate record). Index. 22 cm. 2nd ed. 1937. [66 ref]

• **Summary:** Contents: 1. Deficiencies in the Indian diet and soya bean as a means to rectify them. 2. History of the origin and growth of soya bean: Derivation of the word soya bean, origin of soya bean, literature, primitive man and soya bean, name of the plant, home of soya bean and its expansion, varieties of soya bean, the culture of soya bean is very remote (It “has been the chief article of diet in China for over 7,000 years.”), reference of soya bean in old Chinese records,

how and when soya bean became known to Europeans, soya bean in England (from 1890; J.L. North and Henry Ford), soya bean in France (from 1739), soya bean in Italy, soya bean in other countries of Europe, soya bean in United States of America, India and soya bean.

3. The use of soya bean: Importance of soya bean, dietetic importance, industrial importance, agricultural importance (Russia, Mussolini in Italy), medical importance, soya bean is alkalising in its effect ("Soya bean milk as well as its flour is used in foods for invalids and infants, like Nestle's food"), longevity and soya bean.

4. World trade in soya bean: Imports to Europe, production of soya bean in Manchuria (58% in North Manchuria), exports from Manchuria, oil and cake industry in Manchuria, soya bean production in Japan, in America, in Africa, in Australia, in Europe, in Java, in India, in other British possessions, estimate of world production of the soya bean, the desirability of the expansion of soya bean cultivation, imports and exports of soybeans, soya bean oil, and soya cake—1913-1927: Denmark, Holland, United States, Great Britain, Japan, France, Russia, China, Germany, Norway, Korea. Source: International Institute of Agriculture, Bureau of Statistics, 1921, p. 420-21. A table (p. 38) shows statistics for world production of soybeans "as estimated by the leading firm of London soya bean dealers" for various years from 1923 to 1929. This includes individual statistics each year for China [incl. Manchuria], Japan, and USA. The world totals in tons are: 3,095,000 (for 1923-25), 3,397,000 (for 1926), 4,325,000 (for 1927), 6,000,000 (for 1928), and 6,570,000 (for 1929; incl. China 5,250,000; Japan 550,000; USA 250,000; Java & Dutch East Indies 120,000; Other Asiatic countries & Africa 400,000).

5. Botany of the soya bean plant. 6. Classification of soya bean. 7. Cultivation of soya bean. 8. Diseases and pests of soya bean. 9. Cultivation of soya bean in India. 10. The constituents of soya bean. 11. Soya bean milk. 12. Soya bean flour. 13. Industrial uses of soya bean. 14. Enriching soil by addition of nitrogen and use of soya bean as fodder. 15. Food requirement of the human body. 16. European and American soya bean recipes. 17. Diabetic dishes, Mahatma Gandhi's experiments at Magan Wadi and opinion of scientists on soya bean. 18. Chinese and Japanese soya bean dishes: Toffu [tofu] or soya bean curd: Digestibility, utilization, toffu khan, toffu nao, tze toffu (fried bean curd), chien chang toffu (thousand folds), hsiang khan, kori toffu (frozen toffu), preservation of toffu. Natto. Tokio natto and Kyoto natto etc. Hamanan natto [Hamanatto]. Yuba. Misso [miso]. Soya sauce. Soya bean confectionery. Roasted beans (Chinese).

19. Indian soya bean dishes: Hindustani dishes, Moglai dishes, Gujarati dishes, Maharashtrian dishes, Bengali dishes, Goa dishes, Tanjore dishes. Appendixes. 1. Acreage of soya bean in Manchuria during the last 5 years. 2. Total figures of export during last 5 years. 3. Bibliography. 4. Some opinions about the first edition of this book.

The preface begins (p. iii): "This little book is written in response to innumerable inquiries I have had from time to time after the inauguration of the plantation ceremony of Soya Beans at the State Agricultural Experimental Station by H.H. the Maharaja Gaekwar of Baroda in November 1933.

"A few months after this a food exhibition was held in Baroda where many Soya Bean dishes—Indian, European and Chinese—were exhibited. The leading papers and journals all over the country spoke in very glowing terms about the Soya Bean dishes that were exhibited... Later on at the request of Messrs. Mitsui Bussan Kaisha Ltd., a leading Japanese Firm in Bombay, a Soya Bean Exhibition and Restaurant were run in the Japanese village at the H.O.H. fete. So keen was the interest and enthusiasm evinced by the cosmopolitan public of Bombay that seats in the restaurant had to be reserved in advance. The presence of H.E. the Governor and Lady Brabourne and many Indian princes was an additional evidence of the ever growing popularity of the tasty Soya Bean dishes served there.

"At the closing of the H.O.H. fete many prominent people of Bombay requested me to continue the restaurant at a convenient place in the city, and asked me to open soya-bean milk centres for the children of the poor who could not afford to buy cow's milk. Many were ready to finance any scheme that I would propose, but unfortunately my time was not my own as I had to attend to my duties in the State and could not take advantage of their generous offer.

"The Departments of Agriculture of the various provinces of India as well as many Indian States asked me to supply them with literature regarding the cultivation and the uses of this most useful bean. The Department of Commerce and Industry of the Government of Bombay inquired if I could furnish them with information about the machinery for the extraction of Soya-bean milk. Letters of inquiries from private individuals kept pouring in daily from all parts of India. All this has induced me to undertake the preparation and the publication of this book...

"From the number of experiments carried on in the Baroda territories and outside it, I feel sure that the Indian soil is most suitable for the cultivation of soya bean...

"The leading thought of the day in India is, 'Village uplift,' and 'Rural reconstruction.'

"Baroda, 7th January 1936, F.S.K. (p. iv)

"Preface to the Second Edition: I feel grateful to the public for having given such a hearty reception to the first edition of my book. It is running into a second edition within a year...

"Now, Soya Bean Bakeries and Restaurants have been started in the city of Bombay and in many other towns in India, and Soya Bean products are exhibited in almost all the exhibitions...

"I feel highly thankful to His Highness the Maharaja of Baroda who gave me an opportunity last year of visiting Russia, where I have seen that seven to ten per cent. of Soya

Bean flour was being added to the wheat flour in order to enhance the nutritive value of the bread. The Soya Research Institute at Moscow is making researches into the nutritive, industrial and economical values of Soya Bean. I have seen there the actual working of the Soya-bean milk extracting plant. They make casein out of Soya-bean milk. Soya-bean cream is sold in the market.

"I visited the dietetic clinics in England, France, Germany, Austria and other European countries, where doctors prescribe Soya Bean bread for diabetic patients. In Russia, rickets and consumption are treated by Soyolk extracted out of Soya Bean...

"France is growing Soya Bean on c^{ôte} de jura [sic, Côte d'Azur, on the Mediterranean?]. In England, through the efforts of Mr. J.L. North, Soya Bean is realised as a field crop for the last two years.

"Paris, 3rd April 1937. F.S.K. (p. ix)." Address: Food Survey Officer, Baroda State, India.

3188. Kale, F.S. 1937. Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes. 2nd ed. Chapter 9. Cultivation of soya bean in India (Document part). Baroda State, India: Baroda State Press. xxx + 375 p. See p. 79-111. • **Summary:** Contents: Experiments in Baroda State (1934 and 1935) (p. 79-83): In June 1934, 15 lbs. of good seed was acquired by F.S. Kale, the Officer in Charge, Food Survey Department, Baroda state. Describes: Preparatory tillage, sowing on July 12, germination, interculturing [hoeing], gap filling, pod formation, ripening of pods on Sept. 26, harvesting, thrashing (by beating of sticks), yield (167 lb of seed total), cost of cultivation, net profit, and net profit per acre (in rupees). Experiment of 1935, using acclimatized seed from last year's crop. The germination rate increased to 95% from 60% in 1934. The average number of pods per plant increased to 130 from 110. The yield doubled (given in maunds and seers). Signed: Hargovind Bavabhai Patel. Food Surveyor's remarks.

Cultivation of soya bean in Surveys Nos. 199-212, supervised by Ranchhod Raghav Baria, head man of the village, Kerianagas, Amreli District, Gujarat (p. 83-85): The seed was given to 16-17 farmers; some intercropped it with cotton and others with Bajri [pearl millet]. After sowing, the soya bean was attacked by a beetle and so about 1/3 of the seed was spoiled. After 15 days only half the crop had survived. When pod formation began, crows and parrots began to attack the plants; half the pods were spoiled or damaged by them. Then the monsoons brought less rain than usual. The growth of both cotton and bajri was clearly aided by the soya bean. Food surveyor's remarks: "We are very hopeful that this part of Gujarat will be very well suited for soya bean crop."

Experiments of 1934 at the Baroda Agricultural Experiment Station. Soya bean-fodder type (p. 86-90): Two varieties of soya beans were planted in 1934: Poona greenish

white, and Poona yellowish white, both brought from Poona Agricultural College. Both were planted on July 3, flowered on Sept. 28 and 29 respectively, pod formation on Oct. 20 and 15 respectively, both harvested on Dec. 4. A photo shows one plant that had more than 500 pods. Description of varieties. For Poona greenish white: Preparation of the soil, cultivation, ripening, harvesting (using a sickle), how to cure it for hay, the yield (900 lb per acre of seed, or 3-4 tons per acre of green crop). "We have given the green fodder to the bullocks on the farm and it seems that they relish it much and they put on more fat and seemed to be healthy and strong. The plants when uprooted showed the growth of big nodules on the roots. For Poona yellowish white, the seed yield was 460 lb per acre and the yield of green matter was only about 75% as much. Mammoth Yellow soya beans from Baroda contained 41.1% protein and 9.9% moisture; the same soya beans from Manchuria contained 38.5% protein and 9.7% moisture.

Dep. of Agriculture, Central Provinces and Berar (p. 90-94): Soya bean ("In this province the Agriculture Department started some preliminary work on this crop as early as 1911. A collection of different varieties from foreign countries was made and grown on the Nagpur farm. Particular attention was given to acclimatize it and to obtain suitable high-yielding early strains, possessing at the same time a satisfactory percentage of oil. The work continued for some years but the results obtained were not satisfactory as none of the varieties were acclimatized. Further work was, therefore, dropped and the growing of Soya beans did not make any headway.

"In 1927, the Botanical station started the investigation of fodder supplies, and in this connection a large number of leguminous crops including Soya beans were tested. Of the Soya beans, two varieties, viz., Java black and Wilson early, were tested and gave encouraging results as regards their yield of green fodder" per acre (the sum of two cuttings)):

In a table of 7 crops: #1. *Alysicarpus rugosus* (Shevra) 20,105 lb per acre. #2. *Glycine hispida* (Soya bean Java black) 12,505 lb per acre. #4. *Glycine hispida* (Soya bean Wilson early) 11,905 lb per acre.

In recent years, tests of seed production have also been carried out on soybean. "A large number of fresh varieties from Kalimpong (Bengal), Kuala Lumpur (Federated Malay States), Barberton ([Ohio] USA) and Leningrad, etc. were obtained and tested. Of these, three white seeded and one black seeded varieties gave promising results as regards their adaptability, earliness and yield." An analysis (see table) of their chemical composition shows "that these selected strains are about 1½ times more nutritious than *mung* and *urid* and also contain a high percentage of oil" [12.8 to 15.2% compared with 0.73 to 1.46%].

"With a view to test its taste and other cooking qualities, the selected and acclimatized varieties were distributed for trial in small quantities amongst garden servants and some

officials in Craddock Town, Nagpur. Their report shows that the soya bean is quite palatable and does not suffer from bad taste on account of the high percentage of oil. When ground into flour it can be mixed with wheat flour to make *chapatis*, *puris*, *kachoris*, fritters (*bhajias*) and other Indian preparations. One drawback, however, which has been noticed, is that it does not very well mix with [absorb] water in the preparation of 'dal' like other pulses."

The biggest problem is that India conservative farmers "take a long time to add a new crop to those already grown, unless they can be persuaded that the crop will bring them more profit per acre."

Soya beans in Berar, by Mr. R.R. Dokras, B.A., LL.B., Chandur, Berar (p. 94-98): Improves soils ("It is of great value to persons who must abstain from meat and thus is a great help to the vegetarian population of the country"). Can be grown in Berar ("all over on a profitable commercial basis"). My experience ("growing soya bean from 1931 to 1934). A helpful crop. Best cattle feed.

Imperial Department of Agriculture of India, by Mr. Wynne Sayer, Esq., B.A., Dip. Agri. (Cantab.) Offg. Imperial Agriculturist, Pusa, Bihar (p. 98-101): Summarizes the strengths and weakness of the crop. "3. In India it is generally used as green vegetables, *dal* and *sattoo*." "4. Experts in India and outside are unanimously of the opinion that extension of soya bean cultivation is of great economic value as human food, cattle food and as seed of commercial interest in various industries."

"The only drawback is that there is no ready market for its disposal in India as the people of this country are generally ignorant of its valuable properties—an ignorance which can only be removed with the advancement of scientific knowledge and propaganda among the people."

Soya Bean (*Glycine hispida* Maxim), by M. Wynne Sayer, Esq., B.A., Dip. Agri. (Cantab.) Offg. Imperial Agriculturist, Pusa, Bihar (p. 101-07): Introduction: "The soya bean... is cultivated extensively throughout India, chiefly in the north Indian tract which extends from the Punjab to the Khasia and Manipur Hills and Burma. It is also grown on the slopes of the Himalayas up to an altitude of 6,000 feet" (Duthie 1905, Watt 1890). Economic importance of the soya bean: "The bean is much appreciated as human food on account of its protein and vitamin contents of high physiological value... It occupies a position next to rice in China and Japan. Various preparations such as *Tofu* (Soy-cheese), *Miso* (Soy-paste), *Shoyu* (Soy-sauce), etc. are made from the bean and widely used in those countries... In India it is used in various forms such as *sattu*, *atta* and *dal*. Cultivation of fodder-type soya-bean. Green fodder for cattle: At Pusa farm, cattle are grazed on soya bean in November. Green manure. Standard varieties of soya bean on the Pusa Farm: A table shows 10 varieties from 1917-1923, with the yield of each. The varieties: Local (Pusa), Nepali twining, Riceland, Barchet, Black early, Black late, Yellow

hilum brown (highest yield, 1127.9 lb/acre), Chocolate (#2 highest yield, 1026.5 lb/acre), Assam, Barmeli. Chemical composition (table) of Yellow, Chocolate, and Black early.

Soya bean, by R.R. Rao Bahadur D. Ananda Rao Garu, B.Sc., Director of Agriculture, Madras (p. 107-08): "Soya bean is under trial from 1932 in the Research stations Aduturai, Maruteru, Hagari, Nandyal and Samalkota. The two varieties of Soya bean from Burma viz. Behrum and Pengypi have done well and the trials are being continued.

Soya bean, by K.S. Kulkarny, Professor of Agriculture, Agricultural College, Poona (p. 108-09). Gives basic information about cultivation of soya bean.

Soya bean, by H.H. Stewart, Esquire, I.A.S., Director of Agriculture, Punjab (p. 109-110): "The area under soya bean crop in this province is practically nil. The crop has been tried on a few experimental farms of the Agricultural Department, where it yielded 12 to 16 maunds of seed per acre."

Soya bean, by the Superintendent of Agriculture, Darjeeling, Kalimpong (p. 110-11) [as of Sept. 2010 Darjeeling and Kalimpong are neighboring towns in the Indian state of West Bengal]: "Soya bean is cultivated chiefly as a secondary crop in rotation after maize or on the Alis or ridges of the paddy fields. The approximate 5 years' average under this crop in the Darjeeling District is about 200 acres; but in the neighbouring independent States, such as Sikkim, Bhutan and Nepal the approximate average is 750 to 800 acres. The average yield for 5 years would be about 7,500 to 8,000 maunds and there are 6 or 7 varieties of soya beans grown in and around this district." The crop is grown mainly for seed and human consumption, also as a green-manuring crop in Tea Estates. Address: Paris, France; Formerly: Food Survey Officer, Baroda State, India.

3189. La Choy Food Products, Inc. 1937. The art and secrets of Chinese cookery. Detroit, Michigan: La Choy Food Products. 16 p. Illust. (some color). 10 x 14 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

3190. Woertge, Karl Heinz. 1937. Entwicklung und weltwirtschaftliche Bedeutung der Sojabohnenerzeugung und -verarbeitung [Development and international economic significance of soybean production and processing]. Thesis, Friedrich Alexander University, Erlangen, Coburg, Germany. 119 p. 28 cm. [112 ref. Ger]

• **Summary:** Contents: Foreword. Part I: History and culture of the soybean. 1. History, natural requirements and technology of soybean production; chemical composition of the soybean. 2. Occurrence of the soybean and methods of production in various countries: Asia (Manchuria and China, Japan, Korea, Formosa, Dutch East Indies, other Asian countries incl. British India, Cochin China, Ceylon), America, Europe (Southeast Europe, Austria, USSR, France,

Italy, England, Poland, Switzerland, Czechoslovakia, Germany), Africa and Australia.

Part II. Scale and global economic significance of soybean production in the main producing areas. 1. General overview of world soybean production: Production for seeds, for fodders. 2. Scale of soybean production in the main producing areas: Asia (Manchuria, Japan, Korea, Formosa, Dutch East Indies [Java and Madura/Madoera]), America, Europe (Southeast Europe, USSR).

Part III. Development and global economic significance of soybean processing. 1. Soybean processing possibilities: A. Processing soybeans to make foods: Asia (general, methods used in China and Japan to make vegetable-type soybeans and salads, koji, soymilk, shoyu [soy sauce], miso, natto, tofu, methods used in the Dutch East Indies), Europe (general overview, preparation of soybean meal, soymilk, coffee- and chocolate substitutes). B. The soybean as an oilseed: General, methods of obtaining the oil (in Asia, Europe, USA), use of soy oil (as human food, other). C. Obtaining lecithin from the soybean. D. Use of soybean press-cake for livestock feed. E. Use of the soybean meal for fertilizer. 2. World trade in soybeans, soy oil and soybean cake/meal (*Sojakuchen/Sojaschrot*): World trade in soybeans (Manchuria, Asia, Europe, USA), world trade in soy oil, world trade in soybean meal.

Closing remarks: The state of the world soybean market with special consideration for the current German conditions. Appendixes and tables. Address: Nuerenberg, Germany.

3191. Yamaguchi, H.S.K.; Sakai, Atsuharu. 1937. Shoyu or Japanese soy (Document part). In: H.S.K. Yamaguchi. 1937. *We Japanese*. Yokohama, Japan: Yamagata Press. 592 p. See p. 271-73. Book II.

• **Summary:** “Neither the origin of shoyu nor the date of its invention is known for sure, but it is first mentioned in a record found in the Shoso-in, of the Totai-ji [Todai-ji] Temple, where the personal belongings of the Emperor Shomu (the 45th) and some other emperors are preserved. Also, it is mentioned in the Engishiki, a book of regulations of the Engi era (901-922). Chinese shoyu was imported during the early days of the Ashikaga regime (1338-1574), and it was in large quantities manufactured at Kyoto during the Shogunate of Yoshiharu Ashikaga (1521-1545). But it is certain that shoyu in those early days was not in liquid form, and it was not until the early period of the Tokugawa regime (1603-1867) that liquid shoyu was first made in Japan.

“Tradition has it that in 1228 Gakushin, a Buddhist priest from China, taught the people of Wayakama the method of making shoyu, and the village of Yuasa in that province is known to be the oldest centre of shoyu manufacture. Shoyu was manufactured for the first time at Choshi, another centre, in Chiba prefecture, in 1616, and one shoyu maker, Hamaguchi by name, came to Choshi from Wakayama in 1645 to coach others in shoyu manufacture.

Noda in the same prefecture of Chiba began the manufacture of shoyu during the era of Genroku (1685-1703), and it is now the largest centre of shoyu manufacture in Japan. Shoyu was much used during the Tokugawa period (1603-1867) and greatly improved during the Meiji era (1868-1912). In 1933 Japan produced 512 million litres of shoyu valued at 57 million yen, of which the share of Chiba prefecture where Choshi and Noda are situated, amounted to 111 million litres valued at 17 million yen. These figures are not inclusive, as the farmer makes shoyu for his own use.

“Professor L. Lunge and A. Langgardt [sic, Langgaard], who taught at the Tokyo Imperial University, in the early years (about 1877) took such a great interest in the manufacture of shoyu that they often visited the shoyu centres to study it in the making. Professor A. Langgardt on his return home to Germany, made an imitation of Japanese soy and got it patented in Germany and ‘Moggi’ [Maggi] now manufactured in Europe is a corruption of the name Mogi, who was a shoyu- maker of Noda...

“There are several brands of Japanese soy, of which the following are the chief: Yama-sa [Yamasa], Kikko-man [Kikkoman], Higeta, Kagi-yamasa, Maru-kin [Marukin].” An illustration of each brand and its meaning is given.

There are illustrations of Kikkoman, Higeta, and Yamasa brand shoyu in wooden kegs. Photos shows a shoyu bottling factory and a yard filled with wood for shoyu barrels. Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

3192. Yamaguchi, H.S.K.; Sakai, Atsuharu. 1937. Sukiyaki: How “sukiyaki” is served. Origin of “sukiyaki” (Document part). In: H.S.K. Yamaguchi. 1937. *We Japanese*. Yokohama, Japan: Yamagata Press. 592 p. See p. 264-66. Book II.

• **Summary:** To create the Japanese atmosphere at the Sukiyaki party, the guests must sit on cushions on the floor. For a party of four guests, a circular table is best, with the charcoal brazier (on which a *nabé* is set) or electric cooker in the middle. On plates surrounding the *nabé* are the ingredients required for the meal: Tender beef, thinly sliced. Cut leeks and often some onions mixed with the leeks. “Now comes the highly nutritious bean-curd known as *tofu* in Japan. This is very light and digestible, and of great value in Japanese soups and other dishes.” *Konnyaku*, a gelatin-like vegetable, is cut into strings (*shirataki*) that look like silvery spaghetti. Japanese doctors say that *konnyaku* has considerable medicinal value.

“As seasoning the Japanese usually put a little of what is called *Ajinomoto*, along with a little soup stock. This *Ajinomoto* is one of the most marvelous seasonings in the world, recognized even by the French as superior to their *sel de celeri*, in which French chefs have so much faith. It ought to be better known to housewives throughout the world. Housewives travelling make inquiries about it and buy quantities in Japan to take home.

“Now come two important liquids. The first, *shoyu* or

soy, is indispensable. It is the Oriental sauce which is the basis of almost all sauces in the world, with the difference, however that whereas so many Western sauces are strongly spiced and therefore too piquant, and consequently harmful to delicate stomachs, the Japanese *shoyu* is a natural soy bean-sauce, highly nutritious and an irresistible appetizer.” Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

3193. Snelling, Walter O. 1938. Preparation of soy sauce. *U.S. Patent* 2,107,133. Feb. 1. 3 p. Application filed 12 Jan. 1937.

• **Summary:** An acid hydrolyzed liquid product is first prepared from protein material, preferably soybean meal. Then it is mixed with roasted wheat or equivalent cereal and fermented in a manner conventional for soy sauce. The overall time of sauce production is greatly shortened by the acid predigestion. Preferably, the acid treatment should not completely hydrolyze the protein material to constituent amino acids. Address: Allentown, Pennsylvania.

3194. *Toronto Daily Star (Canada)*. 1938. Toronto Chinese welcome W.C. Liu, Nanking emissary: Nationalist flag flies over Elizabeth St. while Orientals celebrate—Are informed Japanese is not cause of worry. Feb. 7. p. 9.

• **Summary:** More than 150 Chinese attended a dinner given by the patriotic league in the Asia Cafe. The men were in their western clothing, but the women wore gorgeous Chinese gowns. “It was a real Chinese meal, not the chop-suey feast so familiar to Occidentals.

“Beside each guest was placed his soup bowl, his chopsticks, his China spoon, his rice bowl, tea bowl and soya sauce, while the food was placed one dish at a time in the centre of the table...” A large photo shows Liu.

Note: Elizabeth Street was one of the main streets in Toronto’s Chinatown until the late 1950s.

3195. Lager, Mildred. 1938. *The House of Better Living Catalog: Finer natural foods*. Los Angeles, California: Published by the author. 36 p. March. 23 x 10 cm.

• **Summary:** The single most important document showing the creative development of commercial soyfoods in California in the late 1930s. This catalog contains a large section on Diabetic Foods, consisting mostly of soyfoods, and an even larger section titled “Soy Bean Products.”

The Foreword (p. 1) begins: “The House of Better living is as unusual as its name. Its aim is to teach better living, and has made possible Mildred Lager’s free educational program by radio and class work. Become a member of our ever-growing family. Secure one of our creed cards—Realize life can be a game and not a battle, and if you give to the world the best you have, the best will come back to you.

“The House of Better Living has grown in four years from what was called a brain storm to an institution. It is outstanding, unique, and built on the ideals of sincerity

and service. It is teaching the ounce of prevention—the health insurance that pays dividends in years of health and happiness. It carries for you, Finer Natural Foods, selected by Mildred Lager.”

A full page of delivery and order information (p. 2) shows that Mildred was shipping foods (such as California nuts and fruits, fresh and dried) all over the United States.

This catalog contains a total of 42 soyfood products, including 26 such products not found in the 1936 catalog. Soy (and other interesting) products are listed as follows (prices and weights are given for each): Beverages—Coffee substitutes: Radcliff’s soy bean, Soy-Co. Other beverages: Dr. Fearn’s Proteinized Cocoa, Radcliff’s Malted Soya Milk, Radcliff’s Soya Bean Cocolette, Soy-Malt (plain or chocolate). Sugars and syrups: Radcliff’s Golden Soya Honey Spread (4-oz. glass). Natural sweets—Candies: Carque’s health candies, bar, 5¢, Halvah bars, Sesame brittle, Soya candy sticks, 1¢ each, Soy milk “chocolate” bars, in Bavarian, cocoanut, mint, cherry, pineapple, and creme de mint flavors, Soy milk “chocolates,” ½-lb. box or 1-lb. box, Soy chocolate, 1¢ square, ½-lb, 1 lb, 60¢, or bulk.

Desserts: Agar—Parfait mix, Agar—Hain Vege-Jell, Agar—Sanitarium vegetable gelatin. Diabetic foods: Gluten flour, Soy bean flour, 10¢ lb, Soy Bean Pancake and Waffle Flour (Bill Baker’s Prepared; 2-lb. pkg. 30¢), Dr. Fearn’s Soya Cereal, Dietetic Soyrina Cereal, Dr. Fearn’s Soya-Date Breakfast Food, Battle Creek Dietetic Bran, Battle Creek toasted gluten bran flakes, Soy breakfast food, Cubbison’s soy-gluten crackers, Soy-gluten wafers, Loma Linda soy bean wafers, Bill Baker’s 100% soy-fruit slices, Bill Baker’s soy bean bread, Olson’s soy bread, Soy bean macaroni, spaghetti and noodles, Soy beans—imported, Soy beans—cracked, Soy beans—red, Soy beverages (without sweetening), Bill Baker’s soy melba toast, Cubbison’s soy melba toast.

Nut butters: Almond butter, Almond meal, Cashew butter, Peanut butter (dextrinized or raw), Pecan butter, Soy bean butter (lb or 8-oz. can). Whole grain flours, meals, etc.: Lima bean flour, Soy bean flour (1 lb, 3 lbs, or 10 lb), Soy bean pancake and waffle flour (Bill Baker’s prepared), Soy bean pancake and waffle flour (Mrs. Hauser’s), Whole wheat flour, wheat germ. Breakfast cereals (to be cooked): Mildred Lager’s quick cooking cracked soybeans, Dr. Fearn’s soya cereal, Dietetic Soyrina Cereal. Breakfast cereals (ready to eat): Battle Creek Zo, Dr. Fearn’s soya-date breakfast food, Soya breakfast food, Bill Baker’s 10% soya cereal. Melba toast, crackers, cookies: Cubbison’s soy toast, Bill Baker’s soy toast, Cubbison’s Soy-Gluten crackers, Soy-gluten crackers, Loma Linda soy bean wafers, Cookies: Cubbison’s soy cookies, Bill Baker’s 100% soy fruit slices. Bread: Olson’s soy bean bread (sliced loaf), Bill Baker’s soy bean bread (unsliced loaf 16¢). Macaroni noodles: Soy bean macaroni, spaghetti and noodles. Legumes: Soy beans—imported, Soy beans—cracked, Soy beans—red. Meat

substitutes: Nuteena (7 oz. can 15¢), Nut Meat, Nuttose (Battle Creek), Proteena, Protose, Soy bean butter (30¢ lb.), Soy mince sandwich spread, Soy bean spread, Soy bean ravioli (12¢ and 20¢ can).

Soy bean products (40 products; those mentioned above may be omitted here): Loma Linda soy beans (plain or tomato flavored, No. 1 can), Loma Linda soy beans with Proteena (No. 1 can), Dry soy beans (quick cooking red), Soy bean spread, Soya bean honey spread, Loma Linda soy mince sandwich spread, Soy bean sauce (5 oz for 18¢ or 2 oz bottle for 10¢), Soy bean oil (45¢ pint bottle), Soyco (Soy coffee), Soya bean milk powder, Milk of soya bean (6 oz or 12 oz can), Soy-Malt, Proteinized cocoa, Radcliff's 100% soya bean beverage (1 lb package), Cubbison's soy bean cookies, Cubbison soy-gluten crackers, La Sierra Soy breakfast cereal, Diamel Soyarina cereal, Diamel breakfast cereal. Salad dressings: Imitation Worcestershire sauce (Carque's, 5 oz bottle for 25¢). Powdered dry vegetables: Dulce, Dulce leaf, Irish moss, Kelp, Kelp-fancy, Sea lettuce (leaf or powdered), Soy-banana powder. Laxative foods: Agar, Psyllium, Swiss Kriss, Sym, Tam (laxative jam). Natural aids: Savita yeast tablets, Sesame seeds, Theradophilus (4 oz bottle 75¢, 8 oz bottle \$1.25). Electric appliances: Electric juicers are not yet on the market. Index (p. 36).

There are ads for the following: Battle Creek Sanitarium Foods (p. 5; ask for literature). Ficgo coffee substitute (display ad, p. 6). Racliffe's Soya Products (p. 9, 21). Mildred Lager's quick cooking family (incl. cracked soy beans), Bill Baker's soy and lima bean products (photo display, p. 16). Therapy, Ltd.—Foods for Better Living (Theradophilus, soy bean milk, p. 19, 29).

A photo (p. 1) shows Mildred Lager. Address: 1207 West Sixth St., Los Angeles, California.

3196. Knight, Henry G. 1938. Industrial accomplishments at the new Soybean Laboratory. *Industrial and Engineering Chemistry, News Edition* 16(10):291-93. May 20.

• **Summary:** "There are at present approximately 35 mills crushing soybeans, 15 plants engaged in the manufacture of soybean flour, 20 in the manufacture of soybean food products, and more than 50 in the manufacture of other industrial products."

"There has been a large increase in the use of soybean seed for industrial and food products such as paints, enamels, varnish, glue, printing ink, linoleum, plastics, shortenings, margarine, foundry cores, livestock feeds, flour, soy sauce, dietetic foods, infant foods, beverages, and so on."

Thirty-six different varnishes containing 100% soybean for their oil content have been developed and are now undergoing exposure tests to determine their aging properties.

Photos show: (1) The old agricultural building housing the Regional Soybean Industrial Products Laboratory at

Urbana, Illinois. (2) Interior view of the analytical division of the new Soybean Laboratory at Urbana, Illinois. (3) Henry G. Knight applying soybean varnish to a cabin cruiser. Address: U.S. Bureau of Chemistry and Soils, Washington, DC.

3197. Tsuda, Kyosuke; Kazuno, Taro. 1938. Shōyu abura no shin suterin to Soja-Sapogenol B to no hikaku ni tsuite [Comparison of a new sterin in shoyu oil and soja-sapogenol B]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* 58(6):522. [4 ref. Jap]

• **Summary:** This article all appears in German, by the same authors (vol. 58, p. 142), under the title "Ueber die Identität des Soja-Sapogenols B mit einem neuen Sterin aus 'Shoyu-öl.'" Address: 1. Tokyo Teikoku Daigaku Yakugaku Kyoshitsu; 2. Okayama Idai Seikagaku Kyoshitsu.

3198. Mogi, Masatoshi. 1938. Miso jōzō ni kansuru kōbo no kenkyū [Studies on the yeasts of miso fermentation]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 14(8):951-88. Aug.; 14(9):1175-1207. Sept. [34 ref. Jap]

• **Summary:** Contents: I. Materials for experiments. II. Morphological characteristics. III. Physiological characteristics. Address: Brewing Laboratory, Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3199. Guy, Ruth A.; Yeh, K.S. 1938. Peking diets. *Chinese Medical Journal* 54(3):201-22. Sept. [20 ref]

• **Summary:** Two distinct types of diets are eaten in Peking. Whole cereal-legume diets tend to be eaten by the poor, whereas milled cereal-meat diets are eaten by the rich. "Both, at their best, are excellent," as can be seen from the tables of composition or from "the ultimate test, the health and vigor and reproductive performance of the people who eat them." Both include fresh vegetables. The diet in Table 2 is entirely vegetarian. "A little meat is usually eaten three or four times a year at festival times, but it cannot be considered nutritionally significant. The great bulk of the rural population of North China eat it,..."

There are, however, a number of modifications in these two basic diets which render them highly unsatisfactory. In the first, lower-class, diet, extreme poverty leads to a reduction or omission of the vegetables and even of the yellow maize and soya bean. Or, the social prestige conferred by the use of milled [polished] cereals sometimes leads to a deficiency of vitamin B-1. The second, rich diet, is often rendered unsatisfactory with respect to protein and vitamin B-1, and with respect to vitamins A and C, by reductions in the amount of pork and leafy vegetables, respectively.

Contents: Composition of common foods. Whole cereal-legume diets. Milled cereal-meat diets. Distortions in whole cereal-soybean diets. Distortions in milled cereal-meat diets.

Mixed flour, which are sold in the Peking market, vary

considerably in composition. "Some shops say they mix corn eight parts with soybean two parts (called *pang tzu mien*), millet five parts with soybean five parts (called *hsiao mi mien*). Other shops say the mixtures are: corn nine parts and soybean one part, or millet six corn nine parts and soybean one part. "The latter have been chosen as more probably true because of the higher price of soybeans. In any case no measurements are made, both cereal grain and soybeans being put into the mill and ground together."

Soyfoods whose composition is given in the tables are: Soybean meal [flour]. Ground mixture of 9 parts maize and 1 part soybean meal (*pang tzu mien*). Ground mixture of 6 parts millet and 4 parts soybean meal (*hsiao mi mien*). Soybean curd (tou fu). Soybean sauce.

Tables: (1) Composition of common foods. (2) Whole cereal-soybean diet (excellent; vegetarian). (3) Milled cereal-meat diet (excellent). (4) Whole cereal-soybean diet (deficient; vitamin C absent, vitamin A low, calcium low). (5) Milled cereal-meat diet (deficient; vitamin A absent, vitamin C absent, calcium very low). (6) Whole cereal-soybean diet (deficient in calories, protein, calcium, phosphorus, vitamin C). (7) Milled cereal-meat diet (deficient; vitamin B-1 low, protein of poor quality, calories low). (8) Milled cereal-meat diet (deficient; calcium low, vitamin A very low, vitamin C low). (9) Milled cereal-meat diet (deficient; vitamin B-1 low). Address: 1. M.D., Dep. of Public Health, Peiping Union, Medical College, China.

3200. Kibi, Masajiro. 1938. Shôyu jôzô-yô kôji-kin ni tsuite. II. Seïku no jôken [On the varieties of koji molds employed in the brewing of shoyu. II. Conditions for growth]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 14(9):1094-1102. [8 ref. Jap]

• **Summary:** Discusses the effects of temperature and pH on growth. Address: Yamasa Shoyu K.K. Kenkyusho. Biseibutsu Jikken-shitsu: Nôgaku-shi.

3201. Lyman, J.F. 1938. The soybean as food for man. *Proceedings of the American Soybean Association* p. 25-30. 18th annual meeting. Held 12-14 Sept. at Wooster and Columbus, Ohio.

• **Summary:** "The Chinese and other Eastern peoples have solved the problem of food seasoning without the use of meat. They have found that a meaty flavor can be obtained from the soybean through a fermentation process. Soy sauce is to the Chinese what gravy is to the American. Even more important is soy sauce in China because the use of food flavors and condiments in that country is much more restricted than with us. The Chinese have simple tastes. Soy sauce, salt and pepper are the only food flavors commonly used by them.

"While the chemist has made but little study of food flavors and the physiologist has done but little also, enough is known of the problem so that soy sauce can be made by

chemical methods as well as by the ancient fermentation process. The chief meaty-like taste of soy sauce is known to be the salt of an amino acid, mono-sodium-glutamate. This salt is now manufactured for use as a condiment. The process involves the disintegration of the soybean of other protein, preferably wheat gluten, with hydrochloric acid. A mixture of about 20 amino acids is obtained among which mono-sodium-glutamate makes up about one-fifth in the case of soybean protein and two-fifths in the case of wheat gluten.

"The mono-sodium-glutamate can be crystallized from the mixture by adjusting the acidity to pH 3.2, or the mixture can be neutralized to a desired acidity and used without refining just as soy sauce is used" (p. 25).

"In Japan mono-sodium-glutamate of good purity is sold at a wholesale price of about two dollars a pound under the name Ajinomoto" (p. 26).

A diagram (p. 28) shows "Some possible food products from the soybean," including sprouts, soybean milk, soybean curd, soybean cheese, soy sauce, meat sauce, meal, flour (for use in breakfast cereal, bread, sausage, meat loaves, or ice cream), refined oil (for use in lard substitutes), crude oil (for us in margarine or dressing), and lecithin (an anti oxidant or emulsifier). Address: Dep. of Agricultural Chemistry, Ohio State Univ.

3202. Mogi, Masatoshi. 1938. Miso jôzô ni kansuru kôbo no kenkyû. III. Seirigaku-teki seishitsu [Studies on the yeasts of miso fermentation. III. Physiological characteristics]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 14(9):1175-1207. Sept. [Jap]

Address: Nôgaku-shi, Brewing Laboratory, Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3203. Horvath, Artemy A. 1938. Soya meal for feed. *U.S. Patent* 2,132,621. Oct. 11. 1 p. Application filed 2 Nov. 1937.

• **Summary:** "This invention pertains to improvements in soya meal for feeding animals.

"Soya meal is used extensively as feed for stock, such as cattle, hogs, etc."

"An object of this invention is to treat comminuted soya in general, and preferably to treat soya meal, so as to avoid flatulence in animals ingesting this feed. A further object is to improve the digestibility of soya meal and the assimilation of food values and generally to improve the utilization of food in the alimentary tract of cattle, hogs and the like."

"According to this invention important benefits result from incorporating with soya feed for animals certain strains of bacteria. In particular, certain effective strains of bacteria for this purpose are developed by growth during fermentation of soy beans with cereal grains and salt. Such preferred strains are of the following: *B. mesentericus*, *B. subtilis*, and *B. vulgaris*."

"Soy sauce is manufactured by fermenting a mixture of boiling soy beans, barley or wheat, sodium chloride and

water... The soy sauce fermentation lasts many months, during which are developed specific strains of bacteria useful in the present invention,...” Address: Newark, Delaware.

3204. USDA Bureau of Chemistry and Soils. Food Research Div. 1938. Selected references on manufacture of soy sauce. Washington, DC. 2 p. Oct. 28. Mimeographed unpublished manuscript. [16 ref]

• **Summary:** The 16 references from 1895 to 1936 are listed in chronological order. Address: Washington, DC.

3205. Akabori, Shiro; Kaneko, T.; Mochizuki, S. 1938. [On the aroma of soy sauce. V. The synthesis of methionol and related compounds]. *Nippon Kagaku Kaishi (J. of the Chemical Society of Japan)* 59(10):1135-38. Oct. [7 ref. Jap]

3207. Berg, D.J. v.d.; Toit, F.M. du. 1938. The soybean: Its production and industrial use. *Farming in South Africa* 13(151):391-93. Oct.

• **Summary:** Part I, by Berg, is titled “Soybean production in South Africa.” It discusses adaptation, uses of soybeans as a fodder crop, for industrial purposes, and for human consumption, cultural practices, and soybeans in diversified farming systems. Concerning use in human foods, the author notes: “But it is in the meal, after the oil is extracted, that its greatest value lies. The meal contains nearly 43 per cent. of protein, an ingredient so often absent from the diet of a very large proportion of South Africa’s population. The value that this meal, judiciously mixed with maize meal, would have in the feeding of the working classes and the native population of South Africa cannot be overemphasized.”

Part II, by Toit, is titled “The importance of the soybean in industry.” Fig. 2 (photo) shows ten soybean food products, including soybean flour (Soyolk, 7 lb), Worcestershire sauce (Lea and Perrins), soybean biscuits, soybean cocoa, soybean chocolate (Eden Chocolat au Soja), soft soap, laundry soap, invalid and diabetic food, soybean meal, and compressed soybean cake for stock feed. With the exception of the chocolate and cocoa which originated in France, all of these products were made in England. Fig. 3. shows auto parts made of soybean protein and oil made at the Ford River Rouge plant. “One firm in this country is treating and milling soybeans and preparing a meal which is becoming increasingly popular as a source of protein in the rations of mine natives. This firm is to-day forced to import a large proportion of its requirements owing to the low production of soybeans in the Union.” Address: 1. Research Officer and Superintendent, Summer Cereal Station, Kroonstad; 2. Field

Husbandry Section, Div. of Plant Industry.

3210. Kishlar, Lamar. 1938. Soja max—The soybean. In: Soybean Nutritional Research Council, ed. 1938. The Composition and Nutritive Properties of Soybeans and Soybean Oil Meal; A Literature Review. Chicago: SNRC. 62 p. See p. 7-9. Oct. [9 ref]

• **Summary:** “This is the success story of an immigrant plant which came in to America and made good. This is the story of Soja Max, the soybean, who waited 5,000 years for his big chance, and, when opportunity knocked, made a lasting place for himself in American agriculture and commerce on the basis of merit and merit alone.

“The soybean is a native of Asia. It is one of the oldest crops grown. How long ago man started to cultivate the soybean no one knows. Some say that soybeans have been grown for 25,000 years (Breedlove, 4 June 1936, p. 12). The first written record seems to be a Chinese book on *Materia Medica*, *Pen Ts’ao Kong Mu* written by Emperor Shen-nung about 4,800 years ago (Horvath, May 1931, p. 36).

“Even the name is cloaked with mystery. For the salted soybeans [fermented black soybeans], the early Chinese had a word pronounced ‘Shi.’ Another word, ‘Yu,’ was given to the oil used as a condiment. Later the term ‘Shi-yu’ [fermented black soybean sauce] was applied to the plant and to the raw beans” (Chicago J. of Commerce, 20 June 1936, p. 14).

“Linnaeus, the first botanist to make a scientific study of the leguminous plants, applied the Greek word, glycine, meaning sweet, to all the ground nut species of legumes. Since the soybean had very large nodules on the roots, he called it *Glycine Max*. Many years later Moench found that the soybean was a distinct genus. He renamed it *Soja Hispidia*. More modern authorities have shown a preference for *Soja Max*, the name which has become generally accepted.

“The soybean was a long time in coming to America. In 1804 a Yankee Clipper ship, searching the Chinese ports for

a return cargo, loaded several bags of soybeans as reserve food supply and brought the first importation to America" (Burlison 1936).

"More than one hundred years passed. A few soybeans were raised mostly as botanical curiosities. In 1907, Dr. C.R. Ball of the United States Department of Agriculture, described twenty-three varieties of soybeans, all that were then known in the United States." Address: USA.

3232. **Product Name:** Shoyu.

Manufacturer's Name: Yamajifu Soy Factory. Apparently changed to Yamajyu Shoyu & Koji Miso Co. the next year.

Manufacturer's Address: 1402 N. School, corner Houghtailing, Honolulu, Ohau, Hawaii. Phone: 89181.

Date of Introduction: 1938.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1937-38. p. 592. Yamajifu Soy Factory. (Taro Higa). Soy manufacturers, Wholesale and retail dealers. 1402 N. School, corner Houghtailing. Tel. 89181. Note: The next year Taro Higa started Yamajyu Shoyu & Koji Miso Co. at 395 Buckle Lane.

3233. Abreu Velho, H. de L.; Gossweiler, John. 1938. A soja [The soybean]. Luanda, Angola: Imprensa Nacional. 48 p. (Conselho de defesa da producao e do comercio). [8 ref. Por]

• **Summary:** Cover title: Soja; o que os agricultores devem saber sobre a sua cultura (Soya: What farmers must know about its culture). In the section titled "Possibilities for soybean culture in Angola," it is noted: "Although on a relatively small scale, some soybean trials have been conducted in Angola. At the Experimental Station of Algodao, in Catete, some soybean trials were conducted in 1929 and 1930 with a yellow variety, with the intent of studying the crop for use in rotation with cotton and with maize (corn). The sowing went well and the germination was rapid and uniform, but none of the plants grew to a height of more than 30 cm (1 foot)."

At the experiment station of *Policultura Planáltica at Bié*, from 1928 to 1931, the soybean was one of the crops tested for use as a green manure. A summary of the results was given by the station's director in the *Boletim da Direcção dos Serviços de Agricultura e Comércio*, volume 4, numbers 12-15, 1931. A long extract from that Bulletin concerning the soybean is given, focusing on the year 1930.

Soybean trials have also been conducted at the Station for the Reproduction and Improvement of Seeds and Plants (*Estação de Reprodução e Melhoramento de Sementes e Plantas*) at Planalto de Malanje, since the beginning of 1935.

This publication also contains a long section on food uses of the soybean, including soy flour (*farinha de soja*), soy milk (*leite de soja*), tofu (*queijo de soja*; *queijo duro*), soy sauce (*Shoju*, *Soyu*, *Shoyu*, *tao yu*), and soy oil (*óleo de soja*). In Austria and America, and also in the Orient, soybean seeds are roasted, ground, and used as a substitute for coffee (*substituto de café*).

Note 1. This document contains the earliest date seen for

soybeans in Angola, or the cultivation of soybeans in Angola (1928). One source of these soybeans was France.

Note 2. This is the earliest Portuguese-language document seen (March 2001) that refers to soy coffee, which it calls a substitute for coffee (*substituto de café*).

Note 3. This is the earliest Portuguese-language document seen (Oct. 2003) that mentions soymilk, which it calls *leite de soja*. As of Oct. 2003 *leite de soja* is the modern Portuguese term for soymilk.

Note 4. This is the earliest Portuguese-language document seen (Sept. 2006) that mentions soy oil, which it calls *óleo de soja*.

Note 5. This is the earliest Portuguese-language document seen (April 2012) that uses the word *Shoju* or the word *Soyu* or the word *Shoyu* or the term *tao yu* to refer to soy sauce. Address: Angola.

3234. Balzli, Hans. 1938. *Kleine Soja-Fibel. Geschichte, Anbau und Verwertung einer einzigartigen Nutzpflanze* [A little soybean primer. History, culture, and utilization of a unique useful plant]. Zurich and Leipzig: Albert Mueller Verlag. 88 p. Index. 16 cm. [26 ref. Ger]

• **Summary:** Contents: Foreword. Economic questions. Botanical. Historical. Chemical composition of the soybean seed. Utilization in East Asia: Koji, miso, shoyu, soymilk, yuba, tofu (*Sojakäse*, like Quark), soy oil and press-cake. Utilization in Europe and America: As fertilizer and feed, as food (soy flour, roasted soybeans, soy coffee, green vegetable soybeans (*den jungen Sojakern... wie junge gruene Erbse*), soy sprouts), and industrial products (incl. “soybean steel,” an invention of Henry Ford). Medicinal significance. Cultivation and yield. Epilogue. Bibliography. Author-subject index.

In the chapter on History (p. 24), the author notes: “The poet Johann Heinrich Voss (lived 1751-1826) once said: ‘Young Calcuttans... with your sharp soy sauce from Jakarta (*Junge Kalkuten... mit scharfer batavischer Soja*).’ Then he adds to that the observation: ‘Soy sauce (*Soja*) is a powerful sauce, which is prepared from soybeans (*Sojafasele*), Dolichos Soja, which originate in the East Indies and are subject to fermentation, together with brine and spice.’”

Balzli continues on page 25: “The *Deutsche Woerterbuch der Naturgeschichte* (German Dictionary of Natural History) contained in the *Allgemeinen Polyglotten-Lexikon der Naturgeschichte* (General Multilingual Encyclopedia of Natural History) by Philipp Andreas Nemnich (1793) contains the entry: ‘Sojablume. Dolichos soja.’ (Soya flower. Dolichos soja).”

“In the world-famous work *Geist der Kochkunst* (Spirit of the Culinary Art), the art historian C.F. von Rumohr (lived 1785-1843) also mentions soya in the second edition (1832, p. 155) and conjectures that the Garum sauce of the Romans was an imitation of the East Indian sauce (Sulze) made from soybeans (Soja).”

Page 29 reports that “During the war of 1870 (*des siebziger Kriegen*, in which Bismarck of Germany defeated Napoleon III of France) the German head artillery man, O. Wehrman, saw in the botanical garden of Montigny-les-Metz a plant that was unknown to him. It was the soybean. He took 4-5 seeds with him and planted them in early 1872 on his property / estate near Meissen (in Sachsen/Saxony, near Dresden in today’s Germany). He harvested 80 to 100 seeds, with which he continued his investigations successfully for some years” [Note: Haberlandt (1878, p. 5) tells this same story].

On page 57 the author uses the term “Sojaspeisen” to refer to soyfoods. Address: Switzerland.

3235. Dominion Bureau of Statistics, Ottawa, Canada. 1938. Imports into Canada for consumption, years ended March 31, 1933 to 1937: Agricultural and vegetable products. *Trade of Canada*. Fiscal year ended March 31, 1937.

• **Summary:** Table No. 37, titled “Imports into Canada for consumption, Years ended March 31, 1933 to 1937, shows: Imports of soy sauce—from United Kingdom, Hong Kong, China, Japan, Syria, United States (p. 287). It shows that 133 gallons of soy sauce with a value of \$15 were imported from Syria in 1933, but none in 1934, 1935, or 1936.

Imports of soya beans (*Fèves de soja*, p. 288). Imports of peanut oil (*Huile d’arachide*, p. 303). Imports of soya bean oil (*Huile de soja*, p. 300).

Imports of soya bean cake and soya bean meal, for use exclusively in the manufacture of cattle food and of fertilizers (Included “Soya Beans” prior to April 1, 1934; to April 1936, p. 339.7).

Imports of soya bean oil meal, for use exclusively in the manufacture of cattle food and of fertilizers (From May 1, 1936, p. 339.8).

Imports of soya bean oil meal (*Tourteaux d’huile de fèves de soja*) and soya bean flour (*Farine de fèves de soja*), when imported by manufacturers of glues or adhesives for use exclusively in the manufacture of such glues or adhesives (From May 1, 1936, p. 339.9; Note: 5,600 cwt was imported from the USA only) [1 cwt = hundredweight = 112 pounds].

Imports of peanut oil and soya bean oil for the manufacture of soap, and peanut oil for canning fish (p. 344.1). Imports of soya bean oil for the manufacturing of soap (p. 344.5). Address: Ottawa, Canada.

3236. Fairchild, David. 1938. *The world was my garden: Travels of a plant explorer*. New York, NY: Charles Scribner’s Sons. xiv + 494 p. Assisted by Elizabeth and Alfred Kay. Illust. Index. 25 cm.

• **Summary:** This wonderful book, an autobiography of David Fairchild, also tells the story of the early days of the USDA and its Section of Foreign Seed and Plant Introduction, and of the pioneering work with plant introduction to the United States. It contains about 207

black-and-white photos, mostly taken by the author. One of these (p. 472A) shows Howard P. Dorsett (standing) and David Fairchild (seated), who “spent twenty happy years in close association, trying to increase the number and improve through introductions the quality of the fruits and vegetables of the United States.”

Contents: 1. Background. 2. Kansas. 3. I enter government service. 4. I meet Barbour Lathrop and reach Naples [Italy]. 5. Breslau, Berlin, and Bonn [Germany]. 6. Java ho! 7. The Lathrop-Fairchild odyssey begins. 8. The Cannibal Isles (Incl. Hawaiian islands). 9. American interlude (in 1897 his father resigned as president of Kansas State College of Agriculture after the wave of Populism engulfed the college). 10. The West Indies and South America. 11. Cotton in Egypt. 12. Across the Java Sea. 13. From Finland to Dalmatia. 14. Land of the Pharaohs. 15. Malta, Tunis, Algiers, and Spain. 16. England, America, and west to the Orient once more. 17. The Persian Gulf and Bagdad [Baghdad. Note: Iraq was established in 1921 out of former Turkish territory]. 18. A glimpse of Saïgon [Saigon] and a long stay in Japan. 19. I visit Luther Burbank and circumnavigate Africa. 20. I meet Alexander Graham Bell. 21. A grand tour of these United States. 22. Mostly personal. 23. Washington, Madeira, and “In the Woods.” 24. Baddeck, Nova Scotia. 25. Mostly aviation. 26. Lacquer and wild wheat. 27. Aaron Aaronsohn and Joseph Rock. 28. More plants, introduction gardens, and Mr. Bell. 29. Florida in 1912. 30. Monsters of the backyard. 31. The flowering cherry trees are planted in Washington. 32. Quarantine increases and war [World War I] begins. 33. Seeds from Afghanistan. 34. The plains of Canada. 35. The war and dried vegetables. 36. The Allison Armour expeditions. 37. Aloha.

In 1889 Beverly T. Galloway, head of USDA's Division of Plant Pathology, brought David Fairchild, age 19, to Washington, DC, to join five plant pathologists who were working in attic rooms of the old red brick department building. P. Howard Dorsett, Galloway's Wisconsin classmate, soon joined the group. Soon shy and scholarly Walter T. Swingle, Fairchild's Kansas State classmate and close friend since their student days in Germany, arrived with his growing library of agricultural references in 5 or 6 languages. Seeking an opportunity to learn about the flora of foreign countries, Fairchild accepted a Smithsonian fellowship to study entomology in Naples, Italy, and resigned from the USDA. Fairchild's pioneering work with plant introduction traces its roots back to late 1893. On board a ship, the young plant pathologist met Barbour Lathrop, a wealthy San Francisco gentleman who later took him on an extended tour of the Pacific and showed him fruits, grains, and ornamental plants that could be valuable in America. In 1895 Lathrop gave Fairchild the money to begin his study of the plant treasures of the tropics. Returning to the USA in 1897 (with Mr. Lathrop), after an absence of 4 years, David Fairchild knew exactly what he wanted to do with his life.

He visited his parents in Manhattan, Kansas, and learned that a wave of “Populism” (resembling Bolshevism) had caused his father to resign as president of the college (p. 105). In August 1897 he reached Washington, DC—without a job. James Wilson, the Secretary of Agriculture, firmly believed that “what agriculture needed most was more knowledge.” “The idea of plant introduction as a government activity was germinating in other minds besides Lathrop's and mine” (p. 106). Secretary Wilson's first act after taking office had been to send N.E. Hansen to Russia in search of cold-resistant cereal grains and fruits for America's great plains. Swingle has recently presented a paper on introducing subtropical plants to Florida.

Fairchild and Swingle conceived a plan to divert \$20,000 dollars of the funds appropriated for the wasteful Congressional Seed Distribution Service (which was already spending several hundred thousand dollars a year) in order to finance a section for the specific purpose of introducing new, useful, and carefully selected crops into the United States. He enthusiastically presented the idea to Secretary Wilson, who approved the plan and asked him to organize the new Foreign Seed and Plant Introduction Section (p. 107). Housed on the fifth floor under the eaves of the old Department of Agriculture building and staffed by one teenage secretary, it became a reality when Congress passed the revised appropriation bill in July, 1898.

“In 1899, all that existed of the Department of Agriculture was housed in an ugly old building with a mansard roof topping its red-brick walls. It was situated in a park south of Pennsylvania Avenue, just beyond one of the most disreputable quarters of the city” (p. 18).

In 1916 David and Marian Fairchild purchased a piece of property located in Coconut Grove on Biscayne Bay, Florida; they named it The Kampong. On the property was a very old stone barn, a huge stone entrance gate, and many fine old tropical trees (p. 452-53, 456A, 472C). A Kampong is a Malay word (first used in English in 1844) meaning “a native hamlet or village in a Malay-speaking country.”

Good photos show: (1-4) Members of the USDA Section of Plant Pathology taken in the early 1890s: Walter T. Swingle, Joseph James, David Fairchild, Theodore Holm, Beverly T. Galloway, Merton B. Waite, and P. Howard Dorsett (p. 26A-B). (5) Barbour Lathrop and David Fairchild in the cabin of a boat, off Sumatra, Christmas, 1895. (6) The uniform of a worker at Mr. Suzuki's nursery in Tokyo, Japan. The back is decorated with large Chinese characters. (5) Fermentation vats with conical bamboo covers in a soy sauce factory at Ichang (I-ch'ang or Yichang), a city in west Hupeh / Hubei province in Central China (p. 256F, probably taken by Frank N. Meyer in 1917). (6) page shows “A prolific Soy Bean plant ripe for harvest” and loaded with pods (p. 256F). (7) David Fairchild (seated) and Howard Dorsett (standing), each in two-piece suits, by at a desk, examining various fruits (p. 472A). Address: USDA.

3237. Fairchild, David. 1938. A long stay in Japan: Encounters with soy beans, tofu, soy sauce, and green soy beans in the pods (Document part). In: D. Fairchild. 1938. *The World Was My Garden: Travels of a Plant Explorer*. New York, NY: Charles Scribner's Sons. xiv + 494 p. See p. 258-59, 327-28. Assisted by Elizabeth and Alfred Kay.

• **Summary:** In 1902 at Kusafuka, Japan, Fairchild visited the home of Mr. Tsuboi. He had "considerable difficulty digesting the raw fish and seaweed, but became very fond of the egg dishes, the bean cheese or 'tofu,' and the universal soy sauce... But the dish which I afterward served in Washington [DC] was a delicate variety of the soy bean. The young, flat, rather hairy pods—much smaller than the lima bean—are boiled in salted water and served in the pod in a little lacquer bowls. I enjoyed opening the pods and taking out the delicate green beans, which have a pleasant, nutty flavor. Some Americans complain that it takes too long to empty the pods, and of course there is no reply to such an objection" (p. 258).

Japanese "cuisine is conspicuous for the absence of gravies, for which they substitute a sauce made from the soy bean by a complicated process of fermentation. Almost every meal includes boiled rice, often served with delicate, soy bean curds [tofu]... and pretty bits of colored soy bean candy" (p. 259). Note: This is the earliest English-language document seen (Feb. 2004) that uses the terms "soy bean curds" to refer to tofu.

"From Mr. Tsuboi's delightful home, we journeyed to a branch experiment station at Anjo where there were fields of the chief agricultural crops of the country. The soy beans particularly interested me, as in 1898 I had imported both beans and some soil from a Tokyo soy bean field. Waite [Merton B. Waite, of the USDA Section of Plant Pathology] and I discovered that root nodules could be induced on soy bean plants by growing them in Japanese soil, but, when they are grown on new soil, they will not develop the nodules unless the soil is inoculated. In Virginia, Maine, Michigan, and Kansas, a general interest in the soy bean and its possibilities had developed among the experiment station workers, although it was only used as cattle food.

"I hope that a book will be written describing the vast soy bean industry which has developed in America since those early beginnings, and the important part played by the varieties introduced by Frank Meyer and later by W.J. Morse and P.H. Dorsett. Morse has devoted the best years of his life to a careful and penetrating study of the soy bean, and he should receive the full measure of credit for his contributions to an industry now measured by millions of acres under culture in America each year" (p. 259).

After Fairchild was married, he and his wife, Marian, started a garden by their home in Maryland, about 10 miles outside of Washington, DC. A delightful Japanese peasant boy names Mori served as their gardener. In the garden:

"We grew soy-beans as a vegetable and had to endure the criticism that they took too long to shell (p. 327-28).

A photos show: Mr. Tsuboi, an authority on bamboo, enjoying his dwarf plants in charming porcelain bowls and trays (p. 256D). A prolific soy bean plant with many hairy pods (p. 256F). Address: USDA.

3238. Hauser's (Mrs.) Food Products Co. 1938. Mrs. Hauser's recipe book: *Soya formulas for better nutrition*. Los Angeles, California. 32 p. 24 cm.

• **Summary:** The cover of this booklet is light blue on beige. Contents: The purpose of this book. The nutritional marvel—*Soy or Soya Beans* "*Soya max.*" Soya Bean high lights. Analysis of Soya Bean Flour. Soy Bean facts. Soya briefs. Hot and cold food stuffs. Eat relaxing alkaline foods. Breathe correctly. Five day efficiency diet. The water we drink. Practical "low carbohydrate" diets. Soups. Drinks. Salad dressing. Bread—biscuits—muffins. Meat substitutes. Recipes to be used when preparing Mrs. Hauser's paste goods. Cakes. Cookies. A good breakfast for health. Desserts. Sandwiches. Miscellaneous (incl. Baked delight {with ground Soya Nuts}, Tofu or Soya Bean Cheese {made from soya milk curded with lemon juice or citric acid}). About vitamins: Vitamin A, B, C, D, E, G. Soya beans are a good source of vitamin G. Foods and their minerals. Soya beans are rich in copper, iron, phosphorus, and calcium. Food which are alkaline: Incl. soya beans.

The types of soyfoods called for in these recipes include: Mrs. Hauser's "Soy" Sauce. "Soy" Brand Elbow Macaroni (p. 18-19). "Soy" Brand Hot Cake and Waffle Flour. "Soy" Brand Macaroni. "Soy" Brand Noodles. "Soy" Brand Spaghetti. Soya bean flour (also called "Soya flour"—by far the most common ingredient called for). Soya bean mush (p. 25). Soya beans (canned or cooked). Soya milk. Soya nuts (p. 15-16). Soya oil.

The booklet ends with these words (p. 32): "A liberal use of the Soya Bean and Soya Bean Products in the average diet is a very distinct aid in the digestion of meats, poultry, fish, and, in fact, all animal foods. (Recipes of this nature will be given in future publications.)"

Note 1. Many of the recipes call for "Mrs. Hauser's Sea Salt." Note 2. Mrs. Hauser is apparently not related to Gayelord Hauser, who is also in the health foods business in Los Angeles. Address: 4617 Melrose Ave., Los Angeles, California.

3239. Kihara, Kiyoshi. 1938. Shōyu oyobi aminosan-eki no yūki-san hikaku kenkyū [Comparative studies of organic acids in shoyu and so-called "amino acid solution" or liquid HVP (Abstract)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 15(2):A23. [1 ref. Jap]

• **Summary:** Abstracted from *Jozogaku Zasshi* 16:919 (1938).

3240. Montagné, Prosper. 1938. Larousse gastronomique [Larousse gastronomique]. Paris: Librairie Larousse. 1087 p. See p. 989-90. [Fre]

• **Summary:** The following are defined under “*Soja ou Soya*”: Introduction. Tofu (*fromage de soja*), soymilk, (*lait de soja*), soy sauce (*sauce ou extrait de soja*), soy meat (*viande de soja; viande végétale*). The soy meat, which resembles smoked ham, is said to be very complicated to make, requiring industrial equipment. An illustration (p. 990) shows a soybean plant, including enlarged insets of the flowers and pods.

Note: This is the earliest French-language document seen (Nov. 2003) that uses the term *viande de soja* or *viande végétale* to refer to meat alternatives. Address: France.

3241. Photograph of the Yamaju Shoyu & Koji Miso Co. factory in Hawaii. 1938.

• **Summary:** This 4 by 6 inch black-and-white photo was sent to Soyfoods Center in Sept. 1984 by William Higa of the Hawaiian Miso & Soy Co., Ltd. (1714 Mary St., Honolulu, Hawaii 96810). The original company made Shiro Koji Miso and Yamaju Shoyu. Standing by wooden kegs of miso are the founders Henry, Shinyei, and George Taru Higa. The company sign appears clearly over the factory door. Long, dark automobiles from the 1930s are parked at the left and right.

Note: A nice large print of this photo appeared on the front page of the *Hawaii Herald* on 7 Oct. 1983.

3242. Oriental Show-You Company. 1938? Oriental Show-You recipes. Columbia City, Indiana: Oriental Show-You Co. 24 p. Undated. Illust. Recipe index. 18 cm.

• **Summary:** Contents: Chop-Suey. Eggs. Entrees. Fish. Fritters. Meats. Miscellaneous. Noodles. Rice. Salads and dressings, Sandwiches. Soups.

“In addition to shoyu we are marketing canned Chop-Suey, [Mung] Bean Sprouts, Chow-Mein Noodles (fried), and Mixed Vegetables” (p. 1).

“Chop-suey sauce: No matter how skillful you deft fingers may be, you cannot make good chop-suey and other Oriental dishes with inferior sauce. It is absolutely necessary to use the best chop-suey sauce (soy) to get the tang of the orient.

“There are two or three qualities of soy, but the Japanese soy is reckoned the best”—*The Century Dictionary and Cyclopedia*. Oriental Show-You Sauce, being the purest soy brewed according to the secret Japanese formula, is considered the best by the thousands of people who have used it” (p. 2).

Sukiyaki is referred to as “Japanese chop-suey” (p. 4). “The Red Sun and the ‘Show-You’ on the labels are absolute guarantee of superior quality” (p. 22). Address: Columbia City, Indiana.

3243. Nakae, Tadashi. 1939. Amino-san chômiryô seizô ni kansuru kenkyû. XIII. Tanpakushitsu genryô toshite no keshi abura kasu [Studies of preparation of amino acid seasoning. 13. Poppy oil cake as raw material]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 17(1):9-12. Jan. 15. [2 ref. Jap]

• **Summary:** Soybeans are mentioned briefly. Address: Osaka Teikoku Daigaku, Kôgaku-bu, Jôzôgaku Kyôshitsu, Takada Kenkyûshitsu, Osaka, Japan.

3244. Matsumoto, Tsuyoshi. 1939. Shihan shoyu no eiyo-ka ni tsuite [Nutritional value of commercial shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 17(2):97-102. Feb. 15. [Jap]

• **Summary:** This is part of a larger 3-part article, about the nutritional value of commercial food products, that starts on p. 97.

3245. Sinclair, Gordon. 1939. Refugees may look dull but some of them spies: Life goes on peacefully in British territory in China. 30,000 in cars. *Toronto Daily Star (Canada)*. Feb. 23. p. 7.

• **Summary:** Shum Chun, China—“The priest brings me tea and some warm duck skin flavored with soy sauce...”

Note: The Sham Chun River (also called Shenzhen River or Shenzhen He) serves as the natural border between Hong Kong and mainland China. Sham Chung is a place in Hong Kong.

3246. Pynaert, L. 1939. Le Soja au Congo Belge [The soybean in the Belgian Congo]. *Revue Internationale des Produits Coloniaux et du Matériel Colonial* 14(158):61-65. Feb. Summary in *Revue de Botanique Appliquée* (1939) 19:233. [3 ref. Fre]

• **Summary:** Contents: Preface. Soybean yields obtained in the Belgian Congo. The utilization of soya in Europe: Dry seeds (whole dry soybeans), soy sauce, soymilk, yuba, tofu, soymilk casein, soy lecithin, soy flour and chocolate, soy oil. Net cost. In short, Pynaert describes all the basic types of soyfoods and encourages their introduction to the Congo.

Yields: “In 1915 the agronomist Mestdaghe made it known that at the end of an experiment well conducted at Lusambo in the district of Sankuru [Belgian Congo], he had harvested 1,472 kg/ha of a light yellow variety of soybean, and 1,786 kg/ha of a black variety.

“The agronomist J.B.H. Lejeune, who worked in the Congo for nearly 20 years, recently furnished information of great interest on the subject of the soybean cultivation which he had undertaken in the colony as well as in Rwanda-Urundi.

“In 1922 he cultivated a yellow soybean which he had obtained from Vilmorin-Andrieux & Co. in Paris under the name of Mammoth Yellow. He obtained yields ranging from 500 to 1,500 kg/ha.

“In 1926 the same agronomist introduced the black

soybean O-Too-Ton [Otootan] cultivated in Georgia. This variety adapted itself remarkably well to the conditions of the Eala milieu and gave soybean yields of 1,000 to 2,000 kg/ha.

"In 1927 trials were recorded at four stations in Rwanda-Burundi, a country of higher altitude with conditions that are very different from those forested central Africa.

"At Lusunyu, which enjoys a temperate climate, the yields of a variety of O-Too-Ton varied from 90-540 kg/ha during a 4 month cycle. At Bugarama, in a much warmer climate, the average yield of seeds was 556 kg/ha. At Kisozi the variety O-Too-Ton gave yields of 100 to 400 kg/ha. A variety named Biloxi furnished a yield of more than 500 kg/ha. At Rubona, still in Rwanda-Urundi, the following seed yields were obtained from 1931 to 1935. Biloxi: 300 to 652 kg/ha. O-Too-Ton: 150 to 1,300 kg/ha. Eala Yellow (Jaune d'Eala): 214 to 261 kg/ha." Also discusses yields at: Kisozi from seeds introduced by Mr. Lejeune; at the Agronomic Station at Yangambi, near Stanleyville, from 1937; at Nioka in Upper Ituri (*Haut-Ituri*; Ituri is a district in the oriental province of the Belgian Congo) where yields are 450-500 kg/ha in poor soil but 700-800 kg/ha in good soil, and even up to 1,000 kg/ha; it is concluded that indigenous crops will probably not give yields of greater than 400-500 kg/ha.

This document contains the earliest date seen for soybeans in Ruanda-Urundi, or the cultivation of soybeans in Ruanda-Urundi (1927) (one of two documents). Address: Directeur du Jardin Colonial de Laeken (Belgian Congo?).

3247. *Argus (The) (Melbourne, Victoria, Australia)*. 1939. Queries answered. March 11. p. 32.

• **Summary:** "A. A. M. (Gunbower) asks for a recipe for Worcestershire sauce.

"The following has been recommended:—Take ½lb. each of whole black pepper, whole ginger, eschalots, and garlic, two quarts of vinegar, one pint of Indian soy sauce, 1oz. of ground black pepper, ½oz of powdered mace, ½oz of bruised cloves. Put all the ingredients into an earthenware vessel, let them stand for two weeks closely covered, stir them every day with a wooden spoon. At the end of two weeks boil the mixture for 30 minutes. Strain through a fine sieve, bottle when cold and seal tightly. The Indian soy is a vegetable sauce, and if it is unobtainable mushroom ketchup might be tried instead."

Note: This is the most recent of 144 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term "India Soy."

3248. Kihara, Kiyoshi. 1939. Shôyu to aminosan-eki no 2, 3 muki seibun [Some inorganic constituents of shoyu and "amino acid" solution]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 17(3):162-73. March 15. [Jap]
Address: Kagawa-ken Shôyu Shikenjô, Japan.

3249. Nakae, Tadashi. 1939. Aminosan chomiryo seizo ni kansuru kenkyu. Dai 14 ho. Tanpakushitsu genryo toshite no koridofu kezurikuzu [Research on making amino acid seasoning. XIV. The crumbs from trimming dried frozen tofu as a protein source]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 17(3):182-84. March 15. [Jap]*
Address: Japan.

3250. DeBoth, Jessie Marie. 1939. Advises planning to obtain well-balanced meals. *Toronto Daily Star (Canada)*. March 16. p. 28.

• **Summary:** Miss DeBoth includes a recipe for Sub kum chop suey (with "1 tablespoon soy sauce").

3251. DeBoth, Jessie Marie. 1939. Shows how meal may be 'whipped up' on little. *Toronto Daily Star (Canada)*. March 17. p. 28.

• **Summary:** Miss DeBoth taught thousands who attended yesterday's session of The Star Cooking school. She included a recipe for Egg foo yong [young, yung] that called for "soy sauce" as a seasoning.

Gathering data on the conditions of hydrolysis when making shoyu]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 17(5):303-12. May 15. [6 ref. Jap]
Address: Japan.

3254. Mihaeloff, S. 1939. L'utilité économique d'introduire et d'encourager la culture du soja en Égypte [The economic benefit of introducing and encouraging the culture of soybeans in Egypt]. *Egypte Contemporaine (L')* 30(185):493-501. May. [2 ref. Fre]

• **Summary:** The soybean is one of the most ancient and important crops cultivated in East Asia. It is of interest both as a food and industrial crop. From it is made the famous liquid shoyu. Its flour is useful in making bread for diabetics, a vegetable milk can be made from the seeds, and its casein has many industrial applications. In France, Mr. J. Bordas,

Director of the Agronomic Research Station at Avignon, has shown that it can play an important role in solving the current agronomic and economic difficulties in France. Various tables give the nutritional composition of soybean seeds from Egypt and France. The author then discusses soybean cultivation and production worldwide, including Algeria. Based on this information, the author believes that soybeans have a good chance of success in Egypt, and should be tested in lower (north) Egypt, with tests gradually moving toward upper (south) Egypt.

In addition to the role it can play as a human food, the soybean can also be used as a feed for animals (in the form of forage, defatted cake, or milk), and as a source of vegetable oil. The oil can be used as a solvent for rubber, in the production of dynamite or margarine, as a lubricant for automobile motors, and in making soaps. The soy protein (casein) can be used as a binder for lime in agriculture, to make industrial plastics, and as a substitute for gelatine in the manufacture of paper.

In short the soybean could play a very useful role in Egyptian national economy. Address: Doctor of Sciences (*Docteur ès-sciences*).

3255. *Brewer and Wine Merchant (The)*. 1939. Brewing in Worcester. June. p. 48. [1 ref]

• **Summary:** “The Worcester News and Times recently contained a well produced industrial supplement, in which were described the many and varied industries of Worcester. One is apt to look upon Worcester merely as an old quiet cathedral city. It is true the cathedral was one of its principal charms...”

After a section on “Vinegar brewing in Worcester” comes a section titled “The Origin of Worcestershire Sauce” which quotes from the *News and Times*: “The origin of the firm is based like all romantic histories, on tradition. The great grandfather of the present managing director, Capt. J.A. Dyson Perrins, was in partnership with a brother in a chemist’s shop at Evesham. On October, 1828, a split occurred for some unknown reason, and Mr. William Perrins went into business with Mr. John Wheeley Lea in the shop at present occupied by Mr. A.E. Coverdale in Broadstreet, Worcester.

“Here, it is supposed, one day Sir Marcus Sandys, who had held many offices out East, including that of Governor of Bengal, came in with the recipe of a certain sauce to be made up. The two partners worked on this recipe and in due course brought forth ‘Lea & Perrins Worcestershire Sauce, made from the recipe of a nobleman in the Country.

“In 1897 Mr. C.W. Dyson Perrins built the present factory in Midland-road, and the whole business was transferred from Broad-street.

“In 1930 the firm was amalgamated [merged] with H.P. Sauce, but the two ventures were kept quite distinct. There is also a Lea & Perrins, Incorporated, in New York, and Lea &

Perrins (Australia) Ltd., in Sydney.”

Note: This is the earliest document seen (Feb. 2012) that uses the word “Bengal” in connection with Lea and Perrins’ Worcestershire Sauce. It is also the earliest document published in England that mentions “Sandys” or “Sir Marcus Sandys” (Governor of Bengal) in connection with this sauce. Address: England.

Address: Hiroshima Kôtô Kôgyô Gakkô, Jôzô Gakka Kyôshitsu, Hiroshima, Japan.

3260. Borth, Christy L. 1939. *Pioneers of plenty: The story of chemurgy*. Indianapolis, Indiana and New York: Bobbs-Merrill. 303 p. Portraits. 22 cm.

• **Summary:** Soy is discussed at length (usually in connection with Henry Ford Sr. and Edsel A. Ruddiman) on p. 22, 40, 42, 202-06, 208-11. Henry Ford is also discussed on p. 21-22, 30, 69, 76-77, 118, 144, 246.

“A few years ago, Henry Ford was ridiculed when he said the time would come when most of an automobile would be grown on the farm. Since then, Ford chemists have perfected processes whereby soy beans are converted into plastic substitutes for automobile parts formerly made of metal. Ford Chemist Russell Hudson McCarroll estimated that the use of plastics for interior window moldings alone would increase that company’s use of farm-grown metal-

substitutes twenty-five million pounds annually.” (p. 21-22).

“Dearborn was selected as the [first chemurgic] conference site because it was the home of Henry Ford, an industrialist who had demonstrated his understanding of the meaning of the farm problem, and because there were, in near-by Edison Institute, working exhibits of the processing equipment which Ford researchers had developed to convert soy beans into some thirty industrial products.” (p. 40).

At the chemurgic conference Russell Hudson McCarroll, a Ford chemist, described how soy beans are converted into raw materials for industrial use. “From the bean oil Ford chemists make a lacquer which is claimed to be superior to the pyroxylin paints usually used in coating metals. From the residue of meal after extraction of oil, Ford chemists make plastic parts for automobiles, these farm-derived parts being substitutes either for metals formerly mined or for rubber formerly imported.” (p. 42).

Chapter 10, titled “Ford links farm and factory” (p. 200-12) is about Henry Ford, chemurgy, and soy beans. “Do you recall the gibes that greeted his [Henry Ford’s] prediction that man would one day find a substitute for the cow, as revolutionary as the automobile which displaced the horse? It was very funny when the cartoonists and columnists leaped upon it gleefully—but it may not be so fantastic as it once seemed.

“Let’s investigate it.

“Come now to the foot of Elm Street, in Dearborn, to a rejuvenated farmhouse whose homelike exterior masks a modern laboratory.”

“Follow the truant chemurgists inside and meet Ford’s boyhood companion, Dr. Edsel a. Ruddiman, the food-chemist whose services were enlisted by his old deskmate. In the back room, once a farm kitchen, is an electric refrigerator, filled with food made from soy beans. Milk, butter and cheese—the latter, fresh, dried, smoked and fermented—are there, soy-bean products all. In the pantry are breakfast foods, macaroni, salad oils, crackers, diabetic foods, infant foods, flour, bouillon cubes, soups, confections, coffee substitutes, sauces, gravies and beef substitutes—all produced from the soy” (p. 202-03).

A wonder bean indeed!” “During the World War [I], when Germany faced famine, German chemists extracted from the soy the glutamic acid which became the basis of the ‘beef-tea’ that kept patients alive in hospitals.” The soy bean “gets into Heinz and Lea & Perrins’ sauces and into oleomargarine” (p. 203).

A full-page photo (between pages 206 and 207) shows Irénée du Pont and Henry Ford talking and enjoying a meal together at a table.

3276. **Product Name:** Stake-Lets (Meatless Meat Loaf in a Rich Meatlike Sauce) [Sliced, or Bite-Size].

Manufacturer's Name: Madison Foods.

Manufacturer's Address: Madison College, Madison, Tennessee.

Date of Introduction: 1939.

Ingredients: Gluten, soybeans, soy sauce, seasonings. In 1960 the ingredients were gluten, whole wheat, soy flour.

Wt/Vol., Packaging, Price: No. 2 can. 20 oz.

How Stored: Shelf stable.

Nutrition: Protein 18.2%, fat 4.3%, carbohydrates 2.1%, ash 0.5%, calories 120/100 gm.

New Product–Documentation: Ad (2¼ by 3 inches) in *Nature's Path* (USA). 1941. July. p. 273. "A treat without meat." Stake-Lets is one of five basic food products made and sold by Madison Foods.

Madison Health Messenger. V. 49-2. p. 5. Taylor. 1944. *The Soy Cook Book*. p. 201.

3287. Soetisna, Mas. 1939. Kedelé mas Toegoemoeljo [The yellow soybean of Toegoemoeljo]. *Kolonisatie Bulletin* 6:9-11. [Ind]

• **Summary:** In the author's name, the term "Mas" may be a Javanese title, of lower rank than Raden. "Toegoemoeljo" (presently spelled Tugumulyo) is a place name but it can also be translated as "Column/Pillar of Glory," in Javanese culture refers to the manifestation of the highest level of happiness. The document tells about yellow soybeans from this place. Address: Adjunct-landbouwconsultent di Loeboek Linggau.

3288. A handbook of Philippine agriculture. 1939. Manila, Philippines: College of Agriculture, University of the Philippines. vii + 803 p. No index. 18 cm.

• **Summary:** On the title page: "Issued in commemoration of the thirtieth Anniversary." The University of the Philippines was founded in 1908. The Foreword (by L.B. Uichanco, Dean, College of Agriculture) states that its College of Agriculture opened on 14 June 1909, at which time "scientific Philippine agriculture was virtually nonexistent." The idea for the book originated with the former dean of the College of Agriculture, Dr. B.M. Gonzalez, before he was appointed president of the University of the Philippines. Soybeans and soyfoods are discussed extensively.

"Coffee adulterants" (p. 104), commonly mixed with ground coffee, include roasted ground corn, soybean, peanut, mungo, cashew, and sometimes ipil-ipil (*Leucaena glauca*).

In Chapter 1, "Field crops" is a long section titled "Peanut, soybean, cowpea" (p. 132-43). Contents of "Culture of soybean" (p. 134-41): Varieties. Preparation of the land. Planting. Cultivation. Harvesting and threshing. Yield. Green and yellow seeds of Ami soybean. Soybean sprouts. How to prepare—Soybean coffee, soybean cake [dessert, with baking powder], soybean milk, "tao-si" (salted soybean [fermented black soybeans]; Method furnished by Superintendent of the Davao Penal Colony), "toyo" or soy sauce.

Note: This is the earliest document, and the earliest English-language document seen (Jan. 2012) that mentions fermented black soybeans from the Philippines, or that uses the term "tao-si" to refer to this type of salted, fermented soybean food.

The section titled "Method of preparing 'tao-si'" (p. 139-40) gives a full-page description of making tao-si on a small commercial scale—as follows: Wash dry soybean seeds and soak in clean water overnight. In the morning, remove the water. Transfer the soaked soybean seeds into a pot containing fresh clean water; boil until beans are soft. Remove boiled beans from the pot and place in shallow baskets to drain the excess water; allow them to cool. Dry beans in the shade for about one-half hour or one hour in the sun. For every 2½ petroleum cans of boiled soybeans, add 1-2 kg of wheat flour. Stir the mixture until beans are thoroughly coated with flour, then dust over about ½ kg of yellow fungus known as *Aspergillus oryzae*; thoroughly stir again. Cover open mouth of basket with a piece of abaca cloth or clean Manila paper and place in a dark room to allow the fungus to incubate. After 2-3 days the mixture will be thoroughly covered with a thick growth of yellow fungus and is now ready for salting. Transfer mixture into an earthen jar (*tapayan*), and to every 2½ petroleum cans of it, add 16 kg of native salt dissolved in two petroleum cans of water. Sun the jar for five days to facilitate curing, then move jar into a shed for further fermentation. "The 'tao-si' is ready for use after two months, but the longer it is left to cure, the better the quality becomes."

The two main kinds of insecticides in 1939 (p. 223-31) were stomach poisons (which kill when eaten; incl. lead arsenate, calcium arsenate, Paris green) and contact poisons (incl. concentrated tobacco decoction, as in Black Leaf "40").

"Diseases of beans and other legumes (p. 319+) include downy mildew of soybean and rust of soybean.

A table (p. 448) gives the content of five vitamins found in various feeds incl. soybean seeds, soybean leaves, soybean meal, peanut meal, and peanut seeds.

"Leguminous silage" includes that from cowpea, soybean, and mungo [mung bean] (*Phaseolus aureus*). Tables give: (1) The "Average digestible nutrients in feeds" incl.

soybean (p. 459, 462).

(2) The “Nutritive value of foods” incl. seaweeds (ara-rosip, *Gracilaria crassa*, p. 534), mungo sprouts (p. 536), green soybeans (p. 537), seguidilla or kalamismis (*Psophocarpus tetragonolobus*, fresh and sun-dried seeds, p. 538), soy products (p. 538-39) incl. soy sauce (toyo, Superior {Senkee and Co.}, Commercial), soy milk-boiled, soy residue (sapal), soy residue after second drawing of toyo, soy curd (toqua [tofu]).

(3) “Foods as sources of minerals” (calcium, phosphorus, iron; p. 580-81), incl. miso or soybean mush, soybeans-baked flour, soybeans-baked sprouts, soy curd or toqua, soy sauce or toyo (four brands: Solo, Great Eastern, Violin, Rooster), tahuri or soybean curd preserved in strong brine solution (solid portion).

(4) “Foods as sources of vitamins” (p. 593-94) incl. bean-asparagus or cigarillas (*Psophocarpus tetragonolobus*), bean-mungo (in pods or sprouts), bean-soy (dry, green, or leaves), peanut butter, seaweed, sesame (p. 601). Address: Manila, Philippines.

3289. Embree, John Fee. 1939. *Suye Mura*, a Japanese village. Chicago, Illinois: University of Chicago Press. xxxi + 354 p. Index. 21 cm. Reprinted in 1964 with new Foreword.

• **Summary:** This is the first detailed anthropological study of Japanese village life. John Embree is a pioneer anthropologist who lived (with his wife) in the remote mountain Japanese farming village of Suye Mura in Kumamoto prefecture (on Japan’s southern island of Kyushu) from Aug. 1935 to Dec. 1936. Mr. Toshio Sano, a graduate of Tokyo Language School, lived with Embree and acted as his interpreter and translator.

Soybeans and soyfoods (particularly tofu) are discussed throughout the book.

Page 41: “Tôfu (soy-bean curd) is prepared in the *mura* by several *tôfu*-makers and sold to the rest of the villagers. It is made by grinding soybeans in a stone quern. It is eaten a great deal in soup and is used as a cheap substitute for fish at some social gatherings.

“The diet is largely vegetarian, though fish and occasionally chicken accompany a banquet. Plenty of proteins are available in the many foods made of soy beans, especially the soy-bean soup (*miso-shiru*), soy-bean sauce (*shôyu*), and soy-bean curd cake (*tôfu*) (see Table 1).

Pages 42-43: Table 1, titled “Agricultural products by season,” has four columns for each of the four seasons. Azuki beans and sasage are harvested in summer and autumn; soy beans and sesame seed in autumn. Note: Edamame is not mentioned.

“Page 45: “Pigs are raised for outside sale by most of the *tôfu* makers. A piglet is bought for 5 yen from some city broker, fed on *tôfu* waste [okara] and general garbage (very scanty in a farmer’s house) for about a year, after which time

the broker comes back and buys the grown pig for from 15 to 20 yen.” The “villagers never think of eating pig meat themselves.” “Some people make flour at home on revolving grind-stones (*hikiusu*), similar to those used in making the bean-curd *tôfu*.

A photo (facing p. 52) shows the front of a local *tôfu* shop (Kakui), with two ladies seated on the low wooden platform. The caption reads: “This woman makes *tôfu* daily. Her shop carries a few tinned goods, some candy, beer, geta, thongs, etc. It is a favorite gathering-place for people to sit about and talk.”

Page 53: “Some widows and farmers’ wives, usually of the poorer families, make *tôfu* as a means of increasing the family income. Such a family has only a little farmland, otherwise the wife would not have the time to devote every morning to making and selling *tôfu*.” “Each *buraku* [village, community] has a *tôfu* maker.” Sometimes the wives of fishermen make *tôfu*.

Pages 60-61. In the *yakuba* (village office) there are frequent parties. Two men, paid as messengers, go to buy *tôfu* for these parties.

Page 115: On Kwannon Day, a party is held and a square of *tôfu* is served with *shôchû* to each person present. Tofu is also served at other types of parties and sometimes taken as a gift (p. 118, 122, 124, 128, 147).

Page 160: The author identifies six social classes in this village. Small shopkeepers and *tôfu* makers belong to the 4th class, the “lower middle.”

Page 241: Of the Seven Gods, Daikoku and Ebisu are the patron saints of shopkeepers and *tôfu* makers.

Page 254: Inari is the god of crops, especially of rice. “People always refer to Inari as *Oinarisan* (Honorable Inari).”

Pages 292-93. “The eleventh month” of the lunar calendar. On the 15th day is the old Ichifusa Shrine Day. On the evening of the 14th day, *tôfu* is roasted on special bamboo sticks in the fire pit. This preparation, called *dengaku* is made in honor of Otakesan (Ichifusa Shrine).

Page 315: Most *tôfu* makers specialize in doing just that, but some shopkeepers also make *tôfu*.

Page 318: Household expenses. Most miso is made at home. Tofu and other goods purchased at local stores may be paid for with rice instead of money.

3296. Kloss, Jethro. 1939. Back to Eden: A book on herbal remedies for disease, and other natural methods of healing. 1st ed. [Washington, DC]: Published by the author. vii + 667 + [25] p. Illust. Portrait. Index. 21 cm.
 • **Summary:** This treasury of herbal lore and vegan cookbook (it uses no dairy products or eggs, replacing them with soy products) is one of the most creative and original sources of early soyfoods recipes. Contents: Foreword. 1. Personal experiences. 2. Soil. 3. History of medicine. 4. Fresh air and exercise. 5. Fasting. 6. Effects of devitaminized, adulterated foods on the body. 7. Fruit diet. 8. Meat-eating. 9. Foods. 10. Diet. 11. Aluminum utensils. 12. Cooking under steam pressure. 13. Disease of animals. 14. History of water cure. 15. Water. 16. Water-effects and treatment. 17. Water-its effect in sickness. 18. Baths. 19. Compresses and fomentations. 20. Massage. 21. High enemas. 22. Nursing. 23. Fruits. 24. The eliminating diet. 25. Minerals

found in the body. 26. Herbs. 27. Medical trees. 28. Tonics. 29. Herbs (Their description and use in treating disease). 30. Definitions of medicinal properties of herbs. 31. Herbs indicated for specific diseases. 32. Directions for use of non-poisonous herbs. 33. Treatment of disease. 34. Food preparations of various kinds. 35. Oranges. 36. Potatoes; gathering and preserving of herbs.

The Foreword states: "This book contains tried, safe, and inexpensive remedies for the prevention of disease and sickness, remedies which are the result of my own practical experience of nearly forty years." "No matter how many germs get into the body, if the blood stream is clean and the blood corpuscles are in a healthy condition, you will be safe. Everyone comes in contact with many kinds of germ, but these organisms will not harm you or cause you sickness and death unless they have a place in which to propagate themselves." Sickness and illness are "caused by violating the laws of nature and health. "If then they would resort to simple means and follow the basic laws of health that they have been neglecting—proper diet, use of pure water, fresh air, sunshine, rest, and nature's remedies, herbs, etc., nature would restore the body to its original health." "God has provided a remedy for every disease that might afflict us." "The fundamental principle of true healing consists of a return to natural habits of living."

Virtually all of the information on soybeans and soyfoods is in chapter 34, "Food Preparations of Various Kinds" (p. 582-633). First come two sections of text: "The nutritional value of the soybean" (p. 582-84; "Taken from an address delivered by Dr. J.A. LeClerc, before the annual meeting of the American Soybean Association. Sept. 15, 1936"). "Uses of the soybean for industrial purposes" (p. 585).

Then comes an introduction soy-related recipes (p. 585-87): "The knowledge of the value of the soybean here in America is one of the greatest things that was ever launched in the food line in the history of the nation, and at this time of great poverty [the Great Depression], want, and disease, it is the most important thing that could be given the people." "Soybean milk can be made from soybeans at home for less than two cents a quart." Soybean milk "is not only a good food, but a real medicine." It is easily digested and highly alkaline. "I have experimented with soybeans for fifteen years [since about 1924] and have produced a fine, acceptable soybean milk as well as many other soybean products." "I use soybeans in more than fifty dishes."

Then come recipes (p. 587+): Soybean cheese (fermented soybean milk, peanut butter, and tomato puree, p. 587). Soybean cream cheese (from fermented soybean milk, p. 588). Nut cheese no. 1 (fermented soybean milk, peanut butter, and soybean butter {see p. 613}, p. 588). Nut cheese no. 2 (raw peanut butter, ground oatmeal flour, water and salt [no soy], p. 589). Nut milk (made with raw peanut butter and cow's milk [no soy], p. 590). Canned soybeans

(p. 592). Soybeans and rice (with sprouted soybeans). Baked beans with tomato sauce (incl. soybeans, p. 593; “Soybeans are, no doubt, the best of all beans, but the flavor is not as pleasant. This can be overcome by using various seasonings, such as tomato sauce, a little onion, and celery). Vegetable protein (wheat gluten seasoned with soy sauce, p. 597). Nut loaf (seasoned with soy sauce). Kloss’ granola (with soybean milk and soybean mash [okara], p. 599). Baked rice (natural brown rice baked in soybean milk, p. 600). Soybean coffee plus 2 recipes for Cereal coffee based on rye or wheat bran [real coffee with caffeine is not included]. Soybean broth (with soybean milk and oatmeal, p. 604-05). Oatmeal broth (with soybean milk). Soybean buttermilk (fermented, p. 605-06; “Buttermilk is an excellent article of diet for everyday use, but is especially beneficial in malnutrition, tuberculosis, toxic conditions, and intestinal infections. Soybean buttermilk has the advantage of producing an alkaline effect and is more nourishing than ordinary buttermilk. It is rich in minerals and very palatable. More nourishing than yogurt buttermilk used under various names.”). Soybean cheese (fermented soybean milk, raw peanut butter, and tomato puree). Soybean cottage cheese (fermented soybean milk, p. 608). Soybeans and rice (with sprouted soybeans, p. 608-09). To sprout soybeans, lentils, or grains (p. 609). Soy patties (with soybean pulp [probably ground soybeans, not okara] and soy sauce). Gluten patties (seasoned with soy sauce, p. 610). Soybean loaf. Soybean cottage cheese loaf. Soybean milk. Soybean milk no. 2 (made from “soy meal, p. 611). How to curd [soybean] milk (p. 612). Soybean jelly (soybean milk jelled with agar-agar flakes and sweetened with malt sugar). Soybean butter (made with 1 cup water, 2 tablespoons soybean flour, and 2 cups soybean oil, p. 613). Soybean cream (blend rich soybean milk and soybean oil). Soybean ice cream (made with 2 quarts rich soybean milk, 2 lbs. malt sugar, ½ pint soybean butter or soybean mayonnaise, and 1 tbsp. agar-agar). The yolk of an egg (made with soybean flour, p. 614). Pancakes (with cornmeal and soybean mash [okara]). Tomato soup (with soybean flour, soybean flour, soymilk, and/or soy sauce, Savita, or Vegex, p. 618). Cream of tomato soup (with soybean milk, p. 620). Cream of celery soup. Cream of lentil soup. Vegetable oyster soup (with rich soy milk, p. 622). Eggplant soup (with soybean milk). Cream of spinach soup. Potato soup. Soybean gravy. French toast (made with soybean bread soaked in soybean milk, p. 624). Soy oil mayonnaise (with soy oil and finely ground soy flour, p. 628). Vanilla sauce (with soybean cream, p. 632). Vegetable gelatin (with agar-agar and soybean cream dressing, p. 632). Orange jelly (with soybean cream). Strawberry jelly (with soybean cream). Rice pudding (cooked in soy cream, p. 633). Cream tapioca (with soy cream and soybean milk). Soybean bread no. 1 (with whole wheat flour, soybean mash or soybean flour, p. 648). Soybean bread no. 2. Soybean buns or cinnamon rolls (with soybean meal, p. 650). Cornmeal gems (with soybean milk, p. 651).

Oatmeal or soybean gems (with soybean meal). Soybean gems (with soybean mash [okara] out of which soybean milk has been washed, p. 652). Pones (with soybean milk). Beaten biscuit (with soybean milk). Unleavened pie crust (with soybean flour or mash, p. 655). Raised pie crust (p. 656). Soybean pumpkin pie (p. 656). Fig marmalade pie (with soybean milk, p. 657). Mashed potatoes (with rich soybean milk, p. 666).

This book does not call for the use of dairy milk or eggs. Concerning cow’s milk, Kloss states (p. 75): “Cow’s milk is not suited for human consumption. Half the invalids in the world suffer from dyspepsia, and milk should not be taken. Milk causes constipation, biliousness, coated tongue, headache, and these are the symptoms of intestinal auto-intoxication. Soybean milk and nut milks are excellent substitutes, and have practically the same analysis, and the danger of disease is removed.” A recipe on page 614 uses a mixture of soybean flour and soya bean oil as a substitute for the yolk of an egg.

This book contains the same detailed information on the possible dangers of aluminum cooking utensils found in the 1935 edition.

Ads on unnumbered pages in the rear include: (1) Dominion Herbal College, Vancouver, BC, Canada. (2) “Horta” Pure Vegetable Extract. “Of strong aromatic meat flavor, though made from leguminous materials only.” F. Behrend, Inc., New York, NY. Established 1886. (3) Old-fashioned Quaker mill. No. 4 Quaker City Mill. Ad: Enterprise No. 69, Hand Mill. A.W. Straub Co., Philadelphia, Pennsylvania. (4) Nature’s Original Food Co., Falmouth, Virginia. “Nuts, grains, fruits and vegetables are Nature’s original foods for men. Animal flesh has been substituted. If you want health, don’t use it. “Try our [canned vegetarian] meats—see the difference.” Meatose. Vegetose. To-Meta. Note: This latter company was almost certainly founded and is owned by Jethro Kloss.

According to Doris Gardiner (Oct. 1990), the original book (of which she and her aunt each have copies) has a green hard cover. The first printing was probably done by a Mr. Brunck, who worked for the College Print Shop in Takoma Park, Maryland. She thinks Jethro self-published the book. He paid for the printing and sold the books himself. Jethro and his wife moved to Coalmont, Tennessee. There they lived with the Hiatt family, and Mr. Hyatt, owner of Longview Press (renamed The Message Press by 1964) became the book’s first legitimate publisher. His wife died in 1944. Jethro died in 1946 at age 83. The page numbers from the 1939 edition are unchanged in later editions.

Note 1. This is the earliest English-language document seen (March 2007) that uses the term “Soybean cream cheese” to refer to soy cream cheese.

Note 2. This is the earliest English-language document seen (May 2011) that uses the term “soybean mash” to refer to okara. Address: Washington, DC.

3297. Matagrin, Am. 1939. Le soja et les industries du soja: Produits alimentaires, huile de soja, lécithine végétale, caséine végétale [Soya and soya industries: Food products, soy oil, vegetable lecithin, and vegetable casein]. Paris: Gauthier-Villars. x + 390 p. 18 cm. [300 ref. Fre]

• **Summary:** Contents: Introduction. 1. The agricultural, industrial, and commercial history of soya: Asiatic origins and propagation in Europe, soya in America (its cultivation and industries), soya in Europe, Asia, Africa, and Oceania (1936) (1. Admission of soya in the agriculture and industry of European nations (p. 35): Soya in France, soy industry and commerce in central and northern Europe {England, Germany, Holland, Denmark, Sweden, Poland, Austria and Hungary, Switzerland}, penetration of soya into southern Europe {Iberian peninsula, Italy, Balkan countries of Dalmatia, Istria, Yugoslavia, Greece (p. 47), Bulgaria, Romania, Ukraine}, the grandeur and decadence of soya in Russia. 2. Soya in modern Asia (p. 51): China and Manchuria, Japan, Korea, Formosa, French Indochina {Tonkin, Cambodia, Cochin China}, the British and Dutch Indies {Siam, Assam, Bengal, Burma, Ceylon, India, Straits Settlements [later Singapore] / Malacca}, western Asia {Turkestan, Persia (p. 57)}. 3. Soya in Africa and Australia (p. 57-58): South Africa, Rhodesia, Nigeria, Gold Coast [later Ghana], Cote d'Ivoire, Dahomey, Togo, Algeria, Tunisia, Morocco, Egypt, Australia {Queensland, New South Wales, Victoria}, Tasmania, New Zealand, not yet in British New Guinea [later Papua New Guinea], Philippines, Java).

2. The botany and agronomy of soya: The plant, its names, its botanical characteristics, its varieties (original and created by selection), the cultivation of soya.

3. The general chemistry of soya: Chemical composition of the plant, structure and chemical composition of the beans.

4. Using soya in soyfoods and soyfood products: Whole soybeans (whole green, dry, sprouted, roasted and salted {soja á l'état vert, fève de soja sèche, fève grillée, fève salée de soja, fèves de soja salées, p. 166-67}, soynut butter {un mélange rappelant les beurres végétaux}, soy coffee, soy confections {confiture de soja}, soy chocolate, soy sprouts {fèves de soja germées, germes de fèves de soja}, soymilk and tofu {le lait et le fromage de soja; soymilk cream, concentrated soymilk, soymilk powder / powdered soymilk, fermented soymilk {lait fermenté, yoghurt, kéfir, koumys, p. 189}, fermented tofu {fromages de soja}, okara {pulpe résiduaire de la préparation du lait de soja}, fermented soy products (solid, paste, and liquid condiments; natto, miso, and shoyu [soy sauce]; kiu-tsee and lactic ferments), soy flour and bread.

5. The soy oil industry and products derived from it: Extraction and refining of soy oil, properties and use of soy oil.

6. The vegetable lecithin industry: Extraction of

vegetable lecithin, properties and use of vegetable lecithin.

7. The vegetable casein industries and plastic materials based on soya: Soybean cakes and flours from which the oil has been removed, use of such cakes and flours, in the crude state, as a raw material for plastics, manufacture and use of vegetable protein, soybean cellulose for artificial silk, soya furfural and furfuraldehyde (phenolic resins). Conclusion: How to launch soya industries in France. Important terms:

Note 1. This is the earliest French-language document seen that uses the terms *Fève grillée*, *fève salée de soja*, or *fèves de soja salées*, "roasted soy beans" to refer to soynuts.

Note 2. This is the earliest French-language document seen (April 2005) that mentions soynut butter, which it calls *un mélange rappelant les beurres végétaux*. Address: France.

• **Summary:** Sunday's huge full menu, which is given, includes "Chicken chop suey with rice and soy sauce." The cost, with live music: \$0.75. Address: Bay at Adelaide, Toronto.

3310. *South China Morning Post (Hong Kong)*. 1940. Soya bean milk factory opened: War on malnutrition and T.B. March 10. [Eng]

• **Summary:** The article begins: "What is wanted in the colony today is a source of supply of nutritious food which is cheap enough to be within the reach of the masses; and if we can meet a part of this urgent need, one of our main objectives will have been achieved," said Mr. K.S. Lo, Managing Director of the newly-established Hong Kong Soya-bean Products Company, Limited, at the inaugural ceremony of the company's factory at Causeway Bay [on George Street, in Hong Kong] yesterday afternoon. Turning on a switch which set the factory in operation, the Hon. Mr. M.K. Lo officially declared the factory in open in the presence of a large gathering.

"Among those present were the Hon. Dr. P.S. Selwyn-Clarke, Director of Medical Services, and Mrs. Selwyn-Clarke, Dr. F.I. Tseung, Dr. J.E. Dovey, Dr. T.C. Li, the Hon. Mr. and Mrs. W.N. Tam. The guests were conducted over the works by Mr. K.S. Lo and Mr. Y.C. Kwan.

"Welcoming the guests, Mr. K.S. Lo said: 'To most of us, the soya bean needs no introduction. We come in contact with it every day in one form or another. It is the first thing that greets us on our breakfast table in the form of soy sauce, and to many Chinese it is also the last dish served on the dinner table in the form of a hot delicious soup. Its food value, long recognized by our fore-fathers, has been verified by chemists in modern laboratories. What is new here this afternoon is not Soya Bean, but the birth of our pet baby "Vita." And although "Vita" comes from the age-old soya bean family, she is as modern as our lass of 1940.

"Vita is nursed and brought up in a hygienic home, scrupulously attended by its expert doctor, Mr. H.L. Hoover and a string of white-uniformed nurses. It is dressed up in modern romper with a hood as white as that of Snow White's. To make doubly sure that it will turn out to be a strong and healthy thing, we are feeding it with calcium, cod-

liver oil and all the vitamins.

"As "Vita" grows up, it will be followed by Vita butter, Vita cream, Vita biscuits, and Vita ice-cream." Some of the equipment from the United States for the factory has not yet arrived.

"The present Director of Medical Services has set a new mile-stone in social progress in the Colony by his determined campaign against malnutrition and tuberculosis. The better-off community are well supplied with the best milk obtainable. It remains for us to look after the needs of the less fortunate, among whom are thousands of school children and wage-earners." Mr. M.K. Lo then gave a speech about the importance of good nutrition, and of an adequate intake of the "'protective foods' containing vitamins and mineral salts... Their absence has especially deleterious effects upon children and nursing and pregnant mothers."

Dr. Selwyn-Clarke, as Director of Medical Services, is making an energetic attack on tuberculosis and malnutrition, especially among the poor in the Colony. "It seems to me that any concern which could produce, under approved hygienic conditions, soya bean milk in such quantity as to be available to the poorer section of the community, and at such low prices as to be within their means, would be rendering a public service to the Colony. I understand that the Hong Kong Soya Bean Products Company seeks to fill this role. It has imported the latest machinery and will produce soya bean milk cheaply and under hygienic conditions. I wish the promoters and the Company all prosperity and success."

Note 1. According to Vitasoy's 50th anniversary history (1990, p. 102), the English-language name of the company's first product was "Vita Milk." The name was changed on 11 June 1940 to "Sunspot."

Note 2. This is the earliest document seen (July 2000) concerning Vitasoy (named Hong Kong Soya Bean Products Co. Ltd. before 24 Sept. 1990).

3311. **Product Name:** Kreme O'Soys [Plain].

Manufacturer's Name: Madison Foods.

Manufacturer's Address: Madison College, Madison, Tennessee.

Date of Introduction: 1940. April.

Wt/Vol., Packaging, Price: 14 oz can. Retails (by mail order) for \$0.15.

New Product-Documentation: Madison Health Messenger. 1940. 2(3):5. "Large jumbo hand-packed soy beans, a new variety in a special soy sauce, await your trail in Kreme O'Soys. So completely different are these extra-large delicious soy beans that you will be surprised with this new flavor and another new food."

3312. *Eat For Health (Rosenberg's, San Francisco)*. 1940. The versatile soy bean: Food of a thousand uses. Spring. p. 6-9.

Address: Rosenberg's Original Health Food Store, 1120 Market St., San Francisco, California. Phone: MARket 3033.

3313. Mogi, Masatoshi. 1940. Miso jôzô ni kansuru kôbo no kenkyû (hoi). I. Keitaigaku-teki seishitsu [Studies on the yeasts in miso fermentation (addenda). I. Morphological characteristics]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 18(6):543-54. June. [Jap]

Address: Noda Shoyu K.K. Shikenjo (Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan).

3314. *Chicago Daily Tribune*. 1940. Soy bean feast served 35 at cost of \$10.87. July 4. p. 23.

• **Summary:** "A full seven-course dinner—everything from 'soy' to 'bean'—was served 35 members of the Chicago chapter of the Society of Grain Elevator Superintendents. And yesterday the diners, while admitting that even a good thing can be carried too far, said they had no regrets.

The idea of a soy bean feast originated with Dean Clark, national secretary of the organization." Recipes were obtained from a California firm.

Here's the menu: "Soy-carrot juice appetizer. Hors d'oeuvre (celery stuffed with soy bean paste [soynut butter]). Soy-mince soup and soy wafers. Soy-vegellona 'meat' course (tasted like bologna). Pineapple salad made with soy bean sandwich spread. Soy bean (100 per cent) bread. Soy butter. Side dish of (you guessed it) baked soy beans with soy sauce. Ice cream made with soy milk and soy fruities wafer. Coffee with soy milk. Roasted soy beans (for variety's sake)."

The superintendents were then given "a tour of the Glidden company's new elevator at 5165 West Moffat street—a soy bean extraction plant." The retail cost of the entire banquet was just \$10.87.

3315. Simmons, Roscoe Conkling. 1940. The week. *Chicago Defender*. July 13. p. 15. National ed.

• **Summary:** Dr. George Washington Carver may have missed a report on the stylish seven-course soy-bean dinner given recently in Chicago by the Society of Grain Elevator Superintendents. "Beans have enjoyed Dr. Carver's important attention, but goobers have increased their fame under his spell." The full soy bean menu is given: "Soy-carrot juice appetizer. Hors d'oeuvres (Celery stuffed with soybean paste [soynut butter]). Soy-mine soup and soy wafers. Soy-vegellona 'meat course' (bologna like). Pineapple salad made with soybean sandwich spread. Soy bean (100%) bread. Soy butter. Side dish of baked soy beans with soy sauce. Ice cream made with soy milk and soy fruities wafers. Coffee with soy milk. Roasted soy beans."

"The cost of the banquet came to \$10.87. This writer asked one of the superintendents about the after-effects of the feast. 'Easy on the pocket, pleasant to the appetite, agreeable to health,' he replied."

3316. LeClerc, J.A. 1940. Re: Manufacture of soy sauce. Letter to Dr. Harry W. Miller, International Nutrition Laboratory, P.O. Box 326, Mt. Vernon, Ohio, Aug. 19—in reply to inquiry. 2 p. Typed, without signature. [16 ref. Eng]

• **Summary:** "I was very glad to get your letter of August 12, and to learn that it will be possible to see you at Mount Vernon on the 23rd. I hope, of course, to see you also in Detroit at the meeting of the Soybean Convention."

In answer to Dr. Miller's request for information regarding the manufacture of soy sauce and its supplementation with "sodium glutamate," Dr. LeClerc encloses one bulletin from the Philippines, and cites 9 scientific articles, 15 U.S. patent numbers, and one British patent number.

The following are all interested in the manufacture of sodium glutamate: (1) Dr. W.O. Snelling, 110 South 13th Street, Allentown, Pennsylvania; (2) R.W. Greef, 10 Rockefeller Center, New York City; (3) Huron Milling Co., Harbor Beach, Michigan; and (4) Amino Products Company, Rossford, Ohio. Address: Senior Chemist, Food Research Unit, Agricultural Chemical Research Div., USDA Bureau of Chemistry and Soils, Washington, DC.

3317. *Food Industries*. 1940. Formulas for foods. 12(8):99, 102. Aug.

• **Summary:** Page 102: Formula No. 104: Worcestershire sauce, No. 2. "Indian black soy sauce... 1 gallon."

Note: This is the earliest English-language document seen (April 2012) that contains the term "black soy sauce" or the term "Indian black soy sauce."

3318. National Tea Co. Food Stores. 1940. Our low prices mean big savings for you (Ad). *Chicago Daily Tribune*. Sept. 13. p. 25.

• **Summary:** The section featuring Chinese foods includes: "Soy sauce. Chinese Maid. 2 3-oz. bottles—17¢." Also includes Chinese Maid brand Chop Suey, Chow Mein, and Bean Sprouts.

3319. Balzli, Jean. 1940. Sept. 17. Later published *Revue Internationale du Soja*, March 1941, p. 41-45. [1 ref. Fre]

• **Summary:** Includes a discussion of uses for human foods, including defatted soy flour, soy coffee, soy chocolate, Worcestershire sauce, soymilk, tofu, and soy sprouts. Other uses include lecithin and industrial uses of soy oil and soy proteins.

3320. *Food Industries*. 1940. Formulas for foods. 12(9):101, 104. Sept.

• **Summary:** Page 104: Formula No. 113: Worcestershire sauce, No. 3. "Japanese black soy sauce... 1 gallon."

3321. McBride, Gordon W. 1940. What's happening with soybeans? *Food Industries* 12(10):55-57. Oct.

• **Summary:** "Greatly increased production, with accompanying increase in soybean oil output and wider utilization of other soybean products, is influencing all food industries." Discusses, with many statistics, the utilization of soybeans in the USA, including the amount used for oil (crude and refined; nonfood and food), meal, industrial proteins, and foods. An interesting table on page 56 states that the following foods are made from soybean meal: bean powder, bean curd, soy sauce, soy milk, breakfast food, invalid foods, soy flour, infant foods, ice cream, baked goods, macaroni, and sausage. Whole soybeans are used to make sprouts, cooked beans, soy sauce, confections, breakfast foods, meat substitutes, and coffee substitutes. Either whole soybeans or soy flour are used to make "fresh vegetable milk," which can be further processed to make condensed milk, dried milk, confections, cheese, or casein.

"In addition to the increasing quantities of soybeans that are brought to the market as a fresh green vegetable, larger quantities of the green beans are being canned each year. One unofficial estimate placed the 1939 pack at 15,000 cases (24 one-pound cans each)."

A photo shows the soybean products plant of Archer-Daniels-Midland Co. recently erected at Decatur, Illinois. Address: Chemical Engineer, Washington, DC.

3322. Noda Shoyu K.K. 1940. Noda Shōyū K.K. Nijūnen-shi [Twenty-year history of Noda Shoyu, Inc.]. Noda, Japan: Noda Shoyu K.K. 733 p. Illust. No index. 22 cm. [Jap]

• **Summary:** This is the first major history of Kikkoman, written largely by Mr. Morio Ichiyama. Contents: Preface. 1. History: Before the establishment of Noda Shoyu K.K. (The origin and its changes {Thoughts on its origin, Tokugawa period, Meiji period, beginning of the Taisho period}, development of shoyu industry and the town of Noda, Noda Shoyu Jozo Kumiai, family trees and family traditions of the Mogi, Takanashi, Horikiri, and Ishikawa families, virtues of the family), foundation of Noda Shoyu K.K. {the opportunity to unite, the establishment of a joint undertaking}, 20 years after the establishment. 2. Organization and management. 3. Plants (17): Korea, Jinsen?, Keijo plants. 4. Fermentation process: Special products (mirin, miso, sauce), testing center. 5. Business. 6. Cultural welfare facilities. 7. Connected enterprises: K.K. Noda Shoyu Ginko, Sobu Tetsudo K.K., Noda Transportation K.K., Gomei Company Senshukai, Foundational Juridical Perdon Kofukai, Manchuria Noda Shoyu K.K., Choshi Shoyu K.K.

Appendixes. Timeline / time table / chronology: Ranking of capital investments of shoyu producing companies in Japan, graph of yearly shoyu production in

Japan, sales of shoyu, mirin, and miso by the company, sales of the company's shoyu comparing by area and also container, the company's shoyu exporting map, average sales of the company's shoyu, prices of raw materials of shoyu production, prices of shoyu in different type containers.

Pages 461-65 give an introduction to and description of each of the major brands produced by companies presently in the Noda Shoyu group. Under the Kikkoman brand, we learn that the producer of this brand of shoyu is the Saheiji MOGI family. It is said that the logo was designed by Manpei SARANUMA. It is said that the meaning and origin of the brand is as follows. The first "big army of God" in Japan was honored at a place named *Shimousa no Kuni, Kikkō mountain (Kikkō-zan), Katori Shrine (Jingu)*. The name of the mountain, Kikkō, was used in the brand. The tortoise (*kamē*) symbolizes long life and is thus a symbol of happiness. It is said that a tortoise lives for 10,000 [*ichi-man*] years. The grace with the tortoise is born shows high-class dignity with supernatural power.

Pages 466-480 show all of the shoyu brands (including minor ones) produced by companies in the Noda Shoyu group. For each brand, the name, year of introduction, quality rank, and area where sold are given. Early brands, those introduced before the start of the Meiji period (1868), are read from top to bottom, right to left.

The Saheiji MOGI line produced a total of 15 shoyu brands. The earliest was introduced in 1784. Early brands were: Kikkōman (Tenmei 2 = 1784), Kikkōdai (Tenmei 2 = 1784), Azumaichi (Tenmei 2 = 1784), Yamataika (Tenmei 2 = 1784).

The Shichirouemon MOGI line produced a total of 58 shoyu brands. The earliest was introduced in 1772. Early brands were: Kihaku (Anei 1 = 1772), Kagikashiwa (Anei 1 = 1772), Fujikashiwa (Anei 1 = 1772), Shōchikuba (Anei 1 = 1772), Kikkōkashiwa (Tenmei period = 1781-89), Hōzan (Kaei 2 = 1849).

The Shichizaemon MOGI line produced a total of 30 shoyu brands. The earliest was introduced in 1830. Early brands were: Kushigata (Tenpo 1 = 1830).

The Hyōzaemon TAKANASHI line produced a total of 39 shoyu brands. The earliest was introduced in 1772. Early brands were: Jōjū (Anei 1 = 1772), Betatakara (Anei 1 = 1772), Tachitakara (Anei 1 = 1772), Jigamisakari (Anei 1 = 1772), Fundonokina (Genji 1 = 1864), Fujitakara (Kaei 2 = 1849).

The Fusagoro MOGI line produced a total of 48 shoyu brands. The earliest was introduced in 1753. Early brands were: Minakami (Ansei 2 = 1855), Fujimasa (Hōreki 3 = 1753).

The Noda Shoyu Goshi Gaisha produced a total of 13 shoyu brands, the Keizaburo MOGI line produced a total of 7 shoyu brands, the Monjiro HORIKIRI line and the Kanzaemon YOSHIDA line each produced one brand, and the Nihon Shoyu K.K. produced 2 brands, but all were

introduced after the start of the Meiji period (1868).

A section on exports (p. 650-) notes that it is not clear when direct exports of shoyu from Japan to the western world began, but at some time during the Bunsei (1818-1830) or Tempô (1830-1844) periods it was shipped to Holland along with other goods. In 1854 (at the start of the Ansei period, 1854-1860) an American ship came to Japan and during the stay they bought some Japanese shoyu. Also during this same Ansei period it is said that special shoyu was made for export. Made by Sairinko SHIMAZU, it was bottled and shipped via Holland House (Oranda Yashiki) in Nagasaki.

Contains many photos and illustrations. Two of these, on unnumbered pages near the front of the book, are of special interest: (1) MOGI Shichirouemon (lived 1860-1929) was the first president and CEO (*shodai torishimaru shacho*) of Noda Shoyu Inc., which began operations on 1 Jan. 1918 and was the forerunner of today's Kikkoman. An inspiring tribute and eulogy to him appears in: Fruin, W. Mark. 1983. *Kikkoman: Company, Clan, and Community* (Harvard University Press, see p. 129-54). In 1889 he assumed headship of the Kashiwa family branch, then became the most influential director of the Noda cartel. After 1900 he was probably the most widely known and respected shoyu maker in Japan.

(2) MOGI Saheji was the first senior executive manager (*jomu torishimaruyaku*) of Noda Shoyu Inc. Saheji succeeded Shichirouemon as president of Noda Shoyu Inc. Saheji is the name of a *bunke* or branch family. Anyone born or adopted into the family takes the name. So at one time this Saheji was the head of a branch family of the Mogi clan that had among its brands, the Kikkoman brand.

Note 1. Fruin (1983, p. 302-03) further clarifies the relationships: Since the establishment of Noda Shoyu, Inc. "in 1918, kinship has been employed not for interfamily cooperation but for interfamily rivalry. Household membership has become all-important in determining access to the upper reaches of corporate power. Consider the following statistics... Of the twenty-eight main and branch households in the three Mogi, Takanashi, and Horikiri *dôzoku* (see figure A-1),... the percentage of households" by lineage that engage in shoyu manufacture is as follows: "Horikiri, 13; Takanashi, 50; Mogi, 53." But "within the overall Mogi clan one main and two branch households contend. The importance of the subdivisions within the Mogi clan is revealed by the fact that, although eight of the company presidents to date have been Mogis, within the greater Mogi lineage 63 percent of the company presidents can be traced to the Kashiwa branch household of Mogi Shichirouemon, 25 percent from the Mogi-sa group of Mogi Saheji, and only 12 percent from the main house of Mogi Shichizaemon. Household hegemony was reflected as well

on the first board of directors, with 67, 22, and 11 percent representation for the households of Mogi Shichiroemon, Saheiji, and Shichizaemon respectively.”

Note 2. A *dôzoku* is a lineage or clan composed of several stem families or descent groups, called *ie* (Fruin, p. 343, Glossary). Address: Noda, Japan.

3323. *Ohio Farmer*. 1940. Now its soybean milk! This and other foods produced by new Ohio plant. 186(11):10. Nov. 30. Whole No. 4606.

• **Summary:** About the work of Dr. Harry W. Miller (of Ohio and China) with soymilk. Today, because of the Japanese invasion of Shanghai, there now stands in Mt. Vernon, Ohio, a plant producing soybean milk, powder, and a number of products from the edible soybean. The head of this company, International Nutrition Laboratory, is Dr. H.W. Miller, who was born in Miami County, Ohio, and educated as a surgeon. For many years he was head surgeon in an American mission hospital in China. During this time he saw the need for milk and other dairy products in China; they were unavailable to most people due to the high cost and short supply. So he and his associates started a plant in Shanghai for the production of soybean milk. In 1937, at the time of the Japanese invasion, they had 15 delivery boys going out each day on bicycles to deliver the soybean milk to thousands of customers.

When Japanese bombs destroyed the plant in 1937, Dr. Miller decided to relocate near Mt. Vernon, in Knox County, Ohio. He and his sons built the plant, and also designed and built much of the equipment in it. According to Dr. Miller, soybean milk “is more quickly assimilated by the body than animal milk, it gives a quick recovery from exhaustion and fatigue, and is especially desirable as a food for infants and invalids. The liquid and powdered soybean milk produced in this plant is sold to doctors and hospitals all over the United States...” The steps in the process are described. They also make Mien Jing, based on wheat gluten, to which are added fresh vegetables and soya sauce to make a nutritious food with a meat-like flavor.

“During the past summer this plant also packed a quantity of edible soybeans. These were canned, both as green beans, and dried beans with tomato sauce added. Another product is a soybean flour...”

Some of the edible soybeans used in this plant were grown on the farm run by Dr. Miller near Mt. Vernon and by farmers in the neighborhood. However it has been necessary to import a large portion of the soybeans from other states.

Dr. Miller’s organization is presently establishing another plant for the production of soybean milk in the Philippines. Moreover, 2,000 pounds of powdered soybean milk were recently shipped to China from Mt. Vernon.

Photos show: (1) Dr. Harry Miller, seated at a desk in a coat and tie, examining samples of edible varieties of soybeans. (2) The plant of the International Nutrition

Laboratory near Mt. Vernon, Ohio. (3) A worker inspecting a can of edible soybeans, which are packed in cans and labeled, ready to ship to all parts of the USA.

3324. **Product Name:** Miller’s Mien Jing. Renamed Savory Vegetable Cutlets. Renamed Miller’s Vegetarian Cutlets by Sept. 1946, then Miller’s Vegetarian Cutlets (Mien Jing) by Jan. 1946, and Miller’s Vegetarian Gluten Cutlets by 1948.

Manufacturer’s Name: International Nutrition Laboratory.

Manufacturer’s Address: Mt. Vernon, Ohio.

Date of Introduction: 1940. November.

Ingredients: Incl. wheat gluten and probably soy sauce.

Wt/Vol., Packaging, Price: Canned, No. 10, 30 oz. or 20 oz.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: *Ohio Farmer*. 1940. Nov.

30. p. 10. “Now it’s soybean milk!” At their plant in Mt. Vernon, Ohio, Dr. Miller and his sons make Mien Jing, based on the “gluten of wheat flour, to which is added fresh vegetables and soya sauce, making a nutritious food with a meat-like flavor.”

International Nutrition Laboratory. 1940? “Miller’s Soy Bean Foods.” Undated 12-page leaflet. 4. Miller’s Mien Jing: Wheat “gluten, or cereal protein, is the basic food element in Miller’s Mien Jing. Mien Jing is the Oriental name meaning processed gluten. A high protein wheat flour is washed free of starch, and small slices of the remaining gluten are processed with fresh vegetables and soya sauce, making a highly nutritious food, quite meat-like in taste. This gluten food was first introduced into this country by us, and our Mien Jing, or gluten cutlets, has the genuine flavors that have popularized this food in the Orient... It requires only a little cooking to make Mien Jing into many savory dishes, such as stews, croquettes, entrees, and also Oriental dishes such as Chow Mien and Chop Suey.”

Ad in *Soybean Digest*. 1942. Sept. p. 16. “Miller’s Soya Products.” Ad in *Soybean Digest*. 1944. Sept. p. 61. “Meet the Vegetable Cow.” International Nutrition Laboratory now sells Miller’s Vegetarian Cutlets in uniform slices or diced form. This popular product has a high protein value.

Ad in *Soybean Digest*. 1946. Sept. p. 79. “No meat?—Try Cutlets.” A large photo shows the can. The front panel states: “Delicious when grilled or broiled. Protein food for meat pies, grills, chop suey.” The ad text reads: “You may be one of those many folk who will consider Vegetarian Cutlets as a more satisfactory article of diet than fish, fowl, or meat. This tender meat-protein substitute is manufactured from a selected portion of the wheat [gluten], healthfully prepared and tastily flavored, providing a highly nutritious and tempting food for any meal. Cutlets are very low in starch, high in body building qualities, resemble meat in taste.

“Miller’s Cutlets may be prepared and served in many ways—lightly grilled as they come from the can—dipped in egg and rolled in cracker crumbs, corn meal, or potato flour

and browned—used in stews, pot pies, and chop suey. With these delicious cutlets a quick meal, balanced in protein, can readily be prepared.

“Miller’s tenderized cutlets are packed in three sizes: No. 10, 30 ounce, 20 ounce. If your dealer does not have Miller’s Cutlets, write for information.”

Note: The Chinese name on the label probably indicates that Dr. Miller learned about this gluten-based product during his years as a physician in China, and that he was marketing it to Chinese-Americans (as well as Caucasians) in the USA.

Soybean Blue Book. 1948. p. 84. Talk with Clarence Miller. 1986. The best seller at Mt. Vernon was Miller’s Vegetarian Cutlets, a canned gluten entree, but they were not so profitable since they cost so much to make. 100 lb of flour yielded only 30 lb of gluten and 70 lb of starch. The latter was sold for wallpaper glue.

• **Summary:** Items are listed by category in 2 full-page columns. Bakery goods: Penna 100% soy cookies, pkg. 18¢ (Lemon, almond, vanilla and chocolate flavor). Soy orange drops, doz. 15¢. Bill Baker’s 100% soy bean cookies, pkg. 10¢.

Breakfast foods: Soy grits, lb. 20¢.

Coffee substitutes: Brevy. Nuveco. Ficgo in bags, box 25¢. Soy Koff, regular or drip, pkg. 25¢. Kofy Sub, Dr. Jackson. Cassa Fistula Bean. Date sugar.

Figs: Black Mission. Kadota. Calimyrna.

Dulse tablets, Thompson. Cereophyl tablets or powder (powdered grass [like chlorophyll]).

Juices—unsweetened: Soy and carrot juice, 8-oz. 10¢; 16-oz. 15¢.

Kitchen equipment: Zippy juicer, \$49.50. Juice-O-Mat, \$3.29. Hollywood Liquifier, \$24.75. Note 1. This is the earliest English-language document seen (July 2006) that uses the word “Liquifier” to refer to an electric blender, or that mentions the “Hollywood Liquifier,” an early brand of electric blender, or that contains the word “Hollywood” in the name of an electric blender.

Meat substitutes: Vegelona, 10¢, 25¢ can. Yum, 10¢, 25¢, 50¢ can. Gluten steak, 17¢, 27¢ can. Note 2. This is the earliest English-language document seen (Feb. 2005) that contains the term “Gluten steak.”

Noodles: Pfaffman [Williamsport, Pennsylvania] soy noodles, pkg. 13¢; 2 for 25¢. Gluten noodles, pkg. 25¢. Peanut oil, unrefined.

Penna Soya Products: Toasted soy nuts, pkg. 5¢; ½-lb 20¢; 1-lb. 36¢. Tenderized soy bean, 1-lb pkg. 25¢. Rokusun soy bean, lima type, 1-lb. pkg. 25¢. Soya puffs, ½-lb. can 25¢. Soya malt, ½-lb. 23¢; 1-lb. 43¢. Soya cocoa malt, ½-lb. 23¢. Soya cocoanut, ½-lb. 23¢. Soya banana, ½-lb. 30¢. Soya milk powder, plain, 1-lb. can 25¢. Soya milk powder, sweetened, 1-lb. can 25¢. Soya roast, 15-oz. 25¢. Soya loaf, 15-oz. 25¢. Soya sauce, 4-oz. 12¢; 8-oz. 19¢; 16-oz. 35¢. Soya virgin oil, 4-oz. 15¢; 8-oz. 23¢; pint 37¢; quart 67¢; ½-gallon \$1.05; gallon \$1.95. Soya cookies, 100%, pkg. 18¢.

Salt: Bragg Sprinkle, can 50¢. Soy-B-Malt, Cubbison, 8-oz. 25¢.

3328. **Product Name:** Yum (Bologna-Like Canned Meatless Loaf with Tofu).

Manufacturer’s Name: Madison Foods.

Manufacturer’s Address: Madison College, Madison, Tennessee.

Date of Introduction: 1940. November.

Ingredients: Soybeans, gluten, soy cheese [tofu], whole peanut meal, seasonings.

Wt/Vol., Packaging, Price: No. 2 can. 20 oz.

How Stored: Shelf stable.

Nutrition: Protein 19.1%, fat 11.1%, carbohydrates 11.5%, ash 2.5%, calories 221/100 gm.

New Product—Documentation: Ad (2¼ by 3 inches) in *Nature’s Path* (USA). 1940. Nov. p. 428. “Yum, a new food.” “For years Madison Laboratories have been experimenting with this new food to make it very tasty and yet being ever careful not to season it to the point of limiting its appeal to those who like the very spicy foods... Compounded from wheat gluten, soy beans, nut meal and vegetable seasonings, this new food... is right on the front row of body-building protein foods.” Gives two recipes: Yum meatless balls. Breaded Yum cutlet. “Free: the *Madison Health Messenger* with new health news, soy bean information, new recipes, charts, etc. Obtain from your health food store or write to: Madison Foods, Madison College, Tennessee.”

Madison Health Messenger. V. 49-2. p. 5. Can be used hot or cold. Taylor. 1944. *The Soy Cook Book*. p. 201.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual*. 1st ed. p. 95. Yum contains 16.00% protein, 5.20% fat, and 11.26% carbohydrate. Not listed in the 1965 *Diet Manual*.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 162. Lists the ingredients in "Yum (Madison)." The ingredients are now: Wheat protein [wheat gluten], processed soybean, peanuts, soya flour, rolled oats, soy sauce, vegetable oil, tomato puree, onions, yeast extract, salt, garlic, MSG, hydrolyzed vegetable protein, sage.

It's Your World Vegetarian Cookbook. 1973. Glendale, California: Seventh-Day Adventist Church. p. 118. This is a canned product resembling cold cuts, made from wheat [protein] soy, and peanuts. It can also be used in salads or sandwiches. Now made by Worthington Foods.

3329. **Product Name:** Soy Sauce.

Manufacturer's Name: Penna Soya Products (Marketer-Distributor).

Manufacturer's Address: Williamsport, Pennsylvania.

Date of Introduction: 1940. November.

New Product–Documentation: House of Better Living. 1940. Nov. p. 4. 4 oz. for \$0.12, 8 oz. for \$0.19, 16 oz. for \$0.35.

3330. Read, Bernard E.; Wagner, W. 1940. Shanghai vegetables. *China Journal (The)* 33(5):206-20. Nov.; 33(6):259-71. Dec.

• **Summary:** In the "Science" department, the Introduction begins: "Recent advances in the science of nutrition show the great need for more so called Protective Foods in the diet. This term refers to those things which are rich in essential vitamins and minerals."

In section 2, "The Legumes" (p. 210+), the first two entries are: (1) The soybean. Latin names. Chinese name: (Cc = Chinese characters given), Ta Dou. "The yellow, black and green varieties are common in China and marketed from Manchuria, Tsingtao and Shanghai. The young soybean in the pod is a common article of diet in Shanghai, Chinese name, Cc. Shanghai: *Mau Deu*; Peking, *Mao tou*. Followed by: season, price, nutritive value, and a recipe.

(2) Soybean sprouts. Chinese name, Cc. Shanghai: *Waung Deu Nga*; Peking, *Huang Tou Ya*. Followed by: season, price, how to make, nutritive value, and serving suggestions.

"There are very many other soybean preparations of high nutritional value well worth adding to the diet. Soybean sauce (soy) with added spices is the basis of such things as Worcester [Worcestershire] sauce. Beancurd is really a kind of junket containing good digestible protein, it can be added to soups or stews. Made fresh daily... A dry cake is made [pressed tofu], also spiced, pickled, fried and fermented. The latter is just like a kind of strong cheese." Soybean milk is

made by "grinding the [soy] bean with water, one part of bean to about 9 of water

Photos (on unnumbered pages, against a black background, with a small cm ruler show): (1) Four young soybean pods with beans inside. Four soybean sprouts 8-10 cm long.

Also discusses many other edible Chinese legumes. Address: 1. Henry Lester Inst. of Medical Research; 2. Public Health Dep., Shanghai Municipal Council.

3331. LeClerc, J.A. 1940. Re: Soy sauce. Letter to Mr. E. Bradley Fairchild, P.O. Box 2, Manila, Philippine Islands, Dec. 10. 1 p. Typed. [1 ref. Eng]

• **Summary:** "Dear Sir: I have been requested by Mr. W.J. Morse, of the Bureau of Plant Industry, to send you such information as we have on the preparation of soy sauce by the use of hydrochloric acid.

"Is is my understanding that most of the soy sauce made in this country at the present time is produced by the modern process of using hydrochloric acid for the conversion of protein rich material such as gluten, soybean pressed oaks, etc. This process can be completed in about two days, whereas the old process used in China requires from six months to two years. Furthermore, the new process is much more sanitary. On a laboratory scale we have made soy sauce in this way as follows:

"Take 15 grams of wet gluten and 80 cc of 3.7% HCl [hydrochloric acid] (1+9). This is heated in an autoclave at 20 pounds pressure for 3 to 4 hours. The digested material is then concentrated to one-half its volume and neutralized with an alkali, or rather almost neutralized. This is then filtered and the product thus obtained is similar in most respects to soy sauce." Address: Senior Chemist, Agricultural Chemical Research Div., USDA.

3332. Rabbit, James A. 1940. Rice in the cultural life of the Japanese people. *Transactions of the Asiatic Society of Japan* 19:187-257. Dec. Series 2. Plus 6 pages of unnumbered plates at end. A lecture delivered before the Asiatic Society of Japan, Nov. 1939. [33 ref]

• **Summary:** This is an in-depth article by an expert on the subject. Contents: Foreword. The sacredness of rice. The honorable rice throughout the year. Rice in Japanese literature. Rice and religion. Socio-economic influences.

Page 243: "Intercourse with foreign countries, limited as it was from the 16th to the middle of the 19th centuries, has not been without its influence on the national cookery, as is evidenced by the introduction of such exotic foods as *sukiyaki* or *gyūnabe* (beef and vegetables fried in a flat pan with *shōyu* sauce), *torinabe* (fowl and vegetables fried in a flat pan with *shōyu* sauce), tempura (fried in batter) and many other dishes which are still considered to be almost a part of the Japanese menu, particularly in the thousands of eating houses of the metropolitan cities."

Page 244: “The trinity which constitutes the bulk of Japanese daily fare consists of rice, *miso* (bean paste) [sic, soup], and *tsukemono* (pickled vegetables cured with salt or a mixture of rice bran and salt).”

On p. 245 is an interesting discussion of *genmai* (uncleaned rice [brown rice]). “This *genmai* with a generous mixture of wheat was for a long time the staple food among farmers... Although the superior nourishment of *genmai* is well known at the present time and has received much publicity, those who favor its universal adoption are looked upon as faddists, similar to the attitude toward vegetarians in western lands.”

Page 255: In Japan there a huge variety of places to eat, “which range from a street stall selling soba (hot buckwheat noodles covered with soy [sauce] with a sprinkling of green onions) to the semi-private club-like *machiai* (waiting house)...

Pages 256-57 discuss the origins, history, and present status of sushi. Today there are an estimated 1,500 to 1,600 sushi shops in Tokyo alone; in addition to these about 500 small stalls appear each night. Describes the arts of making and eating sushi. “After dipping it into a dish of *shōyu* (soya bean sauce), place the dripping sushi into your *kuchi* (mouth) without the loss of one drop of sauce and in such a manner that the fish side comes in contact with the tongue before the rice.” Address: Japan.

3333. Fujii, T. 1940. *Shōyu jōzō narabini sonota 2, 3 no genryō to shite shiken seru “kiyatsusabaruto”* (mata wa katusaba) [Shoyu brewing using cassava root and several other raw materials]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 35(5):456-60. [Jap]

3334. Fujii, T. 1940. *Shōyu tanpakushitsu genryō daizu aruiwa daizu kasu daiyō toshite sufu zansa no riyō* [Brewing shoyu using “sufu” residue as a protein source substitute for soybeans or soybean cake]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 35(6):532-33. [Jap]

• **Summary:** Sufu means “staple fiber,” not “fermented tofu.” It is a by-product of artificial wool made from soybeans or defatted soybean cake.

3335. **Product Name:** Granose Saviand (A Meatless Savoury).

Manufacturer’s Name: Granose Foods Ltd.

Manufacturer’s Address: Stanborough Park, Watford, Herts., WD2 6JR, England.

Date of Introduction: 1940.

Ingredients: Wheat protein, cashew nuts, soya flour, yeast, salt, hydrolysed vegetable protein, onion, caramel.

Wt/Vol., Packaging, Price: 284 gm (10 oz) can.

New Product–Documentation: *The British Vegetarian*.

1960. Sept/Oct. p. 249. Granose produces Saviand, containing wheat gluten, ground nuts, yeast extract, onion,

and caramel.

Manufacturer’s catalog. 1980. April. “A product similar to Protose but with the addition of onion flavouring.”

Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that the product, made by Granose, was introduced in 1940. Label. 1990. 8.5 by 3.75 inches. Orange, black, and yellow on white. Two color illustrations of a Savoury (like a U.S. turnover, with a crust) on a plate with a spatula underneath it. “A blend of wheat protein and nuts. Contains no animal products. Saviand is a delicious savoury which is ready to serve either cold with salads or hot in pies, hot pots, etc. Slice or dice it. Ingredients: Wheat protein, water, peanuts, soya flour, yeast, salt, hydrolysed vegetable protein, onion powder, caramel. Dietary analysis upon request.” This canned product is similar to Spam or Nuttolen. It is not sold in the pastry crust.

3336. **Product Name:** Miller’s Soya Curd. Renamed Miller’s Soya Cheese.

Manufacturer’s Name: International Nutrition Laboratory.

Manufacturer’s Address: Mt. Vernon, Ohio.

Date of Introduction: 1940.

New Product–Documentation: International Nutrition Laboratory. 1940? “Miller’s Soy Bean Foods.” Undated 12-page leaflet. “3. Miller’s Soya Curd: This delicate protein food is made by coagulating Miller’s Soya Lac with lactic acid and then blending this soft curd with tomato puree, pimento and Soya Sauce. It is a pleasing protein addition to salads, or for spreading crackers and sandwiches.”

Ad in *Soybean Digest*. 1942. Sept. p. 16. “Miller’s Soya Products.”

3337. **Product Name:** Miller’s Soya Sauce (Importer-Marketer). Made in South China.

Manufacturer’s Name: International Nutrition Laboratory.

Manufacturer’s Address: Mt. Vernon, Ohio.

Date of Introduction: 1940.

How Stored: Shelf stable.

New Product–Documentation: International Nutrition Laboratory. 1940? “Miller’s Soy Bean Foods.” Undated 12-page leaflet. 5. Miller’s Soya Sauce: “Produced in South China where the finest soya sauce is made, insuring a pure and highly concentrated product. It should be used in flavoring all protein dishes where a meat-like flavor is desired.”

3338. Suzuki, T. 1940. *Shōyu kasu sei tane kōji ni tsuite* [Koji starter made from shoyu cake]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 35(6):539-40. [Jap]

3339. Bragg, Paul C. 1940. The four generation health food cook book and menus. Los Angeles, California: Published by the author. Printed by Aetna Printing Co., Los Angeles. 169

p. Illust. No index. 24 cm.

• **Summary:** This book is especially interesting for the genealogical information and family photos it contains. Paul Bragg is now a grandfather [with two grandchildren], apparently unmarried, with three living children: Lorraine Bragg Stoddard, Polly Bragg, and Bobby Bragg. Lorraine has a son named Shocky. Paul's father, also apparently no longer married [to Carrie Chappius], is called "Daddy Bragg" and "Grand-daddy" Bragg; his true name [Robert E. Bragg] is not given. A nice portrait photo shows each of the family members separately; they all look healthy and happy. The cover photo shows Paul Bragg standing by a stove wearing a chef's white top hat and white clothing, and holding up a tasting spoon. The frontispiece is a half page photo showing Paul, his father, Lorraine, and Shocky seated, side by side on a wall, facing forward, each with arms around the back of the person sitting next to him or her. The text states: Each of them displays the highest type of physical perfection in normal weight, abundance of energy, vitality, and absolute freedom from sickness." They attribute this perfection to their diet, but they "are not faddists."

Contents: Part I: Four generation menus. 1. Daddy Bragg's first generation menus: Everyday menus for the 'past middle age' group, high energy diet for the youthful maturate. 2. Paul Bragg's second generation menus: The gaining diet, the reducing diet, maintaining normal weight, supreme vitality diet. 3. Lorraine's third generation menu: The modern housewife's health and beauty menu. Polly's third generation menu. Bobby's third generation menus: The athlete's menu, the camper's menu. 4. Shocky's fourth generation menus: Baby's diet, children's foundation diet.

Part II: Important principles of modern health food cookery: Introduction, food combinations—are they necessary? (no), condiments (avoid vinegar, cayenne pepper, Worcestershire sauce), cooking utensils (avoid aluminum and tin), health cocktails (made of fruit or vegetable juices), should we drink liquids at meals? (is fine if you wish), how to enjoy food, milk (important for its calcium), shortenings (some are OK, as from peanut oil, sesame seed oil, soybean oil, corn oil, etc.), salt (use in moderation, or use Sprinkle), white sugar (avoid), white flour (avoid), foods to avoid (long list, starting with alcoholic beverages, soft drinks, tea, coffee, tobacco, and drugs), the adequate diet (includes as serving of soybeans once a week, and 2 tablespoons of vegetable oil, such as soybean oil, daily), the importance of supplementary feeding (vitamin and mineral supplements plus orange juice and Tava—a drink rich in vitamins).

Part III: Recipes. 1. This is the way to prepare delicious, healthful soups. Chapter 10 is about meat substitutes, and calls frequently for Bragg Meal Wafers, Bragg Broth or Bevron, Bragg Meal cereal, etc. Chapter 11, which is about meats, begins: "Meats are one of the greatest energy building foods we have when properly prepared." Recipes call for steak, chicken liver, sweetbreads, veal kidney, boiled heart,

scrambled brains, stewed tripe, roast beef, meat loaf, leg of lamb, roast chicken, roast turkey, etc.

The most important principle is (p. 25): "Eat food as close to Nature as you possible can. Keep it primitive." Brown rice is the best type of rice. Molasses must not contain sulphur dioxide. Honey is the best sweetener, followed by raw sugar or brown sugar. Raw milk is preferred. Avoid foods that contain "benzoate of soda or lye" [preservatives] or any other synthetic ingredient. Unsulphured dry fruits are the best. Use natural cheese, not processes. Avoid cured meats such as ham, bacon, corned beef, salami, bologna, or frankfurters. Buy whole grain flour and cereals. Avoid vinegar and baking soda. Try to save and eat the skins of vegetables, such as potatoes, carrots, beets, tomatoes, etc.

Note: Polly Bragg married a Mr. Sorrel and on 10 Feb. 1936 gave birth to a boy, Robert Paul Sorrel, in Los Angeles. Address: P.O. Box 428, Burbank, California.

3340. Carqué, Otto. 1940. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. 4th ed. Glendale, California: Natural Brands, Inc. 239 p. 23 cm. Revisions and supplements by Mrs. Lillian R. Carqué.

• **Summary:** This manual of food reform discusses the importance of a simple vegetarian diet, fresh air, pure water, exercise, and rest. Also discusses acid and alkaline foods, the treatment of disease, and food preparation. The author lived 1867-1935.

The nutritional value of soy beans is discussed briefly on pages 113, 145, 153, 162, and 174. The section titled "The Soy Bean, a Remarkable Food" (p. 176-78) describes and discusses boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts; recipes for Baked soy beans, Soy bean loaf, and Soy bean bread are given. A table (p. 221) gives the average chemical composition of various legumes, including soy beans. Address: Los Angeles.

3341. Fukai, Tōshi. 1940. Kagaku shōyu to daiyō genryō shikomihō [How to make HVP / chemical shoyu and shoyu using substitute ingredients]. Tokyo: Konno Shoten Shuppanbu. 151 p. 23 cm. 2nd ed. 1941 (164 p.). [Jap]*

• **Summary:** The author was born in 1888. Address: Japan.

3342. La Choy Food Products, Inc. 1940. The art and secrets of Chinese cookery. Detroit, Michigan: La Choy Food Products. 18 p. Illust. (some color). 11 x 16 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

3343. Mariposa. 1940. Hollywood glamour cook book. Miami, Florida: Glamour Publications. Distributed by M. Barrows & Co. xviii + 427 p. Portrait. No index. 21 x 16 cm. [3 ref]

• **Summary:** The author presents herself as a glamour girl, who lives in Miami, Florida. She is “Your ‘Mystic Pot, with herbs and spice. I charm your meals and make them nice.” “Foreword: You must have wondered how the Movie Stars keep so glamorous, vivacious, young-looking and slender, they seem more like gods and goddesses than real people. No wonder they are fairly worshipped by the Movie Fans! This book will disclose to you the beauty secrets of the Movie Stars...” The key is a healthy diet and herbs.

Recommended foods: Whole wheat and soy bean spaghetti, La Choy Soy Sauce and La Choy Molasses Sauce, Soy bean crackers, goat’s milk (not cow’s milk), all seafoods, fish, poultry, rabbit, venison, lamb, frogs’ legs. Foods to avoid: White bread, white flour, white sugar, white rice, spaghetti etc, made of white flour, beef, veal, pork, lard, suet, grease, sulphur dried fruits, table salt (“free running,” iodized, but “bag salt” is OK), most soda fountain drinks, “pop” or any drink put up with carbonated water, gassed, dyed, or faked foods. Soy-related: “Legumes” include soy beans (p. xi). Soy honey bread (with soy bean flour and soy milk, p. 7). Soy honey rolls (p. 8). Soy corn sticks (with soy bean flour, p. 22). Soy vegetable flour sticks (p. 23). Soy waffles (p. 24). Soy [pie] crust (p. 35-36). Soy short cake (p. 52). To make soy bean milk and corn milk (from soy bean flour, p. 78-79). Soy milk and carrot juice (p. 79). Soy bean coffee (p. 83). Coffee substitutes (incl. soy, p. 85). Canapes d’amour (with soy bean bread, p. 102). To cook Soy Sea Shells or Soy Macaroni (p. 122). Soy kidney pie (p. 132). Soy macaroni or spaghetti (with soy or Savita Sauce, p. 200). Soy beans—highlights (p. 213-14). Soy baked beans (p. 214). Proteins (incl. soy, p. 386-87).

Also discusses: Garbanza pie crust (p. 36, 212). Electric vegetable juicer (p. 68). Importance of alkaline diet (p. 68-69, 238-39, 388-91). A table (p. 101), titled “Raw nut butters,” lists 12 types: “Peanut, butternut, lychees, almond, pecans, pignolia nut, pistachio nut, paradise nut, cocoanut, hazelnut, beechnuts, cashew, walnut, chestnut, Brazil nut, and sesame tahini. Note: These butters are sold at the fancy grocer’s or Health Food Stores.” Note: This is the earliest English-language document seen (May 2011) that mentions “tahini” or “sesame tahini”—a smooth paste of sesame seeds. According to *Webster’s Dictionary*, the word “tahini” comes from the Turkish *tâhin* and was first used in English in about 1899.

Carrot peanut butter canape (p. 101). Mock liverwurst. Vegetarian dinner party (p. 287).

Glamour guide (p. 360-61). Planetary foods and menus (by astrological sign, p. 277-341). Tables showing the best food sources of various vitamins and minerals (p. 365-417).

In the chapter titled “Snacks and Beverages” is a recipe (p. 76-77) for a Date and goat’s milk shake, which is “better than any soda treat” and which calls for use of an “electric blender.” The recipe for “Orange honey nanny shake” (p. 77) states: “For a more frothy drink, whip with electric

blender...” See recipe for soymilk made from soy flour. Recommends buying foods and herbs in health food stores.

In the section titled “Recognition and gratitude” (p. 392) near the end of the book, she thanks “Henry Lindlahr, M.D.,” “Otto Carqué, Mausert, M.D.,” and many other lesser-known people.

Talk with Akasha Richmond. 2004. June 5. Akasha has been able to find out very little about the author of this book, who she thinks self-published it. Although she lives in Florida, she talks about “glamour girls” and Hollywood. Address: 1265 S.W. 11th St., Miami, Florida.

3344. Oriental Show-You Company. 1940. Oriental recipes. Columbia City, Indiana: Oriental Show-You Co. 24 p. Illust. 19 cm. *

• **Summary:** These recipes describe how to use the company’s shoyu (naturally fermented, Japanese-style soy sauce).

3345. Prescott, Samuel Cate; Dunn, Cecil Gordon. eds. 1940. Industrial microbiology. New York, NY: McGraw Hill Book Co. x + 541 p. Illust. Index. 23 cm. [53* ref]

• **Summary:** In Chapter 8, titled “Yeast: Its manufacture, vitamins, and uses,” p. 155 states that soybeans, freed of bitter principles, sugar-beet juice, and various other substances have been proposed either to increase the yield of yeast or to act as the source of nutrient material (See Chrzaszcz and Janicki 1936).

Chapter 24 titled “The molds” (p. 339-57) discusses: Some important *Aspergilli* (members of the *Aspergillus flavus-oryzae*, especially strains of the *A. oryzae* series are of major industrial importance in the Orient [East Asia]). They are used to make sake, shoyu, miso, and *mizuame*, a sugar syrup made from rice (p. 350). Divisions of *Penicillia* (the genus *Penicillium*). The genus *Rhizopus* (used in the amylo process for converting starch to sugar by the use of selected molds—see p. 48-50). Mold enzymes. Apparatus for cultivating molds. References on molds (42).

Chapter 32 titled “Mold enzyme preparations: Uses and products” (p. 419-24), has the following contents: Introduction. Commercial amylase and its preparation. Koji and its preparation. Some mold products (in Japan): Soy sauce or shoyu, tamari, miso. The uses of mold enzymes (industrially): Amylases, invertase, proteases, and pectinase. The authors cite the industrial applications of members of the *Aspergillus flavus-oryzae* group especially strains of *Aspergillus oryzae*. Commercial amylase or diastase is marketed under a variety of trade names such as Taka-diastase, Kashiwagidiastase, Digestin, Polyzyme, Protozyme, and Oryzyme. These are generally mixtures of enzymes, however purified enzyme preparations (such as Taka-amylase) may be obtained.

Koji may also be used to make sake (rice wine) and shocho (distilled alcoholic liquor). “The use of *koji* in

the United States was introduced by Takamine” (p. 420). Address: Cambridge, Massachusetts.

3346. Sampaio, Sebastiao C. 1940. Soja [Soybeans]. Sao Paulo, Brazil: Tipografia Brasil, Rothschild Loureiro & Cia, Ltda. 43 p. Secretaria da Agricultura, Industria e Comercio do Estado de Sao Paulo. [20 ref. Por]

• **Summary:** Contents: Introduction: Soya. Botanical description. Varieties. Composition of the plant. Culture/cultivation. Enemies and pests. Improvement of the seeds: Improving the oil (*óleo dos graos de soja*), improving the cake and flour, other improvements. Commerce and trade.

This general book draws heavily on U.S. publications, including Piper and Morse, 1923. The section titled “other improvements” briefly mentions many food uses of soybeans, including vegetable-type soybeans (Easycook and Hahto), green vegetable soybeans (*Quando verdes... elas constituem ótimo legume verde = when green... they constitute an excellent green vegetable*), soy sprouts, soy flour, soymilk (*leite de soja*), soy casein, soy cheese (*queijos e requeijos*) [tofu], shoyu, and miso. The Japanese colony in Sao Paulo makes shoyu in commercial quantities.

Note 1. This is the earliest Portuguese-language document seen (June 2009) that mentions green vegetable soybeans, which it describes as shown above.

Note 2. This is the earliest Portuguese-language document seen (Sept. 2006) that uses the term *óleo dos graos de soja* to refer to soybean oil. Address: 3a Seccao Tecnica do Departamento do Fomento da Producao Vegetal, Sao Paulo, Brazil.

3347. Zaibei Nihonjin Kai. 1940. Zaibei Nihonjin shi [History of Japanese in America]. 1619 Laguna St., San Francisco, California. [Jap; eng+]

• **Summary:** The section titled “*MUTO Yamaji no Shôyugyo*” (Yamaji Mutô’s shoyu business) (p. 59) states that in 1887 Yamaji MUTO tried to sell Kikkoman shoyu in San Jose, California in beautiful pottery containers. Initially the venture was a success, but the product was purchased more for the container than for the shoyu. The container was used for a flower vase. Sales dropped rapidly after 1 month, and the venture soon failed. Address: San Francisco, California.

3348. International Nutrition Laboratory. 1940? Miller’s soy bean foods (Brochure). Mt. Vernon, Ohio: International Nutrition Laboratory. 12 p. Undated.

• **Summary:** A description (probably written by Dr. Harry W. Miller) of each of the following foods is given: 1. Miller’s Soya Lac: A liquid milk packed in 13 oz. and 30 oz cans. It is available in both natural and chocolate flavors. 2. Miller’s Soy-A-Malt: A spray-dried powder available in both natural and chocolate flavors, packed in 1-pound cans, which make 1 gallon of “vegetable milk.” 3. Miller’s Soya Curd: “This delicate protein food is made by coagulating Miller’s Soya

Lac with lactic acid and then blending this soft curd with tomato puree, pimento and Soya Sauce. It is a pleasing protein addition to salads, or for spreading crackers and sandwiches.”

4. Miller’s Mien Jing: Wheat “gluten, or cereal protein, is the basic food element in Miller’s Mien Jing. Mien Jing is the Oriental name meaning processed gluten. A high protein wheat flour is washed free of starch, and small slices of the remaining gluten are processed with fresh vegetables and soya sauce, making a highly nutritious food, quite meat-like in taste. This gluten food was first introduced into this country by us, and our Mien Jing, or gluten cutlets, has the genuine flavors that have popularized this food in the Orient... It requires only a little cooking to make Mien Jing into many savory dishes, such as stews, croquettes, entrees, and also Oriental dishes such as Chow Mien and Chop Suey.”

5. Miller’s Soya Sauce: “Produced in South China where the finest soya sauce is made, insuring a pure and highly concentrated product. It should be used in flavoring all protein dishes where a meat-like flavor is desired.” 6. Miller’s Soya Loaf: “Made from especially selected high protein edible soya beans, low in fat and carbohydrates. This food will be found to be a very pleasing entree that can be served as it comes from the can, or made into appetizing roasts, pot-pies, sandwiches, and other meat substitute dishes.”

7. Miller’s Soya Spread: This canned product can facilitate the making of tasty and nutritious sandwiches. 8. Miller’s Whole Soya Bean Flour: This flour “is not made from oil extracted ‘bean cake,’ but fresh selected edible soya beans are ground to produce this rich golden flour. Wheat flour is classed among the acid foods while soya bean flour is strongly alkaline... One part of Soya Flour will neutralize the acidity of four parts of wheat flour.” 9. Miller’s Green Soya Beans: These delicious canned green beans “are an abundant source of Vitamins A, B, and G, and a splendid source of calcium, phosphorus and iron... rich in protein, they can be served just as they come from the can. They make a splendid addition to a vegetable salad. They combine well with many of the vegetables in cooking. Surprise your family and friends by serving this new food.

10. Miller’s Giant Soya Beans: These soy beans are high in protein (43.18%) and low in fat (18.7%). “Miller’s soy beans are processed so that the nutlike flavor is brought out and they are rendered entirely digestible. The eating of the soy bean creates an alkaline reserve so necessary for the healthful functioning of the body.” 11. Miller’s Soya Beans with Tomato Sauce: Edible soy beans are canned with tomato puree and malt. “This is truly a treat for the picnic lunch.”

This leaflet contains 8 recipes using Miller’s products. Three panels discuss the “Dietetic advantages of the soy bean;” across the bottom is written in large letters “Alkalinize with Miller’s Soy Bean Foods.” These panels

note of the soya bean: "So highly does it stand in the list of foods from the vegetable kingdom that the International Nutrition Laboratory is devoting 95% of its effort to the output of foods made from the soya bean." Edible Soy Beans are a remarkable food, a complete protein with adequate calcium for optimum metabolism, a ready alkalinizer, rich in Lecithin and Cephalin—the nerve foods, and "The only vegetable protein that is biologically able to substitute for animal protein... It is indeed unfortunate that so little interest has been aroused here in America in the culture of the so-called vegetable or edible type of soy beans... The International Nutrition Laboratory uses only these edible beans for canning and food manufacture.

"This institution now located at Mount Vernon, Ohio, first began its work in Shanghai, China, where extensive nutrition experiments were carried out in the feeding of infants, children and adults on soya milk. It operated a Soya Bean Dairy, providing daily milk distribution of plain and chocolate soya milk to thousands of persons. But as this plant was practically demolished during the recent war in the Orient, it was organized again in 1939 in Mount Vernon, Ohio as the International Nutrition Laboratory, and is producing from the edible soya bean all the valuable foods described in this folder."

Another panel describes the "Advantages of vegetable milk." Large letters across the bottom state: "Alkalinize with Miller's soy bean foods."

Note: This is the earliest document seen (April 2002) with the term "soy bean foods" in the title. Address: Mt. Vernon, Ohio.

3349. Ishimitsu Shoten. 1941. Ishimitsu (S.) Co. (Ad). In: The Japanese American News Inc. 1941. The Japanese American Directory (*Nichibei Jûshoroku*). No. 37. p. A-10 (near front). [Eng; jap]

• **Summary:** Ad (half page vertical). The top ¼ of this ad is in English. A direct import and export merchant, they sell grocery and household goods including shoes, plus Kikkoman shoyu (the Kikkoman logo is shown), miso and Ajinomoto. Address: 224 Commercial St., San Francisco, California. Phone: SUtter 2748.

3350. Sooya Been Purodakutsu Kaisha (Soya Bean Products Co.). 1941. Shoyu [Soy Sauce]. 1239 So. Lorena St., Los Angeles, California. [Jap; Eng]

• **Summary:** Ad (3/8 page) in The Japanese American Directory. 1941. p. B-3 (in middle of book, just before Los Angeles directory). This company claims to be the only maker of shoyu (soy sauce) on the west coast of the United States. Their shoyu is tasty and nutritious. Their shoyu production department (*Shoyu Jozo-bu*) makes and sells two brands of shoyu: Soya Club brand and Soyco brand.

Note: Soya Bean Products is apparently *not* the only shoyu maker on the west coast, unless Yasuhara Shoyu Mfg.

Co., which also makes shoyu in Los Angeles at 219 Jackson St., is their shoyu production department (see p. 328).

Note: Soya Bean Products Co. also has a directory entry on p. 328 (under the category "Foodstuff Factory"), at the address and phone number shown in the ad above, but we are not told what soyfoods they make! Address: Los Angeles, California. Phone: ANgelus 14276.

3351. Turner, Grace. 1941. Real Chinese food is delicious food: Pearl Buck, authority on China, talks of the art of cooking there—and gives rare recipes. *Los Angeles Times*. Jan. 12. p. H14. Sunday. This Week magazine.

• **Summary:** In private life, Pearl Buck is now Mrs. Richard J. Walsh, at home on a farm which she and her husband own in Pennsylvania. He is president of a New York publishing company, and she is "chairman" of the China Emergency Relief Committee. "The Chinese have known for centuries that soybeans are good food. Out of soybean curd, for instance, they make a kind of cheese... Most cooking in North China is done with soybean oil, but in South China it is done with peanut oil." Soy sauce is called for in one of the recipes.

3352. Von Struve, A.W. 1941. The soybean crop in the United States. *Science* 93(2404):86-87. Jan. 24.

• **Summary:** According to the 1939 Census of Manufactures, 47 U.S. firms were engaged primarily in the production of soybean oil, cake, and meal, worth \$43.9 million, and employing 1,481 wage earners who drew wages amounting to \$1,889,457 and to salaried personnel who drew \$663,469 in salaries. In 1937, only 26 firms were reported in this industry, making products worth \$24.3 million.

In 1909 the Census of Agriculture shows that only 16,835 bushels of soybeans were produced in the USA. Cultivation was reported on 339 farms.

Today soy bean oil is used primarily in shortening and oleomargarine. Census reports show that of the 369.7 million pounds of soybean oil consumed in American factories during 1939, some 201.6 million pounds (54.5% of the total) were used in the manufacture of shortening and 70.822 million pounds (19.2%) became an ingredient in oleomargarine.

"The oil is also used in manufacturing candles, celluloid, core oil, disinfectants, electrical insulation, enamels, fuel, glycerin, insecticides, linoleum, lubricants, oilcloth, paints, printing ink, rubber substitutes, varnish, waterproof goods and food products such as butter substitutes, cooking oil, lard substitutes and salad oils and medicinal oil.

"Lecithin is derived from soybean oil and is used as an emulsifier and in the manufacture of candies, chocolate, cocoa, margarine, medicines and in dyeing of textiles. (Egg yolk was the chief source before.)

"Dried soybean flour is used in baked products, breakfast foods, candies, diabetic foods, health drinks, ice-

cream cones, ice-cream powder, infant foods, macaroni products and as filler in meat products.

“Soy sauce and sprouts are produced from dried beans.” Vegetable casein is used in paints, size for paper, textile dressing, and waterproofing. “The first record of the plant is in the writings of Emperor Shang Nung of China in 2838 B.C.”

Note: See comment in this journal (21 Feb. 1941, p. 183-84) by L.C. Goodrich refuting this latter statement. Address: Bureau of the Census, Washington, DC.

3353. Roux, Charles. 1941. Le soja [The soybean]. *Revue Internationale du Soja* 1(1):4-20. Feb. [Fre]

• **Summary:** An introduction and overview. Contents: Introduction: Varieties, composition. Soybean cultivation. Feed, food, and industrial uses of soybeans.

The author has recently discovered a way of making petroleum from soybeans (p. 18). Address: Directeur General de l'Association Technique Africaine.

3354. Magnell, A.E. 1941. New Milford site for new food plant. *Hartford Courant (Connecticut)*. March 1. p. 14.

• **Summary:** Maggi, Inc. of New York, the U.S. branch of a Swiss company of the same name, plans to build a new manufacturing plant in New Milford, Connecticut. It is expected to be in production in early 1942. Initially, two hundred people will be employed. Maggi makes food seasonings and bouillon cubes.

The parent company in Switzerland has been in business for more than 50 years. Its products have been sold in the USA for about 50 years.

3355. Balzli, Jean. 1941. La culture du soja “magique” et sa contribution au redressement de la France [The cultivation of the “magical” soybean and its contribution to the recovery of France]. *Revue Internationale du Soja* 1(2):41-45. March. Originally published in the “Free Zone” on 17 Sept. 1940 by *L'Eclairer de Nice et du Sud-Est*. [1 ref. Fre]

• **Summary:** Includes a discussion of uses for human foods, including defatted soy flour, soy coffee, soy chocolate, Worcestershire sauce, soymilk, tofu, and soy sprouts. Other uses include lecithin and industrial uses of soy oil and soy proteins.

3356. Roux, Charles. 1941. Le soja [The soybean]. *Revue Internationale des Produits Coloniaux et du Material Colonial* 16(181):8-25. March. [Fre]

• **Summary:** Contents: Introduction. Chemical composition. Cultivation. Food and industrial uses of soybeans: Incl. soymilk, tofu, soya casein, soy flour, soy bread, soy oil, soybean cake, green vegetable soybeans, fermented soy condiments (natto, miso, shoyu), roasted soy coffee, industrial uses, petroleum substitute.

Appendix A: Composition of various parts of the

soybean plant: (1) Green—stems, leaves, pods. (2). Dry—stems, leaves, pods. (Averages based on analyses by M. Lechartier). (3) Composition of soybean seeds: Whole seeds, cotyledons, embryos, seed coats (based on analyses by the Municipal Laboratory of Paris and the Laboratory of the Biological Society of the Far East {*la Société Biologique d'Extrême-Orient*}).

Appendix B. Composition of the seeds of various soybean varieties by various analysts: Steuf, Pellet, By Steuf: From Hungary, Yellow from Mongolia, From China, Chinese reddish brown. By Pellet: From China, from Hungary, from Etampes. By Giljaransky [Giliaranskii, Giljarinsky, Giljaranskii, Giljaranski, Gilyaranskii, Gilyaranskii]: Yellow from Russia, Yellow from China, Yellow from Japan, Black from China, Black from Japan, Green from Japan. By Lechartier: From Etampes, Etampes dry, Black, Black dry. By Jardin Colonial: Soja from Laos, Soja from Tonkin, Soja from China. By Schroeder: Reddish brown dry, Yellowish brown dry, Tumida pallida yellow. By König: Tumida castanea brown, Tumida astrosperma [sic, atosperma] black.

Appendix C. (1) Composition of soybeans (maximum and minimum) compared with four other legumes.

(2) Composition of soybeans and beef compared. (3) Composition of soy flour and wheat flour compared.

Address: Director General of the Association Technique Africaine.

3357. Wolman, Minka. 1941. There is no indigestion in Japan. *Argus (The) (Melbourne, Victoria, Australia)*. April 5. p. 15S.

• **Summary:** “Polished rice is the principal food,... Shoyu (soy) sauce and the many preparations of the soya bean are used in almost every dish.”

“Shoyu sauce” is used to season sukiyaki, tempura, sashimi, and kabayaki (grilled eels; “A thick tasty sauce made from shoyu is poured over them”).

3358. *Soybean Digest*. 1941. Hawaiians make many soybean foods. July. p. 8-9.

• **Summary:** Carey D. Miller, nutrition specialist at the Hawaii Agricultural Experiment Station, has described a large number of the soybean foods that Hawaiians make in Bulletin No. 68 of the Hawaii Station, “Japanese Foods Commonly Used in Hawaii” (1933). These foods include: Edamame (Green Soybeans; “The whole pod of the fresh green beans is placed in boiling salted water and cooked for about 25 minutes”), Tofu (Soybean Curd, incl. the residue known as “kirazu”), Aburage (Fried Soybean Curd), Miso, and Shoyu. A brief description is given of how each is made. Photos show: Three triangles of aburage on a dish. A dish of tōfu kasu (okara or kirazu).

Note: This is the earliest English-language document seen (Sept. 2011) with the term “soybean foods” in the title.

3359. *New Canadian (The)*. 1941. Shoyu supplies cut off—Local firm prepared to meet demand. Community consumes fifty thousand gallons annually. Aug. 22. p. 8.

• **Summary:** Mr. Teiichi Amano, head of Amano Bros. Ltd. makes Maruten brand shoyu bean-sauce, miso, and vinegar in his plant at 2141, 2135, 2131 Dundas Street, Vancouver, BC, Canada. In January 1941 he started to brew shoyu, which used to be imported from Japan before budget import restrictions took effect. It must age for 7-12 months. His soybeans are imported from California. For 12 years he has made miso and vinegar, and in Japan his father and grandfather made shoyu. Mr. Amano estimates that shoyu consumption in British Columbia exceeds 48,000 gallons/year. A photo shows the inside of the shoyu plant.

A large ad (5 x 4 inches) at lower left of page is titled "Amano Bros. Ltd.: Manufacturers of shoyu bean-sauce, miso, vinegar."

Note: This is the earliest English-language document seen that uses the term "shoyu bean-sauce" to refer to soy sauce or shoyu. Address: British Columbia, Canada.

3360. Ukil, A.C. 1941. Soya bean as a component of balanced diet. *Science and Culture (Calcutta)* 7(1):49-53. July; 7(2):111-16. Aug. [3 ref]

• **Summary:** This article is largely a summary of: Orosa, Maria Y. 1932. "Soybeans as a component of a balanced diet and how to prepare them." *Manila (Philippines) Bureau of*

Science, Popular Bulletin No. 13. 53 p.

It begins: "In view of the interest recently created in the value of the soya bean to make up for the deficiency of protein in the diet of starch-consuming agricultural populations of countries lacking a sufficient supply of high quality proteins like milk, fish, meat and eggs in their diet and in view of its extensive use in China, Japan, the Philippines, U.S.A. and more recently the German army, the following..."

"Although isolated attempts [have been made and] are being made in India to cultivate the bean, no systematic efforts have yet been made to encourage its use on a sufficiently large scale for commercial purposes and to supplement the food resources of the country... Soya bean is not only much more nourishing but has many more uses than dal."

Foods discussed include: Soya-bean flour, soya-bean milk (regular or condensed), coffee made from roasted soya beans, soya bean sprouts (a table shows they are much more nutritious than mung bean sprouts), soya bean oil, soya bean casein, soya bean curd [tofu].

August issue: "Some common foods and their methods of preparation:" Soya sauce (using koji, based on Groff 1919). Soya-bean flour. The cooking of soya beans (immature [green vegetable soybeans] and mature). Some food recipes with soya beans: Of the 22 recipes given, 17 call for boiled whole soya-beans, 2 for dry roasted soya-beans [soy nuts], one for soya-bean flour (Angel cake), and 3 for soya-bean milk (two puddings and a custard). Address: Member, Sanitary Board, Bengal [India].

3361. USDA Office of Foreign Agricultural Relations. 1941. Some culinary uses of soybean flour: Translation of Oberkommando 1938. Washington, DC. 90 p. Aug. 28 cm.

• **Summary:** This is a translation of a German-language publication titled *Speisenzusammenstellung unter Mitverwendung von Edelsoja mit Kochanweisungen* (1938. Berlin: Oberkommando der Wehrmacht {Army High Command}). The introduction to the translation, "Problems and possibilities of using Full Soya Flour," explains that, in German, this flour is called *Vollsojamehl* ("full soya flour") or *Edelsoja* ("pure soya"), however throughout the translation the term "pure soya" is used. This flour is used in many recipes as a substitute for eggs, milk, meat, and fats.

"A reduction in the use of animal products in the German diet is desirable for economic reasons, as these products must be manufactured from plant materials in a roundabout way by the bodies of the animals themselves. In this process, the animals use up the major part of the plant material consumed, about 80 percent, in preserving their own lives. This is an extravagant use of food. A restriction in the use of animal products is likewise to be desired for military reasons, as it is very much harder to accumulate stocks of meat and livestock products, and greater resources are

necessary for their transportation.” (p. 3)

The best plant product for replacing animal products is “full-fat soya flour,” also called pure soya (p. 3). “This flour is made from the soybean, the cultivation of which in the Reich, and particularly in Austria, is becoming yearly more important.” Pure soya flour is made from dehulled soybeans without the use of chemicals. It has good keeping qualities in spite of the high percentage of oil that it contains.

A table shows its high nutritive value compared with 1 kg of wheat flour, rye flour, pea flour, lean beef, pat pork, whole milk, and eggs; it contains more protein and more calories than any of these. Pure soya “provides very high nutritive value in a very small compass: 1 kg (2.2 lb) of full soya flour is equivalent in nutritive value to about 54 chicken eggs, 2500 g of clear beef, or 7.5 liters (nearly 8 quarts) of whole milk. In other words, one heaping tablespoonful of pure soya weighing 20 g is equivalent in protein and oil content to one chicken egg.” It is also a good source of lecithin (an important “nerve food”) and vitamin B.

“In making up the menus, the dishes are to be chosen so that at least 30 grams of pure soya shall be used per person per week” (p. 6).

Outline of the menus: Main dishes (for noon meal):

1. Foods cooked separately. 2. One-dish meals. 3. Supper dishes. Supplementary dishes: 4. Soups. 5. Sauces and gravies. 6. Salads. 7. Fruit dishes and desserts.

Maggi is widely used as a “seasoning sauce (*Speisewürze*). Not all recipes contain soy.

Note 1. Laszlo Berczeller, a soy pioneer from Austria, developed *Edelsoja* which was identical to the product used in this cookbook.

Note 2. Whole soy flour was the most widespread way of using soybeans as food in Germany during World War II. Address: USDA.

Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Shoyu Kabushiki-gaisha, Shikenjo).

3364. **Product Name:** Choplets (Resembling Pork Chops).

Manufacturer’s Name: Special Foods. Renamed Worthington Foods, Inc. in Dec. 1945.

Manufacturer’s Address: Worthington, Ohio.

Date of Introduction: 1941. October.

Ingredients: In 1971: Wheat protein slices [wheat gluten] in broth consisting of extract of Brewer’s yeast and vegetables, soy and other hydrolyzed vegetable proteins, mushroom broth, MSG, salt, dextrose, corn oil, caramel coloring.

Wt/Vol., Packaging, Price: 8 oz, 17 oz, and 30 oz can. 20 oz can retails for \$2.75 (7/90, California).

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Wholesale price list. 1941. Oct. 1. 10 oz retails for \$0.20 and 30 oz for \$0.60; Ad by Worthington Foods, Inc. in *Health*. 1947. Feb. p. 2. “Good foods for every occasion.” Choplets are mentioned.

Seventh-day Adventist Dietetic Assoc. 1960. *Diet Manual*. 1st ed. p. 95. Chaplets + their liquid contain 15.62% protein, 0.56% fat, and 5.40% carbohydrate. *Chopletter* (Worthington Foods, Ohio). 1960. “What you should know about Worthington Foods.” April, p. 3. The Kosher certification on 11 Worthington products has been in effect since 1 July 1959. These products are both Kosher and Pareve (neutral). Foods bearing the Kosher label include Choplets.

Seventh-day Adventist Dietetic Assoc. 1971. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 3rd ed. p. 161. Lists the ingredients in “Choplets (Worthington).”

Seventh-day Adventist Dietetic Assoc. 1975. *Diet Manual, Utilizing a Vegetarian Diet Plan*. 4th ed. p. 175. The ingredients in “Choplets (Worthington)” are “wheat protein slices in a broth consisting of water, HVP, yeast extract, soy sauce, dextrose, L-lysine mono-hydrochloride, mushrooms, salt, corn oil, caramel color.”

Interview with James Hagle? 1983. The name Choplets was suggested by Dr. George Harding’s 11-year-old son. Choplets resembled Dr. Harry Miller’s Cutlets. They were a unique best-seller into the 1960s.

Seventh-day Adventist Dietetic Assoc. 1990. *Diet Manual, Including a Vegetarian Meal Plan*. 7th ed. Appendix A.6-27. Ingredients are the same as those listed below.

By July 1990 the product had been reformulated to include textured soy protein concentrates.

3365. Mogi, Masatoshi; Nakajima, Shigeji. 1941. Miso jôzô shiken: “Homare shiro-miso” no kenkyû. XVI. [Studies on miso fermentation: Research on “homare” white miso. XVI]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 19(11):835-50. Nov. [16 ref. Jap]

Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Shoyu Kabushiki-gaisha, Shikenjo).

3366. *Soybean Digest*. 1941. Derivation [of the term “soybean”]. Nov. p. 12.

• **Summary:** “Julean Arnold of Berkeley, California, who spent more than 35 years in China as Commercial Attache, believes that the name ‘soybean’ came from the Chinese

through the Japanese. He describes its probable origination as follows: The name is really taken from the Chinese 'chiang-yiu' which means soy-sauce, and which in Japanese is pronounced 'shou-yu,' contracted also by the Japanese into 'so-ya' but with the fundamental Chinese character for 'chiang-yiu' pronounced 'gee-ang yu.' The 'yiu' or 'yu' is the Chinese character for oil or sauce. In any event, 'chiang-yiu' means soy-sauce. The Chinese character for 'ya' means sprouts, thus the word 'tou' combined with 'ya' means bean sprouts. The Chinese equivalent for soybean is 'hwang' or 'huang-tou,' the 'huang' meaning yellow. Thus the word 'soy' carries us back to 'chiang-yiu' pronounced by the Japanese 'shou-yiu' and corrupted into 'so-ya' and further corrupted into 'soy-a' or 'soya' but really meaning soy sauce, while in English used for the whole category of legumes known as soybeans." Address: Commercial Attache, China.

3367. Savon S., Julio. 1941. La soya: Un vegetal maravilloso [The soybean: A marvelous vegetable]. *Agricultor Venezolano (El) (Ministerio de Agricultura y Cria, Caracas)* 6(67-68):5-9. Nov/Dec. [Spa]

• **Summary:** What is the soybean? It is a legume which was cultivated for more than 5,000 years in the Celestial Empire, which has the important characteristic of being a food of major value as a source of protein, and which can provide a large quantity of derivative foods, forage, and industrial products.

In the Soviet Union there is a Soy Institute (*el Instituto de la Soya*), which is continually experimenting with new soybean varieties.

A table gives the chemical composition of whole soy flour—which contains 38% protein and 22.5% vegetable oil. The soybean is also a source of many other nutrients, including vitamins and minerals. It is also a source of milk, called soymilk (*leche de soya*), which can be made at home from soybeans. There is no danger of tuberculosis in soymilk as there is in cow's milk. Discusses various published experiments feeding soymilk to infants, and gives the chemical composition of Soybee and Sobee, two soy-based infant formulas. There follows one paragraph on each of the following foods: Soy cheese or tofu (*el queso de soya or teo-fu*). Soy sauce or shoyu (*la salsa de soya o shoyu*). Soybean puree (*el puré de soya*; made from dehulled, ground soybeans, boiled for a long time). Soy cottage cheese and butter. Soy oil and lecithin. Soy coffee and chocolate. Soy bread (bread enriched with 10-20% soy flour; good in diabetic diets). Soymilk: A table compares the chemical composition of mother's milk, cow's milk, and soymilk. Address: Dr.

3368. **Product Name:** Maruten Shoyu Bean Sauce.

Manufacturer's Name: Amano Brothers.

Manufacturer's Address: 2141 Dundas St., Vancouver, BC, Canada.

Date of Introduction: 1941.

New Product—Documentation: The New Canadian. 1941. Aug. 22. p. 8. "Shoyu supplies cut off—Local firm prepared to meet demand. Community consumes fifty thousand gallons annually." An ad in the lower left corner shows the bold black Maruten logo, with the character meaning "heaven" (*ten*) in a circle (*maru*). Amano Bros. Ltd. is at 2141, 2135, and 2131 Dundas St., Vancouver, BC. Phone: Highland 5526.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. "There were several semi-commercial makers of miso and shoyu in Canada, in the Vancouver area, prior to World War I, and at least one commercial miso manufacturer was in the area prior to 1927. In that year Mr. T. Amano started Amano Brothers. In 1982 the T. Amano Co. was still making fermented shoyu." Talk with Michael Weiner. 1987. Dec. 16. Amano is presently the largest manufacturer of fermented soy sauce in Canada. They may soon break ground for a large new miso and shoyu plant.

• **Summary:** Contents: Botanical description: Introduction, the plant's needs, varieties. Soybean cultivation in Europe: Introduction (for some countries preferred early, medium, and late varieties are listed), France, Great Britain, Hungary, Poland (selection has been done at the Wilna experiment station using varieties imported from Hungary and

Czechoslovakia), Romania (About 30,000 ha are devoted to soybeans, primarily in Bessarabia [Besarabia], Dobrouja [Dobrudja, Dobrogea], Bukovina [Bucovina], Walachia or Wallachia or Valachia [now called Muntenia, a fertile belt across southern Romania], and Moldavia. Most of these varieties came from Austria), Switzerland, USSR (the main soybean regions are all warm ones—the Caucasus, Ukraine, and Transcaucasia). Soybean cultivation in America. Soybean cultivation in Africa (especially in South Africa, mainly for forage in the Natal and Transvaal). Soybean cultivation in Asia: China and Manchuria, Malaysia, British Indies, Dutch Indies, Indochina, Japan. Soybean cultivation in Oceania (mainly Philippines).

Cultivation: Crop rotation, inoculation, planting and propagation, maintenance and manuring the land, harvest, seed storage, yield, selection of varieties. Soybean utilization: As human food (dry soybeans, soy sauce, soy flour, soymilk, tofu, soy oil), industrial uses (soy oil, refining and use, soymilk casein). Soya as a fertilizer: Green manure, or soybean cakes. Soya as a feed for domestic animals: Green forage, hay, silage, pasture, seeds, cakes. Soybean cultivation in the Belgian Congo. Soybean trade.

In the Congo various soybean trials have been undertaken since 1936 at the stations of the National Institute for Agronomic Study of the Belgian Congo (l'Institut National pour l'Etude agronomique du Congo Belge). Numerous varieties from the USA and Manchuria have been tested. Address: Directeur au Ministère des Colonies, Professeur a l'Institut Agronomique de Gembloux [Belgium].

3374. Photo of John Takeo Tadano, owner of Marusho Shoyu. 1941.

• **Summary:** The inscription on the photo reads: "To Nakatsu family. Always, John Tadano. '41." Sent to SoyInfo Center by Barbara Y. Peters, his daughter (Nov. 2008). Barbara writes: "My father was a food broker, I believe, for Japan Foods. He had attended Phoenix College, but when World War II started he was not able to continue. I gather he was also on the football team as quarterback when the war broke out. He was stripped of the title Homecoming King too."

• **Summary:** The book *Japanese Serial Publications in the National Agricultural Library* gives the English title as "The Soy and Miso Sauce Industry." Address: Tokyo, Japan.

3377. **Product Name:** College Inn Chop Suey.

Manufacturer's Name: College Inn Food Products Co.

Manufacturer's Address: Chicago, Illinois.

Date of Introduction: 1941?

Ingredients: Choice cuts of lean pork, crisp celery, onions, mushrooms, bean sprouts, imported bamboo shoots and Chinese Suey Sauce.

Wt/Vol., Packaging, Price: 10½ oz. can.

New Product–Documentation: Photocopy of label (from canned product) sent to Soyfoods Center (in late 1981) by Esta Keirn, formerly of Oriental Show-You Company (Columbia City, Indiana). "Chop Suey: Place contents in sauce pan or chafing dish. Heat thoroughly. Serve with rice. Season with Chinese Chop Suey Sauce as desired... It is as fine a chop suey as you ever tasted. Just the thing for the Mah Jongg party, the midnight supper, the emergency meal—and a welcome variation from daily cooking. Always keep a few cans in your pantry... U.S. Inspected and Passed by Department of Agriculture. Establishment 449." In top half of front panel is an illustration of a waiter, dressed in a tuxedo, carrying a tray on top of which is an elegant covered serving dish. On a 3rd panel is an illustration of the towering "Hotel Sherman, Chicago. Owning and supervising College Inn Food Products Co., Chicago, Illinois."

3378. La Choy Food Prods. 1941? Brief history of La Choy. 2 p. Undated. Unpublished manuscript.

• **Summary:** In 1941 Beatrice Foods acquired La Choy. This 1-page typescript originated at about that time.

"Archbold, Ohio, with a population of only 3,200 is the home of La Choy Food Products, largest producer of canned Chinese foods in the world—including China!

"The business actually was started in 1920, by Wally Smith and Ilhan New, who became friends while attending the University of Michigan." Smith, who owned a grocery store in Detroit, wanted to sell freshly grown [mung] bean sprouts. New, a Korean by birth, knew how to grow them.

"Sometime later the pair conceived the idea of canning bean sprouts in glass jars. The next logical step was to use metal cans, and this was accomplished in 1922, when the company was incorporated. New left the company shortly after 1930 and Smith was killed by lightning in 1937.

"After several moves, each time to larger quarters, the first La Choy plant was built in 1937 in Detroit." At the start of World War II, this plant was sold to the government and the firm moved to its present 25-acre site in Archbold, Ohio.

"Today, after several additions, including a new 42,000 square foot Frozen plant, La Choy houses approximately 8½ acres under one roof.

"'Chinatown USA' is more strategically located for the efficient and economical production of Chinese foods than a glance at a map would indicate. Just to the north are the famed celery beds of Michigan. La Choy is the largest single user of Michigan celery in the nation. More than 5,000 tons are used annually in the new process developed by La Choy

which produces up to 50 tons a day of extra-fancy fine cut celery for chop suey and chow mein dishes.

"To the east is the famed Pennsylvania mushroom belt, and La Choy is among the largest users of fresh mushrooms in the nation. Archbold is the largest cattle auction center between New York and Chicago [Illinois] and a major poultry area. More than 100,000 beef cattle were sold here last year.

"The fertile farm country in and surrounding Fulton County yields many of the other necessary ingredients, while such items as flour and shortening for chow mein noodles readily are available from Toledo, only 40 miles distant, and Chicago, Columbus, Detroit, Cleveland and Cincinnati, merely a few hours away by fast freight.

"Into this Northwest Ohio town, located on the main line of the New York Central between Chicago and New York, flow bamboo shoots and water chestnuts from Formosa and mung beans from Peru, Brazil and Thailand as well as Oklahoma and Texas, and other exotic imports that are essential ingredients of Chinese delicacies."

Note: This is the earliest document seen (Sept. 2005) concerning the work of Koreans overseas with soy. Address: La Choy.

3379. Smith, A.K. 1941? Soy sauce producers. 1 p. Undated. Unpublished manuscript.

Philadelphia, Pennsylvania: Tastee Soy Foods, 254 E. Girard Ave.

Williamsport, Pennsylvania: Soya Products Co. Address: [NRRL, Peoria, Illinois].

3380. Mogi, Masatoshi; Nakajima, Shigeji. 1942. Miso jôzô shiken: "Homare shiro-miso" no kenkyû. XVIII. "Waki," sokushin shiken [Studies on miso fermentation: Research on "homare" white miso. XVIII Test to promote waki]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 20(2):107-13. Feb. [6 ref. Jap]

• **Summary:** In this article, the Japanese noun *waki* is difficult to translate into English. Related verbs are *wakikaeru* = to seethe, ferment, or boil up; *wakideru* = to bubble up; *wakiagaru* = to boil up, arise. Two possible translations are "overfermentation" or "bubbling from

fermentation." Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Shoyu Kabushiki-gaisha, Shikenjo).

3381. Warden, Philip. 1942. Soy beans rise on seed buying by government. *Chicago Daily Tribune*. March 17. p. 23.

• **Summary:** "Commodity Credit corporation purchases of seed soy beans gave the bean futures market independent strength yesterday" at the Chicago Board of Trade in Illinois.

"Processing plant operators in Decatur, Illinois, soy bean capital of the United States, informed Chicago grain men that the government agency was seeking to buy as much as 100,000 bushels of high grade seed beans for eastern shipment." Such high oil yielding varieties were reported to be selling for \$2.50 to \$3.00 a bushel.

Government buyers said they wanted only soy beans with a low moisture content; tests at the University of Illinois agricultural experiment station show that these have a higher germination rate.

An interesting diagram, titled "Some of the principal soy bean products," shows whole soy beans falling into a hopper, below which are many branching "pipelines" of products made from the whole soy beans: (1) Soysauce, condiments, other uses. (2) From the meal: Stock feed, fertilizer, glue, plastics, other. (3) From the flour used industrially: Vegetable casein, paper coating, adhesives, other. (4) From the flour used as food: Bread, crackers, wafers, macaroni, ice cream, sausage, infant & invalid foods, other. (5) From the crude oil used industrially: Soaps, glycerine, paint, varnish, core oil, linoleum, other. (6) From the crude oil used as food: Lecithin, confectionary, medicinal. (7) From the refined oil: salad oils, cooking oil, mayonaise [mayonnaise], lard compounds [vegetable shortening], other uses.

Note 1. This is the earliest published English-language document seen (April 2012) that contains the word "soysauce" (spelled as one word).

Note 2. This is the 2nd earliest document seen (Oct. 2006) which uses the term "soy bean capital" (of the United States) in connection with Decatur, Illinois.

3382. Quail, Betty. 1942. Vary your menus with Chinese foods: While their cooking techniques are different from ours, we can adapt some of their vegetables to our advantage. *Los Angeles Times*. March 29. p. F5.

• **Summary:** The Chinese, our old friends and new allies [in World War II] have long used soybeans as a staple in their diet. But in America, until recently, they were grown solely as a forage crop. "Fresh green soybeans rank higher in food value than any of our common table beans..." Dried soybeans contain about 12 times as much fat as other beans. Today soybean flour and bread are widely available in American food stores.

"The Chinese, however, were not content with just beans. They set to work with the skill of alchemists and

accomplished some surprising results. They sprouted the dried beans...” to yield bean sprouts, now starting to be sold in American markets. Then they made a milk out of crushed soybeans and turned it into bean curd. Cut it into squares and try adding it to an omelet, to hard-cooked eggs, or meat loaf. It may also be seasoned and be used as a stuffing for tomatoes, celery, or green pepper rings for salad. Soybean milk can be substituted for cow’s milk. And of course there is “soy sauce, or mandarin sauce.” Unfortunately most Americans limit its use to those “half-caste dishes, chop suey and chow mein. As a matter of fact, this dark brown seasoning should have a place of honor on every American pantry shelf...” Like all good seasonings, it brings out the best in other foods, remaining in the background, “completing a dish while claiming no recognition for itself.” A photo shows bean curd.

3383. Mogi, Masatoshi; Nakajima, Shigeji. 1942. Miso jôzô shiken: “Homare shiro-miso” no kenkyû. XIX. “Waki,” bôshi shiken [Studies on miso fermentation: Research on “homare” white miso. XIX. Test to stop waki]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 20(3):155-68. March. [6 ref. Jap]

• **Summary:** In this article, the Japanese noun *waki* is difficult to translate into English. Related verbs are *wakikaeru* = to seethe, ferment, or boil up; *wakideru* = to bubble up; *wakiagaru* = to boil up, arise. Two possible translations are “overfermentation” or “bubbling from fermentation.” Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Shoyu Kabushiki-gaisha, Shikenjo).

3384. *Manzanar Free Press (Manzanar Internment Camp, California)*. 1942. Shoyu, rice arrive. 1(4):2. April 22.

• **Summary:** On Sunday morning, 130 sacks of rice and 50 gallons of shoyu arrived in the camp. Most of it has “already been distributed to the mess halls.”

Note 1. Manzanar (literally “apple orchard”) was the name of the Japanese internment / concentration camp in the Owens Valley, Southern California (about 230 miles northeast of Los Angeles), during World War II. At elevation 4,000 feet, at the base of Mt. Whitney, it was extremely cold and dusty. Manzanar, which opened in March 1942, was the first of the ten camps to open. It eventually had a maximum population of 10,046. Each of the camps was intended to be self-sufficient.

Note 2. The Manzanar Free Press, the “Official publication of the Manzanar Relocation Center,” was run entirely by Japanese in the camp. By Nov. 1943 it consisted of an editorial staff (4 members), reporting staff (8), typists (2), Japanese section (7), and an advertising department (3). It was published every Wednesday and Saturday and distributed without cost to every apartment. “Subscription rates: 5 cents per copy; 45 cents per month, \$4.75 per year. Editorial office, 1-1-2.”

Note 3. This is the earliest document seen (July 2011) concerning Japanese in the United States in internment / relocation camps during World War II.

Note 4. This is the earliest document seen (July 2011) concerning soy sauce such camps.

• **Summary:** In this article, the Japanese noun *waki* is difficult to translate into English. Related verbs are *wakikaeru* = to seethe, ferment, or boil up; *wakideru* = to bubble up; *wakiagaru* = to boil up, arise. Two possible translations are “overfermentation” or “bubbling from fermentation.” Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Shoyu Kabushiki-gaisha, Shikenjo).

3387. *Manzanar Free Press (Manzanar Internment Camp, California)*. 1942. To make shoyu here. 1(15):1. May 23.

• **Summary:** “To replenish stocks of shoyu and miso formerly purchased from Japanese merchants, the Manzanar production office is now planning to manufacture these food items here.”

3388. Booher, Lela E.; Hartzler, E.R.; Hewston, E.M. 1942. A compilation of the vitamin values of foods in relation to processing and other variants. *USDA Circular* No. 638. 244 p. May. See p. 182-85. [298* ref]

• **Summary:** This is “a summary of the vitamin A, thiamin, ascorbic acid, vitamin D, and riboflavin values of foods in terms of International Units or absolute weights of these vitamins, as recorded in the literature through December 1940.”

Information on the vitamin content of soybeans and soyfoods was extracted from 10 scientific studies. The foods were green, freshly shelled soybeans, mature dry soybeans, soybean meal, soy sauce, and the residue (press-cake) from soya sauce.

The content of vitamin A in immature green soybeans grown in Alabama ranges from 1,175 I.U. to 353 I.U., while the vitamin A content of dry soybeans (6-9% moisture) ranges from 406 to 70 I.U. Address: USDA Bureau of Home Economics.

• **Summary:** The companies are listed alphabetically by state, and within state by city. Numbered codes after each company, keyed to a list of 35 soyfood types in the back, explain which foods are made by each company. Unfortunately, it is not clear from this list which companies are manufacturers and which are "handlers" (retailers or distributors).

California: Arlington (Loma Linda Foods), Berkeley (Golden Gate Food Products Co.), Glendale (Hygienic [Hygienic?] Food Co.), Los Angeles (El Molino Mills, Mrs. Hauser's Soya Foods Co. {4617 Melrose Ave.}, Kevo Co., Klein Soup Co.), San Francisco (Radcliffe Soya Products {146 Fillmore St.}), Santa Cruz (Daglish Health Food Service). Delaware: Milton (Draper Canning Co.). Illinois: Bloomington (Funk Bros. Seed Co.), Chicago (Allied Mills, Armour & Co., Dewey Food Products Inc., Dietetic Supply House, Durkee Famous Foods, Fearn Soya Foods Co. {355 W. Ontario St.}, Glidden Co., Great China Foods Co., Griffith Laboratories {1415 W. 37th St.; handles soy flour and grits}, John F. Jelke Co., Soybean Products Co. {210 N. Carpenter St.}, Swift & Co.), Decatur (Spencer Kellogg and Sons, A.E. Staley Manufacturing Co.), Elgin (B.S. Pearsall Butter Co.), Urbana (Pehr's Health Food Store). Indiana: Columbia City (Oriental Show-You Co.), Decatur

(Central Soya Co.), Indianapolis (Standard Margarine Co.). Iowa: Des Moines (Soy Products Co.). Maryland: Baltimore (J.H. Filbert, Inc., The Wm. Schludenberg-T.J. Kurlde Co.), Takoma Park (Hillcrest Health Products Co.). Massachusetts: Boston (Prince Macaroni Co.), Newton Centre (W.L. Cummings & Co.). Michigan: Battle Creek (Battle Creek Food Co.), Detroit (Shedd Products Co.). Minnesota: Minneapolis (Archer-Daniels-Midland Co.). Missouri: Kansas City (Harrow-Taylor Butter Co.), St. Louis (Blanton Co.). New Jersey: Vineland (George A. Mitchell). New York: Brooklyn (Agash Refining Corp., Cosmo Packing Co., Soy-Malt Co. {234-A Marion St.}), Elmhurst, Long Island (American Lecithin Co.), Glandale, Long Island (Beskor, Inc. Note: As of May 1997 there is no place named "Glandale"—or "Glendale"—on Long Island), New York City (Barrett & Eastwood, Borden Company, Enco Chemical Corporation, Franklin Mills Co., National Biscuit Co., Soya Corporation of America {Rockefeller Plaza}, Stein, Hall & Co.), Rochester (Vegetable Products Co.). North Carolina: Asheville (Judd's Health Foods), Lexington (Vitro Nu Foods Corp.). Ohio: Cincinnati (The Churngold Corp., Miami Butterine Co.), Circleville (Winor Canning Co.), Cleveland (Barton Nut & Candy Co., Pfaffman Egg & Noodle Co.), Columbus (Capital City Products Co.), Greenville (O'Brien Milling Co.), Mount Vernon (International Nutrition Laboratory [Dr. Harry Miller]), Worthington (Special Foods, Inc.). Pennsylvania: Paoli (Great Valley Mills), Philadelphia (J.S. Ivins' Son, Inc., C.F. Simonin & Sons, Tastee Soy Foods), Williamsport (Penna Soya Products Co.). Tennessee: Madison College (Madison Foods). Wisconsin: Hortonville (Fox Valley Canning Co.), Oostburg (Oostburg Canning Co.), Owen (Owen Canning Co.).

The soy food types are: "1. Albumin or protein. 2. Beans—baked. 3. Beans—canned green. 4. Beans—roasted. 5. Breakfast foods. 6. Butter—soy. 7. Candies. 8. Chips or meats. 9. Chocolate. 10. Chocolate and other beverages. 11. Coffee substitute. 12. Crackers, wafers, cookies, puddings, etc. 13. Curd or cheese. 14. Diabetic foods. 15. Flakes. 16. Flavorings. 17. Flour. 18. Flour—prepared. 19. Grits. 20. Health foods. 21. Ice cream powder. 22. Infant foods. 23. Lecithin. 24. Macaroni products. 25. Malted products. 26. Meat-like products. 27. Milk. 28. Molasses—bean. 29. Oil. 30. Puffs. 31. Sauce. 32. Shortening. 33. Soups. 34. Soybeans. 35. Spreads—sandwich. 36. Toast."

Note: This is the earliest document seen (Nov. 2002) that mentions Griffith Laboratories. Address: Washington, DC.

3392. Mogi, Masatoshi. 1942. Miso jôzô ni kansuru kôbo no kenkyû. III. Bunri seru kôbo no bunrui narabini ruinen oyobi hyôchô (4) [Studies on the yeasts in miso fermentation. III. Classification of isolated yeasts (4)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 18(8):733-41. Aug. [Jap]

• **Summary:** Genera discussed include *Zygomycetia*,

Hansenula, Pseudohansenula, Torulopsis, Pseudomycoderma, and Pseudomonilia. A number of new species are claimed. Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3393. *Manzanar Free Press (Manzanar Internment Camp, California)*.1942. Shoyu dispute truce declared. 2(27):1. Sept. 21.

• **Summary:** “An amicable settlement was finally effected late last week by the residents of Block 1 and the production division over the placing of the ‘shoyu’ and ‘miso’ manufacturing equipment in the block’s laundry room.”

3394. *Minidoka Irrigator (Minidoka Internment Center, Hunt, Idaho)*.1942. Shoyu retails at \$4 a gallon in Salt Lake. 1(4):4. Sept. 25.

• **Summary:** “A Salt Lake City Japanese merchant is asking \$8 for a two-gallon can of ‘shoyu’ sauce and getting it, George S. Kashiwagi told friends this week following his return from Salt Lake City [Utah] Monday.”

“The supply of Japanese foodstuffs has dwindled to almost nothing, Kashiwagi said, because inter-mountain Japanese merchants have sold their stock to various relocation centers.”

3395. *Poston Chronicle (Poston Internment Center, Arizona)*.1942. Daily output of 500 tofu planned for Poston III. 4(32):1. Oct. 2.

• **Summary:** Five hundred tofu a day for the tables of Poston III dining halls will soon become an actuality, it was declared yesterday by the food industry, Sim Togaseki, who revealed that half of warehouse 320 will be occupied as a production plant for this Japanese food under the management of Ray Hara.

“The large scope of this undertaking alone was indicated by the quantity of material to be used, which included 500 gallons of water daily.

“The tofu production, however, is but the first step in the industrial production of various Japanese foodstuffs. On the proposed list were the manufacture of such material as noodles, shoyu, etc.

“An advisory council of experienced business men is working on the industrial project.”

Note: The Poston War Relocation Center, located in Yuma County (now in La Paz County) of southwestern Arizona, was the largest (in terms of area) of the ten American internment camps operated by the War Relocation Authority during World War II.

“The Center was composed of three separate camps arranged in a chain from north to south at a distance of three miles from each other. Internees named the camps Roasten, Toastin, and Dustin, based on their desert locations. The Colorado River was approximately 3 miles (4.8 km) to the west, outside of the camp perimeter.

“Poston was built on the Colorado River Indian Reservation, over the objections of the Tribal Council, who refused to be a part of doing to others what had been done to their tribe. However, officials of the Bureau of Indian Affairs overrode the Council, seeing the opportunity to bring in improvements and develop agricultural land on the War Department budget and with thousands of ‘volunteers,’ which would remain after the war and aid the Reservation’s permanent population.

“The combined peak population of the Poston camps was 17,814, mostly from Southern California. At the time Poston was the third largest ‘city’ in Arizona. It was built by Del Webb who would later become famous building Sun City, Arizona, and other retirement communities” (Source: Wikipedia, Poston War Relocation Center, 12 April 2011).

3396. *Manzanar Free Press (Manzanar Internment Camp, California)*.1942. Shoyu project ready. 2(35):1. Oct. 10.

• **Summary:** “Manzanar’s first manufacturing project was all set to go as the shoyu production division reported all machinery and equipment ready to start production of 5,000 gallons of this Japanese staple food a month.

“With an estimated capacity of 7,500 gallons, enough to supply all centers, the project will employ 4 workers under the leadership of Foreman Nobutaro Nakamura.

“The temporary factory is located in laundry room 1 where it will share the building with the bean sprout product. The shoyu equipment formerly belonged to Nakamura who operated a shoyu business in Los Angeles.”

“Shigeki Tomita will head the bean sprout production which will employ a crew of three.”

Note: It is not clear whether the bean sprouts are made from mung beans (probably) or soybeans.

3397. *Gila News-Courier (Gila River Internment Center, Phoenix, Arizona)*.1942. Soy sauce mill at Manzanar. 1(11):3. Oct. 17.

• **Summary:** “Approximately 5,000 gallons of shoyu per month will be produced in Manzanar [internment camp, California] according to the Manzanar Free Press of October 10. With an estimated capacity of 7,500 gallons, enough to supply all centers, a superior grade of shoyu is expected, due to the quality of the water.”

3398. Mogi, Masatoshi. 1942. Miso jôzô ni kansuru kôbo no kenkyû. IV. Kôtsatsu oyobi sôkatsu. (5). Kôtsatsu [Studies on the yeasts in miso fermentation. IV. Considerations and summary. (5). Considerations]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 18(10):940-44. Oct. [23 ref. Jap]

• **Summary:** The main genera discussed include Saccharomyces, Zygosaccharomyces, Zygoichia, Hansenula, Pseudohansenula, Torulopsis, Pseudomycoderma, and Pseudomonilia. A number of new species are claimed.

Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3399. *Manzanar Free Press (Manzanar Internment Camp, California)*.1942. Gas tanks installed for shoyu factory. 2(47):1. Nov. 7.

• **Summary:** “With plans tentatively set, the production department announced that all equipment for the gas tanks has been installed for the shoyu factory and the arrival of the bean grits will start off production.

“The schedule for the bean sprouts project has been changed so that 1500 pounds of moyashi can be distributed to the mess halls once a week instead of a few pounds two or three times a week.”

Note: “Moyashi” means “bean sprouts” in Japanese, however it is unclear whether these were sprouted mung beans (probably) or soybeans.

3400. *Manzanar Free Press (Manzanar Internment Camp, California)*.1942. Name for local shoyu sought. 2(52):1. Nov. 19.

• **Summary:** “Wanted: A name for Manzanar soy sauce.

“A contest, sponsored by the Manufacturing Division, to find a trade name is open to all center residents. The contest will close at noon Saturday, Nov. 21.

“The person submitting the prize-winning name will be awarded one case of shoyu (4 gallons), while those submitting the second and third best names will be given two gallons and one gallon of shoyu respectively.”

The names and titles of the 7 judges (both Japanese- and Caucasian Americans) are given.

3401. *Manzanar Free Press (Manzanar Internment Camp, California)*.1942. Record output of shoyu made. 2(53):1. Nov. 21.

• **Summary:** “In a period of nine days, the shoyu factory produced more than 1500 gallons of sauce. The total production capacity for the local factory is 5,000 gallons per month.”

“Manzanar is the first relocation center to manufacture shoyu. As soon as the production exceeds more than the requirements here, shoyu will be shipped to other relocation centers.”

Note 1. This product, although called “shoyu,” appears to be HVP soy sauce—judging from the ingredients and the time required to make it. Traditional shoyu typically takes at least 6 months to ferment, whereas HVP soy sauce takes only a few days.

Note 2. This is the earliest document seen (July 2011) that mentions actual large scale production of soyfoods (soy sauce) in any Japanese internment camp during World War II.

3402. *Manzanar Free Press (Manzanar Internment Camp,*

California).1942. Shoyu name contest. 2(57):1. Nov. 30.

• **Summary:** “With so many excellent names submitted for the shoyu naming contest, Justus G. Sato, assistant superintendent of the manufacturing division, expressed that the department is experiencing a difficult time in selecting the winner. He announced that the outcome of the contest will be announced later.”

Note: Could the delay have been caused by many Japanese giving the so-called “shoyu” unflattering or HVP-type names?

3403. *Scientific American*.1942. Miracle beans: Long called “The Cow of China,” the soybean is now invading almost every field of endeavor. 167(5):216-18. Nov.

• **Summary:** This article begins: “America in general has just begun to ‘discover’ the widely varied possibilities of the soybean. Henry Ford makes steering wheels of it, midwestern farmers look on it as a promising money crop, diet and health practitioners are starry-eyed about its protein, calcium, and iron content... the little bean is a capital meat substitute; that coffee, cheese, candy, salad oil, lubricating oil, printer’s ink and celluloid and glue, airplane bodies and rubber substitutes are made from it. It’s good for cattle—good for dog food and linoleum and paint and rayon panties, good for explosives, good for building bone and muscle in fighting men. It’s a fine forage crop and, like alfalfa, it will enrich the soil.

“But five years from now, when the present war has made the soybean as familiar an institution in America life as cellophane and synthetic rubber, it will be well to remember that the ‘discovery’ of today was known to the Chinese thousands of years before the birth of Christ. The emperor Shen Nung speaks of it in his “Materia Medica,” written in 2838 B.C. Whole ages before this... a legend was current which had been handed down in northern China and Manchuria to the present day, telling how man first became acquainted with the soybean.

“A caravan of merchants, says the legend, was homeward-bound, loaded with gold after a successful trading expedition, when it was attacked by bandits. Taking shelter in an easily defended ravine, the traders held off the attackers for several days until their food ran low. Starvation threatened—until one of the servants returned to camp with a sack of beans he had found on a vine-like plant which the animals were eating. They mashed up these beans to a paste with a little water and baked them—and on this crude biscuit the famished men regained enough strength to hold off the attackers until help arrived.

“The Chinese have looked on the soybean as their staff of life for ages.” Many have never tasted milk except that from the soybean, which costs one-fourth as much as cows milk. “Long it has been called the Cow of China. The Orient uses the bean not so much as a vegetable as for making cheese [tofu], [soy] sauce, bread, and meat substitutes. For

thousands of years it has been the basic protein food in Manchuria, China, Korea, Japan, and the Malay Peninsula.

“Soybeans first came to America in 1804 on a clipper ship whose Yankee master had ordered several bags tossed in the hold in case his provisions ran low.”

William J. Morse, now senior agronomist at the USDA, worked for 34 years “with the quiet fervor of a missionary to bring the miracle bean prominently into the agriculture of this country.”

In 1929 some 9 million bushels of soybeans were grown in the USA, increasing to 91 million bushels in 1939. The soybean is now America’s fourth largest cash grain crop; “we grow as much as Manchuria. The cow of China has become a hundred-million-dollar American industry.

More than 75% of America’s soybean oil goes into food products; most of the rest goes into paint, lacquers, and soaps. About 95% of the soybean meal is fed to livestock; the remaining 5% is used to make plastics, flour for baking, glue, fertilizer, dog food, breakfast cereals, macaroni, baby foods, reducing diets, and diabetic foods.

Discusses (at great length) the work of Henry Ford and Robert Boyer with soybeans, including soy fiber (which has the potential to replace wool), Ford’s suit made of 25% soybean fiber, plastic parts in cars, the car of the future with a plastic body over a tubular steel framework (it will weigh only 85% as much as 1942 models did), and his solvent extraction system.

Note: This is the earliest document seen (Dec. 2011) with the term “Cow of China,” referring to the soybean, in the title.

3404. *Granada Pioneer (Camp Amache / Granada Internment Center, Granada, Colorado)*. 1942. Tofu merchant arrives here. 1(18):3. Dec. 24.

• **Summary:** “George T. Nagamoto of Swink, Colorado, arrived here to renew his contract with this center to supply tofu for the next three months.

“Nagamoto, a pioneer seed merchant, has been doing business in Swink for many years. At present his business is limited to wholesale and retail distribution of koji, miso, shoyu, age, and tofu,”

3405. **Product Name:** Marumasa Soy Sauce.

Manufacturer’s Name: Honolulu Sake Brewery and Ice Co., Ltd.

Manufacturer’s Address: 2150 Booth Rd., Honolulu, Oahu, Hawaii.

Date of Introduction: 1942.

Ingredients: Water, soy beans, salt, wheat, disodium 5-inosinate, caramel coloring, and sodium benzoate, a preservative.

Wt/Vol., Packaging, Price: 16 fluid oz (1 pint), 50.7 fluid oz (1 quart 1 pint 2.7 fluid oz), or 101 fluid oz (3 quarts 5 fluid oz).

How Stored: Shelf stable.

New Product–Documentation: Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows one label. Marumasa Soy Co. has closed but their brand is being carried on by the Honolulu Sake Brewery and Ice Co. Ltd. Hawaii Herald. 1981. May 15. p. 6-7. “Honolulu sake: Bending with the winds of change.” When World War II started, a law prohibiting the use of rice in making sake was enforced. So the company switched to making shoyu. Under the label of Marumasa Soy sauce and later Diamond Shoyu, the locally made products soon became popular in Hawaii. It was another innovation that kept the company alive. Owners include Tajiro, Daizo, and Shinzaburo Sumida; Label. Received Feb. 1988 from Honolulu Sake Brewery & Ice Co., Ltd. 4.5 x 3.5 inches. Red, black, blue, green, gold, and white. “Choice. New improved. Natural brewed and aged.”

3406. Office of Alien Property, United States Office of Alien Property. 1942. Report. Washington, DC: U.S. Government Printing Office. See p. 46, 48, 108. Report year ends June 30. 23 cm. *

3407. **Product Name:** Marusho Shoyu.

Manufacturer’s Name: Showa Shoyu Brewing Co.

Manufacturer’s Address: P.O. Box 246, Glendale, Arizona. Phone: 457.

Date of Introduction: 1942.

Wt/Vol., Packaging, Price: Gallon, quart, and pint bottles.

New Product–Documentation: Soybean Digest. 1945. “Grits and flakes... from the world of soy: John Tadano is erecting a plant for the production of soy sauce in Glendale, Arizona.” Aug. p. 22. Mr. Tadano has had soy sauce on the market there since 1941. “Capacity of the expanded plant, one of the largest in the country, is expected to be 3,500 gallons monthly.”

Soybean Blue Book. 1947. p. 73; 1949. p. 103. The name is now written “Showa Shoyu Brewing Corp.” No hyphen.

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 451. Under “Glendale, Arizona.” In Japanese: Showa Shoyu Jôzô Kaisha. In English: Showa Shoyu, P.O. Box 246, Glendale. Phone: 457.

Chicago Shimpō, Inc. 1958. Chicago Japanese American directory.

Page 19: An outstanding two-page ad. On the left page a photo shows three sizes (1 gallon, 1 quart, 1 pint) of glass bottles of “Marusho Shoyu. Distributor: Modern Food Products Co., San Francisco, Los Angeles, Denver. Brewed by Showa Shoyu Brewing Corp., Glendale, Arizona.” The company logo (the character “sho” in a circle) is in the upper right and lower left corners. On the right page, horizontal photos show: (1) An outside, ground-level view of two large, side by side, buildings, with a towering smokestack, on

which is written “Marusho” in English. The smaller one on the right was the soy sauce factory. (2) A long tractor trailer distribution truck. On the side is written in English “Marusho Shoyu” with the company logo between the two words. (3) A man in a warehouse with many cases of Marusho Shoyu stacked high. In a box in the lower right corner is written: “Manufacturers–Distributors. Post Office Box 246, Glendale, Arizona. Telephone 457. John T. Tadano.”

Glendale–Peoria [Arizona] Telephone Directory. 1954. “Showa Shoyu Brewing Corp., 1150 East Glendale Ave. John and Joe Tadano.”

Hokubei Mainichi Nenko (Year Book). 1970. Page 761. Residential / personal directory for Phoenix, Arizona: Tadano, John. 3539 W. Colter Ave. Tadano, Joe. 2207 W. Cactus Wren Dr. Tadano, Tadashi. 3632 N. 59th Ave. Tadano, Yoneo. 2609 N. 59th Ave. Barbara Takesuye (e-mail of 22 Aug. 2008) states: Tadanos in the area would have been Tadashi (Wife: Michiko), Takeo Frank (Grace), Yoneo George (Rena), John (Mary), and Joe (Kimi)—the five brothers. There are 23 cousins from these families.

Talk with Karl Matsushita, Director of Japanese–American Library in San Francisco. 1990. May 8. He saw

the building of a shoyu factory that used to exist in Glendale, Arizona. He thinks it began before World War II. He does not recall the name.

Talk with Julie Havir, reference librarian at Glendale Public Branch Library. 2002. Aug. 30. She went to school in Glendale with many Tadano children. The family owned lots of land in Glendale after World War II and was very active in agriculture. Her phone: 623-930-3431. The Glendale Historical Society has an excellent collection of older telephone directories. She may also be able to get in touch with the Tadano family.

Talk with Mary Tadano (widow of John T. Tadano who founded this company) and Michiko Tadano. 2002. Sept. 17. She thinks the company was founded shortly after the Japanese attacked Pearl Harbor, so in late 1941 or 1942.

Letter (e-mail) from Betty Takesuye, John Tadano’s niece. 2008. Oct. 4. She would guess the company started selling shoyu in 1942. “It was founded by Takeshi Tadano, John’s father, but due to the language barrier, it probably got started under John Tadano since he acted as president of the company and was an American citizen and fluent in English.”

Note 1. Concerning the date, 1941 or 1942. *Soybean Digest* says John Tadano had soy sauce on the market by 1941. Yet Mary Tadano (John's widow) says: "Leaving his farm under the supervision of his two grown sons, in about mid-1940 he [Takeshi Tadano, John's father] returned to Japan, learned how to make shoyu from a large shoyu

manufacturing company (nobody remembers where), then after about one year, returned to the United States in about September 1941, on the last Japanese ship allowed to reach the United States before the Japanese attack on Pearl Harbor.

"Arriving in Glendale that fall, he immediately set to work constructing a large wooden building on his farm in which to make shoyu." Mary recalls that the first shoyu made by the Tadano family was sold in about 1942.

E-mail from Betty Takesuye. 2011. July 1. Photos show 8 bottles of Marusho shoyu—with the shoyu in them! "Those bottles belonged to my mother. After she passed away, the contents of the house went to my sister Arlene Tadano who lived with my mother (Michiko)." Betty took these photos at Arlene's home.

Note 2. This is the earliest known soy product made in Arizona.

3408. **Product Name:** Soy sauce.

Manufacturer's Name: Wing Nien.

Manufacturer's Address: Montgomery and Jackson Streets, San Francisco, California.

Date of Introduction: 1942.

New Product—Documentation: Thomas' Wholesale Grocery... Register. 1955. July. p. 1474. Soy sauce. California, San Francisco: Wing Nien Soy Sauce Mfg. Co., 832 Sansome.

3409. Giraud-Gilliet, J. 1942. Le soja, aliment d'avenir: manière de le cultiver; 2 à 300 façons de le consommer [Soya, food of the future: How to cultivate it; 200-300 ways to consume it]. Saigon: Imprimerie de C. Ardin. 285 p. Index. [Fre]

• **Summary:** Contents: Dedication. Introduction. Part I: Summary study of soya (the soybean): Its cultivation. 1. The nature of soya: Its area of expansion. 2. Cultivation of soya: Soil, manure & fertilizer, seeds. 3. Interest in soya: Its richness in nutritive elements and comparison with other foods. Various possibilities for utilization: therapeutic uses for hygiene and diseases (vegetarian diet, diabetes, beriberi, diseases of the nervous system, anemia, slimming, milk diet), agricultural uses for fixation of nitrogen in the soil and as a fertilizer, use in the feeding of animals (green forage, dry forage, soybean cake, flour, seeds, germinated seeds, straw and pods, soymilk, milk), industrial utilization (soybean oil and its derivatives, glycerine, soy casein), use as human food (whole dry soybeans, soy sprouts, soybeans mashed or ground after they are cooked, soybeans cracked or crushed before they are cooked, fermented soybeans, soymilk, soymilk derivatives / foods made from soymilk {tofu / *dâu-phu*, yuba / *tao hu ky*, dry yuba rolls / *phu chuc*, beverages}, edible oil), utilization for social work (drops of milk, bowls of soya, inexpensive restaurants, battle against malnutrition and degeneration, for school gardens, pagodas, waste lands).

Part II: The main soyfood products and how to prepare

them at home. 1. Soymilk, soymilk curds (*tau hu hoa*), small white cheeses (*petits fromages blancs {dâu-hu miêng}*), folded sheets of yellow yuba (*feuille jaune plissée de crème de soja {dâu-hu ky vang}*), white sheets of yuba (*feuille blanche unie {dâu-hu ky trang}*), dried or smoked yuba (*plaquettes séchées ou fumées {dâu-hu ky ngot}*), fermented tofu-like cream cheese (*fromages fermentées: cancoillotte comtoise au soja*). 2. Soy flour: Roasted soy flour, soy bread, sojenta (soy polenta), pasta (soy vermicelli and vermicelli of mung beans *{dâu xanh}* or *song than*). 3. Soy condiments. Solid condiments: natto and douchi (*taotchê*), condiments that are pastes: miso and doujiang (*tao tjiung*) and koji [sic, not a paste but used to make miso, doujiang, shoyu, and jiang-you], liquid condiments: shoyu, jiang-you (*tsiang yeou*), (*tao yu*), ketjap (Indonesian soy sauce), Vietnamese soy sauce (*tuong*).

Part III: Recipes. 1. Introduction: Essential recommendations, the cookery of the poor, comparative cuisine, general recipes. 2. Soups and paps. 3. Hors d'oeuvres and salads. 4. Vegetables. 5. Meat, fish and egg dishes. 6. Breakfasts, sweets, and desserts.

Conclusion. Appendix. Errata. Address: Administrateur des S.C. de l'Indochine; Vietnam.

3410. Jouven, Maurice. 1942. Les plantes des huiles [Oil bearing plants]. Paris: Editions de Montsouris. 160 p. See p. 82-101. Illust. No index. 18 cm. Series: Collection Rustica. [Fre]

• **Summary:** Contents related to soy: Part V: Exotic oil-bearing plants susceptible to cultivation in France. 1. The soybean—Characteristics of the plant, Origin and distribution. Importance of the crop. Varieties (overseas and developed for France). Composition of the plant (as for green forage). Climate. Nature of the soil. Elements needed from fertilizers. Manure / fertilizer (*engrais*).

2. Cultivation of soybeans—Place in the crop rotation. Preparing the soil. Planting. Transplanting. Nitrogenation, incl. inoculation and nitrogen-fixing bacteria. Cultural styles (*façons culturales*). Enemies of the soybean.

3. Harvesting the soybean—Threshing. Yield. Storage.

4. Utilization of the soybean—As animal feed. As human food. Soy flour. Soy bread. Soy oil. The soybean as a vegetable [green vegetable soybeans]. Condiments (made with molds, such as soy sauce. The Chinese consume each year 700 to 800 million liters of soy sauce). Various other products (soy chocolate, soy coffee, soy wine, fermented soymilk). Industrial uses (soaps, candles, paints, soy caseine for sojalithe, artificial petroleum, soy gasoline {by distillation of the petroleum}).

Organizations actively involved with soya: (1) Institut National du Soja, 5, rue de Logelbach, Paris 17eme. (2) Institut Agricole et Industriel du Soja, 13, rue des Saussaies, Paris 8eme. (3) Centre National de Soja, 8, cours de Gourgues, Bordeaux. (4) *Revue Internationale du Soja*,

(Editions E.-V. Letzgus, 97, rue Saint-Lazare, Paris 9eme).

Illustrations show: (1) A soybean plant with enlarged pods (p. 83). (2) A weeder (*Extirpateur*) (p. 89). (3) Many ways to plant soybean seeds (p. 93). (4) Devices for drying soybean forage (p. 96).

5. The peanut.

6. Castor-oil plant, sesame seed, and niger seed (*Guizotia oleifera / abyssinica*). Address: Ingenieur Agronome.

3411. La Choy Food Products, Inc. 1942. The art and secrets of Chinese cookery. Detroit, Michigan: La Choy Food Products, Inc. 26 p. Illust. (some color). 10 x 16 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home. Address: 4461 West Jefferson, Detroit, Michigan.

3412. Löbbecke, Henrique. 1942. Cultura da soja no Brasil. 6a ed. [Culture of soybeans in Brazil. 6th ed.]. Rio de Janeiro, Brazil: Serviço de Informação Agrícola, Ministerio da Agricultura. 35 p. 23 cm. 4th edition, 1939, 33 p.; 7th ed., 1945, 74 p. [Por]

• **Summary:** Contents: History (in East Asia, Europe, and the USA). Markets. Soybean trials in Brazil (from March 1921 at Campo de Sementes de Sao Simao). Letter dated 28 Sept. 1926 from W.J. Morse of the USDA to Dr. Henrique Lobbe (after Lobbe's visit with Morse to Arlington Farm [Virginia], Morse sent Lobbe one ounce each of 51 varieties of named American soybeans, plus 17 varieties of cowpeas). Table showing the 48 varieties of soybeans tested at Sao Simao in 1927, with the dates of planting, germination, flowering, maturation, and harvest, days to maturity, resistance to pests (*vagens*), height of the plant, and yield (in grams). Botanical description. Nomenclature (in Brazil the soybean is called "soja," "feijao China," "ervilha oleaginosa do Japao," "feijao Japones," and "fava da Mandchúria"). Varieties (divided into 5 groups from very early [80-90 days] to late [130-150 days]). Green manure. Climate and soil. Chart showing products of the soybean (from Piper & Morse, *The Soybean* 1923). Preparation of the soil. Inoculation with bacteria. Sowing. Chemical fertilizer. Things to be careful of during cultivation. Diseases and pests. Harvest and yield. Cost of cultivation. Use as forage. Chemical composition of the seeds. Oil. Cake. Use as a food for humans: Hahto and Easycook, soy sauce, soymilk and tofu (*leite e queijo de soja*), use in diabetic diets, soy flour. Address: Brazil.

3413. Onuki, Motoi. 1942. Chômi shokuhin [Foods that are seasonings]. Tokyo: Yuzankaku. 233 + 6 p. 22 cm. [Jap]* Address: Japan.

3414. Quinn, Vernon. 1942. Vegetables in the garden and their legends. Philadelphia and New York: J.B. Lippincott Company. x + 261 p. Illust. by Louise Mansfield. 21 cm.

• **Summary:** The author is a woman. Soybeans are discussed on page 65.

3415. Rotondi, Pietro. 1942. *Vegetarian cookery*. Los Angeles, California: Willing Publishing Co. 151 p. Recipe index. 23 cm. 2nd edition 1948 (150 p.).

• **Summary:** This book, dedicated “To Humanity,” is basically a vegan cookbook—except for the use of a little honey. It uses no dairy products or eggs, and views a raw food diet as the ideal—although many recipes call for cooking. Following the dedication is this quote: “The human body is the temple of God and as real as God himself, because He dwells in it...”

Under “Substitutions” (p. 21) the author notes that “Soy milk may be substituted for cow’s milk...” Under “For the infant” we read: “Advice to the mother—Almond milk is the most perfect and ideal food for the infant both in nutritional value and digestibility.” Soy sauce (p. 70-71, etc.), Savita, and Vegex are widely called for a seasonings. The soy-related recipes in this book seem extremely original and innovative; they include: Baked lima beans (with soy bean milk, p. 58). French-fried onions (with soy bean milk, p. 61). Peas cooked with potatoes and soy bean milk (p. 67). Whole wheat or barley chowder (with soy bean milk, p. 68). Ripe olive croquettes (with soy milk, p. 71). Vegetable hamburgers (with soy bean milk, p. 72). Carrot loaf I (with soy milk, p. 73). Tofu (fried in flour breading, p. 74). Tofu loaf (baked, p. 74). Tofu omelet (p. 74). Tofu and garbanza [garbanzo] beans (p. 75). Gluten steak (with 1 cup soy sauce, p. 75). Chop suey (with [mung] bean sprouts and soy sauce, p. 78). Savory lima patties (with soy bean bread, p. 85). Soy bean loaf (with cooked and ground soybeans, p. 85). Soy gravy (with soy milk and soy sauce, p. 87-88). Wholewheat bread and rolls (p. 89-92; many call for the use of soy milk). Tofu cake I (like a baked cheesecake with shredded coconut, lemon, and agar, but no crust, p. 99). Tofu cake II (like a cheesecake with a wholewheat or graham cracker crust, p. 99). Note: This is the earliest document seen (Oct. 2003) that mentions a tofu cheesecake, and the earliest recipe seen (Oct. 2003) for a tofu cheesecake.

“All Bran” muffins (with brand and soy milk, p. 112). Soy wheat germ muffins (with soy pastry flour, p. 113). Corn meal muffins (with soy milk, p. 113-14). Soy bean chocolate frosting (with “2 squares soy bean chocolate,” p. 116). Soy bean chocolate date pudding (with 5 oz “soy bean chocolate” and 1 tablespoon soy bean milk, p. 120). Rice pudding deluxe (with 1 quart soy milk, p. 121). Soy bean chocolate ice cream (with 1/3 pound soy bean chocolate and a pint coconut milk, p. 127). Fruit ice cream, Maple sugar candy, Maple fudge (each with soy milk, p. 129). Soy bean chocolate fudge (with 1 cup “grated soy bean chocolate” and 3 tablespoons soy milk). Peanut butter fudge (with soy milk, p. 130). Soy bean chocolate caramels (with 3 squares soy bean chocolate and ½ cup “soy milk,” p. 131).

On pages 141-43 are two charts: (1) Alkaline, acid and neutral foods (soy beans [dried or fresh], soy bean bread, and soy bean milk are listed as having an alkaline ash, whereas flesh foods, eggs, cheese, and most nuts are listed as having an alkaline ash). (2) Vegetable protein vs. animal protein. Divides various foods that are high in protein content into vegetable and animal, then ranks them in descending order of protein content. Included in the vegetable protein are: 1. (highest) Soy bean flour 39.5%, 4. soy beans 34.0%. The highest ranked animal product is dried beef 39.2%. The average protein content of 26 vegetable foods is 25.89%, compared with 21.79% for 26 animal foods.

The author, a chiropractor, died in about 1986 in a fire at about age 92. A videotape of him has been produced by the Rotondi foundation in Los Angeles.

Note: This is the earliest English-language document seen (Jan. 2007) that contains the term “Vegetable hamburgers” (or “Vegetable hamburger”). Address: Los Angeles, California.

3416. Rouest, Antoine. 1942. *Le soja français* [Soya in France]. Argenton, France: Langlois. 48 p. Preface by J. Bordas. [9 ref. Fre]

• **Summary:** Contents: Preface, by L Brétignière (Prof. at Grignon, Member of the Academy of Agriculture). Preface to the first edition, by Louis Forest (1921). Introduction to this new edition: Soviet Russia and the soybean (*le Soja*; includes the story of Rouest’s stay in the Northern Caucasus, Russia, from 1930 to 1933), Germany and Poland take up the soya question, the canons [guns] of Germany versus the Manchurian soybean, a secret contract to provide the weapons of war, organization of a Polish bank in Manchuria, Germany cultivates soybeans in Romania and Bulgaria in preparation for the war, France and the cultivation of soybeans.

1. What is soja? 2. History of the propagation of soja: Introduction of the soybean into France and Europe, the soybean is cultivated in central Europe, in Austria, in 1875, in France the soybean is the object of numerous trials from 1876 to 1881, its cultivation worldwide, the study and acclimatization of soya become generalized.

3. Botanical characters of the soybean: And the varieties of soybeans. 4. Chinese varieties: The soybean in China, the production of soya in China in 1916 and 1917, production of soya in the Far East during the year 1928, exportation of soya from the Far East to Europe.

5. Japanese varieties: The soybean in Japan, varieties of soya from Indochina and from other Asian countries. 6. The soybean in America: American varieties, cultivation of soybeans in Ohio, selection of soya using pure lines in Connecticut.

7. The soybean in Europe: Italy, Russia, France, French climatic zones for the cultivation of *Soja hispida*, the Atlantic zone, the continental zone, the Mediterranean

zone and climate, can the soybean be cultivated in all the French climates including those in the north, northeast, and northwest, speedy production of soybeans in view of agricultural production and of the creation of early varieties for the regions in north and northeast France.

8. Instruction for growing soja in France. 9. Soja in Manchuria. 10. Soja seeds. 11. Selection of soja. 12. Varieties of soja. 13. Different ways of planting soya seeds. 14. Soy yield. 15. Nitrogen fixation in soya seeds. 16. Tilling and preparing the earth. 17. Soja fodder. 18. Soja, striking and improving. 19. Harvesting soja grain. 20. Soja oil. 21. Soja oil-cake for animal feeding. 22. Vegetable milk, soja milk and industrial casein.

23. Soja in human food: Soy flour and its applications, soy bread with wheat, nutritional composition of soja compared to dry legumes, soy viewed as a dry legume to replace meat, comparative production of nutritive elements among the various legumes used for human food, comparative value in calories of the usual foods and of soja, preparation of soy soups and meals in compressed tubes, what varieties of soy can serve the special needs of human nutrition, Sojenta, potatoes stuffed with soy, force meat balls (*boulettes*) of rice and soy, bread of rice and soy, pudding of soy and rice, soy sprouts and their food value, fresh soy sprouts in a salad, soy sprouts with vegetables, soy preserves and confections, soy chocolate, soy coffee, soybeans conserved in containers, soy with smoked fish, soup with soy vegetable meat, soymilk soup, omelet with smoked soy vegetable ham, green soy sprouts, soy cake, soy force-meat fritters.

24. The utilization of soja in the Far East: Vegetable cheese (tofu), soy-based condiments, Japanese natto (2 types), Japanese miso, Chinese miso, soy sauce (*soyou* or *schoziou*), making soy sauce in Kwantung, China, making soy sauce in Japan, koji or molded rice.

25. The culture of soja in North Africa (Rouest has varieties that would grow and yield well in the French colonies of Tunisia, Algeria, and Morocco). 26. Opinions of some authors on soja. Conclusions. Bibliography on soja.

A small photo on the "Dedication" page shows Léon Rouest (born in Paris on 11 Nov. 1872). Address: Directeur de la Station des Recherches Agronomiques d'Avignon.

3417. Takenobu, Yoshitaro. ed. 1942. Kenkyusha's new Japanese-English dictionary. Cambridge, Massachusetts: Harvard University Press. iv + 2280 p. 24 cm. American edition. Reproduced by a photolithographic process from the 82nd printing of 1939." Title also in Japanese: *Shin Wa-Ei Daijiten*. [Eng; jap]

• **Summary:** "The present war has necessitated the publication in the United States of a new edition of Kenkyusha's Japanese-English Dictionary because this country is cut off from the former source of supply of the dictionary and because the demand and need for all Japanese

dictionaries has greatly increased. To meet this need, the Department of Far Eastern Languages of Harvard University has undertaken the project of publishing in the United States this dictionary as well as other essential Chinese and Japanese dictionaries, and the Rockefeller Foundation has supplied the necessary funds for the enterprise.

"This American edition of the dictionary has been reproduced by a photolithographic process from the eighty-second printing of 1939. No changes have been made in this edition except to increase slightly the size of the print and the book."

The very first page, titled *Kaisetsu* ("explanation"), shows the Japanese syllabary and the romanization of each.

Near the end are two appendixes: (1) Pages 2264-74: *Saishin-go oyobi gairai-go ichiran* [List of most recent words and foreign words]. (2) Pages 2275-80: *Chugai hikaku nenpyo* [List of Japanese emperors and era names, with Japanese years and Western calendar years—starting with the first legendary emperor Jimmu (660-585 BC)].

The content of this pirated American edition is basically the same as that of Kenkyusha's 1931 second edition of this dictionary. Address: General editor, Japan.

3418. Von Loesecke, Harry W. 1942. Outlines of food technology. New York, NY: Reinhold Publishing Corporation. 505 p. Illust. 24 cm. 2nd ed. 1949. [1 soy ref]

• **Summary:** The section titled "Soybeans" (p. 139) states: "At the present time there are about six commercial canneries in the United States canning green soybeans. The beans are blanched, drained, and run into containers. Hot brine with sugar (about 2 ounces of sugar for each gallon of water) is added and the cans sealed. Pieces of pork are sometimes added. No. 2 cans are processed 85 minutes at 240°F."

Brief recipes for making soy sauce and Worcestershire sauce are given (p. 364). In the latter (whose source is Blumenthal and Thuor, 1932), soy sauce is one of the major ingredients. Address: Senior Chemist, in charge, U.S. Citrus Products Station, Bureau of Agricultural Chemistry and Engineering, USDA, Winter Haven, Florida.

3419. *Manzanar Free Press (Manzanar Internment Camp, California)*. 1943. New implements boost output of local shoyu. 3(4):1. Jan. 13.

• **Summary:** "Addition of implements for shoyu manufacture has raised the potential output of the local factory from 250 gallons per month to 450 gallons per month. The time is near when this camp will be supplying other relocation centers with the favorite Japanese sauce without which many dishes would be quite incomplete, said Nobutaro Nakamura, foreman of the shoyu and miso manufacturing.

"A picture of the steps in the manufacture of shoyu consists of four distinct processes: Two separate boilers, a cooling system, comprising six vats, and a large receptacle called the mixer are the implements required. Boiler No.

1 contains soy beans and wheat. Boiler No. 2 contains salt and sugar. The output of the two boilers is sent through the cooling system to the mixer which with the addition of Amino Acid finishes the product.

"Miso manufacturing advanced to proximity of production, still requires an answer from Mr. Bennett of the regional office who is in Gila, Ariz., and whose knowledge to certain matter is essential to the production of this oriental cheese."

Note: These implements and the description of the manufacturing steps show clearly that the "shoyu" is actually unfermented HVP soy sauce—which is considered greatly inferior to traditional fermented shoyu by Japanese.

3420. *Manzanar Free Press (Manzanar Internment Camp, California)*.1943. Manufacturing and industrial. 3(23):7. March 20.

• **Summary:** "'Shoyu,' or soy sauce, a necessary commodity of the Japanese began production in November to supply the center and other centers in the future. Since production began, 2000 gallons per month has been the total but since January this has been increased to 5,000 gallons. Foreman of this project is Nobutaro Nakamura."

Production of bean sprouts [the type of seeds used is not mentioned; probably mung] began in late October. Production now averages 1,600 pounds a week. The foreman is Shigeji Tomita.

A project to make "tofu" is being contemplated, with Henry Toda as foreman. Also a project to make "miso."

Note: This "Special Anniversary Edition," 18 pages long, summarizes the events at the Manzanar center / camp during the past year.

3421. *Gila News-Courier (Gila River Internment Center, Phoenix, Arizona)*.1943. Tofu manufacture contemplated here. 2(35):3. March 23.

• **Summary:** "Equipment to manufacture tofu is being sought by the Mess Division, stated Harold E. Keadle, supervisor.

"It as disclosed that Manzanar and Poston had been making 'tofu' and 'shoyu' for some time."

Note: The Gila River camp, located 30 miles southeast of Phoenix, was located on the Gila River Indian Reservation—over the strong objections of the reservation's American Indian government. The camp opened in July 1942 and had a maximum population of 13,348.

3422. *Denson Tribune (Jerome Internment Center, Denson, Arkansas)*.1943. Manufacturing of 'tofu' to start here. 1(9):4. March 30.

• **Summary:** "Manufacturing of 'tofu,' or soy bean cake, and 'miso, or soy bean curd [sic] is expected to get underway within a week.

"Installation of the equipment for the factory in Dining Hall 36 was started last week.

"The products will not be for sale. They will be manufactured solely for dining hall consumption.

"Gonshiro Harada, who operated a 'tofu,' 'miso' and 'shoyu' factory prior to evacuation, will head the project. He will be assisted by Mineso Yamagami.

"The manufacture of 'shoyu' or soy bean sauce, in the factory may also be started in the near future, according to Dee Jay Hudson, mess management head."

3423. *Manzanar Free Press (Manzanar Internment Camp, California)*.1943. Soap, shoyu sale starts this week. 3(27):4. April 3.

• **Summary:** "A sale of soap and toilet paper at the General Store and rice and 'shoyu' (soy bean sauce) at the Canteen in effect this week was announced by Frank Kanichi Kurahashi, assistant manager of the Co-op.

"Although hard to procure, Kurahashi disclosed that the Co-op managed to secure a limited supply."

3424. Schmidt, Frances M. 1943. Soybean flour (Ad). *Nature's Path (New York City)*. June. p. 238.

• **Summary:** "Use in all your baking to increase protein in your diet. 5 lbs. for 75 cents, 10 lbs. for \$1.30. Not postpaid. Also try soybean lecithin for \$2.00 lb. and soy sauce at 50 cents a quart." Address: Plainfield, Illinois.

3425. *Manzanar Free Press (Manzanar Internment Camp, California)*.1943. Manufacture of tofu commences following delay. 3(62):1. Aug. 4.

• **Summary:** "Commencement of the manufacturing of tofu (bean cakes) got under way this week at block 1-20 after months of delay, according to the Industrial Division."

"Schedule planned: The Mess Division announced that a schedule has been planned whereby tofu may be distributed on block by block basis, beginning from block 1, since only about five to six blocks can be served daily.

"Tofu section is headed by S. Okugawa and assisted by Henry Toda."

"Shoyu production: Production on shoyu (bean sauce) got under way this week after weeks of experimentation and shoyu will be distributed to the Mess Division by the end of this week for local consumption, it was also reported.

"Out of five different brands of shoyu, a committee, consisting of Project Director Ralph P. Meritt, block leaders and mess hall chefs chose brand No. 2. Every brand was given a taste and cooking test, the Manufacturing division declared."

"Output unknown:... Rumors circulating around the center stating that Shoyu Supervisor Nobutaro Nakamura has turned in his resignation has been confirmed by this division. The name of the new supervisor has not as yet been disclosed."

3426. *Manzanar Free Press (Manzanar Internment Camp,*

California).1943. Residents taste home-made tofu. 3(63):1. Aug. 7.

• **Summary:** “Tofu, the first to be manufactured and distributed here, was distributed and served at the first five blocks on Wednesday, the Industrial Division announced.”

“Alteration of the shoyu plant is now under way and the division hopes to get production started by the end of the week.”

3427. *Topaz Times (Topaz Internment Camp, Topaz, Utah)*.1943. Around the circuit. 4(19):2. Aug. 14.

• **Summary:** From Manzanar Free Press [California]. “After months of delay, manufacturing of tofu (bean cakes) got under way, according to the industrial division.

“Also, production on shoyu (bean sauce) got under way after weeks of experimentation and shoyu will be distributed to the mess division soon for local consumption.”

3428. *Chicago Daily Tribune*.1943. Beatrice buys La Choy Food; seeks listing. Sept. 28. p. 29.

• **Summary:** The Beatrice Creamery Co. of Chicago, Illinois, disclosed yesterday that it has purchased “La Choy Food Products, Inc., a Michigan corporation whose principal plant is at Archbold, Ohio.” Beatrice is “applying to the New York Stock exchange to list 20,900 additional shares in connection with the purchase.”

La Choy, which was organized in 1922, has 167,000 shares of capital stock outstanding. Beatrice “will issue one share of its common stock for each eight shares of La Choy.”

3429. *Wall Street Journal*.1943. Beatrice Creamery asks listing of more shares: Application to NYSE follows purchase of La Choy Food Products, Inc. Sept. 28. p. 24.

• **Summary:** From the Wall Street Journal Chicago Bureau. Chicago—The first part of this article is similar to that published in the Chicago Daily Tribune today.

La Choy owns and operates its main plant on 23 acres of land in Archbold, Ohio. Its business consists of processing and packing [mung] bean sprouts, tomato products, salted black beans, chow mein noodles, meat products of all kinds, Worcestershire sauce [soy sauce], fruit butters, and other food specialties.

In the future, Beatrice will distribute many of these products. This is a step in Beatrice’s further diversification, according to president Clinton H. Haskell.

La Choy’s net worth is \$564,086 and net plant value is \$442,687. Current assets are \$267,558 and current liabilities are \$65,407. Beatrice will assume a long-term loan of \$115,000.

The president of La Choy, French Jenkins, will continue as general manager of the La Choy division of the Beatrice Creamery Co. The reorganization will be voted on by La Choy stockholders at a special meeting to be held on 30 Sept. 1943.

3430. Glidden Company (The), Soya Products Div. 1943. From Glidden: Always a new development (Ad). *Soybean Digest*. Sept. p. 53.

• **Summary:** Lists all products made by Glidden’s Soya Products Division. “For bakery, meat products, confectionery, cereals, and institutional use—Soya flours and Soyalose grits. Available products include: Soyarich Flour—A full-fat soya flour. Soyalose Flour—A low-fat soya flour. Soyafluff Flour—A practically fat-free soya flour. Soyalose Grits -Low-fat soya grits—sized for specific uses in many food preparations.

For household use—Watch for the names: Durkee Soyarich Flour and Durkee Soya Bits—Two new products for home use. Durkee Oleomargarine. Durkee Worcestershire Sauce. Durkee Salad Dressing.

“For confectionery use—Albusoy: A water-soluble proteinaceous material derived from the soybean—of a non-coagulating nature—used as a whipping agent.”

Note. This is the earliest document seen (May 2002) that mentions Albusoy.

For industrial use, soya protein products include: Alpha Protein—An isolated protein for industrial uses. Prosein—A special soybean protein adhesive product. Spraysoy—A special soybean product for use as a sticker and spreader for agricultural spray materials. Mulsoya—A water-soluble isolated soybean protein derivative for textile sizing. Prosoy-G—A filler and extender in molding resins.

For pharmaceutical use: Two products synthesized from soybean sterols used in replacement therapy for endocrine deficiencies.

This ad also appeared in the Oct. 1943 issue. Address: 5165 W. Moffat St., Chicago, Illinois.

3431. *Manzanar Free Press (Manzanar Internment Camp, California)*.1943. Shoyu factory goes into full production. 4(12):3. Oct. 16.

• **Summary:** “Located at 1-20, the shoyu factory under the temporary supervision of Minoru Takechi, swung into full production last week and is producing 1000 gallons monthly, according to the Industrial Division.

“The delay in production was due to periods devoted to testing and sampling of various shoyu sauce in order to obtain the best grade possible. The sauce which was accepted by the various mess hall chefs now in production is known as Formula Two.

“At present, both sugar and glucose are being used to make shoyu but glucose is reported to be much better, according to this division’s announcement. The factory has two workers at present. The two are Minoru Takechi and his son, Harry.”

3432. O’Harra, Michaela. 1943. Japs in Arizona camp create community in desert setting. *Arizona Daily Star*. Oct. 17. p.

1.

• **Summary:** The section titled “Food preparation” states about 1,350 evacuees prepared food for their people in the project’s mess hall. Rice is served twice daily. Most of the people, when questioned, say they don’t like the food. “They usually confess, however, a fondness for various pickled vegetables, pickled in salt rather than in vinegar, soy sauce and miso, a relish paste made of soy beans. These are being prepared now in the project.”

Note: Poston (also known as Colorado River) Relocation Center was the name of one of two Japanese internment camps in Arizona during World War II. Each of the ten camps was intended to be self-sufficient. Built on the Colorado River Indian Reservation (over the objection of the Tribal Council), it was the largest of the 10 internment camps operated by the War Relocation Authority (WRA), and the 4th largest community in Arizona. It was located in the southwest corner of Arizona.

3433. Drown, Marion Julia. 1943. Soybeans and soybean products as food. *USDA Miscellaneous Publication* No. 534. 14 p. Dec. [1 ref]

• **Summary:** Contents: Introduction. Nutritive value of soybeans: Why soybean protein is important, minerals and vitamins of soybeans, the fat of soybeans—soybean oil. Recent increase in soybean production [in the USA]. Soybean products: Soya flour, soya grits, flakes and meats, soya with sausage and in soup. Soybeans as a green or dried vegetable: Varieties, growing and harvesting, preparation and cooking. Soybean “milk.” Soybean curd. Soybean sprouts. (Note: A description is given of how to make the three previous foods at home.) Other edible soybean products (Soy sauce, Worcestershire sauce, soya crackers and breakfast foods, a coffee substitute, and salted soys [soynuts]).

“In 1942 nearly 210 million bushels of soybeans were produced on about 11 million acres [yield = 19.1 bushels/acre]. If the 4.6 million acres on which soybean plants were grown for forage and other purposes are added to this figure, only five other crops—corn wheat, hay, oats, and cotton—occupied more land in the United States in that year. These figures contrast strikingly with those of 1924, when less than 5 million bushels of soybeans were harvested from 448,000 acres” [yield = 11.16 bushels/acre]. Figure 1 shows soybean production in the USA (in million bushels) from 1924 to 1942. The rapid increase in production began in 1934. In 1942 production doubled as a result of wartime needs.

“Soybean meats are split or coarsely ground soybeans, dehulled and debittered. They are chiefly used in place of roasted peanuts in confectionery and baked goods, but they can also be cooked and eaten like navy beans.

Vegetable soybeans make an excellent Victory Garden crop. “The most suitable varieties for green shelled or dried beans have straw-yellow or olive-yellow seeds that cook easily and have a mild flavor.” A table (p. 8) shows: “Some

of the desirable garden varieties for green and dried beans, classified as to their length of growing season” (from Morse & Stuart, Nov. 1943). State experiment stations can usually supply information about the “seeds of vegetable varieties of soybeans... Many State experiment stations furnish pure cultures of soybean bacteria at cost, and commercial seed firms also sell them” (p. 9).

“When soybeans follow corn on fertile land, they should produce a good crop without direct application of fertilizers. The use of fertilizers, however, is recommended on sandy soils or soils of low fertility, the best results being obtained with stable manure or superphosphate and muriate of potash. Wood ashes may be used if the potash is not available.”

Note: This is the earliest English-language document seen (May 2005) that uses the word “debittered” (or “debitter,” “debitters,” or “debittering”) in connection with flavor problems in soybeans. Most early documents that used the term were written in German. Address: Associate editor, Bureau of Plant Industry, Soils, and Agricultural Engineering.

3434. **Product Name:** Durum and Soy Macaroni, Spaghetti, Noodles, Soy Flour (Full-Fat), Meatless Food, Specialty prepared Soybeans, Soya Sauce, and Diabetic Cookies.

Manufacturer’s Name: H.W. Walker Co.

Manufacturer’s Address: 918 Armitage Ave., Chicago, Illinois.

Date of Introduction: 1943. December.

How Stored: Shelf stable.

New Product—Documentation: D.S. Payne. 1943. The story of soya products. Dec. p. 12-14. “... and The Walker Company, Chicago, Illinois, continue to market retail packages of full-fat soya flour in specialty stores throughout the Nation.”

USDA War Food Administration, Food Distribution Administration. Grain Products Branch. 1943. Dec. “Soya products distribution.” p. 5. H.W. Walker Co., 918 Armitage Ave., Chicago, Illinois, sells Durum and Soy Macaroni, Spaghetti, Noodles, Soy Flour, Meatless Food, Specialty prepared Soybeans, Soya Sauce, and Diabetic Cookies. “Distribution in Health and Department Stores.”

3435. *Ladies’ Home Journal*. 1943. How to sprout soybeans. 60:63. Dec.

• **Summary:** Wash ½ cup of this-year’s soybeans. Soak overnight in warm water to which a pinch of chlorinated lime has been added. In the morning, drain the beans and rinse with water. Have ready a clean six-inch pot or quart jar. For the jar—put in the beans and cover opening with cheesecloth or wire screening. Turn upside down on a rack and put in a dark place. “(The secret of success in sprouting is to keep the beans in a cool and dark place). Make up a batch of chlorinated water. (Blend 1/3 teaspoon chlorinated lime to a paste with a little water. Add 1 gallon water and keep this

handy and labeled). Four or five times a day, rinse the beans thoroughly with clear water—right in the jar or pot. At night, rinse with the chlorinated lime water. In 3 or 4 days, the beans will be well sprouted and ready to cook: ½ cup dry beans yields 1½-2 cups sprouted beans. Rinse thoroughly. You don't need to remove the loosened skins of the beans. Of the two methods, we had much the better success sprouting beans in a flowerpot, though the jar method is preferred by some.

“Cooking the sprouts. You eat the bean and cook the sprout. Cook them quickly, 15 to 30 minutes. They never get really soft and mealy like other beans when cooked, but have a nutlike texture. You may have to try them on your family once or twice before they become real devotees. But that's often true of anything new. Try cooking them 20 minutes, chilling and mixing them with other vegetables in a salad. Use them in soups and chow mein.” A recipe is then given for “Sprouted soys with mushrooms.” It also contains chopped onion and cornstarch, and is seasoned with soy sauce and salt.

3436. Morse, W.J. 1943. Introducing the soybean. In: U.S. Food Distribution Administration, War Food Administration, ed. 1943. Soybeans and Soya Products. Program for Meeting of Interdepartmental Nutrition Coordinating Committee. 25 p. See p. 1-2. Dec. 7. [1 ref]

• **Summary:** The soybean has many uses. Fermented, it yields different sauces; “pressed, it gives oil for cooking; sprouted, it gives a fresh vegetable rich in vitamins; picked when green, it makes an excellent green vegetable; ground dry, it makes flour; soaked, ground, and with water added, it provides milk; and the curdled milk furnishes the famous bean curd—the boneless meat of the Orient—used in the form of various cheeses and as a meat substitute.”

“Strange to say, the first published use of the soybean in the United States, other than for forage purposes, was as a coffee substitute by the Indiana Experiment Station in 1892 [sic, 1894]. It was revealed that an Indiana farmer and his neighbors had been using the roasted beans for coffee for about 8 years. During the past two years, as many of you know, the soybean has been sold as ‘Coffee Berry’, and ‘Coffee Plant’, and used extensively to blend with coffee.”

“The soybean was first used for food in America, beginning about 1910, as a flour prepared chiefly for infant foods and for persons requiring a food of low starch content” [diabetics].

“In 1925 the American Soybean Association held its annual meeting in Washington [DC] and in the exhibit of products, the only articles of food shown were canned baked soybeans, diabetic and infant foods, soy sauce, and health soy flour. At the present time more than 50 different foods made wholly or in part from soybeans by about 200 manufacturers are on the market.”

“Vegetable soybeans led the list of new vegetables

planted in the rural gardens in 1942 in South Carolina. Approximately 2000 home demonstration club women in 44 of the 46 counties in South Carolina planted them in the vegetable garden for the first time. In the winter and spring of 1943, 10,000 one-pound packages of dry vegetable soybeans were sold throughout South Carolina.” Address: Bureau of Plant Industry, Soils, and Agricultural Engineering, Agricultural Research Administration, USDA, Washington, DC.

3437. **Product Name:** Diamond Soy Sauce (Later renamed Diamond Shoyu).

Manufacturer's Name: Honolulu Sake Brewery & Ice Co. Ltd.

Manufacturer's Address: 2150 Booth Rd., Honolulu, Oahu, Hawaii.

Date of Introduction: 1943.

Ingredients: Diamond Soy Sauce: Soya beans, salt, wheat, caramel, and 1/10 of 1% sodium benzoate.

Wt/Vol., Packaging, Price: Bottle.

New Product—Documentation: Directory of Honolulu and the Territory of Hawaii. 1930-31. p. 241. The company is currently named Honolulu Ice Co. Ltd. Tomokuni Iwanaga is president. They are at 2153 Booth Rd. In the 1934-35 Directory (p. 211) the name changes to Honolulu Sake Brewery & Ice Co. Ltd. Daizo Sumida is president. Same address. They are never listed as a shoyu manufacturer in any index up through 1954. But Diamond appears as a brand in the 1961-62 index under “Soy Manufacturers.” 1966-67 Directory. Listed under the Shoyu Mnfrs. category as Honolulu Sake Brewery & Ice Co. Ltd. (Diamond Shoyu), 2150 Booth rd, Telephones 59-068, 59-069, 574-451. Not listed 1967-68.

1968-69 Directory. Listed in Buyers' Guide, p. 145. Established 1908, cable address “Honosake” Honolulu, phones 537-9068, 537-9069, 537-4451, P.O. Box 1266,

Honolulu 7. The ad lists Diamond Shoyu, Diamond Su [vinegar], and Marumasa Shoyu as products. Not listed 1973. Re-listed in 1975 directory.

Black-and-white photo of early rectangular Labels. About 1943. Diamond Soy Sauce. One gallon. Manufactured and bottled by Honolulu Sake Brewery & Ice Co., Ltd., Honolulu, T.H. Later color Label. Diamond Highest Quality Shoyu (soy sauce). “Naturally Brewed and Aged.” Same ingredients and manufacturer. 1 pint 8 oz. Both labels have illustrations of wheat and soybeans. Note: This is the earliest document seen (Oct. 2009) in which the term “naturally brewed” (with or without hyphenation) is used in connection with soy sauce.

Ad by Honolulu Sake Brewery & Ice Co., Ltd. in Hui Manaolana. 1951. *Japanese Foods: (Tested Recipes)*. Honolulu, Hawaii. See p. 44. “Highest quality natural brewed Diamond Shoyu (Soy Sauce). Patronize your local products. Sold at all grocers. 2150 Booth Rd., Honolulu.” Note: This same ad appears on the same page in the 1956 edition.

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows an old and a new label and gives the address. The company is still in business. Label. Received Feb. 1988 from Honolulu Sake Brewery Co. Ltd. 4.5 by 3.5 inches. Red, black, brown, blue, green, and white. “Highest quality. Naturally brewed and aged. 50.7 fl. oz. Ingredients: Water, soybeans, salt, wheat, disodium inosinate, caramel coloring, and sodium benzoate a preservative.” Size: 50.7 fl. oz. (1 qt. 1 pt. 2.7 fl. oz) or 101 fl. oz. (3 qts. 5 fl. oz.). Letter from Takao Nihei. 1988. July 19. Diamond Shoyu was first made in 1943 by the Honolulu Sake Brewery & Ice Co. Ltd. It still exists as Diamond Soy Sauce, made by the Honolulu Sake Brewery Co. Ltd. in Honolulu.

3438. Han, Suyin. 1943. *Destination Chungking*: an autobiography. London: Jonathan Cape. 287 p. See p. 208.

23 cm.

• **Summary:** This is the autobiography of a young Chinese woman. “The facts are autobiography, the elaboration only is fiction. The material submitted by Han Suyin was rewritten, with such additions and descriptions as would make it more intelligible to American readers unfamiliar with Chinese customs. The author’s name, Han Suyin, is fictitious...”

Chapter 11, “Burning City—Chungking,” states (p. 208): “The first of May, 1939. My duties as host in Third Uncle’s house were unexacting. The servants knew far better than I could instruct them all the routine of the household. There were eight or ten servants.”

“Lao Li was the cook and a very good one.” He was from Szechwan. “He was very jealous of his dignity. Once when I ventured the suggestion that he serve the noodles ‘white’—that is, unseasoned with red soy sauce, oil, and pepper, but plain as we eat them in the north—Lao Li gave me a pitying look, and addressing the kettle he muttered, ‘Boiled noodles and water! It must be they have no good cooks in the north!’”

Note: “Han Suyin is the pen name of Elizabeth Cober, who was born Rosalie Elisabeth Kuanghu Chow in 1917. She is Chinese-born Eurasian. Han Suyin was born in Xinyang, Henan, China. Her father was a Belgian-educated Chinese engineer, Chow Yen Tung (pinyin: Zhou Yintong), of Hakka heritage, while her mother was a Flemish Belgian. In 1938 Han Suyin married Pao H. Tang (Tang Paohuang), a Chinese Nationalist military officer, who was to become a general. They adopted one daughter (Yungmei).

“She began work as a typist at Beijing Hospital in 1931, not yet fifteen years old. In 1933 she was admitted to Yenching University [in Beijing] where she felt she was discriminated against as a Eurasian. In 1935 she went to Brussels to study science. In 1938 she returned to China, working in an American Christian mission hospital in Chengdu, Sichuan. She described her wartime experiences in her memoir, *Destination Chungking*” (Source: Wikipedia, Oct. 2010).

A map facing the title page shows the main places mentioned in this book.

3439. Huebscher, Adolf. 1943. *Die Soja: Ihre Kultur, Verwendung, Zukunft!* [Soya: Its culture, use, and future!]. Grenchen, Switzerland: A. Niederhaeuser. Published by the author. 52 p. Undated. Illust. with 18 line drawings. [Ger]

• **Summary:** Contents: Foreword. Soya—The dispenser of work and bread. Botanical description of the soybean. Cultivation and manuring of the fields. Seeds and sowing. Nutritional composition and food value. Harvest, storage and use as silage. Enemies of the soybean. Economic significance of the soybean. Preparation of the soybean for use as food. Soya minestra (an Italian dish, also consumed in Switzerland). Soya beefsteak. Soya cutlets. Tomatoes stuffed with soya. Soy sauces—Japanese shoya [sic, shoyu]

and Shimosa. Vegetable cheese [tofu]. Miso-cheese. Natto cheese. Soy coffee. Soy flour (*Soja-Mehle*, made by Morga S.A. or Ennat-Kappel, Switzerland). Soya cakes. Soya salad. Green vegetable soybeans (*Soja-Gruengemuese*). Soya Muesli. Soya Kasha (*Soja-Kascha*, the newest food for soldiers, athletes, and heavy laborers. It consists of a mixture of soy flakes, rolled oats, corn flakes, sugar, salt, and powdered milk). Soymilk (The first soymilk in Europe was made in Paris in 1882). Soy yogurt (*Soja-Yoghurt*). Soy cream for the tropics (*Soja-Crème-Tropenmilch*). Address: Dr. and veterinarian, villa Bel-Air, Corseaux (Vaud), Switzerland.

3440. Lee, M.P. 1943. Chinese cookery: A hundred practical recipes. London: Faber and Faber. 74 p. With decorations by Chiang Yee. 20 cm. Published in the USA in 1945 in New York, NY, by Transatlantic Arts, Inc. (74 p.).

• **Summary:** The Introduction (p. 12-13) notes: “The third important factor in Chinese cooking is the seasoning... There is an erroneous idea that soy bean sauce is indispensable to every dish of Chinese food. Soy bean sauce is only essential in braising, but Bovril, Oxo or Marmite, which has a vegetable basis, can be a good substitute when soy bean sauce is unobtainable. Soy bean sauce is not used in stewing at all. In semi-frying there are two styles, namely, the ‘white’ in which salt is used, and the ‘brown’ for which soy bean sauce is required. The most satisfactory way of applying soy bean sauce is to coat the meat slightly with very thin cornflour paste first and to apply the sauce in small doses a few minutes before serving. Soy bean sauce has a strong flavour of its own and would destroy the original taste of food if it were applied too liberally.”

Page 69 gives a recipes for Bean curd with mushrooms and spring onions, seasoned with soy bean sauce. Page 72 lists the names and addresses of 7 Chinese restaurants and 2 Chinese food shops in London. Address: London.

3441. Mathews, R.H. comp. 1943. A Chinese-English dictionary. Revised. American ed. Cambridge, Massachusetts: Harvard Univ. Press. Published for the Harvard-Yenching Institute. xxiv + 1226 p. Index. 26 cm. [3 ref]

• **Summary:** This excellent dictionary, which romanizes Chinese words using the Wade-Giles system and arranged them in alphabetical order by sound, is a condensed version of the multi-volume dictionary by Giles, and a revised version of Matthews’ 1931 dictionary. Soy-related characters include:

Chiang (No. 661, p. 90)–Soy [sauce], pickled vegetables, pickled bean curd (*chiang toufu*) [fermented tofu].

Fu (No. 1930, p. 285)–Tofu.

Ju (No. 3144, p. 473)–Milk. The breasts; a teat, a nipple. To suckle. *Fuju* (“rotten milk”)–A milky preparation from

beans. [Note: Probably fermented tofu].

Shih (No. 5805, p. 813)–Cantonese soy [sauce], salted beans [fermented black soybeans] eaten with rice, gruel, etc.

Note: This is the earliest English-language document seen (April 2012) that contains the term “Cantonese Soy,” which apparently refers to soy sauce made in Canton, China.

Tou (No. 6478, p. 939-40)–See No. 6481.

Tou (No. 6481, p. 940)–Beans, oil expressed from beans, young bean plants, bean stalks, bean flour, bean curd, dried cakes of bean curd usually flavored with soy, underlings = bean curd officials, soft hearted, bean sprouts [mung]–used as a vegetable, bean pods, soy [sauce], bean-cake, four kinds of soya beans (ta-tou, hei-tofu, huang-tou), (*Glycine hispida*).

Note: At Mao (No. 4357, p. 614, meaning “hair”) there is no entry for *Mao tou* = “green vegetable soybeans.” Address: China Inland Mission, Shanghai.

3442. Nishino, Shoji. 1943. Shōyu miso shokusu kikaku bunsekihō [Methods of analyzing the standards of shoyu, miso and vinegar]. Osaka: Konno Shoten Shupan-bu. 109 p. 22 cm. [Jap]* Address: Japan.

3443. Noda Shoyu. 1943. Noda Shōyu enkaku-shi [History of Noda Shoyu]. Noda: Noda Shoyu K.K., Shain Jitsumu Koshukai. 38 p. 2 vols. 20 cm. [Jap] Address: Noda, Japan.

3444. Ricino, soja y sesamo: Siembra, cultivo, cosecha e industrializacion de estas tres plantas oleaginosas. 2nd ed. [Castor-oil plant, soybeans and sesame: Sowing, cultivation, harvesting, and industrialization of these three oleaginous plants. 2nd ed.]. 1943. Buenos Aires, Argentina: Editorial Atlantida, S.A. 148 p. See p. 41-150. Illust. 17 cm. (Biblioteca de “La Chacra” Dirigida por Waldemar Martínez Pintos). [Spa]

• **Summary:** Contents: Introduction. Products obtained from the soybean (chart). As a human food. The seeds (*los porotos*; the soybean is called *poroto soja*). Green vegetable soybeans (*porotos verdes*). Soy flour. Soy oil. Soy sauce. Soy sprouts (*vastagos*). Soy milk (*leche vegetal*). Tofu (*queso*). Curd (*cuajada*). For livestock or cattle destined for slaughter. For sheep and poultry. Preparation of the seeds for obtaining oil. Utilization of the oil. Defatted soybean flour (*harina de torta*). Soybean cake for animals. Soybean cake for fertilizer. Other uses of the cake. The soybean for hay. For pasture. For silage. Address: Buenos Aires, Argentina.

3445. *Minidoka Irrigator* (*Minidoka Internment Center, Hunt, Idaho*). 1944. Rare foodstuffs received here from internees. 2(49):1. Jan. 29.

• **Summary:** “Word received from the International Red Cross and the Washington [DC] office of the WRA indicates

that residents will receive a large quantity of shoyu sauce and other commodities brought to the United States on the exchange ship Gripsholm.

“The shipment includes 440 barrels [kegs] of shoyu sauce, 15 barrels of bean mash [miso], 15 cases of green tea, 2 cases of drugs, 1 case of musical instruments and 1 case of books.”

Note: This is the earliest English-language document seen (May 2011) that uses the term “bean mash” to refer to miso.

“These are being shipped to Hunt residents from internment camps at Kooskia [Idaho] and Missoula [Montana] and from Rohner, Gehrig and Company, New York, for the benefit of Japanese nationals in this project.”

Note 1. Concerning Kooskia: “The long-awaited account of Idaho’s World War II Kooskia Internment Camp is now available. Titled *Imprisoned in Paradise: Japanese Internee Road Workers at the World War II Kooskia Internment Camp*, it describes a unique, virtually forgotten, World War II detention and road building facility that was located on the remote, wild, and scenic Lochsa River in north central Idaho at the site of an earlier CCC camp and a former federal prison camp above Lowell, Idaho. Between mid-1943 and mid-1945 the Kooskia (KOOS-key) camp held an all-male contingent of some 265 so-called ‘enemy aliens’ of Japanese ancestry. Most came from 21 states and 2 territories, but others were from Mexico; some were even kidnapped from Panama and Peru. Two alien internee doctors, an Italian and later a German, provided medical services; 25 Caucasian employees included several women; and a Japanese American man censored the mail.”

“Despite having committed no crimes, but suspected of potential sabotage, these noncitizen U.S. residents of Japanese descent had been interned elsewhere in the U.S. following Japan’s attack on Pearl Harbor in December 1941. They volunteered for transfer to the Kooskia Internment Camp and earned wages for helping build the Lewis-Clark Highway, now Highway 12, between Lewiston, Idaho, and Missoula, Montana, supervised by U.S. Bureau of Public Roads employees.”

“Knowledge of their rights under the 1929 Geneva Convention empowered the Kooskia internees to successfully challenge administrative mistreatment, thereby regaining much of the self-respect they had lost by being so unjustly interned. Here, finally, is their story.”

A slide presentation and book signing will be held in Portland, Oregon, Thursday, May 12, 2011, 5:00 p.m., at the Oregon Nikkei Legacy Center, 121 NW 2nd Avenue, (503) 224-1458. Hosted by the Oregon Nikkei Endowment and sponsored by Oregon Humanities (Website announcement).

Concerning Fort Missoula: “Fort Missoula Internment Camp was an internment camp operated by the United States Department of Justice during the World War II. Japanese Americans and Italian Americans were imprisoned here

during this war.

“Fort Missoula was established near Missoula, Montana as a permanent military post in 1877 in response to citizen concerns of conflict with local Native American tribes. In 1941 Fort Missoula was turned over to the Department of Immigration and Naturalization for use as an Alien Detention Center [ADC] for non-military Italian men.

“1,200 Italian citizens were interred at Fort Missoula, including merchant seamen and World’s Fair workers who were in the U.S. and could not be returned to Italy, as well as the crew of an Italian luxury liner seized in the Panama Canal. In addition, 650 Japanese American men were interred at the camp for questioning before being transferred to other facilities” (Source: Wikipedia, at Fort Missoula Internment Camp, May 2011).

“Following the bombing of Pearl Harbor on December 7, 1941, the FBI arrested more than a 1,000 of the most prominent Japanese leaders on the west coast as potential security risks. Ultimately, over 1,000 Japanese men—all resident aliens barred by law from American citizenship—were held at Fort Missoula for loyalty hearings. None was ever charged with any act of disloyalty but all were held at Fort Missoula or other camps for the duration of the war.” “Fort Missoula is currently the largest intact World War II internment site with most major buildings of the era still in use,...” (Source: “The Historical Museum at Fort Missoula.” “Alien detention center,” website).

3446. *Topaz Times (Topaz Internment Center, Topaz, Utah)*. 1944. Japanese Red Cross sends shoyu, miso. 6(11):1. Jan. 29.

• **Summary:** “Three hundred sixty barrels of shoyu and 1000 pounds of miso were received from the Japanese Red Cross, it was learned today. The foodstuffs, which arrived on the exchange ship, Cripsholm, last month, were relayed here from the Missoula Internment Camp in Montana.

“The community council is discussing plans for distributing the foodstuffs to the residents.”

3447. Paddleford, Clementine. 1944. New year in Chinatown: The cooks are busy—it’s a great day for feasting! *Los Angeles Times*. Jan. 30. p. F15.

• **Summary:** When Chinese greet each other this week they say “Kung Hay! Kung Hay!” Food is at the heart of this Chinese celebration—especially in New York’s Chinatown. In 2 of the 3 recipes given, soy sauce is used as a seasoning.

3448. *Nature’s Path (New York City)*. 1944. Directory of health aids (Ad). Jan. p. 37-38.

• **Summary:** On page 38, column 1: “Edible soybeans. A protein food, full of vitamins, minerals, nutty flavor, easy to cook. New crop, 10 lbs. for \$1.50. Soybean flour, 5 lbs. for 75¢. 10 lbs. for \$1.30. 30 recipes included with order. Not postpaid. Frances M. Schmidt, Plainfield, Illinois.”

On page 39, column 2: "Soya bean products. Dried soya beans, 10 lbs.—\$1.00. Low fat soya flour, 5 lbs.—\$0.75. High fat soya flour, used as milk powder, 4 lbs.—\$1.00. Soya flakes (Cereal), 4 lbs.—\$1.00. Soya bean oil, 1 gallon (send 40 meat points)—\$2.00. Postage not included in these prices. Also Soya Cookies, Soya Bread, Noodles, Butter, Grits, Lecithin, Coffee, Candles, Sausages, Nuts, Milk, Crackers, Sauce, etc. All made from Soya Beans, Huni Health Products, 205-207 East 87th St., New York, N.Y."

Address: Tokyo Teikoku Daigaku, Nôgaku-bu, Nogeikagaku Kyoshitsu.

3450. *Argus (The) (Melbourne, Victoria, Australia)*. 1944. Try this recipe from China. Feb. 3. p. 6.

• **Summary:** "The British Ministry of Food has culled the cook-books of the world to bring tasty and economical recipes to the British housewife, and her Australian sister now coping with rationing will also find them of great value. Try this interesting recipe:

"Chop Suey (Tsap Sui, Chinese origin)." After cooking, "add the gravy mixture. A few drops of Worcester sauce would be an improvement to the gravy, and would take the place of the Soya bean sauce, so much used in China. Stir the gravy in well..."

3451. Shipment of goods from Japan. 1944. Feb. 6.

• **Summary:** This photo was taken by George Ochikubo on 4 Feb. 1944 in Amache, Colorado. "Group in front of Block 7-F, the camp's Block Information Office. Japan's Red Cross sent barrels of soy sauce, packages of miso and tea to Amache via the exchange ship USS Gripsholm. Each block received a portion of the shipment." On each wooden keg of shoyu is a Kikkoman logo (see next page).

Courtesy of George Ochikubo Collection and Densho Digital Archive. Address: Granada incarceration camp, Amache, Colorado.

3452. Holt, Jane. 1944. News of food: Experts point out many advantages of adding soy beans to American diet. *New York Times*. Feb. 16. p. 20.

• **Summary:** Soy is a bean, and for many people "beans symbolize all that is humdrum in cookery." This may be one reason that some people have given soy beans a cool reception. As they struggle for recognition (with not much success), soy beans must confront the "natural suspicion with which people regard new foods and the resistance they show to efforts to 'reform' their eating habits." Another problem "may be the indifferent quality of some of the soy products

that have been offered at retail and that have prejudiced customers."

"These explanations of why the bean is not more popular despite Federal and State campaigns urging its greater use were advanced yesterday by speakers at a luncheon given under the joint auspices of the New York State Emergency Food Commission and the Neighborhood Luncheon Club." The meeting took place at the Hotel Wellington, which has been exhibiting various soy products this week. Those now available in New York City stores include oil, flour, grits, sauce, etc.

Miss Adeline Hoffman, a nutritionist on the staff of the commission, gave an address in praise of soy beans; "she reminded her audience that they were an admirable stand-in for meat," and gave numerous reasons why.

Pre-cooked, canned whole soybeans are very convenient for the woman who doesn't like to spend much time in the kitchen. They can be "served cold in a salad or hot with seasonings, or they may be enhanced with a tomato sauce" or transformed into other dishes. One such product, sold under the trade name of "Miller" in a tin weighing 1 lb. 4 ounces, is available at Gimbels for 25 cents.

Another interesting and tasty product is soy macaroni, which is sold at Health Food Distributors, 123 East 34th St. A 7-ounce cellophane bag sells for 15 cents.

For more information on soy cookery and recipes, write to the commission's offices, 247 Park Ave., New York City 17.

Note: This is the earliest document seen (Sept. 2009) that discusses the slow acceptance of soy food products during World War II.

3453. *Gila News-Courier (Gila River Internment Center, Phoenix, Arizona)*. 1944. Canal to start making tofu. 3(77):5. Feb. 17.

• **Summary:** "Tofu, which is being produced at mess hall 45 in Butte, will soon be in production at Canal, too, stated Mets Ando, chairman of the Canal Community Council.

"Ando had appointed a committee of three councilmen, Errol Ishii, Ben Iida, and J. Kiriara, to investigate ways and means to start production. The steam boiler and all equipment except a grinder are ready to go at the old dehydration plant, Ando said. He also hinted the possibility of making miso and shoyu."

3454. *Poston Chronicle (Poston Internment Center, Arizona)*. 1944. Shoyu, tea, miso, gifts of Japanese International Red Cross distributed to blocks. 17(28):3. Feb. 24.

• **Summary:** "The food items originally sent by the Japanese International Red Cross to the Japanese in the United States have been distributed to the various blocks under the direction of the local Red Cross chapters.

"The Poston III allocation includes 103 barrels of

'Kikkoman' shoyu, 19 boxes of tea and six barrels of miso.

"The amount distributed to the blocks will be according to its population as of February 13, 1944, it was stated.

"Other articles which have been sent include magazines, phonograph records and medicines."

3455. Paine, Florence. 1944. I was skeptical about soy beans. *House Beautiful* 86:33, 88, 97, 101, 104. Feb.

• **Summary:** The first page contains a large photo of a housewife standing by a table filled with commercial soy products including Soy-B-Prep, Battle Creek soy beans, Arcadia soya puffs, Golden wheat-soy mix for griddle cakes and waffles, Walker's soya sauce, Me-T-Soy extender, and Vivasoy (a high protein soya product). All are available from Kubie's Health Shop in New York City.

The article describes how to sprout soybeans at home and contains recipes for: Chopped bean sprouts with beef. Baked soy beans. Soybean perfection salad (with soybean sprouts). Tangy soy bean soup. Soya nut bread (with soy flour). Meatless chop suey (with soy sauce).

The author was originally turned off to soy after eating a "Soy Bean Loaf" at a vegetarian restaurant. "My shifting

from soy-bean avoider to booster began last summer after attending a luncheon given [in New York] by Governor Dewey at which soy beans were fed to a critical and skeptical group in salads, souffles, bread, and as vegetables. The dishes really were delicious, and I could hardly wait to get home and do some experimenting myself. I have been trying them out ever since on my family and friends. I'll let you in on a secret, though. At first I made the mistake of telling my guests what they were being served. In nine cases out of ten they were anti-soy beans because of some previous experience, and so were antagonistic right away and I could seldom change their opinion. So I changed my tactics. I now wait until I get a favorable verdict before I make my announcement. The new system works like a charm."

3456. Sakaguchi, Kinichiro; Yamada, K. 1944. Kôji-kin no keitai to sono bunrui ni tsuite. II. [On the morphology of the koji molds (*Aspergilli*) and their classification. II.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 20(2):141-54. Feb. [Jap]

Address: Tokyo Teikoku Daigaku, Nôgaku-bu, Nogeikagaku Kyoshitsu.

3457. *Tule Lake Bulletin* (*Tule Lake Internment Center, Newell, California*).1944. Internees to send shoyu to families and friends. March 2. p. 2.

• **Summary:** On February 1, a number of internees at the Santa Fe Internment Camp [in New Mexico; one of 27 run by the U.S. Department of Justice] consolidated 58 barrels of shoyu sauce which is to be sent to their respective families or friends in this center.

“This shipment is not to be confused with the International Red Cross shipment from the said camp. The express charges on the 58 barrels of shoyu sauce have been apportioned among the internees.

“Names of the senders and their respective families or friends are as follows:...”

3458. *Sentinel Supplement* (*Heart Mountain Internment Center, Heart Mountain, Wyoming*).1944. Shoyu distributed to residents. No. 183. p. 2. March 28.

• **Summary:** “The food committee of the community council announced that 376 kegs of shoyu received from the Japanese Red Cross were distributed Thursday to mess hall 30 of every block. It was issued in proportion to the population of the blocks, the committee said.

“Block 1, 2, 8, 14, 29 and 30 received 19 kegs each. Blocks 6, 9, 12, 15, 17, 20, 21, 22, 23, 24, 27 and 28 were issued 20 kegs each, while blocks 7 and 25 received 7 and 15 kegs, respectively.”

3459. Paddleford, Clementine. 1944. Lunchtime in Washington: What do the nation’s executives eat? These sandwiches and salads. *Los Angeles Times*. April 16. p. F18.

• **Summary:** “These hard-working men want their sandwiches made with basic foods—meat, cheese, eggs and fish—tuna fish!... And regardless of the governmental push for the soy, the executives shun sandwiches and salads made with this ‘little miracle’ bean from the Orient.”

Everyone in Washington, it seems, drinks a half pint of milk a day. One executive keeps a small condiment cupboard in his desk drawer—“salt shaker, pepper grinder, a shaker of chili powder, and a bottle of Worcestershire. If he can’t get a meat sandwich he likes toasted double-deckers” with peanut butter.

Contains 6 recipes, two of which call for ½ or 1 teaspoon “Worcestershire sauce.”

3460. Eaton (T.) Co., Limited. 1944. Order food Monday for delivery Tuesday (Ad). *Toronto Daily Star* (*Canada*). April 22. p. 30.

• **Summary:** Under “Fifth floor provisions”: “... Soya Sauce, Chinese, 6-oz. jar—21¢.” Address: College St., Toronto. Phone: TR. 3311.

3461. Beeskow, Herbert C. 1944. Bean sprout production

in the home. *Michigan Agricultural Experiment Station, Quarterly Bulletin* 26(4):346-52. May.

• **Summary:** Contents: Introduction. Suggestions for sprouting soybeans. Suggestions for sprouting mung beans. Soy and mung beans and bean sprouts as food. Suggestions for cooking bean sprouts (The author is indebted to Stephen Djang of Nanking, China, for many of these suggestions).

The author sprouted Chief, Ebony, Illini, Manchu, Mandarin, and Viking soybeans, among others, and found that Ebony produced the best sprouts while those produced by the other varieties were satisfactory.

The author believes that failures in sprouting soybeans may be traced to a lack of understanding of the principles of seed germination. During germination, the seedling requires oxygen and moisture and as the embryo develops, carbon dioxide and heat are liberated. Ventilation during sprouting is important to maintain the oxygen supply and to eliminate carbon dioxide. Washing with cool water prevents a killing temperature from being reached and aids in removing carbon dioxide and other metabolic products. The room temperature recommended for sprouting is between 65 and 75°F. Mold does not develop if the proper conditions for sprouting are maintained.

Contains 2 Chinese-style recipes for cooking soybean sprouts: 1. Fried or sauteed soybean sprouts (*chao dou yea tsai*). 2. Baked soybean sprouts (*djen dou yea tsai*). Also contains two recipes using mung beans: 3. Egg foo yung (*foo yung dan*; to 1 cup blanched mung bean sprouts, “add 2 beaten eggs, a small amount of flour to thicken, ¼ teaspoon of salt, ½ teaspoon of sugar, and 1 tablespoon of soy sauce. Bacon and onions may be added. Mix well, shape into a patty and fry in an oiled pan. Brown on both sides”). 4. Mung bean sprout salad (*lian ben dou yea tsai*).

Note: This is the earliest English-language document seen (Aug. 2002) that mentions “Egg foo young.” Other common early spellings of the last word are “yung” and “yong.” Address: Section of Botany.

3462. *Sentinel* (*Heart Mountain Internment Center, Heart Mountain, Wyoming*).1944. Shoyu firm opens branch in Denver. 3(26):6. June 24.

• **Summary:** “The Showa Shoyu Brewing company, brewers of Marusho shoyu, has opened a distributing office at Lawrence street in Denver, Colorado.

“The office is under the management of Fred Ota, former general manager of Poston community enterprises. He is assisted by Bob Uragami, former buyer of Poston enterprises.

“The company is entering the brokerage business and will handle other food products. The main office is located in Glendale, Arizona.”

Note: This is the earliest document seen (July 2011) that mentions either the “Showa Shoyu Brewing company” or their product, “Marusho Shoyu.”

3463. Barthélemy, M. 1944. Contribution a l'étude du soya en France [Contribution to the study of soya in France]. Clermont-Ferrand, France: Jean de Bussac. 91 p. June 20. Based on his thesis, Strasbourg Univ., Faculty of Pharmacy. [34 ref. Fre]

• **Summary:** This is a published thesis, presented to the Faculty of Pharmacy at Strasbourg. Contents: Introduction. Part I: The cultivation of soybeans. 1. History of cultivation (its origin and importance). 2. Botanical characteristics. 3. Soybean cultivation in detail. 4. Conclusions. Part II: Chemical composition of soybean seeds. Proteins, lipids, oil and lecithin, carbohydrates (*glucides*), minerals, diastases, vitamins, sterols—soyasterol.

Part III: Utilization of soya as a food and in industry.

1. As food (nutritional value, whole soybeans, soy sprouts, roasted soybeans, soy coffee, condiments liquid and solid, soymilk, Li Yu Ying, products derived from soymilk {kefir, yogurt, tofu}, shoyu, miso, natto, soy flour, soy confections, recipes and formulas). 2. In industry: Oil, lecithin, cake. 3. Other uses of the plant.

Part IV: Laboratory work. 1. In human nutrition. 2. Animal feeds for the farm. 3. In industry. General conclusions. Address: Univ. of Strasbourg, France.

3464. *Soybean Digest*. 1944. Lack of soy sauce worries Nisei workers. July. p. 11.

• **Summary:** In Urbana, Illinois, a shortage of soy sauce at “the chow shack in the work camp manned by Nisei evacuees threatened the morale of these workers in their pea vining operations...” These are “American citizens of Nipponese parentage, who had been evacuated from Pacific Coast areas to avoid trouble there... Barrels or 10 and 15 gallon tins were what they needed. Soy sauce seems as essential to these evacuees as coffee to the average American worker.”

3465. LaChoy Food Products. Div. of Beatrice Creamery Company. 1944. Genuine soy sauce (Ad). *Soybean Digest*. Sept. p. 12.

• **Summary:** This small black-and-white ad (2¼ by 3½ inches) shows a bottle of the soy sauce and states: “Famous cooks and expert chefs insist on La Choy Sauce not only in making genuine Chop Suey, Chow Mein, and other Chinese dishes, but also in frying steaks, chopped meat, meat balls and hashes—in making gravies and stews—for serving on the table as a condiment for steaks, chopped meat, roasts, chops, croquettes, spaghetti, fried eggs and sea food.”

Note: This the first time this ad has appeared in *Soybean Digest*. It may have been run in response to the article titled “Lack of soy sauce worries Nisei workers” in the July 1944 issue of this magazine (p. 11).

This ad also appeared in the *Soybean Blue Book*. 1947. p. 72. However Beatrice was now “Beatrice Foods

Company.” Address: Archbold, Ohio.

3466. Umeda, Isao; Tateno, M.; Matsumoto, M. Assignors to Noda Shoyu K.K. 1944. Chômiryô seizô-hô (shinshiki 1 gô) [Method of preparing a seasoning (semi-fermented soy sauce #1)]. *Japanese Patent* 167,668. Oct. 18. Application filed 12 April 1943. [Jap]*

• **Summary:** This Shinshiki #1 patent for making chemical soy sauce was opened by Kikkoman to other shoyu brewers in Japan free of charge (Yokotsuka 1980). In 1948 the same offer was made with the Shinshiki #2 patent for a soy sauce made by a combination of fermentation and chemical processes. Address: Noda Shoyu Co., Noda, Japan; 1. Head of research lab.; 2. Actual discoverer; 3. Asst. researcher.

3467. Markham (James E.). 1944. Display ad: Notice of sale. Invitation for bids for the purchase of shares of stock of Oriental Show-You Company. *Chicago Daily Tribune*. Dec. 3. p. A6.

• **Summary:** World War I is now raging. This company in Indiana was founded and owned by a Japanese man, Mr. Shinzo Ohki. Japanese were not allowed to become American citizens if they had been born outside the USA.

This fairly large, prominent ad begins: “James E. Markham, Alien Property Custodian, invites bids for the purchase as a whole of 132 shares of common stock, of par value \$100 each, (constituting approximately 39% of the outstanding common stock) and 20 shares of preferred stock, of the par value of \$100 each (constituting approximately 17% of the outstanding preferred stock) of *Oriental Show-You Company*, an Indiana corporation, engaged in the manufacture and sale of Oriental Show-You sauce and food products, with its office and place of business at Columbia City, Indiana...”

“All bids must be presented at the office of the Alien Property Custodian, 123 South LaSalle Street, Chicago, Illinois, on or before 12:00 o’clock noon, Central War Time, on December 20, 1944, at which time and place all Bids will be opened publicly. The stock will be sold only to American citizens.” Address: Alien Property Custodian, Chicago.

3468. Junior, Vesta. 1944. Test and tell: Festive cooking in China gives hints for Christmas cooks. *Argus (The) (Melbourne, Victoria, Australia)*. Dec. 19. p. 9.

• **Summary:** The recipe for La Si Che (Chinese wishes) calls for “Soya bean sauce.”

3469. Loosli, J.K. comp. 1944. Manufacturers and distributors of soybean products (Brochure). In: New York State Emergency Food Commission. 1944. 4 p.

• **Summary:** The names and addresses, of sources most readily available to the New York State trade, appear under the following headings: Soy flour and flakes: Manufacturers, wholesale distributors. Flour mixes for pancakes, muffins,

etc. Dry soybeans: For cooking, for sprouting. Canned soybeans. Sprouted soybeans (LaChoy Food Products, Inc., Archbold, Ohio. Most Chinese restaurants).

Macaroni, spaghetti, noodles (The Pfaffman Co., 6919 Lorain Ave., Cleveland, Ohio). Beverages. Bakery products: Soy bread, Soy cookies, crackers, wafers, etc. (Incl. Cubbison Cracker Co., 3407 Pasadena Ave., Los Angeles, California. Tom Soya Foods, Inc., P.O. Drawer 510, Williamsport, Pennsylvania). Breakfast cereals (Soyawheat, Soyawheat Co., Red Wing, Minnesota. Tom Soya Puffs and Exploded Soybeans, Tom Soya Foods, etc.).

Soybean curd [tofu] (International Nutrition Laboratory, P.O. Box 326, Mt. Vernon, Ohio). Meat-like products (The Battle Creek Food Co., Battle Creek, Michigan. Madison Foods, Madison College, Tennessee. Natural Health Products, 143 W. 41st St., New York, New York). Soups. Soy nuts (Dewey Food Products, Inc., 2251-3 N. Knox Ave., Chicago, Illinois. La Choy Food Products, Inc., Archbold, Ohio. Soybean Products Co., 9025 Monroe, Chicago, Illinois. Tom Soya Foods, Inc., etc. Vegetable Products Co., Rochester, New York). Spreads. Address: Vice-Chairman, Soybean Committee, Cornell Univ., New York.

3470. Product Name: Soya Sauce (Seasoning Sauce).
Manufacturer's Name: Loeb Dietetic Food Co. (Marketer).
Manufacturer's Address: 4378 Broadway, New York, New York.

Date of Introduction: 1944.

New Product–Documentation: Taylor. 1944. *Soy Cook Book*. p. 200.

3471. Product Name: Vege-Salt (Table Seasoning Containing Soybean Extract).

Manufacturer's Name: Modern Products Inc.

Manufacturer's Address: 1428 N. 24th St., Milwaukee, Wisconsin.

Date of Introduction: 1944.

New Product–Documentation: Taylor. 1944. *Soy Cook Book*. p. 200.

3472. Bordas, Jean. 1944. *Le Soja: Agronomie du soja, utilisations agricoles et alimentaires, usages industriels, économie du soja, état actuel de la question en France*. Deuxième ed. [The soybean: Agronomy, agricultural and food uses, industrial uses, economics, and present status in France. 2nd ed.]. Montpellier, France: Dubois et Poulain. 32 p. The 1st edition (36 p.) was published in 1937. [39 ref. Fre]
• Summary: Contents: 1. Introduction (he notes that World War II is "the war we have just lost"). 2. Soybean agronomy: Botanical characteristics, varieties (in Japan, China, Manchuria, USA), acclimatization trials in Europe, soybean cultivation (incl. inoculation), 3. Food and agricultural uses of soya: Chemistry of the soybean, alimentary physiology, as a feed for animals (soybean cake,

forage, soybean seed and flour, soymilk mixed with 25% animal milk), other agricultural uses, as a human food (soy sprouts, tofu, fermented tofu, smoked tofu, how to make tofu), condiments–sauces (soy sauce, miso, tuong of the Annamites, soy coffee, provisions / rations), human therapy (incl. infant foods).

4. Industrial uses: Soybean oil, casein, plastic materials (Sojalithe), vegetable lecithin, cellulose, sterol.

5. Soy in the economy: Production, imports and exports.

6. The present state of the soybean question in France–Conclusion.

A full-page table (p. 7) shows varieties developed and acclimatized to various countries. France: Rouest 29. Rouest 250. Rouest 104. Rouest 14. Rouest 71. Rouest 60. Rouest 178. Rouest 16. Rouest 36. Rouest 85. Rouest 6. Rouest 67. Rouest 40. Rouest 500 M. Rouest 13. Vilnensis.

Russia: Schribaux (Rouest). Lawes et Gilbert (Rouest). Miège (Rouest). Staroukrainskaya. Halton 502/2. Kouben 0.354. Kouben 0.375. Kharbinskaya 190.

Germany: Früheste Mittelhöhe gelbe. Mittel Frühe. Mitteleurope. Diekmanns frühgelbe. Diekmanns hel'gelbe. Diekmanns grungelbe. Platter silo. 236 Pappelsdorf. 238 Pappelsdorf.

England: Green Jap. Brown C. Yellow J.

United States: Cayuga. Manchu. Illini. Tokio noir [Tokyo Black]. Mandell. Black Eyebrow. Wisconsin. Chestnut. Mandarin. Lisbonne.

On page 8 is an interesting map of France which shows: (1) Twelve centers of agronomic research. (2) A shaded zone which is the area of optimal production of soybean seeds. It is in the southeast of France and along the eastern side of France all the way to the northern border. This zone includes (from southwest to northeast) the following centers: Toulouse, Montpellier, Avignon, Antibes, Clermont, Dijon, and Colmar (in Alsace).

Pages 5-6: The first trials made by the agronomic stations in France date from 1901. Mr. Lechartier, director of the station at Rennes, concluded at the end of his observations, that the production of soybean seeds would be more advantageous in a climate that was drier and warmer than that of Brittany (Bretagne).

These were the same conclusions that Mr. Brioux, director of the agronomic station at Rouen, arrived at some years later.

Starting in 1924 the agronomic station at Avignon, the central station for plant improvement at Versailles, in 1935 the stations at Colmar, Clermont-Ferrand and Dijon, and in 1940 the School of Merle (Bouches-du-Rhône), established soybean [germplasm] collections which originated in many different places, in order to test the earliest and most productive varieties that were adapted to each region.

Rouest and Rondet in the south of France, Dr. Balzli in Alsace and de Guerpel in Normandy were the main agronomists and selectionists who were passionately

interested in the cultivation of Soya in France.

Note: Rouen is the historic capital city of Normandy, in northern France on the River Seine. Address: Ingénieur Agronome, Directeur de la Station Régionale de Recherches Agronomiques d'Avignon, France.

3473. De Gouy, Louis Pullig. 1944. *The bread tray*. New York, NY: Greenberg. vii + 463 p. Foreword by Dorothy Thompson. 21 cm.

• **Summary:** This is a book about bread. The 1st chapter is "A short history of breads." The chapter titled "Soy flour breads and biscuits" (p. 401-24) includes the following (p. 404-05): In New York's Chinatown, stroll inquisitively along Mott, Pell, and Doyer Streets, and you will see how important the soy bean is in everyday Chinese life. "Fresh bean sprouts—some from soy and some from other beans—stand in large hampers in the shops; on the shelves around them are jugs and bottle of soy sauce, for the kitchen or the table."

In Chinese shops corresponding vaguely to our delicatessen stores you will see *Teou-fu*, or *tofu*, made fresh daily, in cream-white cakes like Philadelphia cream cheese, kept cool and moist in pans of water. It is made from soy bean milk much as cheese is made from cow's milk or goat's milk, and it was a staple commodity in Chinese cities more than two thousand years ago. The Chinese prepare it for breakfast, dinner or supper in many ways, and a favorite form is ready for you in the shops—*Tsa tofu*, the little cheeses fried in deep fat [deep-fried tofu puffs], that look like well-browned and rather robust doughnuts without holes. You can get them hot from the kettle and eat them with syrup or without; a Chinese laborer finds them sustaining and satisfying as a noon-hour meal."

Note: This is the earliest English-language document seen (May 2012) that contains the term *Tsa tofu*, a type of deep-fried tofu.

"*Tofu nao* is of custard consistency and is eaten in soups and as a custard; *Chien chang*, or thousand-fold *tofu*, is made in thin layers rolled together and cut up like noodles for soup or fried in sesame oil. A brown, dry *tofu*, *Hsiang khan* [pressed tofu] is colored and flavored with caramelized millet sugar and eaten with soups and salads. There are many forms of preserved *tofu cheese*: smoked, salted, spiced and packed in wine and brandy to be used in cooking or as a delicacy like cheeses of the Western World. *Yuba*, as old as soy beans from which it is made, is the dried creamy film from boiling soy milk, sold in flakes or sheets, or rolled into "bean sticks" [dried yuba sticks], and it has been one of the most popular commodities in China and Japan for centuries."

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "preserved tofu" or the term "tofu cheese" or the term "preserved tofu cheese" to refer to Chinese-style fermented tofu. Address: Chef Steward, Consulting food editor of *Hotel Management* and

Restaurant Management magazines, food columnist of *Gourmet* magazine and author of various cook books.

3474. La soya: Excelente alimento para el hombre como para el ganado y valiosa materia prima de numerosos usos industriales: Indicaciones para su cultivo y aprovechamiento [The soybean: Excellent food for people and for livestock and valuable raw material with numerous industrial uses. Remarks on its cultivation and utilization]. 1944. New York, NY: Reader's Digest. 32 p. [Spa]* Address: New York City, New York.

3475. Matagrín, Am. 1944. *Le soja: Culture et utilisations* [Soya: Cultivation and utilization]. Paris: Gauthier-Villars. 72 p. Illust. No index. 28 cm. [Fre]

• **Summary:** Contents: Introduction; Why does soybean culture remain little known in France? 1. What is the soybean (*le Soya*)? Why should it be cultivated?: The plant and its varieties, the soybean (*la fève de soya*) and its general characteristics, alimentary interest in soya, agricultural interest in soya, industrial [non-food] interest in soya.

2. Soybean cultivation: The question of climate, choice of the variety to cultivate, choice and preparation of the land/soil, fertilizers for soya, soya in crop rotations, seeds, sowing, and seedlings, mixed cultures or intercropping, soybean vegetation and crop management, maturation, harvest, yield, and storage.

3. Use of the soya plant and its seeds: Soya in agriculture and livestock feeding, soya in human foods, recipes, industrial uses of soya, people and organizations connected with soya, contracts for growing soybeans in 1944. Table of contents.

The section on soya in human foods, based on the author's 5-6 years of personal experience, discusses, with recipes: green vegetable soybeans (*soya en légume vert*), whole dry soybeans (*soya en légume sec*), soy sprouts (*germes de soya*), fermented soy condiments (shoyu, miso, natto), soy flour (bread containing soy flour was made at Paris and even at Vichy in 1939), soymilk and tofu (*lait de soya et fromage végétal*), roasted soybeans and a coffee substitute (*soya grillé, substitut de café*), soy oil (*huile de soya*). Address: France; In 1946: Technical Consultant to Bureau Français du Soja.

3476. Nourse, Mary Augusta; Goetz, Delia. 1944. *China, country of contrasts*. New York, NY: Harcourt, Brace and Company. x + 229 p. Illust. Map. 22 cm.

• **Summary:** This is "A wartime book... produced in full compliance with the government's regulations for conserving paper and other essential materials."

In Chapter 3, "At home with the Chinese," we read (p. 48): "... to most Chinese cheese is a disgusting food. We have many strange ideas of Chinese food, because we have heard more about the unusual food that they sometimes eat

than their more usual dishes... And Chinese have heard that in our own country we eat rattlesnakes, porcupines, chicken feet, and very malodorous cheese. Of course, those things do not represent our usual diet,..."

Page 50: One thing a Chinese cook must always have is many sauces; "one of the favorites is soy sauce, and peanut oil and black sauce are also necessities."

Page 51: "To the Chinese a good meal is a work of art, and they make a ceremony of eating it."

Chapter 5, "China's fields and their harvest," states (p. 80): "The soy bean, another of the five sacred grains of Chinese legend, grew first in China. Today it is China's great cash crop. From there it was taken to Europe. When Benjamin Franklin was in Europe in the eighteenth century he sent soy beans home and advised people in the United States to experiment with growing them. It is only recently that people have realized their value, but now they have become one of our most valuable and nutritious foods. Today soy bean products are filling our grocery shelves, appearing on candy counters, and are part of an increasing number of dishes on restaurant menus." Soy bean oil is used to make many products. The cakes, left over after the oil is removed, "are used for fertilizer and are especially good for feeding the mulberry trees."

3477. Office of the Chief of Naval Operations (United States). 1944. Civil affairs handbook: Taiwan (Formosa). Tainan, Taiwan: Office of the Chief of Naval Operations (U.S.). 106 p. See p. 32. *

3478. Tanner, Fred Wilbur. 1944. The microbiology of foods, 2nd ed. Champaign, Illinois: Garrard Press. viii + 1196 p. Index. 24 cm. [135* ref]

• **Summary:** Contents of Chapter 12, "Fermented milks": Introduction, lactic acid bacteria and intestinal therapy (*Lactobacillus bulgaricus* {*Bacterium bulgaricum*}, characteristics of *Lactobacillus acidophilus* and *Lactobacillus bulgaricus*, implantation of *Lactobacillus bulgaricus* in the intestines, *Lactobacillus acidophilus*, implantation of *Lactobacillus acidophilus* in the intestines, unfermented acidophilus milk, permanence of results of acidophilus therapy, preparation of acidophilus milk {7 methods}, storage of acidophilus milk, other *Lactobacillus acidophilus* preparations {2}), therapeutic use of acidophilus milk (psychoses, constipation, diarrhea, epilepsy, typhoid and paratyphoid carriers, *Lactobacillus bifidus* {*Bacillus bifidus*}, buttermilk, busa, cieddu, dadhi, kefir, kumiss {kumys}, leben, mazun, taette, yogurt {yoghurt}, kuban, survival of pathogenic bacteria in fermented milks). Contains a good review of the benefits of acidophilus milk, a sour milk in which *Lactobacillus acidophilus* is the fermenting organism.

Contents of Chapter 13, "Intestinal microbiology": Introduction, intestinal flora in childhood, effect of diet on intestinal flora, effect of fasting and low-protein diet on

intestinal flora, effect of copious water drinking intestinal flora, effect of high-protein diet on intestinal flora, influence of hydrogen-ion concentration on intestinal flora, effect of intestinal absorption on intestinal flora, relation of vitamin-deficient diets to bacterial flora, relations of a milk diet to intestinal flora, effect of carbohydrates on intestinal flora, effect of a high-fat diet on intestinal flora... vitamin synthesis by intestinal microorganisms, destruction of vitamins by intestinal microorganisms, action of bile on bacteria, autointoxication, changes in bacterial content of stored normal feces. Bacterial study of fecal material:...

In Chapter 17, "Microbiology of bread," is a section (p. 702) titled "Soy bean flour and meal."

In Chapter 18, "Fermented foods," is a section (p. 752-53) titled "Soy and related fermentations" which discusses the "soybean sauce," the process by which it is made, and its microbiology.

In Chapter 21, "Meat and meat products," is a section (p. 906-08) titled "Ferguson, Racicot, and Rane's precipitation test for the determination of soybean flour in sausages" (1942).

Note: This book contains an excellent, well-documented review of fermented milks and their effects on intestinal flora. Address: PhD, DSc, Prof. of Bacteriology and Head of the Dep., Univ. of Illinois [Champaign].

3479. Union Nacional de Cooperativas del Campo. 1944. Instrucciones sobre el cultivo de la soja y sus aplicaciones. 2nd ed. [Instructions on the cultivation of the soybean and its applications. 2nd ed.]. Madrid. 16 p. [Spa]

• **Summary:** Pages 12-14 list industrial uses of soybeans, give a nutritional analysis of white and black soybeans (*Soja blanca*, *Soja negra*) done by the Central Agricultural Station (*Estación Agronómica Central*) using samples from Granada, and briefly describe several soyfoods, including soy flour, soymilk, and tofu (*queso de soja*). Thus section concludes: "Outdoing the known anecdote of Permantier, who offered Louis XVI a succulent feast in which all the dishes were made of potatoes, today one could make a menu that was more varied, rich and select in which the delicacies as well as the serving utensils would all be derived from soya." Address: Madric, Spain.

3480. U.S. Senate, Committee on Appropriations. 1944. War Department Civil Functions Appropriation Bill, 1945: Hearings, Seventy... Washington, DC: U.S. Government Printing Office. See p. 199. *

• **Summary:** Page 199: "Ralph Motto and Yasu Motto, Oriental Show You Co."

3481. White, Julius Gilbert. 1944. Abundant health: Expounding the Learn-how-to-be-well system of daily living. 4th ed. Madison College, Tennessee: Published by the author. xix + 437 p. Illust. 24 cm. [21+ ref]

• **Summary:** The maintenance of physical and mental health can be achieved through a vegetarian diet and wholesome living. Interesting sections include: Meat not necessary (p. 150-52; 13 quotes from authorities). Denmark's food experiment under Dr. Hindhede during World War I (p. 152-53). Sixteen reasons for vegetarianism (p. 153-). The animal kingdom a reservoir for disease (p. 165-). Note that Madison College is a Seventh-day Adventist college and sanitarium.

Soya is discussed on the following pages: Soybeans and soybean products as a replacement for meat (p. 151-52). One section titled "The Soybean: The Wonder Food" (p. 345-59) discusses many aspects of soybeans and how to use soybeans: In baking. In general cooking. As beans. As beans ready-cooked. As meat. As milk (gives 3 recipes for making soybean milk and ways for using "the pulp left after making milk"). As cream. As cheese ("A very satisfactory soybean cheese is now available in the health food stores. It has a texture something like cottage cheese..."). As butter. As oil. As home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color if desired). As home-made soy mayonnaise (based on the above home-made soy butter). As soy acidophilus milk (also often called soy buttermilk). As greens (soy sprouts). As soy sauce. As coffee. As substitute for egg white.

On page 389 begins a long treatise on the safety of aluminum in connection with cooking and foods, a subject which is causing much debate. Address: Madison, Tennessee.

3482. Williams-Heller, Annie; McCarthy, Josephine. 1944. Soybeans from soup to nuts. New York, NY: The Vanguard Press. 119 p. Index. 20 cm. Foreword by Walter H. Eddy, Ph.D., Professor Emeritus of Physiological Chemistry, Columbia University.

• **Summary:** Contents: Introduction. Part 1. The soybean: Vegetable of tradition and high nutritional value, "fresh green soybeans," dried soybeans, sprouted soybeans, soybean oil, soybean flour, soy grits and soy flakes, soybean milk and curd, soy sauce, soy nuts. Part 2. How to prepare soybeans: General directions; fresh green soybeans, dried, and sprouted soybeans; soybean milk, curd, pulp or mash; soy grits and flakes. Part 3. Recipes: Appetizers, soups, meat stretchers, meat substitutes, croquettes and fritters, side dishes, salads, salad dressings, sauces, sandwich spreads, breads and quick breads, desserts, soybean-milk drinks, soybean nuts. Part 4. "One soybean dish a day" (Menu suggestions).

The section titled "Soybean-milk drinks" (p. 107-08) contains 5 interesting recipes: Banana soybean-milk shake (with 4 cups soybean milk, 1 ripe banana, 1 tablespoon honey, and 1 teaspoon lemon juice or vanilla or almond flavoring, to taste; it used no ice cream). Eggnogg (with 4 cups soybean milk, 3 eggs, 3 tablespoons honey, nutmeg and cinnamon to taste, and flavoring to taste). Hot cocoa with soybean milk. Spiced soybean milk (with 4 cups soybean milk, 2 tablespoons honey, ½ teaspoon cinnamon, and a

pinch of nutmeg, or mace [somewhat like chai]). Vanilla soybean-milk shake (with 4 cups soymilk, 2 tablespoons honey, vanilla flavoring to taste). Note 1. This is the earliest document seen (Dec. 2003) that contains a recipe (in standard format with the amount of each ingredient) for a non-dairy soybean-milk shake, or for soy eggnog. It is also the earliest English-language document seen (Dec. 2003) that contains the term "soybean-milk shake."

Note 2. This is the earliest English-language document seen that uses the term "Soybean Nuts" to refer to soynuts. Address: 1. Nutritionist and Food Consultant; 2. Home Economics Director, American Inst. of Food Products ("Ella Mason" on the Dr. Eddy Food and Home Forum). Both: USA.

3483. Wing, Fred. 1944. New Chinese recipes: Using only ingredients easily obtainable in neighborhood stores. New York, NY: United China Relief.

• **Summary:** On the copyright page: "These recipes have all been tested by Mabel Stegner, B.S., University of Wisconsin, Home Economics Consultant." The Foreword notes that these Cantonese-style recipes are delicious, good for you, and money savers. "One pound of lean meat combined with a pound or two of vegetables, the flavors of both skillfully blended by a delicious soy-flavored sauce, makes a satisfying, nutritious, complete main course for four people."

For each recipe, both the Cantonese (large bold caps) and the English (smaller, non-bold, title-style capitalization) names are given. The only soy ingredient used is soy sauce, which (according to the book's title) is "easily obtainable in neighborhood stores." Many recipes are seasoned with soy sauce, including Char-Shew (Chinese Roast Pork), Young-Moo-Goo (Stuffed Mushroom Caps with Pork), Shew-Pye-Gult (Roast Spareribs), etc.

3484. Spencer, Cornelia. 1945. The Chinese people at home. *Chicago Daily Tribune*. Jan. 11. p. 14.

• **Summary:** Chapter three: The section titled "Soy bean curd" begins: "A man is making soy bean curd and setting it out for sale. It stands in shivering squares of white on a cloth which lines the flat bamboo tray." Why is this artistic? Well, behind the man is "brown dried, pickled bean curd" which is used to enhance flavors. Also beautiful are the "brilliant red bean curd cubes hot with red pepper," which add zest to breakfast. Also framed in the scene are "jars of soy sauce." Making this sauce is an art unto itself, for the kind of water used, the amount of fermentation, etc. each affect the finished soy sauce, which is the foundation of Chinese cooking.

An illustration shows a handsome and vital "Horse," by Ju Pei-hung, part of an exhibition titled "Fifteen Contemporary Chinese Painters," organized by the East and West Association, New York. Address: Author of "The Exile's Daughter," "Made in China," etc.

3485. U.S. Regional Soybean Laboratory. 1945. Sources of edible soybeans. Urbana, Illinois. 3 p. Jan. 30.

• **Summary:** This 3-page table contains 4 columns: Varieties and sources, addresses, amount, and price. Varieties: Aoda (5 sources). Bansei (28). Easycook (2). Etum (3). Funk Delicious (5). Giant Green (2). Higan (2). Hokkaido (5). Imperial (1). Jogun (5). Kanro (2). Mendota (7). Rokusun (1). Sac (2). Sanga (1). Soncei [sic, Sousei] (1).

Growers include: Associated Seed Growers, Inc., 301 Kentucky Ave., Indianapolis, Indiana. E.F. Johnson, 1337 McCutcheon Ave., Richmond Heights, Missouri. Farmers Seed & Nursery Co., Faribault, Minnesota. Fred H. Scholl, Memphis, Tennessee. Holmes Seed Co., 224 Cleveland Ave., Canton, Ohio. International Nutrition Laboratory, Mt. Vernon, Ohio. LaChoy Food Products, Archbold, Ohio. L.L. Olds Seed Co., Madison, Wisconsin. G.G. McIlroy, Farm Management, Inc., Irwin, Ohio. Ray Monier, Carrollton, Missouri. Rufus Gillett, R.R. 2, Mazomanie, Wisconsin. Russell-Heckle Seed Co., 16 S. Trout Street, Memphis, Tennessee. J.A. Saltzer Seed Co., LaCrosse, Wisconsin. Strayer Seed Farms, Hudson, Iowa. T.W. Wood & Sons, 11 South 14th St., Richmond, Virginia. W. Atlee Burpee Co., Clinton, Iowa.

Footnote: *”This list is compiled for the convenience of those interested in edible soybeans. We recognize that it is not complete but does include all of those who have replied to our questionnaire. We make no statement as to the varietal purity or seed quality since we did not request producers to send in samples of the seed they had to sell. We will welcome names of any additional growers.”

Note: This is the earliest document seen (June 2009) that mentions the soybean variety Sanga. Address: 178 Davenport Hall, Urbana, Illinois.

3486. Morse, W.J. 1945. Soybeans in the land of our enemies. *Soybean Digest*. Jan. p. 6-7.

• **Summary:** Text of a letter to the American Soybean Assoc., Guelph, Canada, written from Tokyo, Japan on 20 July 1929. This is the first ASA meeting Morse has missed. He and Dorsett, comprising the Oriental Agricultural Exploration Expedition, arrived in Japan on March 18 and set up headquarters in Tokyo. “It is amazing, the extent to which the soybean is used for food in Japan.” For details, see Morse 1929 (“Letter from Dr. Morse”). Address: USDA Bureau of Plant Industry, Washington, DC.

3487. Wang, Cheng-I. 1945. Chinese soy bean sauce as a transmitting agent of bacterial gastro-intestinal infections. *American J. of Tropical Medicine* 25:47-50. Jan.

• **Summary:** “Thirty samples of sauces were examined; 35% of these samples showed evidence of contamination either with *Escherichia coli*, *E. typhosa*, *S. dysenteriae*, or *Salmonella bacilli*. The hypertonicity and acidity of the samples have no significant germicidal effect on these

organisms, and *E. typhosa* inoculated into the sauce can survive for many days. The fact that the soy bean sauce is frequently consumed raw and often contaminated with the typhoid-dysentery group of organisms suggests the possibility that they play a part in the dissemination of intestinal [typhoid and dysentery] infections in this country.” Address: Szechwan Provincial Inst. of Infectious Disease, Chengtu, Szechwan, China.

3488. McCay, Jeanette B.; Loosli, J.K.; Adolph, W.H.; Brewer, Lucille; Munn, M.T.; Neidert, Marion; et al. 1945. Soybeans: An old food in a new world. *Cornell University, Extension Bulletin* No. 668. 65 p. Feb. Illust. Index. 28 cm. Produced by the Soybean Committee of the New York State Emergency Food Commission. [38 ref]

• **Summary:** Contents: A potential food resource: Introduced into the United States, new American industries. Composition and food value of soybeans: Proteins, fats, carbohydrates, minerals, vitamins, the enzymes of the soybean. How to use soybeans and soy products (contains many recipes): Fresh green soybeans (how to cook, how to can, how to freeze), dry soybeans (how to cook, how to can, how to freeze, 3 recipes, salted soybeans [oil-roasted soybeans], how to prepare bean pulp {by running drained cooked soybeans through a meat chopper}, 4 recipes), sprouted soybeans (vitamin C forms during sprouting, exposure to light does not affect vitamin C, riboflavin and niacin are also increased, how to sprout soybeans at home {9-step process}, store sprouts in refrigerator, how to freeze sprouted soybeans, how to cook sprouted soybeans, illustration of apparatus [equipment] for sprouting soybeans in quantity, 6 sprouted soybean recipes), grits, flakes and flour (protein equivalents {one pound of low fat soy flour is equal in protein value to two pounds of cheese, 2 pounds of navy beans, 2½ pounds of beefsteak or chicken, 3 dozen eggs, 5 pounds of bread, or 12 pints of milk}, a little soy flour with wheat flour improves protein quality, amount of protein, iron, and calcium also increased, 23 soy-grits and flour recipes {divided into 3 main dishes, 3 quick breads, 17 desserts}), a stronger staff of life—bread (rats fed bread containing only 5% soy flour grow much better than those eating white bread, does soy bread taste good?, little change required in baking with soy flour, 6 yeast bread recipes), soybeans in large-quantity cooking (6 recipes), other soybean products (soybean curd, soybean milk, soy sauce). Production, varieties, and culture of soybeans. Soybeans in animal feeding: For cattle, for sheep, horses, swine, and poultry, soybean hay a substitute for alfalfa, for dogs and fur-bearing animals. References. Index.

Contains nine bar charts in the form of illustrations / pictorial drawings / symbolic graphics (which may be by Kenneth Washburn).

Tables show: 1. Proximate and mineral composition of soybeans and soy flours. Essential amino acids in servings

of certain protein-rich foods (lean meat, eggs, cooked soybeans). 3. Calcium, iron, and B vitamins (thiamine, riboflavin, niacin) supplied by common serving portions of certain foods. 4. Vitamin composition of 7 soy products. 5. Food values of sprouted soybeans and of some common vegetables per 100-gram edible portions. 6. Thiamine, riboflavin, and niacin content of soybeans during sprouting, storage, and dehydration. 7. Soybean milk, cow's milk, and human milk (typical nutritional analyses). 8. Composition of some [seven] soybean products used for food in the Far East. 9. Varieties of soybeans most suitable in New York State for animal feed and human food (For green vegetables: "Garden varieties such as Green Giant, Hokkaido, Jogun, Bansei, Fuji, Tortoise Egg, and Willomi").

Concerning "Fresh Green Soybeans: When gathered from the garden while the pods are still greenish and the seeds are still soft but fully developed, the soybean is a new green vegetable that some persons say is more attractive and delicious than the fresh lima bean. Many Victory gardeners have grown them for the first time, and they may be purchased commercially canned as are green peas."

Note: This is the earliest English-language document seen (Aug. 2003) that contains the term "protein quality." Address: New York.

3489. Yamazaki, Momiji. 1945. *Tôa hakkô kagaku ronkô* [East Asian studies/theses on fermentation chemistry]. Tokyo: Daiichi Shuppan K.K. han. 436 p. Published 20 March 1945. [160* ref. Jap]

• **Summary:** This remarkable work, published in a limited edition of 1,000 copies, was written by Dr. Yamazaki, a microbiologist, who graduated from the Department of Agricultural Chemistry, Tokyo University, in 1914. The book is a review of existing Asian literature on fermented foods, with a good bibliography. Dr. Yamazaki may have been employed by the laboratories of the Manchurian Railway.

Contents: Introduction: Preface, origin of alcoholic beverages, various alcoholic beverages of the world, summary. Chinese fermentation chemistry documents: Preface, Chinese ancient grains, Chinese ancient grain foods, Various types of Chinese-made koji, Various Chinese-made alcoholic beverages, summary. Japanese fermentation chemistry documents: Preface, Japanese land, inhabitants on Japanese land, Japanese New Stone Age culture, conclusions. Real papers: Japanese ancient foods, Various types of Japanese-made koji, Japanese-made various alcoholic beverages, summary. Korean fermentation chemistry documents: Preface, Korean produced grains, Various types of Korean-made koji, Various Korean-made alcoholic beverages, summary. Tables.

3490. **Product Name:** Pitman Nutmeats [Soya, Savoury, and Nuto Cream].

Manufacturer's Name: Pitman Health Foods Ltd.

Manufacturer's Address: Vitaland, Four Oaks, Sutton Coldfield, England.

Date of Introduction: 1945. April.

Wt/Vol., Packaging, Price: Hermetically sealed tin. Retail for £1/- to £1/11 (4/45, England).

How Stored: Shelf stable.

New Product–Documentation: Ad (half page) in *Vegetarian Messenger and Health Review* (Manchester, England). 1945. April. Opposite inside front cover. "Pitman Nutmeats are still available to all who enjoy a tasty and palatable dish. In three varieties: Soya, Savoury, and Nuto Cream. Ask your Health Food Store for these grand foods." Note: It is not clear whether these are soynuts, or tree nuts seasoned with soy sauce. And it is not clear what Nuto Cream is made of.

Ad in *Vegetarian Messenger*. 1946. Nob. p. iii. "Pitman Nutmeats" The Soya is £1/1 per tin.

3491. Shelledy, F.H. 1945. Japanese trade studies: Soybeans. *U.S. Tariff Commission, Special Industry Analysis* No. 13. 6 p. May. [3 ref]

• **Summary:** Contents: Foreword. Introduction and summary. Description and uses. Production. Imports. Post-war problems.

This "report is one of a number which were prepared during 1944 and 1945 for the Foreign Economic Administration..." Most of the data "were taken from official and semi-official Japanese sources." Errors and inconsistencies in these data have frequently been detected.

"Japan is not important as a world producer of soybeans. It is, however, normally the world's principal soybean importer. Its annual production during 1928-39 was only 10 to 14 million bushels. By comparison, the production in the United States was 90 million bushels in 1939 and more than 190 million bushels in 1943 and 1944; the average annual production of soybean in Manchuria during the thirties was more than 150 million bushels annually.

"Prior to the present war Japan took most of the exportable surplus of Manchuria, the principal world exporter of soybeans, as well as substantial quantities from Korea, a country which produces almost twice as many soybeans as does Japan. During the 10 years 1928-1938, Japanese imports averaged 26 million bushels annually, approximately double its own production."

"If an annual per capita consumption of 0.5 bushels [30 lb] of soybeans were to be maintained in Japan in the post-war period," Japan would require a total supply of about 37 million bushels/year, based on a 1940 population of 73.1 million. An estimated 10-14 million bushels could be produced in Japan in the short term period after the war. The rest must be imported.

Uses of soybeans include miso, soy sauce or shoyu, and tofu. The main center of soybean production in Japan is the island of Hokkaido. The soybean is the principal oilseed

imported into Japan.

Tables show: (1) Soybeans: Production, imports, exports, and apparent consumption, Japan Proper and Karafuto, 1928-39. Columns show: Production. Imports from Empire. Other imports. Total imports. Exports. Apparent consumption: Total and per capita. (2) Soybeans: Imports into Japan from principal sources, average 1928-32, annually 1933-39. The graph has two main parts: Quantity (1,000 bushels), and value (1,000 yen). Empire areas: Manchuria (incl. Kwantung), Korea, Formosa, total. Non-Empire areas. Grand total. Source: Monthly and annual returns of foreign trade of Japan, Korea, and Formosa. Address: U.S. Tariff Commission, Washington, DC.

3492. Thom, Charles; Raper, Kenneth B. 1945. Manual of the Aspergilli. Baltimore, Maryland: The Williams & Wilkins Co. v-ix + 373 p. May. Illust. 7 color plates. Index. 24 cm. [260* ref]

• **Summary:** Contents: Preface. Part I: General discussion. 1. Historical introduction. 2. Classification, generic diagnosis, and synonymy. 3. Morphology and description. 4. Cultivation and examination. 5. Preservation of cultures. 6. Variation.

Part II: The manual proper. 7. The use of the manual. 5-21 contain descriptions of 14 *Aspergillus* groups incl. 18. The *Aspergillus wentii* group. 19. The *Aspergillus tamarii* group. and 20. The *Aspergillus flavus-oryzae* group.

Part III: Reference material. 22. Topical bibliography. 23. General bibliography. 24. Check list of species and genera. 25. Accepted species, varieties, and mutations.

“After the development of the microscope, men began to see structure in molds. In 1729, Micheli distinguished conidiophores and heads. “He noted that the heads were rough, the spore chains or columns producing an uneven surface, hence he gave the name *Aspergillus* (rough head). He then marked with Latin phrases his sketches of differently colored moldy substances... *Aspergillus capitulo pulla* for a black form, etc.”

“After DeBary’s group began to study organisms in comparative culture, the number of publications began to increase rapidly... Titles appeared in the 125 years before DeBary’s 1854 paper; 73 appeared in the next 18 years preceding Brefeld’s 1872 papers; 236 in the next 19 years just preceding Wehmer’s oxalic acid reports in 1891. All of this may be called the period of physiological morphology. The remaining two thousand, published between 1891 and 1928, represent the pure culture period. This may equally well be called the biochemical period” (p. 4-5).

“*Aspergillus wentii* is a cosmopolitan species that is fairly common in soils, upon moist grains and other vegetable matter undergoing slow decomposition... In the Orient, it is often included with *Aspergillus tamarii*, *A. flavus*, and *A. oryzae*, all under the latter name as a rule, in the ‘Koji’ preparations used in the manufacture of various

soy products.”

Aspergillus tamarii is “a cosmopolitan mold upon vegetable material undergoing slow decomposition and can be isolated from almost all soils examined. Like *A. niger* and *A. flavus*, it is more frequently recovered from warm and semi-tropical soils than from cool, temperate soils, although it occurs in the latter. The species commonly appears with *A. flavus* and *A. oryzae* as a constituent part of the ‘koji’ used in the fermentation industries of the Orient. Certain strains apparently produce appreciable amounts of diastatic and proteolytic enzyme, while other strains are known to produce kojic acid...”

“Kita’s culture was isolated from a soybean sauce termed ‘Tamari’, hence the species name. Tamari is made by a shorter fermentation process than soy sauce or shoyu, and differs from it in flavor. Kita believed that where it was made empirically, it owed its individuality to the particular *aspergillus* which he isolated and described.”

“Two species names are widely used for members of this cosmopolitan group. *Aspergillus oryzae* is applied quite generally, without regard to morphology, to the strains used by the Japanese and Chinese in the fermentation of rice and soy products. Although purified cultures are used in many places, the nomenclature is based more upon utilization than upon morphology. There appears, however, in these industries, a series of strains with long conidiophores, radiate heads, mostly greenish-yellow, with the green often fading completely in old cultures. These strains appear to be most commonly used in the production of the diastatic type of ferments and to be distributed in the great culture collections as *Aspergillus oryzae* (Ahlb.) Cohn. Such strains seem to be mostly oriental or tropical in origin.” The other species is *Aspergillus flavus*. This chapter (p. 262-65) contains many excellent high-magnification illustrations of *A. oryzae*.

3493. King, Pei-Sung. 1945. Chinese soy sauce and cheese. *University of Wisconsin, Fermentation Journal Club, Report* No. 22. p. 1-4. June 27. [15 ref]

• **Summary:** Contents: Introduction. Review of the literature. Making soy sauce: Laboratory procedure, grades and composition of soy sauce (there are 3 grades; the lower the grade, the lower the specific gravity of the soy sauce). Soybean cheese (sufu).

The laboratory procedure for making soy sauce involves three steps:

1. Mold culture, growing *Aspergillus oryzae* or *A. soya* on 30 grams of rice that has been steamed and is incubated at 30°C for 4 days.

2. Yeast culture, growing *Zygosaccharomyces soya* on one sterilized culture medium at 30°C for two days and *Lactobacillus delbrückii* on another at 37°C for 2 days.

3. Fermentation, using four basic raw materials: Soybean (or bean cake) 300 gm, whole wheat (or other starchy material) 200 gm, NaCl (table salt) 280 gm, and

water (including steeping water) 1600 ml. Details of the process are given. "It usually takes from two to three months for fermentation to become complete, but it is possible to be fermented completely within three weeks. A table shows the chemical composition of 3 grades of soy sauce. The source of this information is cited as: "(13) King, P.S. Bulletin No. 115, N.B.I.R. [National Bureau of Industrial Research], China 1941.

Note: This is the earliest document seen (April 2012) that describes how to make fermented soy sauce at home or on a laboratory scale—that will actually work. All known previous descriptions on this scale omitted the "mold culture" or koji stage.

"An important microorganism for making soybean cheese is *Mucor sufu*, which was first isolated by N.S. Wei [sic, Wai] (J. of Chinese Agr. Soc. 1926). Other useful microorganisms for making this product are *Monascus* (e.g., *M. anka*, *M. purpureus*, *M. fuliginosus* [sic, *M. fuliginosus*], *M. major*, and *M. pilosus*), yeasts and bacteria. Some of these have been isolated by the writer in the *National Bureau of Industrial Research*, China (Bulletin No. 126, 1941).

The procedure for making soybean cheese is described, starting with 300 gm of whole soybeans. After pressed tofu cubes are inoculated on the surface with any of various mold species, they are incubated at 25°C for 3 days. Then 600 ml of a 16% solution of table salt (NaCl) is added. The 2nd fermentation "usually takes two months after which the cheese and liquid are bottled, sterilized, and marketed."

Note: This is the earliest document seen (Nov. 2011) that describes how to make fermented tofu at home or on a laboratory scale. Address: Univ. of Wisconsin.

3494. Marriage of John Takeo Tadano and Mary Mariko Taguchi, on 1 July 1945 at Rocky Ford, Colorado (Photograph). 1945.

• **Summary:** John was later the owner of Marusho Shoyu in Glendale, Arizona. Sent to Soyinfo Center by Barbara Y. Peters, their daughter (Nov. 2008). Barbara writes: "My dad met my mother through her sister Lucy Seo. My Mother graduated from Colorado University as a Medical Technologist."

3495. Minor, Lewis J. 1945. Soya sauce processes and how they can be improved. *Food Industries* 17(7):758-60. July. [12 ref]

• **Summary:** Contents: Introduction. Present status in U.S. Composition. Methods of manufacture (two). Costs and equipment. Acid method: Digestion, finishing, bottling. Mold-enzyme vs. acid: Quality and equipment. Quality control. Patent review.

Describes the preparation of a sauce by hydrochloric acid hydrolysis and by mold enzyme digestion of a mixture of soybeans and wheat.

All of the Worcestershire sauces contain soy sauce.

The better varieties contain as much as 30% while the less expensive ones have only 10-15%. Before World War II, American soy sauce manufacturers were probably producing less than 1,000,000 gallons per year. Chinese restaurants were using possibly an additional 2,000,000 gallons imported from China.

When using the acid hydrolysis method of certain protein-bearing grains, constantly boiling hydrochloric acid (a 20% solution of hydrogen chloride gas in water) is generally used, in the proportion of 3-5 parts of acid to one part protein. "Hydrolysis is carried out by refluxing the mixture until a maximum concentration of amino acids is obtained," as estimated by the amino-nitrogen method of Van Slyke.

Two firms in the USA are making HVP soy sauce in 6-8 weeks "through modernization of the ancient process." Address: McKay Davis Co., Toledo, Ohio.

3496. *Soybean Digest*. 1945. Grits and flakes... from the world of soy: John Tadano is erecting a plant for the production of soy sauce in Glendale, Arizona. Aug. p. 22. • **Summary:** Mr. Tadano has had soy sauce on the market there since 1941. "Capacity of the expanded plant, one of the largest in the country, is expected to be 3,500 gallons monthly."

Note 1. The Tadano family began making shoyu in a wooden building on their property in Glendale, probably in early 1942, but perhaps as early as late 1941. For details, see *SoyaScan Notes* interview with Mary and Michiko Tadano, Sept. 2002. The wooden building was constructed specifically for making shoyu. It had very wide sliding doors so the large vats could be brought into the building.

Note 2. Mr. Tadano may have been selling soy sauce made by another company in 1941.

3497. Junior, Vesta. 1945. Test and tell: This is a "request number" in which queries are answered. *Argus (The) (Melbourne, Victoria, Australia)*. Oct. 9. p. 11.

• **Summary:** The recipe for "Dim sums" says: Mince pork thoroughly. "Season with salt, pepper, and a little soya sauce. "Roll pastry as thin as possible and cut into rounds about 4 in. in diameter. Fill with mince and shape into pies. Steam for an hour and serve with soya sauce."

3498. Paddleford, Clementine. 1945. Food for conversation: Here's a traditional Thanksgiving dinner, with some new touches. *Los Angeles Times*. Nov. 18. p. F21.

• **Summary:** Before putting his turkey in the oven, Emery Herrett (of Dover Plains, New York) likes to paint it with a "mixture of two-thirds cup made frisky with two tablespoons of soy sauce and one tablespoon of tarragon vinegar." This imparts a honey-sweet taste to the skin.

3499. **Product Name:** Loma Linda Soy Sauce.

Manufacturer's Name: Loma Linda Food Co. (Marketer-Distributor).

Manufacturer's Address: 11503 Pierce Place, Arlington, California.

Date of Introduction: 1945.

New Product–Documentation: Wholesale price list. 1945; Soybean Blue Book. 1949. p. 103. Also listed in 1955, 1960, 1970. They were not a manufacturer. Today's Food. 1964. Autumn. p. 5. Wholesale price list. 1968. Sold in 4 oz., pint, and gallon sizes.

3500. Chao, Buwei Yang. 1945. How to cook and eat in Chinese. New York, NY: The John Day Co. xviii + 262 p. Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index (of both recipe numbers and page numbers). 21 cm. An Asia Press Book. New editions, 1949 and 1963.

• **Summary:** A superb, funny, authentic Chinese cookbook. The "Author's note" begins: "I am ashamed to have written this book. First, because I am a doctor and ought to be practicing instead of cooking. Secondly, because I didn't write the book... You know I speak little English and write less."

The section on "Conventions and hints" states: Clear-simmering is slow cooking without soy sauce. Red-cooking is slow-cooking with soy sauce (p. xvi).

In Chapter 2 titled "Eating materials," the section on "Grains" (p. 21-22) notes: There are two important supplementary starchy foods in the Chinese diet: Sweet potatoes (the poor man's luxury) and "beans: red beans [probably azuki], horse beans, and above all soy beans and their products. Bean milk and bean curd [tofu] are regarded in this country [America] as specialties. But in China, cabbage and bean curd mean a poor family's home cooking. Soy beans not only give starch, but are also the most important source of protein, since most people cannot afford much animal food."

In Chapter 3, "Cooking materials": "The commonest vegetable oils in China are [soy] bean oil and peanut oil" (p. 24). Soy sauce is a "salter," which is not freely exchangeable with salt. It is never used in the white kind of cooking but it is used (sometimes with salt) in red-cooking and red-stir-frying (p. 25).

"Flavorers.—The most important flavorer of Chinese food is soy-bean sauce or soy sauce for short. With soy sauce you can cook an untiring series of Chinese dishes with nothing but those foods you can get at any American chain market. In fact even pretty good soy sauce can now be bought at such chain markets. Chinese dishes are called red-cooked or white-cooked according as soy sauce is or is not used. But even in the white-cooked dishes, especially the slow-cooking ones, the morsels, or rather the chopsticks [chopsticks], of food are often dipped in soy sauce before eating. One thing we never do, however, is to pour soy sauce on rice. When Americans do that, it looks funny. It must taste

funny too.

"Soy sauce is made from fermented boiled soy beans in which salt is added. Several kinds are now seen in this country. The least useful is called in Cantonese *chü-yau*, "pearl sauce," a dark thick sauce without too strong a taste, which lends much color to the dish and is much used in restaurants. Next is *shang-ch'au* "raw extract," which is light brown, tastes very fine, but is not colorful enough for red-cooking and not available in any great quantity. The sauce most suitable for general purposes is called *ch'au-yau*, "extracted sauce," which fortunately is made by several manufacturers in this country and Canada. All varieties of soy sauce are also called by the general name *shi-yau* in Cantonese.

"Similar to soy sauce is a soy jam [chiang], which is much thicker in consistency. In China, fermented flour jam is even more common. Good samples of such jams are scarce in this country.

"There is a whole class of whitish savory powder made mostly from gluten of flour. We shall call it **taste powder** in the recipes. The oldest form of this is made from the dried fermented muscle-of-flour (flour gluten), often made in old Chinese households. Almost thirty years ago the Japanese manufactured, from hydrolized gluten, a powder called *ajinomoto*, 'prime element of taste.' Later a Chinese firm manufactured *ve-tsin* [*vetsin*], "essence of taste, which is still found on some shelves of Chinatown. 'Pickup' and *mee boan* taste powders are made in this country and sold mostly in Chinatown.

"You will note that relatively few recipes in this book call for the use of taste powder." "Other common flavorers are oyster sauce, sesame oil, and soy bean cheese (*fu-yü*) (p. 27-28).

A table (p. 29) list widely used Chinese foods and seasonings in four columns: Chinese characters, Mandarin, Cantonese, and English. Soy related ingredients (in English, Mandarin, and Cantonese) are: (4) Oyster sauce: hao-yu, hou-yau. (6) Soy sauce (1): chiang-yu (M). Soy sauce (2): shi-yau (C). Soy sauce (3): ch'au-yau (C). (7) First quality soy sauce: sheng-ch'ou (M), shang-ch'au (C). Note 1. The first character means "fresh" or "live."

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "sheng-ch'ou" (Mandarin) or the term "shang-ch'au" (Cantonese) or the term "chü-yau" to refer to a type or grade of Chinese soy sauce."

(8) Flour jam: t'ienmien-chiang (M), t'inmin-cheung (C). (9) Bean sauce: Yuanshih chiang (M), yünshi-cheung (C). Note 3. The middle character (shih / shi) refers to fermented black soybeans. (10) Hoisin sauce: haihsien chiang (M), hoisin-cheung (C). Note 4. This is the earliest document seen (April 2012) that mentions Hoisin sauce.

Chapter 6, "Methods of cooking," includes a discussion of red-cooking (stewing with soy sauce, which gives a

reddish color. “Red-cooking is the typical family cooking.” Cooking time varies from 2-6 hours) and clear simmering (without soy sauce).

Soy-related recipes include: Bean curd stirs meat slices (p. 61). Bean curd stirs shelled shrimps (p. 118). Meat sauce meets lobsters (“Variation: As done in Chinese restaurants in America—Get from Chinatown 2 tb-sp salted small black beans [fermented black soybeans]. Wash off visible salt, boil 10 minutes, crush, and add to the stirring sauce,” p. 125). Arhat’s fast or Vegetarian’s ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 156-57).

Note 5. This is the earliest English-language document seen (May 2012) that contains the term “fried puffy bean curd.” It refers to a type of Chinese deep-fried tofu. “Get in Chinatown. The best is to get them ready fried,...”

Plain stirred bean curd (p. 158-59). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 159-60). Pot-stuck bean curd (p. 160). Bean curd and meat-slice soup (p. 164). Huichou pot (with fried bean curd [large triangles or small cubes], p. 181-82). Sandy-pot bean curd (p. 183). Soy jam noodles (p. 201-02, with ½ can *yūnshi* soy jam {get in Chinatown}); this is typical northern food).

Page 158 states: “Bean curd is made of soy beans. It has only a faint flavor of its own. That is why it can be easily combined with other materials. Bean curd has the same nourishment value as bean, but in a much more digestible and palatable state and forms an important ingredient of the food for the poor people in China. It is cheap and easy to prepare. Those who can afford fancy dishes often combine it with meat, fish, and other sea foods. But just plain (Chinese) cabbage and bean curd connotes home sweet home. Bean curd is a versatile cooking thing. It can be boiled plain, with a little of any flavoring. It can be fried in deep oil by whole pieces so that the outer surface will become browned. We often stuff seasoned ground meat inside it like stuffed cucumber and then red-cook the whole thing. Bean curd can even be eaten as part of an American salad.” The Chinese characters for all recipe names are given on pages 232-46. Address: Cambridge, Massachusetts.

3501. Lager, Mildred. 1945. *The useful soybean: A plus factor in modern living*. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. Illust. General index. Index of recipes. 22 cm.

• **Summary:** One of the most important and innovative books on soyfoods ever written. Contents: Preface. 1. Agriculture’s Cinderella: America discovers the soybean, our wonder beans, soy as a food in the United States, soy in rehabilitation food programs, soybeans as an emergency crop, soybean terminology. 2. World-wide use of soybeans: A real antique, monarch of Manchuria, soybeans in mechanized warfare—Germany, soybeans in other countries (USSR, Italy, Spain, Belgium, Holland, Norway, Denmark, Sweden,

Great Britain, Canada), soybeans in Lend-Lease and United States Agricultural Marketing Administration, Food for Greece, soybeans and the Mexican Indian, soybeans in Hawaii (Mr. C.G. Lennox). 3. Soybeans and industry: The versatile soy, uses of soybean in industry, soybean paint (from soy oil, incl. Duco finishing), soybean protein (used in making plywood, plastics, water paints, paper sizing, leather finishes, and insecticide sprays), Henry Ford and soybeans, soybean glue (I.F. Laucks and the firms he has licensed turn out some 30,000 tons of soybean glue annually), rubber substitute (Norepol), paper industry (Glidden), plastics, soy-cotton helmets, firefighting compounds, lecithin, fertilizers. 4. Nutritional nuggets: Food value of soybeans and soy products (vegetable or edible types of soybeans, protein, fat & carbohydrate, minerals, vitamins, lecithin, alkaline ash, economy, exaggerated claims), principal uses of soybeans and soy products (meat substitutes, meat enrichers, fortifying foods with soy flour). 5. From soup to nuts: Green beans, dry beans, frozen beans, roasted soybeans, sprouted soybeans, the cow of China—soy milk, the meat without a bone—tofu or soy cheese, the little giant among protein foods—soy flour, soy grits, puffed grits, soy oil, miscellaneous soy products (soy butter [soynut butter, p. 99-100], sandwich spreads, malts, coffee substitutes, soy sauce, soy albumen—a new product, greatly improved during the past two years, is now used to “replace egg albumen in candy manufacture” [as in marshmallows]).

Note 1. This is the earliest English-language document seen (March 2001) that refers to tofu as ‘the meat without a bone.’ In 1938 Horvath called tofu ‘the meat without the bones.’ Note 2. This is the second earliest document seen (Aug. 2002) in which the soybean is called the “cow of China.”

Note 3. This is the earliest English-language document seen (Aug. 2003) that uses the term “soy albumen” (or “soy albumens”) to refer to isolated soy protein as a product.

6. The blazed trail: Introduction (history and pioneers), our tardy acceptance, food pioneers (health-food stores, Dr. W.D. Sansum of Santa Barbara and soy bread, allergy studies, vegetarians, Seventh-day Adventist food companies, meatlike products, Madison College of Tennessee, Loma Linda Food Co., the International Nutrition Laboratory and Dr. H.W. Miller, special dietary concerns and diabetic diets), establishing soybeans in the kitchen (The Edison Institute and Henry Ford, the USDA and the U.S. Bureau of Home Economics, the Agricultural Marketing Administration, U.S. railroads, the Soy Products Division of the Glidden Co., the Soy Flour Association). 7. The challenge of nutrition: The dangers of hidden hungers, nutrition and health, corrective nutrition, starch-restricted diets, meatless diets, allergy diets, bland diets, building diets, reducing diets, acidophilus culture, lecithin. 8. Our wonder crop: Jack and the beanstalk, early history, new varieties, aids to the industry (Regional Soybean Industrial Products Laboratory, American railroads,

American Soybean Association, Fouts Brothers of Indiana, *Soybean Digest* and George Strayer in Hudson, Iowa, Soy Flour Association with Edward Kahl as first president, Soya Kitchen in Chicago (Illinois) opened in Jan. 1943, National Soybean Processors Assoc., National Farm Chemurgic Council), educational program, restrictive regulations. 9. Soybeans and the farmer: Varieties, sources of information, seeding and inoculating, harvesting, grading, soybean diseases, crop rotation, damaged beans. 10. Tomorrow: Acreage and production, soybeans on the farm, soybeans in nutrition, postwar industrial uses, future improvements. 11. A few suggestions for better living: Kitchen diplomacy, personal opinions, soybeans for everyone. Recipes: Green soybeans, dry soybeans, sprouted soybeans, roasted or toasted soybeans, meat-substitute dishes, soy-enriched meat dishes, soy noodles, macaroni, spaghetti, sauces and gravies, soups, salads, dressings, soy spreads, soy milk, tofu or soy cheese, soy butter, soy cereals, soy desserts, soy candies, soy beverages, soy-flour recipes, bread and muffins, pancakes and waffles, soy gluten recipes, baking-powder biscuits, pastry, cookies and doughnuts, cakes.

Contains recipes for “Soy milk molasses shake (p. 238). Soy puddings. Soy ice cream (p. 250; “Soy milk may be used in place of milk in ice-cream recipes... adding whipped cream”). Soy fruit ice cream. Soy chocolate dessert (Eggless) (p. 250-51). Soy shake “(p. 254, made in a “liquefier or mixer”).

The story of Allied aid to Greece [p. 24-26] is one of the great mercy stories of World War II. Starting in March 1942, as many Greeks were starving, the first mercy ship sailed to Greece with food and medicine. Up to Nov. 1943, the United States through Lend-Lease sent 82 million pounds of food to Greece. A number of these foods (including soup powders, stew mixes, and spaghetti) were based on soy flour and grits, and specifically developed to suit Greek tastes.

Concerning Henry Ford (p. 35-38), his “first experiments were made in a laboratory in connection with the Edison Institute in 1930. In these experiments, several tons of wheat were used, also several thousand bushels of carrots; sunflower seeds, which have a high oil content; cabbages; onions; and cornstalks. It was not until December, 1931, after a long series of experiments with the soybean, that Mr. Ford and his chemists felt that they were at last approaching a solution to the problem of finding a basic farm material from which the ordinary farmer could develop a commercially profitable product.”

Note 4. This is the earliest English-language document seen (March 2007) that uses the term “Soy ice cream” (p. 250).

Note 5. This is the earliest document seen (July 2007, one of two) that uses the word “Cinderella” in connection with the soybean. The author, however, does not elaborate on this idea.

Note 6. This is the earliest English-language document

seen (June 2011) that uses the term “soy-flour.” Address: Southern California.

3502. Lautensach, Hermann. 1945. Korea: Eine Landeskunde auf Grund eigener Reisen und der Literatur [Korea: A geography based on the author's travels and literature]. Leipzig, Germany: K.F. Koehler Verlag. xv + 542 p. Illust. (black & white photos). Maps (part folding, part color). 24 cm. Series: Geographische Handbücher. [1038* ref. Ger]

• **Summary:** A superb, scholarly work, with a huge bibliography, printed just as Germany was losing World War II.

Chapter 6, titled “The anthropogeographical character of ancient Korea” (p. 141+) contains extensive information about agriculture and food. Page 154: In wealthier sites, the farm buildings enclose a courtyard, to which an entrance gate gives access (Fig. 21e, p. 151). Some enclosures are so complete that a square courtyard results. In some corner or other of the courtyard stand the huge brown earthenware jars, in which soy sauce (*Sojabohnensosse*, jap. *shoyu*) is prepared and stored.

Page 176-77: In East Asia, after cereal grains, pulses / legumes are the next most important crop. In Korea, by far the most important is the soybean (*Sojabohne*, jap. *daitsu* [*daizu*] = large bean) which makes few demands on the soil. Korea's climate is ideal for soybeans (Tanaka 1931, p. 18); it is even better than Manchuria's climate, because of the large amount of precipitation during the summer. Today, soybeans are an indispensable part of the various dry-field crop rotations. After planting of the paddies has finished, soybeans are planted on the ridges too; there they grow extremely well without being fertilized. Soybeans are grown throughout Korea, but least in the Kaema upland because of the warmth they require. In northern Korea, on dry fields, they are planted between the end of March and beginning of May. Toward the south, planting is delayed until the end of June. They are generally harvested in October, except in Chejudo, where they are not harvested until early November. Soybeans are the crop that is left standing the longest, and they are not harvested until their leaves have turned brown and started to fall.

Soybeans are used as a very nutritious food for both humans and horses. Also, cooked soybeans are used as a fertilizer for the rice paddies. Above all, though, the hot brown soy sauce (*Shoyusosse*), which is never lacking on any Korean or Japanese table, is made of them, using salt and pepper and a process of fermentation. Bean curd (*Käse*, jap. *tofu* [*tofu*]) and soybean paste (*Mus*, jap. *miso*) are also made of them.”

Page 180: The place of soybeans (*Soja*) in rotations, such as soya/hemp is mentioned. The winter crops consist of wheat, barley, or rye; the summer crops of soybeans, other beans or cotton. Page 181 mentions soybeans as a summer

crop. Page 196: Soybeans are planted on the bunds of the rice fields. Page 199. Those who farm in central Manchuria are likely to grow soybeans. Page 224: Soybeans are mentioned several times.

A fold-out map facing p. 400 shows the distribution of soybeans in Korea. They seem to be slightly more densely grown in the south than in the north.

Page 435: Soybean oil mills (*Sojabohnenmühlen*) are mentioned. Page 460: Discusses imports and exports of soybeans. The main beans exported from Korea to Japan are soybeans, amounting to a weight of 1.3 to 1.9 million dz. in 1939. Note: One dz (*doppelzentner*) = 100 kg. Exports to other countries was small. By comparison, Manchurian soybeans were exported to the northern harbors of Germany and England. In addition, a significant amount of Manchurian soybeans were imported to Korea (0.29 to 1.02 million dz.). Also, a significant quantity of soybean products made in Korea were exported to Japan (Soy oil up to 11,550 dz. and soybean cake up to 1.2 million dz.). Likewise, up to 3,210 dz of soy oil and up to 1.3 million dz of soya cake were imported to Manchuria from Korea.

Page 466-67: A comparison of soybean production in Korea and Japan is given. 85% of the imports of soy oil to Japan came from Korea.

Page 473. Soybeans are grown in the deep valleys of Korea.

Facing p. 144: A photo shows a man carrying a large, empty, pottery soy sauce jar on a rack on his back.

Hermann Lautensach lived 1886-1971. Korean place names are the old ones in the Japanese system. Address: PhD, Prof. of Geography at the University of Greifswald [northeastern Germany].

• **Summary:** "The beginning and foundation of the Library of Congress Orientalia Collection was the great Chinese encyclopedia, the *Ssu k'u ch'uan shu*, a gift of the Empress Dowager of China.

"About 1914, Dr. Swingle, then head of the Office of Crop physiology and Breeding, Bureau of Plant Industry, U.S. Dept. of Agriculture, was able to secure the services of a Cornell graduate, Dr. Hing Kwai Fung, to make abstracts and/or translations of information in the *Ssu k'u ch'uan shu* regarding economic plants. Dr. Swingle interested

Dr. Herbert Putnam, Librarian of Congress in increasing the holdings of Chinese books, especially gazeteers [sic, gazetteers] which contain local information. When Dr. Fung returned to China, he was given a modest sum for purchasing books. Dr. Fung was able to persuade the Commercial Press (the largest publishing firm in China, located in Shanghai) to act as receiving agent for books for the Library of Congress, and to ship them to Washington [DC]. Soon after, Dr. Swingle was sent to the Orient—in March 1918—by the Dept. of Agriculture." There he made arrangements for collecting books in Tokyo and Shanghai.

"As American merchants and missionaries gradually penetrated into China, they sent home more and more plants and trees. The Arnold Arboretum, organized and directed by the great tree expert, C.S. Sargent, financed extensive trips to the Orient to obtain botanical specimens and seeds of ornamental trees and shrubs as well as photographs of them as they grew in their native habitat. These trees and shrubs revolutionized the garden and park plantings of the northern parts of the United States. The illustrated popular books of E.H. Wilson, who made many trips to the Orient for the Arnold Arboretum, helped to arouse interest in the very rich arboreal flora of China...

"The Plant Introduction Service of the U.S. Department of Agriculture was organized by David Fairchild in 1897; he did very extensive exploring for foreign economic and ornamental plants from 1898 on, and directed the Plant Introduction Service from 1909 to 1928. I was fortunate enough to be one of the first 'agricultural explorers.'" Of these men Frank N. Meyer and P.H. Dorsett were outstanding, not only for the number and value of the plants they secured, but also for the detailed and accurate descriptions of every plant they sent to Washington.

"P.H. Dorsett some years later, during the twenties, traveled widely in North China taking many fine photographs of Chinese crop plants and writing descriptions of the culture, harvesting and curing of each. On these trips he collected many varieties of soy beans largely through the utilization of a new and potent method of securing the willing cooperation of all educated Chinese people. A complete translation, prepared by Michael J. Hagerty under my direction in 1917 of the chapter on soy beans contained in a standard Chinese work on economic plants (the *Chih Wu Ming T'u K'ao* by Wu Ch'i-chun) had been furnished the plant explorers looking for soy bean varieties. This translation, covering eighty-two pages, discussed several hundred varieties, telling where they were largely grown. In all cases the name of the variety and the name of the locality where it was grown were not only spelled out in English but also written carefully in Chinese characters. An index made it easy to turn to any variety under discussion and see what was said about its culture.

"This was a turning point in field explorations in China. Such indexed translations in the hands of foreign plant

explorers insured the attention of all educated Chinese, who gladly directed the explorer to the nearest source of the various named varieties. I had learned this at first hand in 1915 when studying varieties of Citrus in southern China. Surprise and skepticism about the foreigners knowledge of Chinese books gave way to astonishment and warm approbation.”

“The soy bean is a striking example of the introduction of a new crop... Soy beans were sent from China to France as early as 1740 and from 1779 were grown in the famous Botanic Garden of Paris. Benjamin Franklin, who had been a member of the French Academy of Sciences since 1772, sent seeds back to the United States and urged that they be given a trial. But in spite of his plea, the soy bean remained merely a curiosity in this country for more than a century.

“In the late eighties [sic, 1890] Prof. C.C. Georgeson brought soy bean seeds from Japan, where he had been teaching at the Agricultural College at Komaba, and planted them in a field on the campus of the Kansas State Agricultural College. I could see the stunted soy bean plants from the windows of the botanical laboratory where I was a teen-age research assistant. This variety, adapted to the perpetual spring climate of Komaba near Tokyo, did not do well on the bare Kansas hills, often swept by hot dry winds. And nothing happened. Soy beans did not arouse interest among Kansas farmers until many years after this failure.

“In the third decade of the twentieth century Dorsett sent to Washington more than 800 named soy bean varieties from China, Manchuria and Japan. These together with shipments secured by Dr. David Fairchild from his numerous correspondents in the Old World, especially in Asia, amounted by 1928 to a total of more than 2800 packages of soy beans, almost all named varieties but many of them duplicated, some of them many times. Meantime tests made by W.J. Morse, in charge of soy bean culture for the Bureau of Plant Industry, showed that many varieties had a narrow range of adaptability. Accordingly, from 1929 to 1931, Morse joined Dorsett in the Orient and these two experts, with trained Chinese helpers, brought to this country the largest single collection of soy bean varieties ever assembled. As soon as Morse returned from studying soy beans in Asia and attacked the problem of finding which Asiatic varieties adapted to the different regions and selecting and breeding to make them fit various American soils and climates, a remarkable change occurred in soy bean culture. Yields went up and plantings increased year by year...

“One of the best-known industrial uses for soy bean proteins is for making water-resistant glue. No less than 30,000 tons of soy bean glue were made in 1942 by a single firm and its licenses annually, most of it being used in the rapidly growing plywood industry. Soy bean proteins have been enthusiastically used by Henry Ford in his automobiles, being mixed with the more expensive phenolic resins, thereby reducing costs and also yielding a more plastic,

freer-flowing mixture which takes dyes better...

“As long ago as 1917-1918 Dr. Yamei Kin set up under my general supervision for the U.S. Department of Agriculture a soy bean mill in New York City in the hope of supplying tofu to increase the bulk and food value of meat dishes served to soldiers in training at near-by camps. Dr. Kin succeeded in making excellent tofu. She even served to a group of army officers a meal composed entirely of soy bean dishes! However, it proved impossible to test tofu on a large scale at that time, since we could not get priority for transportation of soy beans from North Carolina, then the nearest region where they were grown on any considerable scale.

“A splendid example of a double fermentation is the soy bean cheese called *nam yüe* by the Cantonese and *sufu* in North China. It is preferred even to the best Roquefort as a salad dressing constituent by those who have had the opportunity to try it. It is made by Chinese masters of the cheesemaker's art who believe that its fermentation is an insoluble mystery.

“Shih Chi-yien, then working in the American University of Soochow, published in 1918 the first English account of the most important fermented bean foods. He traced the making of *tofu* from soy beans back to the Han dynasty (A.D. 22). Ten years later Wai Ngan-shou [Nganshou], one of the first scientifically-trained Chinese microbiologists and fermentation experts, was able to isolate and identify as a new species of *Mucor* the mold that makes possible the *nam yüe* fermentation. It is a curious fungus, *Mucor sufu*, distantly related to the miraculous *Penicillium notatum* whose marvelous curative action has only recently been discovered. A third fermentation expert, Shih You-kuang, studied another soy bean fermentation product, *meitauza*, made by another species of *Mucor*, and published an illustrated account of it in German in 1937. In his review of the literature of *Mucor* fermentations, Shih You-kuang cites no fewer than thirty articles by eighteen authors all based on Chinese fermentations...

“Miss Elizabeth Groff, under my direction in 1918, made a thorough study of the fermentation of soy sauce in the famous factories of Canton, China, and published the first detailed account of the process in the *Philippine Journal of Science* for 1919.”

“It has been my privilege to assist in building up a great Chinese library in the Library of Congress, under the enlightened policy of Dr. Herbert Putnam, beginning in 1912. The Orientalia Division, headed by Dr. Arthur Hummel, is now the largest Chinese library outside of Asia and is probably larger than all the European libraries of Chinese books combined. It now contains, Dr. Hummel estimates, about 230,000 Chinese volumes (*Chüan*) and some 20,000 more will soon be added in the form of bibliofilm [a type of microfilm] copies of very rare works from the Chinese National Library, sent to Washington for safekeeping.”

Note 1. This is the earliest secondary document seen that mentions the early introduction of soybeans to America by Benjamin Franklin.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term *nam yüe* to refer to Chinese-style fermented tofu. It is 2nd earliest English-language document seen (Oct. 2011) uses the word “sufu” to refer to Chinese-style fermented tofu, and the first such document written by a Westerner. Photos show Dr. Walter Tennyson Swingle, and his wife Maude K. Address: Collaborator, Bureau of Plant Industry, USDA; Consultant on Tropical Botany, Univ. of Miami, Florida.

3505. **Product Name:** Sovex.

Manufacturer's Name: Sovex Co?

Manufacturer's Address: Marin County, California.

Date of Introduction: 1945?

Ingredients: Incl. nutritional yeast and soy sauce.

How Stored: Shelf stable.

New Product–Documentation: Talk with Craig Klatt, manager of the Seventh-day Adventist Book Center in Pleasant Hill, California. 1990 July 19. The original Sovex product, which was in existence by 1945, was a seasoning based on hydrolyzed or autolyzed nutritional yeast made by a Mr. Sampson in his garage in Marin County, California, where Craig grew up. It was a paste sold in quart mayonnaise jars, and used more as a spread on bread than as a soup base. It was always based on nutritional yeast.

3506. Eaton (T.) Co., Limited. 1946. Order foods early Tuesday for delivery Wednesday (Ad). *Toronto Daily Star (Canada)*. Jan. 7. p. 29.

• **Summary:** “Soya Bean Sauce, 7½-oz. bottle–15¢.

“Eaton’s Tuck Shop Worcestershire Sauce, 5-oz. bottle–15¢.” Address: College St., Toronto. Phone: TR. 3311.

3507. *Honduras Agricola*. 1946. La soya: Excelente alimento para el hombre como para el ganado y valiosa materia prima de numerosos usos industriales [The soybean: Excellent food for people and for livestock and valuable raw material with numerous industrial uses]. No. 14 & 15. p. 7-9. Jan/Feb.; No. 16. p. 10-11. March; No. 17. p. 16-17. April; No. 18. p. 18-19. May; No. 19 & 20. p. 17-18. June/July; No. 21. p. 10-13. Aug. [Spa]

• **Summary:** Contents continued: No. 14 & 15: Varieties. Fertilizer and manure to prepare the soil. Inoculation with bacteria. Time of sowing. Methods of sowing. Plant density. Depth of sowing.

No. 16: Tillage (*Labores*). Rotations. Mixed cultures: Soya and maize, soya and Sudan grass pasture, Soya and sorghum (*zahina*). Harmful animals (especially insects). Diseases. II: The harvest. Introduction. Cutting and preparation of soya for dry forage or hay. Time of harvest and reaping

No. 17: Method of harvest. Curing the pasture or hay. Baling the hay. Exhaustion of the soil. Harvest and preparation of the grain. Time of gathering. Methods of reaping. Curing and manipulation. Threshing.

No. 18: Special machines. Exhaustion of the soil. Storage of the seeds. II. Uses of soybeans. Introduction: The plant. The flour made from the seed. Green vegetable soybeans and sprouts (*Las soyas verdes y grillos*). Dry soybeans (*Las soyas secas*) and products made from them. The oil and its uses. The soybean as a human food: Introduction, dry soybeans, green vegetable soybeans (*Soyas frescas*). Soy sprouts.

No. 19 & 20: Introduction. Flour. Oil. Soy sauce. Soymilk. Soy curds or tofu (*Cuajada o requesón de soya*). Soybeans as food for animals. Soy oil. Extraction of soy oil.

Issue No 21: Uses of the oil. Soybean meal (*pulpa, o bagazo de soya*; which remains after extraction of the oil). Use of soy meal [or flour] in human foods. The meal as a feed for livestock, for poultry, and as a fertilizer. Soy hay: For fattening cattle, for dairy cows, for mules and horses, for other animals. Soya pastaderos. Fresh soy forage. Soya for ensilage. Soy straw. Soya as a green manure.

On page 10 of this last part is a full-page cartoon of a woman with fruits and a cooked chicken. “Soya is the ideal food for children; it nourishes more and costs less. It is a good source of proteins, oils, carbohydrates, and vitamins. It can serve as a substitute for milk, eggs, meat, fruits, and pulses or vegetables (*legumbres*).” Page 11 states that people interested in planting soybeans can contact Prof. Raul Zaldivar, Director of the Rural School at Toncontin for Training Elementary Teachers (*Director de la Escuela Normal Rural de Toncontin*), Tegucigalpa, Honduras. Address: Honduras.

3508. Simpson’s. 1946. Luxury fancy fruit baskets. No charge for delivery within Simpson’s suburban delivery area. Phone orders filled (Ad). *Toronto Daily Star (Canada)*. April 8. p. 15.

• **Summary:** “Victory Soy Bean Sauce, 7½-oz. bottle–15¢.” Address: Basement, Toronto. Phone: TRinity 8111.

3509. Raper, Kenneth B. 1946. Chinese soya sauce directions from Raper’s Chinese student at University of Illinois. 1 p. Undated. Unpublished manuscript.

• **Summary:** The author of these handwritten, dated instructions, on lined paper, is not given.

“I. Materials: 300 gm whole soybeans steeped with 60 ml water for 8 hours. Wheat: 200 gms parched and ground. NaCl [table salt]: 300 gm. Water: 1,000 ml.

“II. Inoculum: 1. *Aspergillus oryzae*. 20 gm in 40 ml water. Inoculate [Incubate?] 4 days at 30°C. 2. *Aspergillus soya*. 20 gm rice, 40 ml water. Inoculate 4 days at 30°C. 3. *Zygosaccharomyces soya*. 10% glucose. 2% maltose. 0.5% yeast extract. 5% NaCl. Inoculate 2 days at 30°C.

“III. Fermentation: Combine beans, wheat & inoculation materials. Incubate 24-36 hours at 30°C. Add NaCl 300 gm + 1,000 cc water. Ferment at 37°C for 2-3 weeks. Test by the taste & flavor & determine percentage of nitrogen (0.06 gm / 100 gm).

“IV. Pressing: Filter through cloth. Filter through filter cell on Buchner funnel. Sterilize at 15 lbs [15 psi] for 15 minutes.” Address: [NRRL, Peoria, Illinois].

3510. Sun (Baltimore, Maryland). 1946. Palace kitchen invaded by Japs: Demonstrators eye menu and demand leftist cabinet. May 14. p. 1.

• **Summary:** The end of World War II has left many hungry in Japan. On Sunday, about 100 men and women, some with children strapped to their backs, invaded Emperor Hirohito's Imperial Palace in Tokyo demanding to see the emperor and to ask why rations were two weeks late.

When they were told that the emperor was “out of town,” they demanded to see his kitchens, where they found preparations underway for a banquet. The menu included: “Blue cod cooked in soysauce... Vegetables cooked in bean paste” [miso].

The spokesmen for these demonstrations are often said to be members or leaders of the Communist party, and economic complaints are often viewed as tied to political goals. The marchers waived red flags.

3511. Paddleford, Clementine. 1946. UN's honor dishes: From the chef-in-charge comes a parade of recipes. *Los Angeles Times*. May 19. p. F18.

• **Summary:** At the cafeteria in United Nations headquarters in New York, chef Dirk Eykelhoff creates international fare to promote gastronomic peace. The recipe for Chow San Mein (Noodles with chicken-China) features 2 tablespoons soy sauce.

3512. Hall, Lloyd A. 1946. Protein hydrolysates-Flavor ingredients for foods. *Food Industries* 18(5):681-84, 808, 810, 812, 814, 816. May.

• **Summary:** The subtitle reads: “Acid digestion of casein, corn or wheat gluten yields an amino acid mixture with a meaty or other flavorful taste. The digest is clarified, neutralized and dried for addition to soups, sauces, meat products and spice mixtures.”

“To the best of our knowledge, the first commercial use of hydrolysates was in China and Japan about 1908. Several patents pertaining to them were granted to the Japanese scientist, Ikeda, in 1912. The Japanese were the first to make commercial use of mono-sodium glutamate, one of the salts of glutamic acid. It was used to impart or intensify a meat flavor, especially in soups, broths, gravies, and like foods.

“Production of glutamate: Until 1935, most of the mono-sodium glutamate used in this country was purchased from Japan. About 1935, domestic commercial production of

mono-sodium glutamate from wheat gluten began. Shortly afterwards commercial production of it from Steffen's waste water, a by-product from beet sugar factories, was started by an Ohio plant.

“The proportion of the various amino acids in the hydrolysates varies with the protein material used. Wheat and corn glutens, yeast, soybean meal and casein are the most commonly used proteins.”

“Three basic methods: The three types of hydrolytic methods which may be used are: (1) enzymic hydrolysis; (2) alkaline hydrolysis; and (3) acid hydrolysis.

“Enzymic hydrolysis is usually carried out with pancreatic trypsin and papain.” Acid hydrolysis of proteins is often preferred over the other methods because it does not destroy the tryptophane content of the proteins. Alkaline hydrolysis has the advantage that very little humin is formed, but the hydrolysate does not contain all of the amino acids nor does it have the good flavor of the acid hydrolysate.

In its commercial process, Griffith Laboratories uses the acid hydrolysis process with hydrochloric and sulphuric acids. The ten steps in the process are described, as follows: 1. Run water acidified with hydrochloric acid into a steam-jacketed, glass-lined kettle. 2. Heat to 113°C. 3. Stir in the protein material. 4. Heat at atmospheric pressure for about 9 hours to obtain complete hydrolysis. 5. Filter to remove the humin. 6. Pump filtrate into a glass-lined vacuum kettle. 7. Distil under vacuum to remove about 50% of hydrochloric acid content. 8. Dilute with water to the desired specific gravity and add activated carbon to decolorize. 9. Boil for a few minutes and filter. 10. Pump to another kettle and neutralize with sodium carbonate to pH 5.2-5.4 to obtain best flavor value.” The higher the amino nitrogen content of the hydrolysate, the better the taste. The authors believe that higher quality standards should be established for protein hydrolysates to be used in food products; the amino acid content is now rarely shown. “Mono-sodium glutamate and other ‘non-essential’ amino acids, such as glycine,” impart a good taste to food products. There is a prejudice against protein hydrolysate powders because they are hygroscopic; this problem can be overcome by using liquid hydrolysates.

Three photos show the equipment used in the process. Address: Director of Research, Griffith Laboratories, Inc., Chicago, Illinois.

3513. Marquis, Arnold. 1946. The Pacific story. Radio broadcast. National Broadcasting Company (NBC). Hollywood, California. June 2. 30 minutes. 23 p. transcript.

• **Summary:** This radio broadcast is a fascinating story—told by many voices—of how the Japanese scientifically developed soybean production, utilization, and export in their puppet state of Manchukuo, and, how the USA intends to capture the soybean export markets lost by the Japanese when they lost World War II.

The Chinese speak of the soybean this way: “It is the

poor man's meat. It is the cow of China. It is meat without bones. The Japanese speak of it this way: If we could have held Manchuria, it would have guaranteed that Japan could never be starved out. American nutritionists speak of it this way: It is high in protein. It is rich in vitamins—in A, B-1, C, G, and E—and also in the bloodclotting vitamin K. Weight for weight it contains several times as much B-1 as beefsteak. And as for minerals: One-half cup of soy flour contains as much calcium as a whole cup of milk... [and] as much phosphorus as two cups of milk. And weight for weight, it contains as much iron as liver, twice as much iron as molasses, and three times as much iron as whole wheat flour. The soybean is a wonder food. One pound of soy beans is almost a complete one-day ration for an adult."

The USA is now developing two famine-relief foods based on soybeans. The first contains 50% soybean, plus split peas, wheat flour, and a little peanut-meal, onion, salt, and fish-oil. Four million pounds of this mixture and twelve million pounds of another soy-based mixture are being sent "to the famine areas of China." In other words, soybean are being sent from the USA to the land of their origin, "where they have been a mainstay for five thousand years."

Discusses: The growing of soybeans in Manchuria. The Japanese takeover and extension of their control via the South Manchuria Railroad, whose terminus is Dairen. The importance of Manchurian soybeans to Japan. The Japanese Central Laboratory at Dairen and its research on soybeans. The two Japanese agricultural experiment stations in Manchukuo. Development of the benzene [benzene] solvent extraction process for soybean oil, "until there were 200 large bean plants in southern Manchuria." Soybeans as a livestock feed in Manchuria. Use of soybeans as food in China: "Tofu is bean-curd... This is fermented tofu. It is very good. Tofu is eaten in several forms. Fresh, fermented, dried or frozen. Just about any way it is prepared, its food value is preserved... We also use the oil of the soy bean. And with the soy bean we make soy sauce." Many Asiatic peoples also use soybeans to "make bean milk and bean flour." "They roast them for confections [kinako]. They eat them green [green vegetable soybeans]. They sprout them [soybean sprouts] and they even make drinks of them."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term "fermented tofu."

Industrial uses of soybeans in America. How Dairen became Japan's great center of the soy bean industry in Manchuria, and the Mixed Storage System. "About 55% of the soybeans grown in Manchuria are used for human food."

"You see, its all tied together. The growing of the bean, the processing, the transportation, and the export. Since 1937, the economy of Manchuria has been developed for the benefit of Japan." The Japanese and the Bank of Manchukuo (which is an instrument of the powerful Mitsui and Mitsubishi financial combines) are "buying up all the soybean business" and trying to eliminate the major

European companies that were exporting soybeans before the Japanese moved in, such as Dreyfus Co. (France), and Wassard Co. (Denmark). Although the Japanese claim that Manchukuo is an independent nation, other nations realize it is a puppet state. The Chinese Eastern Railway, which was built by the Russians and has its terminus at Vladivostok, is in competition with the Japanese-controlled South Manchuria Railroad for the soy bean business of Manchuria. The latter uses rebates (kickbacks) to try to eliminate competition.

In 1937, after 6 years of dominating Manchuria, Japan invaded China proper—using Manchuria to supply their troops. "By 1941, Manchuria was yielding some four million tons of soybeans. The Japanese controlled every pound of it. And by 1941 they had fostered the growing of soybeans in Korea, and also in Japan itself. Also, by this time, the Japanese had seized a good part of the soybean country of Japan itself. But by Pearl Harbor [7 Dec. 1941], the United States was also growing soybeans: Over 3 million tons in 1941. By 1945 it was nearly 6 million tons."

Now that the war is over, the Japanese have lost the entire soybean industry in Manchuria—including the laboratories, bean oil mills, Dairen, the South Manchuria Railroad, and the Bank of Manchukuo which controlled it. China, which now controls Manchuria, "will consume much of the soybeans which, before the war, were exported to European countries, and to Japan." The United States has begun to supply this soybean export demand, and in fact "is already shipping soybean products back to the Far East—to the famine stricken areas of China."

America Doctor: "So far most of our soybeans have gone for feeding livestock. But now we know what they can mean to man. Narrator: Now, in this great crisis, we are learning what the Chinese have known for thousands of years. Chinese: It is the poor man's meat. It is the cow of China. It is meat without bones... Announcer: This is the story of the wonder food and the part it has played in our time."

Next comes a 5-minute segment in which W.J. Morse of the USDA Bureau of Plant Industry (Beltsville, Maryland) talks about the significance of the soybean and its development, and the new Pacific Program. Then the conclusion: "For a reprint of this program, send ten cents in stamps or coin to University of California Press, Berkeley, California. The Pacific Story is written and directed by Arnold Marquis. The original musical score was composed and conducted by Thomas Peluse. Your narrator—Gayne Whitman... This program came to you from Hollywood. This is N.B.C.—The National Broadcasting System." Address: USDA.

3514. Worthington Foods, Inc. 1946. Dealer order blank. Worthington, Ohio. 1 p. Catalog. Aug. 1.

• **Summary:** Products include: Mung bean sprouts. Soy

beans in tomato sauce. Beta Broth. Tastex. Tastex food yeast. Protein foods (Alternates for meat): Choplets (vegetable fillets packed in savory sauce). Choplet-Burger (vegetarian ground meat with a texture like hamburger). Proast and Numete (dark or light vegetable meatloaf). Soy sauce (table). Wheatlets (Delicious whole wheat cooked breakfast cereal). A fairly detailed description of each product is given. Address: Worthington, Ohio. Phone: 2-5359.

3515. Hilbert, G.E. 1946. Soybean research at the Northern Regional Research Laboratory, 1936-1946. *Soybean Digest*. Sept. p. 33-34, 72.

• **Summary:** "In 1936 the U.S. Regional Soybean Industrial Products Laboratory was established at Urbana, Illinois. The chemical and engineering research of that laboratory was transferred by an act of Congress from Urbana to the Northern Regional Research Laboratory at Peoria in July 1942.

"Removal of part of the laboratory to Peoria has resulted in an expansion of all phases of soybean research." Dr. Reid T. Milner, formerly director of the U.S. Regional Soybean Laboratory, is now head of the analytical and physical chemical division of the NRRL "Technological and fundamental research on soybeans is being carried out by the oil and protein division of which J.C. Cowan is in charge. This group is concentrating practically all its activities on soybean oil and meal. Most of our new developments originate in this division." The engineering and development division, headed by C.T. Langford, is translating laboratory developments to a pilot-plant scale. This division obtains cost data and evaluates the economic feasibility of the developments. "The fermentation division, headed by A.F. Langlykke, has examined the conversion of soybeans to soybean cheese [fermented tofu] and soya sauce." Address: Director, NRRL, Peoria, Illinois.

3516. Stahel, Gerold. 1946. Foods from fermented soybeans as prepared in the Netherlands Indies. I. Taohoo, a cheese-like substance, and some other products. *J. of the New York Botanical Garden* 47(563):261-67. Nov.

• **Summary:** Contents: Introduction. Sprouts and milk from soybeans. Cheese-like products. How taohoo is made. Condiments made with *Aspergillus*.

In East Asia—as in Surinam—people have developed "means for overcoming the rather bitter taste of soybeans and their failure to cook soft. They have learned to ferment the soybeans with quick-growing fungi, thus making several palatable and wholesome foods.

"Most important of these foods are *taohoo* and *tempe*; also *taokoan*, a cheese made from *taohoo*; *taotjo*, a fermented paste-like condiment, and *ketjap*, which is soy sauce. Soybean milk is also made, but without a fungus, and sprouted soybeans are widely used by orientals."

"In the Netherlands East Indies [later Indonesia]

sprouted soybeans are called *tokolán* or *taogé*. They are one of the ingredients of every 'rijst-tafel' (rice table, or combination of dishes) and therefore are never lacking in the 'passar' (market). Even in our Paramaribo market *tokolán* is displayed every day."

In China, soy milk is used in the same manner as cow's milk. It is also consumed in the United States, though on a very limited scale. In the Netherlands East Indies, soy milk "is only slightly known as food, but it is produced in large quantities for the manufacturing of soy cheese, called *taohoo* or *tahoo*."

The curd [tofu] "is either eaten fresh or baked in oil or lard. In China it is sometimes processed further into a kind of real cheese by impregnating the curd with turmeric and reducing the water content by heavier pressing. This cheese, called *taokoan* [Chinese: *doufugan*], has a yellow color and can be shipped abroad."

"After *tempe* [made with *Rhizopus Oryzae*], *taohoo* is the most common form of soybean product eaten in the Netherlands East Indies. In China, it is the most important soy product. *Taohoo* is manufactured here in Surinam only on a very limited scale, by a single Chinese store-keeper close to the Paramaribo market-halls along the Surinam river. Twice daily, between 2 and 4 o'clock in the morning and again in the afternoon, he manufactures 11½ kilograms of *taohoo*, to be sold after 6 o'clock the next morning." A detailed eyewitness description of the tofu-making process is then given.

Describes briefly how to make *taotjo* (a kind of paste) and *ketjap* (soy sauce) with *Aspergillus oryzae*, another fungus. *Taotjo* is not made in Surinam, but *ketjap* is. "To make *taotjo*, boiled soybeans are mixed with roasted meal of wheat or glutinous rice. The mass is wrapped in hibiscus leaves, which commonly harbor the *Aspergillus* fungus." After 2-3 days the moldy mass is immersed in brine, where it is kept for several weeks. "Palm sugar is added at intervals. *Taotjo* must be made in the dry season, because every day it has to be brought outside into the sun and air for hours." This dish is eaten in East Asia with the 'rijst-tafel.'"

To make *ketjap*, soybean are boiled, cooled, then wrapped in hibiscus leaves—but without mixing in roasted meal. After fermenting for 2-3 days, the mass is immersed in brine, as with *taotjo*. Each day, for one to several months, it is exposed to the sun. A little palm sugar is added at intervals. Then the fluid is filtered off and the solid residue is cooked several times with fresh water to extract all the soluble material. "The fluid is then concentrated by slow boiling. Spices and other piquant materials are added, according to the *specialité de la maison*. These may include galangal, ginger, cloves, Jew's ear fungus, and dried and ground fish and chicken meat."

Photos show: (1) Chinese kitchen [shop] equipped with implements for *tahoo* manufacture, with hand-turned millstones, soybean mash flowing into cheesecloth bag

hanging in wooden barrel, press, earthenware pot filled with brine for the “coagulation of the curd.” (2) Four pieces of fresh taohoo, four-fifths natural size. (2) Four pieces of freshly baked taohoo, four-fifths natural size.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “taohoo” or “taokoan” to refer to tofu. Address: Agric. Exp. Station, Paramaribo, Surinam.

3517. **Product Name:** Soy Sauce.

Manufacturer’s Name: Worthington Foods, Inc. (Marketer-Distributor).

Manufacturer’s Address: 900 Proprietors Rd., Worthington, Ohio. Phone: 2-2539.

Date of Introduction: 1946.

Wt/Vol., Packaging, Price: 4.5 oz glass dispenser.

New Product–Documentation: Wholesale price list. 1946. Aug. 1; Ad in Health Magazine. 1947. 14(2):2. Feb. “Good Foods for Every Occasion.” Interview with James Hagle. 1981. Probably made by La Choy. Sold in 4.5 oz. table dispenser bottles.

3518. Bergeron, Trader Vic. 1946. Trader Vic’s book of food and drink. New York, NY: Doubleday & Co. 272 p. Illust. Index. 20 cm.

• **Summary:** The only soyfood mentioned in this book is soy sauce. “Soya sauce, which was once eyed distrustfully and termed ‘bug juice’ by the uninformed, is now accepted on familiar terms and we are even beginning to appreciate its usefulness in our own kitchens” (p. 157).

The recipe for Chicken livers with water chestnuts (p. 183) concludes: “For added flavor, dip the livers first in soya sauce.” The next recipe, Chicken livers in egg batter (p. 183-84), begins: “Cut chicken or duck livers in small strips, dip them first in soya sauce and then in a very light...”

The chapter on “Barbecuing” contains the most information on recipes using soya sauce (p. 237-41): “A word about soya sauce before we proceed. The use of this little-known ingredient in cooking introduces an indescribable flavor that cannot be equaled. It gives a beautiful brown glaze to all meats and makes the fat crisp and appetizing. Most people associate soya sauce with the little jugs on the tables in Chinese restaurants; it is vulgarly called ‘bug juice’ by the uninitiated. It belongs in the kitchen right along with your other seasonings and as you experiment with it you’ll find yourself using it as often as you would salt and pepper. Try basting a leg of lamb with it—the flavor and color are superb. Lamb chops, too, whether you fry, broil, or barbecue them, are improved by the use of soya sauce” (p. 237).

“Steak Hawaiian: This recipe illustrates perfectly the value of cooking with soya sauce. You’ll find the steak has color and an indescribable flavor, and the fat has a crisp brownness that can’t be achieved in any other method of

cooking.” The steak is marinated on both sides for about 15 minutes total in a mixture of finely minced garlic and ½ to 1 cup of soya sauce. Then it is barbecued, fried, or broiled.

“Barbecued squab [young domestic pigeon]: Brush whole squabs inside and out with soya sauce and barbecue” for 20-25 minutes. Or roast for about the same time. If desired, the “squab may be basted occasionally with a mixture of soya sauce and melted butter while cooking.”

Barbecued lamb, first marinated in a mixture that contains 6 tablespoons soya sauce. Javanese Saté calls for “4 teaspoons Saté spice,” which is sold in Jars at Trader Vic’s Trading Store, 6500 San Pablo Ave., Oakland, California. Note: It probably contains soya sauce. Saté is an Indonesian / Malay word.

Barbecued shrimp: “Peel large gulf shrimp; dip them in soya sauce...” Smoked oysters: “Dip oysters in soya sauce,” skewer, then barbecue. Barbecued chicken livers: “Dip in soya sauce, skewer on wire, and barbecue...”

A recipe for Trader Vic’s daiquiri (p. 92-93) states: “This drink should be made in a Waring type mixer with one large handful of fine ice, and no more than three should be made at one time.”

Note 1. This is the earliest document seen (May 2010) concerning soy ingredients used in Indonesian-style recipes, food products, or dishes outside of Indonesia.

Note 2. In this book Trader Vic shows his love of rum and of swearwords. Address: Oakland, California.

3519. El Salvador Ministerio de Agricultura. 1946. La soya [Soya]. San Salvador. 89 p. [Spa]

• **Summary:** The two Latin American countries in which soybean cultivation has acquired importance are Argentina and Brazil. In Argentina, cultivation began in 1908. In 1940 Argentina produced 15 tonnes of soybeans on 300 hectares, increasing in 1941 to 204 tonnes on 5,000 hectares. Rio Grande do Sul in Brazil exported 6,420 kg of soybeans in 1937, rising to 40,000 kg in 1939. Address: El Salvador.

3520. Hauser, Gayelord. 1946. The Gayelord Hauser cook book: Good food, good health, good looks. New York, NY: Coward-McCann, Inc. viii + 312 p. Illust. 21 cm.

• **Summary:** This is a health food (but not a vegetarian) cookbook; it uses meats, poultry, and fish. Soy-related recipes include: Soya tomato soup (with soya flour, p. 48). Soya soup (with soya flour and soy sauce, p. 49). Soya cheese sticks (with soya grits, p. 111). Roasted soybeans (p. 115; p. 114 notes that the soybean is a first-class protein food). Cranberry soya pudding (p. with soya flour, p. 154). Caramel soya custard (with soya milk, p. 163). Rice pudding (with soya milk, p. 164). Soya ice cream (with soya milk and agar-agar, p. 167).

In the chapter on baked goods, p. 179 shows that soya flour is rich in protein, vitamin B-1, riboflavin, and niacin. And pages 180-81 give a detailed discussion of the benefits

of soya flour and how to use it. Page 182 discusses gluten flour. Recipes include: Whole-wheat soya bread (p. 183). Soya nut waffles (p. 186). Soya muffins (p. 188). Steamed soya bread (p. 189). Four nutritious sandwich spreads with ½ cup soya flour (p. 191). Delicious soya cake (p. 193-94). Quick service cake (p. 195-96). Soya-flour pie crust (p. 197). Soya cookies (p. 204). Soya sand tarts (p. 206).

Fletcherizer (p. 221, a type of electric blender). Fletcherized drinks: Cream of soya milk (with soya flour, p. 222), vege-nut milk (with soya flour), almond-, pecan-, walnut-, filbert-, or cashew milk. Cream of soybean soup (p. 224).

In the chapter titled “Yogurt, brewer’s yeast, and other special foods” is a long section on soybeans and gluten (p. 237-42) including basic information on soybean oil, soya flour and grits, soy flakes, soy meats (split or coarsely ground soybeans), soybeans as a vegetable [fresh-green soybeans], soybean milk, and soybean curd or tofu. Instructions are given for making soybean sprouts at home. Recipes include: Boiled soybean sprouts. Fried soybean sprouts. Green soybeans. Baked soybeans. Soybean milk. Soybean parsley croquettes. Soybean nut croquettes. Vanilla soya ice cream. Homemade gluten dough. Gluten steaks or chops. Address: Beverly Hills, California.

3521. Lea & Perrins, Inc. 1946. The secret of seasoning: With illustrated lessons in carving. New York, NY: Lea & Perrins. 96 p. Illust. Index. 18 x 10 cm.

• **Summary:** Mostly recipes for using Lea & Perrins’ Worcestershire Sauce. Contents: The Englishman’s secret. Preparing flavorful meals. The table trio. Appetizers. Soups. Fish and sea food. Meats and entrées. Stuffings. Stews and hashes. Eggs and cheese dishes. Tempting sauces. Spaghetti and rice. Savory vegetables. Garnishes and relishes. Salads and salad dressings. Sandwiches. Party and snack dishes. Lessons in carving. Pages 87 to the end, titled “Recipe scrapbook: Notes,” are blank pages. The first section, titled “The Englishman’s secret,” begins (p. 4): “Over a hundred years ago an English nobleman who had spent many years in India returned to England.

“He carried with him a treasure from the Orient. Not gold or jewels but a recipe: the recipe for a marvelous Sauce, a secret blend of rare spices and seasonings that lent to food a new savor and delight.

“From this recipe, a Sauce was compounded by Lea & Perrins, of Worcestershire, England.”

“Many have tried to imitate the Original Worcestershire... of course. But the blend remains a secret. It is easy to tell the genuine; just be sure that the name ‘Lea & Perrins’ is written diagonally across the label.”

The front and back covers are color; the inside photos and line drawings are black and white / monochrome. On the front cover is a plump, smiling chef wearing a toque and holding a frying pan. On the rear cover is a large photo of

a bottle of Lea & Perrins Sauce: The Original and Genuine Worcestershire—wrapped in tan paper with red writing. Address: 241 West St., New York 13, N.Y.

3522. Mogi, Masatoshi. 1946. Taigai miso [Making miso with nongrain koji]. Tokyo: Seikatsu-sha. 408 p. [Jap]*
• **Summary:** Discusses substitutes for miso raw materials. Descriptions of making miso koji using potatoes, chestnuts, buckwheat, millet, etc. No history. Note: Mogi was born in 1907. Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3523. Mogi, Masatoshi. 1946. Daitai miso [Miso substitutes (approximately miso)]. Tokyo: Seikatsu-sha. 407 p. [Jap]*
Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3524. Oriental Show-You Company. 1946. Oriental recipes. Columbia City, Indiana: Oriental Show-You Co. 15 p. *
• **Summary:** These recipes describe how to use the company’s shoyu (naturally fermented, Japanese-style soy sauce). A 24-page edition was published in 1940.

3525. Platt, B.S.; Webb, R.A. 1946. Fermentation and human nutrition. *Proceedings of the Nutrition Society (London)* 4(1):132-40. [15* ref]

• **Summary:** Fermented soy and cereal-soy products found in East Asia may have special nutritive properties as a result of microbial action and they may fall into the group of products of the process which the author calls “biological ennoblement.” Table 1 includes various fermented soy protein foods from Asia: Soya sauce, fermented whole soya beans, and fermented bean curd. Address: Medical Research Council Human Nutrition Research Unit, National Hospital, Queen Square, London, W.C.1, England/England.

3526. Rombauer, Irma S. 1946. The joy of cooking: A compilation of reliable recipes with an occasional culinary chat. Indianapolis, Indiana, and New York, NY: The Bobbs-Merrill Co. 884 p. Illust. by Marion Rombauer Becker. Index. 22 cm.

• **Summary:** This is the first edition of *The Joy of Cooking* since the end of World War II. It was actually printed from the 1943 plates with very few changes. It has the same number of pages as the 1943 edition, but less emphasis on soy. Soy-related recipes: Chicken chop suey (with soy sauce, p. 143-44). Sukiyaki (with soy sauce, but no tofu, p. 163). Chow mein with fried noodles (with soy sauce, p. 164). Dried bean loaf (with whole dry soybeans, p. 176). Soybeans, green (p. 280). Soybeans (dried) (p. 280). Seasonings and ingredients for sauces (incl. soy sauce, p. 379).

Includes a delightful Foreword and “Preface to the 1943 edition.” Also well-known recipes for Peanut butter cookies

and Peanut brittle. Worcestershire sauce is used to season many sauce or gravy recipes (p. 379-92). Words notably missing from this edition: Blender, milk shake. Address: St. Louis, Missouri.

3527. Walworth, Arthur. 1946. *Black ships off Japan: The story of Commodore Perry's expedition*. New York, NY: Alfred A. Knopf. xviii + 277 p. + viii. See p. 191, 263-64. Introduction by Sir George Sansom. 22 cm. [83* ref]

• **Summary:** On about 13 March 1854, the Japanese permitted the U.S. officers to walk about the towns of Yokohama and Kanagawa. Dr. James Morrow, the expedition's agriculturist, went on land also. The Treaty of Kanagawa was signed by Japanese and American representatives on 13 March 1854 and proclaimed on 22 June 1855. The Japanese celebrated the occasion with a big meal that included fish, shrimp, sea weed jelly, side dishes of confections, soy sauce, condiment, rice, saké, etc.

Appendix L, titled "Presents received by Americans from the Japanese government, March 24, 1854," notes that "1 box, 10 jars of soy" were received from Udono, 4th commissioner. The term "soy" here refers to shoyu (Japanese-style soy sauce); no mention is made of soybeans as such. Arthur Clarence Walworth was born in 1903.

3528. **Product Name:** Fermented Shoyu.

Manufacturer's Name: Unknown Japanese-American Run Company.

Manufacturer's Address: San Francisco, California.

Date of Introduction: 1946?

New Product–Documentation: Talk with Esta Keirn of Oriental Show-You Co. 1981. Dec. 5. The only other early maker of shoyu that Keirn knows of was a Japanese man in San Francisco who started in about 1945-46. Esta talked with him, obtained a sample of his shoyu, and analyzed it.

3529. Worthington Foods, Inc. 1947. Good foods for every occasion (Ad). *Health* 14(2):2. Feb.

• **Summary:** Ad for Choplet Burger, Beta Broth, Soy Sauce, Soy Beans, Tastex, Choplets, Numete, Proast, Tastex food yeast. Photos show each package and ready-to-serve product. Address: Worthington, Ohio.

3530. *Soybean Blue Book*. 1947-1966. Serial/periodical. Hudson, Iowa: American Soybean Assoc. Annual. Titled Soybean Blue Book from 1947-1966; Soybean Digest Blue Book from 1967-1979; Soya Bluebook from 1980 to present.

• **Summary:** A directory and information book for the soybean production and processing industries—but with much greater emphasis on processing and utilization. One of the most valuable sources of worldwide information on soybeans. During the period from 1947 to the 1960s, the Blue Book was usually published in March or April of each year.

In the 1966 Blue Book (p. 28-29) are two full-page tables titled "World Soybean Production." The first gives acreage in 1,000 acres, yield in bushels per acre, and production in 1,000 bushels. The second gives hectareage, yield in kilograms per hectare, and production in 1,000 metric tons. Figures are given for: 1950-54 (average), 1955-59 (average), 1963, 1964, and 1965. Statistics are given for the following countries: North America: Canada, United States. South America: Argentina, Brazil, Colombia, Paraguay. Europe: Italy, Rumania, Yugoslavia, Other Europe (excluding USSR). USSR (in Europe and Asia). Africa: Nigeria, Rhodesia, Tanzania. Asia: Turkey, China (Mainland), Cambodia, China (Taiwan), Indonesia, Japan, Korea (South), Thailand. Estimated world total. Address: Hudson, Iowa.

3531. *Soybean Blue Book*. 1947. Edible soybean growers and distributors. p. 89.

• **Summary:** In this section, published in the first issue of the *Soybean Blue Book*, the varieties grown are listed alphabetically. Under each variety is the name and address of the grower or distributor offering that variety. The edible soybean varieties are: Aoda (2 growers), Anwei (1), Bansei

(28—by far the most popular), Chuku, Easycook, Emperor, Etum, Funk Delicious, Giant Green, Higan, Hokkaido, Imperial, Jogun, Kirin, Kanro, Mendota, Sac, Sanga (70210-1), and Willomi.

The companies growing these varieties include: Associated Seed Growers, Inc. [Asgrow] (New Haven, Connecticut; or Indianapolis, Indiana), Burpee (W. Atlee) Co. (Clinton, Ohio), International Nutrition Laboratory (Mt. Vernon, Ohio), LaChoy Food Products (Archbold, Ohio), Soybean Johnson (Richmond Heights, Missouri), Strayer Seed Farms (Hudson, Iowa), and Wood (T.W.) & Sons (Richmond, Virginia).

Note: This is the earliest document seen (May 2009) that mentions the soybean varieties Chuku or Kirin. Both came from LaChoy Food Products in Archbold, Ohio. Note: They could be “sprout types.”

3532. *Soybean Blue Book*. 1947. Manufacturers and handlers of soy foods. p. 69-73.

• **Summary:** Arranged alphabetically by product category: Beverages; Breakfast Foods; Soy Butter (probably like margarine; the only source is Daglish Health Foods in Santa Cruz, California); Canned Green Soybeans (Note: These are probably canned mature green vegetable type soybeans. In the 1948 Bluebook this section is titled “Canners of Green Vegetable Soybeans.” List compiled from 1947 edition of *Canners’ Directory*, published by the National Canners Association); Coffee Substitutes; Cookies, Crackers, Toasts and Wafers; Soybeans for Cooking and Sprouting; Soy Flour, Flakes and Grits; Soy Flour Mixes; Soy Food Consultant (Donald S. Payne); Health Food Stores, Supply Houses; Lecithin; Macaroni, Spaghetti, Noodles; Meat Substitutes; Soy Milk; Sprouts; Roasted Soybeans or Nuts; Sausage Binders; Salad and Cooking Oils, Shortening; Soy Sauce; Toppings [Whip]; Whipping Agents.

3533. *Soybean Blue Book*. 1947. Uses of soybeans. p. 97.

• **Summary:** This is a full-page diagram with four columns. In the left column are: Forage, green manure, and pasture. Meal. Oil. Green bean. Dried bean.

In the second column, for example: After green bean, listed vertically, are: Canned, frosted, green vegetable, salad. After dried bean, listed vertically, are: Baked, boiled, breakfast foods, feeds, flour, roasted, soy sauce, sprouts, vegetable milk.

In the third column: After feeds, listed vertically, are: Cattle, hogs, poultry, sheep. After roasted are: Candied, coffee substitute, salted.

In the fourth column after flour (with a dotted line crossing the second and third columns), listed vertically, are: Baked products, breakfast foods, candies, chocolate, diabetic foods, health drink, ice-cream cones, ice-cream powder, infant foods, macaroni products, meat products (filler). Note: There are too many uses on the diagram to describe them all

here.

3534. *Revue Horticole: Journal d’Horticulture Pratique (Paris)*. 1947. Le grand congrès du soya à Paris [The great soya congress in Paris]. 119(2140):277-78. April. [Fre]

• **Summary:** On Monday, March 16, 1947, at 2:30 p.m., at the City University, the first Grand Soya Congress ever held in Europe took place. It was organized by the French Bureau of Soya (*Bureau Français du Soya*), the Laboratory of Soya Experiments (*Laboratoire d’Essais du Soya*), and the France-China Association (*l’Association France-Chin*). Mr. Marius Moutet, the Minister of French Colonies and Territories (*Ministre de la France d’Outre-Mer*) presided. The two presidents were Prof. Blaringhem, president of the Academy of Sciences, and his excellency the Chinese Ambassador to France.

It was indeed a brilliant assembly of numerous scientific and agronomic personalities, including Mr. Lévêque, delegate from the Belgian Soy Group (*Groupe Belge du Soya*).

Includes a brief summary of the presentations by the following people: René Brochon, president of the French Bureau of Soya (*Bureau Français du Soya*). Mr. Schad, director of the Agronomic Research of Clermont-Ferrand (*la Station de Recherches Agronomiques de Clermont-Ferrand*). Mr. Simonet, Director of Scientific Research for Vilmorin (*Etablissements Vilmorin*), who discussed the varieties he had developed at the Center for Agronomic Research of Antibes (in southeastern France). Mr. Salaberry, an agronomic engineer. Mr. Blanchard, head of works at the Station for Seed Trials at the Ministry of Agriculture. Mr. Chouard, Prof. of Agriculture at National Conservatory of the Arts and Crafts. Messrs Brochon and Matagrin discussed the nutritional value of soy.

Mr. Chin Kuo Chun, director of the Laboratory of Soya Experiments (*Laboratoire d’Essais du Soya*), discussed the results of his work on manufacturing soymilk, tofu, and soy sauce in France, using traditional Chinese processes. Prof. Gounelle, Director of the Foch Hospital gave a brilliant discussion on the use of soy flour to combat nutritional edema and diabetes. Mr. Boutroux showed brilliantly that soymilk can successfully replace cow’s milk in the feeding of defective babies.

Mr. Siao Yu, former Chinese Minister of Agriculture, recounted how Mr. Li Yu Ying, presently vice-chancellor (*recteur*) of the University of Peking, established in 1908, near Paris, a soyfoods factory; it made soymilk, tofu, cakes, etc. He saluted with emotion the members of this first Soy Congress to be held in Europe.

Mr. Villars, director of a cooperative for the production of soybean seeds. Mr. Matagrin, technical consultant to the French Bureau of Soya. Mr. Vançon, president of the Family Association of the Gardens of the north of France (*du Nord de la France*).

The Congress was closed by three excellent speeches by conference leaders Blaringhem, Bineau, and the Chinese Ambassador.

A reception in honor of China, cradle of the soybean, was then held and a buffet was served consisting of soy pastry and cakes, soy chocolates, and soymilk.

3535. *Revue Internationale du Soja*. 1947. Congrès du Soja [Soy Congress (Europe's first, held in Paris, March 16, at the City University)]. 7(37-38):30-31. March/April. [Fre]

• **Summary:** Li Yu-ying (President of the National Peiping Research Academy) was there, along with a luminous throng of the greatest soy devotees in France, including: M. Brochon (President du Bureau Français du Soja), M. Simonet (director of scientific research at Etablissements Vilmorin), M. Blanchard (chef de travaux à la Station d'Essais de Semences of the Ministry of Agriculture), and M. Chouard.

Mr. Chin Kuo Chun (director of the laboratoire d'Essais du Soja) discussed the results of his work on the production in France of soymilk, tofu, and soy sauce using the traditional Chinese processes, and of projects to organize family gatherings to taste these products. Prof. Gounelle (director of the Foch Hospital) showed how soy flour can be extremely beneficial in curing edema and malnutrition, and is perfectly suited for diabetics. Mr. Boutroux showed brilliantly that soymilk (*lait de soja*) is beneficial in replacing cow's milk in the diets of undernourished babies, and spoke of the industries presently producing soy products (*produits au soja*) in France. Note: This is the earliest English-language document seen (Nov. 2002) that uses the word "undernourished."

Mr. Siao YU, former Minister of Agriculture in China, recalled how Li YU Ying created in 1908 near Paris a factory for food products from soya: milk, cheese (tofu), cakes, etc. He saluted with emotion the First Soy Congress to be held in Europe. Address: Paris, France.

3536. Chin, Kuo-Chun. 1947. Contributions à l'étude du soja [Contributions to the study of the soybean]. *Revue Internationale du Soja* 7(39-40):51-54. May/June. [Fre]

• **Summary:** Contents: I. First attempts at production of soy sauce. II. The nature of soya, and vegetable meat (tofu). III. The nature of soymilk (*lait végétal de Soja*) and precautions to take in its use. IV. The nature of soybean cake and its judicious use. Address: Directeur du Laboratoire d'Essais du Soja, France.

3537. Morse, W.J. 1947. The versatile soybean. *Economic Botany* 1(2):137-47. June.

• **Summary:** An excellent overview of the multifaceted soybean, by the world's leading expert on the subject, written at about the time of his retirement. Contents: Introduction. Nomenclature. History. Present day production. Diseases. Use as food. Use as a source of oil. Soybean meal.

In oriental countries, the soybean is used mainly for food; "pressed, it gives oil for cooking; sprouted it gives a fresh vegetable rich in vitamins; picked when green, it makes an excellent green vegetable; ground dry, it makes flour; soaked and ground with water, it provides milk, and the curdled milk furnishes the famous bean curd or tofu—the boneless meat of the Orient—used in the form of various cheeses and as a meat substitute; roasted beans are used as salted beans and in cakes and candies; roasted beans and bean flour enter into numerous health drinks [resembling coffee]; fermented bean pastes are used in soups and for preserving vegetables; and boiled beans are eaten with millet, rice, or kaoliang."

Contains 11 photos. Address: USDA.

3538. *Soybean Digest*. 1947. Stock organisms for preparing soy sauce. June. p. 24.

• **Summary:** "The U.S. Department of Agriculture has announced that strains of four organisms desirable in preparing soya sauce have been added to the culture collection of industrial ferments at the Northern Regional Research Laboratory at Peoria, Illinois... The fermentation division of the Bureau of Agricultural and Industrial Chemistry credits Pei Sung King of the National Bureau of Industrial Research, Chungking, China, with aid in selecting the strains of organisms and standardizing a process of fermentation that yields a high-quality sauce. Mr. King has been a guest worker at the Northern Laboratory.

"The preparation of soya sauce calls for a brine fermentation of the beans for from 30 to 90 days. But the 'starter' used in this process is a mixture of three previously prepared cultures: (1) of a mold that develops on cooked rice; (2) of a yeast working on soya broth; and (3) of a bacterial fermentation of soya broth."

3539. Associated Press (AP). 1947. Sauce's poison traced to weed killer caustic. *Los Angeles Times*. July 26. p. 3.

• **Summary:** "San Francisco, July 25. (AP) Two carloads of processing caustic soda manufactured by a Chicago weed killer concern eventually found their way into soya sauce that poisoned consumers throughout the U.S., City Health Director, Dr. J.C. Geiger said today."

"Thousands of gallons of the arsenic-tainted sauce was [sic] was marketed from the" A.E. Staley Manufacturing Co. plant in Decatur, Illinois, "poisoning people in San Francisco [California], Los Angeles, Salt Lake City [Utah], Boston [Massachusetts], New York, Chicago [Illinois], Baltimore [Maryland], Philadelphia [Pennsylvania], New Orleans [Louisiana], and possibly elsewhere, said Joe O'Leary, Federal food and drug inspector here."

Meanwhile "the California Department of Health released a list of 21 brands and 5 distributors of the sauce, which it announced was sent to" the 5 distributors in California by the A.E. Staley Co.

The names of all of the brands (including “Shin Kikkoman”) and distributors are listed.

Note: This is the earliest document seen (July 2011) that mentions a soy sauce brand-named “Shin Kikkoman.” This “Shin Kikkoman,” which was an HVP-based soy sauce, was probably unrelated to Kikkoman of Japan (Noda Shoyu Co.).

3540. Horvath, A.A. 1947. Produits fermentés et antibiotiques au soja [Fermented products and antibiotics from the soybean]. *Revue Internationale du Soja* 7(41-42):79. July/Aug. Presented at the First European Soy Congress, 16 March 1947. [Fre]

Address: Professor, Princeton Univ., Princeton, New Jersey.

3541. Leonard, Warren H. 1947. Barley culture in Japan. *J. of the American Society of Agronomy* 39(8):643-58. Aug. [2 ref]

• **Summary:** Contents: Introduction. Geographical distribution. Regional types and varieties. General cultural practices. Cultural methods on upland fields. Culture on paddy fields. Diseases and insect pests. Utilization. General summary.

Barley, one of the most important crops grown in Japan, is used for both food and forage. Almost all barley grown in Japan is the common six-row barley, *Hordeum vulgare*, as in the United States. In Japan, most of the crop is spring barley, seeded in the fall. The two basic types are covered barley and naked barley; about 60% of the crop is naked barley (which threshes free from the glumes, as does common wheat) and 40% covered. During the period 1936-1940, the cultivated area devoted to barley was about 14% of Japan's arable land area. When the covered and naked types are included together, barley ranks second in acreage among all Japan's cultivated crops, being exceeded only by rice, which occupies 53% of the cultivated area. Barley is grown throughout Japan.

Table 6, titled “Uses of barley in Japan, 1942” gives the number of bushels and percentage for covered barley / naked barley for the following uses: Meal (eating use) 64.42% / 75.88%. Fodder or feed 22.83% / 14.36%. Seed 2.96% / 3.39%. Bean paste [miso] and soysauce 2.99% (1.032 million bu) / 6.03% (1.826 million bu). Beer 5.00% / -. Other uses (candy, medicine, yeast, etc.) 1.80% / 0.34%.

Note that both covered barley and naked barley are used to make miso and soysauce, but about 77% more naked barley is used in terms of bushels per year.

Barley is generally preferred to wheat for cooking with rice; it is pearled when used in this manner. Barley straw is used for straw braids, roof-thatching, litter, and mulches for vegetables.

Covered barley is grown almost exclusively in the United States, primarily for use as livestock feed and for malting. Address: Prof. of Agronomy, Colorado A. and M. College, Ft. Collins, Colorado.

3542. Seiler, Hans G. 1947. Soja in der japanischen Kueche [Soya in Japanese cookery]. In: Dr. Wolfgang von Schuh, ed. 1947. Bericht Ueber die Erste Deutsche Soja-Tagung in Weissenburg, Bayern, 28-31 Aug. 1947. Heilsbronn bei Ansbach, Mittelfranken: Arbeitskreis fuer Landwirtschaft, Deutsche Arbeitsgemeinschaft Soja. 24 p. See p. 10-11. [Ger] Address: Studienrat and Dr., Erlangen.

3543. Lockwood, Lewis B. 1947. The production of Chinese soya sauce. *Soybean Digest*. Oct. p. 10-11. [2 ref]

• **Summary:** In its quest for a method for preparing Chinese soya sauce that would retain the artistry of the Orient but be adaptable to Occidental methods, the Northern Regional Research Laboratory has been fortunate in enlisting the aid of Mr. Pei Sung King, of the National Bureau of Industrial Research, Chungking, China.

“The preparation of soya sauce involves two distinct steps: (1) the preparation of kojis (Chinese for cultures), and (2) the brine fermentation. The first step consists of four different activities: a. Preparation of the mold kojis. b. Preparation of the yeast koji (using a suitable strain of *Zygosaccharomyces soyae* or of the genus *Hansenula*). c. Preparation of the lactic acid bacterial koji. d. Preparation of the soya koji.

The basic ingredients are 5 lb of soybeans and 1 gallon of brine, which should yield 12½ pounds of first grade and 10 pounds of second grade sauce, or about 2½ gallons total.

Four microorganisms suited to the preparation of the soya sauce are available from NRRL: *Aspergillus oryzae* NRRL 1988. *Aspergillus oryzae* NRRL 1989. *Hansenula* NRRL Y1996. *Lactobacillus delbrueckii* NRRL B445.

Photos show: (1) A single spore of *Aspergillus oryzae* in “full bloom.” (2) A petri dish culture of the mold. (3) Separate portraits of Lewis Lockwood and Pei Sung King.

Note: This is the earliest publication seen on fermented soyfoods from the new USDA Northern Regional Research Laboratory (NRRL), established in 1942 at Peoria. During the next 40 years, and especially after 1960 the NRRL would become one of the world's leading centers of research on this subject. Address: NRRL, Peoria, Illinois.

3544. *Food Industries*. 1947. Soybean oil not lost in storage, USDA reports. 19(11):1536-37. Nov.

• **Summary:** Research on the oil content of soybeans shows that no oil is lost from the beans while they are stored prior to processing—contrary to the commonly held belief.

The research was conducted by the USDA Bureau of Agricultural Chemistry's Northern Regional Research Laboratory at Peoria, Illinois. It was reported to the American Soybean Association by Dr. G.E. Hilbert, director of the lab.

The NRRL Has also completed studies on the utilization of soybeans as human food. “One study has established a

scientific basis for the Chinese art of making soya sauce.” Strains of microorganisms from the lab’s culture collection are available to the industry.

3545. Rodrigo, P.A. 1947. Soybean culture in the Philippines. *Philippine J. of Agriculture* 13(1):1-22 + 5 plates. Third quarter. Summarized in Soybean Digest, May 1948, p. 41. [14 ref. Eng]

• **Summary:** Contents: Introduction. Description and history. Climatic and soil requirements. Varieties. Propagation. Preparation of the soil. Fertilizers and lime. Inoculation. Planting. Care of the crop. Harvesting and production: For day, for seed. Cost of production. Uses of soybeans. Diseases. “In the big cities in the Islands, many of the soybean products like soy sauce or toyo, tokua, tajuri [fermented tofu], tojo [soymilk curds], miso, etc. are becoming more popularly used by the Filipinos, and will be more so as their nutritive values become more fully realized. Already, in some sections of the country where soybean is being grown, the seed is used either as a green or as a dry vegetable. The dried bean is roasted and is eaten offhand or is used in adulterating coffee, and the bean in the dough stage is boiled and eaten like peanut” (p. 2).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the word *tajuri* to refer to fermented tofu.

Table 1 shows annual imports (in kg) of soybeans and soybean products into the Philippines from 1929 to 1940, including dried beans, soy sauces, soybean meal, tausi (fermented black soybeans, salted), paste (miso), and total. By far the leading import (by weight) from 1929 to 1937 was dried soybeans. In 1929 some 4,574,497 kg were imported. This figure rose gradually (with ups and downs) to a peak of 5,660,575 kg in 1937, then fell sharply to only 237,666 kg in 1940. Soybean sauces were the No. 2 import, starting with 606,231 kg in 1929, rising to a peak of 1,441,563 kg in 1932, then remaining above 1,000,000 for most years thereafter. Imports of soybean meal started in 1935 with 660,699 kg; they reached a peak 1,023,303 in 1936 (the next year), then remained near 1,000,000 thereafter. Tausi was first imported in 1940, the amount being 151,571 kg.

Table 2 shows the value of these items (in pesos). In 1940 the imports of greatest value were soy sauces (120,346 pesos), soybean meal (50,682), and tausi (20,280).

“In the Philippines, while the plant has been under cultivation since the Spanish regime [1571-1898], it has not gained much headway due mainly to the lack of a variety suitable for commercial planting, and perhaps due to want of interest among farmers” (p. 4-5). The Philippine Bureau of Plant Industry has, to date, introduced more than 200 soybean varieties to the Philippines from the USA, China, Japan, Hawaii, Java, and India, but it presently recommends only a few varieties for commercial planting. These include Ami, which has long been cultivated there and is well

adapted to the varied soil and climatic conditions.

Based on the results of a number of years’ trials in different regions of the Islands, the following varieties have been found to be productive: Yellow Biloxi Hybrid (introduced from Hawaii in 1936), Mis 28 E.B. Str. 3910 (introduced from India in 1937), Mis 33 Dixi (introduced from India in 1937), Head Green (introduced from the USA in 1935), and American Black. All of these varieties are good for May and June planting, and all but Yellow Biloxi Hybrid are good for September to December planting (dry season).

“In the Philippines, the green but fully developed pods are harvested, and the seed is cooked and eaten in practically the same way as lima bean or patani... In Lipa, Batangas, soybean in the dough stage is boiled in the pod and sold and eaten offhand” like peanuts. The more common soy products made in the Philippines are soy sauce or *toyo*, tokua [tofu], tausi [fermented black soybeans], and miso. “Soybean milk is being manufactured by the Bureau of Plant Industry in a limited scale and a big modern firm has started putting soybean milk and other products in the local markets” (p. 15-16).

Note 2. This is the earliest English-language document seen (Nov. 2011) that uses the word *tausi* to refer to fermented black soybeans. Address: Chief, Horticulture Research Section, Bureau of Plant Industry.

3546. **Product Name:** Aloha Barbecue Sauce.

Manufacturer’s Name: Aloha Shoyu Co. Ltd.

Manufacturer’s Address: 609 Waiakamilo Rd., Honolulu, Oahu, Hawaii.

Date of Introduction: 1947.

Ingredients: Water, salt, soy beans, wheat flour, sugar, garlic, ginger, caramel coloring, and 1/10 of 1% sodium benzoate.

Wt/Vol., Packaging, Price: 12 fluid oz.

How Stored: Shelf stable.

New Product–Documentation: Black-and-white photo of rectangular Label. “Aloha Barbecue Sauce. Time-saving. Ready-to-use. Quick tasty preparation. Steak: Soak for 6 minutes for each ¼ inch of thickness. Baste while broiling. (Best over charcoal). Chicken: Cut into pieces and soak from ½ hour to 1 hour. Baste while broiling. Spare ribs: Cut into 3 inch pieces and soak about ½ hour. Fry or broil to taste. Fish: Soak steaks or fillets for about ½ hour. Fry or broil to taste. Always best with Aloha Barbecue Sauce. Ask for the best... Aloha.”

Ad by Aloha Shoyu Co., Ltd. in Hui Manaolana. 1956. *Japanese Foods: (Tested Recipes)*. Honolulu, Hawaii. See p. 16. “Time saving, ready to use, quick tasty preparation.” Steak, chicken, spare ribs, fish. “Always best with Aloha Barbecue Sauce.”

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows two labels and gives the address. The company made and

still makes HVP soy sauce, and is still in business. Letter from Takao Nihei. 1988. July 19. The company is still in business making amino acid shoyu.

3547. **Product Name:** Club Shoyu, Mitsuba Soy Sauce, Hilo Shoyu (All "Genuine Brewed Shoyu").

Manufacturer's Name: Brewery Industries Ltd.

Manufacturer's Address: 45 Omao St., Hilo, Island of Hawaii. Phone: 3079.

Date of Introduction: 1947.

Ingredients: Club: Water, soybeans, wheat, salt, caramel coloring, and 1/10 of 1% of sodium benzoate.

Wt/Vol., Packaging, Price: ½ gallon bottle.

How Stored: Shelf stable.

New Product–Documentation: Black-and-white photo of early rectangular Label. Probably about 1947. Club Shoyu. Hawaii's quality soy sauce. Genuine brewed shoyu. Excellent sauce for sukiyaki, steaks, chops, barbecue meat, chop sui [suey], stew, fried and steamed fish, gravy, roast, spare ribs [pork], and salad. \$1.45 per ½ gallon. Illustrations of wheat and soy. Brewed and bottled by Brewery Industries, Ltd., Hilo, Hawaii.

Similar photos of Labels for Mitsuba Soy Sauce and Hilo Shoyu. These had similar ingredients and similar text. The Hilo Shoyu was produced for the mainland USA.

Ad by Brewery Industries Ltd. in Hui Manaolana. 1956.

Japanese Foods: (Tested Recipes). Honolulu, Hawaii. See p. 110. "Buraku." Y, Hata & Co., Ltd., Ala Moana Market Center, Warehouse #1.

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." Shows all three labels. States that company was founded in 1947. Gives address. Still in business.

3548. **Product Name:** Chun King Soy Sauce [HVP Type].

Manufacturer's Name: Chun King Sales (Marketer-Distributor).

Manufacturer's Address: Duluth, Minnesota.

Date of Introduction: 1947.

Ingredients: HVP soy sauce.

How Stored: Shelf stable.

New Product–Documentation: Display ad: May Co. 1949.

“Chun King–Chicken Chow Mein dinner.” *Los Angeles Times*. Oct. 2, p. A3. “Plus a tin of chow mein noodles and a bottle of soy sauce. Three to four generous delicious servings. Ready to eat. All you have to do is heat and serve it.” A photo shows the front of a can of Chicken Chow Mein with what appears to be a bottle of soy sauce next to it. Note 1. This ad does NOT prove that the soy sauce bore the Chun King brand. In fact, it may suggest the opposite.

Display Ad: Chun King Sales Co. 1954. “Chun King–Chicken Chow Mein.” *Chicago Daily Tribune*. Sept. 12, p. M5. “Call the folks. They’ll douse on Chun King Soya Sauce.” Note 2. This is the earliest document seen (Feb. 2011) that mentions “Chun King Soya Sauce.”

Talk with Jenio Paolucci. 1982. April 30. Brief history of Chun King soy sauce (Interview). Jenio founded Chun King in 1945. The company first began selling ready-made soy sauce in about 1947; they never made fermented soy sauce. Chun King bought this soy sauce by the barrel from a plant in Toledo, Ohio, run by the Donofrio Brothers, then repackaged it under the Chun King label. He does not remember the company’s name but their technician was a man (perhaps Lou Minor) who had worked for La Choy. This man first got Jenio interested in soy sauce before he started buying from A.E. Staley. In the late 1940s and 1950s Jenio was not aware of any fermented soy sauce being made in the USA; it was all made from HVP. During the 1950s the soy sauce market in the USA was a battle between La Choy and Chun King.

Soya Bluebook. Soyinfo Center has searched that section in Soya Bluebook that gives the name and address of soy sauce makers in the USA from 1947 to 1977. We are unable to find any mention of Chun King.

3549. Product Name: Fuji Soy / Shoyu. Hawaiian Soy Sauce.

Manufacturer’s Name: Fuji Sake Brewing Co. Ltd.

Manufacturer’s Address: 539 Cooke St., Honolulu, Oahu, Hawaii.

Date of Introduction: 1947.

Ingredients: Water, soya beans, wheat, salt, caramel coloring, and 1/10 of 1% sodium benzoate as chemical preservative.

Wt/Vol., Packaging, Price: 1 gallon.

How Stored: Shelf stable.

New Product–Documentation: Not listed in the index under soy sauce in any Honolulu city directory from 1905 to 1966; Black-and-white photo of Label. About 1947. Oval. “Brewed under natural process.”

Ad by Fuji Sake Brewing Co., Ltd. in Hui Manaolana. 1951. *Japanese Foods: (Tested Recipes)*. Honolulu, Hawaii. See p. 39. “For added taste in your menus use... Fuji Soy.” 539 Cooke St. Note: This same ad appears on the same page in the 1956 edition of this book.

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49.

“Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows one label. Gives address. No longer in business. Letter from Takao Nihei. 1988. July 19. This product was first made in 1947 by Fuji Sake Brewing Co. Ltd. They closed in 1963.

3550. Product Name: Soy Sauce.

Manufacturer’s Name: Great China Foods Co.

Manufacturer’s Address: 2520-58 S. State St., Chicago, Illinois.

Date of Introduction: 1947.

New Product–Documentation: Soybean Blue Book. 1947. p. 73; 1957. p. 99. Company name is now “Great China Food Products Co.”

3551. Product Name: Maru-Hi Miso [Mellow White, or Red], and Shoyu.

Manufacturer’s Name: Hawaiian Miso & Soy Co.

Manufacturer’s Address: 1714 Mary St., Honolulu, Oahu, HI 96819. Phone: 87488. Later 808-841-7354.

Date of Introduction: 1947.

New Product–Documentation: Directory of the City and County of Honolulu. 1949. p. 354. Hawaiian Miso and Soy Co. (George T. and Henry T. Higa; Doris K. and Seiboku Kiyabu), Manufacturers of Miso and Soy. 1714 Mary. Tel. 87488. Hawaii Directory of Manufacturers. 1953. p. 10. Miso (Soy bean paste). Hawaiian Miso & Soy Company, 1714 Mary St. Honolulu City Directory. 1956. The company is the only miso manufacturer listed for this year. Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” States that Hawaiian Miso Shoyu Kaisha was founded by William Higa. Gives address. No founding date given. Still in business. Wm. Higa. 1980. History of Miso Companies in Hawaii; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234, 240, 255. The company was founded in 1947 by George Higa Sr., William Higa, George Higa Jr., Hisako Higa, and Alvin Higa. They left American Hawaiian Soy Co. By the

1980s HMS was Hawaii's largest miso manufacturer, and the second largest in the USA with 512 tonnes/year in 1983. Ad in Hawaii Herald. 1983. Oct. 7. p. 5.

3552. **Product Name:** Kokusui Shoyu.

Manufacturer's Name: Nichibei Shuzo KK. (Japanese-American Sake Brewery).

Manufacturer's Address: Waiakea, Hilo, Island of Hawaii.

Date of Introduction: 1947.

New Product–Documentation: Hawaii, Maui, Kauai Directory. 1957. p. 454. Listed as Kokusui Co. Ltd. (Kamezo Matsuno, president). 1965 Kamehameha Ave., Hilo, Island of Hawaii. Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." No label. Gives address. No longer in business. Letter from Takao Nihei. 1988. July 19. Kokusui Shoyu was launched in 1947. Closed in 1956. Mr. Nihei deleted Panda Shoyu as one of this company's brands.

3553. Bragg, Paul C. 1947. Paul Bragg's health cookbook [1st ed.]. New York, NY: Alfred A. Knopf. xii + 402 + xxx p. Index. 21 cm.

• **Summary:** Contents: Section I: Flavor. 1. Flavor, the soul of food. Section II: Recipes. 2. Salads (7 types). 3. Salad dressings. 4. Soups. 5. Vegetables. 6. Meats. 7. Fish. 8. Poultry and game. 9. Vegetarian entrees and cheese dishes. 10. Eggs and egg dishes. 11. Cereals. 12. Bread, rolls, and muffins. 13. Pancakes and waffles. 14. Pies and fillings. 15. Cakes and frostings. 16. Cookies. 17. Desserts (fruit desserts, other desserts). 18. Sauces. 19. One world cookery ("Health" foods in many lands, Mexican, Creole, From France, the Near East, the Far East, etc.). 20. Candies. 21. Drink health the new way ("cocktails" made without alcohol, from fresh fruit and vegetable juices). 22. Canapés. 23. Sandwiches and fillings. 24. Canning.

Section III: Special-purpose recipes. 25. Reducing. 26. Gaining. 27. Food allergies. 28. Invalid food or bland diets. Appendixes. Herb chart. How to grow a savory herb garden. The window-box herb garden. Organic gardening: Good nutrition starts in the ground. How to make a compost pile.

Soy-related recipes: Substitutes. Soybean milk for cow's milk. Beans and especially soybeans for meat. Whole-grain flours for white flour (p. 5). Sprouted soybean salad (p. 45). Soybean soup (with whole dry soybeans {WDS}, p. 72). Black soybean soup (p. 72-73). Sour-cream bean soup (p. 73).

In the chapter on "Vegetables" there is a section titled "Soybeans" (p. 92-95) with this contents: Introduction ("The soybean is one of the richest of all foods in protein and in minerals, and it also makes a very delightful addition to good meals... but only in recent years have Americans and Europeans become awakened to its possibilities as a meat substitute and also its great value as a food staple"). How to make soybean sprouts. Soybean sprouts en casserole.

Sprouted soybean omelet. Soybean sprouts with onions and mushrooms. Soybean recipes ("for preparing the magic soybean"). Green soybeans (in pods). Dried soybeans. Canning recipes. Soybeans used as meat substitutes. Soy milk. Soybean cheese [tofu].

Chapter 9: Vegetarian entrees and dishes. Lentil loaf with milk or soy milk. Soybean loaf (with WDS and soy milk). Soybean macaroni loaf. Vegetable and soybean stew. Soy vegetable roast (with 1½ cups cooked soybeans). Vegetable hash (with soy sauce). Boston baked soybeans. Stuffed peppers with soybeans. Vegetarian sausages (with cooked soybeans). Vegetarian chop suey (with soy sauce and gluten steaks). Soybean cheese (homemade tofu made from soy milk allowed to curdle in a warm place; cut and serve with soy sauce).

Whole-wheat soy bread (with soy flour, p. 195). Soybean waffles (with soy flour, p. 212). Whole-wheat soy pie crust (with soy flour, p. 213). Canned [green vegetable] soybeans (p. 324, 336). Soybean waffles (wheatless, with soy flour, p. 369). For those with food allergies: Soy milk and Soybean cheese (see p. 95).

In this book, Bragg uses the word "aminos." "The link between protein and body tissues is the amino acids. When the aminos enter the blood stream, they are carried to every part of the body, where they set to work repairing, rebuilding, and maintaining body tissue, building up rich red blood, and 'conditioning' the various organs" (p. 6).

Note 1. Throughout his life, Paul Bragg seems to have had an ambivalent feeling about eating and recommending red meat and poultry. In his later years, fish became his favorite flesh food.

Note 2. This book contains no autobiographical information about Paul Bragg. Address: P.O. Box 428, Burbank, California.

3554. Burt, Elinor. 1947. Far Eastern cookery. Boston, Massachusetts: Little, Brown & Co. xi + 349 p. Illust. by Samuel Bryant. 22 cm. *

• **Summary:** Elinor Burt was born in 1899.

3555. Cole, A.B. ed. 1947. A scientist with Perry in Japan: The Journal of Dr. James Morrow. Chapel Hill, NC: University of North Carolina Press. 307 p.

• **Summary:** For background on Commodore Perry and the opening of Japan, see Fairbank, Reischauer, and Craig. 1973. *East Asia: Tradition and Transformation*, p. 327; a summary is given in this bibliography.

In 1854, Dr. James Morrow of South Carolina, agriculturist with the U.S. Perry expedition to Japan, East Asia, spent 18 weeks in Japan. He took seeds, plants, and scientific information from the USA to distribute as gifts for the shogun Tokugawa Iesada, and was instructed to collect the same and make observations, which he recorded in this journal. He explored the Great Liu Ch'iu (Okinawa),

and sampled fried bean sprouts (we are not told what type [probably mung bean]) and soy sauce in “a little sauce of bean soy” in Canton (p. 48).

In April 1854 in Kanagawa, Japan, he “put in small papers more than two hundred papers of seed, and sent one of each kind to Mr. Allen, gardener of New York,—to Mr. Landreth, gardener in Philadelphia,*” (p. 155) (Endnote 89, p. 286: *”Probably Richard L. Allen, formerly of A.B. Allen & Co, dealers in agricultural implements in New York, and probably David Landreth of David Landreth & Son {David & Oliver Landreth & Thomas F. O’Neil} in Philadelphia.”), “also to Mr. Buist, gardener in Philadelphia,—to Henry Gourdin, Esq., of Charleston,—and to Gen. Wade Hampton, of Columbia, South Carolina [a planter and congressman]. I sent the large Japanese papers to the Department of the Interior at Washington [DC].

Appendix G (p. 228) shows a list of seed bought in Simoda [Shimoda] Bay in large quantities in April 1853 (1854?) [sic, probably 1854]. Included are “Small red Beans (soya) [azuki?],” and “Black beans (another variety).”

Appendix H (p. 228-30) contains a “List of seed presented to me [Morrow] by the Japanese gentleman who was the principal in making the treaty & collected by himself as he said with great pains. These were principally from Yeddo [Edo, today’s Tokyo] and Conagowa” [Kanagawa; an important port in 1854, a town north of Yokohama and a prefecture whose capital is Yokohama]. Included in the list of 56 plants are “Dolichos pease (green), Red Beans, Black pease, Red pea—Dolichos, and Small red Bean (soya) [azuki?].”

A photo (frontispiece) facing the title page shows Dr. James Morrow. Note: Morrow’s soybean seeds were sent to the Commissioner of Patents, whence they were distributed to farmers, and planted from 1855 on.

3556. Fritzsche, Curt. 1947. *Die Sojabohne: Anbau und Verwertung* [The soybean: Cultivation and utilization]. Lueneburg [near Hamburg], Germany: Metta Kinau Verlag Nachf. 48 p. Series: Kurzschriften fuer Landwirtschaft, Gartenbau und Siedlung. 11. [Ger]

• **Summary:** Contents: Introduction. 1. Origin of the soybean (in Asia and Europe, including the work of Haberlandt in central Europe, plus instructions for making Chinese-style chiang, soy sauce, and tofu). 2. Description of the soybean. 3. The culture of the soybean. 4. Diseases and enemies of the soybean. 5. The economic significance of the soybean: As a food, as an oilseed, and in applied science/industry. 6. Advantages of the soybean: For the farmer, for the economy. 7. Effect of soybean culture on the national diet. 8. Tested recipes for the household. Conclusion. Address: Friedersdorf & Berlin.

3557. Radwansky, Andor (pseudonym of Dr. A. Medriczky). 1947. *Der “Gelbe Gottesseggen,” die Sojabohne im Haushalt*

und Kleingarten [The “golden blessing,” the soybean in home and garden]. Murnau (near Munich): Verlag Sebastian Lux. 31 p. Series: Die kleine Reihe, 4. 17 cm. [21 ref. Ger]

• **Summary:** Contents: Foreword. 1. Soybeans and nutrition. 2. What does the soybean look like? 3. The soybean—commercial products (Edelsoja whole soya flour, soy flakes, soy oil, soy margarine, soy lecithin, soymilk and tofu [these were once made by a German firm in Frankfurt], soy sauce, Worcestershire sauce, soy chocolate and cocoa). 4. Soybeans in the household (incl. the above commercial products plus soy coffee, soy sprouts). 5. Growing soybeans on farms and in home gardens. Hope for the founding the “Society of Soybean Producers and Friends of Soya” (*Gesellschaft der Soja-Anbauer und Sojafreunde*). 6. The different methods of soybean production. Growing soybeans in a small garden.

On page 15 the author uses the term “Sojaspeisen” to refer to soyfoods. On page 17 he uses the term “Gruenbonen” to refer to green vegetable soybeans. Address: Herwegstr. 5, Stuttgart, Germany.

3558. *U.S. General Imports. Schedule A. Commodity by Country.* 1947-- . Serial/periodical. Washington, DC: U.S. Dept. of Commerce, Bureau of Census. Monthly and Annual.

• **Summary:** Gives statistics for imports of soy sauce to the USA. In the book titled *Soyfoods Industry and Market*, by Shurtleff & Aoyagi (1982), statistics for the years 1947 to 1981 are given for soy sauce imports to the USA (in both a full-page graph and a full-page table) from: Japan, China (PRC), Hong Kong, total (1,000 lb), and total (\$1,000). The major source of U.S. imports has always been Japan; this figure peaked at 18,672,000 lb in 1972, then fell after Kikkoman’s plant opened in the USA. Total imports increased from 220,000 lb in 1947, to a peak of 23,098,000 in 1972 (worth \$3,116,000), falling to 8,093,000 in 1974, then rising to 19,613,000 in 1981 (worth \$7,044,000).

3559. La Choy Food Products, Inc. 1947? *Essential characteristics of genuine soy sauce, compared with synthetic or imitation substitutes* (Leaflet). Archbold, Ohio. 6 panels. Undated.

• **Summary:** Contents: Origin of Soy Sauce. Modern processes. Food values. Essential characteristics. Synthetic and imitation substitutes. La Choy Brown Sauce. Suggestions for using genuine soy sauce.

Note: This leaflet tries, quite deceptively, to present the viewpoint that traditional Chinese fermented soy sauce is inferior to La Choy’s “genuine” HVP sauce.

“The Chinese method of preparing the sauce consisted of storing crushed soya beans in casks or wooden tanks, openly exposed to the elements for several months to ferment and mold, after which the liquid sauce was drained or pressed out and stored in vats or kegs.

“Modern processes: Although the Chinese are still using their crude methods, processors of genuine Soy

Sauce in this country have greatly improved the process through development of enzymatic and hydrolytic methods of fermentation. The best grades of Soy Sauce are manufactured from whole or parts of soya beans. Parts of wheat or corn with water and salt, are often added to achieve a more desirable color and flavor. Such products are under laboratory control to achieve predetermined specifications and scientifically filtered and blended to evenly diffuse and suspend the solids and preclude precipitation of sediment to the bottom of the container... Genuine Soy Sauce is distinguished from other varieties of Chop Suey or table sauces by the presence of amino acids and purines..."

"Many imitations of Soy Sauce are on the market. Such synthetic sauces are ordinarily made from various grades of molasses, syrups, and caramel combined with water and salt to achieve and imitate the appearance and consistency of Soy Sauce." Address: Archbold, Ohio.

3560. Berrehsem, Marion. 1948. Cookery from the Orient has many a recipe helpful to Americans learning to save meat. *Christian Science Monitor*. Jan. 8. p. 10.

• **Summary:** "Centuries ago the Asiatics learned the value of the soybean, which is not inferior to meat in nutritional value." The widespread acclaim for Asiatic cookery "can be attributed in no small measure to the fact that cooks in these countries have devised many delicious menus which use meat in small quantities, or not at all.

Recipes include: Egg foo yung, with soy sauce as optional but recommended ingredient. Cream soy sauce, with 1 cup rich cream or milk, "1 to 3 tablespoons soy sauce," plus butter and flour.

3561. *Soybean Digest*. 1948. Grits and flakes... from the world of soy: Bee Gee Products, Oak Park, Illinois is featuring a meatless chop suey dinner... Jan. p. 36.

• **Summary:** "... as an economical, tasty and easy-to-serve meal. The dinner is a complete meal for four persons and includes tea and soy sauce."

3562. *New York Times*. 1948. John Duncan, aide of Lea & Perrins: Treasurer of sauce concern since 1930 dies at 44—Was officer in navy. Feb. 11. p. 27.

• **Summary:** John P. Duncan, treasurer of Lea & Perrins, Inc., 241 West Street [New York City], manufacturers of Worcestershire Sauce, died yesterday at age 44 after an illness of several months; he lived in Ridgefield, Connecticut.

Born in Tuxedo Park, New York, he was graduated from Groton School [in Groton, Connecticut] and, in 1925, from Harvard [in Massachusetts].

"In 1925 Mr. Duncan became associated with one of the predecessor companies of Lea & Perrins and he had been the latter's treasurer since its incorporation in 1930. His father, Stuart Duncan of New York, is the retired board chairman of

Lea & Perrins."

3563. Smith, Allan K. 1948. Re: Request for information available on the production of foods by fermentation, particularly from soybeans: Soya sauce, miso paste, and soya cheese. Letter to Lewis Lockwood, PhD in Shanghai, China, April 1. 2 p. typewritten. Typed, without signature (carbon copy).

• **Summary:** Attached is Smith's 7-page response from the Metropole Hotel, Shanghai, China, dated 7 June 1948. He gives details on the processes for making miso, soya cheese [fermented tofu], katsuobushi, and soy sauce. "The questions on soy sauce were answered largely by Mr. Kung and Mr. C.T. Siao of the National Bureau of Industrial Research, 1313 Szechum Road, N. Shanghai, China. The questions on miso were answered by Quo Sih Gwan, a Chinese worker that has spent a number of years in Japan. No one around Shanghai knows anything about miso."

A second letter from Dr. Smith dated 7 June 1948 (also from the Metropole Hotel, Shanghai), to Dr. Lewis Lockwood at NRRL, Peoria, Illinois, answers questions about miso, katsuobushi, and species of *Aspergillus* mold (3 pages).

Another letter from Smith to Lockwood contains questions concerning soysauce fermentation from Drs. King and Siao.

The final letter from Smith to Lockwood, also dated June 7, contains a questionnaire originally from King and Siao about soya sauce and miso. Smith sends a copy of his responses to Lockwood and asks for suggestions Address: NRRL, Peoria, Illinois.

Foreign Name: Shoyu, Nama Koji, Aka Miso, Mugi Miso, Tekka Miso, Joban Miso, Kinzanji Miso, Kocho Miso, Moromi.

Manufacturer's Name: Mukai Miso Shoyu Seizo-sho (Mukai Brewing Co.).

Manufacturer's Address: P.O. Box 528, Isleton, California. Phone: 2201.

Date of Introduction: 1948. May.

New Product–Documentation: Entry in Nichi Bei Times. 1948. Evacuation-Resettlement Report. Directory of

manufacturers, p. 137 (top center). In Japanese: Mukai Miso Shoyu Seizôsho. In English: Mukai Brewing Co., P.O. Box 528, Isleton, California. Phone: Not listed.

Also: Ad (full page) in Nichi Bei Times. 1948. *Kikan Fukkôshi Narabi Jûshoroku* [Evacuation Resettlement Report, 1948 Directory]. Full page (p. 246, unnumbered near rear). Top one-fourth of this ad is in English. "Brewed by Mukai Brewing Co., P.O. Box 528, Isleton, California." The company logo is a bold hexagon inside of which are the two characters for Nagaiki?, Nagao? Chosei? ("Long Life"; Too many ways of reading these two characters). They make: Nama Koji (fresh koji). Aka Miso (red miso). Mugi Miso (barley miso). Tekka Miso ("tekka" is written with the characters for iron + flower instead of the typical iron + fire). Joban Miso. Kinzanji Miso. Kocho Miso. Moromi.

Ad (¼ page) in Hokubei Mainichi Year Book. 1951, p. 304. The company logo is a bold hexagon inside of which are the two characters for Nagao or Nagasei. The ad reads: In English: Trade mark. Soy sauce. In Japanese: Honzukurî [made in the real traditional way]. Saijô [The best]. Honba shoyu [Authentic Japanese-style soy sauce]. Directory entry at Isleton, California under "Business" (p. 302), Mukai Brewing Co. (Jap: *Kikko Chôsei Miso Shôyu Jôzô-sho*), P.O. Box 171, Isleton. No phone.

Ad (1/8 page) in Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 218. The top 1/3 of this ad is in English: Mukai Brewing Co., P.O. Box 171, Isleton, Calif. Phone 2201. In Japanese (right to left): Honzukurî. Saijô [Made in the real way. The best]. Kikko Nagao? (Nagasei?) [Their trade mark]. Honba shoyu [Authentic shoyu].

3572. Nakayama Shokai. 1948. Marunaka Brand Shoyu (Ad). In: Nichi Bei Times. 1948. *Kikan Fukkôshi Narabi Jûshoroku* [Evacuation Resettlement Report, 1948 Directory]. 138 + 243 p. Page 11. [Eng; jap]

• **Summary:** Ad (¼ page, top right). In Japanese: Yûshû shoyu [excellent shoyu]. Completely safe. Good flavor. If you find a checked proof seal on the bottle, you can use it safely. Nakayama Shokai: Exclusive dealer. Also at 6th St. in Oakland. Address: 1418 Turk St., San Francisco, California. Phone: WEst 1-3861; WALnut 1-9833.

3573. Nichi-Bei Jijisha. 1948/31-. *Kikan fukkôshi narabi jûshoroku* [Evacuation resettlement report, 1948 directory]. San Francisco, California: Nichi-Bei Jijisha. 138 + 243 p. May 31. Illust. 25 cm. [Eng; Jap]

• **Summary:** Note: The 1948 directory is in the 1948 Evacuation Resettlement Report. On the last unnumbered page of photos near the front (page 11) half-page photos show: (1) The front of the Nichi Bei Times office in San Francisco, with three cars parked out in front. (2) Two men standing in front of the huge printing press, with two large rolls of paper in place.

Page 87 (top center left) states (in characters), under the heading Tofu shops, there are 4 workers and 2 shops in Marysville. Note: The explanations for the numbers cannot be found on this page but on the previous page. We are guessing that that larger number is the number of workers and the small number is the number of shops.

Page 90 (top right): Tofu shop, Stockton. Just one shop is listed but with no name or address.

Page 92 (top left): One shoyu maker in the Walnut Grove area of Isleton (California); no name or address is given. Note: This could well be Mukai Brewing Co., which in Feb. 1951 was located at P.O. Box 171, Isleton, California. Address: Ellis Street, San Francisco, California.

3574. Pacific Mutual Sales Inc. (Taiheiyo Kyodo Shoji Kabushiki-gaisha). 1948. Imports and exporters (Ad). In: Nichi Bei Times. 1948. *Kikan Fukkôshi Narabi Jûshoroku* [Evacuation Resettlement Report, 1948 Directory]. 138 + 243 p. Page 143 (right half). [Eng; jap]

• **Summary:** Ad (half page, vertical). The top one-fourth is in English. Company name with diacritics is: Taiheiyô Kyôdo Shôji Kabushiki-gaisha. They are the exclusive seller of Kurabu (Club) brand shoyu. Address: 1537 Buchanan St., San Francisco 15, California. Phone: JOrdan 7-4979.

3575. Pacific National Mercantile Co. 1948. [Ichi-Man Brand Shoyu Sauce, Importer (Ad)]. In: Nichi Bei Times. 1948. *Kikan Fukkôshi Narabi Jûshoroku* [Evacuation Resettlement Report, 1948 Directory]. 138 + 243 p. Page 8. [Eng; jap]

• **Summary:** Ads (¼ page, lower left). In Japanese: Over 30 years of long shoyu making experience. This shoyu, made by Honolulu, Fikushima Shoyu, is the strongest enemy of importing shoyu after the War. The quality of the product speaks for itself; good for use with sashimi [fresh, raw fish, thinly sliced], pickles, and Hiyayakko [Chilled Tofu]. Address: 1844 Buchanan St., San Francisco, California.

3576. San Okin Shokai (San Joaquin Mercantile Co.). 1948. [Jobbers-Distributors (Ad)]. In: Nichi Bei Times. 1948. *Kikan Fukkôshi Narabi Jûshoroku* [Evacuation Resettlement Report, 1948 Directory]. 138 + 243 p. Page 178. [Eng; jap]

• **Summary:** Ad (¼ page, lower left). Top one-fourth in English. In Japanese: Hanamurasaki (brand) shoyu. Fujimoto Kanemasa (brand) miso. Address: 1305 I St., Reedley, California. Phone: 424.

3577. Yamate Brothers (Yamate Burazaasu). 1948. [Imports-Exports, Ltd. (Ad)]. In: Nichi Bei Times. 1948. *Kikan Fukkôshi Narabi Jûshoroku* [Evacuation Resettlement Report, 1948 Directory]. 138 + 243 p. Page 140. [Eng; jap]

• **Summary:** Ad (full page). The top ¼ of the ad is in English; the body is in Japanese. Top: The company was established in 1921. Codes: Bentley, Commercial, Acme.

Cable address: Sayama-San Francisco.

Bottom: The company imports and sells: Bunka Shoyu [Culture Shoyu] and U.S. Kanro Shoyu [Sweet Shoyu = twice-fermented shoyu].

Owner: Mr. Sasato Yamate. Branch office in Tokyo, Japan: Yakei Saka Nobori, Oomori, Tokto-to. Phone: Oomori 1313. Shunin (manager): Mr. Sanzo Yamate. Address: 1619 Lyon St., San Francisco 15, California; 510 Battery St., San Francisco 11, California.. Phone: WEst 1-8731; EXbrook 2-0764.

3578. Morse, W.J. comp. 1948. Soybean varietal names used to date. Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26.

• **Summary:** This is a 9-page two-column table. Column 1 is "Variety name." Column 2 is "Source." P.I. refers to the Plant Introduction number. Acadian-Louisiana Experiment Station 40-293. Acme-P.I. 14954. Adams-A5-2683 (A3-176). Agate-P.I. 81037. A.K.-Manchuria 1912. A.K. (Harrow)-Dominion Exp. Station, Canada. Akasoya-Japanese variety (Indiana). Aksarben-P.I. 36576. Allison Black-D.T. Allison, Tennessee. American Oil King-Same as Midwest. Amherst-P.I. 17275. Anwei-La Choy Co. (Ohio). Aoda-P.I. 81043. Arikara-O. Will Co. (North Dakota). Arisoy-P.I. 86736. Arkan-P.I. 87050. Arksoy-P.I. 37335. Arksoy 2913-Arkansas Exp. Station (Marianna). Arlington-P.I. 22899. Armredo-Arizona Station selection. Auburn-P.I. 21079A. Austin-P.I. 17263. Austrian Green-Same as Tokyo. Avoyelles-Avoyelles Parish, Louisiana, selection. Baird-P.I. 22333. Bakaziro-Same as Amherst. Banner-Same as Midwest. Bansei-P.I. 81031. Barchet-P.I. 23232. Bavender Special-Bavender selection (Iowa). Bell-Same as Midwest. Best Green-Same as Hope. Best White-Same as Amherst. Biloxi-P.I. 23211. Biltan-Otootan selection (South Africa). Black-Same as Buckshot. Black Beauty-Same as Ebony. Black Champion-Same as Peking. Black Eyebrow-P.I. 30744. Blackhawk-A6K-937 (A3K-884). Black Sable-Same as Peking. Boone-P.I. 54563-3. Bopp-Same as Chernie. Brindle-P.I. 20407. Brooks-P.I. 16789. Brown-Same as Mammoth Brown. Brown Otootan-Same as Tanner. Brownie-P.I. 17256.

Buckeye Cross (BX)-Same as Mt. Carmel. Buckshot-P.I. 17251. Burnette-Farmville, North Carolina, selection. Buster Brown-Same as Trenton. Butterball-P.I. 17273. Capital-Central Exp. Farm (Canada). Cayuga-P.I. 65393. Chame-P.I. 80473. Chang-P.I. 54610-2. Charlee-P.I. 71663. Chernie-P.I. 18227. Cherokee-P.I. 93057. Chestnut-P.I. 20405B. Chief-Illinois Exp. selection. Chinaton Echo-Harrow, Canada. Chiquita-P.I. 27707. Chuku-La Choy Co. Chusei-P.I. 80472. Cibao-Salvador variety. Clay-Same as Midwest. Claybank-Same as Midwest. Clemson-P.I. 71659. Cloud-P.I. 16790. Cluster Bean-Same as Midwest.

C.N.S.–J.E. Wannamaker (South Carolina; Note 1. This is the earliest document seen {Dec. 2004} concerning John E. Wannamaker). Coker's Black Beauty–Same as Oloxi. Coker's 31-15–Same as Pee Dee. Late Yellow–Same as Mammoth Yellow. Lexington–P.I. 17862E. Lincoln–Illinois Exp. Station selection. Little Wonder–Farmer selection (Missouri). Looney #2–Farmer selection (Tennessee). Lowrie–P.I. 22898A. Loxitan–Delta Exp. Station selection. Ludeke–Farmer selection (North Carolina). LZ–Louisiana Exp. Station selection.

Note 2. This is the earliest document seen (Sept. 2004) that mentions the soybean varieties Brown Ootoan, Early Mammoth Black, or Hidatsa.

Note 3. This is the earliest document seen (Sept. 2004) which states that Black Champion is the same as Peking, or that Best Green is the same as Hope, or that Brown Ootoan is the same as Tanner, or that Early Mammoth Black is the same as Buckshot, or that Hollybrook Early is the same as Midwest. Continued. Address: USDA, Bureau of Plant Industry, Soils & Agricultural Engineering, Div. of Forage Crops & Diseases [Beltsville, Maryland].

3579. Morse, W.J. 1948. Soybeans yesterday and today. *Foreign Agriculture* 12(5):91-95. May. Summarized in *Soybean Digest*, June 1948, p. 32.

• **Summary:** A good overview of soybeans and their history in China, Manchuria, Korea, and Japan (the principal regions of world soybean production), plus thoughts on their relatively recent introduction to the Western world.

"In China, the soybean is one of the leading and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although

grown everywhere in China, about 60% of the soybean acreage and production is confined largely to 3 northern Provinces, Shantung, Kiangsu, and Honan. China consumes practically all its production, estimates indicating 55% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% of the total cultivated area of Manchuria and is a dominating factor in the life of that country. As a cash crop, it provides fully half the total volume of freight handled by Manchurian railroads. Estimates have indicated that from one-third to two-thirds of the production of soybeans was exported; 15 to 20% utilized for food, feed, and planting; and the remainder processed for oil and oil meal.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to the central and northern areas, because southern Korea, growing chiefly cotton and rice, seems less well adapted to soybean-seed production. The entire seed production is used for food, stock feed, export, and planting, none being used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all its own production and imported large quantities of seed from Manchuria and Korea. Since World War I, production of soybeans in Japan has decreased to some extent, more emphasis being placed on the greater production of rice. The proportion of soybeans used by Japan for various purposes was: Miso (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; bean curd, 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous 0.5%.

"In the Soviet Far East the soybean is said to be one of the chief industrial crops and in some districts to constitute 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in the Khabarovsk territory.

"Previous to 1935 soybean oil in the United States was utilized chiefly in soap, paint, and varnish. Since that time, however, 70 to 85% of the soybean-oil supply has been used in the food industries... The soybean has become one of the most valuable, if not the most valuable, of China's gifts to the Western World."

Photos show: (1) Manchurian soybean in bags being loaded on a freighter at the Dairen wharves for shipment to European oil mills. (2) Two horses pulling a plow, and a 2nd man planting soybeans on ridged rows in Manchuria. (3) Soybean plants growing along the edges of rice paddies, as is common in oriental countries; the green beans will be used for home consumption. (4) Two Korean men threshing soybean plants in a courtyard with bamboo flails. "In Korea, as well as in many other oriental countries, bamboo flails are used in threshing soybeans." (5) A man with a sickle in a field of dried soybean plants. "Soybeans are harvested by hand in all the soybean-producing countries of the Orient."

(6) A combine harvesting soybeans in the USA. It has "been one of the important factors in the economic production of soybeans in the United States." (7) "General view of a Chinese oil-mill yard in Manchuria, showing mill, storage of soybeans in osier bins, and steel tanks." Address: Principal Agronomist, USDA Div. of Forage Crops and Diseases, BPI [Bureau of Plant Industry], SAE [Soils and Agricultural Engineering], ARA, Beltsville, Maryland.

3580. Smith, Allan K. 1948. Manufacturing of soya-sauce. Peiping, China. 1 p. June 18. Unpublished typescript.

• **Summary:** Part one, titled "Method of manufacture of Soya-sauce," describes nine steps used at Peiping No. 2 plant. To begin: Roast separately, 150 kg soya beans and 100 kg wheat. Mix and ferment for one week. Then mix with salt water, put in outdoor "crockerries," and allow to stand for months. "However, the longer the better. The colour and taste of the sauce become better in sunshine than indoors." Stir daily, filter out the liquid when done, and boil. Yields 500 kg of soya-sauce. "As the condiment the licorice plant is used to sweeten the sauce. (Sugar is too expensive)."

"(1) Nearly 400 soya-sauce manufacturers in Peiping. (2) The manufacturing shop we visited is making soya-sauce and soya-paste at the same time. (3) This shop has the history of 40 years. (4) Besides soya beans and wheat, the following are used as materials for making soya-sauce: barley, soya cake and wheat bran. Sample No. 18. is soy sauce taken from this plant." Address: Peiping, China.

3581. Smith, A.K. 1948. Manufacturing soya-sauce in Peiping No. 2 plant (China). Unpublished manuscript, written in China. 1 p. June 18.

Address: Traveling in China; Normally at NRRL, Peoria, Illinois.

3582. Smith, Allan K. 1948. Re: Visits to plants in China making soy sauce, soy paste, and soy cheese. Letter to Drs. K.B. Raper and L.B. Lockwood, Northern Regional Research Laboratory, Peoria, Illinois, June 23. 1 p. Typed, without signature (carbon copy). [Eng]

• **Summary:** "I am enclosing further information on soy sauce and soy paste processing. The samples listed by numbers on the descriptions will eventually reach you I hope. In visiting this plant I had two interpreters."

Note: This is the earliest English-language document seen (March 2009) that uses the term "soy paste" to refer to miso or to Chinese-style miso.

"I have visited two other soy sauce plants but am not reporting on them at this time. One of these is the Peiping Municipal Soy Sauce Plant which operates much like the pilot plant in Shanghai. I have also visited a sauce plant that claims to have been operating for more than 400 years in the same family and a soy cheese [fermented tofu] plant that has been operated by the same family since the latter part of the

Ming Dynasty [mid-1600s]. I doubt if they have changed much in all that time. All of the samples will be in the mails soon... I may have to take some of them back to Shanghai to get them started." Address: Hotel Wagon Lets, Peiping, China.

3583. Smith, A.K. 1948. Re: Making soy sauce and soy paste in China, incl. samples. Letter to Drs. Kenneth Raper and Louis Lockwood, Northern Regional Laboratory, Peoria, Illinois, June 23. 1 p. Typed, without signature (carbon copy).

Address: Traveling: At Hotel Wagon Lets [Lits], Peiping, China; Normally at NRRL, Peoria, Illinois.

3584. Smith, Allan K. 1948. Re: Discovery of a new process for making soy sauce in Peiping, China. Letter to Drs. K.B. Raper and L.B. Lockwood, Northern Regional Research Laboratory, Peoria, Illinois, July 5. 2 p. Typed, without signature (carbon copy). [Eng]

• **Summary:** "The so called new process uses a high frequency current to shorten the aging process. The process was developed in Japan and the operators in Peiping are Japanese who have stayed in China after the evacuation of the Japanese... What I know now is rather sketchy. The effect of the high frequency current is not in the immediate acceleration of the action of the organisms in the system, but rather it is supposed to decompose or breakdown the substrate so that it is more readily acted upon by the organisms or enzymes so that the work of the organisms becomes easier. The process is still in the experimental stage in Peiping." A description of the process, which takes two months, is then given. A hand drawn illustration (sketch) shows a wooden tank, an external generator, and two electrodes in the soy mash in the tank—one on the bottom and one floating on top. Address: Shanghai, China.

3585. Smith, A.K. 1948. Re: Using high-frequency current to shorten soy sauce aging process in China and Japan. Letter to Drs. Kenneth Raper and Louis Lockwood, Northern Regional Laboratory, Peoria, Illinois, July 5. 2 p. Typed, without signature (carbon copy). Address: Traveling in Shanghai, China; Normally at NRRL, Peoria, Illinois.

3586. Murata, Hideko. Assignor to King Shoyu Company (Honolulu, Hawaii). 1948. Sauce preparation. *U.S. Patent* 2,444,577. July 6. 3 p. Application filed 20 Jan. 1947. [3 ref]
• **Summary:** "This invention relates to sauce preparation and more particularly to a process for the production of shoyu, a Japanese type soy sauce."

"It is [the] object of this invention to provide a process for the production of a soy sauce which may be carried out in a few days,... [is] inexpensive,... [and] comparable in taste and in composition to that produced by the older methods

requiring a considerably longer period to complete."

"I have now discovered that an excellent soy sauce may be prepared from vegetable proteins without utilizing the slow process of enzymatic degradation," by hydrolysis with a strong mineral acid such as hydrochloric acid at elevated temperatures. "This new method requires only 4 to 5 days for completion in contrast to the older fermentation methods which require weeks, months or even years to complete." Address: Honolulu, Hawaii.

3587. Onuki, Motoi. 1948. Shôyu [Shoyu]. Tokyo: Takeuchi Shobo. 414 p. Illust. Index. July. 21 cm. [Jap]

• **Summary:** The author, now president of Yamasa Shoyu in Chôshi, Japan, graduated from Tokyo Teikoku Daigaku, Nogeikaku-ka (Tokyo Imperial University, Dept. of Agricultural Chemistry). He lived 1895-1960. Chôshi is a seaport town at the mouth of the Tone River, 60 miles east of Tokyo, on the tip of Cape Inubo (Jap. *Inubô-saki*). Address: Presently: Yamasa Shôyu K.K., Torishimariyaku (President), Nôgaku Hakase. Chôshi-shi, Kitaogawa-machi 2504, Chiba prefecture, Japan.

3588. Banks, George Heartsill. 1948. South goes east [to Korea]. *Soybean Digest*. Oct. p. 16-18.

• **Summary:** Mr. Banks, formerly associated with Ralston Purina Co., recently returned from a governmental mission of almost 2 years in Korea. In this paper, presented at the American Soybean Convention in Memphis, Tennessee, tells of soybeans in Korea, where there is no national debt, no income tax, and where women do all the work. South Korea is about the size of Arkansas. 75% of the land is steep and mountainous, and thus entirely unsuited for crops. On the remaining small area of arable soil struggle about 20 million Koreans. The farms are small; in some provinces they average less than 2.5 acres. In South Korea every farmer grows some soybeans but one has "to look hard and long to find even a small field of soybeans. They are grown in gardens, on the dikes in the rice-paddies, and among the trees. The most widely grown varieties are large-seeded yellow beans with a short, stiff stalk. Almost all of the beans are consumed at home. Soybean processing [i.e., crushing] plants as we know them do not exist... The Koreans eat soybeans in many ways, including soysauce, soy sprouts, soy curd, and green soybeans. They press out some oil in the home or farm village and use the oil for cooking and the meal for feeding farm animals." Rice is the predominant crop. "Korea, along with its neighbors in the Orient, is definitely a 'have-not' nation." They waste nothing, recycle everything, and use human wastes (night soil) for fertilizer. Agriculture is run by hand-power.

3589. Fairchild, David. 1948. Early experiences with the soybean. *Soybean Digest*. Nov. p. 14-15. [2 ref]

• **Summary:** "It was not until 1897 that I first saw soybeans

growing... I found my friend Merton B. Waite had been trying to grow soybeans on his farm outside Washington [DC, in Maryland; see Fairchild, Oct. 1948], but with little success. They had been sent in by some American consul or missionary, I believe. At about the same time Dr. George T. Moore [who by 1903 was Physiologist in Charge of the Lab. of Plant Physiology, Bureau of Plant Industry, USDA, working on soybean root bacteria] in working on the root nodules of leguminous plants had discovered that the nodules contained bacteria. Waite and I talked over the matter of the failure of his soybeans and wondered if they might require special bacteria, so I wrote out to Japan and imported several pounds of soil from a soybean field.

"We made a little experiment, planting alternate rows of soybeans with and without the addition of this Tokyo soil. The effect of the imported soil was immediately apparent as the plants grown in it made a far better growth and had their roots covered with bacterial nodules, whereas the control were practically without any.

"Photographs had yet to come into any general use as records of agricultural experiments, but Waite had taken up photography as a hobby and made excellent photographs with his stand camera. So at harvest time he pulled up an equal number of soybean plants from the soil-treated rows and from the controls, and the only photographic record in existence of this little experiment (the first of its kind, I suppose, in the world) is this negative taken by Waite in the autumn of 1897.

"Although these experiments did not at the time lead to more extensive trials, they indicate the awakening of our interest in soybeans.

"In that fall of 1897 it was my privilege to organize the office of plant introduction in the Department of Agriculture. We began introducing a great number of different kinds of plants, among them, as I see from our inventories printed at the time, occasional small collections of soybeans from China and Japan. They were obtained mostly through correspondence with missionaries and consuls stationed there.

"At that time the Department had no testing ground near Washington where we could grow miscellaneous vegetables, including these soybean collections. It was not until several years had passed that facilities were provided on the so-called 'Potomac Flats' [in Washington, DC] and James H. Beattie, an enthusiastic young horticulturist, took over the planting of our introduced seeds.

"The soybeans did well and Beattie soon had on his hands a quantity of seeds. But we didn't know just what to do with these strange beans. When cooked in the way other beans were prepared they had a strange flavor that nobody seemed to like...

"It was not, I think, until the office of forage crop investigations was organized and C.V. Piper took charge that the soybean as a forage crop attracted attention and

Beattie's experiments came to be looked upon as important. We planted larger patches of soybeans on a tract of land near Bethesda, MD...

"And then we ran into the difficulty of harvesting the soybeans. P.H. Dorsett of the office, one of the most ingenious and most indefatigable workers I have ever known, and his friend Rankin, who was running the little experimental farm, put their heads together and adapted a bean picker then in use—in California I think—and discovered that it was perfectly possible to harvest soybeans mechanically...

"I went out exploring again and my travels with Mr. Lathrop this time took me into the soybean fields of Japan. The tremendous importance of the crop as I saw it there made a great impression on me. Also the almost universal use of soy sauce, which Americans were just beginning to appreciate, fixed my interest...

"Dr. Yamei Kin, an extraordinary Chinese woman whose acquaintance I had made on the boat returning from Japan, made a visit to Washington and captivated us all by her enthusiasm over soybeans. She introduced us to 'tofu,' a delicate cheese which has not even yet attracted the attention it deserves from the American public.

"In 1903 A.J. Pieters came to me one day and told me of an amazing young Hollander who had been a gardener of the great geneticist, Hugo de Vries. He was then on his way back from a trip on foot to Mexico, and I wired him to come to Washington. For 13 years, as agricultural explorer of our office, Frank N. Meyer tramped from village to village over much of China. He gathered soybeans whenever he saw them, for he felt it was important to secure all the local varieties he could for our plant breeders before they should have disappeared as the result of the spread of standard varieties he thought was bound to come.

"The importance of getting as many as possible of these local varieties and these, or selections from them, form, I believe, the basis of the very extensive soybean breeding that has been done by the various plant breeders of America."

Note: According to Vivian Wiser of the USDA and to the Washington D.C. Historical Society (13 Feb. 1991; phone 301-785-2068, Mrs. Offut), in 1897 Merton Waite lived in downtown Washington, D.C. in a built-up area. There is no record of his owning a farm outside Washington D.C., but he may have owned the farm as a sort of summer home or he may possibly have worked with the group at the USDA farm at Somerset, Montgomery County, Maryland. He was a plant pathologist and physiologist, in charge of diseases of orchard fruit trees, especially pears and peaches. There is a collection of David Fairchild's materials at Coconut Grove. His personal residence, The Kampong near Coconut Grove, is still (as of 1998) well preserved and open to the public. Address: "The Kampong," Coconut Grove, Florida.

3590. **Product Name:** Aloha Shoyu.

Manufacturer's Name: Aloha Shoyu Co. Ltd.

Manufacturer's Address: 807-E Waiakamilo Rd., Honolulu, Oahu, Hawaii. Phone: 87720.

Date of Introduction: 1948.

Ingredients: Water, wheat flour, salt, soy beans, sugar, caramel coloring, and 1/10 of 1% sodium benzoate, a chemical preservative.

Wt/Vol., Packaging, Price: ½ gallon.

How Stored: Shelf stable.

New Product–Documentation: Directory of the City and County of Honolulu. 1947-48. p. 52. Aloha Shoyu Co. Ltd., Clarence S. Okita, president. Nobuichi Kaminaka, vice president. Manufacturers of shoyu and vinegar. 807e Waiakamilo Rd. Tel. 87720. Same in 1955 Directory. Not listed in the 1941-42 directory. Black-and-white photo of rectangular Label from about 1947. Aloha Shoyu Co. Ltd., 609 Waiakamilo Rd., Honolulu. Half gallon. Hawaii Directory of Manufacturers: Vinegar.

Ad by Aloha Shoyu Co., Ltd. in Hui Manaolana. 1951. *Japanese Foods: (Tested Recipes)*. Honolulu, Hawaii. See p. 50. "Ask for the best. It's best because it's Aloha Shoyu. Good for: Barbecue. Sukiyaki. Flavoring."

1964. Aloha Shoyu Company, Ltd., 807-E Waiakamilo Rd., Honolulu. Phone: 817411. Not listed in directories 1967-68. Hawaii Directory of Manufacturers. 1969. p. 16. Aloha Shoyu Co. Ltd. at 609 Waiakamilo Rd. has only vinegar (no shoyu) listed as its product.

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." Shows two labels and gives the address. The company made and still makes HVP soy sauce, and is still in business. Letter from Takao Nihei. 1988. July 19. The company is still in business making amino acid shoyu. However, the company is not listed in any Honolulu directory from 1967-1987. Label. 4.25 by 3.75 inches. Paper. Red, black, brown, green, white on yellow.

3591. **Product Name:** Shoyu Sauce.

Manufacturer's Name: Eastern Manufacturing Co. Ltd.

Manufacturer's Address: 925 Kokea, Honolulu, Oahu, Hawaii. Phone: 86259.

Date of Introduction: 1948.

New Product–Documentation: Directory of the City and County of Honolulu. 1947-48. p. 246. Eastern Manufacturing Co. Ltd. Thomas M. Shaw, president-Manager. Manufacturer of Shoyu Sauce and Other Oriental and American Food Products. 925 Kokea. Tel. 86259. This company is listed but not indexed this year. It is indexed under soy manufacturers in 1949.

3592. **Product Name:** Crown Soy.

Manufacturer's Name: George J. Russell & Co.

Manufacturer's Address: 913a Sheridan, Honolulu, Oahu, Hawaii. Phone: 903365.

Date of Introduction: 1948.

New Product–Documentation: Directory of the City and County of Honolulu. 1947-48. p. 862. Russell George J. & Co. (George J. Russell, Kunichi Murata, Masaichi Akiyama, and Seigi Uehara). Importers and Wholesalers. Manufacturers of Crown Soy. 913a Sheridan. Tel. 903365. P.O. Box 1193. Cable Address "Crown."

3593. **Product Name:** Miso, and Shoyu.

Manufacturer's Name: Honolulu Miso & Shoyu Factory (Honolulu Miso Shoyu Seizo-gaisha).

Manufacturer's Address: 405d Buckle Lane, Honolulu, Oahu, Hawaii. Phone: 66254.

Date of Introduction: 1948.

New Product–Documentation: Directory of the City and County of Honolulu. 1947-48. p. 392. Honolulu Miso & Shoyu Factory (Shigeo Yamada). Wholesale Miso & Shoyu. 405d Buckle Lane. Tel. 66254. Same in 1955 Directory.

Note: (1) Shigeo Yamada was apparently making miso on Maui by 1935. (2) This is the only miso company in Honolulu listed in the early 1960s. The index category disappears in the 1961-62 directory. Hawaii Directory of Manufacturers. 1953. p. 10. Miso (Soy bean paste). Honolulu Miso and Shoyu Factory. 405 Buckle lane.

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." States that Honolulu Miso, Shoyu Seizo K.K. was founded by Mr. Shigeo Yamada. Address: 405 Ruckle, Honolulu. No longer in business. Wm. Higa. 1980. History of Miso Companies in Hawaii; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. The company was founded ca. 1942-1950 by Mr. Shigeo Yamada. No longer in business.

3594. **Product Name:** King Shoyu. Soy Sauce, and Broil King Barbecue Sauce.

Manufacturer's Name: King Shoyu Factory. Renamed King Shoyu Co. Ltd. by 1955.

Manufacturer's Address: 1215 Kona St. near Piikoi (P.O. Box 976), Honolulu, Oahu, Hawaii. Phone: 566-744.

Date of Introduction: 1948.

Ingredients: Water, wheat flour, soy beans, salt, sugar, caramel coloring, and 1/10 of 1% sodium benzoate (chemical preservative).

Wt/Vol., Packaging, Price: ½ gallon or bottle.

How Stored: Shelf stable.

New Product–Documentation: Directory of the City and County of Honolulu. 1947-48. p. 512. King Shoyu Factory (Jukichi, Yoshiko, Hideko, and Toshiko Murata) 1215 Kona. Tel. 66744. P.O. Box 976. This is the earliest listing seen for this company. Not listed in 1941-42. Note: The 1947-48 Directory has the first index category for "Shoyu Manufacturers." and King Shoyu Factory is the only company listed there. 1955 Directory. King Shoyu Co. Ltd., 1215 Kona.

Black-and-white photo of rectangular Label from about 1955. King Shoyu Co. Ltd., Honolulu. ½ gallon. Illustration of a cartoon stick figure king as the "I" in the word King. Wearing a tall crown. • **Summary:** Ad (¼ page). The top ¼ of this ad is in English. The top left illustration shows that they sell Daruma Shoyu—which is probably imported from Japan. Address: 3336 N. Halsted St., Chicago 13, Illinois. Phone: LAkeview 5-7135.

3599. Hokubei Shinposha. 1948. Nyuyoku benran: Tsuketari jushoroku, 1948-1949 nendo [New York Japanese American directory: 1948-1949]. New York, NY: Hokubei Shinposha. 53 + 33 + 99 + 33 p.. Illust. 24 cm. [Eng; Jap]

• **Summary:** This book, which is read from “back to front” (except for the last 33 pages, which are in English) is approximately 70% in Japanese and 30% in English. It is divided into the following sections, each paginated separately: (1) Pictorial history (53 p.).

(2) Who's who (33 p. One person per page, with a photo and a brief biography in both Japanese and English). (a) A full-page biography of Mr. Shinsaku Nagano (p. 11) states: “Soy bean sauce” was virtually unknown in the USA until 1906, when it was introduced and subsequently popularized by an enterprising Issei [first generation] pioneer from Chicago, Shinsaku Nagano. He was the first to successfully commercialize “shoyu,” and today he continues to direct the vast commercial enterprises of his Fuji Trading Co., founded 32 years ago. This company, a large scale manufacturer and canner of “soy bean sauce” and Oriental foods, is now located at 441-459 W. Huron St. [at N. Hudson Ave.], in central Chicago, Illinois. “A native of Shizuoka prefecture [Japan], which he left in 1906, Nagano gained prominence for relief work during the Depression years of the 1930s when he opened his factories at huge expense to house the unemployed. This magnanimous gesture, duly noted by the *Chicago Tribune*, was deserving of the paper's story in his honor.” He is now anxiously waiting for resumption of trade with Japan. In the meantime he continues his hobby, working energetically, which is also the story of his success. Note 1. It is not clear from this biography (in English or Japanese) how Mr. Nagano introduced soy sauce to the USA, when he started making it in Chicago, and what the first name of his

soy sauce manufacturing company was. He may have begun by importing it (in 1906) through Fuji Trading Co. When he saw that it was selling well, he may have constructed a factory to make it in Chicago. His facing biography in Japanese says that in 1910 he started “large scale production and sales” (*tairyô seisan hanbai*); if this is referring to soy sauce, then he started making it by 1910.

(b) A full-page biography of Mr. Kaijiro Tanaka (p. 22) states: A native of Fukuoka prefecture, Mr. Tanaka has the distinction of being the only Japanese tofu manufacturer in New York. He also owns two stores that sell general merchandise and Japanese foods (such as senbei / Japanese rice crackers). In 1906 he first arrived in the USA in San Francisco, California, where he was greeted by the great earthquake and fire. He moved to Denver, Colorado, where he became the city's first Japanese chauffeur. In 1914, after a brief visit to Japan, he returned to the U.S., settling in New York, where he soon entered his present business. He continued the tofu shop until the outbreak of World War II. In 1942 he moved into his present shop at 159 East 53rd St [between Lexington and 3rd Ave.]. He continued his pre-war business and also ran another business (*Tanaka Shokai*, Japanese Export and Import) at West 65th St. He is a member of the executive committee of the New York Japanese American Committee for Japan Relief Inc. and during the war was also on the executive committee of the Red Cross War Fund campaign, Japanese division. He is also a director of the Japanese Christian Institute. Note 2. It is not clear when (probably in about 1914) and at what address he began making tofu in New York—nor what the name of his tofu company was. On the facing page (p. 23) is a biography of Mrs. Kikue Tanaka. Born in Kumamoto prefecture, she came to New York in 1919 while a very young girl. For about 20 years she has been a successful woman restaurateur, owning and managing Suehiro's at East 29th St. Note 3. There is no indication that she is related to Mr. Kaijiro Tanaka, the tofu maker.

(3) Nyuyoku Benran, 1948-1948, published by Hokubei Shimpō-sha (99 p., all in Japanese). On page 29 of this section is a subsection on tofu business. See Tanaka 1914. (4) Ads at back (p. A1 to A13, B1-B18). (5) Classified business directory (33 p. all in English, numbered in the opposite direction as most of the book. Encompasses points as distant as Ohio and Florida). There are ads between most sections of the book. Address: New York City, New York.

3600. Koens, A.J. 1948. Peulgewassen [Leguminous crops]. In: C.J.J. van Hall and C. van de Koppel, eds. 1948. De Landbouw in de Indische Archipel [Agriculture in the Indonesian Archipelago]. 'S-Gravenhage: N.V. Uitgeverij W. van Hoeve. Vol. IIA. 905 p. See p. 241-42, 258-274, 473. In collaboration with G.G. Bolhuis. [79 ref. Dut]

• **Summary:** Contents: The plant. Varieties. Selection. Soil and climate. Methods of cultivation. Insects and diseases.

Economics. Planting. Utilization. Value as a food (source of nutrients) for the people of Indonesia (*Indonesië*). Trade and commerce (*Handel*). Contains an excellent bibliography.

The section on “Utilization” mentions (and describes briefly how each is made): green vegetable soybeans (*de halfrijpe planten*), whole dry soybeans, roasted soybeans, ketjap (or soja or shoyu or taoyoe), tofu (*tao-hoe*, *bonenkaas*), baked tofu, firm tofu (*tao koan*; also simmered with *Curcuma longa*), sprouts (*taogè*), Indonesian-style miso (*tao-tjong*), fermented black soybeans (*tao-dji*), tempeh (*tempe*), MSG (*Vetsin*), soybean meal (*sojameel*).

3601. Komaki (Joe T.); Kalifornians Enterprise. comp. 1948. Shikago Nenkan Chicago Japanese American year book. Chicago, Illinois: Joe T. Komaki, KE. 176 p. 22 cm. [Eng; jap]

• **Summary:** This directory is mostly in English.

It contains advertisements for: Showa Shoyu Brewing Co., Glendale, Arizona (p. 38-39). “Club” Shoyu, distributed solely by Pacific Mutual Sales Co., San Francisco, California (p. 40). Tofu—Ageh [Agé] Manufacturer. Asato Soy Bean Food Shop (p. 40). Mori Tofu Co., Chicago: Manufacturers of tofu (p. 43).

The pages in the 1948 Year Book are numbered continuously from beginning to end (p. 176), but the pages that contain bleed photos do not bear numbers. Very little of the 1948 Year Book is in Japanese; any Japanese appears under an English head. The 1948 Year Book does not contain alphabetical listings of businesses. The 1949 Year Book does, but the only apparent businesses that make soy products are Asato and Mori. Address: 1833 N. Bissel St., Chicago 14, Illinois.

• **Summary:** The original edition of this book was published in 1862, in London (which see). This edition, edited by Lady Strachey, was copyrighted in 1912. Address: London.

3603. Li, Ch’iao-p’ing [Qiaoping]. 1948. The chemical arts of old China. Easton, Pennsylvania: Journal of Chemical Education. viii + 215 p. See p. 170-80. Illust. 24 cm.

• **Summary:** Chapter 14, titled “Soybean products,” begins: “Three kinds of soybean products, fermented soybean, soybean sauce and soybean curd, have been largely produced in China and Japan and exported to other countries where they are used to a smaller extent. The first kind called in China ‘chiang’ or ‘shih’ (1 Cc = Chinese character of each is shown), the second ‘chiang yu’ or ‘chih-yu’ and the last one ‘tou-fu’ (2 Cc) are all considered by the Chinese and Japanese as important articles of diet.

“Both the fermented soybean and soybean sauce are

made by the fermentation of either soybean alone or the mixture of soybean and wheat flour in salt solution. Their manufacture originated in the Chou Dynasty [pinyin: Zhou, 1045-256 BC]. It is stated in *Chou li* [pinyin: Rites of the Zhou dynasty, ca 300 BC] that an officer, i.e. the Imperial Cook, was appointed to take charge of making and providing one hundred and twenty of the fermented soybean per year for imperial use. According to another book, the invention of this condiment was attributed to the Duke of Chou. The History of the Han Dynasty 91.7 and the *Shih shi* 129.15 also say that many merchants enriched themselves or obtained titles by the sale of these products in the time of the Ch’in [pinyin: Qin, 221-206 BC] and the Han [202 BC to AD 220] dynasties. From this it is obvious that they were already largely consumed by the Chinese people in ancient times.

Bean curd also had its origin in early times. It is said to have been made first by Liu An (2 Cc) (died 122 B.C.) and was early known as *li-ch’i* (2 Cc) *Shih wu yüan hui* 30.6, *Materia Medica* 25.2.

“During recent years a considerable amount of scientific investigation of soybean sauce has been carried on in China. Methods of manufacture described in early Chinese texts have been modified in many respects...”

“The ancient method of preparing fermented soybean:” A detailed (2¼-page) translation is given of the method for making jiang and shih described in the *Ch’i min yao shu* 8.2b-7a.

The introduction to the translation states: “The process of making the fermented soybean consisted of subjecting the mixture of soybean and wheat flour to the action of certain species of mold and mixing and storing the product with brine in a large container to allow the fermentation to take place.”

Note: This book was first written in Chinese, entitled “History of Chemistry in China,” and published by the Commercial Press Ltd., Shanghai, China. The 1st edition appeared in 1940 and the 2nd ed. in 1941. It was also translated into Japanese and published there in 1941. Address: 10A Hua Yuan Ta Yuan, Fu Ch’ien Chieh, Peiping, China.

3604. Oriental Show-You Company. 1948. Manufacturers of Oriental Show-You (Ad). In: Hokubei Shinpo-sha. 1948. *Nyuyoku Benran: Tsuketari jushoroku, 1948-1949 nendo* [New York Japanese American directory: 1948-1949]. Ad p. B-14. [Eng]

• **Summary:** Ad (½ page horizontal; see next page). The top 1/3 of this ad is in English. “Canning and wholesale of [mung] bean sprouts. Chow Mein, noodles and vegetable chop suey.” In Japanese: Oriental Shoyu Jozo Kabushiki Kaisha, President Mr. Shinzo Ooki, shoyu maker. Address: Columbia City, Indiana.

3605. Pacific Mutual Sales Co. 1948. "Club" Shoyu (Ad). In: Chicago Shimpō, Inc. 1958. Chicago Japanese American directory. See p. 40. [Eng; jap]

• **Summary:** Ad (½ page). The top line and the bottom ¼ of this ad are in English. The word "Kurabu" is written in katakana characters inside an octagon that is wider from left to right than from top to bottom. In the top right, in Japanese, is written vertically "Hon-zukuri Kurabu shoyu" (truly / traditionally made Club Shoyu) Pacific is the sole distributor. We are not told where the product is made, or by what company.

Ad also appears in 1948 in Nichi Bei Times. Evacuation resettlement report. p. 143 (half-page ad on right). May 31. Address: 1498 Ellis St., San Francisco, California. Phone: WAlnut 1-2932.

3610. Larson, Roy F.; Liggett, Robert Winston; Mussulman, Wayne C. Assignors to A.E. Staley Manufacturing Company. 1949. Flavoring materials. *U.S. Patent* 2,459,563. Jan. 18. 4 p. Application filed 19 May 1947.

• **Summary:** This method for production of a synthetic soy sauce reduces fermentation time from years to weeks. It substitutes fermentation of a single ingredient for the fermentation of entire product required in the making of genuine soy sauce. The results, the inventors claim, approach the characteristic odor and flavor of genuine soy sauce more closely than do soy-type condiments prepared by chemical methods alone.

The opening paragraph of the patent states that "it pertains to methods for improving the aroma and flavor of unfermented liquid flavoring materials resembling the condiment known as soy sauce." The first step in the process typically involves hydrolyzing defatted soybean meal with acid. "Combining chemical hydrolysis of the protein material with subsequent fermentation of the hydrolyzate, as suggested by the prior art, may tend to overcome the aroma and flavor disadvantages of the straight chemical sauce and may also reduce the fermentation time required by the conventional soy sauce process, but it still requires a preparation time that is quite long compared with that of a chemical sauce." Address: Staley.

3611. Moyer, Wendell W. Assignor to A.E. Staley Manufacturing Company (Decatur, Illinois; a corporation of Delaware). 1949. Flavoring materials. *U.S. Patent* 2,459,574. Jan. 18. 4 p. Application filed 19 May 1947. [4 ref]

• **Summary:** "This invention... has to do with novel methods for improving the aroma and flavor of unfermented liquid flavoring materials resembling the condiment known as soy sauce.

"Genuine soy sauce is made by a fermentation process requiring from about two months to several years to complete. The fermentation liquid has a characteristic pleasant aroma and flavor. In general, the sauces prepared by the longer fermentations have superior aroma and flavor."

"Example 1: Unfermented liquid sauce similar to soy sauce was prepared by acid digestion of soybean meal

according to directions given in United States Patent No. 1,992,462. A mixture of 19 parts of refinery cane molasses and 1 part of the unfermented sauce was diluted with water to 40 percent solids, was inoculated with a culture of *Zygosaccharomyces nussbaumeri* and incubated for five days at 100°F..." Note: This is a co-patent to No. 2,459,563. Address: Decatur, Illinois.

3615. Smith, Allan K. 1949. Oriental use of soybeans as food: Notes on Oriental farming practices. II. China. *Soybean Digest*. March. p. 26-28, 30, 32, 34.

• **Summary:** Contents: Soy sauce in China. Sweet flour paste—Tien Mien Chang [Chiang]. Soy or vegetable milk (incl. Willis Miller, yuba). Soybean curd or tofu (incl. use in Buddhist restaurants to look like meat, poultry, or fish dishes).

Soybean cheese [fermented tofu]. Fen-t'iao from mung beans (vermicelli). Fermented soybeans [fermented black soybeans] (made from small black soybeans). Vinegar fermentation process. Address: Northern Regional Research Lab., Peoria, Illinois.

3616. Smith, Allan K. 1949. Oriental use of soybeans as food: Soybean cheese [fermented tofu] (Document part). *Soybean Digest*. March. p. 30.

• **Summary:** "Soybean curd, previously described, is the starting material for making all types of soybean cheese. In making the curd, it is pressed hard enough so that it can be cut into small cubes, these varying in size for different cheese preparations. Significant variations in the process, besides the microorganisms, are the proportions of salt and type of solution in which the cheese is aged. The cheese

appears to vary somewhat with the locality in which it is produced, a variation due probably to the influence of climatic conditions on the activity of the fermenting microorganisms.

"At Hangchow they make a cheese product known as 'Chee-fan,' 'Chee' meaning cheese and 'fan' meaning small cube, hence a literal translation is 'small cheese cube.' This type of cheese was reported to be made in only two localities, Hangchow [pinyin: Hangzhou] and Shoshing [sic, Shao Hsing; pinyin: Shaoxing, in Chekiang (pinyin: Zhejiang) province], the home of the famous Shoshing wine.

"*Chee-fan* is a brownish soft cheese. It has both an agreeable smell and taste. The following materials and proportions are recommended for making this cheese." A table shows: Soybeans 70 kg. Salt 25 kg. Yellow wine (Shoshing) 55 kg.

"In making the cheese the pressed soybean curd, prepared from the recommended amount of beans, is cut into cubes about ½ by ½ by ¼ inches. The cubes are inoculated with mold, salted, and placed in an appropriate storage house for about 7 days for development of mold. The mold (*Mucor*) is grown on wheat flour. It exists in Chinese mold of wine and is white in color. Also, *Aspergillus glaucus*, blue in color, apparently takes part in the cheese development. The cubes are next placed in an earthen crock or wide-mouth bottle of about 2-gallon capacity, and yellow wine and mold of wine are added. It is allowed to age in the wine for about 1 year.

"*Tsue-fan* is another type of cheese that translated literally means "drunken cheese". The name probably reflects the use of wine in making the cheese. The materials and proportions for this cheese are: A table shows: Soybeans 70 kg. Salt 15 kg. Wine 35 kg.

"The pressed soybean curd, cut into cubes 1½ by 1½ by ½ inches, is boiled in water, cooled, and partly dried. It is molded and placed in yellow wine (rice wine) with wine mold added and aged for 6 months.

"*Hon-fan* is a red cheese that makes use of soy sauce in its preparation. The materials and their proportions are as follow: A table shows: Soybeans 70 kg. Salt 30 kg. Soy sauce 10 kg. Red mold (from Foochow) 0.75 kg.

"This cheese is made in the same manner as "drunken cheese" except that soy sauce rather than wine is used in aging the cheese. It was reported that red cheese is made only in the fall of the year."

Note: This is the earliest document seen (Oct. 2011) that uses the term "Chee-fan" or the term "Tsue-fan" or the term "drunken cheese" or the term "Hon-fan" to refer to fermented tofu. Address: Northern Regional Research Lab., Peoria, Illinois.

3617. Oriental Show-You Co. 1949. Display ad: Chop suey: Make it at home. *Washington Post*. April 8. p. 8.

• **Summary:** A horizontal rectangular ad. An illustration shows a large bottle of Oriental-brand Show-You sauce.

"Send for free Oriental recipe book." Address: Columbia City, Indiana.

3618. Smith, Allan K. 1949. Oriental uses of soybeans as food: With attention to fermented products. Notes on Oriental farming practices. IV. Japan. *Soybean Digest*. May. p. 24-26, 28, 30.

• **Summary:** Contents: Introduction. Production of miso. Soy sauce in Japan. Monosodium glutamate. Trends in soy sauce production.

"The Kikkoman Shoyu Co. Ltd. was founded in 1764. This is the largest soy sauce plant in Japan and probably the largest in the world for making a fermented type sauce. The annual shoyu production at Noda has been as much as 23 million gallons, consuming 30,000 tonnes (11 million bushels) of soybeans, 27,000 tonnes of wheat, and 29,000 tonnes of salt. The Noda city factory includes 8 brewing plants, 1 barreling plant, 6 auxiliary plants for the construction of barrels and other materials used in their process, and a research laboratory with a staff of more than 30 workers. The factories of Noda city are spread over 2,333 acres of land... The koji is made in wooden trays about 14 by 24 by 4 inches deep. There are 1,500 cement fermenting tanks in one plant. For a good grade of soy sauce, the mash is fermented for 8-12 months. But owing to the current pressing need for the sauce, the fermenting period is now often shortened to 3 months." Address: Northern Regional Research Lab., Peoria, Illinois.

3619. Culbertson, Raymond E.; Smith, Allan K. 1949. Oriental uses of soybeans as food: With attention to fermented products. Notes on Oriental farming practices. V. Korea. *Soybean Digest*. June. p. 15-18, 20, 22.

• **Summary:** Contents: Introduction. Breeding work. Topography. Land use. Soybean varieties. Climatic relations. Soils of Korea. Cultural practices. Marketing. Soybeans as foodstuff. Soya sauce. Green pods on the bush. Bean

sprouts. Parched beans. Curd (soybean curd [tofu]) and milk. Kochuchang. Other uses.

"Prior to World War II, North Korea planted (1940-44 averages) slightly more than 905,000 acres of soybeans annually which yielded some 7,700,000 bushels. During the same 5-year period South Korea was planting 626,000 acres which yielded a little over 5 million bushels. The latest available figures (1947) for South Korea show a production of 4,480,000 bushels from 662,000 acres."

Concerning food uses of soybeans in Korea: "Soya sauce:... is found on the tables of all Koreans, where it is used quite generally on rice, sukiaki [sukiyaki], fish, chicken, and other meats and for the flavor it adds to the soup. It is a very popular appetizer. Most families make soya sauce and are allocated 2.7 kilograms of salt per person annually for this purpose. Yearly consumption is about 6 liters per person. In addition to homemade soya sauce, a supply is also available from many small factories making it. There are more than 10 plants in Seoul, the capital city. Making soya sauce in the home starts about January or February. It is the custom at this time to take a batch of beans and boil them in water until soft, following which they are mashed and formed into a ball, placed in a rice-straw bag and hung up in a heated room to ferment for a 3-month period. Following fermentation, the ball is cut open, broken into pieces and allowed to dry in the sun. When dry, water and salt are added, inoculant (yeast) introduced and the mixture allowed to stand in an earthen crock 2 to 3 months. The liquid is then poured off, boiled about 2 hours and filtered, following which it is considered to be sauce. The sediment remaining in the crock is known as paste. This is used primarily for making soup. In both home and commercial production of soya sauce parched and browned wheat or barley is frequently used in conjunction with the soybeans.

"Green pods on the bush: It is common practice to market early beans on the bush. The plants are pulled, dirt shaken from the roots and the leaves removed. The branches are tied with a string (usually hemp) and the plants are taken to market where they are sold by the bunch. The housewife prepares them for eating by picking off the pods and boiling, and the plant stem is used for fuel.

"Bean sprouts: Bean sprouts are much in demand especially during the winter months. They are used in combination with meat, Chinese cabbage, spinach, turnips, soups and various other cooked dishes. Sprouts are nourishing and supply much-needed vitamins to the Korean's usual polished rice diet. In some instances the beans are left on the sprouts, in others they are removed. The beans are sprouted in central places and usually peddled in two-wheeled, man-drawn carts. Sprouting requires about a week. They are sold on a weight basis.

"Parched beans: For parching, soybeans are simply placed in a pan over a fire and heated slowly until the skin breaks and part of the beans are slightly blackened. They are

eaten like peanuts or mixed with other foods. Most varieties are quite palatable and well liked for parching. Note: The Korean name for parched soybeans is *kong*.

“Curd and milk: Soybean milk is consumed in Korea but not so extensively as in China. The milk is made in a manner similar to the Chinese method which was described in an earlier report.

“A large percentage of the soybeans’ growth in Korea are consumed as soybean curd. In addition to the huge quantities made at home, curd is also made in literally hundreds of small factories. In Seoul alone there are more than a hundred. Small units, which on the average employ five men, can work up about 10 bushels of soybeans daily.

“Kochuchang: Practically every Korean family makes kochuchang. Boiled [soy] beans are mashed and hung up in sacks to cure well for 2 or 3 months. This material is then broken up, dried in the sun, and ground to a fine powder, usually in an old type hand-operated stone mill. Red peppers are ground fine, the lot is mixed and salt and water added, then it is allowed to stand in crocks 2 to 3 months. To prepare kochuchang for the table, it is taken from the crock and boiled with the addition of ground meat and sugar, if the latter is available.”

Note: This is the earliest (and only) English-language document seen (March 2009) that uses the word “kochuchang” to refer to Korean-style red pepper and soybean paste (miso).

Photos show: (1) A man standing in a field of sorghum interplanted with soybeans in Korea. (2) A Korean woman examining different varieties of soybeans in woven baskets in the market place in Seoul, Korea (Aug. 1948). (3) A boy carrying a wooden bucket on each end of a wooden shoulder pole. The buckets are used for transporting night soil to the land in Korea. (4) Soybean curd (cut into cakes) and vegetables in the market place at Seoul, Korea (Aug. 1948).

An outline map of South Korea and its provinces shows the principal varieties of soybeans grown, the section where each variety is grown, acreage and production. A chung or chungbo is 2.45 acres, and a suk is 5 bushels. The yields appear very low but this may be due to the custom of interplanting soybeans with other crops.

Tables show: (1) The 15 chief varieties of soybeans grown in Korea. For each is given: The name of each variety (romanized, with a translation of each word). Days to maturity. Flower color. Stem length. Color of seed coat and hilum. Weight of 1,000 seeds. Yield per acre. Rank in test. Year approved (1921-1939). For example: Chang Tan Paik. “Chang Tan” is the name of a town in Korea; Paik means “white.”

(2) Analytical data for improved varieties of soybeans on the basis of the size of the bean. The 3 sizes are large, medium, and small. Examples of locations are: Southeast Korea. Northeast Korea. Central Korea. Southeast Korea. Address: Northern Regional Research Lab., Peoria, Illinois.

3620. Smith, Allan K. 1949. Oriental methods of using soybeans as food: With special attention to fermented products. Notes on Oriental farming practices. *USDA Bureau of Agricultural and Industrial Chemistry*. AIC-234. June. 40 p.

• **Summary:** Page 1 states: “The text of this bulletin, with slight revisions, is as it appeared serially in *The Soybean Digest*, issues of February through June, 1949, although many additional photos appear herein. It is processed with the publisher’s permission.” Note: An enlarged 65 page edition was issued in July 1961.

Photos show: (1) Nine people in a field cultivating soybean with hoes near Nanking, China. All of these workers but one are women. July 1948. (2) “The three-man shovel, Korean version of the turning plow. The motive power is supplied by the man holding the ropes.” (3) A man and donkey threshing wheat with a stone roller. (4) A water buffalo and man pumping water from the rice fields. All parts of the pump and elevator are made of wood. Near Nanking, China, July 1948. (5) Windmill used for pumping water. The sails or vanes are mats woven from grass. (6) Children with baskets of soybean sprouts and inflated Chinese national currency in the market place at Canton, China. Aug. 1948. (7) Soybean milk for sale on the streets of Canton, China. Aug. 1948. It is in bottles, carried using a shoulder pole. (8) A wedge press for oilseed operations at Canton, China. Preformed disks of the flaked or ground meal are inserted in the slot and turned clockwise in the hollow log; pressure is applied with wooden wedges. July 1948. (9) Equipment for steaming soybeans preparatory to making soy sauce. Steam is passed upward through the wooden tanks from a boiler beneath. Peiping, China. 1948. (10) Soy sauce preparation. Steamed soybeans are placed in woven baskets or trays for 3 to 7 days to permit the growth of the mold *Aspergillus oryzae*. Nanking, China. July 1948. (11) Many earthenware jars for soy sauce production in a courtyard surrounded by houses. “Following the growth of a thick mold on the soybeans, they are mixed with parched and cracked wheat and placed with salt solution in earthenware jars for fermentation, which lasts 3 months to 2 years. Soy paste [chiang] is fermented in a similar manner but it contains less water and the fermentation period is about 3 months. Shanghai, China. Aug. 1948.” (12) “Soybean curd and vegetables displayed for sale in market place, Seoul, Korea. Aug. 1948.” (13) Squares of soybean curd covered with white mold on round, woven bamboo trays. “This is the first step in making soybean cheese. Canton, China, Aug. 1948.” (14) Two rows of large hydraulic presses in the mill of the China Vegetable Oil Company, Shanghai. June 1948. (15) Men loading round, hydraulic-pressed soybean cakes onto a truck, on the Bund. Shanghai, July 1948. (16) Men and an ox preparing a seed bed at a Japanese agricultural experiment station near Tokyo. 1948. (17) “A miso plant in Tokyo. The

large tubs [vats] in foreground are used for the fermentation of miso. A part of this plant was destroyed by bombs during the war. Aug. 1948.” (18) Three men standing by presses destroyed during bombing raids over Tokyo. These presses formerly were used for filtering monosodium glutamate. July 1948. (19) Many stacked wooden tubs of ajinomoto (monosodium glutamate) ready for shipment at a plant located between Tokyo and Yokohama, Japan. Aug. 1948. This plant had a maximum production of 7.5 million pounds of ajinomoto in 1937. (20) Agricultural Experiment Station near Seoul, Korea. This station was built by the Japanese during their occupation of Korea. Later it was taken over and administered by the newly formed Korean Government. Aug. 1948. (21) A Korean boy standing in a field of sorghum interplanted with soybeans; this is a common practice in Korea. 1948. (22) A boy using a shoulder pole to carry two wooden buckets of night soil to the land. Korea. 1948. (23) A wooden shopper looking over the different varieties of soybeans in the market place at Seoul, Korea. Aug. 1948. (24) Outline map of Korea showing where principal varieties of soybeans are grown, the section in which each variety is found, the acreage, and production. Address: Head of Meal Products Investigations, Oilseed Crops Lab., Northern Utilization Research and Development Div., Peoria, Illinois.

3621. *Soybean Digest*. 1949. New soy sauce method. July. p. 21.

• **Summary:** “A new method for the production of synthetic soy sauce, cutting fermentation time from years to weeks, has been developed at Decatur, Illinois, by Roy F. Larson, Robert Winston Liggett, and Wayne C. Mussulman.”

• **Summary:** “Plus a tin of chow mein noodles and a bottle of soy sauce. Three to four generous delicious servings. Ready to eat. All you have to do is heat and serve it.” A photo shows the front of a can of Chicken Chow Mein with what appears to be a bottle of soy sauce next to it.

Note: This is the earliest document seen (Feb. 2012) concerning Chun King and soy sauce. Address: Modern Market, Downtown, Street Floor.

3626. Chatfield, Charlotte. 1949. Food composition tables for international use. *FAO Nutritional Studies* No. 3. 56 p. Oct. [158* ref]

• **Summary:** A table on page 11 shows “Food composition in terms of retail weight (“as purchased”) for soybeans and various soybean products: Whole seeds, dry; Flour, full fat (seed coat removed); Flour, low fat—grits, flakes (partially defatted); Curd, tofu (yield 3.5); Fermented beans—Japanese natto; Fermented beans—Chinese tsiang [chiang]; Soybean milk (yield 7.5); Paste, miso (made with small amounts of rice or other starchy materials) (yield 2.5); Shoyu sauce (yield 3.5). The following are given for each product: Calories per 100 gm, percentage of protein and fat, and yield from 1 kg of soybeans.

Similar but expanded information is given on p. 25, including carbohydrate, fiber, ash, and refuse. Address: Nutrition Div., FAO, Rome, Italy.

3627. Chia, Ji Chiao; Mu, Hsian Kuan; Lang, Chuan Feng. 1949. Preparation of soy sauce. Translated by Mr. Hoo. Shanghai, China: National Bureau of Industrial Research Laboratory. 14 p. Oct. 11. [Eng]

• **Summary:** Contents: Introduction. The factory and its equipment. The procedure. Treatment of raw materials: For soybean, treatment of wheat. Growth of culture: sterilization of culture room and culture dishes, stirring of culture, the culture. Preparation of soy mash. Preparation of chemical soy sauce. Preparation of soy color and caramel. Pressing, sterilization and additional treatment. Address: National Bureau of Industrial Research Lab., Shanghai, China.

3628. *Vegetarian News Digest (Los Angeles)*. 1949. Health in the news: The soy bean—wonder food of many uses. 1(9):21. Sept/Oct.

• **Summary:** “Allan K. Smith of the Northern Regional Research Laboratory, Peoria, Illinois, recently returned to the United States from the Orient where he learned of countless uses for soy beans. In China, Japan and Korea he found soy beans being fermented, ground, and processed in various ways. In its motherland, Smith discovered, the soybean is a source of flour and cake, oil, bean sprouts, vegetable milk, various sauces and pastes, curd, cheese, and several other foods.” Describes how soy milk is made in China. One restaurant that Smith visited prepared more than 25 different dishes from soybeans.

3629. Wang, Fu-Sheng. 1949. Bacterial examination of soy-bean-sauce in Peking. *Chinese Medical Journal* 67:542-46. Oct. Summarized in *Soybean Digest*, Jan. 1951, p. 37. [4 ref. Eng]

• **Summary:** In 1945 it was reported from Chengfu (see Wang 1945, *American J. of Tropical Medicine*) that Chinese soy-bean sauce was transmitting gastro-intestinal bacterial infections. “The author found positive cultures in as many as 35% of the samples examined. If this finding can be confirmed, it seems to be” a serious public health problem.

“In contrast to the findings of Wang in Chengfu, the present examination of 51 samples of soy-bean sauce in Peking showed an absence of the common gastro-intestinal pathogens. However, the finding of coliform bacteria in some of the samples examined might indicate a certain amount of fecal contamination. This point is worthy of further study.” Not a single mold was found in the 51 samples examined. Address: Dep. of Bacteriology and Immunology, Peking Union Medical College, Peking.

3630. Brant, Burl. 1949. CARE packages use soy products. *Soybean Digest*. Nov. p. 39.

• **Summary:** “Since April 1948, when the Japanese Food Package for CARE was developed, two soybean products have been continuously included in those packages. They are soy sauce, known as ‘shoyu’ and a bean curd [sic] preparation, known as ‘miso.’” Both the miso and shoyu shipped to Japan were made in the USA. The annual production of shoyu in America is estimated at about 500,000 gallons. The shoyu sent to Japan is made by blending traditional fermented shoyu with HVP soy sauce. Address: Asst. Executive Director, Cooperative for American Remittances to Europe, Inc. (CARE).

3631. Kagawa, Aya. 1949. Japanese cookbook (100 favorite Japanese recipes for Western cooks). Tokyo: Japan Travel Bureau. 162 p. Illust. (line drawings, and color-, and black and white photos). 19 cm. Series: Tourist Library No. 11.

• **Summary:** Contents: Preface. General remarks (The why of Japanese food, its nutritive value, table utensils, an ordinary meal, meals for guests, table etiquette, kitchen utensils, how to cut up fish and vegetables, glossary {incl. aburaage, miso, shoyu, tofu}). Japanese cookery: Table of measures, soups, boiled foods, broiled foods, fried foods, saucepan foods, steamed foods, *hitashimono* (boiled greens in soy [sauce]), *aemono* (dressed vegetables), vinegared foods, sliced raw fish (sashimi), rice foods, sushi (vinegared rice foods), pickles, seasonal menus, New Year’s foods, Girls’ Festival foods. How to make Japanese cakes (incl. bean paste from red beans).

Many recipes call for “shoyu” [soy sauce]. Soy related recipes: Scrambled egg soup (with shoyu or Worcester sauce, p. 42). Tofu and Japanese leek soup (p. 49). Miso soups (p. 50-51). Broiled egg-plants (with miso, p. 70). Beef sukiyaki (with tofu, p. 79-80). Fish stew (with tofu, p. 81). Odamaki mushi (with yuba, p. 85). Boiled greens in soy (p. 91-92). Dressed food with white sesame [seeds] and vinegar (and aburaage {fried beancurd}, p. 96). Dressed carrot and kidney beans in pod (with tofu, p. 97).

On p. 14 we read: “Soy beans are used very much in Japanese food; especially in hilly regions where fish is scarce, or in vegetarian menus (in connection with Buddhism). Beans are not only simply boiled but eaten in various ways. They are made into *tôfu* (beancurds), *aburaage* (fried *tôfu*), *nattô* (steamed and fermented beans), *shôyu*, *miso*, [azuki] bean-paste used in cakes, etc.” Key flavorings are miso, shoyu, sugar, and vinegar. Sake, mirin, dashi and ajinomoto (seasoning powder) are also important. “Seaweeds are usually eaten dry. Nori (seasoned laver), kombu (tangle), wakame (lobe leafed undaria), hijiki (spindle-shaped bladder-leaf), and so on, are rich in iodine,....”

Note: This is the earliest English-language document seen (May 2012) that contains the word *aburaage* or the term “fried *tôfu*” (with diacritics). They refer to deep-fried tofu pouches.

“Of flavorings, *miso*, *shôyu*, sugar and vinegar are

the most important. *Sake* (Japanese wine), *mirin* (a sweet kind of *sake*) and *dashi* are used in this way to give flavor. Properly speaking, *dashi* is formed by boiling shaving [sic, shavings] of *katsuobushi* (dried bonito) or *kombu* (tangle, a kind of kelp), but *ajinomoto* (seasoning powder) may take its place. Usually, however, *dashi* is not made, and instead *niboshi* (a small dried fish) is boiled together with the food to give it flavor. Besides, ground walnuts sesame, peanuts etc., are used to dress vegetables. In addition to these, mustard, red pepper, horse radish [wasabi], the leaves and berries of *shiso* (a kind of highly flavored leaf), the leaves and berries of *sansho* (Japanese pepper), Japanese leeks [negi], *myôga* (myôga ginger [*Zingiber mioga* Roscoe]), ginger [shôga, the root of *Zingiber officinale*], are used as flavorings, being found growing in most kitchen gardens.”

“Our special thanks are due to Dr. R.H. [Reginald Horace] Blyth, professor of Gakushin University, who translated the original Japanese manuscript into English.” Aya Kagawa was born in 1899. The book was first published in December 1949 but not copyrighted until 1952. The almost identical 9th printing appeared in April 1955. Only the color photos were changed (upgraded) by 1955. The first true revision and 2nd edition was the so-called “Fourteenth & revised edition” of 1962. Address: M.D. and president of Joshi Eiyô Tanki Daigaku (Women’s Nutrition College), Tokyo, Japan.

• **Summary:** Page 565: “Oriental Show You Company, Inc., Columbia City, Indiana. Canned chop suey, canned chow mein noodles, canned [mung] bean sprouts, etc.”

3635. La Choy Food Products, Inc. 1949. The art and secrets of Chinese cookery. Archbold, Ohio: La Choy Food Products. Div. of Beatrice Foods Co. 27 p. Illust. (some color). 10 x 16 cm. *

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

3636. Loma Linda University, School of Dietetics. 1949. Lesson outlines in nutrition & cookery. 2nd ed. Mountain View, California; Brookfield, Illinois; Cristobal, Canal Zone; Omaha, Nebraska; Portland, Oregon: Pacific Press Publishing Assoc. 128 p. 20 cm. [13 ref]

• **Summary:** “Foreword: The purpose of this little book is to serve as a guide in the study of simple facts about nutrition and healthful cookery, primarily prepared to be used in community nutrition classes.” The guidelines, in outline format, are also helpful in teaching the principles of healthful vegetarian nutrition and cookery.

Also discusses: Soybeans as a good source of high quality protein (p. 29). The meatless diet: Meat is not a nutritional necessity, disadvantages of flesh foods (animals are diseased; rich in nitrogenous waste products, which kidneys must eliminate. These act as a stimulant; poor source of most vitamins and calcium; expensive), importance of knowing how to make proper substitution when discontinuing a meat diet, protein content of average servings of some [non-flesh] foods (including soybeans) (p. 31-33). Homemade Vegex (with ½ pint soya sauce, p. 113). Protein foods (gives the composition of soybeans, p. 118). Loma Linda Foods (nutritional composition of their commercial products; Vegemeat Burger, Vegemeat Steaks, Nuteena, Proteena, Peanut butter, Vegex; p. 119). Calcium content of foods (incl. turnip greens, mustard greens, soy bean curd, kale, dry soybeans; p. 120). Iron content of foods (incl. mustard greens, soybean curd). Address: Loma Linda, California.

3637. *Madison Health Messenger (Madison, Tennessee)*. 1949. The story of Madison Foods. Vol. 49-3. p. 1-6. Undated.

• **Summary:** “Over 45 years ago [actually in 1904] a group of educators founded an institution in Madison, Tennessee, where special study was given to healthful living. They began by operating a school on a farm. Later a sanitarium was built. And, finally, a food production department was opened, now known as Madison Foods... People who came to the sanitarium were helped by the treatments and the plain wholesome food. However, because when they returned to their homes, they were unable to obtain some of the foods which proved helpful, many sent their orders to us for these foods. The popularity of the foods increased and now they are available in many stores throughout the 48 States.”

“In 1941 a building program was started to completely rebuild the Madison Foods plant on the original site. Modern

offices, adequate storage and shipping facilities, a five story production section, complete revamping of processing equipment, and a re-arrangement of the plant were realized step by step, and now the Madison Food plant, built of concrete, blocks, and steel, with tile and plastered interior, and a building of modern design for greater efficiency, stands as a monument to the devotion of its founders and the perseverance of those who carried the torch onward.

“A character builder: As part of the vocational training program at Madison College, Madison Foods is primarily concerned with building strong physical bodies and strong minds.”

Photos show: East side view of the new Madison Foods plant. A can (with label) of Stake-Lets (the original gluten-soy product, a complete protein food, sold in 14, 20, and 30 oz sizes). A young man standing next to a large autoclave used for cooking canned foods. Four young ladies hand picking peanuts to insure quality. Front view of the new Madison Foods plant ranging from 2 to 5 stories in height. A can of Yum (14 oz, made with grains, legumes, and vegetables). A young man operating an homogenizer that is homogenizing Kreme O'Soy. A student operating a machine that is labeling cans.

Page 5 contains a description of the various products, with their ingredients, made by Madison Foods: Zoy-Koff—an alkaline beverage used in place of coffee. Contains no coffee—no nerve stimulants. Two grinds—regular and fine. Prepare like coffee. Ingredients: Soybeans, bran, brown sugar. 1 lb bag.

Kreme O'Soy—a rich-bodied, homogenized soy beverage. May be used in place of milk. Ingredients: Soybeans, soy oil, dextrose, calcium phosphate, sodium chloride. 20 oz cans.

Zoyburger—excellent for sandwich spread, serve like steak with onions. Ingredients: Soybeans, gluten, raw peanut meal, vegetable seasonings. 14 & 20 oz cans.

Stake-Lets—a combination of gluten and soybeans sliced in meatlike sauce. Ingredients: Gluten, soybeans, soy sauce, seasonings. 14, 20 & 30 oz cans.

Not-Meat—a smooth-textured loaf for vegetable roasts, salads, sandwiches, etc. Ingredients: Whole peanut meal, soybeans, and seasonings. 14 & 20 oz cans.

Vigorost—a fibrous-textured vegetable steak used like meat. Also for sandwiches, salads, etc. Ingredients: Gluten, soy cheese, whole peanut meal, seasonings. 14 & 20 oz cans.

Yum—a mild bologna-like-flavored, meatless loaf, used hot or cold. Ingredients: Soybeans, gluten, soy cheese, whole peanut meal, seasonings.

Cheze-O-Soy—a curd made from soybean milk, to be used in salads, sandwiches, spaghetti, etc. Ingredients: Coagulated soybean proteins, seasonings. 14 & 20 oz cans.

Bite-Size Stake-Lets—gluten and soy bits in rich sauce simulating stewed bits of beef in rich gravy. A choice food. 20 oz cans.

“A statement of ingredients, use and recipes is on each package and can of Madison Foods.”

3638. Mogi, Masatoshi. 1949. *Shōyu miso* [Shoyu and miso]. Tokyo: Daiamondo-sha. viii + 283 p. [4] p. of plates. Illust. 19 cm. [Jap]

• **Summary:** The first four pages of this book contain 10 small photos relating to shoyu production and 10 relating to miso production. Contents: I. Shoyu. Commercial products: 1. History of shoyu (p. 3). 2. Varieties of shoyu (p. 8). 3. Supply and demand of shoyu (p. 25). 4. Quality of shoyu (p. 28). 5. Containers used for shoyu (p. 36). Production: 6. Fermented shoyu (*Jōzō shoyu*) production method (p. 40). 7. Amino-san shoyu production method (p. 90). 8. Semi-chemical shoyu production method (p. 108). 9. Methods of preventing formation of undesirable mold on and gas in bottled shoyu (kabi, p. 110). 10. About steaming equipment (*jōki kikan*) in the shoyu plant (p. 115). Industry: 11. Structure of the shoyu industry (p. 123). 12. The structure of selling and buying of shoyu (p. 141). 13. Supply and demand for shoyu, and the future of the industry (p. 149).

II. Miso. Commercial products: 1. History of miso (p. 173). 2. Supply and demand for miso (p. 175). 3. Varieties of miso (p. 179). 4. Standards for miso (p. 188). 5. Nutritional composition of various types of miso (p. 189). 6. Storing miso (p. 191). Production: 7. Regular miso production methods (p. 193). 8. Methods of making miso using substitute raw materials (p. 223). Industry: Structure of the miso industry (p. 245). 10. Financial condition of the miso industry (p. 254).

The author was born in 1907. Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

3639. Saito, Akio. 1949. [Chronology of soybeans in Japan, 1927 to 1949] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (Soybean Monthly News). Feb. p. 14-15. [Jap]

• **Summary:** 1927 Sept. 15—Noda Shoyu [Kikkoman] has the longest strike in pre World War II Japan. The labor system becomes more modern and employer-employee problems start to be handled in new ways.

1928—The production of soy oil reaches 38,000 tons, passing rapeseed oil which is 30,000 tons. Soy oil is now Japan's leading vegetable oil.

1931 Sept.—Japan invades Manchuria, using the Mukden incident as a pretext. 1932—Japan attacks China. By early 1932 Japan had conquered all of Manchuria.

1932 Feb.—The Rikagaku Kenkyujo in Tokyo makes salt-free shoyu for the first time.

1935—At about this time, systematic cultivation of soybean seeds begins.

1938—The average retail price of good quality shoyu is 62 *sen* for 18 liters (10 *sho*).

1938 Sept.—The *Kokusaku Daiyohin Fukyu Kyokai* is founded. This organization encourages the substitution of

less expensive or more abundant ingredients in shoyu, such as barley for rice, millet or barn yard millet grass (*hie*) for barley, or the chrysalis of a silkworm for soybeans and wheat in making HVP shoyu (*amino-san shoyu*).

1939—The first soybean is registered in Japan; it is named “Ministry of Agriculture and Forestry, Number 1” (*Norin ichi-go*).

1939 Dec.—The Japanese government puts its energy into controlling the rising prices of rice, miso, shoyu, salt, matches, fresh produce, etc. (i.e. essential foods for daily life).

1940 March—The “Central Price-Fixing Organization” (*Chuo Bukka Iinkai*) sets ceiling prices for the following to control inflation: soy oil, soybean cake, Japanese soybeans mixed with Manchurian soybeans, salted salmon, salted trout, dried nori, and eggs.

1940 April—The “Price Setting Central Committee” (*Kakaku Keisei Chuo Iinkai*) decides to use a ticket (rationing) system for ten items including rice, miso, shoyu, salt, matches, charcoal, and sugar.

1940 June—The Ministry of Agriculture and Forestry (*Norinsho*) and the Ministry of Commerce and Industry (*Shokosho*) proclaim the new revision of the regulation for controlling excessive profits (*Borikoi Nado Torishimari Kisoku Kaisei*), and on responsibility relating to prices.

1940 Sept.—Even though people are under control, summer resorts become crowded and people take home rice and miso and souvenirs. The government asks them not to do this.

1940 Oct.—The Japan Soybean Control Corporation (*Nihon Daizu Tosei K.K.*) and the Cooperative Soybean Products Marketing Corporation (*Daizu Seihin Kyohan K.K.*) are founded.

1941 June—The home use food oil ticket (rationing) system starts.

1941 Dec. 7—Japan attacks Pearl Harbor. War with the USA begins. 1942 Feb.—The ticket rationing system starts for miso and shoyu.

1943 June—The regulations for emergency food production are decided. They start to use unused lands for production of various small grains and legumes (*zakkoku*).

1943 Nov.—A record book rationing system is established for tofu, to ensure fair distribution.

1945 Aug. 14—Japan surrenders to the USA in World War II after atomic bombs are dropped on Hiroshima and Nagasaki (Aug. 6 and 9).

1945—Because of unusually cold weather, Japan’s soybean production drops dramatically, resulting in one of the smallest crops since 1878. It is only 170,400 tonnes, 36.3% lower than the previous year.

1947—The production of shoyu this year is only 1,868,500 *koku*. Since there is not enough shoyu, a lot of substitute shoyu and powdered shoyu (*kona shoyu*) appear; neither of these two products are regulated.

1947 May 3—A new constitution is adopted in Japan in which the country renounces the right to wage war, the emperor gives up claims to divinity, and the Diet becomes the sole law-making authority.

1948 Oct.—At about this time, the food situation in Japan starts to improve. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

• **Summary:** Amino acid. Address: Kôgaku-shi, Japan.

3641. Shimizu, Ken’ichi. 1949. *Kindai shôyu jôzô no shinzui* [The essentials of modern shoyu brewing]. Tokyo: Sanpo Shobo. 327 p. [Jap]

3642. *SoyaScan Notes*. 1949. Chronology of the macrobiotic movement in North America, 1949-1966. 25 Jan. 1995. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1949—Michio Kushi, a student of George Ohsawa, arrives in New York City from Japan, in connection with the World Federalist Movement. He writes letters back to Japan, and Ohsawa reads them to his students at his center (*Maison Ignoramus*) in Yokohama, near Tokyo, Japan.

1951—Aveline Tomoko Yokoyama falls in love with Michio’s letters, wins a trip to America by being the best seller of Ohsawa’s newspapers, and meets Michio in New York.

1952, early—Herman Aihara, age 31 (born Nobuo Nishiyama on 28 Sept. 1920), arrives in America, and settles in New York City. As early as March 1952 he was selling macrobiotic foods in New York; he imported them from Ohsawa in Japan.

1953—Michio Kushi and Aveline Tomoko Yokoyama are married in New York. They had exchanged letters before she arrived.

1955 Dec.—Herman Aihara and Chiiko (Cornellia) Yokota are married in New York. Cornellia arrived in the United States from Japan in Oct. 1955. They had exchanged many letters before she arrived.

1959 or 1960—Zen Teahouse, the first macrobiotic restaurant in the USA, is started in New York City by Alcan Yamaguchi. It was located at 317 Second Ave. and consisted of a small (4-table) main room containing a kitchen. Miso and shoyu were served regularly. This restaurant was later renamed Paradox.

1959 Nov. or Dec.—George Ohsawa arrives in America for the first time, staying in New York City with Herman Aihara, his closest associate. After a week he flies to California to find a source of short-grain brown rice; he locates Koda Brothers (in Dos Palos), but also gives lectures in San Francisco and Los Angeles. After one week in

California, he returns to New York City.

1960 Jan.—Ohsawa presents the first of three series of lectures designed to introduce macrobiotics, and the philosophy and medicine of the Orient, to America; each for ten nights during January, February, and March of 1960 at the Buddhist Academy in New York City. During these lectures his first work in English is published, a mimeographed edition of *Zen Macrobiotics*. He and the Aiharas duplicated and bound these in the Aiharas' apartment, then sold them at the lectures for \$0.50. He also lectured at the Universalist Church, The New School for Social Research, Columbia University, and New York City College (See: *Macrobiotics: The Art of Longevity and Rejuvenation*, p. 188-89).

1960 May 10—Herman Aihara starts publishing *Macrobiotic News*, a magazine consisting mainly of Ohsawa's lectures, plus some current news.

1960 July—Ohsawa returns to America (after a trip to Europe) and lectures daily for two months at the first American macrobiotic summer camp at Southampton, Long Island, New York. Mrs. Lima Ohsawa, aided by Cornelia Aihara, gives macrobiotic cooking classes. Many people attend, especially writers, actors, artists, musicians, and intellectuals.

1960—To serve this growing interest, a tiny restaurant named Musubi is started in Greenwich Village and run by Alcan Yamaguchi, Romain Noboru Sato, Herman Aihara, and Michio Kushi. In late 1961 Musubi was moved to 55th Street.

1960—The first macrobiotic food store (combined with a gift shop), named Ginza, is started by Herman Aihara.

1961 Feb.—At a meeting of the Ohsawa Foundation, Inc. (New York City) Herman Aihara is elected president while he was traveling in Europe. He accepted the position when he returned later that month.

1961 summer—George and Lima Ohsawa come to America again for the second macrobiotic summer camp, this time in the Catskill Mountains at Wurtsboro, New York. Lima and Cornelia Aihara give cooking classes. After the camp, at the time of the Berlin Wall crisis (August 1961, before the Cuban missile crisis of Oct. 1962), Ohsawa feared that a nuclear war might be near. He urged his followers to leave New York and find a place that was safer from radioactive fallout and good for growing rice. After extensive research, they choose Chico, California.

1961 Oct. 1—Thirty four people (11 families) arrive in Chico from New York City in a caravan of vans, buses, and station wagons. Among the active people in the group are Bob Kennedy, Herman Aihara, Teal Ames, Lou Oles, and Dick Smith.

1961 Nov.—The first printed edition of *Zen Macrobiotics*, by G. Ohsawa is printed in Japan (218 pages). It has been edited and the parts rearranged.

1962 March 6—The group in Chico establishes a new

food company named Chico-San as a retail store and an import and wholesale business. It was capitalized with \$10,000. In addition to a line of whole-grain products, they soon began to import a variety of macrobiotic foods from Ohsawa in Japan. The first store and food plant (they made sesame salt or *gomashio* and repackaged foods) was in the basement of a small hearing aid shop in Chico. It became the first macrobiotic food production company in the USA.

1962 July 7—Third summer camp opens in Wurtsboro, New York, under the direction of Irma Paule and Sam Chapman; it continued until Labor Day.

1962 Christmas—George Ohsawa visits Chico and lectures on macrobiotics.

1963—Ohsawa lectures in Boston, New York City, and at the fourth macrobiotic summer camp (the first on the West Coast) at Chico. Lima Ohsawa and Cornelia Aihara give cooking classes. In Chico, Ohsawa suggests that the group try making rice cakes. He sends them a rice cake machine from Japan and production began in the fall of 1963. Rice cakes soon became Chico-San's first really popular and successful product.

1963 May—Junsei Yamazaki arrives in the USA (in San Francisco) from Japan. He first goes (by bus) to Chico, California, to help with the installation of small rice cake machines. After the July 1963 summer camp in Chico, California, he goes to New York, arriving in August.

1964 summer—Ohsawa lectures in California at the fifth macrobiotic summer camp (2nd on the West Coast) at Big Sur. Lima Ohsawa and Cornelia Aihara give cooking classes.

1964 Sept.—After the macrobiotic summer camp on Martha's Vineyard, the Kushi family moves from the island to Cambridge, Massachusetts (101 Walden St., on the outskirts of Boston to the northwest). Michio stops all his outside business activities and directs his full attention to teaching macrobiotics.

1964 Nov.—The first edition of *Zen Cookery*, edited by Teal Nichols, a book of macrobiotic recipes (83 p.), is published by The Ohsawa Foundation in Chico, California.

1965—The macrobiotic movement in America, though small, is growing rapidly. Ohsawa lectures again in California at Mayoro Lodge, near Pulga.

1965—Michio Kushi organizes the first East West Institute out of his home in Cambridge and begins teaching macrobiotics, cosmology, and cooking to mostly young people.

1965—The second edition of Ohsawa's *Zen Macrobiotics* is prepared and published by Lou Oles of the Ohsawa Foundation in Los Angeles. It contains much more information (including much more about soyfoods) than the original 1960 mimeographed edition.

1965—*You are All Sanpaku* by William Dufty is published.

1965 Nov. 9—Beth Ann Simon, a young heroin addict

from New Jersey, dies while following a strict macrobiotic diet. This is the movement's first major setback. Ohsawa and the macrobiotic diet receive much adverse publicity, and the incident brands macrobiotics among many in the medical and health professions as a dangerous and extreme form of food faddism. The image was hard to get rid of. The U.S. Food and Drug Administration closes the New York branch of the Ohsawa Foundation, run by Irma Paule.

1966 April 24—George Ohsawa dies unexpectedly in Tokyo, Japan, at age 72—just as his teaching is beginning to spread rapidly in the West. The cause of his death: a heart attack, perhaps caused by filarial parasites he had picked up at Lambarene, Gabon.

1966 April—Erewhon opens as a tiny (10 by 20 foot) retail store downstairs at 303-B Newbury Street in Boston.

1966, summer—Michio Kushi begins to lecture each Monday and Wednesday evening in a back room of the Arlington Street Church in Boston. These talks were supplemented by cooking classes with Aveline Kushi in Brookline.

3643. Umeda, Isao. 1949. *Shōyu* [Shoyu (Japanese soy sauce)]. Tokyo: Sankyo Shuppan Co. 312 p. Revised eds. 1954-55. 326 p.; 1963. 232 p. [117 ref. Jap]
Address: Noda Shoyu Shiken-shi cho. Head, Noda Shoyu Research Lab.

3644. Von Loesecke, Harry W. 1949. *Outlines of food technology*. 2nd. ed. New York, NY: Reinhold Publishing Corporation. vii + 585 p. 24 cm. 1st ed. 1942. [7 soy ref]
• **Summary:** Soybeans are discussed in several places: Canned soybeans ([green vegetable soybeans]; use the vegetable variety, harvested just before any white or yellow beans appear), and soybean sprouts (p. 150). Soybean flour (p. 294-96). Soybean oil and lecithin (p. 323-24). Soy sauce and Worcestershire sauce (p. 416-17, of which soy sauce is a major ingredient). Address: Chemist, USDA, Washington, DC.

3645. Meade, Mary. 1950. Expert teaches class to prepare Hawaiian specialties. *Chicago Daily Tribune*. Jan. 23. p. B3.
• **Summary:** Chicago home economist Dorothy Roost Bates, just back from four years in the Hawaiian paradise, was the teacher in the last of these foreign fare classes.

"The teriyaki is expensive since it requires a tender cut of beef, preferably the rib eye. Mrs. Bates used sirloin...

Teriyaki (A Japanese appetizer): 1 pound tender beef steak, ¼ cup soy sauce, 1 tablespoon sugar, 1 clove garlic, 1 teaspoon ginger (fresh), chopped fine.

"Slice meat in thin strips across grain. Place on bamboo sticks [skewers] (100 for 25 cents in Chinatown)." Mix soy sauce with other sauce ingredients. Soak meat in sauce 30 minutes or more, turning to marinate evenly. Broil 5 minutes on each side before serving hot.

"These are usually done over charcoal, but broiling [in an oven under an overhead gas flame] works very well. The skewered beef may be arranged on a cooky [cookie] sheet for broiling." Also contains recipes for Hawaiian curry. Chicken luau.

Note 1. This is the earliest teriyaki recipe seen (Nov. 2006) that uses beef (or any other kind of red meat) and the main ingredient.

Note 2. It is also the earliest teriyaki recipe seen that has a complex sauce, similar to modern teriyaki sauces.

3646. Umeda, Isao; Tateno, M.; Naoi, T.; Uchida, H. Assignors to Noda Shoyu K.K. 1950. *Shōyu jōzōhō* (shinshiki 2 gō) [Method of brewing shoyu (semi-fermented soy sauce #2)]. *Japanese Patent* 181,616. Jan. 27. Application filed 18 Aug. 1948. [Jap]*
Address: Noda Shoyu Co., Noda, Japan; 1. Head of research lab.; 2. Actual discoverer; 3-4. Asst. researchers.

3647. **Product Name:** Dr. Bronner's Balanced Mineral Bouillon.

Manufacturer's Name: Dr. Bronner & Associates.

Manufacturer's Address: 447 South Hope St., Los Angeles, California. Phone: 619-745-7069.

Date of Introduction: 1950. January.

Ingredients: Soya bouillon base, blackstrap molasses, vitamin C, lemon and orange juice solids, soya lecithin (oil free), ocean dulse, papain enzymes.

Wt/Vol., Packaging, Price: 8, 16, or 32 fluid oz (quart) glass bottle with screw-on cap (2/90). Quart retails for \$6.85.

How Stored: Shelf stable.

Nutrition: Per 2 fl oz or 4 tablespoons: Calories 60, protein 7.4 gm, iron, fumarate 18 mg, copper 1 mg, iodine (protein-bound iodine or PBI from ocean dulse) 150 mcg, calcium 120 mg, phosphorus 100 mg, magnesium 60 mg, vitamin B-6 complex 2 mg, vitamin B-12 complex 6 mcg, vitamin C 360 mg, papaya enzymes 500 mcg, lecithin form unrefined soya bean 100 mg.

New Product—Documentation: Talk with Bob Gerner.

1990. Feb. 7. He first saw this product in about 1981, after he was carrying a similar product from Dr. Bronner. Label. 1989. 11 by 4.5 inches. Pea green on yellow. "All vege amino broth survival food base concentrate: Always dilute! Enjoy thin look! Sip 2 hot cups or add to food: Don't cook! Concentrated: Dilute! Salty flavor from natural complete vege-amino-acid protein, mineralized with balanced potassium, calcium, phosphorus, iron, magnesium chloride mineral salts. 100% balanced—without alcohol, animal products, or synthetics! Concentrated: Shake well before using. Packed and Guaranteed by All One God Faith, Inc. Rabbi Emanuel H. Bronner, Assoc., SMMC, DD Soapmaker, Master Chemists & Essene Rabbis, Escondido, Box 28, California 92025. Made in USA. Enjoy as instant NRG drink. Complete balanced meal, instant seasoning or gravy.

Concentrated: Shake well before using. Minerals settling out, remain 100% balanced and 100% edible. Therefore, re-dissolve with extra water & enjoy in salads that same week. For instant pick-me-up, makes a complete meal and NRG drink, balanced seasoning & instant gravy. Enjoy 1 tablespoon bouillon in cup hot water instead of meal. Also, mineralize carrot and other vegetable juices with a dash bouillon. Survival food base. Keeps a lifetime if undiluted!

Talk with Dr. Emanuel H. Bronner himself. 1990. Feb. 8. He is a rabbi and soap maker, age 82. He introduced this liquid product in Jan. 1950, just one year after he introduced essentially the same product in powdered form. So many people wanted a liquid that he took soy sauce and replaced some of the sodium with potassium, to make a more balanced product. He also added PBID (protein bound iodine from ocean dulse) and slowly improved the product until the soy sauce was only 50% of it. The other 50% is potassium, calcium, and vitamin C.

Note: This is the earliest document seen (April 1912) in all major U.S. newspapers digitized by ProQuest that uses the term “thick soy sauce.” The new term appears in 21 documents between 1950 and the present.

3652. *Sun (Baltimore, Maryland)*. 1950. On making things taste more like themselves. April 17. p. 10.

• **Summary:** Monosodium glutamate has been garnering a lot of publicity lately. In fact, the name is now so well known that it is popularly known in commercial circles as MSG.

“The virtue of monosodium glutamate is that it

intensified flavor. This has been known to the Chinese for generations. The knowledge was passed on to the Japanese,” who started manufacturing it and sold it in the United States prior to the start of World War II.

“However, what with the running out of Japanese patents and the disruption of the war, manufacture of MSG was commenced in this country,” where annual production is now some 9 million pounds. It is used chiefly in canned soup and soup powders.

MSG is a type of amino acid. It may be extracted [sic, hydrolyzed] from corn gluten, wheat gluten, or soybean gluten [sic]. “Another important source is the molasses from beet sugar which yields a product [substance] known as Steffens waste.”

“The Chinese extracted their MSG from soybean gluten [sic] and called it ve-tsin.” When the Japanese began to manufacture it commercially, they named it ajinomoto, which means ‘element [basis] of taste.’”

You can add a dash of MSG to any dish, just as you would Worcestershire sauce or paprika.

It is claimed that, under certain circumstances, “glutamic acids increase the mental ability of persons with low I.Q.’s.”

• **Summary:** A vertical rectangular ad. An illustration shows a large bottle of Oriental-brand Show-You sauce. “Send for free Oriental recipe book.” Address: Columbia City, Indiana.

3654. Nakano, Masahiro; Ebine, H.; Shijo, N. 1950. Budomari o kotoniseru shobaku ni tsuite [On “shobaku” (wheat bran used for shoyu making) produced from wheat at various milling rates]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 3. p. 107-20. June. [14 ref. Jap; eng]
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan (Hakko Shokuhin-bu, Sogo Shokuryo Kenkyujo).

3655. Worthington Foods, Inc. 1950. Wholesale price list and order blank. Worthington, Ohio. 1 p. July 31.

• **Summary:** Products include: Beta Broth. Tastex. Soy sauce. Tastex food yeast. Lacto-psyllium. Protein foods (Alternates for meat): Soyloin Steaks. Meatless Wieners. Choplets. Choplet Burger. Proast. Numete. Veelets.

Worthington breeding meal. Sav-Ree brown gravy. Honey bear peanut butter. Kel-jel.

Note: A wholesale price list dated 10 Dec. 1950 shows that Worthington was selling the following line of Miller’s Foods products (purchased from Harry W. Miller of Mt. Vernon, Ohio): Miller’s Cutlets, Miller’s Cutlet Burger (regular and smoke flavors), Vegetable Stew.

Note: This is the English-language document seen (Jan.

2007) that contains the term “Cutlet Burger” (or “Cutlet Burgers”). Address: Worthington, Ohio.

3656. Nickerson, Jane. 1950. News of food: Higeta shoyu shipped here. *New York Times*. Aug. 29. p. 30.

• **Summary:** The first shipment of Higeta soy sauce (shoyu) ever made to the United States has just arrived from Choshi, Japan, imported by George Saiki. It is made by that venerable company, Choshi Shoyu, which has been brewing soy sauce in Japan since 1616. Long located in the village of Choshi, in Chiba prefecture, its factory is now equipped with modern equipment. A 22-oz. bottle of Higeta shoyu retails for \$0.74 at Macys.

Saiki says that Higeta shoyu has long been used in Japan’s imperial household. It is now fermented for 6-18 months. Mr. Saiki, like most Orientals, recommends its use in a wide range of dishes, from soup and fish, to fowl, meat and vegetables.

3657. Paddleford, Clementine. 1950. How America eats: Best cook in Phoenix. *Los Angeles Times*. Oct. 8. p. H18.

• **Summary:** Ben Projan likes his steaks to be 2 inches thick and weigh at least one pound. His favorite marinade has “1 quart soya sauce” as its main ingredient, along with beef consommé, lemon juice, liquid smoke, and garlic. Address: *This Week* food editor.

3658. Panday, Daulat. 1950. Chinese dishes: Cookery corner. *Times of India (The) (Bombay)*. Oct. 8. p. 10.

• **Summary:** Four Chinese recipes are given: Meat shred soup. Chinese chicken salad. Eight-jewel duck. Canton rice. Each calls for “soy sauce.” The first recipe states: “...; 1 tablespoon of soy sauce (obtainable from China Town, or any good Chinese Restaurant);...”

Note: This is the earliest of 40 articles or ads seen (Sept. 2010) in *The Times of India* that contains the term “soy sauce.” This term is usually used in connection with foreign foods or cookery.

3659. Brown, Lucia. 1950. Clever appetizers make a party. *Washington Post*. Oct. 18. p. C1.

• **Summary:** “Little appetizers with a flavor all their own” were served to 144 food editors from across the USA at the recent National Food Editors conference in New York.

“For instance there were Teriyakis. Ever try them? The Dole Pineapple people brought the idea from Hawaii for the occasion. They’re a hot, hearty appetizer made of crunchy pineapple and broiled beef on skewers. Provide about two per guest for an afternoon party.”

“Teriyakis: 1 pound tender top beef round or sirloin. 1 No. 2 can (2½ cups) pineapple chunks, drained. ½ cup syrup drained from pineapple. ¼ cup soy sauce. 1 clove garlic, chopped fine. 1 teaspoon chopped fresh ginger root or ¾ teaspoon ground ginger. 1 small jar stuffed olives, drained

(about 22). 22 short metal or wooden skewers (about 4 inches long).”

Cut meat into bite-sized chunks, about the same size as pineapple chunks. Combine pineapple, soy sauce, garlic and ginger. Pour over meat cubes in a container and set aside for at least an hour. Alternate cubes of meat and pineapple on skewers, then finish off with a stuffed olive. Broil 3 inches from heat, turning once, for 10-12 minutes. Serve hot. Makes 20-22 servings for 8-10 people.

Note 1. This is the earliest English-language document seen (April 2012) that contains a good recipe for homemade teriyaki sauce. It is also the first to use fruit or vegetables with meat on the skewers. The pineapple chunks and juice are a delicious addition; the juice replaces sugar.

Note 2. This is the earliest English-language document seen (April 2012) that contains the word “Teriyakis” (plural).

3660. Panday, Daulat. 1950. More Chinese dishes. *Times of India (The) (Bombay)*. Oct. 22. p. 10.

• **Summary:** The first of three recipes given for “appetising Chinese dishes” is Bamboo shoots with pork slices, which calls for “2½ tablespoonfuls soy sauce (also to be had in China Town);...”

3661. Paddleford, Clementine. 1950. Soup to nuts—From cans: To a man’s heart. *Sun (Baltimore, Maryland)*. Oct. 23. p. 8.

• **Summary:** The section titled “Grilled appetizer from Hawaii” states: “Teriyakis is a grilled appetizer. The idea is straight from Hawaii. A hearty tidbit; pass the skewers once and then once again and that’s quite enough, no endless shuffle of hors d’oeuvre trays and refilling.”

The ingredients are tender top round of beef, canned pineapple chunks and syrup, “one-fourth cup soy sauce,” a clove of fresh garlic, fresh ginger root, and ground ginger. The detailed recipe is given.

Note: This section is quite similar to one published in the *Washington Post* on Oct. 18—five days earlier.

3662. Radom, Edyth. 1950. Teriyakis, Hawaiian recipe. *Hartford Courant (Connecticut)*. Nov. 5. p. SM10.

• **Summary:** Quite similar to (with exactly the same recipe for Teriyakis): Brown, Lucia. 1950. “Clever appetizers make a party.” *Washington Post*. Oct. 18. p. C1.

Note: This is the earliest English-language document seen (April 2012) with the word “Teriyakis” (or “teriyaki”) in the title.

3663. *Soybean Digest*. 1950. Japan shifts from whole beans to meal. Nov. p. 24.

• **Summary:** Two pie charts show Japanese usage of soybeans in 1940 and 1948. In 1940 the Japanese were consuming about half of their 562,000 tonnes of soybeans as whole soybeans used to make various foods such as

shoyu, miso, and tofu. But by 1948 nearly all their soybeans were being used in the form of soybean oil meal, especially to make miso, shoyu, and amino acids. Consumption of miso and shoyu have greatly increased, while other uses (especially tofu) have shrunk.

“During the 10 years preceding the end of World War II, Japan imported an average of about 700,000 tons of soybeans, chiefly from Manchuria. This inflow of soybeans was stopped almost entirely immediately after the war, which resulted in critical protein and oil supplies. But imports since then have increased, overcoming the extreme shortage. About 80 percent of total soybean imports during 1946-48 were from the U.S.”

3664. *Soybean Digest*. 1950. Adopts new bottle. Nov. p. 40.

• **Summary:** “New no-drip bottle for La Choy Soy Sauce shown above has been adopted by La Choy Food Products, Archbold, Ohio, for its nationally distributed product.

“The soy sauce is recommended for use on chop suey, chow mein or other Chinese dishes, hamburgers, steaks, roasts, chops, and to flavor soup, gravy, hash, stew, meat loaf and other dishes.” A photo shows the new bottle and its predecessor.

3665. Tammes, P.M.L. 1950. Bereiding van ketjap [Preparation of soy sauce]. *Landbouw (Bogor, Java)* 22(10-12):568-69. Dec. [Dut]

• **Summary:** Contains a brief description of how to make Japanese-style soy sauce, and an analysis of its composition in both volume per 100 cubic centimeters, and grams per 100 grams. Address: Makassar (Algemeen Proefstation, Landbouw).

3666. Yuasa shōyu enkaku-shi [Record of Yuasa shoyu]. 1950-1960? Kubo-san no ie, Yuasa-cho, Arita-gun, Wakayama-ken, Japan. 46 p. Unpublished manuscript. Handwritten. 19 x 25 cm. [Jap]

• **Summary:** According to Heiji Tamura (*Shoyu no Hon*, 1971, p. 31), there is a lovely poem in this work titled “The Song of Shoyu” (*Shoyu no uta*) that reads as follows:

Smell the aroma from the depths of the brewing keg!

Waves of fragrance, deep purple, tamari;

Flowers of wisteria.

Its origins reaching back to the Antei period,

Its brewing lineage inherited from the great teacher.

Tamari from Yuasa is the first in the Emperor’s kingdom.

Its aroma is of the finest quality,

Its flavor most excellent,

Its fame, noblest and purest flower of Arita.

Note: Arita is the early name of the Yuasa region. This poem was translated by Shurtleff and Aoyagi and published in *The Book of Miso* (1976, p. 220). The original Japanese reads like this: “*Nachi no ura. Soko made niou murasaki no namiuchi tsuzuku fuji no hana. Nezashi wa furuku Antei ni.*

Hoto Kokushi no nagare o kumite kamosu Yuasa no shoyu wa Kokoku ni okeru hajime nari. Kaori wa takaku, aji yoshi to, homare Arita no seika.”

Note: This book is not in the Wakayama Prefectural Library nor in the Yuasa Choritsu Library (8/89).

Talk with Seiichi Ando. 1989. Sept. 12. He saw this book, which he believes was never published, 20-30 years ago at the home of a shoyu maker named Mr. Kubo located at Yuasa-cho in Yuasa, Wakayama prefecture, Japan. The manuscript is a basically a history of this company and household. It was definitely written after the start of the Meiji period in 1868. The first word of the Japanese title is the logo or symbol of this house’s brand of shoyu.

Letter from Wakayama Univ. Keizaigaku-bu, Sakaedani 930, Wakayama city 640, Japan. The unnamed writer of this letter was not able to locate this book in his Keizaigaku-bu, the university library, the city library, the prefectural Kyoiku linkai, the Yuasa Kyoiku linkai, and the prefectural history Hensan-shitsu. Finally he located a shoyu maker in Yuasa who had a copy of the original work but would not lend it to be photocopied for fear it might be damaged. The shoyu maker’s name was Chobei KANO, Yuasa 7, Yuasa-cho, Arita-gun, Wakayama-ken. Phone: 0737-62-2035. His brand is Kakucho (*Tsuno + nagai*). He can also be reached (in Yuasa-cho) at Kokudo-ten (Country + road + shop) Yuasa 147. Phone: 0737-63-5243. Address: Arita-gun, Wakayama-ken, Japan.

3667. Nakazawa, Ryoji. ed. 1950-1964. Hakkō oyobi seibutsu kagaku bunken-shū [Bibliography of fermentation and biological chemistry]. Tokyo: Nihon Gakujitsu Shinkokai/Hirokawa Publishing Co. 11 volumes. In European languages and Romanized Japanese. [500 soy ref. Eng; Jap]

• **Summary:** Contains extensive, excellent bibliographies on the following soy-related subjects (listed here alphabetically): Amazake (p. 139, only 2 references). Kōzi (Koji) (p. 398-410). Mirin (p. 464-65). Miso (p. 465-68). Natto (p. 8-9). Natto bacteria (p. 9-10). Penicillium (p. 210-63; see p. 240 for tempeh and ontjom). Rhizopus (p. 81-97). Soybean and soybean cake (p. 271-77). Syōyu [Shoyu] (p. 436-49). Tōhu (p. 498, only 3 references, all for nonfermented tofu).

Each bibliography lists the documents in approximately chronological sequence. An unnumbered page near the beginning titled (in Japanese characters only) *Shuyō Inyo Bunken* [Main Periodicals Cited] lists 51 such periodicals, of which 12 are in Japanese. Of these twelve, all have the title written in Chinese characters, with an English translation, and a Chinese plus a romanized abbreviation of the Japanese title.

Two examples: No. 2. *Nippon Nogei Kagaku Kaishi*. J. Agr. Chem. Soc. Japan [J. of the Agricultural Chemical Society of Japan]. *Nō-ka*. No. 4. *Nihon Jozo Kyokai Zasshi*.

J. Fermentation Association Soc. Japan. *Zyô-Kyô*. Note that much of the romanization throughout these 11 volumes is based on a system that is no longer used. Nakazawa was born in 1878. Address: Japan.

3668. **Product Name:** [Mieki Soy Sauce (HVP)].

Manufacturer's Name: Ajinomoto Co. Inc.

Manufacturer's Address: Kyobashi 1-5-8, Chuo-ku, Tokyo 104, Japan.

Date of Introduction: 1950.

New Product–Documentation: Yokotsuka (1980) notes that in 1950 Ajinomoto began to sell Mieki or Ajieki (HVP), a major event in Japanese soy sauce history. *Soya Bluebook*. 1986. p. 105.

3669. Photograph of the T. Amano Co. in Vancouver, British Columbia, Canada. 1950. Vancouver, British Columbia, Canada.

• **Summary:** This black-and-white photo, sent to Soyfoods Center in 1981 by T. Amano Co. of British Columbia, shows the front of a small, modern building. A floor-to-ceiling panel of glass bricks are to the left of the main door near the center. Over the door, in large letters is written: "T. Amano Co." On the right front window, partly covering venetian blinds, in smaller letters, we read on five lines: "T. Amano Co. Manufacturers–Soya sauce & rice paste [miso]. Oriental food products. Importers & exporters." Address: Vancouver, British Columbia, Canada.

3670. Adachi, Isamu; Sakurai, Shigeru. 1950. *Nihon shokumotsu-shi* [History of Japanese foods]. Tokyo: Yuzankaku. 480 p. [Jap]

• **Summary:** Best book seen on the history of Japanese foods. The following appears in chapter 8. Edo Period:

"Amazake and Shirozake (p. 375-76). In ancient times there was Kozake and hitoyo-zake (one-night sake). They became known as amazake at a later date. But kozake was different from subsequent amazake; sometimes it was made using sake instead of water in the fermentation. The term 'amazake' first appeared in the literature of the Keicho period, which started in A.D. 1596. Later, during the Kan-ei period (1624-1630) there was Shirakawa Amazake.

"In Rokujo, in Kyoto, the Yamashiro-zake was very old and famous. Within the city of Edo (today's Tokyo), in the Yokayama-cho section, during the Temmei period (1781-89), Sangoku Ichi Amazake was sold. After taking it home, the consumer would add an equal amount of boiling water to the amazake and stir while simmering. The names Sangoku Ichi (three countries are one) and Shirayuki (white snow) came from the fact that it was sold in a container with a plum flower crest drawn on it (*umebachi*) and also Mt. Fuji was drawn in the shop. This was because the goddess of the Mt. Fuji shrine is named *Konohana Sakuya Hime* ("Tree Flower Blooming Princess"); she got pregnant overnight. Since

amazake was known as "one-night sake" in ancient times it was connected with this goddess.

"Amazake used to be sold only in winter. Around the Bunka period (1804-1817) it was sold year-round. There were 5-6 amazake shops in Edo (Tokyo). Among them, the one in front of the Asakusa Honganji temple was famous. Although at that time amazake was sold during the summer, it later returned to being a winter drink."

3671. Brown, Helen Evans. 1950. *Chafing dish book*. Los Angeles, California: The Ward Ritchie Press. [21] + 141 + 8 p. Index. 16 x 16 cm.

• **Summary:** This stylish little cookbook reflects the growing influence of Asian (especially Chinese) culture and cuisine in California—and the author's enthusiasm for it. The recipe for *sukiyaki* (#93) calls for "a soy bean cake" [a cake of tofu]. A footnote to the recipe for Chinese spinach (#117) states: "The Chinese would add a piece of fermented bean cake to this; a piece of bleu cheese gives much the same effect."

Helen Brown uses "soy sauce" to season all of her Chinese- and Japanese-style recipes: Nos. 32, 60, 64, 73, 77, 87, 89, 91, 93, 117.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term "soy bean cake" or "a soy bean cake" to refer to tofu. Address: Pasadena, California.

3672. Circle, Sidney J. 1950. Proteins and other nitrogenous constituents (of soybeans). In: K.S. Markley, ed. 1950. *Soybeans and Soybean Products*. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 275-370. Chap. 8. [495 ref]

• **Summary:** Contents: 1. Introduction: Distinction between isolated and *in situ* proteins, classification of proteins, denaturation and denaturing agents. 2. Soybean meal: Criteria for denaturation of meal protein (water- and salt-dispersible nitrogen, moisture-holding capacity, urease activity, "pat" test), denaturation during meal processing (heat and moisture, effect of solvent, oxidation, storage of soybeans, aging of meal, effect of grinding), detection of soybean meal or flour in other materials. 3. Isolation of proteins from mature seed: Number and classification (earlier work—globulin, glutelin, albumin, proteose; other protein fractions, more recent work, discrepancies in characterizing glycinin, relation of glycinin to glutelin, nomenclature of soybean protein fractions, enzymes and minor protein fractions), practices in isolation (introduction, pilot plant production), peptization of protein from meal (water as extractant, saline extracts, acidic extractants, alkaline extractants, neutral salts, effect of acids and bases, combined effect of hydrogen ion and neutral salts, peptization of dialyzed meal, peptization in water-alcohol mixtures, dispersion behavior of soybean and other seeds, reactions of various chemicals with soybean meal intended for adhesive and other purposes), removal of acid-leachable soluble

material, separation of insoluble residue, precipitation (acids and electrodialysis as precipitants, bases as precipitants, miscellaneous precipitants, precipitation of soluble proteins from whey), dewatering, drying and grinding, modification of protein properties during isolation (introduction, effect of hydrolysis on yield of protein), summary of procedures in protein isolation.

4. Chemical and physical properties of protein:

Dispersion behavior (water, salts in neutral or slightly alkaline solution, alkalis and alkaline salts, inorganic acids, salts with acid reaction, organic bases, acids, phenols and other dispersants, plasticizers), reactions with various chemicals (formaldehyde, other tanning agents, carbon disulfide, peroxides, esterification and etherification), heat and other denaturants (heat, reprecipitation, conversion of globular to fibrous form), nitrogen factor and purity (effect of alcohol extraction, effect of hulls, effect of pH of precipitation, other impurities, nitrogen factor), protein-phytic acid relationship, isoelectric points and electrophoretic behavior (methods for determining isoelectric points, isoelectric points), viscosity of soybean protein dispersions, miscellaneous physical properties (absorption spectra, foaming capacity, heat of combustion, colloid stabilizing properties, x-ray structure). 5. Partial hydrolysis of soybean protein: Hydrolysis by steam, hydrolysis by acids, hydrolysis by alkalis, hydrolysis by enzymes, hydrolysis by yeasts, molds, and bacteria, soy sauce. 6. Complete hydrolysis of protein: Hydrolyzing agents, nitrogen distribution, amino acid content of soybean meal and protein.

7. Other nitrogenous constituents in mature seed:

Suppressive, toxic, and other factors (antioxygenic factor, allergenic factor, plant growth factor, goitrogenic factor, blood coagulant factors, antiamylase factor, antigrowth and antitryptic factor, anticoagulant action of crystalline antitrypsin, preparation of various antitrypsin factors), enzymes other than urease (introduction, allantoinase, amylase, ascorbic acid oxidase, carboxylase, catalase, Beta-glycosidase, glyoxylase, lipase, lipoxidase, phytase, protease, uricase), urease (variation in urease content, detection and preparation, action and activators, inactivators, effect of temperature and other factors, physiological effects, uses), nonprotein nitrogen (introduction, determination of nonprotein nitrogen in soybeans). 8. Nitrogenous constituents of germinating seeds: Biochemical changes during germination, enzymes, nucleoproteins and nucleic acid, asparagine and other nitrogenous constituents. Address: Soy Products Div., The Glidden Co., Chicago, Illinois.

3673. Coorengel, G.B. 1950. *Katjang kedelai* [The soybean]. Jakarta: Balai Pustaka. 34 p. 20 cm. [Ind]
Address: Jakarta, Indoensia.

3674. Feng, Doreen Yen Hung. 1950. *The joy of Chinese cooking*. New York: Greenberg. 227 p. Illust. Index. 24 cm.

• **Summary:** The section on “Ingredients” describes each basic ingredient, and gives the Cantonese name plus Chinese characters, including: (1) “Soya sauce” (*jeung yow*) is an absolutely essential basic ingredient. It “can nowadays be found in almost all neighborhood delicatessen or grocery shops” (p. 21). (2) “Bean sprouts” (*dow ngaah*). “They are usually golden yellow in color and possess a strong flavor and a rather crunchy texture.” An illustration shows these sprouts, which appear to be soybean sprouts (p. 22-23).

(3) Two types of dried yuba (*fooh jook* and *tiem jook*), both illustrated. When soya bean milk is boiled, it separates into various layers; “the rich cream that rises is called *fooh jook*, and the settling sediment is called *tiem jook*. When dried, they look like stiff boards glazed with enamel, but after they have been cooked they become creamy and gelatinous. *Tiem jook* is used in fish dishes; while *fooh jook* is usually cooked in soup” (p. 30-31).

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term *fooh jook* to refer to dried yuba sticks.

Note: This is the 2nd earliest English-language document seen (May 2012) that uses the term *tiem jook* to refer to sweet dried yuba—specifically to the thicker, sweeter, less expensive bottom yuba, called *ama-yuba* in Japan. In the illustration, the shapes of the two types of dried yuba are completely different. The *tiem jook* looks like a stiff rectangle about 1/4 inch thick.

(4) Chinese sauces (*jeung*) come in bottles or cans (p. 32): (4a) Soya sauce (*jeung yow*) is an almost black sauce made from soya beans. The best substitute is Maggi. (4c) Bean-curd cheese (*fooh yü*) [fermented tofu] “Grayish-white little cubes of pressed bean-curd fermented in strong wine.” It may be used in cooking. (4d) Bean-curd cheese, Eastern style (*naam yü*) [fermented tofu]. Fermented in a brick-red sauce, it is usually used for cooking. (4f) Tiny black fermented beans (*dow see*) [fermented black soybeans]. In cooking, these are generally crushed and used to season other strong-smelling ingredients such as fish. They add “a delightful spiciness to the sauce.”

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term “black fermented beans” to refer to *dow see* or fermented black soybeans.

(4g) A famous red sauce (*hoy sien jeung*) [Hoisin sauce]. This famous red sauce is often used in cooking shellfish and duck; it is widely served with Peking roast duck. There follows a description (p. 33) of how to make bean-curd cheese from fresh bean curd. (5) Oils and fats, incl. vegetable oils like soya bean oil, peanut oil, or sesame oil.

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the terms “Bean-curd cheese” (with hyphen) or “fooh yü” or “naam yü” to refer to fermented tofu.

Note 2. This is the earliest document seen (Sept. 2008) that mentions Hoisin sauce, whose Chinese name is *hai-*

hsien chiang (Wade-Giles) or *haixian jian* (pinyin). Its main ingredient is soybeans.

Soy related recipes include: Pig's feet soya bean soup (*Jüh gerk fooh jook tong*, with yuba, p. 80). Oyster sauce bean curds (*Ho yow dow fooh*, with fresh bean curd, p. 155). Many other recipes use soya sauce as a seasoning.

Note: This book was first published in 1950 by Greenberg in New York City (227 p., 24 cm). It was next published in 1952 by Faber and Faber in London (227 p., 23 cm). Grosset & Dunlap (1954) appears to be the third.

3675. Heyne, K. 1950. *De nuttige planten van Indonesië*. 2 v. [The useful plants of Indonesia. 2 vols.]. The Hague, Netherlands: W. van Hoeve. 1660 + ccxli p. Tables. 25 cm. [Dut]*

• **Summary:** Contents: Ontjom. Dagé. The soybean (Sojaboon, Kedele). Cultivation. Seeds. Use: Tépépé, tao hoe, tao koan, tao tjo, soja (ketjap).

Note: This book by K. Heyne was formerly published under the title *De Nuttige Planten van Nederlandsch Indië*. This is not a new edition; only the title has been changed. Address: Hoofd van het Museum voor Economische Botanie te Buitenzorg (Bogor).

3676. Lautensach, Hermann. 1950. *Korea: Land, Volk, Schicksal* [Korea: The land, the people and its destiny]. Stuttgart, Germany: K.F. Koehler. 135 p. Illust. Maps (1 folded in pocket). 25 cm. [Ger]*

• **Summary:** Hermann Lautensach lived 1886-1971. Address: Prof., Dr.

3677. Mahyudin, R. 1950. *Chasiat kedele dan tomat: Sebagai makanan rakjat* [The use of soybeans and tomatoes as foods]. Jakarta: Pustaka Rajkat. 42 p. [Ind] Address: Indonesia.

3678. Masuno, Minoru. 1950. *Daizu to sono riyô* [The soybean and its utilization]. Tokyo: Sangyo Hyoron-sha. 197 p. [Jap]

• **Summary:** A very nicely done predecessor to Watanabe et al.'s book *Daizu Shokuhin*. Address: Tokyo Daigaku Kyoju, Kôgaku Hakase, Japan.

3679. Morse, W.J. 1950. History of soybean production: 5. World distribution (Document part). In: K.S. Markley, ed. 1950. *Soybeans and Soybean Products*. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 10-14.

• **Summary:** "The production of soybeans, which for many centuries was confined to the countries of Asia, spread rapidly after World War I to the western world, and since World War II practically all leading nations have become more and more interested in the culture and production of the crop. Agricultural experiment stations throughout the world

have become engaged in the development of varieties suited to their soil and climatic conditions through introduction, selection, and hybridization. Successful results have been obtained in many countries and, in a few, acreage and production have increased to the extent that the crop has become an important factor in that nation's agriculture. This is especially true of the United States, Netherland Indies, Rumania, U.S.S.R., Austria, Bulgaria, and Poland.

"The principal zones of soybean production in the Orient are China, Manchuria, Korea, and Japan. In Manchuria, the soybean occupies about 25% of the total cultivated area and is a dominating factor in the economic life of the country. As a cash crop it provides fully half the farm income in the north and more than half the total volume of freight handled by the railroads. It is estimated that from one- to two-thirds of the production of soy beans is exported; 15 to 20% is utilized for food, feed, and planting, and the remainder is used for oil extraction.

"In China, the soybean is one of the principal and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although grown everywhere in China, about 60% of the soybean acreage is confined to three northern provinces, Shantung, Kiangsu, and Honan. China consumes practically all of her production, estimates indicating more than 50% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% for planting.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to central and northern Korea, as southern Korea, which grows principally cotton and rice, seems to be less suited to the successful production of soybeans. The entire Korean production is used for food, stock feed, planting and export, and none is used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all her production and has imported large quantities from Manchuria and Korea. Acreage and production of soybeans in Japan have decreased since World War I and greater emphasis has been placed on increased production of rice. The proportions of soybeans used by Japan for various purposes are: 'miso' (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; soybean curd [tofu], 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous, 0.5%.

"In the Soviet Far East, the soybean is said to be one of the chief industrial crops and in some districts constitutes 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in Khabarovsk territory, the largest seed-producing area.

"South of China, the soybean is cultivated to some extent in the Netherland Indies, India, Siam, Cochin China, Philippines, and Australia. Until 1932, the production of soybeans in the Netherland Indies was not sufficient to meet

the domestic demand. Since then, acreage and production have gradually increased until soybeans began to be exported to Holland about 1936. The soybean has been widely cultivated for a long time by the natives of the hilly regions from the borders of Afghanistan eastward to Burma, to northern Siam, and French Indo-China. The crop in India has been grown for its forage and food value rather than for commerce. Although successful results have been obtained in some of the provinces with varieties of good oil content, the growing of the crop as an oil seed does not appear to have been popular with the native farmers. In Australia successful results with American varieties have greatly increased acreage and production, especially in the states of Queensland, New South Wales, and Victoria.

“Although attempts to grow soybeans in European countries have extended over many years, it is only within the past few years that there has been any appreciable production. At present, production is confined largely to European U.S.S.R., Bulgaria, Yugoslavia, Austria, Rumania, and Czechoslovakia, production being largest in Rumania, Bulgaria, and Yugoslavia. In the development of adapted varieties, some progress has been made in Sweden, Poland, Netherlands, and Hungary. Because of the economic importance of the soybean, scientists of the U.S.S.R. have carried on extensive experiments with it, especially in the development of adapted varieties and utilization. At present, the principal areas of production are Ukraine, Moldavia, and certain regions in the North Caucasus.

“Experiments have been conducted with the soybean in nearly all regions of Africa but as yet it is an unfamiliar crop to the majority of African farmer. It has been grown successfully in the upland, midlands, and coastal districts of Natal [South Africa] and throughout Gambia, Nigeria, Egypt, the Gold Coast Colony, and also in the corn- and cotton-growing districts of the Belgian Congo.

“Although the soybean has been the subject of considerable experimental work in practically all countries of the Americas, little progress has been made in commercial culture except in the United States and Canada.”

Note: This is the earliest document seen (Oct. 2010) that clearly refers to soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan. This document contains the earliest clear date seen for soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan (long before 1950). The source of these soybeans is unknown. Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, USDA, Beltsville, Maryland.

3680. Morse, W.J. 1950. History of soybean production: 3B. Modern history in the United States (Document part). In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley &

Sons. xvi + 1145 p. See p. 6-9.

• **Summary:** “The first mention of the soybean in the United States is by Mease in 1804, who stated that ‘the soybean bears the climate of Pennsylvania very well and should be cultivated.’ In 1829, Thomas Nuttall grew a variety in the botanic gardens at Cambridge, Massachusetts. From observations he wrote, ‘Its principal recommendation at present is only a luxury, affording the well-known sauce, soy, which at this time is only prepared in China and Japan.’ The Perry expedition to Japan in 1854 brought back two varieties of soybeans which were distributed by the United States Commissioner of Patents. Frequent references to the soybean occurred thereafter in agricultural literature under such names as Japan pea, Japan bean, and Japanese fodder plant. [Note: The last two names do not appear in the SoyaScan database as of Nov. 1991.]

“The Mammoth Yellow variety, cultivated extensively in the southern states for many years, is said to have originated from seed sent from China by missionaries in 1873. In 1878, G.H. Cook of New Brunswick, New Jersey, obtained seed of the soybean from the Bavarian station and James Neilson obtained several varieties from Vienna. Crops of these varieties were harvested in 1879. Undoubtedly these varieties were some of those grown and distributed throughout Europe by Haberlandt. In 1890, C.C. Georgeson of the Kansas Agricultural Experiment Station brought in three varieties from Japan and in 1889 W.P. Brooks of the Massachusetts Agricultural Experiment Station brought back several varieties from the same country.

“Previous to the numerous introductions by the United States Department of Agriculture beginning in 1898, there were not more than eight varieties of soybeans grown in the United States and these with quite limited adaptation to soil and climatic conditions. With the introduction and development of new and improved varieties adapted to a greater range of soil and climatic conditions and uses, acreage and production gradually increased. Until about 20 years ago, most of the soybeans in this country were grown in the southern and eastern states. In 1919, the five leading states in soybean acreage were North Carolina, Virginia, Mississippi, Kentucky, and Alabama. By 1924, the relatively more rapid expansion of the crop in the north central region of the country brought Illinois into the leading position, followed by Indiana, Tennessee, North Carolina, and Missouri. Illinois has held the lead in acreage and production ever since, and the north central region has grown in importance as a region of soybean production and processing.

“Soybeans at first, and for several years, were grown primarily as a forage and pasture crop. Previous to 1930 the acreage harvested for seed was less than one-fourth the total acreage grown for all purposes. With the adaption [adoption] of improved methods of culture, improvement of machinery for planting, cultivating, and harvesting, adapted

improved varieties for processing for oil, and with the development of markets for soybeans for crushing purposes, a gradual increase in the proportion of acreage harvested for soybeans took place. In 1939, 40% of the total soybean acreage was harvested for seed. The proportion for this purpose increased rapidly during the war years. In 1944, 72% of the total planted acreage was harvested for seed and in 1947, 84.5%. An important factor in the marked increase in acreage of soybeans in 1934 was the severe drought, which ruined large acreages of corn, small grains, and tame hay in the early season of the year—as a result of which soybeans were planted as an emergency crop. The program of the Agricultural Adjustment Administration, United States Department of Agriculture was a stimulus to the expansion in acreage of soybeans in the last half of the 1930's. Corn acreage limitations and allotments restricted the acreage of corn and so increased the acreage of cropland available to other crops. Soybeans for seed, although classified as a soil-depleting crop in the principal producing regions, competed effectively for part of this acreage. The greatest annual increase in acreage of soybeans harvested for seed occurred in 1942, in response to the urgent appeal by the Government early that year for a large increase in soybean production to meet wartime demands for oil and fats. Programs of production goals and guaranteed support prices have contributed to maintaining production at a high level since 1942. The Government program for soybean processors, which greatly reduced their risks, was also of importance.

“Standards for use in grading and marketing soybeans were set up by the United States Department of Agriculture as early as 1925 and in 1936 a future [futures] market for soybeans was established in Chicago. In 1929, a soybean laboratory was established in Ohio by the United States Department of Agriculture to conduct research toward the development of high-oil and high-protein varieties. In 1936, the United States Regional Soybean Industrial Products Laboratory was located at Urbana, Illinois, and in co-operation with the experiment stations of the 12 north central states began agronomic investigations in the development of new improved varieties for industrial purposes and chemical research on the development of new industrial uses for soybeans. In 1942, the laboratory work devoted to industrial uses was transferred from Urbana to the Northern Regional Research Laboratory at Peoria, Illinois. At this time the agronomic research remaining at Urbana was designated the United States Regional Soybean Laboratory and was expanded to include 12 southern states in addition to the 12 north central states originally served. The Regional Research Laboratory at Peoria conducts research on soybean processing and on processing and utilization of the oil and oil meal for food and industrial purposes.

“Numerous commercial concerns as well as many public research institutions, are conducting research designed to develop more efficient techniques in processing

soybeans for food and industrial uses. Much research is also being conducted on methods for improving the quality of oil and flour, and for adapting these products to specific uses.” Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, USDA, Beltsville, Maryland.

Address: Noda, Japan.

3682. Pan Ku. 1950. *Han Shu* [The Han dynasty book]. Translated and edited by Nancy Lee Swann. In: *Food and Money in Ancient China: The Earliest Economic History of China to A.D. 25. Han Shu 24 with related texts Han Shu 19 and Shih-chi 129*. Princeton. [Chi]

• **Summary:** See Nancy Swann 1950. Address: China.

3683. Swann, Nancy Lee. trans. 1950. *Food and money in ancient China: The earliest economic history of China to A.D. 25. Han Shu 24, with related texts, Han Shu 91 and Shih-Chi 129*. Princeton, New Jersey: Princeton University Press. xii + 482 p. Plus 79 unnumbered pages of illustrations. Illust. Maps. 25 cm. Plus unpaginated Chinese text at end. [1 ref. Eng]

• **Summary:** This translation of the ancient Chinese book titled *Han Shu* contains extensive annotation and footnotes by the author. The *Han Shu*, written by members of the Pan family (father, son, and daughter), is one of China's most important early historical works, rivaled only by its great predecessor and model, the *Historical Record (Shih-chi)* written by Ssu-Ma Ch'ien and his father, Ssu-Ma Tan, completed between 100 and 90 B.C. Pan Ku (A.D. 32-92), the son, to whom the work is generally attributed, inherited his father's writings. The book is basically a treatise on certain economic phases of the Western/Former Han period (206 B.C. to A.D. 8; HS 24AB) together with sketches of 41 rich merchants and wealthy industrialists (HS 91). It is similar in many ways to the *Historical Record*.

Page 419 notes that “the poor only had soybeans to chew and water to drink.”

The section on the “Wealth of Ch'in Han Times” (Han Shu 91), which describes the period from about 250 B.C. to A.D. 24, it is stated (p. 434): “[Whoever in] market towns and commercial metropolises [sold] annually [any one of the following categories to the specified quantity] was also equal [in wealth with the head of a great hereditary] family *chia* of a thousand chariots. 1. Liquor, a thousand brewings. 2. Pickles and sauces *chiang-yu*,* a thousand jars. 3. Sirups *chiang***, a thousand jars. 4. Slaughtered cattle, sheep, and swine, a thousand [animals including] skins.”

The square brackets are in the translation. This is sections 91:7a/4 and 8b/1 of the original Chinese text. The

authors two footnotes, indicated here by asterisks, read as follows: * “Consult *Li-Chi* 2:23b, Sacred Books of the East, xxvii, 79. The west has learned of the sauce under the Japanese pronunciation *soy*. It is a ‘black, thin liquid, having an agreeable saltish flavor (Stuart 191-195). There are several forms, such as that made from wheat or barley flour, and from various kinds of beans. It is the universal sauce of the Chinese and Japanese, and is to be distinguished from bean relishes *shih*, HS91:11b/5.”

** “Chiang, consult *Li-Chi* 2:24a, SBE xxvii, 79. The *Chou Li* listed four drinks and sirups (5:16a), and also six drinks and sirups (5:24b), and in both lists *chiang* is included. Commentators gave opinions that *chiang* was obtained in part from meats.”

On page 459, in the section on “Nos. 26-32. Seven Wealthy Men of the Capital,” we read that Fan Shao-weng (no. 31), and Wang-sun Ta-ch’ing (no. 32), were both merchants of bean relishes [*shih*, fermented black soybeans]’ they lived in the city of Ch’ang-an. Address: Princeton, New Jersey.

3684. Worth, Miklos. 1950. Soyabeans: The fabulous food that supplies meat, milk, cheese, proteins, amino acids, vitamins, minerals. New York, NY: Ideal Health Books. 62 p. A MacRichard publication.

• **Summary:** This book consists of many short chapters. Contents: The bean that is not a bean. A therapeutic substance. Chemical requirements of life. Natural foods supply basic needs. Disease—A disturbance of mineral salt balance. Essentials in man’s diet. The big five. A balanced mineral supply. Soybean oil valuable to health. Carbohydrates in soybeans. A storehouse of vitamins. How vitamins are to be used. Soyabeans in Rheumatism. Nervous exhaustion. Rickets. Gastro-intestinal disorders. A perfect food for invalids. Constipation. Obesity—An easy way to reduce. Loss of weight. Dandruff and loss of hair. Eczema and other skin disorders. Sciatica. Hardening of the arteries. Excellent food for diabetics. An excellent blood builder. Soyabeans influenced civilization. The poor man’s meat. Introduction to America. Revolutionizing modern economy. Soyabeans could enrich the diet. How to make soya milk. Soyabean sprouts. Soyabean curds. Soyabean coffee. Soyabean oil. How to cook soyabeans. Soyabean flour in baked products. Its use in green salads. Soyabean sauce. Health through soyabeans.

Chapter 1 begins: “Soyabean, the wonder-plant of the Far East that has given sustenance to the peoples of the Orient since time immemorial, is not only a nourishing food, but plays a host of roles in natural health because of its medicinal and therapeutic properties... There is no other single plant known to man which yields such bounty of goodness. All the essential ingredients for health and long life are gathered and packaged in this singular food.”

Note 1. This is the earliest English-language document

seen (Feb. 2004) that uses the term “soyabean curds” to refer to tofu.

Note 2. This is the earliest English-language document seen (Feb. 2000) that uses the term “soyabean sprouts” to refer to these sprouts.

Note 3. This is the earliest English-language document seen (March 2001) that uses the term “soyabean coffee” to refer to soy coffee.

Note 4. This is the earliest English-language document seen (April 2012) that uses the term “soyabean sauce” to refer to soy sauce.

Note 5. This is the earliest English-language document seen (Oct. 2001) that uses the term “soyabean flour.”

3685. Yuasa Shoyu Jozo Dogyo Kumiai [Yuasa Shoyu Brewers’ Assoc.]. ed. 1950? Yuasa shōyu enkaku taiyō: Nihon shōyu jōzō no biso. Wakayama-ken jūyō bussan [Summary of the history of Yuasa shoyu: The originator of Japanese shoyu brewing. An important product of Wakayama prefecture]. Yuasa-cho, Arita-gun, Wakayama prefecture, Japan. 200 p. [Jap]

• **Summary:** Company name with diacritics is: Yuasa Shōyu Jōzō Dogyo Kumiai. The head of the Brewers’ Assoc. is Seshichi Kubo. Included in this history of Yuasa shoyu are logos of at least 6 major Yuasa shoyu manufacturers, together with the company name. Histories of individual companies are not included. One of the companies is Kadocho Shoyu; the founder of its parent company (honke) was Kodaya Umataro.

Yuasa shoyu originated in 1230 A.D., the 4th year of the Antei period. It started to be produced and sold during the Bunreki period by Bo Iwasa. It started to be shipped to Osaka in 1535 (the 4th year of the Temmon period) by Akagiri Zenuemon (or Yoshiuemon). The Yuasa shoyu dealer in Osaka (Yuasa Zogyojo) was Ihei Komatsuya. The Osaka shoyu distributor was established in 1782 (the 2nd year of Temmei) by Matsutaro Kochiya. The Yuasa Shoyu Brewers’ Assoc. was founded on 21 June 1899 (the 32nd year of Meiji). Production is 52,700 koku (1 koku = 180 liters, so 9,486,000 liters), worth 850,000 yen. Address: Yuasa, Wakayama prefecture, Japan.

3686. Pacific Trading Co. (Taiheiyo Boeki Kabushiki-gaisha). 1951. Import–Export–Wholesale (Ad). In: Hokubei Mainichi Nenkan [Hokubei Mainichi Year Book]. 1951. p. 26. [Eng; jap]

• **Summary:** Ad (half page). The top third of this ad is in English, as is the bottom line. In the center are three large logos: Kikkoman [shoyu], Liberty brand Bluerose rice, and Aji-no-Moto [MSG]. Cable address: “Pacmuco” S.F. Address: 249 Davis St., San Francisco 11, California. Phone: YUkon 2-3820.

3687. **Product Name:** Shoyu [Soy sauce].

Manufacturer's Name: Rafu Shoyu Jozo-gaisha (Rafu Shoyu Co.).

Manufacturer's Address: 3500 Larimer, St., Denver, Colorado. Phone: KE 4782.

Date of Introduction: 1951. January.

New Product–Documentation: Hokubei Mainichi Year Book. 1951, p. 662. Category: "Food Products." In Japanese: Rafu Shoyu Jôzô-gaisha. English: Rafu Shoyu Co., 3500 Larimer St., Denver. Phone: KE 4782.

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 485. Under "Food Products." In Japanese: Rafu Shoyu Jôzô Gaisha. In English: Rafu Shoyu Co., 3500 Larimer St., Denver, Colorado. Phone: KE. 4782.

Hokubei Mainichi Nenkan (Year Book). 1970. Page 899. Directory entry, under "Food Products." In Japanese: Rafu Shoyu Jôzô-gaisha. In English: Rafu Shoyu & Bean Sprouts Co., 3500 Larimer St., Denver, Colorado. Phone: 534-4782.

3688. **Product Name:** Shoyu.

Manufacturer's Name: Yamasa Shoyu Kaisha (Yamasa Shoyu Co.).

Manufacturer's Address: 845 Naomi Ave., Los Angeles, California. Phone: TR 5805.

Date of Introduction: 1951. January.

New Product–Documentation: Hokubei Mainichi Year Book. 1951, p. 435. Category: "Food Products." Yamasa Shoyu Kaisha, Yamasa Shoyu Co., 845 Naomi Ave., Los Angeles. Phone: TR 5805. Note: Yamasa is an old and famous maker of shoyu in Japan. It is not clear whether or not this company is related to the Yamasa of Japan, and whether this company makes shoyu or just sells it. However Japan's old and famous Yamasa company does not yet make shoyu in the USA.

3689. Morse, W.J. 1951. What's in a name? *Soybean Digest*. Jan. p. 22-24.

• **Summary:** "Ancient Chinese literature recording the advice of agriculturists on the best varieties of soybeans to plant under different soil and climatic conditions and the utilization of certain varieties for specific purposes, indicates that the soybean was perhaps one of the oldest crops grown by man [sic]. Varieties of soybeans are very numerous in oriental countries, especially Korea. There during agricultural explorations by the United States Department of Agriculture in 1929 to 1931 more varieties showing a wider range of color, size, and shape of seed and plant characters were found than in China, Manchuria, and Japan.

"The soybean is peculiarly sensitive to changes of soil and climatic conditions and this explains undoubtedly to a very great extent why practically every locality in the soybean regions of eastern Asia has its own varieties. Explorations in small villages in China and Korea revealed that nearly every family had its own favorite varieties for different uses.

"It is noteworthy that of the large number of varieties introduced into the United States from the Orient the same variety has rarely been secured a second time unless from the same locality. Obviously, centuries of experience aided by natural crossing and selection have brought about the development of the vast number of varieties for special purposes under local conditions in China, Korea, and Japan.

"Prior to the introduction of numerous varieties of soybeans by the Department in 1898, not more than eight varieties had been grown in the United States. The culture of these was limited to a few well-defined areas. During the past 50 years the Department has made several thousand introductions of soybeans from China, Korea, Manchuria, Indonesia (Java), and India, representing many hundreds of distinct types.

"This large collection, ranging in maturity from 75 to 200 or more days, has shown wide differences in color, size, shape, composition and quality of seed, plant characters, utilization, and in adaptation to the various soil and climatic conditions in the United States.

"In a recent review of all introductions received from eastern Asia, it was noted that a large number of those from China, Korea, and Japan were sent in under their native varietal names, the translation of which revealed some very interesting and perplexing names. It was interesting to note among the oriental names three—Chief, Chestnut, and Hawkeye—that breeders in the United States have assigned to varieties developed for their own local conditions.

"The many peculiar oriental varietal names of soybeans suggested the title of this article. It was thought that American soybean breeders and growers would be interested in knowing the sort of varietal names soybeans have in other parts of the world.

"It is obvious that the oriental breeder or grower, in naming some of the varieties, must have been in a poetic frame of mind in assigning such names as 'Heaven's Bird,' 'White Spirit of the Wind,' 'Flower Garden,' and 'Clasped Hands.'

"The large number of varietal names is quite understandable as they indicate various seed and plant characters, temples, villages, prefectures, animals, birds, uses, and occasionally a breeder's name. This will be noted in the following lists and selected classification of varieties.

"It is not to be assumed that these lists of names represent all of the varieties grown in these countries. In fact, they are only a selected number from the varieties introduced into the United States during the past 50 years. It was interesting to note that some of the Chinese varietal names were the same as those in Chinese literature dating back 100 years ago."

"Selected classification of Chinese soybean varieties:

"Seed Color: Black Belly, Chicken's Foot Yellow, Crow's Eye Yellow, Crow's Skin Green, Flesh Yellow, Musk Deer's Skin Yellow, Parrot Green, Raven's Eye Yellow, Tiger

Skin.

“Seed Size: Great White, Large Black, Large Green, Large White Eyebrow, Small Golden.

“Seed Shape: Flat Black Golden Round, Large Round Black, Pearl Shape, Round Pearl, Small Round Green.

“Hilum (Seed scar): Flowery Eyebrow, Large White Eyebrow.

“Maturity: August Green, Autumn Azure, Burst Pods in Six Months, Eighth Month White, Fifth Month Yellow, Melon Ripe, Midsummer Yellow.

“Pods: Five Month Broad Pod, Four Grain Green, Four Grain Yellow, Iron Pod Green, Three Bean Pod, White Podded Green.

“Leaf: Long Large Green Leaf.

“Pubescence: Hairy Green, Red Hair Green, Sixth Month White Hairy, Yellow Hair Green.

“Utilization: Black Curd, Follow Rice, Round Cattle Feed, Vegetable.

“Odd Names: Entwined Silk, Moon Tooth, Sparrow’s Cackling, Unknown Water.”

“Selected classification of Korean varieties:

“Seed Color: Barbarian Blue, Black Chestnut, Castor Bean Skin, Golden, Indigo, Lacquer Black, Red Striped, Rich Black, Widower (Black and White), Yellow Dragon’s Eye.

“Seed Size: Big Green, Large Black, Small Blackeye, Small Blue.

“Flower: Early White Flower, Large White Flower, White Flower Pure Yellow.

“Hilum: Chotan White Eye, Green Eye, Purple Mouth, Rensen Brown Eye, Small Blackeye, White Eye.

“Maturity: Aid For New Land, Black Sprout, Black Vegetable, Edible, Millet Friend, Plant In Millet, Plant in Wheat, Plant Between Crops, Rainy Season, Roasting, Sprout.

“Habit: Climbing.

“Leaf: Bamboo Leaf.

“Birds: Crow’s Early, Domestic Geese, Pigeon, Skylark, Swallow, Water Rail.

“Animals: Deer, Horse, Mouse, Red Rat, White Horse.

“Village: Anpen, Chotan, Tansen.

“Superior Varieties: Great Happiness, Plentiful, Prolific, Rich, Rich and Virtuous.

“Odd Names: Beheaded, Clasped Hands, Cow’s Knee, Flying Fish, Flower Garden, Peaceful, South Sea, Spirit of the Wind, Turtle Nest, White Priest’s Foot, Wild Boar’s Hip.”

“Selected classification of Japanese varieties:

“Seed Color: Black Autumn, Black Saddle, Brown Spotted, Green Fool, India Ink, Mink Skin, Pretty Flesh Color, Silver White, Yellow Jewel, Yellowish White Blackeye.

“Seed Size: Large Green, Large Jewel, Large White, Large White Ring, Small Blackeye, Small Bullet, Small White.

“Seed Shape: Gingko Seed Shape, White Ball, Water Caltrop Shape.

“Hilum (seed scar): Blackeye, Green Eye, No Eye, White Eye, White Mouse Eye.

“Pods: Black Eye Long Pod, Black Pod Gold, Four Seeded Yellow, Fox Pod, One Seed, Red Pod, Three Seeded Pod, Two Seeded Pod, Yellow Pod, White Pod.

“Pubescence: Early Smooth, Green Non Hairy, Half Smooth, Middle Season Smooth, Naked Devil, Non Hairy, Smooth White, Smooth Devil, White Hair.

“Stems: Fan Shape Stem, Red Stalk, Single Stalk, White Stem.

“Leaf: Five Leaf Saddle, Monbetsu Long Leaf.

“Habit of Growth: Akita Bunch, Bunching Maiden, Doesn’t Touch The Earth, Dwarf, Very Bunched Pods.

“Maturity: August, Black Autumn, Early Gold, Middle Season, October, Very Early Abundant, Yellow Fall, Midseason Fox, Through Frost, White Autumn.

“Utilization: Devil Chaser [for roasted soybeans—irimame], Forage, Miso, Natto, Paddy Field Boundary, Produces in Shady Places, Soy Sauce, White Sprout.

Superior Varieties: Abundance, Abundant Pods, Brings Treasure, Early Increase, Excessive Yield, Fortune, Heavy Yield, One Hundred Percent Good, Small, Fortune, One Thousand Pod.

“Animals: Early Fox, Mink, Mouse, Small Donkey, Tiger.

“Birds: Crane’s Friend, Dove, Dove Killer, Sparrow, Wild Duck, Wild Goose, Young Crane.

“Persons: Bingo’s White, Chichanari, Hachiya.

“Prefectures (states): Aizu, Chiba, Echigo.

“Shrines: Goshanari, Miyashiro, Zankonji.

“Villages: Chizuka, Hachirihan, Iwakiri.

“Odd. Names: Covered with Frost, Bright Country, Elder Brother, Enter Priesthood, Heaven’s Bird, Old Woman’s Cane, Pretty Girl, Through the Water, Under The Snow, White Dog’s Foot.”

Photos show: (1) Bean curd [tofu] cakes being sold by vendors on streets in Peking, China. In the Orient special varieties of soybeans are used in the manufacture of bean curd and many other soy products. (2) Korean farmers’ market day held weekly in the small villages. This offers a rich source of soybean varieties. (3) Japanese farm girls planting seed of the Azemame (Paddy Field Boundary Soybean) variety on the land bounding a rice paddy. The beans are used in making miso (salty soy paste), soy sauce, and other foods for human consumption.

Note: This is the earliest English-language document seen (Aug. 2011) that uses the term “salty soy paste” to refer to miso. Address: Retired Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, Agricultural Research Administration, U.S. Department of Agriculture, USDA.

3690. Nicholls, Lucius. 1951. Tropical nutrition and dietetics. 3rd ed. London: Baillière, Tindall and Cox. ix + 476 p. Feb. Illust. 24 cm. [40+* ref]

• **Summary:** Table XI (p. 22), “Chemical and biological evaluation of proteins for growing rats,” contains 6 columns: Foodstuff, digestibility, Biological Value, Net Utilisation [NPU], Protein efficiency ratio, chemical score, and limiting amino-acid. “There is agreement in all methods of the high value of milk, eggs, and other foods of animal origin, and among those of vegetable origin, the proteins of soya bean flour hold a high place.” Values for soya bean curd [tofu] are also included. The next section is on supplementing proteins.

The long section titled “Pulses (legumes)” (p. 219-35) has this contents: Introduction. Dhals (Dals; peas which have been shelled, split and polished). Peanut. Bambara earth pea (*Voandzeia subterranea*). Soya bean: Importance in Asia, used in many forms: Nearly-ripe seeds [edamamé or green vegetable soybeans], dry seeds, soya bean emulsion (‘Milk’—contains a detailed description of how soya milk [Vitasoy] is made in Hong Kong, including exact amounts of all ingredients for 800 oz and the nutritional composition (%)), soya bean curd (may be smoked or dried), fermented curds [fermented tofu], fermented beans (tépépé), soya bean sauce, sprouted soya beans, soya bean flours, mixtures of soya beans and cereals, milk substitutes (for infant feeding in China). The genus *Phaseolus* may be divided into two types: Those of Asian origin and those of New World origin (Americas). Cow pea (*Vigna sinensis*, *V. unguiculata*, *V. sesquipedalis*). Egyptian kidney bean (*Dolichos lablab*). Horse gram. Chick pea. Cluster bean (*Cyamopsis psoralioides*). Four-angled bean or Goa bean (*Psophocarpus tetragonolobus*). Locust bean (*Ceratonia siliqua*). African locust bean (*Parkia biglobosa*, *P. filicoidea*). Sword bean (*Canavalia gladiata*). Jack bean (*Canavalia ensiformis*). Velvet bean (*Mucuna* spp.). Honey locust (*Prosopis juliflora*). Garden pea (*Pisum sativum*). Broad bean (*Vicia faba*—not a tropical plant). Yam bean (*Pachyrrhizus erosus*). West Indian locust (*Hymenaea courbaril*). Madras thorn (*Pithecellobium dulce*).

Phaseolus—Asian: *Phaseolus aureus*: green gram [mung bean]. *Phaseolus mungo*: black gram. *Phaseolus calcaratus*: rice bean. *Phaseolus actinifolius*: moth bean. *Phaseolus angularis*: adzuki bean. New World: *Phaseolus lunatus*: lima bean. *Phaseolus vulgaris*: kidney bean. *Phaseolus multiflorus*: scarlet runner. The subsection titled “Substitutes for milk” (p. 231-35) discusses soya milk. Goitrogenicity of [raw] soya beans (p. 376). Saponins in foodstuffs (incl. soya bean; p. 385). Table 62 (p. 404-05) gives the botanical name and composition of pulses, incl. soya bean, soya bean curd, soya bean milk, carob bean, Goa bean, tepary bean. Table 66 (p. 410-11) does the same for fresh legumes, incl. broad bean, French beans, pea, pea nuts, and sprouted soya. Table 67 does the same for nuts, oil seeds, and miscellaneous seeds, incl. almonds, coconut, coconut “water,” coconut

“milk,” linseed, pumpkin seed, sesame (gingelly), sunflower seed, and sunflower seed (kernel).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term “fermented curds” to refer to fermented tofu.

Note 2. The title C.M.G. (Companion of St. Michael and St. George) is an honor conferred upon those for distinguished service in the British colonies or commonwealth.

Also discusses: Marmite (autolysed yeast, p. 158, 302). Fluorine in teeth and fluorosis (p. 170, 38). The many species of millet and sorghum (p. 216-18). Coconut, coconut milk, palm oil, red palm oil benniseed of Nigeria, gingelly oil, sesame, sim-sim, til (p. 254-60). Yeast (dried; *Torula utilis*, Brewers’ yeast, Bakers’ yeast, Marmite) (p. 302-03).

Lucius Nicholls was born in 1884. Address: C.M.G., M.D., B.C., B.A. (Cantab.). Late Director of Bacteriological and Pasteur Institutes, and Director of Div. of Nutrition, Ceylon; Lecturer in Nutrition, Ceylon Univ.; Late Lecturer on Tropical Medicine, Ceylon Medical College; Nutrition Adviser to Commissioner General, South East Asia. Presently at Cookham Dean [just west of London, England].

3691. Bening, W. 1951. First published report on soybeans. It was written in Germany in 1712. *Soybean Digest*. March. p. 20-22.

• **Summary:** This book was the *Amoenitatum Exoticarum* (“Exotic Novelties”) by Engelbert Kaempfer. The book, itself, is located in a locked glass case at the Engelbert Kaempfer Museum, in the dreamy medieval town of Lemgo, Germany, where Kaempfer was born on 16 Sept. 1651. When he died, he left behind his extensive diaries, drawings, and manuscripts, some of which are still among the rare materials of the British Museum in London. Kaempfer had a lifelong desire to travel abroad and an “unbelievable capacity for learning foreign languages... An amateur in almost all fields of science, with profound knowledge in medicine, botany, and pharmaceuticals, at the age of 32 Engelbert managed in 1713 to be engaged as secretary to the Royal Swedish Ambassador Extraordinary on a special mission to Persia. And some years later, after many story book adventures, he was assigned as surgeon in the colony of the Dutch East India Company in Japan.”

The author then gives an English-language translation of what Kaempfer wrote about the soybean. “This [Dutch East India] company operated at that time the only European colony in Japan. It was licensed by the emperor of the country. The colony was hermetically sealed from the country and its inhabitants. Laws were extremely severe on foreigners as well as the natives.

“Kaempfer, whose only wish was to study the country and its population, despaired. Yet under these hard circumstances, he wrought the masterpiece of his life. His open character and untroubled friendliness to all, and his

extraordinary gift of learning languages overnight, opened to him the minds and hearts of the Japanese people...

“Engelbert Kaempfer in those prison years on the little island of Deshima, laid the foundation of western science in Japan.

“When Engelbert returned to Lemgo 10 years after he had left home, he wrote his *Amoenitates Exoticae* in the difficult Latin language of those times.”

Photos show: (1) Kaempfer’s book, opened to the illustration of a soybean plant. (2) Dr. W. Bening, “a German nutritionist and soya expert, who has been connected with the program for improvement of the German diet with soy foods.” (3) The outside front of the Engelbert Kaempfer Museum near Lemgo. Address: PhD.

• **Summary:** The soybean “is referred to by Chinese as ‘the poor man’s meat and the poor man’s milk.’” In New York City, soybeans are sold in Chinese shops in three main forms: seeds [whole dry soybeans], bean sprouts, and bean curd. Soy sauce and soybean oil are also available. Soy sauce “is a heavy dark fluid which is used as a condiment to supply saltiness that brings out flavor,...

When soybean milk is heated, a skin [yuba] such as forms on milk rises to the surface. Other [Western] uses of soybeans include soybean flour, meal, lecithin, shortenings, and margarine.

Nitrogen fixation takes place in the nodules of the soybean plant, which makes it useful as a green manure. Crude soybean oil goes into the manufacture of soap (both soft and hard). Soybean meal can be used to make plastic and “protein fibers” which are called “soybean wool. “During the war about 1,000 pounds of soybean wool were produced each day, and all of it went into the winter uniforms of the armed forces.”

Some 36 different varnishes with 100% of their oil content as soybean oil have been developed and given exposure tests. A rubber substitute named “norepol” has been developed and can replace rubber in “insulation, shoe heels, fruit-jar rings, gaskets, and tubing.” Soybean protein has been used as a stabilizer in fire-fighting foam. Other industrial uses, which are too numerous to mention, include enamels, printing ink, linoleum, foundry cores, glycerin, notepaper, and billiard balls. In the United States, soybean crops and products create an annual income of \$45 million.

Tables show: (1) Nutritional composition (on an “as-is” basis) of: “Bean cheese (Tou-fou; 13.5% protein). Soybean milk (3.13% protein). Bean oil (Tao-yu; 7.49% protein). Soy sauce (Tao-jung; 12.67%). (2) Nutritional composition of soybeans.

Half-page photos (each with a black background) show: (1) Bean sprouts ready for cooking. (2) A square of firm “Tou-fu, bean curd, a cheese made from soybeans.” Address: 3334 Prospect Ave., N.W., Washington &, DC.

3696. Anthony Bros. Inc. 1951. The Bar-B-Q Chef (Ad). *Los Angeles Times*. April 22. p. G21.

• **Summary:** “Shish kebab is Armenian, Shashlik is Russian, en Brochett [sic, en Brochette] is French, and Teri Yaki is Hawaiian [sic, Japanese]. They all spell delicious barbecued food.” A recipe for Shashlik (but not Teri Yaki) is given.

A clip-out coupon offers two choices: (1) “Please send me your Free Bar-B-Q Recipe pamphlet.” (2) “Please send me an invitation to your barbecue demonstration.” Note: The company sells barbecue equipment. A brochette is a skewer. Address: 270 S. Rosemead Blvd., Pasadena [California].

3697. Standard, Stella. 1951. Whole grain cookery: A gourmet guide to glowing health. New York, NY: The John Day Co. ix + 240 p. April 26. Foreword by Pearl S. Buck. No index. 21 cm.

• **Summary:** The basic message: Whole grains and their flours taste better and are better for you. The first third of this cookbook contains one chapter (with recipes) on each of the major cereal grains (rice, corn, oats, etc.) plus sunflower seeds. A middle chapter, titled “A miscellany of grains” (p. 111-38) gives recipes for gruenkern, oat grits, wheat

grits, cracked wheat, bulghur, rye, rye grits, hominy grits, millet, pearl barley, barley flour, kasha (buckwheat groats), soybeans, etc. The last third is about baked goods, arranged by type (yeast breads, quick breads, hot breads, pancakes, cakes, pies, puddings, confections, etc.).

Chapter 12, titled "Whole grain," ends (p. 5) with a paragraph about the soy bean. It was introduced to the USA in 1804 "but was not cultivated extensively until after the First World War." There are 2,000 varieties. "It is becoming more and widely used as a food in various forms because it is so rich in proteins, fats, minerals, and vitamins. It is also used in the manufacture of many goods, besides its great importance as a food."

Soy related recipes: Soy grits in consommé (p. 129). Baked soybeans (p. 135-36). Fried soybean sprouts (p. 136). Soya and whole wheat bread (p. 151-52). Orange, oatmeal, and soy flour bread (p. 160-61). Soya, rye, and oatmeal flour bread (p. 161). Soya and cornmeal bread (p. 177-78). Soy sauce is used in several recipes (p. 17, 29, 114, etc.). Many recipes contain meat, fish, or poultry. Address: [USA].

English-language summary on p. 44 of this issue. [11 ref. Jap; eng]

• **Summary:** (1) Out of 121 strains of *Aspergillus oryzae* taken from many kinds of miso and koji starter (*Tanê-koji*), eleven strains which produced riboflavin comparatively well were selected by means of culturing in Pfeffer's solution. (2) A strain that produces the most riboflavin was selected from these 11 strains by manufacturing soy-bean and rice malts.

(3) A sort of fortified miso was made on trial by using this strain, and it produced 3 times the ordinary amount of riboflavin in "rice Miso" and 2.4 times the amount of riboflavin in wheat Miso. Note: This is the earliest English-language document seen (Feb. 2009) that uses the term "rice miso" to refer to miso having rice and soybeans as its main ingredients. Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Sangyo Kagaku Kenkyujo).

3709. **Product Name:** Dr. Bronner's Balanced Protein Seasoning [Powdered, or Liquid].

Manufacturer's Name: Dr. Bronner & Associates.

Manufacturer's Address: 447 South Hope St., Los Angeles, California. Phone: 619-745-7069.

Date of Introduction: 1951.

Ingredients: Unrefined hydrolyzed vegetable protein derived from corn, whole wheat & soya bean.

Wt/Vol., Packaging, Price: 2.25 oz, 5 oz, 10.5 oz, 22 oz, or 3.5 lb (2/90). Plastic jar with screw on lid. Retail for \$1.31.

New Product–Documentation: Talk with Dr. Emanuel H. Bronner himself. 1990. Feb. 8. He is a rabbi and soap maker, age 82. He introduced these two products, in powdered and liquid forms, in about 1950-51, when people demanded a seasoning alone, without the minerals. This product is high in protein and low in minerals.

Label. 1990. 5 by 2.75 inches. Pea green on yellow. "Great for good-balanced nutrition, for salt restricted

diets use balanced mineral-seasoning or mineral-bouillon. Adjusted to contain 33% complete balanced vegetable amino acids protein. Guaranteed to include the essential, natural, unrefined amino-acids, none removed, giving the finished product a fine meaty taste & almost water-free high concentration. Adds delicious flavor & protein to all foods: Soup, broth, salad, meat, or as instant gravy. Fully soluble: Of 100% vegetable origin. Use enough to suit your taste. Concentrated: Keep closed since moist air will cake but not spoil it. Contains no stabilizers, synthetics or any animal products. Completely natural. Judge only by the results! Packed and guaranteed by All One God Faith, Inc. Rabbi Emanuel H. Bronner, Assoc., SMMC, DD Soapmaker, Master Chemists & Essene Rabbis, Escondido, Box 28, California 92025. Made in USA. Save 33%. Refill from 1 lb. 6 oz. quart. Keep closed since moist air may cake but not spoil it.

Ideal for picnics & lunches, gives body & taste to all food. Enjoy on sandwiches, egg, salads, meat, fruit or alone in hot water. Keep tightly closed after use. Makes all food tastier. OK as broth, gravy, meat substitute, soup, sauce & seasoning. 1 oz 54 calories. Unrefined & balanced. Suit your taste! 1 teaspoonful contains 6 calories. Nutritious and delicious to season and strengthen any meal or snack. Enjoy as a balanced seasoning, as vegetable bouillon, a meat-flavored instant soup base, delicious on meat, vegetables, gravy, juices, etc. Help unite All-One! All-One! Ask for Dr. Bronner's Peppermint Soap at your health store. Balanced food unites... [all countries] in All One God Faith! OK! All One! All One!

• **Summary:** Contents: 1. Soybean flour, grits, and flakes: Introduction, early history, types of soybean flour—standard definitions, amount of soybean flour and related products produced, methods of manufacture, soybean flour in bread, soybean flour in other baked goods, soybean flour in the meat industry, soybean flakes in breakfast foods, soybean flakes and derived peptones as brewing adjuncts, miscellaneous uses of soybean flour. 2. Isolated and modified soybean proteins: Aerating agents for confections and related products, neutral spray-dried soybean protein [isolates], soybean protein in [whipped] toppings, soybean protein and flour in confections, soybean protein and flour in ice cream, soy sauce, monosodium glutamate from soybeans, soybean vegetable milk, tofu, miso, yuba, and other Oriental soybean foods (incl. natto and Hamanatto).

The soy flour industry in the U.S. has grown steadily in recent years. Deliveries of soy flour “from the years 1930 to 1940 averaged about 25 million pounds annually. The deliveries have increased considerably since 1940 partly as a result of an increase in domestic use and partly as a result of deliveries of soybean flour to various government agencies, largely for export. In 1941, Federal purchases amounted to about 10 million pounds of soybean flour. In 1943, the amount increased to 170 million pounds when large shipments were made to Great Britain and the U.S.S.R. under lend-lease. Purchases of soybean flour by the Federal government decreased for several years, but increased in 1946 to an estimated 200 million pounds under the UNRRA [United Nations Relief and Rehabilitation Administration] program. Total soybean flour deliveries for 1946 were approximately 380 million pounds. In the domestic market the bakery industry was the largest consumer. About 40% of the domestic sales of soybean flour were for bakery use. Since the Bureau of Animal Industry has legalized the use of soybean flour as a binder in meat products, about 20% of domestic sales are to the sausage industry. The balance is used in prepared dough mixes, macaroni, candy, and in institutional feeding.

“In 1947, domestic sales of soybean flour were over 60 million pounds. This amount, plus government purchases and exports, amounted to about 415 million pounds. Two-thirds or more of the present domestic consumption of soybean flour is by the bakery, meat processing, and pet foods industries.”

Table 155 (p. 953) shows Bushels of soybeans used for U.S. soy flour production (1942-1947). In 1942-43, the amount of full-fat soy flour produced in the USA was roughly 40% of the amount of defatted. In 1944-45 it was about 49%, but thereafter the percentage dropped rapidly to only 5% in 1946-47.

Note: These statistics relate to Soya Corporation of

America, Dr. Armand Burke, and Dr. A.A. Horvath.

Concerning soybean flakes and derived peptones as brewing adjuncts (p. 974-77): "Soybean flakes and grits have been employed by the brewing industry to improve the body and flavor of beer, to increase foam stability, and to stimulate yeast growth.

"Improvement in foam stability and flavor can also be attained by adding directly to the finished beer a hydrolyzed soybean protein which has been broken down to the peptone and proteose stage...

"The early history of the use of soybean products as whipping agents is of interest since this work stimulated the development of processes which eventually led to the production of the present soy albumens. In 1939, Watts and Ulrich pointed out that an active whipping substance could be prepared from solvent-extracted soybean flour in which the protein had not been heat denatured, by leaching it at the isoelectric point of the protein. This extract was found to whip more readily and to a much greater volume than suspensions of the original flour... The active principle in the whipping substance prepared by Watts and Ulrich was probably the nonprotein nitrogenous material present in the soybean flour which is soluble at the isoelectric point of the protein."

Tables show: (155) Soybeans used in the production of low-fat and full-fat flour and grits (1942-1947, 1,000 bushels). (156) Peroxide value of fat extracted from pastries stored at -17.8°C. (0°F.), containing different percentages of soybean flour for periods of 0-6 months. (157) Analysis of uncooked liverwurst emulsion and of processed (water-cooked) sausage containing added soybean flour and water. (158) Losses in cooking liverwurst containing added soybean flour and water. (159). Analysis of frankfurter emulsion and of smoked sausage made with 3.5% of various binders. (160) Losses in smoking frankfurters made with 3.5% of various binders and after consumer cooking. (161) Effect of the addition of soybean peptone on volume and life of foam on beer. (162) Composition and pH of soybean albumens. (163) Composition of ice creams containing soybean flour. (164) Comparison of soybean milk with cow milk. One sample of cow's milk is compared with 4 samples of soybean milk (probably Oriental) and 3 samples of modern U.S. soybean milk reconstituted (Soyalac for infants, all purpose Soyalac, Soyagen canned from Loma Linda Food Co., California).

Figures show: (199-201, p. 981) Comparison of whipping ability of egg albumen and soybean albumen in different proportions and combinations. (202) Flow sheet for the acid hydrolysis process used in making HVP soy sauce. Address: Protein By-Products Research, Research and Technical Div., Wilson & Co., Inc., Chicago, Illinois.

Address: Massachusetts Inst. of Technology, Cambridge, MA.

3724. Hui Manaolana Foundation (formerly Niji-no-Kai). 1951. Japanese foods (Tested recipes). Honolulu, Oahu, Hawaii: International Institute, Y.W.C.A. 122 p. Illust. (some colored). Index. 24 cm.

• **Summary:** The Hui Manaolana was formerly named Niji-no-Kai and is affiliated with the International Institute of the Y.W.C.A. The book was inspired by Mrs. Isaac M. Cox (Catherine E.B. Cox), an educator and volunteer advisor to the Y.M.C.A. Almost all the recipes in this book have been submitted by members of the group, and that woman's name appears next to the recipe title. Shoyu is called for in many recipes.

Following a preface and an introduction, the recipes are organized by type. The many interesting ads related to soyfoods, scattered throughout the book, are cited elsewhere. Helpful hints (p. 12): "To prevent tofu from crumbling, soak in salted water for a while before using." On p. 15 are 4 menus each for breakfast, lunch or supper, and dinner. Soups: Chiri (Fish & tofu soup). Kenchin (Vegetable soup with tofu). Basic miso soup. Satsuma jiru (Miso soup with chicken & vegetables). Oio fish dumplings in miso soup. Miso soup with long rice. Rice: Azuki meshi (Rice with red beans). Sekihan (Steamed azuki rice). Inari zushi (Sushi rice in aburage).

Fish and seafoods: Ebi no teriyaki (Barbecued shrimp. The sauce consists of: 3/4 cup shoyu, 1 teaspoon gourmet powder [Ajinomoto], 1/2 cup sugar, 1 teaspoon grated ginger, 1 clove garlic [crushed]. Mix well). Katsuo no miso yaki (Tuna broiled with miso sauce). Katsuo teriyaki (Broiled fresh tuna). Meat and chicken: Sukiyaki (with tofu). Pork and tofu. Tofu: Gan modoki [Ganmodoki]. Ankake tofu (Boiled tofu with thick sauce). Tofu with crab meat egg roll. Tofu tempura. Okara (Bean curd residue dish). Iri dofu. Okara nira (with aburage). Yudofu with goma [sesame] miso sauce. Fried tofu cooked in miso. Koya dofu (Frozen soybean curd cooked in shoyu).

Note 1. This is the earliest English-language document seen (May 2012) that contains the term "Gan modoki" (regardless of hyphenation); it refers to deep-fried tofu burgers.

Vegetables: Kiriboshi and aburage. Nikomi oden with yakidofu. Cabbage with mustard & miso sauce. Shira ae—Watercress (With tofu dressing). Shira ae (Vegetable with tofu sauce). Daikon sumiso ae (Turnips in miso). Nikomi oden (Vegetables with miso). Nishime (with tofu). Nasu no shigiyaki (Fried eggplant with miso sauce). Negi—nuta (Green onions with miso sauce). Green pepper—miso yaki. Kuromame (black soybeans). Noodles: Kitsune udon (With aburage). Relishes: Konbu no tsukudani (Seasoned seaweed). Tekka miso (Fried miso with gobo). Kaibashira no tsukudani (Scallops cooked in shoyu). Shoyu turnips. Desserts: Many

with kanten, azuki beans, and azuki koshi an (Sweetened bean paste).

Glossary (p. 97-98) includes: Aburage (fried bean curd). An (red bean paste). Azuki (red beans). Edamame (soybeans). Fu (gluten cake). Gourmet powder (mono-sodium glutamate). Kanten (gelatin made from agar-agar). Karashimiso (mustard miso). Kinako (yellow soy bean powder). Kirazu (bean curd residue). Konbu (seaweed). Kuromame (black soy beans). Miso (fermented rice and soy beans). Nori (sea weed). Okara (bean curd residue). Shira-ae (vegetables with mashed tofu). Shoyu (soy sauce). Sumiso (vinegar and miso sauce). Sushi. Tare (thick shoyu sauce). Tempura (fritters). Teriyaki (barbecue). Tofu (bean curd). Ume (pickled plum). Wakame (sea weed). Yakitofu [yakidofu, broiled or grilled tofu].

Note 2. This is the earliest English-language document seen (May 2012) that uses the term “Yakitofu” to refer to grilled tofu.

Note 3. This is the earliest English-language document seen (Aug. 2011) that contains the term “bean curd residue” or that uses that term to refer to okara. Address: International Institute Y.W.C.A., Honolulu, Hawaii.

3725. Law, James Thomas. 1951. Law’s grocer’s manual. 4th ed. Edited and revised by W.G. Copsey. London: William Clowes and Sons, Ltd. xv + 814 p. See p. 467, 510. Illust. 22 cm. With a foreword by W.R. Austen Hudson, M.P., F.G.I.
 • **Summary:** Page 467, under the heading “Soy bean,” discusses soy sauce, tofu, natto, miso, and soy milk. Page 510 gives more details on tofu and describes (quaintly and inaccurately) how to make this “fresh bean cheese.” “The beans are soaked in water for 3 or 4 hours, cooked, and reduced to a paste. The milky fluid is strained through a coarse cloth to remove stalk and fibre [okara], and when cooled is precipitated by the addition of crude salt. The precipitate, which is rich in protein and fat, is then kneaded and pressed into cakes called fresh Tofu. They are then dipped into a solution of curcuma.” Address: W.G. Copsey is Secretary of the Inst. of Certified Grocers; Hudson is President of the National Assoc. of Multiple Grocers.

3726. Murakami, H.; Okuyama, K.; Sugita, S. 1951. Kôji no kenkyû. II. Jôzô kôjikin no sentaku (1) Shôyu jôzô kôjikin [Studies on koji. II. Selection of Aspergilli for the Japanese brewing industry (1) Aspergilli for shoyu brewing]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 46(12):483-77. [13 ref. Jap; eng]

• **Summary:** Aspergilli were selected from shoyu brewing (14 strains), miso (14), amasake (9), sake (6), submerged culture for amylase production (5), and submerged culture for protease production (5). This report describes how to select Aspergilli for shoyu brewing and their classification by availability for shoyu brewing.

3727. Noda Shoyu Co., Ltd. 1951. Soy sauce? Correction please! You mean Kikkoman soy sauce (Ad). In: Hui Manaolana. 1956. Japanese Foods: (Tested recipes). Honolulu, Oahu, Hawaii: Hui Manaolana. 118 p. See p. 40.

• **Summary:** “Try the new pint and ½ pint bottles. Available at all grocery stores.” A cartoon character, a smiling Hawaiian girl with a lei around her neck, is pointing toward the upper right quarter of the page, where there is a large hexagonal Kikkoman logo. A photo in the lower left corner shows a bottle of “KikkoMan Soy Sauce,” made by Noda Shoyu Co., Ltd. Address: 11, 3-chome, Koamicho, Nihonbashi, Tokyo, Japan.

3728. White, Julius Gilbert. 1951. Abundant health: Expounding the Learn-how-to-be-well system of daily living. 5th printing. Pine Mountain Valley, Georgia: Health and Character Education Institute. xix + 477 p. Illust. 24 cm. See p. 367-82. [25 ref]

• **Summary:** About vegetarianism, diet, and hygiene. Note that the author was formerly (for 11 years) head of the Lecture Bureau at Madison College, a Seventh-day Adventist

college and sanitarium. A portrait photo (p. vi) shows Julius G. White.

One chapter titled “The soybean: The wonder food of the world” (p. 367-82) discusses (with some recipes) the nutritional value of soybeans, Soybean milk and the pulp left after making it, soy flour, whole soybeans, vegetable meat (meat substitutes), soybean cheese [tofu], home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color if desired), soy mayonnaise, soy acidophilus milk, soy sprouts, soy sauce, soy coffee, and soy protein substitute for egg-white.

• **Summary:** The section titled La Choy products (lower left corner) includes: “Soy sauce. 3 oz. bottle–10¢.”

This section also includes: Chinese dinner (meatless). Chow mein noodles. Bean sprouts [mung beans]. Chop suey vegetables.

3730. **Product Name:** Dr. Bronner’s Balanced Mineral Salt (Powdered).

Manufacturer’s Name: Dr. Bronner & Associates.

Manufacturer’s Address: 447 South Hope St., Los Angeles, California. Phone: 619-745-7069.

Date of Introduction: 1952. January.

New Product–Documentation: Talk with Dr. E.H. Bronner himself. 1990. Feb. 8. He is a rabbi and soap maker, age 82. He introduced this powdered product in Jan. 1949. He was born and raised in Germany, in a family of soap-makers. The first soap plant was started by his grandfather. He is a nephew of Albert Einstein. Neither a PhD nor an M.D. (physician), he has a German doctor of chemistry degree (SSMC: Seifensieder Meister Chemiker, or SMMC: Soap Maker Master Chemist, recognized by the American Chemical Society). He came to America in 1929 and became superintendent of a large soap plant in Pennsylvania. From 1929 to 1944 he built 3 soap factories in America.

His discovery of this product went through at least 6 steps, but there were two main ones. First, in 1933-34, when Hitler came to power and German imports were unpopular in America, he began to look for potassium salts (potassium hydroxide) for soap making. The imported German potassium source made a better product. He found a natural mineralized dulse (that had been overlooked by others) which he used with good results in his soaps.

Second, in 1938, as a young man with 3 lovely children, he had dental plates—he had lost his teeth. His body had craved calcium since he was a young boy in Germany and he would eat eggs with the shells. In 1941 he read the front-page headlines about “The town without a toothache,” Hereford, Deaf Smith County, Texas. The American Dental Association (83rd annual convention, Houston, TX) discovered that the high calcium, phosphorus, magnesium,

vitamin D, and fluoride content of the food and water was instrumental in preventing tooth decay. That article plus his own personal experience led him to believe that there was a great need for a balanced mineral seasoning that contains calcium, phosphorus, magnesium, potassium, sodium, iodine, iron—all the minerals in the right proportion. He wanted to make both a seasoning and a mineral / vitamin supplement that was a balanced food. He started by using what the Romans called *sal digestivus* or “digestion salt,” a red mineral salt containing potassium, sodium, iron, chloride, found in deposits on the surface of the earth, produced by Chief Chemist God from ocean dulse (a sea vegetable), i.e. mineralized dulse. He uses it to this day as the source of potassium in his mineral seasoning. The only ingredient listed on the original product was “mineralized dulse.”

This innovative ingredient became the key ingredient in his various products. In about 1952, to add more flavor, he first began to add a powdered HVP (made by hydrolysis of corn, whole wheat, and soybeans), which he bought as powdered HVP (from a company whose name he no longer remembers and which no longer exists) and blended it with the minerals and vitamins in the right proportions. HVP was developed in America in the 1930s and became commercially available in the 1940s. His present source of HVP is a “military secret.” This powdered mineral seasoning was his first soy product. It got off to a very slow start. This product (which still exists) has remained basically unchanged since 1952. It and its liquid counterpart are doing well, especially considering the fact that he has no salesmen and no advertising. His original company was located on Hope Street (at 5th and Hope) in Los Angeles, in a 10-story building. In 1955 he got his current building at Box 28, Escondido, CA 92025. From 1955 to 1962 he commuted between the two locations and in 1962 moved everything to Escondido.

He became a rabbi in 1962-63 after a lecture in Watts, the black ghetto near Los Angeles. The 200 blacks applauded but a white man shouted: “You stole that brilliant speech. You stole it from Rabbi Hillel’s 2,000 year old Torah. You stole it.” Hillel was a top man in the Dead Screen Scrolls. Hillel said that “A great teacher must first a self-supporting, creative handworker be.” Otherwise he can be bought and sold. In about 1963 he changed the name of his company from Dr. Bronner & Associates to All God One Faith, he changed the name of this product to Dr. Bronner’s Balanced Mineral Seasoning, and he began to add spiritual messages to the labels of his products. But only the quart sizes are large enough to contain his full message. The pint is too small to make sense.

From 1949 to about 1970, 90% of his sales were food products. From 1970 on, about 90% of his sales have been his soaps and the food is only 10%.

Today Dr. Bronner is totally blind. In 1944 he buried his wife in central Illinois. Weighing 71 pounds, her jaw bones broken, she had been beaten and starved to death by

Jewish people. She was German Catholic and he is German Jewish. In 1941 he lived in Chicago as director of research for a soap and perfume company. A relative wired him for funds (which he did not have) to save their mother from the Nazis. His wife tried to commit suicide, so she was sent to a state hospital where Jewish refugees were in charge. The day before she was to go home, she was forced to do demeaning work by a Jewish doctor. She refused and said "No you damned Jew." The doctor sent her to a ward where she was further starved and beaten. *Readers Digest* (Feb. 1962) did an article on the subject, titled "The progeny of the same people who get put away." Now Dr. Bronner began to investigate what was going on and to speak on peace. At the University of Chicago he was captured as a Jew and for 3 months was unconscious and almost dead, having been given shock treatments that burned the back of his eyes. He escaped from that place in Central Illinois and fled to California to forget the whole thing. Between 1971 and 1973 he went blind from the electrical shock. He has two sons: A teacher in Milwaukee, and chemist in Glendale, California. They will continue his business. Though Hitler killed 6 million Jews, the Soviet Communists, especially Stalin, killed 66 million people, including 16 million Jews. Today there is a great danger of a nuclear warehouse exploding; it would destroy the world. Dr. Bronner says that no good, in-depth article has ever been published about his work with food.

Paul Bragg was a brilliant lecturer and personal friend of Dr. Bronner's. His product was introduced after Dr. Bronner's, in about 1955.

3731. **Product Name:** Sauce.

Manufacturer's Name: Hana Murasaki Shoyu Kaisha (Hanamurasaki Shoyu Co.).

Manufacturer's Address: 702 E. Olive St., Compton, California. Phone: ME 44407.

Date of Introduction: 1952. February.

New Product–Documentation: Hokubei Mainichi Year Book. 1951, p. 435. Category: "Food Products." In Japanese: Hana Murasaki Shoyu Kaisha. In English: Hanamurasaki Shoyu Co., 702 E. Olive St., Compton, California. Phone: ME 44407. Note: Compton is located about 12 miles south of downtown Los Angeles.

• **Summary:** Ad (full page). The top one-fourth is in English. Company name with diacritics is: Taiheiyô Kyôdo Shôji Kabushiki-gaisha. Sells Kikkoman shoyu. The company advertises itself as Kikkoman's special dealer shop. They have branches in Chicago (Illinois) and Los Angeles (California). They sell "Wel-Pac" brands. Address: 249 Davis St., San Francisco 11, California. Phone: YUkon 2-3820.

3737. San Joaquin Mercantile Co. (San Okin Shokai). 1952. [Jobbers–Distributors (Ad)]. In: *Nichi Bei Times*. 1952. *Nichi-Bei Jiji Jushoroku* [*Japanese American Times Directory*]. [Eng; jap]

• **Summary:** Ad (½ page), p. 278. Name of company with diacritics is: San Okin Shôkai. The top 1/3 of this ad is in English. The company sells Hanamurasaki brand Shoyu. Address: 955 I St., Reedley, California. Phone: 424.

3738. Yamate Trading Co., Ltd. (Yamate Burazaasu Shokuhin Seizo Oroschi Sho). 1952. [Importers–Exporters. Yamate Brothers (Ad)]. In: *Nichi Bei Times*. 1952. *Nichi-Bei Jiji Jushoroku* [*Japanese American Times Directory*]. Page 3. [Eng; jap]

• **Summary:** Ad (full page). The company is a food manufacturer and wholesaler. They make and sell Bunka Shoyu [Culture Shoyu] and Kanro Shoyu [Sweet Shoyu = twice-fermented shoyu].

The export department is Yamate Bôeki Kabushiki Gaisha. CEO: Sasato Yamate. Branch in Japan in Tokyo, Oomori, Yakei (Hakkei) saka agari. Phone: 1313. Manager: Sanichi? or Sankazu? Yamate. Address: 1619 Lyon St., San Francisco, California. Phone: WEst 1-8731.

3739. Cooking with a foreign accent: A collection of international recipes for everyday kitchen use—each one tested in the *Sunset* magazine kitchen. 1952. Menlo Park, California: Lane Publishing Co. (A Sunset Book). 64 p. Feb. Illust. Index. 28 cm.

• **Summary:** Contents: About this book. Soup. Fish. Breads and pancakes. Cereal products. Meats and poultry. Vegetables. Pastries and desserts.

Soy related recipes: Stuffed clams (with soy sauce, China, p. 12). Chinese lobster (with [mung] bean sprouts and soy sauce, p. 12). Fried fish (China, with soy sauce, p. 12).

Note 1. Soy sauce is called for in many other East Asian recipes in this book (p. 13, 25, 27 {incl. Worcestershire sauce}, 39, 41, 45, 47, 48). Sukiyaki (with soy sauce but without the usual tofu, p. 47).

Note 2. Most of these recipes are from European countries. Of the Asian recipes, there are 17 from China, 4 from India, 1 from Japan (Sukiyaki), and none from Indonesia, Korea, or the Philippines. Neither tofu nor miso is mentioned. Address: Menlo Park.

3740. Mogi, Masatoshi; Nakajima, S.; Ando, T. 1952. [Studies on harmful yeasts which ferment sterilized soy [sauce]. II. Morphological characters of isolated yeasts]. *Hakko Kogaku Zasshi* (*J. of Fermentation Technology*) 30(2):49-59. Feb. English-language summary at start of issue, p. 5. [1 ref. Jap; eng]

Address: Noda Industrial Science Lab., Japan.

3741. Morse, W.J.; Cartter, J.L. 1952. Soybeans for feed, food, and industrial products. *Farmers' Bulletin* (USDA) No. 2038. 41 p. Feb. Supersedes Farmers' Bulletin No. 1617 (Morse 1930, 1932).

• **Summary:** Contents: Importance of the soybean and its byproducts. Direct use of soybeans on the farm: Soybean hay (for dairy cattle, beef cattle, horses and mules, sheep, swine, poultry), soybeans for pasturage (hogging down soybeans, sheep, beef and dairy cattle, poultry on soybean pasturage), soybean for soilage, for silage, for soil improvement, for livestock feed (feed for swine, dairy cattle, beef cattle, horses, sheep, poultry, wild game {quail, pigeons}), soybean straw (feeding value, fertilizing value).

Soybeans processed for meal and oil: Processing methods, meal for livestock (for dairy cattle, beef cattle, poultry, swine, sheep, dogs {in dog-food industry}, rabbits, fur-bearing animals, quail and pheasants), meal as fertilizer, for industrial purposes, in food products, use of oil (in food products, industrial uses such as paints and varnishes). Soybeans and products for human consumption: Vegetable soybeans, dry soybeans, soy flour, grits, and flakes, Oriental soybean foods, soy milk, soy curd, soy sauce, soy sprouts, soy beverages. Miscellaneous uses of the soybean: Honey production (the soybean as a honey plant, soy flour for honey bees), soy flour and grits in dog food, soy flakes in brewing beer, soy flour for insecticides.

Under “Soybean utilization,” page 3 notes: (1) The roots and coarse stems are used as fuel in China, Manchuria, and Korea. (2) In many parts of China the plants, when 3 to 4 inches high, are used as greens. (3) In Manchuria and Korea, the leaves are cured and smoked as tobacco.

Under “Soy milk,” page 38 states: “The ground soybean pulp or mash [okara] left after separating the liquid from the solid material is still of good nutritive quality, but it has very little flavor. It can be dried and made into flour for human food, combined with foods of more pronounced taste, or used for animal feed.”

Under “Soy curd” [tofu], page 38 states: “Chinese and Japanese markets and restaurants in many cities in the United States sell fresh soy curd. Several firms in the United States can soy curd.”

Under “Soy sprouts,” page 40 states: “A few companies have successfully canned soy sprouts [in the USA]. The New York (Cornell) Agricultural Experiment Station found that sprouts lend themselves admirably to quick-freezing.” Address: USDA.

3742. *Los Angeles Times*. 1952. International flavors spark Hawaiian food. March 2. p. E11.

• **Summary:** Take your wife to Hawaii and you may come home with an international cook, who has a knowledge of ajinomoto, Japanese shrimp tempura, teriyaki steak on bamboo skewers, seaweed salads, or charcoal-broiled octopus covered with miso sauce.

At the Honolulu YMCA, a full five-week course of cooking classes costs \$5 plus a \$5 lab fee.

3743. Nakano, Masahiro; Matsuura, Shinji. 1952. [Research on koji starter (*tane-kôji*). III. On the rate of germination of the mold spores]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 6. p. 157-60. March. English-language summary bound at the end of No. 6, p. 30. [Jap; eng]

• **Summary:** The hourly rate of germination for koji starter mold spores was examined by the direct counting method, as reported in part I, and the so-called “active spore numbers” were calculated. Nine samples of koji starter were examined: For miso (4), shoyu (3), and shochu (3), and each was given a code letter, M, S, and T respectively in the figures 1-9.

Conclusions: (1) Germination starts at about 3 hours and arrives at a stationary phase at about 6 hours in practical koji making; at this stage no control of mycelium growth is required. (2) There are products with rapid or with slow germination according to the blends of the makers. (3) Distinct differences in “active spore numbers” were found. In practice, the greater the “active spore numbers,” the smaller the amount of koji starter required for making koji. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

• **Summary:** *The Chinese Cookbook*, by Wallace Yee Hong, was published a few days ago by Crown. This book more nearly approaches the real cooking of China, and more specifically of Canton, than any such book written for Americans. It calls for such ingredients as snow pea pods, dried bean curd stick, Chinese red dates, dried lilies, bitter melon, winter melon, bird's nests, ginseng [ginseng?], and so on.

Mr. Hong, born in Canton and a restaurateur in the USA for 35 years, owns the Ho Lee Garden Restaurant in Boston's Chinatown. "There are two types of soy sauce, according to Mr. Hong, and he gives recipes for each in his book. The light is made simply from soy [beans], salt and water [no wheat or additives] and is the only type to be used in cooking. The dark, with which Americans are more familiar, has molasses and sometimes rice wine added." This can be put on the table as a salt substitute but is not employed in cooking.

Note: This is the earliest English-language document seen (Sept. 2008) that uses the term "dried bean curd stick" to refer to dried yuba sticks.

Kôji-kin no heni no saibôgaku-teki kenkyû [Studies on the natural variation of koji molds (*Aspergillus oryzae* and *Aspergillus sojae*). II. Cytological studies on the natural variation of koji-molds]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 26(2):85-90. June. [11 ref. Jap; eng]
Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

3756. Nickerson, Jane. 1952. News of food: Introduction of new anchovy catsup recalls U.S. ruling on sauce names. *New York Times*. July 31. p. 26.

• **Summary:** There is an old saying that the French have many sauces but only one religion, whereas Americans have

many religions and only one sauce. When most Americans cooked at home, that sauce was white sauce. But now that they no longer cook so much, that sauce has become the ready-prepared catsup."

A new kind of catsup is now on the market—an anchovy catsup—made by J. Ossola Co., a maker of Italian foods. The U.S. Food and Drug Administration has ruled that catsup (also spelled ketchup or catchup) must be made largely from tomatoes—and indeed the new type is. But that was not always the case.

"Until a few years ago any relish or sharp sauce could be, and was, called catsup. We had walnut catsup and mushroom catsup..." But the FDA found all this very confusing, so it found that manufacturers could use the words "ketchup," "catsup" or "catchup" only for a product made predominantly from tomatoes. "Americans love uniformity."

So what used to be called "walnut ketchup" is now called "walnut sauce." This product "is a mixture of walnut-flavored malt vinegar, soy sauce, spices and what not. Malt vinegar is also the basis for the mushroom sauce. Both are prepared in England and bottled here."

3757. Yamanishi, Tadashi; Obata, Y.; Sano, M. 1952. Shôyu no kôki. V. Ganryû kagô-butsu no gôsei [Studies on soy sauce flavors. V. Synthesis of sulfur-containing compounds]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 26(3):125-28. July. [13 ref. Jap; eng]
Address: Lab. of Agricultural Chemistry, Hokkaido Univ., Japan.

3758. Safeway. 1952. Smart shoppers are loading up with fresh fruits at Safeway (Ad). *Los Angeles Times*. Aug. 21. p. 14.

• **Summary:** The section titled "Chinese food suggestions" (column 1) includes: "Soy sauce. Chinese Maid. 6 oz. bottle—18¢."

This section also includes: Chinese Maid noodles. Chinese Maid Chicken chop suey.

3759. Brownstone, Cecily. 1952. American regional cookery. *Hartford Courant (Connecticut)*. Sept. 21. p. SM12.

• **Summary:** A review of two cookbooks with one recipe for Southern fried chicken. "Coast to Coast Cookery," well edited by Marian Tracey, "is a collection of recipes to which over 100 newspaper editors from all parts of the United States and Canada have contributed." It contains a recipe for "teriyaki steak from Hawaii."

3760. Hauser, Gayelord. 1952. Be happier, be healthier. New York, NY: Farrar, Straus and Young. 278 p. No index. 22 cm. [63* ref]

• **Summary:** This book advocates natural health and prevention using the sun, earth, air, water, and food.

His faithful companion is Deucey, his dog. The chapter titled “Discoverers and recoverers” (p. 71-90) discusses: Priessnitz, Father Kneipp (began treatment in 1855), Louis Kuhne (first of the urban pioneers in natural healing, he established a clinic in Leipzig, Germany. A vegetarian, he wrote *Die Neue Heilwissenschaft*, which enjoyed worldwide success), Schweninger, Edward Hooker Dewey, Adolf Just (his Jungborn clinic was in the Harz mountains), Dr. Bircher-Benner, Arnold Rikli, Samuel Hahnemann (founder of homeopathy), Dr. Lahmann (his Weisser Hirsch Sanatorium in Dresden was famous; Hauser was partly cured by his Lacto-Vegetarian Diet), Dr. Möller (taught fasting in Dresden), Ragnar Berg (Swedish chemist; from 1909 to 1921 he was in charge of Dr. Lahmann’s sanatorium), Mikkel Hindhede (story of his nationwide experiment in Denmark during World War I; he practiced what he preached). A table (p. 129) gives the idea weight for men and women of different height and 3 different frames (small, medium, large).

The chapter titled “Food is our salvation” (p. 138-66) discusses: The appetat (discovered by Dr. Norman Jolliffe), the food cure idea (started by Dr. Heinrich Lahmann in Dresden; Möller, Berg, and Bircher-Benner), the value of vegetables and vitamins, start all meals with fresh (raw) food, Dr. Brauchle’s sanatorium at Schoenau (Black Forest, Germany), breakfast, lunch and dinner (which should include “a good protein. Your choice of meat, fish, eggs, cheese, nuts, soya beans or mushrooms {p. 249}), beware of harmful snacks, hidden hunger test (eat liver, kidney, or heart twice a week; incl. broiled meats and fish), get your chlorophyll from mixed greens, eat natural, unprocessed foods.

The chapter on “Happilogue” tells how he and Marion Preminger, in Sept. 1952, had an unforgettable visit with Albert Schweitzer who was doing organ recordings of Bach in his native town of Guensbach near Strassburg. “It was one of the great experiences of my life.” They had dinner with Dr. Schweitzer at his home: Green salad with tomatoes, “delicious cold cuts of meats with two kinds of cheese—Swiss and cottage. There was one cooked vegetable, a basket of grapes, and yes there was a bottle of dry Rhine wine. This simple meal turned out to be a feast for me, the place, the food, the company.” Schweitzer was very familiar with Bircher-Benner and Dr. Gerson of New York City. “There was a bowl of soya beans on the table and I took some because I love them and told him that even in America protein foods were getting more and more expensive, only the rich can afford steak and roast, and for years I have looked for cheaper proteins and that the best I found and popularized were powdered skim milk, dry food yeast, and soya bean flour.” Dr. Schweitzer said that “he has now planted soya beans. He realizes they are a good protein, but the natives [in Gabon] so far won’t eat them, and all the arguments about how good and how healthful they are will not make them change their minds—they won’t touch

them.” Then Schweitzer said, with a twinkle in his eyes, that he would do with his soya beans what Parmentier did with potatoes when they were first introduced into France from America. At first the French people did not like their taste and refused to eat them. Then Parmentier had a brilliant idea—which Schweitzer describes. “And that is what I’ll do to my soya beans.” After dinner, Dr. Schweitzer showed his guests a large oil painting of his hospital in Gabon (p. 213-15).

Note 1. This is the earliest document seen (Aug. 2009) concerning soybeans in Gabon, or the cultivation of soybeans in Gabon. This document contains the earliest date seen for soybeans in Gabon, or the cultivation of soybeans in Gabon (1952 or before). The source of these soybeans is unknown.

Note 2. André Parmentier (1780-1830) was a well-known horticulturist, who was born in Enghein, Belgium, but lived the last 6-7 years of his life in the USA.

Soy-related recipes: When baking bread at home, “substitute unbleached flour for white flour and try adding a tablespoon each of wheat germ, brewers’ yeast, skim milk powder and soya flour for each loaf you bake” (p. 220). Dinnertime: Vegetable chop suey with [mung] bean sprouts and soy sauce (p. 233). Many recipes call for the use of red meat (steak), chicken, fish, and shellfish. Food tables, showing “percentages of daily recommendations,” include soy beans (p. 261) plus many meats (p. 266-69). A photo (rear cover) shows Hauser standing by the sea at Taormina, Sicily, Italy in Sept. 1952. Address: Los Angeles, California.

3761. Mogi, Masatoshi; Nakajima, S.; Iguchi, N. 1952. Kyôka miso no kenkyû. II. Shigaisen shôsha ni yoru miso kôji-kin no furabin seisan ni tsuite [Studies on fortified bean-paste (miso). II. On the riboflavin production by ultraviolet-induced mutants of *Aspergillus oryzae*]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 30(9):363-69. Sept. English-language summary on p. 39. [10 ref. Jap; eng]
• Summary: By treating the most excellent strain of *Aspergillus oryzae* (described in a previous report) with ultraviolet rays, 743 mutants were obtained. The authors classified them into 13 types. Of these mutants, 19 strains which produced exceedingly large amounts of riboflavin were selected culturing in Pfeffer’s solution. Four strains produced 3 times as much riboflavin as the parent strain in soybean koji and 3 strains twice that of the latter in rice koji. A fortified miso, made by using the most abundant riboflavin producing strain, contained twice as much riboflavin as that made with the parent strain. Address: Noda Industrial Science Lab. Japan (Noda Sangyo Kagaku Kenkyujo).

3762. Sakaguchi, Kinichiro; Ishitani, Chiyoko. 1952. Kôji-kin no shizen heni ni kansuru kenkyû. III. Shizen heni no genin ni kansuru kenkyû (heterokarioshitsu) [Studies on the natural variation of koji-molds (*Aspergillus oryzae* and *Aspergillus sojae*). III. Studies on the mechanism of natural

variation based on heterocaryosis]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 26(6):279-85. Oct. [9 ref. Jap; eng]

• **Summary:** Anastomosis occurs between various strains of koji molds. Natural variation in koji molds (*Aspergillus oryzae* and *A. sojae*) is largely caused by heterocaryosis, which generally produces conidia of increased diameter. Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

3763. Dworschack, R.G.; Koepsell, H.J.; Lagoda, A.A. 1952. Proteolytic enzymes of microorganisms. Evaluation of proteinases produced by molds of the *Aspergillus flavus-oryzae* group in submerged culture. *Archives of Biochemistry and Biophysics* 41(1):48-60. Nov. [19 ref]

• **Summary:** The survey medium consisted of 2% whole corn meal, 1% whole soybean meal, and 0.5% calcium carbonate, sterilized. Some 491 strains of the *Aspergillus flavus-oryzae* group were tested in submerged culture. Eighty one strains produced sufficient proteinase activity to warrant further study. Overall, the greatest enzyme activity was found at pH 7.5; it was much less at pH 5.0 and almost nil at pH 2.5. Seventeen strains showing superior proteinase or α -amylase activity are listed with quantitative data regarding their enzyme activities. Address: Fermentation Div., NRRL, Peoria, Illinois.

3764. Morse, W.J. 1952. Some export history (Letter to the editor). *Soybean Digest*. Nov. p. 30, 32.

• **Summary:** "I have read with interest your editorials on the export beans." During the 1930s, American soybeans were the cleaner, better color, and better quality than Manchurian soybeans. This was one reason that European mills preferred to buy soybeans from the USA rather than from Manchuria, and "would pay 5 cents more per bushel for American soys."

During the early 1930s: "In Japanese-held Manchurian territory and Korea, the Japanese soybean inspectors did a pretty thorough job of inspection. All of the beans I saw from those places—and I saw plenty—were clean and seemed to be of good quality. Of course these beans were taken largely by the Japanese mills and the Chinese mills in Manchuria. The Korean beans all went to Japan and were mostly used for food products. The Japanese soy sauce factories used the Manchurian beans."

Now Mr. Morse laments: "I just cannot see why with all our good modern machinery we send such trashy beans abroad. Must be a colored gentleman in the woodpile somewhere!" "It is quite obvious that if America wants to hold the European market they must ship something beside trashy beans."

3765. Sakaguchi, Kinichiro; Ishitani, Chiyoko. 1952. Kôjikin no shizen heni ni kansuru kenkyû. IV. Shizen heni no genin ni kansuru kenkyû [Studies on the natural variation

of koji-molds (*Aspergillus oryzae* and *Aspergillus sojae*). IV. Studies on heterocaryotic strains induced by irradiation of ultraviolet rays]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 26(8):435-39. Dec. 1. [15 ref. Jap; eng]

• **Summary:** Interestingly the real translation of the Japanese subtitle is "Studies on the causes of natural change." The S- (sporogenous) and F-type (floccose) strains of *Aspergillus oryzae*, which are the constant natural variants of the basic X-type, were irradiated with ultraviolet rays and the resultant mutants were studied cytologically. Address: Inst. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

Bisei-butsu teiryô-hô ni yoru jôzô shôyû no amino-san sosei ni tsuite [The microbiological determination of formation of amino acids in "shoyu"]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 26(9):477-80. Dec. [15 ref. Jap; eng]

• **Summary:** Includes an analysis of Kikkoman special shoyu. Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

3770. Brown, Helen Evans. 1952. Helen Brown's West Coast cook book. Boston, Massachusetts: Little, Brown and Company. xvi + 443 p. See p. 396. Index. 21 cm. [85* ref]

• **Summary:** Reflects the history and ethnic diversity of West Coast cookery, including the Asian (especially the Chinese)

influence—and the author’s enthusiasm for it. For Helen Brown is a superb writer!—as much an artist with words as she is with foods. This informal book is a labor of culinary love, about the foods she has cooked and enjoyed in three Pacific Coast states—California, Oregon and Washington.

Soy related recipes: Sukiyaki (p. 108-09), with “soy bean cake [tofu] (if desired), cut in cubes.” At each place put “small dishes for soy [sauce] (shoyu, to the Japanese),...” Sculpin Serisawa (p. 160-61). Sculpin is a type of fish. To make the basting sauce, “mash a cake of Fu Yu (soy bean cheese [fermented tofu], available in Oriental markets) or 2 tablespoons of blue cheese, and add 2 tablespoons of soy sauce,...” Chinatown spinach (p. 396), calls for “a slice of fermented bean curd if it is available. (If not, 2 tablespoons blue of cheese may be substituted—it’s not the same but has a similar sharp flavor”).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term “Fu Yu” to refer to fermented tofu.

Soy sauce is called for in Asian (mostly Chinese) recipes on the following pages: 17, 19, 82, 102, 103, 140-41, 142, 160-61, 163, 165-67, 171, 173, 198-99, 253, 255, 262, 273, 276, 288, 297, 298, 301 307, 311, 331, 337, 352, 363, 369, 370, 376.

A large photo of lovely Helen Brown in her kitchen adorns the rear dust jacket.

Talk with Akasha Richmond. 2004. Feb. 19. Helen Evans Brown and James Beard were very close friends. He wrote a nice passage of praise for this book on the dust jacket and their collected correspondence has been published as a book. When Beard died, Janet Jarvitz bought his superb book collection, opened a bookstore in the Los Angeles area, and preceded to sell it. Helen Brown married a cookbook collector, Philip, who was also her skilled editor. She made good use of his vast collection in developing her own recipes.

Note 2. Before she met her husband, Philip, Helen Evans Brown had a career as a successful caterer and was running a restaurant in New England. Philip courted her and persuaded her to head to the West Coast with him. Married for almost 30 years, they lived in Pasadena, California, from 1937 until her untimely death in 1964. In Southern California, Helen started work as a consultant to a Hollywood bakery and Philip began working in an antiquarian bookshop. Philip did much to build Helen’s book collection. He also acted as a taster, research assistant, and typist on book projects. Address: Pasadena, California.

3771. Engler, George E. 1952. Japanese-American cookbook: Hibachi cookery in the American manner. Rutland, Vermont; Tokyo: Charles E. Tuttle. ix + 306 p. Index). 21 cm. [Eng; Jap]

• **Summary:** All text, recipes, and indexes are given in both English and Japanese on facing pages. These are

mostly American-style recipes using mostly American-style ingredients—but cooked over a hibachi—a Japanese charcoal broiler. Engler was a chef at the “American Club (the first club in Tokyo for civilian employees of the United States Army...).

A few recipes call for “soy sauce” as a seasoning: Steak Polynesian (p. 92). Chicken chop suey American style (p. 132). Roast chicken, Chinese style (p. 144). Chicken stew, Chinese style (p. 144). Chicken and cauliflower, Chinese style (p. 145). Lobster Malayan style (p. 150; Lobsters should be alive when cooked; plunge head first into rapidly boiling water). French fried clams (p. 174). No other soy ingredients are used. Address: Tokyo, Japan.

3772. Lea & Perrins, Inc. 1952. Dishes men like: New recipes and old favorites. Easy to prepare—Sure to please. New York, NY: Lea & Perrins. 64 p. Illust. Index. 20 cm.

• **Summary:** Contains 168 recipes that call for Lea & Perrins’ Worcestershire Sauce. Contents: If you have a husband who likes to cook, pamper him. The cocktail hour. Soups and chowders. When the main dish is meat. When the main dish is chicken. When the main dish is seafood. When the main dish is cheese, eggs. When the main dish is beans, spaghetti, rice. The barbecue: indoors and out. Salad specialties. Good “go-togethers.” How to carve.

The first section, titled “If you have a husband...” contains the following: “Yellowed with time this framed parchment expresses the sentiment that for more than a century has made Lea & Perrins a world favorite. It hangs in the company offices in New York.” Inside the red frame, on a parchment-like background, is printed: “Tell Lea & Perrins that their sauce is highly esteemed in India and is in my opinion the most palatable as well as the most wholesome sauce that is made.” Below the parchment, also inside the frame, we read: “Extract of a letter from a medical gentleman at Madras, to his brother at Worcester, May 1851.”

The front and back covers are color; the inside photos and line drawings are black and white / monochrome. The front cover is divided into 15 rectangles, each of equal size with a color photo of a prepared dish in it. On the rear cover is a large photo of a bottle of Lea & Perrins Sauce: The Original Worcestershire—wrapped in tan paper with red writing.

Owned by Texas Woman’s Univ. (Denton, Texas), Woman’s Collection. Address: 241 West St., New York 13, N.Y.

3773. Lockwood, Lewis B.; Smith, A.K. 1952. Fermented soy foods and sauce. *Yearbook of Agriculture (USDA)* p. 357-61. For the year 1950-51. Crops in Peace and War.

• **Summary:** Contents: Introduction (The whole soybean is not usually eaten. In East Asia, the people favor mostly fermented soy products). In East Asia people live largely on a vegetable diet (In China it is estimated that meat and eggs comprise less than 3% of the food of the peasants, compared

with 21% among Americans. An estimated 95% of the protein consumed in China is of vegetable origin, and much of it comes from soybeans, which constitute about 20% of the basic diet in northern China).

Japanese soy sauce or shoyu. Soybean paste. Soybean cheeses are made by fermenting soybean curd. Chinese soy sauce—a two-step fermentation and its organisms (the process is described in detail). Making soy sauce by the chemical method. How to make miso (red miso, black miso). Soybean cheeses—how to make them: Sufu, Red sufu, Chee-fan (a brownish soft cheese made with Shaoshing wine), Tsue-fan, Honfan. Soy sauce in the United States.

“Red sufu is a red cheese. It is prepared in much the same way that sufu is, except that the curd cubes and red rice are placed in alternate layers in deep vessels where the brine fermentation is started. The red rice is a Chinese product made by growing the mold *Monascus ruber* in the grains of polished white rice until the entire grain is permeated with the coloring matter. The red rice contributes a pleasant taste and aroma to the red sufu cheese.

Note: This is the earliest document seen (Oct. 2011) that uses the term “Red sufu” or the term “red sufu cheese” refer to fermented tofu.

Note: By 1975 Lockwood was at the Biology Dept., Western Kentucky Univ., Bowling Green, KY (see Smith & Berry 1975). Address: U.S. Dep. of Agriculture (Smith; NRRL, Peoria, Illinois).

3774. Lodder, Jacomina; Kreger-van Rij, N.J.W. 1952. The yeasts: A taxonomic study. Amsterdam, Netherlands: North-Holland Publishing Co. xi + 713 p. Illust. 25 cm. [200+* ref]

• **Summary:** Onishi (1957) states: In a 1952 monograph titled *The Yeasts: A Taxonomic Study*, by J. Lodder and N.J.W. Kreger-van Rij, the subgenera *Zygosaccharomyces* is no longer recognized. In this classification almost all of the *Zygosaccharomyces* known as the osmophilic yeasts were included in only two species and one variety, *Saccharomyces rouxii* Boutroux, *Saccharomyces rouxii* Boutroux var. *polymorphus* Lodder and Kreger-van Rij, and *Saccharomyces mellis* (Fabian et Quinet) Lodder and Kreger-van Rij. For example, *Zygosaccharomyces major*, *Z. soya*, *Z. salus*, and *Z. japonicus*, known as soy yeasts, were all included in one species, *Saccharomyces rouxii*.

Note 1. This book is a condensation revision of three monographs: Die sporogenen Hefen, von N.M. Stelling-Dekker in 1931; Die anaskosporogenen Hefen. 1. Hillfte, von J. Lodder in 1934; 2. Hillfte, von H. A. Diddens und J. Lodder in 1942.

Note 2. The category “yeasts” is poorly defined—especially the boundaries. Yeasts are probably one of the earliest domesticated microorganisms. Yeasts do not form a specific taxonomic or phylogenetic grouping. At present it is estimated that only 1% of all yeast species have been described. The term “yeast” is often taken as a synonym

for *S. cerevisiae*, but the phylogenetic diversity of yeasts is shown by their placement in both divisions Ascomycota and Basidiomycota. The budding yeasts (“true yeasts”) are classified in the order Saccharomycetales.

Yeasts are eukaryotic micro-organisms classified in the kingdom Fungi, with about 1,500 species currently described; they dominate fungal diversity in the oceans. Most reproduce asexually by budding, although a few do so by binary fission. Yeasts are unicellular, although some species with yeast forms may become multicellular through the formation of a string of connected budding cells known as pseudohyphae, or false hyphae as seen in most molds. Source: Wikipedia (Aug. 2009). Address: 1. Mycologist, Koninklijke Nederlandsche Gist- en Spiritusfabriek, Delft; 2. Mycologist, Centraalbureau voor Schimmelcultures, Yeast Div., Delft [Netherlands].

3775. Nichols, Nell Beaubien. 1952. Good home cooking across the U.S.A.: A source book of American foods. Ames, Iowa: Iowa State College Press. 560 p. Illust. by Ray Irwin. Index. 22 cm. [79* ref]

• **Summary:** The recipes are arranged by region of the USA.

The Southwest: Mulligan stew, Arizona style (p. 275, with soy sauce—a reminder of the Chinese cooks in the cow and mining camps. They also used soy sauce to season Spaghetti chop suey).

The Great Lakes: Broccoli, cauliflower and cabbage seasoned with butter and cheese (p. 324. “Women sometimes send a cruet of soy sauce or vinegar to the table with them”).

The Farm Belt: Illinois soy chili (p. 384, with 3 cups cooked soy beans). Illinois baked beans (p. 391, with 3 cups cooked soy beans and 2 teaspoons Worcestershire sauce).

The Pacific Northwest: Barbecued crab (p. 457, with soy sauce and Worcestershire sauce).

California: Fried rice Chinese style (p. 494, with soy sauce). “Californians appreciate seasonings—not as a substitute for good cooking, which they consider basic, but to give a dish distinction. For instance, they borrow from the centuries of experience of Chinese epicures and keep soy sauce on the kitchen shelf. With it they baste chicken, turkey, lamb, pork, and veal during roasting; they say it encourages beautiful, rich browning and oozes fine, subtle flavor” (p. 505).

The Hawaiian Islands: Teriyaki steak (p. 533-34. Ingredients: 3 pounds beef, ½ cup soy sauce, 2 tablespoons sugar, 1 clove garlic, 1 small piece ginger root, crushed).

Hawaiian barbecues and beach picnics are much like those of California. “The sauces for basting meats as they broil reveal one difference. They contain more soy sauce and frequently a seasoning of curry powder” (p. 538).

Note: Worcestershire sauce is used in more than 25 recipes in this book. Address: Topeka, Kansas.

3776. Petelot, Alfred. 1952. Les plantes médicinales du

Cambodge, du Laos et du Vietnam [The medicinal plants of Cambodia, Laos, and Vietnam. Vol. 1]. *Archives des Recherches Agronomiques au Cambodge, au Laos et au Vietnam* No. 14. 408 p. See p. 276-81. [20 ref. Fre]

• **Summary:** The section on the soybean (*Soja hispida* Moench, p. 276-81) includes the vernacular names: Vietnamese: *Dau nanh, Dau tuong, Dau hon, Dau xa*. Cambodian: *Sandek sieng*. Laotian: *Mak toua kon, Ta ton*.

Discusses: Whole dry soybeans, green vegetable soybeans (*Elles peuvent... être consommées à l'état jeune à la façon des flageolets,...*), soymilk (*elles donnent une sorte de lait mousseux et crémeux,...*), nutritional composition, tofu (*le graines sont utilisées pour la préparation d'un fromage, le Teau-fou des Chinois, le dau-phu des Vietnamiens*), composition of fresh and moisture-free tofu, soy oil and its properties (In Europe, above all in England, this oil is used to make soap and margarine. Its drying properties enable it to be used to make paint), soybean cake (used as animal feed; it is rich in lysine), lecithin, vitamin B, the Agronomic Institute of Ankara, Turkey, has found soya to be superior as an animal feed to all other legumes cultivated in Turkey, defatted soybean meal, useful in diabetic diets, Haberlandt of Vienna suggests use as human food, fermented soy products and rice koji, natto, miso, shoyu, *Tsao Yu* of China, *tuong dau* of Vietnam, Japanese natto, MSG. Address: Chargé de Cours à la Faculté Mixte de Médecine et de Pharmacie de Saigon [Vietnam].

3777. Takenobu, Yoshitaro. ed. 1952. Kenkyusha's new Japanese-English dictionary. Tokyo: Kenkyusha. iv + 68 + 2266 + [2] p. 19 cm.

• **Summary:** This interim edition, between the 1931 second edition and the 1954 third edition has two dates written in Japanese in the front matter: March 1931 and April 1949. On the last page, the publication date is given in Japanese as 1 Feb. 1951.

This edition has two main parts: (1) "New Words (1949) consisting mostly of mostly English language words that entered the language due to the social and cultural influence of the American occupation of Japan. The words, a mini-dictionary on 68 pages, include words such as *aakeedo* = arcade (written in both *rômaj*i and *katakana*). There are also some new Japanese words.

(2) The entire content of the 1931 second edition—exactly the same, page for page.

New words related to soy: *daizu* [abura]: [soy] bean oil. Address: General editor, Japan.

3778. Tracy, Marian Coward. ed. 1952. Coast to coast cookery. Lafayette, Indiana: Indiana University Press. 318 p. 24 cm. *

• **Summary:** Recipes submitted by American newspaper food editors.

3779. Paddleford, Clementine. 1953. Quick tricks: Myrna Johnston has so much to do that she's an expert time-saver. Here are some of her drop-of-the-hat recipes to try. *Los Angeles Times*. Feb. 15. p. H34.

• **Summary:** A recipe for "Speedy fish fry" includes soy sauce. Address: *This Week* food editor.

3780. Manners, Marian. 1953. Lacking ideas for menus? New cookbooks should help. *Los Angeles Times*. March 15. p. C16.

• **Summary:** Includes a review of the new book *Good Home Cooking Across the U.S.A.*, by Nell Nichols. Reproduces a recipe from that book (which see) titled Teriyaki steak.

3781. Church, Ruth Ellen. 1953. Soy sauce is a necessity for most Oriental foods. *Chicago Daily Tribune*. April 10. p. A1.

• **Summary:** "Ten years ago [during World War II] there was a rather intensive campaign among people interested in improving the state of nutrition of all Americans to promote the use of soybeans in the human diet. The campaign, for the most part, was a big flop. Admittedly, soy beans are nutritious as all get out; but nobody likes them.

"One of the few forms in which soybeans are acceptable on the American table is in soy sauce, which is a staple in oriental cooking. Most of us dote on chop suey and other Chinese [or pseudo-Chinese] dishes, and chop suey without soy sauce isn't worth the rice it's served upon.

"Soy sauce is the salt of a Chinese meal." A recipe, given in *Far Eastern Cookery*, by Elinor Burt, is summarized here.

"Soy sauce is an ingredient in most of the brown seasoning sauces we use in cookery, and is the essential sauce for worcestershire sauce."

A recipe for "Eggs foo yung" is given. It was submitted by a Japanese from the Island of Maui [Hawaiian Islands], first published in the Mary Meade column in 1949, and is enjoyed by both Japanese and Chinese; it calls for "2 teaspoons soy sauce." Cartoons show: (1) Black soy beans, a soybean plant, a Chinese person with a conical hat carrying baskets at each end of a shoulder pole, and a Chinese pagoda. (2) Five Chinamen, each with a pigtail, Chinese-style hat, and elevated wooden shoes, each carrying a bowl of steaming rice.

3782. **Product Name:** Bragg Liquid Aminos.

Manufacturer's Name: Live Food Products, Inc. (Distributor).

Manufacturer's Address: Burbank, CA 93102. Phone: 805-968-1028.

Date of Introduction: 1953. April.

Ingredients: Pure water & specially formulated vegetable protein (soybeans only [HVP]).

Wt/Vol., Packaging, Price: 16 and 32 fluid oz plastic bottles with flip-up plastic spout cap (2/90). 16 oz retails for

\$3.99.

How Stored: Shelf stable.

New Product–Documentation: U.S. Patent and Trademark Office website. Trademarks. The trademark “Bragg” was registered for use with “Minerals for use as dietary supplements, antacids,... amino acids.” Filing date: 18 Aug. 1952. Registration date: 31 March 1953. Registrant: Live Food Products Co. (corporation, California), 33 East Magnolia Ave., Burbank, California. First use in commerce: 1928 First renewal: 31 March 1973.

Federal Trade Commission Decisions: Findings, Orders, and Stipulations. 1955. “8448. Food and drug products—Therapeutic properties, relevant facts, comparative merits, etc.” Vol. 49, p. 1634-35. This decision is dated March 24, 1953.

Bragg, Paul C. 1968. *How to Keep the Heart Healthy and Fit* [1st ed.]. Burbank, California: Health Science. 128 p. See p. 121. “Then add a tablespoon of liquid aminos, which gives the Chinese soy sauce flavor.”

Lorna J. Sass. 1989. *Mid-Island Times* (Hicksville, New York). Feb. 10. “A seasoning for all seasons.” This interesting alternative to soy sauce, created by the American Paul C. Bragg, contains 18 amino acids.

Talk with Bob Gerner. 1990. Feb. 7. He first saw this product in about 1981, after he was carrying a similar product from Dr. Bronner.

Label. 1989. 8 inches by 5 inches. Red, black, white, green, and purple on yellow. Illustration of hills, trees, sun, and clouds. “All natural. Try a dash for new taste delights. Delicious, healthy gourmet alternative to tamari-soy sauce. Vegetable protein for delicious broth, gravy, soups, and all purpose seasoning. Super concentrated. Lasts longer. Bragg, the pioneer health line—serving America for over 75 years. Delicious, healthy family favorite for over 75 years. This original formula by Paul C. Bragg, America’s health pioneer. Originator of health stores. Contains no additives and no coloring agents. No preservatives. This product is not fermented. Bragg Liquid Aminos contain the following amino acids: (18 are listed and 9 are starred as essential). Essential amino acids in naturally associated amounts and derived from a specially formulated liquid-form from soybeans. No MSG. No preservatives. No chemicals. Taste you love. Nutrition you need. A dash of Bragg Aminos brings new taste delights to season salads & dressings, soups, vegies, rice & beans, tofu, tempeh, wok & stir-frys, casseroles, potatoes, meats, poultry, fish, popcorn, gravies & sauces, macrobiotics. Aminos broth: 1-2 teaspoons Bragg Aminos to 1 cup hot water, or add to hot or cold vegetable juices. Ideal ‘pick-me up’ at work, home, or gym—for more healthy living the Bragg Aminos way. Healthfully replaces salt and soy sauce. Take some home today. Send \$1 for delicious Amino recipes to...”

Talk with Pat Calligan of Health Science (the publishing arm of Bragg’s company), in Goleta. 1990. Feb. 7. He is

quite sure, and he thinks the label says that this product has been around for 75 years (i.e. since 1915). He has seen receipts for the product from the early 1950s. Paul Bragg’s adopted daughter, Patricia Bragg, who lives in Goleta, and who is an active health foods teacher, would know the whole story.

Talk with Dr. E.H. Bronner. 1990. Feb. 8. Paul Bragg was a brilliant lecturer and personal friend of Dr. Bronner’s. His product was introduced after Dr. Bronner’s, in about 1955.

Ad in *Natural Foods Merchandiser*. 1996. July. p. 90. “Bragg super health products.” Photos show: (1) A bottle of Bragg Liquid Aminos. “A delicious alternative to tamari & soy sauce.” (2) “Patricia Bragg, N.D., Ph.D. Nutritionist to Stars Eastwood, Seleck, Beach Boys, etc.” Live Food Products / Health Science, Box 7, Santa Barbara, CA. (800) 446-1990.

3783. Iguchi, Nobuyoshi. 1953. *Kôji-kin ni kansuru kenkyû*. VII. Nitrogen mustard ni yoru shôyu kôji-kin no heni ni tuite (1) [Studies on *Aspergilli*. VII. Induction of induced mutations in *Aspergillus sojae* by nitrogen mustard (1)]. *Nippon Nogeikagaku Kaishi* (J. of the Agricultural Chemical Society of Japan) 27(5):229-33. May. [22 ref. Jap; eng] Address: Noda Sangyo Kagaku Kenkyusho (Noda Industrial and Scientific Research Lab., Noda, Japan).

3784. Yokotsuka, Tamotsu. 1953. *Shôyu kôki seibun ni kansuru kenkyû*. IX. Kô futten-bu no kôki seibun (4) Phenol-sei kôki seibun no bunri [Studies on flavorous substances in soy [sauce]. IX. • **Summary:** Hydroxy-2- methoxy-4- ethyl-benzene was isolated as phenylurethane (melting point: 104°) from the steam distillate of soy sauce presscake. It has proved to be an important component of soy sauce flavors. Address: Noda Industrial Science Laboratory [Noda, Japan].

3785. Beck, Mrs. Fred. 1953. *Farmers market today* (Ad). *Los Angeles Times*. June 17. p. 4.

• **Summary:** “The *hibachi* is the little charcoal-fired stove of Japan.” It “is the very best charcoal broiler we’ve seen.” It looks something like an old-fashioned iron pot, but its main advantage over “most charcoal broilers and braziers is an ingenious but simple draft control. It has a damper that works.”

“With the *hibachi* comes a book of special recipes including one for Sukiyaki—and for Teriyaki Sauce. The price—\$19.95.”

Note: This is the earliest English-language document seen (April 2012) that contains the term “Teriyaki Sauce.”

3786. Nakano, Masahiro; Ebine, Hideo. 1953. Shôyu jôzô-yo kôji-kin to kôso ryoku ni tsuite [On the enzymatic activity of the *Aspergilli* for shoyu manufacture]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 8. p. 169-72. June. English-language summary p. 16. [3 ref. Jap; eng]

• **Summary:** Molds of the genus *Aspergillus* which produce highly active protease were selected by a simple, suitable method as suitable for making shoyu. The optimal ratio of soy bean cake to wheat bran for the formation of amylase by the *Aspergilli* appears to be 1-3 to 7, and for the formation of protease it appears to be less.

The optimal ratio of soybean cake to wheat bran differs according to the strains of *Aspergilli*. Asp. 0-3-6 (*Aspergillus oryzae*) produces more active amylase and protease on the wheat bran. *Aspergillus Okazakii* produces more active protease on the media containing more soy bean cake. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

3787. *Soybean Digest*. 1953. The cover picture: Soy sauce popular. June. p. 9 + cover.

• **Summary:** About La Choy soy sauce. La Choy Food Products (Archbold, Ohio), a division of Beatrice Foods Co., states that its "Chinese foods have approximately tripled in volume since World War II, and soy sauce has more than kept pace."

"People are not only using soy sauce on their Chinese foods and in various Chinese recipes, but are also finding that it makes a delicious sauce on steaks, chops, roasts, and hamburgers. Many people like to marinate their steaks in the sauce before cooking as well as use the soy sauce in gravies, stews, and chops."

La Choy is now in the midst of the largest advertising campaign in the company's history. It includes over 50 radio stations, plus *Saturday Evening Post* and four national women's magazines.

Photos show: (1) Cover: A bottle of La Choy Soy Sauce in the midst of a table set with both Chinese and American dishes (chop suey), ingredients (sprouts, mushrooms), and utensils (knife, fork, and small wok). (2) A small photo of a small dispenser of soy sauce with egg foo yong [egg foo young] (p. 9).

3794. Omata, Shojiro; Ueno, Teruo. 1953. Shôyu no iro ni kansuru kenkyû. II. Chozô-chû no iro no henka ni kanshite [On the color of shoyu. II. Factors causing the color change during storage]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 27(9):575-80. Sept. [6 ref. Jap; eng]

• **Summary:** The main cause of color change in shoyu is air oxidation. The effects of enzymatic reaction, temperature and light are not important. Aeration causes darkening of color.

Address: Faculty of Agriculture, Naniwa Univ.

3795. Sakaguchi, Kinichiro; Ishitani, Chiyoko; Takamori, Shosaku. 1953. Kôji-kin no shizen heni ni kansuru kenkyû. V. Anastomosis no jôken no kentô [Studies on the natural variation of koji molds (*Aspergillus oryzae* and *Aspergillus sojae*). V. Studies on the environmental effects upon anastomosis]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 27(9):638-42. Sept. [8 ref. Jap; eng]

• **Summary:** "The environmental effects upon anastomosis of Koji-molds have been studied by means of hanging drop culture and mixed point-inoculum plate culture, using the color mutants of *Asp. sojae*." Address: Tokyo Daigaku Nôgaku-bu, Nogeï Kagaku Kyoshitsu (Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo).

3796. Yamanishi, Tadashi; Obata, Yataro. 1953. Shôyu kôki no kenkyû. VI. Merukaputaaru oyobi merukaputooru rui no gôsei [Studies on soy sauce flavors. VI. Synthesis of mercaptals and mercaptols]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 27(9):652-54. Sept. [11 ref. Jap; eng]

• **Summary:** "We have synthesized 16 kinds of mercaptans and 2 kinds of mercaptols. Eight of them are unknown substances. The odors of them are illustrated." Address: Hokkaido Daigaku Nôgaku-bu, Nogeï Kagaku Kyoshitsu (Inst. of Agricultural Chemistry, Hokkaido Univ., Sapporo, Japan).

3797. Fern, Stewart. 1953. Hawaii offers summer's sun without heat: Tribune travelers' guide. *Chicago Daily Tribune*. Oct. 25. p. G7.

• **Summary:** "Eating costs about the same as at home. Even budget meals are interesting when vegetables are strange, crisp oriental varieties, the fruit is fresh, and the entree is mahimahi, teriyaki beef, or Hawaiian laulau."

3798. Lager, Mildred. 1953. Nutritional news and recipes: Read labels. *Let's Live* 21(10):16-17, 23. Oct.

• **Summary:** "Choose soy powder." Soy flour and soy powder are often confused. "Soy flour is flour made from soy beans. It may contain the oil of the beans and may be a full fat flour or the oil may be removed and it is a low fat flour. Soy powder is a blend of powdered soy beans, milk solids, minerals, etc., that when added to water will result in a product with the food value of milk. Soy powder has more food value than soy flour. Many persons will think them the same but reading the label on the package will show the difference."

"Soy bean scores: One of the easiest and least expensive ways to add protein to the diet is the use of the little soy bean or soya bean. It is available in many forms and is very delicious in taste. Soy malt for instance, can be added

to milk, hot or cold, for a delicious protein rich drink.

Soy powder can also be used in this way. Soy cereal has more protein than cereal grains, and you can also get a soy wheatless cereal for those allergic to wheat. Pre-cooked grits are also sold which can be used in meat loaves, vegetable roasts, and it is an easy and very inexpensive way to add protein to a vegetable soup. If you have never used soy products find out about them the next time you are in a health food store. And if you wish an interesting folder, write to Mary McBride's Products, Box 19, South Pasadena, California."

Recipes include: Soy stuffed tomatoes (with soy grits, seasoned with a dash of soy sauce). Soy cereal pudding.

Also discusses carob powder (made from the seeds only), which is superior to carob flour (made from the seeds and pods). Address: Los Angeles, California.

3806. **Product Name:** Sovex.

Manufacturer's Name: Sovex Co?

Manufacturer's Address: Holly, Michigan.

Date of Introduction: 1953.

Ingredients: Incl. nutritional yeast and soy sauce.

How Stored: Shelf stable.

New Product–Documentation: Talk with John Goodbrad, president of Sovex. 1980. Nov. 26. Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company's original product was Sovex, a flavor concentrate paste, made from a mixture of brewer's yeast and soy sauce. In 1964 John bought the business [actually the formula and brand name] and moved it to Collegedale, Tennessee.

Note: This is the earliest solid record seen (March 2001) concerning Sovex.

3807. David-Perez, Enriqueta. comp. and ed. 1953. Recipes of the Philippines. Philippines: Published by the author. Printed by Capitol Publishing House, Inc. (Philippines). 124 p. Illust. by S. Serna. No index. 23 cm.

• **Summary:** Almost all the recipes in this book have Filipino names, with no English translation of those names. A surprisingly large number contain soyfoods, especially *toyo* (soy sauce). The glossary (p. 121-23) states: Miso is miso—a paste made of fermented rice and soy beans. Tajure is “fermented soy beans, caked” [fermented tofu]. Tausi is “fermented [black] soy beans” with salt [fermented black soybeans]. Tokua is “soy bean curd” [tofu]. Toyo is Filipino-style soy sauce. Recipes followed by an asterisk (*) call for toyo.

Soy-related recipes include: Chicken relleno-I * (p. 15). Chicken pastel * (p. 27). Lengua (with soy sauce, p. 20).

Morcon * (p. 21). Pancit molo * (p. 22). Adobo * (p. 24). Arroz caldo with chicken (with 3 tbsp. patis or soy sauce, p. 28). Bañgus en tocho-I (with 1 cube tajure, p. 34). Bañgus en tocho-2 (with 2 tbsp. each tajure and tausi, and 1 cake tokua cut into pieces 3/4 inch long and 1/8 inch wide, p. 35). Bulanglang-1 (with 1 cup tokua, cubed and fried, p. 38). Burong isda (with 1 tbsp. angkak—fermented red rice, p. 39). Sauce for pipi-an (with 1 small jar peanut butter, p. 41). Escabecheng apahap (with 4 pieces tokua, p. 46). Escabeche—Macao style * (p. 71). Escabeche with papaya * (p. 48). Fritada * (p. 50).

Kari-karing pata (with ½ cup ground toasted peanuts or peanut butter, p. 51). Lengua estofada * (p. 53). Lumpia labong—Bamboo shoot (with 5 bean cakes—tokua, p. 55). Lumpia sauce (with ½ cup toyo sauce, p. 56). Lumpia with papaya * (p. 56). Lumpia with peanuts (with 2 squares tokua—diced, 2 tbsp. toyo—soy sauce, and 1 cup ground peanuts, p. 57). Lumpia with ubod-2 (with 2 cakes tokua, and toyo to taste, p. 58). Meat balls with “sotanghon” * (p. 59). Menudo de rabo * (p. 60). Miso-tomato sauce (with 2 tbsp. misu—soy bean paste, p. 61). Paksiw na pata * (p. 64). Paksiw—pork (with soy sauce, p. 64). Paksiw na lechon (with 3 tbsp. soy sauce, p. 65). Pancit guisado * (p. 65). Pancit “luglug” (with ½ cup soy bean cake—tokua—cut into small cubes, p. 66). Pork tapa * (p. 72). Umba (with 2 tbsp. toyo and 1 heaping tbsp. tausi, p. 80). Pastillas de mani (with 1 can ground peanuts, p. 89).

A glossary at the end contains brief definitions of uncommon ingredients. Definitions of the soy-related ingredients above are taken from this glossary. Angkak is “red-colored grains of rice used as coloring for fermented fish.”

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the word *tajure* to refer to fermented tofu, or the word *misu* to refer to miso.

Note 2. On the title page is printed “4th printing—May 1956.” Address: P.O. Box 3288, Manila, Philippines.

3808. Fisher, A.W.; Burlew, John S. 1953. Nutritional value of microscopic algae. In: John S. Burlew, ed. 1953. *Algal Culture: From Laboratory to Pilot Plant*. Washington, DC: Carnegie Institution of Washington. ix + 357 p. See p. 303-10. Chap. 20.

• **Summary:** The last section, “Algae as human food” (p. 309-10) states that there has not yet been an opportunity for feeding microscopic algae to human subjects. However: “In recent studies in Japan reported by Dr. Hiroshi Tamiya (private communication, May 1952), dry powdered *Chlorella ellipsoidea* has been described as tasting like a dried seaweed or powdered green tea, both popular in Japan... Hydrolysates of powdered algae showed promise as a substitute for soy sauce.”

Table 1 titled “Protein content of *Chlorella* compared with that of typical animal feeds” (p. 304) shows: Fish meal

60%, Chlorella 50%, brewer's yeast (USP) 48%, soybean meal (typical) 44%, dried skim milk 36%, brewers' dried grains 25%, wheat 12%. Chlorella has a low methionine content. Address: 1. Arthur D. Little, Inc., Cambridge, Massachusetts; 2. Carnegie Institution of Washington, Washington, DC.

3809. Ohara, Yuwao; Nonomura, Hideo. 1954. Tamari moromi oyobi kôji kara bunri shita kôbo. I. *Pichia mogii* nov. sp. [Yeasts occurring in a moromi (mash) and koji of tamari soy sauce. I. *Pichia mogii* nov. sp.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 28(2):122-25. Feb. 15. [3 ref. Jap; eng]

• **Summary:** Six strains of *Pichia* were identified and isolated from the mash (moromi) and koji of tamari shoyu. All were identified as new species of *Pichia mogii* nov. sp. Address: Research Inst. of Fermentation, Faculty of Agriculture, Yamanashi Univ., Japan.

3810. Nickerson, Jane. 1954. News of food: New portable grill is introduced—Use is not limited to outdoors. *New York Times*. Feb. 20. p. 14.

• **Summary:** Hamilton Metal Products, which makes the new grill held a party at Peter's Back Yard (64 West Tenth Street) in New York City. Hamilton asked James Beard, the food authority, to host the party. Mr. Beard said the grill worked well for making teriyaki and sukiyaki, two cooked-on-the-spot Japanese dishes which have become very popular with Americans.

"Teriyaki consists of thin slices of beef which, after having been marinated in a savory liquid, are skewered and then broiled briefly." Suki-yaki is a combination of beef and vegetables that the Japanese cook at the table on a small charcoal brazier.

Address: Noda Industrial and Scientific Research Laboratory.

3812. Yokotsuka, Tamotsu. 1954. Shôyu kôki seibun ni kansuru kenkyû. XIII. Jôzô shôyu no bôbi seibun narabini shôyu hiire ni yoru bôbai-sei no zôka ni tsuite [Studies on flavorful substances in soy [sauce]. XIII. On the yeast-static substances in brewed shoyu and their increase in heated shoyu]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 28(2):114-18. Feb. [4 ref. Jap; eng]

• **Summary:** Phenolic substances increased in heated soy and "showed more resistance to the harmful yeasts of Soy than raw-Soy.

"Two phenolic substances were newly isolated from

Soy;" one was obtained as crude crystals and the other was believed to be vanillin based on its *R_f* value from paper chromatography. Address: Noda Industrial Science Laboratory (Kikkoman), Japan.

3813. Ando, Seiichi; Ishi, Shojiro; Shoda, H. 1954. Yuasa shôyu-gyô no kenkyû [Research on the Yuasa shoyu industry]. *Wakayama-ken Juyo Kogyo Chosa (Surveys of Important Industries in Wakayama Prefecture)* No. 6. 31 p. (Wakayama-ken Keizai-bu). [Jap]

• **Summary:** Chapter 1 gives an in-depth discussion of the origins and history of shoyu in Yuasa. Note: This is the earliest publication seen on Yuasa shoyu written by Ando. Address: Wakayama Daigaku, Keizai Kenkyujo (Wakayama Univ., Economics Research Dep.).

3814. Chatfield, Charlotte. 1954. Food composition tables: Mineral and vitamins, for international use. *FAO Nutritional Studies* No. 11. 117 p. March. [539* ref]

• **Summary:** Table 1 gives "Food composition in terms of the retail weight, ("As purchased"). The section on "Pulses, nuts and seeds" (p. 13-14) includes values for: Groundnuts, peanuts. Soybeans (*Glycine max*) and soybean products—Whole seeds, dry. Flour, full fat (seed coat removed). Flour, low fat; grits, flakes (partially defatted). Curd, tofu. Fermented beans, Japanese natto. Fermented beans, Chinese tsiang [jiang]. Soybean milk. Paste, miso (made with small amounts of rice and other starchy materials). Shoyu sauce. Sprouts: See No. 86a.

Also: Broad beans. Common beans. Hyacinth, lablab, and twinflower beans. Jack beans and sword beans. Lima beans. Mung beans and urd beans. Voandzeia (without shell). Chickpeas. Cowpeas. Lentils. Peas. Pigeonpeas (*Cajanus* spp.).

Table 2 gives "Composition of the edible portion (E.P.) and refuse in the material as purchased (A.P.)." The section on "Pulses, nuts and seeds" (p. 31-33) gives values for the same foods listed in Table 2.

These tables contain corrections to the Food Composition Tables of Oct. 1949. On pages 52+ is an index to the scientific names of plants in the tables. Address: Nutrition Div., FAO, Rome, Italy.

3825. Onishi, Hiroshi. 1954. [Studies on soy yeasts. II. Methods for determining viable counts of yeasts in soy mash (1)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 28(7):546-50. July. [10 ref. Jap; eng]

• **Summary:** This is an early study on osmophilic yeasts in soy sauce. The following species were tested: *Zygosaccharomyces major*, *Z. soya*, *Z. salsus*. Soy sauce mash is different from sake mash because of its high content of sodium chloride (about 18%) and its high nitrogen concentration (total N of 1.0 to 1.5%). It was found that the viable count of yeast cells grown in soy sauce mash experienced a remarkable fall when ordinary media without sodium chloride were used for the plating. Address: Noda Industrial and Scientific Research Laboratory.

3826. Chun King Sales Co. 1954. Display ad: Chun King—Chicken Chow Mein. *Chicago Daily Tribune*. Sept. 12. p. M5.

• **Summary:** The Chun King new “divider pack” is actually two cans in one. The meat is in the top can—“Chun King Cantonese Chicken Chow Mein (without vegetables).” The vegetables are in the lower can. The crisp fried noodles are a separate product.

“Oriental recipe ‘magic’ combines with modern American care and skill in the selection and preparation of the 19 different quality ingredients used in this new Chun King Chow Mein. There’s succulent chicken, Pascal

celery, young bean sprouts, imported bamboo shoots, tender mushrooms, pimientos and water chestnuts. Plus the exotic seasonings that Chun King chefs use so skillfully. A wonderfully delicious combination of flavors.

“Spoon it onto crisp fried noodles (Chun King noodles are best; they are made with fresh eggs!). Call the folks. They’ll douse on Chun King Soya Sauce. It will do your heart good, the way appetites respond to this new and better Chow Mein.”

There is a coupon at bottom of ad, and a “Guaranteed by Good Housekeeping” seal of approval. It is a “Garry Moore special introductory offer. See the Garry Moore Show Mondays through Fridays 10 to 10:30 A.M., EDST, CBS-TV.”

Note 1. This exact same ad appeared in the Los Angeles Times on this same date, p. L39.

Note 2. This is the earliest document seen (Feb. 2011) that mentions “Chun King Soya Sauce.” Address: Duluth, Minnesota.

3827. Ohara, Yuwao; Nonomura, Hideo. 1954. Tamari moromi oyobi kôji kara bunri shita kôbo. II. [Yeasts occurring in a moromi (mash) and koji of tamari soy sauce. II. A taxonomic study on the four strains of *Cryptococaceae*]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 28(9):717-21. Sept. 15. [6 ref. Eng; jap]
 • **Summary:** Four authentic strains of rather unusual yeasts were identified: *Candida polymorpha* nov. sp. strain S-3. *Cryptococcus diffluens* (Zach) Lodder var. non-membranaefaciens nov. var strain K-10. *Trichosporon behrendii* Lodder et Van Rij strain K 3-3. *Candida rugosa* (Anderson) Diddens et Lodder strain K 7. An illustration shows each of these yeasts. Address: Research Inst. of Fermentation, Faculty of Agriculture, Yamanashi Univ., Japan.

3828. Ohara, Yuwao; Nonomura, Hideo. 1954. Tamari moromi oyobi kôji kara bunri shita kôbo. III. *Saccharomyces rouxii* Boutroux [Yeasts occurring in a moromi (mash) and koji of tamari soy sauce. III. *Saccharomyces rouxii* Boutroux]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 28(9):721-24. Sept. 15. [18 ref. Jap; eng]
 • **Summary:** Four strains of osmophilic yeasts most frequently isolated from tamari-shoyu mash were identified. “Two of them were recognized as *Saccharomyces rouxii* Boutroux, and two other strains were considered as identical with it.”

Tables show: (1) Origins of the strains studied: A mash (1 year old) of tamari from Asano Co. in Gifu prefecture. A mash (3 months old) of tamari from Asano Co. in Gifu prefecture. A mash of tamari from Gifu Shoyu K.K. in Gifu prefecture. Tamari miso [Hatcho miso] from Hayakawa Co. at Okazaki, Aichi prefecture. (2) Morphological

properties. (3) Sporulation and physiological properties. Two illustrations show spores and cells of *Saccharomyces rouxii* Boutroux. Address: Research Inst. of Fermentation, Faculty of Agriculture, Yamanashi Univ., Japan.

 Address: Noda Industrial and Scientific Research Lab.

3830. Shibuya, Yoshikazu. 1954. [Soy sauce from the mother liquor of glutamic acid]. *Japanese Patent* 6198. Sept. 27. (Chem. Abst. 50:2118e). [Jap]*

• **Summary:** Soybean cake is heated with 3-10% hydrochloric acid for 60 hours at 85°C until the production of furfural reaches a maximum. The product is mixed with an equal weight of mother liquor from glutamic acid, heated for 3 hours at 60°C, neutralized, fermented at 25-30°C with a mold culture, and filtered. Address: Japan.

3831. *Hartford Courant (Connecticut)*. 1954. Street hawker remains familiar figure in Tokyo. Oct. 24. p. D14.

• **Summary:** No longer seen in the USA, street hawkers do a brisk business in Tokyo. The sellers of each product have their unique call. “The juvenile vendor is likely to be repeating ‘Natto,’ ‘Natto’ in young and earnest tones. He is selling fermented beans, which are served with soya sauce over warm cooked rice.”

“‘To-fu ya-san’ appears with bean curds” [tofu].

The ‘chin-don-ya-san’ is a one man band and children’s theater. The ragman, and the peddlers of shell-fish and bamboo poles can also be heard.

3832. *New York Times*. 1954. News of food: Variation in soya sauces. Oct. 25. p. 30.

• **Summary:** There are many variations. Some are sweeter than others, some saltier, and they can vary in consistency from very thin to almost as thick as molasses.

Some soy sauce is made in the USA, but most is made in Japan, Hong Kong, and Formosa, and imported from those countries. A brief description of the ingredients and process is given.

When people of Japanese or Chinese backgrounds were asked to name their favorite soya sauce, their answers followed strictly national lines. The Japanese say that their soya sauce is not as sweet and thinner than its Chinese counterpart. But Chinese say that “Japanese soya sauce has a molasses-like odor and consistency.”

Soy sauce is used in Japan as often as (and much like) salt in used in the USA. In both China and Japan, soy sauce is the most important seasoning or flavoring.

American per capita consumption of soy sauce is

steadily increasing; it is used in preparing Chinese and Japanese dishes, as well as in typically Western dishes.

"In California, the land of outdoor cookery, soya sauce is often used in the marinade for meats and poultry that are cooked on a spit over an open fire. The sauce is also used as an ingredient in many Western barbecue sauces." And it works well as a basting sauce.

China Beauty is an American-made product; a 3-oz. bottle sells for 10¢. Katagiri & Co. (224 East 59th St., New York City) sells two brands of soy sauce imported from Japan: Yamasa Shoyu and Kikkoman Shoyu. Charles & Co. (340 Madison Ave.) sells another Japanese import, Higeta Shoyu. Walter's, an oriental grocery store (685 Amsterdam Ave., NYC), sells several brands of Chinese soy sauce from Hong Kong and Formosa [Taiwan].

3835. Meade, Mary. 1954. Japanese dish, sukiyaki, should be prepared at table: Chafing dish or hot plate can be used. *Chicago Daily Tribune*. Nov. 16. p. A5.

• **Summary:** The recipe for Beef sukiyaki calls for "12 pieces of tofu (soybean curd) in 1 inch cubes... Sauce: 1 cup shoyu (soy sauce), ¼ cup sake (rice wine), 1/3 cup sugar." Eat sukiyaki with bowls of rice.

3836. Yamaguchi, S.; Ebihara, K. Assignors to Noda Shoyu K.K. 1954. [Treatment for soybeans or fat-free soybeans]. *Japanese Patent* 7646. Nov. 19. [Jap]* Address: Noda, Japan.

3837. Paddleford, Clementine. 1954. Dinner at Trader Vic's: Who ever heard of steak with pineapple? Here's an exotic secret from a famous West Coast kitchen. *Los Angeles Times*.

Nov. 21. p. L16.

• **Summary:** Trader Vic is a famous name in San Francisco. In 1934 his name was Victor Bergeron; an auto parts salesman, he was tired of his job. Since his father was in the restaurant business, he thought he'd give it a try, investing his \$500 of savings. He was an immediate success.

He opened his first restaurant (a mere shack with a tin roof, loaded with South Sea paraphernalia) as a trading post across the bay in Oakland. Two Chinese barbecue ovens were the chief equipment. It was famous for fabulous rum drinks, and for the Trader himself, hopping along on his wooden leg. Soon he began opening more shacks. Today the menu is called Polynesian, but it is actually Chinese—or perhaps uniquely his. A recipe for Skewered barbecued pineapple and steak calls for ½ cup soy sauce. A small photo shows Trader Vic. Address: *This Week* food editor.

On the *Trichosporon cutaneum* and its new variety]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 28(11):886-89. Nov. [7 ref. Jap; eng]

• **Summary:** A taxonomic study was made of 13 authentic yeast strains (Table 1) that produced arthrospores regularly and blastospores rarely. All of them were identified with *Trichosporon cutaneum* (7068) and one of them (K 32) was found to be a new variety, *Trichosporon cutaneum* var. *curvatum* nov. var. Address: Research Inst. of Fermentation, Faculty of Agriculture, Yamanashi Univ., Japan.

3841. *Soybean Digest*. 1954. To La Choy Foods. Nov. p. 28,

30.

• **Summary:** “Edward M. Muldoon, general manager of La Choy Food Products, division of Beatrice Foods Co., has announced the appointment of W.P. McCarthy as general sales manager.”

“Mr. McCarthy comes to La Choy after 16 years with Lever Brothers Co.”

“Gordon Swaney started in the La Choy sales department seven years ago.”

3842. Nickerson, Jane. 1954. Japanese culinary art for the New Year. *New York Times*. Dec. 26. p. SM30.

• **Summary:** Describes the food that Japanese-Americans prepare in New York City to celebrate the New Year. The first seven days of the New Year, called Matsu-no-Uchi, are a time for fun and feasting. They enjoy traditional foods, such as “rice-cake [mochi] soup (*zoni*), black beans (*kuromame*), sake (warm rice wine),... and *toso*, a sweet sake flavored with spices.”

The rice cakes are “formed from a glutinous rice that is pounded into a starchy mass after being boiled...” “Black [soy] beans, sweetened, boiled, and eaten cold, carry with them the idea of a new year devoted to enterprising hard work. That is because the Japanese word for beans” [*mame*] sounds the same as the word meaning ‘industrious.’

3843. Bisson, F.C. 1954. Soybeans—Agricultural miracle. *Board of Trade News (Chicago Board of Trade)*. Dec. p. 3-4.

• **Summary:** This is the first of two articles with this title. It begins: “As little as a generation ago it is doubtful if more than a small handful of the membership of the Chicago Board of Trade had ever actually seen a soybean. And, in all probability, the only actual contact that any may have had up to that time with the many products and by-products made from this legume, was when on an occasional ‘after the show’ visit to a Chinese restaurant near Wentworth and Twenty Second Street, they might have used that mysterious appearing black sauce on a heaping platter of chop-suey or chow-mein.”

“No one seems certain about the actual origin of the soybean... we learn that “in an ancient Chinese thesis—(so old that the author is not even known, with the opus identified simply as having been penned thirty centuries before Christ)—there were in it more than three hundred separate and distinct medical formulae with each having soybeans as basic source. How much older the soybean might be is anyone’s guess.

“Just as the actual origin of the soybean seems to be rather well shrouded in antiquity, modern history is equally bare of facts and figures on how and when the first ones found their way to American shores. But in the absence of anything more specific, it seems like a good guess that a few of them first were brought to this country early in the nineteenth century. And without doubt, they came here more

as a curiosity than with the thought of their serving any utilitarian purpose.

“Near the turn of the century—1890 to be exact—our own government took the first official cognizance of the presence of this agricultural visitor from the Far East by providing for some exploratory research on the adaptability of the soybean to our climate, with particular respect to the possibility of its augmenting our clover, alfalfa and timothy crops as a source of animal forage.”

One table (p. 4) shows the rapid increase from 1925 to 1954 in U.S. soybean acreage (sown alone, or harvested as beans), total production (in bushels), and yield in bushels per acre. The yield almost doubled, from 11.7 bu/acre in 1925 to 21.6 bu/acre in 1950. “Never in the agricultural history of the United States, has there been such a phenomenal increase in production of any crop within such a short space of time. From 1925 through 1954 the United States soybean crop has been multiplied more than 67 times.

“It is rather apparent that if there had not been present some very well defined incentive for these year-to-year increases in soybean production, they never would have materialized. That incentive came in a two-fold manner—(1), a vastly expanded broadening in the demand for the two main by-products of the soybean—oil and meal, and (2), a step-by-step increase in the processing facilities of the country which has matched both the greatly enlarged production of the raw beans on one hand, and the increasing substitution of bean oil and bean meal for other oils and proteins, respectively.”

A second table (p. 4) shows the increase in U.S. production of soybean oil and soybean meal from 1925 to 1952. Soybean oil grew almost 100-fold from 2.5 million lb to 2,478 million lb during that period. Likewise, soybean meal grew from 8,600 tons to 5,551,000 tons. Address: Director of Market Research.

Address: Japan.

3849. **Product Name:** [Handmade Shoyu: Yuasa Tamari].

Foreign Name: Tezukuri Shōyu: Yuasa Tamari.

Manufacturer's Name: Kadocho K.K.

Manufacturer's Address: Yuasa 7, Yuasa-cho, Arita-gun, Wakayama-ken, Japan. Phone: 0737-62-2035.

Date of Introduction: 1954.

Ingredients: Whole soybeans grown in Japan, wheat, unrefined salt, and water.

Wt/Vol., Packaging, Price: 0.72 liters or 1.8 liters.

How Stored: Shelf stable.

New Product–Documentation: Labels. 1989, Oct. received from manufacturer. For the 0.72 liter container, the label is 5.25 by 4.25 inches. Brown on blue. Illustration (with caption) shows Yuasa Tamari shoyu being made by hand in the traditional way during the Tokugawa period (1600-1868), with men emptying wooden buckets into a large vat.

For the 1.8 liter container, the label is 4.25 inches square. Red, yellow, and green on white. The trademark is a thick-walled "O" with a roof over the top. "Yuasa: The homeland of shoyu. Founded 1831 (the 2nd year of Tempo)."

• **Summary:** Soy related words:

aburaage: see aburage.

aburage: fried beancurd.

age: a piece of fried bean-curd.

ama-miso: slightly salted bean paste.

atsuage: not listed.

Daitokuji natto: not listed.

daizu: a soya (= soy) bean. daizu kasu: a [soy] bean cake [a co-product of soy bean oil]. daizu abura: [soy] bean oil.

dengaku: bean curd baked and daubed with miso.

dengaku-zashi ni sareru: to be transfixed; to be pierced through (as with a spear).

edamame: green soybeans.

ganmo: not listed.

ganmodoki: not listed. Hamananatto: not mentioned.

Hamanatto: not mentioned.

inarizushi: fried bean-curd stuffed with boiled rice.

Note 1. This is the earliest English-language document seen (May 2012) that contains the word *inarizushi* (one word without hyphenation).

kogoridôfu = kôyadôfu.

koikuchi: not listed.

koikoku: a carp cooked in bean (= miso) soup.

kôji: malt (mugi); yeast; leaven (kôbo); kôji-ya: a maltster [a maker of kôji]. kôji ni suru: to malt something.

kôridôfu: a frozen bean curd.

kuromame: a black soy bean.

miso (chomiryô = seasoning): bean paste; miso. miso o suru: to mash the miso [as in a suribachi]. miso kakeru: to put miso on something (as food). (2) (tokui to ten) sore ga kare no miso da: that is what he takes pride in [that is what he is good at]. (3) (hikakuteki-ni) miso o kakeru (shuppai suru): to make a mess (=sad work) of something; to make a miserable (=poor) showing. miso o suru (hetsurau): to flatter [someone, as one's superiors]. [Modern is goma suru; kare, shatcho ni goma shitte-iru: he is flattering his boss. A grinding gesture goes with it. goma-suri: a person who flatters]. kuso miso ni iu: to speak meanly of a person; to speak of a person in the most disparaging terms. miso mo kuso mo isshoni suru: to mix up good and bad things. miso no miso kusaki wa, jô miso ni arazu: The secret of art lies in concealing art [Akiko never heard this saying]. soko ga miso darô: perhaps that's the point he takes pride in [=the key point].

misokoshi: a *miso* strainer.

miso-mame: soy (= soya) beans.

misuzu-dofu: not listed.

momen: no meaning related to tofu is listed.

nama-age: fried bean curd.

Note 2. This is the earliest English-language document seen (May 2012) that contains the term *nama-age* which refers "fried bean curd."

nattô: fermented soybeans. nattô uri: a vendor of fermented soybeans. nattô-jiru: miso soup with ground fermented soybeans.

nigari, nigashio: bitter, brine.

nori [no tsukudani]: laver boiled down in soy [sauce].

oboro: not listed.

okabe: = tofu.

okara: bean curd refuse.

shimidôfu = kôridôfu [frozen tofu].

Note 3. This is the earliest English-language document seen (May 2012) that contains the term *shimidôfu* (written as one word, with diacritics) which it says is the same as kôridôfu.

shitaji (7): soy [sauce].

shôyu: soy [sauce].

tamari: [a kind of] soy; soy sauce; sauce from refined soy.

tôfu: beans curds (=cheese); tôfu. [tôfu itcho; in characters]: a piece (=cake) of bean-curd. [tôfu-ya]: a bean-curd dealer (=seller). [yaki-dôfu]: roasted bean-curd. kare ni iken shita totte, tôfu ni kasugai da: advice to him is like water sliding off a duck's back = It's a mere waste of words (=It is like pouring water into a sieve) to advise him. [tofu-ya e ni ri, saka-ya e san ri to iu tokoro da]: there is no human habitation within five miles of the place. [It's out in the boondocks].

tônyû: bean soup; soya-bean juice [sic, soymilk].

u-no-hana: (1) flowers of the *Deutzia scabra*. (2) (tôfu no kara) bean-curd refuse.

yuba: dried bean curds [sic, the film that forms atop soymilk when it is dried]. Address: General editor, Japan.

3858. Kay, Tutu. 1954. Wiki wiki kau kau. Honolulu, Hawaii: Watkins Printery, Ltd. 77 + [2] p. Illust. 22 cm. [Eng]

• **Summary:** Cover text: "Quick cooking recipes from Hawaii." Contains a glossary of Hawaiian words, a brief history and: "How to have a luau, make a lei, sew a muumuu, speak Hawaiian, and entertain simply."

Soy-related recipes: Meat sticks (with "shoyu sauce," p. 15). Deviled macadamia nuts (with Worcestershire sauce, p. 19). Lorie Bachran's spareribs, a la apricot (with shoyu, p. 22). Taylor Mercer's filet de boeuf flambe (with "shoyu sauce," p. 23). Suggested dinner menus: Japanese miso soup and sukiyaki (p. 24). Abalone with cucumber (and shoyu, p. 25). Meat sticks (with "Soy Sauce," p. 26). Hot buttered abalone (with shoyu, p. 27). Note: Many other meat, poultry and fish dishes are also seasoned with shoyu or Worcestershire sauce.

3864. **Product Name:** [Yuasa Shoyu].

Foreign Name: Yuasa Shōyu.

Manufacturer's Name: Yuasa Shoyu Co. Ltd.

Manufacturer's Address: Yuasa, Wakayama prefecture, Japan.

Date of Introduction: 1954?

New Product-Documentation: Ando and Ishi. 1954. Yuasa shoyu-gyo no kenkyu. 31 p. Fruin. 1984. History of five Japanese shoyu companies.

3865. Hughes, G. Bernard. 1955. Old English cruets. *Country Life (London, England)*. Jan. 20. p. 178-80.

• **Summary:** An excellent history of early records of food-related domestic cruets in England: 1459-The *Paston Letters* state that the majority of cruets are made of glass.

1521-Dame Hungerford's inventory includes a set of "cruettes of sylver, parcel gilte." These were matching pairs of flasks for serving oil and vinegar, used to enhance the taste of the preserved foods of the period.

1611-Cotgrave defines the domestic cruet as "a Violl wherein Oyle or Vinegar is served to the Table." 1675-George Ravenscroft introduces glass-of-lead under the name of "improved flint glass." He soon made flint-glass cruets in 3 sizes. 1690-Cruet frames appear; they are silver frames for carrying pairs of cruets, thus simplifying passing at the table.

1760-"At about this time began the half-century vogue of soy [sauce] as a relish with food. Soy was described in 1776 as 'a sauce as thick as treacle, and of a clear black colour.' It was prepared from the beans of the *soja hispida* and salt mixed with ground barley or wheat. This created a demand for special soy frames complete with silver-mounted cut-glass bottles hung by silver bottle tickets on chains. Such a cruet frame might contain six to ten sauce bottles and a pair of pepper casters. The bottle tickets might number many more than the bottles, each being named differently, such as soy, catsup, anchovy, lemon, tarragon, kyan, chili vin and so on."

1765-1773-"The trade-card of Thomas Heming, goldsmith to the king" [London]... "illustrates an example with three glass cruets, their necks and bodies cut with shallow diamonds. The third bottle was for soy. This card, issued between 1765 and 1773, is in the collection of Sir Ambrose Heal."

1820s to 1830s-"In a range of two, four, six, seven, and eight containers they were catalogued as 'Cruet and Soy Frames.'"

Contains many large photos but none showing a soy cruet. Address: [England].

3866. Iguchi, Nobuyoshi. 1955. Kôji-kin ni kansuru kenkyû. X. Jinkô heni ni yoru kôso-ryoku no henka narabini kyoryoku tanpaku bunkai-kin no zôsei [Studies on *Aspergilli*. X. 3868. Millstein, Gilbert. 1955. On a Sunday in Chinatown. *New York Times*. Feb. 27. p. SM22-23, 53.

• **Summary:** A fascinating study of New York City's Chinatown on a typical Sunday. It takes place on Mott Street, and Pell, Doyers, Bayard, and the Bowery; there the Chinese gather to talk, shop, visit, and eat. People typically enjoy a late breakfast, which is large and with many dishes, including "dow foo sui mei (bean curd and meat bun)." One may also visit a coffee shop, tiffin house, or noodle shop. When finished, "the Chinese then goes to his family association. The outstanding family associations in Chinatown are those of the Chins, the Lees, the Wongs, the Ngs, the Leongs, the Chus,..." Chinese laundrymen may visit their laundrymen's association.

While visiting Chinatown, visitors can buy "brown bean sauce, black bean sauce,... soy sauce,... and oyster sauce."

3869. Human Nutrition Research Branch, Agricultural Research Service. 1955. Money-saving main dishes. *USDA Home and Garden Bulletin* No. 43. 48 p. Feb. See p. 3-4, 9, 36, 38, 40. Reprinted in 1962.

• **Summary:** The section titled "What shall we have for dinner?" (p. 3) states: "You get top-rating proteins (as well as other important nutrients) in foods from animal sources, as in meat, poultry, fish, eggs, milk, cheese. Some of these protein foods are needed each day; and it is an advantage to include some in each meal.

"Next best for proteins are soybeans and nuts and dry beans and peas. When these or grain products are featured in main dishes, try to combine them with a little top-rating protein food, if you can."

A table (p. 4) titled "Approximate amounts of some foods that provide about ½ ounce (15 grams) protein" includes various meats (3-4 ounces) and "Soybeans, dry—1½ ounces (about 3 tablespoons)."

Recipes: Soy meat loaf (with ¾ pound chopped meat and ¾ cup soy grits, p. 9). Soybean chop suey (with 1½ cups cooked dry soybeans, plus soy sauce, p. 38). Soybean souffle (with 2 cups cooked dry soybeans, p. 38).

The section titled "Dry peas and beans" (p. 36) notes: "In this country, varieties grown and used in some sections are practically unknown in others. The South has its blackeye peas and black beans, the East and Middle West have their pea beans, soybeans, and kidney beans, and the Southwest and West like pinto beans and chickpeas."

"Soybean protein is of higher quality than protein of most beans commonly used in this country. For high nutritive value and distinctive flavor from your food dollar, use soybeans sometimes instead of navy or lima beans in favorite bean recipes, or use some soy flour in making breads and hot breads."

Page 40: "Milk, eggs, soy flour or grits, meat, or fish help to bring up the protein content and protein value of a cereal main dish." Address: USDA, Washington 25, DC.

3870. Omata, S.; Ueno, T.; Nakagawa, Y. 1955. [On the color of soy sauce. III. On the substances increasing color intensity of soy sauce]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 29(2):165-68. Feb. [12 ref. Jap; eng]

Address: Faculty of Agriculture, Naniwa Univ.

3873. Nickerson, Jane. 1955. Sukiyaki and tempura. *New York Times*. April 24. p. SM50.

• **Summary:** Describes how to prepare each of these famous Japanese recipes. The recipe for sukiyaki is adapted from one used at the Miyako, the oldest Japanese restaurant in New York. Like most such recipes it calls for "soybean curd (tofu)..." "The soy sauce (shoyu) used in the dish should be Japanese; it has a marvelous intensity which makes it different from other such sauces." *Suki* means "plow" and *yaki* means "roasted." The legendary history of the dish is given.

For tempura, the traditional Japanese sauce is composed of soy sauce heated with dashi and other ingredients—including "monosodium glutamate, the vegetable protein seasoning sold here under such trade names as Accent and known in Japan as *aji-no-moto*." Japanese make tempura from shrimp, seaweeds, string beans, eggplant, mushrooms, and many other kinds of vegetables. Four photos show views of these two dishes.

3874. Omata, Shojiro; Ueno, Teruo; Nakagawa, Yasushi. 1955. Shōyū no iro ni kansuru kenkyū. V. Reductone no shōyū chakushoku ni oyobosu eikyō ni tsuite [On the color of soy-sauce. V. On the soy-sauce pigment (1)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 29(4):256-60. April. [14 ref. Jap; eng]

Address: Naniwa Daigaku, Nōgaku-bu, Nogeikagaku Kyoshitsu.

3876. *Times (London)*. 1955. Ah Luk: From China to England and back. May 3. p. 12, col. 5.

• **Summary:** “From a correspondent.” Ah Luk is a Chinese woman. “She derived much pleasure from serving visitors with Chinese ‘chow’ and merriment from watching them use chopsticks more often as instruments of chase than of capture. Guests, for their part, liked the chicken and pork, served with rice and soya sauce, and fried lettuce, which had become her main food in this country.”

Note: This is the 2nd earliest English-language document seen (Dec. 2005) in the *Times (London)* that contains the term “soya sauce.” The first was in 1905 in a letter from a Japanese man, Mr. C. Kadono.

3877. Owen, June. 1955. News of food—Chinese dishes: Oriental foods are now being prepared for take-home trade. First supermarket that features Chinese items opens its doors. *New York Times*. June 15. p. 27.

• **Summary:** A good, early history of Jen Paulucci and his company Chun King Sales. “Several years ago, when Jen F. Paulucci was traveling about the country as sales representative for a food company, he noted that virtually every city and town of any size had a Chinese restaurant or one that claimed a Chinese cuisine.”

Mr. Paulucci, age 37, is a native of Minnesota. Growing up in Hibbing, Minnesota, he helped his mother with her Italian catering business.

Eight years ago, in an improvised Quonset hut in Duluth, Minnesota, Mr. Paulucci and 20 employees started canning chow mein. Today his company, Chun King Sales, produces twenty products and is the largest plant for the production of oriental foods in the country.

Mr. Paulucci’s products are meant for Americans. not for people of Chinese ancestry.

Another young man with a commercial interest in Chinese foods is Raymond C. Tong. He recently opened China Food Fare, the first supermarket in New York City dealing in oriental groceries (at 20 East Broadway, Chinatown). His customers are mainly those of Chinese ancestry; his store sells “bean curd and what may be the widest selection of soy sauces” in New York City. These sauces are made in Hong Kong, Japan, Korea, and the USA. The two basic types are light and dark. “The light is used in cooking and in marinating foods.” The dark is meant to be used at the table, to be sprinkled on dishes as each person

desires. Mr. Tong says that a fine soy sauce is neither too bland nor too salty. It should have a good savory or meaty flavor.

3878. Associated Press (AP). 1955. Condemned soy sauce flavors Formosa river. *Chicago Daily Tribune*. June 22. p. 25.

• **Summary:** Taipei, Formosa, June 21 (AP)—Muddy Tansui river, which flows through Taipei, was flavored with the contents of 250,000 bottles of soy sauce. “The sauce was poured into the river after health officials found it to contain chemicals injurious to health.”

3879. Fujisawa, Shinkichi. 1955. Shokuhin moshiku wa shōyu, miso shikomi genryō to shite tekisuru butsurō no seizō hōhō [Food product for brewing of soy sauce or fermented soybean paste]. *Japanese Patent* 30-4442. June 28. 3 p. (Chem. Abst. 51:13311b). [Jap]

• **Summary:** A protein-rich food product is prepared from sweet or white potatoes by addition of organic and inorganic nitrogen sources followed by cultivation with microorganisms. The product contains large amounts of vitamins and proteinaceous components and can be used as a food or as an ingredient in the production of soy sauce (at 60%) or miso (at 30%). Address: Gifu-ken, Inaba-gun, Numa-machi?, Okan 698, Japan.

3880. Fujisawa, Shinkichi. 1955. Shokuhin moshiku wa shōyu, miso shikomi genryō to shite tekisuru butsurō no seizō hōhō [Food product for brewing of soy sauce or fermented soybean paste]. *Japanese Patent* 30-4443. June 28. 2 p. (Chem. Abst. 51:13311c). [Jap]

• **Summary:** Soybeans or defatted soybeans are hydrolyzed with acid or alkali, neutralized, mixed with fish meal or pressed cake of chrysalis and inorganic nitrogen sources, cultured with slime bacteria, and fermented with yeast. Address: Gifu-ken, Inaba-gun, Numa-machi? Okan 698.

3881. Kawakami, Yasota. Assignor to Keikichi Endo. 1955. [Improvement of the flavor of soy sauce]. *Japanese Patent* 4444. June 28. (Chem. Abst. 51:13311e). [Jap]*

• **Summary:** Ethyl esters (100 parts) of fatty acids consisting mainly of linoleic and oleic acids are dissolved in 50-100 parts of ethanol by employing 50-150 parts of poly(oxyethylene sorbitan monooleate or -palmitate) as an emulsifier. Then 0.1-3 parts of the solution is added to 100 parts of a soy sauce of inferior flavor. The ethyl ester of cottonseed oil is also effective.

3882. Mino, Shoichiro; Mino, Yosuke. 1955. [Koji for the brewing of Miei]. *Japanese Patent* 4445. June 28. (Chem. Abst. 51:13312c). [Jap]*

• **Summary:** Miei, an amino acid solution produced as a by-product of sodium glutamate manufacture, has an off-flavor and a disagreeable fluorescence. These disadvantages

are not removed by brewing with the usual koji. Vanillin can change the off-flavor to an agreeable soy-sauce flavor, and a red food color can remove the fluorescence and form a good soy-sauce color. These substances and alanine, glycine, and sodium glutamate are added to the usual koji. For example, a mixture of 5 gm alanine, 5 gm glycine, 5 gm sodium glutamate, 0.1 gm vanillin, 0.5 gm red food color, 700 ml Mieki, and 1.3 liter water was sterilized by boiling, and cooled. Cultures of 90 ml each *Zygosaccharomyces major* and *Z. soya* were added and the mixture was mixed with 5 kg roasted and crushed wheat and cultured with *Aspergillus candidus* at 28°C for about 3 days to give 6.7 kg of a new koji. The koji (3 kg) was used with 10 liters of Mieki containing 2% total nitrogen to produce a soy sauce of superior flavor and color. Address: Japan.

3883. Takeda, Yojuro; Kagami, Motoo. Assignors to Takeda Foods Company. 1955. [Concentration of soy sauce by use of ion-exchange resins]. *Japanese Patent* 4441. June 28. (Chem. Abst. 51:13311d). [Jap]*

• **Summary:** Soy sauce is passed through a column of cation-exchange resin regenerated with hydrochloric acid, sulfuric acid, or sodium chloride, and the filtrate concentrated to ¼ volume. The flavor of the soy sauce, which is adsorbed on the column, is eluted with hydrochloric acid, adjusted to pH 4.4-4.6 with sodium hydroxide, and added to the concentrated filtrate to give a concentrated soy sauce of a superior fresh flavor.

3884. Iguchi, Nobuyoshi; Yamamoto, Kishiro. 1955. Kôjikin ni kansuru kenkyû. XII. Jinkô heni kabu X-816 to oya kabu no tanpaku bunkai kôso-kei ni tsuite no hikaku (2) [Studies on Aspergilli. XII. The comparison of the proteolytic enzyme system between the induced mutant

X-816 and the parent strain (2)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 29(6):394-99. June. [18 ref. Jap; eng]

Address: Noda Industrial and Scientific Research Lab., Noda, Japan (Noda Sangyo Kagaku Kenkyusho).

3885. **Product Name:** Oriental Soy Sauce.

Manufacturer's Name: La Choy Food Products.

Manufacturer's Address: Archbold, OH 43502.

Date of Introduction: 1955. June.

Ingredients: "Naturally fermented from soy beans, wheat, soy bean and corn protein extracts, salt, corn syrup, and caramel coloring with 0.1% sodium benzoate added as a preservative."

Wt/Vol., Packaging, Price: 10 fl. oz. bottle.

How Stored: Shelf stable.

New Product-Documentation: Thomas' Wholesale Grocery... Register. 1955. July. p. 1474. Soy sauce. Ohio, Archbold: La Choy Food Products, Inc. (Chinese).

Label (see below) sent by Milan Drake. 1981. Dec. 8. 8 by 3.75 inches. Red, yellow, and tan on white. "Authentic." Contains recipes for: Burger Joes. Oriental salad dressing. Easy chicken Oriental.

3886. Thomas' wholesale grocery and kindred trades register: The official buyers' and sellers' guide... 57th annual ed. 1955. New York, New York: Thomas Publishing Co. See p. 789, 1470-74.

• **Summary:** Page 1123: "Oriental Show You Co., 20 Woodbridge E. (Imported Japanese)..." Address: New York 1, New York.

3887. Maners, Marian. 1955. Chinese dinner in patio is delightful. *Los Angeles Times*. Aug. 19. p. B4.

• **Summary:** A perfect Chinese dinner might include: Sweet and sour pork. Chicken chop suey or Pork chop suey. Fried rice. Egg Foo Young. “For extra touches: Fried Noodles, Fortune Cookies, Soy Sauce.” And tea, of course.

3888. *Times (London)*. 1955. Limehouse nights in the 1930s: Chinatown of romance and fable receives its death blow from the planners. Aug. 31. p. 10.

• **Summary:** From a correspondent. He and his party would visit a little Chinese restaurant in Limehouse Causeway [in London’s Chinatown]. Most ordered ham and eggs but some “were daring enough to order noodles..., but never dried seaweed, dried fish, soya bean sauce, bamboo shoots, or other of the delicacies favoured by Chinese customers.”

3889. Lager, Mildred. 1955. Suggestions for the arthritic, with menus and recipes. Burbank, California: Published by the author. 46 p. Aug. No index. 20 cm. Saddle stitched.

• **Summary:** The dedication page states: “Dedicated to all arthritics—everywhere.” Copyright 1938 by Mildred Lager. Seventh edition (Revised and enlarged) May 1948. Eighth edition [printing] January 1951. Ninth edition May 1952. Tenth edition August 1955.

Contents: Part I. Introduction. Types of arthritis (inflammation of the joints; rheumatoid and osteo-arthritis). Causes of arthritis. Suggestions. Foods for the arthritic (diet can make a big difference). My own case. Juice diet. Kind of juices. How to take juices. Limited diet: Breakfast, lunch, dinner. Salisbury diet. General diet: Breakfast, lunch, dinner, dessert. Other suggestions: Heat, baths, sweats, etc., massage, digestive aids (natural laxative foods and bulky foods), supplements, vegetarian diet. Mental attitude (positive mental attitude and healthy emotions are very important). Additions August 1955 (p. 28; “It is now more than 30 years since I began my battle with arthritis... Thanks to my diet I have led a very active life. I am still on the fundamental diet because I do not know of anything better... Cortisone and ACTH have been heralded as miracle drugs. I do not believe these drugs are the solution to the problem. In many cases they have brought temporary relief...”).

Part II. Menus (p. 29-31). Vegetarian menus (p. 31-32). Approximate carbohydrate content of fresh fruits. Carbohydrate content of dried fruits. Carbohydrate content of fresh vegetables. Recipes (p. 33-46).

“My own case” (p. 10-14). Note: Mildred M. Lager was born on 19 Dec. 1900 at Superior, Wisconsin, of Swedish parents, who immigrated to America. In 1925 she started her lifelong battle with arthritis. “As diet was the greatest factor in my recovery, I am going into detail about my experience.” After graduating from college, she began teaching. She continued trying every possible cure for more than two years. “As a last resort, I half-heartedly turned to diet. I found, to my surprise, that when I left out starches and sweets I felt better, but I still did not realize that I must make an about

face and a complete change in my eating habits. I became very interested in food, however, and read every book and article I could read on the subject... I don’t know how long I would have continued in this half way stage had not my doctor bluntly told me *the truth* as he put it He said that nothing could be done and I might as well know it. By this time my elbows were locked (ankylosed)” and my wrists, hands, knees, ankles, and feet were badly affected. “I felt as if my body were nothing but ‘sore joints.’”

So she started a strict diet of natural unsweetened fresh fruit juices only. She found orange, grapefruit, tomato, pineapple, and apple to be the best for her. One month later she took a teaching job in northern Michigan, arriving there in twenty degrees below zero. Within 9 months she had won her battle. There follows a list (p. 13) of six foods to avoid plus two general tips. Also, when using dried fruits, use only the unsulphured kind. “Liquified [sic] drinks: A liquefier is a blessing to any one who for some reason cannot tolerate raw green leafy vegetables” (p. 35).

By 1955 Mildred had already authored two books on soybeans and soyfoods, the first one (*The Useful Soybean*, 1945) a classic. This book contains soy in many of the menus and recipes: Soy oil for salad dressing (p. 18-19). Soybean melba toast (p. 20, 29, 31). The best sources of vegetable protein in a vegetable diet include soybean protein (p. 27). Baked soybeans for dinner (p. 31). Cooked soy grit cereal for breakfast (p. 32). Soy melba toast with avocado for lunch (p. 32). Recipes for: Soy bread, soy melba toast, soy gluten bread (p. 37). Meat substitute dishes (p. 39-42): Cooked soybeans with soy sauce. Canned or baked soybeans (available in most markets and all health food stores). Soy loaf (with cooked soybeans and melba toast crumbles). Soy grits. Cooked soy grits. Soy vegetable hash. Soy cheese or tofu. Tofu steak. Mock fish tofu. Gluten steak. Nut butters. Almond butter. Pecan spread. Nut sauce or gravy. Cashew gravy. Almond hamburgers. Address: Burbank, California.

3890. Ishitani, Chiyoko. 1955. Kôji-kin no shizen heni ni kansuru kenkyû. XIII. Hakushoku kabu to ôshoku kabu no heterocaryon kara shinkabu (eizoku-teki ryokushoku kabu) no ikusei ni tsuite [Studies on the natural variation of koji molds (*Aspergillus oryzae* and *Aspergillus sojae*). XIII. The formation of new recombinants (stable green strains) from the heterocaryons between albino- and yellow-type mutant strains in *Aspergillus sojae*]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 29(9):682-89. Sept. [23 ref. Jap; eng] Address: Inst. of Applied Mycology, Univ. of Tokyo (Tokyo Daigaku Oyô Biseibutsu Kenkyû-jo).

3891. Meade, Mary. 1955. Consul general’s wife gives us Japanese recipes. *Chicago Daily Tribune*. Oct. 21. p. B1.

• **Summary:** Here is Mrs. Okuma’s recipe. “Teriyaki (Six servings): 1 2½ pound frying chicken. ½ cup soy sauce. ½

cup sake. ½ teaspoon sugar. 1 teaspoon ginger juice (or 1 minced clove garlic). ¼ teaspoon aji-no-moto (monosodium glutamate).

Soak pieces of chicken for 1½ hours in a mixture of the other ingredients. Place in a baking pan and bake at 350 degrees [F.] for 45 minutes. Turn pieces several times and baste with sauce in which chicken was soaked. Serve with relishes: pickled horseradish, white onions, and cucumbers.

Note: This is the earliest English-language document seen (Nov. 2006) that uses chicken or poultry as the main ingredient in a teriyaki recipe. It is also the earliest that calls for baking (rather than broiling) the ingredients.

3892. Lager, Mildred. 1955. Nutritional news and recipes: The power of gratitude. *Let's Live* 23(11):22-23, 53. Nov.

• **Summary:** "We all have so much to be grateful for, as there is an abundance of wonder and loveliness in the world if we will but look at it. Gratitude brings both healing and comfort. Start your day with gratitude..."

Discusses nuts as food, with recipes, including: Almond breakfast with "raw almond butter." Almond milk. Peanut butter mayonnaise. Vegetables in nut gravy (with "raw or toasted cashew butter"). Almond hamburgers [meatless] (seasoned with soy sauce). Address: Los Angeles, California.

3893. Komiya, Akira. 1955. Japanese soy sauce offers market for U.S. soybeans. *Soybean Digest*. Dec. p. 14-15.

• **Summary:** The best quality Japanese soy sauce, which is a dark brown color, turns red-yellow when water is added. It stimulates the appetite. The mixed ingredients are fermented at natural temperatures for about a year, then pressed with a hydraulic press. Japan is expected to produce 271,440,000 gallons of soy sauce during the year ending in March 1956. Since Japan's population is about 88 million, per capita consumption is about 3.1 gallons/year. The raw materials needed to produce this soy sauce for one year are: Soybeans 30,000 tons. Soybean cake 200,000 tons (made from 250,000 tons of soybeans). Wheat 200,000 tons. Salt 250,000 tons. "This means that Japanese soy sauce makers are annually using 280,000 tons of American soybeans. Japanese soy sauce makers imported all their soybeans from Manchuria before World War II. The situation has since changed entirely."

Photos show: (1) A tank truck used for transporting soy sauce in Japan. (2) A hydraulic press for compressing the mash. Address: Managing Director, Japan Soy Sauce Brewer's Assoc.

3894. *Soybean Digest*. 1955. Staley is largest U.S. maker of soy sauce. Dec. p. 14-15.

• **Summary:** "A.E. Staley Manufacturing Co., while claiming to be the largest manufacturer of soy sauce in the United States, sells none under its own label. The entire output of the Decatur, Illinois, firm is sold in drums or tankers to

manufacturers and bottlers who use it in their own products or in blending their own brands of soy sauce." The company began experimenting with making soy sauce about 25 years ago [i.e. about 1930] on the recommendations of some of its customers who reported that the soy sauce they were importing "was not always uniform in quality and that shipping schedules were uncertain."

Staley's sauce is made by acid hydrolysis of soy grits from which the oil has been extracted. "In the age-old Oriental process the sauce is fermented naturally, which requires from 3 to 12 months to ferment. That which ferments in 3 months the Japanese refer to as made by the new method [*shinshiki shoyu*]. Some large manufacturers in the Orient are now using an amino acid method which shortens the process to 8 hours, but sauce so made there is used almost exclusively for blending."

"While it is conceded that the Staley product has less bouquet than the long-fermented oriental type, it is estimated that the U.S. production now is larger than the approximately 3 million pounds [about 305,500 gallons or 1,156.4 kiloliters] imported last year from the Orient."

A photo shows a tanker being filled with soy sauce by George Truebe, foreman in charge of special products at the Staley Co.

3895. Strayer, George M. 1955. Why Japan wants clean soybeans. Blow to U.S. exports to Japan. *Soybean Digest*. Dec. p. 4-5.

• **Summary:** "Japan is a country of over 80 million people. Total area is about the same as California. Only a very small part is tillable."

"Last year Japan imported a total of about 750,000 metric tons of soybeans (27.5 million bushels). About 250,000 tons were crushed in oilseed mills. The remainder went directly into foods usage, producing soy sauce, soybean paste [*miso*], and soybean curd [*tofu*]. Over 90% of the flakes from the soybean crushing at the oil mills went to these same food plants.

"Soybeans are the life blood of Japan. They are an absolute necessity, for they are the food of the people. They are used directly, not indirectly, as is our soybean meal in the form of livestock products.

"There are over 3,000 vegetable oil mills in Japan, all except about 30 of them small community plants. Only 33 are on the list to receive imported soybeans. There are over 6,000 manufacturers of soy sauce in Japan. There are over 50,000 manufacturers of tofu or soybean curd, and there are several thousand small manufacturers of soybean paste or miso.

"These small plants do not and cannot have cleaning facilities. They must use the soybeans as they come. They prefer domestic beans, second choice is Chinese beans, and next come our beans. Why? Only one answer—foreign material. Their reaction is exactly as would be yours under

similar conditions. They merely ask—why can you not sell us clean soybeans?”

The Japanese are importing more and more soybean from Red China. The Ministry of International Trade and Industry (MITI) favors increased trade with China. “Authorized imports of soybeans [to Japan] to 335,000 metric tons. Of these, 203,000 metric tons were allocated directly to oil mills and food manufacturers. They may be purchased on a global basis—wherever the buyer can buy at the lowest price and find acceptable supplies. Oil millers will favor U.S. beans because of higher oil content, while food manufacturers will probably buy Chinese beans when available.

“The remaining 132,000 tons were allocated to import firms. If a firm had a record of U.S. imports during the previous year the quota for that firm is based on 50% of the tonnage handled. But if a firm imported Chinese soybeans during that same period, the firm’s quota is based on 100% of that tonnage.

“As soon as I discovered the content of the allocation I called it to the attention of embassy officials here in Tokyo, and a protest was filed with the Japanese government. However, at this writing much more work remains to be done.

“As closely as can be figured about 9 million bushels of soybean business was lost by the U.S. in this one allocation.

A large photo shows George Strayer standing behind a podium, addressing a room full of men seated in chairs. A movie projector is visible in the center aisle. The caption reads: “Strayer addressing meeting of 110 representatives of the soybean industry in Japan at the University Club in Tokyo Nov. 14. Invitations were issued by W.D. Termohlen, Agricultural Attache in the American Embassy, to the leadership of oilseed crushers, miso, soy sauce and soybean curd associations of Japan. At his side is Hiroshi Nakamura of Honen Oil Co., who served as interpreter. Mr. Nakamura was a Fulbright scholar in the United States during the 1954-55 university year.”

Note 1. This article was written by Strayer in Tokyo, where he is conducting a marketing study for the U.S. Department of Agriculture.

Note 2. This is the earliest document seen (March 2001) concerning the activities of the American Soybean Association in Asia, in East Asia, or in Japan. This is also George Strayer’s first trip to Japan.

3896. Morohashi, Tetsuji. 1955-1960. *Daikanwa jiten* [Chinese-Japanese historical dictionary]. Tokyo: Taishukan Shoten. 12 vols. + index (alphabetic by phonetic Japanese pronunciation). Cites earliest references (usually in Chinese documents) for Japanese words. [25+ ref. Jap]

• **Summary:** This is widely regarded as one of the greatest Chinese dictionaries. Volume 11, pages 394-95. The following pronunciations of Chinese words may not be

correct. (33) Sho. Hishiomiso. Incubate rice or barley or beans, etc. Let them ferment and add salt to make these. (35) Chiang Yuan. Miso and shoyu shop. The shop where miso, shoyu, and pickles are sold. (36). Shoko. A big earthenware pot in which hishio is kept. (37). Shokyu. Shishibishio in a hot soup. (39). Chiang tsai. Miso pickled vegetables. (40). Shosho. Miso and shoyu craftsmen. (41). Shosui. Soup or porridge (Zosui) cooked with miso. Ruiju Meibutsuko, Shakuso orai. (42). Shosei. Hishio with flavor. (43). Shotsui. Hishio pot. (45). Chiang fang. Miso and/or shoyu shop. See (35). (46). Shobutsu Hishio. (47). Hishio no kame. Hishio vat. (48). Chiang-yu. Chinese soy sauce. Cooked soybeans, roasted barley and salt are fermented. The liquid is extracted; a salty seasoning, also called shitaji or murasaki.

3897. Ohara, H.; Moriguchi, S. 1955. [Soy sauce fermentation under various conditions in the preparation of the saline. II. On the ratio of C and N]. *Chomi Kagaku (Seasoning Science)* 3(3):12-26. [Jap]*
Address: Japan.

3899. Sato, K. 1955. [Studies on the determination of sodium chloride in soy sauce. I. Direct titration method by silver solution]. *Chomi Kagaku (Seasoning Science)* 3(3):6-12. [Jap]*
Address: Japan.

3900. Yokoyama, Yoshikuni; Takahashi, J.; Miura, K.; Kawarai, H. 1955. Miso oyobi shōyu no bitamin B-12 ganryō ni suite [Studies on vitamin B-12 in miso (fermented bean paste) and soy (sauce)]. *Utsunomiya Daigaku Nogakubu Gakujutsu Hokoku (Bulletin of the College of Agriculture, Utsunomiya University)* 2(3):411-12. [5 ref. Jap; eng]

• **Summary:** The vitamin B-12 content of miso and soy sauce was biologically tested using the microorganism *Euglena cracilis* var. *bacillaris*. The content differs by product type. Miso ranged from 83-316 m gamma% (probably 0.083-0.316 micrograms/100 gm) and shoyu averaged 450 m gamma% (probably 0.450 micrograms per 100 gm). In miso, the highest level was found in salty Edomiso (316) and the lowest level (83) in Sendai miso made at Utsunomiya University. Address: Utsunomiya Univ.

3901. *Federal Trade Commission Decisions: Findings, Orders, and Stipulations*. 1955. 8448. Food and drug products—Therapeutic properties, relevant facts, comparative merits, etc. 49:1634-35.

• **Summary:** These Decisions, which cover the period July 1, 1952 to June 30, 1953, are published by the Commission.

The date at the end of this section, March 24, 1953, is probably the date of the decision.

Section 8848 begins: “Live Food Products Co., a California corporation, with its principal office and place of business located in Burbank, California, and Paul C. Bragg sole owner of the issue capital stock of said corporation, engaged in the business of offering for sale and selling in commerce products designated ‘Bragg Calcium,’ ‘Bragg Hy-Trytion,’ ‘Bragg Floramucin Regular,’ ‘Bragg Floramucin With Cascara’ and ‘Bragg Liquid Aminos,’ which:

“... (d) Represents that ‘Bragg Liquid Aminos’ conditions the body organs or that it is a complete nutritional substitute for meat,...”

Note 1. This is the earliest document seen (Dec. 2011) that mentions “Bragg Liquid Aminos,” a product which is still on the market and selling well.

Note 2. From this document we can conclude that Bragg Liquid Aminos was being sold commercially by March 1953.

3902. Glacken, Clarence J. 1955. *The Great Loochoo: a study of Okinawan village life*. Berkeley and Los Angeles, California: University of California Press. xvi + 324 p. See p. 280. Illust. Maps. 23 cm. [134 endnotes]

• **Summary:** A very interesting study in human geography and culture, and of the details of life in three villages (incl. Hanashiro and Matsuda) on the island of Okinawa starting in 1951. This book is doubly interesting because by the year 2000 Okinawans were widely considered to be the longest-lived and healthiest people in the world (Willcox 2001).

The author decided to select a village whose economy was based on agriculture—this meant primarily the cultivation of rice, sugar cane, sweet potatoes, and soybeans (p. vii).

Okinawan villages have a striking “dependence on plants, not only for food but for other uses” (p. 3). Chapter 1 is about the geography and cultural history of Okinawa, which has long been pulled between and paid tribute to China and Japan. Okinawa is the largest and most populous of the Ryukyu islands. These islands are generally divided into four island groups (*gunto*); the Okinawa, Amami, Yaeyama, and Mikado groups. Three maps and a table (p. 8-16) shows these relationships. Naha, the capital of Okinawa island, is in the southwest.

Bean paste [*miso*] or bean curd [*tofu*] are used in the cooperative ceremonies of housebuilding (p. 70-71).

The most typical shops in rural Okinawa include import stores, which carry rice, flour, soybean sauce, and wheat (p. 74). Small retail shops sell foods, including soybean oil and Ajinomoto (p. 76).

“In the farming areas, sugar and rice are the only significant sources of cash income. Sweet potatoes, rice, eggs, and soybeans may be sold,” but they do not provide much cash. The farmer “can produce much of his food and need spend little money if he is willing to subsist on sweet potatoes, bean curd, and bean-paste soup” (p. 86).

Chapter 7, titled “Agriculture” states: “Soybeans, grown for home consumption, are used for making bean curd (*tôfu*) and bean paste (*miso*)” (p. 131, 151). For soybean cultivation and crop rotation, see pages 136, 138, 151. Soybean plants are harvested with a small sickle and threshed by a flail; the residues are used for either fertilizer or fuel. Whereas soybeans are always used to make *tofu* or *miso*, soy sauce is always purchased.

Another type of bean is the “red dwarf bean (*adzuki*)” (p. 151).

Table 16 (p. 153) shows that soybeans are grown as a dry-land (rainfed) crop; in Hanashiro in 1952 they occupied 19.2% of the total land area; sweet potatoes occupied 50.8% and rice 15.5%.

The term “waste bean curd” (*tofu no kasshu [kasu]*) is used to refer to *okara* (p. 158-59); it is fed to horses and oxen.

When a person dies, if his descendants are devoted, his life will be remembered and celebrated periodically until 33 years after his death (p. 204).

Page 280: “One of the most significant links between family, village, and school is the annual athletic meet (*undôkai*)... There is much bustle, laundering, hair washing and cooking in a village the day before the meet. Special lunches including rice dyed red, bean curd, slices of fish paste, beef or pork are prepared.” The infant is with the mother “when she is turning the quern to make bean curd” (p. 204).

The main difference is the basic diet is that the poor eat more sweet potatoes and less rice. For most people, breakfast includes a “soup made of hot water and bean paste, perhaps with bits of other foods. For dinner: “Bean-paste soup, rice or sweet potatoes, bean curd and tea” (p. 223).

“Home-made bean curd (*tôfu*)” and bean paste (*miso*) are an important foods, but *miso* is the more important of the two. in the daily diet. The present diet is better than before the war, when it consisted of mostly of the sweet potato and bean-paste soup. The latter usually has a few shred of shreds of fish or meat in it. “In times of scarcity, or if the family is poor, only the paste is used; when it is dissolved in hot water, it makes a kind of clear bouillon which is jokingly referred to as ‘mirror soup’ (*kagami miso*) because one can see his face in it; it is also called ‘nothing in it soup’ (*nnshiru*)” (p. 224)

The method of making bean curd is described (in part incorrectly). The remaining whey is used for pig food. “Bean curd, fried, boiled in a soup, in a mixture with vegetables, or as an ingredient in *sukiyaki* is always served at a party.”

“Most families serve bean-paste soup (*misoshiru*) every meal every day. It [*miso*] has four basic ingredients: soybeans, rice or barley—occasionally the cycad, salt, and water. Recipes differ considerably among families... It is put in a large jar (*tsubo*) which is placed in the kitchen or in a storeroom and allowed to stand for at least a year, sometimes for three. With age, the paste becomes sweeter and is

considered to be better; when ready for use, it is very soluble in water” (p. 225).

An excellent photo (p. 239) shows a woman making bean curd using a hand mill.

In observances in memory of the dead, when the “tomb is revisited on the seventh day, rice cakes [mochi], bean curd, favorite foods of the deceased, and a little sake may be taken as offerings” (p. 248).

After New Year, the next public holiday is *Jûrokunichi* (literally, sixteenth day), the 16th day of the first lunar month (Feb. 21, 1951); it “is a day of devotion and prayer at the family tomb.” In Hanashiru, food is taken in two lacquer boxes (*jûbako*), the second of which includes bean curd (p. 253).

In historical times, Okinawan culture was for centuries exposed to Chinese culture, especially from the 14th to the early 17th centuries, “The most significant borrowings, either directly from China or via Japan,” have included “articles of diet, such as bean curd” (p. 298).

Soybean or soybeans are mentioned on pages vii, 74 (soybean sauce), 76-77 (soybean oil), 86, 138 (“The second month (March 8 to April 5, 1951) is devoted to soybean planting which continues until about the middle of the month...” The soybean plots are weeded), 131 (“Four crops are the mainstays of Okinawan agriculture: rice, sweet potatoes, soybeans, and sugar cane”), 135-36 (soybeans in crop rotation), 138-39 (Soybeans are harvested in the fifth month, June 5 to July 3, 1951), 151 (After the soybean, the daikon is the most important of the minor crops grown for home use. Soybeans are planted once a year), 297 (sweet potatoes, soybeans, and sugar cane can be grown freely on land unsuited for rice). Address: Geographer, Berkeley, California.

3903. Griffin, Stuart. 1955. Japanese food and cooking. Rutland, Vermont, and Tokyo, Japan: Charles E. Tuttle Co. 167 p. Illust. No index. 19 cm.

• **Summary:** This basic introduction by an American contains about 70 Japanese recipes. The best known of these in the USA is Sukiyaki. The chapter titled “Ingredients” states (p. 3-4) that ingredients available in the USA include “*fu*, or wheat gluten; *tofu*, or bean curd; *yuba* or dried bean curd [sic]; and *udon*, or macaroni... sugared red beans [azuki],... bean paste squares and jellies, seaweed rice-cakes [probably mochi], painted with *shoyu* sauce.” Sauces and flavorings are very important to Japanese cookery. “Foremost among these is *shoyu*, or soy sauce, made from wheat or barley, soybeans, salt, and water. A dark, inky, thirst-provoking liquid, it is similar to that found in Chinese restaurants. The wheat is grilled in a big iron pan until burnt-brown in hue. It is then crushed. [Soy] Beans are boiled in an adjacent cauldron, with a heavy weight on the lid. Boiling lasts three to five hours, then the fire is put out, and the beans are kept in the kettle overnight. Steaming may be used as a method

of bean preparation. This process lasts for five or six hours. The grilled wheat and boiled beans are mixed and placed in a malt-room [sic, koji room] where malt seed [sic, koji starter] are added. The mixture turns to malt [koji] in a few days. Salt water is put over the malt and left for a few more days, being stirred occasionally until fermentation takes place. This overall mixture is pressed, and the [soy] sauce obtained is bottled.

“*Miso* is another necessity. This is a mixture of malt [koji], salt, and mashed soybeans, the liquor of which is drained off in tubs and allowed to ferment. *Miso* will be discussed later in the soup chapter” (see p. 64). Soy sauce and Aji-no-Moto are frequently mentioned. Soy-related recipes: Chirashi-zushi (with beancurd, p. 31-34). Sashimi (with shoyu, p. 36-41). Miso soups (p. 49, 64-69). Bean curd soup (p. 52-53). Roasted on a plough (sukiyaki with bean curd, p. 70-81). Vegetables, white sesame & vinegar (salad, with “1 *aburaage*, a kind of fried Japanese bean curd,” p. 1124-25). Shoyu spinach (salad, p. 134). Turnips in shoyu (p. 134-35). Sweet soy beans (a festival dish at New Year’s, p. 154-55).

Also mentions: Red rice (with azuki beans and glutinous rice, p. 17-18). Norimaki-zushi (sushi wrapped with nori, p. 27-30). Red bean cake (*yokan*, with bean paste, made from red kidney beans, and agar-agar, p. 145-46). Red kidney bean soup cake (*shiruko* [with azuki beans and mochi], p. 148-49). Bean & jam cake (*kuzumanju*, [with azuki bean paste and kuzu], p. 150-51). Address: [Japan].

• **Summary:** Much of this information describes the development of Kikkoman and its predecessors during the Edo period. Pages 61-63 give information on early Dutch exports of shoyu from Japan. Bibliographic references are given for shoyu export documents, all written in old Indonesian Dutch (which is quite different from old Dutch of the same period), from 1668 to 1776 (Kanbun 8 to Anei 5) located at the Waran Bunsho-kan (Japanese-Dutch Document House at The Hague, Netherlands).

1. Copy of a letter dated 17 Dec. 1668, written by the governor, Balthasar Bort, and the Council of the Moluccas [Malacca? Malaccas?] near Ceylon to Ryklof van Goens. To: India, Southeast Coromandel area. To Coromandel: Sake 30 kegs (*taru*) and shoyu 12 kegs.

2. Copy of a letter dated 13 Feb. 1670 (Kanbun 10), written by the governor Antehong Pavilioen and the Council of Negapatonam. This is an order form for goods needed by the company, plus some other things. India, East Coast Ceylon island, northwest of opposite shore. Order from Japan: Sake 30 kegs, shoyu 12 kegs, miso 6 kegs.

3. Original general letter dated 13 Feb. 1677 by the Governor General and the Council of the Dutch East Indies from Batavia [today's Jakarta] (Northern part of India, east Coast Madras). To Coromandel: Palliacatta, Various types of Japanese shoyu 17 kegs.

4. Original general letter dated 13 Feb. 1679 (Enhô 7) by the Governor General and the Council of the Dutch East Indies. (India west north corner Surat). To Surat: Shoyu 4 kegs.

5. Original general letter dated 11 Dec. 1679 by the Governor General and the Council of the Dutch East Indies, from Batavia. To Coromandel: Miso 1 keg, shoyu 10 kegs, oil 8 kegs. To Ceylon: Shoyu 20 kegs, sake 2 layered kegs—6 kegs, miso 2 layered kegs = 20 kegs.

6. Original general letter dated 29 April 1681 (Tenwa 1) by the Governor General and the Council of the Dutch East Indies, from Batavia. Coromandel: Shoyu large keg(s) (*ôdaru*)—half kegs (*handaru*). Ceylon: Shoyu large keg(s) (*ôdaru*)—three-quarter kegs.

7. Memorandum, dated 8 Jan. 1681, concerning a list of merchandise imported by ship [from Japan] on Chinese junks and ships from other foreign countries in Tonkin. Offerings to the former king: Sake 5 kegs, shoyu 10 kegs. Offerings to the assistant king (*fuku-ô*): sake 5 kegs, shoyu 10 kegs.

8. Copy of a letter dated 14 March 1683 (Tenwa 3) from the Governor and Commissioner, Jacob Joris Pitch, and the Council of Palliacatta near Batavia. Sake: large keg(s), half keg(s). Shoyu: large keg(s), half keg(s). Miso: 6 kegs.

9. Copy of a letter dated 20 Jan. 1699 from governor Govert van Hoorn and the Council of Malacca. Ceylon: Sake 2-layer kegs—6 kegs. Shoyu 2-layer kegs—8 kegs. Miso 2-layer kegs—2 kegs. Bengal: Shoyu 5 kegs, miso 5 kegs. Nagapatnam [probably Nagapatinam, a seaport town in southeast Tamil Nadu, in south India, on the Coromandel Coast 160 miles south of Madras]: Sake 2-layer kegs—3 kegs. Shoyu 3 kegs.

10. Thunberg's *Travels in Japan (Nihon Kiko)* published in 1796 noted in 1776 (Anei 5) that the Japanese do not export much tea to the surrounding countries since Japanese tea is quite inferior in quality to tea from China. However the Japanese make shoyu that is far better than Chinese shoyu, and many kegs of shoyu have been shipped to Batavia [Jakarta], India, and Europe. The Dutch in Japan discovered

how to use heat to prevent over-fermentation of shoyu. They boiled the shoyu in an iron cauldron, then bottled it and sealed the mouth with painting pitch (*rekisei*). Shoyu heat-treated in this way will retain its strength and can then be used in making various sauces.

Note: In various of the above reports, shoyu was written as Zoya or Soya; sake was written as Saky with an umlaut (2 dots) over the “y,” and miso was written as Miso. These products were listed along with other Japanese goods. It is clear that these things were exported from Japan ports in India.

Also includes: Regulations of the Tokyo Shoyu Company (1881), p. 89-91. Address: Noda Shoyu, Noda, Japan.

3907. Kaikoku Hyakunen Kinen Bunka Jigyo-kai (Cultural Enterprise Assoc. for the 100th Anniversary of the Opening of Japan in the Meiji Era). 1955. *Nihon bunka kôshô-shi* [History of Japanese Cultural Negotiations]. Japan: Yoyosha. See vol. 5. Iju-hen (Immigration section), p. 409. [Jap]*
• **Summary:** Repeats the information from Morita 1915 about Haruhachi Shimada being the first to brew shoyu in Hawaii.

3908. Lager, Mildred. 1955. *How to use the soybean: A plus factor in modern nutrition*. Burbank, California: Published by the author. Printed at La Sierra College Press, Arlington, California. 115 p. Index. 23 cm. Lay-flat comb bound.

• **Summary:** Contents: Preface. Nutritional nuggets—food value of soybeans. The versatile soybean. Soup to nuts—soybeans and soy products. Recipes: Green soybeans. Dry soybeans. Sprouted soybeans. Roasted or toasted soybeans. Meat-substitute dishes. Soy-enriched meat dishes. Soy noodles, macaroni, spaghetti. Sauces and gravies. Soups. Salads. Dressings. Soy spreads. Soy milk. Tofu or soy cheese. Soy butter (made from finely ground soybeans or soy flour, it may be raw or roasted, and resembles peanut butter; p. 73-74). Soy cereals. Soy desserts. Soy candies. Soy beverages. Soy-flour recipes. Breads and muffins. Pancakes and waffles. Soy gluten recipes. Baking-powder biscuits. Pastry. Cookies and doughnuts. Cakes. Contains 350 recipes.

A so-called “second edition” of this book was published in 1959, but it was identical to this first edition.

Ad in *Let's Live*. 1960. April. p. 39. Mildred Lager Publications [perhaps her home] is now located at 4118 Warner Blvd., Burbank, California. Mildred died in Aug. 1960. Address: Burbank, California.

3909. Lundqvist, Eric. 1955. *In eastern forests*. Translation of *Vildarna finns i väst*. London: Hale. 264 p. Illust. 27 cm. *

• **Summary:** “Only white crayfish with ketjap sauce and paprika. We went ashore to look for turtles' eggs. The island is high and hilly, and covered with dense jungle.”

Note 1. The “eastern forests” refer to those of Indonesia.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “ketjap sauce” to refer to (probably) ketjap (Indonesian soy sauce).

3910. Noda Shoyu K.K. 1955. *Noda Shōyū Kabushiki Kaisha Sanjugonen-shi* [Thirty-five-year history of Noda Shoyu, Inc.]. Noda, Japan: Noda Shoyu K.K. 865 p. Illust. No index. 28 cm. [Jap]

• **Summary:** This is the second major history of Kikkoman, written largely by Mr. Morio Ichiyama. Concerning the Mogi Saheiji family line (p. 107): The third generation Mogi in this line started a shoyu brewing business in 1782. The trademark, first used in 1784, is identical to the Kikkoman trademark used today; it was designed by Manbei SARANUMA, who was a grain merchant. Earlier in 1784 another trade mark named Kikko-dai was used briefly.

In the section on exports (p. 560), subsection “Development of exports,” it is written that shoyu was allowed to be exported during the period of Japanese isolation (*sakoku*) that started in the early 1600s (early Tokugawa period). According to Dr. Iwao, whose source of information was the Hague Library in the Netherlands (*Waran Haagu Bunshokan*; probably Nederlandse Vereniging van Bibliothecarissen, Documentalisten en Literatuuronderzoekers (NVB)), in 1668 the Japanese sent 12 kegs of shoyu to Coromandel, India (a coast region of southeast India on the Bay of Bengal), in 1670 to the island of Ceylon, in 1677 to Coromandel again, in 1679 and 1681 to Surat in northwest India and to Coromandel, in 1681 to Tonkin (part of French Indochina from 1887, today in North Vietnam) where 10 kegs of shoyu were offered to both the ex-king and the vice-king, and in 1699 shoyu was shipped [by Dutch merchants] (together with sake and miso) to Ceylon, Bengal, and Nagapattinam (a seaport town in southeast Tamil Nadu, south India, on the Coromandel coast, 160 miles south of Madras). Shoyu was written as “Zoya” or “Soya.” Sake was written as “Saky” with two dots over the “y.” And miso was written as “miso.” These exported products were sold at various places in India.

Pages 453-56 discusses the *Mankin Sangyotai* or *Bankin Sugiwai Fukuro* (1731 or 1732), noting that koji starter (*moyashi*) was now being made specifically for shoyu. Sake is made mostly during the cold season (*kanzukuri*). Shoyu should be fermented during the summer (*dōyo shikomu*) and pressed at the end of fall.

Pages 529-30 discuss the size of the wooden kegs *taru* in which shoyu was shipped and retailed. During the Tokugawa or Edo period (1600-1868) the kegs typically had a capacity 8 *sho*; since 1 *sho* = 1.80 liters or 0.476 gallons, a typical shoyu keg had a capacity of 14.40 liters or 8.568 gallons. And they typically contained 7.5 *sho* of high-class shoyu or 7 *sho* or regular/low-class shoyu. Starting in the year Meiji 1 (1868), a keg with 9 *sho* capacity was introduced. Then in Meiji 33 (1900) a larger size keg (called the *ô-dara-zumê*)

was introduced; its capacity is not given. A keg of half this capacity (called the *ô-dara no handaru*) was also introduced. Contains many photos and illustrations.

Note 1. *Webster's New Geographical Dictionary* (1988) defines Coromandel Coast as a coast of southeast India from Point Calimere north to the mouths of the Krishna River. It has a low shoreline with no good harbors. The chief ports are Nellore, Madras, Pondicherry, Cuddalore, Tranquebar, and Nagapattinam.

Note 2. This document contains the earliest clear date seen (Oct. 2010) for soybean products (Japanese shoyu) in Ceylon (today's Sri Lanka; 1670), or Tonkin (today's North Vietnam; 1681); soybeans as such had not yet been reported. Address: Noda, Japan.

3911. Sasmito, -. 1955. *Pembuatan ketjap di Tangerang* [Making kechap in Tangerang]. In: *Pewarta Balai Teknologi Makanan IV*, Th. I. Djakarta, Indonesia: Publikasi & Dokumentasi Djawatan Pertanian Rakjat. See p. 32-34. 25 cm [Ind]*

• **Summary:** Tangerang (also spelled Tangerang) is a city in Banten, Indonesia, located about 20 km west of Jakarta. An industrial and manufacturing hub on Java, it is home to over 1,000 factories. Address: Indonesia.

3912. Springer, Gertrude Anders. 1955. *Natural food cookery: Nature's sweets, herbs and wholegrain flours*. Milwaukee, Wisconsin: Lee Foundation for Nutritional Research. 71 p. No index. 23 cm.

• **Summary:** An early natural-foods cookbook. Contents: 1. Foreword. 2. Fundamental food concepts (“The way to build this vibrantly alive soil is by practicing the Science of Organiculture, or the organic method”). 3. Wholegrain flours. 4. Wholegrain meals and grits. 5. Other valuable foods. 6. Herb cookery. 7. Pies. 8. Cookies. 9. Cakes. 10. Cake frostings. 11. Doughnuts. 12. Confections. 13. Fruits. 14. Health beverages. 15. Salads. 16. Salad dressings. 17. Breads, rolls and muffins. 18. Meat, fish and eggs. 19. Vegetable dishes. 20. Soups and stews. 21. Pancakes and waffles. 22. Jams and preserves. 23. Quick desserts. 24. Article “Sesame seed—An important food.” 25. Practical methods in preparing health-building foods. Note 1. Chapters 24 and 25 (on unnumbered pages) are written by Royal Lee, D.S.S. [dentist].

Soy-related recipes: Chapter 3, “Wholegrain flours,” contains a photo of bags of five such flours, including “Soya flour.” A paragraph (p. 5) explains: “Soya flour can be a full fat flour (all of the fat left in) which many consider nutritionally superior, or it can be a low fat flour (part of the fat removed) for low calorie diets.” Note 2. This is the earliest English-language document seen (Nov. 2003) that uses the term “low calorie” or “low calorie diets” positively in connection with soybeans for human diets. Throughout most of human history, people wanted calories, which

provide energy.

Unleavened Indian chapatis (with ½ cup soy flour, p. 52). Basic muffin recipe—Soya muffins variation (“Substitute ½ cup soya flour for ½ cup of the pastry [flour]. Gradually increase the soya and decrease the pastry until you are using half and half after several batches have been made.” p. 54). Chinese chow mein (with up to ½ cup “Show You sauce,” p. 62). Japanese sukiyaki (with about ½ cup “Show You sauce,” p. 63). Egg white leavened waffles (with a bit of soya flour, p. 67). In Chapter 25, the section on “Vegetables” contains brief instructions for making soy bean milk, and using soaked, “liquefied beans direct from the blender” in making bread. The Chinese never eat soy bean products without first soaking the beans. “It is the secret of successful soy cookery.” The chapter on sesame seeds notes: “Sesame seed ground into a butter like peanut butter is used in some countries—Turkey in particular—like our dairy butter is here, and is used in almost every food in some degree. It makes first-class salad dressing when mixed with vinegar and prepared mustard. With honey and milk powder a very tasty cream candy can be made... In Roman times the emergency ration for soldiers was a candy made from sesame seed and honey. A very tasty and nutritious ice cream can be made from sesame butter, honey and milk powder. The sesame seed can be used for these purposes instead of the sesame butter if the seed is liquefied with the honey in a blender or Osterizer. Sesame butter is an ideal shortening for bread and cookies.” Note 3. This is the earliest English-language document seen (May 2011) that contains the term “sesame butter”—a smooth paste of ground sesame seeds.

This book also discusses: Carob brownies, peanut butter, sunflower seeds, how to sprout mung beans, herbs, etc.

Note 4. This is the earliest English-language book seen (June 2003), published after World War II, with the term “natural food” in the title.

Note 5. This is not a vegetarian cookbook. Recipes (p. 55-58) call for steak, pork, ground beef, spare ribs, lamb chops, ham, chicken, tuna, and salmon.

3913. Umeda, Isao. 1955. *Shōyu* [Shoyu (Japanese soy sauce) 2nd ed.]. Tokyo: Sankyo Shuppan Co. 326 p. [100+ ref. Jap]*
Address: Noda Shoyu Shiken-shi cho. Head, Noda Shoyu Research Lab.

3915. Lea & Perrins, Inc. 1955? A guide to tempting dishes. New York, NY: Lea & Perrins. 47 p. Illust. (color). *
• **Summary:** Mostly recipes that call for Lea & Perrins’ Worcestershire Sauce. Owned by Texas Woman’s Univ.

(Denton, Texas), Woman’s Collection. Address: New York, NY.

3916. Goodsell, Alice Forn. 1956. Tokyo restaurants cater to global appetites. *Christian Science Monitor*. Jan. 17. p. 12.

• **Summary:** Sukiyaki is a delicious sort of stew, cooked before your eyes at the table. Ingredients include “lotus root, bamboo sprouts, or tofu (custardy bean curd)—all cooked in a sauce of soy and other ingredients.”

3917. Paddleford, Clementine. 1956. Chinese chops: Sweet-and-sour pork chops made in a new way. It’s a one-dish meal served with rice. *Los Angeles Times*. Jan. 29. p. L15.

• **Summary:** A recipe for Sweet-and-sour pork chops calls for 1 teaspoon soy sauce and ½ teaspoon Worcestershire sauce. Address: *This Week* food editor.

3918. Strayer, George M. 1956. We must remember, U.S. soybeans are food for the Japanese. *Soybean Digest*. Jan. p. 8-10.

• **Summary:** This is the first in a series of reports by the editor covering his recent marketing study for the USDA in East Asia. Above all, Japan wants clean soybeans from the U.S., with less foreign material. New U.S. standards allow No. 2 soybeans to contain up to 2% foreign material. U.S. standards classify all particles of soybeans which go through a 8/64-inch round hole screen as foreign material. Manchurian standards classify such broken particles of soybeans as unsound soybeans but not as foreign material. An estimated half of U.S. foreign material is these broken particles—which still end up making adequate soy products. “Because Manchurian [soy] beans have for years arrived with a foreign material content of ½% or less, the approximately 3,000 oil mills, 6,000 soy sauce plants, 5,000 soy paste [miso] plants and the 50,000 tofu or soybean curd plants in most cases do not have cleaning facilities... The role played by milk, meat, and eggs in the diets of America is taken by soybeans in the diets of Japan.” The industries that uses soybeans are well organized, and each has its own trade association.

Photos show Strayer with the heads of the Yokkaichi oil mill and the Japan Oil and Fats Manufacturers Assoc., the plant of the Hohnen Oil Co. at Shimizu which processes only soybeans into edible oil, glue, flour, and flakes for miso and tofu production (capacity 300,000 tons/year), K. Sugiyama, chairman of the board of Hohnen Oil Co. receiving a medal, and examining soybeans at Takeya miso plant.

3919. Elson, Katharine. 1956. Two Japanese shops cater to capital: For soya sauce or seaweed. *Washington Post, Times Herald*. Feb. 19. p. F13.

• **Summary:** The House of Hanna (1468 T st. nw.) was started in 1948 by Clara Hanaumi, wife of an American ex-GI, Harold Hanaumi, who was born in Hawaii and is of

Japanese descent. A photo shows Harold Hanaumi in his shop discussing the “merits of a can of Japanese soy sauce with Mrs. Robert Overhuel.”

The 2nd shop, Friends Market (1633 11th st. nw) is run by Harry Asaka. At first, Mr. Asaka featured just three items that are basic to “Japanese cooking—miso, a soybean paste; shoyu, the soya sauce, and rice.”

3920. Baens-Arcega, Luz; Marañon, Joaquin; Palo, Macario A. 1956. Proteolytic enzyme from a Philippine strain of *Aspergillus oryzae* (Ahlburg) Cohn. *Philippine J. of Science* 85(2):189-201. June. [7 ref. Eng]

• **Summary:** Strains of the mold *Aspergillus oryzae* are used in Japan to make shoyu, miso, mizuame [rice syrup], and sake, and used in the manufacture of commercial enzymes such as Takadiastase, Polyzyme, Digestin, Oryzyme, and Kasiwagidiastase.

The authors isolated several protease-forming yellow-green molds. By repeatedly culturing the isolates in copra meal and rice bran media, one was found to produce protease of excellent digestive potency as evaluated by the Oshima and Church method. Optimum temperatures for protease production was 27°C in copra meal and 22 to 27°C in rice bran.

“The potency produced by the Philippine strain of *A. oryzae* in copra meal is 3 times that of the most efficient *A. oryzae* and 2 times that of the *Aspergillus effusus* type cultured in wheat bran by Oshima and Church.” Address: Inst. of Science & Technol, Manila, Philippines.

3921. *Washington Post and Times Herald*. 1956. Anne’s trading post: Travelers bring recipes from afar. July 29. p. F14.

• **Summary:** Sukiyaki is the most popular of saucepan dishes. This recipe is taken from the *Japanese Cookbook* published by the Japan Travel Bureau. The ingredients include Soy sauce, 3 tablespoons and Tofu, 4 ounces. “Tofu is a bean curd which can be purchased here [in Washington, DC] however I omit it because it doesn’t appeal to American palates.”

3922. Owen, June. 1956. Food news: Other lands offer menu. *New York Times*. July 31. p. 26.

• **Summary:** “Oriental: Oriental Food Shop, 2791 Broadway, offers all the ingredients necessary for Japan’s most noted dish, sukiyaki. These include tinned bean curd, bamboo shoots, and Japanese soya sauce.”

Katagiri, 223 East 59th Street, is another good source for imported Japanese foods, especially canned, ready-to-eat products, including “scallions in soya sauce.”

3923. Pineda, Felix A. 1956. The economic value of soybeans and its manufacture for food products. *Agricultural and Industrial Life (Manila)* 18(June):8-9, 30; 18(July):8-9, 37.

• **Summary:** Contents: Introduction. Economic food value of soybeans. The manufactured food products from soybeans and their utilization. Methods of food preparation from soybeans: Soybean-rice, Soyalac or soybean milk, soybean cheese [fermented] or cheap meat, soybean cocoa or Nutribean, soybean coffee, toyo sauce or toyo [includes detailed instructions for making this Philippine-style soy sauce], salted beans or tau-si [fermented black soybeans], “soybean flour or soyaflour,” soybean sprouts, dried and green beans (“The green soybeans with pods can be used for gulay, like the green mongo.”). Conclusion and recommendation.

“Soybean milk” is suitable for the diabetic. Its food value approaches cow’s milk.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the word “soyaflour.” Address: Sugar Agronomist, Philippines.

3924. Walley, Ersel. 1956. The Japanese-American Soybean Institute: Soybean marketing development program project No. 2. *Soybean Digest*. July. p. 12-13.

• **Summary:** Under agreement with the USDA’s Foreign Agricultural Service, the American Soybean Association is charged with carrying out a year-round soybean marketing development program in Japan. This is the first such project to be conducted by an American commodity group in foreign sales promotion—so there were few guidelines or examples of how to proceed.

Walley went to Japan and initiated the first project, the soybean exhibit at the Osaka Trade Fair. The next project was the formation of this institute [JASI]. Mr. Shizuka Hayashi was hired as managing director. He “enjoys unusual respect and prestige throughout the entire Japanese soybean industry. He speaks and writes English excellently.” He has devoted most of his life to oils and fats, and has visited the United States.

The Japanese members are the manufacturers of oil and fat, miso, tofu, and shoyu, plus the fat and oil importers-exporter associations.

Photos show: (1) Walley and Hayashi. (2) Signs above the American soybean exhibit at the Osaka Trade Fair. A large round sign shows two pods filled with soybeans plus soybean leaves at the top. Two rectangular signs read “Soybeans” in Japanese and English.

Note: According to a report titled “The Evolution of the Market Development Programs and the Public / Private Partnerships,” by the U.S. Agricultural Export Development Council (USAEDC) concerning the cooperator program: “The first cooperative agreement was signed with the National Cotton Council in 1955, followed quickly by one with the Oregon Wheat Council. Soon the agreements expanded to include tobacco, soybeans, dairy, millers, poultry and rice in 1956, followed by prunes, raisins, Florida citrus, Sunkist (California / Arizona), canned peaches,

red meat, tallow and grease, hides and skins in 1957 and Northwest apples and pears and a small feed grains project in 1958.” Address: Special Representative and Past President of the American Soybean Assoc.

3925. *Washington Post and Times Herald*. 1956. Would you like to learn how to cook an octopus? Anne’s trading post. Aug. 5. p. F14.

• **Summary:** This recipe from F.V. calls for: “1 pound squid (or octopus). 2 teaspoons light soy sauce.”

Note 1. This is the earliest English-language document seen (April 2012) that uses the term “light soy sauce” refer to light colored soy sauce.

Note 2. This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest that contains the term “light soy sauce.” The new term appears in 572 documents between 1956 and the present, including this one in 1956, 10 in the 1960s, etc.

3926. Platt, B.S. 1956. The soya bean in human nutrition. *Chemistry and Industry (London)* No. 32. p. 834-37. Aug. 18. [25 ref]

• **Summary:** The author worked in China during the period in 1933-37, and there had “some experience of preparations made from the soya bean in infant feeding; also rarely a day passed in that period when I did not eat something of one or more of the Chinese soya bean food products—sauce, oil, bean curd or sprouts.”

The author gives figures to refute the common misconception that “millions of Chinese have lived for centuries on a diet of rice and soya beans. For example (according to Buck 1938) in northeast China (Manchuria) where soya beans were used most, “very little rice was eaten, 25% of the calories in the diet came from wheat, and 5% from the soya bean... Only 2% of the calories in the Chinese farm diet were derived from vegetable oils which included oils from groundnuts, rape seed, sesame, and soya bean; the first three together occupy rather more than the acreage under soya bean crops. Learmonth (1956, p. 360) has stated that the soya bean has only been grown as an oil-bearing crop since the 19th century. There is, however, a Chinese work dated A.D. 1637 called ‘The exploitation of the works of nature,’ the second volume of which is devoted to oils and fats. From this work it may be deduced (according to information supplied by Dr. G.D. Lu) that the soya bean was grown for its oil as early as the third century A.D. According to Buck’s data on most frequent yields, broad beans and field peas yield on average 18 bushels per acre compared with 14 bu/acre for soya beans. Peanuts or groundnuts give 64 bu/acre but it is not clear whether they are shelled or not.

“Anyone who, at a Buddhist feast, has eaten the delectable dishes made from the soya bean cannot but agree that, gastronomically, the merits of a wide range of soya bean products are outstanding. The ‘vegetable’ varieties of soya

bean are, in fact, often simply immature ones. They are green and look like young lima beans but they have a richer and a distinctive and more delicious flavour... Soya bean curd (tou fu) is used in a variety of dishes. It is prepared from the mature beans, not usually in the home, but by the village ‘specialist.’... With appropriate culinary treatment, it can be made to imitate a variety of meat dishes; traditionally it is given to young Chinese children.”

The author also discusses soy sauce, tempeh, soy oil, and soya “milk”.

“I recently had a visit from a professor of pediatrics at a hospital in Djakarta [Jakarta], Indonesia, who reported that about 50 infants put on a soya milk preparation, *all*, after two months, had some gastro-intestinal disturbances; none of them was thriving. In my view, it is still too early to replace human milk for infants and certainly not by a vegetable substitute for animal milk...

“In my own experience soya bean curd is a suitable product for feeding young children and I suggest that its superiority over soya milk may be the separation in the ‘whey’ of substances that have been shown to be toxic for animals.

The contents of this paper were first presented as a contribution to the discussion on “Soya in the Field of Nutrition” by E.M. Learmonth, published in *Chemistry and Industry* on 12 May 1956. The author mentions an ad for “Sun Spot” soya milk.

The article begins with a poem written by “a medical nutritionist and his wife”: “Little Soybean who are you / From far off China where you grew?” / I am wheels to steer your cars, / I make cups that hold cigars. / I make doggies nice and fat / And glue the feathers on your hat. / I am very good to eat, / I am cheese and milk and meat. / I am soap to wash your dishes, / I am oil to fry your fishes, / I am paint to trim your houses, / I am buttons on your blouses. / You can eat me from the pod, / I put pep back in the sod. / If by chance you’re diabetic / The things I do are just prophetic. / I’m most everything you’ve seen / And still I’m just a little bean.”

Note: This poem, written by Dr. and Mrs. J.W. Hayward, was first published in the *Proceedings of the American Soybean Assoc.* 1940. Aug. p. 6. Address: C.M.G., Ph.D., M.B., Ch.B., Human Nutrition Research Unit, Medical Research Council Laboratories, Holly Hill, London, N.W. 3.

3927. *Manchester Guardian (England)*. 1956. Advertising soya beans. Aug. 24. p. 7.

• **Summary:** The U.S. Department of Agriculture [USDA] plans to launch an advertising campaign to make U.S. soy beans and soya bean products popular in Europe. Soya beans are grown mostly in China and Japan [sic, USA] and are used for sauces as well as other purposes—British United Press.

3928. Murata, Hisato; Bingo, Fujihiko. Assignors to Asahi Electrochemical Company. 1956. [Plasticizer from soy sauce oil]. *Japanese Patent* 7522. Aug. 30. (Chem. Abst. 52:10639i). [Jap]*

• **Summary:** A cold weatherproof plasticizer is made from soy sauce oil by its esterification with lower alcohols, followed by epoxidation. The resulting epoxidized ester is shown to be superior to diocetyl phthalate, especially with respect to resistance against cold weather.

3929. Chun King Sales, Inc. 1956. In 15 minutes you create a meal with a new mood. *Reader's Digest* 69:18. Sept.

• **Summary:** "Truly it's been said 'variety creates an appetite.' So go all the way... create a meal with an entirely new mood. Get Chun King Chicken Chow Mein in the new flavor-guard Divider-Pak. Here is Cantonese food at its finest because it has been cooked and packed by Chun King in a very special way.

"Meat and sauce are in the top can. Six choice chow mein vegetables are cooked individually, then packed in the bottom can. That way flavors stay fresh, vegetables stay crisp. You just heat the contents of the two cans together, pour over crisp Chun King Chow Mein Noodles, sprinkle on Chun King Soya Sauce- and you've created an entirely new mood in food.

3 kinds: Chun King Chicken Chow Mein, Beef Chop Suey and Mushroom Chow Mein.

3930. Hamada, Shigeo; Gamô, Kiyoshi; Kadosawa, Taichi; Aso, Kiyoshi. 1956. Shôyu-chû no L-gurutamin san no keitai oyobi seisei kiko ni tsuite [Studies on the behavior of L-glutamic acid in shoyu. I. Studies on the various types of L-glutamic acid and their formation mechanism in shoyu]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 30(9):519-23. Sept. [7 ref. Jap] Address: Kawasaki Factory, Ajinomoto Co., Inc.

3932. Nickerson, Jane. 1956. Japan big contributor to American table: Products sent here to go on exhibition.—Recipes offered. *New York Times*. Oct. 25. p. 38.

• **Summary:** Japan exports more than 80 food products to the United States—more than the writer had expected. The variety of Japan's food contributions to America will be the subject of the Japanese Food Show, which opens to the public next Tuesday at the Japan Trade Center, 393 Fifth Ave.,

Manhattan. About 50 imported foods will be on display, some will be for sale, and the preparation of popular recipes (such as sukiyaki) will be demonstrated.

Imports to be displayed include "shoyu (soy sauce)."

Three Japanese specialty foods shops plan booths at the show: the Oriental Food Shop (2791 Broadway), Katagiri (224 East 59th St.), and Tanaka (144 West 65th St.).

A recipe for "Beef teriyaki" calls for: "½ cup shoyu (Japanese soy sauce)... 1 cake tofu (soy bean curd), cut into cubes..."

3933. Takahashi, Jûsaku. 1956. Bitamin B-12 kyôka shokuhin ni kansuru kenkyû. I. Shokuhin-chû bitamin B-12 no anteido ni tsuite [Studies on the fortification of some foods [incl. miso and soy sauce] with vitamin B-12. I. On the stability of vitamin B-12 in foods]. *Bitamin (Vitamins, Kyoto)* 11(4):385-88. Oct. 25. (Chem. Abst. 51:15816i). [11 ref. Jap; eng]

• **Summary:** The change of vitamin B-12 content in enriched miso, soy sauce, jam, and cream during storage and heating was tested by a microbiological method using *Euglena gracilis* var. *bacillaris*.

Vitamin B-12 added to miso was relative stable during storage for 30 days; 89% remained at 3-5°C and 35-59% remained at 30°C. However vitamin B-12 added to soy sauce was relatively unstable during storage; only 75% remained at 30°C.

Vitamin B-12 added to miso was relative stable during heating; only 6% was degraded after 30 minutes at 100°C. However vitamin B-12 added to soy sauce was so unstable on heating that 28-54% was degraded after heating for 12-30 minutes at 100°C. In short, the enrichment of soy sauce with vitamin B-12 seems unsuitable. Address: Faculty of Agriculture, Utsunomiya Univ., Utsunomiya, Japan.

3934. *Hercules Mixer (Hercules Powder Co., Wilmington, Delaware)*. 1956. Hercules expands in to field of food products with purchase of Huron Milling in Michigan. 38(9):17-18. Oct.

• **Summary:** "Huron Milling Company of Harbor Beach, Michigan [on the shore of Lake Huron about 100 miles north of Detroit], with more than 500 employees and annual sales of \$12 million in proteins for food supplements, natural food flavoring, and wheat starch, is to become part of Hercules. Under the plan for acquisition, Hercules would operate the Huron business as a division of Virginia Cellulose Department.

"This is the first major expansion by Hercules into a field involving food products. Huron buys millions of pounds of wheat flour each year as the raw material which it converts for use of the food flavoring industry, breakfast cereals producers, bakeries, starch and adhesives manufacturers in the United States and abroad." Huron makes monosodium glutamate, hydrolyzed vegetable proteins, enriched protein,

and wheat starch. It sells most of its products as ingredients to industry; it makes few consumer retail products. "When you buy 'enriched' breakfast cereal, bread, and bakery products, they may contain Huron's vital gluten, the protein fraction of wheat." Hercules will acquire Huron in exchange for about 100,000 shares of Hercules common stock. The acquisition is expected to be finalized in mid-December 1956.

Note: This is the earliest document seen (Oct. 2001) concerning HVP (hydrolyzed vegetable protein).

3935. Kenney, Harry C. 1956. Exquisite Japanese display woos trade on New York's Fifth Avenue: Tokyo bids for global markets. *Christian Science Monitor*. Nov. 17. p. 17.
• Summary: At the Japanese Trade Center on Fifth Avenue you find an exquisite display of the products of postwar Japan. Japan, whose economy is now making real growth, is working to develop long-term overseas markets. The man the New York office is Masato Yamamoto, an executive in the Japan External Trade Recovery Organization (JETRO). A quiet man, he told the writer the remarkable story of Japan's 10-year recovery since the end of World War II.

Japan is, in many ways, like Britain in that both are islands which must import raw materials and export finished products. The key to survival is trade and exports.

Japan has a population of 90 million on an area about the size of Montana, only about 17% of which is arable.

"As I took leave of Mr. Yamamoto he handed me a bottle of shoyu, or Japanese soy sauce, from a display of about 50 other Japanese food products."

He explained that the Japanese have been making this sauce for about 1,000 years. Address: Staff correspondent.

3936. Hayashi, Shizuka. 1956. The work of the Japanese-American Soybean Institute. *Soybean Digest*. Nov. p. 20.
• Summary: This Institute was established in May 1956. The initial work has concentrated on a study of the condition of soybean from the USA and other countries when they arrive in Japan. Additional studies have been made of the shoyu and miso industries in Japan.

The Japanese soybean crop this season has been a poor one, estimated now at about 170,000 tons, far below the earlier estimate of 220,000 tons. These domestic soybeans are preferred by makers of miso, shoyu, tofu, glue, and feeds. To make up the total requirements of 954,130 tons, some 784,130 tons must be imported. This includes 10,000 tons of Brazilian soybeans and at least 86,000 tons of Chinese soybeans—both depending on the price.

New-crop U.S. soybeans purchased by Japan are estimated as follows: 60,000 tons for October shipment, 110,000 tons for November shipment, and 30,000 tons for December shipment. Total: 200,000 tons. The average price is about \$112 to \$113/ton, C&F Japanese ports. A small photo shows Shizuka Hayashi. Address: Managing Director,

JASI, Tokyo.

3937. Iguchi, Nobuyoshi. 1956. Kôji-kin ni yoru shomondai. Jinkô heni ni yoru shôyu-yô kôji-kin no kairyô [Various problems concerning koji spores. Improvement in *Aspergillus sojae* used in making shoyu by induced mutation]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 34(12):553-59. [26 ref. Jap]

• Summary: Mutagens used to induce mutation in koji spores were ultraviolet radiation, x-rays, and N-mustard. The longer the dosing time, the lower the survival rate. Address: Noda Sangyô Kagaku Kenkyûsho.

3938. Kuninaka, Akira. 1956. Shôyu-chû no purin, pirimijin enki ni tsuite [Purine and pyridimine bases in soy (sauce)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 30(12):787-91. Dec. [19 ref. Jap]
 Address: Microbiological Lab., Yamasa Shoyu Co. Ltd., Choshi, Japan.

3939. Sugita, Noboru. 1956. Shôyu kôji no kantei to shôyu no hinshitsu ni tsuite [Evaluation of soy sauce koji and its relation to the quality of soy sauce]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 34(12):607-12. Dec. [Jap]
 Address: Tatsuno Shoyu Kyodo Kumiai Shikensho, Japan.

3940. *Fair Trade*. 1956. [In re Noda Shoyu Kabushiki Kaisha, 7 FTC 108]. 1:18-27. [Jap]*

• Summary: The Federal Trade Commission decision on Noda Shoyu was handed down on 27 Dec. 1955.

3941. Han, Suyin. 1956. ... and the rain my drink. Boston, Massachusetts; Toronto, Ontario, Canada: Little, Brown and Co. 306 p. See p. 180. 22 cm.

• Summary: A work of juvenile fiction. In Chapter 10, "Seed of ants," Rosie Yip is a Chinese policewoman. "The policewomen under Rosie often brought some dishes for her,... cooked chicken sprinkled with chopped ginger and sesame oil, duck's feet simmered and steeped in thick black soy sauce, smoked ham, stuffed mushrooms, crinkly pork with red sauce..."

Note: This is the earliest English-language document seen (April 2012) that contains the term "thick black soy sauce."

3942. **Product Name:** Soybean Hydrolyzate for Flavoring (HVP).

Manufacturer's Name: Staley (A.E.) Manufacturing Co.

Manufacturer's Address: Decatur, Illinois.

Date of Introduction: 1956.

New Product—Documentation: Soybean Blue Book. 1956. p. 99. Is this the same product they were making in the 1930s? Do they also now sell an HVP soy sauce?

3943. Umeda, I.; Saito, N. 1956. [On the standard color of soy sauce]. *Chomi Kagaku (Seasoning Science)* 4(2):1-20. [Jap]*

3944. Chao, Buwei Yang. 1956. How to cook and eat in Chinese. London: Faber and Faber. 286 p. Illust. Index. 21 cm.

• **Summary:** The basic information about soy in this 1956 British edition is quite similar to that in the original 1945 American edition except: (1) British spelling is used (e.g., flavour instead of flavor), and additional information about European ingredients or substitutes; (2) The same (or almost the same) text appears on different pages. See pages 20-21 (Vesop is very much like soy sauce. Clear-simmering is slow-cooking without soy sauce. Red-cooking is slow-cooking with soy sauce), p. 43-44 (red beans, [probably azuki], horse beans, soy beans and their products, bean milk and bean curd [tofu]), p. 46 ([soy] bean oil and peanut oil), p. 47 (soy sauce), p. 49-50 (soy-bean sauce, soy sauce or *shi-yau* in Cantonese, “Acceptable substitutes for soy sauce in the order of preference, are as follows: ‘Vesop’ sauce (Italian), ‘Maggi’ (German), and ‘Kub’ (French)).” “Similar to soy sauce is a soy jam, fermented flour jam, “In Cantonese the soy jam is called *mo-shi*.” Oyster sauce, sesame oil, soy bean cheese (*fu-yü*).

Soy-related recipes include: Bean curd stirs meat slices (p. 84-85). Bean curd stirs shelled shrimps (p. 144). Arhat's fast or Vegetarian's ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 180-81). Plain stirred bean curd (p. 181-82). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 182-83). Pot-stuck bean curd (p. 184). Bean curd and meat-slice soup (p. 188). Huichou pot (with fried bean curd [large triangles or small cubes], p. 204-05). Sandy-pot bean curd (p. 205-06). Soy jam noodles (p. 224-25, with ½ can *yünshi* soy jam {also called *mo-shi* in Chinese foodshops}).

Pages 181-82 discuss bean curd. The Chinese characters for all recipe names are given on pages 257-71. Address: Cambridge, Massachusetts.

3945. Chen, Philip S.; Chen, Helen D. 1956. Soybeans for health, longevity, and economy. South Lancaster, Massachusetts: The Chemical Elements. xii + 241 p. Illust. Index. 21 cm. 2nd ed. Jan., 1962, 242 p. [24 ref]

• **Summary:** A comprehensive review of the subject. Contents: Preface, by the author (South Lancaster, Massachusetts, July 1956). Foreword, by Geo. M. Strayer, Vice-President and Secretary-Treasurer, American Soybean Association. Introduction. Part I: Nutritive value of the soybean. 1. Protein (incl. Dr. Wolfgang Tiling of Hamburg, Germany; Dr. Harry Miller). 2. Fat (incl. phosphatides, sterols and hormones). 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population.

7. Soybeans and disease (incl. Dr. Wolfgang Tiling of Germany).

Part II: Soy products. 8. Soybean oil: Composition and properties, processing and refining, reversion, uses, phosphatides, margarine, mellorine (vegetable frozen dessert). 9. Soybean oil meal: Heat treatment, Gelsoy, Multi-purpose Food. 10. Soy flour: Uses, soy bread vs. enriched white bread. 11. Soy milk. 12. Soy cheese (or soybean curd, “aptly described by the Chinese as ‘the meat without bones’”—incl. pressed tofu sheets and yuba). 13. Soy sauce: Preparation of kojis, brine fermentation, production yields, microorganisms are available. 14. Soybean sprouts.

Part III: Soybean culture and preservation. 15. Soybean culture: Two types of soybeans (commercial field vs. edible or vegetable varieties), inoculation, fertilizer, cultivation, harvest. 16. Preservation of soybeans: Shelling, canning, freezing, dehydration, harvesting dry mature soybeans.

Part IV: Recipes. 17. Soybeans and soybean pulp: Green or fresh soybeans, dry soybeans, soybean pulp (“prepared by pressing cooked soybeans through a coarse sieve or by grinding them in a food grinder”), recipes (incl. Soyburger, Scalloped green soybeans, and Roasted soybeans—dry roasted or deep-fried. Describes how to make wheat gluten at home and praises monosodium glutamate for its ability to improve the flavor of recipes—though its use is called for only in the recipe for Soyburger). 18. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 19. Soy grits and soy flakes. 20. Soy milk. 21. Soy cheese. 22. Soybean sprouts.

Appendices: A. Soybean utilization (chart). B. Manufacturers and handlers of soy foods (Source: 1956 *Soybean Blue Book*). C. References.

Chapter 1, “Protein,” begins: “The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15).

Chapter 15, “Soybean Culture,” describes how to grow soybeans in a garden. Pages 126-27 discuss the two types of soybeans: the commercial field type and the edible vegetable type. Five major differences between the two types are discussed (p. 126). The edible varieties are larger in size, do not yield as heavily (though they yield more heavily than snap beans or lima beans), are more prone to shatter as they near maturity in the field, are superior in flavor, texture, and ease of cooking, and some edible varieties are also superior in the manufacture of soybean flour, soybean milk, roasted beans and other products. Table 31 (p. 130) lists eleven varieties of edible soybeans: Very early—Giant Green. Early—Bansei, Fuji. Midseason—Hokkaido, Jogun, Willomi. Late: Illington, Imperial, Funk Delicious, Emperor, Higan. Commercial—Illini.

Chapter 16, “Preservation of Soybeans,” describes how to preserve “green soybeans” by canning, freezing, and dehydration.

Photos show: (1) A sack of Lincoln soybeans (facing p. 1). (2) Soybean plants, showing pods and leaves (p. 3 and

4). (3) A beam balance with a small amount of soy flour balancing many animal products. "The protein value of soy flour: 1 lb. of soy flour contains protein values equal to 2 lbs. beef, or 34 eggs, or 6 quarts milk." Source: Health and Character Education Institute (p. 6). A similar photo (p. 24) states: "1 lb of soy flour contains food calories equal to 3½ lbs beef, or 3 quarts milk, or 29 eggs. (4) Two views of a child. Left, suffering from marasmus. Right, after six months on a soy milk diet. Courtesy Dr. Wolfgang Tiling (p. 62). (5) A machine at the Northern Utilization Research Branch of USDA treating soybean oil with alkali (p. 72). (6) The distribution of MPF [Multi-Purpose Food] to starving Indian children (p. 91; Courtesy Meals for Millions Foundation). (7) Quaker City No. F4 grinding mill (p. 102; Courtesy Straub Co., 4059 Ridge Ave., Philadelphia, Pennsylvania). (8) Early soy cheese (tofu) production in the United States (p. 108; perhaps at Madison Foods). (9) The Northern Utilization Research Branch, Agricultural Research Service, USDA—shows outside of the huge building (p. 113). (10). How to grow soy sprouts in a glass jar at home (p. 119). (11) Well nodulated soybean roots (p. 129; Courtesy The Nitragin Co.). (12) Baked soybeans in a crock (p. 144). (13) Soy flour used in numerous baked products (p. 159; Courtesy ADM). (14) Griddle cakes [pancakes] made with soy flour brown quickly (p. 173). (15) Soy peanut butter cookies (incl. peanut butter and soy flour; p. 185). (16) Soy grits in a glass jar (p. 198). (17) Freshly-cooked crisp soybean sprouts in a raw vegetable salad (p. 219).

Note 1. The first printing of this book (1956) was dedicated "To Li Yu Ying and William J. Morse, *The Soybean Champions of the Eastern and Western Hemispheres*," but by the second printing (April 1957) the dedication had changed "To William J. Morse and Harry W. Miller, *The Soybean and Soy Milk Champions of Our Time*."

The publisher of this third printing was unable to sell all the books printed, so Chen apparently arranged for a company named "Outdoor Pictures" (Box 1326, Escondido, California) to sell them. On the title page, Outdoor Pictures pasted their name and address over that of "The Chemical Elements."

Note 2. According to the *National Union Catalog*, Philip Stanley Chen was born in 1903. The rear cover states that he was born in China and is now a naturalized U.S. citizen. He is a graduate of Emmanuel Missionary College [in Berrien Springs, Michigan] and Michigan State University. Before writing this, his first book on diet, health, or soybeans, he wrote several books on chemistry: (1) *The Chloro Derivatives of m-cresol*. 1933. Easton, Pennsylvania: Mack Printing Co. 7 p. (Abstract of his PhD thesis, Michigan State College of Agriculture and Applied Science); (2) *The Chemical Elements*, Rev. ed. 1948. South Lancaster, Massachusetts: Chemical Elements (fold chart). (3) 500 Syntan Patent Abstracts, 1911-1950. 1950. South Lancaster, Massachusetts: Chemical Elements. 125 leaves. (4) Syntans

and Newer Methods of Tanning. 1950. South Lancaster, Massachusetts: Chemical Elements. 128 p.

In 1962 Chen wrote *A New Look at God*, published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

3946. Chiu, Y.T. 1956. *Meditations of a Christian Chinese*. New York, NY: Pageant Press. [5] + 101 p. No Index.

• **Summary:** The author says that he has previously written 24 books in Chinese. This, his first English-language book, includes a compilation of much of his best material in Chinese. Soy is mentioned in two chapters.

Chapter 7, titled "Child welfare in China," states (p. 22-26): "Very few mothers [in China] know how to feed their babies. If the infant were fed with mother's milk, it would be better for the child." Cow's milk is so expensive in South China that very few mothers can afford to buy it for their children. "The writer has analyzed several kinds of milk substitutes made locally and sold in the stores in Canton and found that they consist of starch and a little sugar (less than one-half of one per cent of this substituted milk is protein). In North China soya bean milk is used in feeding babies. This is much cheaper than cow's milk." A brief description is given of how this soya milk is made. "One pound of soya beans would make seven or eight pounds of bean milk. As soya bean milk is deficient in fat, sugar, and calcium, the latter should be added to the bean milk to increase its food value. Dr. Siddall [1931] used this milk to feed a baby in the Canton hospital and got pretty good results. If soya bean milk is prepared in a sanitary condition, it should be a good and cheap food for poorer babies."

Superstitions are widespread in South China. "Some people think that bean curd, a product made from soya bean, should not be given to infants lest they have an offensive odor on their breath."

Chapter 18, titled "Feeding a hungry world," states (p. 57-61) that the price of food in South China is now 5 to 10 times higher than before the war, while wages and salaries have not increased proportionally. "The increase in food prices is so great that the average family in China does not have enough to eat and many of them suffer malnutrition" and nutritional deficiency diseases. "As milk is so expensive in Hong Kong and China, children have to be contented with soya bean milk which has been used to feed babies in China for two thousand years." In times of famine, some parents have "had to sell their children in order to have money to buy food. Because of poverty, ninety percent of the parents in China cannot afford to send their children to school and these youngsters must either stay home to work or work as servants in the homes of the rich or in the factories."

"Poorer people in China and Hong Kong eat rice, soya beans, [mung] bean sprouts, bean curds and salt fish or green vegetables. The poorest people have only rice, sweet

potatoes, which are cheaper than rice, and soy sauce made from soya beans.”

Talk with Luke Feters of Huntington College, Indiana. 2005. May 23. Luke is writing a biography of the author for this PhD thesis. Chiu wrote this book at about the same time he graduated from the seminary at Huntington College. “He was a Renaissance man. He was an educator, a scientist, a theologian.” Luke’s field is missiology, the study of missions. He believes that too much mission history has been written about the missionaries; not enough has been written about the heroes and hard-working people within the host culture. Address: Rev., Dr. (PhD.), Assoc. Prof. of Chemistry, Huntington College, Huntington, Indiana.

3947. Council of Scientific and Industrial Research. 1956. The wealth of India: A dictionary of Indian raw materials and industrial products. Raw materials. Vol. IV: F-G. New Delhi, India: CSIR. See p. 142-50 (Glycine), plus p. XIII-XXI (bibliography). [51 ref]

• **Summary:** “Attempts to popularise and extend soybean cultivation in India have not met with much success so far. Various reasons have been assigned to this. The market demand for the seeds is not steady and there are few indigenous industries based on soybean. Further, there are other pulse and oilseed crops adapted to varied climatic and soil conditions in India which satisfy the dietetic habits of the people. It is considered, therefore, suitable for introduction only in regions where pulses are not grown at present, e.g. regions at elevations about 5,000 ft. This view has been considered by some to be based on incomplete data.”

Table 2, titled “Estimated acreage and production of soybean in some Indian states,” gives statistics for 1948-1952. The leading state is Jammu and Kashmir (India’s northernmost state). In 1948-49 (the latest year for which complete data is available) Jammu and Kashmir produced 502 tons of soybeans on 1,757 acres. Corresponding figures for other states, ranked in descending order of acreage, are Assam (208 tons/1,230 acres), Orissa (147/988), West Bengal (147/800), Madhya Pradesh (12/67), and Uttar Pradesh (1/33).

Note 1. This is the earliest document seen (Jan. 2009) that gives soybean production or area statistics for South Asia.

“Soybean is grown in India mainly for food and forage. It is generally raised as a *kharif* crop, sown at the outbreak of the monsoon in June or July and harvested in December-January... Soybean is raised either pure or in mixture with maize; in some parts of Assam it is grown along with *aus* paddy. Being a legume, soybean can be cultivated with advantage as a rotation crop with potato, as in Assam, or with sugarcane, as in Bihar. It is grown as a green manure or cover crop in tea estates...

“Uses: Soybean ranks high among the leguminous crops of the world. It is grown mainly as a food crop in

China, Japan and other countries of east Asia. The seeds are consumed green, dry or sprouted, whole or split. Green seeds are used as vegetable; roasted and salted seeds are used in cakes and candies. The seeds are ground into flour and used for bakery products. They are also processed to give a milk-like product, curd or cheese. A variety of fermented products is prepared, including sauces which furnish the basic flavouring in Chinese and Japanese dishes. Soybean has been used as a raw material in a variety of processing industries in U.S.A. The fatty oil extracted from the seeds is used for edible and industrial purposes...

“In India, soybean has not attained much importance as a food crop. The seeds are consumed locally after splitting as *dal*. They are also parched and used as *bhunja* or ground into a meal (*sattu*) and used in food preparations; a fermented product is prepared from soybean in Manipur. Soybean possesses a characteristic nutty or beany flavour which is not much favoured in India. Efforts have been made to select types devoid of the flavour and to popularise the use of soybean in non-cereal catering organizations for such preparations as porridge and biscuits. Considerable work has also been done to popularise the use of soybean ‘milk’.”

A detailed discussion is given of each of the following “soybean products: Soyflour, soysprouts, soymilk, soybean oil, soybean lecithin, soybean meal.” Table 5 (p. 148) gives the “composition of some soybean products,” based on earlier publications: “Soyflour (defatted or full fat), soysprouts, soycurd.”

Note 2. This is the third earliest English-language document seen (May 2006) that contains the word “soymilk” (one of two documents).

Note 3. This is one of the earliest English-language documents seen (Sept. 2006) that uses the term “soy bean” in a new way—as a singular noun, like corn or wheat, not preceded by “the.” Examples: “... there are few indigenous industries based on soybean.” “Estimated acreage and production of soybean in some Indian states.” “Soybean is grown in India mainly for food and forage.” This usage originated in developing countries. Address: India.

3948. Fukai, Yoshiebei / Kichiebei. 1956. *Shōyu dokuhon* [The shoyu reading book]. Tokyo: Ariake Shobo. 128 p. [Jap]

• **Summary:** The section on shoyu exports from Japan notes that on 25 April 1868, 153 Japanese emigrated to Hawaii on the ship *Scioto* (called *Shioto-go*, *Scioto-go*, or *Saioto-go* in Japanese). They took with them several hundred kegs of miso and shoyu, marking the beginning of large scale exports of these products from Japan. In 1879 Mr. Komoto started to sell shoyu under the Kikkoman shoyu brand in California.

Note: This document contains the earliest date seen for soybean products (miso and shoyu) in Hawaii (1868); soybeans as such had not yet been reported by that date.

**TIME-SAVING READY-TO-USE
QUICK TASTY PREPARATION**

STEAK: Soak for 6 minutes for each ¼" of thickness. Baste while broiling. (Best over charcoal.)

CHICKEN: Cut into pieces and soak from ½ hour to 1 hour. Baste while broiling.

SPARE RIBS: Cut into 3" pieces and soak about ½ hour. Fry or broil to taste.

FISH: Soak steaks or fillets for about ½ hour. Fry or broil to taste.

**ALWAYS BEST WITH ALOHA
BARBECUE SAUCE**

Ask for the best !
It's Best because it's
Good for
Barbecue • Sukiyaki • Flavoring

• **Summary:** This 1956 edition is quite similar to the original 1951 edition: The text, recipes, and glossary are exactly the same and on the same pages. The ads on the following pages are the same: 23 (American-Hawaiian Soy Company), 39 (Fuji Masamune and Kinpyo Masamune), 40 (Kikkoman, but a different ad for Kikkoman Soy Sauce), 44 (Honolulu Sake Brewery & Ice Co., Ltd., same ad for Diamond Shoyu), 62 (Kanai Nissei Shokwai). The differences are few and superficial: (1) The title page and copyright page both mention "International Institute Y.W.C.A." The Hui Manaolana was formerly named Niji-no-Kai and was formerly affiliated with the International Institute of the Y.W.C.A. (2) The color photos are different and of better quality reproduction. (3) Many of the ads are different (e.g., p. 6, 8, 10, 16, etc.); the 1956 edition has more soy-related ads. (4) The back matter (from p. 98 to the end) is quite different. The 1956 edition has fewer ads after p. 98. In the 1956 edition, the ads end on p. 100 and the index starts on p. 101. But in the 1951 edition, the ads end on p. 110 and the index starts on p. 113. Address: Honolulu, Hawaii.

3951. King Shoyu Co., Ltd. 1956. *The king of barbecue sauces: Broil King* (Ad). In: Hui Manaolana. 1956. *Japanese Foods: (Tested recipes)*. Honolulu, Oahu, Hawaii: Hui Manaolana. 118 p. See p. 50.

• **Summary:** "Ready-mixed, richly-flavored, rightly blended. Save time, labor, money and a host of ingredients. Give Broil King a try. Best by test, East or West." An illustration

shows a bottle of Broil King Barbecue Sauce. Next to it is a recipe for Barbecued meat with Teriyaki sauce—with an "X" drawn through it—since it is unnecessary when you have broil king. The recipe for Teriyaki sauce (legible beneath the "X" is): ½ cup shoyu, 1 tablespoon sake, 3 tablespoons sugar, 1 teaspoon ginger (grated), 1 clove garlic (grated). Mix well. Address: 1215 Kona St., Honolulu, Hawaii. Phone: 66744.

3956. *Times (London)*. 1957. And spice and all that’s nice. Jan. 21. p. xvi, cols. 5-6.

• **Summary:** Spices were first used to disguise the flavour of meat. Eventually it was found that thin sauces, “made with spices and vinegar, would keep and could be used from meal to meal. These were the first sauces to be manufactured. Perhaps the oldest firm of ‘oilmen,’ or ‘oilermen’ as they were then known, was founded in 1706. The firm—then West and Wyatt, some years later to become Crosse and Blackwell—produced their sauces in china containers of rare beauty. Some of their sauces were issued in containers of Wedgwood china.

“These thin sauces were mostly designed to hide rather than to enhance the flavour of meat. But early in the nineteenth century the first of the piquant sauces, Lea and Perrins’ Worcestershire sauce, was produced. Mr. William Perrins and Mr. Wheeley Lea, a chemist who founded the firm in 1838, were asked by Lord Sandys, of Ombersley Court, who had returned to England from his Governorship of Bengal, to make a sauce from (presumably) an Indian recipe, for use at his table. A four-gallon jar of the sauce was first made, but the demand was so great that the next brew was made in a 25-gallon container. Lea & Perrins still use the original recipe, a closely guarded secret, for their sauce, which matures in vats for a long time before being bottled.

They now export over a million bottles a year, about 50 per cent of their production, to all countries except Russia and her satellites.

“The sauce list of Crosse and Blackwell of 1838 shows that they were producing 38 different types of sauces...”

Alexis Soyer, inventor of the Soyer stove, was one of the most famous chefs of his time and *maitre de cuisine* of the Reform Club.

3957. *Hercules Mixer (Hercules Powder Co., Wilmington, Delaware)*. 1957. Case of the multimillion-dollar gray bag flown from Port Huron to Wilmington. 39(1):1-4. Jan.

• **Summary:** The gray travelling bag was filled with legal documents which transferred on 3 December 1956 the multimillion-dollar assets of the Huron Milling Company to Hercules Powder Company in exchange for 100,000 shares of Hercules stock. A 17-page legal document, and agreement to purchase subject to certain specified conditions, was signed in Sept. 1956. Former Huron President Robert Farr is available to Hercules in an advisory capacity. An aerial photo taken from over Lake Huron shows the Huron Milling Co. with the town of Harbor Beach in the background. A large pond, probably for starch disposal, appears at the far right.

3965. Burt, Leland H. 1957. Now wheat has been added. *Huron Chemist (Hercules Powder Co., Wilmington, Delaware)* No. 29. Feb. p. 1-3.
• **Summary:** "The Huron Milling Company was acquired by Hercules Powder Company on December 3, 1956, and is now operating as the Huron Milling Division of Virginia Cellulose Department. Huron Milling employs over 500 people and last year did a gross business of over \$12 million.

Hercules is now in the business of making products derived from wheat flour. Huron Milling is located at Harbor Beach, Michigan, on a beautiful harbor on Lake Huron. Founded in 1876 as a flour mill, Huron hired a chemist named Billy Rossman from Michigan State Agricultural College in 1896. It was probably one of the first flour companies that had a research laboratory and a chemist, and was certainly one of the earliest flour mills to study the chemistry of wheat flour. Rossman separated wheat flour into starch and gluten and a thriving starch business resulted. Starches were developed for specialized uses. At first the gluten, a by-product, was discarded but over the years it came to but over the years it came to be more a more important product for Huron than starch. Huron Milling was the first American producer of MSG. Huron MSG is sold to leading food processors and canners as a flavor accentuator. Glutamic acid is widely used for medicinal purposes.

"Hydrolyzed gluten contains polypeptides and amino acids (other than glutamic), which are separated from the mixture and designated as Hydrolyzed Vegetable Protein (HVP). HVP is used in liquid sauces to season foods such as chop suey, gravy, and meats; it has a distinctive, meaty flavor. HVP together with enzymes produces 'Age-it' which both tenderizes and improves the taste of meat."

"Wheat gluten, the whole protein from wheat, finds wide use in breads and cereals for increasing the protein content" and adding functionality in baking characteristics and texture. Gluten may also help to overcome the world-wide protein gap.

• **Summary:** Describes use of soybean flour.

3968. Onaga, D.M.; Luh, B.S.; Leonard, S.J. 1957. Quality evaluation and chemical composition of soy sauce. *Food Research* 22(1):83-88. Feb. [18 ref. Eng]
• **Summary:** The quality of soy sauce varies greatly with the raw materials used and with the method of manufacture—by fermentation or by acid-hydrolysis. In the fermentation process, cooked soya beans and roasted wheat flour are fermented by the mold *Aspergillus oryzae* and then by yeasts; this is followed by a long digestion in brine.

Soy sauce samples obtained from markets in California showed significant differences in flavor and aroma. The importance of various chemical constituents to flavor is discussed. Address: Dep. of Food Technology, Univ. of California, Davis. 1. Moved to Herschel California Fruit Prods., Woodland, CA.

Address: Nagano Junior College, Japan.

3974. Onishi, Hiroshi. 1957. Studies on osmophilic yeasts. I. Salt-tolerance and sugar-tolerance of osmophilic soy-yeasts. *Bulletin of the Agricultural Chemical Society of Japan* 21(3):137-42. May. [6 ref. Eng]

• **Summary:** The first experiment involved the reversibility of salt-tolerance in osmophilic soy yeasts. Three strains of *Zygosaccharomyces major* were cultured successively in NaCl-free and NaCl 18% koji extract media. The growth of osmophilic yeasts in a medium of high sodium chloride concentration involved a process of physiological adaptation.

For growth of the yeast *Zygosaccharomyces major*, the order of the toxicity of salts was as follows: $K^+ < Na^+ < Mg^{++} < Ca^{++} < Li^+$. Address: Noda Inst. for Scientific Research [Noda City, Chiba-ken, Japan].

3975. Onishi, Hiroshi. 1957. Studies on osmophilic yeasts. II. Factors affecting the growth of soy yeasts and others in the environment of a high concentration of sodium chloride (1). *Bulletin of the Agricultural Chemical Society of Japan*

21(3):143-50. May. [14 ref. Eng]

• **Summary:** The following named yeasts were grown: *Zygosaccharomyces major*, *Z. soya*, *Z. salsus*, *Z. miso* α, *Saccharomyces miso* α, and *Pichia miso*. The following unnamed yeasts were also grown: N 5, N 8, N 24, A 31, A 34.

The pH range for the growth of soy yeasts (such as *Zygosaccharomyces major*) was found to be very wide (pH 3.0–7.0) in a NaCl-free medium, but quite narrow (pH 4–5) in a medium that contained 18% NaCl—as is typical of soy sauce. Address: Noda Inst. for Scientific Research [Noda City, Chiba-ken, Japan].

3976. Onishi, Hiroshi. 1957. Studies on osmophilic yeasts. III. Classification of osmophilic soy and miso yeasts. *Bulletin of the Agricultural Chemical Society of Japan* 21(3):151-56. May. [13 ref. Eng]

• **Summary:** Most of the salt-tolerant yeasts isolated from soy sauce and miso belonged to *Saccharomyces rouxii*. Some of them produced luxuriant pellicles (surface films) on culture media containing sodium chloride, but pellicles were not formed on salt-free media. A new variety was isolated from these yeast species: *Saccharomyces rouxii* Boutroux var. *halomembranis* nov. var. A few strains were identified as *Saccharomyces acidifaciens* (Nickerson) Lodder et Kreger-van Rij. Two new species were also described: *Torulopsis halophilus* nov. sp. and *Torulopsis nodaensis* nov. sp. These two species showed high salt tolerance, especially the former, which was a facultative halophile.

In a 1952 monograph titled *The Yeasts: A Taxonomic Study*, by J. Lodder and N.J.W. Kreger-van Rij, the subgenera *Zygosaccharomyces* is no longer recognized. In this classification almost all of the *Zygosaccharomyces* known as the osmophilic yeasts were included in only two species and one variety, *Saccharomyces rouxii* Boutroux, *Saccharomyces rouxii* Boutroux var. *polymorphus* Lodder and Kreger-van Rij, and *Saccharomyces mellis* (Fabian et Quinet) Lodder and Kreger-van Rij. For example, *Zygosaccharomyces major*, *Z. soya*, *Z. salus*, and *Z. japonicus*, known as soy yeasts, were all included in one species, *Saccharomyces rouxii*. Address: Noda Inst. for Scientific Research [Noda City, Chiba-ken, Japan].

Address: Noda Inst. of Scientific Research, Noda, Japan.

3978. Specht, Hermann. 1957. Die proteolytische Aktivität von Schimmelpilzkulturen bei der Rohstoffkonversion [Proteolytic activity of molds in raw material conversion]. *Zentralblatt fuer Bakteriologie. Series 2.* 110(16/20):540-47. July 5. [11 ref. Ger]

Address: Institut fuer Gaerungsgewerbe, Berlin, West Germany.

3979. Kagaya, Akira; Inaba, Yakumo; Abe, Takashi; Takata, Ryohei. 1957. Bitamin kyôka shôyu jisshi seiseki (Hiromae chihô shôni eiyô ni kansuru kenkyû, No. 66) [Effect of enriched soy [sauce] upon riboflavin deficiency of children in a farm village]. *Bitamin (Vitamins, Kyoto)* 13(1):52-57. July 25. [5 ref. Jap; eng]

• **Summary:** Soy sauce was fortified with 75 mg of thiamine, 75 mg of riboflavin, and 750 mg of niacinamide per 2 liters of sauce, and was introduced to a Japanese farm village where ariboflavinosis was found endemically among the inhabitants. Observations on its effects were made from Feb. to Oct. 1956. Vitamin fortification improved the diet and reduced symptoms. Address: 1-3. Dep. of Pediatrics, Faculty of Medicine, Hirosaki Univ., Hirosaki, Japan; 4. Kyoto Univ.

3980. Brown, Seletha. 1957. Hawaiian luau brings East and West together in foods. *Christian Science Monitor*. Aug. 15. p. 10.

• **Summary:** Honolulu, Hawaii—"Terruyaki [teriyaki] steak is an island favorite [but no recipe is given]. "Japanese Hekka soon becomes as commonplace to the Haole (Caucasian) table as hot dogs and mustard. A recipe for "Meat Hekka" includes: "1 cup diced soy curd (Tofu), optional... ¼ cup soy sauce." "Add the rest of the vegetables in individual piles and mix the Tofu with the meat."

3981. Nickerson, Jane. 1957. Japan sets the table. *New York Times*. Aug. 18. p. SM25.

• **Summary:** "Japan is helping Americans set their tables in unusual, appetizing fashion, exporting to the United States an increasing variety of delicacies."

Before World War II, U.S. food imports totaled \$25 million. By last year this figure had increased to \$60 million—more than double.

A recipe for Yosenabe (a meal-in-one-dish), whose name in Japanese means "gathered in one pan." The basic recipe calls for "3 pieces bean curd, sliced one-quarter inch thick." The Broth for cooking calls for "½ cup Japanese soy sauce" and "3 three-inch squares seaweed (kombu)."

3982. *Times of India (The) (Bombay)*. 1957. Confectionery & foodstuffs. Aug. 20. p. 18.

• **Summary:** The foods of Japan have changed noticeably since World War II. The islands of Japan, whose combined area is 15% smaller than that of California, are much too small to grow enough staple food crops (such as rice) to feed the 80 million inhabitants. So Japan, which has been shorn of its overseas empire (Korea, Taiwan, Manchuria, etc.) has now become a major importer of wheat flour, and the number of bread eaters has been rapidly increasing.

Great efforts have also been made to incorporate more

protein into the daily diet. "Scientists today have begun to view time-honored seasonings like miso and soy sauce, made largely from soybeans, from a new angle."

The most popular confections are *namagashi* which are traditional Japanese. They include *yokan* (hard red bean paste) [made from azuki beans].

3983. Hayashi, Shizuka. 1957. Tofu takes large volume of soybeans. *Soybean Digest*. Aug. p. 26-27.

• **Summary:** "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use 1,070,000 tons of soybeans, including approximately 350,000 tons for shoyu, 230,000 tons for miso, 160,000 tons for tofu, and 120,000 tons for other foods. But the Tofu Association says 308,000 tons will be used for tofu.

Note: This is the earliest English-language document seen that gives the number of tofu manufacturers in Japan, and statistics on the amount of soybeans used for making tofu in Japan. Address: Japanese-American Soybean Inst., Tokyo, Japan.

3984. Komiya, Masashi. 1957. The seven wonders of soy sauce. *Foreign Agriculture* 21(8):4. Aug.

• **Summary:** In spite of its salt content of 18%, shoyu does not taste excessively salty. By contrast, when sea water, which contains a mere 3% of salt is swallowed, the salty taste is almost unbearable. It is estimated that the average Japanese obtains one-third of the salt he needs from shoyu. Japan expects to produce 1,527,000 tons of soy sauce in 1957. Address: Managing Director, Japan Shoyu Assoc.

3985. *Report of the Noda Institute for Scientific Research, Japan*. 1957-- . Serial/periodical. Published by Noda Institute for Scientific Research, Noda-shi, Chiba-ken, Japan. Director: Masatoshi, Mogi. No. 1 is Aug. 1957. [Eng]

• **Summary:** This institute is owned and run by Kikkoman Shoyu Co., Ltd. Address: Noda-shi, Chiba-ken, Japan.

3986. *Chicago Daily Tribune*. 1957. On our cover. Sept. 6. p. B4.

• **Summary:** On the cover of *Today's Food Guide*, is a photo of Kay Westfall in her kitchen, preparing her American version of Japanese sukiyaki. The recipe, which is given, includes: "1/3 cup soy sauce. 1 cake soy bean curd, sliced thin." The main ingredient is steak.

3987. Paddleford, Clementine. 1957. The captain's herb chicken: A barbecue party is Joe Canet's idea of fun. Try his poultry and Lazy Man's Chili Beans. *Los Angeles Times*. Sept. 22. p. M36.

• **Summary:** Joseph and Dorothy Canet of Mill Valley,

California, like to cook. Before barbecuing chickens, Joe marinated them for several hours in peanut oil with wine vinegar, Worcestershire sauce, and soy sauce, with pepper and garlic, which he pulverized with salt.

3988. *Life*. 1957. Easy surprise meal is all Oriental (Ad). 43(14):104. Sept. 30. *

• **Summary:** A full-page color ad featuring canned Chun King Chicken Chow Main as the main dish. A color photo shows the various dishes on a dining table ready to serve. In the upper right corner a bottle of "Soya Sauce" barely visible. The caption reads: "You fix it at home... in minutes! For the appetizer-starter: Chun King frozen Egg Rolls. Mustard and sweet sour sauce to go with them. The hearty main dish: Chun King Chicken Chow Mein over crisp Fried Noodles... to be sprinkled with Soya Sauce..."

"The most romantic place in town to eat is where the food is Oriental. And tonight at home you can enjoy foods as delicious as those in fine Cantonese restaurants. Give your family a Chun King meal of chow mein or chop suey..."

3989. Hayashi, Shizuka. 1957. The Japanese-American Soybean Institute. *Soybean Digest*. Sept. p. 33-34, 36.

• **Summary:** Subtitle: "The Japanese know the quality of U.S. soybeans is improving. Mr. Hayashi expects every Japanese family to include soybeans in the daily diet as a result of the Institute campaign."

"Membership in the Japanese-American Soybean Institute [JASI] is made up of the Japanese Oil Processors Association, the Japan Soy Sauce Association, the Japan Miso Industry Association, the Japan Tofu Association, and the Oil and Fat Importers and Exporters Association—in other words all groups connected with the soybean industry in Japan. The American Soybean Association is also a member of the Institute.

The Institute carries out a variety of research and educational programs. Under the initial agreement, JASI was established in April 1956 for a period of 1 year with a total budget of \$75,000; it began functioning on 1 May 1956. Each of the Institute's main projects and contracts signed during the first year is described. The production of a movie film, approved by USDA's Foreign Agricultural Service (FAS), is now in progress. "This will be a documentary colored film in three rolls of about 24,000 feet long. The theme of this film involves grammar school children working on a special subject of soybeans in their practical science room."

Before JASI was established, most Japanese did not realize that soybeans were grown in the U.S.—except on a small scale. "Before the war [World War II] we knew that Manchuria, China, was the only major soybean growing country. I was in Manchuria for more than 10 years before the war as an exporter of soybeans to Europe and Japan. We [Japan] imported about 1.5 millions tons of soybeans

annually from China. Production in China was then around 6 million tons. In 1948 I visited this country [USA] and was surprised to learn for the first time of America's huge production of soybeans. After the war when Japan was still under the SCAP's [Supreme Commander Allied Powers = General Douglas MacArthur] control, soybeans were not available from China. It was then that Japan received soybeans from America for the first time in history. It is since then that Japan has gradually become familiar with American [U.S.] soybeans.

"However, soybeans coming into Japan right after the war were very bad. They contained enormous amounts of foreign material, worm-eaten damaged beans, broken beans; besides sizes were irregular and color was bad. The quality of American beans was so bad that it gave Japanese users the impression that U.S. soybeans were not comparable with Chinese soybeans. Everywhere we went we received complaints of foreign material." No makers of miso or tofu wanted to buy them.

Now, a year after JASI was established, the situation has improved. Everybody in the soybean industry now knows about U.S. soybeans, and knows their quality is improving. JASI sends these people a newsletter, the *Soybean Digest Late News*, translated into Japanese. A photo shows Shizuka Hayashi. Address: Managing Director, JASI, Tokyo.

3995. Hayashi, Shizuka. 1957. Miso maker switches to U.S. beans. *Soybean Digest*. Nov. p. 24-25.

• **Summary:** A week-long soybean promotional program was held in the city of Sendai in September. The Institute participated in the name of the “Food Life Improvement Association.” The speaker was J. Sasaki [probably of Sendai Miso Shoyu], vice president of the All Japan Miso Assoc. The biggest miso maker in the district and one of the largest in Japan, he also manufactures shoyu, and he has been using U.S. soybeans only since the early part of this season. Why? More uniform and consistent quality, less purple colored beans, lower price, larger quantities of the same variety available. Address: Managing Director, Japanese-American Soybean Inst., Tokyo, Japan.

3999. **Product Name:** [Kikko Siyau–Japanese Style Shoyu (Light)].

Foreign Name: Kikko Siyau.

Manufacturer’s Name: Fabrica de Siyau Kikko Sociedad de Responsibilidad Limitada.

Manufacturer’s Address: Av. Colombia 171, Pueblo Libre,

Lima, Peru. Phone: 32-3754.

Date of Introduction: 1957.

Ingredients: In 1957: Common beans (*Phaseolus vulgaris*) grown in Peru, wheat, water, salt. In 1960 the common beans were replaced by whole soybeans.

Wt/Vol., Packaging, Price: 1957: 20 liter drum, 3.6 liter glass bottle, 500 mg glass bottle. As of 1997: Plastic bottles of 85 ml, 160 ml, 350 ml, 500 ml, and 5 liters, and sealed plastic buckets of 18 liters.

How Stored: Shelf stable.

New Product–Documentation: Company history form filled out and label sent by Marco Kamego, a present owner of Kikko Corporation S.A. 1997. Dec. 29. Label: 8.5 by 2.75 inches. Red, blue, and black on yellow. Color photo of turkey meat, potatoes, and vegetables. “Kikko Siyau: Salsa Oriental.” Produced by Kikko Corporation S.A., Calle Robert Fulton No. 115, Lima 3, Peru. Phone: 236-1358 or 326-0955. Ingredients: Soybeans, wheat, salt, sugar, and sodium benzoate. Follow-up letter from Marco of 13 Feb. 1998. The product was originally made from native beans, replaced by soybeans in 1960. “Fermentation process and chemical process were applied at once.” The product was originally sold in 20 liter drums, 3.6 liter glass bottles, and 500 mg glass bottles. Now it is made from defatted soybeans using a fermentation process.

4000. Hahn, Y.S.; Park, B.D. 1957. [Studies on the manufacture of soy sauce. I. On *Aspergillus oryzae* in Korean soybean meju and wine kokja mould cultured with wheat bran]. *Report of the National Industrial Research Institute (Seoul, Korea)* 7:51-55. [Kor]*

• **Summary:** Two kinds of *Aspergillus oryzae* were isolated from Korean soybean meju and wine kokja. Microscopic and physiological characteristics were investigated. Five kinds of powerful amylolytic moulds and four kinds of powerful proteolytic moulds were isolated. Address: National Industrial Research Institute, Seoul, Korea.

4001. Hong, S.S. 1957. [On the amino acid composition of Korean soy sauce]. MSc thesis, Seoul National University. [Kor]*

• **Summary:** Soysauce is one of the important condiments used by oriental peoples. There are various types of soy-sauce, such as Chinese, Korean, Japanese and amino acid soy-sauce. The author has detected the kinds of amino acids contained in the Korean soy-sauce by means of paper chromatography. The result of qualitative analysis of amino acids of Korean soy-sauce by means of paper chromatography led to the following conclusion.

1. The amino acids found in the Korean soy-sauce are as follows: alanine, arginine, aspartic acid, glutamic acid, leucine, lysine, phenylalanine, proline, serine, threonine and valine.

2. The amino acids found in the amino acid soy-sauce

are as follows: alanine, arginine, aspartic acid, cystine, glutamic acid, leucine, lysine, phenylalanine, proline, serine, threonine, tyrosine and valine.

3. The 11 types of these amino acids found in the Korean soy-sauce are similar to the kinds of amino acids found in the Japanese soy-sauce. Address: Seoul, Korea.

4002. **Product Name:** Soy Sauce.

Manufacturer's Name: Kauai Shoyu Factory.

Manufacturer's Address: Kapaia, Kauai.

Date of Introduction: 1957.

New Product–Documentation: Hawaii, Maui, Kauai Directory. 1957. p. 425. Kauai Shoyu Factory (Sen Watanabe, proprietor). Kapaia, Kauai. Not listed 1965.

• **Summary:** This is basically a color recipe booklet which enables the reader to prepare tasty Chinese recipes at home.

4008. Miyamoto, Kazuo. 1957. A nisei discovers Japan. Tokyo: Japan Times. [x] + 282 + [4] p. See p. 181. Illust. Port. No index. 20 cm.

• **Summary:** The author, a physician and American citizen, lived with his wife and two children for two years in Japan between 1937 and 1939 "just after the beginning of the China Incident." He spoke and wrote Japanese fluently.

Page 7: On 29 Sept. 1937, after just arriving in Japan, they enter Tokyo. He notes that prices are high, protein consumption is therefore insufficient, and the general population seems undernourished. Beans, including soya beans, ought to be used more extensively. Except for misoshiru [miso soup] and natto, they are apparently not widely used. He suggests that the government welfare department develop and publish soy recipes for the health of the people.

Page 48: On 8 Feb. 1938 on a trip into Yusawa, Niigata, in northeastern Japan, he went skiing. For lunch at a inn he had "natto with lots of onions to erase the odor."

On a train from Ueno station, Tokyo, he has breakfast in the diner of miso-shiru [miso soup], tsukemono [pickled vegetables], and rice for 25 *sen*.

Page 129: In Aomori at the hotel for breakfast they enjoy delicious eggplant fried in butter with shoyu, pepper, and pieces of chiso [beefsteak leaves].

Page 171: At Aoyama hot springs in Hokkaido, caught in a blizzard, he has a bento [Japanese box lunch] from the hotel that includes miso-shiru.

Page 181: On 21 March 1938 they are at the port of Shimonoseki, Japan (in southwestern Honshu, just north of Kyushu, in Yamaguchi prefecture, facing the Tsushima Strait). He notes that many people pass through this port on their way to Chosen [Korea] and Manchukuo [Manchuria].

Shimonoseki is known for its *fugu* or balloonfish (also called globefish or swellfish) for it is here that the largest catch in Japan is taken each year.

They found an eating place, Fujitomo, that served the delicacy. The raw sliced meat was arranged on a huge platter in three rows of semi-circles, so thinly sliced that it was transparent. "The above were dipped in a sauce prepared with murasaki, lime and onions. Tai, considered the king of fishes, must be allotted second place to this delicacy..."

Note 1. The word "murasaki" means purple in Japanese, and is still used in sushi shops and other specialty eating places to refer to soy sauce.

Note 2: This is the earliest English-language document seen (April 2012) that uses the word "murasaki" to refer to soy sauce.

The balloonfish is so poisonous it can kill a person; the toxin is contained in the ovaries. "At Shimonoseki, the season comes to an end at the end of March for then the spawning season begins and the danger of poisoning becomes greater."

Page 201: On a trip to Korea he enjoys *manul zany*, garlic pickled in shoyu.

In April 1955, the family returned to Japan to visit new relatives. Near Furukawa, in northeastern Japan, they

inspected a “miso and shoyu factory.”

Also discusses: Nori (p. 128). Wakame (seaweed, near Idzu / Izu) (p. 276). Address: Honolulu, Hawaii.

4012. Tanizaki, Junichiro. 1957. The Makioka sisters. Translated from the Japanese by Edward G. Seidensticker. New York, NY: Alfred A. Knopf, Inc. 530 p. See p. 293. [1 ref]

• **Summary:** Page 293: “He always used white Kobe vinegar, never yellow Tokyo vinegar, and always a thick soy sauce not seen in Tokyo. He offered only fish taken before his very eyes, so to speak, here along the shores of the Inland Sea.”

Note: What is the word for “thick soy sauce” in Japanese?

The title of the novel in Japanese is *Sasameyuki*, which means lightly falling snow. The translator, Edward Seidensticker, struggled over the title. Translations like “Fine Snow” and “Snow Flurries” do not convey the elegance or layers of meaning in the Japanese title. The novel follows the lives of the Makiokas, a wealthy Osaka family, from the autumn of 1936 to April, 1941. In Japan, the book has been called by Nakamura “the greatest cosmopolitan novel since the Meiji Restoration.”

“In Osaka in the years immediately before World War II, four aristocratic women try to preserve a way of life that is vanishing. As told by Junichiro Tanizaki, the story of the Makioka sisters forms what is arguably the greatest Japanese novel of the twentieth century, a poignant yet unsparing

portrait of a family-and an entire society-sliding into the abyss of modernity” (Publisher’s description).
