Therefore it would be desirable if more attention were given to the planting of soybeans in our regions (*Gegenden*), especially since we have all the conditions necessary for this plant to flourish. Address: Assistent.

1305. *Medical Record (New York)*. 1889. Soya bread in diabetes. 35(14):386. April 6. Whole No. 961. [1 ref]

• **Summary:** “Dr. Lecerf has used bread made from Soya flour in a number of cases of diabetes and regards it as a valuable addition to the dietary in this disease, and as far superior to gluten bread (*Journal de Medicine de Paris*, December 9, 1888). *Soya hispida* is a leguminous plant growing in Japan and the far East, the grain of which is used by the natives in the preparation of sauces [including soy sauce] and to make a sort of vegetable cheese [tofu]. It contains a large proportion of fat, which takes the place in great measure of the starch in other grains. The bread made from it resembles rye-bread, has an agreeable taste, and is quite digestible. It has a tendency to cause diarrhoea [diarrhea] at first, but patients soon become accustomed to its use and can then take it without any inconvenience.”

1306. Tahara, J.; Kitao, M. 1889. Notes sur la composition du shoya. Sur les matières azotées dans la sauce japonaise dite “Shoya” [Notes on the composition of shoyu. On the nitrogenous materials in the Japanese sauce called “Shoya”]. *Revue Internationale des Falsifications* 2:159-61. April 15. German-language summary in *Chemisches Central-Blatt* 1889(1):732. [1 ref. Fre]

• **Summary:** The sauce well known as “Shoya” [sic, shoyu] is indispensable in the culinary art of Japan. Mr. T. Isono, in his 1878 thesis on shoyu, reported that it is a clear, dark

brown liquid, having a sweet and salty taste and a particular savory aroma. The relative density ranges from 1.15 to 1.23. All foods in Japan, whether of animal or vegetable origin, are prepared with the aid shoyu, without the addition of sea salt; however the latter is a major ingredient in shoyu. The annual production of shoyu in Japan is about 3-4 million *koku* (1 *koku* = 180.4 liters, thus 540-720 million liters) and each Japanese consumes, on average, 60-100 cc/day.

A table shows that 13 samples of shoyu, examined at a laboratory in Tokyo, were found to have the following average composition by weight: Solids (dry residue) 36.71%, nitrogen 1.33%, glucose 3.80%, dextrin 1.30%, acids (calculated as acetic acid) 0.72%, ash 19.45%, sea salt 15.86%, phosphoric acid 0.48%. Maximum and minimum values are also given for each nutrient.

“As far as we know, research on shoyu (*Shoya*) conducted to date is limited to qualitative analyses. Furthermore, Mr. Isono has measured the alcohol and nonvolatile acids. We propose to determine whether the shoyu contains nitrogen in the form of proteinaceous materials which come from the beans used in its manufacture, or whether these substances have already undergone a partial alteration during the fermentation period.

“To this end, we obtained the best quality shoyu, made by the House of Yamoguchi [Yamaguchi] in Shimosa prefecture” [just northeast of Tokyo]. The product had a specific gravity of 1.26 at 21°C. The reaction was distinctly acid.

A second table shows the results of the qualitative analysis, 100 gm calculated by weight: Solids (dry residue) 32.58%, total nitrogen 1.18%, glucose 2.76%, dextrin 1.30%, alcohol 0.43%, volatile acids (calculated as acetic acid) 0.16%, non-volatile acids (calculated as acetic acid) 0.83%, inorganic salts 17.47%.

A third table gives an analysis of the ash by weight: sodium chloride (table salt) 87.26%, sulfuric acid 2.84%, phosphoric acid 2.65%, magnesium 3.90%, calcium traces, potassium traces. ash 19.45%, sea salt 15.86%, phosphoric acid 0.48%.

In addition, ammonia and amines were found in shoyu, plus a new aromatic substance that crystallizes and contains nitrogen. It melts at 213°C. 100 cc of shoyu contains total nitrogen 1.18%, proteins 0.55% and of the new aromatic substance 0.46%; it will be discussed in a future article.

Most Japanese believe that shoyu is very nutritious article of food, rich in protein. The above tests show that view to be erroneous, since it contains only 3.4% protein. However shoyu is indispensable to Japanese cuisine.

Note: This is the earliest document seen (July 2001) that uses the word “Shoya” to refer to soy sauce. Since the word was spelled this way twice in the title and at least 13 times in the body of this French-language article, it appears not to have been a typographical error. “Shoya” was subsequently used by only one other author (Loges 1910), but in that case

to refer to soybeans. Address: Tokyo.

1307. **Product Name:** Gawne's Worcestershire Sauce.

Manufacturer's Name: Gawne (W.).

Manufacturer's Address: Dunedin, New Zealand.

Date of Introduction: 1889. May.

How Stored: Shelf stable.

New Product–Documentation: Ad in *Southland Times* (Otago, New Zealand). 1889. May 4. p. 3. This ad in the "Wanted, &c." section states: "Gawne's Worcestershire sauce, Equal to imported, at half the price, try it. H. Hawson, Agent for Invercargill [New Zealand]."

Ad in *Southland Times* (Otago, New Zealand). 1891. March 6. "H. Hawson, importer. Wine, spirit, and general merchant. Tay and Wood Streets, Invercargill. Agent for... W. Gawne, Dunedin, Sauce manufacturer."

Ad in *Mataura Ensign* (Otago, New Zealand). 1900. Sept. 6. p. 5. "What the newspapers say about Gawne's Worcestershire Sauce." The company, named "Messrs. W. Gawne & Co.," is located at George St., Dunedin. This is the last ad seen for this sauce.

1308. Hawson (H.). 1889. Wanted, &c.: Gawne's Worcestershire sauce,... (Ad). *Southland Times* (Otago, New Zealand). May 4. p. 3.

• **Summary:** "... Equal to imported, at half the price, try it."

Note 1. This is the earliest document seen (Feb. 2012) that mentions Gawne's Worcestershire Sauce, made in Dunedin, New Zealand. Does it use soy sauce as an ingredient? If so, how and from what manufacturer does it obtain that soy sauce.

Note 2. This ad appeared in this newspaper on May 4, 11, 18, 28, 29, June 1, 6, and 26, 1889.

Note 3. This in one of at least 506 issues of New Zealand newspapers from 1891 to 1900 that mention "Gawne's Worcestershire." In Sept. 1900 the company, named "Messrs. W. Gawne & Co.," was located at George St., Dunedin. Address: Agent for Invercargill [New Zealand].

1309. *Pharmaceutische Centralhalle fuer Deutschland*. 1889. Zur Kenntnis der Sojasauce [Toward a knowledge of soy sauce (Abstract)]. 30(21):330-31. May 23. New series: Vol. 10. [2 ref. Ger]

• **Summary:** A German-language summary of the following German-language article: Stift, A. 1889. "Beitrag zur Kenntniss der Sojasauce [Contribution to the knowledge of soy sauce]". *Zeitschrift für Nahrungsmittel-Untersuchungen und Hygiene* (Oesterreichische Chemiker-Zeitung) 3(1):33-34. Jan.

1310. Kellner, O.J.; Mori, Y.; Nagaoka, M. 1889. Researches on the manufacture, composition, and properties of "koji." *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(5):9-33. July. [10 ref. Eng]

• **Summary:** A detailed analysis. "Koji i.e. steamed rice or barley upon which is developed the mycelium of special fungus plays an essential part in various manufacturing processes peculiar to Japan and China. It is used as a saccharifying substance in the preparation of rice wine (*sake*) and alcohol (*shochiu*) and seems likewise to be the chief active ingredient which brings about the slow fermentation as well in the manufacture of *miso*, a food adjunct very common in Japan, as in the preparation of *shoyu*, a peculiar sauce also largely consumed in the country.

"... we prepared koji from rice and barley in the following way, which is generally adopted in the koji works, and which has already been described by O. Korschelt (1878), and R.W. Atkinson (1881)." Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

1311. Lecerf, Ch. 1889. Le soya, sa valeur alimentaire et son emploi thérapeutique [The soybean. Its food value and therapeutic applications]. In: *Compte Rendus, Congrès International de Thérapeutique et de Matière Médicale*. 1889. Paris. 347 p. See p. 296-302. Meeting of Aug. 3. Therapeutic section. [4 ref. Fre]

• **Summary:** The soybean (*Le Soya or Soja*) is a legume of the group *Phaséolées*, widely cultivated in China, Japan, and the Far East, where it serves as a foundation of the food of the indigenous people.

The Dutch traveler Kaempfer, in 1712, first reported on this plant, which he designated under the Japanese name Daïdsu. After that it was named: *Dolichos soja* by Linnaeus, *Soja hispida* by Moench, and *Glycine hispida* by Siebold. A detailed botanical description is given. It is an annual herbaceous plant, having slender stems about 80-90 cm in height. Its leaves are trifoliate with a special pattern of veins (*imparipennées-trifoliolées*), its leaflets / folioles are hairy and oval but pointed on the ends. Its flowers are small, papilionaceous corolla, varying in color from white to purple; they are disposed in axillary groups, etc.

The type that I have just described is the one that acclimatizes itself most easily to the European regions where the cultivation of corn / maize is possible. In Japan and China, there are numerous varieties of soya, having brown, black, or greenish seeds. In these countries, each of these varieties has a special use: One kind is used to make tofu (*le Téou-fou*), a kind of cheese of which the Chinese people are very fond. Another is used in the preparation of Shoyu, a kind of sauce which is (so to speak) indispensable to the Japanese. Yet another kind is employed by the Chinese to make Cantonese wine starter (*Kiu-tsée*; [from China]) a solid ferment, which is used in making wines and artificial brandies.

All that is known about the various uses of Soya, about the trials that have been made concerning the acclimatization of this plant in Europe, as well as the chemical composition

of the plant and its seeds, can be found in an excellent monograph by Mr. A. Paillieux [1881].

In April 1888, in a communication to the Society for Practical Medicine (*Société de médecine pratique*), I called to the attention of the medical corps the services that this legume could render to diabetics and to invalids, and presented samples of bread made with soya flour.

I am happy to note that my idea did not remain without a response / an echo. Our learned president, Prof. Dujardin-Beaumetz, was kind enough to present to the Academy of Medicine (on 29 May 1888) the soya bread (*pains de Soya*), which I made with no flour other than non-soy flour; he was kind enough to conduct trials with this bread in his department at the Cochin hospital [a famous hospital in Paris].

Later, Mr. Blondel published (*Journal de pharmacie et de chimie*, 5th series, vol. 18, p. 537) a very interesting study on the structure of soybean seeds, and demonstrated the almost complete absence of starch in their tissues. Then Mr. Egasse, in an excellent article in *Bulletin général thérapeutique* (30 Nov. 1888) summarized the various works concerning Soya and its economic and therapeutic applications.

Not much attention was given to Soya [in Europe] until after the Exposition of Vienna in 1873, to which the Japanese brought numerous samples. Professor Haberlandt and Count Cettems were the principal popularizers, and even though they recommended its cultivation mainly from the viewpoint of feeding and fattening livestock, they opened the door to the idea that the seed could be of service if it were introduced as a human food.

In France, the Society for Acclimatization encouraged cultivation trials with Soya, which it sought to popularize; but in spite of the numerous trials that were made and of which the majority gave excellent results, its cultivation continued only in and around Étampes (Seine-et-Oise).

The analyses [of the chemical composition] of soybean seeds that have been made in Austria, Germany, and France are numerous. The writer then gives the composition (in two large tables on p. 299) of three samples of soybeans (from China, Hungary, and Etampes) and their ash as conducted by Mr. Pellet and published in the *Comptes Rendus des Seances de l'Academie des Sciences* (Paris) (1880, vol. 40, p. 1177).

The analyses of Mr. A. Muntz was based on French samples, whose content of starch and sugar was rather high. They contained 6.4% (p. 299).

The sweet material (*matière sucrée*) of the soybean was studied by Mr. Levallois, who also made comparative analyses of the proportion of phosphoric acid and nitrogen contained in wheat and in soybeans. His latter results are given in the form of a short table.

If we compare the chemical composition of Soya, according to the analyses of Mr. A. Muntz, and that of beef that has been defatted (as in a laboratory) according to the

analyses of M. Lehmann, we see that the Soya contains more of the useful nutrients / principles than the meat. A table (p. 300) compares the amylaceous and sweet materials, proteins, fats, phosphoric acid, and water for the two foodstuffs.

Soya is therefore a precious plant, which, in a small volume, offers a large nutritive value. Its low starch content makes it very useful in diabetic diets.

The oil contained in the soybean seed, even though it is said that the Chinese use it as an edible oil, is a laxative and has a taste that is not very agreeable; this taste would make it hard to use, even as a substitute for castor oil. It is the oil, above all, which makes it difficult to make bread from Soya flour, and which gives this flour a disagreeable taste, which even cooking does not diminish noticeably. This oil is not, strictly speaking, a drying oil as is often said; it is a mixture of resin, fixed oil, and essential oil (*de résin, d'huile fixe et de huile essentielle*).

With the flour, from which most of the oil has been removed, I have succeeded in making a bread that is not disagreeable. It stays fresh for 4 to 5 days, and has the great advantage for sick people over gluten bread of having a good crumb (the soft, white part of a loaf, other than the crust), not to mention the insignificant amount of starch that it contains.

This bread, cut into slices and dried in a drying stove, furnishes biscuits; finally the flour, mixed with egg yolks, enables us to make wafers / thin waffles than can be sweetened with saccharine.

Soya bread, in appearance, has a great similarity to rye bread; its color darkens gradually as it ages. And it is easily digested, provided, as Mr. Dujardin-Beaumetz advises, one does not consume more than 250 gm per day.

In using this bread, a certain accommodation must be made; during the first few days it has a mild laxative effect, but this diminishes as one gets used to it.

Many sick people, having previously used gluten bread, have switched to Soya bread basted on its good taste. Then they discovered the additional advantages of a bread that absorbs and retains moisture well, and that stays fresh and soft for rather a long time. Note: At mealtimes, many French people used to dunk their bread (which is served next to the meal) into a hot, tasty liquid (soup, milk, coffee, gravy, etc.) and use it like a utensil to move or push other foods around, and clean the plate at the end of the meal.

The trials conducted to date do not yet allow us to say for sure, in diabetes mellitus, what the action of Soya is on the production of sugar. But we can affirm, already, that the quantities of glucose (*glycose*) do not increase when Soya bread is substituted for gluten bread. A fact that appears to remain constant with diabetics who use Soya, is a decrease in the volume of urine excreted in 24 hours.

If, by virtue of their low starch content, Soya preparations are useful to diabetics, the relatively large proportions of proteins and of phosphates which they contain make them a substantial food which can render a service to

debilitated persons.

Discussion: Mr. Constantin Paul says—Concerning Soya biscuits, sweetened with saccharine, recently recognized as good for the feeding of diabetics, I would like to call the attention of the Congress to the services which can be rendered, in the diets of the sick, by the use of saccharine in general, so convenient to use to console the diabetics that that they do not have completely suppress all sweets...

Mr. Stokvis adds that saccharine has been recently used in Holland and he would like to make the same observation as Mr. Paul. As long as saccharine is used in a sufficiently alkaline milieu, no stomach problems are observed. Address: Pharmacist, Paris.

1312. *Pharmaceutische Centralhalle fuer Deutschland*. 1889. Offene Correspondenz [Open correspondence]. 30(47):698. Nov. 21. New series: Vol. 10. [Ger]

• **Summary:** Mr. W. in The Hague (Netherlands) is looking for a supplier of soybeans. An extract of soybeans is on the market under the name of “Soya Japan” [probably Japanese shoyu / soy sauce] or “Kefo” and is used as an ingredient in or seasoning for soups. One supplier of this Soya extract is Gehe & Co. in Dresden.

1313. *Los Angeles Times*. 1889. The housekeeper. Nov. 27. p. 7.

• **Summary:** The third recipe, for “Green tomato sauce,” calls for Worcestershire sauce as an optional ingredient.

1314. T. de L. (Terrien de Lacouperie). 1889. Ketchup, catchup, catsup. *Babylonian and Oriental Record* 3(12):284-86. Nov. [11 ref]

• **Summary:** “My attention was called lately by my friend Col. Sir Henry Yule, to this word for which a Chinese origin has been suggested.” After arguing in detail that W.H. Medhurst’s *English and Chinese Dictionary* (Shanghai 1847) cannot be trusted, he concludes: “The Cantonese *Kwai-tchap* might be the antecedent of the English word, but it results from the unsatisfactory evidence of various sorts here adduced, that the etymology is altogether theoretical. My impression is that the word may have a Chinese origin, but not from China. It may have come from Australasia or the Malay peninsula, where the Chinese colonists of southern China are so numerous. The expression may have been made there, with a local acceptance unknown in the mother country.”

Note: *Webster’s Dictionary* defines catsup (pronounced KECH-up or KACH-up, derived from the Malay *kêchap* = a spiced fish sauce, and first used in 1690) as “a seasoned tomato puree.” Under ketchup, *Webster’s Dictionary* simply states “var. of Catsup” without giving a year of earliest known usage.

1315. Stearns, Frederick. 1889. A Japanese dinner: An

elaborate and somewhat curious affair of many courses.

Dainty dishes served in rare and most exquisite porcelains: A cup of tea made from priceless leaves—The menu in detail. *Detroit Free Press*. Dec. 8. p. 16.

• **Summary:** The writer was invited to dine with a Japanese gentleman in Tokio at a “beautiful new tea house, called *Kan-toku-tei* (lofty virtue), in the midst of one of the finest and oldest landscape gardens of Tokio. This garden is over 250 years old.” The first-class Japanese dinner was laid for four persons. Since the writer was unable to sit on his heels or to use chopsticks, the dinner was served on a Western style and he used “that vulgar utensil called a fork.”

Each dish and the vessel in which it was served are described. Three little piles of zests were served with one course: Yellow chrysanthemum petals, bruised and moistened with salted water; horse radish; and small cucumbers very thinly sliced and pickled in brine. Several of the foods were dipped “into a little cup of soy [sauce], adding at the same time one or more of the zests.”

Another course “consisted of young bamboo shoots (resembling somewhat our asparagus) cooked in soy sauce and mirin. With these were... salmon soaked first in soy sauce and then broiled, but eaten cold. This is called *teriyaki*.”

Note: This is the earliest English-language document seen (April 2012) that contains the word “*teriyaki*.” It does not contain the term “*teriyaki sauce*.”

The next course, a soup, included “a greenish sea weed called *nori*,...”

“The only criticism I would make upon Japanese food is that it is too much salted to suit foreign palates. But for daintiness of appearance, pretty decorations and exquisite porcelains it would be difficult to find a parallel.” Address: Yokohama, Japan.

1316. Kellner, O. [Oskar Johann]; Nagaoka, M.; Kurashima, Y. 1889. Researches on the manufacture and composition of “miso.” *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(6):1-24. Dec. [12 ref. Eng]

• **Summary:** Contents: Introduction. Raw material and preparation of miso: Soy beans, koji from rice or barley, common salt. The chemical processes during the ripening of miso (incl. chemical composition of fresh substance and dry matter, which include nitrogenous substances or albuminoids, ether extract [crude fat], carbohydrates, crude fibre, ash, solubility, water). Varieties, composition, and nutritive properties of miso: (1) “Shiro miso, white miso, is characterized not only by its white colour but also by its low content of salt and by the short time it will keep good”—no longer than 10 days; 4 days fermentation time. (2) “Yedo miso, so called from the former name of the metropolis” [Yedo/Edo, now Tokyo]; 20 days. (3) “Inaka miso, country miso, is the richest in salt and is prepared with the help of barley koji”; 11-12 months. (4) “Sendai miso derives its

name from the city of Sendai in Miyagi prefecture where it is widely prepared, but is frequently also termed *Aka miso* (red miso)"; 8-15 months. (5) Other sorts of miso which are only of local importance. Four are consumed mostly in miso soup: Sano miso, Nagaseyama miso, Mikawa or Sanshiu miso [Sanshu miso]. Four others can be consumed uncooked and used as condiments: Kinzanji miso ("named after a Buddhist temple and prepared by fermenting a mixture of soy beans, barley koji, salt, starch-sugar {*amé*}, slices of egg plant {*Solanum melongena*}, and ginger roots"), Sakura miso ("quite similar to the preceding, but sweeter on account of an admixture of large quantities of starch-sugar or raw cane sugar"), Tetsuka miso [Tekka miso] ("is common miso with the addition of sesamum oil, roasted soy beans, and slices of the roots of burdock {*Arctium Lappa*}"), Kogo miso ("is prepared like common miso but with an addition of rice bran").

The introduction begins: "Miso, e.g. a food prepared from a mixture of soy beans, rice or barley, common salt, and water, by slow fermentation, seems to have been known in Japan since remote times. Its manufacture, like so many other useful processes, appears to have been taught to the Japanese by Chinese or Koreans. At least the *Sandai jitsu roku*, tells us, that a Chinese priest named *Jingo* transmitted more than 1000 years ago a small quantity of miso to the then Emperor of Japan, and the name '*Korei shiwo*' sometimes, though not frequently used instead of the word 'miso,' points to its introduction from Korea, where indeed, as well as in China, miso is still a favorite food.

"In Japan miso is very widely consumed, especially by the lower classes, who enjoy it as a sort of food adjunct to the vegetables of which their daily diet consists. Although it is eaten throughout the whole country, it seems to be especially favoured in the north-eastern provinces. Statistics on its consumption do not exist at present and may also be difficult to compile, as in the countryside it is made by families themselves [at home], and only in large communities are special miso works [factories] established. Assuming, however, 10 monme (37.5 grms.) to be the lowest quantity daily consumed per head, and 20 millions out of the 39 [million] of the whole population to eat miso every day, a yearly amount of nearly 30 million kilograms of miso is arrived at, for the preparation of which more than half the yearly produce of soy beans (2.3 million koku [335,000 tonnes] in 1883) is needed. Although these figures are certainly too low, they surely indicate the importance of this food in the nutrition of the Japanese people."

Tables show: (1) The composition of three different types of soy beans that make good shoyu and good miso, and the weight of 1000 grains/seeds of each (p. 3). (2) The composition of four different types of sea salt: Ajino from Bizen, Ako from Harima, Mitajiri from Suwo, and Giotoku from Shimosa [Shimôsa] (p. 4). (3) The composition of soy beans and of barley, and amount of each used in making

miso (p. 6). (4) The composition of the fermenting miso after 50, 85, 120, and 150 days, on a fresh (as-is) basis (p. 7) and a dry-matter basis (p. 8). (5) Changes in nutrients in the soy beans and in the barley during fermentation (p. 11). (6) Changes in the miso during fermentation (p. 13). (7) Temperature of the original mixture and length of fermentation for four types of miso: Shiro miso, Yedo miso, Inaka miso, and Sendai miso (p. 15). (8) Composition of five types of miso (p. 19). (9) Proportion of raw materials, age, temperature of the beans when mixing them with the other ingredients, and price per *kin* (=0.601 kg) of the same four types of miso.

Note 1. Dr. Kellner published three subsequent articles in this journal but none concerned soybeans: (1) "Manuring experiments with paddy rice" (Bulletin No. 8, June 1890); (2) "Manuring experiments with paddy rice. (Third year)" (Bulletin No. 11, July 1892); (3) "Comparative experiments on the effects of various phosphatic fertilizers on upland soil, and analysis of rice grain" (Bulletin No. 12, March 1893).

Note 2. This is the earliest English-language document seen (Sept. 2002) that contains statistics on the production or consumption of soyfoods (in this case miso), in Japan.

Note 3. This is the earliest document seen (Sept. 2002) that contains statistics on miso by geographical area.

Note 4. This is the earliest English-language document seen (Aug. 2001) that mentions the word "nutrition" in connection with soy.

Note 5. This is the earliest document seen (March 2009) that mentions "Inaka miso" [made at home in the countryside], or "Tetsuka miso" [Tekka miso], or "Yedo miso" [Edo miso], or "Sendai miso" [a dark rice miso made in and around the city of Sendai], or "Kinzanji miso," or "Sanshiu miso" [Sanshu miso, a soybean miso made in central Japan].

Note 6. The parallel Japanese title of this English-language periodical is *Tôkyô Nôrin Gakkô. Gakujutsu hôkoku*. Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

1317. Belohoubek, Anton. 1889. Das shoyu [Shoyu]. *Zeitschrift fuer das Gesamte Brauwesen* 12(21):433-37. Extracted from "Archiv Zmedelsky" (Prague). German summary in *Chemisches Central-Blatt* 1890(1):132. [2 ref. Ger]

• **Summary:** Soy sauce or shoyu (*shoyu*) is the name used by people in England to refer to a liquid seasoning prepared from soybeans in India, China, and Japan. In recent years it has come to be imported into Europe. A description of the process for making soy sauce is given.

Soy sauce was found to have the following composition: Protein (*Eiweissstoffe*) 1.058%, peptone 3.115%, other nitrogen-containing organic compounds 3.035%, crude / unrefined fat 0.609%, sugars 2.467%, dextrin 4.966%,

ethyl alcohol 1.602%, volatile acids (calculated as acetic acid) 0.110%, non-volatile acids (calculated as lactic acid) 0.665%, ash 16.263%, water 66.162%. Address: Professor from Prague [Czechoslovakia].

1318. Allen, Grant. 1889. *Falling in love, with other essays on more exact branches of science*. London: Smith, Elder & Co. 356 p. See p. 205. 22 cm.

• **Summary:** The chapter titled “Food and Feeding” states (p. 205): Foods that taste bitter, pungent, fiery, or acrid are usually poisonous or bad for humans to eat. The fore part of the tongue warns us. If so, then why do we purposely use such things as mustard, pepper, curry-powder, and vinegar? Because, in small quantities, used as condiments, they act as agreeable stimulants. “Still, very young children dislike all these violent stimulants, even in small quantities; they won’t touch mustard, pepper, or vinegar, and they recoil at once from wine or spirits. It is only by slow degrees that we learn these unnatural tastes, as our nerves get blunted and our palates jaded; and we all know that the old Indian who can eat nothing but dry curries, devilled biscuits, anchovy paste, pepper-pot, mulligatawny soup, Worcestershire sauce, preserved ginger, hot pickles, fiery sherry, and neat cognac, is also a person with no digestion, a fragmentary liver, and very little chance of getting himself accepted by any safe and solvent insurance office. Throughout, the warning is a useful one; it is we who foolishly and persistently disregard it. Alcohol, for example, tells us at once that it is bad for us; yet we manage to dress it up...”

“The middle region of the tongue is the part with which we experience sensations of taste proper—that is to say, of sweetness and bitterness. In a healthy, natural state all sweet things are pleasant to us, and all bitters... unpleasant. The reason for this is easy enough to understand. It carries us back at once into those primæval tropical forests, where our ‘hairy ancestor’ used to diet himself upon the fruits of the earth in due season. Now, almost all edible fruits, roots, and tubers contain sugar; and therefore the presence of sugar is, in the wild condition, as good a rough test of whether anything is good to eat as one could easily find. In fact, the argument cuts both ways: edible fruits are sweet because they are intended for man and other animals to eat; and man and other animals have a tongue pleasurable affected by sugar because sugary things in nature are for them in the highest degree edible. Our early progenitors formed their taste upon oranges, mangoes, bananas, and grapes; upon sweet potatoes, sugar-cane, dates, and wild honey. There is scarcely anything fitted for human food in the vegetable world (and our earliest ancestors were most undoubted vegetarians) which does not contain sugar in considerable quantities.”

“But besides the natural sweets, we have also taken to producing artificial ones. Has any housewife ever realised the alarming condition of cookery in the benighted

generations before the invention of sugar? It is really almost too appalling to think about. So many things that we now look upon as all but necessities—cakes, puddings, made dishes, confectionery, preserves, sweet biscuits, jellies, cooked fruits, tarts, and so forth—were then practically quite impossible. Fancy attempting nowadays to live a single day without sugar; no tea, no coffee, no jam, no pudding, no cake, no sweets, no hot toddy before one goes to bed; the bare idea of it is too terrible.”

Note: Grant Allen lived 1849-1899. Address: The Nook, Dorking [Surrey, England].

• **Summary:** The Japanese practice a near-vegetarian diet and consume very little meat. In 1882 only 36,288 cattle were slaughtered and the 37 million inhabitants consumed less than 1 kg per capita each year. The authors found that rice constitutes about 50% of the total vegetable food of the Japanese, followed by barley and wheat (27%), other small grains such as millet and buckwheat (13.9%), with green vegetables, roots, tubers, etc. making up the remainder. Soybeans, which are rich in protein and fat, are not widely consumed as such directly, but are made into other unique foods such as tofu and miso, and a tasty sauce, shoyu. Miso is made in almost every household in Japan. The process for making miso, tofu (*Bohnenkäse*), and shoyu is described (p. 103-04).

A table (p. 121) gives the chemical composition of various Japanese foods (on a moisture-free basis), including soybeans cooked with shoyu, and tofu (*Bohnenkäse*).

Address: Tokyo, Japan.

Chemical composition... 3d ed.]. Berlin: Verlag von Julius Springer. 1161 p. See p. 241-42. [21 ref. Ger]

• **Summary:** A table at the beginning of this section (p. 241) gives the weight (gm) of the contents of one bottle, the retail price (German marks), and the chemical composition of 7 such sauces, including “Harvey-Sauce,” Japanese shoyu (*Japanisch Soya*, 550.4 gm, DM2.75), and Indian shoyu (*India-Soya*, 272.2 gm, DM1.25).

More about commercial sauces: The following information about Japanese shoyu or Shoya or Soy (“*Japanisch Soya*” {*oder Shoya, oder Soy*}) comes from a lecture at the Chemical Association (*Chemiker-Verein*) in Hamburg published in the *Officielle Zeitung d. allg. Ausstellung für Kochkunst und Volksernaehrung in Düsseldorf* (1887, No. 4) and from a report titled *Japan. International Health Exhibition A. Descriptive catalogue etc.* (London 1884, p. 21), by Nagai and Murai.

The ingredients or raw materials are: Barley or also wheat (*Gerste oder auch Weizen*), table salt, yeast (*Hefe*), water, and above all, a bean which is cultivated for this purpose, the soybean (*die Sojabohne; Dolichos Soya* or *Soya japonica*) which gives the sauce its characteristic aroma.

The dehulled beans are dried, then in the same way as coffee beans, roasted in ovens scattered throughout the country, since when fresh they cannot be transported well without losing their aroma.

The barley is a long-grained, very hard variety, which can be used without being dehulled. A portion of it is roasted, just like the beans. In the main factory in Tokyo a portion of the fresh barley is now allegedly malted (*gemalzt*) and from it an infusion (*Aufguss*) is prepared, just like in our distilleries. The roasted beans and the barley are then poured into another large vat with cold water and allowed to soften for a long time, while it is kept at an artificially low temperature, and later a high content of table salt (NaCl) is added to the infusion to protect it from spoilage (*Zersetzung*). After a while the diastase solution, prepared from the malt, is mixed in (whether warm or cold, we could not find out), then the entire content is left alone, although it is stirred once in a while. As soon (based on experience) as the time comes, when the seasoning has attained the right color, the varieties of yeast (*Hefe*) are added. Under the given conditions (very low temperature) as well as the high salt content, a very slow fermentation (*Gährung*) takes place. It runs its course supposedly without carbonic acid development and without alcohol in the end product. Depending on the composition

and raw materials, three types of soy sauce are made: The lowest quality requires a one-year fermentation, the middle quality two years, and the third three full years, during which time the vat remains unstirred.

The soy sauce is then drawn off, leaving the dregs behind, and is ready for use. Stored in a cool place in porcelain bottles in the absence of air and light, it keeps for several years; however in the presence of air and light, slow fermentation takes place, [lowering its quality] without noticeable changes in week-long intervals.

A second table (p. 242) from Nagai and Murai shows the relative density and chemical composition of Japanese shoyu from two different sources: (1) “Tokio Shoy und Kwaisha” in Tokyo, and (2) “Kikkoman Shoya” [sic, Shoyu] from Noda, Shimousa Prov. Details of the composition of the ash of sample 1 are given; no alcoholic content could be detected.

In Japan, shoyu serves as a seasoning for almost all foods and forms a widespread food for the people (*Volksnahrungsmittel*), which must partially take the place of meat. Address: Prof. and Head, Agricultural-Chemical Experiment Station, Muenster in Westphalia, Germany (Professor und Vorsteher der Agric.-Chem. Versuchsstation Muenster i. W., Germany).

1322. Matthews, Charles George; Lott, Francis Edward. 1889. *The microscope in the brewery and malt-house*. London: Bemrose & Sons. 198 p. See p. 85, 184-85. Illust. Index.

• **Summary:** This book is dedicated to Mon. Louis Pasteur. In Chapter 6, “The moulds or microscopic fungi,” states (p. 85): “The only distinct industrial purposes to which mould-growths are applied, are in connection with this power of forming Alcoholic ferments. It appears besides, that moulds may give rise to a species of Diastase, as for instance, in the preparation of the Japanese ‘Koji,’ made from steamed rice on which a yellow dust—the spores of a fungus—is placed, and subsequently allowed to vegetate. ‘Koji’ is capable of liquefying gelatinized starch, and setting up a fermentation in it, giving rise to a kind of Beer—the Japanese ‘Saké’ Koji is also used in breadmaking and as a source of ‘Soy’ [sauce]. The mould giving rise to these spores is called Eurotium *Oryzæ*” [*Aspergillus oryzae*].

In the Glossary we read: “Eurotium *Oryzæ*, a mould, the spores of which are found in Kôji, the Japanese ferment” (p. 184).

“Kôji, macerated rice containing fungus spores, used by the Japanese as a ferment in making Saké, and bread; also in the manufacture of ‘Soy’” [sauce]. Address: 1. F.C.S. [Fellow of the Chemical Society], F.I.C. [Fellow of the Institute of Chemistry], etc.; 2. F.I.C., A.R.S.M., etc. [England].

commerce. London: Hodder and Stoughton. xii + 570 p. See p. 6, 55-59, 62-63, 105-08, 157. Illust. Indexes (English and Latin; Japanese). 26 cm. [3 ref. Eng]

• **Summary:** This book is a translation of volume II of his superb book *Japan nach Reisen und Studien*, published in 1886. The result of many years of study, including a stay in Japan, it is based on travels and researches undertaken at the cost of the Prussian government. On page 6, the author discusses the *Gokoku* (five chief cereals) and the introduction of agriculture to Japan. "As Tokugawa Ieyasu, the founder of the last Shōgun [shogun] dynasty, emphasizes in the twelfth of his 'Eighteen Laws,' the introduction of agriculture into Japan is ascribed to the sun-goddess *Tenshō Daijin* (Amaterasu). She was, to the old Japanese, Janus and Ceres in one. Her temple, at Yamada, in Ise, was the great national sanctuary, which had to be cared for according to law, and built anew every twenty-one years out of consecrated Hinoki-wood (*Chamaecyparis obtusa* S. and Z.) 'in order that the land might have peace and thrive.' By *Gokoku* (five chief cereals) were meant rice, barley and wheat, Italian millet, other kinds of millet, and beans—in fact, the principal *Kokurui*, that is, cereals and pulse. The term *Go-koku*, however, did not mean the same thing in all ages. Thus we find in Kaempfer, *Amoenitatum exoticarum* (1712, p. 834), *Kome* (*Oryza*), *O-mugi* (*Hordeum*), *Ko-mugi* (*Triticum*), *Daidzu* (*Dolichos soja*, L.), and *Adzuki* (*Phaseolus radiatus*, L.) mentioned as *Gokoku*. Later the idea was extended farther, and included all important food-plants belonging to the group of cereals and pulse."

"The Emperor Shinnung [Shen Nung] had introduced and spread the practice of agriculture in China, about the year 2700 B.C. For this he was deified after death, and a temple was dedicated to him in Peking. In the park-like surroundings of this temple, the emperor of China since then, at the time of the spring equinox, annually ploughs a piece of land and sows it with *go-koku*." Note 1. This is the second earliest document seen (Dec. 2000) that gives an early date (2700 B.C.) for Shen Nung. It is the earliest document seen (Dec. 2000) that weakly links Shen Nung with soybeans, which were probably one of the *Gokoku*.

Soy-bean is described in the chapter on "Food Plants," under "Pulse or Leguminous Plants." "Among the pulse of Japan (and not the less of China), the soy-bean ranks first in extent, variety of use, and value; and chemical analyses prove the empirical judgment is well founded. In point of nutriment, the soy-bean is of all vegetables the nearest to meat. It contains nearly two-fifths of its weight in legumin rich in nitrogen, and nearly one-sixth in fat. The soy-bean is to the inhabitants of Japan what their *garbanzos* (chick-peas) are to the Spanish, and their *feijao preto* (black beans) to the Brazilians. The author then describes the characteristics of the soy-bean, the work of Haberlandt with soy-beans in Austria, and the yields that he and his co-workers obtained. Note 2. This is the earliest English-language document seen

(June 2008) that uses the word "garbanzos" (or "garbanzo") to refer chick peas.

"In Japan the varieties of soy-bean are distinguished—according to colour, as white (more properly yellowish), black, brownish red, green, and spotted; according to duration of growth [maturity] as early-ripening, middle-ripening, and late-ripening; according to form, as spherical, ellipsoidal, kidney-shaped, and compressed laterally; and according to use, as to those which serve primarily in making Shōyu (soy), Tōfu (bean-cheese), and Miso (a sort of sauce), and those eaten in any plain shape." Soy-bean varieties in Japan include: 1. "White (pea-yellow) soy-beans, Japanese Shiro-mame or Haku-daidzu. To this division belongs an early-ripening sort with very small seeds, called Goguwatsu-mame [Go-gatsu], or 'five-months-kind,' because it ripens in the fifth month of the old Japanese calendar, our July; also another small-seeded, early-ripening variety, the Wase-mame or Natsu-mame, that is, early and summer-bean. These two are also called Tōfu-mame, because they are used chiefly in making Tōfu. Another sort serves to produce Miso. It is called Nakate-mame, 'middle-late bean,' its time of maturity occurring half-way between that of the early and late kinds. Its seeds are round and somewhat larger. The late ripening varieties, Okute-mame (late-bean), Maru-mame (bullet-bean), and Teppō-mame (gun-bean), or Aki-mame (autumn-bean) have, as their names indicate, mostly bullet-shaped seeds, which become harder and larger than the early ones. The variety last named is used in making Shōyu, while Maru-mame is valuable as horse-feed.

2. Black soy-beans, Japanese Kuro-mame or Koku-daidzu. These are eaten boiled with sugar, as an entrée, or as a relish to rice. A species like it with big, bullet-shaped beans is called Kuro-teppō-mame. 3. Brown soy-beans, Japanese Katsu-daizu (thirsty soy-bean) are much less grown than the white and black sub-species, and are used like the latter. They are distinguished as Aka-mame, red soy-beans, round, of red-brown colour, in different varieties, and Chama-mame, tea beans, three light-brown sorts of small extent and significance. 4. Greenish or bluish green soy-beans, Japanese Ao-mame or Sei-daizu, are eaten mostly boiled and with sugar, like the black and brown-red varieties. And, with the brownish sorts, they are much less widely grown than the black and yellowish. The Japanese distinguish the following sub-species of Aō-mame:—(a) Sei-hito,—epidermis green, inside a whitish yellow. (b) Nikuri-sei,—greenish throughout. Both sub-varieties run from roundish-ellipsoidal to a bullet roundness, are of medium size, and remind one of green peas. (c) Kage-mame, with pale green, round beans. 5. Speckled soy-beans, Japanese Furi-mame or Han-daidzu. This group is not important. Its cultivation is confined to a small area, in a few provinces. Its sub-varieties are known as:—(a) Kuro-kura-kake-mame, with a black spot on the saddle (eye), otherwise greenish; flat and with the outline of an egg. (b) Aka-kura-kake-mame, with a brown spot on the

saddle (eye), otherwise yellowish-green, flat and drawn out long. (c) Fuiri-mame or Udzura-mame, speckled or spotted soy-bean, yellowish-green with many dark flecks. A rare variety, grown only in a few places, especially in Harima. Note 3. This is the earliest English-language document seen (Sept. 2004) that uses the word “speckled” (or “speckling” or “specks”), or the word “flecks,” or the term “light-brown” to describe the color of soybean seeds.

“Early-ripening soy-beans are sown as early as April in Southern Japan, in Central Japan during May. Those that ripen in autumn need much more warmth, and are sown, as a rule, one month later... Late-ripening Daidzu is also a favourite for planting along the edge of fields and on the new-built dykes of rice-fields.”

Note 4. This is the earliest English-language document seen (June 2009) which states that there are early-, medium-, and late-ripening varieties of soybeans.

“At the end of his above-mentioned treatise, Haberlandt summed up in five noteworthy propositions, the results of his experiments with the soy-bean and of its chemical analysis. His conclusions are as follows:

“(a) The acclimatization of the early-ripening sorts, particularly those with yellow and reddish brown seeds, appeared to have fully succeeded in Central Europe.

“(b) The seeds obtained were larger, heavier, and handsomer than those from Eastern Asia, the chemical composition, however, remaining unchanged.

“(c) The soy-plant resists light spring frosts better than our young beans, and endures greater dryness in summer than most leguminous plants, though otherwise much like other kinds of beans.

“(d) It is distinguished by heavy crops, besides furnishing, in its stems and leaves, either green or dried, a nourishing feed, of which cattle are very fond.

“(e) In their high percentage of protein and fat, they far excel all other pulse in nutritive quality; and when properly prepared are second to none in flavour.

“After such favourable judgments, it might have been expected that the soy-bean, at least in the warmer regions of Austro-Hungary, would soon become popular and generally cultivated. The result, however, was quite otherwise. The hopes which he had aroused in behalf of this plant seem to have disappeared with Haberlandt, who died in 1878.

“As I know from a reliable source, people soon became convinced that it was possible to cultivate with certainty the early-ripening yellow sorts. The crops from these, however, are unsatisfactory. It is so difficult to boil them soft that they have no sale and cannot be turned to due account.”

The seeds of certain wild kinds of beans also serve for food, incl. Tsuru-mame or No-mame (*Glycine soja*, S. and Z.) and No-adzuki (*Atylosia subrhombica*, Miq.). (p. 62).

Tables (both based on other sources) show: (1) Analyses of soy-beans (*Glycine hispida*, Moench) (p. 62). Gives the nutritional composition of 8 varieties, plus the empty pods,

and the straw and leaves. (2) Comparative “analyses of various pulse” (p. 63), including *Glycine hispida* (Daidzu-soy-beans), *Phaseolus radiatus* (adzuki), *Pisum sativum* (Yendo-peas), *Vicia faba* (Sora-mame), lentil, yellow lupine, and ground-nut.

Pages 105-08 contain accurate, detailed discussions of shoyu, miso (which “does not spoil, and is said to be at its best when three years old”), and tofu.

A table titled “Average composition of various Japanese oil-seeds according to E. Wolff and others” (p. 157) includes the composition of ground-nut [peanut], sesame (brown, or white), hemp-seed, and soy-beans.

Also discusses: Adzuki (*Phaseolus radiatus*, p. 60, 108). Algae, marine, used as food [sea vegetables] (p. 77, 80-82). Ame, midzu-ame, and barley malt (p. 103-04). *Arachis hypogaea* (p. 56, 153-54). Fu (wheat gluten, p. 108). Hemp (*Cannabis sativa*, p. 75, 157, 165-66). Kudzu (p. 65, 160, 184). Sesame seeds (Benni-seed, gingeli, p. 154-55). Address: Prof. of Geography, Univ. of Bonn [Germany].

• **Summary:** “6. Shôyû, the Japanese bean-sauce, also called Soja, English Soy, both being corruptions of the Japanese name, is a dark-brown fluid with a pleasant aromatic odour and a peculiar salty taste. It foams up yellow when shaken, and leaves behind on the side of the glass a clear shining line of a fatty appearance, so that the Japanese designation “soy-oil” (Shô = soy, yû = oil) is quite appropriate. Its specific gravity, which Kinch gives as 1.199, may vary not inconsiderably according to the method of its production...

For the manufacture of Shôyû as I became acquainted with it in Kiôto (Kyoto), they use wheat (Ko-mugi), light-yellow Soja-beans (Shiro-mame), common salt (Shio or Shô), and water (Midzu); the first two in equal parts, three parts of water, and five or six parts of salt. In other places they take equal volumes of all four components. A small portion of the wheat is brought to fermentation with Kôji (rice-ferment); the rest is roasted to a delicate light-brown in iron pans over a fire of coals and then ground in little hand-mills. The Soja-beans are boiled soft for about half a day with a little water, in iron kettles, and after that pounded to mush. Flour, bean-mush, and the fermenting wheat are now thoroughly mixed, poured into little wooden boxes, and exposed to fermentation for three days in a suitable room, at as uniform a temperature as possible (25°C.), whereby the mass becomes covered with mould-fungus” (See also Hoffmann 1874).

“All through winter, for several minutes every day, the paste or porridge in these vats is vigorously and thoroughly stirred. In the warm season, when the fermentation takes

place more rapidly and the solid parts collect on the surface, it is only necessary to stir it from twice to four times daily. This is done with a sort of wooden shovel with a long handle, to use which the workman stands on the edge of the butt.

“A common proverb says, the more rats have found their death in the butts, the better the Shōyū. This, though not to be taken literally, expresses the long time required for making Shōyū. This period varies, in fact, from twenty months to five years, beginning in autumn as a rule, after the Soya-bean harvest. In this slow and peculiar fermentation process a considerable proportion of starch is converted into dextrine and sugar, besides which lactic acid and acetic acid are formed. The paste, at first thick, becomes thinner and more fluid, while its grey hue gradually changes to a muddy brown, and at last to a pure dark-brown. This last and the agreeable aroma accompanying it, together with a bitter taste, are developed generally between the third and fifth year. The Shōyū which is most prized for its odour and taste is obtained only by mingling equal quantities of three-year and five-year product. The mixture is put into strong, coarse, close-woven bags of wool or hemp-linen, which have been rendered closer still by being dipped in Shibu (which see). These bags, 60 to 70 cm. long and 18 cm. wide, are filled loosely, and then laid lengthwise and crosswise on top of each other in a large square box. Then a heavy wooden cover is put on, and a simple lever-press applied, one in which the long arm of 4 or 5 m. is weighted with stones. The expressed Shōyū flows through a hole in the bottom of the box into a bamboo cane, and through this to a cask sunk in the ground, and is then ready for use. As in oil refining, the first stuff produced is the most valuable. By continued pressure with increased weight a second quality is obtained, and at last a third, clear-flowing and less aromatic, as the dregs are mixed with salt-water and then squeezed again. Shōyū reaches the market in wooden barrels containing one To (20 liters). According to Hoffmann, the price was 1.5 yen (six shillings) for a To of the best sort, from three to four shillings for the second, and two shillings for the last.

“The delightful aroma and pleasing taste of Shōyū are quickly lost in a long sea-voyage, through the formation of mould. In good condition, however, Shōyū proves an excellent means of sharpening the appetite and assisting digestion. It is, on this account, as Chief Staff-surgeon Hoffmann justly remarks, much preferable to European preparations that are supposed to effect the same result, being perfectly harmless to the human system.” Note 3. This is the earliest English-language document seen (April 2012) that uses the term “bean-sauce” to refer to soy sauce. Address: Prof. of Geography, Univ. of Bonn.

1325. Rein, J.J. 1889. Tofu, kori-tôfu, and yuba (Document part). In: J.J. Rein. 1889. The Industries of Japan. Together with an Account of its Agriculture, Forestry, Arts, and

Commerce. London: Hodder and Stoughton. xii + 570 p. See p. 107-08. [3 ref. Eng]

• **Summary:** “8. Tōfu, called in English bean curd, in German and French, less appropriately, *Bohnenkaese* and *fromage de pois*, is a valuable article of food made in Japan and China from yellow Soja-beans. It consists of fresh coagulated legumine [legumin], so that the English term suits it better than the German. Its preparation is simple.

“The yellow Soja-beans are put to soak, in cold water for from twelve to twenty-four hours, or a shorter time in warm, and then ground between the stones of a hand-mill, water being added to assist maceration. It becomes thus a thin mass, in which the quantity of water exceeds that of the beans about ten times. This is next filtered or pressed through a fine sieve, and the remnant put through the mill a second time. Ten volumes of this filtered stuff are now diluted with three volumes of hot water, and heated to boiling-point. This is done in a kettle, which is only about half filled. When cool again, the mass is filtered through a woollen sack, and the process ends with pressing it under the lever.

“As in our soups from leguminous plants, the legumine is now found dissolved in the filtrate. To coagulate and separate it, there is added Shio-no-nigari (salt-bitter), i.e. brine from sea-salt, consisting principally of chloride of magnesium. Care is taken to have the precipitation take place slowly and quietly. (In China, according to St. Julien, burnt gypsum is also added.) When the liquor has cleared it is dipped out carefully, while the stuff precipitated is placed in four-cornered wooden forms with punctured, movable walls, which are lined with cloth. This is folded together over the Tōfu, a board is laid on top, and the Tōfu pressed out with a moderate weight of stones. Finally, the soft greyish mass is cut into tablets with broad latten [resembling brass] knives, and put away under water. In summer this suffices only for a short time. To be kept longer, it is put up in Shōyu, or pickled, etc.

“Kori-tōfu, frozen or ice-Tōfu, is the spongy, horn-like substance that remains when common Tōfu is allowed to freeze and then thawed and dried in the sun, thus getting rid of most of its water. By Yuba is meant a third preparation, consisting of brownish, tough skins, made by boiling the dissolved legumine of the Tōfu-process, with the addition of some wood-ashes, and then taking away in succession the scums that rise.”

Note 1: This is the earliest English-language document seen (Feb. 2004) that uses the term “frozen Tōfu” or “ice-Tōfu” to refer to dried-frozen tofu.

Note 2. This is the earliest English-language document seen (Oct. 2008) that uses the word “scums” to refer to yuba. Address: Prof. of Geography, Univ. of Bonn.

1326. Whitney, William Dwight. ed. 1889. The century dictionary: An encyclopedic lexicon of the English language. 6 vols. New York, NY: The Century Co. See vol. I, p. 488.

• **Summary:** This dictionary contains three entries related to the soy-bean in Volume 1. At the entry for “bean” we read: “Sahuca or soy beans, the seeds of *Glycine Soja*, largely cultivated in India and China, from which the sauce known as soy is made.

“bean-cake, n. A large cheese-shaped compressed cake of beans after the oil has been expressed, used largely in northern China as food for cattle, and in the sugar-plantations of southern China as manure.”

“bean-curd, n. A thick white jelly resembling blanc-mange [blancmange], made of beans, much eaten by the natives of northern China, Corea [Korea], and Japan.”

Note 1. This is the earliest document seen concerning soybean products (bean-curd) in Korea; soybeans as such have not yet been reported.

Note 2. This edition of *The Century Dictionary*, published from 1889-1891, is the earliest edition listed in the *National Union Catalog*. Address: Prof. of Comparative Philology & Sanskrit in Yale Univ.

1327. G. [Greshoff, M.?]. 1890. De Soja-boon en hare beteekenis als voedingsmiddel voor Nederlandsch-Indie [The soybean and its significance as a food for the Netherlands Indies]. *Tijdschrift voor Land- en Tuinbouw en Boschcultuur in Nederlandsch Oost-Indie* 5(10):347-56. Jan. 1. [5 ref. Dut]

• **Summary:** In the Netherlands Indies, the soybean (*De soja*), which is called *katjang kadeleh* and *katjang djepoen*, plays a very important role in the production of the sauce known as *ketjap*. However real soy sauce (*soja*) is of much greater importance to the Japanese and Chinese. The Chinese have carried their tradition of soy sauce usage and consumption abroad. The natives of Java use unripe beans, whereas the Chinese use well-ripened beans.

Chemical analyses over recent years have proven the superior nutritional value of the soya bean. No other legume has given such a favorable analysis. This shows how the experience makes the right choice ages before theory had its say about such things. It is as if every reputable chemical food analyst has to issue their own personal analysis of the soya bean in order not to embarrass themselves. According to the Japanese Yossyda [Yoshida?], there are 100 varieties of soya in cultivation in his homeland. Geerts describes 16 different kinds in his monograph. Analyses are given of several soybean varieties. The first, by Geerts and Dewars (Dutch) analyzed 7 varieties: yellow soybeans from Japan (*Wase-mamé*) and China, black soybeans from Japan (*Kuro-mamé*) and China, green soybeans from Japan (*Ao-mame*), Nakaté from Japan, a yellow soybean cultivated in south Russia. One analysis is given by Meissl and Böcker (German), and one by Church (British). Then seven analyses by Church are given of other common legumes from India. Then follows Church's analyses of rice, Indian wheat, corn / maize (*Djagoeng* [*jagung*]), and common sorghum (*Sorghum vulgare*; *Djagoeng tjeutriek*)—followed by a short

explanation.

Experience has shown that in colder climates, the starch content of soybeans rises, while the content of other nutrients drops. This is why major areas of soybean cultivation (as promoted for 15 years by Haberlandt) have been limited to central Europe.

The soybean is said to contain an enzymatic substance which rapidly converts starch to sugar, and to which the high value of soy sauce is attributed. But tests have yet to prove this. Then follows an essay on the caloric value of soy compared to other foods, and how to calculate this correctly. Church's methods of determining the nutrient value of foods are described as too limited.

Among vegetable foods, the soybean is very digestible. According to the latest research by Ladd, comparing the digestibility of various proteins (*eiwitstoffen*), soybean is 75% versus 64% for flour and 54% for grains. Because soya is very low in starch, it is a perfect food for diabetics. At a recent congress for doctors in Paris, soy bread was promoted and given much attention. Prof. Stokvis told the congress how a baker named Koehler bakes soy bread and soy cookies of high quality.

The soybean is also appropriate, because of its nutritional composition, as a food for children and the sick. It is up to an enterprising person to bring it onto the market. Also, soy sauce would be a good commercial product if manufactured in Europe. But the most important point is that soya is an excellent food and, as such, is not given the recognition it deserves in the Netherlands Indies. It is an inexpensive vegetable meat. It deserves to be cultivated, because it can serve as a good, low-cost source of protein for a large number of people. It is appropriate for use in institutions, orphanages, and the army and navy, and deserves experimentation on a large scale. The indigenous people of the Netherlands Indies are used to eating the bean unripe, and not very well cooked—and they are persistent in serving it like this, which has led to the rejection of soy in many important circles.

Glycine soja is a very good secondary crop, next to rice. There is no need to emphasize this, since the Inspector of the Civil Medical Service has brought to the attention of the Netherlands Indies government and its officials, in a very professionally written piece, the advantages of soya cultivation.

“I can't give you any indications about the basis on which the soybean (“katjang kadeleh”) will best thrive. There are so many questions concerning the growth and function of the so-called root nodules (*wortelknolletjes*) of the *Papilionaceae* and the microorganisms that live therein. It has been determined that these plants, which include the soybean (*de soja*) are capable of creating free nitrogen and assimilating it.”

Note 1. This is the earliest document seen (June 2010) concerning soybean root nodules and nitrogen fixation in

Europe.

The author closes with the wish that the import of soya will prove to be a blessing for Java. [Note 2. This could mean either importation of soybeans from China, or more widespread introduction of soybean culture to Java, or import from Java to the Netherlands.] For about a year he has been trying to bring soy to the attention of the Netherlands, an attempt he wants to repeat again under the favorable auspices of a small official publication circulated to those who are interested.

Note 3. Paerels 1913 (p. 288) and Kempster 1923 (p. 79) both cite F.A. von Stuerler as the author of this article, but at the end of the article, the author's name is written simply as "G." On the same line is written: "B. Nov. 1889."

Note 4. This is the earliest Dutch-language document seen (Feb. 2001) that has the word "Soja" (or "Soja-boon" or "Sojaboon") in the title.

Note 5. This is the earliest Dutch-language document seen (Aug. 2003) that uses the word *eiwitstoffen* (or *eiwitstoff*) to refer to proteins in connection with soybeans.

1328. T. de L. (Terrien de Lacouperie). 1890. Etymology of ketchup. *Babylonian and Oriental Record* 4(3):71-72. Feb. [1 ref]

• **Summary:** This is a response to a letter from Rev. Hilderic Friend, who was a missionary in China and who wrote a work on the Folklore of Plants. Friend denies the Chinese origin of the word ketchup, though the Chinese spelling is kwai-tchap. "In perusing the sections about meals and plants in the anonymous work, *A comparative vocabulary of the Barma, Maláya, and T'hái* (of J. Leyden; Serampore, 1810) since my note was published, I have found two terms, Nos. 2199 and 1144, where appear words which may be connected with the antecedent of *ketchup*, if not its antecedent itself. In Siamese *luk kachap* (read *katchap*) where *luk* is the auxiliary numerative, is a sort of sweetmeat; and *p'hak kachiap*, same remarks about reading and *p'hak*, is a species of *crotalaria*.

"Should this surmise be verified, the word originated in Siam has received its Chinese garb from the Chinese there; it has been spread by them in the Indian Archipelago, and even carried as far as China and Japan. The Europeans, then, must have learned it in Indonesia."

• **Summary:** Largely about the chemical composition of

shoyu. Address: Gakushi.

1331. *Chemisches Central-Blatt*. 1890. Japanische Sojabohne [Japanese soybeans (Abstract)]. 1890(25):1013. Dec. 17. [1 ref. Ger]

• **Summary:** A German-language summary of the following German-language article: *Bayerische Gewerbe-Zeitung* (Nuremberg). 1888. "Japanische Soja" (Japanese soy sauce). No. 23. p. 538-40. It also cites four other articles on the same subject, for comparison.

1332. Shimada, Kôichi. 1890. Shôyu no hyôjun [Standards for shoyu]. *Tokyo Kagaku Kaishi* (*J. of the Tokyo Chemical Society*) 11(10):149-50. Dec. [Jap]

• **Summary:** This study was conducted on 10 brands of regular shoyu. When sugar or barley malt syrup are added to the shoyu, the contents of these are listed separately. Maximum, minimum, and average figures are given for each nutrient. Only the average figures are translated here. Specific gravity 1.205. Solids 38.01%. Grape sugar/glucose 4.29%. Free acid (lactic) 1.04. Nitrogen 1.28 (Range 0.51 to 1.56). Inorganic salts 20.27 (range 17.47 to 23.61). Sodium chloride 17.81 (range 15.25 to 21.76), phosphate 0.47. Salt as a percentage of solids 46.84.

1333. Chamberlain, Basil Hall. 1890. Things Japanese: Being notes on various subjects connected with Japan. London, K. Paul, Trench, Trübner & Co.; Tokyo, the Hakubunsha, Ginza; etc. ii + 408 p. Index. 21 cm. 2nd ed. 1891. Slightly revised edition published 1905. Reprinted in 1970 by Charles E. Tuttle Co., Inc. (Rutland, Vermont, and Tokyo). [50+* ref]

• **Summary:** The author, who arrived in Japan in 1873 and was first introduced to the mysteries of the Japanese language by a dear old samurai, has lived through the transition stage of modern Japan.

This book is arranged alphabetically by subject. An extensively revised 2nd edition was published in 1891. Food (p. 122-25): "The following is a specimen of the bill of fare at a Japanese banquet. The reader must understand that everything is served in small portions, as each guest has a little table to himself, in front of which he squats on the floor:—Preliminary course, served with sake:—*suimono*, that is, a kind of bean-curd [tofu] soup;... *sashimi*, minced raw fish; *hachi-zakana*, a fine, large fish, either boiled with salt or boiled with soy [sauce]; *uma-ni*, bits of fish or sometimes fowl, boiled with lotus-roots or potatoes in soy and in a sort of liqueur called *mirin*;...

"First course (*Zembu*):—*Shiru*, soup which may be made of bean-curd [tofu], of fish, of sea-weed or of some other material;... *aemono*, a sort of salad made with bean sauce [miso] or pounded sesamum seeds;..."

"It is the custom, too, to set food before a guest, at whatever time of day he calls. On such occasions *soba* is

in request—a sort of buckwheat vermicelli, served with soy [sauce] and the sweet liqueur called *mirin*; or else *shiruko*, that is, rice-cakes [mochi] with a sauce made of red beans [azuki] and sugar.”

On Buddhism and vegetarianism in Japan (at Food, p. 122-23): Beans are a constant part of the daily diet. Buddhism has left its impress here, as on everything in Japan. To Buddhism was due the abandonment of a meat diet, now over a thousand years ago. The permission to eat fish, though that too entailed the taking of life, which is contrary to strict Buddhist tenets, seems to have been a concession to human frailty. Pious frauds, moreover, came to the rescue. One may even now see the term ‘mountain whale’ (*yama-kujira*) written up over certain eating-houses, which means that venison is there for sale. The logical process is this:—A whale is a fish. Fish may be eaten. Therefore, if you call venison ‘mountain whale,’ you may eat venison. Of course no actual prohibition against eating flesh, such as existed under the old *régime*, exists now. But the custom of abstaining from it remains pretty general; and though beef and pork were introduced at the time of the late revolution,... recent statistics show that meat-eating is again on the wane.”

There are also interesting sections on Kaempfer, Engelbert (p. 187-88), Perry (Commodore) (267-69), and Siebold, Philipp Franz, Freiherr (p. 320-22).

For an excellent, later book with the same title, written by a Japanese in English, see Mock Joya (1960). Address: Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo [Japan].

1334. Fesca, Max. 1890. Beitrage zur Kenntniss der japanischen Landwirtschaft. I. Allgemeiner theil [Contributions to an understanding of Japanese agriculture. I. General part]. Tokyo: Printed by Seishi-Bunsha for the Kaiserlichen Geologischen Reichsanstalt. x + 277 p. No index. 25 cm. Also published as vol. 1 of 2 volumes bound in one (Paul Parey, 1893). [1 ref. Ger]

• **Summary:** Fesca, a sophisticated German agricultural chemist, looks at Japanese agricultural practices, and finds many of them inefficient. Contents: Foreword. Weights and measures in the Japanese and decimal systems. Natural factors: The climate, the soil. The soil as an economic factor of production: Land prices, crop rotations, etc. Techniques for using the soil: Soil improvement, fertilizers.

Various legumes, and especially the soybean, grow in the temperate (*gemaessigte*) Zone northeast of Tokyo (p. 43-44). Two large tables (p. 134-35) show the amount of rice land per capita and the amount of dry land per capita in each province. The five provinces with the most rice land per capita are: Kaga (5.01), Noto, Bizen, Ugo, Awa (on Shikoku).

In the section on crop rotations, soybeans are mentioned on pages 171-72, 175-77.

A table (p. 190) compares various crops (including

soybeans) with rice in terms of their profitability to the farmer. Soybeans are less profitable. Tobacco is the most profitable, followed by indigo, cotton, and potatoes—all of which are more profitable than rice.

Soy is discussed most in the chapter on fertilizers (p. 222-25, 266). A large table (p. 222) gives the chemical composition of four traditional fertilizers, including sake lees (*sakekasu*), shoyu dregs (*shoyukasu*) and okara (*tofukasu*). Shoyu dregs, okara, and cooked soybeans are all discussed in detail on p. 224, based (in part) on analyses conducted previously by Kellner, also a German. “Cooked soybeans are widely used as a fertilizer; they are a concentrated source.” Soybeans (p. 232). Also discusses: Sesame and peanut cake (p. 226). Kudzu (p. 231).

Bound at the back are two large color fold-out maps: (1) Showing the provinces and the six vegetation zones of the Japanese islands. (2) Showing the value of land in each province (in yen/cho). Address: Tokio [Tokyo].

1335. Gorkom, K.W. van. 1890. Supplement op De Oost-Indische Cultures, in betrekking tot handel en nijverheid [Supplement to East-Indian crops: In relation to commerce and industry]. Amsterdam, Netherlands: J.H. de Bussy. vii + 303 p. See p. 283-87. Supplement to the 1884 publication of the same title. 25 cm. [2 ref. Dut]

• **Summary:** The section titled “Kadelé” (Soybeans) discusses the cultivation of soybeans (also called *katjang djepoen* [Japan beans], Soya, *Glycine hispida*, or *kadelé boontjes*) on Java and the experimental culture in Europe. Interest is shown in the cultivation of soybeans as a food for diabetics.

Soya is cultivated in Java both for its seed and for its green leaves which are used as animal feed. The small soy beans are roasted by the indigenous people or, in the form of cakes / patties (*tetempé* [tempeh]), eaten like bean-cheese (*boonen-kaas* [tofu]). (“*De kadele boontjes worden door de inlanders geroosterd of, in den vorm van koeken (tetempé), als boonen-kaas gegeten*”).

The author considers that Indonesian soy sauce (*kétjap*) is inferior to Japanese soy sauce. Nutritionally, soya is rich in proteins (*proteïnestoffen*) ($\pm 38\%$) and fat ($\pm 21\%$), and low in starch and sugar.

In Germany and Austria, many years have been spent in developing and cultivating varieties of soybeans adapted to the European climate. Dr. Haberlandt, professor at the University of Vienna, distinguished himself for this work, even to the extent that a variety was named after him. In the experimental gardens at the National Agricultural in Wageningen [Netherlands], a field of soya is cultivated, but the results are not yet satisfactory. Yields are low, especially during the dry and warm summers, when the plant flowers abundantly, but the seeds don’t have time to develop properly. The author hopes that through continued experiments, a suitable variety will be developed.

The soya bean has received attention from the medical profession because of its composition. Dr. Le Cerf of Paris was one of the first to try using soya with diabetic patients. He introduced soya bread instead of an almond bread and was successful with it. Dr. Stokvis, a professor in Amsterdam, recommended soy bread (see *Nederlandsch Tijdschrift voor Geneeskunde* No. 10), and the chemical analyses published by Mr. L.C.W. Cox in the same journal (issue No. 19) supported the recommendation. Patients were content with the bread, although they did not find it very appetizing. The author states that if rye or wheat flour could be used together with soy flour, they would yield a very digestible and nutritious food. For this reason also he recommended experiments aimed at acclimatizing soya to Europe.

Dr. Sollewijn Gelpke has published a work titled "The Yield and Cultivation of Dryland Crops," in which he writes that the cultivation of soya is quite easy and in Java takes place on sawahs (wet rice fields) and clay, in contrast to peanuts (*katjang-tanah*), which is grown on tegals and sand. [Note: A tegal is a dry (not irrigated) field, near the rice fields, but used for vegetables and other secondary crops.] Soya beans are sun-dried, soaked in water for 24 hours, then sown on land that has first been flooded with water. Otherwise they are sown by poking holes in the ground and dropping in the seeds. Gelpke says that soya is so appealing to the indigenous people that, if the soil is hard, he just opens the surface with a crowbar and sows his seeds. This way of cultivation is seen especially on the heavy clay soils of Java.

In the Netherlands it is not well known that soya is cultivated in Java, because it could be imported for less money than is currently the case. The author has samples of the beans and has noticed that the seeds from European experiments are smaller in size than those grown in Java.

Various laboratory analyses are given. It is noted that a soya flour coming from Hungary is used for the production of soy bread, baked by Mr. Koehler of Amsterdam. Mr. Cox studied this bread. The author believes that the sugar content of this bread is high enough to make it unsuitable for diabetic patients, and notes the presence of starch and dextrin. Morawski and Harz have confirmed that ripe soya beans don't contain starch, whereas unripe beans do.

Note 1. Kemptski (1923) says: "see van Gorkom's Oost-Indische Cultures, neu herausgeg. von Prinsen-Geerligs, Verlag de Bussy, Amsterdam, 1913, Vol. III, p. 283/86."

Note 2. This is the earliest Dutch-language document seen (Aug. 2003) that uses the word *proteinestoffen* (or *proteinestoff*) to refer to proteins in connection with soybeans. Address: Dr., Former Head Inspector of Crops, Dutch East Indies (Oud-Hoofd-Inspecteur der Cultures in Nederlandsch Oost-Indië).

1336. Henderson, Peter. 1890. Henderson's handbook of plants and general horticulture. New ed. New York, NY:

Peter Henderson & Co. 528 p. Illust. Index. 27 cm.

• **Summary:** Soy is mentioned in two places in this book: The main entry is under "Soja" (pronounced So'ja) (p. 417), which states: "From *sooja*, the name of a sauce made from the seeds in Japan. Nat. Ord. *Leguminosæ*."

"*S. hispida* is a climbing annual plant allied to (*Dolichos*). It is much cultivated in tropical Asia on account of its beans, which are used for preparing a well-known brown and slightly salt [sic] sauce (Soy) used both in Asia and Europe for flavoring certain dishes, especially beef, and supposed to favor digestion. Of late it has been, to some extent, cultivated as an oil plant."

The second entry is under "Bean" (p. 45). In the middle of a long alphabetical listing of many types of beans we read: "Sacred Bean, the common name for *Nelumbium*. Sahuca Bean, the seeds of *Soja hispida*. St. Ignatius's Bean, the seed of *Strychnos multiflora*..."

Note 1. This is the earliest document seen that uses the word "Sahuca" in connection with the soy/soja bean.

Note 2. This book contains hundreds of illustrations of plants discussed in the book; unfortunately the soybean is not illustrated.

Note 3. Pages 527-28 are advertising matter. Peter Henderson lived 1822-1890. Address: 35 Cortland St., New York.

1337. Hosie, Alexander. 1890. Three years in Western China; A narrative of three journeys in Ssu-ch'uan, Kuei-chow, and Yun-nan [1882-84]. London: George Philip & Son. New York: Dodd, Mead. xxxiv + 302 p. Illust. Index. 23 cm. 2nd edition published in 1895.

• **Summary:** In pinyin, these three provinces are now written: Sichuan (northernmost of the three), Yunnan (southern), and Guizhou (southeastern). The author, an excellent observer and writer, was stationed in Western China by the British government from 1882 to 1884. Throughout this travelogue, on 18 separate pages, he reports that [soy] beans were being grown, usually with other local crops such as barley, buckwheat, ground-nuts, hemp, maize, millet, oats, opium poppies, rape, and wheat.

On the way to Ch'ung-King [Chongqing] in Sichuan province: "My men, who for the last few days had been unable to procure rice, and had subsisted for the most part on bean-curd, rejoiced to find themselves in a valley of their own province where paddy, maize, tobacco, hemp, and beans were well advanced..." (p. 68).

Near Ch'ung-King: "The hill-sides were also covered with [soy] beans, which seemed to thrive well on a scanty soil." The greenery, houses, and restaurants "invite the traveller to tarry for a moment and enjoy their cool shade. As pack animals are usually turned loose to forage for themselves, the peasantry, whose lands adjoin the high-road, have hit upon a novel plan to prevent their depredations. Wheat and beans were thickly sprinkled with feathers,

which, as might naturally be supposed, are not a pleasant sauce" (p. 72).

In the city of Hou Chou in Sichuan province: "A special industry of the city is the manufacture of a soy [sauce], which is famous, not only in Ssu-ch'uan, but in other provinces. Chinese soy, as is well known, is imported to England in large quantities, and is, I believe, used in the manufacture of sauces. In China itself there is amongst foreigners a decided prejudice against soy, and a fresh arrival is often solemnly assured that it is made of boiled down cockroaches; yet, to the best of my information, it contains nothing more deleterious than the juice of a bean" (p. 164).

The city of Nei-chiang [Neijiang] in Sichuan province exports "bean-sauce" [probably soy sauce], opium, grass-cloth, and several other things. Sugar cane and ground-nuts cover the hill slopes (p. 169). A fold-out map at the back shows the author's route.

Also discusses: Ground-nuts [peanuts] (p. 83, 169) and the sweet cooking oil extracted from them (p. 83). Women who wore coarse hempen clothes (p. 152). Address: H.B.M. Consular Service, Wenchow, China.

1338. Kellner, O[skar Johann]; Mori, Y[ôtarô]; Nagaoka, M[uneshige]. 1890. Beitrage zur Kenntniss der invertirenden Fermente [Contributions to the knowledge of inverting enzymes]. *Hoppe-Seyler's Zeitschrift fuer Physiologische Chemie* 14(3):297-317. [13 ref. Ger]

• **Summary:** This article contains a long analysis of the role of koji and its enzymes (*Koji-Ferment*) in the fermentation process that creates rice wine (saké). The process of making koji from spores is described, as well as the quantitative changes which take place with the development of the mycelium on two substrate (rice or barley) at various temperatures. The work of Prof. Atkinson is discussed at length.

On pages 306-08 Kellner gives the results of his experiments on the effects of koji extracts on various carbohydrates: cane-sugar, milk sugar (lactose), maltose, inulin (a tasteless white polysaccharide), and starch. (Note: In chemistry, inversion, is the conversion of dextrorotary sucrose into a levorotary mixture of glucose and fructose). Before the inversion, there is 4.04% reducing sugar, expressed as dextrose (optical rotation 20.9°); after the inversion there is 7.46% (optical rotation 8.4°). Kellner summarizes these results on p. 310 as follows: "From our investigations, one can conclude that koji contains a powerful inverting ferment [enzyme], which transforms cane sugar into dextrose and levulose, maltose into dextrose, and starch into dextrin, maltose, and dextrose. However milk sugar and probably also inulin are not transformed. Therefore the koji enzyme (*Koji-Ferment*) is entirely different from the diastase of malt; it is also probably different from the invertin (*Invertin* = invertase) of beer yeasts, which easily inverts cane sugar to dextrin and maltose—according to

Mr. J. Kjeldahl. Kellner then repeats the experiments on carbohydrates using yeast extracts (p. 311-13) and confirms that the latter give different results than koji extracts. He then coins the term "Invertase" (p. 313) to refer to the inverting enzyme in *Eurotium Oryzae* Ahlb. (later renamed *Aspergillus oryzae*, the koji mold).

On p. 316 Kellner explains: In addition, koji is frequently used in a mixture with considerable amounts of table salt (*Kochsalz* = NaCl), steamed soybeans, and other materials (*Stoffen*) for the preparation of miso (a food {*Nahrungsmittel*} very widely found throughout Japan) and shoyu (a sauce which is also known in Europe); it seems to be used here mainly as the carrier of a slow, often years long fermentation. "Since miso contains only 6-12% salt and shoyu contains about 150-160 grams of salt per liter, and since this salt limits the action of soluble ferments, we have investigated how the transformation of soluble starch takes place through invertase the presence of various amounts of salt." A table (p. 317) shows two experiments. The percentage of table salt in the mixture is increased from zero to 20% in five or six steps. As the percentage of salt increases, the reducing sugar (expressed as dextrose) decreases moderately, while the relative activity of the invertase decreases dramatically. Fehling's solution is used in the experiment. Address: Japan.

1339. Merck, Klemens. 1890. Klemens Merck's Warenlexikon fuer Handel, Industrie und Gewerbe. Beschreibung der im Handel vorkommenden Natur- und Kunsterzeugnisse, unter besonderer Beruecksichtigung der chemisch-technischen und anderer Fabrikate, der Drogen- und Farbwaren, der Kolonialwaren, der Landesprodukte, der Material- und Mineralwaren. Vierte, wesentlich vermehrte auflage [Merck's dictionary of products and commodities for trade, industry and commerce. 4th ed.]. Leipzig, Germany: Verlag von G.A. Gloeckner. viii + 722 p. + 48 p. See p. 576. 25 cm. [Ger]

• **Summary:** The entry for "Soya" (p. 576) is almost identical to that in the 1882 edition. Soya is also mentioned under Beans (*Bohnen*, p. 78-79). The title page states that this book was compiled in cooperation with Messrs. Lorenz Brauer, Paul Degener, and others. Edited/published (*Herausgegeben*) von Dr. G. Heppe.

Also discusses: Peanuts (p. 150). Sesame seeds and sesame oil (p. 562). Address: [Germany].

1340. Purdy, Charles W. 1890. Diabetes: its causes, symptoms, and treatment. Philadelphia and London: F.A. Davis. viii + 184 p. See p. 87. Index. Physicians' and students' ready reference series, No. 8. [2 soy ref]

• **Summary:** In Section VI, "Treatment of diabetes mellitus," the soya bean is mentioned (p. 87): *Soja*, or Japanese bean, owing to its high nutritive properties and its low percentage of starch, is likely to enter largely into the diabetic diet of the

future. It has recently been much cultivated in some parts of Europe, especially in Hungary. Its composition is as follows: Nitrogen, 36.6 per cent.; fatty matter, 17 per cent.; starchy matter, 6.4 per cent.

“A sauce is made from *soja* which bears the name of *miso* and *soju* [shoyu]. A kind of cheese [tofu] is made from it, and very much prized in Japan as a table-luxury. (Footnote: See Egasse 1888, p. 433-38).

“In Europe the *soja* has already been utilized for food of men and animals, and recently the attempt has been made to make bread of it. This is very difficult because of the large proportion of oil which it contains. This oil is very purgative [sic], and hence it becomes necessary to rid the meal of it in order to render it fit for domestic usages. Lecerf in Paris and Bourdin in Rheims have succeeded in rendering the bread made from this meal very well supported by the stomach.

“This bean, which, as the analysis shows, is more nutritive than meat, serves for nourishment to a great country like Japan, under the forms of sauce, of cheese, of farina, and even of *real* artificial milk” (Footnote: Therapeutic Gazette, March 15, 1890, p. 150).

Gluten is also mentioned several times (p. 84-85): “First in importance ranks the question of bread in the construction of any diabetic diet-list. The withdrawal of this article from the list is usually the most serious deprivation the patient has to encounter. In consequence of this fact, an almost endless number of breads have been placed upon the market, which are *claimed* to be free, or nearly free, from starch, and are hence named diabetic breads. Now, I do not hesitate to say that most breads which have been put upon the market with such claims are ‘a snare and a delusion,’ and have unquestionably shortened the lives of hundreds of diabetic patients. Most samples of so-called ‘diabetic flour,’ from which the starch is claimed to have been eliminated, ‘or nearly so,’ contain from 30 to 70 per cent. of that article... But Dr. Chas. Harrington, of Boston, has rendered us under perpetual obligations to him for fearlessly exposing the most of these deceptions, by publishing a careful analysis of most of them in detail. It may first be noted that his analysis of home-made bread gives the proportion of contained starch as 44.99 per cent. The Graham wafer, made of Graham flour, contains 58.45 per cent. of starch. The gluten flour, of Farwell & Rhines, of Watertown, N.Y., contains 67.17 per cent. of starch... The gluten flour of the New York Health Food Company contains 66.18 per cent. of starch. Bread made of this flour would contain 35 per cent. of starch... The Boston Health Food Company’s diabetic flour, No. 1, sold as absolutely non-starchy, contains 62.94 per cent. of starch. Bread made of this flour would contain 30 per cent. of starch.” Address: M.D., Queen’s University [Kingston, Ontario, Canada].

1341. Watt, George. 1890. A dictionary of the economic products of India. Vol. 3. London: W.H. Allen & Co.;

Calcutta, India: Office of the Superintendent of Government Printing. 534 p. See p. 509-11. Index (in Vol. 7). 25 cm. [14 ref]

• **Summary:** Contents related to the soy bean: *Glycine* (p. 509-10). *Glycine hispida*, Maxim. (p. 510-11): Synonyms, vernacular, references, habitat, oil, medicine, food and fodder, chemistry, the bean, oil.

Under *Glycine*: “Reference having been made to the authorities of the Calcutta Herbarium on the subject of *G. soja*, Sieb. et Zucc., being, as shown in the Flora of British India, a native of this country, Dr. Prain kindly went into the subject very carefully. He writes: ‘We have not, from any part of India, any specimens of *G. soja* proper. The Khasi Hills plant is more erect, more hispid, and has larger legumes than the Himalayan, and indeed resembles *G. hispida*, Maxim., quite as much as it does the Indian cultivated “*G. soja*,” which, indeed, it connects with *G. hispida*. It is, in fact, the plant most like the wild *G. soja*, S. et Z., which no one ever professes to have found wild in India, while it is also the one most like *G. hispida*, Maxim. (which has never been found wild anywhere). It is the plant collected by Dr. Watt and myself in the Naga Hills.’

“The writer noted on his Naga Hill specimens that they were found in a semiwild state, and that the plant was known to the Angami Nagas as *Tsu Dza*, a name not unlike *soja*. Throughout India, the soy bean is cultivated, black and white seeded forms being met with, which vary to some extent, but all preserve the specific characters of *G. hispida*. Plants raised at Saharanpur from Japanese seed have larger and broader leaves than the usual Indian forms. The fact that this cultivated plant possesses, even among the aboriginal tribes, names which are original, i.e., in no way modern derivatives, points to an ancient cultivation, if, indeed, it may not be accepted as an indication of its indigenous nature. (Editor.)”

“Vern[acular]—Bhat, bhatwan, ram kurthi (Hind. [=Hindi or Hindoostanee]); Bhut (Punj. [=Panjabi]); Gari-kulay (Beng. [=Bengali]); Hendedisom horec (black-seeded), Pond disom, horec (white-seeded variety) (Santal); Tzu-dza (Naga); Bhatnas, bhatwas (Nepal); Seta, kala botmas (Parbat.); Musa, gya (Newar); Khajuwa (Eastern Terai); Bhut (Kumaun).

References: The author cites 17 early references concerning *soya* and, using information from these.

This brief bibliography on *soya* is one of the best and worst seen. Its is good in that it cites a host of previously uncited publications. It is bad in that the references are so abbreviated as to often be incomprehensible; and some of them are incomplete or incorrect.

Habitat: “Extensively cultivated throughout India and in Eastern Bengal, Khasia hills, Manipur, the Naga hills, and Burma, often found as a weed on fields or near cultivation.”

Medicine: “A decoction of the root is said to possess astringent properties.” Food and fodder: “The Soy-bean forms an important article of food in China and Japan. Since

1873, it has been successfully grown in the warmer parts of Europe. It is also widely spread, in a cultivated state, over a great part of the Himálaya [Himalaya] and the plains and lower hills of India. On the plains the crop is generally grown by itself, as a *kharif* crop; the seeds are sown from June to September, and the harvesting takes place from November to January.

“The bean is eaten in India in the localities where cultivated. The Rev. A. Campbell states that in Chutia Nagpur it is generally used roasted and ground as *satu*, or simply roasted in the form of *atá*. In other parts of the country it is also eaten in the form of *dal*. In China and Japan three preparations are made from the soy-bean, namely soy-sauce, soy-cheese, and a kind of paste. The last two of which are manufactured by crushing and pressing the seeds.”

Note 1. An extensive “List of works consulted” (bibliography) appears in Vol. I (1889, p. xiii-xxii), followed by a list of contributors (p. xxiii-xxvi) and list of abbreviations (p. xxvii-xxxiii).

Note 2. This is one of earliest documents seen (March 2005) that clearly refers to the cultivation of soybeans in Burma.

Sir George Watt lived 1851-1930. This 7-volume work, published from 1889 to 1896, is arranged alphabetically by product. An extensive bibliography is in vol. 1, and the index comprises vol. 7. Address: M.B., C.M., C.I.E., Reporter on Economic Products with the Government of India.

1342. Whitney, William Dwight. ed. 1890. The century dictionary: An encyclopedic lexicon of the English language. New York, NY: The Century Co. See the entry for “Soy” in Vol. 5, p. 5790.

• **Summary:** This dictionary contains three entries related to the soy-bean in Volume 5: (1) “Soy (soi), noun. [Also *sooja*; = F. *soy*, *soui* = G. Sw. Dan. *soja* (NL. *soja*, *soya*); Jap. *si-yan*, Chinese *shi-yu*, soy.] 1. A kind of sauce prepared in the East from the soy-bean (see def. 2). It is eaten with fish, cold meat, etc. There are two or three qualities of soy [sauce], but the Japanese soy is reckoned the best.

‘I have been told that soy is made with a fishy composition, and it seems most likely by the Taste; tho’ a Gentleman of my Acquaintance who was very intimate with one that sailed often from Tonquin [Tonkin, in today’s Vietnam] to Japan, from whence true Soy comes, told me that it is made only with Wheat, and a sort of Beans mixt with Water and Salt.’ Dampier, Voyages, II, 28.

‘From travellers accusom’d from a boy / To eat their salmon, at the least, with soy.’ Byron, Beppo, vii.

2. The soy-bean or -pea, *Glycine Soja* (*Soja hispida*, etc.). It is an annual leguminous plant with stout nearly erect or somewhat climbing stems covered with rusty hairs, bearing trifoliate leaves and from their axils two or three pods 1½ or 2 inches long. The seeds are made into the above sauce and variously used in cookery; an oil is also

expressed from them, and the residue is extensively used in China for feeding cattle and as a fertilizer. The plant is native from northern India to Japan. The cultivated plant differs somewhat from the wild, and by some authors is distinguished as *Glycine hispida*. Also *Sahuca bean*.

(2) soy-bean (soi’bên), noun. See soy, 2.

(3) soy-pea (soi’pê), noun. See soy, 2.

Note 1. James Platt (1899) says: The word “Soy” has been badly treated by all our dictionaries. The best is the ‘Century,’ where it is traced to ‘Japanese *siyan*, Chinese *shiyu*,’ but even that involves two errors. One is a misprint (‘*siyan*’ should be *siyau*); the other is that it accounts for only half the English word.

Note 2. “Miso” is not mentioned in this dictionary. Address: Prof. of Comparative Philology & Sanskrit in Yale Univ.

1343. *Chicago Daily Tribune*. 1891. Society event in Chinatown. Reception and dinner for Lee Yun, who is Hip Lung’s relative. Jan. 24. p. 3.

• **Summary:** “For the first time in the history of Chinatown a birthday party was given last night, to which only a select few were invited. The festivities were held in Ki Yung’s restaurant... The party was given for Lee Yun, a brother-in-law of Hip Lung, the ‘boss’ Chinaman of Chicago, and was pronounced a success.”

A sumptuous banquet, such as only a Chinese epicure could devise, was spread for twenty. The menu of 14-16 courses, which is given, includes: “Duck, chicken, Canton cake, almond sauce, soy sauce, rice wine, tea, and opium.”

1344. *Manchester Guardian (England)*. 1891. The Wesley centenary: Unveiling the statue in London. Address by Archdeacon Farrar. March 3. p. 8.

• **Summary:** “... this unsavoury mass of tag, rag, and varieties—(laughter)—before them that they could give them as much Naseby pepper and Worcester sauce as they would have stomach for.—(Applause).”

1345. Duncan’s (John) Sons. 1891. Display ad: The original and genuine (Worcestershire) Lea & Perrins’ sauce. *San Francisco Chronicle*. May 14. p. 6, col. 2.

• **Summary:** Printed to the left of the bottle: “Extract of a Letter from a Medical Gentleman at Madras [India], to his brother at Worcester, May, 1851. ‘Tell Lea & Perrins’ that their Sauce is highly esteemed in India, and is in my opinion, the most palatable as well as the most wholesome Sauce that is made.’ Printed to the right of the bottle: “It imparts a most delicious taste and zest to soups, gravies, fish, hot & cold meats, game, Welsh-rarebits, &c.

“Beware of imitations; see that you get Lea & Perrins’ [signature].

“Signature on every bottle of Original & Genuine.”

Large illustrations show: (1) A bottle of the sauce. (2)

The “Lea & Perrins” signature.

Note 2. This is the earliest document seen (Feb. 2012) concerning Worcestershire Sauce that mentions the words “Welsh-rarebits” (or “Welsh-rarebit”). Address: New York [City].

1346. **Product Name:** Shoyu (Brand Unknown).

Manufacturer’s Name: Unknown. Company founded by Jihachi Shimada.

Manufacturer’s Address: Honolulu, Oahu, Hawaii.

Date of Introduction: 1891. June.

New Product–Documentation: Husted’s Directory of Honolulu and the Territory of Hawaii. 1905-06. Not listed. Also not listed in 1907 or 1909.

Morita, Sakae. 1915. *Hawaii Nihonjin Hatten-shi* (History of the Progress of Japanese in Hawaii). Hawaii: Waipahu Shin Eikan. 866 p. See p. 260. “The first Japanese who lived in Hawaii and brewed shoyu there was Jihachi Shimada, who originally came from Yamaguchi-ken, Japan. He started in June 1891 and tried to make shoyu on a large scale. But bad transportation made it difficult for him to expand his market. This plus lack of capital forced him to quit.”

Note 1. This is the earliest known soyfood product manufactured by a Japanese in the Western world. It is not known where the soybeans used to make this shoyu were grown.

Nihei, Takao. 1978. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi” (A history of Japanese sake, miso, and shoyu in Hawaii: Miso and shoyu). *Nippon Jozo Kyokai Zasshi* 73(7):542-49. Gives founder’s name and city. No longer in business. Letter from Takao Nihei. 1988. July 19. “There was a record showing that Mr. Shimada was the first to make shoyu in Hawaii. But he closed soon after he started. The company name and address are unknown. Therefore I think that the first person who succeeded was Mr. Nobuyuki Yamakami (Yamashiro).” Letter from Takai Nihei. 1988. Sept. 1. “Although it is written in many Hawaiian Japanese Immigration Histories that Haruhachi SHIMADA was the first person to make shoyu in Hawaii, I think the original source of that information may be the book *Hawaii Nihonjin Hatten-shi* Sakae MORITA (1915), brewing/fermentation industry section, see above.” Other books (all in Japanese) repeating this information were *Dainihon Kaigi Iminshi* by Fuji Shugoro (1937, Vol. 2, p. 21-22), *Nihon Bunka Koshoshi* (1955, Vol. 5, p. 409), *Hawaii Nihonjin Iminshi* (1969, p. 211).

Note 2. In 1891, Hawaii was not part of the United States. It was first annexed in 1898, and became a state in 1959.

1347. Parker & Co. 1891. Pate de Foie Gras, Truffles du Perigord (Ad). *Hartford Daily Courant* (Connecticut). Sept. 9. p. 2, col. 6.

• **Summary:** “Crosse & Blackwell’s Mushroom Catsup.

Crosse & Blackwell’s Walnut Catsup. Crosse & Blackwell’s India Soy [Sauce]. Crosse & Blackwell’s Essence of Anchovies.”

“Successors of Fox & Co. Wholesale and retail grocers.” Address: No. 17 Central Row.

1348. Rita. 1891. The ladies’ column. *Bush Advocate* (Hawke’s Bay, New Zealand). Oct. 3. p. 7.

• **Summary:** One section reads: “Indian soy [sauce].—Indian and Japanese soy prepared from the dolicas saja [sic, Dolichos soja], termed by them ‘soga’ [sic, shoyu, soya?]. A good imitation is made as follows: Take one gallon or haricot or kidney beans; boil till soft; add bruised wheat one gallon. Keep in a warm place 24 hours, then add one gallon common salt, 2 gallons water; put the whole in a strong jar, bung it up for two or three months, stirring frequently, then press out the liquor.”

Note: This same recipe appeared in the *Evening Post* (New Zealand) on 27 Feb. 1892.

1349. Turner, Fred. 1891. New commercial crops for N.S. Wales: The cultivation of the soy bean (*Soja hispida*, Moench.). *Agricultural Gazette of New South Wales* 2(11):648-50. Nov.

• **Summary:** “The soy bean is indigenous in India, Japan and China. There are numerous varieties of the plant cultivated in those countries, including both tall and dwarf-growing kinds, but it is the large-seeded varieties of the latter which I would particularly recommend for cultivation in this Colony, because they are not only more easily managed, but, generally speaking, are more productive to any given area than the tall growing kinds. The dwarf soy is an annual hairy growing plant, growing about 2 feet high, with trifoliate leaves, and small flowers borne in short axillary racemes. These are succeeded by oblong three or four seeded hairy pods. As will be seen from the engraving of the plant, it is a good deal like the ordinary dwarf kidney bean in its habit of growth, but differs materially in the superior quality of the pulse which it yields. The very productive and pulse yielding plant has been cultivated in Asiatic countries probably from time immemorial, but only within the past twenty years or so has it attracted the attention of European cultivators. In the southern parts of Europe, the cultivation of the dwarf kinds have proved a great success, and in France they are said to be an important crop.

“Some of our leading seedsmen have now become aware of the value of the soy bean, and seeds are now obtainable in Sydney. The plant has already been grown in a small way in a few places in this Colony, and has proved itself well adapted to our climate, so that there is no risk in attempting its cultivation here, in suitable places, on a large scale.”

Note 1. This is the 2nd earliest document seen (March 2010) that clearly refers to the cultivation of soybeans in

Australia or Oceania. This document contains the 2nd earliest clear date seen for cultivation of soybeans in Australia or Oceania (Nov. 1891). The source of these soybeans is unknown.

“Moreover it is not only a vigorous growing and a heavy yielding pulse plant, but it appears to keep remarkably free from both insects and fungoid pests.” Note 2. This is the earliest English-language document seen (Aug. 2007) that uses the word “fungoid” to refer to fungal.

“Having eaten the seeds of the soy bean, I can say that they are an excellent addition to the pulse yielding plants we have already under cultivation. As regards their chemical composition I cannot do better than quote the analyses of Professor Church and Dr. Forbes Watson. ‘Although there are a number of varieties of the soy bean, the chief differences between them lying in the size, shape, and colour of the seeds, yet these varieties are not distinguished by definite differences in chemical composition. That composition entitles the soy bean to the highest place, even amongst the pulses, as a food capable of supplementing the deficiencies of rice, and of other eminently starchy grains. Very few vegetable products are so rich as the bean at once in albuminoids and in fat or oil, the former constituent amounting on the average to 35 per cent, and the latter to 19 per cent. The cultivation of the pale large seeded varieties should be extended.’”

Facing this first page is a full page illustration of a soy bean plant, titled *Soja hispida*, Moench. “Soy Bean.” with an enlarged pod (A) and seed (B). It has been copied from an 1882 issue of *The Garden* (July 29, p. 93) then modified slightly.

Two tables are titled “Composition of soy bean.” The first, by Professor Church, shows the composition in 100 parts [percentage] and in 1 lb. The second by Dr. Forbes Watson, shows the composition with husk and husked.

“The nutrient ratio here is about 1.2 while the nutrient value is 105. Potash forms early one-half and phosphorus pentoxide one-third of the ash of the soy bean. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers [albuminoids = proteins], and 7 per cent of oil.”

“The soy bean can be grown nearly all over that portion of the Colony where late spring or early autumn frosts do not occur, and with irrigation it might prove a valuable plant to grow in the interior. A good guide to go by is to cultivate the plant in those parts where the kidney bean will flourish, and this is over an immense area of New South Wales. The soybean is rather an exhausting crop, therefore it should be an alternating one. It would do very well to follow after a root crop. To obtain the best results it should be grown on a moderately light, well drained, and well worked soil that is rich in organic matter. The plant will grow well enough on other kinds of soil provided that they are drained, and well

worked, and, if not naturally fertile, some suitable manures are applied. If well rotted farm-yard manure is not available, then sulphate of potash, or nitrate of soda, might be used with advantage. If farm yard manure is applied to the land, it should be ploughed in some time previous to sowing the crop, or it might have a tendency to cause a too rank growth of the plants, at the expense of the yield of beans. Commercial manures may be used on the land when it is prepared to receive the crop.

“Sowing the seed. From the Hunter to the Tweed Rivers, it would be possible to obtain two crops in the year by sowing in October, then again in December if there is a sufficient amount of moisture in the soil. South of the Hunter River, however, it will be hardly likely that more than one crop can be harvested during the year. The seed for this should not be sown before the middle of October, or the beginning of November, according to situation. It would perhaps be as well to state that the young plants are very susceptible to frost, 2° Fahr. being quite enough to blacken them.” Gives more details on sowing, then a paragraph on harvesting.

The last section is titled “Uses: The beans can be picked from the plants whilst green, and cooked and eaten without previous preparation. Ripe soy beans should, however, be steeped in warm water for some time before they are cooked, otherwise they will remain almost as hard as they were before cooking. In China and Japan the soy bean cheese [tofu] and a kind of paste [miso] are important articles of food. In those countries also soy sauce is made from the beans, which is not unknown to European palates. The sauce is said to be made in the following way. Boil the beans with equal quantities of wheat or barley, and leave it for three months to ferment, after which salt and water are added, and the liquid strained. Soy sauce is extensively used in Asia, and to some extent in Europe for flavouring certain dishes, especially beef, and it is supposed to favour digestion.”

1350. Thanet, Octave. 1891. Letters from a self-made cook. *Atlanta Constitution (Georgia)*. Dec. 13. p. 11.

• **Summary:** Contains various recipes in sentence-style format. One is titled “How to make brown sauce.” For a darker color, add “a teaspoonful of China soy [sauce],...”

1351. Chamberlain, Basil Hall. 1891. *Things Japanese: Being notes on various subjects connected with Japan...* 2nd ed. revised and enlarged. London: Sampson Low, Marston and Company, Ltd.; Hongkong, Shanghai, Yokohama, and Singapore, Ltd.: Kelly & Walsh, Ltd. [8] + 503 p. Index. 1st ed 1890 (408 p.). Slightly revised edition published 1905. Reprinted in 1970 by Charles E. Tuttle Co., Inc. (Rutland, Vermont, and Tokyo). [14 ref]

• **Summary:** This book is arranged alphabetically by subject. Festivals (p. 154): “*Setsubun* is the name of a movable feast occurring sometimes late in January, sometimes early in

February, on the eve of the first day of spring, old calendar. Beans [roasted soybeans] are scattered about the house on the evening of this day in order to scare away demons, and of these beans each person present eats one more than the number of the years of his age.”

Food (p. 168): Same as in the 1890 ed.

Sun, moon and stars (p. 394): There are three great nights of the lunar year for moon viewing. “The 15th night of the 8th moon, which is no other than our harvest moon at the full, is celebrated by an offering of beans and dumplings and of bouquets of eulalia-grass [*susuki*] and lespedeza blossom. This moon is termed the ‘bean moon.’”

Note: In *Chado: The Way of Tea*, a translation of the Japanese classic *Sado-sai-jiki*, and various other Japanese books we learn that the full moon on the 15th night of the 8th lunar month is the brightest and most widely viewed one of the year and is called *meigetsu* (literally “bright moon”). Aesthetic appreciation of the full autumn moon originated in China as early as the Han dynasty (202 BC to AD 220). Moon-viewing became popular in China during the Tang dynasty (618-907) and this tradition was transmitted to the Japanese court in Kyoto in about the 8th century; the aristocracy called this festival *Otsukimi* (“moon viewing”) and celebrated it, outdoors, by composing poems, listening to music, etc. Today that date falls in mid-September. In both Japan and the West, this is the “harvest moon” and its celebration a pre-harvest festival.

However it is the *next* full moon, about a month later, on the 13th day of the 9th lunar moon that is called the “bean moon” (*mame-meigetsu*). It is indeed, as Chamberlain says, celebrated by an offering of beans (*edamamé*, or green vegetable soybeans) and dumplings (glutinous rice steamed with chestnuts). In some parts of Japan the *edamamé* are mashed, sweetened with sugar, then used to coat rice-flour dumplings. This *mame-meigetsu* is still celebrated at the Kitano Tenmangu Shrine in northwest Kyoto.

Tea (p. 403): Other tea-like infusions: “*Mugi-yu*, an infusion of parched barley; *Mame-cha*, a similar preparation of beans. *Fuku-ja*, or ‘luck tea,’ is made of salted plums, sea-weed, and xanthoxylon seeds, and is partaken of in every Japanese household on the last night of the year.”

Concerning red beans [*azuki*]: Birthdays (p. 56): “Birthdays are not much observed in Japan, except that rice mixed with red beans [*azuki*] is eaten on the auspicious day.”

Festivals (p. 154-55): Dec. 13.—This day is called *Koto-hajime*, that is, “the beginning of things,” because such preparations for New Year as house-cleaning, decorating, and the pounding of rice for cakes (*mochi*), are then taken in hand. People eat *o-koto-jiru* on this day,—a kind of stew whose ingredients are generally red beans [*azuki*], potatoes, mushrooms, sliced fish, and a root called *konnyaku*.”

Jan. 15-16.—The end of the New Year holidays. The 16th is the *Hokônin no Yado-iri*, or Prentices Holiday Home. Rice-gruel mixed with red beans [*azuki*] is eaten.”

N.B. *Azuki-meshi*, that is, rice mixed with red beans, is eaten on the 1st, 15th, and 28th of each month, these being the so-called *san-jitsu*, or “three days.” On the 30th, people eat buckwheat vermicelli (*misoka-soba*).

Overview of Japanese commerce: “The chief progress made during the past thirty years has been in industrial developments” (p. 433). A large table show imports to Japan in 1890 (p. 434): The top five imports (with the value in million yen) are: Textiles and textile fabrics 20.49. Rice 12.30. Sugar 8.48. Raw cotton and wool 5.74. Kerosene oil 4.95. “Oil cake” [mostly soybean cake] is another major import, but grouped with oils, oil wax, and paints in oil 0.41.

Exports from Japan (p. 434-35): The top five are: Raw silk, waste silk, and cocoons 16.75. Tea 6.28. Copper 5.36. Silk piece goods and silk manufactured goods 3.64. Coal 3.10. Also seaweed 0.68.

The top five ports for exports and imports are (p. 435): Yokohama 73.0. Kobe 49.0. Nagasaki 7.7. Osaka 3.80. Shimonoseki 1.77.

Japan’s leading trading partners (imports + exports) are: Great Britain 32.5. USA 26.7. Hongkong 14.8. China 14.0. France 12.2. Address: Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo.

1352. Rathgen, Karl. 1891. Japans Volkswirtschaft und Staatshaushalt [Japan’s economy and national budget]. Leipzig: Duncker & Humblot. xx + 785 p. See p. 328, 331, 397, 445, 611-12. In: Staats- und Socialwissenschaftliche Forschungen. Vol. 10. No. 4. [2 ref. Ger]

• **Summary:** Wheat flour is an important component in the production of shoyu (p. 328).

“Production of soybeans by year was as follows. (Note 1. 1 cho = 2.45 acres and 1 koku = 180 liters or 47.6 gallons): 1878 was 414,961 cho and 1,642,183 koku. 1881 was 427,557 cho and 2,175,337 koku. 1884 was 440,647 cho and 2,323,435 koku. 1887 was 466,315 cho and 3,253,790 koku (p. 330). The large increase in numbers is due mainly to a 76% increase in yields during this 9 year period. This must be difficult since most soybeans are grown around the edges of fields, on paddy bunds and in very small plots.

“Soybeans are grown throughout Japan, but they are concentrated in Tokyo plain and the prefectures bordering on its north. In 1887 the following 12 prefectures accounted for 56% of Japan’s total production: Kanagawa, Saitama, Chiba, Ibaraki, Tochigi, Gunma, Nagano, Niigata, Yamagata, Fukushima, Miyagi, and Iwate. Note 2. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for Japan.

“This exceptionally nutritious bean appears in all possible forms in Japanese cooking, as a vegetable, boiled in sugar, as tofu (“als Tofu (Bohnenkäse)” = bean cheese), and as the main component of fermented miso soup (*Miso-Suppe*) and of soy sauce (*Soja-Sauce*).

“During the period 1870-74, the price of soybeans

averaged 3.015 yen/koku. In 1875 it was 4.46 yen and in 1886 3.98 yen, with a high of 7.11 yen/koku in 1882.”

“Since 1885, with the introduction of use taxes, new production statistics have begun to be kept on the shoyu industry. In 1887/881 some 1,180,188 koku of shoyu was taxed from 11,687 businesses, averaging 101 koku per factory. By comparison, the amount of shoyu taxed in 1888-89 was 1,304,551 koku from 10,634 businesses, averaging koku per factory. As with sake breweries, the number of plants has diminished from 13,682 in fiscal year 1885/86 to 10,634 in the fiscal year 1888/89. Although shoyu factories are found throughout Japan, there are certain regions of concentration. Chief among these is Chiba prefecture, which in 1887/88 had 689 factories and a production of 121,816 koku, averaging 177 koku/factory. The capital of the industry is the city of Choshi. Other major shoyu producing prefectures are Ehime (555 plants, 73,525 koku), Hyogo (544 plants, 73,168 koku), Okayama (580 plants, 64,389 koku), Fukuoka (381 plants, 58,022 koku), Ibaraki, Aichi, Kanagawa, and Saitama.

On p. 611-12 is a detailed discussion of Japan’s shoyu tax. Shoyu production was already being taxed in 1875. Then law 10, enacted on 8 May 1885, which went into effect of 1 July 1885, reinstated the tax. This tax is similar to the sake tax. A yearly license costing 5 yen is required and a tax of 1 yen/koku of shoyu produced is levied. Government tax revenues from shoyu grew from 640,379 yen during the partial year 1885/86 to 1,215,254 in 1889/90.

Rathgen lived 1856-1921. Address: Leipzig, Germany.

1353. *Vierteljahresschrift ueber die Fortschritte auf dem Gebiete der Chemie der Nahrungs- und Genussmittel*. 1891. Japanische Soja [Japanese soy sauce (Abstract)]. 5:161-62. For the year 1890. [1 ref. Ger]

• **Summary:** A German-language summary of the following German-language article: *Bayerische Gewerbe-Zeitung* (Nuremberg). 1888. “Japanische Soja” (Japanese soy sauce). No. 23. p. 538-40.

• **Summary:** “... of equal quality, and nearly double the quantity, for about half the price... It has a peculiar Relish and Piquancy; is a thorough Appetiser and Tonic, and

will agree with the most Delicate Stomach. Gawne’s Worcestershire Sauce is all that the most exacting connoisseur could wish, and should find a place in every household.”

1356. Brooks, William P. 1892. Division of Agriculture. *Massachusetts (Hatch) Agricultural Experiment Station, Bulletin* No. 18. p. 41-104. April.

• **Summary:** The section titled “Report on trial of miscellaneous crops” (p. 97-104) includes many varieties imported from Japan: Oats (3 varieties). Millet, *Panicum crus-galli*. Millet, *Panicum miliaceum*. Hemp. Flax. Wheats. Japanese varieties of beans.

All the beans “belong to two distinct classes, known to the Japanese respectively as ‘Adzuki’ or ‘Shodzu,’ the latter name meaning ‘small bean’ and ‘Omame’ or ‘Daidzu,’ both the latter names meaning ‘large bean.’ The beans of the first class are a distinct species, *Phaseolus radiatus* and are used by the Japanese almost entirely in confections. They are characterized by a remarkably thin skin, and are generally boiled, put through a sieve, and variously sweetened and colored although also prepared in other ways. An enormous quantity of these confections is eaten by persons of all ages and classes.

“The beans belonging to this class have been sometimes incorrectly designated Soja beans by American writers.” It grows fairly well but is “much poorer in albuminoids [proteins] and fat than the soja bean.”

A table compares the nutritional composition of a red adzuki bean raised in Massachusetts in 1890 with a kidney bean (*Phaseolus vulgaris*).

“Whether the beans of this class [adzuki] will prove valuable here may be doubtful. They are certainly unusually attractive in appearance; but it is not likely that the Japanese bean confections, which nearly all foreigners in Japan regard as decidedly flat and insipid, will ever come into favor here.”

“The beans of the second class (‘Daidzu’), belong to a distinct genus and by some authorities are named *Soja hispida*, whence the common designation soja (sometimes soya) bean; by other authorities, the species is named *Glycine hispida* which name, probably, has the claim of priority. The name ‘soja’ or ‘soya’ has undoubtedly been taken from the name ‘soy’ given to a sauce (used extensively as a condiment), in the manufacture of which this bean is largely used. The name given to the Japanese variety of this sauce is ‘shoyu.’ This bean is also extensively used in many ways in Japan as human food, and is also largely employed as food for horses and cattle.

“It has been said that this bean is the richest known vegetable substance. ‘In point of nutriment the soy bean is of all vegetables nearest to meat,’ says Rein [1886]. A sample of beans grown here in 1890 has been submitted to analysis, with results shown below:”

A table titled “Soya Bean. *Glycine hispida*. shows: Dry

matter: 11.53%. Crude protein: 34.49%. Crude fat 16.45%. Nitrogen free extract 26.29%. Crude fibre: 4.40%. Ash: 6.55%.

Several of the varieties which I have had under cultivation, having been taken from northern Japan (Sapporo), ripen seed here with as great certainty as the kinds of corn under cultivation. It is believed that some of these varieties will prove valuable grain crops. The yield, it is true, cannot be expected to equal that of corn; but the grain is far richer, and because of the high percentage of protein it contains it is fitted to take the place of bran, cotton-seed meal and linseed meal for which our dairymen yearly pay out so much money.

“It should further be remembered that if the results of modern investigations on this point are not misleading, this plant must be able to take most of its nitrogen from the air which must vitally affect the question of its economy as a farm crop. Most of our crops are nitrogen consumers. This, being a nitrogen gatherer, should enable the farmer to dispense in large measure with purchased nitrogenous fertilizers.”

Details of cultivation of red and white adzuki beans, kindly sent by Prof. Georgeson of the Kansas Experiment Station, are given. The red yielded 27.3 bushels per acre.

Six varieties of soya beans were also tested: Eda (8.37 bu/acre), Kuiske [Kiyusuke] (14.26), Medium Early White (23.25), Medium Black (22.8), Medium White (19.5), Medium Green (30.2). The first two were sent by Prof. Georgeson, the last four imported from Sapporo, Hokkaido [Japan], by Brooks. The yields in bushels per acre are given after each variety name in parentheses. Medium Early White had previously yielded as high as 35 bushels per acre. “I believe that crops of about 30 bushels per acre of this variety may be safely anticipated.” Address: Agriculturist.

1357. Coupin, Henri. 1892. La soya [The soybean]. *Nature (La) (Paris)* 20:203-04. Aug. 27. [Fre]

• **Summary:** An overview of the soybean. This plant is utilized in China and Japan for human food and for animal feed, for making bread, cheese [tofu], for extracting an oil [soy oil], etc. Why would we not do the research necessary to raise such a precious plant in France? Many trials have already been conducted and have succeeded rather well; we will return to that later, but first we must see how the soybean is utilized in Japan and China.

The soybean (*Glycine Soya*) belongs to the legume family. A botanical description is given.

In Japan, the soybean is one of the most widely used plants. It is known under the name of either *mame* or *daizu*, and it is widely used to make a sort of paste, named *miso* (*le Miso*). The process for making miso is described. [Note: However koji is not mentioned so it will not work]. It ferments for 1-2 months, and then is ready for food use. It is part of the breakfast of many Japanese.

The second product made from soybeans is a condiment, a liquid named *Shoyu*. It is a sort of dark brown syrup which serves as a sauce to season dishes, especially fish. The manufacture of shoyu is a very important industry in Japan. In the city of Nagasaki alone there are as many as ten factories, and each makes more than 1.2 million kilograms per year of shoyu. A description of how shoyu is made is given using equal quantities of boiled soybeans and roasted wheat, plus salt. 1.8 liters sells for 40-50 centimes.

The third product made from soybeans is a cheese called tofu (*le To-fu* or *fromage de Daizu*). The process for making tofu is described. It can be eaten fresh, but unfortunately it retains the taste of raw beans, which is not very agreeable.

In China the soybean is known as *Yeou-teou*, but ice it is not ordinarily cultivated on a large scale, as it is in Japan. According to Eugene Simon: Each person makes his or her own cheese [tofu]. Very also, often, each one makes his oil, if not at home, then at least at one of his parents' homes or in the neighborhood; it is distributed by the head of the family.

There is a variety of black soybean which constitutes the principle food of animals; horses and mules eat the seed in nature. People use mainly the white soybean (*la Soya blanche*): from it they extract an oil [soy oil], which is the object of an enormous trade and which occupies the top rank among the oils used in China. As in Japan, the Chinese also make tofu. According to Paillieux and Bois, in the entire Chinese empire, only the Tartars use daily milk; the [Han] Chinese do not consume it at all. They use soymilk instead. The soybean is solid milk. Not all legumes contain legumine, as the soybean does. Describes how to make soymilk from soybeans.

Trials for the acclimatization of soybeans in Europe are rather numerous. In 1875, the first ones were conducted by F. Haberlandt and Blaskovics in Austria-Hungary. In France, Buffon received soybean seeds and cultivated them at the Museum [of Natural History]. One of the problems with the soybean is that its seed mature very late. However some varieties mature their seeds earlier than others.

An illustration [non-original] shows a soybean plant. At the bottom of the column on page 1, we read: See No. 425, of 25 July 1881, p. 115 [an article by E. Roman]. Address: Ingenieur en chef à Périgueux.

1358. *Vegetarian Messenger (Manchester, England)*. 1892. Japanese agriculture. Aug. p. 226. [1 ref]

• **Summary:** An article in the *Times* (London) summarizes a recent USDA report on this subject. “All kinds of leguminous plants are raised in abundance in almost every part of the empire, beans being largely used in the manufacture of soy, a kind of sauce.”

1359. Georgeson, C.C.; Burtis, F.C.; Shelton, W. 1892. Test of some Japanese beans. *Kansas Agricultural Experiment Station, Bulletin* No. 32. p. 232-38. Dec. 1891.

• **Summary:** “Two species of Japanese bean have been grown here at the Station for two years past. These are the soy bean (*Glycine hispida*), and the adzuki—the mungo, of India (*Phaseolus radiatus*). Both of them have given promise of much usefulness in this country. They have been subjected to severe tests concerning their endurance of this climate, and have come out triumphantly. Having seen these beans grown in Japan, and noted the very important part they take in the diet of the Japanese, the writer became anxious to try them here, which has been done with gratifying success.”

The Soy Bean. “The United States Department of Agriculture made an effort to introduce it [the soy bean] years ago, and several enterprising seedsmen have from time to time made attempts in the same direction; but with the result that it has been generally successful only in the South because the varieties introduced were too late to mature in the latitude of the Northern States. Knowing this, pains were taken to procure some of the earliest varieties grown in Japan. A few dozen beans of each of several kinds arrived in the spring of 1890. They were planted in the latter part of May and matured seed before frost, in a little over three months’ time. The amount planted being so small, no attempt was made to estimate the yield, but they appeared to be very productive. One thing in their favor was proved that first season—their ability to withstand drouth...

“The seed thus raised was planted in the latter part of May, in 1891, and harvested early in September, with yields ranging for the several varieties from 12½ to nearly 19 bushels of beans per acre. These yields would under more favorable conditions have been considerably larger...

“The bean takes its common name, ‘Soy,’ from a sauce manufactured from it, which in commerce goes by the name of ‘Soy,’ though the Japanese name for this sauce is ‘Shoyu.’ The beans are boiled and mixed with certain proportions of rice and salt, and the compound is then allowed to undergo a process of fermentation, which results in the delicious brown sauce so common in Japan, and which forms the basis of the best sauces in this country. The term ‘soja,’ often applied to this bean, is misleading, inasmuch as the species named by Siebold and Zuccarini *Glycine soja* is not cultivated there, or at least rarely cultivated, though it is wild in the south; and later this species was confounded with the cultivated species, *G. hispida* Moench, whence the origin of the term ‘soja,’ as applied to the cultivated bean. The soy bean is a native of Japan, and it has been cultivated there from a very remote period, as is testified by the numerous and strongly-differentiated varieties which have been developed. The Japanese cultivate it extensively, and it is to them an important article of food. It takes to a very large degree the place of meat in their diet, and it is altogether too costly and precious an article to be fed to live stock, except when it on rare occasions is grown as a hay crop. They use the beans ripe, and, properly cooked, they make a palatable and highly-nutritious dish. Sometimes they are eaten green when nearly

full grown; they are then boiled in the pods and shelled at the meal.

“In this country they will likely be of most value as a fodder plant, though they compare favorably with navy beans for table use; they are, however, more glutinous and less starchy than navy beans, and on this account may not suit the taste of all persons.”

“The following four kinds are early enough to be depended upon to mature seed in this latitude every year.” *Eda-mame*: yield, 12.6 bushels beans (at 60 pounds per bushel) per acre. *Yellow Soy Bean*: yield, 14.57 bushels per acre. *Yamagata Cha-daidzu* (tea-colored bean, from Yamagata): yield, 18.8 bushels per acre. *Kiyusuké Daidzu* (Kiyusuke is the name of a person): yield, 18.23 bushels per acre.

“As has been stated, all of these yields would have been larger if the weather had permitted the saving of the crop in better shape.”

Pages 237-38 give detailed information on “The adzuki (*Phaseolus radiatus*),” including white-podded and black-podded varieties. Mrs. Nellie S. Kedzie, Professor of Household Economy, tested the adzuki beans in recipes and found them to be “a very good bean for cooking purposes.” Baked in the old-fashioned way, the adzuki is “sweeter than the ordinary white bean; so less sugar or molasses is needed in baking. I found this bean especially nice for making bean soup.”

Photos (p. 232) show yellow soy bean, Yamagata-Cha-daidzu, and white podded adzuki plants.

Note 1. This is the earliest document seen (Sept. 2005) that contains a photo of the soy bean or of the adzuki.

Note 2. This is the earliest document seen (Oct. 2004) that mentions the soybean variety *Kiyusuké Daidzu* (spelled that way). Address: 1. M.Sc., Prof. of Agriculture, and Superintendent of Farm; 2. B.Sc., Asst. in Agriculture; 3. Foreman of the farm. All: Kansas State Agricultural College, Manhattan, Kansas.

1360. Chisholm, George Goudie. 1892. Handbook of commercial geography. 3rd ed., revised. London: Longmans, Green, and Co. 515 p. See p. 72-73, 344. Illust. Maps. Index.

• **Summary:** In the Chapter I, “Commodities directly or indirectly on climate,” in Section A, “Products of the temperate zone,” is a subsection titled Pulses which states (p. 72-73): “167. The chief pulses of commerce are common peas and beans, chick-peas, and soya beans.”

“In warm countries, where butcher-meat is little consumed, this [chick-peas] and other pulses are in fact an almost essential part of the regular diet, since they supply elements of food not contained in sufficient quantity in grain and fruits. It is for this reason that soya beans are largely consumed in two other warm countries, China and Japan, as well as in India. According to Decandolle this bean is indigenous in Cochin-China, Java, and Japan. It is now very

extensively cultivated throughout Eastern Asia, and is made (along with other pulses) into a great variety of preparations for use as human food. Soya [sauce], an extract from soya-beans, is also exported to Europe, and especially to England, to be used as an ingredient in soups and sauces, but much of the so-called soya is manufactured in Europe itself from various mushrooms [sic]. Oil can also be expressed from the beans, and in some parts of Central Europe the cultivation of this bean as food for cattle has been tried."

In the section on "Countries," under Asia-Japan we read (p. 344): "787. Besides rice, the principal food-crops are wheat, barley, and soya beans."

"788. Japanese agriculture leaves little room for live stock. Sheep have only recently been introduced in small numbers experimentally. The number of horses is about a million and a half, that of cattle one million, as against nearly two millions of the former and upwards of ten millions of the latter in the British Isles, which have a rather smaller population. Japan is thus altogether without, or very poorly supplied with, some important products. It has no native wool, no milk, butter, or cheese, and a comparatively small supply of leather, which has to be replaced for different purposes by various other materials." Address: London.

1361. Giles, Herbert Allen. 1892. A Chinese-English dictionary. London: Bernard Quaritch; Shanghai, Hongkong, Yokohama & Singapore: Kelly and Walsh, Ltd. xlvii + 1416 p. 31 cm. [4 ref. Eng; chi]

• **Summary:** This massive volume, weighing almost 12 lb, contains more than 1,450 pages and 13,848 Chinese characters. Contents: Dedication (to the Honourable C.P. Chater). By the same author (17 books). Preface: Number of characters, the characters numbering, duplicate characters, phonetic arrangement, orthography, the tones, the dialects (Beneath the number attached to each character will be found its rhyme (R) as given in the *P'ei-wên-yün-fu*. The romanization of each character is given in Cantonese, Hakka, Foochow, Wênchow, Ningpo, Peking, Mid-China, Yangchow, and Ssuch'uan {Szechwan} dialects, as well as in Korean, Japanese, and Annamese, each being distinguished by its initial letter), the definitions, the entries, etymology, grammar, difficulty of Chinese, personal. Philological essay (incl. tones, ranging from 4 to 9, in ten dialects). Table of sounds.

Examples of soy-related characters:

Chiang (p. 122, No. 1220). "A soy made by mixing salt with bean-flour. Sauce. Pickled food." Fourteen compounds using this character are given, including: Bean sauce, soy. Pickled bean curd [fermented tofu]. Bean sauce. Soy [sauce] is of two kinds, the clear and the thick. Dry relishes. Soy colour—a dark reddish drab. He won't use money for vinegar to buy soy.

Ch'ih (p. 205, No. 1996). "Salted fruits, etc., dried and used as relishes." Four compounds incl.: Salted beans. Soy,

sauce.

Ch'ou (p. 259, No. 2521). "Sweet-smelling; strong-smelling. Stinking. *Ch'ou fu*. "stinking bean-curd; noxious."

Note 1. This is the earliest English-language document seen (Oct. 2011) that mentions *Ch'ou fu* which it translates as "stinking bean-curd." This is also the earliest document seen (Oct. 2011) that uses the term "stinking bean-curd."

Fu (p. 458, No. 3686). "Rotten; putrid; worthless." Eleven (p. 458, No. 3686). "Rotten; putrid; worthless." Eleven compounds and sayings include: Bean curd, see No. 11,417. Bean curd officials—a term of contempt applied to certain of the poorer classes of official servants who are compelled to feed largely on this cheap food. Also explained as flabby or unenergetic officials. A Mongol name for cheese. A kind of milk made from beans (*rufu* = milk + *fu*) [Note: Probably fermented tofu, *not* soymilk].

Huang (p. 522, No. 5124). Yellow. Compounds: Yellow beans [soja].

Mao (p. 778, No. 7,679). "Hair, down, feathers." But the word "Hairy beans" = edamame does not appear here.

Shih (p. 988, No. 9999). See No. 1996.

Ta (p. 1,036-37, No. 10,470). "Great." But the word "Great bean" = soybean does not appear here.

Tou (p. 1,127, No. 11,417). "Beans; pulse." See also No. 11,412. Thirty compounds, incl.: Bean-sprouts. Bean-curd. A cheap restaurant (a bean-curd restaurant). Bean-cake. Bean oil. Big bean, black bean, or yellow bean = the soja bean (*Glycine hispida*, Max.), used for making bean-curd, soy, oil, etc. Ground-nuts.

Yu (p. 1,316-17, No. 13,409). "Oil, fat, grease." 45 compounds incl. Sesamum-seed oil. Linseed. Wood oil. An oil factory. Oil dregs. But "bean-oil" = soybean oil does not appear here.

Note 2. This is the earliest English-language document seen (Aug. 2007) that contains the term "sesamum-seed oil."

Note 3. Herbert Giles lived 1845-1935.

Note 4. Unfortunately, the pronunciation of the compounds is not given (as in Mandarin).

Note 5. This is the earliest English-language document seen (Oct. 2001) that uses the term "bean-flour" to refer to soy bean flour.

Note 6. This is the earliest English-language document seen (Oct. 2011) that uses the term "pickled bean curd" to refer to fermented tofu.

Note 7. This is the earliest English-language document seen (Oct. 2002) that uses the term "Wood oil" to refer to what would later be called "China wood oil" or "tung oil," a pale yellow drying oil obtained from the seeds of tung trees (any of several trees of the genus *Aleurites*), and used mainly in quick-drying varnishes and paints, and for waterproofing. Address: H.B.M. [Her Britannic Majesty's] Consul at Ningpo [Zhejiang province, China].

1362. Klinkert, Hillebrandus Cornelius. 1892. Nieuw

maleisch-nederlandsch zakwoordenboek [New Malay-Dutch pocket dictionary]. Leiden, Netherlands: E.J. Brill. 400 p. 19 cm. [Dut]

• **Summary:** This dictionary writes Indonesian and Malay words using Latin characters and defines them in Dutch. Soy-related entries include: (1) bidjan, widjen, or lenga (sesame). (2) katjang (bean), including katjang botor, katjang hidjau (small green beans [mung beans]), katjang kedelai [soybean], katjang parang (sword-shaped), katjang peroet-hajam (very long and thin), katjang tanah (peanut), katjang goreng (fried peanuts). (3) kedelai (the name of a legume with black seeds, from which soya etc. is made. In Java, called *kedele*). (4) ketjap (soy = *soija*). (5) ragi (a type of yeast = *gist*). (6) tapé (Jav. tapeh = *tapai*).

The following soy-related words do NOT appear: tahu or tao-hoe (tofu). taoge (sprouts). tautjo (Indonesian miso). tempe (tempeh). Note: H.C. Klinkert lived 1829-1913. Address: Leiden, Netherlands.

1363. Kojima, T. 1892. Jimawari shōyu bunseki [Analysis of local shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 125. p. 701. [Jap]

• **Summary:** The local shoyu is from Choshi in Chiba prefecture, and Otsu in Saitama prefecture. Address: Yakugaku Kyoshi-bu, Ika-daigaku, Japan.

1364. Paillieux, Auguste; Bois, D. 1892. Le potager d'un curieux: Histoire, culture et usages de 250 plantes comestibles, peu connues ou inconnues. Deuxième édition [The inquisitive person's kitchen garden: History, culture, and uses of 200 edible, little-known or unknown plants. 2nd ed.]. Paris: Librairie Agricole de la Maison Rustique. xii + 589 p. See p. 502-49. Illust. Index. 24 cm. [2 ref. Fre]

• **Summary:** Contents of section on soy: Introduction: Work of the Society for Acclimatization with soy, structure of this book, excerpts on soy from past issues of the *Bulletin the Society for Acclimatization*. Botany of the soybean. 1. Soy in Japan: Kaempfer's writings, including miso and shoyu, Japan at the World's Fair of 1878, miso, shoyu, tofu. 2. Soy in Cochin China: Black soybeans, various foods. 3. Soy in China: Soy oil, tofu and fermented tofu, soy sauce, other uses. 4. Soy in Austria-Hungary. 5. Soy in France: Historical, varieties, cultivation, utilization.

The author's full name is Nicolas-Auguste Paillieux (lived 1812-1898; he died on 8 Feb. 1898 at age 85). An illustration (non-original line drawing; p. 503) shows a mature soybean plant bearing many pods, plus a close-up of three pods to the lower right of the plant (from an original in J.R.F. 1882). Note: Desire Bois lived 1856-1946.

Also discusses (listed alphabetically): arachide (peanuts, p. 26-28), haricot mungo (azuki, p. 201-09), kudzu or ko (p. 271-84), quinoa (p. 460-66), souchet comestible (chufa, p. 498-502, with illustration). Address: 1. Member of the Societe Nationale d'Acclimatation 2. Asst. de la Chaire de

Culture, Museum d'Histoire naturelle de Paris.

1365. Suda, Katsusaburō. 1892. Kansai shōyu bunseki seiseki [Analysis of shoyu from Kansai (the Kyoto-Osaka area of southwest Japan)]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 128. p. 1000-03. [Jap] Address: Kyoto, Japan.

1366. Takahashi, Saburo. 1892. Gyo shōyu seibun [Constituents of fish shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 129. p. 1127-30. [Jap] • **Summary:** Soybeans (*daizu*) are mentioned. Address: Kure, Kyushu, Japan.

1367. Tokyo Eisei Shiken. 1892. Kaki shōyu no seibun [Constituents of oyster shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 124. p. 594-96. [Jap] Address: Atsugan, Hokkaido, Japan.

1368. Watt, George. 1892. A dictionary of the economic products of India. Vol. 6:1. Pachyrhizus to rye. London: W.H. Allen & Co.; Calcutta, India: Office of the Superintendent of Government Printing. 594 p. See p. 365-66. Index (in Vol. 7). 25 cm. [65* ref]

• **Summary:** For *Phaseolus mungo* (green gram) (called *mung* in India), see p. 187-93. Varieties include Var. *glaber*, Var. *Wightianus*, Var. *radiatus* (called *urd* or *mash* in India). Since *mung* belongs to the same species as *urd* / *mash*, "the resemblance between the two is very great. The most popular distinction between the two, as met with in the field, lies in the fact that *mung* had dark green, and *urd* yellowish green, leaves, but the chief difference is in the shape of the grain, that of the latter being much larger and longer than that of *mung*." *Mung*, which is cultivated throughout India, comes in three colors, with green (*harri-mung*) being the typical and most common.

For *Prunus amygdalus* (almond), see p. 342-44. For *Pueraria tuberosa*, see p. 363.

For pulses (leguminous seeds), see p. 364-68. They include *Cajanus indicus* (pigeon pea, *arhar dal* in Hindi & Bengali), *Cicer arietinum* (the common gram or chicken-pea, *chena* or *chola* in Hindi & Bengali), *Dolichos biflorus* (the horse gram, *kurti-kalai* in Bengali, *kulthi gahat* in Hindi), *Dolichos lablab* (the Indian bean, *sim* or *makham-sim* in Bengali, *sim* in Hindi), *Glycine hispida*, Maxim. (the soya bean, *gari-kulay* in Bengali, *bhat* or *bhatwan* in Hindi), *Lathyrus sativus* (the jarosse or gesse, *khesari* in Bengali), *Lens esculenta* (the lentil, *masuri* in Hindi), *Phaseolus actinifolius* (*moth* or *mothi* in Hindi), *Phaseolus mungo* and var. *glaber* (green gram, *mung* or *mug* in Hindi), *Phaseolus mungo* var. *radiatus* (*mash-kolai* in Bengali, *urd mash* in Hindi), *Phaseolus trilobus* (*mungani* in Bengali), *Phaseolus vulgaris* (the kidney bean, French bean, or haricot; cultivated for the sake of its young pods by Europeans; scarcely, if

ever, used by the natives). *Pisum arvense* (the grey pea or field pea, *desi mattar* in Hindi & Bengali), *Pisum sativum* (the common pea, *mattar* or *gol mattar* in the North-West Provinces), *Vigna Catiang* (*chowli* in Hindi, *barbati* in Bengali, and *urohi mahorpat* in Assamese). Note: This is the earliest English-language document seen (June 2008) that uses the scientific name *Lens esculenta* to refer to lentils.

Concerning the soya bean (p. 365-66): “This plant, densely clothed with fine ferruginous [rust colored] hairs, is sub-erect. It is met with in the tropical regions and the outer Himálaya, from Kumáon to Sikkim, and the Khásia and the Naga Hills to Upper Burma. Dr. Stewart mentions a field of *bhat* having been observed in Bisahir in the Panjáb, at an altitude of 6,000 feet. Dr. Roxburgh first saw it grown from seed received from the Moluccas in 1798.

“DeCandolle [De Candolle] considers Soya, and apparently correctly, as a native of Cochin China, Japan, and Java. But he remarks that ‘it is of modern introduction into India.’ ‘There are no common Indian names’ for it. This seems to be a mistake; the plant is well known in India under the names given above. In Manipur and the Naga Hills it is one of the most abundant of pulses. In the Naga Hills it is known as *tsu dza*, a name not unlike *Soja*, but at the same time it may be related to the old Chinese name *Shu*. The Soya most likely reached India from China, passing by way of the mountain tracts of Assam. The importance of these hills in settling questions of the nativity of cultivated Indian and Chinese plants has not been fully appreciated, and we might fairly anticipate that many statements at present accepted as facts will be considerably modified with an extended knowledge of the wild and cultivated plants of the Assam and Chinese frontier. Soya is an important article of food in Tibet. It is made in India into a sauce called ‘Soy.’ The advisability of extending its cultivation on the Himálayan tracts was pressed on the Government of India in 1882 by Professor Kinch, and the attention of local Governments also was called to it, but it does not appear to have made much progress.”

Note: Most of Watt’s information about the soya bean and soy sauce came from: “Official report of the Calcutta International Exhibition, 1883-84. 2 vols.” Address: M.B., C.M., C.I.E., Reporter on Economic Products with the Government of India.

1371. Law, James Thomas. 1892? Law’s grocer’s manual: A practical guide for tea and provision dealers, Italian warehousemen, chandlers, shipstore dealers, bakers, confectioners, fruiterers, and general shopkeepers. Liverpool, England: J.T. Law. 842 p. See p. 251. 20 cm. *

• **Summary:** In the section on Spices, p. 251 states: “Soy forms the chief base of nearly all the bottled sauces and relishes on the market.”

A second edition of this book was published in 1902 in London by Gilbert & Rivington (1171 p.). A third edition was published in 1931 in London by W. Clowes & Sons (xiii + 774 p.; edited and revised by C.L.T. Beeching). A fourth edition was published in 1950 in London by William Clowes & Son (xv + 814 p.; edited and revised by W.G. Copsey). Note: James Thomas law lived 1790-1876. Address: Liverpool.

1372. *New York Times*.1893. A sale of bottles. March 14. p. 4.

• **Summary:** From the *Manufacturer* (Philadelphia): “Messrs. Craven Brothers of the Salem Glass Works, Salem, New Jersey, are about shipping five carloads of glass bottles to England by a steamer of the White Star Line. This, it is stated, is the first time that bottles manufactured in this country will be brought into competition with the English-made article in its own market. The first shipment will include 1,000 gross [1 gross = 12 dozen = 144] of long-necked bottles [i.e., 144,000 bottles]. They will be packed in boxes made to hold 2 gross each. The order was received by cable from Lea & Perrin, manufacturers of Worcestershire sauce.”

Note: This article is largely about protective duties and tariffs, to which it is opposed.

1373. *Temps (Le) (Paris)*.1893. On lisait dans *l’Avenir de Diego Suarez* du 2 mars cet avis: [One can read in *l’Avenir de Diego Suarez* of March 2 this opinion:]. April 8. p. 2, cols. 2-3. No. 11641. [1 ref. Fre]

• **Summary:** The governor has received from Mr. de Mahy a box of soya bean seeds (*une boîte de graines du haricot soya*), with which one can make cheeses [tofu] that last a long time.

This cheese made from soya is called “to-fu.” The process for making tofu is described in some detail. In winter it can be [frozen and] dried. In this state it can be kept for a long time.

Soya cheese (*Le fromage de soya*) is a very important food in China. Only the Tartars / Mongols have continued to use milk. The Chinese do not consume it. The soybean takes its place for them. This seed is a sort of solid milk.

The soybean (*La soya*) which is cultivated in Japan, in China, in the Indies [Dutch East Indies, today’s Indonesia], in Cochin-China [today’s South Vietnam], in Tonkin [today’s North Vietnam], etc. is used for more than just making tofu.

It is used in these countries in a great variety of ways to make human foods and seasonings. Transformed by cooking in water into a pap (*bouillie*) which is mixed with salt and polished rice, one obtains miso, which is served at breakfast [as the seasoning in miso soup] by many Japanese.

Mixed with barley and submitted to fermentation, after adding additional water and being pressed, one obtains a syrupy liquid, called shoyu, a unique sauce used to season almost all Japanese foods (*mets*), and which is employed in such large quantities that the factories of the city of Nagasaki make more than 1,200,000 kilograms of it each year. Finally, an oil is extracted from the soybean which is the object of an important trade and which serves for both human consumption and in industry.

1374. *St. Louis Post-Dispatch*. 1893. A dainty salad. May 7. p. 35.

• **Summary:** Written for the Sunday Post-Dispatch: “The fashionable flower of the day, says the *Naturalist*, is used in Japan as a salad plant. The chrysanthemum is cut from the stem as soon as it is in its earliest bloom, boiled in water, and dressed with vinegar, a light wine, salt and a kind of liquid [soy sauce / shoyu] distilled from the soya bean.”

1375. *Natuur (De)*. 1893. Soja [Soya]. 42(20):233-34. May 13. [Dut]

• **Summary:** This Dutch-language periodical appears inside a German-language periodical titled *Die Natur* (Halle). The author of this article (whose initials “CKN” appear at the end) discusses: The soybean plant, named *Glycine Soya* or *Dolichos Soja* or (in Dutch) *de Sojaboon*, which is widely used for food in Japan (where it is called *Mame* or *Daizu*) and China. Food products made from the soybean in Japan: Miso, shoyu (soy sauce), to-fu [tofu] or “kaas van Daizu;” a brief description is given of how each is made. Soybeans in China, where it is called “Yeou-teou,” and where they make a cheese (*Soja kaas*), oil (*eigen olie*), and milk (*melk*) which resembles cow’s milk. Black soybeans (*zwarte Soja*) are widely used. Proteins in the soybean, including legumine. In Europe, by 1881, the soybean was known in Italy, Austria, Hungary, and France (especially at Etampes and Montpellier); from the seeds, people learned to obtain oil, milk, cheese, an excellent cattle feed, and a vegetable for humans—similar to the French bean but much better (*en een groente voor den mensch, gelijkende op onze spersiebonen, maar veel beter*). Soybeans are used by doctors to treat people suffering from diabetes.

In France, the seeds are roasted like coffee beans; the result is a good-tasting coffee substitute (*dure koffie,... een even goed smakend surrogaat verkrijgen*).

A large illustration (engraving) shows a soybean plant bearing many pods. In the lower left corner is one large pod. In the lower right is written “Al Clement,” which appears to be the artist’s name.

Note 1. This is the earliest Dutch-language document seen (March 2001) that mentions soy coffee.

Note 2. This is the earliest Dutch-language document seen (June 2009) that mentions green vegetable soybeans, which it calls “*een groente voor den mensch*,...”

Note 3. This is the earliest Dutch-language document seen (Oct. 2003) that mentions soymilk, which it calls *melk*.

Note 4. This is the earliest Dutch-language document seen (Oct. 2003) that mentions oil from the soybean, which it calls *olie*.

1376. White, W. Hale. 1893. On the use of soya beans in diabetes mellitus. *Practitioner (London)* 1(5):321-32. May. [14 ref]

• **Summary:** The article begins: “The use of preparations of soya beans in diabetes mellitus has been steadily gaining ground lately, and I have myself given the biscuits to every case of diabetes I have had under my care for the last three years. It is such an advantage to be able to vary the monotonous food of patients suffering from this disease that I thought the soya beans ought to be more widely known, and that therefore some description of the vegetable, together with an account of a few of the cases I have watched, might be of interest, especially as there is no doubt that we have in the soya bean an article of diet which is of the greatest benefit to sufferers from diabetes.”

“The best account of the plant from which the beans are derived, and of the uses to which they are put, is given by Egasse” (1888).

“Soy sauce, which is imported into England, is used in enormous quantities in Japan. The Dutch call it *zoya*, the Chinese call it *tsiang-yeou*, the Japanese call it *shoyu*, *sooju*, or *soja*, and in Batavia and Java it is known as *ketjap*. This liquid is obtained by fermentation of cakes of roasted barley and boiled soya beans. After fermentation salt is added, the whole is kept two or three years, and then the sauce is squeezed out of the mass. In Japan it is used largely in cooking, and for many purposes replaces butter” (p. 323).

“Dujardin-Beaumetz, when speaking at the Académie de Médecine in 1888, advised the use of soya beans in diabetes. He is said to have mentioned them again at the Medical Congress at Berlin in 1890, and in 1891 he briefly referred to them and recommended a bread prepared from them as a food for persons suffering from diabetes.

“English abstracts of the articles I have mentioned soon appeared. A short account of Lecerf’s may be found in the *Pharmaceutical Journal*; and that of Egasse is abstracted in the *Therapeutic Gazette* published in America.” (p. 323).

“It as been found that soya beans mixed with oats for a very nutritive food for horses.

“Out of several cases of diabetes which I have treated with soya bean biscuits, I have taken at random three appended cases, which followed each other consecutively in the wards of Guy’s Hospital [London]. They illustrate well

the effects of the treatment.

“At Guy’s Hospital the usual diabetic diet consists of gluten bread 6 oz., two eggs, butter 2 oz., two almond biscuits, milk 1 fl. oz., cooked meat 12 oz., greens, watercress, tea, and soda-water.”

In England, Prof. John Attfield (19 Sept. 1890) published the following analysis of soya bean flour: Nitrogenous material 41.14 per cent. Fatty material 13.70 per cent. Cellulose, starch and sugar 30.35 per cent. Phosphate material 4.81 per cent. Other mineral matter 0.52 per cent. Moisture 9.38 per cent. (p. 324).

A table (p. 324) shows an analysis of soya bread, soya biscuits, and soya flour published by Robert Saundby in 1891.

Case I—Alfred Smith, age 33, admitted into Guy’s Hospital 15 Oct., 1890, for diabetes. He had been there twice before in April 1889 and Sept. 1889 for the same disorder. On the 2nd occasion, on admission, he was passing 5,040 grains of sugar a day. After a stay of seven weeks, during which he was dieted with gluten bread and the ordinary diabetic diet, he left passing 640 grains a day—only 13% as much. Describes the positive effect of replacing gluten bread with 22 soya biscuits. “While taking soya biscuits this patient gained two stone in weight” (1 stone = 14 avoirdupois pounds or about 6.35 kg; 8 stones = a hundredweight in the Imperial system). “When discharged on this occasion, he was passing about 300 grains of sugar a day” compared with 600 grains on a previous occasion when treated with gluten bread. “We may therefore confidently say that the improvement was rapid and marked on soya bean diet... The biscuits produced no diarrhoea [diarrhea] nor other ill effect.” A large table with 6 columns shows the patient’s daily progress from Oct. 15 to Dec. 20: Date, urine passed (fluid oz.), grains of sugar per oz. of urine, specific gravity of the urine, total sugar passed in 24 hours, weight of patient (p. 327-29).

Case II was the same patient as in Case I, readmitted in April 1891. A table shows his daily progress (p. 329-30).

Case III was George Killick, age 18, admitted to Guy’s Hospital on 29 Nov. 1890 and discharged on Jan. 19. A full-page table shows his daily progress. “We learn, therefore, that in this case also, the soya bean diet was quite as efficient as the gluten bread diet, if not more so, in reducing the quantity of sugar in the urine, and in diminishing the amount and specific gravity of the excretion.

“The general health of the patient improved considerably, and the treatment produced no disagreeable results.” Address: M.D., Physician to, and Lecturer on Materia Medica and Therapeutics, Guy’s Hospital, London.

1377. *Chemist and Druggist* (London). 1893. The manufacture of soy in China. 43:38-39. July 8.

• **Summary:** “The manufacture of soy [sauce] and beancurd [tofu] is one of the most flourishing industries in the

prefecture of Wênchow, China. The method is not supposed to be a secret, but the native manufacturers do not encourage inspection by foreigners. The beans used in the industry are principally white beans from Chinkiang. Besides these little else is required than a large amount of salt and flour, and an unlimited supply of fresh water.

“There are five large manufacturers in Wênchow, who work under licenses issued by the provincial Government and (as salt is a Government monopoly) are subject to periodical inspection of their premises by excisemen. The largest manufacturer at Wênchow takes out a license for 8 salt ‘passes,’ each ‘pass’ representing 368 bags of 85 1/3 lbs., or 2,243 cwt. [1 cwt (British) = hundredweight = 112 pounds] of salt every year. For each ‘pass’ obtained the manufacturer is permitted to set up 36 vats, to each of which, again, are annexed two feeding-vats. The vats are arranged at the bottom of a reservoir; the salt is stored in a similar reservoir at the back of the premises, where it is allowed to stand and drain for one year, Chinese salt being mostly unclarified sea-salt. Each vat is provided with an impervious cover.

“The beans, having been carefully washed, are placed in a cauldron holding 133 1/3 lbs. They are boiled for six hours, and then simmered and cooled through another eighteen hours. The broth is drawn off for use later on in the process, while the mash is mixed with flour (apparently wheat flour) at the rate of 213 lbs. of flour for each cauldron of mash. The resultant mixture is placed in large shallow baskets of bamboo, fitting each upon a wooden frame. These frames are piled one on the top of the other to a great height, and are left in the sun for five to eight days. When the mash emits a yellow exudation and turns yellow it is ready for further manipulation. It is now placed in the vats, and over it is poured a mixture of 2 parts of salt to 5 parts of water.

“To this clarified brine is added the bean-broth, and with this mixture the mash (now dry) is beaten up, and left to ferment. As it dries in the sun the process is repeated, and so on throughout the hot season (say, July to September), care being taken to cover the vats during rain. After three months or so a yellow oil appears, each vat producing about 667 lbs. of the oil. To this oil are added 2,400 lbs. of brine (but no bean-broth) thickened by 10 per cent. of salt, and the result is the soy [sauce] of commerce. Of this there are six grades, the prices of which per catty (1 1/3 lb.) are respectively 96 cash, 80 cash, 56 cash, 40 cash, 24 cash, and 20 cash—1,040 cash to the dollar (2s. 10d.). The soy [sauce] of one year can be used in that year, but it is considered always better to give it a second summer’s fermentation.”

Note 1. This is the earliest English-language document seen (May 2003) that contains statistics on the production or consumption of soyfoods (in this case soy sauce) in China.

Note 2. The ratio of wheat to soybeans in making this soy sauce is apparently 213 to 133.3, or 1.6 to 1. It is not clear whether the 133.3 pounds refers to dry or to washed

soybeans, however the weight should not be much different.

1378. Hawson (H.). 1893. See what the newspapers say about Gawne's Worcestershire sauce (Ad). *Southland Times* (Otago, New Zealand). July 29. p. 2.

• **Summary:** Contains a long list of praiseful testimonials from the following New Zealand newspapers: *Southland Times*, *Evening Star*, *Otago Workman*, *Taieri Advocate*, *New Zealand Tablet*, *Globe*, *Southern Standard*, *Cromwell Argus*, *Oamaru Mail*, *Otago Daily Times*, *West Coast Times*, *Palmerston and Waikonaite Times*, *Christchurch Press*, and *Dunstan Times*.

Messrs. Gawne and Co., George street, Dunedin—which [as of Feb. 2010 is the second-largest city in the South Island of New Zealand, and the principal city of the region of Otago] make this sauce.

"Why buy a small bottle of Lea and Perrin's Sauce when you can buy a large bottle of Gawne's Worcestershire Sauce?" It is locally made and sells for about half the price of the imported article. Address: Agent [New Zealand].

1379. Parker & Co. 1893. Imported sauces (Ad). *Hartford Daily Courant* (Connecticut). Sept. 30. p. 4.

• **Summary:** "L. & P. [Lea & Perrin's] Worcestershire Sauce. Mushroom Catsup. Walnut Catsup. Essence of Anchovies. Sayer's Sultana Sauce. Harvey Sauce. China Soy [sauce]. Green Mango Chutney. Sliced Chutney. Chasmere [sic, Cashmere] Chutney. Bengal Hot Chutney. Tobasco Pepper Sauce [Tabasco], etc., etc."

"Successors of Fox & Co. Wholesale and retail grocers." Address: 17 Central Row.

1380. *St. Louis Post-Dispatch* (Missouri). 1893. Use of the soya bean. Nov. 12. p. 20.

• **Summary:** "The use of the Soya bean in the dietary of diabetics has recently attracted much attention. Heretofore the bean has been used only for culinary purposes, the Japanese using a liquid called sooji [shoyu] or soja [soy sauce], a condiment which they prepare by fermenting the seeds of the Soya bean. The Japanese name of the plant is Daidzu [Daizu]. Linnaeus, the great botanist, called it *Dolichos Soja*."

The Japanese call the beans Mame, and make 'miso' or sooji from them. The preparations are used principally in cooking meat. In China an emulsion [soymilk] is made from the oil of the beans [sic, from the whole beans]. It forms a white liquid and is drunk in the districts in which milk is too dear for the poor to buy it. The Chinese also make a kind of cheese [tofu] from the beans. Soy sauce is exported to and used in many European countries. The Dutch call it 'Zoya.' In the East Indies it is known as 'Ket Jay' [sic, 'Ket Jap'] (probably the source of 'catchup' or 'ketchup'). This liquid is obtained by fermentation of cakes of roasted barley and boiled soya bean. After [the first] fermentation salt is added.

The whole is kept for two or three years and then the sauce is squeezed out of the mass.

"Bread and biscuit, made from the flour of the beans, have been highly recommended for diabetics on account of the low proportion of starch and the high proportion of fat and proteid. They are said to be pleasant to the taste. Dr. W. Hale White, writing from Guy's Hospital, London, where he has used the bread and biscuit for some time, says: 'They are to patients suffering from diabetes not only a good substitute for gluten bread, but they form a pleasant change from it, and many patients much prefer the taste of them to gluten bread.'"

1381. Ball, James Dyer. 1893. *Things Chinese: Being notes on various subjects connected with China*. 2nd ed., revised and enlarged. London: Sampson Low, Marston and Company, Ltd.; Hongkong, Shanghai, Yokohama, and Singapore, Ltd.: Kelly & Walsh, Ltd. 5 + 497 + xiv p. Index. [8 ref]

• **Summary:** This book is arranged alphabetically by subject. In the section on "Food" (p. 183+) we read (p. 186): "Chinese food, like French, does not consist of roasts, but of a multitude of made-up dishes. Peanut oil and soy [sauce] are added to them, and soups and broths are much taken. The Chinese, as far as their own food is concerned, are born cooks."

Page 188: "We give a few Chinese receipts which we have translated from a Chinese Cookery Book:... Chicken with the liquor of fermented rice... Take gelatinous rice, which has been fermented with yeast and water added, and cook with this for two hours, afterwards add the juice expressed from fresh ginger, soy, sesamum, and oil, of each a little. Mix together with boiled peanut oil. Dish and add fragrant herbs."

Peanut oil is mentioned on pages 186, 188, 288 (for use in lamps). The author lived 1847-1919. Address: Author, H.M. Civil Service, Hongkong.

1382. Bretschneider, Emil V. 1893. *Botanicon sinicum. Notes on Chinese botany from native and Western sources. II. J. of the Royal Asiatic Society, North China Branch. Series 2. 25:i-ii, 1-468. For the year 1890-91. See pages 35-36, 137-39, 162-65. [200+* ref. Eng]*

• **Summary:** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Corrigenda and addenda to Part I. Introduction (p. 1). Notes on Chinese, Japanese and European works consulted (p. 4). Plants mentioned in the *Rh ya* (p. 20). Plants mentioned in the *Shi king*, the *Shu king*, the *Li ki*, the *Chou li* and other Chinese classical works (p. 137). General remarks by Dr. E. Faber (p. 402). Classification of Chinese names of plants (p. 411). Index of Chinese names (p. 435). Index of European names (p. 461).

Pages 35-36 state: "29.—*Jung shu* is the same as *Jen shu*."

Kuo P'o:—This is the plant called *Hu tou* (foreign bean).

“Hing Ping:—Fan Kuang as well as She Jen and Li Sün all explain the above names of the *Rh ya* by *hu tou*. But they were mistaken. As *jung* is likewise a term for foreigners [western barbarians] they concluded that *jung shu* and *hu tou* are the same. Cheng Hüan and Sun Yen identified the *jung shu* correctly with the *ta tou* or great bean. [Comp. infra, 355, *Shi king*.]

“The *ta tou* is the *Soja hispida*, Moench, or soy bean. The *hu tou*, or foreign bean, is the *Faba sativa* [sic, *Vicia faba*], or common bean [sic, broad bean], one of the cultivated plants introduced from Western Asia into China, in the second century B.C., by the famous general Chang K'ien [Chang Ch'ien, traveled 139-115 B.C.].

Chapter 2, “Plants Mentioned in the Shi King, the Shu King, the Li Ki, the Chou Li and Other Chinese Classical Works,” begins with a discussion of cereals or grains (*ku*). “The term *wu ku* [wugu] (Cc = Chinese characters given) or five kinds of grain seems to be the oldest classification of grain. It is attributed to the Emperor Shen Nung. The ancient commentators enumerated these five kinds as follows (Cc): 1. *tao*, Rice. 2. *mai*, comprising Wheat and Barley. 3. *tsi*, *Panicum miliaceum*, the common Millet. 4. *shu*, *Panicum miliaceum*, the glutinous variety [of Millet]. 5. *shu*, the Soy bean, *Soja hispida*. Note 1. This is the earliest English-language document seen (Aug. 2002) which mentions the *wu ku* (“five grains”) and states that the soy bean (*shu*) is one of them. Since the classification of the *wu ku* are attributed to Shen-Nung, it is the earliest English-language document that links him with the soy bean.

“Some commentators have *liang*, *Setaria italica*, instead of *tsi*, others substitute *ma*, hemp, *Cannabis sativa*, for *tao*, rice.” Mencius and the *Li ki* both use the term *wu ku*.

“The ancient Chinese term ‘the five kinds of grain’ is also usual in Japan. We read in [Kaempfer’s] *Amoen. exot.*, 834, under *come* [rice]...” The soy bean is included. The *Chou li* mentions the six kinds of grain, or *liu ku*, which did not include the soy bean, and the nine kinds of grain, or *kiu ku*, which listed the soy bean, *ta tou*, as number six and the adzuki bean as number 7.

Pages 164-65 state: “355.—In the *Shi king* we have the term *jen shu*, which Legge translates as ‘large beans,’ 468:—Hou Tsi planted large beans [dadou = soy beans] which grew luxuriantly. Note: This is the earliest English-language document seen (June 2003) that mentions Hou Tsi in connection with soy beans.

“In the *Rh ya* [29] *jen shu* is given as a synonym of *jung shu*. Sun Yen identifies it with the *ta tou* or great bean, which latter name seems to appear first in Fang Cheng-chi’s book on husbandry [1st century B.C.] This is the soy bean, *Soja hispida*, Moench [See *Pên ts’ao kang mu*, XXIV, 1.] A good drawing of the plant is found in *Chi wu ming shi l’u k’ao*, I, 8. This bean has always been considered by the Chinese as the most important of the cultivated leguminous plants. It is

grown in numerous varieties all over the Empire, especially in the north, and is much esteemed for the oil yielded by its seeds. The name great bean refers to the plant, not to the seeds, which are small, of the size of a pea.

“The soy bean is also largely cultivated in Japan. It is described and figured under the Chinese characters meaning “great bean” in *Amoen. exot.*, 838, and *So moku*, XIII, 18-21.

“The soy bean is much employed in China and Japan for preparing the so-called ‘bean-curd’ and the sauce called ‘soy.’ The first is prepared by macerating the beans in water and milling them together with the water. The liquid pap is filtered. To this fluid is added gypsum, in order to coagulate the casein, and also chloride of magnesium. The coagulated casein or bean-curd is of a jelly-like appearance. Soy is made by boiling the beans, adding water, salt and wheat, and producing fermentation by yeast.

“Bean-curd and soy were most probably known to the Chinese in the classical period, although no distinct mention is made of these condiments in the classical writings. The ancient term *tsiang*, which Legge translates by ‘sauce,’ includes, we may suppose, soy. [See *Li ki*, I, 459-461 ‘Diet of the Ancient Chinese.’] Confucius *Analects*, 96. Biot translates the *tsiang* mentioned in the *Chou li* by ‘mets delicats.’ I, 70:—Pour les mets delicats on emploie cent vingt objets differents. Compare *Pên ts’ao kang mu*, XXV, 26, on the preparation of the *tsiang*. At Peking the common name for soy is *tsiang yu* (*tsiang* oil). [S.W.] Williams [*Dictionary* (1874), 764] states that the English word soy is probably derived from *shi yu*, in Japanese *si yu*. [I should think rather from the characters pronounced *sho yu* in Japanese. See Hepburn’s *Dictionary* (1867).] The character *shi* written with another radical replacing the “bean” radical to the left of the main character, in the *Shuo wen* is explained there by 5 characters, made of salt and beans [I cannot understand what the third character here is intended to mean]. See also *Pên ts’ao kang mu*, XXV, 2, under *ta tou shi*.

“As to the bean-curd, *tou fu*, it appears from the quotations in *Pên ts’ao kang mu*, XXV, 7, that this term and the mode of making bean-curd are first mentioned in the *Huai nan tsz’* [2nd century B.C.], but it was no doubt much earlier known in China.” Address: China.

1383. Duthie, John F. 1893. Field and garden crops of the North-Western Provinces and Oudh, with illustrations. Part (volume) III. Roorkee: Dep. of Land Records and Agriculture, N-W. Provinces and Oudh (India). Printed at the Thomason Civil Engineering College Press. x + 65 + xix p. + unnumbered plates. See p. 3, 45 and plate LXXXV. [6 soy ref]

• **Summary:** “*Glycine hispida*, Maxim. See plate LXXXV. Soy bean or Japan pea; bhat (N.-W. Himalaya); kajuwa (Tarai); bhatnas, bhatwas (Nepal and N. Tirhoot).

“Natural order *Leguminosæ*. An annual clothed with ferruginous [rust-colored] hairs. Stems stout, suberect, or

climbing. Leaves trifoliate, on long petioles. Flowers small, reddish. Pods 2-3 seeded, axillary, linear oblong, recurved, and densely pubescent.

“The *Glycine Soja*, under which name the soy bean is described in the Flora of British India, is another species, and has been identified with *G. ussuriensis* of Regel, which grows quite wild in Mandchuria [Manchuria], whereas this plant has nowhere been found as unmistakably wild...

“In these provinces its cultivation is confined to the lower slopes of the Himalaya and to a few of the neighboring plains districts. It is grown in poor soils during the rainy season, and represents a very inferior variety of the Japan pea, which under proper cultivation is a much more robust plant, with broader leaves and larger pods and seeds...

“The plant affords excellent fodder for all kinds of stock, if harvested before it is fully matured. From the seed a preparation called *miso* is largely used in China and Japan; and the green pods yield the well known sauce” [sic].

Plate LXXXV, drawn by H. Hormusii, is an excellent illustration of the cultivated soy bean plant (*Glycine hispida*, Maxim.) showing young and old leaves, flowers, and slightly hairy stems. An inset shows five different views and parts of the flower.

The author acknowledges his indebtedness to Dr. Watt's most useful “Dictionary of the Economic Products of India” and Prof. Church's “Food Grains of India.” Address: Director, Botanical Dep., Northern India.

1384. Fesca, Max. 1893. Beitrage zur Kenntniss der japanischen Landwirtschaft. II. Specieller theil [Contributions to an understanding of Japanese agriculture. II. Special part]. Berlin: Paul Parey. ix + 929 p. See 187-203, 872-73. Also published as vol. 2 of 2 volumes bound in one (Paul Parey, 1893). [7 ref. Ger]

• **Summary:** The chapter on the legumes (*Die Huelsenfruechte*, p. 187-203) is partly a review of the literature, with emphasis on soybeans (*Daizu*, *Oname*, *Sojabohne*). He begins by noting that for a nation like Japanese, where the people live predominantly on plant foods (*Pflanzenkost* = vegan diet), legumes are of major importance for the nutrition of the people, in that they offer a substitute for meat. They also supply important nitrogen to the soil. A table (p. 188) shows soybean production and yield in Japan from 1879 to 1887. The area increased from 441,699 *cho* to 466,315. Note: 1 *cho* = 2.45 acres Production increased from 2,280,135 *koku* to 3,253,790. Note: 1 *koku* = 180 liters or 47.6 gallons. Yield increased from 5.1 *cho/koku* to 7.69. Soybeans like the climate of northeastern Yezzo [Hokkaido]. A table (p. 190) gives the date of planting, date of harvest, and days to maturity at Hakodate, Sapporo, and Nemuro (all on Hokkaido). Also discusses: Soy sauce (*Shoyusauce*; p. 190), dates for other locations, and fertilizer (*Düngung*) needs (p. 191-92, incl. phosphoric acid, potash, wood ashes, straw, and superphosphate). A table (p. 193)

shows soybean area (in *cho*), production. and yield in 1887 in 6 parts of Japan (Yezzo, northern Japan, central Japan [which had by far the greatest planted area and production], western Japan, Shikoku, Kyushu).

Also discusses: The extraordinarily high nutritional value of the soybean (p. 196), yellow lupins (p. 196), defatted soybean cake (*Daizukasu*, p. 196), shoyu or soy sauce, *Shoyubohne*, and koji (p. 197-99), tofu, *Bohnenkäse*, and *Tofumame* (p. 199), Kori-Tofu and E. Kinch (p. 199).

His analysis of shoyu presscake (*Shoyukasu*) and okara (*Tofukasu*) showed that they contained respectively: Water 53.6 and 85.7%. Ash: 6.7 and 0.5%. Crude protein: 12.6 and 3.8%. Crude fat: 13.7 and 1.4%. Nitrogen-free extract: 6.7% and 5.4%. Crude fiber (*Rohfaser*): 6.7 and 3.2%. *Tofukasu* is a rather good livestock feed, and it is also eaten by poor people. The shoyu presscake, although richer in nutrients than okara, is used, at most, only in small amounts in feeds and then it must be cooked. Living yeast cells in the koji can easily cause stomach diseases and problems, and the presscake also has a high salt content. Note: This is the earliest German-language document seen that mentions okara (Oct. 2001), which it calls *Tofukasu*.

Miso (4 types; p. 200-02): (1) White miso (*Shiro-Miso*: Low salt content and short shelf life; keeps for 10 days); made with rice koji. Fermented for 3-4 days. (2) Edo Miso (*Yedo-Miso*): Higher salt content, shelf 5-4 months up to 1 year. Made with rice koji. Fermented for 10 days in summer, 30 days in winter. (3) Farmhouse miso (*Inaka-Miso*): Very high salt content. Shelf life: About a year; made with barley koji. Fermented for about 11-12 months. (4) Sendai miso, also known as Red miso (*Sendai-miso*: auch *Aka-Miso* genannt): Red color and high salt content. Shelf life: several years. Made mostly with barley koji. Fermented for 1½ to 2 years.

Azuki (*Phaseolus radiatus*, with planted area, production and yield for 1883 and 1884, p. 203).

A table (p. 873) shows a valuation of Japan's agricultural production for about 17 major crops (Source: *Japan's Volkswirtschaft und Staatshaushalt*). For each crop, the annual production (in *koku*), the worth per unit, and the value of the total crop in yen are given. The most valuable crops are: Rice: 40 million *koku*, 200 million yen. Dehulled barley (*beschalte Gerste*): 7 million *koku*, 14 million yen. Naked barley (*nakte Gerste*): 5 million *koku*, 12.5 million yen. Soybeans (*Sojabohnen*): 3 million *koku*, 12 million yen. Wheat (*Weizen*): 3 million *koku*, 12 million yen. Address: Prof., Dr., Germany.

1385. Flagg, Chas. O.; Towar, J.D. 1893. Agricultural Division. *Rhode Island Agricultural Experiment Station, Annual Report* 5:129-62. For the year 1892. See p. 149-52, 156-57. [4 ref]

• **Summary:** The section titled “Forage Plants” (p. 149-62) states: “From Dr. O.C. Wiggin of Keysville, Va. [Virginia],

was received a small package of Soja beans and two varieties of cowpeas... six varieties of Japanese beans [including two soja bean varieties, Yamagata Cha daidzu, and Kiyusuke daidzu, see p. 157] were received from the Kansas Experiment Station.”

“Soja or Soya Bean. (*Soja hispida*, natural order Leguminosæ).” According to *Henderson’s Hand-book of Plants* (p. 417) “This is a climbing annual plant allied to (*Dolichos*) (“cow-pea”). It is much cultivated in tropical Asia on account of its beans, which are used for preparing a well-known brown and slightly salt [sic] sauce (Soy) used both in Asia and Europe for flavoring certain dishes, especially beef, and supposed to favor digestion.”

“We believe this plant worthy of trial by those who desire a variety of crops for soiling and especially as, in common with all the *Leguminous* plants, it is rich in nitrogenous elements. It could easily be cut and stored as ensilage...”

“During the early winter a variety of this bean was extensively advertised by a party in Missouri as ‘Cole’s Domestic Coffee Berry,’ and offered for sale at the extravagant price of \$3.50 per pound. Its wonderful merit as a substitute for coffee was set forth in a ‘dodger’ with ‘testimonials’ attached. The seed can be purchased of J.M. Thorburn & Co., No. 15 John St., New York, or other large seed dealers, in small quantities, at 15 cents (15 cts.) per pound.”

A table (p. 151) gives the composition of soja beans, red clover, and cowpea plants. Values for the soja bean plant are based on three analyses, two grown at the Massachusetts Experiment Station in 1889 and cut August 20th and August 30th, the third grown at the South Carolina Experiment Station and cut in full bloom August 5th 1889.”

Another small table (p. 152) gives the fertilizer constituents of the above soja bean plant cut in full bloom: Moisture 7.05%. Nitrogen 2.37%. Potash 1.315%. Phosphoric acid 0.58%. The crop from one acre of soja beans cut and weighed green (27,769.5 lb) has the following fertilizing values, based on the value of each constituent: Vines \$34.54. Roots \$4.99. Total: \$39.53.

“For many years the idea has been prevalent among the farmers of southern New England that it does not pay to sow clover... This condition of things is unfortunate for our agriculture in the light of the discovery within recent years that the *leguminous* plants are able to use the nitrogen of the atmosphere for their growth through the medium of *bacteria* infesting a *nodular* growth upon the their roots. All the clovers, peas, beans, lupines, vetches, spurry, serradella, and sainfoin belong to this class and are generally cultivated for their seeds, for fodder or for green manuring. None other of our ordinary field and garden plants, grasses, cereals, root crops, vines, etc., have yet been shown to possess any such ability to assimilate atmospheric nitrogen, hence are dependent for their growth upon the supply of nitrogen

within the soil and rain water, or supplied by the farmer in manure or fertilizers. When purchased, nitrogen is the most expensive element, costing more than three times as much per pound as potash and more than twice as much as phosphoric acid, hence true economy should direct the prudent farmer to invest his money in *phosphoric acid*, *potash* and the *seeds of leguminous plants* in so far as he can use such crops for market, for feeding or for green manuring” (p. 155).

A table titled “Summary of analyses of leguminous crops” (p. 157) compares the composition of soja beans, cowpeas, and three types of “Japanese beans” (Yamagata Cha daidzu, Kiyusuke daidzu, and Black Podded Adzuki). The two “daidzu” beans are actually types of soja beans.

Note 1. This is the earliest English-language document seen (Sept. 2004) that uses the term “Cole’s Domestic Coffee Berry” to refer to the soybean.

Note 2. This is the earliest document seen (Aug. 2011) concerning soybeans in Rhode Island, or the cultivation of soybeans in Rhode Island. This document contains the earliest date seen for soybeans in Rhode Island, or the cultivation of soybeans in Rhode Island (1892). The source of these soybeans was Dr. O.C. Wiggin (of Keysville, Virginia), and the Kansas Agricultural Experiment Station.

Note 3. This is the earliest document seen (Jan. 2000) that mentions J.M. Thorburn & Co. in New York, or Mr. Cole in Missouri, as seedsmen for soja beans.

Note 4. This is the earliest English-language document seen (June 2007) that uses the word “nodular” or the word “bacteria” (or “bacterium”) in connection with root nodules.

Note 5. The authors apparently do not realize that Yamagata Cha-daidzu and Kiyusuke daidzu are the names of soja bean varieties (see table p. 157). Address: 1. B.Sc., Director of the Station, Agriculturist, and President of the Board; 2. B.Sc., Asst. Agriculturist. Both: Providence, Rhode Island.

1386. Henry, Augustine. 1893. Notes on economic botany of China. Shanghai, China: Printed at the Presbyterian Mission Press; Kilkenny, Ireland: Boethius. 68 p. See p. 13-14. 18 cm. Facsimile edition printed in 1986 by Boethius Press, Kilkenny, Ireland. [Eng]

• **Summary:** The book begins: “Missionaries and others living in the interior, are often in a position to make enquiries concerning the natural production of China, the results of which would be of great service to science. I intend to publish a few notes, pointing out the direction in which such work might be done as regards articles derived from the vegetable kingdom.”

The author focuses on the vegetable products of Shêng-king [Liaoning, a province in northeast China whose capital is Mukden]. The soja bean is a staple of Newchwang trade.

“7. The Soja bean, *Glycine hispida*, Max. is noted for its numerous varieties and manifold uses. *Ta-tou* is the book-

name of the *species*; but in the colloquial the varieties have each a distinct name, and these have not been very well made out for China. In Japan there are five great varieties, the white or yellowish, green, black, brown, and spotted, divided into sixteen sub-varieties, according to difference in form (which varies from spherical to flattened elliptical) size and colour. These sub-varieties differ in their use, time of arriving at maturity, etc. In China the chief kinds are *Huang-tou* [Yellow soybean] and *Hei-tou* [black soybean]: and perhaps the following sorts mentioned in the Paris Ex. C. [Exhibition Catalogue?] as occurring at Newchwang, are simply varieties of the Soja bean, viz., *Pai-tou* [white soybean], *Ch'ing-tou* [green soybean] and *Ma-tou* ["sesame bean"]. Information is wanted about these varieties. The Soja bean is the most important of the legumes cultivated in China; from its seeds *bean-oil* is produced; the refuse in the manufacture of which, *bean-cake*, is largely used in the South for manuring the sugar plantations. From certain varieties *bean-curd*, *soy* and *bean-sprouts* are prepared...

"For Sheng-king we wish descriptions and uses of the different varieties of the Soja bean, distinguished according to the local names."

Also discusses other species of beans and peas cultivated in China (p. 12-13; each is accompanied by two Chinese characters): 1. *Pien-tou*, the *lablab* bean, of which there are two varieties, one with purple, the other with white flowers. Botanists call this species *Dolichos lablab*, L.

2. *Kang-tou*, *Vigna sinensis* Hassk, the "chow-lee" of India [cowpea].

3. *Tao-tou* ([jack bean], literally "sword bean"), *Canavalia ensiformis*, D.C., the "over-look" pea of the West Indian negroes.

4. *Tsan-tou* ("silkworm bean"), *Vicia Faba*, L, the common bean, the broad bean.

5. *Wan-tou*, *Pisum sativum*, L., the common garden pea.

6. *Phaseolus mungo*, L. This haricot includes in China two if not more very distinct varieties. (a). *Lu-tou* ("green bean"), the Chinese vermicelli pea [mung bean]; the small seeds of this are ground into flour and are used for making the kind of vermicelli known as *Fên-t'iao*. (b). *Ch'ih-hsiao-tou* ("red small bean"), small red haricots [azuki].

8. Besides the foregoing there are several other species of beans cultivated to a small extent, among which may be mentioned the *Man-tou* of Hupeh, *Phaseolus chrysanthus*, Sav. and lentils, *Ervum Lens*, L. which is called at Ichang *Chin-mai-wan*.

Note 1. This is the earliest English-language document seen (April 2003) that uses the term "lablab bean."

Also: kudzu (*ko*, p. 57-59), which is said to grow all over China, especially in the vicinity of Kiukiang.

Note 2. The edition published in Ireland in 1893, having the same title, has E. Charles Nelson as the 2nd author. It has vx [15] pages of front matter plus 6 unnumbered pages. And it is 21 cm tall, rather than 18. According to OCLC

/ Worldcat (Oct. 2010) the edition published in Ireland is owned by 44 libraries worldwide, compared with only 2 for the Shanghai edition. Address: I.M. Customs, Shanghai, China.

1387. Japan, Dep. of Agriculture and Commerce, Agricultural Bureau. 1893. A descriptive catalogue of the agricultural products exhibited in the World's Columbian Exposition. Tokyo: Printed at the Seishibunsha. 115 p.

• **Summary:** The World's Columbian Exposition was a World's Fair held in Chicago, Illinois, to celebrate the 400th anniversary of Christopher Columbus's arrival in the New World in 1492.

Discusses 38 commercial products, with most divided into basic information and products made from the crop. Includes: Rice ("The manures applied to rice fields" include "green manures, farm yard manures, composts, ordures, fish manures, Sake kasu, Shoyu kasu, rape seed cake, and soy bean [cake] {p. 11}), barley ("It is much used as the material for making miso. Miso is prepared by pounding together boiled soy bean, salt, and the Koji {yeast}* prepared from common barley or naked barley; and is one of the most common articles of food in Japan." (Footnote: ***Eurotium oryzae*). It [barley] is also used for making *ame* {p. 23}).

Wheat ("Wheat is used principally for preparing soy [sauce], vermicelli, onmen [sic, somen?], undon [sic, udon], and several kinds of confectionary" {p. 27}. It is also used for making *fu* or wheat gluten; "Roast 'fu' is used as food by boiling it with soup, soy, mirin, etc." {p. 29}), naked barley (*Hordeum nudum*; *hadakamugi*), Job's tears (*Coix lacryma*; *hatomugi*), soy bean (*Soja hispida*; *daidzu*), adzuki (*Phaseolus Radiatus*, [azuki]), sasage (*Dolichos Umbellatus*), haricot bean (*Phaseolus vulgaris*), peas, buckwheat ("Sobakiri" and "Kôri-soba" are both seasoned with soy sauce {p. 46}), rape seed (*Brassica chinensis*, *natane*) and rape seed oil (*natane abura*), sesame seeds (yellow {*kigoma*}, white {*shirogoma*}, and black {*kurogoma*} are displayed) and sesame oil (made from only yellow and white sesame), yegoma (*Perilla occimoides*), hemp, shiitake, chilli (*Capsicum Longum*; *tôgarashi*; "The fresh unripe fruit and leaves of certain varieties are eaten by cooking them with soy, sugar, "Katsuwobushi" [katsuobushi],* etc." {p. 103}). Also discusses: Dried daikon (p. 109-11), konjak flour (*Conophallus konjak*; *konniak-ko*, *konnyaku*; "For cooking, it is cut into small pieces and boiled with soy, soup, mirin, sugar etc." {p. 112}), kampo (*Lagenaria vulgaris*; *kampo* [kampo, kanpyo]; "It is used as an article of food by boiling with water, soy, sugar, mirin etc." {p. 113}), wine.

Concerning the soy bean: In 1887, the total area of arable land devoted to soy bean cultivation is 4,633,152 *tan* (1 *tan* = 0.245 acre; thus 1,142,472.2 acres or 462,352.16 hectares). The total production of soy bean in the Empire was estimated to be 3,253,790 *koku* (1 *koku* = 180 liters, and 1 bushel = 35.2390 liters; thus 585,682,200 liters = 16,620,284

bushels).

Note 1. From the above figures, a yield of 14.53 bushels per acre can be calculated.

From 1887 to 1891 the price of soybeans per *koku* ranged from 4.180 yen in 1888 to 5.319 yen in 1890. Four specimens of soybeans were exhibited: Green soy bean (*awo-daidzu*). Black soy bean (*kuro-daidzu*). Common soy bean.

“Daidzu or soy bean is extensively used in Japan to prepare various kinds of foods indispensable for the daily meal, such as ‘soy’ or ‘shōyu,’ ‘tamari’ (a kind of soy), tofu, and miso. It is also largely used as a food for horses and manure [bean cake].

Note 2. This is the 2nd earliest English-language document seen (April 2012) that mentions tamari, which it calls “tamari” (not “tamari shoyu”).

A analysis of the percentage composition of 3 kinds of soy beans analyzed by the Sanitary Experiment Station at Tokio is given; Green soy beans have the highest crude protein content (42.85% with 12.28% water). White soy beans (*shiro-daidzu*) have the highest ash content (5.00% with 13.46% water). Black soy beans have the highest fat content (18.26%, and the 2nd highest crude protein content 40.25%, with 11.09% water). Soy bean (*Itachi-daidzu*) from Saitama prefecture.

Although daizu is abundantly produced in Japan, since its daily consumption by all classes of people is great, it is now imported from China and Korea in large quantity. However imported soy bean is never used to make first class shoyu or soy, since the imported beans are inferior to those produced in Japan.

A table shows the quantity (in *kin*) and value (in *yen*) of soy bean exported from Japan from 1887 to 1891; 2.1 million *kin* were exported in 1889.

Four specimens of soy sauce are on display. Two brands (the trade marks are shown) are made by Mr. Mogi Shichiroemon, and two are made by Mr. Mogi Saheiji. All are made at Noda-machi, Chiba prefecture, Japan. Brands (a) and (c) are of the first quality; brands (b) and (d) are of the second quality.

A table shows the amount of shoyu made in Japan each year from 1887 to 1891; the amount ranges from 1,304,551 *koku* in 1888 to 1,157,982 *koku* in 1890. Since 1 *koku* = 180 liters, the amount made in 1888 is 234,819,180 liters. The total number of shoyu manufacturers in 1889 was 10,682. A table shows the price (in *yen*) of various brands and quantities of shoyu from 1887 to 1892. A brief description of the process for making shoyu is given. The word “barm” is used instead of koji. Either barley or wheat can be used with daizu to make the barm. The “mixture is kept for about 25 months, stirring it occasionally with a paddle, say twice a day during winter and three times in summer, and when it is fermented to the required degree, soy is extracted by means of a soy press. The clear liquid thus obtained is pasteurized

by heating to about 130° F. and when entirely cooled, it is transferred into casks.”

As shoyu is manufactured from daizu, wheat, etc., “it naturally contains a large quantity of albuminous matter. Shoyu is used in Japan as table salt is in Europe and America; consequently it is indispensable for daily use for cooking fish, meat, vegetables. etc. It has a remarkable merit when applying it in the place of sauces (like ‘worcestershire’) for beefsteak, fry, stew, etc. It answers better than salt when used with cold meat.

“Japanese soy or ‘Shoyu’ has long been exported to various parts of Europe where those who once taste it never fail in extolling its flavour. It is said that in Holland, Japanese soy has been used by many people from long years ago and highly esteemed by them.” A table shows the chemical composition of shoyu.

“Since the fine flavour of Japanese soy has recently become known to people abroad, several trial consignments were made both to Europe and America, and the result, though it has obtained a high reputation among them, still it has not yet become a leading article of export.” A table shows the annual amount and value of shoyu exported from Japan from 1887 to 1891. It ranges from 1,302.71 *koku* worth 11,091 in 1887 to 3,749.01 *koku* worth 41,028 yen in 1891. Thus the exports are growing rapidly.

Three specimens of tamari are on display, one dilute and one concentrated. The first two are made and sold by Mr. Ishima Mosaku. The 3rd (regular tamari) is made and sold by Mr. Morimoto Chōhachi. All are made at Yokkaichi in Miye [Mie] prefecture. Tamari is made chiefly in the prefectures of Miye, Aichi and Gifu [in central Japan]. Tamari is very similar to shoyu except that no wheat is used in manufacturing tamari.

Tofu (bean curd): “Tofu is one of the most favourite foods of Japanese and sold in all places both in towns and villages. The specimen here exhibited is called Yakidofu and is prepared by roasting partially dried ‘Tofu’ over a charcoal fire.” “As ‘Tofu,’ sometimes called bean curd, being a coagulated vegetable albumen of soy beans, it contains a large proportion of nutritious matter, most important to human life, especially, to those who subsist mainly upon vegetables.” The price of this Yakidofu is 18 yen per 10 dozen.

Note 3. This is the earliest English-language document seen (May 2012) that mentions grilled tofu, which it calls *Yakidofu*.

A specimen of Kōri-tōfu or frozen bean curd is displayed; it is made in Minami Adzumi-gun, Nagano prefecture. “As it can be preserved for many years it is a suitable for provision for vessels undertaking long voyages.”

Concerning adzuki: There are both red adzuki and white adzuki. Early varieties are sown in the spring; late varieties {called aki-adzuki in the autumn}. “It is mostly used for preparing “An”—a pulpy mixture of boiled Adzuki flour and

sugar, and in that state is largely used for making various kinds of confectionary.” It is also used to make “Sarashi-an or refined flour of ‘adzuki,” and “shiruko—a juice prepared by boiling the flour with a suitable quantity of water and adding sugar...” Note 4. Shiruko could be described as adzuki bean soup with mochi (rice cake).

Concerning rape seed: “Rape was formerly cultivated to a great extent but since the introduction of Kerosene Oil, the acreage of its cultivation has been much diminished, yet it is grown in nearly all parts of Japan and forms one of the important farm crops.”

1388. Japan. Dep. of Agriculture and Commerce, Bureau of Commerce (Nôshômushô Shôkôkyoku). 1893. General view of commerce & industry in the empire of Japan. Tokyo: Printed by M. Onuki. ii + 491 p. See p. 22, 37, 67, 247, 324, 345, 349-51, 429-30, 440-41, 469-70, 474. Index.

• **Summary:** Name of organization with diacritics is: Nôshômushô Shôkôkyoku. Pages 21-22: A list of all the 71 commodities exported from the port of Kobe in 1891 whose value exceeded ¥10,000. The largest by far was rice (5.5 million yen), followed by tea, matches, and camphor. Also: Kanten or colle vegetable [agar] 408,615. Rape seed oil 114,572. Sea weeds 22,372. Cut sea-weeds 17,765. Soy [sauce] 11,483 yen.

Page 37: After the “Restoration of Meiji,” a new port was opened at Kobe, near Osaka. Its principal articles of merchandise were “rice, salt, sugar, tea, soy,...”

On pages 61-67 are tables of Japanese weights and measures and comparative tables with those of the empire of Great Britain, including both troy and avoirdupois. These show Japanese units for length (9 units; the standard is the shaku), area of land (6), capacity (5), and weight (6; the standard is the kwan). In 1885 the Government of Japan joined the Universal Metric Convention, and in 1891 established the present system of weights and measures.

Page 67: Industrial pursuits can be classified into original ones (that existed from ancient times, having first been introduced from China and Corea [Korea]) and those introduced from the West. Original industries include “salt making, sugar making, Sake brewing, soy brewing, oil producing,...”

Page 247: Exports (Class 22) include “Soy. The total value of the latest export is 41,029 yen, and chiefly exported to Hawaii.”

Page 324: A table shows imports (both weight and value) of “Oil-cake” from 1887 to 1891, from China, Korea, and Other.

Page 345: Class II—Duty free goods includes “Oil cake.”

Page 349: Class II—Duty free goods, includes “All kinds of Mush-rooms, excepting Shiitake, Confectionaries, all kinds of Liquors, Vinegars, Soy [sauce], Oils, and Prepared Tobacco... Sea-weeds excepting Kobu [Kombu, seaweed],...”

Pages 429-30: “Table of the total quantity [weight

in picul or catty] and value [in yen] of the commodities exported from Japan to the United States.” Soy [sauce] rose from 7,862 catties worth 261 yen in 1887 to 9,744 catties worth 1,146 in 1891.

Page 440-41: Chapter 7, “Commercial and industrial unions in Japan,” lists the 2,013 “trade unions” of businesses in the same general field. One of these, “Liquor and soy,” has 106 members.

Pages 469-70, 474: Table III lists “Industrial corporations.” One class, “Soy and miso,” has 4 members and capital of 75,500 yen. Address: Tokyo, Japan.

1389. Kaeufliche Saucen [Commercial sauces (Document part)]. 1893. In: F.J. Koenig, ed. 1893. *Chemie der Menschlichen Nahrungs- und Genussmittel. Zweiter Theil. Ihre Herstellung, Zusammensetzung und Beschaffenheit, ihre Verfaelschungen und deren Nachweis. Dritte Auflage* [The Chemistry of Human Foods and Stimulants. Vol. 2. Their Production, Composition and Properties, their Falsification and Proof of that. 3rd ed.]. Berlin: J. Springer. xvi + 1385 p. See p. 194-95. [3 ref. Ger]

• **Summary:** The most widely available sauce is Japanese shoyu (die “Japanisch Soya,” or *Shoya*, or Soy), which, in Japan, is made by a fermentation process from barley or wheat (for the malting {koji} phase), table salt, yeasts, water, and mainly out of a soybean variety (*Dolichos Soya* or *Soya japonica*) cultivated especially for this purpose. The soybean has an excellent aroma for this purpose. The composition of the soybeans used for this purpose (according to Kellner 1887) are given.

For details on the art of making Japanese shoyu, see Vol. 1, p. 241.

Shoyu is a very important foodstuff / seasoning (*Nahrungsmittel*) in Japan; it is enjoyed with almost all dishes and must partially take the place of meat. Each year in Japan about 540 to 720 million liters are manufactured; the Japanese enjoy, on average, 60-100 cc of shoyu (*Shoya*) per day.

The next section is basically a summary of Tahara and Kitao (1889) Nagai and Murai found the composition of Japanese shoyu to be as follows (in gm per 100 cc): dry matter 35.17, total nitrogen 8.93, sugars 4.44, dextrin 4.56, alcohol 0.14, volatile acids = acetic acid 0.16 gm, non-volatile acids = lactic acid 1.08 gm, ash 14.67 gm, specific weight (relative density) at 21°C 1.199.

A large table at the bottom of p. 195 gives a detailed nutritional analysis of nine commercial sauces by C. Söllscher and F.J. König. These nine include: Essence of Anchovies, Harvey-Sauce, Japanese Soya (shoyu), Indian Soya, Beefsteak Sauce, and Maggi’s Suppen- und Speisegewürze (Seasoning for Soups and Foods). The contents of a typical bottle and the relative price are also given: Japanese Soya is the most expensive (2.75) and Beefsteak Sauce is the least expensive (1.50).

Note: This is the earliest document seen (April 2012) that mentions an HVP sauce product (Maggi's).

1390. Koenig, Franz Joseph. ed. 1893. *Chemie der menschlichen Nahrungs- und Genussmittel. Zweiter Theil. Ihre Herstellung, Zusammensetzung und Beschaffenheit, ihre Verfaelschungen und deren Nachweis. Dritte Auflage* [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. Their production, composition and properties, their falsification and proof of that. 3rd ed.]. Berlin: Verlag von Julius Springer. xvi + 1385 p. See p. 194-95, 389, 486-90, 529-30, 1044-53, 1071. Illust. Index. 24 cm. [12 ref. Ger]

• **Summary:** Summaries of early studies on the chemical composition of soybeans and various soyfoods, including some original studies. Discusses (p. 194-95) commercial sauces, including Japanese shoyu ("Japanisch Soya oder Shoya oder Soy"). See separate entry.

Discusses (p. 1044-51) adulteration of coffee and coffee substitutes. Under "Coffee made from legumes" (p. 1051) we read: "The soybean (compare p. 486) is also used for the preparation of a coffee substitute." A table (p. 1053, based on Kornauth) compares the composition of 12 roasted seeds and fruits used to make coffee substitutes, including chicory, barley, figs, soybeans, white lupins, and chufa.

An illustration (p. 1071) shows different cellular layers of the soy bean sprout leaves (*Keimblätter*)—after an illustration by J. Moeller.

Also discusses: Peanuts (*Erdnusse*, *Arachis*, p. 322, 373, 385, 389, 494, 621, 686, 1051). Sesame seeds (p. 322, 385, 372, 389, 408, 494). Almonds (p. 322). Hemp (p. 322, 385, 493). Lupins (p. 372, 385, 389, 490-91, 1050, 1053, 1068-69). Chufa (*Erdmandel*, *Cyperus esculentus*, p. 1051, 1053). Address: PhD, Prof. (who teaches but does not have a faculty seat or voting rights) at the Royal Academy and Head of the Agricultural-Chemical Experiment Station at Muenster, in Westphalia, Germany (ordentlicher Honorarprofessor der Koeniglichen Akademie und Vorsteher der agric.-chemischen Versuchsstation Muenster i. W.).

1391. Sagot, Paul Antoine; Raoul, Edouard François Armand. 1893. *Manuel pratique des cultures tropicales et des plantations des pays chauds* [Practical manual for tropical crops]. Paris: Augustin Challamel. xxxii + 734 p. See p. 151-55. [Fre]

• **Summary:** In the chapter titled *Légumes et Culture Potagère*, there is a section on soybeans and soyfoods written by Edouard Raoul titled "Soja hispida Moench, Pois Soja, Pois oléagineux de Chine. Daïzou des Japonais." It discusses the widespread culture of soybeans in southern Asia, China, and Japan. "The seed is very rich in oil and in casein soluble in water. Its consistency, especially before maturation, is very tender and fine. Unfortunately it does not have much taste of its own. The pod is very small and contains only 2-3

seeds. It is not easily opened. I prefer soybean seeds having a color that is clear fawn-colored or tawny (*fauve*) or greenish, to those which are black."

"The plant must be sown from very fresh seeds. The germination (in Europe) is often very unequal, and many of the seeds don't develop... Some seeds sent by me to French Guiana (*la Guyane*) have been cultivated by Mr. Bar au Maroni, and have borne fruit, but I don't have precise details on their vegetation or ease of utilization."

Brief descriptions are then given of miso, shoyu, tofou (tofu), *kouri-tofou* [dried-frozen tofu], "which is nothing but tofu dried using heat" [sic], and *uba* (yuba, "a product very rich in nitrogenous materials {proteins} and fats"), followed by a list of the names of the best-known Japanese soybean varieties, and a discussion of the difference between *Glycine hispida* Moench (*Kuro mame* [black soybeans], *no mame*, *kuzu*, *yama-daizou* [wild soybeans]), and *Glycine soja* Siebold et Zuccar. (*kiu mame* and *tsourou-mame*). Typical analyses of the stems and leaves, seeds, and entire plants are given based on research conducted by M. Joulie. A comparison of the nutritional value of soya and wheat is given based on the research of Wechler in Austria and Messrs. Fremy, Muentz, and Pellet in France. Dr. Menudier uses soy flour in diabetic diets.

Also discusses: Winged beans (p. 149-50; *Psophocarpus tetragonolobus* Dec., *Dolichos tetragonolobus* L., *Pois carré*). Peanuts (p. 150-51; *Arachide*, *Arachis hypogaea*). Bambarra groundnuts (p. 151; *Voandzou*, *Voandzeia subterranea* Dup. Th.).

Note 1. This is the earliest document seen (May 2009) concerning soybeans in French Guiana, or the cultivation of soybeans in French Guiana. This document contains the earliest date seen for soybeans in French Guiana, or the cultivation of soybeans in French Guiana (1893). The source of these soybeans was Prof. E. Raoul, who was apparently in France.

Note 2. This is the earliest French-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls "kouri-tofou." Note 3. Sagot lived 1821-1888.

Note 4: This is the earliest document seen (Nov. 2003) concerning general information on soybean production in the tropics.

Note 5. Notice that "kuzu" is given as a name for the wild soybean in Japan. Address: 1. Docteur en Médecine, Ancien Chirurgien de la Marine, Ancien Professeur d'Histoire Naturelle à l'École Normale Speciale de Cluny; 2. Pharmacien en Chef du Corps de Santé des Colonies. Professeur du Cours de Productions et Cultures Tropicales à l'École Coloniale.

1392. Westeroode, W. de Wolff van. 1893. *Inlandsche plantennamen* [Indigenous plant names (in the Dutch East Indies); *Glycine Soja* ("kadeleh")]. *Teysmannia* (*Batavia* [*Jakarta*]) 4:23-30. See p. 25-26. [Dut]

• **Summary:** Mentions Glycine Soja (“kadeleh”). The Ngoko-Javanese is “kadele” or “kedele,” the *kromo-“kedang-soel”*, the same in East as in Central Java. The soy (kedele) beans deserve a precise pharmacological investigation in view of the surprising results given by the soy product ketjap [Indonesian soy sauce] against persistent malaria, which cannot be cured by other means. Address: Indonesia.

1393. Flett (W.H.), Limited. 1894. Classified ad: To Messrs. Lea and Perrins, Worcester. *Times (London)*. Feb. 3. p. 1, col. 3.

• **Summary:** “We the undersigned, W.H. Fleet, Limited, of Everton-valley, Liverpool, hereby express our Regret at having Used a Label for our Worcestershire Sauce having on it two medallions or circles containing representations of game, and a border with diagonal lines, which you consider to be an infringement of your rights in respect of the labels registered by you as Trade Marks, and we undertake not to use it again, or any other, in infringement of your rights. And in consideration of your abstaining from legal proceedings against us, we are willing that you should publish this our apology in such a manner as you may think fit.

“Dated the 9th day of January, 1894. (Signed) W.H. Flett, Limited. J.A. Shearer, Secretary.” Address: Liverpool [England].

1394. Morrell, Dora M. 1894. Relishes: Cooking them at table—Variety and abundance. *Los Angeles Times*. Feb. 11. p. 21.

• **Summary:** The last recipe, for “Deviled almonds,” calls for “two tablespoonfuls of Worcestershire sauce.”

1395. Schlegel, Gustave; Cordier, Henri. 1894. The Chinese bean-curd and soy and the soya-bread of Mr. Lecerf. I. Tofu. *T'oung Pao (General Newspaper)* 5:135-46. March. [11 ref. Eng]

• **Summary:** “Of late these Chinese preparations have again attracted the notice of Europeans. The *Temps* in France published last November [sic, April 8, 1893] a note upon the subject after an article in the *Avenir de Diego-Suarez* of 2 March 1893, and Dr. Vorderman, of the civil medical service in Java and Madura... We will add to these notices what is written about the subject by the Chinese themselves.

“I. Tao-fu or Bean Curd. According to ‘Collected Omissions of *Sieh-choh*’ nothing had been ever heard of the confection of bean-curd before or after the period of the three dynasties of antiquity (B.C. 2205-250), and it was only mentioned for the first time in the work of *Liu-ngan* [*Liu An*] king of Hoai-nan [Huai Nan] of the Han (second century before our era) Cf. Mayers, Chinese Readers Manual, No. 412, Cap. 24.”

“The *Tao-fu* or Bean-curd was also called ‘Leguminous milk’, and was prepared by boiling curds or milk from beans.

“It is further related that when *Shi-tsih* [pinyin: Shi Ji] was governor of *Ts’ing-yang* [pinyin: Qing Yang] (Latitude 30°45’, Longitude 115°26’) he, in order to purify himself and to rouse the population, did not permit himself the use of meat, but bought every day in the market several pieces of bean curd, so that the townpeople called these curds ‘The little slaughtered sheep.’

“The bean of which this curd is prepared is known in science by the name of *Soja hispida*, and has been imported in the form of a meat-sauce from Japan to Europe under its Japanese name of *Sho-yu*, the corrupted Japanese pronunciation of the Chinese *tsiang yu* or ‘relish-oil’ which this sauce bears in some parts of China, and which has been further corrupted by the Dutch into *Soja*, by which name (also written *soya* and *soy*) it became known all over Europe. We will return to this by and by.

“According to Dr. Vorderman (loc. cit. p. 354) the soy-beans are distinguished in light-colored (cream-color, straw-yellow, light ochre-yellow and amber-yellow), brown and black. The first two sorts are roundish, the last either roundish or oblong, as they come from the one or the other variety of the plant. Accordingly, the plant with roundish seeds is called *Soja hispida, tumida* and that with oblong seeds *Soja hispida, platycarpa*, amounting, with the differences in color, to four varieties: 1. *Soja hispida, tumida Beta pallida*; 2. *Soja hispida, tumida Beta atropurpurea* [atrosperma]; 3. *Soja hispida, tumida Beta castanea*; 4. *Soja hispida, platycarpa Beta melanosperma*.

“No. 2 and 4 are black and serve especially for the fabrication of Soy or Ketchup, whilst No. 1 (pale-yellow) and No. 3 (brown) are used for other culinary purposes.

“Since the Vienna [Austria] exhibition of 1873, when several samples of Chinese, Japanese and Indian soybeans were exhibited, their great nutritive properties and richness of azote [nitrogen] and fat have been shown by chemical analysis, and the culture of this plant has been largely introduced into Europe, especially in Hungary.” Note 1. This is the earliest English-language document seen (July 2003) that contains the word “soybeans”—spelled as one word.

König in his work *Die menschlichen Nahrungs und Genussmittel*, 2nd Ed., Vol. II, p. 372, gives an analysis of the composition of 4 types of soybeans. “Dr. Vorderman says that he has not been able to detect amyllum [starch] in the Soybeans of Java, China and Annam in applying the reaction of jodium [iodine] upon the section of the bean. The texture of the cotyledons consists principally of oblong, radiating parenchyme-cells, about five times longer than broad.

Note 2. This is the earliest English-language document seen (Oct. 2004) that uses the word “cotyledons” in connection with soybeans.

“II. *Tao-kan* or Preserved Bean Curd. The Chinese make of the Soy-beans two preparations, one called in Java *Tao-hu* and the other *Tao-toa*. They both consist of leguminous cheese, obtained from the light-brown beans, principally

those obtained from Annam. But at present many Chinese in Batavia prefer the so much cheaper *kadele putih* grown in the *Preanger* and the *Ommelanden* (circumjacent territory of Batavia).

“These lightcolored beans are macerated during five hours in rainwater, when they swell up to about twice or thrice their original size. After having been cleansed from accidental dirt or admixtures, they are ground in a stone handmill, very much resembling that in which Europeans ground colors. One Chinese turns the mill, whilst the other throws the macerated beans, still in their husk, with a little water into the mill, so that the stuff runs as a white, thin mass, by a small gutter, into a tub prepared for its reception. This mass is then heated upon the fire in a large iron open cauldron, until it reaches the boiling-point. The froth is skimmed, and the fluid strained, after boiling, through a cotton cloth, in which a white, doughy residu [sic, residue = okara] remains, having a peculiar oily smell, and which serves as food for ducks and fowl.

“The filtrated fluid, which has a milkwhite color, is mixed, whilst it is being cooled, with a certain proportion of common Madura-salt or with a little calcined gypsum. Note 2. This is the earliest English-language document seen (Oct. 2003) that refers to soymilk, which it calls the “milk from beans” and “The filtrated fluid, which has a milkwhite color...”

“This gypsum is imported from China in the form of large lumps of radiated gypsum. As it is specially used for preparing the leguminous cheese of the soybeans, it is called by traders in Batavia by the Malay-Chinese hybrid word *Batu-tao* i.e. ‘bean-stone.’\ “The salt (or, as in China, the chloride of magnesium) and gypsum change the juice, by precipitation of the legumine [legumin], into a white, gelatinous [gelatinous] mass, which, when sufficiently cooled, obtains a certain consistency, allowing it to be cut into flat square pieces. This can, however, not be done for after two hours after the precipitation. These squares are then laid upon plantain-leaves protected by a white cotton cloth against dust, and hawked about in the streets.

“They have an unpleasant raw bean-flavor, but when mixed with other victuals, this taste is lost. It is used as well in the preparation of Chinese victuals, as in that of the so-called Indian rice-dish.

“In order to preserve the *tao-fu* for continuous use, it is made to *tao-koa* (or dried beans) by the following method.

“The *tao-fu*, cut into flat squares, is plunged into a decoctum of *Curcuma longa*, which colours it intense yellow. These yellow cakes are then wrapped up in white square pieces of cotton, laid between boards and exposed to a certain pressure. Generally they are at the same time stamped with Chinese characters.

“By this pressure a good deal of water is lost, but the cakes can be preserved much longer.

“Dr. Vorderman says that both *tao-fu* and *tao-koa* can be

successfully used in the nourishment of feeble children, who refuse to take eggs. *Tao-koa* is also imported from China, but these cakes are much larger than those prepared in Java, and are always stamped with Chinese characters.”

Note 2. This is the earliest document seen (Aug. 2002) that mentions Liu An of Huai Nan in connection with tofu.

Note 4. This is the earliest English-language document seen (Aug. 2010) that uses the word “*Tao-fu*” (or “*Tao fu*”), or the word “*Tao-hu*” (or “*Tao hu*”), or the word “*Tao-kan*” (or *Tao kan*)” to refer to Chinese-style tofu.

Note 5. This is the earliest English-language document seen (Sept. 2004) that uses the term “pale-yellow” or the term “straw-yellow” to describe the color of soybean seeds.

Note 6. An article in this same issue, titled “The Chinese in Boston” [Massachusetts], notes that presently “1,000 Chinese live in Boston, of which 700 work in the 180 laundries, and about 300 are merchants and traffickers, all dwelling on Harrison Ave. Here one also finds 63 gambling dens (or houses of ill repute) and several others where opium is smoked—visited in part by the most vile class of Americans.” We wonder if there wasn’t at least one tofu shop in Boston at this time. Address: 1. Professeur de Chinois à l’Universite de Leide [Leiden]; 2. Professeur à l’Ecole spéciale des Langues orientales vivantes et à l’Ecole libre des Sciences politiques à Paris.

1396. Schlegel, Gustave; Cordier, Henri. 1894. The Chinese bean-curd and soy and the soya-bread of Mr. Lecerf. III. *Tao-yu* or soy oil. *T’oung Pao (General Newspaper)* 5:135-46. March. See p. 140-43. [10 ref. Eng]

• **Summary:** This section is not about soybean oil, but about various types of Chinese soy sauce. “But the Soy-bean does not only serve for the preparation of beancurd, but also for the renowned condiment and sauce known as *Soya*, not only in the far east, but also over all Europe and America. It is known by the name of *Shi* which is explained in the *Yih-ya* as being a homonym of the word *Shi* or ‘taste’ and was known by the people of *Thsi* because it is a combination of the five tastes.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the word *Shi* to refer to fermented black soybeans.

“In the dictionary *Shwo-wen* [*Shuowen*] (about A.D. 100) the condiment is described as ‘Salt-mixed dark pulse.’ Bretschneider (*Botanicon Sinicum*, II, 165, Shanghai 1892) says he cannot understand what the character (dark) is intended to mean.

“If he had looked up the word in our Dutch-Chinese dictionary published in 1884, i.v. *Soya*, he would have found its explication given according to the *Tan-yuen-luh*, written by *Yang-shin*, one of the most prominent scholars of the Ming-dynasty (Wylie, Notes, p. 130), who says: ‘*Shi* is properly a bean; it is mixed with salt and *darkly* shut up into jars and pots, wherein it is fermented; this is why it is

called dark pulse.' In fact, this is the way the Soya is made. The beans are first boiled soft, mixed with an equal quantity of wheat or barley, and left to ferment; a portion of salt, and three times as much water as beans, are afterwards put in, and the whole compound left for two or three months, when the liquid is pressed and strained.

"As we have said above, the mass is fermented in large stone covered jars, and any-one who has visited Canton will have, if not seen, at least smelled the disagreeable stench emanating from the large jars with fermenting Soy in the Soy-makers-lane.

"The Chinese say that the character *Shi* does not occur in the nine classics, but that in the commentary of the 'Great bitter, the salt and the sour of the Nine discussions of Sung-yuh,' the 'Great bitter' is explained as being the *Shi* or Soy; and that in the Chapter on Aliments in the Annals is spoken of a thousand measures of salted soybeans (*shi*): whilst, according to the History of Aliments of the former Han-dynasty, soy was sold in (the capital) Chang-ngan by a certain *Fan Shau-ung*, who was on that account called the Soy-Fan."

"In the Elegies of Thsoo (Wylie, Notes, 181) 4th Century B.C., is equally spoken of the Great bitter, the salt, the sour, the pungent and the sweet, where, according to the commentary, the great bitter is the Soy, the pungent are Pepper and Ginger and the sweet Sugar and Honey; and that it means that the juice of the Soybean was mixed with Pepper and Ginger, and that the salt and sour was mixed with Sugar and Honey, so that the pungent and sweet flavor was produced.

"In the book 'Antiquities of Wu-lin' (Wylie, Notes, p. 45), written during the southern Sung-dynasty (13th century), we find mentioned among the victuals in the market: birdsnests (?), gingered soy (*shi*) and honied and gingered soybeans.

"This is the native soy; but the *Poh-wuh chi* (Wylie, Notes, p. 153), published in the latter part of the 3d century, says that Soy is also prepared in foreign countries. The beans are steeped in bitter wine and afterwards dried very hard; they are then boiled in and again dried, which process is thrice repeated. Afterwards the mass is mixed with a proportional quantity of powdered pepper. This species of Soy is called in China *Khang-pih* (Man-strengthening) because it pushes down the humours and composes them.

Bretschneider thinks that though the character *Shi* does not occur in the Classics, Soy was very probably known in olden times under the name of *Tsiang* [chiang or jiang] which occurs in the *Li-ki*, the *Chow-li* a.o. The common name for Soy in Peking, he says, is *Tsiang-yu* or *Tsiang* oil. This name, imported into Japan, but pronounced there *Sho-yu*, from which our word Soya has been corrupted, was first imported by the Dutch from Japan to Europe.

"But this supposition is not supported by Chinese authorities, who describe the *Tsiang* as a salted condiment

or sauce made from all sorts of meat, fishes, fruits, etc., but never from beans.

"According to the *Fan-tsze-ki-jen* the *Tsiang* was introduced from *Toung-hai*, the modern *Hoai-ngan fu*. The first quality cost 200 pieces a pound; the middling sort one hundred, and the inferior quality thirty. This condiment was so expensive that we read in the Annals that a thousand jars of briny *tsiang* were put upon a par with a state of a thousand carriages.

"In the *Ping-tsih* are mentioned Briny Tsiang of stewed chicken, Briny Tsiang of stewed fishroe (Footnote: With reference to this condiment, we may mention the *Ké-tsiap*, brine of pickled fish or shell-fish, prepared in Fuhkian [Fujian, W.-G. Fukien] {Douglas [1873], Dict. of the Amoy dialect}, and which is most surely the origin of the word *Ketchup*, another name for soy [sauce]. It has nothing to do with the Malay, though the Malay word *Ketjap* 'to taste' has a family-air.), of stewed turtles, of hashed fish mixed with mustard, and of the fat of the elk.

"In old *Nan-yueh* people ate *Tsiang* made of the *Kow-fruit*, a kind of mulberry according to some, but the betelpepper according to others.

"A condiment was also made of the peony roots of the elmseeds which was called *Mut*, of bitter squash and of the bottle-gourd [gourd].

"In like wise a sauce was made of the *Yu-tsih* fish, and even of salted bees, crabs, shrimps, or rather lobsters, and ant-eggs. But not a single writer speaks of *tsiang* made of beans, and more particularly of the soyabean" (p. 143).

Note: This is the earliest English-language document seen (Feb. 2007) that contains the word "soyabean" (or "soyabeans"), written as one word. Address: 1. Professeur de Chinois à l'Université de Leide [Leiden]; 2. Professeur à l'Ecole spéciale des Langues orientales vivantes et à l'Ecole libre des Sciences politiques à Paris.

1397. *Western Druggist*. 1894. Queries and comment. 16(3):104-08. March. See p. 106.

• **Summary:** "67. Canton Soy or Soja.—L.S.S. (Chicago, Ill. [Illinois]) asks the composition of 'soja,' a condiment in much favor amongst Scandinavians. Genuine canton soy or soja, according to the Scientific American Cyclopaedia, is a species of black sauce imported from China, prepared with white haricots [sic] (?), wheat flour, salt and water. A spurious preparation is made in the manner described below. The soja bean mentioned (soja hispida or dolichos soja) is described in the Dispensatory. It contains a starch-converting ferment, and this gives the explanation of the preceding formula.

"No. 2.—Soy bean—gal. 1

"Wheat, bruised—gal. 1

"Salt—gal. 1

"Water—enough

"Boil the soja seeds in water till soft, add the wheat,

keep in a warm place for twenty-four hours; add the salt, and 2 gallons of water, and, after keeping bunged up in a stone jar for two or three months, press out the liquor.”

1398. *American Druggist and Pharmaceutical Record*. 1894. Queries and answers: Worcestershire sauce. 24(14):171. April 5. Whole No. 293.

• **Summary:** “J.F.G.—The *Scientific American* says that this is quite a complex condiment. It is made of wine vinegar, 1½ gals.; walnut catsup, 1 gal.; mushroom catsup, 1 gal.; Madeira wine, 1 gal.; Canton soy [sauce; from China], ½ gal.; moist sugar, 2½ lbs.; salt, 19 ozs.; powdered capsicum, 3 ozs.; pimento, 1½ ozs.; coriander 1½ ozs.; chetney [chutney], 1½ ozs.; cloves, ¼ oz.; mace, ¾ oz.; cinnamon, ¼ oz.; asafoetida [asafetida], 6½ drms [drams]. Dissolve in 1 pt. brandy 20° above proof. Boil 2 pounds hogs’ liver for 12 hours in 1 gal. of water; add water continually so as to keep up the quantity of 1 gal.; mix the boiled liver thoroughly with the water, strain through a coarse sieve, and add this to the above mixture. It is self-evident that no chemical examination could ever detect the presence of half the above ingredients.”

Note: Soy sauce is an ingredient, as are two types of Western-style catsup.

1399. *Times (London)*. 1894. The cereal crops of Japan. April 9. p. 12, cols. 2-3.

• **Summary:** “A report has been made to his Government by M. Sienkiewicz, the French Minister at Tokyo, upon the cereal crops of Japan, which comprise rice, barley, wheat and rye.” Although only one-eighth of the total area of Japan is cultivated, it produces (in ordinary years) enough food to feed the population of more than 40 million people. “Wheat and barley are largely employed in the manufacture of *shoyu*, or Japanese sauce, and also for making pastry.” Most of the article discusses rice, including huge exports (at high prices) and imports (at low prices).

1400. Shimada, Koichi. 1894. Kansai shōyu oyobi tamari shiken seiseki [Results of tests on shoyu and tamari from Kansai, or Western Japan]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 146. p. 297-327. April. [Jap]

• **Summary:** Early information on the chemical composition of soy sauce in Japan. The term “tamari” (with furigana attached) is written with the characters “kuki” plus “sho or Chiang.” Very revealing.

1401. Parker & Co. 1894. Lee [sic, Lea] & Perrin’s Worcestershire Sauce (Ad). *Hartford Daily Courant (Connecticut)*. May 23. p. 5.

• **Summary:** “Harvey Sauce, Mushroom Catsup, Walnut Catsup, India Soy [sauce], etc.

“Successors of Fox & Co. Wholesale and retail grocers.”

Note: This ad also appeared in the June 2, 5, 9, and 12 issues of this newspaper. Address: No. 17 Central Row.

1402. Thompson (T.) and Son Co. 1894. We might give you a much longer list than this one... (Ad). *Evening Star (Toronto, Canada)*. June 21. p. 4.

• **Summary:** Groceries:... “Tomato Catsup 10¢, large bottle. Worcestershire Sauce 8¢ bottle. Epps’ Cocoa 10¢ package.”

Note: This is the earliest document seen (Feb. 2012) that mentions Worcestershire sauce (one of whose main ingredients was soy sauce) in Canada.

1403. *Manchester Guardian (England)*. 1894. Commercial markets: London produce market, Thursday. July 6. p. 3.

• **Summary:** “Drugs.—The sales went very quiet. Rhubarb again cheaper... Cardamoms firmer... Jamaica honey... Jamaica beeswax... Cape aloes... Gamboge...; China soy at 10s. to 11s.”

1404. Parker & Co. 1894. Sauces! (Ad). *Hartford Daily Courant (Connecticut)*. Aug. 30. p. 4.

• **Summary:** “Lea & Perrin’s Worcestershire, Harvey’s, Halford’s, Sultana, Indian Soy [sauce].

“Catsup: Mushroom, Walnut, Shrewsbury, Snider’s.”

Note: This ad also appeared in the Aug. 31, Sept. 1 and Sept. 5 issues of this newspaper. Address: 17 Central Row.

1405. Carpenter, Frank G. 1894. Li’s banquet: A dinner with the premier in one of his palaces. How a Chinese state dinner is served. *Los Angeles Times*. Oct. 21. p. 13.

• **Summary:** This banquet took place in Tien-Tsin, China. The dinner was given in honor of General John W. Foster, our ex-Secretary of State, who was then on a trip around the world. As is the custom, no women were present at the banquet.

“All of the Chinese dishes were served in such shape that they could easily be taken up with chopsticks. In place of salt, each man has a little bowl of Japanese soy into which he dipped his food before eating it.”

1406. Lea and Perrins. 1894. Classified ad: Lea and Perrin’s sauce. *Times (London)*. Nov. 20.

• **Summary:** “Original and genuine Worcestershire. Purchasers should see that every bottle bears the signature of Lea and Perrins.

“Lea and Perrins’ signature is now printed in Blue Ink Diagonally across the outside wrapper of every bottle of the original and genuine Worcestershire sauce.

“The most economical in use.

“Beware of imitations.”

Note: These four messages are repeated over and over until they fill up an entire column. The bottom four lines read: “The original and genuine Worcestershire Sauce sold wholesale by the proprietors, Worcester. Crosse and

Blackwell, Ltd., London, and export oilmen generally. Retail everywhere.” Address: [England].

1407. *Eisei Shiken Iho (Bulletin of the Imperial Hygienic Laboratories)*. 1894. [Analysis of Kansai (southwest Japan) shoyu and tamari]. 9:90-. [Jap]*

• **Summary:** JTULM says (2001/08): This serial owned by Faculty of Pharmaceutical Sciences Library, University of Tokyo. Phone: 03-5841-4746.

1408. Murai, Junnosuke. 1894. Shôyu bunsekihyô [Tables of shoyu analyses]. *Eisei Shiken Iho (Bulletin of the Imperial Hygienic Laboratories)* 8:35-45. (Journal also called Tokio Eiseisiken Iho. Edited by Naimu-sho Eisei-kyoku). [Jap]

• **Summary:** Investigated the composition of 40 samples of soy sauce. Discusses shoyu nitrogen, albumins, and peptones. Address: Tokyo Eisei Shikensho, Tokyo, Japan.

1409. Cavendish, Alfred Edward John; Goold-Adams, Henry Edward. 1894. Korea and the sacred white mountain: Being a brief account of a journey in Korea in 1891. London: George Philip & Son. 224 p. Illust. (40 original, many color). Maps. Index.

• **Summary:** This book is an amplification of the author's diary kept during a stay of a few weeks in Korea. Soy is mentioned as follows: Page 12: “Chefoo is the watering-place for Korea, Pekin, Tientsin, and Shanghai, but the foreign portion of it is very small, with three indifferent boarding-houses, but good pears and good bathing, if you do not mind a naked fisherman or two about. The chief exports appear to be straw plait for hats and bean-cake for manure.”

Page 33-34: Korean ponies, which carry foreign travelers and their belongings, are very small. The forage ration consists of about 2 lbs. of beans and millet boiled in water, and the whole poured hot into a trough; the average feed is two gallons of this mixture, given three times a day, and supplemented by 2 lbs. of chopped straw (rice or millet).” “Other means of transport are found in donkeys, cattle, and coolies.”

Page 48: Beans are becoming largely grown in Korea, for the demand for them in Japan is increasing, as they are used in the manufacture of Bean-curd, Miso, and Soy [sauce], while the Japanese are growing instead mulberries for sericulture. Wheat, barley, and rice, the latter of two kinds, one of which grows in dry soil, are also increasing, the export of these in 1890 being—barley, 5,260,533 lbs., value \$50,341; beans, 87,950,800 lbs., value \$1,004,762; wheat, 5,869,466 lbs., value \$60,381; rice, 116,622,000 lbs., value \$2,057,868.”

Page 54. “Besides flax, maize, and cotton, there were fields of the small millet (*Setaria italica*), substitute for porridge, and of the tall millet, Susu or Kaoliang (*Holcus Sorghum*), with stems 8 to 12 feet high and as thick as a man's thumb, turning to golden yellow or bright mahogany

colour; from the latter kind the Koreans make the coarse cloth of which their rough garments are composed, when they do not use Manchester shirtings; also fields of beans, food for cattle and men, and the foundation of Japanese soy [sauce] and our Worcestershire sauce.”

Pages 146-47: “He produced some samshu, a muddy fluid which smelt and tasted like Kaffir beer, with strong spirit in it; this peculiar taste is due to the bean-water [water in which soy beans have been boiled] which they mix with the spirit distilled from rice or millet. We were given a bottle of this liquor by the head-man, and the cook bought another of Chinese make, which was quite clear and less diluted with bean-water.”

Pages 195-96: “Whilst waiting in the inn to-day, I had plenty of opportunities of observing the nauseous smell of the food greedily devoured by the Koreans. Five or six little dishes, containing various preparations of meat or fish, chillies, [soy] beans, cabbage, rice, &c., were ranged on a little table a foot high, and gave forth a most evil odour. A Korean likes his viands very highly seasoned, and in eating takes a little of every dish into his mouth, that he may enjoy the pleasant mingling of the different flavours.” Note: At least one of these dishes probably contained Korean-style soy sauce or miso—but we cannot be sure.

Bean or beans (usually noted in passing as a crop with other crops) are mentioned on pages 66, 67, 68, 134, 138, 150, 191, 194, 199. Address: 1. Captain, F.R.G.S., 1st Argyll and Southern Highlanders, now in Edinburgh; 2. Captain, R.A..

1410. Engler, Adolf; Prantl, L.K. 1894. Die Natuerlichen Pflanzenfamilien nebst ihren Gattungen [The natural plant families, together with their genera]. Leipzig: Verlag von Wilhelm Engelmann. 396 p. See vol. 3. Part 3, p. 360-61, 392 (Fig. 131 B-D). [Ger]

• **Summary:** “390. Glycine L. (*Soja* Savi, *Johnia* W. et Arn., *Notonia* W. et Arn., *Leptocytamus* Benth., *Bujacia* E. Mey.)... There are about 15 varieties in tropical Africa, Asia, and Australia...

“Uses: *G. hispida* Maxim., the Japanese soybean is grown throughout East Asia for the pleasant tasting seeds; they serve also for the preparation of a pungent brown sauce, which in South Asia accompanies almost all meals and is also imported to Europe. The plants also thrive in Germany and are recommended for cultivation, however they do not always ripen in our climate, so their cultivation is unsure.”

Illustrations (p. 362, Fig. 131) show (B) the leaves and flowers of a soybean plant (¼ size), and (C) an enlarged soybean flower (3 times normal size).

Also discusses the peanut (p. 324-25) with an excellent five-part illustration. Address: 1. Prof. der Botanik und Direktor des botan. Gartens in Berlin; 2. Prof. der Botanik und Direktor des botan. Gartens in Breslau.

1411. Japanese Bureau of Agriculture (Norinsho). 1894. The fisheries of Japan. *Bulletin of the United States Fish Commission* 13:419-435. For the year 1893.

• **Summary:** The short section titled “Utilization of algæ” (p. 434-35) was compiled and arranged from the 1893 “Descriptive Catalogue of Exhibits Relating to the Fisheries of Japan at the World’s Columbia Exhibition” by Hugh McCormick Smith.

It notes of amanori (*Porphyra vulgaris*): “The weed is but seldom eaten fresh and nearly always is made into thin sheets like paper, and dried for preservation. This is heated over the fire and eaten with broth, or by itself with a little [soy] sauce. It is also used for various other culinary purposes.”

Company name with diacritics is: Nôrinshô.

1412. Nagai, Sôji. 1894. Sake shôyu koku sù sanshutsu shinpô [A new method of calculating the number of koku (a Japanese unit of volume) of sake and shoyu]. Iiyamachi, Nagano-ken, Japan: Published by the author. 75 p. 20 cm. [Jap]*

• **Summary:** One koku is approximately 278.3 liters. One koku was originally defined as a quantity of rice, historically defined as enough rice to feed one person for one year (one masu is enough rice to feed a person for one day). A koku of rice weighs about 150 kilograms or 330 pounds. Address: Iiyamachi, Nagano-ken, Japan.

1413. Ranhofer, Charles. 1894. The epicurean: A complete treatise of analytical and practical studies on the culinary art,... making a Franco-American encyclopedia. New York, NY: Published by the author. 1183 p. Illust. Index. 28 cm.

• **Summary:** The recipes in this book are numbered sequentially. “Soy” (sauce) is used as an ingredient in 2 recipes: 545. “Soya sauce (*Sauce Soya*). Reduce one pint of velouté (No. 415) or espagnole (No. 414) with two gills of essence of either chicken, game, or fish, and when the sauce is of a sufficient consistency, add to it two tablespoonfuls of soya sauce, and two ounces of fresh butter; beat slowly with a whip” (p. 317).

557. “Victoria sauce (*Sauce à la Victoria*) (“a teaspoonful of vinegar, the same of soya sauce,” p. 319).

The following recipe for pompano fish has “soya” in the title but neither “soya” nor “soy” are used as an ingredient, nor are they mentioned in the body of the recipe. 1226. Pompano à la soya (*Pompano à la soya*) (p. 452).

Worcestershire sauce is used as an ingredient in 8 recipes: 299. Chicken okra gumbo. 332 Ox tail soup à la Soyer. 451. English sauce. 632. Tartar sauce, English style (also calls for Harvey sauce). 1396. Minced tenderloin à la Beckman. 1571. Sweetbreads, English style, with brown English sauce. 1591. Mutton chops Soyer. 1721. Minion filets à la Landgrave.

“This book is simply the best way to answer any

question about how the upper classes were dining in late Victorian America. It is the magnum opus of the great Chef, Charles Ranhofer, who ruled the kitchen at the famed Delmonico’s restaurant in New York City. This is a huge treatise: 1183 pages, 800 illustrations, over 3000 recipes. By and large, the recipes are in the classic French tradition. However American recipes are not neglected... This opus shows well why Delmonico’s was the premier dining room of its day” (MSU introduction).

For an excellent history of Delmonico’s Restaurant and business operations in New York see www.steakperfection.com/delmonico/history.html. The business (a small cafe and pastry shop) was started in 1827 by two Swiss-born brothers at 23 William St. in New York City. But the restaurant opened in 1830 in the adjoining building at 25 William Street; the cafe and pastry shop continued to thrive next door. The restaurant featured a bill of fare (called a menu today), which was itself new. Address: Chef of Delmonico’s, Madison Square [New York City].

1414. Saunders, William. 1894. Report of the Superintendent of Gardens and Grounds. *Report of the Secretary of Agriculture*. p. 365-394. For the year 1893. See p. 378, 387.

• **Summary:** In the section titled “Notes in miscellaneous plants (p. 365+), there is a subsection on “Soy bean” (p. 378) which states: “*Glycine soja* is a low-growing annual plant resembling the well-known kidney or bush bean of the gardens. The seeds of this species are used by the Japanese and Chinese in the manufacture of the sauce which they call soy, or soja. This is said to be made by boiling the seeds or beans in water together with millet, wheat, or other grains, the mixture being allowed to ferment, and afterwards refined and stored for use. Soy is a thick, black liquid resembling molasses, but not so tenacious. This sauce is a favorite accompaniment to other food dishes in China and Japan. The leaves [sic, seeds] furnish a valuable oil, and the resulting cake is used for feeding animals and for manure to the fields of sugar cane in Southern China. These beans have frequently been recommended as a substitute for the coffee bean, but they are a poor substitute for it—about equal to scorched wheat or rye.”

In the section titled “Interrogatories and Replies” (p. 385+) is a letter (p. 387) from “E.P.D. (Massachusetts)” who asked: “Can you inform me if the soja or Japan bean is cultivated in this country? It is said to be valuable as an article of food, being more nutritious than meat.

“Reply—The soja bean has been grown more or less, chiefly as a novelty, in this country for many years—for half a century at least—but having gained recognition as being of special importance. It has been recommended for the oil contained in it as a substitute for coffee, etc. It is said to be used in Japan mainly as an ingredient in a sauce called soy. Seeds can be obtained from most of the large seed stores in this country.” Address: Superintendent of Gardens and

Grounds [USDA, Washington, DC].

1415. Whitehead, Jessup. 1894. *The American pastry cook: A book of perfected receipts*,... 7th ed. Chicago, Illinois: Jessup Whitehead & Co., Publishers. 225 p. See p. 180, 199. Illust. Index.

• **Summary:** The chapter titled “The hotel book of salads” states (p. 180) that d’Albignac was a Frenchman living in London. One day, while dining alone in one of the most famous taverns in London, a young dandy of good family came to his table and said: “Sir, it is said that your nation excels in the art of making salads; will you be so good as to oblige us by mixing one.” He consented and, “after a little hesitation, ordered all that he thought necessary for his expected masterpiece.” With good luck he succeeded.

Before long he was invited to “mix a salad in one of the finest houses in Grosvenor Square, London.” With good luck he succeeded again. Before long he became “known as the fashionable salad maker and soon had a gig, in order to keep his appointments, with a servant to bring his mahogany case containing all the ingredients—such as vinegars of different flavors, oils with or without a fruity taste, soy [sauce], caviare [caviar], truffles, anchovies, ketchups, gravies, and even hard-boiled eggs.

“Later he got cases made to order, furnished them completely and sold them by hundreds. In short he came to realize a fortune of more than eighty thousand francs.”

In the same chapter, recipe 718 for “Garlic vinegar” (p. 181) calls for “1 teacupful of walnut ketchup.”

In the same chapter, under “750. Fish salad” we read (p. 199): “But table sauces, ketchups, soy, and essence of anchovies, can be added to the dressings according to taste.

“Of India soy Savarin says: ‘It seems likely the Roman *garum* was a foreign sauce; perhaps even the “soy” which we get from India, and which is known to be got by the fermentation of a mixture of fish and mushrooms’” [sic].

Note: The author does not realize that soy [sauce] is made from soy beans and, in East Asia, never contains fish or mushrooms. It always contains salt, and koji, made by growing filamentous molds on wheat or soybeans. Address: Chicago, Illinois.

1416. Kellner, O.J. 1895. Ueber die Bereitung von Sake, Shoyu, und Miso [On the preparation of sake, shoyu, and miso]. *Chemiker-Zeitung* 19(6):97-98; 19(7):120-21. Jan. 19. [6 ref. Ger]

• **Summary:** The first installment of this article gives details on the production of sake in Japan. The process can be divided into 4 steps: The production of a diastatic ferment (koji), the culturing of the yeast (*Hefezüchtung*), the main fermentation, and separation of the fermented liquid (sake). A detailed description is given of the preparation of both koji starter (the ash of camellia wood is used) and koji. The koji, made in koji cellars, contains a very powerful, inverting

ferment (*ein sehr kräftiges, invertirendes Ferment*), whose effect goes further than the diastase of malt. The finished sake, which contains 11-14% alcohol, is consumed hot. Sake makers in Japan, like beer makers in earlier times in Germany, are very conservative and will hardly allow the introduction of a thermometer into their operations.

Shoyu or “Bohnen-Sauce” is called Soja or Shoja in Germany. About one-fourth of the wheat is finely pulverized. It is fermented in vats for various times ranging from 8 months to 5 years. Then the liquid is pressed out in cotton sacks. Finally the press-cake is mixed with salt water, and re-pressed to yield a lower quality product. The finished product consists of a mixture of soy sauces of different ages to improve the flavor and aroma. The best soy sauce is made from equal parts of 3-year and 5-year soy sauce. The press-cake is used for fertilizer.

A nutritional analysis of shoyu is given. Its relative density ranges from 1.182 to 1.193. In 1888-89 in Japan 10,634 shoyu plants produced 1.3 million koku [1 koku = 180 liters or 47.6 gallons, so 1.3 million koku = 234 million liters or 61.88 million gallons]. Per capita consumption was about 5.5 liters per year.

Concerning miso, the author discusses rice miso first, then barley miso, implying that the former is more widely used. He notes that miso can be made in only 4 days by incubating it hot. He then gives nutritional analyses of 5 types of miso that he made in 1889. “According to my estimation, at least 30 million kg. over half of the yearly soybean harvest, is used in miso production... Those soybeans that are not used for shoyu and miso production, serve largely for the production of tofu (*Bohnenkäse*).” The tofu is coagulated with a solution obtained from sea salt that is rich in magnesium chloride [i.e. nigari]. Address: Privy Councillor (Hofrath), Japan.

1417. Woodward & Co. 1895. *Sauces. Ketchups* (Ad). *Hartford Daily Courant (Connecticut)*. Jan. 24. p. 12.

• **Summary:** “Sauces: Lea & Perrin’s Worcestershire, quarts 75¢, pints 45¢, ½ pints 25¢. Holbrook’s Worcestershire, pints 35¢, ½ pints 18¢. A 1 International 40¢. Tabasco 45¢.” Halford’s. Sultana, Chili, Anchovy.

Ketchups: Shrewsbury’s, Snider’s, Flacus, “Crosse & Blackwell’s Mushroom, pints 40¢, Walnut 40¢,... India Soy [sauce], Paprika [Paprika],...” Address: 217 Main Street, Hartford, Connecticut.

1418. *Manchester Guardian (England)*. 1895. London produce market, Thursday. Jan. 25. p. 3.

• **Summary:** “Drugs.—Auctions very interesting. Vanilla was in good demand... Rhubarb flat... Cardamoms chiefly sold... Dragons blood reeds... China soy sold at 8 3/4d. to 10 1/2d.”

1419. Mell, P.H. 1895. Experiments on foreign seeds. *Alabama Agricultural Experiment Station, Bulletin* No. 60.

p. 25-32. Jan. See p. 32.

• **Summary:** The section titled “Soja or soya or soy bean (*Glycine hispida*)” (p. 32) begins with a long quotation from “The Treasury of Botany” by Lindley and Moore (1866). The author then notes: “This plant is valuable for man and stock and the results of the experiments conducted at Auburn show that it can be easily grown in Alabama. The forage cured from it [hay] is excellent, and stock eat it with relish. Two varieties of the seeds have been tested and both have yielded favorable results.

“The soja bean is not a new plant in the United States since it has been grown with marked success in some of the Middle and Western states for several years; it is however new to the South.

“The Experiment Station has a small quantity of the seeds for distribution among the farmers of Alabama. Efforts will be made to give the seeds as wide a distribution as possible.”

Note: This is the earliest document seen (March 2011) concerning soybeans in Alabama, or the cultivation of soybeans in Alabama. This document contains the earliest date seen for soybeans in Alabama, or the cultivation of soybeans in Alabama (Jan. 1895). Address: Botanist and member of Experiment Station Council, Auburn, Alabama.

1420. Martin, Ernest. 1895. Le Tao-fu (soya), son origine, ses propriétés, son acclimatation [Tofu (soya): Its origin, properties, and acclimatization]. *Revue Scientifique (Revue Rose)* 3(5):144-46. Feb. 2. Series 4. [Fre]

• **Summary:** A French-language review of the literature on tofu, including a brief discussion of soy sauce and soybeans. The Soya hispida (Family: Papilionacées; *Glycine Phaseolus*) is an oilseed (*graine oléagineuse*) that originated in China. According to the research of Prof. Schlegel at the University of Leiden, it was first mentioned in the work of Liu-An, king of Huai-nan, of the Han dynasty, in the 2nd century before the Christian era. From this period, the seed was boiled and a milk-like liquid [soymilk] was extracted which had the reputation of possessing beneficial properties.

When the soybean (*le soya*) was imported to Europe, it was in the form of a sauce made in Japan and sold by the Dutch who were the first [sic] European navigators to arrive in Japan. Note: Portuguese navigators arrived in and traded with Japan before the Dutch.

Its name was *sho-yu*, which is nothing but the corruption of the Chinese characters *tsiang-yu*, which signifies savory oil [sic]. From *sho-yu*, the Dutch made the word “soya” or “soy” the name by which the bean is known in Europe.

Discusses: The shape and color of soybeans. The Exposition of Vienna [Austria] in 1873. König’s discovery that soybeans contain 31-33% protein. The research of Vorderman and Pellet. Tao-Kan, Tao-Hu (tofu in Java), and Tao-Koa. Tofu exported from Annam. How Chinese in Batavia make soymilk and tofu (curded with gypsum); use

of the residue [okara] for feeding to penned poultry, such as chickens and ducks. Further processing of tofu to extend its shelf life. Preparation of soy sauce. Many uses of tofu in Chinese therapy. Shi-tsih as the founder of the vegetarian diet. Writings of Montigny, the French consul general. Soy bread in diabetic diets. Mr. Desvilles. Soybean trials and acclimatization in France. Composition of soybeans grown in France.

“From the viewpoint of practical utility, we conclude that the acclimatization of species of the vegetable and animal kingdoms, which was formerly the goal of multiple costly tests, has now lost much of its importance. The ease of communications and the rapidity with which exotic shipments can be made often provide the same results.

“However we must continue to be attentive to failures of acclimatization, for they have much to teach us. One of the most interesting problems of science is that of mutations. The work of the mutationists (*tératologistes*), and especially of Dareste, on the production of artificial anomalies, has led to new proof that the variability of animal organization is much greater than one would be tempted to believe—and this variability extends also to plants... Such research can help elucidate the problem of the origin of races, which has heretofore remained in the deepest obscurity despite the work of savants such as Is. Geoffroy Saint-Hillaire, Darwin, and Quatrefages.

“Thus there is nothing surprising in the transformations manifested in living things which, transplanted from afar, find themselves placed in telluric [terrestrial] and climatological conditions completely different from those of their original habitat. Examples of this transformation multiple with each new day;” they include the opium poppy, rhubarb, some legumes, numerous varieties of bamboo. “What is the reason for these laws of transformation and degeneration that extend over each of the large kingdoms of nature? The problem is posed but has not been seriously addressed.

“As for the soybean (*graine de soya*), we have shown that it undergoes this transformation in a very sensitive manner: in it, the protein molecule progressively gives way to the starch (*amylacée*) molecule. At the heart of the plant organism, a special synthesis is accomplished: its chemical composition is modified in proportions such that it becomes inappropriate for the goal targeted by its cultivation in Europe.”

1421. Kellner, O.J. 1895. Die Bereitung von Miso in Japan [The preparation of miso in Japan]. *Chemiker-Zeitung* 19(13):265. Feb. 13. [3 ref. Ger]

• **Summary:** This is an answer to questions from Dr. Hanausek to *Chemiker-Zeitung*. Kellner wrote his first major article on miso in 1893. There are 4 basic types of miso in Japan: 1. Shiro miso (white miso) is made from large-seeded soybeans (*grosskörnigen Sojabohnen*), rice koji, and salt.

The ingredients are mixed at 70-90°C, and the product is ready after 3-4 days of fermentation. It will not keep longer than 10 days. Note 1. This is the earliest document seen (Oct. 2001) worldwide that mentions “large-seeded soybeans.” The next document to use that term appeared in 1936 in the USA.

2. Yedo miso (named after the early name for Tokyo) is made from the same ingredients as Shiro miso. The ingredients are mixed at 35-45°C, and a part of the salt is added in a cooled solution after the mixing. The fermentation takes about 10 days in summer, 30 days in winter. The miso will keep for 4 to 15 months at room temperature.

3. Inaka miso (countryside or peasant’s miso). Less expensive barley koji is used in place of rice koji. The soybeans are steamed for a very long time until they attain the desired reddish color. The fermentation takes 11-12 months, and the finished miso will keep for about 1 year. This type contains the most salt. To accelerate the fermentation, mix the ingredients while the soybeans are still hot.

4. Sendai miso (named after the city of Sendai) is substantially different in preparation from the other types. The cooked beans are rubbed to a paste, formed into prismatic pieces [*prismatische Stuecke*], and hung up with straw cords to dry for 1 to 1½ months. Then they are washed with lukewarm water, pulverized, sifted through a fine sieve, mixed with barley koji, salt, and cold water, and mashed in a mortar. The mass is put in the fermentation vat and roughly every 2 months reworked in the mortar. The fermentation, for which a cool room is used, is first ended after 1 to 1½ years, and the finished miso has a fine aroma, sweet taste, and reddish color. Because of the latter it is widely referred to as “red miso.”

In the production of special types of miso, the following ingredients may be added to the basic ingredients before the fermentation: Glucose or cane sugar, gingerroot, slices of eggplant, Japanese burdock, roasted soybeans (*geröstete Sojabohnen*), rice bran, sesame oil. Moreover, many families, for use in their homes, prepare a miso using the press-cake that is left over after making shoyu and that has not been washed with salt water. It is used in place of steamed soybeans, and it is permeated with a fermentation-instigating power. In place of koji, dehulled barley may be used. In commercial miso production, only rice- or barley koji is used.

Note 2. This is the earliest German-language document seen that refers to soynuts, which it calls (*geröstete Sojabohnen*). Address: Prof., Dr., Moeckern [near Leipzig], Germany.

1422. Wehmer, Carl. 1895. *Aspergillus oryzae*, der Pilz der japanischen Saké-Brauerei [*Aspergillus oryzae*, the mold of Japanese sake breweries]. *Zentralblatt fuer Bakteriologie. Series 2*. 1(4/5):150-60. Feb. 23; 1(6):209-20. March 11. [40

ref. Ger]

• **Summary:** The first detailed description of *Aspergillus oryzae*. Address: Privatdozenten an der Technischen Hochschule, Hannover.

1423. *Boston Daily Globe*. 1895. Our cooking school. March 10. p. 27.

• **Summary:** “Worcestershire sauce: One and a half gallons of white wine vinegar, 1 gallon of walnut catsup, one gallon of mushroom catsup, ½ gallon of Madeira wine, ½ gallon of Canton soy [sauce; from China], 2½ pounds of moist sugar, 19 ounces of salt, 3 ounces of powdered capsicum, 1½ ounces chutney, ¾ ounce each of cloves, mace and cinnamon and 6½ drachms assafoetida [assafoetida, a spice] [drams; 1 dram = 1/16 ounce = 1.772 gm], dissolved in 1 pint of brandy 20 above proof. Boil 2 pounds of hog’s liver for 12 hours in 1 gallon of water, adding water as required to keep up the quantity; then mix the boiled liver thoroughly with the water; strain it through a sieve. Add this to the sauce. Cayenne pepper may be added to it.” From: Weaver, Olneyville, Rhode Island.

A second recipe, with a modification, is given by J.H. (of Fall River, Massachusetts), who has used it for over 10 years. It includes: “Canton soy, ½ gallon;...” The modifications include: “Indian soy, 1 ounce;...” The Indian soy is an imported article; it is sometimes imitated by boiling one gallon of dwarf kidney beans in water till soft, adding 1 gallon of bruised wheat, keeping in a warm place for 24 hours, then adding a gallon of salt and 2 gallons of water, and keeping 2 or 3 months, in a tightly corked jar, after which the liquor is pressed out.”

Note 1. Following the above instructions for homemade “Indian soy” will not work at all; the result will not even vaguely resemble soy sauce. Note 2. This is the earliest document English-language document seen (Feb. 2012) that uses the term “dwarf kidney beans” in connection with soybeans or soy sauce.

1424. *Evening Star (Toronto, Canada)*. 1895. The label on the bottle: Crosse & Blackwell, and Lea & Perrin may be heard from. Said to be on the trail of those who refill bottles: An effort to be made to stop the fraud. March 21. p. 1.

• **Summary:** “There is a species of fraud that has been practiced generally all over, that will likely before long be suppressed, for steps have already been taken in that direction, not only in Toronto, but also in other parts of the province.”

An Englishman is here in the interest of several English sauce and pickle manufacturers, who think that their bottles and their labels are being too freely used to hold bulk articles of an inferior quality.

The label and the bottle: You have noticed in restaurants and hotels, even of good name, that the bottles containing Worcester sauce, and Crosse & Blackwell’s pickles have

labels that look as though they had been roughly handled,” and that the contents of the bottle is of inferior quality.

Many of the people who fill these trade-marked bottles are apparently unaware that what they are doing is illegal. The Englishman is making a list of the names and addresses of the proprietors of such establishments.

1425. Hills & Co. 1895. Macaroni! (Ad). *Hartford Daily Courant (Connecticut)*. April 8. p. 12.

• **Summary:** “Sauces... we carry ten times the best assortment. Lea & Perrin’s Worcestershire 28¢, 45¢, and 75¢. Holbrook’s Worcestershire 22¢, 35¢, and 65¢. Mango Chutney. Sliced Mango... also China Soy [sauce], Brands A 1, Reading, Walnut and Mushroom, Chile,...”

Also sells many types of “catsup,” incl. Van Camp’s. Address: 368 Asylum Street.

1426. *Evening Star (Toronto, Canada)*. 1895. Ketchups–pickles. Recipes for making choice relishes. July 13.

• **Summary:** Recipes are given for: Cold tomato ketchup. Tomato soy. Neither recipe calls for soy as an ingredient.

1427. Inoue, M. 1895. Note on nukamiso. *Bulletin of the College of Agriculture, Tokyo Imperial University* 2(4):216-18. Aug.

• **Summary:** Nukamiso (which is unrelated to miso) is rice-bran in a state of lactic fermentation that is used for pickling and softening certain vegetables such as daikon (Japanese white radish) and egg-plant. Nukamiso is prepared in barrels by almost every family in Japan.

The article concludes: “It may be that *nukamiso* will gradually find its way into other countries, as our soya-sauce or *shoyu* has done.”

Note 1. This is the earliest English-language document seen (April 2012) that uses the term “soya-sauce” to refer to soy sauce.

Note 2. The parallel Japanese title of this English-language periodical is *Tôkyô Teikoku Daigaku. Nôka Daigaku. Gakujutsu hôkoku*. Address: Nôgakushi [Tokyo, Japan].

1428. Miyoshi, Manabu. 1895. Anwendung japanischer Soja und deren Gemisch fuer Pilz Kultur [Use of Japanese soya and mixtures of it for culturing molds]. *Botanical Magazine (Tokyo)* 9(104):361-65, 403-04. Oct. 20. [2 ref. Jap; ger]

• **Summary:** The first part of this article (p. 361-65) is in Japanese. The second part is a 1½-page German-language summary of the article, apparently by the author. Address: Prof., Botanical Institute, Tokyo Imperial University, Japan.

1429. Bowie (Robert). 1895. Sutter’s Buildings (Ad). *Timaru Herald (Canterbury, New Zealand)*. Nov. 30. p. 2, col. 3.

• **Summary:** “Has just landed ex ‘Tokomaru’ and ‘Ionic’ 54 cases new and seasonable goods, including Crosse

and Blackwell’s goods in great variety. Also Gorgona Anchovies,... Potted Meats, China Soy [sauce], Barrilla Ash Soap,...”

Note: This is the earliest document seen (Feb. 2010) in the New Zealand Newspapers database that contains the term “China soy.”

1430. Prinsen Geerligs, H.C. 1895. Eenige Chineesche voedingsmiddelen uit Sojaboonen bereid [Some Chinese foods made from soybeans]. *Pharmaceutisch Weekblad voor Nederland* 32(33):1-2. Dec. 14. Summarized in *Teysmannia* (1897) 7:413-15. [5 ref. Dut; eng]

• **Summary:** Contents: Introduction. Tofu or bean cheese (*Tao-hoe of boonenkaas*). Chinese soja or Fao-ijoe (boonenolie; soybean oil). Japanese soya (soy sauce; In Japanese: Shoi-joe; in Chinese: Sex-sze-ijve). Tauchio or bean paste (*Fao toio of boonenbrei*).

In the section on tofu, soymilk is mentioned twice. Note 1. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *melkachtige, vette vloeistof* (“milky, fatty liquid”) or *gefiltreerde melkachtige vloeistof* (“filtered milky liquid”) to refer to soymilk.

Note 2. This is the earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls “Fao toio.” This would later be spelled tao-tjo, taotjo, tauco, or tauchio.

At the end of the section on tofu, the author continues: Another widely used bean preparation is soy sauce (de Soja), of which two kinds exist: the Japanese and the Chinese Soja. The first-mentioned has already been repeatedly described, for example by König (1889, p. 241), further by J.J. Hoffman in his “Contributions to the Knowledge of the Language, Geography, and Ethnology of the Netherlands Indies” (*Bijdragen tot de Taal-, Land- en Volkenkunde van Nederl. Indië*; Vol. V, p. 192), and recently by G. Schlegel in *T’oeng pao* [T’oung Pao 1894] (Part 5, No. 2) and O. Kellner in *Chemiker Zeitung* (1895, p. 120). While I could not find anything in the literature about the preparation of Chinese soy sauce (*Soja*), I have copied the following from the manufacturers themselves.

Chinese Soja or Fao-ijoe (bean oil). For this, only black varieties of the *Soja hipida* [*sic, hispida*] *humida Beta atrosperma* or *Soja hipida platycarpa Beta melanosperma* have been used. Their seeds are cooked and the water poured off, after which the beans are left in the sun for half a day to dry. Now they are cooled on big trays of woven bamboo out of the sun, then covered with leaves of a *Hibiscus* variety. On the beans there will always appear a type of mold, the *Aspergillus Oryzae* to be precise, which, at least on Java, appears every time again on moist soybeans exposed to the open air, but strangely enough does not appear on other foods. The beans are allowed to stand until the mold sporulates, which can be seen by the green color of the mold threads (hyphae), then they are dried again for some days

and then put in a strong salt solution that has been cooled. This mixture is put in the sun for 8 days and afterwards it is boiled. The salt solution is then poured off from the beans and saved. The beans are boiled again and the water is added to the first salt solution. This process is repeated as many times as it takes to extract the residue completely.

"The decoction is strained through a fine sieve, boiled again, and the sugar from the areng palm, star anise (not the leaves), and some other herbs (which are available from Chinese druggists as "soya herbs") are added. Finally, this dark brown, pleasantly aromatic liquid is boiled down until salt crystals start to appear on the surface, indicating that the liquid is completely saturated with salt. After cooling, the soy sauce (*soja*) is ready to use. It yields a spice which is used together with all different kinds of foods as a pleasant condiment, and in the Chinese, Javanese, and even the European kitchen on Java it is an irreplaceable ingredient.

"Soy sauce is sold in several quality grades, of which the best is a thick sauce with a special aroma. The lesser kinds are thinner and are made by diluting the thick soy sauce with salt water, while in the very low-grade kinds, instead of the pleasantly sweet-tasting palm sugar, the bitter, sour-smelling unassimilated molasses from sugar factories is used.

Note 3. This is the earliest document seen (May 2010) that describes the preparation of a sweet Indonesian-style soy sauce quite similar to *ketjap manis* (which seems to have been first created about 1960), yet the writer does not mention its name.

"The Chinese soy sauce appears as a black colored, thick, clear liquid in which sometimes a viscous sediment can be found. When diluted with water it turns turbid or cloudy, but after adding salt this cloudiness disappears. Here is an analysis of one of the most common varieties: Specific gravity 1.254, saccharose and glucose 15.60%, nitrogen containing substances (*stikstofhoudende stof*) soluble in alcohol 4.87%, nitrogen containing substances not soluble in alcohol 2.62%, nitrogen-free substances soluble in alcohol 0.25%, nitrogen-free substances (*stikstofvrije stof*) not soluble in alcohol 0.75%, salt 17.11%, other ash components 1.65%, water 57.12%. Total 100%.

"The substances insoluble in nitrogen consist (except for peptone) mainly of legumin, which is soluble in strong salt solutions (compare Beilstein, *Handbuch Organische Chemie*, III, p. 1275) and will precipitate when diluted. This protein product (*eiwitstof*) has, by repeated precipitation with alcohol and renewed dilution in water and salt, been cleaned and could be recognized as a legumin. The elementary analyses gave these figures: Carbon 51.6, hydrogen 7.1, nitrogen 15.9.

"Furthermore, the dilution in water was precipitated by ammonium sulfate, magnesium sulfate and sodium sulfate and not by a large quantity of sodium chloride.

"The nitrogen containing substances soluble in alcohol were leucine, tyrosine and aspartic acid, all breakdown products of legumin, plus a little ammonia. Nitrogen-free

extraction substances are almost not present and consist of a little pectin and the black coloring agent from the skin of the soybeans, which gives the black color to the soya.

"Just like Kellner (*Chemiker Zeitung* 1895, p. 121) remarks, the composition of the soya is very similar to the one of meat extract, by which the big importance of this condiment in countries, where mainly vegetable type food is consumed, can be readily explained. Very peculiar moreover is the way in which during the preparation of the soya the heavily digestible protein substances, which are locked into the thick skinned cells of the soya, have been converted into an easily digestible, very delicious food.

"One lets the boiled beans mold by means of the *Aspergillus oryzae*, which above all has the quality of changing amyloextrine and starchy substances into sugars followed by carbonic acid and water breakdown. We can say that a microscopic investigation of a molded soybean shows that the mold threads (hyphae) penetrate the cell walls of the complete soybean and partly dissolve them so the contents will be more readily available. When the mold has used up all that food, as shown by its fructification, the beans are put into a strong solution of salt water so that the legumin will dissolve, producing a thick fluid liquid. At the same time, the broken down substances of the legumin will dissolve pepton [peptone], leucine, tyrosine and ammonia, next to the aromatic substance that will start to form in this stage. The continued manipulations, addition of sugar, herbs, etc., are of course of minor importance, but principally the clever way in which the mold is being used to dissolve the cell walls is highly interesting. This, like so many Chinese preparations, is completely empiric and no Chinese would have the slightest notion of what all this molding is about."

This article describes the first attempt to identify the tempeh mold. In the section on Indonesian miso (taucho), the author notes: "In a similar way, in Java, other molds are used to make leguminous seeds into more digestible foods. Thus the presscake, which remains after making peanut oil and would be indigestible without further preparation, is subjected to the action of molds. In central and eastern Java *Chlamydomucor Oryzae* [now known as *Amylomyces rouxii*] is used, whereas in western Java an orange mold of the family Oospore (*Neurospora*) is used. In the former case, the food is called 'bongkreng,' and in the latter 'ontjom.' If soybeans are molded with *Chlamydomucor* the spice is called 'tempets' [sic, tempeh]. In the preparation, the seeds are boiled, spread, mixed with a little molded cake from a former batch, and left alone for a while until the mass is bound into a solid white cake.

"All the aforementioned molds have the ability to break starch and pectin substances down into sugars, by which means the cell walls are opened and the seeds made more easy to digest.

"In the case of the starch-containing peanut presscakes, the breakdown of starch into sugars, followed by the use

of the resulting sugars, proceeds so rapidly that the cakes become warm and within 1 day about 5% of their weight will disappear.

Kagok Tegal 28.9.95.

Note 4. This is the earliest document seen (Feb. 2004) written only in Dutch that mentions tofu, which it calls “Tao-hoe” or “boonenkaas.” Earlier documents written in Latin and Dutch also mentioned tofu.

Note 5. This is the earliest document seen written only in Dutch that mentions Indonesian miso, which it calls *Fao toio* or *boonenbrei*, and *tao tsioe*.

Note 6. This is the earliest document seen stating that Hibiscus leaves are used in Indonesia to make soyfoods—in this case soy sauce.

Note 7. This is the earliest document seen (April 2012) that mentions “bongkreng”—but the explanation is incorrect.

Note 8. This is the earliest document seen (Sept. 2011) that mentions “ontjom.” Address: Java, Indonesia.

1431. Agricultural Society of Japan (*Dai Nihon Nokai*). 1895. Useful plants of Japan: Described and illustrated. Vol. 1. Tokyo: Agricultural Society of Japan. 233 p. See p. 5-6. 22 cm. [Eng]

• **Summary:** Discusses five varieties of *Glycine hispida* (p. 5-6) including: 21. Black soy-bean, Jap. *Kuro-mame*. “The beans have black skin. They are eaten either boiled or parched and also used to make *miso* (a kind of sauce with solid consistency), cakes, and *natto* (a cooked beans eaten as relish to rice).”

Note 1. The writer fails to mention that both miso and natto are fermented foods.

Note 2. This is the earliest English-language document seen (Jan. 2012) stating that natto is eaten with rice, or as a relish to rice.

22. White soy bean, Jap. *Shiro-mame*. Similar to No. 21 but the beans have yellowish-white skins. “Numerous varieties as to size, form, or duration of growth occur, and all are eaten either boiled or parched. Many important services are due to this bean. They are used to make malt [koji], *miso* (a kind of sauce), *shōyū* (bean sauce), and *yuba* (a kind of food). The *mamenoko* (bean flour) [probably roasted soy flour or *kinako*] is made of the beans and is eaten with *dango*, etc. It yields a dye called *Mame-no-go*. Oil is also pressed out from these beans. They are used in many other different ways.”

Note 3. This is the earliest English-language document seen (Dec. 2005) that uses the word *mamenoko* to refer to roasted soy flour.

23. Green bean, Jap. *Ao-mame*. Similar to No. 21 but with larger seeds of greenish color. “One variety with green colour both of the skin and albumen called *Konrinzai* occurs, and is used to make *Aomame-no-ko* (green bean flour).”

24. Jap. *Goishi-mame*. The seed of this variety is flat and black. Eaten boiled.

25. *Gankui-mame*. “Closely allied to the preceding. The beans are larger and thinner in the middle, and eaten principally boiled.”

Also discusses: Job’s tears (*Coix lachryma*, Jap. *Tōmugi*, *Hatomugi*, p. 5. The grain is pounded in a mortar, cleaned, and “consumed as meal and *mochi*. An infusion of the parched and ground grains is used instead of tea, and is called *Kosen*).” Five varieties of adzuki beans (*Phaseolus radiatus*, p. 7-8).

Pea-nut (*Arachis hypogaea*, Jap. *Tōjin-mame*, *Nankin-mame*, p. 9. “They are eaten parched or used in confectionery, or to extract oil. A variety with larger nuts about 3 times bigger was introduced from America in 1873”).

Kudzu (*Pueraria thunbergiana*, Jap. *Kudsu*, *Makudsu*, p. 69-70, 92. “The largest roots are about 3-4 ft. [long] and about the thickness of a man’s arm. In winter they are taken, and an excellent starch is prepared from them. It is used for food or paste. The vine is used to make baskets, and its fibre is taken for cloth. The leaves are used to feed cattle”).

Sesame (*Sesamum indicum*, Jap. *Goma*, p. 84. “There are three varieties, black, white, and brown colored. The latter variety is the best to take oil. The oil is principally used for dressing food. The grilled seeds are used to add to cakes, salads, etc.”). Address: Tameike 1, Akasaka, Japan.

1432. Atwater, W.O. 1895. Methods and results of investigations on the chemistry and economy of food. *USDA Office of Experiment Stations, Bulletin No. 21*. 222 p. See p. 193-94.

• **Summary:** In the section on “Food Consumption” a subsection titled “Japanese Dietaries” (p. 193-94) states: “The legumes are little eaten in their natural state but form the basis of a number of prepared foods and relishes, such as miso, tofu, and shoyu, all of which are made from the soja bean. The miso is prepared from cooked beans, which are rubbed to a thick paste and fermented with the ferment used in the preparation of the rice wine. Tofu, or bean cheese, is essentially the legumin of the soja bean, which is first extracted with water and then precipitated by the addition of the mother liquor (magnesium chlorid), obtained from the evaporation of sea water in the manufacture of salt. The cheese is eaten fresh. The shoyu sauce is prepared from a mixture of cooked and pulverized soja beans, roasted and pulverized wheat, wheat flour, salt, and water. The mixture is fermented with the above-mentioned rice ferment for 1½ to 5 years in casks. This sauce is used very largely by all classes.” Address: Prof. of Chemistry in Wesleyan Univ. Director of the Storrs (Connecticut) Agric. Exp. Station, and Special Agent of the U.S. Dep. of Agriculture.

1433. Holcombe, Chester. 1895. The real Chinaman. New York: Dodd, Mead & Company. xx + 350 p. Illust. No index. 21 cm.

• **Summary:** An accurate and sympathetic portrayal of China and her people in 1895, with 77 full-page black-and-white photos. “One of the most common sights in any city or town of China is that of a boy or girl with three or four pieces of cash in one hand and a couple of dishes of coarse pottery in the other going, with great dignity and importance, to purchase the materials for the family dinner, and the fuel with which to cook it. The bill of expenditures would run somewhat as follows: Charcoal, one cash; rice or flour, two cash; cabbage, one cash. On occasions of prosperity another cash would be spent for oil or soy [sauce], and on very rare and exceptional festive days still another would be invested in purchasing about a teaspoonful of weak alcohol, to be drank hot with the meal” (p. 315-16).

“Their daily food consists of rice steamed, cabbage boiled in an unnecessarily large amount of water, and for a relish, a few bits of raw turnip, pickled in strong brine. When disposed to be extravagant and reckless of expense, they buy a cash worth of dried watermelon seeds, and munch them as dessert... In certain parts of the empire wheat flour, oat, or cornmeal takes the place of rice. With this variation the description answers with entire accuracy for the food consumption of the great masses of the Chinese people...” (p. 312).

“The inn was better than average, and was supplied with all the varieties of food which the region afforded... Six meals and lodging for three men were furnished for less than nine cents! But, to tell the truth, the bill of fare was wholesome, but simple in the extreme” (p. 314-15).

Pages 10-12 discuss opium and the opium war from the Chinese viewpoint. Pages 73-77 discuss the difficult role of women in China. Address: For many years Interpreter, Secretary of Legation, and Acting Minister of the United States at Peking [China].

1434. Miyoshi, Manabu. 1895. Die Durchbohrung von Membranen durch Pilzfaeden [Penetration of membranes by mold filaments]. *Jahrbuecher fuer wissenschaftliche Botanik (Berlin)* 28(2):269-89. [39 ref. Ger]

• **Summary:** Japanese shoyu was first used by Prof. Miyoshi of this Institute as a liquid cultural medium for various molds. He recommended a mixture of 50 parts water, 20 parts Japanese shoyu, 5 parts raw sugar, and 25 parts concentrated cooked onion juice.

Note: This is the earliest document seen (Sept. 2001) that describes the industrial uses of soybeans or soy products (shoyu) as a culture medium (for growing microorganisms). Address: Prof., Botanical Institute, Tokyo Imperial University, Japan.

1435. Bennett, John E. 1896. Pickle-making: An industry whose importance few appreciate. *Los Angeles Times*. Jan. 27. p. 6.

• **Summary:** An early study of the rapidly growing pickle-

making industry and market in Los Angeles—with many statistics. The great staple of this industry is sauer kraut [sauerkraut]. The Foster Preserving Co., established 2 years ago, produces about 250 barrels/year of catsup and Worcestershire sauce. The Los Angeles Preserving Company, a new firm located on San Pedro street near Ninth street, makes about 500 gallons/year of Worcestershire sauce.

Lea & Perrin's Worcestershire sauce, “which made the estates of each of its manufacturers worth millions of dollars,” comes into Los Angeles because of its good reputation, although its price is higher than that of locally made products.

Note: It would be very interesting to know the ingredients used in the catsup and Worcestershire sauce made by the Foster Preserving Co. Is soy sauce used in either?

1436. Prinsen Geerligs, H.C. 1896. Einige chinesische Sojabohnenpraeparate [Some Chinese soybean preparations]. *Chemiker-Zeitung* 20(9):67-69. Jan. 29. (Exp. Station Record 8:72). [3 ref. Ger]

• **Summary:** This is a German translation of the author's 1895 Dutch article, but with two mistakes concerning tempeh corrected. He changed the name of the mold from *Chlamydomucor Oryzae* to *Rhizopus Oryzae* and he changed the name of the product from “tempets” to “tempeh.” He added in conclusion that “it was finely sliced and enjoyed, mold and all.” But he continued, apparently mistakenly, to refer to tempeh as a Chinese soyfood.

He also improved his description of Chinese-style soybean paste, which he now calls *Tao-tjiung (Bohnenbrei) [doujiang]*, and says has much similarity with the miso of the Japanese (p. 68 R.7).

Note 1. These two articles by Prinsen Geerligs ushered in the era of scientific research on tempeh by European microbiologists and food scientists.

Note 2. This is the earliest document seen (Sept. 2011) that contains the word “tempeh”—spelled with an “h” on the end.

Note 3. It is also the earliest German-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempeh.”

Note 4. This is the earliest German-language document seen (Oct. 2003) that uses the term *milchweisse Flüssigkeit* (“milk-white liquid”) to refer to soymilk. Address: Java, Indonesia.

1437. Corson, Juliet. 1896. A Lenten dinner: Good things that can be made in the lean season even. *New York Times*. March 8. p. 27.

• **Summary:** “Soya, or soy, is a favorite table sauce, which was first brought to England by officers returning from India. Small pieces of fish, poultry, and vegetables are preserved in this sauce, with the double effect of keeping them entirely sweet and making them tender... being remembered that the

Chinese soya is sweet and spicy, but less peppery than the cassareep of the West Indies. The Japanese is saltier [sic, saltier] and less spicy and sweet than the Chinese.”

Note: “Cassareep is a thick black liquid made from cassava root, often with additional spices, which is used as a base for many sauces and especially in Guyanese pepperpot. Besides use as a flavoring agent, it also acts as a preservative” (Source: Wikipedia, Sept. 2010).

1438. Wehmer, Carl. 1896. *Aspergillus Wentii*, eine neue technische Pilzart Javas [*Aspergillus Wentii*, a new type of technical mold from Java]. *Zentralblatt fuer Bakteriologie. Series 2*. 2(5):140-51. March 27. [8 ref. Ger]

• **Summary:** Contents: General and background. The mold. 3. Physiology of the mold. 4. Comparison with similar mold varieties. 5. Diagnosis: *Aspergillus Wentii* [Wehmer] nov. spec.—a new species of mold.

This new species of mold was observed by Went in the preparation of Chinese-style soy sauce (*Tao Yu*, see vol. 1, p. 248) and Chinese-style soybean paste (*Tao-tjiung* or *Bohnenbrei*) according to the method practised in Java, and was described by Wehmer (XIX.) in 1896. It appears spontaneously on the boiled Soja beans that have been covered with *Hibiscus* leaves, and affects a loosening and disintegration of the firm tissue of the bean.

Ten illustrations on p. 151 show different stages and parts of the mold.

Note: This is the earliest document seen (Feb. 2009) that contains the term *Tao-tjiung*, a term, and perhaps a product, that appears to be between *doujiang* (Chinese-style miso) and *tao-tjo* (Indonesian-style miso). Address: PhD, Privatdozenten an der Technischen Hochschule, Hannover.

1439. Parker & Co. 1896. Groceries. New goods just received (Ad). *Hartford Daily Courant (Connecticut)*. April 1. p. 10.

• **Summary:** “Pate de Foie Gras, Truffles du Perigord... Crosse & Blackwell’s Mushroom Catsup. Crosse & Blackwell’s Walnut Catsup. Crosse & Blackwell’s India Soy [Sauce]. Crosse & Blackwell’s Essence of Anchovies,...” Address: 17 Central Row.

1440. Trimble, Henry. 1896. Recent literature on the soja bean. *American J. of Pharmacy* 68:309-13. June. [12 ref]

• **Summary:** One of the best early reviews of the literature, especially the Japanese and European literature, published in the United States. This paper introduced several new soyfoods (such as *natto* and *kori-dofu*) to the United States Contents: Introduction. Nutritional composition of the soja bean based on analyses of 5 samples from China, Hungary, France, and Japan. Diastatic enzyme / ferment “present in the soja beans to a greater extent than in many other leguminous seeds (see Güssmann 1890). Composition of etiolated soja shoots [sprouts]. The oil [of the soja bean]. Starch content.

Sugar content. Use of soybeans as food in Japan. Miso. Natto. Tofu. Kori-dofu. Introduction of the soja bean to the United States in about 1888. Ability to obtain nitrogen from the air.

“The immediate excuse for the appearance of this paper is the fact that a number of contributions have recently appeared on the soja bean, notably from the College of Agriculture, Imperial University of Japan.”

“The oil may be extracted by pressure or by means of solvents [in the laboratory]; it is said to possess some laxative properties, is of a yellowish brown color, and has a slightly aromatic odor; it is intermediate between the drying and non-drying oils.” The following constants, based on Stingl and Morawski (*Chemiker Zeitung*, 1886, p. 140) are given: “Specific gravity at 15°C: 0.924. Point of solidification: 8-15°C. Fusing point of the fatty acids: 27-29°C. Point of solidification of fatty acids: 23-25°C. Temperature rise: 59°C. Iodine number: 121.3. Iodine number of the fatty acids: 122. Saponification number: 192.5. Note: Trimble actually got these constants from *J. of the Society of Chemical Industry*, 31 May 1893, p. 453-54, which summarised an Italian-language article by De Negrìs and Fabris (1891), whose values confirmed those obtained by Stingl and Morawski.

Trimble (p. 311-12) gives a good, detailed description of natto based entirely on Yabe (1894). Parts of his summary perceptive: “Yabe found in this substance four kinds of microbes present, and he believes the chemical decomposition of the proteids to be due to one or more of these microbes... A chemical investigation by the author just mentioned [Yabe] revealed tyrosine, peptone, guanine, leucin and xanthine. The total proteids amounted to considerably more in the *natto*, when allowance is made for moisture, than existed in the original bean, and the artificial product is also considered to be much more digestible.”

Concerning tofu and soymilk: “A still more interesting preparation of the soja bean than either of the preceding [miso and natto] is *tofu*. This has been described and investigated by M. Inouye (*Bulletin Imp. College of Agriculture*, Vol. 2, No. 4 [1895]). The beans are first soaked for about twelve hours in water, and then crushed between two millstones until a uniform pulpy mass is obtained. This is then boiled with about three times its weight of water, and filtered through cloth. The liquid filtrate is white and opaque, very closely resembling cow’s milk, while the odor and taste remind one of fresh malt. On standing, the liquid becomes sour from the formation of lactic acid, and a coagulation of the casein takes place. The freshly boiled and filtered liquid is coagulated either by the addition of a portion of the sour liquid which has been set aside from a previous lot, or it is treated with about 2 per cent of a concentrated brine, such as is obtained as mother liquor from the preparation of sea salt.”

“Somewhere about the year 1888 the soja bean was introduced into the United States. It has been tried in a

number of State Experiment Stations, and is gradually working into favor in the Southern States. In Kansas the plant has been found to withstand considerable drought... The plant is valuable for forage or soiling. The beans have been produced in South Carolina to the amount of 10 to 15 bushels per acre. On account of their richness in oil they have been used as a substitute for cotton-seed meal in feeding cattle, with very satisfactory results.

"The plant is believed to have, in common with most leguminosæ, the power of obtaining some of its nitrogen from the air, and hence, of acting as a soil renovator."

Note 1. This is the earliest document seen (March 2002), published in the USA, that contains the word *tofu*, or *kori-dofu* [dried-frozen tofu], or that discusses soymilk.

Note 2. This is the earliest English-language document seen (March 2003), published in the USA, that uses the word "crushed" or one of its cognates (crushing, crushers, etc.) in connection with soybeans.

Note 3. This is the earliest U.S. document seen (Sept. 2002) that mentions the use of a solvent for extracting the oil from soybeans.

Note 4. This is the earliest English-language document seen (March 2008) that contains the term "iodine number" (regardless of hyphenation or capitalization).

Note 5. This is the earliest English-language document seen (March 2008) that contains the word "drying" in connection with soy oil and its iodine number, or that states that soy oil is intermediate between the drying and non-drying oils. Address: USA.

1441. Yeo, I. Burney. 1896. Food in health and disease. New and rev. ed. Philadelphia, Pennsylvania: Lea Brothers. viii + 592 p. See p. 383-84, 394, 399. Illust. Index. 19 cm. Reprinted in 1897, 1901

• **Summary:** In Part II, "Food in disease," Chapter 3 is titled "Food in diabetes." In a review of the literature, "Soya bread" is mentioned on pages 383-84. A nutritional analysis of soybean flour by Prof. Atfield appears on p. 384.

Table II, "Article permissible [in diabetic diets] in small quantities" (p. 394) includes: "English sauces.—Worcester, Harvey, anchovy, Indian soy, etc. 1 tablespoonful."

The section on "Diabetic dietaries" contains "5.—Dujardin-Beaumont's" (p. 399) which begins: "He adopts with little modification the dietary of Bouchardat. He strongly recommends... *the use of soya bread*."

The author (who lived 1835-1914) mentions gluten on pages 7, 9, 67, 69, 71-76, 165, 173, 379, 381-384, 396, 398, 399, 404, 538, and 554. Address: M.D., F.R.C.P., Prof. of Clinical Therapeutics, King's College, London; Physician to King's College Hospital [London, England].

1442. *Boston Daily Globe*. 1896. Banquets in China. Here is a list of the proper dishes to be served. There must not be less than 37 courses on such an occasion. Sept. 20. p. SM40.

• **Summary:** From *Woman* magazine, by Miss J.E. Budgett-Meakin: "One night I was a guest at a regular Chinese feast of 37 courses, and here is the bill of fare:" 2-5 "... boiled fowl dipped in soy sauce."

Courses 1-20 were "the preliminaries, which were duly disposed of or sampled, according to taste by means of chopsticks, little bowls of soy sauce being provided wherein to dip such of the provisions as seemed to require more flavor."

1443. Parker & Co. 1896. Imported sauces! (Ad). *Hartford Daily Courant (Connecticut)*. Oct. 3. p. 4.

• **Summary:** This ad is almost identical to that which appeared in the 30 Sept. 1893 (p. 4) issue of this newspaper.

Note: This ad also appeared in 1896 in the Oct. 6, 7, 8 and 9 issues of this newspaper. Address: 17 Central Row.

1444. Hearn, Lafcadio. 1896. A living god. *Atlantic Monthly* 78(470):833-41. Dec.

• **Summary:** Part I of this article is about Shinto shrines (*miya, yashiro*), their architecture and philosophy. The typical shrine is a windowless building of unpainted timber with a very steep overhanging roof. Part II is about customs in traditional Japanese villages. Quarreling between people of the same community was not allowed; Japanese know how to live without quarreling. Japanese generally fight only to kill. Also, a peasant girl, before marriage, enjoyed far more liberty than was permitted to city girls. No objection was raised to her having a lover if the relationship was honest and based on good intentions. But if, after marriage, she had an extramarital affair, she and her parents would be shamed by all villagers. She would be stripped, driven in mockery through every street of the village, then sentenced to banishment for 5 years—after which she was free to return to her husband and village.

Part II (p. 837-41) tells how Gohei Hamaguchi (who lived on the Japanese coast long before the Meiji era) protected nearby villagers from a huge tidal wave (*tsunami*) by setting fire to his own newly harvested rice, to which the straw was still attached in the field. The fire attracted the villagers away from the beach as they ran up the hill to put out the fire—and thereby saved their lives. Their village by the bay had been totally destroyed. Grateful for their lives, the villagers declared him a god, called him Hamaguchi Daimyōjin, built a temple in their village to his spirit, and worshipped him there with prayer and offerings.

Note 1. Koji Okamoto, an officer of the Yamasa Shoyu Co., sent this article to Soyfoods Center in Feb. 1995. However the article was in a different format. On the left page was the original English, and on the right page was a Japanese translation, with difficult words or ideas explained in footnotes. The name of the author and the last four paragraphs are omitted! A separate Japanese-language article sent by Mr. Okamoto (See his letter to Soyfoods Center dated 8 Nov. 1984) gives the name of the hero as

the 7th Gihei [sic, Gohei] Hamaguchi of Yamasa, and says that he is related to the Hamaguchi family that started the famous shoyu company at Yamasa. The article adds: After the tidal wave, realizing that in order to protect the villagers from future tidal waves, he would have to construct a strong embankment, he did so at his own expense. After the project was completed, the villagers proposed building a shrine for him. He, of course, turned down their request. The embankment still remains solid and protects the villagers at Arita-gun, Wakayama-ken, Japan. Gihei wanted to conceal his act of setting fire.

Note 2. His kind act was discovered not by a Japanese but by the famous British author Lafcadio Hearn (lived 1850-1904; Japanese name: *Koizumi Yakumo*), who wrote *Kaidan*, a well-known Japanese-language book of ghost stories. He also collected Buddhist proverbs and assembled 100 of the most representative sayings in his 1899 book, *In Ghostly Japan (Rei no Nihon)* which expressed the viewpoint that “all things are merely dreams.” Born in Greece in 1850, Hearn lived in Ireland as a youngster and later traveled in the USA, where he worked as a journalist for various newspapers. In 1886, Hearn visited Japan as a reporter and was so captivated by Japanese culture that in 1890 he moved there to teach English. Six years later he became a naturalized Japanese. He married Koizumi Setsu, raised a family, and continued to teach and write until his death in 1904.

Note 3. Gihei’s name became famous in London earlier than in Japan. This story of the tidal wave is said to have appeared in Japanese elementary school textbooks before World War II. Address: Japan.

1445. Chicago City Directories, Shinzaburo Mogi, Kikkoman, Shinzo Ohki, Oriental Show-You Co. 1896-1923. Chicago, Illinois.

• **Summary:** The Chicago city directory shows no listings in 1896, 1902, or 1904 for Mogi or Yamato. In 1914 Shinzaburo Mogi is president of Yamato Importing Co., 824, 36 S. State in Chicago. S. Nakinura also works there. They import silks. In 1916 Shinzaburo Mogi is still president but the address is now 3rd floor, 319 West Adams. S. Kurihara is secretary. Mr. Mogi’s residence is at 6050 Blackstone Ave. Mr. Tanba and Oriental Show-You are not listed.

In 1923 Shinzaburo Mogi is treasurer of Oriental Show You Co. and resides at 6210 Dorchester Ave. The listing for Oriental Show-You Co. shows Shinzo Ohki, president, Earlie Diffendarfer, vice president (residence: Columbia City, Indiana), Mitsuji Kiyohara, secretary, and Shinzaburo Mogi, treasurer. Soy mfgs, 208 N. Wab Av. The listing for Yamato Importing Co. shows S. Mogi, president, S. Kitazawa, vice president, N. Kimura, secretary, T. Kinchi, treasurer. Whol[esale] dry goods. 305 W. Adams. Address: Chicago, Illinois.

1446. **Product Name:** [Dr. Lahmann’s Japan Soja].

Manufacturer’s Name: Dr. Heinrich Lahmann.

Manufacturer’s Address: Germany.

Date of Introduction: 1896.

How Stored: Shelf stable.

New Product–Documentation: Ad in Ellen Goodell Smith. 1896. *The Fat of the Land and How to Live on It*. A description of “Japan Soja” is given on p. 164-65. A full-page ad (p. 258) is titled “Pure. Vegetable. Nutritive.” by The Hygienic Supply Co. (F. Witte), 203-205 Park Ave., Baltimore, Maryland. They are “Importers of German health goods and books” including Dr. Lahmann’s Japan Soja, which “Is a pure vegetable extract, which is far superior to Meat Extract. It can be used for making soups, or may be added to other foods in order to make them more appetizing. Price per jar, \$1.00.” Other German imports include Dr. Lahmann’s Vegetable Milk (for infants), Dr. Lahmann’s Vegetable Extract, and Dr. Lahmann’s Nutritive Cocoa.

Note 1. According to *Vegetarisches Kochbuch mit Gesundheit Regeln*, by Carlotto Schultz (1886), Dr. H. Lahmann of Stuttgart is an authority on the feeding of infants and problems related to indigestion. Note 2. Strittmatter (1915, p. 56) says that H. Lahmann M.D. lives in Munich, Germany.

Note 3. Janet Barkas in *The Vegetable Passion* (1975, p. 100) states that Dr. Heinrich Lahmann was an early, influential vegetarian in Germany. “Lahmann traced many illnesses to an over-reliance on meat and unnatural medications.” He was one of the first German physicians to use natural healing methods. He was the author of at least 3 major books, his sanatorium generated much enthusiasm, and, at the turn of the century, he founded a vegetarian society in Dresden.

Note 4. This is the earliest known commercial soy product made in Germany.

1447. Farmer, Fannie Merritt. 1896. The Boston Cooking-School cook book. Boston, Massachusetts: Little, Brown and Company. xxx + 567 p. + [21] p. of advertisements. Illust. Index. 19 cm. See also the 1911 and 1918 eds.

• **Summary:** This book is dedicated to Mrs. William B. Sewall, President of the Boston Cooking-School. A dedication, by the English author John Ruskin (1819-1900), is the same as that found on the title page of Croly (1870).

In the Preface, Fannie states: “During the last decade much time has been given by scientists to the study of foods and their dietetic value, and it is a subject which rightfully should demand much consideration from all. I certainly feel that the time is not far distant when a knowledge of the principles of diet will be an essential part of one’s education. Then mankind will eat to live, will be able to do better mental and physical work, and disease will be less frequent.” She hopes that this cook book will “be looked upon as a compilation of tried and tested recipes” and “that

it may awaken an interest through its condensed scientific knowledge which will lead to deeper thought and broader study of what we eat.”

Chapter 1, titled “Food,” begins by discussing proteids, carbohydrates, fats and oils, mineral matter (which furnishes the necessary salts), and water. “The chief office of proteids is to build and repair tissues. They can furnish energy, but at greater cost than carbohydrates, fats, and oils. They contain nitrogen, carbon, oxygen, hydrogen, and sulphur or phosphorus, and include all forms of animal foods (excepting fats and glycogen) and some vegetable foods. Examples: milk, cheese, eggs, meat, fish, cereals, peas, beans, and lentils. The principal constituent of proteid food is albumen. Albumen as found in food takes different names, but has the same chemical composition; as, albumen in eggs, fibrin in meat, casein in milk and cheese, vegetable casein or legumen in peas, beans, and lentils; and gluten in wheat. To this same class belongs gelatine” (p. 2).

“One of the greatest errors in diet is neglect to take enough water;...” (p. 2).

“The average daily ration of an adult requires 3½ oz. [99.3 gm] proteid, 3 oz fat, 10 oz. starch, 1 oz. [28.38 gm] salt, 5 pints [10 cups] water” (p. 3).

“To keep in health and do the best mental and physical work, authorities agree that a mixed diet [from both the animal and vegetable kingdoms] is suited for temperate climates, although sound arguments appear from the vegetarian... Brain workers should take their proteid in a form easily digested. In consideration of this fact, fish and eggs form desirable substitutes for meat.” But the working man needs meat (p. 3-4).

Chapter 2, titled “Cookery,” begins (p. 17): “Cookery is the art of preparing food for the nourishment of the body... Progress in civilization has been accompanied by progress in cookery.”

Three recipes have the word “peanut” in the title: Peanut cookies (p. 408). Salted peanuts (p. 445). Peanut nougat (p. 449). And Pistachio bisque uses peanuts as an ingredient.

Worcestershire Sauce is used in recipes throughout this book: Oxtail soup (p. 108-09). Cecils with tomato sauce (p. 188). Salmi of Lamb (199; “or one cup cold lamb gravy seasoned with Worcestershire, Harvey, or Elizabeth Sauce”). Veal cutlets (p. 202; its Brown sauce is seasoned with “salt, pepper, lemon juice, and Worcestershire Sauce”). Tartar sauce (p. 244). Sardine canapés (p. 462; “sardines (from which the bones have been removed) rubbed to a paste, with a small quantity of creamed butter and seasoned with Worcestershire Sauce and a few grains of cayenne”). Devilled bones (p. 471; also calls for “1 tablespoon Walnut Catsup”).

Blanquette of Lamb (p. 199) also calls for “one tablespoon Mushroom Catsup.” Thus, “catsup” is called for in only two recipes; “ketchup” is not mentioned.

“Fannie Farmer (1857-1915), the author of this book,

is perhaps the best known of the great American culinary authorities of the turn of the 19th to 20th centuries. And this book is arguably the best known and most influential of all American cookbooks. It has been in print from its appearance in 1896 until the present day... The publishers, Little, Brown, evidently afraid of losing money on a cookbook, required Fannie to pay for the first printing herself;...” By the time she died in 1915 more than 360,000 copies had been sold. By 1946 some 2.5 million copies had been printed, and by 1990 about 4 million.

When Fannie was 30, she was encouraged “to enroll in the Boston Cooking School to train as a cooking teacher. The school, established in 1879 by the Woman’s Education Association of Boston, fostered a more intellectual, scientific approach to food preparation and diet, and in turn, elevated the role of women not just as cooks, but as educated cooking teachers and authorities on proper diets for the healthy and sick. As a post-Civil War institution founded by reformers and philanthropists, the school gave women of modest means an entry into professional work at a time when more women needed employment and few had career options... Mary Johnson Lincoln, one such woman who began working following her husband’s financial demise, served as president of the school from 1879 to 1885.” Fannie “completed the two-year program in 1889 as one of the best students; she stayed on as Assistant Principal and became Principal in 1891.”

Fannie Merritt Farmer lived 1857-1915. This book, her first cookbook, is actually an extensively revised version of Mary J. “Lincoln’s popular work, *Mrs. Lincoln’s Boston Cook Book*, published 12 years earlier” in 1884. “Some initially criticized the book for appropriating Mrs. Lincoln’s schools recipes without acknowledgement. Nevertheless, the book stood on its own as thoroughly modern:...” (MSU biography). Address: Principal of the Boston Cooking School.

1448. Nishimura, Eijuro. 1896. *Miso shōyū jōzōhen* [Miso and shoyu fermentation]. Tokyo: Hakubunkan. 316 p. See p. 18. 20 cm. Series: *Tsuzoku nichiyō kagaku zensho*, no. 11. [Jap]*

• **Summary:** More than 90% of the protein in soy beans is in the form of albuminoids.

Note: This is the earliest book in WorldCat / OCLC that has miso as a subject or title word.

1449. Skeat, Walter William. 1896. *A concise etymological dictionary of the English language*. 4th ed., further revised with enlarged supplement. New York, NY: Harper & Brothers, Publishers. xii + 633 p. See p. 453-54, 611.

• **Summary:** The etymology of the word “Soy” states (p. 453-54): “Soy, a sauce. (Japanese.) Also *sooja*, ‘which has been corrupted into ‘soy;’ Eng. Cycl. Japanese *shōyū*, soy, sauce; though the name is now given to the bean (*Dolichos*

soja) whence *soy* is made.”

In Appendix 6, “Distribution of words according to the languages from which they are derived,” is a section (p. 611) “19. Words of Asiatic origin, but neither Aryan nor Semitic.” Under “Japanese” are listed only two words: “japan, soy.” Address: Rev., Litt.D, LL.D., Elrington and Bosworth Prof. of Anglo-Saxon in the Univ. of Cambridge [England].

1450. Smith, Ellen Goodell. 1896. The fat of the land and how to live on it. Special chapters on nuts and vegetable oils, and how to use them in cooking; milk; bakeries; feeding infants and various other subjects relating to the problem. Amherst, Massachusetts: Press of Carpenter & Morehouse. 251 + [12] p. Portrait. Illust. Index. 20 cm. At top of title page: “A practical cook and text book for general use.”

• **Summary:** A remarkable and wholistic vegetarian (actually vegan) cookbook by a medical doctor (M.D.). A photo (frontispiece), facing the title page, shows a portrait of Dr. Ellen Smith. Dedication: “To the millions of thinkers who think in new directions, and to other millions who do not stop to think whether they should ‘live to eat’ or eat to live’ this book is dedicated.” Facing the table of contents are three quotations from Buddhist and Christian scriptures on the importance of not killing.

The Preface begins: “This book is because of the agitation and discussion upon the various phases of the food question. The title indicates its character to be vegetarian; this word however is a misnomer, but as none better has yet been coined, we will simply state that we are vegetarians because we think nature designed us to subsist on the ‘fat of the land,’ and not on the flesh and blood of beasts, or of any living, sentient creature.”

“To be a health and dietetic reformer in the early days of this movement meant much sacrifice and often personal abuse” (p. 10).

“With no desire to set aside the work of the scientists, we accord ‘honor to whom honor is due,’ and may success attend their gigantic efforts, that seem to be heroically directed toward healing, protecting, and preparing the animal world and their products for human consumption” (p. 11).

This chapter, after listing many of America’s major problems, concludes: “From a vegetarian standpoint, these unhealthful conditions of mind and body are largely propagated, nourished and developed and developed from the never ending supply of slaughtered flesh and its stimulating—not nourishing—accompaniments. The moral and physical health of millions is thus undermined, and from such material is created generation after generation of imperfect human beings;...” (p. 11).

Chapter 5, titled “Milk, cream, butter, etc.” begins: “Milk, cream, butter, salt and sugar are admissible in hygienic and vegetarian dietary, but in most of the recipes here given are not included... [but] in all cases salt can be added if desired, or milk substituted for water.”

Chapter 6, titled “Vegetable oils,” notes: “Those at present extensively used for culinary purposes are obtained from the olive, coconut and cotton seed.” It is almost impossible to obtain olive oil unadulterated. “The *American Analyst* tells us that ‘Two-thirds of the olive oil sold in the markets of the world is born in the cotton fields of the southern states’ (p. 57). “At Manheim, Germany, cocoanuts have for many years been made into butter for general culinary use... [It] keeps indefinitely and even when exposed to the air *will not become rancid* like animal fat. This butter is also manufactured in England... It is now manufactured in America by the Pure Food Co., Chicago, Illinois” (p. 58). Chapter 6 concludes prophetically: “One need not be a vegetarian or even a hygienist to use these vegetable oils, for these are thousands of families using them, who also use animal food, finding economy in health and purse by so doing.” Note 1. This is the earliest document seen (March 2005) that contains the term “Pure Food,” probably in connection with the growing “pure food movement” in the USA

Chapter 10, titled “Nuts, their culture and use in cooking,” (p. 141-56) discusses almonds (now largely grown in California), walnuts, pecans, Brazil nuts, and peanuts. Peanut oil is largely exported to foreign countries and doubtless returns, with olive oil, under the name of “Pure Olive Oil.” “It is said that America uses 4,000,000 bushels of peanuts yearly at a cost to the consumers of \$10,000,000. Very rarely do we find these nuts on the table as an article of food, but they are consumed between meals by everybody, from the shoeless and hatless street waif to the gray-haired millionaire.” “Unbelievers tell us that a vegetable diet lacks proteids or tissue building elements, and hence that vegetarians are not properly nourished. Science has demonstrated that proteids are abundant in the grains,” nuts, and other foods (p. 148-49). The section titled “Nuts as food” (p. 149-53) begins: “Nuts are not only superior to flesh as an article of diet, but may be used in many forms of cookery, either whole, chopped, grated, crushed or ground into a paste or meal.” “The pine nut, sold under the name of pignolia [pignolia], is an excellent nut for cooking.” Two sub-sections are titled “Nut substitute for milk” (using cocoanuts, pecans, peanuts, Brazil nuts, etc.) and “Nut butter” (one of the latest novelties). There are recipes for sandwiches with “almond nut butter,” and “Peanut sandwiches” spread with a “form of nut butter which flavors so strongly of peanuts that it will make an excellent substitute for dairy butter to spread the bread and hold the crushed nuts in place.” Note 2. This book contains no recipe for making peanut butter at home.

Chapter 11, “Salads,” contains a long section titled “Japan Soja” (p. 164) which clearly refers to Japanese soy sauce: “A jar of the extract of Japan soja was received too late for careful testing or experiment. But coming from a German vegetarian laboratory [Dr. Lahmann’s] and said to be free from injurious substances, it may prove to be a useful

addition to the table. Following is a description of the Soy-bean from which it is made.

‘Japan Soja, a substitute for flesh meat extracts such as Bovinine, etc. etc. The soy-bean or pea is a small erect herb, (“Glycine soja,” or “soja hispida”) of the bean family, “Papilionaceae” of India and China, cultivated for its seeds; composed of 38% proteids, 17 to 20% fat, 5% cellulose and 4% ashes. The hygienist loses nothing by declining flesh meat extracts of any sort, but substantially gains by adopting Japan Soja, a safe and far more palatable flavoring for various dishes. It may not only be so employed in the preparation of dishes, prior to serving, but subsequently and similarly to Worcestershire sauce, etc.’

The odor and flavor of this preparation is very delicate and may readily supply a need in the dietary of those who are making a change from an animal to a vegetable diet.”

The next (and last) paragraph of Chapter 11 (p. 165) notes that commercial samples of “Bromose and nut butter... manufactured in vegetarian laboratories and guaranteed free from animal fat” were “received at ‘the eleventh hour,’ too late for critical experiment... Crushed nuts, nut butter and nut meal of home make were used in all preceding recipes containing nuts.”

Chapter 12, titled “Condiments and seasonings” (p. 167-71) argues against the use of salt, spices (including pepper, mustard, ginger, etc.), and commercial condiments. “Salt destroys natural flavor and gives its own flavor to all food... Salt also induces unnatural thirst...” Instead, why not grow and use “sweet herbs” and “aromatic seeds.” “Why may not sweet marjoram, sweet basil, rosemary and lavender, lemon verbena, rose and geranium leaves lend their exquisite flavors to our food? Thyme, parsley, sage and mints of various kinds...” Note 3. This general attitude may explain why Japanese soy sauce, a commercial condiment, was not considered a condiment and included in this chapter.

A “Directory” (p. 246) lists 13 sources of “pure food products” including: “Health foods: Dr. J.H. Kellogg, Battle Creek, Michigan. Nut preparations: Sanitas Food Co., Battle Creek, Michigan... Vegetable milk, etc.: Hygienic Supply Co., 203-05 Park avenue, Baltimore, Maryland... Readshaw’s Forest Mills Graham Flour (Original) and cereals, Dansville, New York.”

A full-page ad (p. 255) describes products made and sold by the Sanitas Food Company (Battle Creek, Michigan) titled “Pure Products of Nuts.” These include Bromose, Nuttose, Nut-Butter [probably peanut butter], and Nut-Meal.

A full-page ad (p. 258) is titled “Pure. Vegetable. Nutritive,” by The Hygienic Supply Co. (F. Witte), 203-205 Park Ave., Baltimore, Maryland. They are “Importers of German health goods and books” including Dr. Lahmann’s Japan Soja, which “Is a pure vegetable extract, which is far superior to Meat Extract. It can be used for making soups, or may be added to other foods in order to make them more appetizing. Price per jar, \$1.00.” (Note 4. According

to *Vegetarisches Kochbuch mit Gesundheit Regeln*, by Carlotto Schultz {1886}, Dr. H. Lahmann of Stuttgart is an authority on the feeding of infants and problems related to indigestion.) Other products imported from Germany by this company include Dr. Lahmann’s Vegetable Milk (for infants), Dr. Lahmann’s Vegetable Extract, and Dr. Lahmann’s Nutritive Cocoa.

Note 5. This is the second earliest English-language document seen (April 2010) that contains the term “Vegetable Milk.” This non-soy product is an emulsion made from almonds and nuts.

Page 259 contains an ad for *Health-Culture: A Journal of Practical Hygiene* by The Health-Culture Co., 341 Fifth Ave., New York.

Page 260 contains an ad for *Food, Home and Garden*, a periodical edited by Rev. Henry S. Clubb of the Vegetarian Society of America, 310 Chestnut St., Philadelphia, Pennsylvania.

Note 6. Notice that this book contains no chapter on main dishes or entrees; unleavened Graham bread (made with “entire wheat flour”) was considered the best main dish. Very few the many recipes call for the use of dairy products, eggs, animal fats, or honey, and in each case they are optional. Chapter 13, “Pudding, pastries and cakes,” convincingly questions the need for this entire category of foods, but those who *must* have such sweets are encouraged (p. 176-77) to use water instead of milk, vegetable fats instead of animal fats and dairy products, reduce the number of eggs and the amount of sugar used by one-half or more, and gradually eliminate spices and salt. Chapter 14, “Milk and the cow” makes a strong case for not using these animal products.

A woman cited several times (p. 68, 177) as an authority on foods is Mrs. Emma P. Ewing. Address: M.D., Pansy Park, Dwight, Massachusetts.

1451. Tokio Nurseries Co. 1897. General catalogue of plants, bulbs, seeds, &c. &c. Tokio, Japan. v + 53 p. 25 cm. [Eng]

• **Summary:** In the section titled “Vegetable seeds” (p. 45-50) is a subsection on “Pulse” (p. 47-48). The first entry is: “Soya Hispida, glycine hispida, soy bean, wide cultivation of this bean in the East, is used in the preparation of Japanese Soy [sauce], of Vegetable Bean Cheese [tofu], as well as Green fodder and manure. Thus the bean forms one of the staple products of Japan.

“‘Early Variety,’ sow April, crop in June. \$1.20 per 10 lbs. \$12.00 per 100 lbs.

“‘Late Variety,’ sow May, crop in August, eaten only when fully boiled down. \$2.00 per 10 lbs. \$18.00 per 100 lbs.”

Other species of pulse listed are: *Phaseolus Mungo* var. *subtrilobata* ([azuki], 4 varieties; “‘Common,’ a very hardy productive one, sending out bushy crowns. The beans are crushed and made into sweets. \$1.00 per 10 lbs.”

Also: White, Black-Eyes, New Prolific), *Phaseolus Mungo* var. *radiatus* (mung beans); “green podded, which when smashed is made into sweets, June-Sept., \$1.50 per 10 lbs.”), broad beans, peas (“Ordinary pisum sativum, also used in the preparation of viscous soy” [sauce]), red pea, *Dolichos Lablab*, *Mucuna Capitata*, French beans, Speckled Partridge (“correct botanical name is not yet identified”), *Canavalia ensiformis*.

“Cable address: Nurseries Co., Tokio. Headquarters for lily bulbs, *Cycas revoluta*, Japanese plants and seeds.” On the cover are two photos: (1) A horse pulling a two-wheeled cart loaded with boxes. (2) People packing things into trays and baskets outdoors.

Note 1. This is the earliest Japanese seed catalog seen (Dec. 2004) that mentions soybeans.

Note 2. This is the earliest Japanese seed catalog seen (Dec. 2004) that contains one or more photographs.

Note 3. This is the earliest English-language document seen (April 2012) that mentions a non-soy sauce made from peas that resembles soy sauce. Address: Komagome, Denchu, Tokio, Japan.

1452. Williams, Thomas A. 1897. The soy bean as a forage crop. *Farmers' Bulletin* (USDA) No. 58. p. 1-19. March. Revised (very slightly) in 1899. [7 ref]

• **Summary:** Contents: General characteristics and origin. Varieties. Conditions of growth. Methods of culture. Harvesting. Yield. Chemical composition. Digestibility. Value and uses: As a soiling crop, as a silage crop, as a hay crop, as a pasture plant, as a soil renewer, value of the bean for feed. Summary. Appendix—Soy beans as food for man.

In the letter of transmittal printed at the front of this bulletin, F. Lamson-Scribner (USDA Agrostologist) says: “For reasons set forth in the body of this bulletin [see p. 4], the name ‘soy’ has been adopted to ‘soja,’ by which it has been generally known.

“In 1875 Professor Haberlandt began an extensive series of experiments with this plant in Austro-Hungary, and in a work published in 1878 he gave the results of his studies and strongly urged the cultivation of the soy bean as a food plant for both man and beast. Although he succeeded in exciting a great deal of interest in its cultivation while making his experiments, and distributed a considerable amount of seed, very little seems to have come of it; for at his death, which occurred in 1878, the interest flagged, and the soy bean has failed to obtain the place as a staple crop which he prophesied for it.”

“It is only within the last 15 years that it [the soy bean] has received much attention as a forage crop.” Robert C. Morris of Illinois grew soy beans in 1896.

“The term ‘soy’ applied to this bean is derived from a Japanese word ‘shoyu,’ denoting a certain preparation from the seeds which is a favorite article of diet in that country. The term ‘soja’ is often used in connection with this plant,

but Professor Georgeson, who spent some time in Japan, and who, since his return to this country, has experimented extensively with this plant, says [1892, “Test of some Japanese beans”]: ‘The term *soja*, often applied to this bean, is misleading, inasmuch as the species named by Siebold and Zuccarini *Glycine soja* is not cultivated there (Japan), or at least rarely cultivated, though wild in the south...’” (p. 3-4). Note 1. Prof. Georgeson played an important role in changing the name of this plant to soy bean from soja bean.

“Varieties (p. 5-7): The different varieties of soy bean are distinguished largely according to the color, size, and shape of the seed, and the time required for the plants to reach maturity. They also differ more or less in the habit of growth and in the character and degree of the hairiness of the various parts of the plant. The names applied to the varieties here in the United States usually refer to the time of reaching maturity and the color of the seed; as, for example, ‘Early White,’ ‘Medium Late Green,’ ‘Medium Black,’ etc. The early varieties generally fruit heavier in proportion to the size of the plant than the later ones, and hence are better to grow for seed, while the medium or late varieties are better for forage on account of the larger yield of fodder that may be obtained.

“The ‘Early White’ soy bean is an excellent variety to grow when a crop of seed is desired, particularly in the North, where the growing season is likely to be short... ‘Medium Early Green’ is one of the best varieties to plant for hay, as it yields heavily and retains its leaves well. For soiling or for ensilage ‘Medium Early Green,’ ‘Medium Early Black,’ or the ‘Late’ green or black varieties may be used, according to the length of the season and the time at which the crop is to be used. In the New England States the ‘Medium Early Green’ variety is generally preferred, while in the Central States ‘Medium Early Black’ seems to be the favorite... For green manuring the large medium or late varieties are best; ‘Medium Late Black’ being excellent for this purpose.”

Harvesting: The “best forage will be obtained by cutting just as the pods are forming... In harvesting a crop for the seed, the plants may be pulled by hand or cut with a scythe or mower and gathered into small piles, which should be relatively high and of a small diameter, so that the plants may dry out readily. Thrashing can be done with a flail or with the thrashing machine. Very good results can be had with common grain thrashers by taking out a portion or all of the concaves and substituting blanks.”

The subsection titled “As a pasture plant” (p. 16) states: “In some parts of the country, particularly in the South, the soy bean crop is often pastured. Although hogs are perhaps most frequently used, all kinds of stock can be pastured on it. The crop can often be fed in this manner to great advantage. The labor and expense of harvesting is saved and the droppings from the animals are of great value to the land. Young stock, particularly sheep and hogs, can be very

profitably pastured on this crop. Many farmers maintain that by this method of feeding the land is benefited as much as if the crop had been plowed under, and they obtain the pasturage in addition.”

The subsection titled “As a soil renewer” (p. 16-17) states: “Leguminous plants, through the aid of the root tubercle organisms, are able to add to the available nitrogen of the soil... When the soy bean was first introduced into the United States it did not form root tubercles, owing to the absence of the tubercle organism from the soil, and it has been grown for several years in some localities without the appearance of any tubercles. In other cases the tubercles have developed in great abundance after a short time. At the Massachusetts (Hatch) Station the medium green soy bean produces great numbers of the tubercles. (See fig. 5.) At the same station it was found that a liberal application of nitrates interfered with the development of the tubercles.”

“Value of the bean for feed: There is no crop so easily grown that is so rich and can be used to such good advantage in compounding feeding rations as the soy beans. Excepting the peanut, there is no other raw vegetable product known which contains such high percentages of protein and fat in such a highly digestible form.

“For feeding to animals the beans should be ground and the meal used with some less concentrated feeding stuffs. Comparatively few experiments have as yet been made in the United States to test the feeding value of soy-bean meal. Professor Brooks, in Massachusetts, found that it compared very favorably with cotton-seed meal. Cows fed on soy-bean meal gave richer milk and produced a better quality of butter than when fed on cotton-seed meal, but on the latter the cream was richer. Professor Georgeson obtained excellent results in feeding hogs on a ration of which soy-bean meal was a prominent constituent” (See Bulletin No. 61 of the Kansas Station).

Excellent illustrations (line drawings, some made from photos, p. 4-7, 17) show: (1) A young seedling soy bean ($\frac{1}{2}$ size). (2) (a) flowering branch of a soy bean plant (reduced $\frac{2}{3}$). (b) one of the flowers (enlarged), (c) pods of a soy bean plant (reduced $\frac{2}{3}$). (3) Extra early soy bean, leaves and roots at age 7 days ($\frac{1}{4}$ size). (4) Medium black soy bean, leaves and roots at age 7 days ($\frac{1}{4}$ size). (5) Roots of a soy bean plant, showing tubercles.

Tables show: (1) Composition of soy bean at four different stages of growth. (2) Chemical composition of the various kinds of forage made from the soy bean (incl. hay and ensilage). (3) Total amounts in pounds of food constituents produced on an acre of land by soy bean and fodder corn (proteins are flesh formers; fat, fiber, and extract matter are fat and heat producers). (4) Digestibility of soy-bean forage.

An appendix to this article is titled “Soy Beans as Food for Man,” by C.F. Langworthy (which see).

Note 2. This is the earliest document seen (Jan. 2003)

that uses the word “mower” or the word “concaves” in connection with soybean production.

Note 3. This is the earliest English-language document seen (Jan. 2003) that uses the word “machine” (thrashing machine) in connection with a specific machine for soybean production.

Note 4. This is the earliest document seen (Aug. 2004) that mentions the soybean varieties Medium Early Black, Medium Early Green, or Medium Late Black.

Note 5. This is the earliest document seen (Oct. 2004) which gives details on use of soy bean as a good “pasture plant” or a pasture plant well suited for use in fattening hogs.

Note 6. This is the earliest English-language document seen (Oct. 2004) that uses the words “pasturage,” “pasture,” or “pastured,” or the term “pasture plant,” in connection with soybeans. Address: Asst. Agrostologist, Div. of Agrostology, USDA.

1453. *Otago Witness (New Zealand)*. 1897. Pater’s chat with the boys. April 1. p. 51.

• **Summary:** The section titled “Japan: Past and present” states: “Twenty years ago she [Japan] was an isolated nation, untalked of among the nations of the west; but she is now a great military, manufacturing, and commercial power, combining the maritime instincts of Britain with the go-aheadism of America, and so becoming the combined John Bull and Yankee of the Pacific. So afraid have the United States become of the competition of the lively Japs that one of the planks in the last election was exclusion of the Jap and his products.” These protectionist measures are bound to fail for two reasons, which are given.

Japan is facing labour troubles and a rise in the cost of living, as a table shows. If 100 “is taken as the unit of cost of living in 1872,” then “the figures below show the amount of advance since [to about 1897]:—Rice 100 to 161. Miso 100 to 189. Shoyu 100 to 158. Firewood 100 to 141. Charcoal 100 to 150. Cotton 100 to 150. Rent 100 to 228—or an average increase of 64 per cent., while wages have gone up only 33 per cent., or little more than half as much.”

1454. Loew, Oscar. 1897. Ueber die Bereitung der Shoyu-Sauce [On the preparation of soy sauce]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens (Yokohama)* 6(60):474-76. [1 ref. Ger] Address: Prof. of Agricultural Chemistry, Imperial University of Tokyo.

1455. *Washington Post*. 1897. Saucemakers win a suit. June 24. p. 2.

• **Summary:** “The English papers contain an account of a motion made last month in the suit of Lea & Perrins against Courtenay, before Mr. Justice Romer last month, seeking an injunction restraining the defendants from holding themselves out as ‘the original makers of Worcestershire

sauce,' the advertisement complained of reading that the Messrs. Courtenay were 'the only producers of the original and genuine Worcestershire sauce at a reasonable price, and manufactured from the original recipe. Upon the argument the Judge at once held that this advertisement could not go on. The defendants' counsel admitted it was indefensible, and the defendants gave an undertaking to discontinue its use."

Note: To give an undertaking to do something is to formally promise to do it, as before a judge or a court of law.

1456. Curtis, Minnel Wakeman. 1897. Experiment of American family in Japanese housekeeping. *San Francisco Chronicle*. June 27. p. 1.

• **Summary:** "At noon they unpacked their rice and dried fish, and took their tiffin seated in the open doorway. The former dish was eaten dark with shoyu sauce; the latter, soaked and delicately fried, looked exactly like squares of coarse white lace."

"... with hot sweet potatoes, cutlets, and turbans of fish and squares of pressed rice coated with shoyu, together with other delicacies,..."

Note: A "turban" is a rolled stuffed fillet of fish.

1457. Nishimura, Y. 1897. The chemistry of soja sauce manufacture. *Bulletin of the College of Agriculture, Tokyo Imperial University* 3(3):191-206. June. German summary in *Chemisches Central-Blatt* 1897(2):817. [5 ref. Eng]

• **Summary:** Contents: Introduction. Preparation of wheat and soja bean. Preparation of soja koji. Chemical processes during the ripening of soja sauce wort (*moromi*). Microscopical examination. The production of the flavour. Suggestion for the improvement of manufacture.

"The manufacture of soja sauce forms one of the important industries of Japan and the export of the article [is] increasing from year to year. (Footnote: Every Japanese uses daily in place of common salt from 50 cc. to 80 cc. of this sauce as a food condiment.) The production in 1893 was 2,307,844 hectoliters (=1,279,238 koku). The number of brewers was now nearly 10,000. One of the factories in Tokio alone employs 250 workmen and manufactures annually 45,000 hectoliters."

This is a detailed description of the process for making koji, moromi, and soja sauce, and an attempt to improve the process and product, and to reduce the fermentation time. Making soja sauce consists of four principal stages: Preparation of the wheat and soja bean, preparation of the soja koji, the ripening process, and pressing and boiling. "Soja sauce is prepared from wheat (sometimes also from barley), the soja bean,* and a salt solution by a slow process, which requires from one to two years and sometimes more. (Footnote: *)"The so-called yellow soja bean (*itachi*) which principally serves for the manufacture of soja sauce is rather small and has a certain lustre... All materials for my investigation were obtained from the great soja sauce factory,

Asamasa, at Nakano near Tokio)."

"It was clear to me that the whole ripening process consisted principally in the action of the powerful enzymes of *Aspergillus oryzae* upon the carbohydrates and proteids in the soja bean and wheat, and further in the development of an agreeable flavour" (p. 19).

"As the present method of manufacture of soja sauce requires much time and therefore a considerable amount of unremunerative capital, it seemed to me of great importance to find some way by which the process could be shortened. Two points seemed to me worthy of consideration. 1. To hasten the action of enzymes. 2. To produce the agreeable taste and flavour in the same measure as the enzyme action is hastened" (p. 200).

First the author crushed freshly prepared moromi so as to increase the surface area acted upon by the enzymes. Then he diluted the moromi with an equal amount of water and heated the mixture to a temperature of 30-35°C for 1 week. But the normal flavour of good soja sauce had not developed. "The colour of the mixture was dark brown and its taste decidedly sour. To the mixture just mentioned was added 2% cane sugar and 2 c.c. of thick sake yeast for 300 grams of the mixture, and this was again digested at 30-50°C for 12 days. In this case the flavour was more agreeable and the taste not sour." The author also recommended the direct addition of alcohol in the form of sake or *nigori* (crude sake) to improve the flavour. In this way he was able to make soja sauce with a good odour and taste in 5 weeks. He then tried making soja sauce with germinated [sprouted] soja beans, but no real advantage was gained.

Microscopical examination demonstrated that "the membranes of the cells of the wheat-endosperm and of the seeds of the soja bean, had been attacked and partially dissolved; only the husk of the wheat had resisted completely. This action must be due to the powerful enzyme derived from the *Aspergillus oryzae* developed during the preparation of the koji." "The mycelium observed was mostly due to *Aspergillus* and *Penicillium*. The small elliptic yeast cells observed resembled *Saccharomyces exigus* while the large kind of yeast resembled the sake yeast" (p. 203). Bacteria were observed during the summer on the surface of the moromi, but could never be found alive in its interior.

The gradual production of alcohol seems to affect the development of flavour.

The article concludes: "I hope that the manufacture of soja sauce will be improved, however, not only by adopting the measure I propose, but also by introducing steam power and other modern appliances."

Note 1. This is the second earliest English-language document seen that contains statistics on the production or consumption of soyfoods (in this case soy sauce) in Japan.

Note 2. The parallel Japanese title of this English-language periodical is *Tôkyô Teikoku Daigaku. Nôka Daigaku. Gakujutsu hôkoku*. Address: Nôgakushi.

1458. Langworthy, C.F. 1897. Soy beans as food for man. *Farmers' Bulletin (USDA)* No. 58. p. 20-23. July 7. Revised (very slightly) in 1899. [1 ref]

• **Summary:** Describes and gives the nutritional composition of various Japanese soyfoods, including natto, miso (white, red, or Swiss), tofu, frozen tofu, yuba, shoyu. Many of his descriptions of soyfoods are based on Trimble (1896).

"Tofu, or bean cheese, is prepared as follows: The beans are soaked in water for about twelve hours, and crushed between millstones until of a uniform consistency. The ground material is then boiled with about three times its bulk of water for about an hour, and filtered through cloth. The filtrate is white and opaque, having somewhat the appearance of milk. It has, however, the taste and smell of malt. This milky liquid, to some extent, resembles cow's milk in composition, as is shown by the following table:" The table, titled "Comparison of the composition of soy-bean milk and cows' milk," shows that the two liquids (soy / cow) have the following composition: Water 92.53% / 86.08%, albuminoids 3.02% / 4.00%, fat 2.13% / 3.05%, etc.

"The protein in soy-bean milk is precipitated by adding the mother liquor obtained in the manufacture of salt from sea water, which contains considerable magnesium chloride. The precipitate is filtered off and formed into cakes with the hands. It is eaten in the fresh state or frozen. In the latter case it loses part of its water."

"Though these soy-bean products are prepared chiefly in Japan and other eastern countries, their manufacture has been attempted to some extent in Switzerland and elsewhere..."

"Bean sausages in considerable variety are prepared in Germany, and formed part of the ration of the German soldier in the Franco-Prussian war. So far as can be learned, these are always made from ordinary varieties of beans and not from soy beans..."

"Under the name of coffee beans, soy beans are eaten to some extent in Switzerland as a vegetable, and dried and roasted are also used as a coffee substitute. Their use for this latter purpose is not unknown in America. The attempt has recently been made by certain dealers to place the soy bean on the market as a new substitute for coffee and to sell it under other names at an exorbitant price."

"Bulletin No. 98 of the North Carolina Experiment Station recommends soy beans as a palatable vegetable when prepared as follows: Soak the beans until the skins come off and stir in water until the skins rise to the surface and then remove them. Boil the beans with bacon until soft, season with pepper, salt, and butter, and serve hot. If the beans are green the preliminary soaking may be omitted. No other references to the use of soy beans for human food in the United States have been found."

Note 1. This is the earliest English-language document seen (Oct. 2003) that contains the term "soy-bean milk." It is also the earliest U.S. government document or USDA

document seen (May 2006) that uses the term "soy-bean milk" (or any other term containing the word "milk") to refer to soymilk.

Note 2. This is the earliest document seen (Jan. 2005) concerning the work of the USDA with nutrition (or home economics) and soybeans. Address: Office of Experiment Stations, USDA, Washington, DC.

1459. *Times (London)*. 1897. Section K.—Botany: Bacteria and cheese. Aug. 21. p. 6, col. 6.

• **Summary:** "It is not impossible that the much more definite results obtained by investigations into the manufacture of the vegetable cheeses of China and Japan will aid bacteriologists in their extremely complex task. These vegetable cheeses are made by exposing the beans of the leguminous plant *Glycine*—termed soja-beans—to bacterial fermentations in warm cellars, either after preliminary decomposition by certain mould-fungi, or without this. The processes vary considerably, and several different kinds of bean-cheeses are made, and known by special names. They all depend on the peculiar decompositions of the tissues of the cotyledons of the soja-bean, which contain 35-40 per cent of proteids and large quantities of fats. The softened beans are first rendered mouldy, and the interpenetrating hyphae render the contents accessible to certain bacteria, which peptonize and otherwise alter them."

Soy [sauce] is a "brine extract of mouldy and fermented soja beans,..."

1460. Jerrold, Julian. 1897. A Chinese dinner in New York. *Illustrated American (The)*. Sept. 4. p. 312-13. *

• **Summary:** "A Chinese dinner is the most civilized dinner in the world. There is a certain New York epicure who delights to demonstrate this by giving Chinese dinners to little parties of his chosen friends. Such a dinner, in twelve courses, he gave the other day, in the restaurant of Ma Hung Low, in Mott street. This dinner may be described as a lesson in Chinese civilization, and an effective example of how to dine both wisely and well."

"The guests were eleven, making, with the host, the accepted Chinese dinner number of twelve,..."

"The shark-fin rolls, in spite of their forbidding name, were a gelatinous mixture rolled in eggs, very light and digestible, but needing the relish of the red 'soy' sauce [red soy sauce] into which one was expected to dip them."

Note: This is the earliest English-language document seen (April 2012) that contains the term "red soy sauce."

"The stuffed chicken wings were a marvel of delicacy, but the addition of 'soy' obscured their distinctive flavor to any but a Chinese palate subtilized by a thousand years of discrimination."

1461. *Epicure: A Journal of Taste (The)*. 1897. Notes from the Brussels Exhibition. 4(46):354. Sept.

• **Summary:** At the Brussels International Exhibition: “Another firm exhibiting is the Birmingham Vinegar Brewery Company, who show a pyramid of bottles of Holbrook’s Worcestershire Sauce, 20 feet high by 20 feet square.”

1462. *New-York Tribune*. 1897. Dinner at the Japanese legation: There are some peculiarities in the menu, though not many. Oct. 17. p. C14.

• **Summary:** “Chickens, too, are served in a peculiar way. They are cut up into small squares, fried and then dressed with a sauce called ‘shoyu,’ which the Japanese say is the origin of the so-called Worcestershire sauce.”

1463. *Star (Canterbury, New Zealand)*. 1897. In a Japanese inn. Oct. 23. p. 8.

• **Summary:** From *St. James’s Budget*: The writer, who stayed in a traditional Japanese inn (*hatoga*), described eating a meal there. “The European traveller will be confronted with a variety of surprises.” Of the soups, he liked the *wan mori* (clear soup) best. “*Chawan mushi*, or soup with eggs in it, thick and custard-like, containing minced meats, fish, vegetables, &c.; and miso shiru, or bean soup [miso soup], are also palatable.

“It is only within the last few years that the Japanese have begun to eat meat. Now, however, in most of the inns on the main roads *ushi nabe* will appear on the menu. This dish is composed of beef cut up small, stewed and served *aux fines herbes*, together with a liberal admixture of soy [sauce]. *Tori nabe*, or stewed fowl, is a similar dish and most appetizing. Soy gives a strong flavouring also to another esteemed dish, *unagi meshi*, or eels and rice.”

• **Summary:** This new Canadian tariff comes with an index. Page 159: “67. Pickles, sauces and catsups, including soy [sauce], thirty-five per cent ad valorem.”

1465. *Current Literature: A Magazine of Contemporary Record*. 1897. Table Talk: Concerning eating and drinking. 22(5):444. Nov. [1 ref]

• **Summary:** “A Chinese Dinner in New York—Julian Jerrold—Illustrated American.

“A Chinese dinner is the most civilized dinner in the world. There is a certain New York epicure who delights to demonstrate this by giving Chinese dinners to little parties of his chosen friends. Such a dinner, in twelve courses, he gave the other day, in the restaurant of Ma Hung Low, in Mott street. This dinner may be described as a lesson in Chinese civilization, and an effective example of how to dine both wisely and well.

“The guests were eleven, making, with the host, the accepted Chinese dinner number of twelve,...

“The shark-fin rolls, in spite of their forbidding name, were a gelatinous mixture rolled in eggs, very light and digestible, but needing the relish of the red ‘soy’ sauce into which one was expected to dip them.”

“The stuffed chicken wings were a marvel of delicacy, but the addition of ‘soy’ obscured their distinctive flavor to any but a Chinese palate subtilized by a thousand years of discrimination.”

Note: This appears to be a “digest” with reprints or excerpts of selected current literature.

1466. Trimble, Henry. 1897. The soy bean. *American J. of Pharmacy* 69:584-93. Nov. [11 ref]

• **Summary:** Much of this material is derived from Williams and Langworthy (1897). Illustrations (p. 585, from Williams, p. 5) show: (a) flowering branch of a soy bean plant (reduced 2/3), (b) one of the flowers (enlarged), (c) pods of a soy bean plant (reduced 2/3).

One table (p. 588) shows the chemical composition of various kinds of forage made from the soy bean (fresh or air-dry substance, or water-free substance): Fodder (early bloom to early seed), soy-bean hay, straw, straw (hulls and vines after threshing), soy-bean seed, soy-bean meal (18.9% / 21.0% fat), soy-bean ensilage, corn and soy-bean ensilage, millet and soy bean ensilage.

Another table (p. 591) shows the composition of the following “Soy-bean food products”: Fresh tofu, frozen tofu, natto, yuba, white miso, red miso, Swiss miso, and two types of shoyu. For each is given the percentage of water, protein, fat, nitrogen-free extract, fiber, and ash [minerals].

Note: This is the earliest English-language document seen (Sept. 2011) that contains the term “soy-bean food” or “soy-bean food products.” It is also the earliest document seen (Sept. 2011) concerning the etymology of the word “soyfoods.” Address: USA.

1467. Witherspoon’s. 1897. Christmas delicacies: See our window (Ad). *Press and Horticulturist (Riverside, California)*. Dec. 11. p. 6.

• **Summary:** “Some very dainty imported fruits, Mushrooms in glass, Tobasco sauce [Tabasco], India chutney, India soy [sauce], Jordon’s imported almonds” [Jordan’s]. Address: 711 Main Street [Riverside]. Phone: 72.

1468. Angell, Stephen H. 1897. Soya as food and fodder. *Consular Reports [USA]* 55(207):551-52. Dec. [2 ref. Eng]

• **Summary:** A remarkable article about all aspects of soybeans and soyfoods. It begins: “The following is a translation from an article by M. Henri Fortune, the well-known French agriculturist. ‘There exists a plant extensively cultivated throughout China, Japan, Cochin China, and Tonquin, of which the culture on clay and flinty clay lands would be an excellent experiment for agriculturists and persons interested in the progress of agriculture. This plant

acclimatizes perfectly in Belgium.

“It is employed in the above countries as a food and for divers other purposes. Transformed by cooking into a pulp, which is mixed with salt and rice, we obtain the ‘miso,’ which constitutes the regulation breakfast of the Japanese. I have eaten this preparation in Yedo [Edo, Tokyo] in 1892, and I found it excellent in taste and very nourishing.

“Mixed with barley, fermented with water and pressed, this product yields a sirup known as the “soya,” which is, so to speak, the unique sauce for all and every Japanese dish, and is employed in such large quantities that the works in the town of Nagasaki have a yearly production of 2,000 tons. The soya also yields a very superior quality of oil, which advantageously replaces olive oil.”

“The bread made from the flour of the soya is as good as cake without sugar, and is very appetizing, and is not to be compared with gluten bread, which constipates.” Fortune believes that ‘soya bread is twice as nourishing as wheaten bread, five times as poor in starch, and ten times as rich in fatty materials, and, once its qualities are fully known, the soya may be pronounced the bread of the future.’ He recommends the use of soya in bread and biscuits for diabetic diets.

“In China, the soya replaces milk, which the Chinese do not drink at all. To make this milk, the grain must be crushed, put in a sieve, water slowly poured over it, and a product obtained having all the qualities of milk.

“The cheese made from soya is delicious. The grain is softened in water and pounded in a mortar. The pulp compressed in a cloth gives two parts; that which is hard is used to feed poultry, etc., and the other, which passes through the cloth, is albumen, and is put on the fire, the curds separated with the aid of rennet, and, when coagulated, a little salt is added.”

Of green vegetable soybeans he writes: “We have a project in hand to call together the principal Paris restaurant keepers this winter, to allow them to partake of this new vegetable, which will advertise it throughout the world under the patronage of such substantial connoisseurs.

“In a few years hence, one will buy soya at the grocers, as to-day one buys beans. It is an excellent substitute for hay, and keeps horses in good condition, and cows, when fed on it, will yield at least 20 per cent more milk daily than when fed on ordinary hay.

“The soya produces per hectare (2.471 acres) from 2,500 to 3,000 kilograms (5,512 to 6,614 pounds) of seed, especially if phosphate fertilizers are sufficiently employed.”

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in Belgium, or the cultivation of soybeans in Belgium. This document contains the earliest date seen for soybeans in Belgium, or the cultivation of soybeans in Belgium (Dec. 1897). The source of these soybeans is unknown. Address: Commercial Agent, Roubaix,

France July 13, 1897.

1469. Read, Sheridan P. 1897. Flour in China and Japan. *Consular Reports [USA]* 55(207):519-25. Dec. See p. 523. [Eng]

• **Summary:** Page 523: “In the northern provinces, where rice is not grown and can only be purchased by the well to do, wheat is the most common cereal, but it is of a very poor quality.”

“The wheat is ground by a very primitive process. The mill consists of two light stones, which are turned by aid of a blindfolded mule. The flour is coarse and dark, chiefly used in the form of vermicelli, and, when steamed, makes a good substitute for rice, and when mixed with a little broth, flavored with a dash of soy [sauce], it forms a very savory dish.”

Wheat flour is also used for making rolls which are lightened with leaven, and these are cooked by steaming, as are the many varieties of patties containing minced meat, molasses, or a kind of jam. The steamer consists of sieves, fitting tightly one upon another, which are covered and placed over the kettle in which the meat or other food is being cooked.

“The ordinary Chinese, whether in city or village, takes his breakfast at the tea house or restaurant. It consists almost entirely of these meat rolls or patties; the latter are dipped in vinegar, soy, or a solution of red pepper, when eaten.” Address: Consul, Tientsin [China] (24 June 1897).

1470. **Product Name:** Yamamori Shoyu [Soy Sauce].

Manufacturer’s Name: Yamamori Jozo-sho (Yamamori Brewery).

Manufacturer’s Address: 561 North 6th Street, San Jose, California.

Date of Introduction: 1897.

New Product–Documentation: Note: This is the second earliest known soyfood product made by a Japanese in the Continental USA, and the earliest known soy sauce and fermented soy sauce produced in the continental USA.

Zaibei Nippon-jin Nenkan (The Japanese-American Yearbook). 1905. No. 1. Published by Mr. Kyutaro Abiko, of Nichibei [Shinbun], Japanese-American News. Page 24. Under the category heading “Jozosho” (Breweries), lists Yamamori Jozo-sho, 561 North 5th Street, San Jose, California. Then page 137 states: “In recent years a person named Yamamori started a new shoyu brewery and engaged in it enthusiastically.” An unnumbered page in the same 1905 edition states that there are currently two shoyu breweries in San Jose. This must mean Yamamori and Sugita.

Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Directory entry p. 38.

“Yamamori Shoyu Jozo-sho, 561 N. 6th St., San Jose.

Washizu, Shakuka. 1930. *Zaibei Nihonjin shi kan (A History of Japanese in America)*. Page 38. “The origin

of shoyu production (by Japanese in America).” In about 1897 Mr. Kohei Yamamori started making shoyu in San Jose, California (on North 6th St.). Eventually the business failed, but in about 1907 many other shoyu makers started in various other parts of the country. Talk with Ken Mogi. 1984. April 20. The California First Bank in San Francisco has a library of Japanese-American history. A 1930 article states that Mr. Yamamori (Yama = mountain, Mori as in Morioka) started brewing soy sauce in San Jose on North Sixth St. The company name is not given.

1471. Fullständigaste Svensk-Amerikansk Kokbok–Swedish-English cookbook. 1897. Chicago, Illinois: The Engberg-Holmberg Publishing Co. 378 p. Illust. Index. 20 cm.

• **Summary:** “Soy” [sauce] is used as an ingredient in 3 recipes: Veal steak (“beef tea and a few drops soy,” p. 32-33). Brown jelly for roastbeef (“color it with some soy,” p. 307). Swedish caviar (“two spoonfuls dark soy and salt,” p. 317).

A recipe titled “To make soy” (p. 309) states: “When in the spring, meat and pork is taken up to be smoked, the brine may be used for soy. Boil the brine, and when it curdles and looks clear, strain it. Then boil 4 ox feet with ginger, cloves, strong pepper (½ ounce), a pound of onions, a bunch of tarragon, thyme and marjoram. When the feet feel soft there is about ½ gallon brine left, which strain and allow to cool. Boil 3 pounds of lump sugar. Put the brine in it, and boil a while.”

Worcestershire sauce is used as an ingredient in 4 recipes: Fricasse [Fricassee] of beef (p. 27). Goose with turnips (p. 50-51). Pigeons on the spit (p. 59-60). White cabbage with pork (p. 201-02). Address: Chicago, Illinois.

1472. Hosie, Alexander. 1897. Three years in Western China: A narrative of three journeys in Ssu-ch’uan, Kuei-chow, and Yun-nan [1882-84]. 2nd ed. London: George Philip & Son. New York: Dodd, Mead. xxvii + 302 p. See p. 68, 164. Illust. Map. Index. 22 cm. First edition published in 1890.

• **Summary:** The contents and pagination of this book are largely the same as those of the first edition (1890). Bean curd [tofu] is discussed on p. 68, and soy sauce on p. 164. Also contains a fold-out map showing the author’s route. Address: M.A., F.R.G.S., H.B.M. Consular Service, Newchwang, China.

1473. Japan. Dep. of Agriculture and Commerce, Bureau of Commerce (Noshomusho Shokokyoku). 1897. General view of commerce & industry in the empire of Japan. Tokyo: Printed by Y. Yamaguchi. 315 p. See p. 22-23, 234. Also published in 1900 in Paris by M. de Brunoff)

• **Summary:** Name of organization with diacritics is: Nôshômushô Shôkôkyoku. Page 5: “The treaty ports or towns open to foreign trade are: Yokohama and Tokyo, on the Bay of Tokyo. Kobe and Osaka on the Bay of

Osaka. Niigata, on the western coast of Honshiu [Honshu]. Hakodate, on the Tsugaru Strait. Nagasaki, on the south-western coast of Kiushu [Kyushu]. Kelung, Tamsui, Takow, and Taiwan on the western coast of Taiwan. Ten partially opened ports in Japan and three in Corea [Korea] are also listed.

On pages 18-22 are tables of Japanese weights and measures and comparative tables with those of the empire of Great Britain, including both troy and avoirdupois.

Agriculture and mining (p. 22-23): Agriculture has been the leading pursuit of the people since earliest times and in the greater part of the cultivated area rice is grown; other principal food crops are wheat, barley, and soya beans. Industries not imported from the west include “salt making, sugar making, sake brewing, soy brewing, oil producing,...” (p. 23).

Imports–Class II.–Duty free goods (p. 228) includes: “Grain, including rice, paddy, wheat, barley, oats, rye, peas, beans [incl. soya beans], millet, Indian corn. Flour and meal prepared from the above. Oil cake [when imported from Manchuria, this was typically soya bean cake].

Exports–Class II.–Duty free goods (p. 232-34) includes: “All kinds of mushrooms, excepting Shiitake, Confectionaries, all kinds of liquors, Vinegars, Soy [sauce], Oils, and Prepared Tobacco... Sea-weeds excepting Kobu [Kombu, seaweed],...” Address: Tokyo, Japan.

1474. Krafft, Guido. 1897. Die Pflanzenbaulehre. Sechste, neuarbeitete Auflage [Instruction in plant cultivation. 6th ed.]. Berlin: Verlagsbuchhandlung Paul Parey. viii + 279 p. Illust. (incl. many color). Index. 23 cm. Series: Lehrbuch der Landwirtschaft auf wissenschaftlicher und praktischer Grundlage. 2nd Bd. [2 ref. Ger]

• **Summary:** In Chapter 2, “Legumes (Cultivation of protein-rich seeds),” section 7 (p. 80-81) is about the soybean (*Die Sojabohne*) also called the hirsute Soya (*rauhhaarige Soja*) or the “Haberlands bean” (*Haberlandt’s-Bohne*) (*Soja hispida* Mönch). Discusses: Botanical description, color of seeds, two important German-language publications about soybeans (Wein 1881 and Haberlandt 1878), widely cultivated in China and Japan, bears seeds in Europe only in areas which in 20-25 weeks accumulate 2500 to 3000°C heat units (*Wärmeansprüchen*), description and chemical composition of yellow soybean seeds, used as food to make [soy] sauce and cheese [tofu] in China and Japan, a source of oil in Europe, and a feed for cattle, imported also as soya cake and meal (*Sojakuchen, Sojaschrot, Sojamehl*), best soil for cultivation, planting time, care, flowering, typical yields of seeds (62-72-75 kg/ha) and straw. A non-original illustration (line drawing) shows a soybean plant with many pods growing thickly on the stem, plus an enlarged view of a cluster of about 7 pods to the upper left of the plant. The soybean is also mentioned on p. 64. Also discusses Lupines (p. 80-85).

Chapter 3, Oilseeds (*Ölfrüchte*; the cultivation of oil-containing seeds, p. 81+) mentions: Peanuts, almonds, white sesame, brown sesame. It discusses: rapeseed (p. 82-83). Address: PhD, Professor der Land- und Forstwirtschaft an der k.k. technischen Hochschule in Wien (o. ö. Professor der Land- und Fortswirtschaft and der k.k. technischen Hochschule in Wien).

1475. Lafar, Franz. 1897. Technische Mykologie. Ein Handbuch der Gaerungsphysiologie... Erster Band: Schizomyceten-Gaerungen [Technical mycology. A handbook of fermentation physiology... Vol. 1: Schizomycetic fermentations]. Jena: Verlag von Gustav Fischer. xiii + 362 p. See p. 290, 305-15. Illust. No index. 25 cm. Foreword by Prof. Dr. Emil Chr. Hansen (Carlsberg-Laboratorium, Kopenhagen [Copenhagen]). [7 ref. Ger] • **Summary:** The introduction gives a detailed early history of the discovery of fermentation, microorganisms and *Mikrozymen / Mikrozyma* (microzymes) (including the work of Needham, Spallanzani, Franz Schulze, Theodor Swann, Schröder and Dusch, Louis Pasteur, and Béchamp), its relation to spoilage, the development of fermentation theory, and the nature of the fermentation organisms.

In Chapter 31, "Cheese fermentations and related decompositions," section #179 is titled "Natto and miso." These fermented foods are both made from the soybean (*Soja-Bohne*). For natto: The fermentation results in a partial transformation of the proteins into amides, peptones, guanin, xanthin, and tyrosin. The resulting mass is called natto in Japan, and is sold commercially. Note: Even though the word "enzymes" is not used, the author describes their action. This is the earliest document seen (July 2003) describing the action of enzymes produced during a soybean fermentation. At the end of the same section, koji, shoyu, tofu, nukamiso, taohu, and tao-yu (Chinese-style tofu and soy sauce) are mentioned—with 7 partial references.

Chapter 33, titled "The binding of free nitrogen by bacteria" (p. 303-17) discusses this relatively new idea in depth, including the discovery of root nodules on legumes, the origin and function of the nodules, and the nodule bacteria; Soybeans are mentioned on p. 303. Chapter 36, titled "Nitrogen-fixing bacteria" (p. 335-43) gives more details.

Note 1. Although there are many in-text citations, the bibliography for this volume appeared in Vol II, published in 1901-1907. An English-language translation of this volume was published in 1910.

Note: This is the earliest document seen (Sept. 2002) concerning the early history of microbiology and the discovery of enzymes. Address: Unestablished university lecturer (*Privatdozent*) for Fermentation-Physiology, Technical High School. Assistant at the Physiological Laboratory of the Royal Experiment Station for the Fermentation Industry at Hohenheim near Stuttgart

[Germany].

1476. Porter, Noah. ed. 1897. Webster's international dictionary of the English language. Springfield, Massachusetts: G&C Merriam Co. 2011 p. 30 cm.

• **Summary:** "Soy (soi) n[oun]. (Chinese *shōyū*) 1. A Chinese or Japanese liquid sauce for fish, etc., made by subjecting boiled beans (esp. soja beans), or beans and meal, to long fermentation and then to long digestion in salt and water. 2. (Bot[anical]). The soja, a kind of bean. See Soja."

"Soja (*sōja* or *sōya*). n[oun]. (Bot.) An Asiatic leguminous herb (*Glycine Soja*) the seeds of which are used in preparing the sauce called soy."

"Catchup, or catsup (Probably of East Indian origin because it was originally a kind of East Indian pickles). A table sauce made from mushrooms, tomatoes, walnuts, etc. (Written also *Ketchup*)."

Note: At the entries for Ketchup and for Catsup, it says, "See Catchup." Address: Springfield, Massachusetts.

1477. Scott, Charles Payson Gurley. 1897. The Malayan words in English. New Haven, Connecticut: The American Oriental Society. 93-144, 49-124 p. See p. 64-67. Index. 25 cm. [73* ref]

• **Summary:** The word "ketchup" is discussed in detail (p. 64-67). It is a well-known name for various kinds of sauces. The word *catchup*, which first appears in English in 1690, is defined as a "high East Indian Sauce." This word is found in Malay as *kechap* or *kichap*, and in Dutch transliteration as *ketjap*. It is also found in Lampong as *kichap* and in Sundanese as *kechap*. In Malay dictionaries from 1884 to 1895 it is defined as soy [sauce], Japanese soy [sauce], or indigenous / native soy [sauce]. The earliest Sundanese entry found (Rigg 1862) states: "*Kéchap*, Catchup, a dark coloured sauce prepared by the Chinese."

But what is soy? The word comes from the Japanese *shō-yu* (Hepburn 1867). The Chinese form, in Mandarin, is *sh'-yiu* (Williams 1874) or *shi-yu* (Doolittle 1872), Canton *shi-yau* (Chalmers 1870; Williams 1856), Ningpo *tsiang-yiu* (Morrison 1876). The Chinese forms are probably original.

Other words that have come into English from Malay or other languages of the Malay archipelago (Javanese, Lampong, Sundanese, etc.) include: agar-agar (a sea-weed), amuck (frenzied, homicidal rage), bantam (a dwarf fowl), batik (spotted cloth), catchup (see ketchup), cockatoo (a parrot), compound (from campong, a village), gecko (a lizard), gingham (cotton cloth), gong (instrument of sound), gutta-percha (a gum or resin produced by a tree), junk (a boat), kacang (a legume), ketchup (a condiment), lorikeet (a parrot), lory (a parrot), orang-utan (primate animal), padi (rice), picul (a weight), rattan (part of palm stem used for walking sticks and wickerwork), sago (pith of a palm), sambal (a curry).

Note: Reprinted from the *Journal of the American*

Oriental Society vol. 17 (1896) and vol. 18 (1897).

1478. *Tropical Agriculturist (Ceylon)*. 1898. The soy beans. 17(7):460. Jan. 1. [1 ref]

• **Summary:** “The Madras Government sends us a paper showing how Surgeon-Lieutenant -Colonel W.G. King, Sanitary Commissioner for Madras, addressing the District Medical and Sanitary Officer, Vizagapatam, the Deputy Collector of Bellary and the Tahsildar of [nearby] Saidapet [Tamil Nadu], on 8th September 1897, says:

“I have the honour to forward herewith ___ oz of soy beans, with the request that you will kindly cause them to be sown in any suitable place where they can be carefully watched as to progress of growth, and that you will oblige me by stating the nature and amount of crop obtained and whether you think the beans can be grown successfully in your district from the experience so obtained. I need not remind you that the ‘Soy bean’ is probably the most nutritious form of readily assimilable pulse at present known, and that, should it prove possible to introduce it widely in this Presidency, it would prove of great advantage in jail administration and also to the poorer classes generally... In asking you to kindly undertake the experiment, I may state that it was only after long and persistent search in India and Burma that I have ultimately obtained specimen.”

“Very few vegetable products are so rich as this bean at once in albuminoids and in fat or oil, the former constituent amounting on the average to 35%, and the latter to 19... In China and Japan three preparations are extensively made from the soy bean. Soy sauce is the best known of these, but more important are the soy or bean cheeses, and a kind of paste. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers and 7 per cent. of oil. The Soy bean may also be grown as a fodder plant. If cut just when the pods are fully formed, it makes an excellent hay, superior to that of the lentil.”

1479. *Otago Witness (New Zealand)*. 1898. A Chinese dinner in New York. Jan. 6. p. 52.

• **Summary:** “A Chinese dinner is the most civilised dinner in the world.” The feast began at 2 o’clock and there were ivory chopsticks at every diner’s place—and never a knife or fork in sight. There were many courses. “The shark-fin rolls, in spite of their forbidding name, were a gelatinous mixture rolled in eggs, very light and digestible, but needing the relish of the red ‘soy’ sauce into which one was expected to dip them.”

“The stuffed chicken wings were a marvel of delicacy, but the addition of ‘soy’ obscured their distinctive flavour to any but a Chinese palate subtilised by a thousand years of discrimination.”

1480. Grange Wholesale Supply Co., Ltd. 1898. Grocery specials (Ad). *Evening Star (Toronto, Canada)*. Feb. 15.

• **Summary:** “Worcestershire sauce. Lorimer’s imported, 9¢ bottle.” Address: 126 King St. East, Toronto.

1481. *Chicago Daily Tribune*. 1898. Great is kaffir corn... Value of the soy bean. March 21. p. 4.

• **Summary:** “There is still another food coming into cultivation in Kansas and Nebraska that will have an important effect probably on agriculture in those states. The food is the soy bean, a Japanese product that was brought to this country in 1890. This bean has the peculiar property of being able to supply certain qualities that are lacking in all varieties of corn as a fattening product. It is a little black bean that has been grown for centuries in Japan, and takes its name from a sauce into which the beans are made in that country. None of the ordinary fodder plants of this country compare with the soy bean in nutritive qualities. As a food it is equally attractive to human beings as to live stock. It compares favorably with the ordinary bean for table use.”

Then summarizes the following experiment in which 12 pigs were fed rations based on varying proportions of Kaffir corn and soy beans: Georgeson, C.C.; Burtis, F.C.; Otis, D.H. 1896. “Feeding experiments.” *Kansas Agric. Exp. Station, Bulletin* No. 61. p. 147-60. Nov.

• **Summary:** The U.S. Treasury Department and State Department are working “to stop undervaluations of imports at the Port of New York.”

“Consuls at Hongkong and other Chinese ports are directed to forward at frequent intervals price lists or quotations on the following enumerated articles: Birds’ nests, lichees preserved in tin, bamboo shoot, shrimp sauce, oyster sauce, plum sauce, bean sauce, soy sauce, preserved ginger,

beansticks [dried yuba sticks], and dried mushrooms.”

1485. *Boston Daily Globe*. 1898. Housekeepers' column: Tried and true recipes from experienced cooks. May 26. p. 8.
• Summary: “This is how I make Worcestershire sauce, and I find it keeps many years and is always appreciated. If you save the vinegar from other pickles, such as walnuts, it takes the place of white wine vinegar, and makes the sauce a better color. I strongly advise you to save the vinegar from all your pickles in future. Proceed to make your sauce in this way:

“Pound half an ounce of cayenne pepper, half an ounce of shallot, and one-eighth of an ounce of garlic, in a marble mortar, adding gradually a quart of white wine vinegar, then press it through a hair sieve. Add a quarter of a pint [a gill] of Indian soy [sauce], then bottle and cork for use. If you find the method too tedious, after pounding the dry ingredients, put them into a jar and pour the vinegar boiling onto them. Cover closely and let it stand till the vinegar has well extracted the flavor of the ingredients, and before bottling add the soy. This sauce improves by keeping. Mrs. English.”

Note: This recipe, by the same writer (Mrs. English), under the titled “Worcestershire sauce” appeared in the 8 Feb. 1899 issue (p. 8) of this newspaper.

1486. Dujardin-Beaumetz, Prof. 1898. The soya bean: A vegetarian treasure. *Vegetarian (The) (London)*. July 23. p. 468.

• Summary: From *Health News*: The Soja, or Soya bean, is the Japanese bean (*Glycine soja*), cultivated in certain countries of Europe, and more particularly in Hungary, since 1875. This bean, which contains extremely little starch, and has been employed in the dietetic treatment of diabetes by Lecerf, contains a very large amount of albuminoid matter (flesh formers); and, on referring to the different analyses published by Steuff, Capan, Pellet, and Muntz, we find the following percentage of alimentary principles contained in the bean:—Albuminoid matter, 36.67 per cent.; fatty matter, 17.60 per cent. If this analysis is compared with that of meat, the Japanese bean has a decided advantage over beef.

“From an alimentary point of view, the soya bean serves several uses. A sauce is made from it, which bears the name of *stiso* [*miso*?] and *soju* [*shoyu*], but the most curious and interesting point in the application of soja to dietetics, is a kind of cheese made from it—it is the *pea or bean cheese* [*tofu*], very much prized in Japan.

“In Europe, the soya bean has been utilized as the food of men and animals, and in the last few years the attempt has been made to make bread of it, which is a matter of considerable difficulty, by reason of the large proportion of oil which this bean contains. This oil, as Leon Petit has shown, is very purgative, and might replace castor oil in medical practice. Hence it becomes a necessary to rid the meal of this oil, in order to render it fit for domestic use. Lecerf, in Paris, and Bourdin, in Rheims, have succeeded in

rendering the bread made from this meal very well borne by the stomach.

“Here, then we have a bean which is more nutritive than meat, and which serves for nourishment to a great country like Japan, under the different forms of sauce, of cheese, of farina, and even of an artificial milk. The advantage which the Vegetarian dietary may derive from such a food is evident.” Address: Physician to the Cochin Hospital, Paris.

1487. *Manchester Guardian (England)*. 1898. Books of the week. Aug. 16. p. 9.

• Summary: This is a book review of *Gleanings of Cookery*, by a Mother and Daughter. London: Horace Cox. 8vo. pp. 149.

“Perhaps the most conspicuous example of unsatisfactory flavourings is to be found in the recipe of Julienne soup, which includes ketchup and Worcester sauce, whereas the soup in question should, when finished, be perfectly clear and something like the colour of sherry.”

1488. Fesca, M. 1898. Die Sojabohne [The soybean]. *Tropenpflanzer (Der) (Berlin)* 2(8):233-46. Aug. [7 ref. Ger]

• Summary: The author writes about the importance of soybeans for the German colonies. This is primarily a review of earlier writers, such as O. Kellner and E. Kinch. “The soybean is one of the most important cultivated plants in East Asia. In Japan and most parts of China, it is by far the most important legume. It is also cultivated in India...” In Japan, 385,000,000 kg of soybeans are produced on 430,000 to 450,000 ha of land. This is 8½ to 9% of Japan's total agricultural land and 19% of the land not planted to rice. Large amounts of soybeans are also planted around the edges of fields and on the tops of dams. The yield of soybeans in Japan for 1892-94 was 880-900 kg/ha. The soybean is one of the main crops in Shantung province, China, according to travelers Williamson and von Richthofen; it is used extensively for oil. An excellent 5-part illustration (p. 235) shows the cultivated- and the wild soybean plant, with close-ups of the pods, seeds, and flowers.

The author then discusses *Shoyu*. Through a long, slow fermentation process some of the starch is transformed into dextrin and sugar, then lactic and acetic acids are formed. Aromatic compounds are also formed but little is known about their amount or composition. The fermentation breaks down proteins. He then gives Kellner's analysis of the composition of shoyu. According to E. Kinch, one liter of shoyu contains 31.03 gm of sugar and 41 gm of nitrogenous substances.

The author praises tofu as a fine protein source and cites E. Kinch's 1879 analysis of the composition of tofu and dried-frozen tofu [*Kori-Tofu*].

He gives analyses of the composition of shoyu presscake (*Shoyurueckstande*) and okara (*Tofurueckstande*). Of the shoyu presscake he says: “Unfortunately the high content of

salt (NaCl; 3-5%) makes it unusable for man or beast. It can, however, be used as a fertilizer.” Address: Prof., Dr.

1489. Great Atlantic and Pacific Tea Co. 1898. Today’s marketing (Ad). *Washington Post*. Sept. 24. p. 7.

• **Summary:** “Courtenay’s Worcestershire Sauce at ½ usual price.” Note: This company also goes by the name “Great A. and P. Tea Co.” Address: Main store: 501-503 7th St. N.W. [Washington, DC].

1490. Takamuku, T. 1898. Shôyu kôji no enchiimu narabini moromi no jukusei ni tsukite [On the enzymes of shoyu koji and the ripening of moromi (mash)]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 19(8):787-803. Nov. [Jap]

• **Summary:** The title on the English-language table of contents reads: “On the Enzyme of Soja Kôji and the Process of Soja Sauce Ripening.”

1491. Bishop, Isabella L. Bird (Mrs.). 1898. Korea and her neighbors: A narrative of travel, with an account of the recent vicissitudes and present position of the country. 2 vols. London: John Murray; New York, NY: Fleming H. Revell Co. Vol. 1: x + 261 p. Illust.

• **Summary:** In Vol. 1: Preface, p. vi: “It must be evident to all who know anything of Korea, that a condition of tutelage, in some form or another, is now absolutely necessary to her existence as a nation. The nominal independence won for her by the force of Japanese arms is a privilege she is not fitted to enjoy, while she continues to labour under the burden of an administration that is hopelessly and superlatively corrupt.”

Page xi: The author made four visits to Korea between Jan. 1894 and March 1897 as part of her larger plan to study the characteristics of the Mongolian races. Her first journey produced the impression that Korea was the most uninteresting country she ever travelled in.

Soy [sauce] is mentioned—Pages 141-42: If, while traveling, no “clean room” existed in an inn, “I had a room in the women’s quarters at the back, remarkable only for its heat and vermin, and the amount of ang-paks, bundles of dirty clothes, beans rotting [fermenting] for soy [sauce and paste], and other plenishings which it contained,...”

Page 177: “A quart of rice, which when cooked is of great bulk, is a labourer’s meal, but besides there are other dishes, which render its insipidity palatable. Among them are pounded capsicum, soy [sauce], various native sauces of abominable odours, kimchi, a species of sour kraut [*kimchi*], seaweed, salt fish, and salted seaweed fried in batter. The very poor only take two meals a day, but those who can afford it take three and four.”

Page 179: Koreans are omnivorous, and they waste nothing. “Cooking is not always essential. On the Han I saw men taking fish off the hook, and after plunging them into a pot of red pepper sauce, eating them at once with their bones. Wheat, barley, maize, millet, the Irish and sweet

potato, oats, peas, beans, rice, radishes, turnips, herbs, and wild leaves and roots innumerable, seaweed, shrimps, pastry made of flour, sugar, and oil, *kimchi*, on the making of which the whole female population of the middle and lower classes is engaged in November, a home-made vermicelli of buckwheat flour and white of egg, largely made up into a broth, soups, dried persimmons, spongecakes, cakes of the edible pine nut and honey, of flour, sugar, and sesamum seeds, onions, garlic, lily bulbs, chestnuts, and very much else are eaten. Oil of sesamum is largely used in cooking, as well as vinegar, soy [sauce], and other sauces of pungent and objectionable odours, the basis of most of them being capsicums and fermented rotten [soy] beans!”

Page 182: The inn, if inn it was, gave me a room 8 feet by 6, and 5 feet 2 inches high. *Ang-paks*, for it was the family granary, iron shoes of ploughs and spades, bundles of foul rags, seaweed, ears of millet hanging in bunches from the roof, pack-saddles, and worse than all else, rotten beans fermenting for soy [sauce and paste], and malodorous half-salted fish, just left room for my camp-bed.”

Note: The author does not mention Korea’s very popular soybean pastes—such as doenjang or kochujang. She may well have used the word “soy” to refer to both soy sauce and soy pastes.

Bean or beans are mentioned: Page 18: “Hides, [soy] beans, dried fish, *bêche de mer*, rice, and whale’s flesh are among the principal exports. It was not till 1883 that Fusan was officially opened to general foreign trade, and its rise has been most remarkable.”

Page 39: In the market booths are to be seen “rice, millet, maize, peas, beans,...”

Page 85: In 1894 they paid taxes on barley, beans, rice, and cotton.

Page 100: “... they conveniently export their surplus produce, chiefly beans, tobacco, and rice, and receive in return their supplies of salt and foreign goods.”

Page 112: In the Han River valley: “Every valley has its streamlet, and is barred across by dykes of mud from its head down to the Han—rice, with tobacco, beans, hemp, and cotton, being the great articles of export.”

Page 119: “Ma-Kyo is the river port of Che-chôn... “It exports rice, beans, and grain from the very rich agricultural country on both sides of the river,...”

Page 123: “When full grown a bull can carry from 350 to 500 lbs. They are fed on boiled beans, cut millet stalks, and cut pea haulm, and the water in which the beans are boiled.”

Page 138: Korean ponies “are fed three times a day on brown slush as hot as they can drink it, composed of beans, chopped millet stalks, rice husks, and bran, with the water in which they have been boiled.”

Page 147: “There is much wet rice along the route, as well as dry rice, with a double line of beans between every two rows,...”

Page 149: "It is a most fertile tract, and could support a large population, but not being suited for rice, is very little cultivated, and grows chiefly oats, millet, and beans, which are not affected by the strong winds."

Page 150: "There the villagers could not or would not take us in. They said they had neither rice nor beans, which may have been true so late in the spring."

Page 185: "A smaller valley contains about 3,000 acres of rice land only, and on the slopes surrounding all these are rich lands, bearing heavy crops of wheat, millet, barley, cotton, tobacco, castor oil, sesamum, oats, turnips, peas, beans, and potatoes."

Page 186: "In wheat, barley, or rye fields the sowing is in October, and the harvest in May or June, after which beans, peas, and other vegetables are sown."

Page 187: "Grain, peas, and beans are threshed out with flails as often as not in the roadway of a village,..."

Page 189: The village "has several schools, and exchanges rice and beans for foreign cottons at Won-san,..."

Page 217: Newchwang "is a city of 60,000 souls, the growth of its population having kept pace with its rapid advance in commercial importance since it was opened to foreign trade in 1860. Several British steamers with big Chinese characters on their sides were at anchor in the tideway, and the river-sides were closely fringed with up-river boats and sea-going junks, of various picturesque builds and colours, from Southern China, steamers and junks alike waiting not only for cargoes of the small beans for which Manchuria is famous, but for the pressed bean-cake which is exported in enormous quantities to fertilise the sugar plantations and hungry fields of South China."

Page 218—Concerning Newchwang: "'Peas,' really beans (Footnote: *Glycine hispides* [sic, *Glycine hispida*] {Dr. Morrison}), are its chief *raison d'être*, and their ups and downs in price its mild sensations. 'Pea-boats,' long and narrow, with matting roofs and one huge sail, bring down the beans from the interior, and mills working night and day express their oil, which is as good for cooking as for burning."

Page 235—Muk-den [Mukden] is a busy place, and does a large and lucrative trade, specially in grain, beans, and furs."

Seaweed is mentioned on pages 38, 140, 142, 177, 179, 182, 198-99. Kimchi: p. 98, 147, 177. Address: F.R.G.S., Geographer, Great Britain.

1492. Brinkley, Frank; Nanjô, F.; Iwasaki, Y.; Mitsukuri, K.; Matsumura, J. 1898. An unabridged Japanese-English dictionary: With copious illustrations. Tokyo: Sanseido. xxvi + 1687 p. Illust. [Jap; Eng]

• **Summary:** For each entry, the romanized word comes first, followed by the word written in hiragana and then in kanji (Chinese characters). Note: The authors often use the word "bean" when they should use the word "soybean." Soy

related:

"Aburage: Bean-curd fried in oil.

"Amazake: Sweet *sake*; a kind of drink made of fermented rice. Syn. [Synonym]: Hitoyozake, Kozake.

"Ame: A honey-like jelly made of flour of various grains; starch-sugar.

"Ammochi: Mochi stuffed or covered with boiled and crushed pea-beans [sic, azuki beans] mixed with sugar.

"Azuki [bot.] Mungo.

"Azuki meshi: Rice and red pea beans mixed and boiled for food.

Azuki mochi: Same as Am-mochi.

"Dengaku: (2) (Coll.) *Tôfu* baked and covered with sweetened miso. *Dengaku wo yaku*: to bake or prepare *dengaku*.

"Dengaku-dôfu: See above.

"Daizu (Bot.) Soja bean.

"Edamame: (1) (lit.) Branch bean. (2) (coll.) [Soy] Beans boiled in pods on the stalks.

"Gobuzuke: Dried radish chopped into pieces of about 5 *bu* (of half an inch) in length and cooked with soy [sauce] and sugar.

"Gusokuni: Lobster chopped into transverse pieces and cooked with sugar and soy.

"Hachihaidôfu: *Tôfu* chopped into small pieces and boiled in a soup composed of four cups full of water, two of soy, and two of sake.

"Hitasu—Shôyu ni hitasu: To steep in soy.

"Hiyayakko: *tôfu* served cold.

"Ikanago-shôyu: Soy prepared in Sanuki [on Shikoku island], from a kind of fish called *Ikanago*.

Irimame: Parched peas or [soy] beans. *Irimame ni hana ga saku* (coll. Prov.) (lit.) blossoms on parched peas; something regarded as impossible.

"Iritori: Fowls boiled with a mixture of sugar, soy and *mirin* until the sauce is fully absorbed.

"Iritsuke: Any fish roasted or boiled in a pan until the sauce or soy is fully absorbed.

"Kabayaki: (1) A way of roasting fish. (2) Eels cut open on the dorsal line, covered with soy mixed with sugar, and roasted. (3) Unagi no kabayaki: Roasted eels.

"Kenchin: (Modern Chin.) (1) Black beans malted and fried, and eaten with soy or table salt. (2) A soup containing various vegetables and *tôfu* mixed together and fried.

"Kigaracha-meshi: Rice boiled with water and a small quantity of *sake* or soy (so called from its yellowish color).

"Kijiyaki: The flesh of bonito or tunny-fish covered with soy and sugar, and baked.

"Kinako: [Soy] Bean flour (of yellowish or greenish color).

"Kinome-dengaku: *Tôfu* or the fruit of the egg plant covered with a pasty mixture of *miso*, sugar, and the buds or leaves of the *sanshô*, and baked.

"Kiuri-momi: Cucumber chopped fine and seasoned

with salt, vinegar and soy.

“Kôji: Yeast, barm [sic]. *Kôji wo nekasu*: To make yeast [sic, kôji].

“Kokushô: A soup prepared with *miso* and the flesh of *koi* [carp] (*cyprinus haematoperus*).

“Kombumaki: Roasted or cooked fish wrapped in a piece of *kombu*, tied and boiled with sugar and soy.

“Kuromame: (Bot.) Black soy bean.

“Kyarabuki: The stems of the *fuki* boiled with soy.

“Mamemaki: A ceremony of scattering parched peas [sic, soybeans] about in an occupied house to drive out evils spirits, celebrated on the last night of December, or the early part of January (o.s.) [old style] crying aloud the while *fuku wa uchi* (fortune inside), *oni wa soto* (devils outside). Syn. Oniyarai, Setsubun.

“Mame-no-ko: [Soy] Bean flour used for covering or sprinkling over *mochi*, *dango*. Syn. Kinako.

“Miso: A kind of sauce made of wheat, [soy] bean, and salt. *Miso wo tsukeru*: (a) (lit.) to spoil (as one’s coat) with miso. (b) (fig. coll.) to disgrace one’s self; *Tonda miso wo tsuketa*: (coll.) have met with a shocking failure.

“Misokoshi: A miso strainer.

“Misomame: (Bot.) Soja bean, Glycine.

“Mioshiru: A kind of soup made with miso.

“Moromi: The grounds or lees left in making soy or *sake* and used as food.

“Moromi-sake: A kind of sake with rice grounds not separated from the liquid. Syn. Doburoku, Nigorizake.

“Murasaki: Another name for the sardine, or for soy. Namaage or Nama-age: Not listed.

“Nattô: A kind of food made of boiled [soy] beans (usually sold in small packages made of rice straw).

“Nigari: The brine left by the deliquescence of salt.

“Nigashio: Same as Nigari.

“Oborodôfu: (1) A *tôfu* boiled down until it is almost dry and relished with soy and sugar. (2) A kind of *tôfu* [sic, unpressed tofu curds].

“Oname: (Bot.) Soy bean.

“Satsuma-iri: Food prepared by cooking a mixture of parched rice and finely chopped sweet potato, and relishing it with soy and sugar.

“Shitaji: Soy. See *Shôyu*.

“Shôyu: A kind of sauce made by pressing a fermented mixture of calcined barley meal, boiled [soy] beans, yeast, water, and salt; soy. Syn. Shitaji, tamari.

“Shôyu no moromi: Soy before it is pressed.

“Suiri: Cooked with vinegar. *Iwashi no suiri*: A sardine cooked with a mixture of vinegar and soy. Syn. Suni.

“Sukimi: Flesh of fish sliced thin, and eaten relished with soy and *wasabi* or horse-radish.

“Sukiyaki: Roasting sliced meat or flesh with soy, in a shallow pan. Note: This is the earliest document seen (April 2012) that contains the word “sukiyaki.”

“Sumiso: A kind of sauce made by rubbing together

miso and vinegar in a mortar [suribachi].

“Suribachi: An earthenware vessel used in rubbing *miso*; a mortar.

“Sushi: (1) Fish seasoned with vinegar. (2) A general name for food made of boiled rice and fish, eggs, vegetable, etc. seasoned with vinegar and soy. As an affix the form is changed to *zushi*. *Inari-zushi*: food made of fried *tôfu* stuffed with a kind of *chirashi-zushi*.

“Tamari: Soy before it is pressed [sic].

“Tekkamiso: A kind of food made by roasting *miso* mixed with parched beans, chopped burdock, and a little oil.

Temae: (1) One’s own side. *O temae miso wa shio ga karai*: (coll.) Self approbation is disgusting.

“Teriyaki: Flesh of fish baked with a kind of sauce composed of soy, *mirin*, and sugar.

“Tôfu: A kind of food made from bean curd hardened by mixing with a small quantity of the brine left after the deliquescence of salt [nigari]. In composition the form changes into dôfu. *Tôfu ni kasugae*: (Prov.) (lit.) an iron clamp to connect pieces of tofu; no effect. Yaki-dôfu: Baked [grilled] *tôfu*.

“Tsukuru: To pickle in sake, brine vinegar, etc. *Shôyu wo tsukete yaku*: To bake [grill] seasoned with soy. Syn. Hitasu, uruosu.

“Uchimame: The soy bean flattened with hammer and boiled in soup.

“Udondôfu: Tôfu cut into udon like pieces, and eaten boiled in a soup made of cups of soy, two of *sake* in four cups of water.

“Yuba: The skin of bean curd used as food. Syn. Uba.

“Yudôfu: Boiled *tôfu*.” Address: 1. Captain, R.A., Editor of the *Japan Mail*; 2. M.A., Bungakuhakushi; 3. Nôgakushi.

1493. Chamberlain, Basil Hall. 1898. A handbook of colloquial Japanese. 3rd ed. London: Sampson Low, Marston, & Co.; Tokyo: The Shuyeisha, Ichigaya; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ltd. ix + 567 p. 19 cm.

• **Summary:** Page 241: Court words, used by the Imperial Family, include: For miso they say “*o mushi* (lit. honourably steamed). English: bean sauce.” For *tôfu* they say “*o kabe*. English: Bean-curd.” O-kabe belongs also to the language of women.

Page 451: A poem of 31 syllables (5, 7, 5, 7, 7) says: Hototogisu / Jiyû jizai ni / Kiku sato wa, – / Saka-ya ni san ri, / Tôfu-ya ni ni-ri!” Translation: “The village where one may listen undisturbedly to the cockoo’s song is—three leagues from the grog shop, and two from the bean-curd shop!”

Anglo-Japanese vocabulary: soy [sauce], *shôyu*, *shitaji*.

Japanese-English vocabulary: “kabe, (with honorific prefix *o*), the Court word for *tôfu*, bean-curd.”

Page 517: “miso, a kind of bean sauce.”

Page 520: “mushi, (with honorific prefix *o*), the Court word for miso, bean sauce.”

Page 538: “shōyu, soy (our word comes from the Japanese).”

Page 546: “tōfu, bean-curd: tōfu-ya, a shop for or seller of bean-curd.” Address: Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo.

1494. Fruwirth, Carl. 1898. *Anbau der Huelsenfruechte* [Cultivation of legumes]. Berlin: Verlagsbuchhandlung Paul Parey. xii + 274 p. See p. 11-13, 19, 47, 214-19 (Die Sojabohne), 264, 272-73. Illust. No index. 19 cm. [5 ref. Ger]

• **Summary:** Contents: Vernacular names in other countries. Botanical characteristics. Varieties, types (*Varietäten*, *Sorten*). Natural history. Uses and significance. Demands placed on the soil and climate (*Wärmesumme* or “heat units”). Use of fertilizers. Preparing the soil. Planting and seed. Harvest and yields. Animal pests. An illustration (p. 215) shows the leaves and buds of a soybean plant (*Glycine hispida*).

Concerning varieties and types: In addition to the yellow-seeded form, soybeans (*Sojas*) with brown and with black seeds are also cultivated in Europe, and both likewise belong to the *Soja tumida* group. However the distribution of these latter two is insignificant. Haage and Schmidt, the seedsmen in Erfurt, sell a green-seeded form named Bluish-green Soybean (*Blaugrüne Soja*). 100 seeds weigh 8-13 gm. One liter of seeds weighs 712-717 gm. Individual seeds are 7-8.2 mm long, 5-5.5 mm wide, and 3.2-4 mm high.

Yield: The yield obtained in Hungarian Altenburg was 1,600 to 2,100 liters of seed and 1,300 to 1,600 kg of straw per hectare. The yield in Bavaria (*Bayern*), based on many trials, averaged 2,400 kg/ha of seed. Haberlandt calculated the yield, based on trial plots with small areas, at 1,685 kg/ha. The range in yield is considered to be 700 to 3,000 kg/ha of seeds and 1,200 to 3,000 kg/ha of straw.

A table (p. 266-73) gives the composition on an as-is and moisture-free basis of all legumes discussed in this book.

Note: Karl Fruwirth was born in 1862. Address: Professor at the Royal Agricultural Academy (an der Koenigliche Landwirtschaftlichen Akademie), Hohenheim [Württemberg, Germany].

1495. Gifford, Daniel L. 1898. *Every-day life in Korea: A collection of studies and stories*. Chicago, New York, Toronto: Fleming H. Revell Co. 231 p. See p. 20, 53. Illust. Map. No index. 20 cm.

• **Summary:** Page 20: “Beans are used for food—put sparingly into the rice kettles, or decomposed for a peppery sauce which furnishes one of their side dishes. Again they are mixed with chopped straw and boiled in water, forming a hot mixture that is the sole food of cattle and horses in Korea. Beans are also an article of export.” Note 1. These beans are soybeans and the peppery sauce is probably *kochujang*.

Page 53: “The heaping bowl of rice is then discussed,

either with the brass spoon or chop-sticks. And the chop-sticks descend every now and then upon the contents of the little side dishes, the brine-soaked ‘mu,’ or turnip, the bits of dried fish or meats, a species of sauerkraut [*kimchi*] composed of cabbage, shrimp, ginger, onion, red pepper, salt, etc., with an occasional dip into the bean sauce [soy sauce] (à la Worcestershire). For liquid food he drinks cold water, or the water in which the rice has been cooked.”

Note 2. In 1898 Pyeng-yang [Pyongyang] was “by far the most important city in the north of Korea,...” As of 2009, it is the capital of North Korea. Address: Rev., Mendota, Illinois. Formerly eight years a missionary in Pyeng-yang [Pyongyang], Korea.

1496. *Proceedings of the American Pharmaceutical Association*. 1898. Report on the progress of pharmacy. 46:582-1120. See p. 857-60.

• **Summary:** In the section titled “Materia medica,” under “Vegetable drugs,” we read: “*Soy Bean-Food Value, etc.*—Referring to his paper on the soja bean (see *Proceedings* 1896, 634), in which he gave a summary of the literature on this valuable food product, Prof. Henry Trimble reproduces in the abstract a recent paper entitled “The Soy Bean as a Forage Crop,” by Thomas A. Williams, with an appendix on “Soy Beans as Food for Man,” by C.F. Langworthy, published in *Farmer’s Bulletin*, No. 58, issued by the U.S. Department of Agriculture. While not adding anything new to the knowledge of the digestive ferment, which was prominently discussed in the summary above referred to, there is much valuable information that is of interest to the pharmacist.

Discusses *Glycine hispida*, soy bean, Prof. Haberlandt, yuba, shoyu, tofu, frozen tofu, natto, and miso.

See: Trimble, Henry. 1897. “The soy bean.” *American J. of Pharmacy* 69:584-93. Nov.

1497. Simmonds, Peter Lund. 1898. *The dictionary of trade products, manufacturing and technical terms, moneys, weights, and measures of all countries*. New ed., revised & enlarged. London and New York: George Routledge and Sons, Ltd. viii + 510 p. 20 cm.

• **Summary:** This book consists of a reprint of the body of his 1867 book *Commercial Dictionary of Trade Products*, plus a different preface and a shorter supplement (p. 423-510). New soy-related entries in the Supplement include: “Pea oil, a fixed oil obtained in China by pressing the seeds of *Dolichos soja*. “Soy bean (*Glycine soja*. This pulse, a native of the far East, is now grown in Thibet, Assam, and other parts India).” “Tofu, the oil-cake of beans and peas in Japan and China, used for soups and sauces.

New non-soy entries in the Supplement include: Alfalfa, earth-pea (*Voandseia* [sic, *Voandzeia*] *subterranea*), ginguba (a name in Angola for the ground-nut), yaourt [yogurt] (a name among the Turks for fermented milk).

Note 1. This book has no date on the title or copyright pages. The most recent date seen in the Supplement is 1891 (p. 500–Telescope). Note 2: Peter L. Simmonds lived 1814–1897. Address: F.L.S., F.R.C.I., Vice-President of the City of London College, 16 Whittingstall Road, Fulham [England].

1498. Tokio Nurseries Co. 1898. General catalogue of plants, bulbs, seeds, &c. &c. Tokio, Japan. v + 37 p. 25 cm. [Eng]
• Summary: In the section titled “Vegetable seeds” (p. 32–35) is a subsection on “Pulse” (p. 33–34). The entries concerning soybeans and other beans are very similar to those in the 1897 edition. However the prices in this English-language catalogue are all given in Japanese yen. A note at the bottom of each page states: “Yen is equivalent to about 50 cents U.S. currency, 2 shillings or 2½ francs.” Address: Komagome, Denchu, Tokio, Japan.

1499. Trabut, Louis. 1898. Le soja [The soybean]. *Algerie, Service Botanique, Informations Agricoles. Bulletin* No. 16. 7 p. [7 ref. Fre]

• Summary: The author, who demonstrates a good knowledge of American and European publications on the soybean, has cultivated soybean varieties at Alger (Algiers) and Rouïba since 1896. The soybean resists dryness well. “Soya (*le Soja*) has remained a curiosity and is not well known among agriculturists. This is explained by the large diversity of soybean races having very different needs, and also by their very varied aptitudes and uses. This is not astonishing, for soya is cultivated in the country of its origin in both temperate and tropical zones, and is used for the feeding of animals, which eat it in the form of grain, hay, and green forage. It plays a major role in the human diet, providing abundant nutrition in the form of sauce, vegetable milk (*lait végétal*) or cheese [tofu], oil, flour, and bread. Soya completes rice, which is lacking in nitrogen. It is very widely used, furnishing, at a low price, a food which replaces meat or fish.” Note 1. This is the earliest French-language document seen (Oct. 2003) that uses the term *lait végétal* to refer to soymilk.

“We have made the mistake of presenting soya as a rival to the haricot bean: the comparison turned out to be advantageous for the latter legume (haricot) and soya was rejected.

“In Algeria we think that, for the moment, soya must be looked at primarily as a forage plant. Very remarkable for its richness in nitrogenous materials and fat, it can be very useful in the feeding of animals, for fattening and for the production of dairy milk. Its role in the human diet is less evident, however the indigenous people might find a precious resource in this legume. The soya would perfectly complement ‘bechna’ [probably a local grain] and barley, which are used to make a flat cake which, is too low in nitrogenous materials.”

“At this station the maximum yield has been obtained

from a large yellow soybean obtained directly from China. On an area of 10 ares (1,000 square meters or 0.1 hectare) the yield has been 30 tonnes/ha of green forage giving about 70 quintals (7,000 kg) of dry forage.” Note 2. This is the earliest document seen (Jan. 2001) that uses the word “quintals” (or quintal”) in connection with soybeans. Note: 1 quintal = 100 kg.

“The yield of the seed had been high enough that cultivation of soybeans can be considered profitable. The early varieties have given the following yields in kg/hectare at the Rouïba Station in 1896/1897: Chocolate dwarf 1370 (not watered)/1735 (watered). Compact green 2980/1735. Yellow early 2500/1785. The spring of 1896 was very rainy, while the spring of 1897 was very dry and it was necessary to water the crop.

On page 7 is a brief description of miso, shoyu, and tofu (made by coagulation of soymilk).

Concerning nodulation: “Until this year, the numerous varieties of soya which I have cultivated at the station did not show any trace of nodulation on the roots; it is therefore evident that in our soils the special microbe which determines these nodules or tumors is not present. In Jan. 1897 I contacted Prof. Kirchner (at the School of Agriculture at Hohenheim), who is especially interested in the rhizobium of soya, and I asked him to send me several nodules in order to allow me to introduce to the soya crops here the microbe which assimilates atmospheric nitrogen. All the pots that were inoculated produced soybeans whose roots were covered with nodules the size of peas. It was not formerly possible to appreciate the influence of the nodules on the development of the plant. Field trials concerning this point will be made during 1898.” An illustration (non-original, p. 2) shows a soybean plant (from an original in Carrière 1880). Address: Algeria.

1500. Yamamoto, Masami. 1899. Seishu, gyûnyû, shôyuchû no horumuarudehiido bôfu no kôryoku jikken seiseki [Results of experiments on the antiseptic power of the formaldehyde in sake, milk, and shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 206. p. 313–25. April. [Jap]

1501. Hills & Co. 1899. Catsups, pickles and sauces (Ad). *Hartford Daily Courant (Connecticut)*. May 30. p. 14.

• Summary: “In these lines we leave nothing that’s good, to be wished for—Sauces: Watkins’ Nonpareil, Reading, Essence Anchovies, Halford, Beefsteak, Brand’s A-1, Harvey, John Bull, China Soy [sauce], Mushroom, Walnut, Lee [sic, Lea] & Perrin’s Worcestershire, Colonel Skinner, Major Grey, Sweet Louchnow, Ripe Mango, Sweet Mango, Bengal Chutney.” Address: Grocers, Batterson Bldg.

1502. Fesca, M. 1899. Ueber die Landwirtschaft in Shantung [On agriculture in Shantung, China]. *Tropenpflanzer (Der)*

(Berlin) 3(6):246-57. June. See p. 249-50, 255. [2 ref. Ger]
• Summary: Among the legumes in Shantung province, the soybean plays a predominant role. It is used for human and animal food, for making soy sauce (*Shoyusauce*), and above all for oil. The large exports from Tshifu [Chefoo] of soybeans, soybean oil, and soybean cake in 1896 amounted to 1,567,147 Haikuan tael (6,258,588 German Marks), and accounted for about one-fourth of all exports.

The soybean is one of the legumes with the highest oil content, averaging 17.5% and ranging up to 20%. Peanuts, however, contain 45% oil, and they are sometimes grown in Shantung for their oil. Also discusses sesame seeds and hempseeds. Address: Prof., Dr.

1503. Blasdale, Walter C. 1899. A description of some Chinese vegetable food materials and their nutritive and economic value. *USDA Office of Experiment Stations, Bulletin* No. 68. 112 p. See p. 32-36. [19 ref]

• Summary: "According to Prinsen-Geerligs [*Chemiker-Zeitung*, 20 (1896) 67-69], 'tao hu,' or bean cheese, is prepared from the seeds of the white variety of soy bean. These are allowed to soak for three hours in water, are then reduced to a thick paste, and the mass cooked. The cooked mass is strained through a coarse cloth. The filtrate consists of a milky-white liquid containing protein and fat. As soon as this becomes cool some material is added (for instance, crude salt containing magnesium chlorid [chloride]), which precipitates the proteid material, the fat being inclosed in the coagulated mass. The coagulated material is pressed and kneaded into small cakes. The cakes may be dipped for a few moments into a saline solution of curcuma. Variations in the process give rise to a number of varieties of bean cheese. This is essentially the method used by the Chinese of San Francisco in the preparation of the bean cheese used by them. It is sold either in the form of a freshly precipitated curd or in the form of small square cakes obtained by compressing the former material. It is usually cooked in peanut oil before being eaten and, in the author's opinion, is a palatable food. A partial analysis of one of the cakes gave 81.35 per cent, fat 5.19 per cent, and ash 0.80 per cent.

"The filtrate from the cooked soy beans resembles milk, and, on heating, a skin [yuba], not unlike that formed on milk, rises to the surface of it."

A large number of varieties of the soy bean are in cultivation in China and Japan, but only two were found in the Chinese markets in San Francisco, a yellow and a black variety. Aside from a difference in color, the two forms apparently do not differ materially from each other. The yellow variety is known as 'wong tau,' and is designated by the characters 'yellow' + 'bean,' while the black is known as 'hak tau,' and is designated by the characters 'black' + 'bean.'

"Both varieties obtained from the Chinese market in San Francisco grew readily in Berkeley, attaining a height

of about 3 feet, and in spite of a very dry season produced an abundant crop of seeds... The composition of the seeds of the two varieties is shown in Table 10 (p. 33), the average composition of American-grown soy beans being quoted also for purposes of comparison." On a dry-weight basis, the original black soy beans contained, on average, 0.35% more protein (39.62% vs. 39.27%) and 0.72% less fat (18.77% vs. 19.49%) than the yellow soy beans. The soy beans grown in Berkeley (average of 8 analyses) contained 38.1% protein and 19.00% fat.

Photos show: (1) The upper portion of a plant of the black soy bean (p. 33).

(2) "Mature plant of yellow soy bean" (showing only the pods and stems, no leaves, p. 35). Address: Instructor in Chemistry, Univ. of California.

1504. *San Francisco Chronicle*. 1899. A San Franciscan's impressions of the Orient. Aug. 20. p. 3.

• Summary: George A. Newhall, Vice-President of the San Francisco Chamber of Commerce, visited Asia where he was officially commissioned to promote international trade. His first stop was in Yokohama, Japan where "he was received with the greatest cordiality by Kahe Otani, president of the Yokohama Chamber of Commerce, member of the House of Parliament,..." Mr. Otani "has two houses, one of modern European style, the other a typical Japanese dwelling, and it was in the latter that the repast was offered." Mr. Newhall removed his shoes and refused a chair that was offered to him.

"The numerous courses were served by dainty little soft-footed Japanese maidens all of the food being in elaborate lacquered bowls and served on lacquered trays richly ornamented with gold. The courses were as follows:

"1. Sweetmeats with rice, molded in different shapes, representing birds, flowers and beasts.

"2. Entree of meat and vegetables, with soye sauce.

"3. Fish-tai, baked and served cold with piquant Japanese sauce."

"The banquet lasted seven hours, from 3 to 10 P.M., and Mr. Newhall heroically sat it out, using chopsticks,..."

1505. *Washington Post*. 1899. An interesting case settled; Decision regarding the customs duty on a proprietary sauce brought here in an unfinished state. Aug. 31. p. 7.

• Summary: "From the *New York Tribune*: An order was filed in the United States District Court on August 4 discontinuing, by consent of both parties, the suit of the United States vs. John Duncan's Sons. This simple incident terminated a remarkable episode in the administration of the customs laws.

"About sixty years ago [i.e., in about 1839] this firm became the American agents for the firm of Lea & Perrins, of Worcester, England, manufacturers of the well-known proprietary preparation called Worcestershire sauce.

“About twenty-two years ago [i.e., in about 1877] a change of practice was begun by Lea & Perrins and John Duncan’s Sons, by which, instead of sending over here the sauce finished, bottled, labeled and ready for use, it was sent over in a partly manufactured condition in casks, and the Messrs. Duncan finished the sauce here according to a formula furnished them by the English house, and bottled and put it up for sale. This course had certain obvious advantages. It saved the firms from paying duty on bottles, labels, straw and finishing expenses, and avoided breakage. The article which was brought over was an incomplete material for the sauce, and was, of course, of no use to anybody who was not acquainted with the formula for finishing it. It was never furnished by Lea & Perrins to anybody but the Duncans, and consigned only to them. It was, therefore, one of the class of merchandise for which or tariff law provides that in determining the valuation upon which to assess duty the government officers shall ascertain the cost of production and make suitable addition to represent the manufacturers’ profit.

“Lea & Perrins had furnished the United States consul with a statement of their cost of production, giving as much detail as was consistent with the inviolability of their proprietary secret. A suit was brought against the importers. They defended it, putting in an answer denying that the goods had been undervalued, and alleging good faith on their part. The attorney general directed the discontinuance of the suit on the Messrs. Duncan filing an affidavit similar to the declaration made by Lea & Perrins, on the other side, that the invoices in question had fully covered the market value of the importation. The suit was discontinued without costs, without payment of one dollar by the Messrs. Duncan, and upon the motion of the government’s officers themselves.

“Lea & Perrins’ Worcestershire sauce is apparently more popular than ever, and it is difficult for the manufacturers to keep up with the demand.”

Note: It seems likely that Lea & Perrins imported soy sauce from East Asia, then transshipped it from England to New York, probably in the original wooden casks in which it had been sent from Asia.

1506. Duncan’s (John) Sons. 1899. Display ad: Lea & Perrins’ Sauce: The original Worcestershire. *San Francisco Chronicle*. Sept. 4. p. 10.

• **Summary:** A large illustration shows a gentleman seated at a dining table, with white tablecloth and fine dinnerware. He is wearing pince-nez spectacles and looking up at a waiter who is standing near him, holding a tray upon which is one lone bottle of Worcestershire sauce. He utters the words: “That’s it.” Below the illustration is written: “Beware of imitations.” Address: Agents, New York.

1507. Omako, M. 1899. “Ramuko” su oyobi shôyu no sekiri, korera oyobi chôchi fusu no sankin ni taisuru sakkin ryoku

ni tsuite [The bacteriocide power of soda-water, vinegar, and shoyu against the bacilli of cholera, typhoid fever, and dysentery]. *Tokyo Iji Shinshi (Tokyo Medical Journal)* No. 1119. p. 1-6. Sept. 16. [6 ref. Jap]

• **Summary:** Nakazawa (1950) translates the title of this article as “The antiseptic power of lemonade vinegar and shoyu on the bacillus of dysentery, cholera, and typhus.”

Note: Wine is said to have been first made by the Babylonians about 3,000 B.C. But vinegar existed as much as 5,000 years before that. It is mentioned in the Bible. It is produced naturally after a wine fermentation when bacteria called acetobacters convert the alcohol to acetic acid. The English word “vinegar,” first used in the 14th century, is derived from the French *vin aigre*, or sour wine. In German it is *essig*, and in Italian *aceto*, which is where the name acetic acid comes from. Address: Osaka, Japan.

1508. *Boston Daily Globe*. 1899. Housekeepers’ column: Tried and true recipes from experienced cooks. Sept. 27. p. 10.

• **Summary:** “Worcestershire sauce. Pound in a mortar ½ ounce of cayenne pepper, ½ ounce of garlic, and pour over 1 quart of boiling vinegar (or, if you have it, walnut pickle vinegar). When nearly cold add a gill [¼ pint] of Indian soy [sauce], and bottle. Cork tightly, and, after six weeks, the sauce will be fit for use. Mrs. A.S.”

Note: With two small exceptions, this recipe is the same as that by Mrs. English, first published in the 26 May 1898 issue (p. 8) of this newspaper.

1509. *Boston Daily Globe*. 1899. Housekeepers’ department: Tried and true recipes contributed by the women of New England. Oct. 15. p. 27.

• **Summary:** “Yorkshire relish: Yorkshire relish should always be made as soon as walnuts can be gathered... Pick your walnuts in dry weather, bruise them thoroughly, scatter salt over them, and stir daily for three days. Press out all the juice you can, and to every pint of the liquor add half a pint of Indian soy [sauce], and three pints of good vinegar, one ounce of shallots, half an ounce of cayenne pepper, and half an ounce of garlic. Pound the dry ingredients in a mortar before mixing all together. Stir and pour into small bottles for use. Cork tightly, as this sauce will not mature under four or six months. Mrs. L.”

1510. Ralphs (Geo. A.). 1899. Our motto—“Large value at little cost” (Ad). *Los Angeles Times*. Dec. 7. p. 3.

• **Summary:** “1 large bottle catsup—10¢. 1 large bottle pickles—10¢. 1 large bottle mustard—5¢. 1 large bottle Worcestershire Sauce—10¢.” Address: 601 S. Spring [Los Angeles, California]. Phone: Main 516.

1511. Platt, James. 1899. “Soy.” *Notes and Queries (London)* 4:475. Dec. 9. 9th Series. [2 ref]

• **Summary:** “This word has been badly treated by all our dictionaries. The best is the ‘Century,’ where it is traced to ‘Japanese *siyan*, Chinese *shiyu*,’ but even that involves two errors. One is a misprint (‘*siyan*’ should be *siyau*); the other is that it accounts for only half the English word.

“To explain this, I must draw a distinction between three kinds of Japanese. (1) In Japanese as written with the native character *soy* would not be *siyau*, but *siyau-yu*. (2) In the Romanised Japanese this is simplified to *shoyu*. (3) Colloquially this is still further reduced by dropping the final vowel, to *shoy* or *soy* (*sh* in Tokio, *s* in some other dialects). Of this monosyllable only the *so* represents the classical *siyau*; the final consonant (*y*) is a relic of the termination *yu*. Hence my remark that the ‘Century’ accounts for only half the English word. The English word is derived from the Japanese, the latter from the Chinese. The Chinese form given by the ‘Century’ is Northern Mandarin. At Shanghai it becomes *sze-yu*, at Amoy, *si-iu*, at Canton *shi-yau* [fermented black soybean sauce]. The first element is defined by Williams, in his ‘Dictionary,’ p. 764, as ‘Salted beans, or other fruits, dried and used as condiments’; the second element merely means ‘oil’ (Williams, p. 1111).”

1512. T. 1899. “Soy.” *Notes and Queries* (London) 4:526. Dec. 23. 9th Series. [2 ref]

• **Summary:** Responding to notes on “Soy” in this periodical (9 Dec. 1899, p. 475) the author states: “In Java called *Soya*. Query, from *Soya*, in Java?”

1513. Haury, Alfred. 1899. Die Schimmelpilze und ihre industrielle Anwendung [Molds and their industrial application]. *Oesterreichische Chemiker-Zeitung* 2(23):605-11. Dec. Series 2. [24 ref. Ger]

• **Summary:** Discusses three genera of molds: *Penicillium*, *Aspergillus*, and *Mucor*. Gives details and a review of the literature on the use of *Aspergillus* species of mold for the production of saké, koji, soy sauce, miso, and various other East-Asian foods. In 1896 a book titled *Les moisissures* (*The molds*), by Calmette was published in Brussels, Belgium; he discussed sake, the chemical composition of koji, and the action of its diastase enzyme. “It was a Japanese named Jokichi Takamine who first had the idea of using koji in place of malt in American and European distilleries. In 1889 in the USA he was issued a patent on the process for using koji (or a mixture of koji and moto) in a fermentation to make of product containing 15-18% alcohol. The process was first tested in practice at Peoria, Illinois, is a distillery of the Distilling and Feeding Co., but not with the results that all the world had expected. Both Delbrueck (1894) and Saare (1895) had the opportunity to the process on the spot in 1894; in the opinion of Delbrueck koji is suited for use in place of malt in the saccharification of starches. For the production of koji, Takamine uses an inexpensive wheat bran instead of the typical rice. The process is then described in

detail.

Aspergillus oryzae plays a key role in the production of two East-Asian foods: soy sauce (*Shoyu-Sauce*) and miso. The former is made with wheat, soybeans, salt, and water; miso is made from soybeans, koji, salt, and water. For details see Kellner’s publication “On Saké, Shoyu and Miso.” In Java, another species of *Aspergillus*, namely *A. Wentii* is used to make their soy sauce (*Sojasauce*), according to Prinsen-Geerligs.

Also discusses the use of *Mucor* species, such as *Amylomyces rouxii*, in the production of spirits or brandy from dehulled rice. In 1892 Calmette was head of the Pasteur Institute in Saigon; today he is director of the Pasteur Institute in Lille, France. He has taken considerable interest in *Mucor* species, and published the results of his research in his 1896 book. Colette has a factory at Seclin near Lille. Colette and Boidin have formed the Amylo Society (*Société d’Amylo*) in Lille. Address: Chemist, Austria.

1514. Kano, S.; Iishima, S. 1899. Honpo-san shizenbutsu oyobi shikohin 18 shu no kyûshû ni tsuite [Digestion experiments on 18 Japanese foods]. *Gun-i Gakko Gyofu Koku Nobu* (*Bulletin of the Army Medical College*) No. 3. p. 101-33. [Jap]

• **Summary:** These human digestion experiments with single food materials were conducted at the Army Medical College in Tokyo. They are summarized in English by Oshima (1905, p. 168-73). Most of the experiments used shoyu as a seasoning. Experiment #89 used *kingyo fu* (a gluten preparation) and raw red azuki (adzuki) beans. #92 used tofu. #93 use tofu cake or okara. #94 used yuba. #97 used kuzu starch (made from *Pueraria thunbergiana*). Address: Army Medical College, Tokyo.

1515. Breitenstein, H. 1899. 21 Jahre in Indien: Aus dem Tagebuche eines Militaerarztes. Erster Theil: Borneo [Twenty-one years in the Indies: From the diaries of a military doctor, Part I: Borneo]. Leipzig, Germany: Th. Grieben’s Verlag (L. Fernau). viii + 264 p. See p. 69. Index. [Ger]

• **Summary:** A section about food states (p. 69): Of the countless spices (*Gewuerzen*) (Hass-Karl speaks of 199 from the plant kingdom alone), for example Kerry, Ketjab [Ketjap] (*Soja*) I can only say the same; they are magnificent. Address: M.D., Karlsbad.

1516. Chamberlain, Basil Hall; Mason, W.B. 1899. A handbook for travellers in Japan: Including the whole empire from Yezo to Formosa. 5th ed., revised and augmented. London: John Murray; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ltd. ix + 577 + 53 p. “With 28 maps and plans and numerous illustrations.” Index.

• **Summary:** Contents: Introduction. Routes: 1. Eastern Japan. 2. Routes connecting Tokyo and Kyoto. 3. Central

Japan. 4. Western Japan and the Inland Sea. 5. The island of Shikoku. 6. The island of Kyushu. 7. Northern Japan. 8. The island of Yezo [Hokkaido]. 9. Luchu and Formosa. Glossary.

Page 10: Provisions: “Curry-powder will often help to make insipid Japanese dishes palatable, and *shōyu* (soy [sauce]) adds a zest to soups.” “The following Japanese articles of food are considered palatable by most foreigners: *Kaseteira* [*Kasutera*], sponge cake. *Miso-shiru*, bean-soup [miso soup],... *Sakana no tempura*, fish fritter. *Unagi-mesih*, layers of rice with eels done in soy. *Yokan*, sweet bean-paste” [azuki].

Gods and Goddesses (p. 56): Toyo-Uke-Bime, also called Uke-Mochi-no-Kami, is “the Shinto Goddess of Food or of the Earth. The *Nihongi*, one of the two principal sources of Japanese mythology and early history...” The Moon God killed the Goddess of Earth. From the body of the murdered Earth sprang cattle and horses, millet, silkworms, rice, barley, and [soy] beans, which the Sun-Goddess decreed should thenceforth be the food of the human race. In the *Kojiki* version of the myth, it is Susa-no-o who slays the Goddess of Food, and there are other differences of detail.”

Eastern Japan (p. 225): “Tenjin-yama or Minato (Inn, Suiryō-kwan). This prettily situated place contains a few sake breweries and soy manufactories, the produce of which is shipped in junks to Tokyo;...”

Mountains of central Japan (p. 281): “Narada (accommodation at a Buddhist temple)” consists of but a few households; the people are isolated and poor. “Rice, *sake*, and soy [sauce] are with them luxuries to be indulged in on rare occasions, their ordinary food consisting only of millet and potatoes.”

Central Japan (p. 334): “Yuasa (Inn, Edo-ya) is a dull town, noted for its manufacture of soy.”

Central Japan (p. 336): “There is a current belief to the effect that Koya-san is so precipitous that such luxuries as bean-curd (*tōfu*) cannot be carried up to it, but that the priests place coppers on the temple balustrade, with which the crows fly off to Kumano and bring back bean-curd in return.”

Central Japan (p. 389-90): Kasuga no Miya (a Shinto temple). The oratory “is now used by the townspeople on the evening of the Setsubun (3rd February) for the performance of the ceremony of scattering [roasted soy] beans to expel evil spirits.”

Central Japan (p. 403): Matsudō. “Travellers will remark the great industry and economy practised in the agriculture of this district, even the ridges between the rice-fields being sown with beans or barley.” Note 1. Soy beans were often planted on such ridges, then harvested as green vegetable soybeans.

Note 2. The last 53 pages of this book are advertisements. Address: 1. F.R.G.S., Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo; 2. Corresponding member of the Royal Scottish Geographical Society, and late of the Imperial Japanese Dep.

of Communications.

1517. Douglas, Carstairs. 1899. Chinese-English dictionary of the vernacular or spoken language of Amoy, with the principal variations of the Chang-chew and Chin-chew dialects. New edition. London: Presbyterian Church of England. xix + 612 p. 27 cm. [2 ref]

• **Summary:** The Preface begins: “The vernacular or spoken language of Amoy, which this dictionary attempts to make more accessible than formerly, has been also termed by some ‘The Amoy Dialect’ or ‘The Amoy Colloquial;’ and it particularly coincides with the so-called ‘Hok-kien Dialect,’ illustrated by the Rev. Medhurst in his quarto Dictionary under that title.”

On page 58, under the character for *chiang-chiu* a sort of sauce or condiment. *tau chiu* sauce made from beans and flour. *chiu-chheng* the thinner part of *tau chiu*. *koan-kiu-chiu* this sauce seasoned with cayenne pepper. *chiu-liau* various sorts of vegetables preserved in *tau chiu*. *chiu-koe* pumpkins so preserved. *chiu-kiu* ginger so preserved. *chiu-mia-chia* wheaten dough balls in this sauce.

On page 156, under the character for *hu-tau-hu* bean curd shaped into squares (from the pulpy “tau-hoe”), but not yet pressed. See *tau*.

On page 176, under the character for *iu* meaning oil or fat. On the last line of the right column—*tau-iu* soy [sauce]. *e-tau-iu* dark-colored soy. *seng-iu* the common oil from ground-nuts. *moa-iu* oil from hemp-seed.

On page 423, under the character for *shi-si* salted vegetables and fruits. *tau-si* pickled and salted beans [soybeans]. *tau-si-pe* black beans [soybeans] boiled, dried, and kept till mouldy, to be made into soy [sauce]. *tau-si-phoh* beans from which soy has been made, broken down small. *mi-si* (Cantonese) = *tau-chiu* (Amoy), sort of salted sauce.

On page 480, under the character for *tou-tau* peas or beans; pulse. *tau-khe* bean cake from North China, used as manure. *tau-iu* soy (see *iu*). *tau-chiu* a thick salt sauce made from pulse. *tau-si* salted beans [fermented black soybeans]. *tau-hoe* soft bean curd not yet pressed or shaped. *tau-chiu* same. *tau-hu* bean curd shaped but not yet pressed. *tau-hu-phe* same, but made into thin sheets for wrapping around eatables. *teh tau-hu* to shape the *tau-hoe* into pieces of *tau-hu*. *tau-koa* bean-curd that has been pressed in a cloth. *tau-ju* same cut into smaller squares and salted. *tau-kiam* (Cantonese) same. *tau-che* refuse from manufacture of bean-curd [okara]. *tau-thau* same. *the-tau* = lok-kha-seng, the Arachis, ground-nut, or pea-nut, from which oil is made. *tho-tau* same.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term “pickled and salted beans” to refer to fermented black soybeans.

Note 2. The first edition of this book was published in 1873. In 1970 the Ku-T’ing Book Store in Taipei published a photoreprint of the 1899 London edition; it was bound with

a Supplement photoreprinted from the 1923 Shanghai ed. (612 p., 27 cm). Carstairs Douglas lived 1830-1877. Address: Rev., M.A., LL.D. Glasgow, Missionary of the Presbyterian Church in England.

1518. Duncan's (John) Sons. 1899. Its only a ? [question] of sauce. New York, NY: John Duncan's Sons. [8] p. Illust. (color). 12 cm. *

• **Summary:** Advertisement in verse for Lea & Perrins' Worcestershire Sauce.

1519. Fraser, Hugh (Mrs.). 1899. A diplomatist's wife in Japan: Letters from home to home. 2 vols. London: Hutchinson & Co. See vol. 1, p. 231, 233, 238. Chap. XI. With 250 Illust. 24 cm. [Eng]

• **Summary:** The author's maiden name is Mary Crawford. These letters, written in a poetic, flowery style during a three years' residence in Tokyo, Japan (April 1889 to April 1892), describe many aspects of Japanese life. Chapter XI, written in Nov. 1889, begins with a description of a Japanese mushroom hunting party in the autumn woods of Kyoto. After the mushrooms (the most prized at *matsu-také*) are gathered, they are cooked over a little fire in the woods. "Then begins the business of roasting the mushrooms, in which everybody helps; and great enthusiasm is shown over the delicious odour they give out. 'Ii nioi! Ii nioi de gozaimasu!' (Good smell! Honourably good odour!) exclaim the ladies, as they deftly peel off the outer skin of the toasted fruit, which is then shred into small pieces, flavoured with *shoyu* (soy) and vinegar, and eaten with *o'hashi*, the honourable chop-sticks."

During his visit to Japan, there was an attempt on the life of the young Russian prince Cesarévitch. There was a great outpouring of sympathy and condolences and love from Japanese people of all ranks "to the boy who lay healing of his wound in Kobe Harbour. The poor sent the most touching gifts—the rice and shoyu, the fish and barley flour, which would have fed the little family for a year;..." Address: Tokyo, Japan.

1520. Heuzé, Gustave. 1899. Les plantes alimentaires des pays chauds et des colonies. 2 ed. [Edible plants of the tropics and colonies. 2nd ed.]. Paris: Librairie Agricole de la Maison Rustique. xii + 381 p. See p. 174-78. 19 cm. Series: Cours d'Agriculture Pratique. [Fre]

• **Summary:** The soybean is referred to in French as "Dolic du Japon ou soja." An illustration (non-original, p. 175; by Thiebault, from Carrière 1880) shows the soybean plant (titled *Dolic du Japon ou soja*) and a cluster of pods. Its scientific names are *Soja japonica*, Sav. or *Soja hispida*, Moench. Synonyms are *Dolic soja*, and *Dolic à café*. A botanical description is given. "Varieties which are most widely cultivated are the yellow soybean (le soja jaune; *Soja ochroleuca*) and the black soybean (le soja noir;

Soja hispida). A sub-race named *soja d'Étampes* is the most widely appreciated in France. It is very productive but it needs 4-5 months to ripen its seeds. The soybean is an annual; it was introduced to France from China by de Montigny under the name *pois oléagineux*. It is successfully cultivated in China, Japan, the Indies, the Moluccas, etc. It is rather easily sold in the green state at various markets. Its principal merit is its ability to resist drought. It needs as much heat as haricots...

"The Japanese transform the seeds of this legume into a puree (tofu; *ten-hu*) or a paste (*miso*) with which they make a sauce (soja), which they use to prepare various seasonings named *shoyu* or *soaju* and *tofu* or *daizu*.

"Soybean seeds germinate very irregularly and very late in Europe, especially in their second year of existence. An analysis of the soybean seed on a moisture-free basis, conducted by Mr. Joulie, is given.

"The soybean is richer than wheat in fatty and proteinaceous materials. When one prepares dry soybeans, it is useful to soak them in water for 8-10 hours before cooking, for they are naturally very hard. They are also eaten in the shelled green state.

"The varieties with branches [les variétés à rames] are not yet cultivated in Europe." Gustave Heuzé lived 1816-1907. Address: Membre de la Société Nationale d'Agriculture. Inspecteur Générale Honoraire de l'Agriculture.

Honorary member of the Council of the Societe Nationale d'Acclimatation 2. Asst. de la Chaire de Culture, Museum d'Histoire naturelle de Paris.

1524. Saito, Akio. 1899. [Chronology of soybeans in Japan, 1868 to 1899, first half of the Meiji period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 11-12. [Jap]

• **Summary:** 1871 July—A brewing tax (*jozo-zei*) and patent tax are levied on clear sake (*seishu*), unclear sake (*dakushu*), and shoyu. But in 1875 the two taxes on shoyu are discontinued because shoyu is considered one of the necessities of life.

1873—At about this time a sincere farmer, Itoi Mosuke, of Akita prefecture finds a special type of soybean and names it Itoi-mame. Later the name changes to Ani and they are cultivated all over Akita prefecture.

1873 May—The Japanese government exhibits soybeans at the exposition in Vienna, Austria. And the USA becomes interested in soybeans. Also at this expo, Kikkoman uses glass bottles for their shoyu for the first time.

1875—At about this time, shoyu becomes so popular overseas that a German-made fake shoyu appears.

1877—There are now 40-50 miso shops in Tokyo, centered in Hongo (which comprises the areas of Yotsuya, Fukagawa, Shiba, Shinagawa, Ooi, Oshima, etc.).

1877 Feb.—Dried-frozen tofu (*kôri-dôfu*) is purchased as an army supply for the Seinan no Eki war.

1877 Aug.—The first domestic exposition is held in Japan, at Ueno Park, Tokyo. Kikkoman shoyu wins an award.

1878—The quick method of miso fermentation (*miso no sokujo-ho*) is mentioned in a government report.

1878—The first official government statistics on soybean cultivation in Japan start to be compiled. This year the area is 411,200 hectares and production is 211,700 tonnes [yield = 514 kg/ha].

1879—The price of high-quality miso in Tokyo is 4 sen per kg. In 1880 the price is 303 yen/kg—or about 7,575 times higher. Note: From now on prices from the Meiji era come from a book titled *History of Lifestyle of the Meiji, Taisho, and Showa periods as seen from prices of the day* (*Nedan no Meiji Taishi Showa Fuzoku Shi*). It is published by the Weekly Asahi (*Shukan Asahi*).

1882—Around this time many small shoyu manufacturers appear and quite a few bad quality shoyu products are on the market. Shoyu loses considerable consumer confidence.

1885—The price of 1 keg (*taru*, 16.2 liters or 9 *sho*) of shoyu at this time is as follows: Highest grade (*jo no jo*) (Kikkoman) 1 yen, 40 sen; Middle upper grade (*jo no chu*) (3 makers including Yamasa) 1 yen 38 sen; Lower upper grade (*jo no ge*) (Kamibishi) 1 yen 25 sen; Upper middle grade (*chu no jo*) (Fujita) 1 yen 25 sen; Lower middle grade (*chu no ge*) (Chigusa) 1 yen 17 sen; Lower grade (*ge*) (Kinka) 80 sen. Yamaguchi Yoshibei of Yamasa Shoyu starts to sell Worcestershire Sauce, called “Mikado Sauce.”

1885 May—The government reinstates the tax on shoyu to raise money for the army.

1887—Soybean production in Japan tops 400,000 tonnes (419,700 tons) for the first time.

1890—The Tokyo-Area Shoyu Brewers' and Wholesalers' Union (*Ichifu Rokken Shoyu Jozo-ka Tokyo Tonya Kumiai Rengokai*) forms a cartel for the first time because of a 50% increase in the price of their raw materials.

1891—Mogi Kenzaburo of Kikkoman (1st generation) starts to use a special press (*gendo maki assaku-ki*) invented by Yamazaki Izuko to press the shoyu out of the moromi mash more efficiently and quickly.

1893—In recent years the import of soybeans to Japan has increased rapidly, and this year it reaches 96,000 tonnes. These soybeans are grown mainly in Manchuria. The average price of 2 liters of high-quality shoyu in Tokyo is 10 sen. (In 1982 it is 584 yen, or 5,840 times more than in 1893).

1894—Around this time miso soup is recognized for its value as a protein food. Dr. Sato Nesaku, an agricultural specialist, says that miso is a farm household's milk.

1894—Yabe Kikuji (1868-1936) calls natto “Japanese cheese” and presents the first academic paper on natto bacteria in Japan.

1895—Around this time the number of walking vendors of tofu, natto, and boiled whole soybeans (*ni-mame*) increased, as did the production of dried-frozen tofu (*kori-dofu*). The number of small shoyu makers decreased dramatically as Kikkoman, Yamasa, and Higeta increasingly used advanced industrialized methods. Recipes and methods

for making miso pickles (*miso-zuke*) using carrots, daikon, udo, and ginger are given in women's magazines such as *Jokan*, *Katei Zasshi* and *Jogaku Kogi*.

1896—Around this time the importation of salt starts, as shoyu makers in Noda and Chiba buy 15,000 tons of salt from England.

1897—Soybean imports this year increase to about 140,000 tonnes, which is one-fourth of Japanese consumption. Domestic soybean production is 400,000 tonnes.

1899—Mogi Keizaburo of Kikkoman of Kikkoman (1st generation) starts using a boiler for the first time in the shoyu industry. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

1525. Schulz, Carlotto. 1899. *La table du végétarien: Choix, préparation et usage rationnels des aliments. 700 recettes suivie des règles d'hygiène* [The vegetarian table: Choice, preparation, and rational usage of foods. 700 recipes following the rules of hygiene]. Paris and Brussels: La Société végétarienne de France; Georges Balat, éditeur à Bruxelles. 395 p. Illust. General index. Recipe index. [Fre]
• Summary: Contains an introduction on vegetarianism by the author. Soy is not mentioned in the index. However, a table (p. 18) titled "Seasonal vegetables" (*Légumes de saison*) includes fresh soybeans (*soja frais*) for August and September.

The section titled "Throughout the year" (what to eat) (p. 20), under "dry legumes" includes: Fèves—Soja. Haricots—Arachides (peanuts). Lentils—Lentils of Egypt. Pois cassés—Chick peas.

An advertisement by a company named *Dépôt Central Végétarien* ("Central Vegetarian Depot") in Brussels includes: Soybean extract, an excellent condiment (*Extrait de Fèves de Soya, condiment excellent*). Note: This extract is probably soy sauce.

1526. *Boston Daily Globe*. 1900. Housekeepers' column: Tried and true recipes from experienced cooks. Jan. 16. p. 10.

• Summary: "Three recipes for Indian soy [sauce]: (1) Boil 1 gallon of dolichos soja (if this cannot be had haricot or kidney beans will answer), in sufficient water until soft. Add 1 gallon bruised wheat and keep in a warm place for 24 hours; then add 1 gallon salt, and 2 gallons water and keep for two or three months in a tightly stoned jar; after which press out the liquor.

"2. Soys, 1 gallon, water to cover. Boil till soft, then add bruised wheat, 1 gallon; water, 2 gallons. Bung up in a stoneware jar for two or three months (shaking very frequently), press and filter. If the genuine soys (black Indian beans) be unobtainable, peas, kidney, or haricot beans may be substituted without disadvantage.

"3. This, the common base of most sauces, is made from

the seeds of glycine soja, which is cultivated in the far east. The method of manufacture is practically a secret, but I give a formula for an excellent imitation; Mix 4 lbs extract of malt in warm water, so that the resulting sirup [syrup] should measure 1 gallon. Add 5 lbs treacle, 4 lbs salt and 2 pints of mushroom juice. Heat gently to facilitate mixing; set aside for 14 days and decant."

1527. *Manchester Guardian (England)*. 1900. Food preservatives inquiry. Jan. 16. p. 11.

• Summary: "Other experiments were made to test the effect of the quantities of preservative mentioned on the digestion of breadcrumbs as compared with the effect of other condiments, such as vinegar, Worcester sauce, small quantities of alcohol, and infused tea,..."

1528. Aso, K. 1900. The chemical composition of the spores of *Aspergillus oryzae*. *Bulletin of the College of Agriculture, Tokyo Imperial University* 4(1):81-96. Feb. [5 ref. Eng]

• Summary: "Our knowledge of the chemical composition of the spores of fungi is still very scanty, and as regards their ash, no analysis whatever has thus far been made." The spores of *Aspergillus oryzae* "can easily be obtained in any quantity in Japan, as the rice grains covered with the mycelium and the spores of this fungus form an article of commerce under the name of *Tane-Koji* or *Koji-dané*. I have preferred however to collect the spores myself, in order to obtain them in a pure state.

"*Aspergillus oryzae* plays a great part in several industries in Japan, being used not only in the manufacture of Sake or rice wine, but also in that of Shoyu or Soja-sauce, and of Miso."

Note: This is the earliest English-language document seen (April 2012) that uses the term "Soja- sauce" (or "soja-sauce") to refer to soy sauce.

"This fungus contains powerful enzymes, a diastase, a maltase, invertase and a peptase. Oxydases appear to be present only in traces."

In the section titled "Preparation of samples" (p. 82) the author describes how he prepared and collected the spores: "*Tane-kôji* was prepared roughly milled rice without mixing any ash [in sake factories the ash of oak leaves is typically mixed with the rice substrate]; and when the rice grains became covered with innumerable spores, they were brought out from the cellar and the spores were separated from the rice grains and the mycelium by tapping on the bottom of the culture boxes (*kôji-buta*) inverted on a sheet of paper." These spores "were then sifted with a very fine silk sieve to remove all impurities... This sample was exposed to air in a balance room for two weeks and kept in a bottle."

Two tables (p. 83) show the organic constituents in 100 parts of air-dry spores, and 100 parts of dry matter. The latter contains 5.151% ash, whose composition is discussed in more detail on pages 93-96. A table (p. 95) shows the ash

content and composition of winter wheat, paddy rice (not whitened), oats, soy-bean, rice (not whitened), and spores of *Aspergillus*. The latter is by far the richest in ash, potash, and phosphoric acid. In conclusion, the author expresses “much thanks to Dr. O. Loew, formerly professor in this college...”

Note: This is the earliest English-language document seen (Jan. 2006) that uses the term “Soja-sauce” (regardless of capitalization) to refer to soy sauce. Address: Nôgakushi, Japan.

1529. Gomilevskii, V.I. 1900. O kitaiskom bobe (Soja hispida) i ego znachenii dlya rysskogo khozyaistva [The Chinese soybean (Soja hispida) and its meaning in Russian economy]. St. Petersburg, Russia: Printing House of “Obschestvennaya Pol’za” Union. 32 p. 22 cm. [17 ref. Rus]

• **Summary:** Contents: I. Research of Gil’desgeim proved that soybeans could replace meat in daily diet. More than 20 varieties of soybeans from Japan and China were introduced to Central Europe and Russia in 1873 at the World Exposition in Vienna. Soybeans were first recognized in Russia by agricultural writers Yaroshevskii and Semnalovskii in an article in their journal (name of which is not stated) and later in another article in the *Zemledel’cheskaya Gazeta*. During about the same time articles were written by I.G. Podoba and Mel’nikov. In the 1884 exhibition in Odessa, various Russian regions presented soybeans in various stages of development and soybeans which can be used as coffee substitutes. Soybeans were also cultivated in Kiev, now part of Ukraine.

II. Description of soybeans. Different varieties of soybeans in Europe (*Soja hispida praecox* is recommended for cultivation in Russia). III. Composition of soybeans. Use of soybeans as meat substitutes for poor people and the army. Soybeans as substitutes for coffee. Soybeans used in tofu, miso and spicy sauces for meat. Recipes: food uses of soybeans: soybean flour for bread, soybeans for soybean oil. IV. Composition of soybeans. Use of soybeans as feed for cattle, dairy cows, pigs and horses.

V. Characteristics of the soybean: How it stands hot and cold weather, uniqueness, not a demanding plant (needs little fertilizer), prefers southern climates/latitudes. VI. Cultivation of soybeans: Type of soil, preferred temperatures and time of year for planting, spacing between seeds and rows. VII. Soybean maintenance. VIII. Harvesting of soybeans. IX. Harvesting/gathering of soybeans. X. Conclusion: Soybeans have a bright future in Russia, they may help fight hunger in the poor regions, as well as provide an excellent source of nutrition and energy for the army and the marines. Address: St. Petersburg, Russia.

1530. Sempolowski, A. 1900. Ueber den Anbau der Sojabohne [On soybean culture]. *Fuehling’s Landwirtschaftliche Zeitung* 49(5):193-96. March 1. [Ger]

• **Summary:** “The soybean first aroused great interest

in Europe after the Vienna World Exposition in 1873, where a large collection of soybean varieties from China, Japan, India, etc. were exhibited. Professor Haberlandt in Vienna and others subsequently conducted a large series of agronomic trials with the soybean in various locations from Austria and Germany. These, however, showed that the cultivation of this fodder plant in the districts concerned is not worth recommending since the soybean matured either very late or not at all. At that time I also conducted soybean agronomic trials in the province of Posen and in Russian Poland; these, too, gave negative results in those vegetation areas. The farmers were discouraged from cultivating the soybeans and pretty soon the once-popular fodder plant was indeed forgotten.

“However, in more recent years, there arose a new, eager apostle of the soybean, the farmer J. Owsinski [Owinsky, Ovinski] from the province of Podolia. He had been working for a long time in East Asia, allegedly, and there he learned about new, earlier-ripening varieties of this fodder plant. For cultivation, he recommends two varieties above all: one black- and one brown-seeded. Since the soybean still continues to have a great reputation, publicity, especially in Russia, as an excellent fodder plant, I decided to conduct another agronomic trial with these two new varieties at agricultural research station at Sobieszyn (in Russian Poland). I wanted to answer two questions: First the time required for the soybean to mature in our climate, and second the value of the entire plant as fodder.

According to Owsinski, the soybean took 100 days to come to vegetative maturity in southwest Russia and 110 days in western Russia, corresponding to late varieties of oats or blue lupins. The brown-seeded soybean is said to ripen in 100 days in southwest Russia and 108-110 days in western Russia, however the yield is low and the seeds shatter easily.

In East Asia soybeans are used to make soy sauce (“Shoya, Soohu, or Soy”), miso, and natto—the last two being fermented foods. A table shows the nutritional composition of soybean cake on a dry weight basis (41.73% protein, and 7.18% fat).

On 14 May 1898 the author planted his trial field with soybeans. On Sept. 22 he harvested 30 plants of brown-seeded soybeans, including 200 gm of seeds; 100 seeds weighed 22.07 gm. The plants were 26-36 cm high and on each stem were 13-17 pods. The time to maturity was 140 days. On Oct. 5 he harvested 23 plants of black-seeded soybeans, including 208 gm of seeds; 100 seeds weighed 16.01 gm. The plants attained a height of 30-55 cm, and on each stem were 12-56 pods. The time to maturity was 173 days.

On 17 May 1899 the author planted a larger quantity of brown-seeded soybeans at the rate of 643 kg/ha in rows 40 cm apart. The time to maturity was 130 days. At the same time on another test plot he planted black-seeded soybeans

in rows 50 cm apart. The harvest took place on Oct. 7 and the time to maturity was 170 days, but the seeds were not completely ripe and had to be dried for another week. A table shows the nutritional composition of these two varieties. Brown: 39.03% crude protein and 18.55% fat. Black: 37.62% crude protein and 20.87% fat.

“When we consider the protein and fat content of the seeds, we must acknowledge that the soybean, compared with other crops, has a very high nutritional value. However, farmers must be urgently advised to treat the new, allegedly early-ripening varieties with great caution, since they have not yet been sufficiently tested to be recklessly praised and their cultivation widely expanded.”

Note: This document contains the earliest clear date seen for soybeans in Russia, or the cultivation of soybeans in Russia (14 May 1898). This is also the earliest document seen that describes soybean breeding in Russia. The source of these soybeans was Owinski, who apparently obtained them from East Asia. Address: Dr., Sobieszyn [Russian Poland?].

1531. *New York Times*. 1900. A missionary exhibit: Oriental curios to be seen soon at Museum of Natural History. March 4. p. X8.

• **Summary:** It is chiefly an exhibit of curios from Asia, collected by various missionaries. The Japanese department is one of the most complete. “There are specimens of Japanese food supplies, beans of different kinds, rice, dried edible mushrooms grown in an oak grove [probably shiitake],... long, transparent strips of a tempting looking stuff which is labeled ‘seaweed’; a bottle of [soy] sauce made of fermented wheat and beans; a cake made of wheat flour and looking much like ordinary bread but with odd black lines running through it [fu, or dried wheat gluten cake with nori]; a stick for stirring bean curd [tofu];...”

Note: An almost identical article appeared in this newspaper on June 12, p. 2. It describes the exhibit that this article is announcing.

1532. *Washington Post*. 1900. Dinner a la Japanese: A repast that is certainly picturesque and may be digestible. May 20. p. 22.

• **Summary:** From the Boston Evening Transcript: “In each course there are half a dozen dishes and the host tells what they are. First suimono, a bean soup [sic, clear soup, often with tofu];... sashimi, raw fish cut into thin slices and covered with ice. This is dipped into rich sauce called soy, and is really very good.”

1533. Langworthy, C.F. 1900. Vegetable cheese. *Sanitary Home (Fargo, North Dakota)* 2(3):55-57. May.

• **Summary:** “It is commonly believed that the Japanese, Chinese, and other oriental peoples live almost exclusively on rice, eating little or no meat... In the course of centuries

the Japanese and Chinese have evolved the art of preparing substances resembling dairy products from vegetable sources. It is well known that beans, peas, and other legumes contain large amounts of protein... The soy bean, which is perhaps the principal legume grown in Japan and China, is less suited for food in its natural state.”

“Though the soy bean is not relished when cooked in the ordinary way, the Chinese and Japanese prepare very satisfactory foods from it in ways which are unknown to western cooks. Bean cheese or bean curd, called by the Japanese tofu and by the Chinese tao hu, is one of the most important of these products and is prepared as follows: The soy beans are soaked in water for about 12 hours and crushed between mill stones until of a uniform consistency. The ground material is then boiled with about three times its bulk of water for an hour or more and filtered through cloth. The filtrate is white in appearance and has somewhat the appearance of milk. It has the taste and smell of malt. Analysis shows that it resembles cow’s milk in composition. When heated a film forms on the surface which in appearance suggests cream. This is dried and eaten under the name of yuba. As soon as the soy bean milk becomes cool, some material is added; for instance, crude sea salt, containing magnesium chlorid [chloride], which precipitates the proteid material, the fat being inclosed in the coagulated mass. The coagulated material is pressed and kneaded into small cakes or cheeses. These are sometimes dipped in saline solutions of curcuma to color them. The bean cheese cakes are sometimes eaten fresh or may be cooked in different ways. Often when practicable they are frozen. This removes a considerable part of the water present. As shown by analysis, the fresh bean cheese contains about 5 per cent of protein and 3 of fat. Ordinary cheese made of milk contains about 28 per cent protein and 36 per cent fat.

“Miso resembles tofu to some extent. It is prepared from cooked soy beans, which are rubbed to a thick paste and fermented with rice wine ferment. Shoyu is a thick sauce prepared from a mixture of cooked pulverized soy beans, roasted and pulverized wheat, wheat flour, salt, and water. The mass is fermented with rice wine ferment in casks for from one to five years being frequently stirred. The resulting product is a moderately thick, brown liquid, in odor and taste, not unlike a good quality of meat extract, though perhaps a trifle more pungent. Throughout the East it is eaten in large quantities with rice and other foods and is an important source of protein. Under the name of soy sauce, it has been known to Europeans in India for many years, and is not unknown in the United States. Most of the soy bean products are fermented; that is, they are prepared with the aid of micro-organisms. The micro-organisms break down the cell walls and similar materials and thus the cell contents are rendered more accessible to the digestive juices at the same time peculiar and pleasant flavors are developed. The manufacture of these products is of very ancient origin

and affords an interesting, practical illustration of the use of bacteria for economic purposes.

“The Chinese residents of San Francisco and other cities consume large quantities of these soy bean products and it is stated on good authority that soy bean cheese is manufactured in this country, though doubtless it is seldom, if ever, eaten by any except the Chinese.”

Note 1. This periodical was later named *North Dakota Farmer*.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term “soy bean cheese” or “bean cheese cakes” to refer to tofu.

Note 3. This is the earliest document seen (June 2011) concerning soybeans in connection with (but not yet in) North Dakota.

Note 4. This is the earliest English-language document seen (Oct. 2003) that contains the term “soy bean milk.”

Note 5. Dr. E.F. Ladd was a nationally-known pioneer in food safety and sanitation in the United States. He published this periodical, *Sanitary Home*, in Fargo and distributed it free of charge like an extension publication before the extension service was created; North Dakota State Univ. paid the printing and mailing expenses. Interested in home safety, he rewrote technical publications in a language homemakers could understand. He did much work with North Dakota food purity and chemical purity laws. Address: PhD, Office of Experiment Stations, Dep. of Agriculture, Washington [DC, USA].

1534. *Boston Daily Globe*. 1900. Housekeepers' department: Tried and true recipes contributed by the women of New England. June 24. p. 27.

• **Summary:** “Three recipes for Indian soy [sauce]: 1. Boil 1 gallon of *Dolichos soja* (if this cannot be had haricot or kidney beans will answer), in sufficient water until soft. Add 1 gallon bruised wheat and keep in a warm place for 24 hours; then add a gallon of salt and 2 gallons of water, and keep for 2 or 3 months in a tightly stoned jar; after which press out the liquor.—M. Note 1. A close relative of this recipe was published on 10 March 1895 (p. 27) in this newspaper, however the key ingredient (*dolichos soja* = soy beans) was not mentioned.

“2. Soya [soy beans], 1 gallon water to cover. Boil till soft, then add bruised wheat, 1 gallon; water, 2 gallons. Bung up in a stoneware jar for two or three months (shaking very frequently), press and filter. If the genuine soys (black Indian beans) be unobtainable, peas, kidney, or haricot beans may be substituted without disadvantage.—J.B. Note 2. Without salt, this recipe will quickly spoil.

“3. This, the common base of most sauces, is made from the seeds of *glycine soja*, which is cultivate in the far east. The method of manufacture is practically a secret, but I give a formula for an excellent imitation: Mix 4 lbs extract of malt in warm water, so that the resulting syrup should measure 1

gallon. Add 5 lbs treacle, 4 lbs salt and 2 pints of mushroom juice. Heat gently to facilitate mixing; set aside for 14 days and decant. L.E.”

Note 3. Basic problems with all three of these recipes: (1) They do not understand *koji* (roasted wheat covered with fragrant *Aspergillus oryzae* mold), which is a major, essential ingredient in any soy sauce. (2) They add much too much salt. (3) Soybeans were widely available in the United States by 1900 from almost any agricultural experiment station.

Note 4. This is a slightly improved version of the same 3 recipes that appeared in this newspaper on 16 Jan. 1900, p. 10.

1535. *New-York Tribune*. 1900. Typical Chinese feast. Dinner of thirty-seven courses given in San Francisco. July 13. p. 7.

• **Summary:** This Chinese dinner, which was recently given in San Francisco, is described by a participator. It included “boiled fowl dipped in soy sauce.”

1536. Abel, Mary Hinman. 1900. Beans, peas, and other legumes as food. *Farmers' Bulletin (USDA)* No. 121. 32 p. See p. 9-11. Illust. Revised Nov. 1904. Corrected March 1906. [1 ref]

• **Summary:** A section titled “Soy Bean (*Glycine hispida*)” (p. 9-11) briefly describes the soybean plant and the rich nutritional composition of its seeds. The first paragraph is quoted from USDA Farmers' Bulletin 58.

Starting with paragraph 2: “This leguminous plant, probably native in China, is the most important legume of China and Japan... In the Orient this bean and the various food products made from it are so largely consumed that it is perhaps the most important food plant next to rice. The soy bean is eaten to a small extent boiled like other beans, but in China and Japan it is elaborated into a variety of products, all of which have a high percentage of protein, and when eaten in connection with the staple food, rice, which is so deficient in that constituent [protein], helps to make a well-balanced dietary. Some one of these products is eaten at perhaps every meal and by rich and poor alike, especially in the interior of these countries, where sea food is not obtainable.

“One of the most important of these preparations is shoyu, and it is the only one that has been introduced to any extent into other countries, where it is known as soy sauce...”

“There are also several varieties of bean cheese or similar products made from this legume which are very important foods. These are natto, miso, and tofu. Natto is made from soy beans that have been boiled for several hours until very soft, small portions of the still hot mass being then wrapped securely in bundles of straw and placed in a heated, tightly closed cellar for twenty-four hours. Bacteria, probably from the air or the straw, work in the mass, producing an agreeable change in its taste.

“For tofu, the soy bean, after soaking and crushing, is boiled in considerable water and filtered through cloth.

To the resulting milky fluid 2 per cent of concentrated sea brine is added, which, probably by virtue of the calcium and magnesium salts present, precipitates the plant casein, which is then pressed into little snow-white tablets. It is made fresh every day. Tofu is sometimes cooked in peanut oil before it is eaten. In natto and miso the action of minute organisms plays an important part. In tofu there is no such action. The composition of a number of these products is as follows:”

A table (p. 11) shows the nutritional composition of food products made from soy beans, including fresh tofu, natto, white miso, red miso, Swiss miso, and shoyu (2 samples).

An illustration (non-original line drawing, p. 10) shows a soy bean plant with a cluster of 7 pods to its upper left (slightly changed from an original in Carrière 1880, p. 154).

This bulletin also discusses (with an illustration of each): The bean—Broad or Windsor bean (*Vicia faba*). Kidney bean (*Phaseolus vulgaris*). Lima bean (*Phaseolus lunatus*). Scarlet runner (*Phaseolus multiflorus*). Frijole (*Phaseolus spp.*). Cowpea (*Vigna catjang*). Lablab bean (*Dolichos lablab*) and other common varieties. Locust bean (*Cerantonia siliqua*).

The pea—Field pea (*Pisum arvense*). Garden pea (*Pisum sativum*). Chick-pea or gram (*Cicer arietinum*).

The lentil (*Lens esculenta*). The peanut (*Arachis hypogaea*).

Note 1. This is the earliest English-language document seen (Aug. 2011) that uses the term “milky fluid” to refer to soymilk.

Note 2. Mary Hinman Able was not an employee of the USDA or of the federal government. She was a pioneer in the fields of nutrition, nutrition education, home economics, and popularizing science for the general public. Between 1904 and 1913 she wrote several farmers bulletins for the USDA. From 1909 to 1915 she was editor of the *Journal of Home Economics*.

1537. Gawne (W.) and Co. 1900. What the newspapers say about Gawne’s Worcestershire Sauce (Ad). *Mataura Ensign*¼ (Otago, New Zealand). Sept. 6. p. 5, col. 6.

• **Summary:** “‘Evening Star,’ 22nd June, 1889, says: ‘Messrs W. Gawne and Co., of George St., Dunedin, have sent us a sample of Worcestershire Sauce manufactured by them, which is in no respect inferior to the imported article, so long celebrated for Flavoring Sauces, and as an agreeable addition to grills, fish, and steaks. We can safely recommend it as a valuable addition to our rapidly developing local manufactures. The bottles are neatly labelled and ornamental, not only for home use, but for exportation and we hope the manufacturers will realise a demand equal to the merits of the savoury article they have produced.’”

Note: This is the last ad seen for this sauce. Address: George St., Dunedin. New Zealand.

1538. *North Otago Times* (New Zealand). 1900. The industries of Japan. Oct. 13. p. 2 (Supplement).

• **Summary:** “Agriculture is the chief pursuit of the people of Japan, and in the greater part of the cultivated area rice and the principal food crops, wheat, barley, and soya beans, are grown.”

“The industries of the Japanese empire may be distinguished as ‘original’ and ‘imported.’ The original industries which existed from early times are those of... vegetable wax, salt, sugar, sake, soy [sauce], oil, tobacco, indigo, and raw silk.”

1539. Prescott, Augusta. 1900. Thanksgiving dishes and how to serve them. *San Francisco Chronicle*. Nov. 25. p. 26.

• **Summary:** Contains various recipes in sentence-style format. “Oysters on the half-shell. Place shells on a plate of cracked ice, over which scatter watercresses; in the center lay a lemon shell, in which serve this sauce: One teaspoonful freshly grated horseradish, two teaspoonfuls lemon juice, one teaspoonful catsup, dash of paprika, one-half teaspoonful of salt and one-half teaspoonful Worcestershire sauce.”

1540. Sack, J. 1900. Samenstelling van Indische voedingsmiddelen: Tweede serie (LI-C) [Composition of Indonesian foods: Second series (51-100)]. *Bulletin van het Koloniaal Museum te Haarlem* No. 23. p. 85. Nov. Fold-out table bound at the end of No. 23. [3 ref. Dut]

• **Summary:** This is the second such table published in this Bulletin. The first table by J. Sack was published in Bulletin No. 22 (March 1900). Dr. M. Greshoff supervised the work. The composition of fifty Indonesian foods is given, with two lines of notes in one wide column after each. Each food is numbered: 51-100. Soy-related foods are: 56. Black soybeans (*Katjang kadelé itam; zwarte soja*). 76. Tempeh (*Tempé*). 81. Japanese shoyu (*Japansche soja*).

Also discusses: 57. *Katjang poetih* (Poetih [putih] means “white.” A note says this is a type of soybean but we think it is a species of *Vigna*). 58. *Katjang ketjipir* (*Psophocarpus tetragonolobus*). 67. Sesame seeds. 82. Agar-agar. Address: Assistent bij het Laboratorium, van het Koloniaal Museum te Haarlem [Netherlands].

1541. Sack, J. 1900. Samenstelling van één honderd Indische voedingsmiddelen [Composition of one hundred Indonesian foods]. *Bulletin van het Koloniaal Museum te Haarlem* No. 23. p. 68-73. Nov. [Dut]

• **Summary:** This is a detailed summary of information published in two fold-out tables by J. Sack, published in Bulletin No. 22 (March 1900) and No. 23 (Nov. 1900). Here, however, the 100 foods are listed in a different sequence—alphabetically by Indonesian name.

Soy-related foods are: 33 and 34. Soybeans (*Katjang kadelé; Glycine*). 35. Black soybeans (*Katjang kadelé itam*). 84. Japanese shoyu (*Soja; Japansche*). 90. Tempeh (*Tempé*).

Also discusses: 1. Agar-agar (*Eucheuma*). 36. Winged beans (*Katjang ketjipir; Psophocarpus tetragonolobus*). 43.

Peanuts (*Katjang tanah; Arachis*). 81. Sesame seeds (*Sesam-zaad; Sesamum*). Address: Assistent bij het Laboratorium, in het Laboratorium van het Koloniaal Museum te Haarlem [Netherlands].

1542. **Product Name:** [Light House brand Soy Sauce, Chiang, Fermented Tofu].

Foreign Name: Jiang-yu, Dou-jiang, Furu.

Manufacturer's Name: Yeo Hiap Seng.

Manufacturer's Address: Chang-chou, Fukien [Fujian] province, China.

Date of Introduction: 1900.

How Stored: Shelf stable.

New Product–Documentation: Letter from Alan Yeo. 1982. April, and YHS news release. 1990. Oct. Yeo Hiap Seng traces its origins to the year 1900 when the patriarch of the Yeo family, Mr. Yang (in the Amoy dialect, his name was pronounced Yeo Keng Lian) purchased a small company named “Hiap Seng” in the city of Chang-chou (pinyin: Zhang Zhou), Fukien (Fujian) province, China. “Hiap Seng” means “unite to succeed.” Yeo Keng Lian changed the company’s name to reflect his family’s ownership. He worked as a manufacturer and retailer of fermented soybean seasonings: soy sauce (*jiang-you*), Chinese-style miso (*dou-jiang*), and fermented tofu (*furu*). All three products were sold from day one under the “Light House” brand. By working together, the family did succeed. Their soy sauce, fermented in the traditional Chinese way in wooden vats and earthenware jars, was of superior quality and the business prospered. The original plant was located near the center of Chang-chou. In about 1920 a second plant was established in the eastern part of the city, and in the late 1920s a third plant was set up in the southern part of the city. Each of the three fermented soy products were produced in all three plants; the second and third plants also produced some pickled vegetables.

In 1935, during the Japanese invasion of China, when life was difficult and unsettled in Fukien province, Yeo Keng Lian sent his eldest son, Yeo Tian In, to Singapore to investigate possibilities there. The son founded the Yeo Hiap Seng Sauce Factory at 410 Outram Road, Singapore 3. He was joined shortly by the rest of the family.

Note 1. This is the earliest known commercial soy product (with a brand name) made in China.

Note 2. This is the earliest known commercial soy product made or sold by Yeo Hiap Seng. It is also the earliest record seen (Oct. 2001) concerning Yeo Hiap Seng.

1543. Boorsma, P.A. 1900. Scheikundig onderzoek van in Ned.-Indie inheemsche voedingsmiddelen. De sojaboon [Chemical analysis of some indigenous foodstuffs in the Netherlands Indies. The soybean]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 40:247-59. [18 ref. Dut]

• **Summary:** Contents: Literature review. Introduction

(Boorsma is living in Java). Chemical composition of indigenous soybeans: Table giving figures (based on Boorsma’s original research) for large black, large yellow, small yellow, unripe or immature black soybeans, soy protein (*eiwit in de soja*) or legumine, the oil (*De vette olie*), analysis of the ash, starch, the black soybean (*zwarte kedeleh*), use of soybeans in Java and Japan. Japanese soy preparations (*Japansche soja preparaten*): Shoyu (soja) made with koji, tofu, yuba, miso and natto. Indigenous (Chinese) preparations: Tempeh (*tempe kedeleh*), Indonesian soy sauce (*Ketjap–Bataviasche soja*), tofu and pressed tofu (*Tao-hoe en Tao-koan*), Indonesian miso and fermented black soybeans (*Tao-tjo en Tao-dji*).

Note 1. This is the earliest document seen (Jan. 2012) in any language that mentions “Tao-dji.”

Note 2. This is the earliest Dutch-language document seen (Jan. 2012) that mentions fermented black soybeans, which it calls *Tao-dji*.

Note 3. This is the 2nd earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls “Tao-tjo.” This is the earliest Dutch-language document seen (Feb. 2009) that uses the word “Tao-tjo” to refer to Indonesian-style miso.

The section titled “Japanese soy preparations” (p. 251-53) includes descriptions of koji, tofu, dried frozen tofu, yuba, miso and natto, as follows: Tofu is the Japanese name for a yellow-white to gray mass, which is prepared by macerating the finely ground up soybeans with water; an initial [natural] fermentation, which occurs alongside, creates enough acid to precipitate part of the protein. Then a short heating, causes as much fat as possible to bind to the protein, so that the liquid after filtration has a milky appearance. Through the addition of the highly alkaline magnesium concentrate, a by-product of making sea salt, the protein is precipitated, separated out by hand and shaped into cakes—which contain lots of water, protein and fat. As a side dish or in the preparation of soup, tofu is used a lot. To remove most of the water, it is common to freeze and dry the cakes in the sun afterward. Then they are called kori-tofu.

Yuba is an even fattier product obtained by the evaporation of the cream layer, that aggregates on the surface of the just mentioned bean milk.

In Japan, most soybeans are processed into cheese types, called miso and natto [which the author confuses in the following].

The cooked beans, that have been formed into a firm dough are fermented again with koji, kitchen salt and water. The temperature and the amount of kitchen salt, that one uses, affect the nature of the product [miso] and the speed of fermentation. Finally the mass is cooked for a long time in the brine, separated and shaped into cakes. The resulting vegetable cheese [natto] is then wrapped in bundles, of about 500 grams, of straw, and left to its own for a few days in a heated space; where, according to Loew [sic, Yabe 1895,

p. 438-39] the microbes attached to the straw cause an additional post-fermentation.

The reason for the somewhat extensive attention [in this writing] to the latter, is that the native soybean (katjang kedeleh) preparations of the Dutch East Indies are, more or less, patterned after the Japanese.

This excellent article contains a 4½-page description (the best seen to date, p. 253-58) of the traditional process for making soybean tempeh (*Tempe kedeleh*). The soybeans are parboiled, soaked in water for 2-3 days, drained, steamed in a steamer (*koekesan*), spread in a layer several centimeters thick on woven bamboo trays in shelves, and covered completely with banana leaves. They are then inoculated with the *bijang*, which is the “mold containing residues of a previous preparation.” This is mixed in here and there, then the trays are covered lightly with banana leaves so as to let in some air. “Rampant growth of the mold soon begins. In the evening the mass is molded a little and after two 24-hour periods one will obtain a coherent cake, which is cut into pieces and taken as is to the market.”

The cotyledons are stuck together by a dense mycelium, which has grown into a somewhat white covering. According to Prinsen Geerligs (cited above), the name of the mold is *Chlamydomucor Oryzae*.

During the two days of rampant mold growth, a radical conversion takes place in the components of the seeds; a lot of water, carbonic acid, and heat start to develop... A thermometer inserted into the fermenting mass shows a temperature 10-12°C above that of the environment.

As the preparation is finished, the banana leaves are taken away; the temperature drops slowly to normal, the rampant mold growth stops, and the mass dries out slightly. In this condition, the tempeh can be kept for several days without spoiling.

When the rampant mold growth is allowed to continue for a third day, simply by leaving the banana leaves in place, the conversion will soon become much stronger as noted by the formation of ammonia. Also poisonous products start to form; a monkey, given a little bit [of overripe tempeh] among his other foods that day was vomiting violently one hour later. Thus we should admit that the stories about poisonings caused by various sorts of tempeh [such bongkreik, made from coconut presscake] probably have some foundation. But there is little fear of this from soybean tempeh.

After microscopic examination, Boorsma concluded that Prinsen Geerligs and others were wrong in stating that (1) the mold hyphae penetrate and dissolve the hard soybean cell walls, and (2) cellulose is decreased during tempeh (*tempe*) fermentation. He studied the chemical and compositional changes at four stages during a 3-day tempeh fermentation; a table shows his findings. He observed that fats and soluble carbohydrates decreased substantially, while nitrogen decreased only slightly. He also discussed the hydrolysis of soybean lipids, and why tempeh is easier to digest than

whole soybeans.

Note 4. This is the earliest Dutch-language document seen (Sept. 2011) that uses the term *tempe kedele* or the word *tempe* to refer to tempeh.

Note 5. This is the earliest document seen (Jan. 2012) that describes how to make tempeh on a commercial scale.

On page 258 Boorsma briefly discusses Ketjap (which he called *Bataviasche soja*, or Jakarta soy sauce) and Tao-hoe and Tao-koan (tofu and firm tofu), based on information from Prinsen-Geerligs (for both) and Vorderman (for firm tofu). For each he gives a nutritional composition. On page 259 Boorsma briefly discusses *Tao tjo* and *Tao-dji* (Indonesian-style miso and fermented black soybeans). Note 6. This is the earliest Dutch-language document seen (Dec. 1999) that uses the term *Tao tjo* to refer to Indonesian-style miso or taucu / tauchō.

Note 7. This is the earliest document seen (April 2001) that contains the term *Tao-koan*.

Note 8. This is the earliest Dutch-language document seen (Jan. 2012) that contains the word *natto*.

Note 9. This is the earliest Dutch-language document seen (Oct. 2008) that mentions yuba, which it calls *Yuba* and describes as *een nog vetrijker product dat verkregen wordt bij uitdampen van de roomloog, die zich bij de zoeven genoemde boonenmelk aan de oppervlatte verzamelt.*”

Note 10. Boorsma was a Dutch naturalist who lived in Indonesia in the early 1900s. Address: Netherlands.

1544. Fraser, Hugh (Mrs.). 1900. A diplomatist's wife in Japan: Letters from home to home. 3rd ed. London: Hutchinson & Co. 709 p. See p. 190. Chap. XI. [Eng]

• **Summary:** See the 1899 edition, which contains the identical text but on different pages. Note: A revised edition, titled *A Diplomat's Wife in Japan: Sketches at the Turn of the Century*, edited by Hugh Cortazzi, was published by Weatherhill in New York in 1982. Mrs. Fraser died in 1922. Address: Tokyo, Japan.

1545. Illustrations of a Noda Shoyu (later Kikkoman) soy sauce brewery at the turn of the century (1900). 1900.

• **Summary:** This line drawing by Akiko Aoyagi, based on a Japanese color illustration, appears in *The Book of Miso*, by Shurtleff & Aoyagi (1976, p. 222-23; see next page). The color illustration (also shown) appears in Kikkoman Foods Inc. (1973, p. 10).

Important steps (and places) in the process of making shoyu are numbered as follows: (1) Wheat and soybean granary. (2) Soybean caldron. (3) Grinding and cracking wheat. (4) Steaming cracked wheat. (5) Koji incubation room. (6) Salt storeroom. (7) Moromi-filled vats. (8) Pressing shoyu from moromi. (9) Making kegs. (10). Branded kegs.

1547. VanBuskirk, J.D. 1900. Some common Korean foods. *Transactions of the Korea Branch of the Royal Asiatic Society* 14:1-8.

• **Summary:** Table 1, “Korean food products,” based on statistics published in the 1917 report by the Bureau of Agriculture of the Government General, shows Korean production in millions of bushels: Rice 61. Barley 25. Millet 19. Wheat 8. Beans and peas 18. Since exports and imports of foodstuffs are relatively small compared to the amount produced, and the number of animals fed is not large, “these figures should give us a good idea of the amount of food eaten.”

Rice is sometimes cooked with peas or beans (incl. soy beans) mixed in (called *pat-pap* or *kong-pap*). But the cooking takes longer and the beans are often not well cooked, and thus less digestible (p. 3).

The section titled “Bean and pea foods” (p. 4-5) gives the name of each food in Korean characters and discusses: (1) Bean curd (*tu-bu*), equivalent to Japanese tofu, is curded with the “concentrated mother liquid from sea water” [Jap. *nigari*]. The bean residue (*pi-ch'i*) left over from making tofu is also sometimes eaten. Bean curd “is not generally eaten without further preparation; it is commonly added to soups and stews and often made into omelets with eggs; another palatable food is made by cooking the bean curd for a short time in bean sauce (*chang*) and serving this with sesame oil, pepper and onions; it is called *to-bu cho-rim*. Bean curd may be eaten without further cooking served in sauce.”

Pea curd (*mook*) is similar to beancurd in composition but made from peas using a very different process.

“Bean Sauce (*kan-chang*) is somewhat like the Japanese ‘sho-yu’ but is more salt and not sweetened. Soy beans are thoroughly boiled, mashed, made into cakes and partially dried. These cakes (*me-ju*) are stored for months and allowed to mold and slowly ferment: when ripe they are broken up and soaked in salt water for a long time, then strained, the solid part being dried and used as a condiment (*toin-chang*). The liquid is boiled and the coagulated protein scum frequently removed; when sufficiently concentrated the liquid sauce is cooled and stored. This is the indispensable condiment for Koreans.

Note 1. This is the earliest English-language document seen (April 2012) that uses the term *kan-chang* to refer to Korean soy sauce.

“Another bean sauce (*ko-cho-chang*) is made by taking about equal parts of the fermented bean cakes, rice, and salt, with a large amount of red pepper, the mixture being soaked in a small amount of water till ripe. This too is very important as a condiment.”

Note 2. This is the earliest document seen (March 2009) that clearly mentions a Korean-style miso, which it calls “*ko-cho-chang*,”—today commonly called “red pepper sauce.”

“‘Kong-cha-ban’ is made by boiling beans in the bean sauce; they do not swell but are hard, brittle, and very salty. Sugar and sesame oil may be added when serving them.

“Sprouted beans (*kong-na-mul*) are very common. The beans are soaked in water and allowed to sprout. When the sprouts are quite long both beans and sprouts are boiled and served—sauce is generally added.”

Kim-chi, a fermented food made from cabbage or sliced turnips, is sometimes served with added bean sauce.

Among animal foods: “‘Mut-chim’ is dried fish soaked in water, then shredded; it is then soaked in bean sauce. Sesame oil and pepper are added; it is then allowed to stand for a short time.” Address: M.D..

1548. Zavitz, C.A. 1900. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 21:6-37. For the year 1899. See p. 9, 16, 31-32.

• **Summary:** A table (p. 7) shows the number of distinct experiments in agriculture, number of experimenters, and number of satisfactory reports each year for 1886, 1888, and 1891-99. For 1886 these numbers were 1, 12, and 8. For 1888 they were 1, 90, and 40. For 1891 they were 12, 203, and 126. For 1895 they were 15, 1699, and 513. For 1899 they were 23, 3485, and 739. Thus, during these 14 years the Union made remarkable progress.

A table titled “List of experiments for 1899” (p. 9), under “Grain crops” includes “Testing three varieties of Japanese beans—3 plots.”

In a long “List of experimenters” we read (p. 16) that the Japanese beans were grown by: (1) F.B. Doud, Branchton, Brant Co. (2) Simon Miller, Unionville, York Co. (3) Jno. D. Neilson, Thedford, Lambton Co. (4) O.A.C., Guelph,

Wellington Co.

In the section titled “Conclusions” (p. 31-32), table 15 shows the results (based on 4 tests) of testing three leading varieties of Japan [soy] beans: Medium Green (estimated value 72), yielded 2.6 tons/acre of straw and 22.4 bu/acre of grain. American Coffee Berry (estimated value 100), 1.4 tons/acre of straw and 21.3 bu/acre of grain. Extra Early Dwarf (estimated value 86), 1.1 tons/acre of straw and 12.7 bu/acre of grain.

The text immediately below the table explains: “The Soy beans [sic] (*Glycine hispida*) is a leguminous plant native of Japan and China, and ranks very high from a chemical point of view. The plant is an annual, erect in growth and branches profusely. There are a large number of varieties, nearly all of which are too late for the conditions of Ontario. The different varieties are distinguished largely by the time required for the plants to mature and by the color of the seed; the yellow, the green, and the black, being the most common. The Soy beans are used for green fodder, silage, hay, pasture, and as a soil renovator, and the grain is used as a feed for live stock. These beans have been used as a food for man from the earliest times in Japan and China, and more recently in the European countries. They are not used as a food by themselves, but are made into different complex forms, of which five are quite common among Japanese, namely: natto, tofu, miso, yuba, shoyu.

“Conclusions.

“1. The Soy beans gave very good results in the Union experiments in 1899.

“2. The medium green Soy beans which gave the largest yield of grain per acre of the three varieties tested over Ontario in 1899, is the latest of the three varieties.

“3. The American Coffee Berry was the most popular variety with the experimenters when yield, time of maturity, etc., were all taken into consideration.”

Note 1. This is the earliest report seen (Aug. 2002) in this periodical concerning soy beans. C.A. Zavitz is also secretary of the Ontario Agricultural and Experimental Union, and a member of its Committee on Agriculture (appointed at the last annual meeting).

Note 2. This is the earliest document seen (Jan. 2012) that mentions natto in Canada. Address: B.S.A., Director of Co-operative Experiments in Agriculture, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

1549. Speer, Robert E. 1901. The “morning calm” country—Korea: The country which Russia covets and which Japan must have. *American Magazine (The) (Frank Leslie's Popular Monthly)* 52(2):174-86. June. See p. 182.

• **Summary:** Page 182: “At the inns along the road you order your meal as ‘a table of rice,...’ It is brought on a low, pretty, four-legged table and set down on a floor before you. On it are rice, in a copper bowl, cucumber soup, an omelette, salt fish, shredded cabbage in salt water, salted shrimps, hard

bean sauce made out of the pressed bean extract, of which great quantities are said to be shipped from China and Korea as the basis of Worcestershire sauce. But perhaps this is a fable. There are many such told in Asia.”

Note: The term “hard bean sauce” probably refers to Korean-style soy sauce. But the meaning of the word “hard” is unclear.

1550. *Washington Post*. 1901. All palates pleased: Cosmopolitan variety in the Washington restaurants. July 14. p. 20.

• **Summary:** The section titled “Many Chinese eating rooms” notes the “The Flowery Kingdom is represented by a dozen or more restaurants in different parts of the city... The popular dish in these restaurants in the ‘chop-suey.’” The ingredients, which are listed, “are mixed by the Oriental chef and placed in a great bowl-shaped cooking utensil [a wok], in which a strange colorless oil is heating. A dash of inky-black liquid, Chinese ‘soy’ [sauce], is poured into the mixture, which fries and sputters during the continuous stirring; then five minutes’ cooking and the dish is ready.”

“‘Chow mein’ is a rare dish, and costs the consumer exactly \$1.” The ingredients “remain forever a mystery.”

1551. *Otago Witness (New Zealand)*. 1901. Notes on rural topics: The soja bean. Sept. 18. p. 8.

• **Summary:** From *Agricola*: “The soja bean is a fodder plant that is thought very highly of in Canada and the United States, where it has been in cultivation for about five to seven years [sic, 135 years]. This leguminous fodder plant is a native of China and Japan, and though I have not seen it growing I gather from various reports that it has many good points to recommend it. Mr. Kinsella referred to it recently in his paper upon ensilage, and mentioned it as one of the substitutes for maize when a heavy green crop is desired in a climate unsuitable for maize. It was said a year or two ago that the soja bean plant had gained much favor with farmers in America, not as the result of a boom, but entirely upon account of its merits, and it was strongly recommended a few years ago as a suitable crop for the dry climate of Australia, but I cannot say whether it has caught on there or not. So many flattering things have been said about it that one is inclined to think it may prove to be no better than some other wonderful plants that have been boomed with disastrous results.

“A few years ago the Massachusetts Experiment Station gave the bean a trial, and reported it to be the richest known vegetable substance, being four times richer than maize corn. A hundred pounds of the latter contains 4½ lb of fat, while the same weight of soja beans contains nearly 19 lb of fat. An American farmer says that he has threshed 100 bushels per acre on a rich river flat. Another says it is certainly a grand forage plant, and withstands drought or excessive moisture. It is said to be well adapted for making ensilage, or

silage, because it gives a heavy bulk of growth and being of such an oily nature is difficult to make into hay as it cures—that is, dries into hay, very slowly. It appears there are two varieties—the mammoth [Mammoth] and the dwarf [Dwarf]—and both are said to be so hardy as to be able to hold their own against flood, frosts, drought, grass and weeds. The bean itself is small, no larger than the vetch seed, smooth skinned, but not so hard as the horse bean. This bean, ground fine, is largely used in China and Japan in making the sauce called ‘soy.’”

Note: This article is largely compiled from other articles previously published in New Zealand.

1552. Duncan’s (John) Sons. 1901. Lea & Perrins’ Sauce: The original and genuine Worcestershire (Ad). *American Kitchen Magazine* 16(1):p. xxv. Ads section at end. Oct.

• **Summary:** A ¼-page ad. “Beware of imitations. All successful cooks use Lea & Perrins’ Sauce to get the most delicious flavor for soups, fish, meats, gravy, game, salads, etc. Signature on every bottle—Lea & Perrins.”

An illustration shows a French-looking chef, with a pointed mustache, goatee, and white top hat (toque), in a kitchen pouring Worcestershire sauce from a bottle into a spoon over a dish on a plate. Address: New York.

1553. *New York Times*. 1901. From city highways and byways: How to make chop suey. Nov. 3. p. SM7.

• **Summary:** “W.E.S. Fales, who for several years was Vice Consul at Amoy, China, is a cook of superexcellence. Said he: ‘There is a growing taste on the part of New Yorkers for Chinese dishes. Chinese restaurants have sprung up all over the city, and they are well patronized, especially at night. The dish mostly in demand is chow chop suey, a delicious concoction, if properly prepared.’”

The recipe concludes: “The See Yu sauce [Mandarin: Shiyou or Shih-yu is fermented black soybean sauce] which is eaten with this delectable dish can be procured at any Chinese grocery.”

1554. D.A.R. 1901. Katjang-Kedelihpraeparaten [Soyfoods]. *Orgaan van de Vereeniging van oud Leerlingen der Rijks Landbouwschool (see Landbouwkundig Tijdschrift)* 13(161):242-45. Dec. [Dut]

• **Summary:** The author wrote an article in the April issue of this magazine about soybean cultivation. Now he will discuss how soybeans are used to make foods. As mentioned in the previous article, soya beans as such are not good to eat, even boiled or roasted; they need to be processed so as to digest the indigestible protein; then this protein can be absorbed by the digestive enzymes of the stomach and intestines.

As Japan is the soya country, we will start with the product that is most popular there, soy sauce, which has also earned its place in Europe. It is made from equal parts of roasted soybeans and wheat, 1-3 parts water, and much

salt. The koji is fermented for a long time. Prof. Dr. M. Fesco [sic, Fesca], who provided much of this information, said it takes about 20 weeks to 5 years. The longest and slowest fermentation gives the best quality product. In Japan, every housewife makes her own soya sauce and there is competition for the best homemade soy sauce. Late-ripening protein-rich soybeans, called shoyu-mame, are used. In Java, the residue from soy sauce is used a lot, along with peanut presscake, for fertilizing sugar-cane fields.

In the Netherlands Indies, ketjap [Indonesian-style soy sauce] is made solely by the Chinese. Also called Tao-yoe, it is prepared by covering cooked soybeans with hibiscus (*waroe*) leaves. The age and variety of the leaves is very important. The mold that grows produces substances [enzymes] that digest legumin [soy protein]. More of the process is described.

Note 1. This is the earliest document seen (Feb. 2009) that contains the term Tao-yoe. H.T. Huang (e-mail of 25 Feb. 2009) states: “Tao-Yoe sounds like Cantonese for *Douyou* (pinyin) or *tou yu* (W.-G.) which in Mandarin mean soy sauce, and which first appeared in about 1750 in the *Xingyuan Lu* (*Hsing Yüan Lu*). See Huang 2000, p. 371-73.

Star anise (*Hades manies*) is also added to Indonesian soy sauce. Some Chinese have gained a reputation for their knowledge of the different additives (*boemboengs*). 61. kg of soybeans (1 gantang or 10 katties) can yield 3 bottles of number 1 ketjap (which retails for 50 Dutch cents per bottle), plus 3 bottles of 2nd extraction ketjap (each 40 cents), plus 3 bottles of ketjap no. 3 (which is little better than salt water with a light brown tint; each 20 cents).

The Japanese also use soybeans to make tofu (*tofoe*). Precipitated with magnesium chloride, it is a greyish-white tough, or sometimes yellow product. Although containing 90% water, it is a concentrated food. A table (based on analyses by E. Kirch [sic, Kinch] of Tokyo) shows the composition of tofu and kori-tofu; the latter is made by freezing tofu then thawing it. Tofu is a good product for vegetarians, but beware than it can act as a laxative because of the magnesium chloride.

Note 2. This is the earliest Dutch-language document seen (Sept. 2011) that uses the term “Katjang-Kedelihpraeparaten” in the title to mean “Soyfoods.”

Note 3. This is the earliest Dutch-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls “kori-tofu.”

1555. Lafar, Franz. 1901-1907. Technische Mykologie. Ein Handbuch der Gaerungsphysiologie... Zweiter Band: Eumyceten-Gaerungen [Technical mycology. A handbook of fermentation physiology... Vol. 2: Eumycetic fermentations]. Jena: Verlag von Gustav Fischer. x + 507 p. (p. 365-871). See p. 638, 640, 674-76. Illust. No index. 25 cm. Foreword by Prof. Dr. Emil Chr. Hansen (Carlsberg-Laboratorium, Copenhagen). [5 ref. Ger]

• **Summary:** This book is continually paginated with Vol. 1, so the first numbered page is 365. Part 15 (chapters 56-58) is titled “Morphology, physiology, and classification of the technically important higher Ascomycetes and related forms” (p. 627-704). Chapter 56, by Prof. Dr. Carl Wehmer (*Dozent an der Technischen Hochschule zu Hannover* [Germany]), “Morphology and classification of the families of the Aspergilli (*Aspergillaceen*)” discusses (p. 627+): Eighteen illustrations of *Aspergillus* conidiospores (p. 632-33). *Aspergillus Oryzae* (Ahlburg) Cohn (= *Eurotium Oryzae* Ahlburg), which is widely used in Japan to make saké, soy sauce (*Soja-Sauce*), and miso (p. 638-39, with illust.). *Aspergillus Wentii* (Wehmer), which is used in Java to make Tao-Yu (Chinese-style soy sauce) using cooked soybeans covered with *Hibiscus* leaves (p. 640).

Chapter 57, also by Prof. C. Wehmer, titled “Chemical effects of the Aspergilli (*Aspergillaceen*),” discusses (p. 674+): Saccharification of starches, diastase and diastatic enzymes, Takamine’s research using *Aspergillus* to make diastase (Takadiastase) and its efficiency compared with similar enzymes of different origins, koji extract which contains amylase and other enzymes, use of *A. oryzae* to make saké, shoyu, and miso (p. 675-76).

This book also discusses: Zygospor production (p. 379). Sporulation and *Aspergillus* (p. 387-89, with illust.). Morphology and classification of the Mucorales, zygomycetes, zygosporae (p. 420-21). The genus *Mucor*, sporangia, *Rhizopus* (p. 424-27, illust.). Mucorales used in the spirits industry, *Mucor rouxii*, Chinese yeasts (p. 436-37). Ragi/raggi and tapé (*tapej*) (p. 441). Decomposition of proteins and their derivatives, protease (p. 690-91). Film-forming surface yeasts and their accompanying phenomena, *Mycoderma* (p. 732-33). Invertase (p. 828). Other enzymes discussed in this chapter include maltase, melibiase, lactase, trehalase, raffinase, and amylase. Address: Prof. of Fermentation Technology and Bacteriology at the Imperial-Royal Technical College at Vienna [o. ö. {obiger Oesterreichischer} Professor der Gaerungsphysiologie und Bakteriologie an der k.k. {kaiserlich-königliche} Technischen Hochschule zu in Wien].

1556. Bie, H.C.H. de. 1901. De landbouw der inlandsche bevolking op Java [The agriculture of the indigenous people in Java]. *Mededeelingen uit 's Lands Plantentuin (Buitenzorg)* No. 45. 143 p. See p. 97, 99, 138-43. [Dut]

• **Summary:** The soybean is discussed in the chapter titled “Cultivation of crops other than paddy rice: Cultivation of secondary crops (*Palawidja*).” Soya bean is one of the secondary foods served with rice, but it is mostly used to make soy sauce and tempeh (*tempe*). One variety of soybean, which originally came from Japan, is widely grown as a second crop on the wet rice fields (*sawahs*), and it is easy to cultivate at altitudes of 1,200 to 1,500 feet above sea level. It is called *katjang kedele* in Central and East Java, but

katjang djepoen in Sunda or West Java (*de Soedalanden*). A description of the plant and the method of cultivation in Java is then given. It is planted much more on wet rice fields than on dry (non-irrigated) fields (*tegalans*) near the rice fields used for vegetables and secondary crops. Usually the soybean seeds are planted right after the paddy stumps have been cut away, but sometimes they are planted just before or during the paddy harvest, and pressed into the earth under the feet of the paddy cutters. They are rarely weeded, excepted when the crop is suffocated by tall weeds. At harvest, the plants are pulled completely out of the ground and bound into bunches. At night they are stored under a specially-constructed roofed shelter in the field, and during the day they are sun-dried on bamboo structures or on the ground. This takes at most 3-4 days, if the plants are really ripe and the weather is good, after which the bunches are put on bamboo mats in heaps and threshed. To protect the seeds from damage, one preferably uses piece of banana tree branches which still have woody veins. The woody plant stems and branches are removed together with the soybean pods and burned on the sawah fields. Poor people first sort out the pieces good enough for fuel and take these home. Immature green leaves are fed to animals. Sometimes soybeans are planted on the dikes of the paddy fields at the same time as or a few days later than the paddy rice. The fresh seeds from this harvest are then planted in the sawah fields after the paddy is harvested. Soybeans planted in this way are called *katjang apitan*.

There are two varieties of soya: one has an ivory yellow seed coat and the other is black. The latter is used almost exclusively to make soy sauce; the former to make pastry and condiments for rice or as a vegetable (*sayur; sajoer*). Soya is cooked with salt in the green pod and eaten as a snack.

The indigenous people do not occupy themselves with the production of soya (soy sauce) or *ketjap* or other products made from soybeans such as *taoetjo* [*tao tjo, tauco, taucho* = Indonesian style miso], *taoehoe* [*tao hoe, tahu* = tofu], *taoekwa* [*tao koan, taokoan or takoa* = fermented tofu], and *taoetji* [*tao dji, tausei* = fermented black soybeans]. The work is too involved and takes too long before the product is ready to be sold. Most people are too inexperienced and there is not enough of a market for the product.

The only food that most people make out of soybeans is tempeh (*témpé*), which plays the same role in Central and East Java as does ontjom in Sunda or West Java, and is prepared similarly. The tempeh-making process is described. It takes place indoors, out of the light. It is sometimes cut into smaller pieces. It is usually eaten pan-fried after being soaked in a solution of tamarind and salt. It is also cooked with vegetables.

Most soybean seeds are sold to the Chinese, who export them or process them to make soy sauce and other products. To make soy sauce, the seeds are roasted to aid in removing

the hulls. Some people pound the seeds instead. They are cleaned, boiled in water, drained, spread on flat bamboo trays (*tampah* or *njiroe*) and dried daily for a week in the wind. They are washed again then soaked for 30-40 days in salt water which has been boiled then cooled. This mash is mixed thoroughly and strained through a cloth. To the black liquid is added a boiled and cooled mixture of cane sugar and water, then the mixture is boiled until its volume is reduced by 20%. If the solid residue removed by filtering still tastes salty, it is put into water, kneaded and strained again. A sugar solution is added and all is boiled down as before to make second-grade ketjap.

To make *taoetjo* (*tauco*, *taucho* or Indonesian-style miso), the soybeans are soaked in fresh water, the hulls are removed, the seeds boiled and spread on bamboo trays to cool. Rice or glutinous rice flour is roasted until golden brown, then mixed with the seeds and set aside for 2-3 days to ferment between hibiscus (*waroe*) leaves on flat trays. When the mass has molded, it is sun dried for a few days until very hard. Note: This is the soybean koji used making *taucho*.

Remove the leaves and put this mass of soybean koji into salt water. On the third or fourth day, add some yeast (*gist*) and some cane sugar syrup. Continue the soaking and fermentation in salt water for 2-3 weeks. Place it [in crocks] daily outside in the dew, taking care that no rain gets on it.

To stimulate the fermentation, take steamed rice or glutinous rice that is only half cooked. Add *ragi* starter and allow it to ferment for 2-3 days until a sweet, alcoholic flavor develops. This kind of fermented rice is called *peujeum* in West Java, or *tapé* in Central or East Java. Now add this fermented rice to the soybeans in salt water to enhance both the fermentation and the product.

After 3-4 weeks the soybeans should be very soft like porridge; then the *taucho* is ready to be used. It is eaten raw with cooked or raw vegetables, or mixed with meat or rice dishes; other condiments are also made from it.

Another product that the Chinese make out of soybeans is tofu (*tahoe* or *tauwhoe*). Soaked soybeans are ground and the puree is mixed with fresh water. Then a milky liquid (*melkachtige vloeistof*) is filtered off and coagulated. The Chinese use a coagulant called *tjiogo* (gypsum or calcium sulfate), which is specially imported from China and is not always available, even to the Chinese apothecary. It is first burned, then cooled before being added to the milky liquid. The white mass which is precipitated is called tofu. A similar product can be made from mung beans. Address: Batavia (Jakarta), Java.

1557. Chamberlain, Basil Hall; Mason, W.B. 1901. Handbook for travellers in Japan: Including the whole empire from Yezo to Formosa. 6th ed., revised. London: John Murray; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ltd. ix + 577 + 94 p. "With 28 maps and plans and

numerous illustrations." Index.

• **Summary:** This 6th edition is quite similar to the 1899 5th edition, but with some important changes, and 41 pages of additional advertisements at the rear. In the concise English-Japanese dictionary (p. 21-22): Beans—mame. Soy—shôyu, shitaji.

Eastern Japan: Chôshi (Inn, Daishin): "Chôshi is noted for its soy, the manufacture of which may be seen at Tanaka Gemba's establishment, the oldest and largest, which supplies the Imperial Household."

In the ads at the back is a full page advertisement (p. 49) for "Higeta Soy, manufactured by G. Tanaka, Chôshi, Shimôsa, Japan." An illustration shows the Higeta trade mark. "Higeta Soy dates from 1615 A. D. (Second year of Genwa).

"Higeta Soy is honoured with the distinguished patronage of the Imperial Household.

"Higeta Soy was awarded the superior medal at the World's Fair at Chicago [Illinois], and gold and other superior medals by the Home Exhibitions.

"Higeta Soy has an excellent flavour and is very nutritious, being made of the best kind of bean, wheat, rice, and table salt." A table gives a nutritional analysis.

"Higeta Soy, not being acrid, is suited for ladies and children.

"Higeta Soy can be preserved even in hot countries, if kept in a dark place. This fact has been proved by many years' experience." Detailed directions for use are given.

Note: This is the earliest document seen (Feb. 2012) that mentions "Higeta" in connection with soy sauce. Address: 1. Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo; 2. Corresponding member of the Royal Scottish Geographical Society, and late of the Imperial Japanese Dep. of Communications.

1558. Kander, Lizzie Black. comp. 1901. The "Settlement" cook book: Compiled by Mrs. Simon Kander,... Containing many recipes used in "settlement" cooking classes,... 6th ed. Milwaukee, Wisconsin. xxv + 470 p. Illust. Index. 20 cm.

• **Summary:** Worcestershire sauce is used as an ingredient

in about 20 recipes. The first 4 of these are: Tartar sauce (p. 92). Baked trout (p. 99). Steak for the oven (p. 115). Stuffed peppers No. 4 (p. 168).

The word “vegetarian” appears in the title of two recipes: Nut butters for sandwiches–vegetarian (p. 240). Vegetarian chicken (p. 240).

Peanut butter is used as an ingredient in Cheese mixture for sandwiches (p. 236). Peanuts are used in at least 25 recipes; almonds are used in 6.

This is a “charity cookbook” published “for the benefit of the ‘settlement,’ 601 Ninth Street, Milwaukee. Price: \$1.20 postpaid.” Address: Milwaukee, Wisconsin.

Address: Hannover, Germany.

1560. Faber’s. 1902. Faber’s (Ad). *San Francisco Chronicle*. Jan. 17. p. 14.

• **Summary:** “Worcestershire sauce—2 bottles 30¢. Lea & Perrins’ and Marshall’s.”

1561. Makino, T. 1902. Observations on the flora of Japan. *Botanical Magazine (Tokyo)* 16(179):34-35. Jan. 20. [42 ref. Eng]

• **Summary:** Gives numerous early references concerning *Glycine Soja*, *Dolichos Soja* Linn., *Soja hispida* Moench, *Glycine hispida* Maxim., *Soja japonica*, *Sooja japonica* Sieb., and *Daidso*. Habitat: Japan, widely cultivated, having various forms. There are not any wild forms in Japan. “Soja” was derived from “Shoyu” or Soy, a kind of sauce made of boiled seeds of this plant and fermented wheat, commonly used by Japanese.

Glycine (Soja) ussuriensis. *Glycine Soja*, *Soja angustifolia*, *Johnia javanica*, *Glycine javanica*, *Phaseolus lathyroides*. This species is never in cultivation and the seed grains are useless hence the specific name “Soja” given to it is very inappropriate. Probably a variety of the preceding species.

1562. Boehmer (L.) & Co. 1902. Wholesale catalogue: 1902-1903. Yokohama, Japan. 44 p. Illust. 26 cm. [Eng]

• **Summary:** The section titled “Plants and seeds of economic value” (p. 30+) gives the first detailed information seen (Dec. 2004) in Japanese seed catalog about the different varieties of soy-beans as follows: In large letters near just below the section title we read: “We are in a position to fill special contracts for the following food-, fodder-, vegetable-,

and other plants, which are used in the textile and other industries.”

After describing 3 types each of rice and millet the text continues: “Soy-bean. *Dolichos soya* L. Jap. nom. [Japanese name(s)] *Daidzu* and *O-mame*. These Jap. soybeans have been well acclimatized in Central Europe and there yield very fine crops.” Three types, based on seed color, are described:

(1) “The white Soy-bean. Jap. nom. *Shiro Mame*. The following varieties are recommendable: Five-months bean. *Goguwatsu Mame*. Ripening in July. Summer bean. *Wase* or *Natsu Mame*. Small seeded, early. Middle-late bean. *Nakate Mame*. Larger in seed than the foregoing. Late bean. *Okute Mame*. Bullet bean. *Maru Mame*. Very valuable as horse feed. Gun bean. *Teppo Mame*. This kind is principally used to make the famous *Soyu-sauce*” [*shoyu*, soy sauce].

Note: This is the earliest document seen (April 2012) that uses the term “Soyu-sauce (regardless of capitalization or hyphenation) to refer to soy sauce.

(2) “The black Soya-beans. *Kuro Mame*. Round middle-late bean. *Kuro-Teppo Mame*. Green *Mame*. *Nicuri* [*Nikuri*] *Sei*. Green throughout. Pale green–*Kaje* [*Kage*] *Mame*. Round seeds.”

(3) “Speckled Soya-beans. Jap. nom. *Fuiri Mame*. Green and black bean. *Kuro-Kura Kake-Mame*. Green and brown bean. *Aka-Kura Kake-Mame*. Flat and long bean. Yellow-green bean. *Fuiri Mame*. Marked with many dark spots.”

Other food legumes on this page include: *Sword bean*–*Dolichos incurva*, *nata mame*. Ray-fruited dwarf bean–*Phaseolus radiatus*, *adsuki* [*azuki*], small pealike bean of very fine fine flavor and therefore very popular. *Phaseolus typicus*–*Oku Adzuki*–Very large seeded bean. *Phaseolus pendulus*–*Kuro Adsuki*–Black fruited. *Shiro Adsuki*–White fruited. *Tsuru Adsuki*–Twining bean. *Phaseolus subtrilobatus*–*Bundo* [*Yayenari*], bearing each from 4 to 6 hanging pods. Also (p. 31): *Pueraria Thunbergi*–*Kudzu*.

Note 1. The above information on soybean varieties and other economic plants appears to have been taken in large part from any of three books about Japan by Johann J. Rein published from 1884 to 1889, especially his 1889 book.

Photos show: (1) A characteristic Japanese garden, with many stone lanterns and trees, and people walking along the stone pathways around the central pond. (2) A Japanese woman seated, packing bulbs into baskets. (3) The company’s packing department, showing many Japanese and European workers and trays of bulbs. (4) A bamboo-walk in Japan.

Note 3. The title page of this catalog states:

“Nurserymen & exporters. The only European nursery firm established in Japan. Established in 1882. Cable address: *Boehmer Yokohama*.” It suggests that the company’s main business is in “lily-bulbs, iris, peonies, and other Japanese flower roots.” Page 1 states that this is the first Boehmer catalog in which “photo-arto-prints” appear. Page 3 notes:

"Prices are quoted and will be charged in Yen and Sen, 1 ¥ = 100 sen. The value of the Yen is subject to slight fluctuations, but about equal to 0.50 Gold \$; 2 shillings; 2 Mark; 1 Rubel [sic, Ruble]; 2.50 Frs. [French francs]; 1.20 Fl. [Florins, probably Austria-Hungary], etc." Address: Nos. 5 and 28 Bluff, Yokohama, Japan.

1563. *Vegetarian Messenger (Manchester, England)*. 1902. Price list. Jan. p. 12.

• **Summary:** Lists prices for foods; beans, peas, lentils; prepared foods; biscuits; Plasmon; tea and coffee substitutes; nuts; jams; bottled fruit; oils; butter and lard substitutes [margarines and shortenings]; soaps; and cookery appliances, etc.

All are available for purchase from the Vegetarian Society's Food Stores at 19 Oxford St., Manchester, England.

The foods in the category "Prepared foods" are of special interest, since most are meat alternatives and would soon be called "health foods." Those known to be made (or imported) by the International Health Association Ltd. (renamed Granose Foods Ltd. in 1926). are followed by an asterisk: Dr. Nichol's Food of Health, Dr. Allinson's Food (packed in tins), Fromm's Extract (jar), Maggi's Soups (packet), Granose Flakes* (packet), Granose Biscuits* (packet), Avenola (packet), Bromose* (tin), Falona (tin), Meatose*, Nutmeatse* (tin), Vejola (tin), Nutvejo (tin), Malted Nut Caramels (tin), Nut Butter* (tin), Carnos, Golden Grain Meal (packet).

Cookery appliances include several Nut Mills, and "The Pitman Spoon."

Note: There are apparently no foods made by Pitman sold at this vegetarian store.

1564. *San Francisco Chronicle*. 1902. Rough weather fatal to cargo: Liquids in the hold of the *Thyra* break and much damage results. Feb. 9. p. 9.

• **Summary:** "San Diego. February 8.—The steamer *Thyra* of the California and Oriental line, which has been discharging cargo here since Thursday, sailed at noon to-day for San Francisco. Captain Halvorsen reported" that he had run into some severe weather on the trip from the Orient and that when that portion of the hold containing the Chinese goods was opened, it was found that "large amounts of 'soy' [sauce] and Chinese wine had been broken by the tossing of the ship, and quite a large amount of tapioca flour and other products of the Orient had been destroyed by the spilled liquids. The steamer has about 3,500 tons [of goods] for San Francisco, and some of it will doubtless have met the same fate as the Chinese cargo intended for here.

"The damaged and destroyed freight is piled up in the warehouse here and will have to await the decision of the port warden or insurance adjuster as to its value."

1565. Ono, Ryoza. 1902. *Shôyu-chû yori sekisetsu kesshôtai*

ni tsukite no jikken [Investigation of the crystallized substance separated from shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 245. p. 649-54. July. [Jap; eng]

• **Summary:** The author examined the crystals that separate from shoyu during the winter; he reports on the cause and prevention of such separation.

1566. *GVT Grand Valley Times (Utah)*. 1902. How chop suey is made: Famous Chinese delicacy that is becoming popular dish in the United States. Oct. 10. p. 3.

• **Summary:** "Chop suey, the national dish of China for at least 25 centuries, bids fair to become a standard food in this country. There are some 60 Chinese restaurants scattered over the different boroughs of New York whose chief attraction is this popular composition, and several American restaurants have endeavored to take advantage of its popularity by adding it to their daily bill of fare. There is a ridiculous amount of mystery concerning this dish. It is simple, economical and easily made, according to the *New York Post*. The general formula (a long recipe in sentence-style format) is as follows: One pound of moderately lean pork..."

"Some Chinese cooks use the Indian soy, which is sweeter. The effect can be imitated by adding a teaspoonful of Worcestershire sauce and another of brown sugar or a teaspoonful of molasses. An agreeable modification results."

"In Chinese restaurants the cost varies from 10 to 25 cents a plate.

Note: This "Indian soy" is clearly sweet soy sauce, which means it is different from the soy sauce made in Japan. Perhaps "Indian soy" here refers to the sweet soy sauce (*ketjap manis*) made in the Dutch East Indies, today's Indonesia. However *ketjap manis* seems to be a recently-developed seasoning and recently-coined term; it is first mentioned in a document in 1960 (as far as we know, as of April 2012).

1567. Hills & Co. 1902. About-Turkeys (Ad). *Hartford Daily Courant (Connecticut)*. Nov. 21. p. 18.

• **Summary:** Their long list of "Imported and domestic sauces" begins: "John Bull, Mushroom, Beef Steak, China Soy, Essence of Anchovies, Worcestershire Sauce,..."

1568. *Washington Post*. 1902. Like oriental cuisine: Many Americans eat at Chinese restaurants. Nov. 30. p. 28.

• **Summary:** The ordinary bill of fare at Chinese restaurants in this city is bird's nest soup, or birds' nests a la Chinois; chop suey, chow fou, yet quo mien, chow mein, fou young dong and kee heong chan."

"Yet quo mien is perhaps the most popular item on the menu." "Chop suey stands next in order of popularity." The ingredients, which are listed, are hashed fine and fried in peanut oil. For cooking, the Chinese, being good Buddhists,

never use lard or any other animal fat, employing in their place all manner of vegetable oils. With each dish of chop suey the waiter brings a small dish, such as is used for butter in American restaurants, filled with a peculiar brown sauce. This [soy sauce] is made in China of fermented beans, rice, and cabbage [sic], and is a great appetizer.

"Many years ago a shrewd Englishman who had been in the East India service took this sauce, and by adding certain other ingredients, evolved the famous Worcestershire sauce, which to-day is found on the tables of every hotel in the civilized world.

"It is surprising what the Chinese are able to make of beans. In the Heavenly Kingdom 'bean curd' is as staple an article of diet among the masses as bacon in this country. It is made by grinding beans moistened with water between two heavy stones, the product resembling cream. It is then taken, strained, flavored, and subjected to several processes known only to the makers, and finally pressed into long cakes like castile soap, in which shape it is cut up in slices and sold."

"There the ordinary bill of fare is bird's nest soup, or bird's nest a la Chinois; chop suey, chow fou, yet quo mein, chow mein, fou young dong and kee heong chan."

1569. Law, James Thomas. comp. 1902. Law's grocer's manual: A practical guide for tea and provision dealers, Italian warehousemen, chandlers, drysalters, bakers, confectioners, fruiterers, and general store-keepers. 2nd ed. London: Gilbert & Rivington, Ltd. 1185 p. See p. 872-73 (soy), 957 (torfu [sic, tofu] or bean curd). Illust.

• **Summary:** "Soy.—This thick, brown liquid sauce, or ketchup, is not made from black beetles, as some humorous connoisseurs persist in suggesting, but from Soja beans, a kind of black beans, variously known as *Glycine*, or *Dolichos soja*, *Soja hispida*, etc., or Soy-beans, or peas...

"Soy is generally made by boiling the beans till soft, and then mixing them with an equal weight of crushed wheat or barley and salt. After covering and leaving this mixture about 24 hours to ferment, other ingredients are added, and the whole is then stirred daily for about two months. Finally, it is squeezed, and the liquid is filtered, and preserved in wooden vessels, in which it gradually brightens and clears by long keeping. It should be thick, but of a clear brown colour, not too salt or sweet, and of agreeable flavour. When shaken in a glass bottle, it should leave a coat on the surface of a bright yellowish-brown colour.

"The manufacture of China soy and 'bean-curd,' or 'cheese' (see *Torfu* [tofu]), is said to be one of the most flourishing in the prefecture of Wenchow, where there are five large factories making them from the Chin-Kiang white beans, sea-salt, flour, and water.

"The ordinary batch there is 123 1/3 lbs. of beans, which are first washed and boiled for six hours in a large cauldron, after which the fire is withdrawn, and the beans are allowed to simmer and cool for about 18 hours, after which they are

ground to a thin paste with the water in a mill. The 'broth' is then drawn off and kept for use later on in the process. To the mash is added 213 1/3 lbs. of flour. After being well mixed it is filled into large shallow baskets of bamboo, each of which is then fitted on a wooden frame. These frames are piled one on top of another to a great height, and are exposed in the sun for five or six days, or in cold weather for seven or eight days, until the mash gives out the proper effluvium and turns yellow. The mass is next emptied into a large vat, and on it is poured a quantity of clarified brine, which has already been mixed with the bean 'broth' above mentioned. It is all then beaten up together and left to ferment. After three months or so, a yellow oil appears, and to this oil more brine is added (to each 667 lbs. of oil, 2,400 lbs. of brine), and about 10 per cent. of salt to thicken it. The result is 'China Soy,' of which there are about six different qualities, the best being about five times the value of the lowest.

"English soy.—An inferior article sometimes made in this country by simply saturating molasses, or treacle, with common salt. The better sort is made as follows:—Take 1 gallon of malt syrup, 5 lbs treacle, 4¼ lbs. of salt, 1 qt. [quart] mushroom juice; mix with a gentle heat, and stir until thoroughly blended, and in a fortnight [14 days] the clear portion may be drawn off as a very fair imitation soy.

"Soy forms the chief base of nearly all the bottled sauces and relishes in the market.

"Apply to C. Windschuegl & Co., 1 Leadenhall Street, E.C.

Note: The entry for tofu is listed separately in this bibliography (Law 1902) as a "document part."

The first edition was published in 1896. A third edition was published in 1931 in London by W. Clowes & Sons (xiii + 774 p.; edited and revised by C.L.T. Beeching). A fourth edition was published in 1950 in London by William Clowes & Son (xv + 814 p.; edited and revised by W.G. Copsey).

1570. Law, James Thomas. comp. 1902. Law's grocer's manual: A practical guide for tea and provision dealers, Italian warehousemen, chandlers, drysalters, bakers, confectioners, fruiterers, and general store-keepers. 2nd ed.: Tofu (Document part). London: Gilbert & Rivington, Ltd. 1185 p. See p. 957. Illust.

• **Summary:** "Torfu [sic, tofu] or Bean Curd.—(See also Soy.) A Japanese food product which is said to approach more nearly to animal food than any other vegetable. It is made by powdering the yellowish-white beans grown chiefly in the North of China and the Himalayas. The powder, or meal, is impregnated with brine, and undergoes elaborate treatment until coagulated. and preserved in a mass. It contains about 1-5 [one-fifth] its weight of fat and 2-5 [two-fifths] of nitrogenous matter, and when wanted for use is cut up into slabs which may be fried or toasted, and saturated with soy [sauce], so as to taste like a sweet bread, or it may be divided into small squares for soups, sauces, etc."

The first edition was published in 1896. A third edition was published in 1931 in London by W. Clowes & Sons (xiii + 774 p.; edited and revised by C.L.T. Beeching). A fourth edition was published in 1950 in London by William Clowes & Son (xv + 814 p.; edited and revised by W.G. Copsey).

1571. Neuville, Henri. 1902. Les ferments industriels d'Extrême-Orient (Biologie, emploi et produits) [Industrial fermentations of East Asia (biology, utilization, and products)]. Paris: Masson et Cie. 192 p. 19 cm. Encyclopédie Scientifique des aide-memoire publiée sous la direction de M. Léauté. [60+ ref. Fre]

• **Summary:** Chapter 4, titled "Food products obtained by fermentation of amylaceous [starch-like] substances," discusses the following fermented soyfoods and related products: Shoyu and miso, koji, brem, and ontjom. Contains a good bibliography. Neuville lived 1872-. Address: Préparateur au Muséum d'Histoire Naturelle.

1572. Rorer, Sarah Tyson. 1902. Mrs. Rorer's new cook book: A manual of housekeeping. Philadelphia, Pennsylvania: Arnold and Company. 730 p. Illust. Index. 21 cm.

• **Summary:** The soy bean is mentioned in two special sections: Botanical classification of our common vegetables (p. 281): "Leguminosae: Pulse family. Soy bean, peanut, kidney bean, string bean, lima bean, black bean, pea, chick pea, lentil, St. John's bread."

Soy bean (*Glycine hispida*, Maxim.) (p. 334-35): "Soy beans are grown principally in China where they form an important article of food; in fact, they are the richest of all in food constituents. It is also grown to a considerable extent in India [sic], where it is mixed with rice. This bean ranks high in fat and albuminoids and is their only muscle-making food. It has more than meat value. By the Chinese it is made into cheese [tofu], pastes [jiang], and sauces [Soy]. Soy sauce is used by them on all meat and fish dishes. For the English and Americans it forms the foundation for such sauces as club-house and Worcestershire."

Note 1. This is the earliest document seen (Feb. 2012) stating clearly that soy sauce is used as an ingredient in making Worcestershire sauce.

"Soy is an agreeable seasoning to creamed meat dishes and a very pleasant addition to French salad dressing. It can be purchased in jugs at any Chinese shop, or at the American wholesale druggists by measure." A table (based on Church) gives the composition of the soy bean: Albuminoids, etc. 35.3%. Fat 18.9. Starch and dextrin 12.5. Sugar 12.0. Cellulose 4.2. Water 12.5. Mineral matter 4.6.

"Soy" [sauce] is used as an ingredient in 12 recipes: Japanese fish sauce (p. 228). Japanese eggs (p. 253). Sautéd [sic Sautéed] celery ("When ready to serve sprinkle over two tablespoonfuls of soy or mushroom catsup, and send at once to the table," p. 389-90). Ginger chutney (p. 435).

Japanese dressing (p. 442). Celery salad ("This is greatly improved by adding a few drops of Worcestershire sauce, soy or mushroom catsup," p. 451). Bobotee salad (p. 457). Philadelphia cream salad (p. 459-60). Shad roe salad ("one tablespoonful of Worcestershire sauce or soy," p. 469). Salad seasoning ("Agreeable seasonings to be kept on hand for salad making: Garlic, mushroom catsup, tomato catsup, Worcestershire sauce, soy, tobasco oil [sic, Tabasco], tarragon vinegar, mint sauce, capers and celery seed," p. 472). "A group of Hawaiian recipes"—To cook beef ("bake until brown. Then pour over it a half pint of sweet cream, to which you have added a tablespoonful of soy. Cook slowly for one hour, basting frequently with the cream," p. 691-92). Cream lettuce sauce to serve with fish ("a half saltspoonful of pepper and a teaspoonful of soy," p. 695).

Worcestershire sauce is used as an ingredient in at least 25 recipes. The first four are: Ox tail soup (p. 62). Cream of cheese soup (p. 74). Mock turtle soup (p. 80). Baked carp (p. 104).

Peanut butter is used as an ingredient in 5 recipes: Cream of peanut soup (p. 75). Lentil pie (p. 337-38). Peanut wafers (p. 535). Nut and fruit crackers (with almond butter or peanut butter, p. 537-38). Marguerites (p. 556).

The earliest recipe seen for homemade peanut butter states (p. 535): "Peanut Butter: Roast the nuts, shell and blow off the brown skins. When making it in large quantities, it will pay to have a bellows for this purpose, or put the peanuts on a coarse towel, cover them with another towel, rub them gently, then blow off the skins. If you use salt dust them lightly with it and grind at once. Pack the butter into glass jars or tumblers, cover them and keep in a cool place. This may be used plain or diluted with water."

Two recipes use almond butter as an ingredient: Almond wafers (p. 525). Nut and fruit crackers (p. 537-38). A recipe for homemade almond butter is given (p. 525).

The word "vegetarian" is mentioned in connection with 7 sections of recipes: Meats (p. 135-36). Vegetables (p. 277-78). Salsify (p. 317-18). Tomatoes and okra with curry (p. 417-18). Nuts (p. 522-23). Nut croquettes (p. 538). Sample menus—Vegetarian (p. 666). The author speaks very favorably of a balanced vegetarian diet. Scientists in general agree, she says, that animal proteids are easier to digest than vegetable proteids. "I must contend, however, that a well selected vegetable diet will give health, bodily vigor and mental strength to those who live rationally." In other countries and cultures, vegetarians are quite equal in strength to those of the same economic class who live largely on meat or on a mixed diet of proper proportions—and are most likely freer from disease. The out-door laborer would probably do better on a vegetarian diet whereas the sluggish digestive apparatus of an indoor is probably better suited to beef (p. 135-36).

"The American people, as a class, in their rushing and bustling life, prefer to take their nitrogen from animal

products, which are more easily digested and assimilated than vegetables.” “The Japanese, who do in their country the work performed by horses here, are practically vegetarians.” The “vegetarian requires but two meals per day,” yet they are more nourishing than three meals of meat. They take less time to eat, cost less, and offer more variety. “The amount of cellulose or waste in vegetable foods keeps up the peristaltic motion of the intestines and lower bowels; hence, vegetable eaters are rarely troubled with constipation and torpid livers.” America has “grown into a meat-eating nation” in large part because the scullery maids who preside over the kitchen are largely uneducated, do not understand nutrition, and have never learned the subtleties of preparing vegetables (p. 277-78).

“To the vegetarian, they [nuts] are indispensable; they furnish his meat, milk and butter. They are palatable, nutritious, and, if well prepared, easy of digestion. Being of vegetable origin, they are free from the danger of disease germs. Their food value is generally overlooked by Americans as they are generally served as dessert”—on top of a heavy meal. “From the general awakening in regard to healthful diet, societies have sprung up all over the world, recommending the use of vegetable foods, especially fruits and nuts. We have well established, both in New York and London, large vegetarian societies, many with separate branches of ‘fruit and nut eaters.’ Personally I have tried the experiment, and find it most satisfactory” (p. 522).

The Preface notes that this “new book on Domestic Science... represents on paper The School at its highest period of development...” “A great change in the methods of living has taken place in America during the last few years.” Not long ago, schools of cookery taught “fancy cookery”—“to succeed with these elaborate, dyspeptic-producing concoctions as the highest ambition. All this has now changed: the teacher or cook book (an ever present teacher) that does not teach health, body building, and economy in time and money, is short lived. There are still a few women who do elaborate cooking to please the palate and appetite,... They are still at the palate stage of existence. Strive to reach a higher plane of thought—eat to live. Why should any woman be asked to stand for hours over a hot fire mixing compounds to make people ill? Is this cookery? Is the headache that follows a food debauchery more pleasant or pardonable or less injurious than that which follows drink? Results of intemperance are identical. Simple living and high thinking have the approval of learned men and women,...”

Sarah Tyson Heston Rorer (1849-1937) “is one of the great ladies of American culinary history. She was a nationally recognized cookery expert, founded and ran a cooking school in Philadelphia for 18 years, authored over 75 books and pamphlets, edited her own magazine *Table Talk*,... and was domestic editor of the *Ladies Home Journal* for 14 years.” With over 1,500 recipes, tips and advice, and more than 125 recipes, this “is one of America’s great

cookbooks. The *Ladies Home Journal* reprinted it in 1970. It offers an excellent view of American cookery at the turn of the 19th to 20th centuries” (MSU introduction).

Note 2. This is the earliest document seen (Jan. 2001) which states that “body building” is widely considered part of a healthy way of life. Address: Philadelphia.

1573. Yendo, K. 1902. Uses of marine algæ in Japan. *Postelsia: The Year Book of the Minnesota Seaside Station* p. 1-18. For the year 1901.

• **Summary:** Page 1: “I propose to mention briefly the more important algae which are generally used by the inhabitants of Japan.”

Page 5: “*Phyllitis fascia* (*Haba-nori*). Young plants of this species are collected and laid out in sheets after a method which will be explained more in detail in connection with the uses of *Porphyra*. The sheets are dried in the sun and afterwards baked, powdered and eaten with soy [sauce]. *Haba-nori* is used principally by the peasantry of the Province of Awa and Sagami.

“*Chordaria abietina* (*Matsumo*).” This is particularly abundant in northern Japan, where it is collected and packed in salt. It is cooked with soy and is a common food of the poorer classes in the north.”

Page 6: “*Undaria pinnatifida* (*Wakame*). This species is used in several ways. Dried bales are common articles of merchandise. After washing with fresh water it is used as an ingredient of soup, cooked with soy, or eaten as a salad with vinegar.”

Pages 7-9: *Laminaria* (*Kombu*). One form in which *Laminaria* is very much relished by the common people is the so-called *Kombu-mati* [*Kombu-maki*] or *Laminaria* roll. To make this, the dried weed is boiled in fresh water for a while and cut up into pieces of the desired length and width. Portions of dried herring, cod or other fish are wrapped up in the boiled alga and then recooked in dilute soy, soup or milk. *Laminaria* is also used upon New Year’s day as a festoon, and for this purpose *L. radicata* (*Antokume*) is utilized, but not as a food.”

Pages 8-9: “*Cystophyllum fusiforme* (*Kijiki* [*Hijiki*]). The young fronds are collected and dried in the sun, in which condition they are a well-known article of merchandise. Cooked in soy it is eaten by the peasantry, but not by the better classes.”

Pages 9-12: “*Porphyra* (*Asakusa-nori*, *amanori* or *nori*). This is one of the most important food plants of Japan. It is used by every class of people in a variety of ways and is cultivated in many districts. The plant is collected, made into sheets, and baked.” The method of cultivation is described briefly. The sheets “are washed for a time to remove the mud and sand and are then laid out upon reed mats which are placed in the sun. The layer is made as thin as possible, the plants adhering to each other by their own gelatine. When such a sheet is quite dry it is peeled off from the surface of

the mat, folded and ready for market. When baked before a gentle fire, *Porphyra* acquires a remarkably agreeable flavor; the rule of the cooks is to bake until the purple color changes to green. After cooking, *Porphyra* is eaten with soy, powdered and employed as a condiment or made up into sushi. This occupies somewhat the same place in the Japanese menu as the sandwich does in Europe and America. A sheet of *Porphyra* is laid out, boiled rice spread upon it, strips of meat or fish laid upon this, and the whole then rolled up. after which it is cut in slices. Everyone eats sushi."

"*Nemalion lubricum* (*Umi-zomen*). In some parts of Japan this plant is dried and bleached. It is then eaten with soy or vinegar, but its use is not common."

Page 14: "*Campylaphora hypnoides* (*Ego*). This is prepared similarly to *Gelidium corneum*. It makes a stiff jelly, which is used for food with sugar or soy, much as is cornstarch by the Americans."

Page 15: "*Grateloupia affinis* (*Comenori*) and *G. filicina* (*Mukade-nori*). These plants are dried, and after dipping in fresh water are eaten with vinegar or soy. Their use is not very general."

Statistics for exports (chiefly to China; weight in lbs and value in yen) for the years 1890-1894 are given for leaf laminaria, cut laminaria, and agar-agar. Address: [Minnesota and Japan].

1574. Pozzi-Escot, Emm. 1903. Chimie de l'industrie du soja [Chemistry of the soy sauce industry]. *Revue Generale de Chimie Pure et Appliquee* 6(3):64-69. Feb. German-language summary in *Chemisches Central-Blatt* 1903(1):849-50. [3 ref. Fre]

• **Summary:** "The manufacture of soja [soy sauce] (which is also called shojou or miso) forms one of the most important industries of Japan. It is obtained by fermentation of the soybean (*du haricot-soja*), wheat and koji, with the aid of certain molds." Soja is widely consumed in Japan and also widely exported. "It is a condiment more than a food, and it serves in place of salt in most culinary preparations. The average Japanese consumes 50-80 cc/day.

The production reached 2,307,844 hectoliters in 1893, and today it surpasses 2.5 million hectoliters, bringing in more than 6 million marks to the government [in taxes]. Today the number of brewers surpasses 11,000; it was nearly 10,000 in 1897 and 10,600 in 1900. One of the factories in Tokyo employs 250 workers and produces 50,000 hectoliters each year. The author has become friends and communicated with two professors in Tokyo, Dr. Oscar Loew (Prof. of Agricultural Chemistry at Tokyo University) and K. Aso.

Three tables (by Murai 1897, by Nagai and Murai, and by Prinsen-Geerligs 1895) give the composition of shoyu (the first two tables are each based on two analyses).

Noting that many erroneous works have been published on the manufacture of soja [soy sauce], the writer proceeds to describe the process as he understands it, based largely

on Japanese publications—but also with many mistakes. The process has four main steps: 1. Preparation of the wheat or soybeans. 2. Preparation of the soja koji. 3. The fermentation process. 4. Extraction and sterilization. The total process takes 1-2 years. He concludes with some ideas for improving the process by reducing the fermentation time. He would heat the soy sauce during fermentation and add alcohol. Address: In charge of pure chemical research at the labs., Malzeville, France.

1575. *Nelson Evening Mail* (*New Zealand*).1903. Curiosities of smuggling. Sept. 18. p. 2.

• **Summary:** "England taxes... chutney because it contains sugar, soy sauce,..."

1576. *Chicago Daily Tribune*.1903. Roosevelt order worries labor. Sept. 21. p. 2.

• **Summary:** "The new Japanese salad, 'udo,' and a condiment, 'wasabi,' similar to horseradish, will soon be introduced to the American people. They were found in Japan by Barbour Lathrop of Chicago [Illinois] and Prof. D.G. Fairchild, agricultural explorer for the government [USDA], who brought to this country cuttings of these plants, which are now growing in American soil."

"Prof. Fairchild says that in the tea houses of Japan the crisp blanched stems of udo are eaten with salt, as our native celery is served, or it is boiled and served with soy sauce."

1577. **Product Name:** Garton's H.P. Sauce.

Manufacturer's Name: Midland Vinegar Co.

Manufacturer's Address: Tower Road, Aston Manor, near Birmingham, England.

Date of Introduction: 1903.

New Product—Documentation: Louise Wright. 1975. The road from Aston Cross: An industrial history, 1875-1975. H.P. Sauce is mentioned on pages 10-12. Photos (facing p. 17) show the original labels, proving that Garton's was the original brand.

1578. Hopkins, Albert Allis. ed. 1903. Scientific American cyclopedia receipts, notes and queries. 22nd ed. New York, NY: Munn & Co. 629 + 105 p. See p. 768. Illust. Index.

• **Summary:** On page 1 is a helpful list of abbreviations.

The entry for "Sauces" (p. 496-97) includes the following which call for soy [sauce]: "4. Quin's.—a. Walnut pickle and port wine, of each, 1 pt.; mushroom ketchup, 1 qt.; anchovies and shallots, chopped, of each, 2 doz.; soy, ½ pt.; cayenne, ¼ oz.; simmer for 10 minutes, strain and bottle.

4b. Walnut pickle, ketchup and soy, of each 1 pt.; chopped cloves of garlic and anchovies, of each 1 doz.; cayenne and bruised cloves, of each 1 drm. [drachm]. As last [i.e., same as previous formula]."

"8. Sauce au Roi.—Brown vinegar (good), 3 qt.; soy and walnut ketchup, of each ¼ pt.; cloves and shallots, of each

½ doz.; Cayenne pepper, 1 oz.; mix and let them stand for fourteen days.

“Sauce piquante.—Soy, 1 part; port wine and Cayenne, of each 2 parts; brown vinegar 16 parts; mix and let them stand for three or four days before bottling.

“10. Soy.—Boil until soft 2 qt. of seeds of *Dolichos soja* (if this cannot be obtained use haricot or kidney beans). Add 2 qt. bruised wheat; keep in a warm place for one day; add 2 qt. salt and 1 gal. of water; keep for two or three months on a tightly covered stone jar. Then press out the liquor. The genuine soy is imported from China, but this is a good substitute.

“To make Quin sauce.—Walnut catsup, 2½ gal.; mushroom catsup, 2½ gal.; soy, 1¼ gal.; garlic, 1¼ lb.; sprats 7½ lb. Boil 15 minutes, strain and bottle.

“Harvey’s sauce.—Quin sauce, 24 parts; soy, 8 parts; cayenne, ½ part.

“Epicurean sauce.—Indian soy, 3 oz.; walnut catsup, 12 oz.; mushroom catsup, 12 oz.,” etc.

“Worcestershire sauce.—This is quite a complex condiment. It is made of wine vinegar, 1½ gallon; walnut catsup, 1 gallon; mushroom catsup, 1 gallon; Madeira wine, ½ gallon; Canton soy [China], ½ gallon; moist sugar, 2½ pounds; salt, 19 ounces; powdered capsicum, 3 ounces; pimento, 1½ ounces; coriander, 1½ oz.; chutney, 1½ oz.; cloves, ¾ oz.; mace, ¾ oz.; cinnamon, 2/3 ounce; asafoetida [asafetida], 6½ drachams dissolved in 1 pint brandy 20° above proof. Boil 2 pounds hog’s liver for 12 hours in 1 gallon of water, add water continually so as to keep up the quantity of one gallon; mix the boiled liver thoroughly with the water, strain through a coarse sieve, and add this to the above mixture. It is self-evident that no chemical examination could ever detect the presence of half the above organic products.”

The entry for “Soy” states (p. 530): “Genuine soy sauce is a species of thick black sauce, imported from China, prepared with white haricots, wheat flour, salt and water; but a spurious kind is made in England as follows: Seeds of *dolichos soja* (peas or kidney beans may be used for them), 1 gal.; boil till soft; add bruised wheat, 1 gal.; keep in a warm place 24 hours; then add common salt, 1 gal.; water, 2 gal.; put the whole thing into a stone jar, bung it up for 2 or three months, shaking it very frequently; then press out the liquor; the residuum may be treated afresh with water and salt for soy of an inferior quality.”

The entry for “Vinegar and vinegars” (p. 582+) contains two formulas for “Camp vinegar” (p. 584). The first calls for 3 tablespoonfuls of soy [sauce] (plus 1½ pints walnut catsup); the second calls for 4 oz. of soy [sauce].

The first appendix, titled “Additional receipts” contains numerous formulas that call for “soy” [sauce]. In the section on “Pickles, sauces and catsups” (p. A-55+) we find the following:

“An excellent pickle (p. A-55) includes “1 wineglassful

of soy.”

“Soy” (p. A-55). This is a sauce frequently made use of for fish, and comes from Japan, where it is prepared from the seeds of a plant called *Dolichos soja*. The Chinese also manufacture it; but that made by the Japanese is said to be the best. All sorts of statements have been made respecting the very general adulteration of this article in England, and we fear that many of them are true. When genuine, it is of an agreeable flavor, thick and of a clear brown color.”

Under “Sauces” (p. A-57). “Sauce aristocratique” includes “2 tablespoonfuls of soy... To every pint of the boiled liquid add vinegar, wine and soy, in the above quantities, and bottle off for use. Cork well and seal the corks. Make this sauce from the beginning to the middle of July, when walnuts are in perfection for sauces and pickling.

“Carrack sauce (for cold meat).” Includes “5 dessertspoonfuls of soy,...”

“Store sauce or Cherokee.—One-half oz. of cayenne pepper, 5 cloves of garlic, 2 tablespoonfuls of soy, 1 tablespoonful of walnut catsup, 1 pint of vinegar, Boil all the ingredients gently for about half an hour;...”

“Harvey sauce.—One dozen of anchovies, 6 dessertspoonfuls of soy, ditto of good walnut pickle;...”

“Leamington sauce” (p. A-58). “Walnuts. To each quart of walnut juice allow 3 qt. of vinegar, 1 pt. of Indian soy, 1 oz. of cayenne, 2 oz. of shalots [shallots] ¾ oz. of garlic, ½ pint of port...”

“Reading sauce.—2½ pt. of walnut pickle, 1½ oz. of shalots, 1 qt. of spring water, ¾ pt. of Indian soy, ½ oz. of bruised ginger;...”

Under “Catsups” (p. 59-60) are formulas for: Grape catsup. Mustapha or liver catsup. Mushroom catsup. Oyster catsup. Pontac catsup or sauce. Tomato catsup. Walnut catsup. Note: None of these catsup formulas call for soy [sauce].

“Vinegar” (p. A-60). “Camp vinegar—1 head of garlic, ½ oz. of cayenne, 2 teaspoonfuls of soy, 2 teaspoonfuls of walnut catsup, 1 pt. of vinegar, cochineal to color...”

Note: The publication date printed on the title page is 1903, however the copyright for this edition is 1900. Address: New York [Query Editor of the “Scientific American”].

• **Summary:** Page 60: "Those everlasting relishes" mentions catsups, soys, Worcestershire sauce, mushroom and walnut catsups, Harvey's sauce, India soy.

Page 87: Relishes: Tomato catsup, Worcestershire sauce. Page 214: Worcester sauce.

Alphabetical: Carp (p. 267): Baked carp; gravy made with Worcestershire sauce. Chinese cookery (p. 278-80): Chinese chop soly [chop suey], a savory ragout, is the national dish of China. Incidental ingredients include "salted black beans." Chop sticks.

Cucumber (p. 299) and eggs, with vinegar and Worcestershire sauce. Devil sauce (p. 303), with Worcestershire. Drinks (p. 305): Prairie oyster, with dash of Worcestershire sauce. Garum (p. 324): "One of the two principal sauces used by the ancient Romans...; a kind of soy,..." Horseradish (p. 343): Napolitaine sauce, with

Worcestershire sauce.

Japanese cookery (p. 350-51): Mentions "Japanese misoshiru [miso soup]... This is made from miso, a fermented mixture of soy, beans [sic, soy beans], wheat and salt. It has a gamey flavor all its own." "Hachimono,... a piece of sole stewed in soy." "... the brown soy-colored beans and strips of Kukirage, or ear-shaped mushrooms." "Fu, a kind of biscuit made from the glutinous part of wheat flour." A gravy "thickened with a transparent, starchy substance, obtained from the root of a climbing plant (*Pueraria Thunbergiana*), called by the Japanese Kuzu."

Sauces (p. 430-34): "Harvey's sauce—'A fair imitation of Harvey's sauce may be produced by working the following recipe. Mince a clove of garlic very finely, add 6 chopped anchovies, ¼ oz. cayenne, 3 tablespoonfuls of Indian soy, 3 tablespoonfuls of mushroom or walnut ketchup..." "Soy—An East Indian bottled sauce; it is made of purple wrinkled morels, galangal root and spices." "Bottled table sauce—The recipe for making the genuine Yorkshire relish is probably known only to manufacturers. However, the following is said to yield a good imitation of that popular sauce: 1 oz. garlic, 1 teaspoonful cayenne, 2 tablespoonfuls Indian soy, 2 tablespoonfuls mushroom ketchup, and 1 pint vinegar."

Scottish cookery (p. 438): Mince collops—incl. a "dessertspoonful Worcester sauce..."

"Soy—A bottle sauce imported from China and India; composition uncertain."

Tripe (p. 461): Tripe a la Creole, with Worcestershire sauce. Address: Chicago, Illinois.

1582. Yule, Henry; Burnell, Arthur Coke. 1903. Hobson-Jobson: A glossary of Anglo-Indian colloquial words and phrases, and of kindred terms, etymological, historical, geographical, and discursive. A new edition edited by William Crooke, B.A. London: J. Murray. New York: Humanities Press. New Delhi: Munshiram Manoharlal. 1021 p. See p. 858-59 ("soy"). Index. 22 cm. [6 ref]

• **Summary:** "Soy, s. A kind of condiment once popular. The word is Japanese *si-yau* (A young Japanese fellow-passenger gave the pronunciation clearly as shô-yu), Chinese *shi-yu*. [Mr. Platts (9 ser. N. & Q. iv. 475) points out that in Japanese as written with the native character, soy would not be *siyau*, but *siyau-yu*; in the Romanised Japanese this is simplified to *shoyu* (colloquially this is still further reduced by dropping the final vowel, to *shoy* or *soy*) Of this monosyllable only the *so* represents the classical *siyau*; the final consonant (*y*) is a relic of the termination *yu*. The Japanese word is itself derived from the Chinese, which at Shanghai is *sze-yu*, at Amoy, *si-iu*, at Canton, *shi-yau* [fermented black soybean sauce], of which the first element means 'salted beans,' or other fruits, dried and used as condiments; the second element merely means 'oil.' It is made from the beans of a plant common in the Himalaya and E. Asia, and much cultivated, viz. *Glycine Soja*, Sieb. and Zucc. (*Soya hispida*,

Moench.) boiled down and fermented. [In India the bean is eaten in places where it is cultivated, as in Chutia Nagpur (Watt, Econ. Dict. iii. 510 Seq.)]"

The authors then quote passages relating to soy from Lord King's *Life of John Locke* (1679), Dampier (1688), Ovington (1690), Kaempfer (1712), Thunberg's *Travels* (1776), and Mrs. Frazer, a Diplomat's Wife in Japan (1900).

Yule lived 1820-1889. Burnell lived 1840-1882.

Address: 1. Living in Palermo; 2. Madras Civil Service, one of the most eminent modern Indian scholars. Died 1882.

Note: This is the most recent of 230 documents seen (Oct. 2009) in the Australian Newspapers database that contains the term "India Soy." Address: Grocer, 91 Liverpool-street [Hobart].

1584. Ansai [or Anzai], -. 1904. Bakteriologische Untersuchung ueber Shoyu [Bacteriological investigation on shoyu]. *Zentralblatt fuer Bakteriologie. Series 2*. 11(19):563-64. Feb. 27. Summary of Japanese article in Mitteilungen der medizinische Gesellschaft zu Tokyo 17(6):1. [1 ref. Ger]

• **Summary:** Bacteriological tests showed that 1 cubic centimeter of shoyu contains 9,280 to 19,700 bacteria. Address: Japan.

1585. Farmer, Fannie Merritt. 1904. Food and cookery for the sick and convalescent. Boston, Massachusetts: Little, Brown and Company. xiii + 289 p. Illust. Index. 20 cm.

• **Summary:** Chapter 1, titled "Food and its relation to the body," provides basic information about food and the human body. It begins: "Food is that which builds and repairs the body, and furnishes heat and energy for its activities. Metabolism includes the processes by which food is assimilated and become part of the tissues, and the excretion of broken-down tissues as waste products." The body is found to contain 15-20 chemical elements. The main ones are oxygen (62.5%), carbon (21.5%), hydrogen (10%), and nitrogen (3%), plus many minerals.

"Food adjuncts are such substances as stimulate the appetite without fulfilling the requirements of food. Examples: tea, coffee, spices, flavoring extracts, condiments, etc., etc.

"While air is not classified as a food, it is essential to life. Combustion cannot take place without it, and all food must be oxidized (which is a slow process of combustion) before it can be utilized by the body."

A diagram titled "Classification of foods" (p. 2, according to Prof. Atwater), shows that all are divided

into organic and inorganic (mineral matter and water). The organic are divided into protein, fats, and carbohydrates (starches, sugars, and cellulose). The protein is divided into proteids, extractives of meat, and extractives of vegetables (amides). The proteids are divided into albuminoids and gelatinoids (collagen of skin and tendons, and ossein of bones). Examples of albuminoids are albumen (white of egg), myosin (lean of meat), casein (of milk), gluten (of wheat), and legumen (or peas).

The text continues: "The chief office of proteids is to build and repair tissues, and they only can do this work... The principal animal proteids are meat, fish, eggs, and cheese; the principal vegetable proteids are cereals, peas, beans, and lentils. The proteids obtained from animal foods are more easily digested and more completely absorbed than those obtained from vegetable foods. This is due in part to the presence of the large quantity of cellulose in vegetables."

Soy is mentioned only once in this book. A table of the "Composition of diabetic flours" (p. 221) shows that "Soya bean meal" contains by far the lowest percentage of starch (26.67) according to Dr. Charles Harrington. Two diabetic flours and a wafer have "Gluten" in their name. Worcestershire sauce is used as an ingredient in Sauce fineste (p. 234).

Gluten is also mentioned in various other places: Bread and bread making (p. 90-91). "Gluten is the chief proteid of wheat... The strength of a flour is determined largely by the quantity of gluten it contains." The gluten in rye flour is less elastic and tenacious, while that in oat and barley flour are even less so. Also: Gluten nut cakes (p. 226). Almonds are also mentioned frequently.

"Although history best remembers Fannie Farmer for her *Boston Cooking-School Cook Book* (1896)," Fannie herself thought this book would be her greatest contribution. During her high school years in Massachusetts, Fannie (who never married) suffered a stroke with paralysis, and had to discontinue her education. She "remained an invalid for years thereafter, recovered enough to walk with a limp for the rest of her life and spent her last several years teaching and lecturing from a wheelchair. Perhaps because of her own illness, she had always had an interest in cooking for invalids.

"She supplied lectures on that subject to training schools for nurses nationwide and lectured on nutrition at Harvard Medical School. Her work there brought her in contact with Dr. Elliott Joslin, the pioneer diabetes researchers, who credited Fannie as 'the stimulus which started me writing about diabetes.'"

"In 1902, she left the Boston Cooking School to open Miss Farmer's School of Cookery, aimed not at professional cooks but at training housewives... The school continued until 1944" (MSU introduction and biography). Address: Principal of Miss Farmer's School of Cookery.

1586. Societe Nationale d'Agriculture de France. 1904. Séance du 2 Mars 1904 [Meeting of 2 March 1904]. *Bulletins des Seances de la Societe d'Agriculture de France* 64:12, 172. Mr. Tisserand, presiding. [1 ref. Fre]

• **Summary:** The perpetual secretary notes: At the conclusion of various communications made on the subject of the soybean (*du Soja hispida*), I have detached an important note from our correspondent, Mr. Paul Serre, vice-consul of France in Batavia—as follows:

I have read in the Bulletin of our society for the month Nov. 1903 and extract of a note from Mr. Foëx, correspondent, on the subject of the soybean. Even I am occupied, here in Java, with this legume, with which the indigenous people prepare a cake [probably tempeh], hairy like bonnet de sapper, of which they are very fond. This food, covered with mold, is repugnant even to Europeans who enjoy Roquefort cheese.

Likewise, they prepare from the soybean a sauce named *ketjap*. I have sent to the museum some soybean seeds from Java and a sample of the aforementioned sauce which looks like caramel, and whose taste is far from disagreeable. Address: France.

1587. Anzai, Shigetaro. 1904. Shôyu no saikingaku-teki kensa [Bacteriological investigations on shoyu]. *Tokyo Igakkai Zasshi (J. of the Tokyo Medical Society)* 17(6):209-15. March 20. German-language summary in Zentralblatt fuer Bakteriologie, Series II. 11:563-64. [Jap; ger]

• **Summary:** The short German-language summary at the end of the issue is titled *Bakteriologische Untersuchung uber Soyoyu*.

1588. *New-York Tribune*. 1904. Chinese food products: Beans a leading article of diet in China. April 10. p. A9.

• **Summary:** From What to Eat: “Dr. Yamei Kin, a Chinese woman doctor now studying in America, gives some interesting facts about Chinese food products. One surprising thing Dr Yamei Kin tells is that Chinese soy is made from a sort of red bean ground up and fermented. While fermenting it smells like sauerkraut, only worse. The fermented product is shipped in cases to England, where it is mixed with vinegar and other products and sold as Worcestershire sauce.

Note: This is the earliest document seen (April 2012) that mentions Dr. Yamei Kin in connection with soy.

“The Chinese laborer lives on beans as much as does the Boston typewriter girl. The bean in China is more like our small round cow-pea. This is ground fine, mixed with water and a little salt. Then the water is pressed out and the bean cake [tofu] is sold to the poor. This bean cake may be cooked and mixed with other things, fish, chickens, etc. It is highly nutritious and explains why the Chinese laborer can endure so much on so little food. Vegetables are eaten in quantities... Fish is popular but very little meat is eaten. An animal is never killed to be eaten until it is too old to work; hence the

Chinese do not like beef, considering it too tough. Pork is popular and every family keeps one or two pigs.

“The Chinese are great cooks, and love to give elaborate dinners. This is the chief means of entertaining in China. However, the dinner consists of sixty courses, and it takes several hours.”

Also appeared in the *Detroit Free Press*. 1904. May 1 (p. 2).

1589. Humphreys, Mary Gay. 1904. The aesthetic housekeepers of Japan. *Ogden Standard Examiner (Utah)*. April 29. p. 23.

• **Summary:** The author, an American, writing from her experience of living in Tokio, notes that Japanese housekeepers bring a strong sense of beauty or aesthetics to every part of their daily life. Concerning foods: “One of these is bean curd, ‘tofu,’ a white substance that is sliced and fried like mush, with soy [sauce] for a flavor. This curd is so nutritious and so cheap that an American who lives in Japan suggested its being introduced into this country as a food. Soy is a liquid made from the black bean and is said to be the foundation of Worcestershire sauce. It enters into almost all cooking, and most agreeably.”

A Tokio restaurant meal: “It was charming, a meal to be remembered, and meat thus cooked in soy [sauce] something ‘Japanesy’ that we might well import.”

Nuta salad: “This is made of clams, rape tops and onion with a sauce of bean paste, rice, mustard and soy [sauce], rubbed into a brown liquid.” One large illustration shows a Japanese woman with elaborate dress and hairdo; three others show her working at home.

1590. *Boston Daily Globe*. 1904. Typical dishes. Japanese service is dainty in the extreme. May 22. p. 35.

• **Summary:** “Meat plays a small part in the Japanese menu,... Fish and rice are the staples... The following is a typical menu for a dinner of ceremony:” Soy-related dishes include: “Suimono—A kind of bean-curd [tofu] soup.” “Hachi-zakana—A fine, large fish, either boiled with salt or boiled [broiled?] with shoyu.” “Umani—Bits of fish or sometime fowl, boiled with lotus root or potatoes in shoyu and with ‘mirin,’ a sort of sweet liqueur.” “Tsubo—Seaweed...” “Ayemono [Aemomo]—A sort of salad made with bean sauce [miso?] or pounded sesamum [sesame] seeds.” Raw fish—The favorite for festive occasions is the *tai* [sea bream], “on account of its name, which is the last syllable of the word *me-de-tai*, meaning ‘congratulatory.’... Before eating, the slices are dipped lightly in soy [sauce], seasoned with grated horseradish or ginger.”

1591. Brunson, John A. 1904. A glimpse of Japanese life. *Good Health (Battle Creek, Michigan)* 39(5):237-42. May.

• **Summary:** A good photo (p. 239) shows a Japanese vegetable vendor carrying his goods in baskets on a shoulder

pole. Page 240 notes: “*Tofu*, or ‘bean curd,’ as the foreigners call it, is a favorite dish. The beans are first ground fine in hand mills. These mills consist of two stone discs about eighteen inches in diameter, and perhaps six or eight in thickness, one being placed above the other. To the upper stone is attached a handle by which it is turned, and the motor power is supplied by two women. It is a familiar sight in Japan to see ‘two women grinding at the mill.’ The husks and coarser parts of the bean flour are then carefully removed, and the fine white residuum is mixed with water and pressed into squares which somewhat resemble cottage cheese in appearance. The *tofu* is then boiled, and is both palatable and nutritious, but rather concentrated.”

In Japan, fish are served raw, while yet fresh, “with *shoyu*, a kind of Japanese Worcester sauce.”

Note 1. This is the earliest article seen (Aug. 1996) with detailed information on soyfoods in Dr. John Harvey Kellogg’s periodical *Good Health*.

Note 2. This is also the earliest document seen (Aug. 1996) that compares *tofu* with cottage cheese.

1592. *Toronto Daily Star (Canada)*. 1904. Madge Merton’s page for women. July 16. p. 16.

• **Summary:** “Aunt. B.: The following recipe for homemade Worcestershire sauce sounds well. Pound once ounce of garlic, two ounces of small onions, and half an ounce of cayenne pepper. Put them in an earthen jug with half a pint of vinegar, stand in water, and simmer for three hours. Strain, add a pint of hot vinegar, and half a pint of Indian soy. Perhaps you can’t get Indian soy, but at the shops where Chinese food is sold, you may get the Chinese article of the same name. Bottle your sauce and seal tightly, using a mixture of equal parts beeswax and resin.”

1593. Bolce, Harold. 1904. First taste of raw fish: Approached with fear and trembling, but followed with ecstasy. *Washington Post*. July 22. p. 11.

• **Summary:** From Booklovers Magazine: The writer visited Japan (“this Sunrise Land”), where he met novelist and diplomat Tumio [sic, Tomio] Yano, who invited him to dinner at the Nippon club. “Not so well known among the Occidentals as soy sauce, but of equal merit as an appetizer, is wasabi. Its use is universal in Japan. It serves the same purpose as horseradish does on Occidental tables, but is less acrid.” It is almost always eaten with raw fish.

Bolce closes with a song of praise to *Eutrema wasabi*. “All honor to triumphant agricultural Japan, and may this far Eastern member of the mustard family take deep root and spread and flourish in my native land.” Address: [Washington, DC].

1594. Smith, Hugh M. 1904. Japan, the paramount fishing nation. *Transactions of the American Fisheries Society* 33:111-38. See p. 116. 33rd annual meeting held 26-28 July

1904 at Atlantic City, New Jersey.

• **Summary:** “Raw fish is one of the national foods. I acknowledge that my repugnance to it was great, but it was overcome with the first dish, for as prepared and served by the Japanese the thin, cold, boneless slices of perfectly fresh tai or mackerel, taken with chop sticks and dipped in soy-bean sauce, are delicious.”

Note: This is the earliest English-language document seen (April 2012) that uses the term “soy-bean sauce” to refer to soy sauce.

The author traveled to Japan on assignment from U.S. Fish Commissioner Bowers to study the fisheries and related industries; he was the first American to ever do this. He traveled 5,000 miles within the country, always accompanied by helpful government officials, who were well familiar with the different regions and their fisheries, and to act as guides, companions, and interpreters.

“The artificial propagation of food fishes is not as yet important and is practically to salmon on the island of Hokkaido and to carp in all sections.”

“A branch of fisheries in which Japan far surpasses all other countries as regards both extent and methods is the sea-weed industry. In the United States, notwithstanding our long coast line and sea-weed resources not inferior to Japan’s, the annual crop of marine vegetables is worth only \$40,000, whereas in Japan these products are worth not less than \$2,000,000, and are exceeded in value by only four animal products of the fisheries [herring, sardines, bonito, and tai / red snapper]. Gives detailed information about four of Japan’s main “sea-weed resources” (p. 121-27) including *kombu* (*Laminaria*, kelp; and shredded kombu), *kanten* (vegetable isinglass, agar-agar), *nori* (*Porphyra*, laver; “the supply comes almost entirely from planted grounds, and in the cultivation of marine vegetables the Japanese stand alone).

This article contains many photos, including one of “bars of vegetable isinglass” (p. 123). Illustrations (from Japan) show (p. 122-25): (1): Gathering kelp in Hokkaido, showing both above and below water. (2) Planting dry brush on which laver is to grow in shallow water in Tokyo Bay. (3) Spreading and drying laver on mats.

1595. *New York Times*. 1904. In the business world: Invoice values advanced. Aug. 26. p. 9.

• **Summary:** “Several heavy advances in invoice values were announced yesterday by the Board of United States General Appraisers... and from Many Fook & Co., Yokohama, 160 buckets Japanese shoyu sauce, entered at .80 and advanced to 1.40 yen a bucket. All good will be seized.”

1596. *State (The) (Columbia, South Carolina)*. 1904. Wants to handle soja beans. Oct. 21. p. 8.

• **Summary:** “The department of agriculture, commerce and immigration has received a request from a man who

wishes to secure and handle on the market large quantities of soy [sauce] and soja beans. Commissioner Watson is very anxious to obtain the names and addresses of any in this State who are growing these beans and hopes that if there are any they will write him at once informing him of what quantities they can furnish and at what prices.”

1597. Hosie, Alexander. 1904. Report by Consul-general Hosie on the province of Ssuch'uan. Presented to both houses of parliament by command of His Majesty. Oct. 1904. London: Printed for H.M. Stationery office, by Harrison and Sons. 101 p. See p. 10-11. 34 cm. China No. 5.

• **Summary:** Sir Alexander Hosie (lived 1853-1925) traveled to Ssuch'uan in June and July, 1884.

In Part A, titled “Agricultural and horticultural products,” section II on “Pulse” (p. 10-11) states: “1. Soy Bean (*Glycine hispida*, Max.).—The soy bean does not play the same part in Ssuch'uan [Szechwan] as it does in Northern China, and especially Manchuria, where it is cultivated almost entirely for its oil and for the refuse cakes, which find a ready market not only in China and adjacent countries, but are winning their way as fertilisers into remoter regions. The great oil-yielding plant of Ssuch'uan is rape, and although oil is extracted from the soy bean, it is as an article of food, whether cooked whole or in the form of resultant products, that the latter is appreciated in Western China. Three well-marked varieties, each with two or more sub-species, are cultivated.” A bushel of each weighs 40 pounds.

(I.) Yellow Soy Bean (all are ovoid in shape; oil is extracted from the first two): (a) “Pai Huang Tou” or White Yellow Bean. This is the lightest in color of the three sub-species of the yellow bean. A bushel of 40 lbs. costs T. [Taels] 0.8.8, or about 2s. 1d. There are about 150 beans per ounce. “As a rule they are cooked whole and served as a vegetable condiment.” (b) “Ta Huang Tou” or Large Yellow Bean. Has a light tinge of green. Eaten in the same way as the white-yellow bean. (c) “Hsiao Huang Tou” or Small Yellow Bean. This bean is much smaller and less expensive than the other two sub-species. “For this reason it is in demand for the manufacture of beancurd in its various forms. It is also used as a vegetable. “Oil is extracted from (a) and (b), and to a much less extent from (c); but this subject will be dealt with under the head of oil-yielding plants.

(II.) “Ch'ing Tou”—Green Soy Bean. “There are two sub-species of this bean, (a) where epidermis and inside are both green, and (b) where epidermis is green and inside yellow. The former is more commonly cultivated in Ssuch'uan, and both are eaten and cooked as a vegetable. They are also salted and put away in jars for winter use. The bean is of the same size, shape, and weight as the white-yellow bean. The above yellow and green varieties of the soy bean occupy the ground from April to August, whereas the next variety (black) takes a month longer to mature.

Note 1. This is the earliest English-language document

seen (May 2009) that contains the word “Green Soy Bean.” It refers to mature dry soybeans with a green seed coat—not to green vegetable soybeans.

(III.) “Hei Tou”—Black Soy Bean. “There are two sub-species of this bean: (a.) The first is much larger, rounder, and heavier than the yellow and green variety. Only 88 are required to make up an ounce and the cost is T. 0.6.5 per bushel of 40 lbs. Like the green bean, it is used cooked in its fresh state as well as pickled. (b) The second is a small flattish bean, about 450 going to the ounce. It is used in medicine and for food, principally the former. The cost is T. [Taels] 0.8.0 for 40 lbs. Both these sub-species are black outside and yellow inside, the epidermis of the former being readily detachable when crushed.”

In section VI, “Products of cereals, pulse, and starch-yielding plants,” the first entry (p. 19) is for “1. Beancurd and Jellies.—In my book on Manchuria I have fully described the manufacture of beancurd from the yellow soy bean, and it is therefore unnecessary to go into details in this place; but in Ch'êngtu it is preserved and exported in jars like wine. The beancurd is cut into small pieces, drained of its water, and packed in jars with layers of salt. There they remain for forty days, when they are taken out, drained of the brine, packed in other jars with ground up bread, red rice (died), star-aniseed, and red wine. The jars are then closely stoppered and the preserved beancurd is ready for export. It is also preserved without the wine, which is replaced by the cold water which had previously drained from it, but with a seasoning of ground-up chillies, star-aniseed, &c.” Related products are “pea jelly,” “sweet potato jelly,” “rice jelly,” and “buckwheat jelly.” Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term “preserved beancurd” to refer to fermented tofu.

Note 3. This is the earliest English-language document seen (Oct. 2011) that uses the word “wine” (including rice wine or “sake” / “saké”) in connection with fermented tofu, and explains how that wine is used in the two-step fermentation process.

We also read (p. 19): “3. Soy or bean sauce. Two kinds of soy are manufactured in Ssuch'uan—white or red—or, as the latter is frequently called, black:—(a) Red soy.—In describing the manufacture of soy, I propose to give the exact quantities employed, so that a better idea of the amount of soy yielded by them may be obtained.

“Twenty-eight catties of yellow soy beans are steeped overnight in cold water. In the morning they are removed in their swollen state and steamed for five hours. They are then taken from the steamer, spread out on mats, and allowed to cool, after which they are thoroughly mixed with 20 catties of wheat flour and placed in a basket made of split bamboo. [Note: The ratio by volume of soy beans to wheat flour is 1.4 to 1]. In six or seven days, as soon as yellow mould begins to appear, they are placed in an earthenware jar with 30 catties of cold water (well-water preferred) and 30 catties of

granular salt and the whole is thoroughly mixed and the jar covered. In three or four days the jar, which has been placed in the sun, is uncovered and the contents stirred by hand, and the same takes place daily for three months. At the end of this time the liquid has all evaporated. During the following months the cover is removed during the day and replaced at night. The contents are now a black pickle, and may be eaten as such; but to obtain the soy they are divided up into equal parts and placed in two earthenware jars, to each of which is added 40 catties of boiling well-water. The contents of each jar are now thoroughly mixed and stirred up and a fine bamboo sieve in the shape of a basket is placed in the jar. The liquid escapes into the basket while the dregs are kept back by the sieve. In two or three days the liquid has all drained into the basket, when it is baled out and boiled with two catties of white sugar or glucose manufactured from glutinous rice, already described, with the addition of two or three ounces of mixed whole chillies and star-aniseed. Each jar will yield 35 catties of red soy, valued at 96 cash a catty, so that the 28 catties of yellow beans, with the other ingredients, yield 70 catties of soy. A whole year is required from the steeping of the beans to the production of this soy.

“(b) White soy.—In the case of white soy the beans are first roasted in sand which has been previously heated in an iron pan with a mixture of rape oil. This roasting is complete when the beans open or split, and the sand is removed by sieve. They are then placed in an earthenware jar and steeped in cold water for twelve hours. They are afterwards steamed as in the manufacture of red soy, and mixed with flour and salt; but, instead of 30, some 60 catties of water are added to prevent the blackening of the beans and the discoloration of the soy. The daily uncovering, stirring, and recovering take place as in red soy, but at the end of 120 days the solid matter is removed and the liquid alone is exposed in the jar to the sun. This soy is ready for use at the end of the 120 days, but improves by keeping and exposure to the sun. No sugar or glucose is used, and the seasoning is placed in the jar with the 60 catties of water. Nor is there any boiling before use. The cost of white soy, which is more yellow than white, is from 80 to 96 cash a catty, according to quality.”

In the section on oil-yielding plants, p. 34 states: “(e.) ‘*Glycine hispida*, Max.’—In Ssuch’uan the soy bean of Northern China and Manchuria is replaced by rape seed, and it is cultivated more as a vegetable than for its oil. The production of the latter is insignificant from a commercial point of view.”

In 1922 a derivative work titled “Szechwan, its Products, Industries, and Resources,” was published in Shanghai by Kelly & Walsh, Ltd. (185 p.).

1598. *Kogyo Kagaku Zasshi* (*J. of the Society of Chemical Industry, Japan*). 1904. Shodoshima no shōyu jōzō no jikkō oyobi kairyōhō [Brewing of shoyu in Shodoshima and improvement]. 7(80):1127-34. Oct. [Jap]

Address: Shodo Island, Japan.

1599. *Monthly Consular and Trade Reports* (U.S. Bureau of Manufactures, Department of Commerce and Labor). 1904. Japan’s fiscal resources. No. 289. Oct. p. 147-48.

• **Summary:** “The Commercial Intelligence, of London, England, September 14, 1904, contains an article on the ‘Economic War Resources of Japan,’ from which the following fiscal data is taken.” In normal times, Japan derives her revenue from various taxes and duties, including a “land tax, income tax, business tax, tax on liquors, tax on soy, sugar excise” etc. These together are estimate to produce \$69.5 million for the fiscal year 1904-05. Total revenue from all sources is estimated to be \$111.8 million. But now the Japanese government needs more money for prosecuting its war with Russia.

A table (p. 148) shows revenues from the “Supplementary budget of Japan, 1904-05.” The four biggest sources of revenue (in million dollars) are: Land tax \$11.9. Sugar excise tax \$4.1. Income tax \$2.6. Business tax \$2.5. The soy tax [on soy sauce] brings in only \$567,208.

Note: Pages 146-47 discuss “Japan’s tobacco monopoly. The law relating to the monopoly of leaf tobacco was promulgated in March, 1896. This law provided that all leaf tobacco grown was to be bought by the government and in turn sold to the manufacturers by the Government at a fixed rate of profit.” Address: Washington, DC.

1600. Douglas (J.M.) & Co. 1904. Just a dash of the genuine: Lea & Perrins’ Worcestershire Sauce (Ad)... *Toronto Daily Star* (Canada). Nov. 8. p. 9.

• **Summary:** “... is as necessary as salt to bring put the true flavor of Consomme, Bouillon, Sauce, Meats, Game, Fowl, etc. Without an equal for 60 years [i.e., since about 1844]. Ask any good cook.” Address: Montreal [Quebec, Canada].

1601. Abel, Mary Hinman. 1904. Beans, peas, and other legumes as food. *Farmers’ Bulletin* (USDA) No. 121. 39 p. See p. 11-13, 18-20. Revised. Illust. [1 ref]*

• **Summary:** A revised edition, 3 pages longer than the 1900 original. The information about soy is unchanged, however it is on different pages (see above). The section titled “Nutritive value of the legumes” (p. 18-20) includes a table titled “Composition of fresh and dried legumes compared with that of other foods.” Under “Dried legumes,” the composition of “Soy beans” (dry, containing 10.8% water) is given.

1602. *Agricultural Bulletin of the Straits and Federated Malay States*. 1904. Soy and bean cheese. 3(12):494-96. Dec.

• **Summary:** “Among the number of small manufactures by natives in Singapore, many of which are quite unknown to the ordinary residents, the manufacture of the Chinese sauce known as Soy, is one of some interest and importance, and

having had occasion lately to visit three of these factories, I put together such notes on the manufacture as I was able to make. Soy is made from the seeds of the bean *Glycine hispida*, which is cultivated in China and also in India, and the beans are imported from China to Singapore for making Soy and Bean-cheese.

“The present price of the beans is high, six dollars a picul, probably owing to the Russo-Japanese war.

“The Soy beans are first boiled, which causes them to swell up considerably, and then put into stone jars about three feet tall and two feet across, with a quantity of brine made of coarse salt, which I was told was made of equal parts of salt and water. The brine is first made in jars, and occasionally skimmed as the extraneous matter floats to the top. The jars when full of beans and brine are covered on wet or dull days with a conical tin cover which is taken off in sunshine. At one factory I was told that wheat flour was put into the jars with the beans, and a note in ‘Spon’s Encyclopedia’ states that an equal quantity of roughly ground barley or wheat is boiled with the beans, but this does not appear to be done here.

“The beans are left to soak for from sixteen days, when there is a big demand for the product, to a year, and the longer it is kept the better the Soy is considered. Six to eight months, however, seems the usual length of time.

“The beans are then strained out, squeezed in a cloth, and the deep brown liquor filtered through a cloth laid in a rattan basket, and then boiled. It is afterwards poured into stone jars such as the Chinese use for their pickled cabbages, and sold to various places in the East.

“I could not find that any ferment was added to produce fermentation of the beans, and the Chinese said there was none. There is, however, a general idea of there being some secrets, known only to the head man and religiously preserved by him, as to the manufacture. This is, however, commonly stated by any Chinese manufacturer, however simple and well known his manufacture may be.

“There are two kinds of beans of the *Glycine*, black and white, which are used separately.

“Soy is extensively used as a condiment both by Chinese and Europeans in the East, and forms the basis of most of the sauces used throughout the world.

“Bean cheese: Bean cheese or bean-cake [tofu], is also made from the Soy beans, but the white ones only are used. The beans are first cracked in a stone quern or mill, worked by hand, the beans being poured through a hole in the upper millstone. They are then immersed in water for a day, which causes them to swell. Then they are transferred to another quern and ground to the consistency of a cream. This is boiled and when cool poured into a cloth and squeezed and pounded on a small table with a square hole in the centre till much of the water is squeezed out, when the cheese is made into square flat cakes four or five inches across and about ½ or ¾ inch thick, then wrapped in cloth and put each in a

little rattan tray or dish, they are put over a low fire, till they are firm enough. Some are coloured yellow by a decoction of the seeds of a capsular plant brought from China, the seeds being steeped in water and the liquid brushed over the top of the cheese. A little alum and a quantity of powdered gypsum is sometimes at least added to the bean cake during its manufacture. The former probably to make it whiter, the latter probably to increase the weight. The Chinese seem to be very fond of adding gypsum to such manufactured articles. It has been mentioned in an earlier *Bulletin* that it is mixed with Jelutong rubber.

“Bean cheese is a very popular article of food with all kinds of natives, and costs about one cent a cake, and about 6 or 8 cents a pound.—Ed.”

Note: This article also appeared in *The Gardens’ Bulletin, Singapore* (1904, p. 496).

1603. Fesca, Max. 1904. *Der Pflanzenbau in den Tropen und Subtropen* [Plant cultivation in the tropics and subtropics. 2 vols.]. Berlin: Wilhelm Suesseroth Verlagbuchhandlung. Vol. 1: viii + 278 p. See vol. 1 (Erster Band), p. 159-65. 21 cm. Suesseroth’s Kolonialbibliothek. [2 ref. Ger]

• **Summary:** In Volume 1, in the chapter on legumes (*Huelserfruechte, Leguminosen*), is a long section the soybean (*Die Sojabohne*) (p. 159-63), which focuses on soybean production. Contents: Introduction. Climate. Soil and cultivation of the soil. Fertilizers. Planting / sowing. Harvest. Yields. Composition of the seeds and straw. Soybean oil and cake in China. Food uses of soybeans in China and Japan, especially “Shoyusauce” (shoyu) from which the soybean derives its name. It is used in the preparation of Anglo-American sauces such as Worcestershire sauce, etc. A description of the preparation of shoyu is given, along with its composition based on analyses by O. Kellner and E. Kinch. “The fermentation lasts from at least 20 months up to 5 years; the longer the fermentation the better the sauce. The finest quality is a mixture of 3 and 5 year sauces.” An analysis of shoyu presscake (*Shoyurueckstande*) is also given.

Note: This 3-volume work is volumes 1-2 in *Suesseroth’s Kolonialbibliothek*, vol. 708. Address: Germany.

1604. Gautier, Armand. 1904. *L’alimentation et les régimes: Chez l’homme sain et chez les malades*. 2 éd. rev. et augm. [Diet and dietetics: For healthy and for sick people. 2nd ed.]. Paris: Masson & Co. xvi + 528 p. 3d ed., 1908. [1 ref. Fre]

• **Summary:** Chapter 19, on vegetables, grains, etc., contains a section titled “*Pois ou fèves de Soja*” (Soja peas or beans), which notes that these are the “oil peas” (*pois oléagineux*) of China and Japan, where they have been cultivated since ancient times. The small quantity of starch and the large amount of proteins (*albuminoïdes*) [in the seed] has led them to be recommended for use in a bread for diabetics.

A table gives the nutritional composition of yellow

soybean seeds according to two studies cited by Mr. A. Balland (1903). Gautier adds that the ash is composed mainly of the phosphates of potassium and magnesium, plus a little calcium sulfate.

This food is exceptionally rich in oils and proteins. Unfortunately its taste is not very agreeable. In Japan, soy flour (*la farine de Soja*) is mixed with cooked rice and allowed to ferment until one obtains a sort of pap or sauce which takes the place of meat extract.

Note: Neither soy flour nor rice are used in Japan as raw materials for making soy sauce. Apparently the author is not aware of koji, the key to the soy sauce fermentation.

In chapter 35, on special diets, the first long section (p. 390-97) is about the vegetarian diet (*Régime végétarien*), which concludes that this diet should be practiced “by all who pursue the idea of building up and educating races that are intelligent and artistic, and at the same time prolific, vigorous and active.”

The section on diabetic diets (p. 430-31) recommends foods with a low starch content, including gluten, gluten bread, and almonds; soy is not mentioned. Address: Professeur a la Faculte de Médecine de Paris.

1605. Kiliaan, H.N. 1904. *Madoereesch-Nederlandsch woordenboek* [Madurese-Dutch dictionary]. Leiden, Netherlands: Boekhandel en Drukkerij voorheen E.J. Brill. vii + 384 p. [Dut]

• **Summary:** Dutch-language definitions are given for each of the following words: (1) ketjap (p. 193) = soy sauce. Made from soja.

(2) “kadhelli” (p. 260) = soybean. Jav. kedele. Glycine soja. De soja boon.

(3) kotok (p. 281) = “koffie, amfioen of soja voor de tweede maal koken; koto kotoghan.” (4) “tahu” (p. 302) = tofu. includes the words “kadhelli” [kadele / kedele] and “soya.” Address: East-Indian civil servant with permission [Oost-Indisch Ambtenaar met verlof.

1606. Koenig, Franz Joseph. ed. 1904. *Chemie der menschlichen Nahrungs- und Genussmittel*. Vol 2. Ihre Herstellung, Zusammensetzung und Beschaffenheit... Ed. 4 [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. Their production, composition and properties... 4th ed.]. Berlin: Verlag von Julius Springer. xxv + 1557 p. See p. 243, 788-91, 839-41, 1090-94. [12 ref. Ger]

• **Summary:** Summaries of early studies on the chemical composition of soybeans and various soyfoods, including some original studies. The section on meals (p. 839-40) gives the composition of various legume meals (*Hülsenfruchtmehle*, *Leguminosesmehle*), including [whole] soybean flour (*Sojabohnenmehl*) and defatted soybean meal (*Desgl., entfettet*, which may have been defatted in the laboratory). “The various preparations made from

leguminous meals by Jul. Maggi & Co. in Kempthal (Kemptal) (Switzerland) (see Vol. 1, p. 467) are made by mixing leguminous meals with gluten-rich varieties of cereal grains, and sold under names such as Leguminose-Maggi A (2% fat), B, C, AA (6.54% fat), AAA (14.60% fat), etc. The composition of these products on an as-is and on a dry-weight basis is given on page 841. These can be categorized into those which are low in fat and those which are rich in fat. The fat from the latter is derived from the process of making soybean meal.”

In the section on coffee substitutes, the subsection on “coffee from legumes” (p. 1093-94) mentions briefly that a coffee substitute can be made from soybeans (see also p. 788). The composition of this soybean coffee (“Sojabohnen-Kaffee”) is given. Address: Geh. Reg.-Rath, o. Professor an der Kgl. Universitaet und Vorsteher der Agric.-Chem. Versuchsstation Muenster in Westphalia, Germany.

1607. Smith, Hugh McCormick. 1904. The seaweed industries of Japan. *Bulletin of the Bureau of Fisheries (USA)* 24:133-81.

• **Summary:** A remarkable article, with reproductions of many old Japanese illustrations, plus many current photos. Contents: Introduction (with 7 early references, 3 in English). Kanten, or seaweed isinglass. Funori, or seaweed glue. Kombu. Amanori or laver. Seaweed iodine. Other Japanese algæ and their uses.

The article begins: “Seaweeds are among the most valuable of the aquatic resources of the Japanese Empire, and conduce largely to the prominent rank attained by the fisheries of that country. While marine plants are extensively utilized in France, Ireland, Scotland, and other European countries, in the East Indies, in China, and elsewhere, in no other country are such products relatively and actually so important or utilized in such a large variety of ways as in Japan.” Only one species, laver (*nori*; *Porphyra lacinda*), is extensively cultivated. “The seaweed preparations to which special attention is given are kombu, amanori [nori], funori, kanten, and iodine.”

Under “Food qualities of kombu” (p. 153): “Fronds after being scraped once are cut in 3/4-inch squares and boiled in soy-bean sauce, which treatment preserves them for a long time, and these pieces make an excellent relish, tasting like caviare [caviar] or anchovy sauce. The Japanese name, *tsukudani*, means ‘boiled with soy-bean sauce.’” The average wholesale price of “kombu chips in soy sauce, 1.10 yen per kamme” (1 kamme [kan] = 8.28 pounds) (p. 154).

Under “Preparation and utilization of porphyra” [nori] (p. 159): “Recently it has been boiled with Japanese (soy bean) sauce and put up in tins.”

The section titled “Other Japanese algæ and their uses” notes (p. 163-65) that many species are seasoned in soy-bean sauce: *Arame* (*Ecklonia bicyclis*) “is chiefly eaten as an ingredient of soups, as a salad, or mixed with soy-bean

sauce.”

Hijiki (Cystophyllum fusiforme) “is sun dried and is ready for use after boiling in fresh water or cooking with soy-bean sauce.”

Wakame (Undaria pinnatifida): “Before being used it is washed with fresh water, and then eaten as a salad, cooked with soy-bean sauce or put in soups... The thick root of wakame, called *mehibi*, is often dried, shaved, cut into slices, or eaten with sauce (miso).”

Suizenji nori (Phyllocladus sacrum): “This product is ordinarily eaten with raw fish (*sashimi*); the dry weed is soaked in fresh water, and after it has swelled, boiling water is sprinkled over it and then soy-bean sauce is added. In the time of the feudal system this preparation was regularly presented to the local daimyo.”

Miru (Codium tomentosum, C. mucronatum, C. lindenberghii): “After drying they are preserved in ask or salt. They are prepared for food by boiling or baking in water, and are put in soups; or, after washing, by mixing with soy-bean sauce and vinegar.”

Haba-nori (Phyllitis fasciata): “This plant is prepared for use after the manner of ‘awa-nori’ (*Porphyra*), principally by peasants of the provinces of Awa and Sagami. The young fronds are dried in the sun in sheet form and subsequently parched, powdered, and mixed with soy-bean sauce.”

Matsuma (Chordaria abietina) “abounds in northern Japan and is consumed by the peasantry. It is preserved by packing in salt, and is cooked with soy-bean sauce.”

Mozuku (Mesogloia decipiens) “is preserved by salting, and is eaten after washing out the salt and immersing in soy-bean sauce or vinegar.”

Hondawara (Sargassum enerve) “When the plant is young it is eaten in soup or with soy-bean sauce.”

Somen-nori (Nemalion vermiculare) “is eaten in soup or after mixing with vinegar and soy-bean sauce.”

Tosaka nori (Kallimena dentata) “is preserved by drying, and is eaten as a condiment or mixed with soy-bean sauce.”

Other Japanese algæ which are eaten are: *Awo-nori (Enteromorpha compressa, E. intestinales, E. linza)*. *Aosa (Ulva lactuca)*, “the well-known sea lettuce of the United States.” *Tsuno-mata, hosokeno-mimi (Chondrus crispus, C. ocellatus, etc.)*. “The well-known Irish moss. *Ogo-nori (Gracilaria confervoides)*.

“Other Japanese algæ which are dried and eaten or utilized in various other ways are: *Cata-nori (Gigartina teedii)*, *comen-nori (Grateloupia affinis)*, *mukade-nori (Grateloupia filicina)*, *makuri (Digenea simplr)*, *ego (Carnpylaephora hypneoides)*, *okitsu-nori (Gymnogondrus flabelliformis)*, and *tosaka (Sarcodia species)*.” Address: Deputy U.S. Fish Commissioner.

1608. Lea and Perrins. 1905. Lea & Perrins’ Sauce (Ad). *Japan Weekly Mail (Yokohama)* 43(11):24. Jan. 7.

• **Summary:** This black-and-white ad (5 by 4 inches) states: “The original and genuine Worcestershire. By Royal warrant to His Majesty the King.”

Note: This is the earliest document seen (Feb. 2012) that contains the phrase “By Royal warrant to His Majesty the King” in connection with Lea & Perrins’ Worcestershire sauce. The phrase was used frequently in ads until about 1916. Address: England.

1609. *Chemist and Druggist (London)*. 1905. Trade report. 66(2):65-68. Jan. 14. See p. 68.

• **Summary:** On page 68 we read: “Soy [sauce] of the finest quality is offered at 1s. 7d. per gallon, duty paid.”

1610. Saito, Kendo. 1905. Microbiological studies on the brewing of Japanese Soja-Sauce. *Botanical Magazine (Tokyo)* 19(216):75-77. Jan. 20. Bound after p. 119 of Japanese text. [1 ref. Eng]

• **Summary:** The author has been able to isolate the following microorganisms from koji and moromi: 1. Moulds: *Aspergillus Oryzae*, *Rhizopus sp.*, *Tieghmella sp.* Others incl. *Penicillium glaucum*, *Cladosporium herbarum*, etc. 2. Bacteria: *Sarcina Hamaguchiae* and *Bacterium Soja* (both new species). 3. Yeasts: *Saccharomyces Soja* (new species) grows copiously in moromi [the mash]. Film yeasts incl. *Saccharomyces farinosus* Lindner [Pichia farinosa (Lindner)], *Mycoderma sp.*, etc.

Note 1. This is the earliest document seen (Jan. 2009) describing Japanese investigation on the yeasts in shoyu mash (*moromi*).

Note 2. This is the earliest document seen (Jan. 2009) which mentions that *Saccharomyces* yeasts are involved in the shoyu fermentation. Address: Botanical Inst., Imperial Univ., Tokyo, Japan.

1611. Akizuki, Yoshizo; Nakanishi, Yoshitaka. 1905. Shôyu shiken seiseki hôkoku [Analysis of shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 275. p. 49-51. Jan. [Jap]

Address: Zeimusho-kannai, Matsuyama-shi, Ehime-ken, Japan.

1612. Tokyo Plant, Seed & Implement Co. (Tokyo Konoen). 1905. *Agriculturist (The)* No. 125. Jan. 56 p. [Jap]

• **Summary:** This illustrated monthly Japanese-language periodical, which began publication in 1894, has two main parts and functions: (1) Articles that promote agricultural theories and techniques to the public in easy-to-understand language. (2) A catalog of the publisher’s seeds, plants, bulbs, and implements.

The catalog section titled “Beans” (p. 8+) includes two entries (p. 9) for soybeans (*daizu*): (1) Juninko (“ten people like”) variety. 5 sen per *gô* (100 sen = 1 yen; 1 *gô* = 180 cc = 0.763 cups {U.S.}). 40 sen per *shô* (1 *shô* = 1.8 liters = 1.903

quarts {U.S.}). A recently improved variety with medium sized, shiny seeds. They are good for making shoyu, miso, or other foods. (2) Kimusume (“fresh daughter”) variety. 5 sen per *gô*. 40 sen per *shô*. Mid-season / medium-maturing, summer varieties that yield a big harvest. Address: Tokyo, Japan. Phone: 2421.

1613. Kadono, C. 1905. The diet of the Japanese. *Times* (London). Feb. 11. p. 6, cols. 3-4.

• **Summary:** This article is actually mostly about soya beans and their products. “It is well known that the Japanese diet consists chiefly of rice, vegetables, and fish, with very small and occasional additions of butchers’ meat. The relative quantities of these, and vegetables and products thereof used, would be interesting and in some respects instructive.

“The following bill of fare, which attempts to give the three meals of a day for a family of moderate circumstances, will show how they live. It may also be said that all Japanese live rather simply whether high or low in their station of life, and the menu can be taken as typical of all classes.

“Breakfast (about 7 to 7:30 a.m.).—Miso soup (with vegetables, tofu, &c.), pickles, boiled rice, tea (sometimes raw egg or boiled sweet soya beans, or natto, &c.).

“Lunch (12 noon).—Fish boiled in soya, vegetables stewed in soya, pickles, boiled rice, tea.

“Supper (6 to 6:30 p.m.).—Soya soup (with vegetables, fishes, &c.), raw fish sliced and eaten with soya sauce, broiled fish (or boiled) with vegetables (or butchers’ meat or fowl and vegetables stewed), rice, tea...

“From the foregoing it can be seen how cereals and vegetables predominate in Japanese diet. Rice and miso and soya, as will be seen from the menu, form the predominant feature of the food, and it may not be an exaggeration to say that the Japanese physique is mainly built up on the products of soya beans, such as miso, soya sauce, tofu, &c.”

There follows a detailed table titled “Analysis of Soya Beans and Their Products. (Extract from a table by Mr. C. Omura.)” Nutritional analyses are given for the following, written exactly as they appear: Soya beans (5 varieties), miso (white, red Osaka, red Tokio, red Sendai), soya sauce (regular or Noda), tofu, dried frozen tofu, fried tofu, mash residue from tofu (Okara), yuba (Dried skim off tofu-mash), natto (Steamed beans with surface fermentation).

Note 1. This is the earliest English-language document seen (May 2012) that contains the term “fried tofu.”

“Soya beans are grown all over Japan and in Manchuria, and so far as I know cannot be had here [in England]. They are eaten boiled, either young or ripe.” They are manufactured into those articles shown above, of which miso, soya, and tofu are the most important...” The author then gives a 5-10 line description for each of how miso, soya sauce, and tofu are made. Tofu is coagulated with a “strong brine. “The remnant (okara), being a white pulverized mass, called fancifully ‘snow balls’ by Japanese, is eaten boiled

and seasoned with soya sauce.

“I have given Japanese meals to some English friends and most have pronounced the food excellent, and some have even braved the sliced raw fish with soya sauce.”

Note 2. Concerning the idea that okara is sometimes fancifully called “snow balls,” the term *kirazu* is written with three characters: yuki = snow, hana = flower(s), and sai = vegetable(s). Or the author may be referring to a local term from some part of Japan.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *okara* or the term “mash residue from tofu” to refer to okara.

Note 4. This is the earliest English-language document seen (Nov. 2011) that contains the word “dried frozen tofu” (or “dried-frozen tofu”). Address: England.

1614. *Manchester Guardian*, 1905. What the Japanese eat. Feb. 13. p. 12.

• **Summary:** This is a summary of: Kadono, C. 1905. “The diet of the Japanese.” *Times* (London). Feb. 11. p. 6, cols. 3-4. Mentions soya beans, miso soup, tofu, natto, soya sauce, etc.

1615. *Star* (Canterbury, New Zealand), 1905. Fish as war food: The fish eater versus the beef eater. Tabloids of brain and nerve food furnished as emergency rations. Feb. 25. p. 2.

• **Summary:** “(By Frank G. Carpenter, in the New Orleans ‘Times-Democrat’). Washington [DC], December 29, 1904. I saw this morning a specimen of the emergency rations furnished the Japanese Army. It [katsubushi] looked like a petrified banana of the largest size,...

There follows a conversation with Dr. Hugh M. Smith about fish in Japan.

“Raw fish. ‘How about eating fish raw, doctor, I understand that is common in Japan?’

“It is, and I assure you that raw fish are not so bad when properly served. Take a fresh tai [sea bream] and slice it thin. Bring it cold to the table and eat it with chop-sticks, dipping each bite in soy or bean sauce, and you will find it delicious. The Japanese, however, usually eat their fish cooked.”

1616. *Chemist and Druggist* (London), 1905. Trade report. 66(1310):364. March 4.

• **Summary:** On page 364 we read: “Soy [sauce].—Good thick (Mandarin No. 1) sold without reserve at 1s. 3d. per gallon, and fair thick (Buffalo No. 2) at 1s. 2d. duty paid. Privately fair to good thick is quoted 1s. 3d. to 1s. 5d. per gallon duty paid.”

1617. *Chambers’s Journal* (London), 1905. Japanese diet. Vol. 8. March 25. p. 270. Sixth series. [1 ref]

• **Summary:** “The nations of the world have now had the opportunity of learning many a valuable lesson from the general management of the Japanese army... It is interesting

to note that the hard work done by the Japanese Tommy is performed on a dietary table which would hardly satisfy the soldiers of any other country. A large quantity of the Japanese soldiers' rations is made up of compressed fish-meal... Another form of food which seems peculiar to the Japanese army is obtained from kelp and other seaweeds, many of which afford very nourishing sustenance...

"At home this is the bill of fare of a Japanese family in moderate circumstances, according to C. Kadono in the *Times*. Breakfast (about 7 to 7.30 A.M.)—miso soup (with vegetables, tofu, &c.), pickles, boiled rice, tea (sometimes raw egg or boiled sweet soya beans, or natto). Lunch (12 noon)—fish boiled in soya, vegetables stewed in soya, pickles, boiled rice, tea. Supper (6 to 6.30 P.M.)—soya soup (with vegetables, fish, &c.), raw fish sliced and eaten with soya sauce, broiled fish (or boiled) with vegetables (or butcher meat or fowl and vegetables stewed), rice, tea. The Japanese physique is thus largely built up on the product of soya beans, which are grown all over Japan and in Manchuria, and from which miso, soya, and tofu are made. Soya beans, which, we believe, are not to be had in this country, are much richer in albumen than either beef or mutton. The Japanese diet, therefore, mainly consists of rice, vegetables, and fish, with very small and occasional additions of butcher meat."

1618. *Chemist and Druggist (London)*. 1905. Trade report. 66(1313):486. March 25.

• **Summary:** On page 364 we read: "Arrivals: The following drugs, chemicals, etc. have arrived at the principal ports of the United Kingdom from March 9 to 15, inclusive..." "; soy (@ Hong Kong), 400."

Note: The soy sauce was probably shipped from Hong Kong; the meaning of the number "400" is unknown.

1619. Suzuki, Tozaburo. 1905. Apparatus for making soy extracts. *U.S. Patent* 0,785,776. March 28. 6 p. Application filed 28 July 1904. 6 drawings.

• **Summary:** Concerns soy sauce production. Six illustrations (line drawings) show the apparatus consisting of 3 vacuum evaporating pans, in series, working on the multiple effect system. The pans consist of a cylindrical drum containing the extract to be evaporated, surrounded by a steam jacket; a rotary stirring device is provided in each drum for keeping the liquid in motion, and the extremities of the stirring arms are fitted with brushes. The concentrated extract from the last evaporator is discharged into a vacuum finishing receptacle heated by hot water. This receptacle is divided into 2 sections, containing shelves composed of hot-water tubes, upon which trays containing the concentrated extract are placed for final drying; the air can be exhausted from either section independently.

Note: This is the earliest U.S. patent seen related to soy. The five earliest soy-related patents in the United States were all issued to Tozaburo Suzuki. This is the second earliest

soy sauce patent seen worldwide, after the British patent of Samuel Bowen of 1767. Address: No. 401 Jibeishinden, Sunamura, Minami Katsushika, Japan.

1620. Lust (Benedict). 1905. Mother's milk (Ad). *Naturopath and Herald of Health (The) (New York City)* 6(3):Unnumbered page at front. March.

• **Summary:** "... is undoubtedly the best food for infants. When this, however, is not procurable the best substitute for it only should be used... Dr. Lahmann's Vegetable Milk (*Pflanzen-Milch*). Dr. Lahmann's Nutritive Salt Health Cocoa (*Närsalz-Cacao*). Dr. Lahmann's (sweetened) Chocolate. Dr. Lahmann's Nutritive Extract (*Närsalz-Extract*). Dr. Lahmann's Oatmeal and Närsalz Biscuits. Dr. Lahmann's Japan Soya Sause [sic, Sauce] \$1.00.

"Descriptive pamphlet on receipt of 2 Cents stamp. For sale by all naturopathic sanitarium and N.D's."

Note: This is the earliest document seen (Aug. 2007) in this periodical that mentions soy. Address: Sole importer and agent for the U.S., 124 E. 59th St., New York City.

1621. *Chemist and Druggist (London)*. 1905. Trade report. 66(1316):596-97. April 15.

• **Summary:** A table shows (p. 597) goods offered and sold: Soy [sauce]—Offered 57. Sold 0.

Note: The meaning of these two numbers is unclear.

1622. *Chemist and Druggist (London)*. 1905. Trade report. 66(1317):648-49. April 22.

• **Summary:** On page 648 we read: "Arrivals: The following drugs, chemicals, etc. have arrived at the principal ports of the United Kingdom from April 6 to 12, inclusive..."

Page 649: "; soy (@ Hong Kong), 155."

Note: The soy sauce was probably shipped from Hong Kong; the meaning of the number "155" is unknown.

1623. *Chemist and Druggist (London)*. 1905. Trade report. 66(1318):681. April 29.

• **Summary:** Page 681 states: "Soy is very quiet at from 1s. 2d. to 1s. 7d. per gallon, according to quality."

1624. Ishizaka, S. 1905. Shōyu jōzō fukusan yubun ni tsuite [On the oil by-product of shoyu]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 8(86):381-91. April. [Jap]

1625. Smith, Hugh M. 1905. Japan, the paramount fishing nation. *American Fish Culturist* 2(4):101-10. April. See p. 108.

• **Summary:** From *Transactions of the American Fisheries Society*, 1904: "Raw fish is one of the national foods. I acknowledge that my repugnance to it was great, but it was overcome by the first dish, for as prepared and served by the Japanese the thin, cold, boneless slices of perfectly fresh tai

or mackerel, taken with chop sticks and dipped in soy-bean sauce, are delicious.”

1626. Suzuki, Tozaburo. 1905. Apparatus for brewing soy. *U.S. Patent* 0,789,299. May 9. 4 p. Application filed 5 July 1904. 3 drawings.

• **Summary:** Three illustrations (line drawings) show the apparatus consisting of a closed heating chamber, the temperature of which can be regulated, one or more brewing tanks sunk in the chamber, and stirring shafts passing centrally through the brewing tanks. These stirring shafts carry several pairs of radial stirring arms, the arms of adjacent pairs being of different radial lengths; the pairs of radial arms are connected by transverse stirring slats, the whole being so arranged as to bring the arms and slats of adjacent stirrers out of alignment and alternately to thrust the soy from the path of one stirrer laterally into the paths of adjacent stirrers. Address: Sunamura, prefecture of Tokio, Japan.

1627. *Chemist and Druggist (London)*. 1905. Trade report. 66(1320):748-49. May 13.

• **Summary:** A table shows (p. 749) goods offered and sold: Soy [sauce]—Offered 53. Sold 0.

Note: The meaning of these two numbers is unclear.

1628. Scanland, J.M. 1905. Some tidbits of the dinner elegant in the Chinese quarter. *San Francisco Chronicle*. May 21. p. 2.

• **Summary:** In San Francisco there are hundreds of restaurants. “They are as cosmopolitan as the city’s population and as unique.” In the “Chinese quarter” there are “restaurants of barbaric glow and splendor, where soft-footed noiseless attendants serve you with strange Eastern dishes of unknown and unpronounceable names; where one is an alien among aliens, and where one awakes from a dream of sumptuous Oriental magnificence.”

“Other favorite dishes are stewed shell fish, sliced sea-slugs in chicken broth, stewed bamboo shoots, boiled fish with soy sauce, strips of boned chicken fried in oil,…”

1629. *Chemist and Druggist (London)*. 1905. Trade report. 66(1322):833. May 27.

• **Summary:** A table (p. 833) shows recent price trends for various goods. The four trends are: Higher. Firmer. Easier. Lower. “Soy” sauce is listed under “Easier.”

1630. *Chemist and Druggist (London)*. 1905. Trade report. 66(1322):835. May 27.

• **Summary:** Under “London drug-auctions” is a table which shows the amounts of various goods offered and sold, “Soy [sauce]—Offered 30. Sold 30.”

On page 836: “Soy.—Easier. Thirty casks of fair thick sold without reserve from 1s. to 1s. 1d. per gallon duty paid.”

1631. Kitao, Motohide; Akiyama, Takuji. 1905. Miso shōyu chū ka kurooru tetsu ni yotte sarichiru-san to kokuji no nannō o teisuru ni tsuki. I. [On the substance which appears to resemble the reaction of salicylic acid with ferropchloride in miso and shoyu. I.]. *Eisei Shikenjo Iho (Bulletin of the Imperial Hygienic Laboratories)* 10:79-87. May. [Jap]

Address: 1. Gishi; 2. Gishu. Both: Eisei Shikenjo.

1632. *Chemist and Druggist (London)*. 1905. Trade report. 66(1324):908. June 10.

• **Summary:** A table (p. 908) shows the amounts of various goods offered and sold, “Soy [sauce]—Offered 59. Sold 29.”

On the same page: “Soy.—A parcel of 24 casks Chinese sold without reserve at 11d. [11 pence] per gallon duty paid for ordinary.”

1633. Douglas (J.M.) & Co. 1905. Lea & Perrins’: The genuine Worcestershire Sauce (Ad). *Toronto Daily Star (Canada)*. June 24. p. 65.

• **Summary:** A large illustration shows a dignified man wearing glasses seated at a dining table with a steaming bowl of something in front of him. Behind him stands an attentive waiter.

“James, haven’t you forgotten something.”

“Forgotten—me! Sir.” “What about my cold roast beef?”

“Beg pardon, Sir. Of course, Sir. Lea & Perrin’ Sauce, Sir.

“Ad it for you hevery day, these thirty years, Sir.

“Couldn’t heat cold meats without Lea & Perrins’ Sauce, could you, Sir?” Address: Canadian agents, Montreal [Quebec, Canada].

1634. Ishisaka, S. 1905. Shōyu-jōzō [Analysis of the oil obtained as a by-product of shoyu fermentation]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 281. p. 589-99. June. [Jap]

1635. Kitao, G.; Akiyama, T. 1905. Miso, shōyu-chū ka kuroru tetsu ni yotte sarichiru-san to kokuji no hanno o tei suru seibun ni tsuki, dai ikkai hōkoku [A constituent of miso and shoyu which gives, with ferric chloride, a reaction similar to that of salicylic acid]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 280. p. 483-88. June. [Jap; eng]

• **Summary:** This constituent is thought to be tyrosine, which is a decomposition product of albuminous matter contained in the raw material. Authors also give the results of experiments on that constituent and the distinction between it and salicylic acid.

1636. Douglas (J.M.) & Co. 1905. Lea & Perrins’: The

genuine Worcestershire Sauce (Ad). *Toronto Daily Star (Canada)*. July 15. p. 19.

• **Summary:** A large illustration shows a waiter carrying to steaming bowl of soup to the table.

“Beg pardon, Sir.

“Alphonse says as ‘ow the grocer didn’t send ‘im Lea & Perrins’ Sauce, Sir.

“The bottle looked the same, Sir—hand ‘e didn’t notice the label. Sir.

“Sorry, Sir, that the soup hisn’t seasoned just right, Sir.

“Alphonse, Sir, says has ‘ow hit wont ‘appen hagain, Sir.” Address: Canadian agents, Montreal [Quebec, Canada].

1637. *France Militaire (La) (Paris)*. 1905. La Guerre Russo-Japonaise: La cuisson des aliments dans l’armée japonaise [The Russo-Japanese War: The cooking of foods in the Japanese army]. 6(6464):1. July 27. [1 ref. Fre]

• **Summary:** We borrow the following interesting details from the *Streffleurs Oesterreichische Militaerische Zeitschrift*. The Japanese soldier does not eat bread, which greatly simplifies supply operations, making it unnecessary to construct of bakeries or to carry fresh bread—which is very cumbersome. Moreover, meat is not as important to the Japanese as it is to European armies. Japanese soldiers can easily do without meat, for they are not accustomed to eat it regularly; they are content with rice and dried fish, provisions which are easily transported and distributed. When they are given meat, it is cut into small morsels and stewed with vegetables. They eat it with a sort of piquant sauce (*sauce piquante*) [i.e., soy sauce].

The Japanese eat their meals cold voluntarily—even canned meat.

1638. Eaton (T.) Co., Ltd. 1905. Eaton’s July sale news (Ad). *Toronto Daily Star (Canada)*. July 28. p. 12.

• **Summary:** The section titled “You’re the doctor” states: “Pure, fresh, clean foods go a long way toward keeping you right, and that’s the kind of food we offer every day.”

“Lee and Langley’s imported Worcestershire Sauce, special per bottle 10¢.” Address: 190 Yonge St., Toronto.

1639. Kurihara, T. 1905. Shôyu-chû shibashiba ganyu suru biryo no sanri yaji-san ni tsuite [On a minute quantity of salicylic acid often contained in shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 281. p. 599-600. July. [Jap; eng]

• **Summary:** The salicylic acid comes from the cask used in holding the shoyu. Address: Eisei Shikensho, Kurihara, Hyogo-ken, Japan.

1640. Macmillan, H.F. 1905. The “Soya (or Soy) Bean.” (*Glycine hispida*). A new vegetable, fodder, and green-manure product for Ceylon. *Tropical Agriculturist (Ceylon)* 25(5):682-83. Nov. 15.

• **Summary:** “It is strange that a product so important, so simple of cultivation and so quick in yielding returns as this has not hitherto attracted attention in Ceylon. Notwithstanding the fact that it has been introduced several years ago by the Royal Botanic Gardens, and successfully grown at Peradeniya year in and year out, both for the instruction of visitors to the Gardens and for distributing seeds; I question whether there are at present half-a-dozen gardens or estates in Ceylon which count this amongst their crops.”

“The Soya Bean thrives at Peradeniya, and appears to be well-suited to the climate and soil; whilst it also flourishes in the Mediterranean region and Southern Europe. It would therefore seem reasonable to expect it to thrive at a comparatively wide range of elevations in Ceylon, provided the conditions of soil and rainfall were at all favourable. In China and Japan the Soya Bean forms a standard article of food with all classes of the community, being prepared for use chiefly in the form of a sauce, paste or cheese, the latter two preparations being made by crushing and pressing the seeds. In India the seeds are said to be cooked and used in various ways, often ‘roasted and ground as *satu*, or simply eaten in the form of *dal*.’ Soy sauce is said to form the basis of many popular sauces made in Europe.” A few years ago soy sauce in London was worth 2 shillings and 6 pence per gallon. “Personally I think Soya Bean as a vegetable is very agreeable and forms a good substitute for the Lentils and Broadbeans of Europe if cooked and served similarly. Its chemical composition, according to Professor Church, places it above all other pulses as an albuminous food.”

The soya bean is also considered valuable as a fodder plant and for green manuring. A brief description of its cultivation is also given. “Regarding cultivation, probably few crops are less exacting in their requirements than this. Its most striking characteristic, judging by results recorded at Peradeniya, is the remarkably short space of time in which the plants grow and produce a crop. Here the seeds germinate in 3 to 5 days, the plants flower when a month old; a fortnight later the pods are fit for picking [for use as a green vegetable], and the harvesting is complete in about two months from the time of sowing. Thus, granted the seasons were favourable, it should be possible to obtain four crops a year. In making these statements, which may seem unduly optimistic, it is not by any means intended to convey the impression that practically no expenditure of labour is involved in the production of this crop. On the contrary it is pretty certain that to make it a profitable product for whatever purpose, even under the most favourable conditions for its growth, a reasonable amount of cultivation will be required. It has yet to be proved how far it would repay cultivation in Ceylon for fodder and green-manuring, but that it should prove a welcome adjunct to the food products of the natives, if not as a general vegetable, there seems no question.”

A footnote states: “* Since writing this Mr. Kelway Bamber has presented a small quantity of Soya Bean seed to the Botanic Gardens, remarking that he intended to recommend it as a green-manure crop.” Address: Curator of the Royal Botanic Gardens at Peradeniya.

1641. Holbrook’s Sauce. 1905. The soup recipe which won the Holbrook’s prize (Ad). *Toronto Daily Star (Canada)*. Dec. 23. p. 16.

• **Summary:** A large illustration shows a bottle of “Holbrook’s Worcestershire Sauce” which savour’s soup. “It helps make poor soups palatable and makes good soups better than they could be without it.

“Many recipe for soups using Holbrook’s Sauce were submitted in competition for 18 prizes offered by the manufacturer. The awards were made after careful test by Miss Ida M. Hunter, the Superintendent of Domestic Science Department of the Public School of Toronto.”

The first prize recipe, titled “Curl vegetable soup,” is given. Address: 23 Scott St., Toronto.

1642. **Product Name:** Kikko-Ki Soy Sauce.

Manufacturer’s Name: Terada (T.) Shoten. By 1915 renamed Terada Shoyu Jozo-sho.

Manufacturer’s Address: 1346 N. King, Honolulu, Oahu, Hawaii.

Date of Introduction: 1905-1906.

New Product–Documentation: Husted’s Directory of Honolulu and the Territory of Hawaii. 1905-06. p. 357. Terada T. Shoten, soymkr [soy-maker], 1346 N. King. 1907 Directory. p. 567. Terada, Tagero, soy, 1346 N. King. Residence, same. 1908 Directory, same. 1909 Directory. p. 559. Terada, F., soy. 1346 N. King. Residence, same; Hawaii Hojin Katsuyaku-shi, Meiji 41-42 (Japanese who play an active role in Hawaii, 1908-09). 1915. Oct. Lists Terada Shoyu Jozosho, founded by Tajiro Terada, as a brewer of Kikko-ki brand soy sauce, located on King St., Palawa, Honolulu. The company also has an ad on page 22.

1916 Directory. T. Terada, 1222 N. King. Directory of the City and County of Hawaii. 1947-48. p. 989. Terada T. Shoten (Kyuzo and Robert H. Terada, and Mrs. Hatsuko Umeno). General Merchandise and Soy Manufacturers. 1224 N. King. Tel. 8033. Note this company’s rebirth on the same street with the same name after almost 40 years. They are not listed in the 1941-42 Directory.

Note: This is the earliest known commercial soy product made in Hawaii after the Hawaiian Islands were a territory of the United States.

1643. *Japan Year Book*. 1905-1952. Serial/periodical. Published by The Japan Year Book Office, Tsukiji, Tokyo; and by Foreign Affairs Assoc. of Japan. Annual. [Eng]

• **Summary:** In the *Year Book* for 1906, in the chapter on agriculture, page 104 gives statistics from 1895 to 1903

for the production of the following: Miscellaneous grains (millet, buck wheat [buckwheat], Italian millet, Sarva millet), beans (soja beans, red beans [azuki]), sweet potatoes and potatoes.

Production of soja beans increased from 2,943,478 koku in 1895 to 3,647,830 koku in 1903—an increase of 23% in 8 years. The frontispiece, facing the title page, lists “Weights, measures, and moneys.” 1 koku (dry) = 4.962 bushels.

1644. **Product Name:** Sugita Shoyu [Soy Sauce].

Manufacturer’s Name: Sugita Jozo-sho (Sugita Brewery).

Manufacturer’s Address: 569 Tyler (Taylor?) St., San Jose, California.

Date of Introduction: 1905.

New Product–Documentation: *Zaibei Nippon-jin Nenkan (The Japanese-American Yearbook)*. 1905. No. 1. Published by Mr. Kyutaro Abiko, of Nichibei [Shinbun], Japanese-American News. 1905. Page 24, under the category heading “Jozosho” (Breweries), lists Sugita Jozo-sho, 569 Tyler Street, San Jose, California. An unnumbered page in the same 1905 edition states that there are currently two shoyu breweries in San Jose. This must mean Yamamori and Sugita.

1645. **Product Name:** Soy Sauce.

Manufacturer’s Name: Yamajo Soy Co. [Yamajo Shoyu Seizojo].

Manufacturer’s Address: Pua Lane, Honolulu, Oahu, Hawaii.

Date of Introduction: 1905.

How Stored: Shelf stable.

New Product–Documentation: Husted’s Directory of Honolulu and the Territory of Hawaii. 1907. p. 609. Yamajo Soy Co., Nobuyuki Yamakami, mngr. Pua Lane, [Honolulu]. Two entries following: Yamakami, N., mgr, Yamajo Soy Co., residence King, near Palama Chapel. Note: No listing in 1905-06 Directory, which is the earliest at Sutro library. 1908 Directory. Yamajo Soy & Sauce Co. Ltd. The, Pua Lane. 1909 Directory. p. 602. Company name has changed to Yamajo Soy and Sauce Manufacturing Co. Ltd., N. Yamakami, mngr, Pua Lane near Kukui. Krauss. 1909. Hawaii Agric. Exp. Station, Annual Report. p. 16, 83-85. For the year 1908. States that “Seed of two other [soybean] varieties were [sic] donated by the Hawaiian Yamajo Soy Company of Honolulu.”

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” States that the company was founded in 1905 by Mr. Nobuyuki Yamakami.

F. Odo and K. Sinoto. 1985. A Pictorial History of the Japanese in Hawaii, 1885-1924. A photo (p. 166) shows the inside of the Hawaii Shoyu Co. (Hawaii Shoyu Kaisha) on King Street in Palama, Honolulu, taken in about 1914. The caption reads: “The Japanese in Hawaii depended upon

shoyu imported from Japan until Nobuyuki Yamashiro [sic, Yamakami] started making shoyu in 1904.” His company was established as Hawaii Shoyu Co. in 1906. American Shoyu Co. was established in Honolulu in 1912. Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. Letter from Takao Nihei. 1988. July 19. “There was a record showing that Mr. Shimada was the first to make shoyu in Hawaii. But he closed soon after he started. Therefore I think that the first person who succeeded was Mr. Nobuyuki Yamakami.”

1646. **Product Name:** Kenfu Shoyu.

Manufacturer's Name: Yamakami Shoyu Jozo-sho. Renamed Hawaiian Soy Co. Ltd. (Hawaii Shoyu K.K.) by 1909.

Manufacturer's Address: N. King St., Honolulu, Oahu, Hawaii.

Date of Introduction: 1905.

New Product–Documentation: Hawaii Hojin Katsuyakushi, Meiji 41-42 [Japanese who play an active role in Hawaii, 1908-09]. 1915. Oct. Lists Hawaii Shoyu K.K. as a soy sauce brewer on King St., Palawa, Honolulu. The ad on page 39 notes that in Taihso 4 (1915) the company produced 3,500 koku (1 koku = 180 liters or 47.6 gallons), so 630,000 liters or 166,600 gallons of shoyu.

Shogoro Fujin. 1937. *Dainihon Kaigai Iminshi* (Great History of Japanese Immigration Overseas). Published by Kaigai Chosakai. Vol. 2. p. 95. Gives a brief life history of Nobuyuki Yamakami and states that in 1905 in Honolulu he founded Yamakami Shoyu Jozo-sho, which succeeded. He later changed the company's name to *Hawaii Shoyu Kaisha*. He called the shoyu “kenfu.” which means “wise wife/women.”

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” States that the company was founded in 1906 by Mr. Yamagami/Yamakami Nobuyuki and Tashiro Kumataro.

F. Odo and K. Sinoto. 1985. *A Pictorial History of the Japanese in Hawaii, 1885-1924*. A photo (p. 166) shows the inside of the Hawaii Shoyu Co. (*Hawaii Shoyu Kaisha*) on King Street in Palama, Honolulu, taken in about 1914. The caption reads: “The Japanese in Hawaii depended upon shoyu imported from Japan until Nobuyuki Yamashiro [sic, Yamakami] started making shoyu in 1904. His company was established as Hawaii Shoyu Co. in 1906. American Shoyu Co. was established in Honolulu in 1912.”

1647. Alviso Co. (The) 1905. Dealer in Japanese American provisions, dry goods and merchandise (Ad). In: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Unnumbered page near the end. [Jap; eng]

• **Summary:** Ad (full page). The central 1/8 of this ad is in English. This company sells various goods including miso and shoyu. The Japanese title across the top: “Great bargain

prices. You'll be surprised!” An illustration shows two flags, Japanese and American, crossed. Address: P.O. Box 15, Alviso, Santa Clara Co., California.

1648. Aoki (George) & Co. 1905. Direct importers of rice and tea: Gents. furnishing goods (Ad). In: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Unnumbered page. [Jap]

• **Summary:** Ad (full page). The top 1/3 of this ad is in English and includes a photo showing a man with a sash and many medals, probably George Aoki. This company imports various goods including (exclusively) shoyu made by Nakayama Kankichi (spell?) and Oota Kyusuke. They are wholesale and retail dealers. Address: 437-439 DuPont St., San Francisco, California. Phone: Bush 865. Cable address: Aoki.

1649. Bui, Quang Chieu. 1905. Des cultures vivrières au Tonkin [On the food crops of Tonkin, Indochina]. *Bulletin Economique de l'Indo-Chine* 48:1152-90. New Series 2. Many illust. and photos. [4 ref. Fre]

• **Summary:** This article begins with a foreword by H. Brenier, Director of Agriculture, Forestry and Commerce for Indochina. He notes the importance of soybeans, soy products (including soy sauce and tofu) and adzuki beans (*Phaseolus radiatus*), among the people of Asia. In Annamite (south Vietnamese), tofu is called *dau phu* and the soybean is called *dau nanh* or *dau tuong*.

Adzuki beans are discussed (p. 1153-55, 1157) and a nutritional analysis of the azuki bean, which has been cultivated in France, is given. The section on the soybean (p. 1153, 1157-68) discusses: The local names and varieties of the soybean, botanical characteristics, cultivation, utilization (to make soy sauce, *tuong*, tofu, etc.), commerce and trade (in the province of Hungyen, the stalks of the soybean plant are used to make a sort of incense). An illustration (line drawing, p. 1159) shows a Soja plant with pods.

A detailed description is given of the manufacture of *tuong* (a sort of soft miso) in Tonkin. First *moc*, or molded glutinous rice is prepared. After glutinous rice is cooked, it is covered with banana leaves and allowed to mold for 2-3 days. Then the soybeans are prepared. They are grilled, ground to a powder, boiled with water, and put into a jar for 7 days until sweet. Six parts of rice koji are then mixed with 5 parts soy. The mixture will be ready to eat after it has fermented for 15-30 days. If it is too thick, add salt. Good *tuong* is soft and mildly sweet. It is sweeter and smoother than *nuoc mam*. Annamites say that only the prosperous households succeed in making *tuong*. If the *tuong* starts well, then becomes sour, that is a bad omen.

Tuong can also be made from corn (*maïs*), which is grilled, ground, sifted, covered with taro leaves, and allowed to mold. Put it in salt water, then after 5-6 days add roasted soy flour as above. Stir it before sunrise and let it stand open

in the sun for 15 days, putting on the cover as soon as the sun disappears. If this is done, it will last a long time.

Note 1. This is the earliest document seen (Jan. 2009) that mentions *tuong*. The importance of this fermented seasoning, a close relative of Chinese *jiang*, is indicated by the local name for the soybean (*dau tuong*), or “the bean used to make tuong.”

Production of tofu (*dau-phu*): Lots of *dau-phu* is made in Tonkin, especially in Hanoi, where it constitutes the basis of the poor people’s food. It is never made in large factories, only small shops. Soak the soybeans, wash them and remove their hulls, cook to soften them, then grind them with a hand-turned mill over a wooden bucket. The soymilk is extracted with cold water then boiled for 30 minutes. There remains in the sack a white residue (*un résidu blanc*) [okara] which is fed to the pigs. The next day, add some fermented whey from a previous batch to coagulate the soymilk. Then press the curds. The finished tofu cakes are each 15 by 8 by 1 cm thick. Tofu is widely used in soups. A table (p. 1165) shows the costs of equipment to start a tofu shop, and a profitability analysis. Early analyses of the composition of the soybean, conducted by Fremy, Muentz and Pellet (in France) and Wechler (in Austria), are reproduced. Photos show key steps in the process: (1) A person is washing soybeans in a bamboo colander while standing in a stream near Hanoi. (2) The soybeans are ground in a small, traditional, hand-turned stone mill by a person sitting on the same wooden bench as the mill, in a bamboo hut, surrounded by various wooden tubs and colanders. (3) Using a sack to filter the ground puree from the stone mill. (4) Cooking the filtered liquid over a small wood fire in an earthenware pot. (5) Pressing the curds (outdoors) after precipitation of the protein. (6) More forceful pressing. (7) A merchant walking the streets selling tofu on two trays, each suspended by 3 ropes from the ends of a shoulder pole.

Note 2. This is the earliest French-language document seen that mentions okara (Oct. 2001), which it calls *un résidu blanc*.

Note 3. This is the earliest document seen stating that okara is fed to “pigs.” Address: Indo China.

1650. Clubb, Henry Stephen. 1905. Unpolished rice, the staple food of the Orient: A lecture to the Vegetarian Society of America; to which is added over one hundred receipts [recipes] for cooking unpolished rice, rice flour, rice polish; and testimonials of eminent food reformers. Philadelphia, Pennsylvania: The Vegetarian Society of America. 32 p. 18 x 14 cm. Pages unnumbered.

• **Summary:** Rev. Henry Clubb (born 1827) was an early advocate of the use of brown rice in America. He notes that this is the food on which the Japanese Army won its great victories (in the recent Russo-Japanese War), performed its rapid marches, remained comparatively free from camp diseases, and recovered rapidly from battle wounds.

On page 5 he notes: “In China, Japan and Java soy sauce, soy bean cheese [tofu], or a similar product is eaten with rice in considerable amounts, and furnishes a large part of the protein necessary for the daily diet of the laborious people.”

On the inside rear cover of the booklet is a list of publications and products sold by the Vegetarian Society, which is located at 1023 Foulkrod St., Philadelphia.

Note 1. This is the earliest document seen (April 2011) concerning unpolished rice (brown rice).

Note 2. This is the earliest English-language document seen (April 2011) that contains the term “unpolished rice.” Address: Rev., Philadelphia.

1651. Duthie, John Firminger. 1905. Flora of the upper Gangetic plain and of the adjacent Siwalik and sub-Himalayan tracts. Vol. I, part 1. Ranunculaceae to Campanulaceae. Dehra Dun, India: M/s. Bishen Singh Mahendra Pal Singh; Delhi, India: M/s. Periodical Experts. 500 p. + v. See p. 231-32. 19 cm. [6 ref]

• **Summary:** In the section on “Leguminosæ” we read (p. 230-31): “20. Glycine, Linn.; Fl. Brit. Ind. ii, 183 [Hooker, Joseph D. 1879. *The Flora of British India*. Vol. 2, p. 183].

“Twining or suberect herbs... Species about 15, spread through the tropics of the old world, also in Australia.

“G. Soja, Benth, in *Journ. Linn. Soc.* viii, 266: F.B.I. ii, 184 (not of Sieb. & Zucc.) G. hispida, Maxim.; Watt E.D.; *Field & Gard. Crops* iii, 3, t. 85; Prain in *Journ. As. Soc. Beng.* LXVI (1897), 403. Soja hispida, Moench.; W.&A. *Prod* 247. Dolichos Soja, Linn.; Roxb. *Fl. Ind.* [Roxburgh’s *Flora Indica*] iii, 314; DC. *L’Orig. Pl. Cult* 264. Vern. [Vernacular] *Bhat*. (Soy bean, Japan pea).

“An annual, with stout suberect or climbing stems, densely clothed with fine rusty-coloured hairs. *Leaves* 3-foliolate, long-petioled; *leaflets* 2-4 in. long, ovate, usually acute. *Racemes* sessile, few-flowered. *Calyx* ¼ in., densely hairy; teeth long, setaceous. *Corolla* reddish-purple, not much exerted [sic]. *Pods* 2-3 in the axils of the leaves, 1½-2 in. long, linear-oblong, recurved, densely pubescent, subtorulose, 3-4 seeded.

“Sparingly cultivated within the area, and confined to a few of the Sub-Himalayan districts. It is grown more extensively on the lower slopes of the Himalaya up to 6,000 feet, from the Punjab eastwards; also in Bengal, on the Khasia, Manipur and Naga Hills, and in Burma, but nowhere in India has it been found truly wild. De Candolle considered the plant to be a native of Cochin China, Japan and Java at the time when the ancient inhabitants of that region began to cultivate it, and to use it as food. As grown within the area of this flora, and in other parts of India, it represents a very inferior form of soy bean. It is a rainy-season crop, and is usually sown in very poor land. Under proper cultivation the chemical composition of the bean shows it to be the richest of all the pulses in albuminoids and oil. In China and

Japan various preparations are made from it, including soy-sauce, which is largely exported from those countries. The plant affords very excellent fodder for all kinds of stock, if harvested before it is fully matured.” Address: B.A., F.L.S., Formerly Director of the Botanical Dep. of Northern India.

1652. Fernie, William Thomas. 1905. Meals medicinal: With “herbal simples,” (of edible parts). Curative foods from the cook; in place of drugs from the chemist. Bristol, England: John Wright & Co.; London: Simkin, Marshall, Hamilton, Kent & Co., Ltd. xxii + 781 p. See p. 84. Illust. Index. 22 cm.

• **Summary:** In this collection of unusual facts about the healing power of foods, the various foods are listed alphabetically. The section titled “Bean” states (p. 84): “The Soy Bean (*Glycine soja*) [sic, *Glycine soja*] is of three varieties, black, green, and white. These Beans are boiled, then mixed with barley, or wheat, until, through fermentation, they become covered with fungi; then brine is added, and further fermentation goes on for a couple of years. The sauce thus concocted is afterward boiled afresh, and put, when cool, into bottles, or casks. From a nutritive point of view it is superior to any other sauce in our markets.” Soy is made throughout Japan, and most Japanese partake of it with every meal. “In China, Soy Cheese [tofu] is extensively eaten, whilst various sauces, and pastes [jiang] are prepared from the Beans... An old fable said that Soy was made from certain beetles, and Londoners have improved this to ‘black beetles.’” Note: This is also the earliest English-language document seen (Feb. 2004) that clearly uses the term “Soy Cheese” (or “soy cheese”) to refer to tofu.

The author then quotes a four-line poem by Edward Lear from his *Book of Nonsense* (1862) which begins: “There was an old person of Troy / Whose drink was warm brandy and soy...”

Also discusses: Seaweeds (p. 495-96, 627-33; Incl. Irish moss or carrageen, dulse, laver, sloke, samphire, sea holly, bladderwrack, and *Laminaria digitata* or sea-tang, sea spinach, agar-agar or Japanese isinglass). The Pea-nut (*Arachis hypogaea*, p. 504-05; Incl. pea-nut candy and nut cream). Vegetarianism (p. 711-17). The book contains no recipes. Address: M.D [England].

1653. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1905. Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 1]. 234 Turk St., San Francisco, California. 345 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Toshō Senta. Series: Nikkei Imin Shiryōshū. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is no English-language title page. The company that publishes this yearbook also publishes

(at the same address) a daily newspaper titled *The Japanese American*.

The book is composed of: 16 unnumbered pages of ads and basic information; page 14 is “About this publication, and pages 15-16 are the table of contents, 12 unnumbered leaves of black and white photos (including two maps, in Japanese, of northern and southern California, on glossy paper), 192 pages which are the body of the book, a directory interspersed with 80 pages of ads in groups of either 16 or 32 pages.

The table of contents reads: 1. Census of Japan and USA (both population and agriculture). 2. U.S. law. 3. U.S. agriculture as it relates to Japanese. 4. Commerce. 5. Education and religion. 6. Cities in which a significant number of Japanese live. 7. Statistics. 8. Japanese farmers in U.S. agriculture. Appendix: Directory and index to the directory.

Sources are cited: U.S. Agricultural Census for 1900. Trade information from Japan’s Dept. of the Treasury (*Ökurasho*) and the U.S. Dept. of Commerce. Then there is a 2nd table of contents for the directory, listing different city place names, by state. This directory was compiled by this newspaper using every means at their disposal.

Imports of Japanese shoyu (soy sauce) to the USA were 429,135 *sho* worth \$86,681. Note: 1 *sho* = 10 *go* = 1.8000 liters. So this amount is 772,443 liters or 203,925 gallons (p. 136). A significant amount of Japanese miso was also imported but this yearbook was unable to get the exact statistics (p. 136).

The top half of p. 137 is about shoyu; the bottom half is about sake. Concerning shoyu: Shoyu is one of the daily necessities for Japanese. It is the 3rd largest item imported [probably after white rice and sake]. In Meiji 36 (1903) the amount imported was 4,291 *koku*, 3 *to* and 5 *sho* worth \$86,681 (see above). It is the No. 1 “direct import” because it is relatively easy to import due to its packaging, documentation, basic liquid nature, and way of invoicing (it does not require double invoicing). It is easy to sell; not much capital is needed to stock it and it is a very popular item. Like bread or flour in U.S. groceries, it has a small profit margin and the stock turns over rapidly. Many varieties of shoyu are imported from many parts of Japan: Choshi in Chiba prefecture, Hamaguchi Yoshibe, Sa-jirushi, Mogi Saheji’s Yama Kikkoman in Noda (Chiba prefecture), Ka-jirushi, Yamagata-hi, Sendai jirushi, and Bunmei jirushi. The best selling brands are those which are of medium price. Recently, in San Jose, Mr. Yamamori, started a shoyu making plant and is working hard to make it successful. We look forward to receiving his product.

In San Jose, California, there are two shoyu makers (p. 156, bottom right).

The Directory shows Japanese companies making soyfoods only in California.

Note: This is the earliest document seen (July 2011)

that is a directory of Japanese living in the United States. Address: San Francisco, California.

1654. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man. *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 20-33, 40-43, 46-47, 145-53, 168-73. [26 ref. Eng]

• **Summary:** One section titled “The Soy bean and its preparations” (p. 23-33) gives detailed discussions of tofu (including yuba, frozen tofu, kara [okara], and fried tofu), miso (incl. white miso, red or Sendai miso), shoyu, and natto. The nutritional composition of each is given, and many early studies by Western and Japanese scientists are cited.

“Next to rice in importance in the Japanese diet are legumes, which are universally used... Of the different legumes used as food in Japan, the soy bean (*Glycine hispida*) is by far the most important. According to agricultural statistics for the years 1879 to 1887, nearly 10 per cent of the cultivated land in Japan was devoted to the growth of this legume, an area somewhat larger than that devoted to wheat growing. In the northern Island [Hokkaido] in 1887 nearly 17 per cent of the total cultivated area was devoted to the soy bean. The average yearly production of soy beans amounts to about 360,000,000 kilograms... A part of the product is of course used for seed, and a not inconsiderable part is used as fertilizer.*” (Footnote: * “In northern China soy beans are used to some extent in the production of oil, which is used for cooking and illumination [in oil lamps]. The residue from this process [the presscake] is imported largely into Japan, where it is used as a fertilizer”). Other legumes widely used in Japan include the mungo bean (*Phaseolus mungo radiatus*) and the adzuki bean (*Phaseolus mungo subtrilobata*) (p. 23-24).

“Many varieties of soy beans are known, being designated according to the color, size or shape of the seed, and the time required for maturity. For example, there are black, green, yellow, and white varieties, and these are again designated as early, medium, or late, according to the season of maturity, and small, medium, and large, according to the size of the seed. The black soy beans are used chiefly for cooking, with sugar and shoyu; the green variety is also used in this way, either in the fresh state or after being dried” (p. 24). There follows a long section on tofu (detailed in a separate record).

The “larger part of the leguminous food in the Japanese diet consists of the preparations of soy beans, such as miso, shoyu and tofu,...” (p. 46).

In Japan, legumes about 8% of the protein and 11% of the fat in the diet (p. 137). Many digestion experiments are described (p. 144-87), including those with tofu, shoyu, “tofu cake or kara, the soy-bean residue remaining from the preparation of tofu (see p. 26),” and yuba conducted in Japan by Osawa and Ueda (1887), T. Suchi (1887), Kano and Iishima (1899). Table 91 (p. 191) is a “Summary of

results of digestion experiments with legumes and legume preparations.” The percentages given are “coefficients of digestibility.” Experiments No. 6 and 7—soybeans (average): Protein 65.5%, fat (uncertain), carbohydrates (incl. crude fiber) 85.7%. Experiments No. 8 and 92—tofu (average): Protein 92.7%, fat 96.4%, carbohydrates (incl. crude fiber) 93.3%. Experiment No. 94—“yuba (soy legumin coagulated):” Protein 92.6%, fat 95.7%, carbohydrates (incl. crude fiber) 86.6%, crude fiber 35.5%. Experiment No. 93—“tofu cake (soy-bean residue [okara]):” Protein 78.7%, fat 84.3%, carbohydrates (incl. crude fiber) 82.8%, crude fiber 89.6%.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *kara* to refer to okara.

Other Japanese foods discussed include adzuki or adzuke beans (*Phaseolus mungo subtrilobata*) (p. 24, 170), dried algae (sea vegetables, p. 34), and kuzu (p. 170). Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

1655. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man: Preparations of cereals (Document part). *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 20-23. [10 ref. Eng]

• **Summary:** The section titled “Preparations from cereals” which gives detailed discussions of bread, *fu* (baked wheat gluten cakes), macaroni and vermicelli, sobakiri or soba (buckwheat noodles), mochi, ame [rice syrup].

“Fu: This is a gluten preparation obtained from wheat flour. The whole is mixed with water and made into a dough which is kneaded, the kneading and addition of water continuing until a large part of the starch is removed. What remains is known as “fu,” and is used wither in the fresh state as an ingredient of soup, or is roasted to preserve it for future use.”

While mochi is usually made from glutinous rice (*Oryza [Oryzae] sativa glutinosa*), “it may also be made from glutinous grains like millets. In the latter case some special prefix denoting the kind of grain used is also employed, as, for instance, Kibi-mochi, or Awa-mochi (Kibi is *Panicum miliaceum*; Awa is *Setaria germanica*). The use of mochi made from glutinous millets is usually confined to the rural and laboring classes... Mochi is considered one of the essential articles of food for New Year’s feasts. It is generally eaten either roasted or cooked with shoyu sauce.”

“Ame: This material is prepared most commonly from glutinous rice or glutinous millet, sometimes from common rice, and rarely from Indian corn or sweet potatoes. The essential feature of the process of ame preparation is the conversion of starch into maltose by diastase. Malt or sprouted barley is generally use to furnish the diastatic ferment. The cleaned rice or millet is soaked in water and then steamed, by which process the starch grains are broken

open and made easily accessible to the ferment. The steamed grain is then transferred to a suitable vessel, mixed with certain proportions of powdered malt (added fractionally) and of water at about 60° C., and well stirred. The mixture is kept at a temperature of 50° to 60° C. In the course of 6 to 8 hours the diastatic ferment has acted upon the starch and converted it largely into dextrin and maltose. The liquid mass is then filtered by pressing through a fine linen bag, and the filtrate is condensed in a double boiler to the proper consistency, which varies slightly according to the season.”

“The material thus prepared is called midzu-ame, which means liquid or soft ame. It is a dense, clear, light amber-colored liquid, not unlike the best commercial glucose in some of its physical properties. It is used in this form, or is further concentrated into kata-ame, or hard ame, a sort of hard, white, sweet candy. Stick ame is also made from midzu-ame by pulling.

“Ame has been manufactured in Japan for at least two thousand years, and long before sugar was known it was used for flavoring articles of food. Even at the present time it is sometimes used in place of sugar in cooking. Ame is also a favorite food adjunct for invalids.

“An interesting discussion of the relations between midzu-ame as made by the Japanese and malt products of European countries before sugar was so generally known is given by Storer and Rolfe (1904, p. 80), in which the process of ame making is described by Takaki, from information obtained from Japan. In the same publication is given also the translation by Takaki (Loc. cit., p. 95) of a ‘Note on ame,’ published in Japanese by Furukowa [sic, Furukawa] (1885, p. 355). A description of the manufacture of midzu-ame from glutinous rice has been given by Wiley and McElroy (1982, p. 57).

“Whether made from glutinous rice, ordinary rice, millet, or corn, ame consists mainly of maltose and dextrin. Kokashima (1855, p. 233) gives the following as the average of three analyses of samples of ame made from glutinous rice: Water, 15 per cent; protein, 1.1 per cent. These figures are almost identical with those given by Furukowa. The composition of ame from ordinary rice, as given by the latter, is as follows: Water, 17.4 per cent; protein, 0.8 per cent; ether extract, 0.1 per cent; maltose, 58.1 per cent; dextrin, 23.3 per cent, and ash, 0.3 per cent.

“Furukowa states that ‘since the rice ame is rich in maltose and poor in dextrin, it has a sweeter flavor than the glutinous rice ame, the flavor of which is weaker in consonance with a similar quantity of maltose and a larger amount of dextrin in it. Since the proportion of nitrogenous matter in both kinds of ame is minute, this constituent would not readily suffer decomposition even if the ame were to be kept for a long time.’ Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

1656. Oshima, Kintaro. 1905. A digest of Japanese

investigations on the nutrition of man: Tofu (Document part). *USDA Office of Experiment Stations, Bulletin No. 159.* 224 p. See p. 26-28. [1 ref. Eng]

• **Summary:** “Tofu: This term is commonly translated as bean cheese—though sometimes bean curd—in English and *Bohnen-käse* in German. Tofu is not strictly equivalent to cheese, however, as neither bacteria nor ferments are involved in the process of manufacture. It consists chiefly of the albuminoid materials of the soy bean combined with magnesium and calcium salts, as pointed out by Inoue.” To make tofu, soaked soybeans are ground between millstones. “The mass is then mixed with about three times its bulk of water and boiled for about an hour, after which it is filtered through a cloth. By this process about 30 per cent of the total protein of the beans is dissolved and contained in the filtrate, ready to be precipitated as tofu. The filtrate is white and opaque, somewhat resembling milk. To this is added, with constant stirring, about 2 per cent of the concentrated mother liquid [nigari] obtained in the manufacture of salt from sea water, whereupon the albuminoid material is precipitated in combination with calcium and magnesium salts.” After pressing, the tofu is finally cut into cakes about 10 cm broad, 2 cm thick, and 25 cm long [about 3.9 by 0.79 by 9.8 inches], though the size varies in different localities.

“The residue from the boiled and filtered beans is known as kara [okara], or tofu cake, and contains a large quantity of protein and carbohydrates. It is a good food material, being used considerably by poor people as an ingredient of miso soup.

“If the milky filtrate mentioned above is boiled, a sort of film forms on the surface. This film, which consists mainly of coagulated albuminoids and fat, is sometimes prepared in large quantity, and when dried is used as an article of food, being known as yuba.

“Tofu is generally prepared every day and is eaten in the fresh condition simply with a little shoyu, though it is also frequently cooked in shoyu or in miso soup. Fried tofu, called abura-age, is also a very popular article of food. Rape-seed oil is generally used in frying, though sesame oil is sometimes used.

Note. This is the earliest English-language document seen (May 2012) that uses the word “abura-age” to refer to fried tofu or to deep-fried tofu pouches.

“Tofu may also be prepared for preservation and transportation. For this purpose it is cut into smaller pieces and exposed to severe cold weather, to remove the water by freezing, and then dried in an oven. As thus prepared it can be preserved for several years. When the tofu is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the tofu porous and it may be easily dried. If it is not frozen, it is difficult to dry it and the resulting material is dense and horn like.”

Table 2 (p. 28) gives the average composition of the

above-mentioned tofu preparations: “Fresh tofu, frozen tofu, fried tofu, tofu cake [okara], yuba.”

The digestibility of the nutrients in tofu has been found to be high, as will be seen from the results of digestion experiments summarized later (p. 191). As much as 95 per cent of the protein is digested and about the same proportion of fat. The carbohydrates were found to be somewhat less digestible when the tofu was eaten alone, but when it was eaten with rice about 99 per cent of the total carbohydrates of the diet was digested.

“Both the composition and the digestibility of tofu, therefore, prove it to be a very nutritious food material. This is extremely significant, because tofu in its various forms is used very extensively by all classes of Japanese. In the interior of the country, where fish can not be easily obtained, it is a most important source of protein. For Buddhist priests, as well as the strict adherents to Buddhism (who eat no animal food), it forms a very popular and almost indispensable dietary article. Though no authentic record has been found regarding the manufacture of tofu in Japan, it is believed on good authority that the method was first introduced from China by Buddhists for their own use.” Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

1657. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man: Shoyu (Document part). *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 30-33. [1 ref. Eng]

• **Summary:** “Shoyu, or ‘soy sauce,’ is a dark-brown, moderately thick liquid very popular for use in cooking, and as a relish or condiment to increase the flavor and palatability of the diet. In odor and taste it is not unlike a good quality of beef extract. It is prepared from a mixture of soy beans, wheat (or sometimes barley), salt, and water by long-continued fermentation. For the preparation of shoyu a large and late variety of soy bean, that is rich in protein, is usually recommended. The varieties especially adapted to this purpose are called shoyu beans. The western name ‘soy bean’ for all varieties of *Glycine hispida* very probably owes its origin to his fact.

Note 1. This is the earliest English-language document seen (April 2012) that uses the term “shoyu beans” to refer to soybeans used to make shoyu (Japanese-style soy sauce). / “As shown by the average for five years (1887-1891), the annual production of shoyu in Japan, so far as statistics could be obtained, amounted to 221,000,000 liters. A small portion of the total product is exported, but this is more than counterbalanced by what is manufactured privately in rural districts and not included in the statistics quoted. It may be inferred from these figures that the yearly consumption per capita amounts to not less than 5 liters. It is generally estimated, however, on good authority, that the annual consumption per adult is 9 to 10 liters. In the average of 28

dietary studies included in the present compilation, 36 grams of shoyu were used per man per day, an amount equivalent to nearly 11 liters per annum, which is in agreement with the higher estimate quoted above.

“The term ‘hishiwo’ [hishio], which is considered as applying to a crude from of shoyu made without filtering, is found in a Japanese record dating from the early part of the eighth century. The manufacture of shoyu in its present form originated much later, probably in the sixteenth century, and has been gradually brought to the improved form of the present day.”

A detailed description is then given of the process for making shoyu and “shoyu-koji.” “When the saline solution is cooled to the temperature of the air, the koji is added and the mixture well stirred. This material is kept in casks and allowed to ferment. It is stirred from time to time, the stirring being at more frequent intervals as the process of fermentation advances. The fermentation is allowed to continue usually one to two years, though often as long as five years. It is believed that the longer the period of fermentation the better the quality of the product, other things being equal. When the fermentation is completed, the mass is filtered and pressed and the filtrate is allowed to settle two to three days. The clear supernatant liquid is then removed and heated to 70° to 100°C. in a double boiler 2 to 3 hours, after which it may be kept for a long time. To improve the taste, it is usual to add a certain quantity of sugar or sweet sake during the heating process.”

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “shoyu-koji” to refer to koji used to make shoyu (Japanese-style soy sauce).

Also discusses: The chemical composition of 3 samples of shoyu. The effect of fermentation, including “proteolytic ferments,” “the diastatic fermentation” (which produces glucose), and the alcoholic fermentation.

“The vegetable diet of the Japanese people at large is more or less monotonous, hence the value of these preparations [miso and shoyu]. Indeed, the variety which they afford as food adjuncts can hardly be overestimated.” Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

1658. Plaut, Hermann. 1905. Japanese conversation-grammar: With numerous reading lessons and dialogues. Heidelberg, Germany: Julius Groos; New York & Washington, DC: Brentano's. viii + 391 p. See p. 111-13. [Eng; Jap]

• **Summary:** Words (p. 111): “*misoshiru*—a soup made with miso, a kind of bean-sauce.” “*nimame*—boiled [soy] beans.” “*teriyaki*—meat or fish baked with *shōyu*.”

Page 113. “15. Reading Lesson. *Nihon no shokuji*.” “*teriyaki unagi*.”

Note: This is the 2nd earliest English-language document seen (Nov. 2009) that contains the word “*teriyaki*.”

It does not contain the term “teriyaki sauce.” The word and the definition are both in English; the book is in English with Japanese lessons and words. Address: Berlin, Germany.

1659. Sakura-fu Co. 1905. Sakura-fu Co. (Ad). In: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nankan* [*Japanese-American Yearbook*]. Unnumbered page. [Jap; eng]

• **Summary:** Ad (½ page). The central ¼ is in English. This trading company sells various goods including shoyu, miso, and shiro / white sake (*shiro-zake*) and sake. They are also a shipping company.

A full-page ad in the 1908 yearbook states: “Sakura-fu Shōkai. Direct importers of all kinds of provisions. KSK. 1014–1016–1018 3rd St., Sacramento, California. Tel. Sunset Vale 1566.” They also sell retail. They still sell miso and shoyu, but shiro sake / white sake is not mentioned. Address: 1014 Third St., Sacramento, California. Phone: Vale 1566.

1660. Tuck Wo. Co. (Tokuwago Shoten). 1905. Tuck Wo. Co. (Tokuwago Shoten) (Ad). In: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nankan* [*Japanese-American Yearbook*]. Unnumbered page in the block of ads after Directory p. 28. [Jap; eng]

• **Summary:** Ad (¼-page). This company sell various goods including shoyu and miso. The company name and address are in given in both English and Chinese. This ad (which appears to be for a Chinese-owned company) also appears in the 1906 yearbook, and in the 1907 yearbook (near the end, p. 36). Address: 33 Cleveland Ave., San Jose, California. Phone: James 3821.

1661. Favre, Joseph. 1905? Dictionnaire universel de cuisine pratique: encyclopédie illustrée d’hygiène alimentaire: modification de l’homme par l’alimentation. Edition 2. 4 vols. [Universal dictionary of practical cuisine: Illustrated encyclopedia of food hygiene. Modification of humans by food. 2nd ed. 4 vol.]. Paris, France: Published by the author. Undated. [1 ref. Fre]

• **Summary:** The entry for Soja (p. 1811) has the following contents: About the plant: Chemical analysis (by M. Léon Padé), culinary uses. Soy sauce: Formula No. 5,145, basic description. Tofu (*Fromage de Soja*): Formula No. 5,148, basic description, remarks.

Masculine noun. Pronounced “so-ya” (*Soja hispida platycarpa*). A plant of the legume family, also called *pois oléagineux de la Chine* (“oil pea of China”).

Pierre Poivre, who visited the Indies in 1750, tells us in his work *Voyage d’un Philosophe* of a species of phaseolus called *pois du Cap*—which is probably not related to the soybean. Nevertheless, an illustration (not original) shows a soybean plant.

A table gives a chemical analysis of soybean seeds by M. Léon Padé.

Culinary uses: Mentions soy flour, dried frozen tofu

(*kôri tô-fu*), tofu, soy sauce.

Recipe for making soy sauce (Sauce soya, Formula 5,147—apparently located elsewhere in the book) using fresh soybeans. Recipe for making tofu (*Fromage de Soja*, Formula 5,148) also from fresh soybeans.

Joseph Favre lived 1849-1903. Address: 11 rue Guénégaud (near le Pont-Neuf), Paris.

1662. The Times cook book—No. 2: 957 cooking and other recipes by California women... Brought out by the 1905 series of prize recipe contests in the Los Angeles Times. 1905? Los Angeles, California: The Times-Mirror Company. 105 p. Undated. Index. 24 cm.

• **Summary:** On the cover: “Los Angeles Times cook book—No. 2: One thousand toothsome cooking and other recipes including seventy-nine old-time California, Spanish and Mexican dishes—Recipes of famous pioneer Spanish settlers.”

This book contains two recipes with the word “vegetarian” in the title: Cream celery soup for vegetarians (p. 14). Vegetarian salad (p. 31).

Two recipes call for peanut butter as an ingredient: Peanut soup (p. 18). Washington salad (p. 25). The recipe for Peanut butter sandwiches (from Mary Stone Welch, San Diego, California) states: “Boil peanuts until tender; remove hulls in cold water; mash. Season with butter and salt. When cold spread between slices of bread. Good for school lunch.”

Peanuts are used in 20-25 recipes including: Peanut soup. Peanut butter sandwiches. Peanut cookies. Peanut kisses. Peanut brittle (2). Peanut candy (3). Candied peanuts.

Worcestershire sauce is used as an ingredient in 10 recipes. Soy is not mentioned.

Note: Starting in the late 19th century, various media companies—newspapers, magazines, radio, the movies, and TV—all got involved in publishing cookbooks. This book provides an interesting window into Southern California and its rich Mexican and Spanish heritage. The undated book is based on the 1905 recipe contests in the *Los Angeles Times* (MSU introduction). Address: Los Angeles, California.

1663. Hillman’s. 1906. Purity in foods is indispensable (Ad). *Chicago Daily Tribune*. Jan. 9. p. 16.

• **Summary:** “Genuine imported Japanese shoyu sauce, bottle, 10¢.” Address: State & Washington Sts. Phone: Private Exchange 7.

1664. *New York Times*. 1906. Latest customs rulings. Chinese soy assessed on higher basis—Other decisions. Feb. 20. p. 6.

• **Summary:** “In a decision by Judge Somerville, the Board of General Appraisers yesterday affirmed the action of Collector Stranahan in declining to accept invoice values placed on Chinese soy, exported by Choy Chong Lung of Hongkong. The merchandise was invoiced as possessing a value of 3.06 Mexican dollars per cask, but this price was deemed too low by the Collector, who raised it to 4.56

Mexican dollars per cask, on which basis the assessment of duty was levied.”

1665. Abel, Mary Hinman. 1906. Beans, peas, and other legumes as food. *Farmers' Bulletin (USDA)* No. 121. 38 p. March 25. See p. 11-13, 18-20. Corrected. [1 ref]

• **Summary:** A corrected edition, one page shorter than the 1904 revised edition. On the cover, below the title is written “(Corrected March 25, 1906),” yet at the bottom of the same page the publication date is given as 1904.

The section about soy (p. 11-13) is titled “Soy bean (*Glycine hispida*) and its preparations,” but the information in that section appears to be the same as in the original 1900 edition, as is the illustration of the soy bean plant (p. 12) and the table on page 19.

1666. *Otago Witness (New Zealand)*. 1906. A Japanese edible plant—Udo. April 11. p. 8.

• **Summary:** “Washington [DC], January 9.—‘Udo’ is the name of a Japanese plant the Department of Agriculture is trying to introduce into the United States to compete with lettuce as a winter salad... It is tabled in all the tea houses in Japan, its crisp, blanched stems being served with salt or boiled with a soy sauce.”

1667. Mann & Co. 1906. Now landing: Ex S.S. Tokomaru, from London (Ad). *Bay of Plenty Times (New Zealand)*. April 23. p. 3, col. 5.

• **Summary:** “Crosse & Blackwell’s Fine sheet gelatine, Walnut catsup, Essence anchovies, China soy [sauce] and Fine Lucca salad oil...” Address: Auckland.

1668. *Hawera & Normanby Star (Taranaki, New Zealand)*. 1906. Strange stories from American papers. April 27. p. 2.

• **Summary:** The section titled “Seven to die for horrible crime” begins: “A telegram from Hile [sic, Hilo], on the Island of Hawaii, says that seven Coreans [Koreans] were recently convicted of murder in the first degree in the Supreme Court.” “One Corean was suspected of having stolen £10 from another, and, instead of reporting the theft to the police, the friends of the man who lost the money adopted Corean methods. The suspected Corean was chased through the cane-fields, and when captured was beaten with sticks and stones until he was exhausted. As he still refused to confess, they rubbed salt in his wounds... When this torture failed to force a confession, they rubbed Japanese soy [sauce] into the wounds, causing excruciating pain...”

1669. Eaton (T.) Co. 1906. Eaton’s Friday bargain list (Ad). *Toronto Daily Star (Canada)*. May 31. p. 14.

• **Summary:** The section titled “Friday’s pure food economy” includes: “Baird’s Imported Worcestershire Sauce, 5 bottles, 25¢.” Address: Toronto.

1670. Lea and Perrins. 1906. Cheese is much improved by the addition of a little Lea & Perrins’ sauce (Ad). *Times (London)*. June 23. p. 11, cols. 5-6.

• **Summary:** “Just a small quantity on the side of your plate. Try it.” At the top of this display ad is an illustration of a large cylindrical block of cheese on a plate with a pottery cover nearby. At the lower left is a large illustration of a bottle of the sauce, showing the front panel with signature. At the lower right is a royal seal, and below it the words “By Royal Warrant to H.M. The King.” Address: [England].

1671. Gautier, Armand. 1906. Diet and dietetics. Edited and translated by A.J. Rice-Oxley. M.A., M.D. London: Constable & Co., Ltd. xii + 552 p. June. Illust. Index. 22 cm. [1 ref. Eng]

• **Summary:** This is a translation into English of *L’alimentation et les régimes: Chez l’homme sain et chez les malades*. 2nd ed. (1904).

In a multi-page table titled “Composition of the usual principal aliments with regard to their fundamental nutritive principles,” the section on “Seeds of leguminosae” contains an entry (p. 118) for “Soja hispida, yellow.” Much of the data comes from König 1889. The average cellulose content is 4.67%.

On page 236 we read: “Peas or beans of Soja.—This is the oily pea of China and Japan where its cultivation dates from the earliest times. Its feeble quantity of starch and its richness in albuminoids has given rise to the proposal to make bread of it for diabetics.” A table shows the composition (minimum and maximum for each nutrient) according to H. Pellet (1880) and A. Balland (1903), including: Fatty matter 12.95 to 14.80%. Proteid 34.85 to 38.41. Starch, dextrin, sugar 26.74 to 32.11. Cellulose 3.60 to 6.20. Mineral matters 4.35 to 5.20. The ash is composed mainly of “phosphates of potash and magnesia, with a little calcium sulphate.”

“One will notice the exceptional richness of this aliment in nitrogenous principles. Starch rises on an average in this flour to 28 per cent instead of 45 per cent in that of wheat. Unfortunately the taste of this vegetable is not very agreeable.

“In Japan the flour of Soja is mixed with cooked rice and left to ferment, and a sort of broth or sauce is thus obtained [sic] which takes the place of extract of meat.”

Also discusses: Albuminoids and proteid matters (p. 8). The cellular mechanism of assimilation and of the production of vital energy (p. 101-12). Ferments [later renamed enzymes], including digestive ferments which hydrolyze and divide, figured ferments (bacteria and yeasts), ferments of hydrolysis and dehydration, oxidizing and reducing ferments, ferments of decomposition and re-composition, coagulating and liquefying ferments (p. 102-11). Lecithins (p. 110). Cholesterins (p. 111). The principal oils and fats furnished by

vegetables (incl. olive oil, colza oil, cotton oil, oil of sweet almonds; p. 204). Margarin / margarine (p. 206-07). Gluten bread for diabetics (p. 228-29). Almonds (p. 261). Diet in diabetes mellitus (p. 453-55). Address: Professeur at the Faculty of Medicine de Paris; Member of the Institute.

1672. Lea and Perrins. 1906. Classified ad: Dinner–Soup, fish, entrées, joints, savouries, with Lea & Perrins' sauce. *Times (London)*. July 6. p. 13, col. 6.

• **Summary:** To the left is a large illustration of a bottle of the sauce, showing the front panel with signature.

At the bottom right: "The original & genuine Worcestershire." Address: [England].

1673. Suzuki, Tozaburo. 1906. Process of brewing soy. *U.S. Patent* 0,825,500. July 10. 4 p. Application filed 5 July 1904.

• **Summary:** "Attempts have been made recently to brew soy [shoyu] in a shorter time and easier way than in the process hitherto in vogue." One approach is to heat the mash. "In my invention I prepare the mass originally with a less amount of salt than heretofore has been the custom and subject it to slow and uninterrupted stirring in tanks or receptacles exposed to moderate external heat." When the fermentation is thoroughly completed, "more salt is added to regulate the quality of the soy."

"The soy-yeast is prepared with about 5.10 bushels of barley and 5.13 bushels of soybeans, to which is added salt water prepared by adding about 2.05 to 3.6 bushels of dissolved salt to about 63.52 imperial gallons of boiling water, the quantity of salt being one-third to one-half less than in mash prepared in the usual way."

Three illustrations (line drawings) show apparatus used in the process of brewing soy sauce. Address: Sunamura, Prefecture of Tokyo, Japan.

1674. Ishizaka, S. 1906. Shōyu jōzō fukusan yubun no shiken [Analysis of the oil obtained as a by-product of shoyu fermentation]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 281. p. 589-99. July. [Jap]

1675. Duncan's (John) Sons. 1906. Lea & Perrins' sauce (Ad). *Outlook (The) (New York City)* 83(17):Unnumbered page near end of issue. Aug. 26.

• **Summary:** Half-page ad. "The original Worcestershire. For steaks, chops, cold meats. Fish, soups, salads, gravies, etc. The peerless seasoning." A photo shows a hand holding a bottle of Lea & Perrins' Sauce, pouring it over a large steak on a plate. Address: New York City.

1676. Yoshida, Kotaro. 1906. Shōyu no seibun ni tsuite [On the constituents of shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 294. p. 848-52. Aug. [Jap; ger]

• **Summary:** The author considers the art and practice of the

so-called *hiire* (treatment with heat below 100°C) during shoyu production to be the most important problem or challenge as far as shoyu quality is concerned. He proposes a modified method of heat treatment, then analyzes the shoyu before and after this treatment. Address: Kagawa-ken, Japan.

1677. Lea and Perrins. 1906. Fish, hot or cold, is rendered more agreeable and appetizing by the addition of Lea & Perrins' sauce (Ad). *Times (London)*. Sept. 15. p. 12, cols. 5-6.

• **Summary:** "It gives just that 'finishing touch' which makes the dish perfect." At the top of this display ad is an illustration of 3 fish on a plate. At the lower left is a large illustration of a bottle of the sauce, showing the front panel with signature. At the lower right is a royal seal, and below it the words "By Royal Warrant to H.M. The King." Address: [England].

1678. Hillman's. 1906. "A store for everybody" (Ad). *Chicago Daily Tribune*. Oct. 14. p. E12.

• **Summary:** Under Groceries–Teas: "Genuine imported Japan Shoyu sauce, per bottle, 5¢." Address: State & Washington Sts. Phone: Private Exchange 7.

1679. Lea and Perrins. 1906. Soups, stews and hashes are rendered tasty and appetizing by the use of Lea & Perrins' sauce (Ad). *Times (London)*. Oct. 20. p. 7, cols. 5-6.

• **Summary:** "The addition of this Sauce gives the finishing touch which makes the meal perfectly enjoyable." At the top of this display ad is an illustration of a large pottery tureen, with a ladle and steam coming out the top; its cover is nearby. At the lower left is a large illustration of a bottle of the sauce, showing the front panel with signature. At the lower right is a royal seal, and below it the words "By Royal Warrant to H.M. The King." Address: [England].

1680. Lea and Perrins. 1906. Classified ad: Hot joints are much improved and rendered more appetizing if a little Lea & Perrins' sauce is added to the gravy. *Times (London)*. Nov. 17. p. 8, cols. 5-6.

• **Summary:** "Lea & Perrins' Sauce is the best 'relish' for all kinds of meat, fish or game, and is a delicacy which should be on every dining table. An excellent digestive." At the top of this display ad is an illustration of a large, thick slice of roasted meat on a plate. At the lower left is a large illustration of a bottle of the sauce, showing the front panel with signature. At the lower right is a royal seal, and below it the words "By Royal Warrant to H.M. The King." Address: [England].

1681. **Product Name:** Soy sauce.

Manufacturer's Name: Hawaiian Soy Co. Ltd. (Hawaii Shoyu K.K.). Formerly named Yamakami Shoyu Jozo-sho.

Manufacturer's Address: Pua Lane near King, Honolulu,

Oahu, Hawaii.

Date of Introduction: 1906-1909.

New Product–Documentation: Husted's Directory of Honolulu and the Territory of Hawaii. 1909. p. 255. Hawaiian Soy Co. Ltd., W. Motoshige, president. N. Yamakami, vice president. B. Hayashi, secretary. H. Miyake, treasurer. Y. Takakua, aud. [auditor?]. Note: That year N. [Nobuyuki] Yamakami was also manager of Yamajo Soy and Sauce Manufacturing Co. Ltd., which was also on Pua Lane. 1916 Directory. Hawaiian Soy Co. Ltd., 1136 Pua Lane. Hawaii Hojin Katsuyaku-shi, Meiji 41-42 [Japanese who play an active role in Hawaii, 1908-09]. 1915. Oct. p. 39. Contains an ad for Hawaii Shoyu K.K. at King St., Pua Lane, Hawaii. Gives their production of shoyu in 1915 (Taisho 4) as 3,500 koku. Since 1 koku is 47.6 gallons or 180 liters, this is 166,600 gallons, or 630,000 liters.

F. Odo and K. Sinoto. 1985. A Pictorial History of the Japanese in Hawaii, 1885-1924. A photo (p. 166) shows the inside of the Hawaii Shoyu Co. (*Hawaii Shoyu Kaisha*) on King Street in Palama, Honolulu, taken in about 1914. The caption reads: "The Japanese in Hawaii depended upon shoyu imported from Japan until Nobuyuki Yamashiro [sic, Yamakami] started making shoyu in 1904. His company was established as Hawaii Shoyu Co. in 1906. American Shoyu Co. was established in Honolulu in 1912."

1682. Denver City Directories, Shinzaburo Mogi, and Kikkoman. 1906-1910. Colorado.

• **Summary:** There are no relevant listings in Denver City Directories for 1906, 1907, 1909, or 1910 for Mogi (including Shinzaburo), Kikkoman, Oriental, Sauces, Seasonings, Show-You, Shoyu, Soy, or Tatekawa. We were unable to examine the 1908 directory. Address: Denver, Colorado.

1683. *Revue de Service de l'Intendance Militaire (France)*. 1906. La cuisson des aliments dans l'armée japonaise [Cooking of foods in the Japanese army (Abstract)]. 19:202-03. [1 ref. Fre]

• **Summary:** A French-language summary of a French-language article with the title shown above, published in: *La France militaire*, 27 July 1905.

1684. Aoki (George) & Co. 1906. Geo. Aoki & Co. (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nankan* [Japanese-American Yearbook]. Unnumbered page near the front. [Jap; eng]

• **Summary:** Ad (full page). This company imports various goods including (exclusively) shoyu made by Nakayama Kankichi and Oota Kyusuke. An illustration shows a sack of "Choice Japan Table Rice No. 1, 100 lb, from Japan." Address: 437-439 DuPont St., San Francisco, California. Phone: Bush 865.

1685. Dampier, William. 1906. Dampier's voyages: Consisting of a new voyage round the world, a supplement to the voyage round the world,... Edited by John Masefield. 2 vols. London: E. Grant Richards. Portrait. See vol. I, p. 580.

• **Summary:** The following passage appears in the chapter titled "The Voyage to Tonquin from Achin in Sumatra" (p. 557-612). "Year 1688. The Nuke-mum [nuoc-mam, fish sauce] is of a pale brown colour, inclining to grey; and pretty clear. It is also very savory and used as a good Sauce for Fowls, not only by the Natives, but also by many Europeans who esteem it equal with Soy. I have been told that Soy is made partly with a fishy Composition, and it seems most likely by the Taste: tho' a Gentleman of my Acquaintance, who was very intimate with one that sailed often from Tonquin to Japan, from whence the true Soy comes, told me that it was made only with Wheat, and a sort of Beans mixt with Water and Salt."

Captain William Dampier, an Englishman, lived 1652-1715. Address: Capt., London.

1686. Loew, O. 1906. Ueber einige sonderbare japanische Nahrungsmittel [On some special Japanese foods]. *Mitteilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens* 11(1):109-11. [Ger]

• **Summary:** Prof. O. Loew includes a discussion of tofu, soymilk, yuba, and shoyu (*shôyû-sauce*). On the coasts of Japan there were fresh seafish, and in the inland regions some salted fish were used. People have learned how to prepare wheat gluten (*Jap: fu; German: Weizenkleber*) in various dried forms, which are very porous and easily digested. The protein of the soybean, under the name of tofu (*Tôfu*), comes in the form of soft white cakes and is prepared daily. It is sold from door to door by salespeople.

The cooking of the softened soybeans, before the precipitation of the tofu, has a very milklike consistency. Without doubt, it is similar in nutritional value to milk but it can be recommended only for adults, and not for sensitive infants. "When this soybean milk (*Soyabohnenmilch*) mixed with some gelatine [sic] is simmered down, and while in a concentrated condition the mixture is poured into flat, level containers, there results from the drying of the gelatinous mass thin skins, which are sold under the name of yuba."

Note 1. This is the earliest German-language document seen (Oct. 2003) that uses the term *Soyabohnenmilch* ("soybean milk") to refer to soymilk.

Note 2. The date on the title page is given as 1907-09. The place of publication has now changed to Tokyo. Address: Prof. of Agricultural Chemistry, Imperial University, Tokyo, Japan.

1687. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1906. *Zaibei Nihonjin nankan* [Japanese-American yearbook. No. 2]. 234 Turk St., San Francisco, California. 345 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon

Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 4 unnumbered leaves of black and white photos (mostly of San Francisco) on glossy paper, 20 unnumbered pages of ads and basic information, of which the 4th to last page is why and how they wrote this book (they got a lot of help from people in various areas to gather data, although no names or places are given), and of which the last two pages are the table of contents, 224 numbered pages which are the body of the book, 44 unnumbered pages of ads, 59 pages of directory interspersed with 50 pages of ads in groups of either 16 or 32 pages.

There is a tofu shop in San Francisco (p. 183, bottom right) and a shoyu (soy sauce) maker in San Jose (p. 189, top right); last year Yamamori Shoyu Jojo-sho made 1,000 koku of shoyu. Note: 1 koku = 10 sho = 180 liters. Therefore the company made 180,000 liters of shoyu. Since 1 liter = 0.264 gallons, this is 47,520 gallons of shoyu.

There is 1 tofu shop in Florin (p. 203, top right) and two tofu shops in Isleton (p. 204, top right).

The Directory shows Japanese companies making soyfoods in California and Washington state. It is preceded by an index of the Directory. Address: San Francisco, California.

1688. Senft, Emanuel. 1906. Ueber einige in Japan verwendete vegetabilische Nahrungsmittel, mit besonderer Beruecksichtigung der japanischen Militaerkonserven [On some vegetable foods used in Japan, with special attention to Japanese military canned foods]. *Pharmazeutische Praxis* 5(12):481-91. [5 ref. Ger]

• **Summary:** Working for the German Food Administration, the author examined a number of preserved foods that had played an important role in helping Japan to win the Russo-Japanese war. He drew heavily on Loew (1895). “Widely distributed in Japan is a unique baked good, which is produced primarily from wheat gluten with only a little of wheat flour; it is called *Fu* (wheat gluten bread).

“A very important role is played by the soybean and the many diverse products made from it: Yuba, the vegetable cheeses tofu, natto, and miso, plus shoyu or soy-sauce (*Shoju* oder *Soy-Sauce*). Like the soybean, tofu and natto are rich in protein. They supply the protein lacking in rice.”

Also discusses fresh konnyaku, dried-frozen konnyaku, dried persimmons, sea vegetables (12 types in great detail, with an illustration of the cells of a kombu plant), and warabi (dried ferns). Address: Official of military medicines, Committee of military hygiene.

1689. Stuerler, F.A. von. 1906. Nederlandsch Oost-Indische cultuurgewassen: Hunne kenmerken, teelt en bereiding [Crops of the Dutch East Indies: Their characteristics, cultivation and preparation]. Tiel: A. van Loon. ii + 373 p. See p. 341-43. Illust. Index. 25 cm. [5 ref. Dut]

• **Summary:** The subsection on the hibiscus plant (*De Waroeboom*, *Hibiscus tiliaceus*, p. 334) states that the leaves are used in making foods from soybeans [tempeh].

In the chapter on crops that yield oils and fats (*Vette oliegewassen*, p. 335-44), the section titled “Soja” (p. 341-43) has the following contents: General botanical characteristics: Introduction, the plant, stem, leaves, flowers, fruit, seeds. Cultivation. Chemical composition of the seeds, preparation, and uses.

The main product made with soybeans is soy sauce (*kètjap*). The Chinese in Java cook the soybeans and inoculate them between hibiscus leaves (*Hibiscus tiliaceus*) to make tempeh (*tèmpé*). They also make *tao-tjo*, a sort of bean paste (Indonesian-style miso). And with the black soybeans they make a sort of bean cheese, *tao-djie* (fermented black soybeans). Also discusses peanuts (*aardnooten*, p. 335-37), sesame seeds (*sesam*, p. 337-39), the castor oil plant (*ricinus*, p. 339-41), other crops that yield oils and fats (p. 343-44).

Note: This is the earliest document seen (Sept. 2011) stating that molds grown on Hibiscus leaves are used in Indonesia to inoculate tempeh. Address: Leiden.

1690. Takemoto Shoten. 1906. Takemoto Shoten (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Unnumbered page near the front. [Jap]

• **Summary:** Ad (full page). In big Chinese characters the ad says “New Year’s Greetings.” They sell various goods including miso and shoyu. A small illustration shows some bamboo leaves, with snow on them and a little bird flying. Address: P.O. Box 332, Gilroy, California. Phone: Main 334.

1691. Teikoku Shokai. 1906. Teikoku Shokai (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Unnumbered page near the front. [Jap]

• **Summary:** Ad (full page). This company, owned by USHIO Mankichi and KUBO Sakujiro, imports various goods directly including miso and shoyu. An illustration shows two crossed flags; one is the flag of Japan. Address: 802 Stockton St., San Francisco, California. Phone: Main 5556.

1692. Woenne (W.M.). 1906. W.M. Woenne (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Unnumbered page near the front. [Jap; eng]

• **Summary:** Ad (half page). In big Chinese characters the ad

says “Happy New Year.” They sell various goods including miso and shoyu. Address: Mt. Eden, Alameda, California.

1693. Meyer, Frank N. 1907. Re: Manchuria, sprouting small green beans. In: Letters of Frank N. Meyer. 4 vols. Compiled by Bureau of Plant Introduction, USDA. 2444 p. Typed.

• **Summary:** Meyer wrote this letters from Newchwang, Manchuria, to David Fairchild at USDA in Washington, DC.

Page 310-11 (28 Jan. 1907). He made a hurried trip from Mukden to Liaoyang and from there to Newchwang. “If you find the opportunity, I wish you would take a part of No. 719a, those small green beans [probably mung beans], and make a sprouting test with them. The Chinese way of letting them germinate and sprout is this. They take an earthen jar, pour the beans in it, take luke warm water and pour that over the beans. Then put the jar in a warm place and let the beans germinate, refreshing the water every twenty-four hours. After these beans have made short roots, they pour them out in wickerwork or reed-woven baskets and keep them in a warm, dark place again, taking care not to let them shrivel from want of moisture or of warmth, by sprinkling them several times a day with warm water and keeping moist cloth [sic] over the baskets to prevent cold air from injuring them. After the sprouts are about 1½ inches long they are fit for human consumption and they are hawked out in the streets, being sold by weight.

“Now the most favorite way of eating them seems to be this: lean pork is cut in small pieces, is fried with care, then when it is nearly ready the bean sprouts are thrown into the pan and the pork and sprouts are turned a few times only; then at once it is thrown on the dishes and is ready for the table. When putting a little vinegar or some soy sauce over it, the taste is highly improved and I consider it one of the most palatable dishes.

“Another was of serving which is more patrician is as follows: The sprouts at a length of 1½ to 2 inches are freed from their roots and seed lobes by means of cutting or clipping them off. Then some cold pork or cold veal is cut in long strips, only a few lines broad, the beans are steeped in boiling water for a few minutes only, taken out and mixed with the meat and by putting some salt, pepper, oil and vinegar over it one obtains an excellent salad.” Address: USDA Plant Explorer, China.

1694. *Otago Witness (New Zealand)*. 1907. Notes and queries. Feb. 20. p. 47.

• **Summary:** “Inquirer.—To make Worcestershire sauce mix together 1½ gallons white wine vinegar, 1 gallon walnut catsup, 1 gallon mushroom catsup, ½ gallon Maderia [Madeira] wine, ½ gallon Canton soy [sauce; from China], 2½ pounds moist sugar, 19 ounces salt, 3 ounces powdered capsicum, 1½ ounces each of pimento and coriander, 1½ ounces chutney, ¾ ounce each of cloves mace and cinnamon, and 6½ drams of assafoetida [asafoetida]

dissolved in 1 pint brandy 20 above proof. Boil 2 pounds hog’s liver for 12 hours in 1 gallon of water, adding water as required to keep the quantity; then mix the boiled liver thoroughly with the water; strain it through a coarse sieve. Add this to the sauce.”

Note: This recipe for Worcestershire sauce contains soy sauce (Canton soy) as an ingredient.

1695. *New York Times*. 1907. Latest customs rulings.

Government defeated in Chinese soy case—Other decisions. Feb. 24. p. 15.

• **Summary:** “In a decision by Judge Waite the Board of United States General Appraisers suspended yesterday a claim filed by Wo On & Co. of New York regarding the customs classification of Chinese soy, it being held that the article was not a ‘sauce’ as claimed by the Government but is to be considered as an unenumerated manufactured article within the meaning of the Dingley tariff.

“The soy, which is used by the Chinese and in American restaurants for flavoring purposes, was assessed for duty at the rate of 40 per cent., whereas the importers maintained 20 per cent. as equitable. Some time ago the Government was defeated in an attempt to assess the higher duty on the merchandise, but as large quantities of the soy are brought annually to this country, the Treasury Department concluded to make a new test...”

1696. *Bulletin of the Imperial Institute (London)*. 1907.

Utilisation of the soy bean. 5(1):86-87. [2 ref]

• **Summary:** “The plant yielding the “soy bean” (*Glycine soja*) has of late received much attention at the hands of agriculturists in tropical countries on account of its value as a green manure. The bean itself has long been employed in the East as a vegetable and food-stuff, and has been imported in large quantities into European countries, principally for use as a feeding-stuff for animals. It is also an important ingredient in Indian soy, which forms the basis of chutney. More recently the introduction of the extraction of cheaper methods for the extraction of fixed oils by the use of solvents has made it possible to utilise such materials as the soy bean, which contains only 10 per cent. of fixed oil, as a source of oil, and considerable quantities are now used in the United Kingdom in this way.” Note: This is the earliest English-language document seen (March 2003) that uses the term “solvents” (or “solvent”) in connection with the crushing of soybeans to give oil and meal.

Also discusses briefly the preparation of soymilk and tofu in Japan.

1697. Suzuki, Tozaburo. 1907. Apparatus for brewing soy. *British Patent* 9,995. 5 p. Date of application, 30 April 1907. Accepted 3 Oct. 1907. 3 drawings.

• **Summary:** “This invention relates to improvements in apparatus for brewing soy... The object of this improvement

is to provide auxiliary means for quickly changing the temperature of the tanks, said means being also adapted to act as a substitute for the closed chamber for effecting or giving the contents of the tanks a uniform temperature and also acting if desired in conjunction with said chamber for regulating the temperature of said tanks. In the brewing of soy the question of temperature is very important...”

“The novelty of this invention consists in combining with an apparatus, comprising a brewing tank, means for applying a constant temperature thereto, and means for constantly stirring the contents of the tank, an auxiliary means or arrangement whereby the temperature of the contents of the tank may be quickly changed.”

Four illustrations depict the apparatus. Address: No. 401 Jibeishinden, Sunamura, Minami-Katsushika, Tokio [Tokyo], Japan.

1698. Suzuki, Tozaburo. 1907. Appareil pour brasser la sauce dite Soy [Apparatus for brewing soy sauce]. *French Patent* 377,294. April 30. 5 p. Application filed 6 July 1907. 4 drawings. [Fre]
Address: Japan.

1699. Inomata, Yoshio. 1907. Shōyu ni hitaseru pesto nezumi shikabane chū pesto kin no unmei ni tsuite [On the fate of pest bacillus and pest bacillus in the corpse of a rat (killed by the bacillus) which was soaked in shoyu]. *Saikingaku Zasshi (Bacteriology)* No. 142. p. 576-83. April. [Jap]
Address: Wakayama-ken Dai Yon-bu Saikinshitsu.

1700. Suzuki, Umetaro; Aso, Keijiro; Mitarai, Harukichi. 1907. Shōyu no seibun ni tsuite [On the constituents of soy-sauce]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 28(4):363-407. April. [2 ref. Jap]
• **Summary:** An analysis of the chemical composition of Japanese soy sauce. It is very difficult to isolate the various protein decomposition products and to understand the complex chemical changes that occur during shoyu fermentation. Tables show the composition of both soybeans and wheat. Address: 1-2. Nōgaku-shi, Japan.

1701. Saito, K. 1907. Mikrobiologische Studien ueber die Sojabereitung [Microbiological studies on the brewing of Japanese shoyu]. *Wochenschrift fuer Brauerei* 24(24):323-24. June 15. [1 ref. Ger]

• **Summary:** This is a summary of an article in *Zentralblatt für Bakteriologie* II. 17. p. 20-27, 101-09, 152-61 (1907). Address: Aus dem pflanzenphysiologischen Laboratorium des Botanischen Instituts der Kaiserlichen Universitaet zu Tokio (Tokyo Univ.).

1702. *Toronto Daily Star* (Ontario, Canada). 1907. Everywoman's column. July 2. p. 17.

• **Summary:** A discussion of making tasty sandwiches.

“Peanut butter, dates, and chopped nuts, bananas and crushed strawberries or strawberries are other fillings that meet with favor, and may suggest still others.” “Worcester sauce” is also mentioned as a filling ingredient.

Note: This is the earliest document seen (Dec. 2009) in the *Toronto Star* that mentions “peanut butter.”

1703. Suzuki, U.; Aso, K.; Mitarai, H. 1907. Ueber die chemische Zusammensetzung der japanischen Soja-Sauce oder “Shoyu.” [On the chemical composition of Japanese soy sauce or shoyu]. *Bulletin of the College of Agriculture, Tokyo Imperial University* 7(4):477-94. July. (Exp. Station Record 16:966). [2 ref. Ger]

• **Summary:** The koji for shoyu is made with the spores of *Aspergillus oryzae*; it is left in a room at 30-40°C for 3 days. The shoyu is allowed to ferment for 1-3 years.

From 2 liters of shoyu were isolated: alanine 1.6 gm + 5.0 gm impure alanine. Leucine 6.0. Proline 3.0. Lysine 2.6. New base #1 1.0. New base #2 0.2 Ammonia 4.2. Proteins 5.4 (by calculation). Formic acids (*Ameisensäure*) 0.1. Acetic acid 0.40. Lactic acid 3.20. Also present were: Tyrosine, asparagin acid, polypeptides, phenylalanine (*Phenylalanin*), cystine. Not found were: Glycocoll, histidine, arginine, serine, *Aminoisovaleriansäure* ?, glutamin acid? (*Glutaminsäure* ?) (p. 493-94).

1704. *New York Times*. 1907. Here is a Japanese bill of fare: Prof. Chittenden shows value of simple diet used in Japan. Aug. 11. p. SM5.

• **Summary:** A typical bill of fare of a Japanese family in moderate circumstances includes: “Breakfast (from 7 to 7:30 A.M.)—Miso soup with vegetables. Boiled rice, pickles, and tea. Sometimes raw egg or boiled sweet soya beans or natto.

“Lunch (12 noon)—Fish boiled in soya. Vegetables stewed in soya. Boiled rice, pickles, tea.

“Supper (from 6 to 6:30)—Soya soup. Vegetables. Raw fish sliced, eaten with soya sauce...”

“The miso, soya sauce, and topi [sic, tofu] are all products of the soya bean, on which, with rice, the Japanese physique may be said to be built up.” “Rice is the main foodstuff, with the soya bean a close second.”

Prof. Chittenden of Yale University notes that Japan's “exploits in war have recently attracted the attention of the civilized world.” Yet the great majority of Japanese have “remained untouched by the prodigality of Western civilization.” Their “habits and customs still bear the imprint of simplicity and frugality.”

Since Japan defeated Russia in war, many observers have noted that “the people of no other nation... have greater powers of physical endurance, or greater bodily strength and agility...”

1705. Fair (The). 1907. The Fair (Ad). *Chicago Daily Tribune*. Sept. 29. p. D11.

• **Summary:** “Groceries: Catsup—Snider’s, per half pint bottle, 12¢... India Soy Sauce—per half pint bottle, 10¢. C. & B. [Crosse & Blackwell’s] John Bull’s Sauce—½ pint bottle, 15¢.

“Established 1875 by E.J. Lehman.” Address: State-Adams and Dearborn Streets. Phone: Private exchange 3.

1706. *Sydney Mail (Australia)*. 1907. Answers to correspondents. Oct. 16. p. 23.

• **Summary:** Gwen.—1... A recipe for homemade Worcestershire includes “a gill of Indian soy [sauce].”

1707. Bloch, A. [Armand-Aron]. 1907. Le soja. Sa culture, sa composition, son emploi en médecine et dans l’alimentation [The soybean. Its culture, its composition, its use in medicine and in food]. *Bulletin des Sciences Pharmacologiques (Paris)* 14:536-51. Sept.; 14:593-606. Oct. [46 ref. Fre]

• **Summary:** A review of the literature drawing heavily on Egasse (1888), Trimble (1896 and 1897), and Williams & Langworthy (1897, revised 1899), and including many others. Contents: Introduction (mainly a long history of the soybean worldwide, with emphasis on Europe). Chemical composition of the soybean. Chemical composition of the soybean plant.

Part II: Preparation of shoyu. Preparation of miso. Natto. Preparation of tao-yu ([Chinese-style soy sauce] a condiment made with black soybeans, hibiscus leaves, and *Aspergillus Wentii* mold) and tuong. Tofu and yuba. Other soyfoods, incl. soy coffee.

“We are presently looking everywhere for ways of giving economic value to our colonies. It seemed interesting to me to draw attention to the soybean, the Chinese bean (*le Soja, Haricot chinois*) which contributes a large part of the food of the people in China, Japan, and the Far East. Already in use in Indochina, tested in Europe with success then abandoned for no apparent reason, the soybean could acclimatize itself in other colonies of ours, particularly in Madagascar, and perhaps in certain of our African possessions, and therefore could contribute to increasing their riches and the well being of their indigenous peoples.”

Soy oil “can be extracted partially by pressure or completely by ether or petroleum ether. It is yellowish red with a not particularly disagreeable odor.”

Mr. Lailleux, a former intern at the hospital in Algiers, has reported that a certain number of diabetic Arabs under treatment at the hospital of Dey, in Algiers [Algeria], have been helped by a dietary regimen based on soybean pap.

Note: This is the earliest document seen (Aug. 2009) concerning soybeans in connection with (but not yet in) Madagascar. Address: Pharmacist major 2nd class of the colonial troops. Doctor of pharmacy.

1708. *Chicago Daily Tribune*. 1907. Recent notes of science.

Dec. 12. p. 8.

• **Summary:** In China: “Pickled eggs are preserved with a compound of common mud, salt, saltpeter, and soy bean sauce.”

Note: This is the English-language document seen (April 2012) that uses the term “soy bean sauce” (regardless of capitalization or hyphenation) to refer to soy sauce.

1709. Suzuki, Tozaburo. 1907. Apparatus for brewing soy. *U.S. Patent* 0,874,041. Dec. 17. 5 p. Application filed 18 July 1907.

• **Summary:** In this invention, several tanks were “sunk into a closed chamber wherein means were provided for regulating the temperature. Stirring apparatus was provided for effecting continuous and uniform agitation of the contents of the tanks.”

“A further utility of the invention consists in providing means whereby hot water or a like heating medium may be directed through the auxiliary means to facilitate and hasten first maturing by heating the mash and whereby after the first maturing is complete cold water or a like cooling medium may be circulated through the auxiliary means to complete second maturing of the soy.”

Four illustrations depict the apparatus. Address: Sunamura, Japan.

1710. Ruata, Guido; Testoni, Giuseppe. 1907. La soia nell’alimentazione italiana [Soy in the Italian diet]. *Ministero d’Agricoltura, Industria e Commercio. Bollettino Ufficiale* 6(6):698-718. Dec. 18. (Chem. Abst. 2:864). [35 ref. Ita]

• **Summary:** Contents: Introduction. Description of the soybean. Cultivation and its history in Europe. Harvest and yield. Nutritional value of the soybean: Tables show analyses according to König (10 tables), to Balland (1 table analyzing 3 varieties, from Cambodia {Exposition of 1900}, from Cochin China, and from Tonkin), to Gautier (1 table), to Maurel (1 table), and to Lechartier and Joulie (from Grandeau 1903, analyzing 3 varieties, from Etampes, black soybean, and yellow soybean—all grown in France; each either as is or dry). Tables of nutritional analyses by Ruata & Testoni (includes the weight of 1,000 seeds for each variety): I. Black soybean, from Vilmorin-Andrieux of Paris, France; from Dammann & Co. [seedsmen] of Naples (Italy); and from the Inst. of Hygiene of Bologna, Italy. II. Giant Yellow, from Etampes (Pinolini), from Naples (Dammann), from Bohemia (*Boemia*—Ingegnoli); III. Small yellow soybean (from Dammann in Naples). IV. Green soybean (from Dammann). V. Brown soybean (from Dammann). The authors believe the Giant Yellow soybean is best adapted to Italian conditions. The analysis of the variety from Naples is as follows: Weight of 1,000 seeds: 205 gm. Water 9.80%. Albuminoids 37.13% (*albuminoidi*, protein) Carbohydrates 24.40%. Fat 18.36%. Lecithin 1.62%. Crude fiber 4.47%. Ash: 4.30%.

Preparation of soybeans (detailed descriptions and nutritional analyses): The whole seeds, miso (*Il miso*), tofu (*To-Fu* or *to-fu*), shoyu (fermented; made with koji), soy flour and bread (*farina e pane di soia*, incl. experiments by Brugia, and Rimini), soy polenta. Conclusions.

Three non-original illustrations (line drawings; between p. 700 and 701) show three different full-size views of the Soja plant, including: (1) Plant with roots. (2) Stem, leaves and pods. (3) Stem and pods (Original from Pinolini 1905).

Several bar charts (following p. 712) give nutritional composition comparisons of 12 staple foods, mainly legumes, cereal grains, dairy products, and meat: Fig. 2—Albuminoids (protein content); soya is the highest with 37.13%. Fig. 3—Carbohydrate content. Fig. 4—Fat content; soya is highest with 18.36%. Fig. 5—Salt (*Sali*).

Other tables show: (1—p. 701): For four soybean varieties, weight of 100 liters in kg and number of seeds per kg. Soia d'Etampes yellow 72 / 7,400. Black soybean from Podolia 74.5 / 7,400. Yellow soybean 72.5 / 8,550. Black soybean 73 / 12,200. Note that the black soybean has by far the smallest seeds.

Selected translations of the text: The first part of the article discusses dietary problems in Italy, especially pellagra, a skin disease caused by deficiencies in protein and niacin. One of the causes seems to be the consumption of corn, especially spoiled corn (*maiz guasto*) (p. 699-700). The authors are interested in studying the soybean as a potential new food for Italy, based on the examples from other countries where it has been consumed for a long time and where corn is unknown or almost unknown. They want to take the initiative in getting the best possible advantage from the introduction of soybeans as an Italian food (p. 700). In Italy the varieties which grow well are the early black, the yellow, the brown, the green, and the giant yellow; the latter is similar to the variety Soya Etampes, which has been acclimatized in France (p. 701). History in Italy: According to Pinolini, the soybean made its appearance around 1840, and has been cultivated with success around Verona, along the Lombard coast of Lake Maggiore, and near Mantua and Lucca (Mantova and Lucchese). As far as we know, it either was cultivated or is still cultivated in Liguria, Friuli, the Marches, and Emilia. Around Naples, it is especially cultivated in San Giovanni a Teduccio, under the care of Dammann & Co., a seed company (p. 702).

In the year 1906 in a field annexed to the Institute of Hygiene, we conducted experimental cultivation of soybeans, sowing the black variety from Podolia, sent to us by the Vilmorin-Andrieux, a seed company in Paris. A similar experiment was carried out on a larger expanse of land, at the same time as ours and with the same seeds, by Dr. Ignazio Buldrini at his farm near Bologna. The land at the Institute of Hygiene, being rather rich in humus, was fertilized with phosphate fertilizer at the rate of 500 kg/ha and potassium sulfate at the rate of 100 kg/ha. Dr.

Buldrini's land, well supplied with potassium and phosphoric anhydride,... was fertilized with plenty of manure. The seed was planted on both fields in early May. The vegetation developed regularly and in August we obtained a harvest that yielded 1,500 kg/ha of seeds reaching perfect maturation (p. 703).

Brugia (1902) has conducted numerous experiments in baking with soy flour, and here is what he writes about it: "It is necessary to find an inexpensive food with great nutritional value for the poor farmers and rural people. It would be ideal to be able to make bread from soybean flour, thus creating a food that would be physiologically balanced and complete." He first tried mixing soy flour with wheat flour in the proportions 50/50 and 30/60, but the results were unfavorable. Then they tried using brewer's yeast in the process and had very good results, except that the price was a little high. It was then necessary to substitute a mixture of bicarbonate of soda and cream of tartar ($\frac{1}{2}$ gm per 3 g of flour) for the brewer's yeast. This worked very well. He then gives a table showing the nutritional analysis of the best bread (p. 716). In the conclusions of his work, Brugia says: "Soy flour cannot be used by itself in baking. But mixed with wheat it gives an optimum bread, soft textured, complete and balanced nutritionally, economical, and convenient. A second table shows an analysis of soy bread published by Rimini (1902) (p. 716).

Soy polenta, a mixture of soy and corn, was named Soyenta by Haberlandt who first prepared it. It could be of nutritional benefit to the people in those parts of Italy who get almost all of their nutrients from polenta. We have conducted numerous tests to find a type of Soyenta (to adopt Haberlandt's name) which, because of taste and ease of preparation, could enter into the diet of our rural population without difficulty. Here are the results of our experiments with various types of Soyenta: (1) With whole yellow soy flour: The resulting product does not have a soft consistency; it is coarse and crumbles rather easily, but the taste is nice. (2) With sifted soy flour: This product is not as good as the previous one, because it is too sticky. The taste reminds us of infant cereal made of wheat flour. (3) Soy flour mixed with wheat flour in varying proportions: Not advisable because it presents in various degrees the difficulties of the former. (4) (p. 717). Soy flour mixed with corn flour: Best results were obtained with a mixture of 1 part soy flour to 4 parts corn meal (coarsely ground, Veronese style). The consistency of this product is not unlike that of regular polenta, and the flavor is also very close. Hot or cold it slices very well, and overall it can be used just like regular polenta, but it has more nutritional value (p. 717).

Note 1. This is the earliest Italian-language document seen (March 2009) that mentions tofu, which it calls *To-fu*.

Note 2. This is the earliest Italian-language document seen (April 2012) that mentions soy sauce, which it calls *Il shoyu* ("shoyu").

Note 3. This is the earliest Italian-language document seen (March 2009) that uses the word “miso” (*Il miso*) to refer to miso.

Note 3. This is the earliest Italian-language document seen (Aug. 2003) that uses the term *albuminoidi* to refer to protein in connection with soybeans. Address: 1. Direttore dell’Istituto d’Igiene della Regia Università di Bologna (Director of the Inst. of Hygiene at the Univ. of Bologna); 2. Insegnante nella Regia Scuola Media Commerciale, Direttore del Laboratorio chimico Compartimentale delle Gabelle di Bologna, Italy.

Date of Introduction: 1907.

New Product–Documentation: Husted’s Directory of Honolulu and the Territory of Hawaii. 1909. p. 759. “Hirao, H., soy, Kahului” [Maui]. Not listed in 1907.

1713. **Product Name:** [HVP Cubes or Paste? (“A Type of Miso”)].

Manufacturer’s Name: Jul. Maggi & Co.

Manufacturer’s Address: Kempthal, Switzerland.

Date of Introduction: 1907.

New Product–Documentation: Senft. 1907. Pharmazeutische Praxis. 6(3):81-89; 6(4):122-24, 131-32. “Recently the firm of Jul. Maggi in Kempthal [Switzerland] has begun to make and market a type of miso.”

Note: This is the earliest known commercial soy product made in Switzerland.

1714. **Product Name:** [Shoyu (Plum Tree Japan, Wisteria Japan, Pinetree Japan, and Water Chestnut Japan)].

Foreign Name: Shōyu.

Manufacturer’s Name: Nihon Shoyu Jozo K.K. (Japan Shoyu Brewing Co.).

Manufacturer’s Address: Tokyo, and Kyoto-Osaka area, Japan.

Date of Introduction: 1907.

New Product–Documentation: Kenji Kawakoshi, ed. 1972. Shashi-Choshi Shoyu Kabushiki Kaisha. Tokyo: Toppan. p. 72.

Mark Fruin. 1983. Kikkoman: Company, Clan, and Community. p. 69-72. “The Russo-Japanese War... brought on a formidable challenge: the appearance of a maverick entrepreneur named Suzuki who sought to dominate the soy sauce industry in much the same way that he had already prevailed over the world of sugar refining.

“In 1903 the Department of Provisions and Fodder of the Japanese Army had sought to purchase condensed or concentrated shoyu, but discovered that it was generally unavailable and, moreover, that, given the slowly changing technology of the day, it would not quickly become available. Upon learning this, Suzuki Tosaburo, who had already had great success with sugar refining, carefully studied the fermentation process of shoyu and designed a new tank that allowed for the application of heat to fermenting mash to speed fermentation. Thus, Suzuki challenged the traditional world of soy sauce manufacture by introducing high volume, energy- and capital-intensive production methods.

“In April 1904 Suzuki took out a patent on his fermentation tank design, and in 1906 he began sending samples of his new product to Hawaii for field testing. In 1907, after making various adjustments to his process based on the results of the taste sampling in Hawaii, Suzuki formed the Nihon Shoyu Jozo Kabushiki Kaisha (Japan Shoyu Brewing Company) with a capitalization of 10 million yen, and he opened two factories, one in the Tokyo area and one in the Kyoto-Osaka area, to manufacture soy sauce by his new method. Running both factories at full capacity, he produced 300,000 koku (14,280,000 gallons) annually—three times the current capacity of the combined Noda associates! He sold his product under the brand names Plum Tree Japan, Wisteria Japan, Pinetree Japan, and Water Chestnut Japan, at four different prices, thereby blitzing the soy sauce market with his brews.”

1715. **Product Name:** Shoyu [soy sauce].

Manufacturer’s Name: Sa-shi Shoyu Jozo-sho. Renamed Sanoze (San Jose) Shoyu Jozo-sho by 1908.

Manufacturer’s Address: 561 N. 6th St., San Jose, California.

Date of Introduction: 1907.

New Product–Documentation: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Directory entry p. 23. Note: “Sa-shi” is the

Japanese abbreviation for “San Jose City.”

Nichibei Shinbun-sha. 1908. *Zaibei Nihonjin Nenkan* [*Japanese-American Yearbook*]. Directory p. 60 (Japanese numbers). / Note: Japanese Shoyu was first made at this address as early as 1897 by Yamamori Jozo-sho (Yamamori Brewery).

1716. Chalmers, John. 1907. English and Cantonese dictionary. 7th ed. Revised and enlarged by T.K. Dealy. Hongkong: Kelly & Walsh, Ltd. xi + vii + 822 p. 23 cm. [Eng; Chi]

• **Summary:** On page 20 are the Cantonese characters and term for bean-curd (tau-foo). On page 437 are the Cantonese characters and terms for soy [sauce], shi-yau, and for soy bean (*Soja hispida*) (taai tau, paak tau) or *Dolichos soja* (wong taai tau, or mo tau [literally “hair beans” = green vegetable soybeans]).

A 5th edition was published in 1878 in Hongkong, and a 7th edition in 1907 in Hongkong.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “tau-foo” (or “tau foo”) to refer to Chinese-style tofu. Address: Chalmers: L.L.D; Dealy: Queen’s College, Hongkong.

1717. Griffis, William Elliot. 1907. *Corea: The hermit nation*. 8th ed. Revised and enlarged. New York, NY: Charles Scribner’s Sons. xxvii + 512 p. See p. 270. Illust. Index. 23 cm. 1st ed. 1882. [99* ref]

• **Summary:** This enlarged 8th edition is identical to the original 1882 ed. except that 4 pages of front matter (including a “Preface to the eighth edition”) have been added, and the recent history of Korea to 1907 and the index have been updated, adding 50 pages to the end. A color fold-out map has been added, facing p. 506; it shows Korea, Tsushima, Shimonoseki, Karatsu, Hirado, Nagasaki, Goto Islands, northwest Kiushiu [Kyushu]. The information on soy remains unchanged, on p. 270. Address: Ithaca, New York. Formerly of the Imperial Univ. of Tokio, Japan.

1718. Hurrier, Paul. 1907. *Matière médicale et pharmacopée Sino-Annamites* [Chinese and Annamite (Vietnamese) materia medica and pharmacopoeia]. Paris: Vigot Frères. viii + 292 p. Illust. Index. 25 cm. Preface by Prof. Em. Perrot. [25 ref. Fre]

• **Summary:** The book begins with a chapter titled “History of medicine in China,” which includes many abbreviated bibliographic references in the text. Pages 21-22 discuss acupuncture and a large fold-out illustration (facing p. 20) shows several views of the meridians on the human body. Part two of the book, titled “Special Chinese and Annamite drugs with therapeutic uses,” contains four chapters: 1. Mineral kingdom. 2. Animal kingdom. 3. Vegetable kingdom. 4. Five indexes: Latin names, Chinese names, Annamite names, Japanese names, and Cambodian names.

In chapter 3, “Vegetable kingdom,” in the section on Legumes (p. 144) is a subsection titled *Dolichos soja* L. (p. 147). It begins with the three Chinese characters for “Yellow soy bean” = *Teou-Ko* (Mérat); *Mau-tau* (Porter Smith); *Houang-teou* (in Chinese), *Dan-dèn* (in Annamite). The laxative seeds of this variety are used to make a special condiment, soy sauce (*le soy*; *Tsiang-yu*) composed of soybean flour, tea, and salt. From the cooked seeds, the Annamites make a vegetable cheese (*fromage végétal*; *Teou-fou*), which resembles goat cheese, and of which they consume very large amounts. Mr. Bloch, in a recent study on tofu (“*Quelques mots sur la fabrication et la composition du Teou-Fou*,” published in *Bulletin des Sciences Pharmacologiques* (Paris), March 1906, p. 138-43), described the process of making tofu, which is coagulated with magnesium chloride. The entire plant is used to make a decoction for treating smallpox and rheumatism.

Glycine javanica (*no-mame* in Japanese is also mentioned on p. 148).

Also discusses: Various sea vegetables (*kombu*, *kanten*, *funori*, *amanori*; p. 71-72). *Cannabis sativa* (hemp; p. 102). *Phaseolus radiatus* = small red bean (azuki in Japanese; p. 150). *Sesamum orientale* (sesame seeds; kuro-goma [black sesame] and shiro-goma [white sesame] in Japanese; p. 178). Address: Pharmacien de 1re class, Docteur de l’Université de Paris, France.

1719. Jumelle, Henri L. 1907. *Les ressources agricoles et forestières des colonies Françaises* [The agricultural and forestry resources of the French colonies]. Marseille, France: Barlatier, Imprimeur-Éditeur. viii + 442 p. See p. 333. No index. 28 cm. [2 ref. Fre]

• **Summary:** In the chapter on Indo-China (p. 267-363) is a section on coconuts (p. 322+) followed by a section on “Other oil-bearing plants” (*Les autres plantes oléagineuses*), which contains paragraphs (p. 326-27) on the sesame seed (*Le sésame*, cultivated in Cambodia) and the peanut (*L’arachide*, long cultivated in Cochin China and central and south Annam). Some confusion exists concerning the oil of *Aleurites cordata* (Chinese wood oil, *l’huile d’abrsin*) (p. 331-32): “Why is this oil, so well known and widely used in Indo-China, not exported, as is its analogous oil from China? It is not ignored by European and American manufacturers; and in the United States, as in Europe, it is in demand * by the factories that make linoleum or that prepare varnish from copal.” (Footnote: *) “It seems that the oil imported into Europe and the United States is often adulterated with oil from the seeds of *Soja hispida* [soybeans], which is likewise a very drying oil”).

The next section, titled “The indigenous food” (*L’alimentation indigène*) (p. 332-35) includes a discussion of various legumes consumed in Indo-China. “Among the leguminous seeds used as food, there is a large consumption of kidney-beans (*de haricots*), of dolichos beans (*de*

doliques), and, even more, of soybeans (*de sojas*).” “The large consumption of the soybean (*du soja*) is due to the fact that its beans, not only are eaten after a long cooking, but, again, serve as the base for various preparations, as in Japan and China (Footnote: It is with these soybeans, mixed with wheat and *koji*, and coarse salt, that the Japanese make their *shoyou* [*shoyu*, soy sauce] and their *miso*, and the Chinese their sauces or analogous dishes, *teou-ju* and *teou-tiung*. In Java, the indigenous people make similar preparations. The fermentations are, in all these cases, caused by various molds.) It is thus that the Annamites [of central Vietnam] make a cheese called *dau-phu*, which is the *teou-fou* of the Chinese, the *tofu* of Japan. They likewise make a sauce named *tuong*, which is almost the same as the *teou-tiung* [*doujiang*] of the Chinese, and two cheeses [tofu], one solid, the other of a softer consistency, called *dau-hu* and *dau-hu-ao* in Cochin China.” Address: Prof., Faculte des Sciences de Marseille [Marseilles], France.

1720. Lust, Louise. 1907. The practical naturopathic-vegetarian cook book. New York City, NY: Benedict Lust. 72 p. No index. 20 cm.

• **Summary:** This vegetarian cookbook uses milk, butter, and eggs. It also calls for many whole foods, such as unpolished rice [brown rice] (p. 41) and whole-wheat flour. The recipe for “Impromptu soup” (p. 24) states: “If soup is required quickly, not time to make a vegetable stock, it can be made by adding two tablespoons of Japan soya, which may be regarded as ‘natural’ vegetable salts, extract or any of the other vegetables...” Note 1. “Japan soya,” probably a type of soy sauce, is sold by Dr. Heinrich Lahmann of Germany.

A recipe for “Cauliflowers” (p. 24) states: “cleanse the heads carefully from insects.” An oval portrait photo facing the title page shows Louise Lust, N.D.

Note 2. This is the earliest document seen (Nov. 2009) that mentions Louisa (or Louise) Stroebel Lust, the wife of Benedict Lust. They were married on 11 June 1901. Address: N.D., Naturopathic Director of Ladies’ Dep. of “Yungborn,” Butler, New Jersey. Instructor in Naturopathy, The American School of Naturopathy.

1721. Macgowan, John. 1907. Sidelights on Chinese life. London: Kegan Paul, Trench, Trübner & Co., Limited. viii + 367 p. Illust. (12 in color by Montague Smyth and 34 others). 26 cm.

• **Summary:** Chapter 1, “The Chinaman,” begins (p. 1): “The Chinaman’s mind is a profound and inexplicable puzzle that many have vainly endeavoured to solve. He is a mystery not simply to the foreigner, who has been trained to more open methods of thought, but also to his own countrymen, who are frequently heard to express their astonishment at some exhibition of character, that has never occurred to them during the whole of their oblique life.”

Page 9: “A coolie, for example, in [sic, is] engaged by

you to do general household work. He comes to you from an inland country where poverty is the prevailing characteristic of the whole population. Sweet potatoes are the staple food three times a day, year in, year out, helped down perhaps by salted turnip, bean curds [tofu] and pickled beans [fermented black soybeans]—for it is only on special occasions that they have the rare happiness of indulging in the luxury of rice.”

Page 163: “At the same time he placed before him a tiny little platter in which were some nicely browned strips of fried bean curds [deep-fried tofu] to act as appetizer to the rice, and to arouse his flagging appetite.”

Note: This is the earliest English-language document seen (May 2012) that contains the term “fried bean curds.”

Page 170: “In addition to this precious crop [rice] that needs so much attention, the cultivator has others that claim his thoughts and time. These are the beans that are used in the manufacture of soy [sauce] and in the making of bean curds [tofu] that are considered so important as condiments to be eaten with the rice.

Page 183: “The Chinese, who are connoisseurs in the art of cooking rice, can never tolerate it being boiled to a pulp... There are also bean curds [tofu] and cucumbers pickled crisp and juicy, and celery and lettuce, and salted beans [fermented black soybeans] and plates of various kinds of fish, and different kinds of soy, which are sprinkled with a sparing hand over the bowl of rice to give it a flavour in order to induce an appetite with the first sip that the customer takes of the savoury compound.” Address: Rev., London Missionary Society and author.

1722. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1907. Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 3]. 234 Turk St., San Francisco, California. 398 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Toshō Senta. Series: Nikkei Imin Shiryōshū. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 6 unnumbered leaves of black and white photos (mostly taken after the San Francisco earthquake and fire) on glossy paper, 18 pages of ads and basic information, numbered using Japanese numbers (NUJN), of which the last two pages are the table of contents, 176 numbered pages which are the body of the book, 84 unnumbered pages of ads, 75 pages of directory (preceded by an index of the directory) NUJN, 35 pages of ads and back matter NUJN.

There are two tofu shops in San Jose, California, and also two breweries (*jozo-sho*). Note: One may have been for brewing shoyu and the other for sake (p. 153). The San Jose shoyu maker [Sa-shi Shoyu Jozo-sho] helped Komada Shoten [probably not a shoyu maker] in San Francisco last

year. Although they used wheat and salt made in the U.S., they had to get soybeans and also the bamboo hoops for the wooden kegs (*taru*) from Japan. It cost them over 50 cents to make one wooden keg; that's a problem (p. 154, top right). There is one tofu shop in Watsonville (p. 154, bottom center).

The Directory shows Japanese companies making soyfoods in California and Utah. Address: San Francisco, California.

1723. Royal Botanic Gardens, Kew [England]. 1907. Official Guide to the Museums of Economic Botany. No. 1. Dicotyledons. Third edition, revised and augmented. London, Printed for H.M. Stationery Off. by Darling... 236 p. See p. 65. 19 cm.

• **Summary:** Page 65 states: "No 192. Soy beans (*Glycine hispida*, Maxim.). An annual, cultivated largely in China, Japan, and India. In the two former countries a sauce known as Soy is produced in large quantities and in Japan a kind of cheese or curd cake is prepared known as 'Natto.' The chief products of Manchuria are bean oil and bean cake. The seeds yield 17 per cent. of an edible oil obtained by expression, and the residue is made into large circular cakes, weighing about 60 lbs, similar to that exhibited, used in the East for feeding cattle and also as manure. Soy is imported into Europe in barrels and is said to form the basis of most of the popular sauces."

Also discusses "Ground nuts. Pods and seeds of *Arachis hypogaea*, L." (p. 63, No. 188), and Kuzu (*Pueraria thunbergiana*, p. 66-67, No. 195). Address: Kew, England.

1724. Saito, Kendo. 1907. Microbiologische Studien ueber die Soyabereitung [Microbiological studies on the preparation of soy sauce]. *Zentralblatt fuer Bakteriologie. Series 2*. 17(1/2):20-27; 17(3/4):101-09; 17(5/7):152-61. Plus 5 plates on unnumbered pages near end. [55 ref. Ger]

• **Summary:** Contents: Part I (p. 20-27): Introduction. (1) Process for making soy sauce (*Soya*, which can be divided into 3 steps): (a) Preparation of the koji (*Koji* or *Soyakoji*). (b) The main process, making the moromi or mash (*Maische*). (3) Pressing, clarifying, and pasteurizing. (2) Method for isolation of the microorganisms: Molds / fungi, yeasts, bacteria. (3) Special remarks: Molds—(a) *Aspergillus Oryzae* (Ahlbg.) F. Cohn.

Part II (p. 101-09): (b) *Rhizopus japonicus* Vuillemin nov. var. *angulosporus* (Fig. 1). (c) *Tieghemella hyalospora* nov. spec. (Fig. 5). (d) Other molds. Yeasts—*Soya* yeast (a) *Saccharomyces Soya* nov. spec. Diagnostic properties, comparison of *soya* yeast with other types of yeasts. (b) *Saccharomyces farinosus* Lindner (Fig. 2 and 8c). (c) A *soya* yeast that grows on the surface of liquids (*Soya-Kahmhefe*) (Fig. 3 and 8b).

Part III (p. 152-61): Conclusion of (c). (d) *Mycoderma* species (Fig. 6 and 8d). (e) *Torula* species (Fig. 7). Bacteria—

(a) *Bacterium Soya* nov. spec. (b) *Sarcina Hamaguchiae* nov. spec. (Table 5, Fig. 10). Conclusion. Appendix: (1) *Rhizopus Tamari* nov. spec. (2) *Aspergillus glaucus* Link. (3) *Aspergillus Rehmii* Zukai (?). (4) *Cirencella mucoroides* nov. spec.

Explanation of five plates of illustrations.

Since ancient times, according to legend, a substance for salting foods has been made by the Japanese. About 300 years ago the process underwent a significant improvement through trade and communication with the Chinese, whose culture then stood on a higher level. For the first time a product named soy sauce (*Soya*; Japanese: *Shōyū*) came to be widely known, and from then on it found extensive use. By the year 1903 nearly 4 million hectoliters [i.e., 400 million liters] of shoyu were being produced in Japan, from which the state took the equivalent of about 7 million German marks in taxes.

Among the yeasts, the author found *Saccharomyces Soya* (a new species of film yeast), *Saccharomyces* (later *Pichia*) *farinosus*, and one species each of *Mycoderma* and *Torula*.

Illustrations show: Plate 1: *Rhizopus japonicus* in seven detailed views.

Plate 2: (2) *Saccharomyces farinosus*. (3)

Saccharomyces Soya, a soya yeast that grows on the surface of liquids (*Soyakahmhefe*).

Plate 3: (4a-b) The new yeast *Saccharomyces Soya* from soya koji. (6) *Mycoderma* sp. x 900. (7) *Torula* sp. x 900.

Plate 4: (5) *Tieghemella hyalospora* (from rice culture) in seven detailed views.

Plate 5: (8) Large colonies (3 weeks old) of *Saccharomyces Soya*, a soya yeast that grows on the surface of liquids (*Soyakahmhefe*), *Saccharomyces farinosus*, and *Mycoderma* species. (9) *Bacterium Soya*. (10) *Sarcina Hamaguchiae*.

Note: This is the earliest document seen (July 2010) that mentions the species *Saccharomyces Soya*. Later (in 1909) the author gave this film yeast the name *Zygosaccharomyces japonicus*. In the early 1950s this species was renamed *Saccharomyces rouxii*. Address: Plant Physiology Lab., Botanical Inst., Tokyo Imperial Univ., Japan.

1725. Senft, Emanuel. 1907. Ueber einige in Japan verwendete vegetabilische Nahrungsmittel, mit besonderer Beruecksichtigung der japanischen Militaerkonserven [On some vegetable foods used in Japan, with special attention to Japanese military canned foods]. *Pharmazeutische Praxis* 6(3):81-89; 6(4):122-24, 131-32; 6(6):211-12, 219. [19 ref. Ger]

• **Summary:** These three sections contain a good review of the literature (especially the Japanese literature) in German. Issue No. 3 begins with “Phanerogams. Chapter 5. Legumes. Soybeans and soybean preparations” (p. 81-89). Contents: Introduction. Varieties: Group I. Soja platycarpa-Harz (5

forms—olivacea-Harz and punctata-Harz, melanosperma, platysperma, parvula Martens). Soja tumida-Harz (3 forms—pallida Roseb. [sic, Roxb = Roxburgh], castanea-Harz [brown], atrosperma-Harz). Anatomy and cell structure of different parts of the plant and seeds. A non-original illustration (line drawing; p. 83) shows a soy bean, full-size and at cellular levels. Haberlandt and the Vienna World Exposition of 1873. Foods made from soybeans in China and Japan described by Charles Bryant (1785): Miso, soy sauce (*sooju-sauce* or soy), Roos, Koji. Tofu, sake. Shoju or Soja-Sauce. Miso (vegetable cheese; “Recently the firm Jul. Maggi & Comp. in Kempthal makes a type of miso and sells it commercially”).

Issue No. 4 begins with “Natto and tofu” (*Bohnenkäese*) (p. 122-24) and includes fresh tofu and frozen tofu (*gefrorener tofu*). Yuba. A separate section on miso pickles (*Misozuke*; p. 131-32) describes the different types, especially those made with daikon (*Rettiche*).

Issue No. 6 discusses shoyu (called *Extrakt-Sauce Japonica*, or Shoju-Sauce) (p. 211). A table (p. 212) lists the main food plants of Japan, including five different “varieties” (“var.”) of soybeans: *Kuro-mame*, *Shiro-mame*, *Ao-mame*, *Goishi-mame*, *Gankui-mame*. A photo (p. 219) shows various Japanese preserved foods, including a metal box containing “Fukujinsuke” [*fukujinzuke*] consisting of sliced vegetables (cucumbers, bamboo shoots, onions) preserved in soy sauce. Address: Military medicine official, Germany.

1726. Strakosch, Siegfried. 1907. Das Problem der ungleichen Arbeitsleistung unserer Kulturpflanzen [The problem of the unequal production efficiencies of our crop plants]. Berlin: Verlagsbuchhandlung Paul Parey. 110 p. No index. 23 cm. [Ger]

• **Summary:** This book, dedicated to Julius Wiesner, “the master of plant physiology,” looks at national food supplies from the viewpoint of plant physiology. In the section on “Calculation of assimilative effects,” a table (p. 44-45) compares rye, wheat, corn, rice, soybeans, and potatoes in their production per hectare of starch, digestible protein, value of product in German marks, value of nutritive elements consumed, assimilative effect (defined as the ration of the value of the usable substance produced per unit area to the value of the nutritive elements borrowed from the soil by producing this substance), assimilative effect compared with rye, and difference between the production and consumption in German Marks. Soybean produces much more protein per given area of land than the other crops, has the highest assimilative ratio, 6.68 times larger than that of rye. Thus the culture of soybeans should be the most remunerative.

In the same section, a bar chart (p. 48) shows the value (in marks) of physiologically useful substance resulting from withdrawal of one mark worth of soil nutrients. The soybean gives the greatest returns of the 22 plants listed.

In the section on “Consideration of plant production

efficiency in crop rotations” (p. 66+), the legumes are praised and soybeans are mentioned on pages 71 (the most productive of all legumes with an enormous number of 668) and 73. In this context, the work of Friedrich Haberlandt with soybeans and his book, *Die Sojabohne* (The Soybean, Vienna, 1878) are described in detail (p. 74-76). Haberlandt died shortly after the publication of this book, and Hecke, his friend, carried on his work.

In the last chapter, “Goals and consequences,” a table (p. 102) shows the productivity in the northern U.S. states of nine crops, including wheat, barley, corn, sugar beets, peas, Jerusalem artichokes, and soybeans. In value of crop per hectare, soybeans are third after Jerusalem artichokes (German: Topinambur; French: Topinambour) and sugar beets. Two long footnotes (No. 122 and 123, p. 109-10) discuss the importance in Japan of soybeans and the various foods made from them including shoyu (Shoju, Shoyu), miso, tofu, and yuba. Address: Dr., Wien-Hohenau.

1727. Tokyo Shoyu Tonya-ken Yushutsu Nyugyo. 1907. Tokyo Shoyu Tonya-ken Yushutsu Nyugyo [Tokyo Shoyu {Soy Sauce} Wholesale Export and Import Co. (Ad)]. In: Nichibei Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Page 14 (Japanese numbers) near the front. [Jap]

• **Summary:** Ad (half page, vertical). San Francisco branch representative, ICHIDA Risuke, 1905 Bush St., San Francisco, California. Okada Shoten & Co. (*Gomei Gaisha*; an unlimited partnership) represents the Kikkoman brand as well as other shoyu makers from the towns of Noda and Choshi; we sell their products and we also export. Address: Koami-cho 3 chome 19 banchi, Nihonbashi, Tokyo.

1728. **Product Name:** Shoyu [Soy Sauce].

Manufacturer's Name: Hokubei Shoyu Kabushiki-gaisha (Hokubei Soy Sauce, Inc.).

Manufacturer's Address: 1615 Gough St., San Francisco, California.

Date of Introduction: 1908. January.

New Product–Documentation: Rafu Shinposha. 1908. *Rafu Nenkan* [Rafu Shinpo Japanese-American year book]. Directory, p. 55. The company name is written in Japanese characters. The address is in English. No phone number is given.

Note: It is surprising that the San Francisco-based directory Nichibei Nenkan never mentioned this first soy sauce maker in San Francisco, whereas the Los Angeles directory did. However Nichibei Nenkan did list a company with this name across the San Francisco Bay in Fruitvale (today a neighborhood in eastern Oakland), California, but at a different street address. Then in Jan. 1919 a company with a very similar name—Hokubei Miso, Shoyu Seizô Oroshi Kouri (North American Mfg. Co.)—started making miso in Los Angeles at 519 East 1st St. Could these three all be one

in the same shoyu maker?

1729. *Chemist and Druggist* (London). 1908. Soy. 72(3):98. Jan. 18.

• **Summary:** In the section titled “Trade report,” in the subsection on “London markets” we read: “Soy.—For good thick ‘Wochan.’ “1s. 4½d. per gallon is quoted, at which sales have been made.”

Note 1. The word “Wochan” refers to a brand name (See this periodical, 17 Oct. 1908 issue, p. 628). It may be a place name, although we can find no such name in gazetteers.

“Soy” almost surely refers to soy sauce rather than to soy oil.

Note 2. This is the earliest document seen (Aug. 2011) that contains the word “Wochan” in connection with soy.

1730. *St. Louis Post-Dispatch*. 1908. Notes and queries: Answers to questions from readers of the Post-Dispatch. Feb. 9. p. 2.

• **Summary:** “Z.Y.O.D. To make enough Mo Goe chop suey (chop suey with mushrooms) for five persons.” The recipe ends: “Drain off superfluous liquor, add teaspoon brown see yu sauce [Mandarin: Shiyu or Shih-yu is fermented black soybean sauce], also obtainable at the Chinese grocers,’ and serve with bowls of boiled rice.”

1731. *Vegetarian Messenger and Health Review* (Manchester, England). 1908. Soy bean sauce. March. p. 75.

• **Summary:** “Samples of this sauce are to be had from the Vegetarian Society’s Food Stores, Manchester. A number of samples of Japanese Shoyu or Soy Bean Sauce as we should call it, were sent to be exhibited at the 60th Anniversary but arrived too late.”

1732. John Duncan’s Sons. 1908. Roast meats: Lea & Perrins Sauce (Ad). *Collier’s* 41(5):33. April 25.

• **Summary:** A 1/8 page ad. Underneath the large bold words “Lea & Perrins Sauce” are written the tiny words “The Original Worcestershire.” An illustration shows the bottle. “See that Lea & Perrins signature is on the label and wrappers. Beware of imitations.” Address: Agents, New York.

1733. Suzuki, Tozaburo. 1908. Apparatus for brewing soy. U.S. Patent 0,888,204. May 19. 4 p. Application filed 5 Dec. 1907.

• **Summary:** “This invention relates to improvements in apparatus for brewing soy and has for its object the provision of means for quickly and uniformly controlling the temperature of the soy...”

“It is well known that during the process of making soy it is necessary to artificially change the temperature thereof to obtain fermentation and maturation at the proper time...” Two illustrations depict the apparatus, showing that a coil of pipe surrounds the container in which the soy sauce is

fermented. A several paddles in the soy sauce, driven by a bevel gear, enable the soy to be stirred.

“In cold weather hot water or other suitable heating medium is passed through the coil until the first fermentation has been completed and in hot weather cold water or other suitable medium is used during maturing...”

“In order to uniformly and quickly change the temperature of the soy, during the process of brewing, it is desirable to agitate the contents of the receptacle...” Address: Sunamura, Japan.

1734. Chalmers, P.A. 1908. Japan: Report for the year 1907 on the trade of North Formosa. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4041. p. 1-19. June.

• **Summary:** A map shows the northern three-fourths of the island of Formosa, including railways, projected railways, and the savage frontier. It is in the Tamsui Consular District; the main city is Taihoku. Discusses the total trade of Tamsui and Keelung (both port cities) into North Formosa. Efforts are being made toward “pacification of the 30,000 aborigines of the island” using 5,000 border police.

Annex I shows return of principal articles of import into Tamsui and Keelung during the years 1906-07. One major item is opium from Britain, Persia, Turkey, and China. Small amounts of miso and soy [sauce] were also imported. Trade into Keelung [later named Chilung] comes from Moji and Kobe [Japan]. Trade into Tamsui comes from Foochow, Amoy, and Hongkong. Address: British Consul.

1735. Lea and Perrins. 1908. Lea and Perrins' Sauce (Ad). *Japan Weekly Mail (Yokohama)* 50(2):56. July 11.

• **Summary:** This black-and-white ad (5 by 6 inches) states: “Assists digestion and gives a delightful piquancy and flavour to all meat dishes, soups, fish, cheese, curries, game, poultry & salads. The original and genuine Worcestershire. By Royal warrant to H.M. the King.” A large illustration shows a bottle of Lea & Perrins Worcestershire Sauce. Address: England.

1736. Wileman, A.E. 1908. Japan: Report for the year 1907 on the trade of the consular district of Tainan (South Formosa). *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4083. 19 p. July.

• **Summary:** A table (p. 14) shows returns of imports from Japan from 1902 to 1907. The value of Soy [sauce] imports, which averaged £3,863 for the 5 years 1902-06, was £3,653 in 1906 and £6,764 in 1907. No quantities are given.

Table II (p. 15) shows returns of exports from the open ports of Anping and Takow from 1902 to 1907. [Soybean] “oil cake” was exported to Amoy, where it was used for manure. The value of oil cake exports, which averaged £2,001 for the 5 years 1902-06, was £1,626 for 16,572 cwts. [1 cwt = hundredweight = 112 pounds] in 1906 and £795 for

6,647 cwts. in 1907. Also exported were hemp, lungan (pulp or dried), and sesamum seed. Address: British Consul.

1737. *Chemist and Druggist (London)*. 1908. Japanese soy. 73(6):223. Aug. 8.

• **Summary:** This small “filler” paragraph in the lower right corner of the page states: “Japanese soy [sauce] is an article the exports of which are increasing from Japan, owing to the number of Japanese residents being scattered in many parts of the globe. A new description, which is said to have many advantages and prepared by a new process, was put on the market last year. The exports of soy from Japan amounted in value to 100,500 l. [British pounds sterling] as compared with 97,000 l. in 1906.”

1738. J.H.C. 1908. Domestic economy: Chop Suey, p. 706 (Letter to the editor). *Country Gentleman*. 73:777, col. 4. Aug. 13.

• **Summary:** “Your inquirer for chop suey may find the following satisfactory: Chop suey is made with young, tender pork as a foundation, and is known in Chinese restaurant parlance as fine chop; with chicken it is called guy chop suey, or with chicken and mushrooms mo goe chop suey. With all these is served the Chinese condiment, brown and piquant, known as *see yu* or *gee yow* [soy sauce]. It corresponds to our Worcester sauce [Worcestershire sauce]. It can be purchased of any Chinese dealer, together with the bean sprouts or water chestnuts that go with the dish.”

1739. *Otago Witness (New Zealand)*. 1908. The journey to Kagoshima. Sept. 9. p. 15.

• **Summary:** “There was also a great variety of beans, besides the ever-present soya [bean], from which Japan's national soy sauce is made.”

Note: Kagoshima is a city at the southwestern tip of Kyushu, Japan's southernmost large island.

1740. Nishimura, Torazô. 1908. Shôyu kôbo *Saccharomyces soya Saito ni suite*. I. [On the shoyu yeasts, *Saccharomyces soya Saito*. I.]. *Nogakkai Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 83. p. 11-52. Sept. [Jap]

• **Summary:** Three varieties of yeast which sporulated were isolated from the shoyu mash: *Torula shoyu*, *Torula shoyu* var. *minuta*, and *Torula turbinata*. These three species seem to play an important role in the brewing of shoyu. he also found several kinds of film-forming yeasts, two of which belong to the genus *Pichia* and others to *Mycoderma* and *Torula*. Address: Nôgaku-shi, Japan.

1741. *Chemist and Druggist (London)*. 1908. Soy. 73(16):628. Oct. 17.

• **Summary:** In the section titled “Trade report,” in the subsection on “Continental drug and chemical markets” markets” we read: “Soy.—Quiet with sellers at 1s. 2d. to 1s.

4d. per gallon, the higher price being for 'Wochan' brand.

1742. Wilcox, Sarah E. 1908. Domestic economy: The Thanksgiving meats. *Country Gentleman*. 73:1115, col. 2. Nov. 19.

• **Summary:** "Chicken pie.—Prepare as for turkey and joint... Serve with currant soy or spiced cherries."

Note: The meaning of "currant soy" is not clear. It is probably akin to "Tomato soy," a recipe, containing no soy sauce or other soy ingredients, that is designed to make a type of tomato ketchup. As of May 2012 this exact phrase occurs nine times in Google Books from 1891 to 1910. In the earliest of these, *Santa Rosa Recipes*, by Presbyterian Church (Santa Rosa, California) (1891, p. 62), in the chapter on "Pickles," recipes for "Currant Soy" and for "Gooseberry Soy" are given; neither calls for the use of a soy-related ingredient in any form. The main ingredients are 5 lb. of currants (or gooseberries), 5 lb. of sugar, one pint of vinegar, and two teaspoons of salt. A recipe for "Currant soy" is given in *The North End Club Cook Book* (1905, p. 125). As above, soy is not among the ingredients in any form.

1743. Harrington, -. 1908. Japan: Report for the year 1907 on the trade of the consular district of Yokohama. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4165. p. 1-47.

• **Summary:** Yokohama is Japan's leading port, accounting in 1907 for about 40% of all imports. Germany exported £13,000 in oil and bean cake to Japan (perhaps transshipped from China; p. 13). Japan's main imports from China via Yokohama included raw cotton £362,000, oil and bean cake £296,000, and soja beans £73,000 (p. 14). There was a small increase in the export of soy [sauce] to Canada (p. 16; no amounts are given).

A ten-page table (p. 22-32) titled "Imports into the Port of Yokohama during the Years 1905-07" shows the import of "oil cake" used as manure rose from 61,830 tons worth £281,870 in 1905 to 88,520 tons worth £461,460 in 1907 (p. 32).

A table (p. 34) titled "Exports from the Port of Yokohama during the Years 1905-07" shows the value of the export of "soy" [sauce] (mostly to the United States and Hawaii) rose from £42,007 in 1905 to £59,900 in 1907; no quantities are given. Groundnuts, rice, seaweed, and Bêche-de-mer (sea slug, trepang) were also exported from Yokohama. Address: Acting British Vice Consul, Yokohama.

1744. Ito, Teiji. 1908. Shōyu narabini tamari (kibiki-damari, sobiki-damari, niira tamari) naka no ekisubun gaitei ippō [A method of obtaining approximate measurements of extracts from shoyu and 3 types of tamari (kibiki, sobiki, and niira tamari)]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 321. p. 1200-07. Nov. [Jap]

1745. Takenob, Y.; Takeda, G. 1908-1909. Japanese wine and soy. *Japan Year Book* 4:391. [Eng]

• **Summary:** This section on "Japanese wine and soy" is in Chapter 18, titled "Industry." The second part of this section, titled "Soy" (and meaning soy sauce or shoyu) states (p. 391): "For soy the prefecture of Chiba, which is contiguous to Tokyo municipality, heads all other places on the list. Parched wheat mixed with salt and beans is a principal ingredient. The process is still far from scientific, and several patented processes, notably that by Mr. Suzuki, do not seem to have attained ideal perfection. The production in recent years is as below:—"

Note: According to the table of weights and measures at the front of this Year Book, one *koku* (liquid) = 100 *sho* = 39.703 gallons or 150.275 liters:

1902-03—1,767,366 *koku*. 1903-04—1,763,710 *koku*. 1904-05—1,859,165 *koku*. 1905-06—1,765,973 *koku*. 1906-07—1,932,492 *koku*. This latter figure is equal to 76,725,729 gallons.

The part on "*Saké*" above this notes: "For *sake*, the national liquor brewed from rice, the 'Five villages of Nada,' situated about midway between Osaka and Kobe, are the most noted center of production in Japan. What is interesting is that the fame of 'Nada sake' is generally attributed not so much to the long experience of the brewers at Nada as to the peculiar quality of water in certain wells existing in the five villages. The general opinion is that certain bacilli found in the water possess the virtue of imparting peculiar agreeable flavor to the liquor." Address: Japan.

1746. Agricultural Bureau, Department of Agriculture and Commerce. 1908. Agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. x + 455 p. See p. 225-29, 434, 439, 448, 453-54. No index. 23 cm. [Eng]

• **Summary:** A table of moneys, weights and measures (p. x) includes British equivalents of the following Japanese units: Money—*yen, sen, rin*. Length: *ri, chô, ken, shaku, sun*. Area: *cho, tan, sé, bu* or *tsubo, kô* (9.724 *tan*). Capacity / volume: *koku, tô, sho, go*. Weights: *kwan* or *kwamme, kin, momme*.

In Chapter 6 titled "Agricultural products," in section 2 on "staple food stuffs" is a subsection titled "Soja beans" (p. 225-29) which begins: "In point of production and use, soja beans occupy an important position among the various beans, they are extensively cultivated from the Hokkaido in the north to Formosa in the south. They find a congenial soil to prosper, the acreage for 1906 was 460,895 *cho* (1 *cho* = 2.45 acres) which with the exception of the acreage of barley (503,498 *chô*) is equalled by no other products from the upland fields. Their use is quite extensive. They are eaten boiled, baked and powdered while soy, *miso* and *tofu* (bean curd) made out of beans, are found even in the remotest villages. They are found on the table both of high and low. In making soy [sauce], a by-product in a shape of soy-cakes

is obtained and may be used as excellent manure, while in making *tofu*, the remaining ingredients [*okara*] may be used as a subsidiary diet and as food for cattle. Soja beans may also be pressed, and its oil used for the purpose of diet and for various technical uses, while the residue forms excellent manure. The fresh stalks of soja beans may be used as forage or as effective green manure. In short, soja beans, either as an article of Japanese diet, or as agricultural manure or as food for cattle are indispensable.

“The cultivation of beans under the circumstances was developed from ancient times, and numerous varieties are most extensively cultivated while by its peculiar nature of root, it absorbs nitrogen from air so that high priced nitrogenous manure may be dispensed with, and therefore the cultivation of beans like other agricultural products do not exhaust the productive power of the soil, but on the contrary, it operates favourably to improve the soil. As for rotation of crops of wheat, millets, corns and potatoes, beans are indispensable. Seeds are sown early in the beginning of May.”

Tables show: (1) Output of soja beans in Japan, 1897-1906.” For each year is given the area (in *chō*), the production (in *koku*) and the yield (in *koku per tan*) (1 *koku* = 4.962 bushels; 1 *tan* = 0.245 acres). The area increased from 435,605 *chō* in 1897 to a peak of 482,044 *chō* in 1898, then slowly fell to a low of 446,844 *chō* in 1904, then rose to 460,895 *chō* in 1906. Production increased from 3,100,973 *koku* in 1897 to a peak of 4,069,619 *koku* in 1901, then slowly dropped to 3,557,592 in 1906. The yield in 1897 was 0.712 *koku per tan*, rising to a peak of 0.830 in 1904. Hokkaido has the largest area (43,924 *chō*) and production (392,140 *koku*). The principal soja bean producing districts are Ibaraki (33,000 *chō*), Saitama (29,000 *chō*), Iwate (26,000 *chō*), Nagasaki (26,000 *chō*), Kumamoto (26,000 *chō*), Niigata (22,000 *chō*). There is no prefecture where the production does not exceed 10,000 *koku*.

(2) “As mentioned above, soja beans are used either boiled, baked or powdered or as material for *tofu* (bean curd), frozen *tofu*, *soy* and *miso* (bean-cheese), and particularly the latter two products besides meeting with domestic demands, are exported abroad in large quantities, as may be seen in the following table.” This table shows amount and value (in *yen*) of *miso* and *soy* [sauce] exported from Japan each year from 1903 to 1907, inclusive. *Miso* exports increased from 1,670,092 *kin* (1 *kin* = 1.322 lb) in 1903 to a peak of 5,199,957 *kin* in 1907 (a 3.1 fold increase in 4 years), while *soy* [sauce] exports increased from 1,974,119 *shō* (1 *shō* = 1.9 quarts) in 1903 to 4,403,851 *shō* in 1907 (a 2.2 fold increase). The total *yen* value of these two exports rose from 489,213 *yen* in 1903 to 1,354,517 *yen* in 1907 (a 2.8 fold increase). In American units: *Miso* exports increased from 2.20 million lb (worth \$347,647) in 1903 to a peak of 7.50 million lb (worth \$132,652) in 1905, dropping to 6.86 million lb (worth \$135,833) in 1907.

Shoyu exports increased from 5.92 million lb (worth \$204,959) in 1903 to 13.21 million lb (worth \$541,425) in 1907. Note that in 1907 *shoyu* exports are worth about 4 times as much as *miso* exports.

(3) Because of increasing exports, Japan now needs to import soja beans from abroad. This table (p. 227) shows the amount and value of soybeans imported by Japan for the years 1903-1907, inclusive. They rose from 146,971 tons (worth \$3.18 million) in 1903 to a peak of 193,479 tons (worth \$4.92 million) in 1905, dropping to 177,365 tons (worth \$4.79 million) in 1907. They are mostly imported from Manchuria and Korea. “While a greater portion of these imports is used as material for *soy* and *miso*, it is also used in making bean-cakes and is sown for obtaining green manure, or used as manure or for feeding cattle.”

(4) This table (p. 228) shows the quantity and value of [soy] bean-cakes imported into Japan for the years 1903-1907, inclusive. The cake was used mostly for fertilizer. Cake imports rose from 216,198 tons (worth \$3.81 million and representing 57.8% of all fertilizers) in 1903 to 367,210 tons (worth \$8.71 million and representing 44.8% of all fertilizers) in 1907. (5) This table (p. 229) shows acreage and production (output) of [soy] beans in Formosa [today’s Taiwan]. Acreage doubled in 3 years from 11,226 *kō* in 1901 to a peak of 22,641 *kō* [53,886 acres] in 1904, then decreased slightly to 21,220 *kō* in 1906. Note 1. 1 *kō* = 9.724 *tan*, and 1 *tan* = 0.245 acres. Therefore 1 *kō* = 2.38 acres.

Production in Taiwan increased more than 3-fold from 44,661 *koku* in 1901 to 135,271 *koku* in 1904, then decreased slightly to 100,803 *koku* in 1906. Note 2. Production of soja beans in Formosa in 1904 was only 3.6% as much as production of soja beans in Japan in 1904.

The next section, titled “Red-beans” (p. 229-30) gives similar detailed statistics on acreage, production, and yield for azuki beans in Japan. *Sarashi-an* (the powdered red bean) is made in Osaka, Tokyo, Niigata, and Aomori. A second table gives annual imports of red [azuki] beans to Japan from 1903 to 1907. They are imported mainly from China, Korea, and British India.

In Chapter 9, titled “Agricultural products in commerce,” section 2 is on imports to Japan. A table (p. 433-34) gives imports of the following grains and seeds (in quantity / piculs and value / *yen*) from 1903 to 1907: Italian millet, soja beans, red beans [azuki] (small white), and sesame seeds. Another table (p. 438) titled “Miscellaneous” includes imports of “bean’s oil cake” for the same period. An explanation titled “Soja-beans” (p. 439) states: “Not only as foodstuffs, but also as a manure a large quantity of beans are consumed each year, as that from China and Korea a considerable amount is imported. Besides beans, bean-cakes are imported from China in large quantity.” Imports of sesame seeds, rice, wheat and rape-seed are also discussed on the same page. In this same chapter, section 3 is on Exports and imports in Formosa. Soy is mentioned on pages 434,

439, 442, 448, 453-54. "Beans, Soja: The demand for soja beans in Formosa is enormous and as the Formosan product was not sufficient to meet the demand, a large amount is imported from abroad. Soja beans produced in Manchuria, and Chin-kiang [Chinkiang, Zhenjiang] are imported from China and Hongkong." "Oil, Beans [soybean oil]: This is principally produced in Manchuria and is brought here through China and Hongkong. Originally it was used as an illumination, but the demand has greatly increased as it is used in making cut tobacco" [to keep it moist]. Ground-nut oil is used for the same purpose (p. 453-54).

Note 3. This is the earliest document seen (Oct. 2003) concerning miso in international trade—exported from Japan; export statistics are also given. Note 4. The preface, by Chuji [Chuji] Shimooka, explains that this book was compiled for the International Agricultural Association meeting to be held in Italy in the autumn. The compiler did not have time to explain all the terms [and units] adequately. Address: Tokyo, Japan.

1747. Allen, Horace Newton. 1908. *Things Korean: A collection of sketches and anecdotes, missionary and diplomatic*. New York, Chicago, Toronto, London, Edinburgh: F.H. Revell Co. 256 p. See p. 74. Illust. (black and white photos). No index. 19 cm.

• **Summary:** Page 74: "Products.—The great product of Korea is rice, which is the staple of diet. Next come [soy] beans, which are largely used as a food for man and beast, being mixed with rice in the human dietary or used in the form of curd or cake [tofu], while they are indispensable for making the sauce so highly prized in Asia, and which is shipped abroad in vast quantities for the preparation of a celebrated English sauce as well as others, since it is the foundation for most of our sauces. Any one who patronizes a Chinese restaurant will be familiar with this bean sauce. Millet, rye, barley, oats, wheat and some poor corn, together with cotton and vegetables, form the chief farm crops raised in Korea after rice and beans."

Note 1. By "bean sauce" the author probably means "soy sauce," but he might also mean soybean jang (Korean-style soybean miso).

Note 2. The term "celebrated English sauce" clearly refers to Worcestershire sauce.

Preface: The author lived for 22 years "in China and Korea, including practically the whole period of the latter's diplomatic intercourse with the outside world,..." He spent 3 years in Korea as a medical missionary, 3 years in the Korean service, and 15 years in the diplomatic service of the United States government, "beginning as secretary of legation and ending as minister plenipotentiary." The poor Koreans are in desperate straits but opposition by them to their situation "seems at present to be unavailing if not suicidal." Sadly, the United States "deserted them in their time of need and ignored the solemn agreement we had entered into with them

as an inducement for their abandoning the centuries-old position of exclusion and non-intercourse and emerging into the dazzling glare of treaty relations. Our treaty with Korea of May 22, 1882, in its first article, makes the following promise: 'If other Powers deal unjustly or oppressively with either government, the other will exert their good offices on being informed of the case, to bring about an amicable arrangement, thus showing their friendly feeling.'

The U.S. disregarded this solemn pledge at the time of the Portsmouth convention; we violated our sacred covenant. Chapter 16, "Political changes and probabilities."

1884—The "haughty Chinese drove the then inconspicuous Japanese so precipitately from the land that they left their dead in the streets to be devoured by the dogs" (p. 243); the Chinese continued their traditional domination of Korea.

1894-1895—First Sino-Japanese War, over domination of Korea; the Japanese won and in Oct. 1895 the treaty of Shimonoseki was signed. During this war the world got its first intimation of the excellence of Japanese military organization and power. But diplomatic mistakes in Korea by Japan, after her victory, enabled Russia to gain the upper hand. Yet Russia too made diplomatic blunders while for 10 years Japan prepared for another war over Korea.

1904-1905—Russo-Japanese war; Japan won, gained control of Korea, and drove Russia from the entire area except in the vicinity of Vladivostok. During the 20 previous years when Korea could have fortified the country, it "played at all manner of silly pastimes." Now Korea is Japan's to exploit for herself. The U.S. position in the area has been weakened. Japan's next great objective will surely be China; it is only a matter of time. Address: Toledo, Ohio; M.D., Late Envoy Extraordinary and Minister Plenipotentiary of the United States.

1748. Ball, James Dyer. 1908. *The Cantonese made easy vocabulary: a small dictionary in English and Cantonese...* 3rd ed. Hongkong: Kelly & Walsh, LD. [viii] + 294 p. See p. 241. [Eng; Chi]

• **Summary:** Under "Soy" (noun, p. 241) are the Chinese characters and the Cantonese term for soy sauce, *shi-yau*, with tones shown.

Note: *Shi-yau* is, more precisely, "fermented black soybean sauce." Address: Exmouth, Devon, England.

1749. Bloch, A. 1908. *Le soja. Sa culture, sa composition, son emploi en médecine et dans l'alimentation* [The soybean. Its culture, its composition, its use in medicine and in food]. *Annales d'Hygiène et de Médecine Coloniales* 11:85-122. [29 ref. Fre]

• **Summary:** This article is identical to that published by Bloch in 1907 in *Bulletin des Sciences Pharmacologiques* (Paris). Address: Pharmacist major 2nd class of the colonial troops. Doctor of Pharmacy.

1750. Colby, Frank Moore. ed. 1908. The new international year book: A compendium of the world's progress for the year 1907. New York, NY: Dodd, Mead and Company. [6] + 860 p.

• **Summary:** The section titled "Manchuria" (p. 475-76) states: "By the treaty of Portsmouth (September 1905) Manchuria was practically divided into a northern or Russian sphere of influence, and a southern or Japanese sphere of influence. The Russian section is crossed by the Trans-Siberian Railway, which runs from east to west for a length of 960 miles over Manchurian soil until it reaches Vladivostok; and by the Central Manchurian Railway, which runs southward from Harbin, on the Trans-Siberian, to Changchun, with a branch line of 70 miles from Changchun to Kirin. The Japanese section is crossed by the continuation of the Central Manchurian line from Changchun to Port Arthur and Dalny, now known as the South Manchurian Railway [sic], which was surrendered by Russia to Japan; by the new Japanese line from Antung to Mukden, 187 miles long... Extensions of the Chinese Northern Railways are permitted by Japan only on condition that the capital, if not Chinese, be borrowed from the South Manchuria Railway Company."

"The leading exports are [soya] beans, bean cake, and bean oil, raw wild silk, maize, and millet. Newchwang and Dalny are the principal ports (p. 476).

"History-Reorganization of the Province: On April 20, 1907, an Imperial Chinese edict reconstituted the government of Manchuria. Instead of three provinces governed by three separate Tatar rulers, the whole country was placed under one viceroy, with a governor in each province."

The long and interesting section on Japan (p. 420-30) contains a map of the country. The section on agriculture states: The percentage of land owned by the tillers of the soil is 50.21 in rice field and 60.93 in upland. The rest is rented by tenants. In 1905 the production of soya beans was 3,261,881 koku and of red beans [azuki] was 804,485 koku (1 koku = 4.66 bushels). There is also detailed information on: Population (47 million in 1903) and immigration, fisheries, religion, education, mining, forestry, number of establishments [businesses] and employees, manufactures (incl. vegetable oils; "The Japanese Government is the greatest employer of labor in the country"). foreign commerce, shipping, railways, post and telegraph, banks and money, government (a constitutional monarchy; the Imperial Diet consists of a House of Peers and a House of Representatives; in 1904, 1.67% of the population could vote), finance (in 1907-08 projected internal revenue taxes on alcoholic beverages, soy [sauce] etc. totaled 96,331,881 yen), army, navy. History: Political parties, relations with the United States (incl. persecution of Japanese in San Francisco, California), relations with Great Britain, with France, with

Russia, navy and military development, territorial expansion (retention of some troops in Manchuria as "railway guards," gradual absorption of Korea, and conquest of interior portions of Formosa, expansion of lumbering along the Yalu river, opening of 16 cities and towns in Manchuria as 'places of international residence and trade').

1751. Crowe, E.F. 1908. Japan: Report for the year 1907 on the trade of Japan. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4026. p. 1-86.

• **Summary:** "Export of soy (p. 35): This sauce was again sent in large quantities to those countries where the number of Japanese residents is on the increase. A new kind, said to have many advantages, and prepared by a lately-invented process, was put on the market during the year."

Annex I (p. 64-65) shows imports of "Beans, peas and pulse" to Japan (mainly from China and Corea) from 1902 to 1907.

Annex II (p. 76-77) shows "Return of principle articles of export from Japan during the years 1907 and 1906." Exports of soy [sauce] were worth £97,000 in 1906, increasing to £110,500 in 1907. The average value for the 5 years 1902-06 was £65,300; no quantities are given. Other leading exports were tea, cotton undershirts and drawers, saké, and fish. Address: Commercial Attaché to His Majesty's Embassy, Tokyo.

1752. Freshel, Maud Russell Lorraine (Mrs.). 1908. Six hundred recipes for meatless dishes. Originated, collected, and arranged by M.R.L. Sharpe. Cambridge, Massachusetts: The University Press. viii + 323 p. Recipe index. 22 cm.

• **Summary:** On the cover of this important, early vegetarian cookbook is written "The Golden Rule Cook Book." Later editions were published under the title *The Golden Rule Cook Book* in 1910 and 1926. The author's full name was Mrs. Maud Russell (Lorraine) Sharpe; thus her maiden name was Maud R. Lorraine. Born in 1867, she sometimes writes her first name "Emmarel" (i.e. for M.R.L.).

Worcestershire sauce is called for in many recipes in this book; see *The Golden Rule Cook Book* (1910). Address: Providence House, Chestnut Hill, Massachusetts.

1753. Gautier, Armand. 1908. L'alimentation et les régimes: Chez l'homme sain ou malade. 3e édition [Diet and dietetics: For healthy or for sick people. 3rd ed.]. Paris: Masson & Co. xx + 750 p. See p. 317-18, 617. Illust. 25 cm. [1 ref. Fre]

• **Summary:** Chapter 19, on vegetables, grains, etc., contains a section titled "*Pois ou fèves de Soja*" (Soja peas or beans, p. 317-18). The first half is almost identical to that in the 1904 edition. It continues: Soy flour contains, on average, only 28% starch, compared with 45% in wheat flour. Unfortunately the taste of this legume is not agreeable.* (* Footnote: This may be because we don't have a good recipe for its preparation. Here is the one Gautier used: Combine

250 gm of dry soybeans with 1 liter of water at 40°C and 15 gm sea salt; soak for 12 hours. Pour off the water and replace it with the same quantity of newly salted water. Cook on low flame for 3 hours, without skimming off the foam. When it begins to form, add 3-4 gm of sodium bicarbonate, 2 leeks and some spinach leaves. Remove from the fire after sufficiently cooked. Remove the leeks and spinach leaves. Eat in sauce or on a salad).

In Japan, soy flour is mixed with cooked rice and allowed to ferment until one obtains [sic] a sort of pap or sauce which takes the place of meat extract and which is mixed with many foods. In China, the soybean (*le Soja*) is fermented with diced meat, to yield a condiment named *Sizian*, which is very stimulating for the stomach.

The chapter on vegetarianism is similar to that in the 1904 edition.

Note: Émile Julien Armand lived 1837-1920. Address: Professeur a la Faculte de Médecine de Paris; Membre de l'Institut et de l'Académie de Médecine.

1754. Heppe, Kurt. 1908. Explanations of all terms used in cookery [sic]—cellaring and the preparation of drinks. Pocket dictionary. New York, NY: Published by the author. 335 p. See p. 45-46.

• **Summary:** The Preface begins: “This book has been specially adapted to American methods.” Pages 45-46. Under the entry for “Cheese” we read: “Tao-foo cheese; Chinese cheese prepared from peas.”

Under Sauces, ready-made (p. 274+) we find: Page 274: “Catchup; from the East Indian, kit-jab, (to get the essence). Page 275: Lea and Perrins Worcester [sic] sauce; a very hot dark sauce for meats, rarebits, fish, etc.

Page 286: “- a la Soy or Soya; of Japan beans with butter, brown fish essence, velouté.

Page 313: “Soy—a ketchup of the Soy bean.”

1755. **Product Name:** Shoyu [soy sauce].

Manufacturer's Name: Hokubei Shoyu Jozo K.K. Jozo-sho.

Manufacturer's Address: 1217 Temple Ave., Fruitvale, California.

Date of Introduction: 1908. January.

New Product—Documentation: Nichibei Shinbun-sha. 1908. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Directory page 25 (Japanese numbers).

1756. Huang Shirong. 1908. Weitujiu suibi [Random notes from the “plain flavor” studio]. China. Passage on soy reprinted in C.N. Li 1958 #349, p. 248-49. [Chi]

• **Summary:** Wade-Giles reference: *Wei T'ui Chü Sui Pi*, by Huang Shih-Jung. Qing dynasty. A revised edition of this book, edited by Huang's son, appeared in 1916 during the Republican period. This is a summary by Mr. Huang (in China) of a publication by Li Yu-ying—who was in France at

the time.

The section titled “Soybeans efficacy and use” (*gongyong*) states: Mr. Li Yu-Ying recommends that China establish an association / society for soybeans and soybean technology for Chinese manufacturing. Li wrote two articles: One, to promote the establishment of a society for soybeans, and the second to promote manufacture of soybean products in China using modern technology. It is most important to invent new methods of production and manufacture, which would have a great effect on the industry. These two, which contained 5,000 words, were published in a Chinese newspaper [probably in China] the 2nd month on the 6th, 7th, 8th, 9th, 10th, 11th, and 12th days. Note: The name of the newspaper is not given. Mr. Huang summarizes the content as follows:

The nutrients of the soybean benefit health, economics, and commercial production; it is worthy of future development. Its wider propagation will improve the fertility of the soil because the roots contain nodules which fix nitrogen to enrich the soil. Soybeans are a rich source of dairy products (milk content) and oil, so they are very nutritious. They can be used to make good substitutes for meat. They are rich in phosphorus and potassium, so they are healthful and strengthen the brain. Since they are lacking in starch, they are good for diabetic diets. Because they are a rich source of dairy products (milk content) and oil, they would be a good material for industrial exploitation. And its very inexpensive; it sells for only about one-fifth as much as legumes from other countries. When you compare the milk / protein content with that of meat, milk, or eggs, or with other legumes and cereal grains, it is at least 2-10 times higher.

The soybean is rich in phosphorus, which is equal to the efficacy of Western medical phosphorus. Other products: Whole soybeans (*douren*). Soybean noodles (*doumian*; wheat pasta enriched with soy); it is a substitute for wheat gluten (*mianjin*). Soybean oil (*douyou*). Soybean cake—defatted (*doubing*). Okara or residue from making soymilk (*douzha*; [mostly fed to animals]). Soymilk (*doujiang*). Spray-dried soymilk (*doujiangfen*). Canned soymilk (*quandoujiang*). Soured soymilk (*suandoujiang*; by lactic acid fermentation). Soybean extract (*doujing*). Tofu (*doufu*). Pressed tofu—sliced (*doufugan yupian*). Fermented tofu (*faxiao doufu*). Whey—from making tofu (*yujiang*). Soy sauce (*jiangyou*). Sweet wheat-flour jiang (*tiandoujiang*). Soy sprouts (*douyacai*). Soybean coffee (*douren jiafei*). (Translated by H.T. Huang, PhD, April 2003).

1757. Ichida (R.). 1908. R. Ichida (Ad). In: Nichibei Shinbun-sha. 1908. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Page 11 (Japanese numbers) near the front. [Jap]

• **Summary:** Ad (full page). Food wholesaler. ICHIDA Risuke. Tokyo Shoyu Tonya-ken Yushutsu Nyugyo [Tokyo Shoyu Wholesale Export and Import Co.] Gomei Kaisha.

Okada Shoten. Address: Koami-cho 3 chome 19 banchi, Nihonbashi, Tokyo. San Francisco branch representative, ICHIDA Risuke, 1905 Bush St., San Francisco, California. Okada Shoten represents the Kikkoman brand as well as other shoyu makers from the towns of Noda and Choshi; we sell their products and we also export. Address: 1905 Bush St., San Francisco, California.

1758. Lahor, Jean; Lucien-Graux, -. 1908. *L'alimentation à bon marché, saine et rationnelle* [Food that is reasonably priced, healthful and rational]. Paris: Félix Acan, Éditeur. iii + 284 p. No index. 18 cm. [10 ref. Fre]

• **Summary:** Chapter 11, titled “Vegetarianism and vegetarian restaurants” (p. 146-66) gives accurate, detailed information for France. The Vegetarian Society of France is located at 13 rue Froisart, Paris. We read on p. 162-63: “The soybean (*Le soja*) of Japan, so rich in nitrogen, should also be favored on our tables, no doubt in the form of soy sauce, just as it is in the Far East.”

A table titled “List of vegetarian foods which one can have all year round” (p. 166) includes soybeans and peanuts under “dry legumes.”

Appendix IV titled “Fruitarianism” (p. 273-77) notes that fruits includes seeds (such as cereal grains and legumes) as well as nuts.

Note: Jean Lahor is a pseudonym. Address: Dr. Cazalis.

1759. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1908. *Zaibei Nihonjin nenkan* [Japanese-American yearbook. No. 4]. 234 Turk St., San Francisco, California. 491 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Toshō Senta. Series: Nikkei Imin Shiryōshū. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 3 unnumbered leaves of black and white photos (two show before and after the San Francisco earthquake and fire) on glossy paper, 20 pages of ads and basic information, numbered using Japanese numbers (NUJN), of which the last four pages are the table of contents, 210 numbered pages which are the body of the book, 84 pages of ads NUJN, 6 unnumbered pages of index and ads, 95 pages of directory NUJN, 37 pages of ads and back matter NUJN.

The import tax on shoyu is either 40% or 4% (unclear, p. 48). There is one tofu shop near (but not in) Oakland, California (p. 180, lower right). There are three tofu shops in San Jose, one in Watsonville, one in Salinas, and a brewery [that may make shoyu and sake] in San Jose (p. 182).

The Directory shows Japanese companies making soyfoods in California and Nevada (Reno). Address: San Francisco, California.

1760. **Product Name:** Miso, and Shoyu [soy sauce].

Manufacturer's Name: Sanyo Shokai. Renamed Sanyo Shoyu Jozo Gaisha by 1909.

Manufacturer's Address: 920 Hight St., Melrose (near Alameda), California.

Date of Introduction: 1908. January.

New Product–Documentation: Ad (¼ page) in Nichibei Shinbun-sha. 1908. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Page 14 (Japanese numbers) middle block of ads. A maker of miso and shoyu {soy sauce} (*Miso shoyu seizō-gyō*).

Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [Japanese-American Yearbook]. Directory entry p. 31. The company name is now given as Sanyo Shoyu Jozo Gaisha. Address: 920 Hight St., Melrose, California. The company no longer makes miso-only shoyu. Note: Melrose is on the mainland, just northeast of Alameda (an island). As of Jan. 2008 Melrose was part of central east Oakland, a city adjacent to Alameda.

1761. Tsuda Shoten. 1908. Tsuda Shoten (Ad). In: Nichibei Shinbun-sha. 1908. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. p. 49, middle section of ads. [Jap; eng]

• **Summary:** Ad (half page). This company sells various goods including miso and shoyu. Address: 1020 Third St., Sacramento, California. Phone: Oak 1561.

1762. Veitch, Henry Newton. 1908. *Sheffield plate: Its history, manufacture and art; with makers names and marks,...* London: George Bell and Sons. xiv + 359 p. See p. 176-77. Illust. (74 plates + portrait). Index. 29 cm.

• **Summary:** Chapter 13, titled “Illustrations from the original maker’s catalogue of the First Period (with descriptive notes) (p. 153-83) states (p. 154): “Oil and vinegar frames, cruets and ‘soy’ frames are shown in great variety; teapots, sugar baskets, and cream pails then follow;...”

It continues (p. 176-77): “Plate XLIV, Catalogue Nos. 912-914 No. 912 is a Soy Frame, holding six cut flint-glass bottles with plated tops and name labels; the bottom pierced and flat-chased, on four fluted feet. While this is the only Soy Frame in the whole Catalogue, there are shown no less than twelve Cruets, containing from five to seven bottles, all of the finest type of design;...”

The illustrations appear on the page after the description. Address: 4, Bennet St., St. James’s, S.W., London.

1763. Watt, George. 1908. Commercial products of India. Being an abridgment of “The Dictionary of the Economic Products of India.” London: John Murray. viii + 1189 p. See p. 564-65. [15 soy ref]

• **Summary:** Since Watt’s *Dictionary of the Economic Products of India* has been out of print for some time, the Government of India asked him to write an updated 1-volume abridgement. He said that soybeans in India were first introduced from Indonesia. “The Soy Bean; in Indian vernaculars, *bhat*, *ram*, *gari-kulay*, *hendedisom horec*, *pond disom*, *an-ing-kiyo*, *tzu-dza*, *bhatnas*, *seta*, *musa*, *khajuwa*, etc.

“A sub-erect or creeping annual native of China, Cochin-China, Japan and Java, comparatively recently introduced into India, though recorded as acclimatised and even seen as an escape from cultivation. It might, in fact, be described as extensively cultivated, though more as a garden than a field crop; is especially prevalent in Eastern Bengal, Assam (Barpeta Sub-division), the Khasia hills, Manipur, the Naga hills and Burma. It is not infrequent in the plains of India proper, especially in Busti, Gorakhpur, Patna and Purnea, etc. In Bombay and Madras, however, the Soy Bean has apparently hardly passed the experimental stage.

“Cultivation.—Two chief varieties occur, one called white, the other black. On the plains it is generally grown by itself as a *kharif* (autumn) crop. The seeds are sown from June to September, and harvested from November to December... In Assam it is sown with *áhu* (autumn rice) in April and May. The *áhu* crop is removed in July and August, and its stubble acts as a support for the bean plants, which are ready for harvest in December and January.”

“It is eaten in India in the localities where it is cultivated, chiefly in the form of *dál* or *satú*. In Japan it is largely used as a sauce, cheese (*natto*) or paste, and in China an edible oil is obtained from the seed. If cut when the pods are fully formed it makes a most nutritious fodder, and the seed-cake, as already stated, is an extremely rich cattle food.”

Also discusses: Alfalfa (p. 778). Almonds (*Prunus*

amygdalus, p. 905). Broad bean or Windsor bean (*Vicia faba*, p. 1106-07. “There are two distinct forms, the long-podded and the broad-podded, the latter originating the name ‘Broad’ or ‘Windsor bean’”). Chufa (*Cyperus esculentus*, p. 465; also called Rush-nut, earth-almond, or tiger-nut). Coffee (p. 363-68, with an excellent history). Cowpeas (p. 1107-08). Lucerne or alfalfa (*Medicago sativa*, p. 778-79).

Mung bean, *udid*, and *urud* / *urd* (*Phaseolus mungo* or *P. radiatus*, p. 880-82). “There has been some confusion regarding the nomenclature of *Phaseolus Mungo* and the species which follows—*P. radiatus*,—due chiefly to Roxburgh having transposed the original Linnean names. *P. Mungo*, Linn., is the present plant, *udid* or *urd*; while *P. radiatus*, Linn., is the plant known in the vernacular as mung. There are two varieties of *udid*, one with large black seeds, the other with smaller greenish seeds, and these correspond very possibly with *P. Mungo* proper and the variety *Roxburghii*.

Sea-weeds (Kelp, p. 50). Address: Kew Gardens, England; Formerly, Prof. of Botany, Calcutta Univ., Superintendent Indian Museum (Industrial Section) and reporter on economic products to the Government of India.

1764. Senn, Charles Herman. 1908? A pocket dictionary of foods & culinary encyclopedia. London: The Food & Cookery Pub. Agency. 158 p. Undated. *

• **Summary:** Charles Hermann Senn lived 1862-1934.

1765. *Christian Science Monitor*. 1909. Want favorite food duty free. Jan. 1. p. 3.

• **Summary:** “Washington—Greeks, Japanese and Chinese now want to take a hand in framing the new tariff bill. The San Francisco Chinese chamber of commerce,... has submitted to the ways and means committee a brief asking that the duties be reduced on Chinese soy [sauce], rice, fish, meat, type and fire crackers.

“The Japanese association of America, with headquarters in San Francisco [California], makes a plea that mizo [sic, miso], a food, shoyu, a sauce, and greenhouse stock be placed on the free list, and that the tariff be reduced on rice, vegetables, and earthenware.”

1766. *Chemist and Druggist* (London). 1909. Trade report. 74(1511):61-63. Jan. 9. See p. 63.

• **Summary:** Page 63: “Soy.—The new method in regard to the calculation of freight on soy has now been established. To arrive 1s. 2½d. [1 shilling 2 pence] c.i.f. is quoted, or 1s. 3½d. to 1s. 4d. per gal. [gallon] spot for good thick.”

A subsequent entry [13 Feb. 1909, p. 270-74] reads: “Soy—Small spot sales of good thick have been made at 1s. 3½d. per gallon, but for shipment higher prices are asked.”

Note: Soy sauce now seems to be categorized as thick and not thick (perhaps thin).

1767. *USDA Bureau of Plant Industry, Inventory*. 1909. Seeds

and plants imported during the period from January 1 to March 31, 1908. Nos. 21732 to 22510. No. 14. 64 p. Jan. 9. Also titled USDA Bureau of Plant Industry, Bulletin No. 137.
 • **Summary:** Soy bean introductions: *Glycine hispida* (Moench) Maxim. [Note the first use of this terminology in this publication.]

21754-21757. "From Paris, France. Purchased from Vilmorin-Andrieux & Co. Received January 3, 1908.

"21754. Yellow seeded.

"21755. *Ogemaw*. Extra early, brown seeded.

"21756. Black seeded.

"21757. Extra early, black seeded."

21818. "From Paris, France. Purchased from Vilmorin-Andrieux & Co. Received January 17, 1908. *Ito San*. Called by the French, *Yellow Etampes*.

21825. "From Hokkaido, Japan. Presented by Mr. K. Hashimoto, Kuchchau Agricultural Society, Abutagun. Received January 14, 1908. *Amherst* (?). 'Used in the manufacture of "soy," "miso," "tifu" [tofu], etc.' (*Hashimoto*.)"

21830/21831. "From Hokkaido, Japan. Presented by the Yokohama Nursery Company, Yokohama, Japan. Received January 24, 1908.

"21830. *Butterball*. Japanese name *Akita*.

"21831. Japanese name *Rumoi*."

21946. "From Buitenzorg, Java. Presented by Dr. M. Treub, director of the Department of Agriculture. Received February 11, 1908. '*Zwarte kadelee*'" [black soybeans].

21999. "Received through Mr. F.N. Meyer, agricultural explorer for this Department at the Plant Introduction Garden, Chico, Cal., February 12, 1908. From Boshan, Shantung, China. '(No. 799a, Sept. 18, 1907.) A rare variety of soy bean, sparsely grown near Boshan. Chinese name *Ta ha tau*. Used by the higher classes as a vegetable in soups.' (*Meyer*.)"

22311/22312. "From Shanghai, Kiangsu, China. Presented by Rev. J.M.W. Farnham, Chinese Tract Society. Received March 11, 1908.

"22311. Black. 'Similar to *Nuttall* but larger.' (*Nielsen*.)

"22312. Yellow."

22317-22322. "From Erfurt, Germany. Purchased from Haage & Schmidt [seedsmen]. Received March 16, 1908.

"22317. Probably *Butterball*.

"22318. '*Giant Yellow*.' Probably *Amherst*.

"22319. Brown.

"22320. *Samarow*. Like No. 17260.

"22321. Probably *Cloud*.

"22322. '*Early Black* from Podolia [Ukraine].' Probably *Buckshot*."

22333-22337. "Grown at Arlington Experimental Farm, Virginia, season of 1907. Received March 19, 1908.

"22333. *Baird*. 'This variety was mixed with *Brownie* when received from Pingyang [Pyongyang / P'yongyang], Korea. This mixture was given S.P.I. No. 6414. The two

varieties were grown together under these numbers, 9417, 17256, and Agrost. No. 1542, respectively. The two varieties were separated in the 1907 seed from Arlington Farm, and *Baird* given the above new number, *Brownie* remaining as No. 17256.' (*Nielsen*).

"22334. Flat black. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. The original source of the seed is not known. It is quite similar in growth to *Nuttall*, but the seed is not the same shape, being flatter and larger.' (*Nielsen*.)

"22335. Yellow. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois, where it was grown as *Illinois Medium Yellow*. It is very similar to *Hollybrook*, and perhaps is the same, but appears different on account of having been grown farther north.' (*Nielsen*.)

"22336. *Guelph*. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. Original seed was procured from the Agricultural Experiment Station, Wooster, Ohio.' (*Nielsen*.)

"22337. *Guelph*. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. Original seed was procured from the Agricultural Experiment Station, Fayetteville, Arkansas' (*Nielsen*.)"

22379-22381. "From Canton, Kwangtung [province], China. Presented by Dr. J.M. Swan, Cooks Hospital. Received March 20, 1908.

"22379. Yellow.

"22380. Black.

"22381. Green mixed with yellow and a few brown."

22406/22407. "From Hongkong, China. Presented by Mr. S.T. Dunn, Botanical and Forestry Department. Received March 26, 1908. [Note: It is not clear whether or not they were ever cultivated in Hongkong. These two soybeans (#22406 and #22407, both black seeded) were later given the names "Hongkong" and "Nigra" respectively, and introduced to the USA in about 1910].

"22406. Yellow.

"22407. Black."

22411-22415. "From Naples, Italy. Purchased from Dammann & Co. Received March 25, 1908.

"22411. *Samarow*.

"22412. Black. 'Similar to *Cloud*.' (*Nielsen*.)

"22413. Brown.

"22414. Yellow. 'Similar to *Acme*.' (*Nielsen*.)

"22415. Giant yellow."

"*Glycine soja* Sieb. & Zucc." [Note the first mention of this species.] 22428. "Grown at Arlington Farm, Virginia, season of 1907, under C.V.P. No. 0474. Received March, 1908. 'Original seed presented by the Botanic Gardens, Tokyo, Japan. A near relative to the soy bean, but a spreading or decumbent plant, abundantly provided with large root nodules. Has considerable promise as a cover or green manure crop.' (*Piper*.)"

22498-22501. "From Hangchow, Chehkiang, China.

Presented by Dr. D. Duncan Main, through Mr. J.M.W. Farnham, Shanghai, China. Received March 26, 1908.

"22498. Yellow. Similar to No. 18619.

"22499. Yellow.

"22500. Green. Similar to No. 17857.

"22501. Black."

22503-22507. "From Yokohama, Japan. Purchased from L. Boehmer & Co. Received March 31, 1908. The following seeds with Japanese names quoted; varietal descriptions by Mr. H.T. Nielsen:

"22503. 'Teppo Mame.' Yellow, similar in appearance to Amherst, No. 17275.

"22504. 'Kaze Mame.' Green.

"22505. 'Gogwatsu Mame.' Yellow, similar to Haberlandt, No. 17271.

"22506. 'Maru Mame.' Yellow.

"22507. 'Vieuri Lei.' Green, similar to Yoshio, No. 17262." Address: Washington, DC.

1768. Ford, Sydney (Miss). 1909. Facts, features and fancies for women. *Los Angeles Times*. Jan. 19. p. 117.

• **Summary:** The section titled "Table talk" suggests: "Try a Chinese luncheon to entertain your eastern guests... Lay a pair of Chinese chopsticks at each place and serve a dish of soy [sauce], birds' nest soup, chicken with the bones removed, tea, queer candied fruits, chop suey made with fish, nuts and bamboo sprouts,..."

1769. Holland, Edward B. 1909. Soy beans and soy bean oil. *Massachusetts Agricultural Experiment Station, Annual Report* 21(Part II):111-19. Jan. 1909. [30 ref]

• **Summary:** Contents: Economic uses. The chemistry of soy bean meal. Table showing composition of Medium Green soy beans. Soy bean oil: Physical tests (tables show specific gravity, specific viscosity, refractive index, mean dispersion), chemical tests (tables show acid number, ether number, Hehner number, insoluble acids, neutralization number, mean molecular weight, iodine number).

The oil was removed from the soy beans by the V.D. Anderson Company of Cleveland, Ohio, using torsional pressure. "An analysis of the resulting cake indicates that from 55 to 60 per cent. of the oil was removed. The oil was passed through a filter press, but was not refined otherwise. The oil was clear and of a dark amber color, with an odor similar to that of other vegetable oils." The author found the oil to have following physical constants: Specific gravity at 15°C 0.9206. Specific viscosity 8.43. Refractive index at 20°C 1.4749. Mean dispersion at 20°C 0.00938.

In chemical tests, the author found the following constants: Saponification (*Koettstorfer*) number 191.95. Acid number 1.27. Ether number 190.68. Iodine number 130.77. "According to the classification of Lewkowitsch, based on iodine number, soy bean oil is a semi-drying oil of the cotton-seed oil group."

Note 1. E.B. Holland is no relation to J.H. Holland of London, who wrote about soy in 1910.

Note 2. This is the earliest English-language document seen (Sept. 2006) with the term "soy bean oil" in the title.

Note 3. This is the 2nd earliest document seen (Sept. 2006) that uses the term "Refractive index" in connection with the soja bean, and the first that gives a value (1.4749 at 20°C).

Note 4. Values for the specific gravity and saponification number of soy bean oil, attributed to Shukoff in "correspondence with Dr. Lindsey," are the same as those published by Shukoff in *Chemische Revue ueber die Fett- und Harz-Industrie* (Hamburg, Germany) (Dec. 1901, p. 250-51). Address: M.Sc., Assoc. Chemist, 28 North Prospect St., Amherst, Massachusetts.

1773. *Scotsman (The) (Edinburgh, Scotland)*. 1909. New oilcake industry. March 5. p. 10.

• **Summary:** "The following, which appeared in a recent issue of the *Eastern Morning News*, is referred to to-day by our agricultural contributor:—The arrival of the Javorina, s. [steamer], at Hull with the first cargo of Soya beans marks the beginning of what promises to be an important new industry in this country. Considerable interest is manifested in this new development as it will have an important bearing upon the future prosperity of the oilcake industry.

"The Javorina, s., is the first of a fleet of steamers bringing Soya beans to Hull. The beans are in good condition and this is due to the excellent arrangements made for

ventilation in the holds. It is a long voyage from Vladivostok, the vessel leaving the Russian port on Boxing Day [probably Dec. 26]. The total quantity for Hull is about 4,700 tons, and the remainder will be transshipped to London.

"The Soya bean grown in immense quantities in Manchuria and China. The Japanese have adopted the bean to commercial uses, not for the food of animals, but for that of man. It is not an unpopular article of diet in many parts of the Far East, and during the campaign conducted in Manchuria by the troops of the Rising Sun the men were fed very often on little else. It possesses sustaining qualities, and is the basis of a Japanese sauce [shoyu, or soy sauce]. Its chief value to this country, lies in the fact, however, that it will be an excellent animal food because of its richness in albuminous compounds and nitrogen, which are very good feeding qualities."

"Several forms of cake manufacturers have conducted... tests and these have proved eminently satisfactory. The experimental Soya cakes which have been made in Hull have been tested by a practical and scientific dairyman in the East Riding, who has reported that one cow set aside for this test and fed with half a cake a day, in addition to other food, yielded a considerable extra quantity of milk daily, and was much improved in general condition. The large proportion of oil in the cake makes sparing use of it advisable.

"Up to the present soya beans have been imported to England only in small quantities, but the development of Manchuria promises to revolutionise what is an important industry in Hull."

"What it will mean to Hull alone is that this new source of supply will be available in the seed crushing trade when other classes of seed are scarce and the mills will, therefore, be able to continue running uninterruptedly.

"A combination of circumstances are said to be responsible for the development under such favourable conditions at the present time—the low price of silver, which is what everything is bought with in Japan and China, and low freights. The Javorina, s. [steamer], is the first of a fleet of nineteen vessels which are now on the way from Dalny or Vladivostok with large cargoes of the bean. Several of these vessels are definitely fixed for Hull, two for Liverpool, and the remaining eleven for other ports in the United Kingdom."

1774. *Poverty Bay Herald (Gisborne, New Zealand)*. 1909. New food from China. March 13. p. 2.

• **Summary:** "London, Jan. 16—A new food is coming to town—new, that is, in the sense that comparatively few people in the country have partaken of it.

"The soja or soya bean is a product of Manchuria. In appearance it somewhat resembles the ordinary lentil, while in taste (uncooked [sic]) it approaches very nearly to the taste of the common 'split' pea.

"It has only heretofore been brought to this country in very small quantities, and, in spite of the fact that it

constitutes almost the staple food [sic] of the Chinese laborer, it has never been seriously considered by Western civilisation as a bean with food properties.

"Travellers who have journeyed through the interior of Manchuria tell marvelous stories of Chinese carriers who will cover thirty miles a day regularly with a load of 120 lb or 130 lb upon their backs, and these laborers keep up their strength for this work by eating the soja bean.

"Some British physicians have recognised its value as a food for diabetes, and it is also prescribed at certain large German hospitals for the same' complaint. The Japanese have for many years past laid it under contribution as the basis of their well-known piquant sauce, and it is from one of the Japanese firms that Europe will shortly receive a consignment of, it is anticipated, well over 100,000 tons.

"As a food the bean is prepared in very similar fashion to the method employed in cooking ground rice" [sic].

• **Summary:** Exports of [soy] beans and [soy] bean-cake from Newchwang, China, are increasing rapidly. The United States Consul at Newchwang, "Thomas E. Heenan, calls attention to the exports of Chinese beans to the United Kingdom as the beginning of what is expected to develop into considerable proportions.

"Since the closing of the river to navigation, large numbers of carts have been entering the town with inland produce, and great quantities of beans have been stored for export in the spring. It is difficult to obtain reliable figures concerning the quantity brought by rail, but up to date 64,000 tons have been brought by carts, and it is estimated that the total quantity brought in by rail and carts during the four Months December-March will reach 88,000 tons, against 30,000 tons for the same period last winter. This quantity, however, is small compared with the stocks shipped to Dalny by rail from the north, and when the thaw sets in, putting a stop to cart traffic, unless there are early spring rains, there is very little prospect of large supplies coming down by river boats, as the snow thus far has been insufficient to give the requisite draft of water in the up-river reaches.

"Countries to which shipments are made: Beans, bean

cake, and bean oil are the principal products of Manchuria. The prices of these during the past season have been higher than ever before, but how much of this is due to the ability of Japan, a gold-standard country, to pay more in silver, because silver has been cheap, can not be positively stated. The bean cake and bean oil go chiefly to Japan, but shipments have gone to England, France, and the United States during the past year. The American shipment was a small quantity sent from Newchwang merely as a sample... During the year the exports to England amounted to about 70,000 bags. This is a new development, said to have been brought about by English experts who have made a study of the beans. They have discovered, it is said, a means of extracting an oil therefrom, for culinary use as well as for lubricating purposes., the residue being converted into cattle feed. The exports of bean cake from Newchwang to foreign countries in 1908 amounted to 246,608 tons, valued at \$5,518,508.

"The exports of beans from Newchwang to foreign countries and other Chinese ports during 1908 were as follows, in tons:" Yellow [soy] beans 75,996. Green beans 31,873. Black [soy] beans 16,489. White beans 4,315. Red [azuki] and small green [mung] beans 3,634.

"United Kingdom: An experiment with the soya bean in Manchuria." U.S. Consul Walter C. Hamm of Hull [England] writes, under date of January 20,... "The soya bean "has been exported to some extent to the United States, and a few samples have been brought to England, but the present shipments to Hull are the first on a large scale. Three steamers, the Maroa, the Javorina, and the Matoppo, are now on their way from Dalny or Vladivostok with about 10,000 tons each, and the Claverdon and the Bannockburn are loading similar quantities at Dalny, making 50,000 tons in all."

A long quotation from an article in the *Eastern Morning News* describes the arrival at Hull, England, from China, of the first cargo of soya beans on board the Javorina. "The beans arrived in good condition, and this is due to the excellent arrangements made for ventilation in the hold." Experimental "soya cakes have been made in Hull and have been tested by a practical and scientific dairyman in the East Riding, who has reported that one cow set aside for this test and fed with half a cake a day, in addition to other food, yielded a considerable extra quantity of milk daily and was much improved in general condition. The large proportion of oil in the cake makes sparing use of it advisable... The Japanese have adapted the bean to commercial uses, not for the food of animals, but for that of man. It is not an unpopular article of diet in many parts of the Far East. It possesses sustaining qualities, and is the basis of a Japanese sauce [shoyu].

"Chinese beans in Scotland: Tests in crushing mills for oil and stock meal." U.S. Consul Rufus Fleming reports on Feb. 12 from Edinburgh: "In the production of oil cake and seed oil the crushing mills in this district have long used

only Bombay and Egyptian cotton seed. Recently some of the mills have experimented with small quantities of 'soya beans' from Manchuria. The Chinese bean, which is about the size of a pea, has been found to contain from 15 to 16 per cent of oil suitable for soap making. The usefulness of the oil for other industrial purposes has not yet been demonstrated. The cake produced, containing about 6 per cent of oil, is said to be good feed for stock... The mills in this part of Scotland have undertaken to carry out thorough tests, and a shipment of 1,700 tons is expected to soon arrive at Leith for this purpose."

Note 1. This is the earliest document seen (Feb. 2003) concerning soybeans in Scotland. They were imported from Manchuria. Rufus Fleming filed his report on 12 Feb. 1909.

Note 2. This is the earliest English-language document seen (Feb. 2000) that uses the term "soya cake" or "soya cakes" to refer to ground, defatted soybeans.

Note 3. This is the earliest English-language document seen (Sept. 2006) that uses the term "Chinese beans" (or "Chinese-beans") to refer to soybeans.

Note 4. This is the earliest document seen (Oct. 2005) concerning soya beans imported to or processed in Hull, England. Address: Washington, DC.

1781. *Mark Lane Express Agricultural Journal and Live Stock Record (Farmer's Express, London)*. 1909. Soya beans and soya cakes. 100(4054):667. June 7. See also Experiment Station Record 21:474 (1909). [1 ref]

• **Summary:** This is a detailed summary of a "communication which Professor Gilchrist, of Armstrong College, has sent to the press." "Trials to test the comparative feeding value of soya and decorticated cotton cakes have been carried out at Newton Rigg, the Cumberland, and Westmorland Farm School, under the supervision of the manager, Mr. W.T. Lawrence.

"Soya cake is produced from soy or soya (soja) beans (from which some of the oil is extracted), which are now being extensively imported from Manchuria to this country." "Soya cake" was found to be slightly superior to "decorticated cotton cake" for milk production. Six cows were fed for 6 weeks on each protein supplement. The basal ration consisted of hay, oatstraw, crushed oats, and roots. Concerning milk production, there was a slight advantage in favor of the soya cake but it was too small to be considered significant. Both feeds also gave similar results in terms of the fat content of the milk. The cows, however, gained somewhat more weight while they were being fed the soya cake than they did on the decorticated cotton cake.

"Soy, soja, or soya beans have been known in China and Japan for a considerable time. Soy (shoyu), the universal condiment in Japan, is prepared from soy beans, mixed in equal quantities with either wheat or barley. The British Oil and Cake Mills, Ltd., Hull, inform me that about 400,000 tons of these have been sold to this country

within the past few months for delivery till the end of the year, of which 50,000 tons have now arrived, and a steady supply is anticipated in the future. Three qualities of these are now imported:—The Sakura, which are said to be the best, being shipped from Dalny [Manchuria], the Harbin from Vladivostock [Vladivostok], and the Hankow from Shanghai."

"Soya or soja meal is being sold in this country, which is soya beans from which the greater part of the oil has been extracted. This may contain as little as 1.5 per cent of oil, while the albuminoids and other constituents are consequently increased.

"Soya cake is now sold in the Newcastle district at about £6 15s. to £7 a ton."

Note 1. This is the earliest English-language document seen (Dec. 2005) that uses the term "soja meal" to refer to ground, defatted soybeans.

Note 2. This is the earliest document seen about feeding "soya cake" to dairy animals.

Note 3. This is the earliest document seen (Sept. 2004) that mentions "Sakura," which appears to a grade or quality of soybeans, rather than a soybean variety name. "Sakura" is not used as either a grade or soybean variety name in the USA. Address: Armstrong College, England.

1782. Mitsuda, Ryuichi. 1909. On the carbohydrates of shoyu. *J. of the College of Agriculture, Tokyo Imperial University* 1(1):97-101. June 16. [Eng]

• **Summary:** Contents: Isolation of sugars from shoyu. About furfural [an aldehyde of furfuran; also called furfural]. About total pentosane. "Although the existence of sugars in shōyu is easily shown by the reduction of Fehling solution, it is comparatively difficult to isolate them in a pure state. At first I have tried to isolate them as the lead compounds... Afterwards I found that such a long operation is unnecessary." He used recrystallization of crude osazones.

He gives technical details of how each carbohydrate was isolated from shoyu or tamari. Furfural, which is formed from pentose or pentosane, was found to increase with the age of the moromi. Address: Japan.

1783. Yoshimura, Kiyohisa. 1909. Ueber die chemische Zusammensetzung der Tamari-Schoyu [On the chemical composition of tamari shoyu]. *J. of the College of Agriculture, Tokyo Imperial University* 1(1):89-96. June 16. [3 ref. Ger]

• **Summary:** So-called Tamari-shoyu (*Tamari-Schoyu*) is a variety of shoyu (liquid soy sauce) which is mainly used and made in the middle and western part of Japan. The chief difference between this variety and the most common soy is the absence of wheat in the raw materials used in its preparation. The author isolated from 1 liter of "tamari-shoyu" 0.3 gm of putrescine, 0.7 gm of ornithine, 0.7 gm of a base $C_6H_9N_3$, and 4.5 gm of ammonium. Address: Japan.

1784. *Chamber of Commerce Journal (London)*. 1909. Soya bean oil and oil cake. 32:199-200. July.

• **Summary:** “With reference to the paragraph in our previous issue as to Chinese Soya beans...” During the last few months, large quantities of these beans have been imported into the United Kingdom. “The Soya bean grows in great abundance in China and especially in Manchuria, where it is used for human consumption, and its nutritive qualities are highly appreciated. It forms the basis of a Japanese sauce [soy sauce] of great repute.”

Because this leguminous plant absorbs nitrogen from the air, it exhausts the soil much less than other oleaginous plants. “In Europe the bean is only of value for the oil which it contains and the cake left after the oil has been expressed.” The oil-pressing mills at Hull, England, have already imported large amounts and find the oil a valuable product, with a good color. The residual cake makes an excellent cattle food.

This year more than 150,000 tons have been exported, and there are now many cargoes of 4,500 to 6,000 tons on their way from Vladivostok [Vladivostok] and Dalny to Europe, consigned to Hull, Liverpool, and Hamburg [Germany]. The condition of the beans upon arrival is said to be perfect, despite the long voyage. “The product is sold with a guaranteed maximum of 2 per cent. of non-oleaginous foreign matter; it is packed in the original sacks.

“The qualities are classified in three grades: No. 1, shipped at Dalny; No. 2 at Vladivostok; and No. 3 at Hankow. The value of No. 1 is about 12s. 7d. per 100 kilos gross. c.i.f. European port direct. Nos. 2 and 3 are of equal value about 12s. 5d. per 100 kilos gross.” The nutritional composition of the cake is given.

Note: This is the earliest English-language document seen (Sept. 2006) with the term “soya bean oil” in the title.

1785. Ruhräh, John. 1909. The soy bean in infant feeding; Preliminary report. *Archives of Pediatrics* 26:496-501. July.

• **Summary:** This pioneering paper was read before the Twenty-first Annual Meeting of the American Pediatric Society, Lenox, Massachusetts, May 28, 1909. “The soy bean (*glycine hispida*), sometimes incorrectly called the soja bean, is an annual leguminous plant which originally grew in a wild state from Cochin China to the south of Japan and Java.”

There follows a brief but accurate history of the soy bean. “In 1875 Professor Haberlandt began a series of investigations with this plant in Austro-Hungary, and in his work published in 1878 he urges the importance of the soy bean as a food both for man and animals. After his death, which occurred in 1878, very little notice was taken of the soy bean in Hungary and the prophecy that he made for its future failed.”

“As early as 1829 Thomas Nuttall wrote an article in the

New England Farmer concerning the bean as a valuable crop for this country. The Perry expedition to Japan also brought back soy beans, but until the last fifteen or twenty years the plant was known only as a curiosity.”

“The plant is grown in America, but is used chiefly for the purpose of a forage crop and comparatively little reference has been made to its use as food for man.” The plants “bear a remarkable number of beans and the flowers are self-pollinated, making the yield independent of insects. The bean may be easily grown in Maryland. I am indebted to three friends for experimenting with this plant in their gardens and obtaining good crops...”

Note 1. This is the earliest document seen (May 2009) that mentions soybean pollination—quite remarkable since it is by a pediatrician writing about a completely different subject. It is also the earliest document seen (May 2009) that uses the term “self-pollinated” (or self-pollinating, etc., with or without the hyphen) in connection with soybeans.

“At the present time there are seven varieties handled by seedsmen, and some twenty-two distinct varieties are known.” The varieties Mammoth Yellow, Hollybrook, and Ito San have been used in infant feeding experiments. “The other varieties are the Guelph (green), the Samarow (green), the Ogemaw (brown), and the Buckshot (black). All of these latter may be grown in the north.”

“I am indebted to Mr. Frank N. Meyer, agricultural explorer for the Department [U.S. Department of Agriculture], for information concerning the use of the beans in the East... The light-colored beans are eaten in soups and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as promoters of appetite; the same varieties are often slightly sprouted, scalded and served with meals in winter time as a green vegetable.” Also discusses soybean oil, soy bean milk (which “has a composition nearly the same as that of cow’s milk” as shown in a table), “natto, tofu, miso, yuba, shoyu,...” (p. 498).

“The soybeans are sometimes roasted and then used as a substitute for coffee” (p. 499)

“The fact that the soy beans contain little or no starch suggested to Dujardin-Beaumetz that they be used as a food for diabetics. The soy bean flour has been placed on the American market, but was withdrawn owing to the fact that according to the manufacturers it contained 8 per cent. carbohydrate. It contains much less carbohydrate, however, than any of the other diabetic foods.”

“As regards the use of the beans in infant feeding it seemed to me that soy bean gruel or milk, either alone or with cow’s milk, might be of value in feeding several classes of cases, viz., of marasmus and malnutrition, as a substitute for milk in diarrhea, and in intestinal and stomach disorders, and in diabetes mellitus.”

Note 2. This is the earliest document seen (July 2008)

that suggests the use of a soybean preparation as a milk substitute for infants.”

Note 3. This is the earliest document seen (Aug. 2003) concerning the actual feeding of soymilk to infants or children, or concerning a soy-based infant formula. The author was the world’s first pediatrician to use soybeans in infant feeding, and did the first U.S. studies with soyfoods and human nutrition.

Note 4. This is the earliest English-language document seen (Oct. 2003) that uses the term “substitute for milk” to refer to soymilk. Note 5. This is the earliest English-language document seen (Nov. 2002) that uses the word “malnutrition” in connection with soyfoods.

The writer had hoped to conduct experiments and make a more complete clinical report but several misfortunes attended his efforts to secure the beans. “My first crop was eaten by rats, my second moulded in the pods owing to some unusually damp weather, and insects ate about two-thirds of my last crop. Fortunately, the beans may now be obtained from Messrs. T.W. Wood & Son, Richmond, Virginia.

“So far the gruel has been prepared by soaking the beans over night, stirring to remove the envelope surrounding the bean. Three times the amount of water is added to the beans and they are boiled until a smooth gruel results. This is strained if necessary [to make real soymilk]. This has the odor and taste of malt, but with the addition of a little salt is well taken, especially after the first bottle or two. The gruel is retained unusually well and seems to be easily digested. The stools are not more frequent than with other foods. The stools are light brown in color like those from malted milk. This soy bean gruel has nearly the same food value as milk and for certain children may need further dilution. About the same size feedings should be used as if milk were being given. Five percent sugar may be added to increase the fuel value.

“I have not used the beans in a sufficiently large number of cases nor over sufficient periods of time to justify any further statements at this time, but I do feel that properly used they will be a most valuable addition to the dietary of the sick infant. Grinding them to a bean meal would simplify matters very much, and, if success attends their use, a soy bean meal could easily be prepared.

“I hope to be able to make a second report at the next meeting and have called your attention to the bean in hope that other members may try them and report at the same time.”

Note 6. Pediatrician Herman F. Meyer (1960, p. x) published a long poem by Dr. John Ruhräh titled “A Simple Saga of Infant Feeding,” which described the history and present status of infant feeding. Meyer described Ruhräh as a “philosopher, teacher, poet, pediatricist [pediatrician] and able historian.”

Note 7. This is the earliest English-language document seen (Oct. 2001) that uses the term “soy bean flour.”

The following photo of Dr. John Ruhräh (1872-1935) was taken in about 1914. Born in Chillicothe, Ohio, he was a graduate of the College of Physicians and Surgeons (Baltimore, 1894), did post-graduate work at Johns Hopkins, the Pasteur Institute, Paris (1897), and in other European schools (1900-1901), and was quarantine physician of the port of Baltimore (1898-1900), where he became Professor of pediatrics in the University of Maryland Medical School and in the College of Physicians and Surgeons.

His autograph is shown below. Address: M.D., Baltimore, Maryland.

1786. *Milling (Liverpool)*. 1909. A new British industry. Soya beans. Their cultivation and manufacture. Their wonderful food value. Great possibilities. 33(9):290, 292. Aug. 28. Also printed in 1910 as *Soya Beans*, a 27-page booklet by Northern Publishing Co. in Liverpool., Liverpool. Extensively quoted by Sawyer 1910 (p. 27) and 1911 (p. 212). [1 ref]

• **Summary:** “The firms which first entered the export trade in Soya beans in quantity were Messrs. Nathanson (Russia) and Messrs. Mitsui and Co. (Japan). Several English firms have also entered the trade, and among these must be mentioned Messrs. S. Macgregor and Co., and Messrs. Jardine, Mathieson [Matheson] and Co. We believe that Messrs. [John] Bibby, of Liverpool, were one of the first British importers of Soya beans, that firm having received a considerable quantity last year. It was not until last Spring, however, that consignments arrived in this country in large cargoes. Up the present time the imports in 1909 have been estimated at about 300,000 tons. This is a large total for the first year of general crushing, and shows that the trade is certainly to be largely increased, providing that Manchurian exporters can secure the beans, and of this there does not appear to be any doubt.”

The yellow Sakura soybean variety shipped from Dalny appears to be the best quality and commands a price of about 2/6 per ton more than small yellow varieties such as the Harbin variety shipped from Vladivostok or the Hankow variety shipped from Shanghai. “The black Soya bean appears to be the richest in oil, while analysis proves it to contain a large percentage of albuminoids and phosphates.

“The analysis of the ordinary yellow Soya bean, made by Mr. Alfred Smetham, F.I.C., F.C.S., of Brunswick Street, Liverpool, shows an average of about the following constituents:—Water 12 per cent., oil 17 per cent., albuminoids (protein) 38 per cent., carbohydrates 22 per cent., fibre 5 per cent., ash 5 per cent., and sand 1 per cent...

“Mr. Smetham, in a pamphlet he has prepared for the *Annual Journal of the Royal Lancashire Agricultural Society* for 1909, gives a number of analyses of Soya beans, besides the products of oil and flour millers generally. Some of our readers will be interested to learn that the Chinese in Liverpool have regularly imported various kinds of Soya

beans, which are sold in the Chinese shops for human food. We understand that the method of cooking them is very similar to the British plan of steeping and boiling dried peas. In China the beans, after having had the oil extracted from them, are used for feeding pigs and cattle, as well as for manuring the land. The beans have long been known in Japan, where they are made into a favourite condiment known by the name of Shoyu, the meal from the beans being mixed with meal from either wheat or barley.”

The oil is of a superior kind and finds a ready sale at high prices for a great variety of purposes, including the manufacture of margarine and other edible goods, the manufacture of fine toilet soaps and paint oils. Note 1. This is the earliest document seen (Oct. 2007) concerning the use of soybean oil in margarine.

“We hear that the Japanese are extracting the caseine [casein] from Soya beans, using it as a substitute for milk. It is said that this vegetable milk is produced by extracting the juice. The preparation, according to the *Java Times*, is a very popular drink among the poorer classes of China and Japan. In making the milk the beans are first softened by being soaked and then boiled in water. The liquor is secured by straining and is similar to cow’s milk in appearance, but has a different composition, which renders it highly suitable for use in tropical countries...

“The most interesting use to which the bean can be put, from a corn miller’s point of view, is the production of flour for bread-making purposes. This has been done by a Hull firm who recommend that the Soya flour be mixed with wheat flour in the proportion of one of the former and four or five of the latter. We have obtained a sample of Soya flour and blended it with white flour. After baking a loaf it was seen that the top broke but the crumb was all that could be desired. The flavour of the loaf was superior to that of average brown bread. The Soya flour cannot be bleached; therefore, it would not be suitable for white bread making. We think that a proportion of Soya flour might be blended into the millers’ brown meal with advantage, because of its great food value and its flavour. Further mention is made of Soya beans and flour in our editorial notes.

“Just as we go to press a gentleman called at this office and showed us a Soya bean pod which had been plucked from plants raised in South-West Lancashire [England]. It was fully ripe and contained four beans... Soya beans, he informs us, have been grown before in this country as an experiment though without much success.”

Note 2. This is the earliest document seen (Sept. 1999) that mentions Mitsui & Co. (a major Japanese trading company) in connection with soybeans.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the term “soya flour” (one of two documents).

1787. *Tropenpflanzer (Der) (Berlin)*. 1909. Die Soja-Bohne

[The soybean]. 13(8):388-90. Aug. [2 ref. Ger]

1788. *Toronto Daily Star (Canada)*. 1909. Beef-eating in Japan: Is on the increase—abandoning rice which is cause of beri-beri. Sept. 10. p. 7.

• **Summary:** London, Sept. 11. “The Japanese peasant does not eat much rice; it is too dear. Barley, vegetables, and fish are his staple foods. The upper and middle classes, however, who have hitherto eaten large quantities of rice, are now slowly beginning to add meat to their dietary. Beef is the favourite dish. It is cut up small, boiled with a native bean sauce [soy sauce] and vegetables, and eaten with the hashi or chopsticks.”

1789. United States Land & Irrigation Exposition. 1909. Will the United States export rice to the Orient? (Ad). *Chicago Daily Tribune*. Oct. 4. p. 8.

• **Summary:** This organization believes that, using highly-productive mechanized agriculture, the answer to the above question is “yes.” “Food value of rice: The nutritive value of rice is greater than that of any other cereal, and it is easily digested. With a little seasoning—dried fish, soy sauce or soy bean cheese [tofu, or fermented tofu] it furnishes for the Oriental a large part of the protein necessary for daily diet.”

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term “bean cheese” or the term “soy bean cheese” (regardless of hyphenation) to refer to fermented tofu. Address: 4th Floor (#407) Commercial National Bank Building, 115 Adams Street [Chicago].

1790. *Otago Witness (New Zealand)*. 1909. New Zealand products: Markets in the East. Oct. 6. p. 21.

• **Summary:** “(From our own correspondent). London, Aug. 20. Another hint has been received this week of the genesis of a large market for New Zealand products in the East”—where 400 million people are gradually beginning to adopt European practices.

“The head of the cattle-breeding department of the Japanese Government (Mr. Hashimoto) is at present visiting this country [Great Britain] to make purchases of stock.

“‘Meat-eating,’ said Mr. Hashimoto, is on the increase in Japan. Its popularity is increased by the recently advanced theory that an over-consumption of rice is a source of beri-beri. The Japanese peasant does not eat much rice; it is too dear. Barley, vegetables, and fish are his staple foods. The upper and middle classes, however, who have hitherto eaten large quantities of rice, are now slowly beginning to add meat to their dietary. Beef is the favourite dish. It is cut up small, boiled with a native bean sauce [soy sauce] and vegetables, and eaten with the hashi or chopsticks.”

About 10-12 years ago Japan began to import European cattle into Japan to improve their native breeds. “For ploughing purposes, Japanese farmers invariably use cattle. For this purpose the native breeds are good, but for milk and

beef they are poor.”

1791. Gordon, E.L.S. 1909. Report for the year 1908 on the trade and navigation of the port of Dairen (Dalny). *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4372. 18 p. For the year 1908.
 • **Summary:** The 1st map shows the “Kwantung Leased Territory” (Dairen consular district), a long peninsula including Dairen and Port Arthur, which are connected by the South Manchuria Railway. A 2nd map, “Sketch map of part of Manchuria,” shows the four three railways, plus major cities and towns, crops, and rivers: (1) South Manchuria Railway; (2) Chinese Eastern Railway; and (3) Chinese Imperial Railway.

Currency (p. 3): In ports other than Dairen, dealings with the Chinese are based on taels and copper cash, the amount of cash taken for each tael differing at each port. But “at Dairen, there are no taels or cash. The Chinese Imperial Maritime Customs of course make up their statistics in Haikwan taels, but the business here is all done in Yokohama Specie Bank Newchwang notes known as silver yen...” A table shows the value of Haikwan tael, gold yen, and silver yen in shillings and pence for 1907 and 1908.

Pages 3-4 state that “soya beans which come down from the north are made up in bags, each of which weighs from 185 to 200 lbs. avoirdupois. Bean cakes are reckoned by pieces, weighing nearly 60 lbs. apiece.” A table defines the following weights and measures: Chinese: *catty, picul, li, mow*. Japanese: *kin, ken (6 shaku), ri, tsubo, koku* (liquid and dry), 1 S.M.R. ton (2,000 lb).

The section titled “Possible industries” contains subsection III on “Bean cake and bean oil” (p. 6). A table gives the chemical composition of 3 samples of bean cake. “By the present method, using hand presses, the amount of oil extracted from the beans is about 8 per cent. At one mill in Dairen, which is fitted with hydraulic presses, nearly 10 per cent. can be obtained. The quantity of oil in the soya bean is from 16 to 17 per cent., and by improved processes it should be possible to extract practically the whole of this, and still make from the fragments as good a quality of bean cake for fertilising purposes as is made now.”

The section titled “The South Manchuria Railway” states (p. 6-7): The work of broadening the main line of the South Manchuria Railway and its Fushun and Newchwang branches from the 3 feet 6 inches gauge to the standard gauge of 4 feet 8½ inches was completed by the end of April, 1908. A new and improved system of trains was introduced, and a revision of fares and traffic rates, in most cases involving a reduction, has been effected. As a result the complaints that were so rife during 1907 are no longer heard, and both traders and passengers seem generally satisfied with the treatment accorded to them. In October express trains composed of Pullman dining and sleeping cars commenced to run between Dairen and Changchun, the northern

terminus, twice a week, covering the distance of 437½ miles in 21 hours. This time is to be shortened during 1909 to 18 hours, and no doubt further accelerations will follow and the express run oftener.

“With the completion of the reconstruction of the main line, the work of doubling the tracks between Dairen and Suchiatun, a distance of 238 miles, was commenced, and is to be finished in the autumn of 1909.”

The section titled “Exports” contains long subsections on [Soya] “Beans” and Bean cake” (p. 10-13). In the first subsection we read: “Towards the end of 1908 was commenced a trade in beans with the United Kingdom and Europe, which promises to have a great effect on this part of China, and, in view of the great possibilities of this trade, the following, taken from a report which appeared in the local newspapers some little time ago, may prove of interest.”

There follows the full-text of a 3-page article on production and exports of soya beans in 1907 and 1908.

The subsection on “Bean cake” states: “In 1907 there were at Dairen two large Japanese mills, in one of which steam is used as the motive power while in the other electricity has been adopted, and a few Chinese mills where the old native method has been retained. During 1908 some 17 Chinese factories have been added, and more are in contemplation. This increase is likely to be sustained, though possibly not in the same proportion. A better price can be obtained for bean cakes made here than for those brought down from the interior, as the latter are apt to get damaged in the course of transportation, and the demand for bean cake as manure in other countries is steadily increasing.”

Annex 1 (p. 14) gives the value of imports to Dairen during 1907 and 1908. In 1908 the value of soy [sauce] was £27,431 and of miso was £5,422.

Annex 2 (p. 16) gives the value (in British pounds sterling) of exports from Dairen during 1907 and 1908. [Soy] Beans: £658,135 / 1,000,948. Bean cake: £488,997 / 865,480. Bean oil:—£27,284. Address: Mr., Acting Vice-Consul [for Great Britain to Japan].

1792. *Tropical Life (England)*. 1909. The soy or soya beans (*Glycine hispida*). 5(11):181. Nov. [3 ref]

• **Summary:** The soya bean “has long been familiar by name to British cooks, because it furnishes the condiment called ‘soy,’ which forms an ingredient of several soups and sauces. It is considered the most nutritious of all leguminous vegetables...”

“The beans can be cooked in the green pod, like French beans, or the dried beans may be treated like haricots.”

“The Imperial Institute, always on the alert to push the interests of this country, has already brought the matter of soy-bean cultivation to the notice of various Colonial Governments and experiments are now in progress at the Cape of Good Hope, Natal, East Africa, and the Gambia.”

A table gives the chemical composition of four different

soy bean varieties. One of these, a yellow variety, was grown in West Africa.

1793. *Hartford Courant (Connecticut)*. 1909. Big eats clubs are getting busy: Hungarian Goulash Club meets tomorrow. Dec. 15. p. 16.

• **Summary:** “When the Hungarian Goulash Club meets tomorrow night, there will be several gallons of goulash. Each club has its own recipe for its favorite dish and it is a secret. All that is really known is that there are squares of beef, a few vegetables, a sauce that contains some paprika and India soy, and that every one wants two or three plates.”

1794. Togano, Meiji-ro. 1909. Shôyu moromi-chû no saikin ni tsuite [Studies on the microbes in soya (or shoyu) mash (or moromi)]. *Nogakkai Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 90. p. 1-56. Dec. [Jap]

• **Summary:** The Japanese word *moromi*, which is often translated as “mash,” is the stage in making soy sauce (it has a consistency resembling apple sauce) before the liquid shoyu (soy sauce) is pressed out, leaving behind the shoyu presscake. Address: Nôgaku-shi, Japan.

1795. **Product Name:** Best Shoyu, Ikeda Shoyu, Maru-ichi.

Manufacturer's Name: Ikeda (T.) (Later renamed Ikeda Shoyu Brewery).

Manufacturer's Address: Front St., near King, Hilo, Island of Hawaii.

Date of Introduction: 1909.

Ingredients: Best shoyu: Soya beans, salt, wheat, caramel color, water, and 1/10 of 1% of sodium benzoate.

Wt/Vol., Packaging, Price: Best shoyu is in 1 gallon bottle.

How Stored: Shelf stable.

New Product–Documentation: Husted's Directory of Honolulu and the Territory of Hawaii. 1909. p. 660. T. Ikeda,

soy mnfr [manufacturer], Front near King. Residence, same. 1910 Directory. p. 690, same. 1911 Directory. p. 787, same. A photo shows an early square Label (pre. 1950). “Best Shoyu.” Logo is Maru-Ichi. “Genuine Brewed Shoyu.” Manufactured and Bottled by Ikeda Shoyu Brewery. Hilo, Hawaii. An illustration shows wheat stalks and soybean plants.

A photo shows an oval Label (Used shortly before they closed). Ikeda Shoyu. Maru-Ichi. Hilo, Hawaii. ½ gallon. Same ingredients as before. T.H. Nihei. Hawaii, Maui, Kauai Directory. 1954. p. 78. Shiro Ikeda Shoyu (Shiro Ikeda, proprietor). 195 Liholiho h958, Kaumana Drive, Hilo, Island of Hawaii. 1957 Directory. Becomes the Ikeda S. Shoyu Factory. Address same. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Shows two labels. Ikeda Shoyu Brewery, Hilo, Hawaii. They make amino acid soy sauce. The company recently closed.

1796. Imperial Hygienic Laboratories. 1909. Inshoku-butsu narabini shikô-hin bunseki-hyô [Analytical tables of food and luxury items]. *Eisei Shikenjo Hokoku (Bulletin of the Imperial Hygienic Sciences)* No. 10. p. 1-78. Miso, see p. 27-28. Shoyu, see p. 28-28. Soymilk, see p. 39-45. [Jap]

• **Summary:** Gives a detailed analysis of the nutritional composition of these basic foods, including analyses of various well-known brands, which are clearly specified. The number of products analyzed are: Miso 30 products, shoyu 122, fermented black soybean Chiang (Shoyu shisho) 4, shoyu moromi 2, shoyu presscake (kasu) 1, Thick (noko) shoyu 11, shoyu second generation products and imitation products 16, soymilk (containing only soybeans) 6, other soymilk products 89. Address: Eisei Shikensho (National Institute of Hygienic Science), Tamagawayoga-machi, Setagaya-ku, Tokyo, Japan (in 1962).

1797. Mitsuda, Ryuichi. 1909. Shôyu no tansuikabutsu ni tsuite [On the carbohydrates in shoyu]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 4(8):29-40. [Jap]

• **Summary:** This influential journal was still being published in 1990. This dynamic illustration, of Japanese men apparently pouring moromi into a vat where it will start fermenting, appeared on the cover. Address: Japan.

1798. **Product Name:** Shoyu (Soy Sauce).

Manufacturer's Name: Sanyo Shoyu Jozo Gaisha.

Renamed Sanyo Shoyu Jozo-sho by 1913.

Manufacturer's Address: 69 N. 5th St., Portland, Oregon.

Date of Introduction: 1909.

New Product–Documentation: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*]. Directory entry p. 137. Also in the 1913 Yearbook, however the company name is now Sanyo Shoyu Jozo-sho, the address is 537 Goldsmith, and the phone is C 1397. Also in 1914, p. 215. But the address is 539 Delay St.

1/8 page ad in *The Japanese American Directory*. 1919. p. 230. Sanyo Shokai, 539 Delay St., Portland, Oregon. Phone: 1397 (written in Japanese characters). They make and sell shoyu, miso, and koji (*issai seizô hanbai*) plus various other non-soyfoods.

Note 1. This is the earliest document seen (Nov. 2005) concerning soybeans in Oregon. This document contains the earliest date seen for soybeans in Oregon (1909). The source of these soybeans is unknown. A shoyu manufacturer must have soybeans in order to make shoyu.

Note 2. This is also the earliest known commercial soy product made in Oregon.

1799. **Product Name:** Shoyu (Soy Sauce).

Manufacturer's Name: Tairiku Shoyu Jozo Gaisha. The Continental Soy Brewing Co.

Manufacturer's Address: 1217 Temple Ave., Fruitvale, California.

Date of Introduction: 1909.

New Product–Documentation: Nichibei Shinbun-sha.

1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*].

Directory entry p. 30. Ad (½ page), p. B-34. The top ¼ of this ad is in English: The Continental Soy Brewing Co. 1217 Temple Ave., Fruitvale, California. Tairiku Shoyu Jozo K.K. This is an early maker of soy sauce in the continental United States (not including Hawaii). Two illustrations show what look like its two logos, each including the character *dai / tai*, which means “big.” The president (*shachô*) is Hamada Tsunegoro. Vice president (*fuku shachô*) is Isaki Yonetaro. The names and titles of 11 other company officers are listed across the bottom of the ad.

Note: Hokubei Shoyu Jozo K.K. Jozo-sho was at this address in 1908.

1800. **Product Name:** Shoyu.

Manufacturer's Name: Tanaka.

Manufacturer's Address: Waipahu, Oahu, Hawaii.

Date of Introduction: 1909.

New Product–Documentation: Husted's Directory of Honolulu and the Territory of Hawaii. 1909. p. 554. Tanaka, soy, Waipahu. Not listed in 1907.

1801. **Product Name:** Shoyu (Soy Sauce).

Manufacturer's Name: Un-named Japanese shoyu makers (two).

Manufacturer's Address: Oakland, California.

Date of Introduction: 1909.

New Product–Documentation: Nichibei Shinbun-sha.

1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*].

Census entry p. 149. Two male owners and 4 male employees. Also in 1910, p. 172, 174. Male owner and two male employees.

1802. Yoshimura, Kiyohisa. 1909. Tamari shôyu no seibun ni tsuite [On the chemical composition of tamari shoyu]. *Tokyo Kagaku Kaishi* (*J. of the Tokyo Chemical Society*) 30:43-120. [Jap]

• **Summary:** Note: This is the earliest document seen (March 2012) that contains the term *tamari shôyu* in Japanese.

1803. Carson, John M. 1909. Soya bean and products.

Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor) No. 41. Part 5. 35 p. Erroneously numbered Special Consular Reports, Vol. XL.

• **Summary:** Contents: Introduction. I. Countries of production. China: Newchang (Varieties of beans and amount produced {in centals [hundredweights; 1 cental = 112 pounds]}), methods of cultivating and harvesting,

prices and exports, shipments to Europe—use by natives), Dalny (Manufacture of bean cake and oil, preparing the cake, expressing the oil and wages paid, freight charges to Dalny, exports, stock on hand, and prices), Chefoo (Beans imported for cake manufacture, quantity and value of output, bean vermicelli made by a peculiar process [from the small green bean *lū tou* {mung bean}], preparation of beans, drying of product and prices [for vermicelli]), Shanghai (Extent of export trade in beans), Shantung (manufacture of bean oil and cake, harvesting and pressing, shipping and prices), Swatow, Tientsin (Exports of raw beans, shipments of bean cake, extent of trade at Tientsin). Tables (p. 5) show prices and exports of soya beans, bean cake and bean oil at Newchang for the years 1905-1908. Japan: Cost of production and prices (of soya beans, quite detailed), imports of beans and cakes, use of the bean as food (shoyu, miso, tofu, koya-tofu, natto, flour), Kobe (Beans as human food {eaten boiled with a little soy [sauce], “made into bean curd, and a kind of sauce made of wheat, beans, and salt”}—small exports {“The total exports of beans, pease, and pulse [incl. soy] in 1908 were valued at \$25,971, of which about \$24,000 worth went to Hawaii, the United States, and Canada for use by the Japanese residents in those countries as an article of food”}), manufacture of cake), Nagasaki (Production of beans, imports of beans—market prices). Shipments from Vladivostok * [Russia, of soybeans probably grown in Manchuria] (Fluctuations in prices, shipments during present season, immense shipments planned next season (by Mitsui)).

“It is the intention of Mitsui Bussan Kaisha, the largest exporter from this port, to ship about 200,000 tons of beans via Vladivostok during 1909 and about double that quantity via Dalny. Many large contracts have been made for next season, and from present indications a strong effort will be made against the control of Mitsui Bussan Kaisha as the Chinese are making arrangements to deal direct with the European market without the aid of the Japanese” (p. 18).

Tables show: The quantities and value of soya beans, soya-bean cake, and bean oil imported into Japan during the year 1908 (p. 15). The soya bean harvests (in bushels) reported in various Japanese districts (p. 16).

II. Markets. Denmark: Experimental imports made, views of an importer. France: High duties prevent importation of soya beans, soya-bean flour bread used by diabetics, unknown in Calais district. Germany: Danger of feeding cattle on soya-bean products, oil value—prices at Hamburg, comparative food value of the bean. Italy: Beans imported and cultivated in limited quantities, prices of soya products—American cotton-seed oil, not imported into Catania, home products supply Piedmont district. Netherlands: A great future for the soya-bean trade predicted, prices of the bean and bean cake, soya cake as cattle feed, manufacture of soya-bean products begun, English soya-bean cake defective. Norway: Imports of soya-bean meal and

cotton-seed meal. Russia: Beans and products unsatisfactory as feeding stuffs. Spain: Soya bean unknown in Valencia district [They are neither cultivated nor imported in this district]. Straits Settlements [Singapore and Malaya]. Sweden: Soya-bean products introduced through England. Comparative value of cattle feed [work by Nils Hansson of Sweden], comparative prices of feed stuffs. Turkey. England: Liverpool (Conversion of the soya bean into cake and meal), Plymouth (Soya cake and meal extensively consumed), Southampton (The bean appreciated as a fattener and as a dairy ration, the soya bean as human food [for use in diabetic diets]). Ireland: Chinese bean products are favorably received, soya bean introduced in Belfast, small imports at Cork. Scotland: Statistics as to use in Dunfermline not available, test of feeding value of soya cake [by Prof. Douglas A. Gilchrist], Edinburgh mills making experiments (based on 1909 report 1909 of U.S. Consul Rufus Fleming from Edinburgh).

III. Competitive American exports. Tables (p. 35) show exports for 1907, 1908, and 1909 of cotton-seed meal, cotton-seed oil, and cottolene, lardine [not defined: presumably shortening made from cottonseed oil], etc. to major countries, especially in Europe.

The Introduction notes: “In compliance with requests from manufacturers of cotton-seed products in the United States, who desired that an investigation be made of the production and use of the soya bean and its manufacturers in the Far East and of the extent to which they compete with American cotton-seed products in the European markets, the reports following have been submitted by consular officers in the various countries concerned...

“The reports of the consular officers have been placed in two groups, the first having to do with the countries that produce the soya bean and the second with the countries that are sought as markets. Statistics as to the imports of soya-bean products in many European countries were not available at the time the reports were submitted, but inasmuch as the prices quoted were generally lower than for other seed products, emphasis has been laid on the relative merits of the two classes of goods as shown by experiments and analyses in these countries. These manufacturers will have to work in meeting this new competition.”

Note 1. This is the earliest document seen (Dec. 2007) concerning soybean products (oil or meal) in Turkey, Denmark, Ireland, the Middle East, or Sweden (one of two documents); soybeans as such have not yet been reported in any of these countries. This document contains the earliest date seen for soybean products in the Middle East or Turkey (1909).

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term “soya-bean flour.” Address: Chief of Dep.

1804. Carson, John M. 1909. Soya bean and products: Straits

Settlements (Document part). *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. p. 26. Erroneously numbered Special Consular Reports, Vol. XL.

• **Summary:** “Vice-Consul-General George E. Chamberlin, of Singapore, reports that the soya bean is not cultivated in that district. As to the imports and the uses to which the beans are put, he writes:

“The beans are imported into Singapore and other ports of this district from China, Japan, and India, principally from the former country, in considerable quantities, and are used for making soya [soy sauce] and bean cheese [tofu], or bean cake—popular articles of food among the natives and Chinese. Practically no beans are exported and no bean cake, all being consumed locally.

“Soya beans in this locality are not made into meal, nor are they used for the same purpose as cotton-seed meal and cake. The present market price is about \$2 per picul (133 1/3 pounds) for the white soya bean and \$1.75 for the black.”

Note 1. The Straits Settlements is a former British Colony on the south and west coast of the Malay Peninsula, including adjacent islands, comprising Singapore, Penang, and Malacca settlements.

Note 2. This is the earliest document seen (May 2010) concerning soybeans in Singapore. This document contains the earliest date seen for soybeans in Singapore (1909). Address: Chief of Dep.

1805. Carson, John M. 1909. Soya bean and products: Shanghai: Extent of export trade in beans (Document part). *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. p. 11. Erroneously numbered Special Consular Reports, Vol. XL.

• **Summary:** On page 11, the Vice-Consul-General of Shanghai writes that while the Shanghai district does not produce any beans, there is considerable shipping of beans and bean products from that port. “The soya bean is little known in this district by the name ‘soya,’ as it is generally stated that the soya bean is any bean from which soy [sauce] is made. The best bean for making soy is the yellow bean [huang-tou]. The consular district of Shanghai does not produce any yellow beans of commercial importance... The total reexport of white and yellow beans from Shanghai to foreign countries, Hongkong, and Chinese ports during 1908 was \$1,548,572. Bean cake, a product principally of the yellow bean, was reexported to foreign countries, Hongkong, and Chinese ports in 1908 to the value of \$791,606.

“The bean curd, or a form of soy, is largely exported to Chinese ports, \$17,085 worth being exported in 1908.”

“Many of the beans from up the river are shipped into Shanghai and made into soy [sauce] for export.”

Note: This is the earliest document seen (April 2001) that contains tofu industry or market statistics by geographical region. Address: Chief of Dep.

1806. Carson, John M. 1909. Soya bean and products: Japan (Document part). *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. p. 13-16. Erroneously numbered Special Consular Reports, Vol. XL.

• **Summary:** Vice-Consul-General E.G. Babbitt of Yokohama writes: “The soya bean, or soja bean, as it is known here (Common Japanese name ‘daidzu’ [daizu]), is cultivated throughout the Empire of Japan. The total area of cultivation is in the neighborhood of 1,200,000 acres, or about 3.8 per cent of the total area devoted to the cultivation of rice and other cereals and grains. The soya bean is often cultivated, not in fields by itself, but in rows along the edges of rice or wheat fields. These edges are, as a rule, very soft, for they have been previously plowed, and little labor is required in planting... In harvesting the plants are uprooted, and, after being dried in the sun for several days, flails are used to separate the beans from the pods. The flails are of a very primitive type, with bamboo handle and of light weight. Female and child labor is invariably employed in flailing.

“The kinds of fertilizers used differ by districts. In the prefecture of Miyagi, for example, straw ashes and superphosphate of lime are commonly employed, while in the prefecture of Akita wood ashes, superphosphate of lime, and horse dung are used.”

The average yield of soybeans in Japan over the past 10 years is 15.30 bushels per acre. For the year 1907 the highest yield is from Ishikawa prefecture, 21.62 bushels/acre, whereas the lowest yield is from Okinawa prefecture (Loochoo Islands, south of Kiushu [Kyushu]), 8.48 bushels/acre. During 1908 huge amounts of soya beans (3.3 million piculs; 1 picul = 132.277 pounds weight) were imported to Japan from China, Kwantung, and Korea, with small amounts coming from Asiatic Russia. Large amounts of soya-bean cake (7.760 million piculs) were imported from China and Kwantung, with small amounts coming from Asiatic Russia and none from Korea. “The total imports of bean oil in 1908 amounted to only 49,993 pounds, valued at \$1,325.”

“The soya bean is one of the most important articles of food in Japan. The beans are cooked in various ways, while in brewing soy (shoyu), in the manufacture of miso (pea or bean cheese), tofu (bean curd), koya-tofu (frozen bean curd), and natto (steamed beans) they are the chief ingredient. They are also manufactured into flour and make up the principal part of many Japanese sweetmeats. All these foodstuffs are daily used in Japanese homes.

“To a limited extent soya beans are used as horse or cattle food, being sometimes boiled and mixed with straw, barley, bran, etc.”

The vice consul of Kobe states that in 1908 Japan produced 18,812,228 bushels of soya beans. Small amounts are exported “to Hawaii, the United States and Canada for

use by the Japanese resident in those countries as an article of food.” Three factories in the Kobe district make bean cake, largely from imported, lower-cost soya beans. “The beans are first crushed flat, then put into a big container and steamed, after which they are put into a steam press to extract the oil and to be made into cakes. The cakes come in circular pieces, a yard in diameter and an inch thick, each weighing about 50 pounds. The oil is used for lubricating machinery. The cake is used only as a fertilizer and is not fed to animals as it causes their hair to fall off.”

Note 1. This is the earliest document seen (Feb. 2004) stating that soya bean oil can be used as a lubricant.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term “koya-tofu” (or “koya-dofu” or “kôya-dôfu”) to refer to dried-frozen tofu.

Note 3. This is the earliest document seen (Aug. 2011) in *Chemist and Druggist* in which the toxicity of a soy product is discussed or alleged, namely soya cake “is not fed to animals as it causes their hair to fall off.” Address: Chief of Dep.

1807. Central Union Church (Honolulu, Hawaii), Ladies’ Society. comp. 1909. Hawaiian cook book. 5th ed., revised and enlarged. Honolulu, Hawaii: Hawaiian Gazette Co. 150 p. Recipe index by category. 22 cm. 1st. ed. 1882.

• **Summary:** After the title of each recipe is given the name of the person (mostly women) who submitted it. Worcestershire sauce is used to season some recipes (see, for example, soups, p. 9; fish, p. 18; beef, p. 28). For “vegetarian soups” (“for those who are forbidden meat or whose preferences are in favor of a vegetable diet”) see p. 12-15.

Note: The recipes in this book are much more American than Hawaiian. The one main exception is the “Hawaiian feast” or luau (p. 130-31). Otherwise, the major Hawaiian influence is the use of tropical fruits (such as cocoanut, papaia [papaya], pineapple, mango, breadfruit, or Alligator pears), in otherwise American recipes. These recipes also show no Japanese or Chinese influence. For example, soy sauce is not used to season even one recipe in the entire book. Address: Honolulu, Hawaii.

1808. Clercq, Frederik S.A. de. 1909. Nieuw plantkundig Woordenboek voor Nederlandsch Indië [New botanical dictionary for the Netherlands Indies]. Amsterdam, Netherlands: J.H. de Bussy. xx + 395 p. See p. 248, no. 1664. [1 ref. Dut]

• **Summary:** In the following, we will spell out, then translate, abbreviations in square brackets: “1664 *Glycine Soja* Sieb. et Zucc. * Nat. fam. der Leguminosae. Dekeman, Jav. Kr. D. [Krama-Doesoen of Hoog-Dorps-Javaansch = Mount Dusun high-level village Javanese]; Dele, Jav. [Javaansch = Javanese]; Gadele, Jav. [Javanese]; Kadele, Boeg. [Boegineesch = Buginese, spoken in South Sulawesi], Makas. [Makasaarsch = Makassarese, from Makassar, the

provincial capital of South Sulawesi, Indonesia]; Kadale, Jav. [Javanese]; Kadheli, Madoer. [Madoereesch = Madurese, spoken in Madura {Dutch: Madoera}, an Indonesian island off the northeastern coast of Java]; Katjang djepoen, Soend. [Soendaasch = Sunda, the language of the Sundanese people of Western Java]; Katjang kedelai, Mal. [Maleisch = Malay, the language of Malaysia and Brunei, lingua franca of the Malay Archipelago]; Katjang kedele, Mal. Batav. [Bataviasch-dialect van Maleisch = the Batavian dialect of Malay; Batavia was the colonial Dutch name (1600s to 1942) for today’s Jakarta]; Kedangsoel, Jav. Kr. D. [high-level village Javanese]; Kedelai, Mal. [Malay]; Kedele, Balin. [Balineesch = Balinese, the language of the Indonesian island of Bali], Jav. [Javanese], Mal. Batav. [the Batavian dialect of Malay]; Keudeule, Soend. [Sunda]; Lawoei, Biman. [Bimaneesch = Bima, language of the Bimanese people, spoken on the Indonesian island of Sumbawa and its city of Bima]; Leboewi bawak, Sas. [Sasaksch = Sasak, spoken by the Sasak people on the Indonesian island of Lombok]; Retak medjong, Lamp. [Lampongsch = Lampung, spoken by the Lampung people in the Indonesian province of Lampung, on the southeastern tip of Sumatra].

“*Variëteiten (Varieties) in Soend. [Sunda]: Katjang djepoen beureum; Katjang djepoen bodas; Katjang djepoen hedjo; Katjang djepoen hideung.—Kruid (herb, plant), de sojaboon.*

“Uses: Known for the high protein content of its beans, consumed mostly by indigenous people as green vegetable soybeans (unripe). For the preparation of Batavian ketjap or Soy (*Bataviasche ketjap of soja*), black-seeded soybeans are used. In addition, the beans are boiled, beaten into flat cakes, and inoculated with a particular type of mold to obtain tempeh (*tempe*), which is very much liked in Java.” Address: in Leven; Oud-Resident van Ternate en van Riouw [former resident of Ternate and of Riouw].

1809. Cornet, Paul. 1909. Le régime alimentaire des malades: Considérations pratiques sur les aliments et les boissons diététiques et sur l’hygiène de l’alimentation [The dietary regimen for the sick: Practical considerations on dietetic foods and drinks and on the hygiene of feeding]. Paris: G. Steinheil, Éditeur. 484 p. No index. 23 cm. [144* ref. Fre]

• **Summary:** In Part III, “Foods drawn from the vegetable kingdom,” Chapter 20 titled “Starchy vegetables” discusses various fruits, grains, and legumes. The section on “Soya” (p. 269-70) gives the name of the soybean in Japan (*daizu*), Annam (*dau-nauh*), and China (*théou*), and notes that the seeds can be used to make shoyu, miso, and tofu—which are widely appreciated.

“Dietetic uses: Without having recourse to these exotic preparations, the nutritional value of soybeans is not used enough in our country. Soy bread is only used in anti-diabetic diets*, whereas one could prepare a pap and a drink (*boisson*,

[soymilk]) no less precious, as well as extracts [soy sauce] which could be substituted for meat extracts.” Footnote:

*Soya is well suited for diabetics, for the seed contains only 3% starch plus 16% oil and 27% protein.

In Part V, “The regimens,” Chapter 30 titled “General solid regimens” has two parts: The first, the “Vegetarian regimen” (p. 341-55) has the following contents: Indications for the vegetarian regimen. Application of the vegetarian cure: Absolute [vegan foods plus water], mitigated (lacto-ovo vegetarian), total vegetarian diet (*régime total*) throughout the seasons (incl. dry legumes such as soybeans, peanuts, etc.), culinary preparations. Vegetal calendar (*Calendrier végétal*): soups, main dishes, and desserts for each month of the year. Address: Dr., Professeur at the municipal schools of the infirmaries of the Hospitals of Paris (aux Ecoles municipales d’Infirmières des Hôpitaux de Paris).

1810. *Hawaii Agricultural Experiment Station, Annual Report*. 1909. Soy beans. p. 83-85. For the year 1908.

• **Summary:** “The soy bean possesses many advantages as a green manuring and rotation crop. Early in the present year, three varieties of soy beans were obtained through the Bureau of Plant Industry. These were designated as Nos. 20797, 20798, and 21080... Seed of two other varieties were donated by the Hawaiian Yamajo Soy Company of Honolulu. One of these, a green seeded type, has been grown in the Kona district of Hawaii for some years; the other, a yellow seeded variety, was imported direct from Japan. The seed of both these varieties is used in the manufacture of the Japanese food product, ‘Miso,’ and other preparations.”

All the varieties were sown on March 12. Variety No. 21080 yielded 600 lb of shelled beans per acre; the yellow seeded variety imported from Japan yielded 800 lb, and the Kona seed yielded 1,060 lb. “The average price in the Honolulu market is \$3 per hundred pounds. About 500 tons of the beans are imported from Japan annually, and the demand is said to be on the increase. It would appear that this could be made a profitable crop for the small farmer.”

Photos show: A man standing in a plat of soy beans in Hawaii, with palm, banana, and other tropical trees in the background. Three sets of dwarf soy bean plants with roots; their soy beans are used in making miso and other Japanese food products.

Note: In 1898 Hawaii was annexed as a U.S. Territory.

1811. Hokubei Boeki K.K. 1909. North American Mercantile Co. (Ad). In: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 6]. p. A-1. [Jap]

• **Summary:** Ad (full page). This company imports various goods including white rice, sake, shoyu, and miso. Illustrations show: (1) Two sacks of “Japan Rice—100 pounds.” (2) Two kegs of sake tied with traditional rice-straw ropes. Address: 318-320 Front St., San Francisco, California.

1812. Ichida Risuke. 1909. R. Ichida (Ad). In: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 6]. p. A-15. [Jap]

• **Summary:** Ad (full page). The top 1/5 of this ad is in English. This company imports various goods including Kikkoman shoyu, and shoyu made by other companies in Noda, Japan. Ichida is the overseas sales representative of Tokyo Shoyu wholesalers and of Okada Shoten. Address: 1968 Bush St., San Francisco, California. Phone: WEST 1688.

1813. Iwakami Gomei-gaisha Shiten. 1909. Iwakami & Co. (Ad). In: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 6]. Unnumbered page. [Jap]

• **Summary:** Ad (full page). The company name is written across the top of this ad in English. This Japanese company has its main office in Yokohama, Japan, with branch offices (*shiten*) in Osaka, Hawaii, and San Francisco, California. It exports shoyu, miso, and other goods from Japan. Address: Yokohama, Japan.

1814. Kita, Gen-itsu. 1909. Shôyu jôzô ni kansuru kenkyû. I and II. [Studies on shoyu brewing. I and II.]. *Kogyo Kagaku Zasshi* (*J. of the Society of Chemical Industry, Japan*) 12:1-24; 12:399-428. II. Application of natto microorganisms. [Jap]

• **Summary:** Part I is titled “Shoyu moromi and shoyu presscake” Address: Kôgaku-shi, Japan.

1815. Lewkowitsch, Julius. 1909. Chemical technology and analysis of oils, fats, and waxes. 4th ed. Entirely rewritten and enlarged. 3 vols. London: Macmillan and Co., Ltd. See vol. II, p. 122-24. [7 ref]

• **Summary:** The section titled “Soja bean oil (Soy-bean oil, Bean oil, Chinese bean oil)” (Vol. II, p. 122-24) gives details about the soja bean, which is indigenous to China, Manchuria, Korea, Japan, Formosa, and Indo-China. The soja bean industry is one of the most important in Manchuria and Japan. In Manchuria, the expressed meal is made into bean cakes (*Téou-fou-tcha*) which are exported in large numbers. The Japanese make shoyu and miso from soja beans. “Efforts have been made to ship soja beans to Europe, but on account of the deterioration which they undergo on the long voyage, as also on account of the difficulty of disposing of the cakes, attempts in this direction have been abandoned.” Two tables give physical and chemical characteristics based on the investigations of: (1) Morawski and Stingl; (2) De Negri and Fabris; (3) Shukoff (from seed grown in an experimental station in South Russia); (4) Lane (who found 80.26% of liquid fatty acids).

Vol. II also discusses many other major and minor oils including: Linseed oil (p. 39-60), hemp seed oil (p. 76-77), sesamé oil (beniseed oil, gingelli oil, teel oil, p. 167-79),

almond oil (p. 233-40), and arachis oil (peanut oil, earthnut oil, ground nut oil, p. 244).

Julius Lewkowitsch lived 1857-1913. Address: Ph.D., M.A., F.I.C., Consulting and analytical chemist, and chemical engineer, examiner in “soap manufacture” and in “fats and oils” to the City and Guilds of London Inst.

1816. Lloyd, Arthur. 1909. *Every-day Japan*. London, New York, Toronto and Melbourne: Cassell and Co., Ltd. xvi + 381 p. See p. 121, 124, 188. Introduction by Count Hayashi. Illust. Index. 24 cm. With 8 color plates and 96 reproductions from photographs.

• **Summary:** On the title page: “Written after twenty-five years’ residence and work in Japan.”

Chapter 22, “Life in a tea, silk, saké or shoyu district,” states (p. 121): “As a striking contrast to the general poverty of appearance of districts purely agricultural—i.e. devoted to the cultivation of rice and other cereals—we have the general aspect of those districts in which tea is the principal product, where silkworms are cultivated, or saké and soy manufactured. In these districts—known as “Shoyu” districts—there is a far larger amount of wealth, and the general standard of comfort in all classes is much higher.”

Continuing on p. 124: “Saké and soy [sauce] (the latter the foundation of our Worcestershire sauce) are old-established industries which have generally been carried on by the same families for generations.” Soy is mentioned briefly on p. 128.

Chapter 35, “Sights and cries in Tokyo streets,” states (p. 188-89): The first sounds he hears in the morning are those from a Buddhist temple. “Domestic life begins at a somewhat later hour, but in the streets I can already hear the cry of “Natto, na-tto-!” which tells me that the poor are beginning to bestir themselves. Natto is a concoction of beans which have been kept until they are beginning to go bad. It is said to have a rich tasty flavour, and to be very popular with some sections of the community. It is essentially a poor man’s dish. By the time the natto sellers have done their business, other itinerant vendors have begun their rounds.” Address: M.A., Lecturer in the Imperial Univ., Higher Naval College and Higher Commercial School, Tokyo. Formerly Fellow of Peterhouse [UK].

1817. Maurel, Edouard César Emile. 1909. *Traité de l’alimentation et de la nutrition à l’état normal et pathologique*. Vol. 3 [Treatise on food and nutrition in normal and diseased conditions. Vol. 3]. Paris: O. Doin, Éditeur. xii + 685 p. Index (in vol. 4). 25 cm. [Fre]

• **Summary:** The last entry in the section on “Legumes,” titled “Soy peas or beans” (*Pois ou fèves de Soja / Soya*), states: In order to be complete, to the preceding dried legumes I add the soybean, used here only as a therapeutic agent, but whose consumption in China and especially in Japan is considerable.

Its use in food is, moreover, completely justified by its great nutritive value. Here are some analyses of its nutritional composition: A table (p. 495) gives 6 analyses by three authors (each of whom cites other researchers) as follows: Balland (Gautier): maximum, minimum, mean. König (Siderski): black or yellow soybeans. König (Siderski): soy flour.

As you see, despite their great nutritive value, all the other legumes remain below that of the soybean. It contains more than 30% protein and 400 calories per 100 gm. It must be added that no other legume is as rich in minerals, for soy always contains at least 4%.

This legume, known in Japan by the name of *daidzou* [*daizu*], can be made into a cheese, tofu (*tôfou*), and above all the national sauce, shoyu (*shôyou*) and miso. These three substances result from fermentation, but under different conditions.

Japanese miso is a venerable food; it’s the *tao-tzung* of the Chinese. It is made of crushed soybeans, boiled and mixed with rice or wheat koji, then submitted to fermentation. Miso consumption in Japan is 30 million kg.

Tofu is also used frequently but less than the preceding [miso], and much less than soy sauce which constitutes the universal seasoning. The consumption of this last would be, in fact, 5.5 liters per inhabitant.

Discussed in this section are: Dry beans (*haricots secs*; [*Phaseolus vulgaris*]), lentils, peas or round peas (*pois ronds* [*Pisum sativum*]), square peas (*pois carrés*; probably winged beans {*Psophocarpus tetragonolobus*}, or flat pea / *Lathyrus* pea / chickly vetch {*Lathyrus sativus*}, or *Pisum sativum medullare*), chickpeas (*pois chiches*), and dry [broad] beans (*fèves sèches*; [probably *Vicia faba*], broad beans). Address: M.D., principal physician for the Naval Reserves, Prof. at the Faculty of Medicine, Toulouse (Médecin principal de réserve de la Marine).

1818. Murai Nishikawa Shokai. 1909. Murai & Nishikawa: Importers & com. merchts. [commercial merchants] (Ad). In: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 6]. Unnumbered page near center of book. [Jap]

• **Summary:** Ad (full page). The top ¼ of this ad is in English. This company imports various goods including white rice, sake, shoyu, and miso. Cable address: “Muranisu” San Francisco. 1819. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1909. *Nichi-Bei nenkan* [Japanese-American yearbook. No. 5]. 650 Ellis St., San Francisco, California. 605 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 17 parts, each numbered separately. Contents: (1) Front matter (5 p.) (2) Table of contents (3 p.). (3) Maps (2 p.): Map of the United States. Map of California (1 p. each, in Japanese). (4) Black and white photos on 6 unnumbered pages (single sided). (5) Advertisements (A-1 to A-32). (6) Front part (p. 1-168), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (7) Ads from San Francisco printers (2 p.). Appendixes: (8) Appendix 1: Table of contents (2 p.) (9) Appendix 1. Japanese agricultural workers in the various states (p. 1-60). (10) Ads (p. B-1 to B-96). (11) Appendix 2 table of contents (2 p.). (12) Ads (3 p.). (13) Appendix 2. Japanese living in America, alphabetically by state, and within each state by city (p. 1-148). (14) Ads (2 p.). (15) Ads on numbered pages (C-1 to C-66). (16) California ads (p. C-1 to C-42). (17) Publication data / Copyright page (1 p.).

Basic information about how this book was compiled and the survey conducted is given on pages 60-66, 140-41, and on the title page of Appendix 1 of this year book. Pages 60-66 show various existing government registration forms that Japanese are required to fill out, such as birth, marriage, death, and divorce certificates, employment / occupation, agricultural details (employer, land use, nature of relationship with employer, etc.), and visa.

The tariff (import duty) on shoyu and miso from Japan is 40% for each (p. 32).

The value of the 1900 soybean crop in the United States is \$7,634,262 and the value in California is \$1,022,586 (p. 69). Note: This is the earliest document seen (March 2009) that gives soybean production or area statistics for either the USA or California—much earlier than any U.S. Department of Agriculture statistics. Unfortunately, the source of these statistics is not given. During the period 1900 and 1909 many Japanese were farming land in California, and there was a significant number of soyfoods manufacturers in California and, more broadly, west of the Rocky Mountains. Therefore we should not be surprised to learn that these farmers were growing soybeans in California, either for use as edamamé (green vegetable soybeans in the pods) or for sale as whole dry soybeans to soyfoods makers.

Value of selected imports from Japan to the USA in 1906: Miso—Imported to the mainland \$55,648. To Hawaii \$43,108. Total \$98,756. Shoyu [soy sauce]—Imported to the mainland \$241,345. To Hawaii \$211,265. Total \$452,610 (p. 119).

Retail prices of Japanese foods in San Francisco (on 1 Nov. 1908): Amazake [cup] for 15 cents (100 cents apparently = \$1.00). Kikkoman shoyu: 1 cho for 300 cents. Yamasa shoyu: 1 cho for 280 cents. Miso: 1 cho for 180

cents. Tai [sea bream] miso: 1 piece (*ko*) for 10 cents. Note: A *cho* is an undefined, vague unit of Japanese measurement. A photo shows the inside of a Japanese retail store (p. 120). Note: The meaning of “1 cho” is unclear.

In 1908 the Japanese population in the United States totaled 103,630, including 93,149 men (89.9%), 6,379 women, and 2,100 male children, and 2,010 female children. Six pages of tables give the Japanese populations of different U.S. states and cities.

The directory (p. 5) gives a listing of sake and shoyu sellers in San Francisco: Hokubei Boeki Kaisha, 318 Front St. Tel. [Phone] Kearny 451. McKendry Shosha, 149 California St. Tel. Kearny 2970. Iwagami Shokai, 441 Commercial St. Tel. 2447. Kagawa Soko Shiten, 41 Commercial St. Tel. 1263. Ichida Shoten, 1968 Bush St. Tel. West 1688. Murai Ishikawa Shokai, 2001 Pine St. Tel. West 5407. Tanaka Kyodai Shokai, 1609 Gough St. Tel. West 6615.

The Directory shows Japanese companies making soyfoods in California, Colorado, Nevada, New York, Oregon, Utah, and Washington.

Note: A big jump in the number (and geographical extent) of Japanese tofu shops occurred in 1909. A translation (from older Japanese) of the pages describing how this book was compiled and the survey conducted (on pages 60-66, 140-41, and on the title page of Appendix 1 of this year) would probably help to explain this jump. William Shurtleff has a theory that it had something to do with contact between the people who conducted the Mackenzie survey of Japanese in America (1910). He spent a large amount of time trying, unsuccessfully, to find out how those surveyors knew where to look. He thinks that they worked with the owners of *Nichibei Shinbun* using its list of subscribers to locate communities of Japanese living in California.

At some point a light when on in the minds of the publishers of the annual directory. (1) If the businesses in those communities started advertising in our annual directory, it could become a major source of income. (2) Each new address of a Japanese person or business we find represents a potential new subscriber to our newspaper. Hence their interest and follow-through. So each helped the other to their mutual satisfaction. A win-win situation. Address: San Francisco, California.

1820. Saito, K. 1909. Shōyu jōzō jō ni okeru biseibutsugakuteki kenkyū [Microbial investigation of shoyu brewing]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 4(4):99-101. See p. 101. Part of his doctoral dissertation, in German. [Jap]

• **Summary:** Two illustrations (line drawings) show the equipment. Address: Japan.

1821. Tanaka Kyodai Shokai (Tanaa Bros.). 1909. Direct

importers & general mdse. [merchandise] (Ad). In: Nichibei Shinbun-sha. 1909. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 6]. p. A-8. [Jap]

• **Summary:** Ad (full page). The top 1/20 of this ad is in English. This company imports various goods including sake and Sakae-jirushi shoyu, which is made in Noda, Chiba-ken by Mogi Shichiro Uemon. Tanaka is the exclusive seller of this product. Each year 115,000 *koku* (1 *koku* = 180 liters; so 20,700,000 liters). An illustration shows a Japanese woman dressed in a kimono holding a keg of sake bound with rice-straw ropes. The word “shoyu” is written in flowing script in the upper right corner of the illustration. Address: 1609 Gough St., San Francisco, California.

1822. Thomson, John Stuart. 1909. *The Chinese*. Indianapolis, Indiana: The Bobbs-Merrill Company. 441 p. Illust. (photos). Index. 22 cm.

• **Summary:** Page 118: “Eggs are preserved in a paste of saltpetre, soy [sauce] and earth for periods so long that they are blackened with their sulphur, and taste like our high school boy’s experiment in sulphurated hydrogen. In Chekiang Province hams are pickled in soy sauce.”

Page 120: “Cassia, mushrooms,... carambola fruit, almond custard, orange wine, steamed sharks’ fins, chicken cooked with rice wine, ginger, soy [sauce], sesamum, peanut oil and herbs,—are all drawn upon by these versatile cooks in preparing their menus, especially when a foreigner is to be invited.”

Page 300: “The South Manchurian Railway route, now dominated by the selfish Japanese.”

Page 319: In Kowloon, “across the bay from Hong-Kong, is situated a village of soy-makers.” “Behind the bamboo fences you will notice the bean poles, and the great earthenware pots, where the bean liquor is fermented, and stirred for two months in the blazing sun until it is black. The beans are skinned and made into a flour, into which gypsum is mixed. Salt and secret things are added to make this appetizing soy, which those who have learned the taste prefer to the flavored Worcestershire, of which it is the base. The soy costs only a trifle, and the workman who earns only ten cents a day will have it at his meal. The wealthy are equally proud of their national ‘abettor of appetite.’” Note: Gypsum is used in making tofu, not soy sauce.

Page 408: “On the railway which the war gave her in Southern Manchuria, Japan is seeking a loan of \$150,000,000, which will be reloaned to finance these Government-Baronial Development Companies. The railway is to be broad-gaged so as to exchange traffic with the Chinese railways coming from the south and west, rather than to look for trade with the broader gaged Siberian Railway at Kwang Chau Fu. Exclusive of the revenue from military transport the South Manchuria Railway is already earning \$3,000,000 gold a year, or nineteen dollars gold a mile per day. The operating expenses are forty-five per cent.

China is fighting Japan bitterly to parallel with the Fakumen Railway the Japanese South Manchurian Railway from the Russian railways down past Mukden to tidewater in Liaotung Gulf.”

“Another knotty problem for the future in Manchuria is the question of taxation in the railroad zone. The Russians control the largest part of the Chinese Eastern Railway. The Japanese own as a war legacy the South Manchurian Railway. Now, if the Americans, British and French have a right to levy taxes in the settlements of Shanghai, Tientsin, etc., why have not the Russians and Japanese the same right in the railroad zones in Manchuria?”

Page 411: “On exports to Manchuria, the subsidized steamship lines, which so far are in private control, have been compelled by the [Japanese] government to reduce rates fifty per cent. During the first year after the war the government charged on its Manchurian Railway half rates on Japanese goods, which alone came duty and likin free through Tairen (Dalny), on the flimsy pretext that Russia, which is not a manufacturing nation at all, had no custom-houses on the Manchurian border.”

Note: A “likin” is a former Chinese provincial tax at inland stations on imports or articles in transit.

1823. Wilcox, E.V. 1909. Summary of investigations: Miscellaneous crops. *Hawaii Agricultural Experiment Station, Annual Report*. p. 9-16. For the year 1908. See p. 16.

• **Summary:** “Several varieties of soy beans have been grown for use as fodder, green manuring, and human food, particularly in the Japanese product, Miso. The yields have been very encouraging. About 500 tons of soy beans are annually imported from Japan, and the demand is increasing. The beans are sold in Honolulu for \$3 per 100 pounds. The market can easily be supplied by home production.

“Peanuts have yielded gratifying results in various localities. On the trial grounds of the station a number of varieties have been grown, including Spanish, Bunch Jumbo, Running Jumbo, and Virginia Running.”

Note: In 1898 Hawaii was annexed as a U.S. Territory. Address: Special agent in charge.

1824. Yukawa, Genyô. 1909. Ueber die absolut vegetarische Ernahrung japanischer Bonzen [The strict vegetarian (vegan) diet of Japanese Buddhist monks]. *Archiv fuer Verdauungs-Krankheiten* 15:471-524. [5 ref. Ger]

• **Summary:** The author studied a group of 12 strict vegetarian [vegan] Buddhist monks in Japan and found them to be in good health. He estimated that their daily diets, if evaluated for a 150-pound male, supplied 3,575 calories and 113 gm of protein. The older men ate somewhat less. The diet consisted chiefly of rice and barley, with soy products, vegetables, and rape seed oil.

A table (p. 478-79) summarizes the author’s research on the protein content of vegetarian meals by previous

Japanese researchers. These meals contained various soy products: Miso (*Soybohnennmus*), soy sauce (*Soy*), and tofu. On pages 489-91 are definitions of miso soup, miso, soy sauce (*Soy*) koji, grilled tofu (*Yakidofu*), cooked soybeans (without the hulls removed), azuki bean paste, and mochi, which are served at Nanshuji temple. A table (p. 497-98) gives the nutritional composition of these and other foods. Amounts served at each meal are shown on p. 501, 514, 522, including daikon pickled in miso. The terms “Makrobiotik” and “Makrobier” are used. Address: Aus der Privatklinik fuer Magen- und Darmkrankheiten von Dr. Yukawa in Osaka, Japan.

1825. Hitier, H. 1910. Société Nationale d'Agriculture de France: Le soja [National Society of Agriculture of France: Soya]. *Journal d'Agriculture Pratique* 74(1):24-25. Jan. 6. [Fre]

• **Summary:** “Mr. Sagnier, on behalf of Mr. Liyuying [Li Yu-ying], delegate of the government of China in Europe, gave a very interesting presentation on the soybean (*le soja*), and its alimentary, therapeutic, agricultural, and industrial utilization. (This journal will soon publish an article on the soybean.)

After his presentation, Mr. Sagnier showed the members of the Society various products that can be extracted from soybeans: flour, bread for diabetics, cake, seasoning sauce, confections, raw milk, fresh cheeses, etc.

Mr. Schribaux recalled that the soybean, which is widely grown in East Asia, is also cultivated in Europe, but the varieties introduced up to this time have been very sensitive to the cold. In the USA the crop has expanded rapidly.

Mr. Lindet remarked that the soybean contains 16-17% oil, a rather low percentage. Mr. Ch. Girard has cultivated soya at Joinville as a forage plant, but the forage obtained is mediocre, in part because the plant is covered with hairs.

The prince of Arenberg noted that prior to 1908 not one kilogram of soybeans passed through the Suez Canal, yet in 1908 35 million kilograms passed through. This gives a good idea of the commercial development of this plant. Address: France.

1826. *Los Angeles Times*. 1910. Our consuls say. Jan. 16. p. II20.

• **Summary:** “For public reference the Bureau of Manufactures [Department of Commerce and Labor], Washington, D.C., has a report on the soya bean (coming greatly into vogue in Europe for Chinese process of manufacturing soy and soyacake), and two specimens of the plant.”

Note: The meaning of the last half of this sentence (starting with “for Chinese process”) is unclear. In Europe, the soya bean is now crushed to make soya bean oil and cake (or meal). An addition, Li Yu-ying in Paris is using soya beans to make many innovative types of soyfood products,

including soy [sauce].

1827. Cornwell (G.G.) & Son. 1910. A list of fancy sauces (Ad). *Washington Post*. Jan. 29. p. 7.

• **Summary:** “Here are only a few of the extraordinarily large line of table sauces we carry: Brand A 1, Genuine India Soy, English Anchovy Sauce, Lazenby’s Harvey Sauce, Walnut and Mushroom Sauce,...” “Grocers and importers.”

Note: This ad also appeared in the June 30 and 31 issues of this newspaper. Address: 1412-18 Pa. {Pennsylvania} Av., Washington, DC].

1828. *Bulletin de l’Association Amicale Franco-Chinoise*. 1910. Le soja [Soya]. 2(1):62-64. Jan. [Fre]

• **Summary:** This periodical was established to promote understanding and friendship among the people of France and China.

The name *Soja* or *Soya* comes from the name that the Japanese give to the sauce made from soybeans. In Chinese it is called *tsiang-yeou* (Cc = Chinese characters given [soy sauce]) and it is made from *houang-teou* (Cc [yellow soybeans]). This sauce, which is used in the well-known *Worcester sauce*, is widely used in China and Japan. Some Chinese residing in Paris [incl. Li Yu-ying] recently took the initiative to introduce into France this sauce, as well as several other products derived from these same ‘yellow peas’ (*pois jaunes*).

They have just built a factory near Paris in a town named Les Vallées (rue Denis-Papin), on the train line going to Saint-Germain-en-Laye. There, perfected machines / equipment and the resources of western science allows them to obtain from the raw materials a much better yield than could be obtained using the rudimentary Chinese process. These things made it possible, at the same time, to develop many new soy products suited to European tastes.

A retail store named the Golden Jar in Paris (La Jarre d’Or, 4, rue du Renard) received the right to sell these products from *Caséo-Sojaïne*. And an exposition [of the soy products] was organized at the Grand Palace, at the time of the opening, last Nov. 20, of the Food Fair / Expo (*Salon de l’Alimentation*). There various products were offered.

A summary of the contents of an interesting brochure from that exposition is reprinted. Contents of the brochure: Introduction to the soybean. Products based on soymilk (*Le lait de soja*, *Le lait végétal*): Liquid, powdered, or fermented soymilk, soy cheese (*Le fromage de soja*, *Le fromage végétal* [tofu]) (fresh, hard, and fermented). Soy sauce. Soy oil. Sweet soya preserves (*Confiture de Soja*; this soy cream {*crème de soja*} resembles chestnut cream {*crème de marron*}). Soybeans used as a vegetable (dehulled dry soybeans, and soy sprouts). Other soy products (including soy flour, bread for diabetics, whole-meal bread, and soybean cakes—used as feed for animals).

Note 1. It is unclear whether the Chinese-run factory,

Caséo-Sojaïne, has started to make and sell commercial soy products, or whether they are just about to. They may have started on Nov. 20 of the previous year, however there is no description of soyfood products now being sold in Paris.

Note 2. This is the earliest document seen (Aug. 2001) that contains the term *Caséo-Sojaïne*, which appears to be the name of a business, not of a product. This term would soon be used to also refer to “tofu.” Li Yu-ying’s name is not mentioned.

Note 3. This is the earliest document seen (Sept. 2002) that mentions soy cream (*crème de soja*).

Note 4. This is the earliest document seen (Sept. 2002) that mentions powdered soymilk (*Le Lait de Soja, en poudre*).

Note 5. This is the earliest document seen (Sept. 2002) that mentions fermented soymilk (*Le Lait de Soja Fermenté*).

1829. Saito, Kendo. 1910. Notizen ueber einige koreanische Gaerungsorganismen [Notes on some Korean fermentation organisms]. *Zentralblatt fuer Bakteriologie. Series 2*. 26(13/15):369-74. Feb. 23. [4 ref. Ger]

• **Summary:** Mentions the molds *Aspergillus oryzae* and *Rhizopus Tamari*. Address: Botanical Institute, Tokyo.

1830. Sagnier, Henry. 1910. Le soja et ses produits [The soybean and its products]. *Journal d’Agriculture Pratique* 74(1):307-10. March 10. [4 ref. Fre]

• **Summary:** The soybean was a curiosity in Europe until 2-3 years ago, when large amounts started to be imported. The prince A. d’Arenberg, president of the Suez Canal Society, told the National Society of Agriculture, that prior to 1908 no soybeans had passed through the Suez Canal, yet in that year 35,000 tons passed through it. It seems that the new commerce has been stimulated by the expansion of the crop in Manchuria and Korea, under Japanese influence. Most of the imports have gone to England and northern Europe. In England, the oil is used to make soaps and the cakes are fed to livestock.

Recently it was announced that the Chinese government, preoccupied with the expansion of exports, would have manifested the intention to prohibit these exports in view of preventing a shortage of soybeans in the interior of the country.

“The Chinese are now greatly expanding their efforts to make known in Europe the advantages to be gained from soya and from the products that can be extracted from its seeds. I recently had the occasion to present to the National Agricultural Society of France a study written by Mr. Liyuying [Li Yu-ying], delegate of the government of China for several missions. It was titled *Le soja, utilisation alimentaire, thérapeutique, agricoles et industrielle*. This study was accompanied by samples of yellow and black soybean seeds, and by the principal products which can be extracted from this plant: flour, bread for diabetics, cake

(*gâteau*), seasoning sauce (*sauce condimentaire*), confections (*confitures*), raw milk (*lait cru*), cooked and sweetened milk (*lait cuit et sucré*), cake for livestock feed, (*tourteau pour l’alimentation du bétail*), fresh cheese (*fromage frais* [tofu]), and smoked cheese (*fromage fumé* [smoked tofu]).

“These products originated from processing imported soybeans. They have been prepared at a test factory (a photo, p. 309, shows the interior) set up just outside of Paris, at Vallées, near Asnières. Li Yu-ying’s study gives complete details on these products” which are made from imported soybeans. This factory, named *Caséo-Sojaïne*, “has been established by the agents of a civil society constituted in China under the name of *Société biologique de l’Extrême-Orient* (Far Eastern Biological Society). Made up of physicians, scholars (men of letters), and businesspeople, this society would seem to have as its principal goal/object to make known and have used in Europe the pharmaceutical and agricultural products of the Far East [East Asia].”

Note: This is the earliest document seen (May 2011) that mentions the Far Eastern Biological Society (*Société biologique de l’Extrême-Orient*)

The author concludes by discussing soymilk (*lait de soja ou lait végétal*), soybean cakes (*les tourteaux d’huilerie*), and a brief history of the soybean in France.

Illustrations (p. 308) show: Mature soy bean plant with pods. Close-up of soy bean pods and seeds. Soy milk and soy flour viewed under a microscope (p. 309).

1831. Cowie, W.B. 1910. Soya seeds and oil. *Chemist and Druggist (London)* 76(13):66. March 26. [1 ref]

• **Summary:** Overview of a paper presented by Cowie on 16 March 1910 in Edinburgh at an evening meeting of the North British Branch of the Pharmaceutical Society of Great Britain.

People have become suspicious of “soya-bean meal” because it has been sold mixed with Java beans which contain a significant amount of cyanogenetic glucoside. A table shows six constants for “soya-bean oil” based on studies by Cowie, E.S.L. & W, and Lewkowitsch. The iodine value was found to be 120, 130.4, and 122 respectively. When soya-bean oil is substituted for olive oil in B.P. liniments of ammonia, lime, camphor, or nitrate of mercury ointment, the ointment is a complete failure.

In Japan there are some 11,000 firms in which 2.5 million hectoliters of soya beans are expressed each year and fermented with “*Aspergillus oryzae* for the preparation of the liquid soy” [sauce].

Also gives an overview of the discussion that followed. Mr. Wilson noted that the use of soya oil in the manufacture of linoleum depends on its relatively high iodine value. He added that for feeding purposes, soya-bean is never used alone; a maximum of 25% is mixed with linseed or other feeding stuffs.

Note: This is the earliest document seen (March 2001)

that mentions the term “Java beans.” Address: Ph.C., F.C.S., Edinburgh.

1832. Cowie, W.B. 1910. Note on soya seeds and oil. *Pharmaceutical J. and Pharmacist (London)* 30:403-04. March 26. [3 ref]

• **Summary:** At yesterday’s evening meeting of the Pharmaceutical Society of Great Britain, held in Edinburgh, Scotland, three varieties of soya beans and a sample of soya bean oil were exhibited. Seeds received from Mr. J. Rutherford Hill, of the yellow variety, yielded 18% of oil and 38.2% of proteins. They were found to contain no cyanogenetic glucoside. “All the suspicion attached to the soya bean meal seemed to have been caused by admixture with Java beans which contain an appreciable amount of cyanogenetic glucoside.”

An analysis of the oil is given; it agrees quite closely with that given by Lewkowitsch and those given in Evans’ *Analytical Notes* for 1909. A long passage quoted from the *Scotsman* of 4 March 1910 concerns the present great interest in soya bean trade. If the Manchurian supply should be cut off, the remainder might be supplied by Japan, where each year 11,000 installations transform 2.5 million hectoliters of soybeans, using fermentation and *Aspergillus oryzae*, into “soy [sauce], a liquid condiment used extensively by the population.”

There follows a long discussion, with many questions and answers. Dr. Watt asks about the difference in price between soya bean oil, arachis oil, and cotton-seed oil—which are sometimes used as a substitute for olive oil. Mr. Giles asks if soya bean oil is less expensive than arachis oil. Mr. Cowie notes that it could be detected as an adulterant in olive oil, and that it could possibly be substituted for olive oil in the following official preparations: Liniments of ammonia, lime, and camphor, and nitrate of mercury ointment.

Mr. Wilson described the case in which soya bean oil had been supplied to a fried fish restaurant. When used in cooking, it seemed to decompose like crude linseed oil, creating an offensive smell.

Mr. McEwan recalled that about 15 years ago a baker in Edinburgh had tried to use soya bean oil in bread and biscuits, but had found it impossible to work with, and had long since abandoned it.

Mr. Hill recalled that a gentleman who had a garden a few miles from Edinburgh, Scotland, cultivated the soya bean for three years. Although they grew readily and flowered, he was never able to obtain seeds from them.

Note 1. Unfortunately, neither the name of the gentleman who cultivated the soya bean nor the date that he began cultivation are given. However, if he planted the seeds in May, he could have started no later than May 1906. Note 2. This document contains the earliest date seen for soybeans in Scotland, or the cultivation of soybeans in Scotland (by May 1906, near Edinburgh). The source of these soybeans is

unknown. Address: Ph.C., F.C.S.

1833. Japan, Bureau of Agriculture (Norinsho, Nomukyoku), Dep. of Agriculture and Commerce. 1910. Outlines of agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. 132 p. March. Illust. No index. 23 cm. [Eng]

• **Summary:** This book was compiled to acquaint foreigners with agriculture in Japan. Company name with diacritics is: Nôrinshô, Nômukyoku. A map near the front shows Japan and its empire (incl. Korea, Formosa, Kwantung, Karafuto, and the Kurile Islands, with an inset pie chart showing the value of Japan’s agricultural products). Oval photos show Japan’s six top agricultural officials. A full-page table shows the moneys, measures and weights of Japan with English equivalents. Contents of the first part of the book: Introduction: Geographical location, area, population, topographical position, climate. 1. General remarks. 2. Condition of farmers. 3. Condition of agricultural land.

The section titled “Upland fields” (p. 18) states: “Upland fields are those portions of land being located in high and dry places which by wanting means of irrigation could not be converted into paddy fields. The utilization of these fields is commonly made by the rotation system and crops are raised twice a year. The commonest instance is that barely, naked barely, and wheat are raised as the first crop in winter whereas soja beans, sweet potatoes and millets are raised during the summer as the second crop.” The profits from upland fields are generally smaller than from lowland / paddy fields. The average yield of soja beans over the past 10 years is given in Japanese units (p. 19).

In Japan only cows and horses are kept as work animals. In 1907 Japan had 1,008,922 cows and 2,204,031 horses. But they were used more for their manure than for plowing.

A table (p. 28) shows the value (in yen) of the principal commercial fertilizers in Japan from 1905 to 1907. “Soja bean cakes” (a key source of nitrogen) is by far the largest, averaging 12.9 million yen for these three years, followed by superphosphate of lime, mixed manure, rape-seed oil cakes, herring cakes, bone dust, and cotton-seed oil cakes. Note 1. This is the earliest English-language document seen (Nov. 2005) that uses the term “cotton-seed oil cakes” (plural or singular) to refer to cotton-seed cakes.

A table (p. 37) gives the cultivated area (in 1,000 *cho*) of major Japanese crops in 1887, 1892, 1897, 1902, and 1907. In 1907 rice had by far the largest area (2,906), followed by naked barley (694), barley (658), soja bean (471), wheat (444), mulberry tree (390), sweet potato (288), Indian millet (202), rape seed (143), small red bean ([azuki], 135). Soja bean area remained almost unchanged between 1887 (466) and 1907 (471).

A table (p. 39) gives average yield (in *koku/tan*) of the same major Japanese crops for the same years shown in the previous table. Yield of soja beans rose from 0.698 in 1887

to 0.777 in 1907. Since 1 *koku* = 4.963 bushels and 1 *tan* = 0.245 acres, the 1907 yield is 15.74 bushels/acre.

A table (p. 40) gives the production (in 10,000 *koku*) of the same major Japanese crops for the same years shown in the previous table. Production of soja beans rose from 325 in 1887 to 366 in 1907. Since 1 *koku* = 4.963 bushels, and 10,000 *koku* = 49,630 bushels, then 366 *koku* is 18.164 million bushels. The next table (p. 42) shows the value (in yen) of each of these agricultural products in 1905-07, and a table (p. 46) compares the cultivated area of each of these crops with rice; soja beans are 16.2% of rice.

In the section on “Food crops” (p. 47+) is a detailed discussion of each. Concerning “Soja bean” (p. 50-51) we read: “The use of this bean is extremely extensive since they are used for the purpose of supplying to the people low priced starchy food by being made into *miso* (pea cheese), soy, *tofu* (bean curd), and other food-stuffs required by the Japanese. The residue obtained from making these food-stuffs from the bean is used for the purpose of feeding cattle or of pressing oil while as manure it is highly valued. Soja bean is easily cultivated requiring less amount of manure and labour. It is therefore cultivated all over the country and occupies the principal position among summer crops of upland fields. Within recent years the demand for it has considerably increased at home and also the export of various food-stuffs prepared out of bean has shown some increase so that no small amount of bean is imported either from China [Manchuria] or Korea. The amount imported actually reaches 10,000,000 *yen*. Over and above these, the import of bean cakes is approximately figured at 20,000,000 *yen* so that the domestic output has somewhat been affected.”

Also discusses: Barley and naked barley. Indian millet, Barnyard millet and sorghum. Small red bean [*azuki*] (“A large amount of small red bean is used as a material for cakes [confections], Hokkaido being the principal producing district.” p. 51). Flax and hemp. Green manure crops, incl. *genge* (*Astragalus sinicus*, *umagoyashi* (*Medicago denticula*)), soja beans, etc.

Note 2. This is the earliest English-language document seen (March 2006) that uses the term “small red bean” to refer to the *azuki* bean.

Chapter 4, titled “Animal industry and poultry” (p. 69+) contains many statistics which may be of interest to vegetarians. Japanese traditionally ate fish rather than meat. “Even at present, the amount of meat consumed per capita a year does not exceed 1.7 pounds while that consumed in America is 150 pounds and in England 118 pounds per capita.” etc.

A table (p. 85) shows imports of principal agricultural products (quantity and value) each year from 1906 to 1908. Imports of soja beans increased from 286 to 352 (x 10,000 piculs) during this period, while imports of [soja] bean cake increased from 433 to 776. Both were imported mainly from China. However “the output of soy [sauce] and *miso* made of

soja bean is exported to the amount of 1,200,000 *yen*, while bean cake forms the principal fertilizer in Japan” (p. 86). Address: Tokyo.

1834. Kita, Gen-itsu. 1910. Shôyu jôzô ni kansuru kenkyû. III. [Studies on brewing shoyu. III.]. *Kogyo Kagaku Zasshi* (*J. of the Society of Chemical Industry, Japan*) 13(145):221-35. March. [1 ref. Jap; ger]
Address: Kôgaku-shi, Japan.

1835. Blin, Henri. 1910. Le soja ou fève de Mandchourie. Production et utilisations [The soybean or bean of Manchuria. Production and utilization]. *Nature (La)* (Paris) 38(1, Supplement):141-42. April 2. [Fre]

• **Summary:** Since 1908 people in France have been very preoccupied with the large imports of soybean seeds which are grown in Manchuria and shipped from Dalny and Vladivostok. Soya beans are known in commerce as *Haricot de Chine* and *Pois oléagineux du Japon*. In England, soybeans have been used as a source of oil which is healthful, very nutritious, and of great value—especially for use by soap manufacturers. In Germany, this bean is used for the preparation of an artificial distillery yeast; it contains an important amount of fermentable materials and of an enzyme (*ferment*) similar to the diastase of malt which transforms fermentable starches and sugars. The investigations of Dr. Calmette of the Pasteur Institute at Lille, have made it possible to extract from soybeans diastatic enzymes (*des diastases*) which have unique effects. [Note: Dr. Calmette was one of the inventors of the “amylo process,” which began operation in France in 1891. He also first named *Aspergillus rouxii*.]

Recently Li Yu-ying, a delegate of the government of China in Europe, made a very interesting presentation to the French Society of Agriculture, concerning the food, therapeutic, agricultural, and industrial uses of the soybean: Flour, bread for diabetics, cakes, a seasoning sauce, confections, raw milk, fresh cheeses, etc.

Also discusses: Soybean cakes, cultivation of soybeans in Europe and the USA, soy coffee made by roasting soybeans in the south of France (*le Midi*), and the use of soya in diabetic diets. The author concludes by stating that the soybean has great potential in France, and varieties well adapted to this climate should be cultivated.

1836. *J. of the Royal Society of Arts (London)*. 1910. Soy beans. 58:519. April 8.

• **Summary:** “At a recent meeting of the Linnaean Society, Mr. J.H. Holland, on behalf of the director of Kew, showed samples of Soy bean, *Glycine Soja*, Sieb. and Zucc (*G. hispida*, Maxim.), with herbarium specimens of the plant producing this seed... This plant is variously known as ‘Soy,’ ‘Soja,’ ‘Soya,’ ‘White Gram,’ ‘American Coffee Berry,’ and ‘China Bean.’

The “Soy [Sauce] of Commerce” is made from the seeds of this bean, plus salt, flour, and fresh water. “Wenchow is an important centre of the manufacture, and here the bean used for the purpose is said to be chiefly the white form from Chinkiang.”

“The principal use of the beans in this country is for the extraction of the oil, of which they contain about 18 per cent. suitable for soap-making, and in general as a substitute for cotton-seed oil... The beans can be bought in London at about £5 to £6 per ton; the oil realises about £21 to £22 per ton, and the cake about £6 to £7 per ton.

“Beans and bean-cake exported from China have gone chiefly to Japan, and certain parts of Asia, but recently, beginning about November 1908, an important trade has been developed in them, more especially with the beans, between Manchuria and Europe, Dairen (Dalny) being the chief place of export.”

“The amount of the 1908 crop sent to Europe through Vladivostok up to July, 1909, was 180,000 tons, the greater part destined for the English market (Hull and Liverpool), and the remainder going to German (Hamburg) and Scandinavian ports.

“Up to 1907 the export of Soy beans from Manchuria did not exceed 120,000 tons annually. During 1908 the export rose to 330,000 tons (one half shipped from Dairen; 100,000 tons from Newchang, and 65,000 tons by rail via Suifenhoh [Suifenhoh] to Vladivostok), the increase it is said being due entirely to the demand from Europe.”

Note: This is the earliest document seen that mentions Suifenhoh [Suifenhoh] (spelled Suifenhoh in 1999), a border town on the railroad that joins eastern Manchuria with Vladivostok. It is located between the cities of Suiyang (in Manchuria) and Pogranichnyy (in Primorskiy Krai in the Russian Far East). Address: Kew Gardens.

1837. Holland, J.H. 1910. Linnean Society of London: Soy bean. *Pharmaceutical J. and Pharmacist (London)* 30:515-16. April 23. Series 4.

• **Summary:** Reprinted from the *Proceedings of the Linnean Society of London*. Session of March 17, 1910. Address: F.L.S., London.

1838. Brenier, H. 1910. La question du soja [The soya question]. *Bulletin Economique de l'Indochine (Hanoi)* 13(83):105-28. March/April. Series 2. [22 ref. Fre]

• **Summary:** This is an in-depth look at the relevance of the soybean to France, both now and in the future. It is prompted by the rapid growth of soybean imports to Europe from Manchuria. The author has a good knowledge of the literature on soybeans and a familiarity with the crop in the field in French Indochina and China.

Contents: 1. Soybean cultivation: Species and varieties, major soybean producing countries (China, Japan, Korea, Indochina), other countries (Java and the Dutch East

Indies, France, USA. The Imperial Institute of London is conducting trials in the Cape of Good Hope and Natal [South Africa], in British West Africa, and in Gambia), methods of cultivation and yield. 2. Commerce: Exports of soybeans and soybean cake (beancake, *tourteaux de soja*) from China and especially Manchuria (Newchwang, Dairen/Dalny, Antung, Ta tung kow, Suifenhoh [Suifenhoh] / Sui-fen-ho), importing countries in 1908 in descending order of amount imported (Russian ports on the Pacific [Vladivostok, for re-export to Europe], Great Britain, France, Holland, Italy, Belgium, Germany), prices. 3. Soybean utilization: Chemical composition, use as a forage plant and for improving the soil, use in human foods (tofu, shoyu, Worcestershire sauce, tuong [Annamite soy sauce], miso, natto, soymilk), the soybean as an oilseed (yield of oil from various oilseeds), soybean cakes. Conclusions.

Page 109 discusses soybeans in Indochina, according to information received from M. Crevost, Curator of the Agricultural and Commercial Museum of Hanoi, and from the article by Bui-quang-Chieu (Dec. 1905). The names of the soybean are different in the various parts of Indochina. In Cochinchina (especially in the provinces of Chaudoc and Baria), in Annam (sporadically), and in Tonkin it is called *dau-nanh* or *dau-tuong* (*Tuong* is a sauce made with soybeans, described later under “Uses”). In Cambodia (*Cambodge*) it is called *sandek sieng*. The variety most widely cultivated in Indochina seems to be one with a yellowish-white color, more oblong than round, a little flattened (*soja platycarpa* of Harz [1880, 1885] (?)), different therefore from the fine (*belle*) varieties of Manchuria and Japan that are well rounded and pure yellow.

A table (p. 112) shows soy bean grain exports (in 1,000 metric tons) from different Manchurian ports for the years 1905-1908. The author notes that Indochina could be exporting soybeans to France. One factor that stimulated the large exports of soybeans from Manchuria in 1908 (besides an excellent harvest in 1907) was a program to suppress the cultivation of opium by expansion of soybean acreage (p. 113). The author uses the scientific name *Phaseolus radiatus* to refer to the *petit haricot vert* (probably mung bean). He observed soybeans planted in mixed culture in Szechuan.

Page 116 notes that the rise of soybeans in Manchuria is due in part to the power of the Japanese commercial house Mitsui Bussan Kaisha and the large English oil mills, which joined to develop an industry that had not previously existed. At the end of 1906, Mitsui, which had a dominant commercial role in Southern Manchuria, sent one or two trial shipments of soybeans to England. Mitsui was followed mainly by the British trading houses (Samuel & Samuel, Jardine, Matheson), then by the Germans (Otto Reimers, Arnhold Karberg), and the Russians. Continued suppression of opium growing led to further expansion of soybean cultivation.

A table (p. 117) gives the price of soybeans (per picul

of 300 catties = 180 kg), soybean cake (per 10 cakes of 53 catties each or 318 kg for the 10), and soybean oil (per picul of 100 catties = 60 kg) in New chwang [Newchwang] taels and in French francs in the average year from 1882-1891, and in the year 1897. Prices were up in 1897.

Page 124 states: "A factory was recently founded near Paris (at Saint Germain en Laye), with Chinese capital, for the preparation of a series of products derived from soya: milk, "*caséo-sojaïne*," cheese [tofu], sauce, and sweet soya preserves (*confiture (?) de soja*)." A footnote states: "I owe this curious piece of information to the amicability of the secretary of *Ecole française d'Extrême-Orient*, Mr. Ch. Maybon, who pointed it out in the January 1910 issue of the *Bulletin de l'Association amicale franco-chinoise*."

A table (p. 125) shows that the soybean gives the lowest yield of oil of all major oilseeds: copra (from coconut) yields 67-70% oil, sesame seeds 50-56%, poppy seed (*pavot*) 43-50%, castor oil plant 42-50%, rapeseed (*colza*) 42-45%, linseed 43%, peanuts 35-47%, cottonseed 21-26%, soybeans from Manchuria 16-18%.

Note: This is the earliest document seen (March 2000) that describes *caséo-sojaïne* as a product. Yet this may well be a mistake since its source of information is given as *Bulletin de l'Association Amicale Franco-Chinoise* (Jan. 1910)—which uses the term to refer to a business name. Address: Inspecteur-Conseil des Services Agricoles et Commerciaux de l'Indochine.

• **Summary:** This article is mainly about soybeans, their chemical composition, and the various foods that can be made from them. "By coincidence, the soybean (*Soja hispida*), of Japanese origin, fell into our hands. The first experiments on this plant were conducted many years ago, initially in our private clinic in Frankfurt, then later by another one of us in Frankfurt and the other in Vienna.

"*Soja hispida*, a legume, produces a seed that lies somewhere between peas and beans in appearance. There are numerous varieties of soybeans and each has different qualities. Only certain varieties are useful in the kitchen. In Japan it is used to make the Japanese "bean sauce [*Bohrensauc*], called shoyu; it is also found in fine European kitchens. Moreover, in Japan, a peculiar dish called tofu (*Tofou*) is prepared from soybeans. It is rich in protein;

almost all other nutrients of the beans are removed during its preparation. In its simple boiled state, the soybean is used as a vegetable or salad in Japan by the poor. Also in southeast Europe, people have been planting soybeans for three decades, but they don't have the same value here as in Japan.

"The high concentration of protein in soybeans (30-35%), the low concentration of starch and of digestible carbohydrates (ca. 6%) leads us to want to try soybeans in diabetic diets. But the plain, unprocessed bean, regardless of what we add to it, does not suit European palates..."

"Finally a method was found that removes almost all of the carbohydrates from soybean meal (*Sojabohnenmehl*), and also gets rid of the unpleasant tasting materials. Because this process is much too complicated to be carried out in one's household, Bayer & Co., a paint factory in Elberfeld, took over the production on a large scale. The preparation was next produced in the form of a thick puree, put into sterilized tin cans (about 18-19% solids, of which 8-9% was protein). Meanwhile they succeeded in making a dry powder, and the firm even told us that they would probably prefer to sell the preparation in a powdered form.

This soybean puree, given the name Sarton by the factory, contains no starches or red dextrins (*Erytrodextrins*) as indicated by a test with Lugol's solution. If properly prepared, the taste is excellent. All patients, and even healthy workers, accepted it very well. Like pea soup and lentil soup, the Soybean soup invites the use of plenty of butter or other fats, and thereby enables the incorporation of a high level of total nutrients—with little resulting sugar in the urine.

"More detailed communications about the soybean, about the chemistry of this and other preparations, about its digestibility, etc. will soon be published by Dr. E. Jürgensen from the Vienna Medical Clinic (*Wiener I. medizinischen Klinik*).

Note: This product, which originated in Japan, was made in its own factory in Potsdam. Address: 1. Vienna, Austria; 2. Frankfurt am Main, Germany.

• **Summary:** This is a Spanish-language translation of USDA Farmers' Bulletin No. 58 (1897, Revised 1899). The soybean is referred to throughout as "La haba soya." It describes and gives the nutritional composition of various Japanese soyfoods, including natto, miso (3 types; *miso blanco*, *colorado*, *Suiza* [Swiss]), tofu (*Tofu o queso de haba*; *Tofu fresco*), soymilk (*leche de la haba soya*), frozen tofu (*Tofu helado*), yuba, soy sauce (*salsa de la haba soya*).

Note 1. This is the earliest Spanish-language document seen (Oct. 2008) that mentions yuba, which it calls *yuba*.

Under the name of coffee beans (*habas de café*), soybeans (*las habas soya*) are sometimes consumed in Switzerland as legumes (*como legumbres*); when they are dry and toasted, they are used as a substitute for coffee (*sustituir al café*). No mention is made of soybeans or soyfoods in Mexico.

Note 2. This is the earliest Spanish-language document seen (July 2000) that mentions tofu, which it calls *Tofu or queso de haba*.

Note 3. This is the earliest Spanish-language document seen (Jan. 2012) that mentions natto, which it calls *natto*.

Note 4. This is the earliest Spanish-language document seen (March 2009) that mentions miso, which it calls *miso*.

Note 5. This is the earliest Spanish-language document seen (Feb. 2004) that mentions soy as a substitute for coffee, which it calls *sustituir al café*.

Note 6. This is the earliest Spanish-language document seen (Oct. 2003) that uses the term *leche de la haba soya* to refer to soymilk.

Note 7. This is the earliest Spanish-language document seen (Feb. 2004) that mentions frozen tofu, which it calls "Tofu helado."

Note 8. This is the earliest Spanish-language document seen (April 2012) that mentions soy sauce, which it calls "salsa de la haba soya." Address: PhD, Office of Experiment Stations, USDA, USA.

1844. Sewaki, Hisao. 1910. On the preparation of a simple culture medium. *Sei-i-kwai Medical Journal* 39(5):515-16. May 31. Whole No. 339. [Eng]

• **Summary:** To replace the ordinary bouillon and agar culture media, most frequently used for the cultivation of bacteria, the writer describes five less expensive alternatives: (1) Shōyu-Bouillon—15 parts shoyu, 18 parts pepton, and 1000 parts water. (2) Simple shoyu culture medium. (3) Shoyu-agar medium. (4) Shoyu medium after Endo's method. (4) Shoyu medium after Conradi-Drigalsky's method.

Characteristics of these shoyu media: 1. The shoyu medium does not contain meat in any form. 2. Shoyu is employed in place of meat. 3. As shoyu contains sodium chloride, the latter is not used. 4. It takes only 2 hours to make an ordinary shoyu culture medium. 5. The above

mentioned conditions make the expense very small and economise on time.

Note: This journal, later titled *Seikai Geppo*, is published by the Society for the Advancement of Medical Science in Japan. Address: M.R.C.S., L.R.C.P.

1850. *Christian Science Monitor*. 1910. Rapid development of the soy bean trade in China. July 21. p. 2.

• **Summary:** London. From the black variety of soy bean "is manufactured soy (so called from the Japanese equivalent So Yu [sic, Shoyu]), a sauce used by the Japanese as well as the Chinese in astonishing quantities with all kinds of cooked food. It is manufactured by boiling the beans and by allowing them to ferment with yeast [sic] after mixing thoroughly with water, flour, and salt, and is sold in glazed earthenware jars.

"The variety of yellow beans is used for making another product of general use, a clear [sic] jelly like substance known as bean curd. It is to be seen on sale in large slabs on every wayside food stall. The cheerful looking coolies in the

accompanying photograph are pausing a moment in their work of grinding beans for the purpose under a revolving stone mill. The pulp [okara] so produced will be filtered, [the soy milk cooked], the casein coagulated by the addition of gypsum and the jelly-like coagulated mass pressed into shape for market.

"But it is the cultivation of a third variety, the white bean, which has developed during the last few years from a mere local crop, to supply far eastern demands, into an industry of world-wide importance. At a recent meeting of the Linnaean Society of London Mr. Holland, on behalf of the director of the royal botanic gardens, Kew, gave some statistics of the remarkable innovation for which Manchuria is apparently responsible. The output of soybeans from that country prior to 1907 did not exceed 120,000 tons annually, nearly all being taken by neighboring ports in China and Japan; but during 1908, owing to the demands from Europe, the export rose to 330,000 tons, while the 1909 crop has been estimated at 700,000 to 800,000 tons. The principal use of the beans in Europe is for the extraction of oil, of which they contain some 18 per cent, which is suitable for soap making, while the cake left after crushing is said to be a valuable cattle food likely to prove a serious competitor to cotton seed and linseed cake, at present in use for this purpose. The beans fetch \$20 to \$21 a ton in London, the oil from \$84 to \$88 per ton, and the cake about \$26 per ton.

"The sudden influx upon the markets of the world of this extremely useful product is, strange as it may seem, undoubtedly due to the Russo-Japanese war, for the cultivation of the crop was extended in Manchuria in direct consequence of the large demand for the bean for food for the Russian army. When the troops were withdrawn other markets had to be sought for the products, the supply of which was at once greatly in excess of demand."

The photo caption reads: The grinding process. Soy beans being prepared for market in a Kwangtung [Guangdong] village. Note: Guangdong is a province in southeast China; its capital is Canton (Guangzhou).

1851. Burt-Davy, Joseph. 1910. The soy-bean (*Glycine hispida*). *Transvaal Agricultural Journal* 8(32):620-26. July.

• **Summary:** Contents: Introduction. Description. Climatic requirements. Varieties. Planting and cultivation. Harvesting the seed. Returns of seed. Use of the seed for stock feed. Use of the seed for human food. Commerce in the seed. Soy-bean oil. As green forage. For ensilage. For hay. As a rotation crop for green manuring. Some co-operative experiment reports (from South Africa).

"We have grown soy-beans successfully at Skinners Court and on the Springbok Flats since 1903. We have also tested them successfully in other parts of the country, but as there was no market for the beans, and farmers had not learned to use them for their own stock, they were not taken up as a regular crop. Another reason for this was that some

varieties gave a uniformly poor germination, while on some soils, or under some conditions, none of the varieties did well.

"We have continued our experiments and have now established a strain of seed which gives very satisfactory results. But owing to the variations in soil and the apparent necessity for inoculation (natural or artificial) in some cases, I cannot recommend farmers to plant largely until they have given the crop a trial on a small scale..."

"A variety brought by me from the United States in 1903, known as the 'Southern,' has given the best results of any tried by us, both at Skinners Court and on the Springbok Flats. The seed harvested in 1904 we distributed extensively in different parts of the Transvaal, and have had favourable reports of it, both from the high veld and the bush-veld. The original stock was obtained through [seedsmen] J.M. Thorburn & Co., New York.

"Writing from London, Messrs. Mitchell, Cotts & Co. state that only two varieties have been imported into England in any quantity, viz., the north Manchurian or 'Harbin' quality, exported from Vladivostok, and the south Manchurian or 'Sakura' quality, shipped from Dalny, both of which are described as very similar in appearance and composition; the 'Sakura' realizes about 2s. 6d. per ton more than the others. These are the classes which are most acceptable to the English market. Seed has been received through the courtesy of Messrs. Mitchell, Cotts & Co., and will be tried the coming season."

"Of the varieties grown in Europe we have tried Vilmorin's 'Extra-Early,' 'Extra-Early Black,' and 'Yellow Etampes' at Skinners Court, but they did not thrive at all, even though grown alongside the 'Southern' which did excellently" (p. 621).

A list of the names of soybeans grown in Japan, grouped according to seed color, is given. Among the six white seeded beans (*Shiro Mame*), Teppo Mame or 'Gun Bean' is "the sort principally used to make the famous Soy Sauce." Maru Mame or 'Bullet Bean' is recommended as very valuable for horse food. The names of three black seeded soybeans (*Kuro Mame*) and three speckled seeded soybeans (*Fuiri Mame*) are also given. "These have not yet been tested by the Department, but seed is on order for trial next season. In the meantime I recommend farmers to restrict themselves mainly to the 'Southern' variety." Note 1. In calculating yields, 1 muid = 3.33 bushels.

"In China and Japan the soy-bean is an article of human diet. In Japan it constitutes a large proportion of the food of the people, a variety of dishes being prepared from it as well as foodstuffs similar to butter, oil, and cheese. A condiment famous among the Chinese under the name of 'soy', is made from this bean. The beans are of a pleasant taste when boiled, either in a green state or when ripe; in the latter state they need considerable soaking before use..."

"The Japanese are reported to extract the casein from

soy-beans, using it as a substitute for milk. This vegetable drink is said to be a very popular drink among the poorer classes of China and Japan. The beans are first softened by being soaked and then boiled in water.

“Experiments are being made in Europe in the use of soy-bean flour as an admixture with wheat flour for bread. A biscuit is made and sold in Paris, containing soy-bean flour, which has no starch, and is recommended for persons suffering from diabetes.

“Biscuits seem to be the most likely form in which this flour can be used, and two or three large English firms are now making them... A coffee substitute is made in America and on the Continent of Europe, out of soy-beans.”

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term “soy-bean flour.” Address: F.L.S., etc., Government botanist and agrostologist.

1852. Crowe, E.F. 1910. Japan. Report for the year 1909 on the trade of Japan. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)* No. 4511. 86 p. July.

• **Summary:** “Imports of manures.—The question of manures forms one of the most interesting items of 1909. A detailed table showing the quantities and values imported during the past three years will be found in Table 1 (B), page 61. Bean cake, of course, heads the list as regards value. The total amount imported in 1909 was 575,180 tons, worth £2,283,700, or £3 19s. 4d. a ton, as compared with 461,950 tons, worth £2,220,000 in 1908, or an average of £4 16s. 1d. a ton.

“Next comes the sulphate of ammonia, but in this item there was a big drop from 66,445 tons, valued at £898,000, to 45,835 tons, worth 604,700, while in the case of both phosphate rock and fish guano there was a decrease of about £100,000. Nitrate of soda made a small gain.

“It is a well-known fact that bean cake has for years occupied the position of the most popular imported fertiliser in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a lesser extent, have become purchasers of Manchurian beans the questions arises as to whether Japan will be able to continue to buy bean cake in huge quantities if the price rises appreciably. In studying this question two factors should not be lost sight of; one is that Japan is herself a large grower of soya beans, having, according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soya beans from China and Corea.

“The greater part of these beans is used for the purposes of human food, *i.e.*, the making of “soy,” “miso,” and bean curd, but a portion, by no means small, is used also as a fertiliser.

“The Russo-Japanese war had such an effect in

curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years.” A table (p. 18) shows imports of [soy] beans and bean cake (in piculs; 1 picul = 132.27 lb), the value of each, and the average price of silver each year from 1900 to 1909. Imports of [soy] beans increased from 1,575,022 piculs in 1900 to a record 3,623,377 piculs in 1909. Imports of bean cake increased from 2,280,687 piculs in 1900 to a record 9,663,036 piculs in 1909. The average price of silver fell by about 16% during this period. “Should the price in future be forced up very high in consequence of British and other demand, the presumption is that Japan would turn to sulphate of ammonia if the cost per unit of nitrogen therein were to be less than in the bean cake. On the other hand it must be remembered that the removal of duty on sulphate of ammonia in the United States of America means that that country will probably absorb large quantities of the British output and that Japan will have to pay a bigger price if she wants a share of this fertiliser.

“Thus the outlook for nitrate of soda becomes a good deal brighter and now that, owing to the subsidised Japanese line which runs to South America, it is possible to get cheap direct rates of freight, it looks as though the nitrate of soda will be a serious competitor to the other nitrogenous fertilisers, except in the matter of wet rice cultivation.”

Page 31 shows the shares of principal countries in the import and export trade of Japan during the years 1908 and 1909. Japan’s biggest imports came from the United Kingdom, followed by the USA, then China. The biggest customer of Japan’s exports was the United States, followed by China then France (p. 31). Japan’s biggest port (in terms of value of imports and exports) was Yokohama, followed by Kobe than Osaka (p. 37). Japan’s population at the end of 1909 was estimated at 49,769,704 (not including Formosa or Karafuto [Japanese Sagalien]). Japan’s most valuable exports in 1909 were tea, followed by rice then fish. Exports of “Soy” [sauce] rose from £110,500 in 1907 to £111,100 in 1909.

Summarized in *J. of the Board of Agriculture (London)*, Aug. 1910, p. 410.

Note: This is the earliest document seen (Sept. 2001) that gives statistics concerning industrial utilization of soybeans—in this case soybean meal used as a fertilizer in Japan. Address: Attaché, British Embassy, Tokio [Tokyo].

1853. Duncan’s (John) Sons. 1910. Try it on salads and obtain that piquancy so often lacking in Salad Dressings. Use Lea & Perrins Sauce, the original Worcestershire (Ad). *Boston Cooking School Magazine* 15(50):xi. June/July.

• **Summary:** “Soups, fish, steaks, chops, roasts, and many other dishes are improved by its use. For four generations it has stood unrivaled as a seasoning. Shun substitutes. John Duncan’s Sons, Agents, New York.” An illustration (line drawing) shows a woman cooking, a man dining, and a plate

of food with the sauce on the white table cloth. Address: New York.

1854. Paton, G.P. 1910. Japan. Report for the year 1909 on the trade and navigation of the port of Dairen. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)* No. 4504. 22 p. July.

• **Summary:** On pages 3-4 key weights and measures are defined: Chinese: catty = 1.333 lb, picul = 133.33 lb, *li* = 1/3 miles, *mow* = 736½ square yards; Japanese: 1 *koku* [liquid] = 39.703 gallons, 1 *koku* [dry] = 4.963 bushels. The Japanese, Chinese, and total populations are given for Dairen, Shaokangtzu [Shao-kuan, in Kwantung Leased Territory], Port Arthur, Chinchou [Chin-chou] and Pitsewo [Pikou, in Kwantung Leased Territory]. One map (p. 5) shows part of Manchuria, with the main towns, railroads, and where major commodities are produced. Next comes a large fold-out map of the Kwantung Leased Territory [and peninsula] (Dairen Consular District).

Dairen may now be considered the principal outlet for the produce of South Manchuria. The Central Laboratory is doing good work in the manufacture of bean cake and bean oil, and soap from bean oil. "The manufacture of soap from bean oil has been commenced on a very small scale by three different firms in Dairen, but the excessive price of bean oil since the end of 1909 is proving a great handicap." The South Manchuria Railway Company takes a major share in the development of South Manchuria as well as the Kwantung Peninsula. Its work during the past year is discussed. An ice-breaker has been added to facilitate the berthing of ships during the winter months.

"Export trade.—Thanks to the very large increase in the export of beans, the export trade is in a very thriving condition... Beans and bean products.—The most striking feature in the exports is the enormous increase in the shipments of beans and bean products, viz., oil and cake" which accounted for nearly 70% of all exports from Dairen. Export of [soy] beans rose from 206,653 tons in 1908 to 462,423 tons in 1909. In 1909, some 56% of these beans went to Europe, 29% to Japan, 12% to north China, and 21.4% to south China. "Of the amount sent to Japan, probably some was re-shipped to Europe; while of the quantity sent to Europe about 90 per cent. went to the United Kingdom." There follows a long discussion of economic factors causing the prices of soybean and bean cake to be currently high in Manchuria. If, as seems probable, the French, German, and U.S. governments remove the import duty on [soy] beans, then a great impetus will be given to the export... The farmer in Japan has learned the value of bean cake as a fertiliser for the paddy field and the mulberry plantation, and immense quantities are exported to that country. In 1909, indeed, Japan took over 99 per cent. of the bean cake exported from Dairen... A small quantity is exported to South China where it is used both as a fertiliser

and as a food for pigs. A shipment was also made last year to Formosa [today's Taiwan] for trial in the sugar plantations and, as the result was successful, the experiment will probably be repeated this year."

"Bean oil.—In Manchuria the primary object of the bean mills is the manufacture of bean cake, and the oil is only of secondary importance. The mills are worked on the press system and only extract 7 or 8 per cent. of the 17 or 18 per cent. of the oil contained in the bean... The largest purchaser of bean oil is South China, which takes about one-half of the output. Of the remainder, the bulk goes to Japan, where it is mostly transhipped [transshipped] to Europe and America." The value of "Soy" (soy sauce) imports to Dairen increased from £22,367 in 1907, to £27,431 in 1908, falling to £21,551 (3,307 tons) in 1909. The value of miso imports to Dairen increased from £2,128 in 1907, to £5,422 in 1908, falling to £2,815 (656 tons) in 1909. Tables (p. 19-21) show returns of: (1) Import trade of Dairen during 1907-09 (2) Export trade of Dairen during 1907-09 (3) Shipping entered at the Port of Dairen during 1908-09. Note: In some parts of this report, the £ sign is written as "l."

Summarized in *J. of the Board of Agriculture (London)*, Sept. 1910, p. 502. Address: Acting British Vice-Consul, Dairen.

1855. Suzuki, Umetarô; Furuya, Yeizô. 1910. Shôyu jôzô no sai ni okoru kagaku henka ni tsuite. I. [Chemical changes occurring during shoyu fermentation. I.]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 31(7):696-712. July. [Jap]

• **Summary:** The elder readers of this garden magazine will know well this plant, which is so useful and versatile. "But that we will take advantage of the resurgence of interest in the soybean to give our young readers a summary of what various people appreciate this useful plant. It can be used as food, forage, in industrial products, and as a medicine. Those who have written about it include Blavet, D. Bois, A. de Candolle, Chevallier, Cusin, Foëx, Fruewirth, Grandeau, Guichard, Haberlandt, Lachaume, Ladureau, de Lunaret, Michelin, de Mortillet, Paillieux, Trabut, Vavin, Vianne, Vilmorin, and many more. We also want to encourage our young readers to at least try cultivating the soybean, since this is not difficult."

Contains a brief botanical description of the soybean,

a list of the Asian countries where it is grown and its vernacular names in some of these countries, a long quotation from Kaempfer (1712) describing the soybean, and a history of the soybean in France from about 1740 when it was sent to the *Jardin du Roi* (today called the Museum) by missionaries in China—although the first records date from 1779. In 1821 it was tested by Mr. C. Brun of Beaumes on his land at Champ-Soue, near Etampes (Seine-et-Oise). At the end of 1855 the Society for Acclimatization distributed it to some farmers for trial. “Then in 1880, thanks to the introduction in the catalog of the house of Vilmorin-Andrieux & Co. of a variety cultivated in Austria-Hungary which could be propagated very easily, serious trials were conducted in different parts of France. From these, we can conclude that the early yellow soybean (*Soja jaune hâtif*) or oil-pea of China (*Pois oléagineux de la Chine*) (*Houang-teou* or *Houang-ta-teou*, whether referred to as the dwarf or as the tall variety) could be usefully cultivated” (p. 233).

“Being better advised than we are, the Austro-Hungarians, after the first trial they conducted in 1850, acquired incontestable proof of the value of Soya in the feeding of cattle / livestock (*du bétail*). So they developed this crop more and more; it took off strongly, especially after the Vienna World Exposition of 1873.”

“In the climate of Paris, only the yellow Chinese and the Mongolian varieties can be cultivated successfully, since their vegetative cycle is 3-4 months. South of the Loire River, one can add the brownish-red variety of China. Finally, even further south, in Languedoc, Provence [regions in south central France], and Algeria, all the late varieties can be cultivated, especially the ones with black seeds and those from Japan. A large number of these varieties are found in commerce, especially the early ones designed by names such as Early of Podolie and Early of Etampes (see fig. 140).

Gives details on how to sow, cultivate, and harvest the soybean for garden use. Its needs are quite similar to those of the Haricot. “Unlike Haricot beans, which can only be eaten as green beans (pods and all), soybean seeds (*Pois oléagineux de la Chine*) can be consumed either fresh or dry. Moreover, soybeans are easily digested and do not cause the all-too-well-known inconvenience of Haricot beans. To eat them in the fresh green stage, they should be prepared/cooked like small green kidney beans (*flageolets*), which they resemble in taste. For the dry beans, soak them overnight in twice their volume of either rain- or river-water in which you have dissolved (per liter) 3 gm of baking soda or 50 gm of sugar. The next day, drain them then put them like any dry legume in cold water, bring to a boil, and simmer for 2½ hours. Half way through the simmering process, add salt and a walnut-sized piece of butter. After they are cooked, you can serve them either with or without fat [butter or lard] or meatless seasonings (*au gras ou au maigre*). The cooked dry soybeans are also excellent pureed” (p. 234).

A table (p. 234) compiled by Prof. Haberlandt of Vienna compares the composition of seeds of soybeans, haricot, peas, lentils, feves, and yellow lupins. It shows that soybeans are the most nutritive, because they contain the most protein and fat.

A second table (p. 235) shows that this plant, cultivated in the garden solely for its seeds, removes from the soil the following amounts of minerals per 100 kg of seeds: Phosphoric acid 0.729 kg, lime 3.146 kg, magnesia 1.106 kg, and potash 0.811 kg.

A third table shows the amount of these four substances removed when the soybean is grown for forage; the yield is 20,000 to 30,000 kg/ha.

“The Asiatics and particularly the Chinese and Japanese greatly value the seeds of the soybean (*du Soja*), which are both nutritive and rich in fat; they form the basis of their diet, replacing butter, oil, and milk. They are used in culinary preparations greatly appreciated in these regions.”

The seeds are the richest of all legumes in the protein legumine, which is actually “solid milk.” The Orientals soak, then grind the beans and extract the milk, which they use like dairy milk. “Much of it is coagulated to make a cheese, similar to our *fromage à la pie*, which is called *Teou-fou* in China and *To-fu* in Japan, and which they consume in large quantities, fresh or dry, uncooked or cooked.

“This cheese, when well prepared, is very tasty, and it forms a very exquisite dish when it is deep fried like potatoes.

When the seeds are roasted with an equal quantity of wheat or barley, then mixed with water and allowed to ferment, they become the appetizing condiment sauce of great renown, known as Tsiang-yeou or Shoyu; at this time it is greatly in vogue in England and America under the name of “Indian Soy.” This sauce is greatly appreciated with roasted meat or fish; added to beef or beef bouillon, it communicates a color and savor that are very agreeable.”

Aside from these food uses, the soybean is also used in Asia for forage and to make oil and meal. “Finally, the soybean can be used as a coffee substitute—as it has long been in the regions of Languedoc and Tyrol [Tirol].” Also discusses soy flour and its high nutritional value.

A non-original illustration (p. 235) shows a soy bean plant with pods and a close-up of the pods on stem (from an original in Carrière 1880).

1857. *Daily Consular and Trade Reports* (U.S. Bureau of Manufactures, Department of Commerce and Labor). 1910. Industries of Hongkong: Bean sauce and rice milling. 13(36):489-92. Aug. 15. See p. 491.

• **Summary:** “Chinese soy or bean sauce is the main constituent of almost all of the well-known sauces used with meats, and it is exported in large quantities both to Europe and to the United States. The value of soy exported from this district [Hongkong] to America in 1909 was \$36,523

United States currency. There are several large factories in Hongkong, all owned and operated by Chinese, engaged in the manufacture of this product.” Note: No amounts are given. Address: Washington, DC.

1858. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)*. 1910. Japanese trade notes. 13(36):499. Aug. 15.

• **Summary:** “Consul-General Thomas Sammons, of Yokohama, furnishes the following notes concerning Japanese trade... Japanese ‘soy’ [sauce] is exported chiefly to the United States, Hawaii, Port Arthur and Dalny [Manchuria], and Korea, each taking approximately 400,000 gallons annually.”

“Of Japan’s total exports of peanuts the United States takes two-thirds.”

“Korea leads in the consumption of Japan’s national beverage, sake, taking 1,400,000 gallons a year; the United States consumes about 250,000 gallons annually.” Address: Washington, DC.

1859. Ransford, Robert Bolton. Assignor to Société Française des Distilleries de L’Indo-Chine. 1910. The treatment of leguminous matter and of soja (Glycine hispida) in particular for the manufacture of sauces and condiments. *British Patent* 20,520. 5 p. Date of application, 2 Sept. 1910. Accepted, 2 Nov. 1911.

• **Summary:** This patent for making soy sauce using a new process is based on French Patent 415,025 of 1909. This invention was communicated to Mr. Ransford, a “Chartered Patent Agent” in London, “from abroad by Société Française des Distilleries de L’Indo-Chine, of 20, rue Lafitte, Paris, France.”

“The various processes used in the Far East for the manufacture of sauces, and condiments of which soja is the principal ingredient generally—involve the action of micro-organisms, usually the mucedins, which bring about the transformation of the material.”

“The manufacture at present is difficult and sometimes very long; this is the case with shoyu, under which term the most widely-used sauce or condiment based on soja is known; the preparation of shoyu may last from 8 months to five years. The results obtained moreover are irregular and not always those desired and as a rule all the useful constituents of the material employed are not used to the best advantage.”

This invention consists in “preparing from the materials used an aseptic medium in which the selected micro-organisms can develop and react.” In the “first phase, the primary materials usually employed are soja (glycine hispida) and a cereal, such as wheat, barley, rice, maize, etc. or other leguminous matter. For example a product of the shoyu type made be produced” from equal parts soja and rice. Address: 24, Southampton Buildings, London, W.C.,

Chartered Patent Agent.

1860. Ueno, Senichi. 1910. Nihon shōyu jōkyō torishirabe no ken [The Japanese shoyu market in Honolulu, Hawaii]. Honolulu, Hawaii. 3 p. Sept. 3. Handwritten unpublished manuscript. [Jap; eng]

• **Summary:** This is a market report from Mr. Ueno at the Japanese consulate in Honolulu, to Mr. Yoshitaro Komura at the Japanese Ministry of Foreign Affairs.

Shoyu imports to Honolulu were 83,894 kegs (*taru*) in 1909 (about 1.359 million liters), with 90,000 expected in 1910. The 1910 Japanese population was 65,790. Note: The average keg (*taru*) held 9 shō = 16.2 liters = 4.28 gallons (U.S.). One shō is 1.8 liters.

Note: This is the earliest document seen (Aug. 2002) that is a market study concerning soy products (shoyu). One of three documents. Address: Japanese Consulate, Honolulu, Hawaii.

1861. Yada, Naganosuke. 1910. Shōyu jōkyō torishirabe no ken [The Japanese shoyu market in Vancouver, British Columbia, Canada]. Vancouver, BC, Canada. 5 p. Sept. 13. Handwritten unpublished manuscript. [Jap; eng]

• **Summary:** This is a market report from Mr. Yada at the Japanese consulate in Vancouver, to Mr. Yoshitaro Komura at the Japanese Ministry of Foreign Affairs.

In 1909 1,390 koku (250,200 liters) of shoyu were imported to Vancouver, where about 8,000 Japanese lived. Address: Japanese Consulate, Vancouver, BC, Canada.

1862. Société Française des Distilleries de l’Indo-Chine. 1910. Nouveau procédé de traitement des légumineuses et particulièrement du Soja (Glycine hispida) pour la fabrication des sauces, condiments ou produits alimentaires [New process for the treatment of legumes and particularly of Soya (Glycine hispida) for the making of sauces, condiments or food products]. *French Patent* 415,026. Sept. 16. 3 p. Application filed 1 July 1909. [Fre]

• **Summary:** Soya or other leguminous seeds, with or without addition of cereals, are suitably cooked, and after being cooled aseptically are seeded with pure cultures of the organisms necessary to produce the desired results. They are then aged. The process is very delicate and the aging sometimes very long (as in the preparation of *shoyu*, which can last from 8 months to five years). Other products include *tao-yu*, *miso tao-tjing*, and *tuong*. The sauces or condiments produced are sterilized or pasteurized in trade packages. Address: Boulevard Gia-Long 53, Hanoi [Hanoi] Tonkin [French Indochina].

1863. Choles, H.J. 1910. Soy beans: Their cultivation and uses. A new Natal industry. *Natal Agricultural Journal* 15(3):281-307. Sept. [4 ref]

• **Summary:** Contents: Introduction. I. Botany and habitat:

Introduction, varieties. II. Cultivation: Conditions of growth, methods of culture, soy bean mixtures. III. Harvesting: When to harvest, curing, frame for curing soy bean hay, harvesting for seed, yield of seed, yield of forage. IV. Chemistry of the soy bean: Introduction, digestibility, soy bean oil, soy bean bake. V. Value and uses of the soy bean: Introduction, the uses of the soy bean (uses of the oil {7 uses}, uses of the bean as a vegetable in Natal {like marrowfat peas or haricot beans}, in bread or biscuits in Paris [France] for diabetics, in France and Switzerland as a coffee substitute or adulterant, soy bean flour used for making bread and biscuits in England, soya meal for cattle feeding, oil-free residue made into cake for stock-breeding purposes, liquid closely resembling cow's milk made in Japan, vegetable cheese [tofu] made from the milk, a sauce called "Shoyu" made in Japan, soy-bean cake used as a fertilizer in Japan and China), as a soiling crop, as a silage crop, as a hay crop, as a pasture plant, as a soil renewer. VI. Value of the bean for feed: Introduction, soy beans for hogs, soy beans for dairy cows, other experiments with milch cows.

Illustrations (non-original line drawings) show: The soy bean plant with pods and roots (p. 280; from an original in Piper 1909). Flowering branch with close-ups on flower, leaves and pods (p. 285; from an original in Lamson-Scribner 1899). Frame for curing soy bean hay (p. 291; reproduced from Messrs. Lever Bros. pamphlet on Soy Bean Cultivation). Roots of soy bean plant with nodules (p. 301).

Note: This is the earliest document seen (May 2005) concerning Lever Brothers in connection with soybeans.

1864. Higeta Shoyu Jozosho (The "Higeta" brand soy brewery.) Main office: Choshi, Chiba Prefecture (Document part). 1910. In: Japan's Industries: And Who's Who in Japan. 1910. Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 152-53. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]

• **Summary:** History: The 'Higeta' is one of the brands of soy made in Choshi. The concentrated kind of soy from which it is derived was first brewed in the second year of Genna (1616) by a brewer named Gemba Tanaka. After the quality had been greatly improved, a new variety of the brand was made in the second year of Bunsei (1819), known as 'Horai.' When the metropolis was moved from Kyoto to Tokyo in 1868, the firm was honoured by being appointed supplier of soy to the Imperial Household. Since then the business has greatly increased. In 1898 the firm, in conjunction with the Iwasaki and Hamaguchi concerns, started an experimental laboratory, under superintendence of Dr. Ryojun Tawara, and a staff of experts, in which a study was made of soy fermentation. As a result of the investigations, much improvement was effected in the quality of soy generally. In that year, 1898, the Imperial Household ordered a special supply of the 'Higeta' brand, and this fact, coupled with the improved methods of salt refining, greatly extended its

sale. When the grand military manoeuvres were held in the vicinity of Kumamoto in 1902, attended by His Majesty the Emperor, an order was placed with the firm to supply the army with bottled soy; to commemorate this honour the brewer has sold bottled soy ever since.

"During the Russo-Japanese war, 'Higeta' soy was used by the Army Department for seasoning canned foods sent to the front. In 1905 a new kind of soy bottle, with a screw stopper, was made for the troops. Soy was afterwards sold to the public in this form. Since then the firm has gone on flourishing, nothing being left undone to maintain the quality of the brand, and improve it if possible.

"The firm possesses two breweries, fitted up with steam engines, and employing altogether 320 workmen. The 'Higeta' brand soy is used all over the country, especially at Tokyo and Yokohama. It goes also to the United States, Canada, Siberia, China, Korea, Hawaii, the Philippine Islands and the Straits Settlements [later Singapore], being much appreciated in all these markets.

"In addition to being suppliers to the Imperial Household, the brewer has been honoured in other ways. At the Milan Exhibition of 1906, the 'Higeta' brand, which was selected by the Japanese Department of Agriculture and Commerce as a typical soy, was awarded the highest order of the Grand Prix; besides this, the soy was presented to Their Italian Majesties by the Japanese Commissioner for the Exhibition, and they are reported to have expressed to him their high appreciation of its flavour. The following are the principal honours conferred upon the firm by various exhibitions:

"A First Prize at each of the five National Exhibitions.

"The Grand Prize at the Chicago [Illinois] Exhibition, 1890.

"A Gold Medal at the Asian Exhibition (Hanoi, French Indo-China), 1903.

"The highest Grand Prize at the St. Louis [Missouri] Exposition, 1904.

"The Grand Prize of Honour at the Seattle Exposition, 1909.

"Mr. Gemba Tanaka, the proprietor, who was born in 1871, studied political economy at Keio University. On succeeding to the business of his ancestors, he entered into his work with enthusiasm, and by his strenuous exertions did much to extend the sale of the 'Higeta' brand. Owing to the esteem in which he is held in the district, Mr. Tanaka has been elected to represent the highest taxpayers of his prefecture in the House of Peers."

A large photo shows "the interior of a Choshi soy brewery."

plates. Undated. Translated from unpublished Japanese manuscripts. Colophon title in Japanese: Sangyō no Nihon. 29 cm. [Eng]

• **Summary:** On the title page, below the subtitle, is written: “An Exponent Encyclopedia of the Present Industries of Japan has never been yet Published.” Black-and-white photos (unnumbered front pages) show each of the major contributors. A photo shows “Dr. Teizo Takahashi (*Kogakuhakushi*), Professor of the Tokyo Imperial University.” He contributed an article titled “The Outline of the Brewing Industry.” Photos throughout the book show many companies and their owners. The book was apparently never published in Japanese.

This book was published under the support of Count Okuma, whose photo is shown, and who wrote the excellent first part (p. 1-22) titled “The Industries of Japan.” Its contents is: 1. The industrial condition of Japan before the restoration: The great landmark in history (in 1858 Japan was forced to end nearly 300 years of seclusion), industries under the Tokugawa shogunate, industries in the Genroku era (1688-1704). 2. Japanese industries after the opening of the country: The industrial revolution, demand for things European, table of exports and imports (1868-1908; p. 5-6), general dissemination of education, progress of natural resources. 3. Industries before and after the Sino-Japanese War (1894-1895): The growth of foreign commerce, the improvement of the currency system and foreign commerce, entry into the comity of financial nations, manufacturing industries on a large scale (there was a major National Industrial Exhibition as early as 1877). 4. The state of Japanese industries before and after the Russo-Japanese War (1904-1905): The blow dealt by the war, abnormal trade and consequent reaction, the increase of population in Japan and Formosa, progress in the means of transport and communication (especially railways), the money market and industry, free trade and protection, protection in the United States, Japan need not imitate the USA, Great Britain’s free trade policy. 5. The future of Japanese industries: Bright future for Japanese industries, silk yarn and silk production, cotton yarn and cotton manufacture, forestry, minerals, the trade in marine products, capital.

The book is composed of lengthy chapters on Japan’s major industries, each preceded by a general overview and outline, and containing a detailed description of the largest 10-20 firms. These industries are cotton and silk spinning, Portland cement, sugar, brewing sake and soy [sauce], woollen textiles, hemp, electricity, engineering, mining, transportation, silk textiles, shipbuilding, ceramics, an appendix (p. 485-572) with representative firms from other industries (incl. Mitsui & Co. [p. 493-95], Osaka Gas Co. [p. 520]), and a Who’s Who in Japan (p. 573-687; brief biographical sketches with photos of “over 700 names of representative captains of our business world,” incl. Keizaburo Mogi [p. 632, soy brewer], Teizo Takahashi [p.

664, microbiologist]).

The chapter titled “The Brewing Industry” starts with a general outline by Dr. Teizo Takahashi on the brewing of sake, “shoyu or soya,” beer, shochu, awamori, and mirin (p. 121-27). Representative soy breweries are discussed in detail, with photos, a brief company history, present conditions, awards of merit (in Japan and overseas), and a biographical sketch of the owner, proprietor, and or managing staff.

Part I: The soy industry of Choshi, Chiba prefecture (A photo shows the interior of a Choshi Soy Brewery). The four principal Choshi Soy Brewers are: (1) Higeta Shoyu Jozosho [Brewery] (The concentrated forerunner of this brand was first brewed in 1616. Proprietor: Mr. Gemba Tanaka. A photo shows interior of a Choshi Soy Brewery); (2) Jigamisa Shoyu Jozosho (brand first brewed ca. 1645. Proprietor: Mr. Kichibei Hamaguchi. A photo shows the Jigamisa brand soy brewery with hundreds of shoyu kegs); (3) Yamaju Shoyu Jozosho (brand first brewed ca. 1630. Proprietor: Mr. Jujiro Iwasaki. A photo shows a motor for brewing); (4) Yamasa Shoyu Jozosho (see separate record).

Part II: The soy industry of Noda, Chiba prefecture (p. 158): Joju Shoyu Jozosho (brand first brewed before 1710. Proprietor: Mr. Hyoyemon Takanashi. A photo shows the interior of the Joju brand soy brewery with several kegs of shoyu), Kihaku Shoyu Jozosho (brand first brewed in about 1750. Proprietor: Mr. Hichiroyemon [Shichirouemon] Mogi. A photo shows the Kihaku brand soy brewery and its proprietor), Kikkoman Shoyu Jozosho (see separate record), Kushigata Shoyu Jozosho (See separate record. It was 290 years ago [i.e. in 1620] the founder of the firm, the ancestor of the present proprietor, settled in Noda as a shoyu brewer. Proprietor: Hichizaemon [Shichizaemon] Mogi), Minakami Shoyu Jozosho (Brand first brewed in about 1710. Proprietor: Mr. Fusagoro Mogi. A photo shows machinery for pumping soy [sauce]).

The book begins (p. 1): “The year 1858 forms one of the greatest landmarks in Japanese history, for it was then that, after nearly three hundred years of seclusion, the country was definitely thrown open to foreign trade and intercourse. In that year, also, the Tokugawa Shogunate, (1591-1858) signed the first treaty of commerce and amity with the United States, Great Britain, France and Holland. By this treaty Old Japan ceased to be and the New Japan entered upon her career among the comity of nations.”

Page 3 continues: “In 1868 [the first year of Meiji] the feudalism that had lasted for centuries, was abolished at a single stroke, and the reins of government restored to the Imperial Throne. Despotism was done away with, and an Imperial Edict announced that the prefectural system of administration [administration] then inaugurated was to be the foretaste of constitutional government on Western lines twenty years later. Not only was this a political revolution, but a social and industrial revolution. One remarkable feature

of this revolution, so complex in its effects, was that the new order of things inaugurated by it became at once stable and permanent, while the nation was infused with a new life and vitality. In this respect, there has never been a revolution in any country to compare with it. It is hardly necessary to say that the industrial side of a revolution is as important and as interesting as its political side, if not more so.” Also in 1868 Yedo [Edo], the administrative headquarters of the Tokugawa Government, was renamed Tokyo.

A table of imports and exports (p. 5-6) shows that exports rose from 15.5 million yen in 1868 to 432.4 million yen in 1907, while imports rose from 10.6 million yen in 1868 to 494.5 million yen in 1907. In a majority of these years, imports exceeded exports.

The improvement of the currency system and foreign commerce (p. 8-10). During the last 10 years of the Tokugawa Shogunate, about 60 varieties of coins were in circulation. In 1871 (Meiji 4) the new Meiji government adopted a gold standard. As foreign Powers were using the Mexican silver dollar as the basis of their exchange in the Far East, the Japanese Government issued silver coin of similar quality and weight (known as silver *yen*) for circulation in Treaty Ports. In 1877, to pay for the Satsuma Rebellion, the government was forced to issue inconvertible paper money. This led to chaos and undermined the gold standard. In 1873 Germany adopted the gold standard; this led to a depreciation of silver. Though Japan remained among the silver standard countries of East Asia, she found it necessary to issue silver trade dollars. In March 1897 the Diet passed an Act that again established a gold standard in Japan. This had a most salutary effect on Japanese finance. “On looking back on the history of foreign commerce in Japan from the time the country was opened in the mid-1800s, we find that it attained its full growth on adoption of the gold standard.”

Note: How do we know when this undated document was published? The latest year published in the document is 1909 (see p. 12). But the National Union Catalog record gives the year as 1910. Address: Japan.

1866. Kikkoman Shoyu Jozosho (The “Kikkoman” brand soy brewery.) Main office: Noda, Chiba Prefecture (Document part). 1910. In: Japan’s Industries: And Who’s Who in Japan. 1910. Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 163-65. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]

• **Summary:** “History: The origin of the brewing of the ‘Kikkōman’ brand of soy, reputed to be the leader among the best varieties, dates back about 120 years [i.e. to about 1790]. Ever since the honoured founder of the firm inaugurated the brewing of soy, the succeeding proprietors have all been men of great ability, who have succeeded in extending the business generation by generation, as well as improving the quality of the product. In the year 1838, when Mr. Saheiji Mogi, fifth of the line, was the head of the

firm, it was appointed by special warrant purveyor to the Household of the Tokugawa Shoguns, having been ordered to supply the Household and the Heir-Apparent every year with a large quantity of soy, a custom which was continued until the overthrow of the Shogunate in 1868. Very few firms or individuals were honoured by being appointed special contractors to the Court of the Shogun, and this fact must be considered as a very high tribute to the excellence of the firm’s products, the quantity to be supplied being subsequently doubled.

“The chief point worthy of special mention in regard to the ‘Kikkoman’ firm is the fact of its having been chiefly instrumental in making Japanese soy known and appreciated in foreign countries, more than half the total amount of soy exported to foreign countries at present being the ‘Kikkoman’ brand. Mr. Saheiji Mogi, the grandfather of the present proprietor, was a remarkable able businessman. He was most assiduous and energetic in endeavouring to effect improvements in the process of brewing as well the extension of the business. On the occasion of the International Exhibition held in Vienna, Austria, in 1873, when the Japanese Government participated for the first time in such an undertakings, the ‘Kikkoman’ soy was among the exhibits. Being deemed by the judges far superior both in regard to taste and colour to the sauce usually used as a condiment, the ‘Kikkoman’ soy was awarded the gold of honour.

“Afterwards, when the name of ‘Kikkoman’ soy gradually came to be known in Europe and its exportation increased, many spurious articles appeared on the market, bearing the same brand, This proved very detrimental to the reputation of the genuine ‘Kikkoman’ soy, so that, the firm, in order to protect itself against fraudulent imitations, ordered a very elaborate design for a trade-mark to be made for them in Paris, which they had registered, this being, in fact, the very first instance of a trade-mark being registered for soy and most probably in advance of any other commodity. In January, 1905, the above trade-mark was registered at the United States Patent Office. In June 1909 the United States Government issued a certificate regarding ‘Kikkoman’ soy, to the effect that it is of very superior quality, containing no admixture of saccharine or any other chemicals and being very suitable as a condiment.

“The services which this firm have rendered in the cause of the soy industry, principally for its exportation to foreign countries, are very remarkable. Whenever there was an exhibition abroad, tiny sample bottles of the soy were distributed, and no opportunity was lost and no difficulty seemed too great to be overcome by the firm in order to popularise Japanese soy in foreign countries.

“On the occasion of the Japan-British Exhibition held in London in 1910, ‘Kikkoman’ soy as well as the other best varieties of Japanese soy, is being exhibited. Thus, the English public will be given full opportunity to test this best

quality of Japanese food condiment.

“Present conditions: The ‘Kikkoman’ firm owns at present six soy breweries, with the total number of 4,200 hands and eight sets of boilers and steam engines. The yearly output is about 11,800,000 gallons, of which 2,880,000 gallons are exported to foreign countries, the principal destinations being Honolulu [Hawaii], Portland [Oregon], San Francisco [California], Seattle [Washington], Los Angeles [California], Tacoma [Washington], Denver [Colorado], Chicago [Illinois], London [England], Paris [France], Berlin [Germany], Vienna [Austria-Hungary], and China ports.

“Honours awarded: The ‘Kikkoman’ firm has had conferred upon it the honour of being special contractors to the Imperial Household Department, a special brewery being devoted exclusively for the brewing of soy supplied to the Imperial table. An entirely new plant, with the capacity of turning out 20,000 gallons per annum has been newly installed, which is under the strict surveillance of experts specially appointed for the purpose. The utmost cleanliness is carefully observed and the brewing is carried out on up-to-date and hygienic principles.

“The most principal medals and prizes awarded to the firm at the various exhibitions are as follows: International Exhibition at Vienna, 1873. Gold Medal. National Industrial Exhibitions (First to the Fifth inclusive). First Prize. International Exhibition at Amsterdam (Netherlands), 1883. Gold Medal. St. Louis [Missouri] International Exposition, 1904. Grand Prix of Highest Honour. Seattle International Exposition, 1909. Grand Prix of Honour.

“Proprietor: Mr. Saheiji Mogi, the father of the present proprietor and eighth of the line, was a man of very progressive ideas. He studied at Cambridge University, and after a stay in England extending for several years, returned to Japan and devoted himself to the extension of the business of the firm, when he was unfortunately attacked by a sudden illness to which he succumbed. His son succeeded to the head of the business and being ably and faithfully assisted by the guardian, Mr. Keizaburo Mogi, and the Manager, Mr. Kyujiro Uchida, the business has progressed and is at present in a very prosperous condition.

A photo (p. 164) shows the Kikkoman brand soy brewery next to a river. Smoke is rising from a tall smokestack and boats are docked along the river.

Note: This is the earliest document seen (April 2012) that contains industry or market statistics for soy sauce production by a particular manufacturer. Address: Japan.

1867. Kushigata Shoyu Jozosho (The “Kushigata” brand soy brewery.) Main office: Noda, Chiba Prefecture (Document part). 1910. In: Japan’s Industries: And Who’s Who in Japan. 1910. Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 165-67. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]

• **Summary:** “History: As will be seen by the accompanying articles, most of the soy brewers of Noda are distinguished by the surname of Mogi, and the family of Mr. Hichizayemon [Shichizaemon, Hichizaemon] Mogi, proprietor of the firm of ‘Kushigata’ brand soy is, in fact, the head and originator of all these distinguished so brewing firms of the same name. One of the ancestors of the Mogi family was a distinguished Samurai in the service of the celebrated warrior and statesman—Toyotomi Hideyoshi—and his daring and deeds of valour are matters of history. With the overthrow of the Toyotomi family he laid aside his sword and entered the field of business. It was 290 years ago that the founder of the firm, the ancestor of Mr. Hichizayemon Mogi settled in Noda as a soy brewer. His distinguished personality and lineage gained for him the deep respect of the inhabitants and he was appointed the headman of the place, thus being called upon to engage in public business as well as his own. At this period, soy was brought over from Osaka to Tokyo, the capital of the Tokugawa Shoguns. The quality of this sauce, however, was very inferior and in view of this Mr. Mogi instructed a member of this branch of the family—Mr. Saheiji Mogi—to brew the ‘Kikkôman’ soy as an experiment. The results having proved very satisfactory, that brand was brewed on a large scale, and Mr. Mogi subsequently inaugurated the brewing of the ‘Kihaku’ brand, the two firms being allowed to engage in the brewing of so-called Noda Soy on an extensive scale. These two brands of soy having proved very well suited to the tastes of the citizens of Yedo, the demand increased to such an extent that the output was hardly sufficient to meet the demand. Such being the case, Mr. Hichizayemon Mogi himself engaged in the brewing of soy also. The ripe experience gained by supervising the work of the branch firms in brewing superior varieties of soy proved very valuable to him, and his business also proved a very great success, the name of the new brand of soy ‘Ichiyama’ becoming quite celebrated within a comparatively short period of time. However, another new branch of the Mogi family’s firm being inaugurated under the proprietorship of Mr. Yuyemon Mogi, the brand ‘Ichiyama’ was transferred to the new firm so as to ensure its prosperity and the brand ‘Kushigata,’ at present in use, was then adopted. Such proceeding may appear somewhat strange, but it was in compliance with the legacy left by the ancestors of the Mogi family that the various branches should unite for the general sharing of profits in their business undertakings. At the time when the fame of the ‘Kushigata’ brand was at its height, in 1871, the whole premises of firm were unfortunately destroyed by fire. This proved a great blow to the fortunes of the firm but the present proprietor, by dint of sheer energy and perseverance, succeeded in retrieving the lost fortunes of the firm, the yearly output at present far exceeding the former production. Although the yearly output of the main house of Mogi (‘Kushigata’ brand soy) is below that of the branches, namely the ‘Kihaku’ and other brands,

it has been entirely owing to the good will of the former that the latter firms have been enabled to attain their present prosperous state, the outcome of the traditional legacy of the Mogi family having been carried out by the head of the house

“Present conditions: The firm has at present two factories, the number of hands employed being 600. The factories are provided with two sets of boilers and steam engines for motive power. The firm produced about 5,270,000 gallons of soy per year, of which about 336,000 gallons are exported to foreign countries, the places of destination being Hawaii, Australia, China, Korea, Canada, British Columbia, the United States, the Philippine Islands, and the Straits Settlements [today’s Singapore]. The export trade shows a tendency to increase year by year.

“Honours Awarded: The following are some of the principal prizes and medals awarded to the ‘Kushigata’ brand soy at the various exhibitions where the firm’s products have been shown:—The National Industrial Exhibition from the First to the Fifth. First Prize on each occasion. International [Columbian] Exposition held in Chicago [Illinois], 1893. Gold Medal. International Exhibition held in Paris, 1899. Gold Medal. St. Louis International Exposition [Missouri], 1904. Grand Prix. Alaska-Yukon International Exposition at Seattle, 1908. Grand Prix.

“Proprietor: The present proprietor of the famous firm of the ‘Kushigata’ brand is Mr. Hichizayemon Mogi, who is the eleventh of the line. Although he is yet young, he places business before pleasure, strictly adhering to the precepts of his ancestors and is devoting his entire energy to the development of his business and the improvement of the particular brand for which the firm is responsible. Having selected a most favourable locality he is, at present, constructing a new factory with the producing capacity of 2,000,000 gallons per year, which promises to be the best equipped factory of its kind in Japan. The machinery employed is to be of the latest pattern, and it is intended that electricity be used as the motive power.”

A photo (p. 166) shows “The pumping machinery of soy.” Around the pump are many brick walls. Address: Japan.

1868. Nagai, Shôzô. Japanese Consulate. 1910. Shôyu ni kansuru hôkoku teishutsu no ken [The Japanese shoyu market in San Francisco, California]. San Francisco, California. 7 p. Sept. Handwritten unpublished manuscript. [Jap; eng]

• **Summary:** This is a market report from Mr. Nagai at the Japanese consulate in San Francisco, to Mr. Yoshitaro Komura at the Japanese Ministry of Foreign Affairs.

About 50,000 Japanese live in San Francisco. About 6,000 large and small kegs (*taru*) of shoyu a month are imported, equaling about 97,200 liters. Address: Japanese Consulate, San Francisco, California.

1869. Takahashi, Teizô. 1910. The brewing industry: Chapter II. Shoyu or soya brewing (Document part). In: Japan’s Industries: And Who’s Who in Japan. 1910. Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 125. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]

• **Summary:** “Development of the industry: *Shoyu*, also called *soya* and more generally known in English as ‘soy,’ is a food adjunct or condiment especially used in Japan. Its origin is not known, but it is highly probable that the brewing of *shoyu*, like *sakê*, is of Chinese origin. The first description about *shoyu* appears at the beginning of the 16th century during the reign of the Emperor Go-Kashiwabara, and the demand for it appears to have somewhat increased at the end of the century, but the method of its preparation was artless and the product must have been a crude one. Certain improvements in brewing were made at the end of the 17th century, but *shoyu* of the kind at present in use was first prepared at the beginning of the 18th century.

“In 1751 a *shoyu* factory was established in the town of Noda in the Prefecture of Chiba. Other similar factories were opened there and they increased in number annually, and that city now stands in the first rank for this particular commodity. The annual production for the 5 years from 1904 to 1908 may be seen from the following table.” Production grew from 74,367,040 gallons in 1904 to 84,952,440 gallons in 1908.

“In olden times *shoyu* brewing was somewhat different from the present method. The steamed *soya* beans were covered with layers of rice straw for 5 or 6 days until the surface of the beans appeared yellow by the growth of the fungus. After that the beans were dried in the sun and steamed again; then, after mixing with moderate quantities of common salt, ginger and orange peel, allowed to ferment in sealed tubs for 1 to 2 months. An improvement was made, probably by the introduction of Chinese methods of preparation, at the end of the 17th century; but the products of those days were very inferior compared with the *shoyu* as a present in use.

“*Shoyu* or Soy sauce is prepared from wheat (sometimes also from barley), the *soya* bean, and a salt solution by a slow fermentation, which requires from one to two years and sometimes longer.

“The process of brewing is divided into four stages: (1) Preparation of the wheat and *soya* bean; (2) Preparation of the soy *koji*; (3) The fermentation, of *moromi* process; and (4) Pressing and boiling.” Address: PhD, Prof. at Tokyo Imperial Univ., Japan.

• **Summary:** “Outline: Soy is brewed in almost all parts of Japan, but the chief centres for its production are Chôshi and Noda in the Prefecture of Chiba; Sakai and Amagasaki, seaport towns in the vicinity of Osaka; and Tatsuno, Yuasa, and Shôdoshima in the prefectures of Hyogo, Wakayama, and Kagawa respectively. The soy of Chiba Prefecture is generally recognised as the best, and by far the largest quantity is made there. The soy brewers have derived great advantage from the river Tone which flows through the district; indeed the towns of Chôshi and Noda on its banks have flourished from early times in consequence, and have become famous throughout Japan as centres for the brewing of soy.

“Chôshi is right at the mouth of the river, on the Pacific Ocean, and is a few hours’ railway journey from Tokyo, which is 73 miles distant. Only a small proportion of the soy, however, is carried by rail, the greater part of it being sent by sea, as the marine service is a good and safe one. Tokyo is the distributing centre for the sauce, both for home consumption and the foreign market. A good telegraph and telephone service facilitates the dispatch of business.

“Soy has been brewed in Chôshi for the past three hundred years. The first to brew the thick concentrated variety of soy was a man named Gemba Tanaka, an ancestor of the present Mr. Gemba Tanaka, who makes the ‘Higeta’ brand. From that time onward different varieties of soy came to be brewed, such as the ‘Yamaju,’ ‘Yamasa,’ and other such brands. In the year 1825, when there was much distress throughout the country owing to a famine, and the Tokugawa Shogunate issued an edict to regulate the prices, and thus allay the suffering as far as possible, four brands of soy made in Chôshi, and three in Noda, were specially exempt from the operation of this law on account of their excellent quality, and were moreover granted the rare privilege of being called the ‘Best Soy.’ Henceforth Chôshi’s four first-class brands became famous throughout Japan, and the industry has grown more and more prosperous.

“The Chôshi brewers are very careful in the selection of their ingredients. The beans and wheat used are the best that Hidachi Province can supply; salt is brought all the way from Hyogo Prefecture, the centre of Japan’s salt industry; all the water used is very carefully filtered through layers of sand, and in fact everything possible is done to ensure purity and good quality. Whenever possible, the soy factories are situated in shady, secluded spots, as the sunlight prevents proper fermentation. The machinery and apparatus used is constantly improved.

“It may be mentioned that the relations which subsist between masters and workmen are of a very cordial nature. For the most part, the labour is hereditary, the sons carrying on the vocation of their fathers. The workmen put heart and soul into their labour, rivalling each other in diligence

and perseverance, and the employers, on their part, treat their servants with much liberality, and neglect no means to protect and guide them. A complete system of life insurance and old age pensions enables the men to carry on their work without anxiety as to their future. Their children, too, are not left uncared for, and special schools have been erected for their benefit. Indeed, it is to the complete harmony which exists between capital and labour that the great prosperity of Chôshi’s soy industry is attributed.

“As already stated, it was the excellent quality of Chôshi soy which won for it such a wide reputation, even at a time when facilities for its transportation were not very good. The climate and the pure water in the vicinity have proved of tremendous advantage in the industry, while the improved means of communication and transport have also done much for its development in later years. And above all, the brewers have paid great attention to their apparatus and methods, so that not only is the industry in a flourishing state, but the prospects for its future development are of the brightest.”

“The following articles give some account of the four principal Chôshi Soy Brewers.” 1. Higeta Shoyu Jozosho. 2. Jigamisa Shoyu Jozosho. 3. Yamaju Shoyu Jozosho. 4. Yamasa Shoyu Jozosho.

A photo shows “the interior of a Choshi soy brewery.” Address: PhD, Prof. at Tokyo Imperial Univ., Japan.

Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 158-60. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]

• **Summary:** “History: Noda is a small town of some 12,000 houses situated about 20 miles north-east of Tokyo, and is 8 or 9 miles from the nearest railway station, but the River Yedo, one of the tributaries of the River Tone, affords excellent means of direct communication with the Capital, and light railways traverse the town, these being used for the conveyance of the soy casks from the various factories to the wharves on the river bank, whence they are shipped to Tokyo. Noda is also well provided with an excellent telegraph and telephone service which facilitates business with various parts of the country.

“The major portion of the population is engaged in the industry of soy brewing, for which the place has been famous for very many years. It was back 350 years ago [i.e. 1560] that the first soy factory was established at Noda, the proprietor being a man named Ichirobei Iida. The success of his business proved the suitability of the place for the brewing of *shoyu* or soy, and subsequently Hyoyemon Takanashi, brewer of the ‘Jôjû’ brand soy, entered into partnership with the idea of doing business on a larger scale than had hitherto been attempted. That partnership was eventually dissolved, each partner starting business on his

own account, and subsequently many other firms of soy brewers were established, such as Saheiji Mogi ('Kikkoman' brand soy), Fusagoro Mogi ('Minakami' brand soy), Heibei Yamashita ('Kinoyene' brand soy), and Okuyemon Mogi ('Ichiyama' brand soy), and great prosperity has attended the industry as a whole. In 1825 when, as a result of a famine, the price of commodities rose very high and great distress prevailed amongst the masses, the Government of the Tokugawa Shogunate issued an edict ordering that as a means of alleviating the distress lower prices should be charged for commodities. It is noteworthy that the 'Kikkoman', 'Jôjû' and 'Kihaku' brands of soy (together with the four best brands of soy made in Choshi) were granted the special privilege of being permitted to retain their former prices, on account of their superior quality. Moreover, they were allowed to use the distinguishing mark 'Best Soy' which was the highest testimonial to their general excellence.

"Mr. Keizaburo Mogi, a leading authority on matters relating to the soy industry, began experiments in 1879 at Noda with the object of applying scientific and mechanical methods to the fermentation of the sauce. In 1882 his experiments had progressed to such an extent that steam was successfully applied to the brewing of soy, while at the present time further advance is in contemplation by the utilisation of electricity, the necessary plans for this having already been completed. Mr. Mogi also made a close study of the question of the improvement of the *kôji* (yeast), the most important ingredient of soy, and in 1899 he completed a perfect method for its preparation. For this discovery he obtained a patent from the Government, but in order that the industry as a whole might benefit from his investigations, he made the process public and available to all the brewers. He has also made important investigations in regard to a more rapid process of brewing and has thus rendered very valuable services to the soy industry in general, and to that of the Noda district in particular.

"There are many reasons for the unrivalled position which Noda Soy holds, but the chief cause of its success lies in the extreme care bestowed upon the selection of the necessary ingredients in order that only the very best may be used. The wheat, beans, and salt required for the brewing of soy are not produced in the neighborhood of Noda, but are purchased from distant localities specially noted for those products. Salt, for instance, is brought from Nagasaki, about ten hundred miles distant, and this alone is sufficient proof of the care best owed by the Noda soy brewers upon their product. As in other brewing operations, one of the main factors is the water supply, and Noda is exceptionally well provided in this respect, having been noted from ancient times for the abundance and purity of its water supply, which has its source in a natural well 3,000 feet deep."

"There are over 5,000 labourers employed in the various soy breweries and the fact that there has never been a strike or unpleasantness to any extent is very good

evidence that the work-people are satisfied with their lot and that employers are treating them fairly and with proper consideration."

• **Summary:** "History: The Hamaguchi Soy Company, which was formed in 1906, with a capital of ¥500,000, is the continuation of a very old firm founded 265 years ago [i.e., in about 1641] by the brothers Kichiyemon and Gihei Hamaguchi, ancestors of the present Mr. Kichiyemon Hamaguchi, the proprietor of the firm. These two brothers, natives of what is now Wakayama Prefecture, settled down in Chôshi, and opened a soy brewery, which has gone on progressing from that day to this. In 1825, the Yamasa brand was one of those accorded the privilege of being called 'The Best Soy' by the Tokugawa Shogunate.

Note: This is the earliest document seen (Feb. 2012) which states that a brand of soy sauce named Yamasa existed as early as 1825. The name of the company that makes this brand is not clear. Nor does this article state when the present company, Yamasa Shoyu Jozosho, was founded. We believe this company was founded in 1928.

"Mr. Goryo Hamaguchi, the father of the present proprietor, after a visit to Europe and America, in 1833, introduced some radical changes in the brewing of soy in his brewery, by an application of the most scientific principles. Mr. Kichiyemon Hamaguchi, the present head of the firm, continued the same enterprising policy of his father, and the business began to extend very much in consequence. In 1894 the firm was appointed supplier of soy to the Imperial Household by special warrant. On being transformed into a partnership concern, the business of the firm increased considerably, while experts were engaged to conduct scientific investigations. Dr. Kendo Saito, the well-known scientist, was entrusted with the study of soy fermentation.

"At present the firm owns two breweries, installed with steam plants, and employing over 600 hands. The annual output is approximately 8,000,000 gallons. Tokyo, Yokohama, and other large business centres, consume great quantities of the 'Yamasa' brand, and much of it is exported to Great Britain, the United States, Germany, Australia, China, Korea, Hawaii, and Vladivostok. The soy which goes abroad is contained in bottles of artistic appearance, well packed in boxes. The Hamaguchi Company was the pioneer in the export trade of soy, this being due to Mr.

Goryo Hamaguchi's tour in 1883, when he made a special study of the foreign taste for the Japanese sauce.

"As above mentioned, 'Yamasa' brand soy is supplied to the Imperial Household by special warrant. A great honour was done the firm when His Highness Prince Kan-in, the President of the Fifth National Industrial Exhibition, paid a visit of inspection to the brewery. In 1907 their Imperial Highnesses, Princes Kitashirakawa and Higashikuni went over the brewery, and made some observations highly complimentary to the proprietor. In the same year a further honour was done the proprietor, when he was appointed supplier of 'Yamasa' soy to His Imperial Highness the Crown Prince of Korea.

"Space does not permit of a full list of the prizes won by the company at various exhibitions. 'Yamasa' brand soy was awarded a first prize at every one of the five National Exhibitions which have been held in Japan. Abroad, either a gold medal or the Grand Prix was awarded at each of the following Exhibitions: Chicago [Illinois / Columbian] International Exposition, 1893; Paris International Exhibition, 1899; The Asia Exhibition (Hanoi, French Indo-China), 1903; St. Louis [Missouri] International Exposition, 1904; Milan Exhibition [Italy], 1905; and Seattle Exhibition, 1909.

"Mr. Kichiyemon Hamaguchi, the President of the company, was born in Wakayama Prefecture in 1862, and was educated at Keio University. In 1900 he made a tour round the world, and since his return has done much to assist in extending the nation's commerce and industry. In order to enlarge his business he converted it into a company, and owing in great part to his energy and enterprising spirit, the company has proved a conspicuous success. Indeed, the whole soy industry has profited by his labours. A gentleman of excellent character and reputation, he has sat in both Houses of the Legislature. Mr. Hamaguchi has been ably assisted in his work by Mr. Kichibei Hamaguchi, a director, and Mr. Tetsujiro Midzushima, the superintendent of the works, as well as by an industrious and efficient staff."

1873. Gilbert, A.W. 1910. Soy beans and fertilizer question. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 13(79):55. Oct. 5. [1 ref]

• **Summary:** The following is an extract from the *National Review*, of Shanghai, China: "It is well known that soy-bean cake has for years been the most popular fertilizer in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a less extent, have become purchasers of Manchurian beans, the question arises whether Japan will to be able to buy bean cake in huge quantities if the price rises appreciably. In studying this question two

factors should not be lost sight of: One is that Japan is herself a large grower of soy beans, having according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soy beans from China and Korea. The greater part of these beans is used for the purpose of human food—i.e., in making of 'soy,' 'miso,' and bean curd—but a portion by no means small is used also as a fertilizer.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years. In making such a review it will be noted that, both in the case of beans and of cake, the amounts imported in 1909 were record importations, but that the average price was the lowest since 1903. Should the price in the future be forced up very high in consequence of British and other demands, the presumption is that Japan would turn to sulphate of ammonia, if the cost per unit of nitrogen therein were less than the cost of bean cake. On the other hand, it must be remembered that the removal of the import duty on sulphate of ammonia in the United States of America means that the United States will probably absorb large quantities of the British output, and that Japan will have to pay a higher price if she wants a share of this fertilizer. Thus the outlook for nitrate of soda becomes a good deal brighter, and now that, owing to the subsidized Japanese line to (South) America, it is possible to get cheap freight rates, it looks as though (Chilean) nitrate of soda will be a serious competitor to the other nitrogenous fertilizers, except in the matter of wet rice cultivation.

"There is a point which, though obvious enough to those intimately connected with the trade, is sometimes overlooked in general discussions on the subject of bean cake, viz, that the British farmer can afford to pay a proportionately higher price for cake than the Japanese farmer, the reason being that in the United Kingdom the cake, after serving for provender, turns into a fertilizer, whereas in Japan it is employed as a fertilizer directly, without any intermediate use.

"As regards rock phosphate, most of the supplies have hitherto come from Ocean and other islands. Owing, however, to the new fertilizer law which prohibits any admixture in Japan of earth and sand with rock, it will probably be found that the phosphate from the above-mentioned islands, being pure and expensive, will be displaced by the cheaper varieties of rock from Tennessee and Algiers, which are naturally mixed with impurities." Address: Vice-Consul, Nanking.

1874. *Los Angeles Times*. 1910. Fertilizers for Japan. A scarcity of soy beans makes a market for Tennessee rock phosphate. Oct. 13. p. 113.

• **Summary:** "It is well known that soy-bean cake has for years been the most popular fertilizer in Japan. Now,

however, that the United Kingdom, and the Continent of Europe and America to a less extent have become purchasers of Manchurian [soy] beans, the question arises whether Japan will continue to be able to buy bean cake in huge quantities if the price rises appreciably.

"In studying the question, two factors should not be lost sight of: One is that Japan is herself a large grower of soy beans, having according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soy beans from China [Manchuria] and Korea. The greater part of these beans is used for the purpose of human food—i.e., in making of 'soy' [sauce], 'miso,' and bean curd [tofu]—but a portion by no means small is used also as a fertilizer.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years." In 1909 Japan imported record amounts of beans and cake, but "the average price was the lowest since 1903. Should the price in the future be forced up very high in consequence of British and other demands, the presumption is that Japan would turn to sulphate of ammonia, if the cost per unit of nitrogen therein were less than the cost of bean cake."

The "British farmer can afford to pay a proportionally higher price for cake than the Japanese farmer," since in the UK the cake, "after serving for provender [feed], turns into a fertilizer [manure], whereas in Japan it is employed as a fertilizer directly, without any intermediate use."

1875. *Tropical Agriculturist, Supplement (Ceylon)*. 1910. East Asiatic Co. and the soya bean industry. Soya cake factory erected at Copenhagen. 35(4):368. Oct. 15. Also titled Supplement to the Tropical Agriculturist and Magazine of the Ceylon Agricultural Society. [1 ref]

• **Summary:** A factory "has been erected there with capital provided by the East Asiatic Company at a cost of about 1,000,000 kr. (£55,500). It is estimated that as at present arranged 100 tons of soya beans can be pressed in 24 hours, and that, if necessary, the output could be increased. The factory appears to be well equipped and fitted with the latest improvements. The East Asiatic Company's own vessels are likely to largely contribute to the activity of the factory by bringing the beans from the East for pressing, though a quantity of soya beans has already been shipped from the United Kingdom [to Copenhagen]. It is anticipated that by establishing this, and in the course of time other oil cake factories, Denmark may be able to obtain a more effectual control over the price of butter than has been the case hitherto, and avoid the enormous fluctuations of price which of late have been so much in evidence."

"A French agency states that Mr. Li Yu Jin [sic, Li Yu-ying], who established the first soya bean industry in Paris,

has returned from China after consulting Chinese capital of F. 1,500,000 for developing this enterprise in Europe. The soya will be worked at Paris, Brussels, London, and Berlin, and will be consumed in the form of milk, sauce, soup, vegetable, jam, cheese, flour, and bread.—L. & C. [*London and China*] *Express*, Aug. 19."

Note 1. It is not clear whether soybeans have arrived yet in Denmark for processing by this new oil mill. Note 2. This is the earliest English-language document seen (March 2000) with the term "Soya cake" in the title.

1876. *Oil, Paint and Drug Reporter*. 1910. The soya bean and the fertilizer question. 78(17):41. Oct. 24. [1 ref]

• **Summary:** "An extract from the *National Review of Shanghai*, regarding the relation of the soya bean to the fertilizer question, has been sent to the Department of Commerce and Labor by Vice-Consul A.W. Gilbert from Nanking. The discussion of the subject by the Review is as follows:" There follows a long excerpt.

1877. Page, H. Orville (Pat). 1910. Maroon baseball nine at ambassadors reception in Japan... Orientals give Yankees many treats before games. *Chicago Daily Tribune*. Oct. 30. p. C4.

• **Summary:** Tokyo, Oct. 2.—"The University of Chicago baseball team has been entertained royally since its arrival in Japan. Wednesday night Waseda university tendered the maroons an elaborate banquet at Seiyoken, Uyema, and welcomed us formally."

"Move number two found them [the Japanese baseball players] squatted around on mats with their individual charcoal stove [sic, stoves] before them... The [Japanese] athletes relished most the item entitled 'niku nabe,' cooked in 'shoyu,' a bean sauce,..."

1878. Mene, Edouard. 1910. La Chine a l'Exposition de Bruxelles [China at the Brussels Exposition]. *Bulletin de l'Association Amicale Franco-Chinoise* 2(4):336-46. Oct. See p. 340-43, 346. [Fre]

• **Summary:** 1. The Chinese pavilion: In the beautiful and grandiose Universal Exposition of 1910, that a frightful fire partially destroyed, the Chinese section merits special mention. It is not an official exposition organized through the care of the Chinese administration. Rather, it is an exposition organized by five Chinese merchants. The last one, Mr. Tsu represents both soya and the ideal kite (*soja et cerf-volant idéal*).

Note: The meaning of *cerf-volant idéal* is unclear. The Chinese have long been known for their beautiful and well-designed kites, some with long, flowing tails. However, if Mr. Tsu was exhibiting kites, he would have used the plural form of the noun. Is he saying that soy is like a high-flying kite?

These exhibitors have gathered a certain amount of

indigenous and modern objects, commercial and artistic in a pavilion located in the section reserved to foreign countries (start of p. 339).

In the back of the room, to the right are displayed by Mr. Tsu, the different products extracted from one of most utilized plants in China: *Soja hispida*, Houang-teou, the soybean of the leguminous family.

One can observe plates filled with soybean seeds (*graines*), looking like little round (broad) beans (*fèves*), and some dehulled soya beans; jars filled with white soya cheese, looking like quark [tofu], cheese in round boxes, looking like Camembert [fermented tofu]; a jar with the skin of the soya cheese [yuba]; a vial with soya casein [soy protein].

A display case is filled with jars of different types of yellow, green, and black soybeans, of soya flour, of semolina, of a brownish soya coffee in bean and powder form, of bottles of soymilk, of soy oil, and of Soy [sauce], this condiment so utilized in Chinese cuisine. On a table are displayed soya pastries resembling in their shape, the Commercy madeleines [small sponge cakes shaped like sea shells], some noodles, macaroni and soya bread that is prescribed to diabetics as well as a gruel of soya flour. On the floor are placed several square soybean cakes (*tourteaux*), residue of the soya oil production, of a grey-yellow color, to be used as fertilizer. A brochure on soya-based food products, excerpted from the book *The Soybean (Le Soja)* by Mr. Li Yu-ying is being handed out through the care of the exhibitor, Mr. Tsu.

This brochure, titled: 'Soya based Food Products' (*Produits alimentaires à base de Soja*), Caseo-Sojaïne, rue Denis-Papin, les Vallées (Seine), describes these products and their preparation: soya milk, liquid or in powder form, derived from the grinding of the beans, after immersion, in water, for several hours. The grain content consisting of legumin or vegetable casein, is placed under a grindstone: one derives an homogenous, nutritive and digestible milk product. Fermented and powdered milk is produced, soya casein, extracted from the soya milk, with uses in food and in industry; soya flour, obtained by the grinding of the dehulled beans, completely deprived of their seed coat to lessen the proportion of cellulose and increase its digestibility. It does not contain any starch; soya bread, well utilized to feed diabetics; by perfecting fermentation, one makes a rather light bread, one that reminds one of rye bread; pasta / noodles; cookies, pastries, white- and pink-tinted pasta prepared with soya flour, soy sauce (Soy) with a bouquet that reminds one of burned onion that is used to enhance fish and vegetables; soya jam (*confiture de Soja*), similar in appearance and taste to chestnut cream (*à la crème de marrons*), soya oil for food use; green vegetable soybeans (*légumes de Soja*), whose sprouts may be used as a salad. As for the soybean cakes (*tourteaux*), these are used for animal feed and fertilizer.

In China, the *Soja hispida* (the soybean), with hairy

pod, with yellow, reddish, black, green, white, variegated beans, whose taste echoes the green bean, the lentil, the pea, and that has a high content of culinary oil, is grown, on a large scale, in Mongolia, in Manchuria, and in the provinces of Henan, Zhejiang, Jiangxi (*Ho-nan, Tchokiang, Chan-si et Chang-tong*). It is one of the most utilized plants from the culinary and industrial point of views.

Soy sauce, called Soy in English and in Chinese *Tsiang-yeou*, is a greatly-appreciated condiment that is prepared with yellow soybeans named *Houang-teou* and that one flavors with star anise, green anise, and grated orange rind. It is a blackish liquid, lightly syrup-like used to enhance the flavor of fish, meat, and vegetables. Another Chinese condiment [fermented black soybeans] is made with soybeans mixed with salt and ginger. In Canton, *Kiu-tsu* [*jiuzi*, Cantonese wine starter, a ferment] is made with soybeans, red rice, and leaves of *Glycosmis citrifolia*. As for soya cheese, it is made as follows (see footnote): Soak the soybeans in water for 24 hours to make them swell; drain off the water, grind while adding fresh water to form a slurry that is run through a filter. Stir it by hand, then pour it into a caldron, where it undergoes a slow cooking. Let it cool in a tub and remove and foam with a big spoon.

A thick film [yuba] is formed on the surface. It is lifted off with a round wooden stick shaped like a long chopstick (*baguette*) and it is allowed to dry on thin ropes. This skin is called skin of soya cheese [yuba]. To the remaining soymilk, add a little water mixed with calcium sulfate (*plâtre*) and several drops of nigari, which is magnesium chloride derived from the salt in salt beds.

Footnote at the end of page 342: See (1) *Bulletin of the Society for Acclimatation*, second series, volume 13, page 562, 1866, "On The production of tofu in China," by Paul Champion.

Stir in the liquid coagulant which will cause the casein in the soymilk to coagulate. Pour the warm mass into in a wooden frame or box lined internally with a fine cloth through which the liquid whey will seep. Atop the frame or box place a board loaded with weights to press the cheese which is of a grayish white color, looks like quark, and has a pea-pod taste (*à goût de pois*); with the addition of salt, this cheese will keep; without this precaution, it spoils. It is used to feed the impoverished portion of the population: often, it is fried in soya oil. Soya cheese [tofu] is manufactured on a large scale near Peking and in most of the sea ports of Southern China. It is mostly the town of Ning-po that is the center of this production. Each year, thousands of junks (*jonques*) loaded exclusively with soya cheeses leave this town harbor to reach other Chinese harbors.

Besides cheese [tofu], the most important soya product is the oil that is extracted from its beans, mostly the yellow beans called *Houang-teou*. This yellow oil, which is siccative / drying, has a special smell and a pea-pod taste. At Kaifeng (K'ai-fong) in Henan (Ho-nan) province, at Tsi-

nan in the Chan-tong, and at T'ai-yuan in the Chan-si, are located important soya oil manufacturing plants. But it is mostly Ningpo in the Tcho-kiang, that is the center for the production and the centralizing of soya oil. Much is also produced in Newchwang [Nieou-tchouang], and in Chefoo / Tantai (Tche-fou) in Shantung province. The soybean cakes (*tourteaux*), the by-products of soya oil processing, are a major export out of Newchwang and Chefoo; they are shipped to Swatow and Amoy to be used as fertilizer in sugar cane plantations.

These soybean cakes (*tourteaux*) are sought after as much as the beans themselves, and are to feed cattle, as are the pods, the stems and the foliage of the plant. The beans of *Hei-teou*, the black soya bean, mixed with cut up straw, are given as feed to horses and mules in Northern China and in Manchuria.

Note: This periodical was established to promote understanding and friendship among the people of France and China. Soja is mentioned on pages 341, 342, 343, and 346. Address: Dr.

1879. *Proceedings of the Linnean Society of London*. 1910. Soy beans. Oct. (122nd Session). p. 53-55. Meeting of March 17, 1910.

• **Summary:** "Mr. J.H. Holland, F.L.S., also on behalf of the Director of Kew, showed samples of the Soy Bean, *Glycine Soja*, Sieb. & Zucc. (*G. hispida*, Maxim.), with herbarium specimens of the plant producing this seed.

"He stated that the seeds of 'Soy,' of which there are many varieties, may be black, brown, green or greenish-yellow, yellow, or mottled; sometimes seeds are described as white, but there appears to be no Soy bean true white in color.

"The plant is variously known as 'Soy,' 'Soja,' 'Soya,' 'White Gram,' 'American Coffee Berry,' and 'China Bean.'

"In China and Japan, where the plant has been cultivated for many years—perhaps centuries—the beans are an important food, and they are also said to be used as a substitute for coffee.

"Bean cake and the sauce known commercially as 'Soy' is also made from them. It is stated that in the manufacture of the soy of commerce, in addition to the beans, the requirements are simply a large amount of salt and flour and an unlimited supply of fresh water. Wenchow is an important centre of the manufacture, and here the bean used for the purpose is said to be chiefly the white form from Chinkiang. The cultivation has been extended to India, Africa, and other warm countries...

"The principal use of the beans in this country is for the extraction of the oil, of which they contain about 18 per cent. suitable for soap-making, and in general as a substitute for cotton-seed oil. The residue, after the extraction of oil, is suitable for feeding cattle, and for this purpose appears likely to become a serious competitor of cotton-seed cakes,

sunflower-seed cakes, linseed cakes, &c."

"Beans and bean-cake exported from China have gone chiefly to Japan and certain parts of Asia, but recently, beginning about November, 1908, an important trade has been developed in them more especially with the beans, between Manchuria and Europe, Dairen (Dalny) being the chief place of export.

"The cause of this sudden development may, perhaps, be attributed to the facts that a great increase in the cultivation took place in Manchuria during the Russo-Japanese war to meet the demands for food of the Russian Army; then, when the troops were withdrawn, the production being found, profitable, and the home demand reduced, other markets were sought. The trade extended to Japan, and afterwards, assisted perhaps by a period of depression in that country, it extended to Europe, where the industry has created interest in many quarters.

"The amount of the 1908 crop sent to Europe through Vladivostok up to July, 1909, was 180,000 tons, the greater part destined for the English market (Hull and Liverpool), and the remainder going to German (Hamburg) and Scandinavian ports.

"Up to 1907 the export of soy beans from Manchuria did not exceed 120,000 tons annually. During 1908 the export rose to 330,000 tons (one half shipped from Dairen; 100,000 tons from Newchang, and 65,000 tons by rail via Suifenhoh [Suifenhe] to Vladivostok), the increase, it is said, being due entirely to the demand from Europe."

Summarized in *Tropical Agriculture*. 1910. July 15. p. 28. Address: England.

1880. Lewkowitsch, Julius. 1910. Die Industrie des Soyabohnenöles [The soya-bean oil industry]. *Chemische Industrie (Berlin)* 33(22):705-08. Nov. 15. Whole number 670. (Chem. Abst. 5:597). [3 ref. Ger]

• **Summary:** This is a major report on the world soybean oil industry. "In an astonishingly short period of time, the almost unknown soybean has become a major oilseed in Europe." The method of separating the oil from the soya bean in Manchuria is to soak the seeds in water overnight, to crush them, and, after boiling the mass with a little water, to express the oil in a primitive form of press. Owing to the length of time during which the pressure is continued, the yield of oil is as high, if not higher, than is given by the modern hydraulic presses [used in Europe]. The expressed oil is mainly used for food, while any that is unfit for that purpose is burned in lamps. The residual cakes in the press, which are about 3 inches thick and 2 to 3 feet in diameter, form a staple food product. The bean cakes in China are called *teou-fou-tcha* [sic, actually this term refers to okara].

Some idea of the trade done in these soya bean cakes may be formed from the fact that during the year 1904 no less than 160,000 tons of soya bean cake (not including the beans themselves or the oil) were exported to Japan alone,

although that country itself produced about 2,500,000 hl. (1 hectoliter = 100 liters, so 6,875,000 bushels) of beans, which were utilised in 11,000 factories that manufacture soy sauce. In the year 1909 the quantity of beans exported from Manchuria to Japan reached 600,000 tons.

Until two years ago considerable difficulties stood in the way of the trade with Europe, for the long sea-voyage through the tropics and especially through the Red Sea, had such a deteriorating effect upon the beans, that, after removal of about 10 per cent of oil, the residual oil cake was quite unsuitable as a feeding stuff. Only a small amount arrived in Liverpool, where the resident Chinese created an insignificant demand for their favorite dishes. Nevertheless, small amounts of soybean cake (*Soyakuchen*) were imported to England for use in mixed feeds, although this branch of trade had but a paltry existence. Therefore the confluence of a number of particularly favourable conditions were required to introduce the beans into the world and European markets. During the Russo-Japanese War, soybeans served as a staple food for the Japanese, and later the Russian soldiers. After the war, Manchuria was thrown open to the commerce of the world. Thanks to the industrial activity of the Japanese and the decline in the shipping rates, a favorable opportunity arose, after the soldiers left, for exporting large quantities of the beans to England.

The first large consignment reached Liverpool towards the end of 1908, and its arrival coincided with a period of great scarcity of other oils and fats, due to various causes, and, in particular, to the increased consumption of edible fats, and the growing demand for dynamite glycerin for the Transvaal mines and the construction of the Panama canal. In addition to this, the cotton-seed harvest in the United States had been poor, and this had caused a considerable increase in the price of Egyptian cotton-seed, so that many oil-mills in England had been forced temporarily to suspend work. Hence attention was at once directed to the new raw material, large quantities of which were available at favourable prices.

The imported beans had the following average composition: Water 10%, oil 18%, proteins 40%, carbohydrates 22%, fibre 5%, and ash, 5%. It was not possible to reckon upon a higher yield of oil than 10 per cent. from the beans, but feeding experiments with the oil-cake showed that while it produced as much flesh as cotton-seed oil-cake, it caused the cows to yield a milk richer in cream. Thus for some time past soya cake has fetched higher prices in the market than cotton-seed cake.

Had it not been for the timely appearance of soy-bean oil the already high price of cotton-seed oil would have been at least 25 per cent. higher, and there would have been a corresponding increase in price of all the fats used in the soap industry. Immense quantities of the new oil were employed in the manufacture of soap, and during the year 1909 more than 400,000 tons of the beans were imported into England. Only small quantities were sent to America,

and, relatively, very little to the continent of Europe.

The high tariff on raw materials in Germany and in France prevented the importation of the seed, and at first the English oil manufacturers took advantage of this, and exported large quantities of soya oil and soya cake both to America and the Continent. Only within the last few months have the German oil manufacturers succeeded in obtaining the concession that soya beans may be imported into Germany free of duty, but in the near future the production of soya oil and soya cake may become an important branch of the German oil industry.

The chief use of the new material in the manufacture of soap is as a partial substitute for cotton-seed oil in the production of hard soaps, while for soft soaps it can completely replace cotton-seed oil and partly replace linseed oil. Soya-bean oil has also been extensively used as an edible oil, and in admixture with cotton-seed oil large quantities of it have been consumed in England. It has also been employed as an oil for the preservation of sardines. Attempts were made to use it as a substitute for linseed oil in the color and varnish industries, but it can never replace the latter oil completely.

The composition of soya-bean oil renders it particularly suitable for the adulteration of both linseed and cotton-seed oils, while it is also frequently employed as an adulterant of Japanese rape oil.

The chief ports for the export of soya beans are Newchang, Dalny, Vladivostok, and Hankow, while the principal European ports for their importation are Hull, London, and Liverpool, and, more recently, Hamburg. The supply of the beans is assured for several years, for, in addition to that produced in Manchuria and South China, attempts, which appear likely to be successful, are being made to cultivate the plant in West Africa and in the East Indies.

In the Southern States of North America the soya plants are already grown for fodder, and experiments are now being made to cultivate them for the production of oil seed. It has already been proved that the beans grown in West Africa from Asiatic seed do not yield less oil than the original seed. The author lived 1857-1913.

Note 1. This is the earliest document seen (March 2001) concerning soybeans in connection with (but not yet in) Panama or the Canal Zone. Address: London.

1881. *Times (London)*. 1910. Soy bean as a fertilizer. Nov. 21. p. 14, col. 6.

• **Summary:** "Several subjects of importance to this country are discussed in the *Daily Consular and Trade Reports* published by the Bureau of Manufacturers, Department of Commerce and Labour, Washington [DC]. A note upon soy beans as a land fertilizer is particularly noteworthy in view of the doubt expressed in this country last year as to their manurial value."

There follows a summary of: Gilbert, A.W. 1910. "Soy beans and fertilizer question." *Daily Consular and Trade Reports* (U.S. Bureau of Manufactures, Department of Commerce and Labor). Oct. 5. p. 55.

1882. *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)*. 1910. Analyses de soja [Analyses of soybeans]. 10(92):427-28. Nov. [Fre]

• **Summary:** "The Colonial Garden [*Jardin Colonial*, probably located in Paris, France] has recently had the opportunity to conduct a number of analyses of samples of the soybean [*Soja*] and of products made from these seeds. A compositional analysis is then given for white soybeans and black soybeans from northern China, white soybeans imported from Denmark, dehulled white soybeans, flour of white soybeans, soybean cake (from white soybeans), and bread made from white soybeans. The bread contains 15.53% moisture, 3.74% minerals, 30.25% nitrogenous (protein) materials, 7.36% fat, and 17.88% saccharifiable materials.

Page 428 contains an analysis of soy sauce (*la Sauce de Soja*), which is said to be known, in China and Japan, under the name of "Schoyu." Solids comprise 39.59% of the product on a dry-weight basis. These solids are composed of ash 41.70%, nitrogenous materials [proteins] 18.00%, and oil 4.2%. The mineral portion is very rich in chlorine, potash, and soda or kali (*soude* [*sodium*]), and rather rich in sulfuric acid; it contains traces of phosphate.

Note: This is the earliest French-language document seen (April 2012) that uses the word *Schoyu* to refer to soy sauce.

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in Denmark. This document contains the second earliest date seen for soybeans in Denmark (Nov. 1910). According to Thompson (1914, p. 15) Denmark first started importing commercial quantities of soybeans in 1911; that year they imported 20,000 metric tons. Address: Le Jardin Colonial, Paris, France.

1883. *Oil, Paint and Drug Reporter*. 1910. Prospects of lower soya bean values. Difference of opinion abroad—Crop large and quality better. 78(23):23. Dec. 5.

• **Summary:** The new Manchurian soya bean crop is expected to be 25-30% larger than last year's crop. One firm predicts that about 1,550,000 tons of soya beans will be available for export from the 1910-1911 crop; Japan will take 600,000 tons and South China 200,000 tons leaving 750,000 tons available for Europe. "The beans are required in Japan for making Japanese sauce—a national food in demand during the winter."

A table shows shipments of soya beans from Manchuria. from Oct. 1 to Sept. 30, 1908-09, and 1909-10, from three ports: Dalny (the leading port both years), Newchwang, and Vladivostok (having the smallest exports of the three).

1884. *Hartford Courant (Connecticut)*. 1910. Note and comment. Dec. 19. p. 8.

• **Summary:** "Japanese living in our Pacific states are importing canned beef from their native land." It "is known to the trade as 'Yamatoni' beef—'Yamato' being the poetical name for Japan and 'ni' meaning stewed or cooked. Before being cooked, the beef is sliced so as to permit of its being picked up with chopsticks. It is then thoroughly cooked with shoyu and sugar. Sometimes a little thin-sliced fresh ginger is added as a flavor" before it is canned.

1885. Li, Yu-ying. 1910. Produits alimentaires et condimentaires à base de graine de soja [Food products and condiments made from the soybean]. *French Patent* 424,125. 2 p. Application filed 27 Dec. 1910. Issued 5 May 1911. [Fre]

• **Summary:** "This invention has for its object the manufacture of products based on cooked soybeans (*graines de soja cuites* (*pois chinois* = Chinese peas)), which can be divided into two large categories: 1. Products fermented with salt, including soy sauce (*la sauce de soja*) and soybean paste (*la pâte de soja*). 2. Non-fermented, sweetened products, including sweet soya preserves (*la confiture de soja*) and soy powder (*la poudre de soja*), which can be utilized in pastry (*la pâtisserie*) and confectionery (*la confiserie*).

The process for making each type is described in general terms. To the fermented sauces "can also be added spices such as pepper, cloves, ginger, nutmeg, pimento / allspice, etc. Or sugar can be used in place of the spices. The soy sauce or paste obtained, as has just been said, can be concentrated or dried by heat or evaporation.

"For the non-fermented, sweetened products, including soy confectionery and soy powder, one proceeds as follows: For the confectionery, the soybean seeds are dehulled, cooked, and crushed. Then this pulp is mixed with about one-third part sugar. Or, one can add dry fruits, chestnuts, almonds, hazelnuts, cocoa*, etc. The product can be dried to obtain a soy-based powder, which can be employed in various ways in pastry and confectionery. This powder is different from flour, not only because it comes from cooked soybeans, but also because it contains none of the cellulose in the soybean hulls."

Note: This is the earliest document seen stating that soy can be used with cocoa. *Webster's Dictionary* defines cocoa (pronounced CO-co, a modification of the Spanish term cacao), a term first used in 1577, as "1: Cacao. 2a: Powdered ground roasted cacao beans from which a portion of the fat has been removed." *Webster's Dictionary* defines cacao (pronounced kuh-KAO, derived from the Spanish from Nahuatl *cacahuatl* cacao beans, and first used in 1555) as the dried partly fermented fatty seeds of the cacao (a South American tree, *Theobroma cacao*), used in making cocoa, chocolate, and cocoa butter—also called cacao bean, or cocoa

bean. Address: Resident in France (Seine).

1886. Li, Yu-ying. 1910. Sauce consisting chiefly of soja grains. *British Patent* 30,351. 2 p. Date of application, 31 Dec. 1910. Accepted 29 Feb. 1912.

• **Summary:** Sauces. Cooked soy beans, to which flour may be added, are fermented with ferments such as “sojaobacille” (*vide* 30,275, 1910, *supra*), and the fermented mass is placed in saltwater. When matured, it is pounded to a paste or is diluted with saltwater and filtered. Alternatively, “soy milk,” obtained as described in 30,275, 1910, is fermented with sojaobacille, sodium chloride being added, and filtered. Spices or sugar may be added, and the products may be concentrated or dried.

Note: This is the world’s earliest patent seen for soymilk.

1887. Friedenwald, Julius; Ruhräh, John. 1910. The use of the soy bean as a food in diabetes. *American J. of the Medical Sciences* 140:793-803. Dec. [9 ref. Eng]

• **Summary:** The article begins: “The soy bean (*Glycine hispida*), sometimes incorrectly called the soja bean, is an annual leguminous plant...” It continues with a brief but accurate history of the soy bean in Europe and the USA, a botanical description of the plant, examples of food uses such as boiled whole dry soybeans, green vegetable soybeans (“The beans are eaten as a vegetable, in soups, sometimes picked green, boiled and served cold with a sprinkling of soy sauce and sometimes served as a salad... If the beans are green, the preliminary soaking may be omitted.”), soy sauce or shoyu, natto, tofu, miso, yuba, a coffee substitute, and whole dry soybeans. A brief description of the process for making tofu is given, together with nutritional analyses of tofu, and 4 varieties of soybeans. “The most striking point about the bean is that it contains no starch, or, at least a very small quantity, which is strange when one considers it resembles the various beans very closely and all other varieties of beans are extremely rich in starchy materials.” An analysis of the “gruel flour from the soy bean” made by the Cereo Co., Tappan, New York, shows it to contain 14.64% protein, 19.43% fat, no starch, and no reducing sugars. “Our own experience with the soy bean in diabetes extends over a series of eight cases.” The 8 cases are then described individually. Cooking directions and recipes are given for making gruels, broths, and muffins using “soy gruel flour” or “soy flour.”

The authors conclude: “(1) The soy bean is a valuable addition to the dietary of the diabetic on account of its palatability, and the numerous ways in which it can be prepared. (2) The soy bean in some way causes a reduction in the percentage and total quantity of sugar passed in diabetic subjects on the usual dietary restrictions.” Address: 1. M.D., Prof. of Diseases of the Stomach, College of Physicians and Surgeons, Baltimore, Maryland; 2. M.D., Prof. of Diseases

of Children and Therapeutics same college.

1888. Honcamp, F. 1910. Die Sojabohne und ihre Verwertung [The soybean and its utilization]. *Tropenpflanzer (Der) (Berlin)* 14(12):613-34. Dec. (Chem. Abst. 30:45). [9 ref. Ger]

• **Summary:** Contents: Introduction. Utilization as food and food adjuncts (stimulants / enjoyables) (*als Nahrungs- und Genussmittel*). Use for technical purposes. Use for fodder.

According to English consular reports the total production of soya beans in China amounted in 1907 to 580,000 tons, rising in the following year to 850,000 tons. During the year 1909 no less than 35 million kg of the beans passed through the Suez Canal.

Harz classified the varieties of *Soja hispida* into 2 main groups, one containing those of strongly compressed form and of olive green to brownish-black color, and the other swollen varieties more or less sickle-shaped, and of yellowish-brown to deep brown color.

Dietrich and König [1891] conducted 20 analyses of the soybean and found the following average composition: Water 11.34%, crude protein 35.11%, crude fat 16.98%, nitrogen-free extract 26.18%, crude fiber 5.88%, and ash 4.51%.

An analysis of the inorganic constituents of the beans by Schwachhöfer gave the following results: Potassium oxide, 44.56%; sodium oxide, 0.98%; lime, 5.32%; magnesia, 8.92%; iron oxide, trace; silica, trace; phosphoric acid, 36.89%; sulphuric acid, 2.70%; and chlorine, 0.27%.

Both in China and Japan the black varieties are boiled and roasted and eaten with rice, while the green and white varieties are ground to meal and baked into cakes, etc. The soy sauce, which is now largely exported to England and America, and used in the manufacture of other sauces, is prepared from wheat and a small light yellow variety of the bean, with the addition of salt and water, the prepared mass being fermented in open vessels at as low a temperature as possible for a period of 8 months to 5 years, and the sauce then separated from the residue. Another product made from the beans in Japan, and used in the preparation of soups and flavors for cooking, is know as miso. In addition to these, a so-called bean cheese (tofu), and a similar product from which the bulk of the water has been removed (kori-tofu), are prepared from soya beans in Japan.

Attempts to acclimatize the plant in Germany have not yet proved successful, although it may be possible to introduce an early-ripening variety with a short vegetation period.

Note: This is the earliest document seen (Aug. 2007) that gives soybean production or area statistics for China. It is not clear whether or not this includes Manchuria, or refers only to Manchuria. Address: Prof., Germany.

1896. Encyclopædia Britannica (11th ed): Bean. 1910. New York, NY: Encyclopædia Britannica, Inc. See vol. 3, p. 572, 573c.

• **Summary:** “The Soy bean, *Glycine hispida*, was included by Linnaeus in the genus *Dolichos*. It is extensively cultivated in China and Japan, chiefly for the pleasant-flavoured seed from which is prepared a piquant sauce. It is also widely grown in India, where the bean is eaten, while the plant forms a valuable fodder; it is cultivated for the latter purpose in the United States.”

Note: The 11th edition of the Encyclopædia Britannica is considered by many to be a classic, perhaps the best edition of this famous work ever published. The key to its use lies in the index.

1897. Freshel, Maud Russell Lorraine (Mrs.). 1910. The golden rule cookbook: Six hundred recipes for meatless dishes. Originated, collected and arranged by M.R.L. Sharpe. New edition. Boston, Massachusetts: Little, Brown and Company. viii + 323 p. Illust. Recipe index. 21 cm.

• **Summary:** This important, early vegetarian cookbook was first published in 1908 (copyright 1907) under the title *Six hundred recipes for meatless dishes*. The author's full name was Mrs. Maud Russell (Lorraine) Sharpe; thus her maiden name was Maud R. Lorraine. Born in 1867, she sometimes writes her first name “Emmarel.”

Worcestershire sauce is called for in many recipes: Black bean soup (p. 48-49). Savoury rice (p. 189). Macaroni bianca (p. 190-91). Fried eggs (p. 231; “A little Worcestershire sauce or walnut catsup heated in the pan and poured over fried eggs adds variety”). Egg savoury (p. 275; “sprinkle with Worcestershire sauce, or any good sauce,...”). Egg sandwiches (p. 283; “sprinkle with Worcestershire sauce”).

A “fourth printing” (Feb. 1926 edition) was issued by Dodd, Mead and Co. in New York. Part of the title was changed slightly to read: *Originated, collected, and arranged by M.R.L. Freshel*. Apparently between 1910 and 1926 she had divorced Mr. Sharpe and married Mr. Freshel. Address: Providence House, Chestnut Hill, Massachusetts.

1898. Hirtzler, Victor. 1910. *Hotel St. Francis: Book of recipes and model menus. L'art culinaire*. San Francisco, California: Putney Haight. Subscription edition. [31] + 67-307 p.. Illust. No index. 24 cm.

• **Summary:** The legendary Victor Hirtzler, a native of France, was one of America's first “celebrity chefs.” He was chef of the Hotel St. Francis in San Francisco from 1904 (the year the hotel was built) until 1926. The lavish hotel was a success right from the start. It “was the best known hotel in San Francisco and probably the best known west of Chicago” [Illinois]. “If the hotel was a grand theater, Victor was its greatest actor; with his extravagant French accent, neatly pointed mustache and beard, and bizarre costumes, he exceeded even the Hollywood portrait of a master chef” (Source: MSU Feeding American—biography of Hirtzler, 1919).

On unnumbered pages at the front of the book are: Illustration of Hotel St. Francis, San Francisco, with trolley car and 3 flags flying. About the Hotel St. Francis. To epicurean San Francisco. Victor Hirtzler, Chef de Cuisine, Hotel St. Francis (with full-page portrait photo). Patrons of this first, or subscription edition (8 pages of names, 2 columns per page). Recipes published in *The Evening Post* (SF). Foreword: Scraps of culinary information. Preface: One minute home talk by Victor.

Table of Contents. Part I: Victor's two hundred model menus, selected to provide for all ordinary and special meals. Special breakfasts. Special Luncheons. Special dinners. Special suppers and midnight bites. Part II: General advice on selections and points involving success in cooking, by Victor. Victor's own recipes: Bread, rolls, muffins, buns, etc. Soups, purees, consommés, etc. Preserves, confections, nuts, dainties, etc. Ices, coupes, fancy drinks, etc. Miscellaneous special dishes. Hors d'oeuvres, tidy bites, etc. Salads, green dishes, heavy and light preparations. Meats, entrees, dinner dishes, etc. Cocoa, coffee, beverages. Eggs—Omelettes and other forms. Sauces, dressings, gravies, etc. Vegetables, special preparations, etc. Pastries, puddings, cakes, desserts, etc. Fish, oysters, sea food, etc.

Worcestershire sauce (called simply “Worcestershire,” as in “a dash of Worcestershire,” in 8 recipes) is used as an ingredient in a surprising 20 recipes in this cookbook—thus clearly showing its standing as a highly respected sauce and ingredient in the USA. Most of these recipes were served at dinner and are based on animal products (fish or shellfish, meat, poultry, eggs, cheese, or milk); some are salad dressings or sauces. The recipes using Worcestershire sauce

are: Manhattan clam chowder (with “a wine-glass of tomato catsup,” p. 155-56). Sardine paste sandwich (p. 185). Welsh rarebit (p. 185). Venetian egg, in chafing dish (p. 186). Baked steak en casserole (p. 203). Brains with black sauce (p. 204). Curried lamb, East Indian style (p. 222). Pigeon pot pie, English style (p. 223). Baked porterhouse (p. 228). Miroton [stew containing beef with onions devilled] or beef or meat (p. 29). French dressing (p. 251). English Colbert sauce (p. 253). Devil sauce (p. 255). Parisian tomato sauce (p. 258). Curry sauce (p. 261). Bengal oysters (p. 291). Devilled crab in shells (p. 294-95). Devilled lobster (p. 301). Coquille of fish (p. 304). Crab cocktail Victor (p. 306).

Catsup / ketchup is used in many recipes, such as: Raisin cocktail (“half a pint of catsup,” p. 187). English Colbert sauce (“two teaspoons of mushroom catsup,” p. 253). Sauce with spaghetti (“three or four spoonsful of catsup,” p. 256). Oysters a la ancienna (“putting on each bivalve a teaspoonful of catsup,” p. 292). Crab cocktail Victor (“make a sauce of three-quarters cup of tomato ketchup, one teaspoonful of Worcestershire,...” p. 306). Almonds are also used in many recipes. The cruelest recipe: “How to boil a terrapin. Take two live terrapin and put into boiling water for two minutes...”

Note: Many advertisements for food and drink are scattered throughout this book. Address: Chef of Hotel St. Francis, San Francisco [California].

1899. Inouye, Jukichi. 1910. *Home life in Tôkyô*. Tokyo, Japan: Printed by the Tokyo Printing Co. vii + 323 p. No index. Illust. (some color). 23 cm. Facsimile edition reprinted in 1985 by KPI (London & Boston). [Eng]

• **Summary:** Chapter 5, “Meals,” states (in a description of making breakfast): “But in point of utility the soy bean comes next to rice, for our soy sauce which enters into almost all dishes is made from the bean, wheat, and salt. So extensively is this sauce employed that table salt is comparatively little needed. The bean is also the principal ingredient in *miso*, which is a mixture of the soy bean, steamed and pounded, with rice-yeast [koji] and salt. This *miso* is largely used in making soup; and the soups into which it does not enter are usually flavoured by boiling shavings of sun-dried bonito and straining them off” (p. 58).

“After the rice-pot is removed, another pot is put over the hearth for making *miso*-soup... *Miso*-soup contains strips of garden radish [daikon], edible seaweed (*alopteryx pinnatifida*) [wakame], bean-curd [tofu], egg-plant, or other vegetables according to season. These two, the rice and the soup, are all the cookery required in the morning. There must, of course, be hot water for tea.” Pickled vegetables (called *kôkô* or *kô-no-mono*) especially garden radish, invariably accompany Japanese meals (p. 58-59).

“The breakfast, then, is very simple. Sometimes the family take their meals at a large low table which is set before them [as they sit on their heels in the *seiza* position

on tatami mats] at each repast; but often a small tray, about a foot square and standing six inches or more high, is placed before each member. In the left corner of the tray near the person before whom it is set, is a small china bowl of rice, while on the right is a wooden bowl of *miso*-soup. A tiny plate of pickled vegetables occupies the middle or the farther left corner, while any extra plate would fill the remaining corner. This plate also holds something very simple, such as [*umeboshi*] plums preserved in red perilla leaves, boiled kidney beans, pickled scallions, minute fish or shrimps boiled down dry in soy sauce, a pat of baked miso, shavings of dry bonito boiled in a mixture of soy and *mirin*." An illustration (line drawing) shows such an individual meal tray, with chopsticks resting on the rim of the tray (p. 59-60).

"Soy [sauce] is usually sold in wooden kegs as it does not change [spoil] with time; but the poor buy it in half-pint bottles" (p. 68).

The midday meal is very simple. But the "evening repast is the principal meal of the day... fresh fish is more frequently served than at noon. The fish may be boiled in a mixture of *mirin* and soy, be put into a soup made with an infusion of dried bonito shavings, be roasted on the iron netting with a sprinkling of salt or repeated coatings of soy, or be taken raw in thin slices [*as sashimi*]. This raw fish is a peculiarly Japanese dish" (p. 70).

Note 1. In Japan, almost everything is done in an orderly way, followed by nearly everyone. There are rules (often unwritten) for how to do almost everything.

Chapter 6, "Food," states: "Sea-weeds are also in great demand. Of these the principal are the *konbu* (*Laminaria japonica*), which is largely exported into China, and the laver [*Porphyra tenera*], which is obtained in this sheets [*nori*] and taken with soy alone or with rice rolled into it." Yellow chrysanthemum flowers are also used as food, "either fried with a coating of *kuzu* (*pueraria Thunbergiana*) or boiled in brine and pressed" (p. 72).

Eels are eaten, with bamboo skewers passed through them; "they are roasted over a fire, being from time to time dipped in a gravy [sauce] of *mirin* and soy. Tokyo is especially noted for eels served this way." Sun-dried cuttlefish, which are flat and hard, "are cut into slices which are roasted and dipped in soy" (p. 73).

"As we do not use a knife and fork at table, all fowls have to be cut up before they are served... The commonest method with the domestic fowl and duck is to boil them in small slices in a shallow pan with bits of onion in a gravy [sauce] of soy, *mirin*, and sugar." "It is only of recent years that we have begun to eat beef and pork; but we have in Tokyo a large number of shops where they are sold." One kind of shop is "a sort of restaurant where beef is served in the same manner as the domestic fowl and duck above mentioned" (p. 74).

"Though cooking is mostly done at home, no small quantity of small quantity of prepared food is bought for the

meals. The most important of such food is the bean-curd [tofu]. For this the soy bean is soaked in water, ground, steamed, and strained; and the liquid is allowed to coagulate by the addition of brine [*nigari*] and then pressed in a square box with a cotton-cloth bottom until the water has been drawn off, leaving behind a soft white curd. This curd is cut into small slices and put into soup in the morning; it is sometimes thrown into hot water, and as soon as it is warmed [*as yudofu*], dipped into a mixture of soy and *mirin* and eaten. It is also fried. Indeed, the bean-curd shares with the *tai* [sea-bream] the distinction of having a special treatise dealing with a hundred ways of dressing [cooking / serving] it" (p. 74).

"As there is no dessert at a Japanese meal, fruits are commonly eaten at odd hours, especially by children." Apples are grown mostly in Yezo [Hokkaido], "the most northerly of the larger islands" (p. 75).

A common dish for the bever [a light lunch eaten between meals] is the (*soba*) or buckwheat noodles. Soba "is dipped before eating, into an infusion of bonito shavings flavoured with a little soy and *mirin*, to which small bits of onion [*negi*] and Cayenne pepper have been added" (p. 77).

Another inexpensive food "is a kind of cracknel [*senbei*] made by baking and dipping small disks of rice or wheaten flour in soy" (p. 78).

"The bulk of confectionery is made of rice, red beans [*azuki*], millet or sugar. Glutinous rice is steamed, pounded in a wooden mortar into a pasty consistency, and left to cool" [to become mochi]. "The red bean is boiled, pounded, and strained through a coarse cotton bag to get rid of the skin, though the latter is sometimes retained, in which case the straining is unnecessary, and finally mixed with sugar" to make "red bean jam" [*an*], which "is the most important ingredient of Japanese sweetmeats as there is in our confectionery no other equivalent... The red bean jam is also used in making soup into which small rice dumplings are thrown; this soup is much in demand, especially in winter, to while away the tedium of long evenings. The red bean is also boiled with rice to give it a colour; the red-bean is eaten in old-fashioned families three times a month, on the first, fifteenth, and twenty-eighth" (p. 80).

Note 2. This is the earliest document seen (May 2011) that uses the term "red bean jam" to refer to Japanese *an* [sweet *azuki* bean paste].

"Starch extracted from the root of the *kuzu* (*pueraria Thunbergiana*) is also much employed in confectionery." "By steaming a mixture of red beans, sugar, wheat, and *kuzu*, we get a sweet dark-red cake, which is almost as popular as the sponge-cake" (p. 80).

Inouye, who lived 1862-1929, lived to witness the Meiji period end and westernization begin. A scholar, journalist, translator and Japanese diplomat, he served at Japanese embassies in Belgium and the United States. Returning to Japan in 1918, he devoted the remaining years of his

life to compiling English-Japanese and Japanese-English dictionaries.

Note 3. This book comes in an elegant, traditional “folding case” (*chitsu*), consisting of five stiff pieces of paperboard, covered with cloth, and held in place by two ivory-looking pegs (each 3 cm long), each of which slips into a cloth sleeve. This folding case performs much the same function as a Western slipcase. Address: Tokyo, Japan.

1900. Lafar, Franz. 1910. Technical mycology: The utilization of micro-organisms in the arts and manufactures. Vol. I. Schizomycetic fermentation. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. xvi + 312 p. Introduction by Dr. Emil Chr. Hansen (Principal of the Carlsberg Laboratory, Copenhagen). Illust. (90 figs). Index is in Vol. II. 23 cm. [Eng]

• **Summary:** This first volume discusses bacterial (“schizomycetic”) fermentations. Richly illustrated, it also includes accurate historical background on many subjects. An extensive bibliography for both this volume and volume II appears at the back of volume II (p. 417-518).

The Preface, by Emil Chr. Hansen of Copenhagen, states (p. vi): “Within the last two decades the study of Microbiology has made gigantic strides, both in the pathological and technical branches of the subject; and just as investigations into the Physiology of the higher plants gave the first impetus to the establishment of Agricultural Experiment Stations in all countries, so, in like manner, have the Physiology of Fermentation and Technical Bacteriology called into existence, within the last few years, a number of Stations and Laboratories for the development of those branches of industry where micro-organisms play an important part.” The first three chapters, comprising the introduction, give an interesting early history of the discovery of fermentation. Their contents: 1. The theory of spontaneous generation: Definition, discovery of fermentative organisms, Needham’s demonstration in favour of ‘Generatio Æquivoca’, Spallanzani’s experiments, Franz Schultze’s experiment, foundation of the science of antiseptics by Schwann, labours of Schröder and Dusch, Pasteur’s examination of the theory, Béchamp’s microzyme theory, spontaneous generation only unproven, not impossible. 2. Theories of fermentation: The alchemists—Stahl’s theory of fermentation, Gay-Lussac’s opinion, Cagniard-Latour’s vitalistic theory, Th. Schwann’s researches, Fr. Kützing’s general theory, Liebig’s decomposition theory, Pasteur’s theory. Nägeli’s physico-molecular theory, the enzymes and M. Traube’s ferment theory, general definition of fermentation, so-called spontaneous fermentation of sweet fruits, decompositions effected by light and air.

In Chapter 31, titled “The fermentation of cheese and allied decompositions” (p. 243-52) are sections on “Pure culture ferments” (p. 246-47) and “Natto and miso” (p. 247-

48; each a kind of “vegetable cheese”). The latter section also discusses the Soja bean, Fr. Haberlandt, koji, shoyu (called shojou, soy or shoyu), tofu and nukamiso. Reports by H.C. Prinsen-Geerligs “on the preparation (by the aid of fungoid ferments) of other dishes from soja beans in Chinese cookery, such as Taohu or bean-cheese [tofu], the sauce Tao-yu, &c.”

In Chapter 33, titled “The fixation of free nitrogen by bacteria” (p. 259-71) are sections on “The discovery of leguminous nodules” (p. 261-62; Malpighi, Boussingault, Hellriegel), “Formation and functions of the nodules” (p. 262-64; Lachmann, Frank, Woronin, Hellriegel, Wilfarth), “The nodule bacteria” (p. 264-66; organized albuminoids, *Bacillus radicola*), and “The bacteroids” (p. 266-69). Concerning bacteroids: “The first successful, artificial production of nodules by the aid of pure cultures was made by A. Prazmowski. This worker, in view of the absence of the sporogenic faculty in these organisms, changed the name of *Bacillus radicola*, bestowed on them by Beyerinck, into *Bacterium radicola*.”

Note 3. This is the earliest English-language document seen (March 2003) that uses the word “bacteroids” (or “bacteroid”) in connection with root nodules on plants.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the word “Taohu” to refer to Chinese-style tofu. Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

1901. Lafar, Franz. 1910. Technical mycology: The utilization of microorganisms in the arts and manufactures. Vol. II. Eumycetic fermentation. Part II. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. ix + p. 191-748. Illust. Index. 23 cm. [3240* ref. Eng]

• **Summary:** An extensive bibliography on mycology and fermentation (3,240 references) for both this volume and volume I appears at the back of this volume (p. 561-695). The first chapter in this volume is Chapter 49, titled Mineral Foodstuffs (p. 191-202).

Chapter 55, titled “Classification of the families Saccharomycetaceæ and Schizosaccharomycetaceæ” is on p. 270-295. Section XVII (starting p. 456) is titled “The enzymes and the enzyme actions of yeast.” It begins with Chapter 53, on “Alcoholase,” by Dr. Rudolf Rapp, which starts with an historical introduction. Page 506 mentions the “Amylo process.”

Chapter 56, by Prof. Dr. Carl Wehmer, titled “Morphology and subdivision of the family Aspergillaceæ” discusses (p. 296-346): Eighteen illustrations of *Aspergillus* conidiospores (p. 300-19).

“*Aspergillus Oryzae* (Ahlburg) Cohn (=Eurotium *Oryzae* Ahlburg). This species is of practical importance as a saccharification fungus, and has been cultivated for centuries in Japan for the preparation of the rice mash for Saké, as

well as for the production of Soja sauce and miso.” It was first identified (as *Eurotium oryzae*) by Ahlburg in 1876, and was renamed *Aspergillus oryzae* by Cohn in 1883, though a full morphological description was not given until 1895 (by Wehmer) (p. 308).

Fig. 166 shows *Aspergillus oryzae*. “1-2. Conidiophores with clavate and almost spherical globule. 2. In optical section. 3-5. Development of a small conidiophore, distension of the hypha, protrusion of the sterigmata and incipient formation of conidia. 1a. Optical section of tough stem. 6. Sterigmata. 7. Conidial herbage, slightly magnified. 8. Conidia. Approximate magnification of 1-5 = 75 times. Of 6 = 400 times. Of 8-900 times. (After Wehmer).

Fig. 167. Conidiophores 1-5, 2 and 5 in optical section. Figs. 3-5, development of the globule (3) and sterigmata (4). The separation of the conidia is beginning in 5. Approximate magnification of 1-4 = 20 times. Of 5 = 120. *Aspergillus Wentii* (Wehmer), which is used in Java to make Tao-Yu (Chinese-style soy sauce). It appears spontaneously on the boiled Soja beans that have been covered with *Hibiscus* leaves, as described by Wehmer in 1896 (p. 311).

Chapter 57, also by Prof. C. Wehmer, titled “Chemical activity of the Aspergillaceæ,” discusses (p. 350-74): Saccharification of starch, Takamine’s research using *Aspergillus* to make diastase (Taka-diastase) and its efficiency compared with similar enzymes of different origins, koji extract which contains amylase and other enzymes, use of *A. oryzae* in the preparation of rice-wine, Soya [shoyu], and Miso (p. 352).

This volume also discusses: The degradation of proteids and their derivatives, protease (p. 369-70). Film-forming surface yeasts and their accompanying phenomena, *Mycoderma* (p. 411-15). Invertase (p. 516). Other enzymes discussed in this chapter include maltase, melibiase, lactase, trehalase, raffinase, and amylase. Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

1902. Macmillan, Hugh Fraser. 1910. Handbook of tropical gardening and planting, with special reference to Ceylon. Colombo, Ceylon: H.W. Cave. xii + 524 + xvi p. See p. 188. Illust. 22 cm. [15 ref]

• **Summary:** In chapter 4, titled “Green manuring and mulching,” is a list of suitable plants including (p. 35) “*Glycine hispida*. Soya Bean. Small herb, 12-15 inches. [Grows at altitudes] Up to 2,500 ft.” Note: No Sinhalese or Tamil names are given.

In chapter 12, on “Tropical vegetables and food products,” section 1, “Leguminosæ, including beans, grams and pulses,” contains the following (with Sinhalese and Tamil names given for most): *Cajanus indicus*. Pigeon pea; Congo bean *Canavalia gladiata*. Sword bean. *Cicer arietinum*. Chick pea; Bengal gram. *Cyamopsis psoraliodes*. Guar, or cluster bean. *Dolichos brachyotus*. *Dolichos lablab*, var. Four varieties. *Lens esculenta* (= *Ervum lens*). Lentil. *Mucuna nivea*. Velvet bean is one variety. *Glycine hispida*. Soya bean. *Pachyrrhizus tuberosus*. Yam bean. *Phaseolus lunatus*. Lima bean; Tonga bean. *Phaseolus vulgaris*, var. Climbing, or Runner beans. *Phaseolus vulgaris*, var. Dwarf French or Kidney bean. *Psophocarpus tetragonolobus*. Winged bean; Goa bean; Manilla bean [Manila bean]. *Vigna sinensis*. Cow pea; Yard-long bean.

The section on the Soya bean (p. 188) begins with a botanical description. “In India they are sometimes eaten in the form of ‘dhal.’ The famous Soya-sauce, said to be the basis of many popular sauces made in Europe, is made from these seeds. A useful domestic oil is also obtained from

them, and the residual cake resulting from the expression of the oil forms a nutritious cattle-food. According to Sir George Watt, 'Soya Bean is extensively cultivated in Eastern Bengal, Khasia Hills [Khasi Hills, in today's Indian state of Meghalaya], Burma, &c.' Yet I can find no mention of it in either Firminger's or Woodrow's works on gardening in India. Cultivation is very simple. A loose rich soil is preferable."

Chapter 26, "Pasture, grazing, and fodder plants," has a section titled "Other forage plants (leguminous)," which includes (p. 463) "*Glycine hispida*. Soya bean—A quick-growing annual, 15 inches high, producing a heavy crop of herbage, much relished by stock. See *Tropical Vegetables*." Address: F.L.S., Curator, Royal Botanic Gardens, Peradeniya, Ceylon.

1903. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1910. Nichi-Bei nenkan [Japanese-American yearbook. No. 6]. 650 Ellis St., San Francisco, California. 278 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 10 parts, each numbered separately. Contents: (1) Front matter, incl. 1 ad (5 p.) (2) Table of contents (3 p.). (3) Map of California agriculture (fold out, in Japanese, 1 p.). (4) Black and white photos on unnumbered pages (6 p., single sided). (5) Front part of Nichibei Nenkan No. 6 (p. 1-237), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (6) Ads (9 p.). (7) Nichibei Nenkan continued (p. 238-50). (8) Original printing and publication dates and data (1 p.) (9) Ads (2 p.). (10) New printing and publication dates (2001), data, and ISBN (1 p.).

A table (p. 39) shows Japanese population by states. For each state the population is subdivided by men, women, and children. For Japanese, the 8 most populous states are: California 55,901, Washington 16,930, Colorado 4,557, Oregon 3,873, Utah 2,529, Idaho 2,399, New York 2,260, and Wyoming 1,409. The totals are: Adult men 87,170. Women 7,323. Children 4,222. Total 98,715.

A table (p. 42) compiled from census data, shows that there were 2 shoyu makers in the USA, with 2 male owners and 4 male employees. There were 42 tofu makers with 47 male owners, 10 male employees, and 1 female employee.

Note: Unlike other volumes, this relatively slender 1910 volume has no directory to give us the names and addresses of these Japanese tofu and shoyu makers in the USA.

A table (p. 54-55) shows the general population (not only Japanese) each decade in California from 1850 to

1910: It grew from 92,597 in 1850, to 379,994 in 1860, to 1,208,130 in 1890, to 1,484,053 in 1900, to 2,564,363 in 1910.

A table (p. 56) shows the Japanese population of California: 120 in 1878, 270 in 1880, 420 in 1884, 500 in 1885, 1,000 in 1887, 2,300 in 1890, 4,500 in 1892, 6,000 in 1895, 13,000 in 1897, 25,000 in 1900, 30,000 in 1902, 35,000 in 1903.

A table (p. 56-60) shows the 1910 Japanese population in various counties and cities in California. For each it subdivided into men, women, boys, and girls. In 1910 the Japanese population of California was 55,901, which was about 2.2% of California's total population.

A table (p. 62) shows the total value in 1900 of various crops in the USA and California. The soybean crop was worth \$7,634,262 in the USA and \$1,022,586 in California.

A table (p. 172) gives the population of Japanese in California by occupation; there is 1 shoyu maker (in Oakland) and 32 tofu makers.

The Directory shows Japanese companies making soyfoods in California, Oregon, Washington, Utah, Colorado, New York City, and Vancouver, British Columbia, Canada. Address: San Francisco, California.

1904. Sawyer, E.R. 1910. Studies in agriculture. Series 2. The soya bean. Div. of Agriculture and Forestry, Natal, South Africa. 33 p. Reprinted from the Natal Mercury. [10 ref]

• **Summary:** Contents: 1. The agricultural romance. 2. The commercial aspect. 3. The adaptability of the bean. 4. The cultivation of the crop. 5. Soya bean oil. 6. A food for man. 7. A stock food and fertiliser (the cake is widely used as an agricultural fertiliser in the Far East). A photo (opposite contents page) shows two men standing in a crop of soy beans at the Central Experiment Farm, Cedara, 1908-09.

Concerning "Soya bean oil": "In the Far East it is largely employed for edible purposes; it is suitable for cooking, for a salad oil, and as a component in such butter substitutes as margarine. In the 'Mark Lane Gazette' for Jan. 20, 1910, it is stated that one third of the frying oil used in London kitchens now comes from the soya bean, instead of from cotton seed as heretofore" (p. 21).

Illustrations on unnumbered pages show: (1) A typical soya bean plant. (2) Botanical characters of soya bean, with close-ups of vegetative parts, floral parts, and fruit. (3) Seeds and pods of 7 varieties of soya beans. (4) Soya bean seedlings, with roots. (5) Roots of soya bean plant, with nodules (by Blanchard). (6) Curing frame for harvesting soya beans. Address: Director, Div. of Agriculture, Natal, Durban, South Africa.

1905. The provinces of China, together with a history of the first year of H.I.M. Hsuan Tung and an account of the government of China. 1910. Shanghai, China: The National Review office. 187 p. See p. 158. Undated. Illust. 23 x 19

cm.

• **Summary:** Until a year or two ago, millions of otherwise well informed people in Europe and the USA were largely ignorant of China and “all matters Chinese.” This book has one a chapter on each of China’s 22 provinces.

The chapter on Shantung states (p. 38): Salt is largely obtained from the evaporation of sea-water and is used very extensively for the purpose of salting fish and vegetables, the making of soys [soy sauces] and bean sauces, and the like.

In Chapter 22, titled “Manchuria,” the section on “Products” states (p. 158): “Manchuria is but sparsely populated. The settled inhabitants are re-inforced every spring by willing labourers from Shantung and Chihli coming to till, to sow, and to reap. Twenty thousand pass over to Newchwang and ports in south Manchuria from Chefoo alone; and these nearly all return in the autumn, when the harvesting is done. So that shortage of labour is a serious drawback in Manchuria. Next comes the climatic disadvantage. Agricultural and indeed all outdoor pursuits are confined to seven months of the year—from Mid-March to the middle or end of October.”

The most important crop for Manchuria’s external trade is pulse. “A large variety of beans is grown in Manchuria and, together with their products, bean-cake and bean oil, they constitute by far the most important item in the export trade of the Three Eastern Provinces. The beans are of many kinds, yellow, green, black, white, red, and small green. The yellow, green and black are varieties of the soy bean, and each variety has sub-varieties. Besides these beans of commerce there are several kinds of garden bean, cultivated for food.” Two varieties of hemp, opium, tobacco, and ginseng are also grown in large quantities.

The section titled “Mammon” notes (p. 169): On all sides new enterprises have been springing up and new industries started. From Manchuria the export of beans has very rapidly, and largely during the past year, become a most important trade, so much so that the Indian exporters of oil seeds of one kind or another are beginning to feel the effect and to consider the possibility ‘of producing the soy bean on Indian soil.’

China’s chief foreign complications have been with Russia and Japan, but “it is emphatically with Japan that the most serious trouble has taken place” (p. 172). The Japanese were found to be stealing supplies of nitrates from China’s Pratas Islands—an incident which came to be known as the “Tatsu Maru case.” This unwarranted intervention led to the “Manchurian Convention” which “is so obviously unfair to China.” The publication of its terms “aroused great indignation in China and a boycott of Japan was immediately set in motion” (p. 173).

“It is possible that the terms of the Convention would have been vastly different had not Japan previously set all the canons of international morality at defiance by the seizure on the flimsiest of pretexts of the Antung-Mukden

Railway. By the terms of an arrangement made in 1905 it had been arranged that Japan might within two years convert the Antung-Mukden Railway from a narrow gauge military railway to a standard gauge line suitable for all purposes. This privilege had lapsed with the flux of time and China was therefore exercising more than the necessary patience in acceding early in the year now under review to the survey of the line by a joint commission. The reason of Japan’s delay had been obvious. If she delayed to begin the reconstruction of the line her term of tenure might be made to overreach that of the South Manchuria Railway, and would or could be pressed to imply an extension of the lease of the South Manchuria itself. When it was found that China was not so complaisant as she was expected to be the only alternative was to steal the line; this Japan promptly proceeded to do. This theft precipitated the Manchuria Convention for which Japan is never likely to be forgiven.”

“Beans” (meaning soybeans) are also mentioned in passing, usually in section on “Productions” under Shensi (p. 9), Chihli (p. 28), Shantung (p. 36. “The beans are used for the manufacture of bean-oil and bean-cake, the oil being extracted [expressed] during the process of pressing the beans into cakes; the latter are exported for use as manure.”), Szechwan (p. 49, in the Chengtu plain), Hupeh (p. 54. A table shows exports of beans and beancake each year from 1905 to 1908), Anhwei (p. 71, beans are exported), Kiangsu (p. 86, beans and beancake are exported from Shanghai), Yunnan (p. 92), Kweichow (p. 99).

Page 164 discusses the South Manchuria Railway and Newchwang (literally “Cattle Mart”), which was the leading port of entrance to Manchuria before the railway. Newchwang was formerly at the mouth of the Liao, but silting has left it 10 miles inland and the new port of Yinkow has been developed at its former place.

1906. Wheldon, Rupert H. 1910. No animal food: And nutrition and diet with vegetable recipes. New York, NY; Passaic, New Jersey: Health Culture Co. 125 p. Plus 18 unnumbered pages of advertisements at end. Undated. No index. 19 cm.

• **Summary:** A comprehensive appeal to vegetarianism, advocating exclusion of all foods of animal origin [i.e., a vegan diet]. Contents: I. No animal food: 1. The urgency of the subject. 2. Physical considerations. 3. Ethical considerations. 4. The aesthetic point of view. 5. Economical considerations. 6. The exclusion of dairy produce. 7. Conclusion. II. Nutrition and diet: 1. Science of nutrition. 2. What to eat. 3. When to eat. 4. What to eat. Food table. Recipes (100 “strictly vegetarian” [vegan] recipes as they appear in the English edition).

The Preface states that “the following pages are in vindication of a dietary consisting wholly of the products of the vegetable kingdom, and which therefore excludes not only flesh, fish, and fowl, but milk and eggs and products

manufactured therefrom.” “This work is reprinted from the English edition with changes better adapting it to the American reader.”

Pages 30-31: “As to the testimony of individuals it is interesting to note that some of the greatest philosophers, scientists, poets, moralists, and many men of note, in different walks of life, in past and modern times have, for various reasons, been vegetarians, among whom have been named the following:—Manu, Zoroaster, Pythagoras, Zeno, Buddha, Isaiah, Daniel, Empedocles, Socrates, Plato, Aristotle, Porphyry, John Wesley, Franklin, Goldsmith, Ray, Paley, Isaac Newton, Jean Paul Richter, Schopenhauer, Byron, Gleizes, Hartley, Rousseau, Iamblichus, Hypatia, Diogenes, Quintus Sextus, Ovid, Plutarch, Seneca, Apollonius, The Apostles (Matthew, James, James the Less, Peter), The Christian Fathers (Clement, Tertullian, Origen, Chrysostom, St. Francis d’Assisi), Cornaro, Leonardo da Vinci, Milton, Locke, Spinoza, Voltaire, Pope, Gassendi, Swedenborg, Thackeray, Linnaeus, Shelley, Lamartine, Michelet, William Lambe, Sir Isaac Pitman, Thoreau, Fitzgerald, Herbert Burrows, Garibaldi, Wagner, Edison, Tesla, Marconi, Tolstoy, George Frederick Watts, Maeterlinck, Vivekananda, General [Bramwell] Booth, Mrs. [Annie] Besant, Bernard Shaw, Rev. Prof. John E. B. Mayor, Hon. E. Lyttelton, Rev. R. J. Campbell, Lord Charles Beresford, Gen. Sir Ed. Bulwer, etc., etc., etc.”

The chapter title “What to eat” states (p. 83): “The Mongol procures his supply of protein chiefly from the Soya bean from which he makes different preparations of bean cheese [tofu] and sauce.” “Among the foods rich in protein are the legumes, the cereals, and nuts... Fat is chiefly found in nuts, olives, and certain pulses, particularly the pea-nut.”

Several recipes (p. 116-17) call for: Nut-milk, Vegeton, Nutter or nut butter, Marmite, Carnos, Pitman’s Vigar Gravy Essence. These can be ordered from stores in England (see p. 111). The last 16 pages contain advertisements for *Health-Culture* magazine (monthly), “health appliances” (such as Dr. Forest’s massage rollers and colon syringes), and many books published by The Health Culture Co., Turner Building, 45 Escension St., Passaic, New Jersey.

1907. Labbé, Henri. 1911. Le soja et ses usages [The soybean and its uses]. *Revue Scientifique* 49(1):171-76. Jan. 7. [6 ref. Fre]

• **Summary:** A summary of earlier publications (mostly in French) on soybeans and soyfoods. Discusses: Soy flour (*farine de soja*) for diabetics. Soy bread (*pain de soja*). Soy flour used to make various foods for diabetics as well as for vegetarians. Soymilk (*lait végétal à base de soja*, p. 174). Soy kefir and soy yogurt (Kephir, Yohourt). Soy sauce (*sauce de Soja, soyou, choyou*). Tofu (*Le fromage de Soja ou Tou-Fou*), which was invented by the ancient Chinese philosopher Whai Nain Tzu. Fresh tofu and dry tofu [dried frozen tofu, containing 53.6% protein]. How shoyu is made.

Note: This is the earliest French-language document seen (April 2012) that uses the word *soyou* to refer to soy sauce.

The section on the nutritional value of soy and soy protein (p. 173) ends with this interesting thought: For a long time the Chinese and Japanese, who cared little about the future justification of their habits and customs, have adopted the consumption of soy on a large scale, without realizing that science would perhaps one day come to bestow / confer on them a certificate or testimonial of complete approbation.

The section on soymilk ends as follows: Soya milk, according to trustworthy Chinese persons, is not just a mere curiosity. It is used, in China, for breakfast, being mixed with cow’s milk. It is also used for infant formula [literally “artificial breast feeding”] or therapeutically. For this latter purpose, it is the fermented foods, such as Kefir, Yogurt, etc. that appear to be of interest. (“*Le lait de Soja, au dire de Chinois dignes de foi ne serait pas une simple curiosité. On s’en sert, en Chine, pour le déjeuner du matin, et en mélange avec le lait de vache. On l’utilise aussi pour l’allaitement artificiel, ou dans un but thérapeutique. Dans ce dernier but, ce sont plutôt les laits de soja fermentés, genre Kephir, Yohourt, etc. qui paraissent intéressants*”).

The author notes (p. 175, footnote) that a Chinese proverb says: *Le To-Fou est la viande des os* (“Tofu is the meat of the bones”). Note: This makes no sense and appears to be a mistake. Tofu has long been known as “the meat without bones” (Horvath 1927, 1931, 1938, etc.) or “the meat without a bone” (Lager 1945, etc.).

The writer also notes that France is not taking any part in the development of an industry to produce soy oil (p. 176, footnote). Illustrations (p. 72) show: Soy bean plant, with roots and pods. Close-up of soy bean pod and seed. Address: Doctor of Sciences (*Docteur ès-sciences*), France.

1908. Rousset, H. 1911. Chronique et correspondance: Chimie industrielle. Laits et beurres végétaux [Chronical and correspondence: industrial chemistry. Vegetable milks and butters]. *Revue Generale des Sciences (Pures et Appliquees)* 22(1):182-83. Jan. 15. [2 ref. Fre]

• **Summary:** Vegetable butters are made from coconut oil. Soymilk is made from the soybean, a unique type of bean which is grown in China. Huge quantities have recently been exported. This paradoxical plant can be used in many different ways—as to make oil and soap, special breads for diabetics, forage and fodder for animals, and confections. The Japanese transform the soybean into a cheese [tofu], the Chinese make it into milk, and the English use it to make sauces [such as Worcestershire sauce].

According to Mr. Li Yu-Ying, who, as a former student at a French school of agronomy, is well qualified by his origins and knowledge to know the soybean, as well and the milk and sprouts made from it. A table shows the composition of soymilk. A long discussion of soymilk and its

uses follows.

1909. *Christian Science Monitor*. 1911. Paris and the soy bean. Jan. 24. p. 16.

• **Summary:** “Western palates may not be easily reconciled to the culinary art of the eastern nations. Oriental cooking has not so far inspired the celebrated chefs of the world centers. For famous recipes, the epicures would hardly look to China. As many bills of fare still make their appeal in the French language, so the kitchens of France retain reputations earned long ago... But Paris, no doubt, is as proud of Alexis Soyer’s ‘Culinary Relaxations,’ which the famous cook wrote in 1845, as of some other literary achievements of the period, more popular today, perhaps, but scarcely as interesting to the epicure.

“What, then, shall be said of Li Yu Ying, home address Peking, who has established himself in Paris and believes he has something of value in the cooking line for even the surfeited Parisians. This, assuredly, is blazing a new trail where it must have required considerable courage to venture. China teaching France how to cook! Here, to say the least, is a gastronomical novelty.

“Son of a former minister of state at Peking, Yi Ying [sic], after studying scientific agriculture in France returned to his native land two years ago. Apparently impressed with what the French had taught him, he nevertheless considered it possible to produce something different from anything they had to show. For this purpose progressive China assisted Li Ying [sic, Li or Li Yu-Ying] in forming a company with a capital of \$400,000. The factory built at Les Valleees, near Paris, is the result.

“This Chinese invasion of French territory, however, need not cause alarm to Parisian restaurateurs. Li Ying and his associates, for the present at least, propose to devote their efforts to concentration of foodstuffs. The French Agricultural Institute at Chesnoy, where Li obtained his training, has done vegetarianism more than one service, and it appears as if China is now the debtor through that which the institute taught one of her sons.”

In the food area, Li is “proceeding along original lines. For instance, since all the machinery came from China, it is an interesting commentary on oriental progress that the far east is so advanced in mechanics that it can supply the equipment for a factory located in the center of European industrial activity. All the raw materials from which the foods are prepared are also imported from the eastern empire. Further than this, one of the most plebian staples in China, the soy bean, is the leading agricultural product from which Li Ying is manufacturing his delicacies.

“Tabloid foodstuffs may not revolutionize ordinary cooking methods, but if the soy bean is capable of tasty preparation, then it is evident from the magnitude of this Chinese enterprise there is a lesson wrapt in the incident. The Occident is no stranger to the value of the soy bean as basis

for a piquant sauce. Here, now, is the Orient teaching many novel values for the same insignificant product.

“The western world has hardly had a chance to say what it thinks of this Chinese product. But if the Parisian institution is a success, there is no reason why other countries should not prove responsive to the idea. The civilization of the west owes many things to Asia. And the utilization of the bean is everywhere easy since there is practically no deterioration, no matter how far it is shipped.”

1910. *Matieres Grasses (Les) (Paris)*. 1911. Analyses de soja [Analyses of soya]. 4(33):2083. Jan. 25. [Fre]

• **Summary:** “Le Jardin Colonial recently conducted a number of nutritional analyses of soybeans and soybean products,” including white (yellow) and black soybeans from northern China, yellow soybeans imported to Denmark from China, dehulled yellow soybeans, soy flour, soybean cake, soybean bread, shoyu.

1911. Cornwell (G.G.) & Son. 1911. Unusual flavorings (Ad). *Washington Post*. Jan. 31. p. 7.

• **Summary:** “The art of good cooking consists chiefly of a judicious use of flavorings and relishes. In no other store will you find such a large and unusual assortment.

“Tippo Saibs. Curry Powder. Surfines Capers. India Soy Sauce. Escoffier Sauce...” “Importing grocers.” [Est.] 1865. Address: 1412-18 Penna. {Pennsylvania} Av., Washington, DC].

1912. Shaw, Norman. 1911. The soya bean of Manchuria. *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series No. 31.* 32 p. Also published by P.S. King & Son, 2 Great Smith St., Westminster, London SW, England. [6 ref. Eng]

• **Summary:** Contents: Introductory. Varieties. The plant. Soil and climate. Cultivation. Soil infestation. Yield. Uses of the soya bean: In the Far East: Bean sauce or soy (called shoyu in Japan [whence the name “soya”] and *chiang-yu* in China), the Chinese paste *chiang* (incl. *ta chiang* {great, made with yellow soybeans} and *hsiao chiang* {small, made with soybeans and maize}), tofu (incl. firm tofu {*tou-fu kan-tzu*}, tofu curds {*tou-fu nao*, curded with calcium sulphate instead of brine}, curd skin or yuba {*tou-fu p’i*}, layers of tofu pressed in cloth [pressed tofu sheets] {*ch’ien-chang tou-fu*}, and “frozen curd” {*tung tou-fu*, tofu that is frozen then dried}), bean flour, bean refuse {*okara*}, bean oil for food or industrial uses. Beancake and its uses. Uses in the Western world (beancake in Europe, and bean oil in Europe). The bean oil and cake industry in Manchuria. Trade development (statistics on exports from Newchwang have been kept since 1864). Beginnings of the European trade. Bean oil and cake production in South Manchuria. Chief sources of supply. Map references. Supplementary note.

Appendixes: 1. Table showing values (in Haikwan taels) per picul of [soya] beans, beancake, and bean oil at Newchwang, 1864-1909. 2. Graph showing monthly values (in silver yen) at Dairen of beans, bean oil, and beancake, 1907-10. 3. Table showing estimated [soya] bean production of Manchuria in normal years, compiled by the South Manchuria Railway Co. in 1909. 4. Estimates of [soya] bean production of Manchuria for the last 5 years by province and territory, compiled by the South Manchuria Railway Company in 1909: Fengtien province 1,092,350 tons. Kirin province 626,500 tons. Heilungkiang province 280,250 tons. Grand total for all Manchuria: 1,999,100 tons. Estimated soya bean production in Manchuria has increased from 600,000 tons in 1906 to a peak of 1,500,000 tons in 1908, to 1,400,000 tons in 1910. Percentage contributed by various colors of soya bean in 1910: Yellow 80.1%, green 9.4%, white-eye 3.8%, black-eye 3.2%, and black 3.4%. 5. Table showing total export of [soya] beans and bean products from Manchuria, 1909. For export of soya beans: Dairen 51% of total, Suifenhö [Suifenhe] 25%, Newchwang 23%. For export of bean cake: Newchwang 50%, Dairen 44%, Antung 2%. For export of oil: Newchwang 75%, Dairen 21%, Harbin 1%. The writer frequently refers to Sir Alexander Hosie's book on Manchuria (1901, 1904).

The introduction begins: "It is only in the last three years that soya beans have become important in intercontinental commerce, and their rapid emergence from obscurity has, indeed, been one of the most remarkable commercial events of recent times. The circumstance that 'the rise of a great export trade in beans is that fact that overshadows all others,... the soya bean thus taking at a bound a position equal to that of tea in the list of exports and, with the addition of beancake, even challenging the position of silk at the top of the list'""* (Footnote: * = "Statistical Secretary's Report on the Foreign Trade of China in 1909").

The "bean district *par excellence* is the upland country beyond Moukden [Mukden] where the hills... are overlaid with wind-deposited soil..."

"Cultivation: In Manchuria the beans are produced almost entirely by hand methods. The plough, which is drawn by quaintly mixed teams of oxen, mules, and donkeys, has only one handle and a rough steel-tipped cutter. The seed is sown by hand, on top of the drills, in April, and is covered by hand. A heavy hoe is used for a good deal of the turning and breaking. When the plant appears the earth is heaped up round it, so that the roots may derive the maximum of nourishment from the soil."

"The harvest takes place in September, and the pods are usually harvested before they are quite ripe, as otherwise they are liable to burst on drying, a loss of seed being thus occasioned. The plants are pulled up by hand or cut with a straight-bladed sickle in Manchuria, and collected into small heaps in order to facilitate drying, and, when dry, the seed is separated by means of a cylindrical stone roller having

longitudinal cuts on its surface, which is dragged over the plants by a mule as they lie on the threshing-floor. After this primitive threshing operation has been completed, the beans are winnowed in the usual Chinese method—that is, by throwing them against the wind. The only manure used is a compost of stable manure and earth, which is often taken from the miry pools formed in the roads—the despair of the carter but a boon to the farmer. In countries where chemical manures are used, it is only necessary to apply potash and phosphoric acid where they are lacking, for nitrogenous manure is unnecessary, owing to the property which the soya bean possesses, in common with other leguminous plants, of obtaining nitrogen from the air by means of colonies of bacteria."

Yield: In 1867 the Rev. A. Williamson, who travelled in the upper Sungari district at the time and who appears to have been a very close observer, estimated a maximum yield of 2,000 lb., or 15 piculs, to the acre.

The Chinese paste *chiang* is not the same as the Japanese paste miso. Chiang "is made by farmers and eaten with fish, meat, and vegetables, while the more expensive Chinese soy [sauce] is only made by wealthy families and restaurant keepers and is not consumed by the very poor. There are two kinds of *chiang*: *ta* (great) and *hsiao* (small)." Describes in detail how each is made. Great *chiang* is made from yellow soybeans, salt, and water. Small *chiang* contains a small amount of maize (p. 7).

Industrial uses of bean oil: (1) As an illuminant, where it has not been superseded by kerosene oil. One advantage is that "no lamp is needed to hold it, the wick being inserted into the basin or plate containing the oil." (2) As a lubricant, bean oil is used to a very considerable extent in north China and Manchuria "for greasing axles and parts of native machinery" (p. 8-9).

In China, bean oil "is used as a substitute for lard, in cooking. Although it is inferior to rapeseed and sesamum oils for this purpose, these oils cannot compete with it in point of price... In spite of its unpleasant characteristic odour and unpalatability, the poorer classes in China consume it in its crude state, but among the rich it is boiled and allowed to stand until it has become clarified" (p. 8). In Europe "Refined bean oil may be used as a salad dressing in place of other oils (but, owing to its unpleasant odour, is usually mixed with an oil of animal origin or with rapeseed oil), or in the manufacture of margarine, when a greater percentage of soya oil than of copra oil is allowed" (p. 10).

Traditional methods of pressing out the oil yield only about half of that present in the seed (9% of the weight of the beans); the rest is left in the cake, and this detracts very much from its fertilizing value. "By gasoline extraction the beans give up practically all their oil, which, as refined by this process, is a clear, pure liquid, hardly resembling the muddy, dark oil produced in the old way" (p. 14).

Photos on unnumbered pages show: (1) Seven varieties

of soya beans: Large black, small black, large flat black, small flat black, two green, and two yellow. (2) Soybean root nodules. (3) A massive granite roller for crushing beans. (4) "Steaming vat with grating on which [soya] beans are placed in gunny bags during the steaming process." (5) Native bean press, showing cakes in receptacle and log wedges driven in to press out the oil. (6) Modern bean press [hand turned screw?] set up in bean mill. (7) Oil-motor and crusher. (8) Modern crushing machinery. (9) Piles of beans in sacks awaiting loading onto trains at Changchun. (10) Color fold-out map titled [soya] "Bean districts of Manchuria." A schematic diagram (in the form of a rhombus / diamond) shows the probable relationships of the different groups of soya beans based on their color. A beautiful map, approximately 17 by 22 inches, is attached between page 26 and page 27. "Wuchang" [not Wochan] is in the area labeled "Yellow Beans" in the map. Other labeled growing areas on the map include "Grasslands," "White eye," "Black beans" [soy], "Maize" and "Green beans." The major railways, rivers, roads, and towns / cities (with their Chinese characters) are shown. The major soybean markets (underlined) are Fenghwa / Maimaikai, Kungchuling, Changtufu, Tungkiangtze, Sinminfu, Tienchwangtai, Newchwang, Kaiyüan, Tiehling, Mafengkow, Moukden, Takushan, Antung, Harbin, and Shwangcheng.

Shaw finished writing this yellow book on 31 December 1910.

Note 1. This is the earliest document seen (July 2000) that mentions the South Manchuria Railway Company in connection with soybeans. This company was run by Japan. According to the *Encyclopedia Nipponica* (vol. 22, at "Minami"), the South Manchuria Railway Company (*Minami Manshu Tetsudo K.K.*) was established in 1905 based on the Portsmouth Treaty ending the Russo-Japanese War; Japan took over the rights to the railway from Russia. The company started to actually run the railway in 1907.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term "frozen curd" to refer to dried-frozen tofu.

Note 3. This is one of the earliest English-language documents seen (Sept. 2006) that repeatedly uses the word "bean" (not preceded by the word "soya") to refer to the soya bean.

Note 4. This is the earliest English-language document seen (Oct. 2008) that uses the term "tou-fu p'i" to refer to yuba.

Note 5. This is the earliest English-language document seen (April 2012) that uses the term *chiang-yu* to refer to Chinese soy sauce. Address: 4th Asst., Custom House, Dairen.

1913. Clerget, Pierre. 1911. La question du Soja [The question of the soy bean]. *Revue Generale des Sciences (Pures et Appliquees)* 22(3):100-01. Feb. 15. (Chem. Abst.

5:1637). [2 ref. Fre]

• **Summary:** Contains a brief description of the soybean and discusses its commercial importance, distribution, soil requirements, the value of the oil and its uses, and the composition and commercial value of the cake. During the past 2 years, the large amounts of soybeans exported from Manchuria to Europe have called attention to this plant. It is cultivated all over China, but especially in Manchuria (in the Liao Valley, where it is the second most important crop after sorghum), Japan, Korea, and Indo-China. In China it is often cultivated with maize; it demands a great of work, care, and good soil. The main exports come from the Manchurian ports of Newchwang and Dairen, and from Vladivostok. In 1908 some 859,200 tonnes of soybean and cake were exported from Manchurian ports, up from only 88,900 tonnes in 1905. Until 1908, Japan was the principal outlet for Manchurian soybeans (615,900 tonnes), but at the start of that year, exports to Europe began: 69,200 tonnes to Great Britain, 21,390 tonnes to France, 7,290 tonnes to Holland, etc.—for a total of 204,440 tonnes.

According to chemical analyses made at the Colonial garden of Nogent-sur-Marne, Manchurian soybean seeds contain 17.64% oil and 33.5% protein; yellow varieties contain more oil than black varieties. The soybean is used as a forage plant and for soil improvement, but its most important role in China and Japan is as a human food among people who consume little meat. According to Bloch (1908), it is most widely used in making a sauce [soy sauce] and a cheese [tofu]. It is also used to make numerous pastes and a sort of soymilk (*lait de soja*).

It also has industrial uses, thanks to its oil content of 16-18%. Indigenous mills can obtain only 8-10% oil, but modern hydraulic presses can obtain 12-14%. The oil and cake have made the soybean rise so rapidly on European markets. The oil, which has an agreeable smell and taste, is widely employed for culinary purposes in Manchuria. In England, as in France, it is used in making soap and margarine. It is more drying than cottonseed oil and can likewise be used in making paints. Soybean cakes (*Les torteaux de soja*) would give the same results as cottonseed cakes in terms of milk yield from dairy cows. As a fertilizer, they are used throughout Japan and on the sugarcane plantations of southern China.

The soybean could be introduced to Indo-China where, even if it has to compete against Manchurian soybeans, it could be service locally for soil improvement in the rice fields and as a food in the densely populated districts where there is hardly any room for animals, or where the animals have been decimated by disease. Address: Professeur à l'Ecole supérieure de Commerce (Graduate School of Commerce) de Lyon [France].

1914. Lea and Perrins. 1911. Fish. It is essential, with such delicate fare, that a *good* sauce be used, otherwise the flavour

may be spoiled instead of being enhanced (Ad). *Times* (London). March 3. p. 4, cols. 6-7.

• **Summary:** “The right sauce is Lea & Perrins’ sauce. The original and genuine ‘Worcestershire.’” At the top of this display ad is an illustration of a fish in the water with a hook and fishing line in its mouth; nearby is a fishing net. At the lower left is a royal seal, and below it the words “By Royal Warrant to H.M. The King.” Address: [England].

• **Summary:** In the English-language table of contents, shoyu is called “Soya.” Address: Nôgaku-shi, Japan.

1916. Le Goff, Jean. 1911. Le soja dans l’alimentation des diabétiques [Soybeans in diabetic diets]. *Gazette des Hôpitaux* 84(27):399-402. March 7. [8 ref. Fre]

• **Summary:** The author, a woman who has written more than 15 articles on diabetes mellitus (*diabète sucré*), reviews the literature on that subject as it relates to soybeans. Diet plays an important role in the treatment of diabetes mellitus. Takeuchi, in Tokyo, Japan, was the first to point out the presence of a very active urease in soybeans. Soyfoods are now available in France for there is a factory, located not far from Paris, that makes them under the direction of Chinese [Li Yu-ying]. Armand Gautier, in *L’Alimentation et les Régimes* recommended adding 12-15 gm of sodium bicarbonate per kg of soybeans that one is going to cook. The author feels that “except for shoyu, all soyfoods have a peculiar flavor and I believe that one will meet with many difficulties in trying to make them acceptable to the European palate.”

She gives five recipes for the use of soybeans in diabetic diets: 1. Roasted: “The soybean can be eaten roasted or grilled like our chestnuts (*grillé comme nos châtaignes*). It is sufficient to run them through a chestnut- or coffee roaster. If the soybeans are imported, they must be soaked previously in lukewarm or soft water.” 2. Whole soybeans with butter. 3. Soybeans sautéed with vegetables. 4. Cooked soybean puree. and 5. Bread or cake with soybeans (boiled until soft with sodium bicarbonate).

She encourages the French to grow their own soybeans for use in diabetic diets. In 1911 the most widely grown varieties were le Soja d’Etampes and le Soja de Podolie [Podolia]. “In conclusion, the introduction of the soybean to our country for use as food is justified by the important role its oils can play in the feeding of diabetics. I would add that the leaves of this plant, which are equally nutritious, can constitute a precious resource for agriculture, and that its culture, after being practiced for a number of years, can improve the soil considerably. Under these conditions, I

would consider that serious and ongoing trials should be undertaken, and I call this subject to the attention of those in public power who are interested in the question, and would be able to render an important service to the numerous diabetics and to agriculture.”

Photos show: (1) A small soy bean plant in the ground. (2) A field of soy bean plants growing in the suburbs west of Paris.

Note: This is the earliest French-language document seen that refers to soynuts, which may be made by roasting soybeans like chestnuts. Address: Laureat de la Faculté de Médecine de Paris.

1917. *Times* (London). 1911. Wills and bequests. March 31. p. 11, col. 2.

• **Summary:** “Mr. Francis Barnitt, of Woodside, Larkhill, Worcester, a member of the firm of Lea and Perrins, sauce manufacturers, who died on February 27, aged 77, left estate valued at £118,401 gross, and net personalty [personal property], £114,497. He bequeathed £250 to the Worcester Infirmary, unless he had given such a sum in his lifetime.” Address: [England].

1918. Mitsuda, Ryuichi. 1911. Notes on yeasts of “shoyu”-mash [moromi]. *J. of the College of Agriculture, Tokyo Imperial University* 1(3):345-56. March. German summary in *Zentralblatt fuer Bakteriologie, Series II*. 37:289 (1913). [2 ref. Eng]

• **Summary:** This is the third Japanese investigation on the yeasts in shoyu mash (*moromi*). “Three samples were used for the purposes of isolation, one from Noda, one from Tatsuno, and the other from Handa. Eight different varieties of yeast, 3 bacilli and 3 mould fungi were obtained from them.” Among these was a red yeast and two film-forming yeasts. The first yeast variety discovered by the author “ferments sucrose, raffinose, dextrose, etc. but not lactose etc. (Cf. Table 2).”

The author believes that the five varieties of yeast he describes are different from the *Saccharomyces Soja* discovered by Saito, since they ferment “Sucrose and raffinose, while his does not ferment either” (p. 351).

Note: This is the earliest English-language document seen (March 2002) that contains the word “raffinose” (See p. 347, 351, 353). Address: Japan.

1919. Quintus Bosz, J.E. 1911. De samenstelling van Indische voedingsmiddelen [The composition of Indonesian foods]. *Bulletin van het Kolonial Museum te Haarlem* No. 46. 261 p. March. Also published in Amsterdam by J.H. de Bussy as a book. [8 ref. Dut]

• **Summary:** The nutritional composition and the source of information is given in a table for the following: Soybean seeds (p. 74-77). Soybean oil (*sojaboonen-olie*) (p. 76-77). Soybean flour or meal (p. 154-55). Soybean biscuit

(Beschuit, 170-71). Japanese soy sauce and soybean tempeh (*Japansche soja, Tempé kedeleh* p. 242-43). Indonesian soy sauce (*Ketjap, Bataviasche soja* p. 244-45). Firm tofu (*Tao-koan*, 79.8% water. p. 244-45). Address: Dr., naar onderzoekingen in het Laboratorium van het Koloniaal Museum verricht onder leiding van Dr. M. Greshoff.

March. [Jap]
Address: 1. Jozo Shikensho, Shokutaku Nôgaku Hakase; 2. Ditto, Gisho.

1921. *Daily Colonist (Victoria, BC, Canada)*, 1911. On the waterfront: Panama Maru from Far East. Osaka Shosen Kaisha liner reached the outer wharf yesterday from Yokohama and other Oriental ports. 103(412):14. April 6.
• **Summary:** "The steamer Panama Maru of the O.S.K. line reached the outer wharf yesterday after a fair passage from Yokohama with 31 passengers and a good cargo including 444 bales of silk worth a quarter of a million dollars. In the cargo for Victoria was a shipment of 500 tubs of soya bean oil, the product of the soya bean grown in Manchuria in which a profitable trade has been worked up during the past few years, 450 bags of peanuts, 251 cases of rattan furniture, 150 mats of rice, 140 tubs of sake,... 100 tubs of soy [sauce] and some general merchandise."

There is a famine in the interior of China. A new Japanese tariff, which goes into effect July 1st, has caused a rush of shipments to ports in that country.

1922. Li, Yu-ying. 1911. Charcuterie de soja [Cold cuts and meatlike products from soya]. *French Patent* 428,718. 2 p. Application filed 20 April 1911. Granted 6 Sept. 1911. [Fre]
• **Summary:** "This invention concerns the products of the pork-butcher's shop (*charcuterie*) such as fresh sausages (*saucisses*), pâtés, etc. to which are added a soy-based product (*un produit à base de soja*) (*pois chinois*). The preparation of these products of the pork-butcher's shop involves the use of tofu (obtained by the coagulation of soymilk) *fromage de soja* (*obtenu par la coagulation du lait de soja*) to replace ordinary meats in part or in totality, tofu being a sort of vegetable meat (*le fromage de soja constituant une sorte de viande végétale*).

The author then discusses how to cook tofu and use it in to make fresh sausages (*les saucisses*), large dry sausages or salami, (*saucissons*), pâtés, etc. Aromatics (*aromates*) which can be used for seasoning are soy sauce, salt, pepper, and the oil and juice of onions.

Likewise, tofu can be mixed with ordinary meat to obtain charcuterie products. Note:

Note: This is the earliest document seen (Aug. 2002) in the Western world concerning soy-based meat alternatives or a soy-based meatless sausage, or soy-based pork alternatives. Address: Resident of France (Seine).

1923. Bontoux, Emile. 1911. Le Soja et ses dérivés [The soybean and its products]. *Matieres Grasses (Les)* (Paris) 4(36):2195-99. April 25; 4(37):2239-43. May 25; 4(39):2326-29. July 25; 4(40):2364-66. Aug. 25; 4(41):2405-07. Sept. 25. [48 ref. Fre]

• **Summary:** Contents. Introduction. The plant: origin and history, species and varieties, culture, and production: USA, Japan, Manchuria, France, England, China, Korea, Indochina (it is cultivated for the needs of the population in Cochinchina {especially in the provinces of Chaudoc and Baria}, Annam, Tonkin, Cambodia), Formosa, Java, India, Africa. The soybean—a food plant: The plant, the seed, large table showing many analyses from many countries of the chemical composition of many soybean seed varieties.

Introduction to food products made from soybeans in East Asia. Shoyu [soy sauce] (and koji). Miso. Natto (from Japan). Le Tao-yu (a Chinese condiment also widely used in Japan. It is a thick, clear liquid made from black-seeded soybeans) Tao-tjiung (doujiang, from China). Tuong (from Annam). Tofu. Li Yu-ying. Table showing composition of powdered soymilk, fresh tofu, and soy flour.

The soybean—an oilseed plant. The soybean as an oilseed in the Far East. Table showing exports of soybean cake and oil from various Manchurian and Chinese ports in 1908 and 1909. The soybean as an oilseed in Europe and the United States. Table showing imports of soybeans to various British ports in 1909 and 1910 (the leading port by far is Hull, followed in 1909 by Liverpool, London, Bristol Channel, Scotland, and Other ports {Rochester, etc.}). Table showing exports of soy oil from Great Britain in 1910: To Germany, Austria, Australia, USA, Belgium, Denmark, Egypt, France, Holland, Italy, the Indies (*Indes*), Norway, Russia, Sweden, other, total (115,372 barrels, each weighing 175 kg). Discussion of soy oil and cake in most of the above countries.

Trade in soybean seeds: Mitsui Bussan, Manchuria, England, China, Japan. Soybean cake.

Soy oil: Physical and chemical properties. Applications and uses as food and in industry: Margarine, for illumination, soaps, as a drying oil, paints and varnishes, linoleum, artificial rubber. An extensive bibliography is at the end of the last article in the series.

Note: This is the earliest document seen (May 2010) concerning the cultivation of soybeans in Cambodia. This document contains the earliest date seen for the cultivation of soybeans in Cambodia (April 1911). Earlier documents imply that soybeans were being cultivated in Cambodia by 1900, and it is highly likely that they were being cultivated for at least a century before that time. Address: Ingénieur-

chimiste E.C.I.L., France.

• **Summary:** “The recent arrival at the port of Stettin, by direct shipment from Vladivostok, of 4,823 tons of soya beans, valued, according to the local press, at \$166,600, marks the entry into this market of a new raw material for industrial exploitation.

“Following the example of Hamburg manufacturers, Stettin capitalists have organised a company with a capital of 1,500,000 marks (\$357,000) for the utilisation of the soya bean for industrial purposes. The removal of the German duty on these beans in March, 1910, will develop an industry of importance for several reasons: First, as a competitor of linseed oil, soya-bean oil can be sold at a price one-third lower than the former; second, as a valuable oil for soap manufacture, where such oils can be substituted; third, for cattle-feed purposes the residue remaining in the process of oil extraction can compete with the American cottonseed-oil cake. Meal can also be produced therefrom which, when mixed in correct proportion with wheat flour, makes an edible bread or biscuit, provided the meal has been manufactured by the extraction process, which removes the 8 per cent of oil present in the ordinary meal.

“Some analyses have shown the bean to yield as high as 23 per cent of oil, but this is exceptional, and the average percentage is figured to amount to about 17 per cent; loss in manufacturing reduces this to 8 or 9 per cent. The ordinary meal contains about 8 per cent of oil and 41 per cent of protein, but by a refining process 90 per cent of this oil can

be extracted, only 1 per cent of fat remaining in the meal, which has about 45 per cent of protein and 28 per cent of carbohydrates.”

“Uses of the bean—Its culture outside of China: In Japan soya-bean oil [sic, soy sauce] is still used as a favored aromatic constituent of sauces, and enormous quantities are said to be absorbed there for this purpose. The bean is much used as a spice [sic]. A cheese called tofu is also prepared therefrom. The cakes are useful to a certain extent as fertilizers and as fodder, although definite conclusions as to the value of this feed have not yet been reached thus far.. Scandinavia has become the largest consumer of the cakes made in England, Denmark alone having imported about 150,000 tons during the 1909 season.

“Efforts to cultivate the soya bean on European soil have been made as far back as 40 years ago, especially in Germany and Hungary, but as yet without success. Some investigations resulted in the alleged discovery that all these failures were to be ascribed to the absence of a specific bacterium, present in the plants in Manchuria but absent in those grown in Europe; in fact, not until this so-called *Knoellchenbakterium* [root nodule bacterium] had been cultivated in Japan and the seed inoculated therewith was the plant brought to growth in Europe. In Italy and southern France the cultivation of the bean is said to have shown better results than in Germany.

“The demands made upon the yield in Manchuria, the hinterland of Kiaochow, and Shantung have created the necessity for the cultivation of this bean in other countries, and the Tropics and subtropics, as best adapted, will probably take up its production.”

Note 1. This is the earliest English-language document seen (Nov. 2005) that uses the term “cottonseed-oil cake” (plural or singular) to refer cotton-seed cake.

Note 2. Stettin [Szczecin] is the largest seaport in Poland (as of Feb. 2008); it is located on the Baltic Sea and the Oder River. Address: Consul, Stettin.

• **Summary:** The author's advisors were Prof. Dr. H. Matthes, and Prof. Dr. Haussner. Contents: Introduction: Nomenclature, history in Asia and Europe (Kaempfer, Haberlandt), taxonomy, chemical composition, Maggi and shoyu, miso, tofu, soy bread for diabetics, coffee substitute, soy oil in China and Japan, in England and Germany, use in soaps and as a substitute for linseed oil, constants (such as iodine number), fatty acids, the work of Prof. Matthes. Experimental part.

In Japan and China, two fermented products are made from soybeans: Shoyu or bean sauce (*Bohnensauce*) and miso. Shoyu is enjoyed with almost all foods as a seasoning, and for quite some time has been exported in abundance to England and America, where it is used in the manufacture of English and American sauces. Shoyu is even used in the well-known Maggi seasoning. With respect to its nutritional value and stimulating effect (on the appetite), shoyu sauce (*Shoyu-Sauce*) is somewhat comparable to meat extract. For the preparation of shoyu sauce, milled wheat, soybeans broken into large pieces then cooked until half soft, water, and table salt are combined in specific proportions and allowed to ferment in large vats. The fermentation lasts anywhere from 8 months up to 5 years.

The preparation of miso seems similar to that of shoyu except that barley or rice are used [instead of wheat]

Moreover, in Japan, a type of raw cheese, so-called "bean cheese" (*Bohnenkäse*), is made from soybeans (*Soja*); in Japan it is called tofu (p. 8). (p. 8).

Biography: The author was born on 20 March 1884, in Halberstadt, the son of a chemist, who was later the director of a sugar factory. Address: Halberstadt, Germany.

1930. Beltzer, Francis J.-G. 1911. Études sur la caséine végétale du "soja" et ses applications [Studies on the vegetable casein of soybeans and its applications]. *Revue Scientifique* 49(23):716-20. June 10. [4 ref. Fre]

• **Summary:** The author did his research in Cochinchina [today's Vietnam], then a French colony. This is a very original and important article.

Contents: Introduction. Vegetable milk [soymilk]. Vegetable cheese [tofu and fermented tofu]. Industrial vegetable casein (*La caséine végétale industrielle*; i.e. soy protein). Production of vegetable casein: Cleaning and

washing the soybean seeds, extraction of the oil (which can be used in soap), extraction of the casein. Industrial [non-food] applications of vegetable casein: Paint, paper coating, Galalith, etc. Conclusion.

The preparation of vegetable milk and vegetable cheese are widely practiced today in Cochinchina and in Annam [today's North Vietnam], as recently discussed by Mr. Henri Labbé in *Revue Scientifique* (11 Feb. 1911).

Soymilk (*lait végétal*). After describing the process for preparing soymilk, the author notes: This soymilk serves for the feeding of infants and for general nutrition (*Le lait sert à l'allaitement des enfants et à l'alimentation générale*); it can also be used for the production of a vegetable cheese (*fromage végétal*).

Tofu (*fromage végétale*): When vegetable milk is treated with a mineral salt or an acid, playing a role analogous to that of rennet, it produces curds through coagulation, resembling those of ordinary casein. By draining and washing, one obtains a sort of white cheese (*fromage blanc*) which plays a major role in the nutrition of the peoples of the Far East. In Indochina the milk is coagulated by the addition of a very small quantity of a powder called Tchach-Kao or plaster [calcium sulfate], which comes from a selenite pulverised by the action of fire.

Tofu is generally eaten fresh, the same day it is made, but it can also be preserved by salting or smoking. In Annam, three main varieties of tofu are found: 1. Fermented tofu, gray or yellow in color, with a flavor resembling Roquefort cheese; 2. White or salted tofu resembling goat's cheese; 3. Baked or smoked tofu, resembling Gruyere cheese. At the market in Saigon, Chinese sell regular tofu to the natives for one-tenth the price of Gruyere cheese.

Industrial vegetable casein: Defatted soybean meal from oil presses is ground between millstones with cold water to give a slurry that is filtered to obtain soymilk. The soymilk is heated to boiling, then calcium sulfate is added to precipitate the protein, which is collected (just like tofu curds) on filter cloths. The presscake is mixed with forage and molasses, then fed to livestock. The curds are then dissolved in diluted soda lye (sodium hydroxide), filtered, precipitated with acetic acid. The finely divided precipitate is filtered out, washed on the filter, left to evaporate in the open air, then dried to a yellowish powder at a low temperature. The casein thus obtained is white, and, from an industrial viewpoint, very pure. It is insoluble in water, but soluble in dilute caustic alkalies and in ammonia. It exhibits almost precisely the same properties as the casein obtained from ordinary milk. It is found on experiment to be susceptible of the same industrial applications as animal casein, and may come to largely supersede this because of lower cost. 100 gm of soybeans yields about 25 gm of this "vegetable protein," which has both food and industrial uses.

Note 1. This is the earliest document seen (June 2011) concerning isolated soy protein. The author says that his

“vegetable protein” has both food and industrial uses.

Note 2. This is the earliest French-language document seen (Aug. 2003) that uses the term *caséine végétale du soja* or *caséine végétale industrielle* to refer to isolated soy protein.

Industrial applications of vegetable casein: “Like animal casein, industrial vegetable casein, free of fat or buttermilk, can be used in a host of applications. It can be used in making paints, and for the preparation of moisture-resistant products. Note 3. This is the earliest document seen (Oct. 2001) that mentions the use of soy protein in paints.

“It may be used also for the sizing (coating used to fill the pores) of paper, which consumes such large quantities of ordinary casein. Being soluble in ammonia and caustic solutions it is capable of forming a smooth and solid size.

Note 4. This is the earliest document seen (Oct. 2001) concerning the use of soy protein as a sizing for paper.

“Other uses are in certain manufacturing processes in the preparation of silks and artificial textiles, as well as of rubber, leathers, plastic materials, films, photographic emulsions, etc.

Note 5. This is the earliest document seen (Sept. 2001) concerning the use of soy protein to make silks, artificial textiles, or other industrial (non-food) fibers.

Note 6. This is the 2nd earliest document seen (Dec. 2001) concerning the use of soy protein as a raw material for making plastics.

Large amounts of animal casein are at present employed in the manufacture of ‘Galalith,’ from which are made numerous objects which imitate articles made from ivory, tortoise-shell, bone, horn, etc. The Soya casein, when free from fats, is equally well adapted for these purposes.

“Formol acts upon this casein in the same way as on ordinary casein, rendering it insoluble. Hence it may be used for the water-proofing of fabrics, straw hats, etc., as well as for the preparation of sizes and dressings... A solution of vegetable casein and borax can be successfully utilized in the process of calico printing.”

“It will be seen from the foregoing résumé, that the fabrication of vegetable casein for industrial purposes has immense possibilities, only exceeded in importance by the alimentary value of its food products for man and for beast.

Note 7. *Webster’s Third New International Dictionary* (1963) defines Galalith (a registered trademark)—as “used for a hornlike plastic [also resembling ivory or bone] made from casein [milk protein] and formaldehyde and used especially in making small molded objects (as buttons, beads, or combs).” This is the earliest document seen (Nov. 2003) that mentions Galalith in connection with soy protein. Galalith, “a new horn-like product from cow’s milk,” was sold commercially by Nov. 1905 and the process was protected by patents “in all civilized countries” (*Monthly Consular and Trade Reports*, USA. 1905. No. 302. Nov. p. 243.)

Conclusion: “A Chinese factory has already been

established on the outskirts of Paris (at Vallées near Colombes) to make food products based on soya (*produits alimentaires à base de Soja*). This factory now produces tofu (*Caséo-Sojaïne*) and the following food products: Soy flour, soy bread, soy sauce, sweet soya preserves (*confiture de Soja*), soymilk (*lait de soja*), fermented soymilk (*lait de Soja fermenté*), tofu (*fromage de Soja*), etc.

Note 8. We wonder: Was Beltzer influenced more by Li Yu-ying, or was Li influenced more by Beltzer? Both did independent and original research, however by Dec. 1910, some 6-7 months before this article was published, Li had applied for two French patents and three British patents which describe how to make various soy products in detail—including many of those products described by Beltzer. Therefore, we believe that Li influenced Beltzer more than Beltzer influenced Li.

“The Indochinese prepare, in addition, a fermented liquor, a concentrated milk, an alimentary flour, and a casein which forms the essential food of the people... Many Europeans are preoccupied with extracting part of the nutritive principles that exist so abundantly in the seeds, for the feeding of armies at war and of colonial troops... Hopefully the question of food uses of soy will be taken up at the same time as the manufacture of industrial casein, and that this will permit the utilization of the immense resources that our Indochinese colonies offer as raw materials.”

Note 9. Later in 1911 this article was summarized in *Scientific American* Supplement and printed as a special booklet.

Note 10. This is the earliest document seen (May 2000) that uses the term *la Caséo-Sojaïne* to refer to a food—clearly to tofu. Li Yu-ying coined this term, apparently after considerable thought and research. However the author also uses the term *fromage végétale* to refer to tofu—perhaps more generically. Martine Liguori, a native French speaker who is interested in tofu, noted in an interview (May 2000): “This term for tofu doesn’t sound foreign. Rather it sounds somewhat scientific, learned, and upper-class, as from the techno-elite. If you don’t know what it means, that’s because you are not well enough educated. In France, people will adopt something that is upper class, but they resist foreign things—even foreign words. This whole idea originated in France when Napoleon created the *Grandes Ecoles* (French graduate schools) to develop an intellectual elite to replace the royal elite.”

Note 11. This is the earliest document seen (April 2001) that mentions dried tofu. Address: Ingénieur-chimiste.

Department of Commerce and Labor 14(135):1114-16. June 10. See p. 1116.

• **Summary:** “The valuable soya bean: The soya bean has lately come into some prominence by reason of its extensive uses in the manufacture of oil and soap, and also because it forms return cargoes for tramp steamers bringing coal to the East. Dr. Gilbert Brooke, port health officer of Singapore, describes some new uses for the article:

“The object of this paper is to show that we have at hand an article of diet which is cheap, which can be grown over large areas of the globe, which is palatable, which is not attacked by any known insect or fungus, which forms valuable by-products, and—most important of all—which contains, more nearly than any other known animal or vegetable substance, all the essential and properly proportionate constituents of a perfect diet.

“Rice is a very badly balanced food, consisting mainly of starch, having next to no nitrogen, and hardly any fat or salts. In this rice stands, in the scale of food values, almost at the bottom, whereas the soya bean stands at the top. But it is remarkable that nature and experience seem to have taught rice-eating races that one of the best accompaniments to rice is some form of leguminous food, such, for instance, as dhal, the small yellow pea so much used by natives of India. Following out this analogy it would seem to be most desirable to foster among Asiatic races that depend mainly upon rice as a staple the simultaneous consumption of the soya bean as supplying in abundance those essential food elements that can not in the least be derived from rice.”

“Among the economic products derived from the soya Dr. Brooke enumerates these:

“(1) Bean curd. A most nutritious jelly can be made from the soya bean. This has been known and widely used by all classes in north China for the last 2,000 years.

“(2) Bean milk. The beans are dried, very finely ground, and made into an emulsion with water. This forms a valuable milk, which resembles cow’s milk in that it coagulates when heated and acidified. The possibility of this is due to the fact that the proteid is composed of casein, as in the case of animal milk.

“(3) Bean cheese. A nutritious cheese [tofu] is frequently made in Japan from bean milk.

“(4) Bean flour. The dried and pulverized bean is most valuable as a soup basis. It is also useful for making biscuits and infant foods. Soya biscuits, produced by a Scotch firm, are supplied on several P. & O. mail boats.

“(5) Bean oil. There is a very high percentage of fat in the soya bean. This is of commercial value. It is edible, and also forms an excellent basis for candle and soap manufacture.

“(6) Bean cake. The seed cake left after expression of the oil from the soya bean forms one of the most valuable and rich cattle foods known.

“(7) Bean sauce. The soya bean ground up and steeped

in vinegar or brine forms a basis for Worcestershire and other sauces.

“(8) Bean coffee. A substitute for coffee may be made from the soya bean, by dry roasting and grinding it, then adding boiling cow’s milk or hot soya milk.

“(9) The straw surpasses in nitrogenous value that of wheat or even hay. It is quite possible that the leaves or root may have medicinal properties, but this has not yet been worked out.” Address: Vice Consul General, Singapore.

1933. **Product Name:** [Soy Sauce or Shoyu].

Foreign Name: Sauce de Soja ou Schoyou.

Manufacturer’s Name: Usine de la Caseo-Sojaïne.

Manufacturer’s Address: Valles, Colombes (near Asnieres, Seine), northwest of Paris, France.

Date of Introduction: 1911. June.

New Product–Documentation: Beltzer, Francis J.-G. 1911. “*Études sur la caséine végétale du “soja” et ses applications* [Studies on the vegetable casein of soybeans and its applications]. *Revue Scientifique* 49(23):716-20. June 10. See p. 720. Conclusion: “A Chinese factory has already been established on the outskirts of Paris (at Vallées near Colombes) to make food products based on soya (*produits alimentaires à base de Soja*).” This factory now produces various food products, including soy sauce (*sauce de Soja*).

Scientific American Supplement. 1911. “Extended utilization of soya bean products: Milk, cheese, and a variety of other products from a vegetable seed.” Aug. 19. p. 115. “A Chinese factory has been established [by Li Yu-ying] not far from Paris for the purpose of manufacturing alimentary products from Soya, and it has already put on the market... Soya sauce,...”

Li, Yu-ying; Grandvoinnet, L. 1912. “*Le soja* [The soybean]. *Agriculture Pratique des Pays Chauds* (Bulletin du Jardin Colonial) 12(108):213-23. March. See p. 216-22. The section titled “Sauces” begins: “1. *Schoyou* (*Soyou*, *Schoyu*). *Shoyou* (*Phek-sze-You* in Chinese) is a liquid, soy-based condiment...” Details are given on the preparation, raw materials used and their proportions, formation of molds and koji, fermentation, perfection of the fermentation process in an aseptic environment using soymilk or soy bouillon inoculated with pure cultures, properties of shoyu, chemical composition of shoyu.

1934. Porter, Albert J. 1911. Heard between the watches. *San Francisco Chronicle*. July 9. p. 29.

• **Summary:** This Veteran Customs Officer had been watching the sterns of China boats for many years, “and he could tell at a glance whether the rice mat or shoyu tub tossed over the rail high above contained that which has been keeping the Federal authorities on the run for a long time—the little five-tael tins of the subtle poppy drug, at present worth nearly its weight in gold.”

Note: This article is about opium smuggling.

1935. *Los Angeles Times*. 1911. Wonderful soya bean: Has great food possibilities and is grown in great quantities in China and Japan. July 16. p. II-11.

• **Summary:** From *The Pathfinder*. “The Western world is only just beginning to appreciate the possibilities of the soy, soja, or soya bean, which is produced in such vast quantities in China, Japan and other parts of the East and which is adapted to so many different purposes. Large quantities of these beans are now being brought to Europe and this country, as they form a good return cargo for vessels that carry manufactured goods to the oriental markets.”

“Dr. Gilbert Brooke, British health officer at Singapore, has issued a paper emphasizing the merits of the soya bean. He recommends it as a very desirable food... and—most important of all—which contains more nearly than any other known animal or vegetable substance, all the essential and properly proportioned constituents of a perfect diet. Among the economic products derived from the soya Dr. Brooks enumerates these:” Bean curd, bean milk, bean cheese [probably tofu—not fermented], bean flour, bean oil, bean cake, bean sauce (“the well-known ‘soy’ sauce”), and bean coffee.

“The straw surpasses in nitrogenous value that of wheat or even hay. Like other leguminous plants it enriches the land on which it grows, instead of impoverishing it.”

1936. Lea and Perrins. 1911. Lea & Perrins’ sauce for travelers and sportsmen (Ad). *Times (London)*. July 23. p. 16, col. 1.

• **Summary:** “Adds much to the enjoyment of hot or cold luncheon, dinner or supper. The only original and genuine ‘Worcestershire.’”

Near the upper left of this display ad is an illustration of large, fancy hotel. At the center of the ad is a circular illustration of a well-dressed man and woman seated at a table in the hotel. Behind them is a waiter with what appears to be a bottle of Worcestershire sauce on his upheld tray. At the right center are some people in a motor car. At the lower right is a large royal seal, and above it the words “By Royal Warrant to H.M. The King.” Address: [England].

1937. Beltzer, Francis J.-G. 1911. Le lait végétal, la caséine végétale et les produits industriels retirés des graines de “soja” [Vegetable milk, vegetable casein, and industrial products extracted from soybeans]. *Revue de Chimie Industrielle et le Moniteur Scientifique, Quesneville* 22(259):209-15. July; 22(260):241-51. Aug. (Chem. Abst. 5:3597). Also published in Paris by Librairie Bernard Tignol (1911). *Bibliothèque des Actualités Industrielles*, No. 144. [13 ref. Fre]

• **Summary:** Contents: Introduction: Chemical composition of the soybean and of soy oil. Fermented soyfoods and koji: Li Yu-ying and his soyfoods plant established near Paris (at

Vallées, near Colombes), the products it makes (tofu or soy casein {*Caséo-Sojaïne*}, soy flour, bread, sauce, confections, milk, fermented milk, tofu, etc.), soyfoods made in French Indochina. Soymilk (*lait végétal*). Tofu (*fromage végétal or to-fou*): fresh tofu, fermented tofu (*La variété fermentée*, which is gray or yellow and has a piquant taste resembling that of Roquefort cheese), white and salted tofu (which resembles a goat’s cheese), smoked tofu (which resembles a gruyère cheese)...

Industrial production of vegetable casein from soybeans (cleaning the seeds, extraction of the oil), cost of a plant to make vegetable casein, industrial applications of vegetable casein: in paints, glues, paper coatings, plastics resembling Galalith, conclusion.

An illustration (schematic drawing; p. 248) shows two views (a cross-sectional side view and an overhead floor plan) of a factory for producing vegetable casein, with a capacity to process 10 tons of soybeans per day.

Note: This is the earliest document seen (Sept. 2001) concerning the use of soy protein in glues or adhesives. Address: Ingénieur-chimiste, Expert, Professeur de Chimie Industrielle, France.

1938. Togano, Meiji. 1911. Shōyu no kōki ni tsuite [On the odor of shoyu]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 109. p. 1-38. Aug. 5. [Jap]

• **Summary:** In the English-language table of contents, shoyu is called “Soya.” Address: Nōgaku-shi, Japan.

1939. Oyama, Jiro. 1911. Pootorando ni okeru yunyū Nihon shōyu ni kansuru ken [The market for imported Japanese shoyu in Portland, Oregon]. Portland, Oregon. 15 p. Aug. 8. Handwritten unpublished manuscript. [Jap; eng]

• **Summary:** This is a market report from Mr. Oyama at the Japanese consulate in Portland to Mr. Yoshitaro Komura at the Japanese Ministry of Foreign Affairs.

During the past 18 months 10,509 taru (170,460 liters, or 947 koku) of shoyu has been imported to Portland. A Japanese run shoyu company in Portland [probably *Sanyo Shoyu Jozo Gaisha*; see 1909 entry] made or makes about 300 koku (54,000 liters) a year. Address: Japanese Consulate, Portland, Oregon.

1940. *Scientific American Supplement*. 1911. Extended utilization of soya bean products: Milk, cheese, and a variety of other products from a vegetable seed. 72(1859):115. Aug. 19. Summary of Beltzer 1911, in *Revue Scientifique*. [Eng]

• **Summary:** “A Chinese factory has been established [by Li Yu-ying] not far from Paris for the purpose of manufacturing alimentary products from Soya, and it has already put on the market Soya flour, Soya bread, Soya sauce, Soya Milk, Soya cheese, preserves, fermented milk, etc.”

The well-known chemical engineer, F.J.G. Beltzer, “who has made a careful study of the whole subject, publishes

in the *Revue Scientifique* a report of whose most important features we present an abstract.”

“For purely industrial applications it is necessary, as we have said, that the vegetable casein be entirely free from fatty matters.

“In the industrial treatment of Soya, therefore, the process is somewhat different. The 3 objects sought are: the pure oil, the casein entirely free from oil, and the residuary cake.

“The oil is extracted by pressing, and 2 grades are obtained. The first or purest is sold for edible purposes, while the second is useful for soap-making and other manufactures where oils and fats are employed...

“The pure casein is prepared from the pulp which remains after the extraction of the oil. The milky liquid obtained by triturating the pulp with cold water, is filtered and treated with powdered gypsum. About 1 kilo of gypsum per 1,000 liters of the liquid is used. The mixture is brought to a boil and the resulting coagulate is drained and washed in cloth filters. The casein thus obtained is dissolved in a quantity of very dilute soda solution, so weak that the reaction is either neutral or very slightly alkaline. The solution is filtered and then precipitated by acetic acid. The finely divided precipitate obtained is filtered out, washed on the filter and finally dried at a low temperature.

“The casein thus obtained is white, and, from an industrial point of view, very pure. It is insoluble in water, but soluble in dilute caustic alkalies and in ammonia. It exhibits almost precisely the same properties as the casein obtained from ordinary milk. It is found on experiment to be susceptible of the same industrial applications as animal casein, and may come to largely supersede this because of lower cost.

“Among the various uses to which it may be applied we may mention its employment in painting, and for the preparation of products having a resistance to moisture.

“It may be used also for the sizing of paper, which consumes such large quantities of ordinary casein. Being soluble in ammonia and caustic solutions it is capable of forming a smooth and solid size.

“Other uses are in certain manufacturing processes in the preparation of silks and artificial textiles, as well as of rubber, leathers, plastic materials, films, photographic emulsions, etc. Large amounts of animal casein are at present employed in the manufacture of ‘Galalith,’ from which are made numerous objects which imitate articles made from ivory, tortoise-shell, bone, horn, etc. The Soya casein, when free from fats, is equally well adapted for these purposes...

“It will be seen from the foregoing *rèsumè*, that the fabrication of vegetable casein for industrial purposes has immense possibilities, only exceeded in importance by the alimentary value of its food products for man and for beast.

“The residuary cake left after the extraction of both oil and casein still retains sufficient nutritive qualities to be

useful as an addition to the feed of animals.”

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term “soya cheese” to refer to fermented tofu.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term “soya cheese” to refer to either (or both) regular tofu or fermented tofu. By 1905 Li presented a paper (in French) describing how he had tofu to make “Fermented cheese (*Le fromage fermenté*). Its color is white, yellow, or gray, and its flavor is very strong, like that of Roquefort.” In Dec. 1910 he applied for British Patent 30,275, titled “Vegetable milk and its derivatives.” It was accepted / issued on 29 Feb. 1912. It stated: “For obtaining fermented cheese such as roquefort [Roquefort], parmesan [Parmesan], romatour [Rahmatour], camambert [Camembert], and gruyere, suitable ferments are employed.”

Note 3. This is the earliest document seen (Oct. 2008) that uses the term “Soya casein” to refer to an isolated soy protein product; it is used for industrial purposes.

Note 4. This is the earliest English-language document seen (Dec. 2004) that uses the term “silks” (or “silk”) to refer to spun soy protein fiber used like a textile fiber.

1941. Nishimura, Torazô. 1911. Shôyu kôbo aruhaa, beetaa, oyobi ganmaa ni kansuru kenkyû [Studies on the shoyu yeasts “alpha,” “beta,” and “gamma”]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 110. p. 44-56. Sept. 5; No. 111. p. 16-41. [Jap]

• **Summary:** In the English-language table of contents, shoyu is called “Soya.” Address: Nôgaku-shi, Japan.

1942. Li, Yu-ying. 1911. Procédés et dispositifs pour la transformation intégrale du soja [Processes and apparatus for the complete transformation of soybeans]. *French Patent* 433,986. Application filed 6 Sept. 1911. Granted 20 Jan. 1912. [Fre]

• **Summary:** The beans, freed from stones and decorticated, are passed into a pipe from which they are withdrawn, through a number of branch-pipes, to be converted into flour (by dry grinding and bolting) suitable for bread-making, etc. They are also converted into oil and press-cake, or into “milk” (by wet grinding and pressing) and press-cake [okara], or into sauce, or after roasting into “coffee” or “chocolate.” The “milk” may be concentrated or reduced to powder, or converted into “cheese,” or into sauce, or it may be used for the preparation of casein (*sojalithe*, for various industrial uses). The cake obtained on expressing the “milk” may also be used for the preparation of casein, and the cake obtained on expressing the oil from the bean serves for the preparation of “milk” or meal.

Soybeans can be used in seven different food industries: (1) Milling. (2) Dairy and cheese. (3) Baking, pastry, and pâtes. (4) Confectionery. (5) Chocolate. (6) Charcuterie—Pork butcher deli business. (7) Preserves and canned foods.

They can also be used for industrial (non-food) uses in: (1) The casein industry (*Caséinerie*, incl. sojalithe for various industrial uses). (2) The oil industry (*Huilerie*, incl. soap, paint, candles {*bougies*}, and artificial rubber).

Note: This is the earliest document seen (Dec. 2005) that mentions the use of soy oil to make candles (one of two documents). However no description or details are given as to how the candles are actually made. Were they made from hydrogenated soybean oil? Address: Resident in France (Seine).

1943. Krauss, F.G. 1911. Leguminous crops for Hawaii. *Hawaii Agricultural Experiment Station, Bulletin* No. 23. 31 p. Sept. 20. See p. 23-27, 30.

• **Summary:** “Soy bean (*Glycine hispida*): While possessing most of the good qualities common to other leguminous forage plants, the great diversity of type to be found in the soy bean adapts it to many uses and conditions unsuited to other legumes.”

“Among its most important uses is that for culinary purposes especially in the manufacture of the Japanese products (soy and miso). These products are imported into Hawaii from Japan in large quantities, but their manufacture is being rapidly extended in Hawaii. This has created quite a demand for the bean locally. At present two and one-half million pounds of the bean are being imported into Hawaii annually. The average cost is about \$3 per hundred pounds landed in Honolulu and the beans sell for \$3.25 to \$3.40 per hundred pounds. The Japanese coffee growers in the Kona district in Hawaii have been growing the bean as an intercrop for years. The total production is said to be about 200,000 pounds per annum. It will thus been seen that the immediate local demand is very far from being supplied at present.”

Note 1. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for part or all of the United States (Hawaii).

“The yield of seed obtained by the station from small experimental plantings ranges from 600 to 1,000 pounds per acre for the dwarf early maturing varieties, and about twice that amount from the medium late and medium tall sorts.”

“The following list has been selected from about 100 varieties tested by the station. It is believed to include the best sorts for each of the several purposes for which the soy bean is especially recommended. In the case of culinary varieties, both quality and yield of seed have been considered. The soy and miso manufacturers demand a large, hard, light colored seed, with a thin skin, and the writer is indebted to Mr. N. Yamakami, manager of the Hawaiian Soy Co., for his assistance in selecting varieties according to these qualities.

“Under Group I has been collected the best culinary varieties. These are usually found among the dwarf, early maturing sorts, qualities which make them well suited for intercultures, short rotations, and catch crops. Group

II contains the heaviest seeding sorts irrespective of their culinary qualities. These varieties are especially well suited for growing as grain for cattle feeding. Group III contains the rankest growing sorts. These supply the maximum yields of both forage and grain, which makes them especially valuable for fodder and green manuring.” Two photos show two types of soy bean plants: (Fig. 1) Three dwarf types (culinary varieties). (Fig. 2) Three intermediate types (general purpose varieties). These are accompanied by a list of the soybean names in the 3 groups with SPI numbers and basic characteristics. The six culinary varieties in Group I include Hollybrook, Manhattan, Swan, Elton, and Acme. The four culinary and grain varieties in Group II include Acme, Edward (“Mr. Yamakami, of the Hawaiian Soy Co., pronounces this the largest seeded yellow soybean he has ever seen and considers it a very desirable variety for the production of miso and other Japanese food products”), Ito San, and Ruralnook. The two forage varieties in Group III (tall, rank-growing, and best suited for green manuring) are Riceland and Barchet.

Another photo (Plate VIII) shows “Seeds of leguminous plants described in this bulletin, natural size—including three colors and sizes of soy beans.

Note 2. This is the earliest English-language document seen (June 2005) that uses the word “intercrop” (or “intercropped” or “intercropping”) in connection with soybeans.

1944. Abel, Mary Hinman. 1911. Beans, peas, and other legumes as food. *Farmers' Bulletin (USDA)* No. 121. 38 p. See p. 11-13, 17-20, 35-36. Revised Nov. 15, 1906. Reprint, Sept. 30, 1911. [1 ref]

• **Summary:** This is a reprint of the 1906 revised edition. The information about soy is unchanged. On pages 17-18 is a section titled “The peanut” (*Arachis hypogaea*). On pages 35-36 is a section titled “Peanuts and peanut preparations” which includes a subsection titled “Peanut butter.—The roasted peanut ground to an oily meal has somewhat the consistency of butter and is now marketed under the name of peanut butter. Salt is perhaps quite generally added during the process of manufacture. Water is also sometimes added—usually before serving. Peanut butter is used like other butter to spread on bread, for the making of sandwiches, and in the preparation of a number of made dishes. Many persons like its flavor when it is fresh and of good quality, and it seems fair to say that the use of this and other sorts of nut butter is growing. As regards composition, peanut butter, which is essentially the ground roasted peanut, contains more protein and less fat than ordinary butter. Little is known regarding the digestibility of peanut butter, but the fine grinding would naturally seem to be of an advantage. Judged by Jaffa's experiments with a ration containing peanuts, it would be well digested. (See p. 26)

“Peanut oil.—At present the American peanut crop is

not large enough to more than supply the roaster and the confectioner, hence the expressing of oil from the peanut has never become established here, but in Europe large quantities of the African-raised nuts are used for this purpose. The shelled nuts contain from 30 to 50 per cent. of oil. The oil is said to be of fairly good flavor, but inferior to olive oil. In 1899 some 80,000 tons of the nuts were used in Marseille alone for oil making. The unhusked nuts are passed between a pair of rapidly revolving grooved rollers and the shells and red inner skins are then removed by a winnowing process with the use of air currents and oscillating sieves. The cleaned kernels are ground and enveloped in fibrous mats and pressed to extract the oil.

“According to Brannt, “the first cold pressure yields 16 to 18 per cent of very fine table oil. The residue is then broken up, moistened with water, and again cold pressed, yielding 7 to 8 per cent of more or less valuable oil, used for table purposes and burning. The residue from this is heated and then pressed, giving 7 to 8 per cent more oil, unfit for table use, but used for soap and lubricating.” The grades of oil are sold as salad oil alone or mixed with olive oil.

“Peanut cake.- When the oil has been pressed from the ground nut, the mass remaining, called oil cake, is used for fattening. Some experiments have also been made as to its food value for human beings. Containing, as it does, 47 per cent of protein and 9 per cent of fat and starch, and costing about 5 cents a pound, this attracted the attention of German scientists. The oil cake broken up and cooked a long time in water and eaten as a soup or porridge in a hospital. Most of those who tried it ate it with apparent relish, not once only, but again and again. No effort have been made to ascertain to what extent it was digested, and the use of the cake does not seem to have passed the experimental stage.”

1945. Nishimura, Torazô. 1911. Shôyu moromi oyobi shôyu ni shôzuru sanmakusei kôbo kinrui (zoku ni shôyu no kabi to shôsu) ni kansuru kenkyû [Species of film-building yeasts on shoyu]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 111. p. 42-63. Oct. 5. [Jap]

• **Summary:** In the English-language table of contents, shoyu is called “Soya.” Address: Nôgaku-shi, Japan.

1946. Dorsey, George. 1911. Skill of the Chinese shown on farms: Few people have grown more food on rocks or developed more plants. Their cookery an art. *Chicago Daily Tribune*. Oct. 29. p. A2.

• **Summary:** “No other dense population has so thoroughly adjusted itself to its physical surroundings, depending throughout the course of its history on its own natural resources and the ingenuity of its brain. We speak of the application of science to agriculture as if science were something quite new... Few countries can show such a record of great inventions as the Chinese.”

“China is just enough saturated with Buddhism to make

people afraid of eating meat at times... There are societies in China, like our temperance societies, the members of which vow never to eat beef. There is in Chinese a formula to the effect that the ox, as man’s most useful helper in plowing and winning his daily bread, shall be inviolable [not available for slaughter to eat].

“In parts of China where Mohammedans are numerous, beef and mutton are largely consumed. The butchers of Peking are all Mohammedans. The Chinese abhor milk. Nor do they prepare cheese. Pork is the favorite meat throughout China.”

“Variety of grains:... Chinese grow all kinds of pulse—white, yellow, red, green, and black. Bean curd, prepared from the yellow and black bean, is the principal food article in China and Japan. The beans are macerated in water and milled. The liquid filtered [and boiled], and gypsum added to coagulate the casein. Vermicelli and a kind of jelly are made from [mung] bean flour. From the starch extracted from green beans a meat sauce is made; from fermented beans a condiment known as soya [soy sauce]... Turnips and cucumbers are seasoned with soya.” Address: PhD, LLD, Hankow, Hupeh Province, China.

1947. Eddington, Jane. 1911. Economical housekeeping: Chop sooy. *Chicago Daily Tribune*. Nov. 9. p. 8.

• **Summary:** The typical American has all the ingredients needed to make “chop suey or sooy” “except the soy sauce, which he buys.”

“The following remarks and recipe is from the *Hotel Monthly*: ‘To make chop sooy the following Chinese goods are necessary: Soy or Chinese sauce, per jug, 35 cents...’ ‘Serve with a bowl of hot boiled rice, black tea, wafers, and a bottle of soy.’”

Note 1. This is the earliest document seen (Oct. 2006) which states that soy sauce is a basic ingredient in chop suey.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term “Chinese sauce” as a synonym for “Soy.”

1948. Harland, Marion. 1911. Marion Harland’s helping hand. *Chicago Daily Tribune*. Nov. 16. p. 9.

• **Summary:** “At least a dozen women have asked... for the recipe which follows... I am asking you to print what I know to be the best thing of its kind ever published for the housewife’s use: Worcestershire Sauce—Vinegar, one gallon; garlic, one ounce; black pepper, one-half ounce; nutmegs, grated, two; lemons, twenty; salt, one ounce; cayenne, one-quarter ounce; mace, one ounce; mustard, two ounces. One pint of Chinese soybean sauce greatly improves this sauce.”

Note: This is the earliest English-language document seen (April 2012) that uses the term “soybean sauce” to refer to soy sauce.

“Cut each lemon half-way through; peel garlic and put in lemons whole. Mix other ingredients together; divide

equally between lemons and place in lemons. Put lemons in an earthen dish and cover with plate; bake until quite brown, then turn into vinegar in a covered earthen jar. Stir several times a day. It is ready to bottle in ten days. I have tried it and I know it is good! I don't know where I got it, but copied it from somewhere. R.M.C.”

1949. Cornwell (G.G.) & Son. 1911. The chef says today:... (Ad). *Washington Post*. Nov. 17. p. 7.

• **Summary:** “The charm of French cooking lies in the unusual flavors imparted by the use of various seasonings and sauces. Here are a few that every housewife should have in her pantry: Rose Water, India Soy, Escoffier Derby Sauce,... Harvey's Sauce, Walnut Catsup.”

An illustration shows a smiling French chef with a white top hat, a goatee, and a waxed handlebar mustache. Address: New store: 1415-17 H St., N.W. [Washington, DC].

1950. Kent, William P. 1911. Manchurian trade and commerce: Newchwang. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 14(271):888-93. Nov. 18.

• **Summary:** Table 2 (p. 891) shows that significant “decreases occurred in the 1910 [soy] bean, [soy] bean-oil, and [soy] bean-cake shipments through the Newchwang customs. Beans were exported to Japan, Hongkong, and Samarang [Semarang, a port city on the north coast of the island of Java]; bean oil to Japan, the United Kingdom, Samarang, and Belgium; while Japan imported all the bean cake not consumed locally. All units for these three commodities are in piculs; A picul is equivalent to 133.33 pounds.

“The soya bean and its products... continue to grow in importance throughout Manchuria and to furnish the principal articles of commercial activity at Newchwang. When it is recalled how recently the soya bean and its extensive uses have come to the knowledge of the commercial world and how rapidly it has taken its place as an article of commerce, it must be regarded as a marvel of agricultural transformation, comparable alone in modern times to the discovery of Indian corn, tobacco, and the potato. The average price for 1910 of beans, bean cake, and bean oil, laid down at Newchwang, was: Beans, \$4.90 per 400 pounds; bean cake, \$5.55 per 687 pounds; and bean oil, \$5.75 per 133.33 pounds.

“One of the by-products of the soya bean whose manufacture is increasing is soy sauce, a condiment much used in Japan and other parts of the East. The Japanese established a factory at Newchwang in 1903 for the manufacture of soy [sauce], starting with a small capital. It has been so successfully conducted that from the profits the plant is being enlarged by an expenditure of \$30,000. Some prominent Chinese capitalists from the south of China propose erecting two additional factories at Newchwang

during the coming season.

“The most important and profitable adjustment of the bean trade is bean milling, and during the 1909-10 season great progress was made in the substitution of modern machinery for the old type of press, in which a system of wooden wedges was used. Up to December, 1910, the number of bean mills in operation at Newchwang was as follows: Seven steam mills with an average capacity of 5,000,000 pieces of bean cake and 21,000,000 catties (catty=1.33 pounds) of oil per annum; 7 smaller ones with an average annual capacity of 1,800,000 pieces of cake and 7,900,000 catties of oil; and 3 others with an average annual output of 300,000 pieces of cake and 1,300,000 catties of oil. One of steam mills employs hydraulic power on the mold presses; all the others utilize steam and oil engines simply to crush the beans preparatory to their being placed in the molds, which are worked by hand on a cog and screw system.

“What is desired is a machine similar to a cottonseed press, meeting certain requirements peculiar to the bean. This suggestion implies a matter of great importance to the first devisers of a machine meeting the approval of local bean-mill owners. To accomplish this end will require a personal investigation to acquire a close knowledge of the minor details of the industry. Descriptions and details are of no avail, owing to the probable omission of some item overlooked by an inexperienced investigator.

“Declared exports—shipping: Beans have not as yet been shipped direct from Newchwang to the United States. A small shipment of bean oil was sent on trial to a New York firm, and should this prove satisfactory larger returns may confidently be expected.” Address: Consul, Newchwang.

1951. Barrett, O.W. 1911. Rice ally crops. *Philippine Agricultural Review* 4(11):592-98. Nov. See p. 594-96. [1 ref]

• **Summary:** The section titled “Soybeans” (p. 594-96) begins: “Probably every tourist who has visited any of the cities of Japan or China has noticed in the markets these peculiar blocks of a grayish white, jelly-like substance and wondered whether they were really good to eat, but comparatively few have ever tried there the three or four varieties of vegetable ‘cheese’ prepared from the soybean*.”

*Footnote: A 3/4 page footnote, extracted from USDA Farmers' Bulletin No. 58 by Langworthy, discusses five preparations commonly made in Japan from the soybean: natto, tofu or bean cheese (eaten in the fresh state or frozen), miso, yuba, and shoyu.

“Experts in threpsology, the new science of nutrition, seem to be in accord on the fact that in dietary matters two kinds of food are at least four times as good as one... Recently the European food experts have realized the high nutritious value of the soybean and a factory has been established near Paris [by Li Yu-ying] for the manufacture of

various food products from this wonderful seed.”

“Now is the time for the Philippine Agriculturist to take up soybean culture in earnest, and to develop it in the same way, even if not to the same degree, as our neighbors across the way have been doing for centuries. The fact that there are practically no seeds of this valuable crop at the present in the Philippines is a sad commentary on the progressiveness of the Philippine farmer; but it is never too late to learn” (p. 596). Address: Chief of the Div. of Experiment Stations, Philippines.

• **Summary:** The German title is “Ueber die Ermittlung von Formaldehyd in ‘Sake’ und ‘Shoyu’ (So-ya).” Address: Tokyo Eisei Shikensho, Japan.

1953. Takahashi, Teizō; Yukawa, Matao. 1911. Shōyu kōji oyobi shōyu moromi-chū no gaseikin ni tsuite (1) [Studies on the budding fungi of shoyu koji and shoyu moromi (mash) (1)]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 112. p. 1-26. Dec. 5. [Jap]
Address: 1. Nōgaku-Hakushi (Doctor of Agriculture), Japan; 2. Nōgaku-shi, Japan.

1954. Nishiwaki, Yasukichi. 1911. Kaki-iro kabi, kōji kabi oyobi kumonosu kabi o motte, shōyu jōzō hikaku kenkyū [Shoyu manufacturing experiment using orange-colored mold, koji mold, and *Rhizopus* mold]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 14(166):1161-65. Dec. [Jap; eng]

• **Summary:** The orange colored mold is actually called “persimmon colored” and refers to *Oidium lupli* or *Monilia sitophila* (used to make onchom or ontjom). The koji mold is *Aspergillus oryzae*. *Rhizopus japonicus* is called “spider-web mold.” It is clear that shoyu can be made with molds other than just the koji mold. Good shoyu koji was made easily with the orange mold, which is little attacked by other molds. The *Rhizopus* mold gave unfavorable results. Address: Nōgaku-shi, Japan.

1955. **Product Name:** Soy sauce?

Manufacturer’s Name: Honolulu Soy Manufactory.

Manufacturer’s Address: 1100f N. King, Honolulu, Oahu, Hawaii.

Date of Introduction: 1911.

New Product–Documentation: Husted’s Directory of Honolulu and the Territory of Hawaii. 1911. p. 304. Honolulu Soy Manufactory. K. Daimaru, mngr. 1100f N. King.

1956. **Product Name:** Soy sauce.

Manufacturer’s Name: Ishizu (J.).

Manufacturer’s Address: Front St., Hilo, Island of Hawaii, Hawaii.

Date of Introduction: 1911.

New Product–Documentation: Husted’s Directory of Honolulu and the Territory of Hawaii. 1911. p. 788. Ishigu, J. [But Ishizu is correct]. soy mnfr, Front St., Hilo, Hawaii. Note: 1912 Directory (p. 813) lists J. Ishizu, soy, Front, Hilo. Ishizu is also listed in 1913, 1914, and 1915 directories.

1957. Kinoshita, K.; Taido, J. 1911. Seishu-chū “forumuarudehiido” kenshutsu-hō ni tsuite [Detection of formaldehyde in sake. I-IV.]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 6(10):15-28; 6(12):5-15; 7(6):10-16; 7(2):12-25. [Jap]

1958. Kita, Gen-itsu. 1911. Shōyu seizō ni kansuru kenkyū hōkoku. IV. [Research report on shoyu production. IV.]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 14(156):109-28. [Jap]

• **Summary:** “Traditional shoyu production depends on alcohol fermentation as well as on protein degradation and acid fermentation. Therefore starch or the majority of the sugar is converted into alcohol, then into esters, which the flavor of shoyu. In 1907 Dr. Saito Kendo published a report titled “Microbiological studies on the preparation of soy sauce” (*Zentralblatt für Bakteriologie*. Series 2. 17(1/2):104-09, 152-53) in which he discussed shoyu yeasts. The major yeast is the new variety *Saccharomyces soya*, and there are others such as *Sacc. farinosus*.

“I tried to isolate the yeast in order to study the process of fermentation, the growth of yeast, the side effects the yeast, etc. After plating the yeast many times on a medium containing koji solution plus salt, the yeast can be purified by Lintner’s method. Samples were obtained from Noda, Choshi, Shizuoka, Handa, Sakai, Shodoshima (island) and Tatsuno.

“I observed four types of yeast: Type 1 was isolated from the samples from Noda, Shizuoka, Sakai, Shodoshima, Tatsuno, Choshi, and Handa. It is the most common type which has the medium fermentation ability. Type 2 was isolated from the Shizuoka sample. Its characteristics are about the same as Type 1. Types 3 and 4 were isolated from the Noda sample; they do not ferment during cold weather.

The author then discusses: Microscopic observation. Plate culture. Large colonies. Agar culture. Liquid culture. Small droplet culture. Fermentation characteristics using various kinds of sugar. Apparent optimal temperature and the actual optimal temperature. Test for spore formation. Fermenting ability of the shoyu yeast (p. 115): 1. The growth condition when the medium contains salt and sugar. 2. The fermenting ability of various yeasts grown in boring (?) 10° or boring 20° sugar medium without salt (boring is a unit of

concentration). 3. The fermenting ability of various yeasts grown in boring 10° sugar medium containing 10% salt. 4. The effect of alcohol on shoyu yeast. 5. The reaction of yeast to salt. 6. The fluctuation of nitrogen compounds in the culture medium due to the presence of yeast.

“The importance of alcohol fermentation in shoyu making (p. 125): Alcohol fermentation is one of the most important changes that takes place during the process of making shoyu. Although the flavor of shoyu depends a lot on alcohol fermentation, we don’t know exactly how important its role can be. When the flavor and color of shoyu was evaluated, we did not find a significant difference, so that it seems unnecessary to add a large amount of wheat when making shoyu. Currently equal volumes of wheat and soybeans are mixed in order to make the best quality shoyu. However considering that regular quality shoyu doesn’t require wheat at all makes us think that addition of wheat is arbitrary and irrational. I conducted the following tests (p. 116): 1. The effect of decreasing the amount of wheat on the taste and flavor of shoyu and the relationship between profit and cost. 2. The characteristics of koji (?) when cheaper soybeans are used instead of wheat. 3. characteristics of koji (?) when other cheaper starchy grains are used instead of wheat. These tests should be conducted with great caution, using a large quantity, and we should avoid drawing conclusions obtained from only a few experiments. I hope the shoyu makers will volunteer to conduct them. Here are some results which I obtained: The possibility of storing koji enzyme in salty water.” Three photos (p. 111) show microorganisms growing in petri dishes. Address: Kôgaku-shi, Japan.

1959. Alviso Co. (The) (Arubiso Shokai). 1911. The Alviso Co. (Ad). In: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 7]. p. C-36. [Eng; jap] • **Summary:** Ad (½ page). The top 1/3 of this ad is in English. This company sells various goods including (in Japanese) shoyu [soy sauce]. This ad also appears in the 1912 Year Book (p. C-16), and in 1913 (p. 35). Also in 1914, p. 15 (near end). They sell Japanese foods including shoyu, and Western foods. Address: P.O. Box 15, San Jose, California. Phone: San Jose 5417 R 1.

1960. Bowie, Henry P. 1911. On the laws of Japanese painting: An introduction to the study of the art of Japan. San Francisco, California: Paul Elder and Company. xv + 117 p. See p. 90. With prefatory remarks by Iwaya Sazanami and Hirai Kinza. Illust. Index. [14 ref]

• **Summary:** In Chapter 6, in the section on “Month and holiday subjects,” under the month of “May” (p. 90) we read: “The fifth of May is the boys’ festival, and the carp (*koi*) is the favorite subject for painting... When this fish is caught and about to be cut up alive for *sasshimi* [*sashimi*], a Japanese delicacy, once the carver has passed the flat side

of the knife blade over the body of the fish the *koi* becomes motionless, and with heroic fortitude submits to being sliced to the backbone. Served in a dish, a few drops of soy being placed in its eye it leaps upward in a last struggle, to fall apart in many pieces.”

References (Japanese title in Roman letters, English translation of that title, and author) to 14 of the best Japanese-language books about Japanese painting appear on p. 28; none have yet been translated. Address: Japan.

1961. Farmer, Fannie Merritt. 1911. The Boston Cooking-School cook book. Revised. Boston, Massachusetts: Little, Brown and Company. xv + 648 p. + [30] p. of advertisements. Illust. Index. 19 cm. See also the 1918 ed. • **Summary:** Contains 125 new recipes. As in the original 1896 edition, Worcestershire sauce is called for in many recipes in this book (p. 117, 180, 182, 188, 189, 197, 207, 212-13, 223, 227, 231, 273, 333-34, 344, 371, 372, 554, 565).

Catsup is called for much more and in many new forms compared with the 1896 edition: Oyster cocktail (p. 180; “1 tablespoon tomato catsup”). Lobster cocktail (p. 186; “two tablespoons, each, tomato catsup and Sherry wine”). Blanquette of lamb (p. 223-24; one tablespoon Mushroom Catsup, or any other suitable table sauce”). Asparagus salad (p. 329; “serve with French Dressing, to which has been added one-half tablespoon tomato catsup”). Oyster and grape fruit salad (p. 344; “season with six tablespoons tomato catsup,...”). Breast of quail Lucullus (p. 376; “Serve with one and one-half cups rich brown sauce seasoned with tomato catsup...”). Devilled bones (p. 565; “1 tablespoon Walnut Catsup”).

Concerning vegetarian diets: In Chapter 1, titled “Food,” he section on “Correct proportions of food” states (p. 3): “To keep in health and do the best mental and physical work, authorities agree that a mixed diet [from animal & vegetable sources] is suited for temperate climates, although sound arguments appear from the vegetarian... Brain workers should take their proteid in a form easily digested. In consideration of this fact, fish and eggs form desirable substitutes for meat.”

Near the end of the book is an ad (on an unnumbered page) for “Works on cookery.” The first of these is *The Golden Rule Cook Book: Six hundred recipes for meatless dishes*, by M.R.L. Sharpe. “A new edition of the best of all books on vegetarian food and cookery.” Address: Of Miss Farmer’s School of Cookery.

1962. Hooper, David. 1911. Soy bean in India: Glycine hispida. *Agricultural Ledger (Calcutta)* No. 3. p. 17-33. (Vegetable Product Series No. 114). Also reprinted in *Tropical Agriculturalist*, 1912. 38:11-15, 99-103.

• **Summary:** Contents: Introduction. Experimental cultivation in India. Vernacular names of the soybean. Method of

cultivation: Green manure, harvesting. Races and varieties. Races in India: Yellow [grown in Poona Experimental Farm, Burma, Darjeeling, Dehra Dun, Simla, Punjab], green [Poona], black [Poona, Kashmir to Darjeeling, Simla], brown [Kashmir, Kalimpong to Darjeeling], mottled [Shillong, Assam]. Composition of the seed: From Church, from König, from Dr. J.W. Leather (1903), tables showing analyses made in India of Indian-grown Soy beans from various provinces (Burma, Hill Tracts, United Provinces [black seeds], and Poona). Soy bean oil. Soy bean oil-cake. Composition of hay. Use as food: Soy-bean milk, bean cheese (topo, sic tofu, or "Soy-bean cheese"), shoyu ("Under the name of 'Soy sauce' and other fanciful names it has formed the basis of most of the important sauces of Europe for many years."), roasted soy beans as a coffee substitute, soy beans in diabetic diets. Trade (exports of Soy bean from Manchuria to England). Price.

"The plant was introduced into the United States of America in 1854 and was grown to a small extent in the Southern States, but from the year 1885 its cultivation as a forage crop has gained in importance in all the agricultural centres. Within the last two or three years a great deal of interest has been taken in the cultivation of Soy, and experiments are in progress in Government Farms in Cape Colony, Natal [South Africa], East Africa, Gambia, Mauritius and Australia.

Contains a good early history of the soybean in India: "It is difficult to ascertain the date of the introduction of Soy beans into India. There is no doubt that certain hill tribes, mostly of Mongolian origin, have cultivated the bean for a long time. At the Punjab Exhibition held at Lahore [later divided between India and Pakistan] in 1864 Soy beans identified by Dr. Cleghorn, were sent from the Hill States. This is the first record of the beans being exhibited in this country, and shows that the cultivation was on a insignificant scale.

"Experiments in India. In 1882 Messrs. Jardine, Matheson & Co. of Hong-Kong sent a sample of Soy beans for experimental cultivation in the Saidapet Experimental Farm, Madras. The plants raised from these seeds were healthy but the yield of the crop was small.

"In 1897 Surgeon-Colonel W.G. King, Sanitary Commissioner, Madras, strongly advocated the cultivation of Soy bean as a valuable food worthy of the attention of the people. In two experiments carried on at Saidapet during 1897-98, the yield of seed per acre was 468 to 495 lbs., respectively. Recent enquiries in Madras resulted in the opinion that the cultivation in the Presidency is still in an experimental stage.

"In 1882 some Japanese Soy beans were sent by the Government of India for trial to Saharanpur. In 1885 very good results were obtained, the black seeded variety giving a yield of 1,124 lbs. per acre, and the white seeded variety giving a yield of 561 lbs. per acre. In 1886 the acclimatised

seed was widely distributed; in some cases the crop failed and in others it was fairly successful, but as a rule where seed was harvested it was said that the pulse was not popular in any form. The Botanical Gardens grew the crop for a few years longer but as there was no demand for the seeds the cultivation was abandoned. An interest in Soy bean, however, seems to have revived for the Agricultural Department has this year sent to the Reporter on Economic Products samples of the black variety of Soy beans from forty villages of the United Provinces.

"At the Experimental Farm at Nagpur, Central Provinces, the bean was grown experimentally from Japanese seed first planted in 1885. The yield at the end of the first year was at the rate of 180 lbs. per acre, but taking the average of five years the result was 88 lbs. per acre. In the Report for 1908-09 it is stated that Soy beans were grown on a small area under field conditions and the yield was fair, but there was little local demand for the seed. It was, however, ground and formed an excellent addition to the diet of the farm cattle. Last year only 43 lbs. were obtained on light soil on the Nagpur Farm, the crop being practically a complete failure; on heavier soil 380 lbs. of seed were raised.

"Soy beans have been grown at Poona for nine or ten years with varying results, and they have also been tried at Nadiad in Gujrat [Gujarat] and elsewhere in the Bombay Presidency. In the Experimental Farm Report for 1901 a large yield was chronicled, but next year the crops at Poona and Surat failed. In 1904 a yield of 300 lbs. per acre was obtained in light land. One year later nineteen plots were under trial but with unpromising results, for only five yielded seed enough to repay the cost of cultivation. The yield varied from 50 to 293 lbs. per acre, and it was found that only when the yield exceeded 200 lbs. was the crop profitable. In 1905-06 the Manjri Farm, Poona, grew nineteen plots with better results, probably due to better soil. The yield of some of the plots was on an average of 680 lbs. per acre—a highly remunerative return. A year later it was reported by Mr. Fletcher, Deputy Director of Agriculture, that an experiment made on the edge of black cotton soil gave a yield of 1,166 lbs. per acre, while adjacent plots gave from 395 to 650 lbs. per acre.

"In the Agri.-Horticultural Gardens at Lahore Soy bean planted on a small area in 1894 yielded an estimated crop of 349 lbs. of seed per acre and 349 lbs. of fodder. Evidently it varies greatly in suitability to different soils and climates and does not seem to be adapted to the sea level plains of India.

"Gollan observed that the Japanese plant is erect, attaining a height of 12 to 15 inches, while the Himalayan form is a trailing plant. So far this vigorous growing plant does not appear in India to have been attacked by any insect or parasitic fungus.

"With regard to Burma, Mr. Burkill remarks: 'The Burmese grow it under the names of Pe-nga-pi and Pe-kyat-pyin, sowing it never in great quantities along with

other beans on the mud banks as the falling rivers leave them bare in October, or more sparingly still away from the rivers. The Kachins and other hill tribes grow a little of it on their hill clearings, the Kachins call it Lasi. The Khasis, the Nagas and other tribes between the Brahmaputra and Upper Assam cultivate it similarly... In the Brahmaputra Valley it is grown as far as known only towards Barpeta in the Kamrup District.'

"Soy beans are called 'Bhut' in the Punjab, 'Bhat', 'Bhatwas' or 'Bhatmas' in the United Provinces and in the hills as far as Darjeeling, and 'Rymbai ktung' in Shillong and the Khasi Hills. Mr. B.C. Basu gives the Assamese name for *Glycine* as 'Patani jokra' and the corresponding Bengali name as 'Chhai.' In the Naga Hills it is called 'Tsudza' or 'Sudza.' It is grown by the Lepchas in Sikkim and is called by them 'Salyang' or 'Siliangdun.' 'Pe-nga-pi' is the usual name for Soy bean in Burma, but it has been received under the name of 'Lasi shapre tum' from Bhamo, and as 'Lasi N'Loi' and 'Lasi N'Hti' from Myitkyina. The Santali name appears to be 'Disom Horee.'"

"Dr. J.W. Leather in 1903 analysed the seeds of seven samples of Soy bean from Japanese seeds cultivated at Manjri, near Poona. The amount of oil in them varied from 14.92 to 23.05 per cent. being on the dry weight 15.97 to 24.41 per cent. with an average of 19.99. In 1902 Dr. Leather examined five samples grown on the Dumraon Farm. They yielded from 14.27 to 19.72 per cent of oil on the air-dried seeds.

"Fourteen samples of the seeds grown from Japanese seeds at the Manjri Experimental Farm were again analysed last year by a leading European firm. The percentage of moisture varied from 9.90 to 12.06, and the percentage of oil from 16.80 to 22.48...

"The following analyses of Indian-grown Soy beans were made in the laboratory of the Indian Museum in 1909 and 1910." Gives names and composition (oil [as is and on a dry basis], water, and ash) for 17 varieties from Burma, 21 from the Hill Tracts, 11 from the United Provinces [black seeds], and 15 varieties from Poona. "An attempt in 1903 to extract oil from these beans with the country *ghani* or indigenous oil-mill was a failure in Bombay."

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term "soy-bean cheese" to refer to tofu.

1965. Jingu Shicho. 1911. Koji ruien [Encyclopedia of early references to things Japanese]. Tokyo: Koten Kokyusho. Revised editions publ. in 1931 and 1971 by Yoshiko Bunkan; 51 volumes. Key volumes are Inshoku (#39) and Shokubutsu (#50). [50+ ref. Jap]

• **Summary:** Koji means "ancient things" or "origins." Rui means "varieties" or "description." En means "dictionary." This is one of the best books for doing historical research on Japanese culture, including foods. The book is divided into 30 major subject areas, such as Food and Drink. Within that section all basic Japanese foods and beverages are listed. After each one is listed many of the important early works in which that food is mentioned, with a quote of what is said. Furigana are used liberally to assist with pronunciations of hard-to-pronounce early document names and terms. Compiled from 1896 to 1914, volume 1 of the original edition is dated 1908. The works cited are from ancient times to 1867. The final volume is an index to the whole.

The volume on Food and Drink is titled *Inshoku-bu* (Vol. 51). Whole soybeans, p. 229-35. Black soybeans, p. 235-36. Green soybeans (*ao-daizu*), p. 236-37. Green vegetable soybeans (*edamame*), p. 239-40. Soybean cultivation, p. 240-42. Soybean utilization, p. 243-47. Daizu-ko Mochi, p. 555. Amazake, p. 695-97. Shirozake, p. 697-98. Hishio (Chiang), p. 836-40. Shoyu, p. 840-49. Miso, p. 851-68. Kuki (fermented black soybeans), p. 868-71. Natto, p. 871-74. Tofu (incl. Dengaku), p. 984-1005. Yuba, p. 995-96.

1966. Kagawa (T.) Company 1911. Importers and distributors (Ad). In: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 7]. p. C-64. [Eng; Jap]

• **Summary:** Ad (full page). About ¼ of this ad is given in English. This company imports and sells various goods. These include (in Japanese) shoyu [soy sauce], shiro miso [sweet white miso], and aka miso [red miso]. And (in English) "Japanese refined sake (Aramakiya-Masamune), rice, miso, sauce, canned goods, dried fish, vegetables & pickles." Address: 442 Merchant St., San Francisco, California. Phone: Kearny 1263.

1967. Lafar, Franz. 1911. Technical mycology: The utilization of microorganisms in the arts and manufactures. Vol. II. Eumycetic fermentation. Translated from the German

by Charles T.C. Salter. London: Charles Griffin & Co. ix + 558 p. Illust. Index. 23 cm. [3240* ref. Eng]

• **Summary:** An extensive bibliography (3,240 references) for both this volume and volume I appears at the back of this volume (p. 417-518). The opening chapter begins: "Already in the first volume (sect. 22) the algae and the fungi were arranged in a single group. that of the Thallophytes, in contradistinction to all other plants, the latter being classed in the group Cormophytes." The latter group has "an articulation of the body of the individual organism into leaf and stem."

Chapter 43, titled "Morphology and systematology of the Mucors (p. 48+) contains sections on "Subdivision of the Mucor family" (p. 49-51), "The genus Mucor" (p. 51-53; The genus was established by Micheli as far back as 1729. It contains *Mucor Rouxii* and *Mucor mucedo*), and "Rizopeæ" (p. 53-56). An illustration (p. 55) shows *Rhizopus nigricans* (After Brefeld). *Rhizopus nigricans* is the best and longest known member of this family. In 1818 it was described by Ehrenberg under the name *Mucor stolonifer*, which is still used by several workers." "The name *Rhizopus oryzae* has been given by Went and Prinsen Geerligs (I.) to a fungus discovered by them in Ragi (sect. 241), the sporangia and spore of which organism are considerably smaller than those of *R. nigricans*."

Chapter 44, is titled "Fermentation by Mucors" (p. 57-62). Chapter 45, titled "The use of Mucoreæ in the spirit industry" (p. 63-71) has three sections: Sect. 240. "Mucor rouxii and other species of Amylomycetes" (p. 63-67) states: "For the preparation of rice spirit there is produced in China, Cochin China, and neighboring countries, an article known as Chinese Yeast, and put on the market in the form of flat mealy balls, about the size of a half-crown. Its preparation, composition, and application were first described in 1892 by E. Calmette (I.), whose reports were extended and supplemented by C. Eijkman (II.) in 1894." The method of preparation is given. More important than its bacteria are "the yeast cells, which must be regarded as the exciting agents of the alcoholic fermentation; and certain Mucors, which affect the saccharification of the starch. Of the last-named organisms, which concern us here,. Calmette isolated a species which, in honour of his teacher and colleague, E. Roux, he named *Amylomyces Rouxii*." Two illustrations show this organism, which produces a "diastatic enzyme" (p. 65). The so-called amylo process and the work of Colette and Boidin with *Beta-Amylomyces* and α -*Amylomyces* in this process are discussed (p. 65-66).

Sect. 241 titled "Ragi and tapej" [tapé or tapeh] (p. 67-69) states that "Tapej... is prepared from rice by the aid of a secondary auxiliary material, which the Malay natives of Java term Ragi or Raggi, and the Chinese settlers call Peh-Khah." A.G. Vorderman (1893) describes the preparation of Ragi. According to Eijkman (1894) Tapej, which is also called Tsao, is prepared with the aid of Ragi, by boiling

husked Mochigome rice (*Oryza glutinosa* [*Oryza sativa glutinosa*], known as "Ketan" in Java) in water until soft. The flora of Ragi and Tapej comprises three groups of microorganisms; bacteria, budding fungi, and fungi belonging to the family *Mucoraceæ*.

Sect. 242, titled "The so-called Amylomyces process," (p. 69-71), or Amylo process for short, states that "this is the name given to the process for the industrial utilisation of the diastatic activity of *Mucor Rouxii* and several allied fungi. A company, the '*Société d'Amylo*, was founded by A. Collette and A. Bodin (I, 1897), who also, in 1897, took out in the name of this company a German patent for a 'process for producing alcohol from starchy materials, by means of aseptic saccharification and fermentation with *Mucedineæ*,...'"

Fernbach (II, 1899) has given a lucid description of the practical performance of this process in the patentees' works, the maize distillery at Seclin near Lille, France. This description is summarized. "An English patent for the mechanico-technological modification of the process was also taken out by Collette and Boidin (III.) in 1898." See also two other 1897 English patents by Collette and Boidin No. 19858 and No. 1155. "The reader interested in this matter will find more precise data in the review published by M. Delbrück (III, 1899). The chief advantage of the Amylomyces process is the abolition of the expensive additions of malt requisite in the older method of saccharification, the amount formerly needed being up to 15 per cent. in the case of maize, and 2 to 3 per cent. in the case of potatoes. With regard to the yield furnished by the Amylomyces process, it is stated that in the Seclin works, 37.8 litres of absolute alcohol are obtained per 100 kilos. of maize containing 57.5 p, a yield corresponding to 66.2 litres per 100 kilos of starch. Owing to the large amount of mycelial hyphae, the residue filters easily." "Finally it should be said that, since 1898, the aforesaid patentees have replaced *Mucor (Amylomyces) Rouxii* by another species, namely, so-called *Beta-Amylomyces*, or *Mucor Beta*. This organism is capable of dealing with more highly concentrated mashes than the other, and enables a charge of 25,000 kilos. of maize to be mashed to 1000 hl (22,000 gallons) of goods. per cent. of starch

Page 213 states that *Pichia farinosa* (Synonym: *Saccharomyces farinosus* Lindner, a film yeast) has been found by K. Saito (II, 1905, *Botanical Magazine*, Tokyo) in Japanese Soja sauce.

Chapter 51 discusses the genus *Aspergillus* (p. 228-31) with many fine illustrations, including conidiophores, conidia, ascospores, different stages of *A. oryzae* and *A. glaucus*. Page 228-29 state: "*Aspergillus Wentii*, Wehmer, was observed by Went in the preparation of Tao Yu (see vol. 1, p. 248) according to the method practised in Java, and was described by Wehmer (XIX.) in 1896. It appears spontaneously on the boiled Soja beans that have been

covered with *Hibiscus* leaves, and affects a loosening and disintegration of the firm tissue of the bean. The species forms a pale coffee-coloured, dense mold vegetation (Fig. 167)."

In Chapter 57 titled "Chemical activity of the Aspergillaceæ," by Prof. Dr. C. Wehmer, page 270 states: "Two species, *Asp. oryzae* and *Asp. Wentii* are reported as able to grow through the substance of soft-boiled rice and Soja beans..." The "enzyme mixture from *Asp. oryzae* (the so-called 'Takadiastase') is also mentioned.

Chapter 62 titled "The Monillæ and Oidia," by Dr. H. Wichmann mentions *Monilia javanica* (occurring in association with others in Ragi, p. 333), "*Monilia sitophila* (Mont.), Saccardo, is said by Went (IV.; reference missing) to be used by the natives in West Java in the preparation of a sweetmeat known as 'ontjom' composed of the seeds of the ground-nut or earth-nut (*Arachis hypogæa*). The ground-nuts, which are thoroughly permeated by the fungus, are made up in the form of small, orange-colored cakes, the surface of which is covered with the conidia, whilst the interior is both chemically altered and loosened in structure by the mycelium." Sect. 315 (p. 336-39) is titled "Oidium lactis and allied species." Also discusses *Oidium lupuli*, Matthews and Lott (p. 338). Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

1968. Langworthy, C.F. 1911. Cheese and other substitutes for meat in the diet. *Yearbook of the U.S. Department of Agriculture* p. 359-70. For the year 1910. See p. 363-64.

• **Summary:** Physiologists "admit that meat is not essential to a well-balanced diet, and there are many who, for one reason or another, are interested to know the rational ways of lessening the amount of meat which they consume or of replacing it with other foods." "Meat apparently supplies "a greater abundance than other foods of the substances which stimulate the normal or natural flow of the digestive juices" (p. 359).

The section titled "Dried beans and other legumes" (p. 363-64) states: "In Eastern countries, where conditions differ from those in Europe and America, the lack of abundant supply of food animals has been responsible for the production of a series of food products made from legumes, chiefly the soy bean. By ingenious processes, the nitrogenous material and more or less of the fat which the beans contain are separated and made into a number of special articles of diet, for instance, bean cheese or bean curd, a white material not unlike cottage cheese in appearance, and soy, a thick brown sauce which is the common flavoring material as well as a condiment of millions of people who thus supply nitrogenous material and flavor to a diet of vegetables, rice, and other similar foods."

The section titled "Commercial meat substitutes" notes: "There are on the market numbers of proprietary or patent foods recommended by their makers as meat substitutes.

For some it is claimed that they are made from nuts, and judging from their flavor and other characteristics they may be prepared from the peanut or other nuts, in part at least. It has been suggested that some of these special foods contain wheat gluten. Undoubtedly considerable quantities of these foods are used by those who follow some one of the vegetarian systems of diet, but they are not used in any general way as substitutes for meat in the average home." Address: Expert in Charge of Nutrition Investigations, Office of Experiment Stations [USDA].

1969. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1911. Nichi-Bei nenkan [Japanese-American yearbook. No. 7]. 650 Ellis St., San Francisco, California. 647 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 12 parts, each numbered separately. Contents: (1) Front matter, incl. 1 ad (5 p.) (2) Table of contents (6 p.). (3) Map of California agriculture (fold out, in Japanese, 1 p.). (4) Black and white photos on unnumbered pages (12 p., front and back). (5) Ads (p. A-1 to A-18). (6) Front part of Nichibei Nenkan No. 7 (p. 1-200), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (7) Ads (12 p.). (8) Nichibei Nenkan continued (p. 108 p., incl. original printing and publication dates and data on last page). (9) Ads (B-1 to B-66). (10) Directory of Japanese businesses and other organizations in the USA (p. 1-152, as of 1910 Oct. 1) (11) Ads (C-1 to C66). (12) New printing and publication dates (2002 Feb. 25), data, and ISBN (1 p.).

This year book focuses on Japanese in California. In early 1909, the California legislature "approved an appropriation of \$10,000 to be utilized for investigating the conditions of the Japanese in that state. The duty of directing the investigation naturally devolved upon the State Commissioner of Labor Statistics (*Rôdôkyoku-cho*), Mr. John D. Mackenzie. The work was begun on April 15, 1909, with the appointment of 9 special agents," 8 men and one woman, all white Americans. "There were no Japanese or other aliens employed in any capacity. To this force were added for the office work two expert statisticians and two stenographers." In early 1910, Mr. Mackenzie submitted to the governor of California (Gov. Gilette) a 78-page report (K. Kawakami 1912, p. 343-44).

Basic information about how the survey was conducted, its scope, and reaction to it is given on pages 27-28, 36-45, 47, 61-62, 150-51 of this year book. The text is written in the Japanese of the day, which included old-fashioned characters, sentence structure, and grammar—and is thus

difficult for modern Japanese to read or translate. The surveyors went to every part of California where Japanese were believed to live, and eventually surveyed an estimated 95% of the Japanese in California.

Most Japanese welcomed the surveyors and responded accurately and in detail on forms which were printed in both Japanese and English. A very high percentage of the forms were returned by mail to the survey headquarters. The Japanese were also asked to fill out more specialized forms such as business license, payment of taxes, no. of children in school (incl. where and in what grades), occupation, employment, land use, etc. This newspaper (*Nichibei Nankan*) obtained much information from this survey, and (apparently) from another census begun on 15 April 1910 (or is it 1909?); this one took one year and 5 days—finishing the research in April 1911, at which point compilation began. A key reason for the census was the strong anti-Japanese feeling in California, stirred up by leaders of the labor movement. The survey praised Japanese in California.

A table of U.S. farm crops (p. 54, near the front of this book) shows that in 1911 some 2,785,516 bushels of soybeans were produced in the entire USA worth \$7,767,702. Note: What is the source of these statistics? These are very early statistics on soybean production in the United States—earlier than any known USDA statistics.

A table of U.S. imports and exports from Japan (p. 74) shows that \$109,316 worth of miso and shoyu were imported; they were considered dutiable items, with a 40% duty levied on each (part 2, p. 23).

The Directory shows Japanese companies making soyfoods in California, Utah, Colorado, New York City, Washington state, and Oregon. Address: San Francisco, California.

1970. Nolton, Jessie Louise. ed. 1911. Chinese cookery in the home kitchen: Being recipes for the preparation of the most popular Chinese dishes at home. Detroit, Michigan: Chino-American Publishing Co. 71 leaves, unnumbered. 24 x 13 cm.

• **Summary:** The preferred oils are sesamum [sesame] oil and peanut oil. On one unnumbered page are descriptions of two Chinese sauces; both probably contain soy sauce: “Chinese Seasoning Sauce. A rather salty sauce with a sort of meaty flavor. It is a necessity in preparing Chinese dishes to obtain the peculiar flavor which makes the chief charm of the dish.

“Chinese Flavoring Sauce. A sauce which is somewhat like molasses in appearance and is used in most Chop Sooy [Suey] dishes. These sauces are imported from China in jugs of a distinctive Chinese pattern.”

The section titled “Luncheon menu” states: “A small pot of soy, see yu, or see gow, as the Seasoning Sauce is variously called should be at each place for use if furthering seasoning of the food is desired.”

Contains 36 recipes. Address: The Chicago Inter-Ocean.

1971. Okurasho Shuzeikyoku. 1911. Naikokuzei isan 53 [Domestic tax; treasure from the past 53]. Tokyo: Tokyozeimu Kantoku-kyoku. 1 vol. 23 cm. [Jap]*

• **Summary:** This is a Japanese government publication.

Note: This is the 3rd earliest book in WorldCat / OCLC that has miso as a subject or title word. Address: Japan.

1972. Sawyer, E.R. 1911. Cedara memoirs on South African Agriculture. Vol. II. Containing reports on feeding crops and livestock experiments in South Africa. Natal/Pietermaritzburg, South Africa. 371 p. See p. 131, 177, 183-218. Report X. The Legumes as Grain and Oil Crops: Soya Beans. [15 ref]

• **Summary:** A superb, early overview of soybeans and their uses in South Africa and England. Contents: An agricultural romance. Early experiments with the soya bean [in Europe and South Africa]. Export trade from Manchuria. The course of prices. Consumption in Great Britain. Botanical character. The commercial aspect. History of the oil market during 1910. The adaptability of the bean. Germination of seed. Climatic requirements. Classification of varieties. Variety tests at Cedara: Black seeded (Buckshot and Nuttall tested in 1906), brown seeded, green seeded (Samarow and Guelph), yellow seeded (Mammoth and Hollybrook, planted Nov. 1908). The cultivation of the crop. Times of planting. Distances of planting. Manure experiments at Cedara. Nodule formation and composition of the plant. Harvesting soya beans. Storage of seed. Comparative yields of grain. Soya bean oil. Uses of the oil [for cooking, paint, soap, etc.]. Soya beans as human food (incl. natto, tofu, miso, yuba, shoyu {p. 209-11}). Digestion experiments [on humans in Japan]. Milling experiments. Soya beans as stock food and fertiliser. Live-stock experiments. Soya cake as fertiliser. Soya bean as green forage.

Concerning industrial utilization: The Vice-Consul-General at Yokohama writes that “the annual value of fertilisers employed in this country (Japan) amounts on an average to about £8,000,000 represented in equal proportions by artificial fertilisers and soya bean cake.” The year 1908 was exceptional, however, in that the value of the bean cake was 3.5 times that of the artificial fertilizers.

During 1910 the linseed oil reached its highest price in 50 years. Soya oil, now produced in large amounts in Manchuria after the Russo-Japanese war took its place. It was used in making paints, candles, and soaps. “Soya bean oil has been found eminently suitable for the soap-makers’ purpose on account of its low content of free fatty acids and of unsaponifiable matter or impurities. In the latter respect it has been shown superior to any of the other oils or fats of commerce, whether of vegetable or animal origin. The glycerine, which is secured as a by-product of soap and candle manufacture, is subsequently distilled for explosives, such as dynamite, blasting gelatine, cordite, etc., and for

various purposes in the arts, for filling gas-metres, for the manufacture of inks, printers' rollers, etc. The residue from the distillation of glycerine is used in the manufacture of boot blacking."

Concerning germination (p. 191): At Cedara: "The first crop was planted in 1903, and a maximum yield of 920 lb. of grain obtained per acre. In the following season, characterized by unfavourable weather conditions, the heaviest yield on a new series of plots was 780 lb. per acre. A third season's trial on the same ground, however, witnessed a marked increase with local seed, the heaviest crop totalling 1,252 lb. of grain."

Concerning soybean cultivation in British colonies in Africa (p. 192): "Early last summer the late Sir Alfred Jones shipped to West Africa soya beans for experimental purposes, and it was subsequently reported by Mr. A.G. Turner, who was entrusted with a special mission to encourage this culture on the west coast, that the soya bean could be successfully cultivated throughout the Gambia, Sierra Leone, Nigeria, and the Gold Coast Colony, but that the yield to the first experiment had only been from six to eight bushels per acre, there having been a considerable loss owing to faulty germination. Later results, however, were phenomenally successful."

Concerning soybean trials in South Africa (p. 192-93): "During the past year favourable results have been received from Umzinto [from Messrs. Archibald and Co., 52 miles south of Durban; elevation 300 feet], Nel's Rust Estate [64 miles north of Durban; elevation 2,710 feet], Nottingham Road [elevation 4,807 feet], and Naval Hill [Mr. J.R.T. Clouston of Garrow planted a few acres in 1908], Colenso [elevation 3,200 feet], and Cedara [82 miles by rail from Durban; elevation 3,540 feet; a number of varieties were tested in 1906] in Natal; and from Barberton and Pretoria in the Transvaal."

Concerning comparative yields (p. 203): "As a grain producer, the soya bean compares very favourably with other leguminous crops, such as field beans, peas, etc. At Cedara no other legume has produced, with chemical manures only, so heavy a yield of seed; and no other legume, except the lupine, has showed itself so much to be depended upon as a grain producer." "Land that will produce 10 muids of maize per acre should yield at least six muids of beans after the second year's cultivation,..."

Concerning human digestion experiments (p. 212): "The general opinion of Japanese investigators, and others familiar with Oriental dietetics, is that the protein in articles of food prepared from soya beans is in a very available form, and that these preparations are most valuable foods."

Five photos show various men standing in a crop of soya beans and in some of the variety plots at Cedara (1909-11). An illustration (line drawing) shows a curing frame for soya beans.

Tables show: (1) Yields in lb. per acre of soya beans

sown at different times, during 3 years (19-3-04 to 1905-06). For each year is given: Date of sowing, date of harvest, yield of grain and straw, and manures used (superphosphate, gypsum, and potash). The variety tested was Henderson's Early Green (Guelph) (p. 198). (2) Results of manure experiments with soya bean (Early Green) in lb. per acre. Sown 4 Nov. 1904. Harvested 13 March 1905. Increasing yields "may be attributed to the association of nitro-bacteria, the benefits of constant cultivation, and the accumulation of humus and residues of fertilizers" (p. 200). (3) Feeding value of soya bean cakes for manure, based on experiments by Messrs. Lever Bros., Port Sunlight, Liverpool (p. 215).

Note 1. This is the earliest document seen (June 2004) that mentions the use of a soy oil derivative (glycerine) in printing inks.

Note 2. This is the earliest document seen (May 2004) that mentions the use of soy oil to make candles (one of two documents).

Note 3. This is the earliest document seen (June 2004) concerning the use of soy oil (or the glycerine derived from it) to make explosives.

Note 4. The next section of this report (p. 218+) is about ground nuts (*Arachis hypogaea*). Address: Director, Div. of Agriculture and Forestry, Natal; Principal, Cedara School of Agriculture; Formerly Asst. Secretary of Agriculture, Southern Rhodesia.

1973. Stuart, George A. 1911. Chinese materia medica: Vegetable kingdom. Shanghai, China: American Presbyterian Mission Press. 558 p. See p. 189-96, 411. 23 cm. Reprinted in 1928 in Shanghai at the Presbyterian Mission Press. [6 ref]

• **Summary:** Below the title is written: "Extensively revised from Dr. F. Porter Smith's work." This excellent book contains good summaries of the information on soyfoods found in the famous *Pen-ts'ao kang-mu* (1578-1597) by Li Shih-chen. Rev. Stuart, a physician (M.D.), minister, and missionary in China, adds a number of observations on medicinal properties ascribed to these foods by the Chinese. He began to write this revision of Dr. Smith's 1871 work in 1900 when the Boxer trouble (movement) drove him to Shanghai. He died shortly before the work was published and before he was able to finish the Preface. The section on the soy bean (p. 189-96) begins: "Glycine hispida [sic, hispida].-(Ta-tou), (Shu), (Jên-shu), (Jung-shu), (Shih-tou), (Hei-tou), (Huang tou) (Chinese characters given before each term). This is the same as *Soja hispida* [sic, *hispida*] and *Dolichos soja* [sic, *soja*], and is the Chinese and Japanese soy bean. It has been known in China from ancient times, and has always been considered by the Chinese as the most important of the cultivated leguminous plants. A very large number of varieties is found throughout the Empire, especially in the north. The name 'great bean' applies to the plant, not to the seeds, as these are quite small. It is employed in China and Japan in the preparation of three

products which are of almost universal use in oriental cookery. These are 'bean oil,' 'bean-curd,' and 'soy.' There are many varieties of this bean, which the Chinese distinguish by the color of the seeds; these being black, white, yellow, gray, azure, and spotted."

"The black sort [of soybean] is used in medicine, and the yellow is especially valued in the preparation of bean-curd [tofu] and soy [sauce]. The black kind is not used much as food as it is thought to render the body heavy. The Chinese regard those things which give lightness to the body with more favor than those which promote flesh and sluggishness. The characters (Shu) (three separate Chinese characters are given) are the classical name, while (Jên-shu) and (Jung-shu) (Chinese characters given before each) are equally ancient compound names for this plant. (Chinese characters given) (Shih-tou), 'bean-relish bean,' indicates its use in making the bean relish and soy [fermented black soybeans and soy sauce].

"Medicinally, the black beans are considered to have much value. Their frequent use is thought to have a most beneficial effect upon the body, giving strength and vigor, albeit with heaviness. This latter fact is the only objection offered to the use of these beans. They are regarded as an admirable counter-poison against most of the vegetable poisons, such as *Aconite* and *Croton tiglii*. Carminative and quieting properties are also ascribed to them. They are prescribed in a large number of difficulties, notably post-partum and sexual disorders; but as they are always in combination with other active drugs, it may be readily supposed that the beans play no very important part in these prescriptions. The green bean hulls, 1317, chewed into a pulp, are applied to small pox ulcers, corneal ulcer, and the excoriation produced in children by urine. The bruised leaves of the plant are used as a local application in snake bite. The flowers, 1310, are used in blindness and opacity of the cornea."

"The *bean sprouts*, called (Ta-tou huang-chüan) and (Tou-nieh) (Chinese characters are given before each term) are also mentioned in the *Pentsao*. Bean-sprouts (Chinese characters are given, Tou-ya) are a common article of diet with the Chinese, but these former are made with the black bean and are especially used in medicine. Li Shih-chen gives the following method of preparation: "On a water day (Three Chinese characters) soak black beans in clear water, and after the sprouts have grown, take off the hulls and dry the sprouts in the shade." Their medical properties are considered to be laxative, resolvent, and constructive. They are reputed to have special influence upon the growth of the hair, and to be curative in ascites and rheumatism.

Note 1. *Webster's Dictionary* defines ascites (pronounced uh-SAIT-ez, and first used in the 14th century) as "accumulation of serous fluid in the spaces between tissues and organs in the cavity of the abdomen."

"The yellow variety of beans is also given a separate

discussion in the *Pêntsao*. As was before said, these are used for the most part in the preparation of bean oil, bean-curd, and soy [sauce]. The beans and pods of this variety are larger than those of the black kind, and in the green state they are highly esteemed by the Chinese as an article of food [green vegetable soybeans]. But they are also considered 'heavy,' and if partaken of too freely they are thought to produce jaundice. They are considered to be carminative and deobstruent, and are recommended in ascites. Locally they are applied to smallpox ulcers. The ashes of bean stalks are specially recommended as an application to unhealthy granulations in hemorrhoids (possibly fungous growths of the anus).

"The [soy] oil, (Chinese characters for bean + oil) (Tou-yu), is considered to be very slightly deleterious, and is used as a local application to ulcers and skin diseases, and for removing bandoline (defined by the *Oxford English Dictionary* as "a gummy preparation for fixing the hair or a moustache" and in use by 1846) from the hair. This oil is manufactured in large quantities, especially in Manchuria, and is shipped to every part of China. It is used as food, chiefly by the poorer people, and was formerly used as a burning oil; but kerosene has now almost superseded it for this latter purpose. It is usually dark colored, and has a not very pleasant odor."

On page 411 we read: "Soja hispida—(Chinese characters for white + bean) (Pai-tou). Also called (Chinese characters are given) Fan-tou. This is a small bean, a variety of *Glycine hispida* [sic, hispida], the stalks of which, when young, are eaten as a pot-herb. The bean is sometimes used to make soy [sauce] and bean-curd, and is eaten boiled and as a congee. It is considered to belong to the kidneys, therefore those suffering from diseases of this organ should use it. The bean is regarded as very nutritious, and both it and the leaves benefit the viscera."

Note 2. Congee is rice cooked with excess water to make a porridge. In China, there are many types of medicinal congee (*jook*) containing grains, vegetables or herbs, eggs, meat, etc. See: Flaws, Bob. 1995. *The Book of Jook: Chinese medicinal porridges*. Boulder, Colorado: Blue Poppy Press. \$16.95. Address: Rev., M.D., Shanghai, China.

1974. Stuart, George A. 1911. *Chinese materia medica: Vegetable kingdom. Bean ferment* (Document part). Shanghai, China: American Presbyterian Mission Press. 558 p. See p. 193-94. 23 cm.

• **Summary:** "Bean Ferment.—(Chinese characters given) (Tou-huang). This is the fermentation pellicle (*Mycoderma*) which forms on the top of fermenting beans, as the mother-of-vinegar forms on the top of vinegar in its process of preparation. The pellicle contains, in addition to the *mycetes* of fermentation, various kinds of moulds and mildews." To make the product, "Take a peck of black beans and thoroughly steam them. Spread upon matting and cover with

artemisia stalks, as in the process of preparing soy [sauce]. When the pellicle is formed on top, take it off, dry in the sun and powder, when it is ready for use. The taste is sweet and cooling, and the substance is non-poisonous. It is specially recommended in the treatment of rheumatism, especially that of the knees, for the insufficient action of the five viscera, spleen, and stomach, giving strength to the body, lubricating the muscles and skin, improving the complexion, invigorating the marrow, and toning up the system generally, enabling one to eat fats. It is sometimes combined with pork fat and made into pills for producing flesh. A hundred pills should be take at one time. Fat people should not use this substance. Chewed into a paste and applied to eczema, it proves very efficacious.”

Note: Eczema, a skin disorder, was later recognized to be, in many cases, an allergic reaction. Address: Rev., M.D., Shanghai, China.

1975. Stuart, George A. 1911. Chinese materia medica: Vegetable kingdom. Soy [Chinese miso and soy sauce] (Document part). Shanghai, China: American Presbyterian Mission Press. 558 p. See p. 195-96. 23 cm.

• **Summary:** “Soy.—(Chinese character given) (Chiang). Common names are (Chinese characters given) (Chiang-yu [soy sauce]) and (Chinese characters given) (Shih-yu [fermented black soybean sauce]). Li Shih-chen says that the Chinese name indicates the power of this substance to counteract the poison which may exist in food. Several forms of soy exist, such as flour soy, made of wheat or barley flour; sweet soy, of similar composition, but varying slightly in the method of manufacture; and bean soy, made of various kinds of beans, but more particularly of the *Hispidia* [sic, *Hispida*] bean. One method of manufacture is as follows: ‘Take of *Hispidia* beans three quarts, and boil in water. Mix with twenty-four catties of flour and allow to ferment. To every ten catties of the mixture take of salt eight catties, of well water forty catties; mix and allow to stand until it is ripe.’

“Several other methods of manufacture are given in the *Pêntsao*, differing in various respects from this, but the method here given will suffice to illustrate the mode of manufacture. Soy is a black, thin liquid, having an agreeable saltish flavor, and frothing up of a yellow color when even slightly shaken. It is the universal sauce of the Chinese and Japanese, and is largely exported to India and Europe as a convenient menstruum for other flavoring substances used as condiments. In China it is both made in large quantities by shops and in smaller quantities by domestic manufacture. It is considered to provoke the appetite and to correct any injurious qualities of food. It is laxative, cooling, and antidotal to various poisons, according to Chinese estimation. It is often applied to burns, scalds, eczema, and leprous sores. Its use is considered beneficial in threatened abortion and the hematuria of pregnancy.

“Two other kinds of soy are mentioned in the *Pêntsao*,

each made from the seeds of different species of elm tree. One is called (Yü-jên-chiang) and the other (Wu-i-chiang) (Chinese characters given before each term). In regard to these two terms for elm, see the article on *Ulmus*. Both these kinds of soy are considered to be laxative, diuretic, and anthelmintic [expelling or destroying parasitic worms esp. of the intestine]. They should not be used to excess, as they are considered to have some deleterious properties.” Address: Rev., M.D., Shanghai, China.

1976. Ward, Artemas. 1911. The grocer’s encyclopedia—Encyclopedia of foods and beverages. New York, NY: Published by the author. 748 p. Illust. (color). 29 cm.

• **Summary:** Soy-related entries: Bean (p. 49-54): “The bean of European history is the Broad or Windsor variety,...” “The principal beans of United States cultivation are the Kidney and Lima, both of them believed to be native to South America.

“The Kidney Bean is the Haricot of the French and in Great Britain is sometimes called the French bean.” The many varieties can be classified into “tough podded” and edible podded.” “The ‘tough podded’ class produces the bulk of the dried beans of commerce, variously known as ‘Kidney Beans,’ ‘Navy Beans,’ ‘Marrow Beans,’ ‘Black Beans,’ ‘Turtle Beans,’ etc., in many colors, shapes and sizes.” “‘Flageolets’ are cultivated with special regard to the consumption of the fresh seeds or beans.” To the “edible podded” class of kidney beans belong Wax or Butter Beans, the Cranberry Bean or Red Speckled Bean, String Beans, Snap Beans, French Beans. “Pea Beans are the Cowpeas of the agriculturist.” “Among numerous other ‘special’ varieties are the Soy Bean (which see), Asparagus Bean, Frijole, Lab-lab (or Egyptian Kidney), Red Bean, and Scarlet Runner.” Asparagus Beans are known as *Tou Kok* by Chinese gardeners in California.

“Catsup, Catchup, Ketchup: a word derived from the name of an East Indian pickle, which was formerly applied specifically to the boiled spiced juice from salted mushrooms, but is now freely attached to various sauces (sold both bottled and in bulk) which consists of the pulp—bottled, strained and seasoned—of various fruits, as tomatoes, green walnuts, etc.” Note: At “Catchup” and “Ketchup” we are told to see “Catsup.”

Locksoy ([Lock Soy], p. 346): “Rice boiled into a paste and drawn into threads, imported from China. It is used to thicken soups.”

Nuts (p. 412-13): A table shows the nutritional composition of all major American nuts, including almonds, chincapin [chinquapin] or water chestnut, chufa (earth almond), cocoanut, peanut, and peanut butter. “Many special nut foods, such as malted nuts, meat substitutes, etc., have been devised and extensively advertised by manufacturers for general dietetic use and for the special needs of vegetarians and fruitarians. It is said that some of these

products contain soy beans, but apparently the peanut is very important in their composition.

Sauces (p. 552-53): In bottled sauces, vinegar is the most common liquid ingredient. "Commercial sauces of the Worcestershire kind, if of good quality, generally have Soy (which see) as their chief character ingredient. A typical formula of Worcestershire-style includes, in addition to Vinegar and Soy, a considerable percentage of lime juice, onions and tamarinds and small quantities of garlic, fish (as anchovies or pickled herrings), red chilies and spices. The product, after cooking, is strained through fine hair sieves. Leicester Sauce resembles Worcestershire in general characteristics but is less pungent."

Soy (p. 576): "A brown sauce, valuable to the commercial sauce market, made from the Soy Bean, a native of Southeastern Asia [sic] and widely grown in China and Japan. The beans are boiled, mixed with ground wheat or other grain, salt, etc., and allowed to ferment for a month or 6 months. The liquid is then strained off and clarified. Molasses is frequently added. In appearance it resembles Worcestershire Sauce, of which it is an important ingredient. It should not be too salt [salty] or too sweet, and although thick and syrupy, should be clear. When shaken in a bottle or glass it should, if it is genuine, leave a bright yellow film on the glass. Being a very desirable article, it is often counterfeited."

Soy bean (p. 577): "Commercial and government circles, both in Europe and this country are devoting increased attention to the cultivation of the Soy Bean as a food product, as it contains a large percentage of protein and a fair amount of fat, thus resembling meat in general nutritive value. The cell-walls of the raw bean are very tough, but thorough cooking makes it readily digestible. Boiled with bacon and other fatty broths until soft and then seasoned, the result is a vegetable dish very pleasing to the average palate. If the beans are dry, a preliminary soaking to remove the skins is necessary.

"The Soy Bean is largely consumed in Japan, China and other parts of Asia as an adjunct to rice and other foods, taking the place of meat in the popular dietary. It is most popular in these countries in fermented form, the best known types being *Shoyu* or Soy Sauce; *Tofu*, a kind of cheese; *Miso*, Soy Bean 'Milk' [sic]; *Yuba*, the evaporated product of 'Miso' [sic], and *Matto* [sic, *Natto*], a product obtained by simple fermentation of the boiled beans. The various degrees and styles of fermentation serve the double purpose of rendering the beans more easily digestible and producing new flavors, just as by the fermentation of milk and cream we produce the different flavors of cheese.

"The plant is an annual, growing chiefly in bush form..." The different varieties are classified principally by the color of the beans: "Black, Yellow, White and Brown,... Types of all these four classes are grown to some extent in Germany, Austria, and Switzerland, and the first three also in this

country, in North Carolina and other Southern States. Under favorable conditions a single plant may bear a hundred or more pods.

"Because of the fact that the beans contain little if any starch, they have been recommended as a desirable food for diabetics, and Soy Bean Bread and Soy Bean Meal are prepared for that purpose in Paris. The dried beans are also used in Switzerland and elsewhere as a coffee substitute." An illustration shows the top of a soy bean plant, with leaves, pods, and flowers.

Note 1. This book is full of fascinating information about the food system in the USA in 1911, with entries such as cold storage (first attempted in 1860, it has grown to extraordinary proportions), coloring matter (great improvements, no longer harmful), ice and refrigeration (ice manufacture dates from about 1870; today nearly 200 companies produce ice for general sale, mostly using the compressor and anhydrous ammonia). Dictionary of food names in five languages (English, French, German, Italian, and Swedish, p. 710-724) and a dictionary in English of "Culinary and bill-of-fare terms" (p. 741-45).

Note 2. The author, Artemas Ward, lived 1848-1925. His father was Henry Dana Ward (1797-1884), his grandfather was Thomas Walter Ward (1758-1835), and his great-grandfather was Artemas Ward (1727-1800), the first Commander-in-Chief of the colonial troops before the arrival of George Washington (a little-known Virginia planter) on 3 July 1775. Thereafter he served as second in command after Gen. Washington and was a Major General in the American Revolutionary War. Address: Formerly (from 1874) founder and editor of *The National Grocer*, 30 Union Square, New York.

1977. Yabuno Bros. 1911. Yabuno Bros. (Ad). In: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 7]. p. B-3. [Eng; jap]

• **Summary:** Ad (¼ page). The top half of this ad is in English. This company imports and sells Kishu Yuasa shoyu [soy sauce]. A photo shows a wooden keg of soy sauce. This ad also appears in the 1912 Year Book (p. A-11), and in 1913 (p. 26). Address: 1525 Geary St., San Francisco, California. Phone: West 2324. Home S. 3651.

1978. Yamato Shokai (Yamato Co.). 1911. Dealers in Japanese and American groceries and provisions and general merchandise (Ad). In: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 7]. p. C-33. [Eng; Jap]

• **Summary:** Ad (¼ page). The top 1/3 of this ad is in English. This company sells various goods including (in Japanese) shoyu [soy sauce] and miso. This ad also appears in the 1913 yearbook (p. 35). Address: 630 N. 6th St., San Jose, California. Phone: San Jose 3379.

1979. Estes, Rufus. 1911? Good things to eat... Chicago, Illinois: Published by the author. 142 p. Undated. Frontispiece (portrait). Illust. Index. 24 cm.

• **Summary:** “Soy” [sauce] is mentioned as an ingredient in the recipe for Royal sauce (“... stir in by degrees two tablespoons of tarragon vinegar, two tablespoons of Indian soy, one finely chopped green gherkin... When cold serve with fish.” p. 76).

Peanut butter is used as an ingredient in Peanut Meatose (a meat alternative, p. 49). Peanuts are also used in recipes for Peanut soup and Margarettes (as part of the filling between crackers).

Note: The author, Estes Rufus (born 1857) is African American. The frontispiece shows his portrait photo. The “Sketch of my life” tells how he was born a slave in 1857 in Tennessee then rose to become a chef in the Pullman Company Private Car Service. He is presently chef of the subsidiary companies of the United States Steel Corporations in Chicago. Address: Chicago, Illinois.

1980. Nishimura, Torazô. 1912. Shôyu moromi oyobi shôyu ni shôzuru sanmakusei kôbo kinrui (zoku ni shôyu no kabi to shôsu) ni kansuru kenkyû [Species of film-building yeasts on shoyu]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 113. p. 1-45. Jan. 5. [Jap]

• **Summary:** In the English-language table of contents, shoyu is called “Soya.” Address: Nôgaku-shi, Japan.

1981. Hooper, David. 1912. Soy bean in India: Glycine hispida. *Tropical Agriculturist (Ceylon)* 38(1):11-15. Jan. 15; 38(2):99-103. Feb. 15. [1 ref]

• **Summary:** This is a reprint of an article by the same author with the same title published in 1911 in *Agricultural Ledger* (Calcutta) No. 3. p. 17-33. Address: Australia.

1982. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* 12(106):28-38. Jan. [16 ref. Fre]

• **Summary:** Contents (continued): Soymilk (continued): Chemical properties, composition (comparison with 8 animal milks—in bar chart form showing protein, lipids, carbohydrates, and ash), action of ferments [enzymes] and diastases [diastatic enzymes] on soymilk (*Action des ferments et des diastases sur le lait de soja*) (1. The lactic ferments {kefir, yogurt, etc.} act in the same way on vegetable milk and on animal milks. 2. The ferments of certain European cheeses make analogous vegetable cheeses {fromage végétal d’une façon analogue}. 3. Rennet coagulates soymilk, but the optimum temperature is a little higher than for cow’s milk. 4. The ferments that we have extracted from shoyu [Japanese soy sauce] coagulate animal milks in the same way as vegetable milk).

Uses of soymilk (p. 30): They are the same as those of the animal milks. We will note, mostly, its use in China as a

substitute for mother’s milk. (Footnote 1. One of our parents was nourished, from the first phase of life, with soymilk. He/she is now 37 years old and has always been in excellent health).

Residues of the [soy] dairy (*residus de laiterie*; okara).

Condensed soymilk (*lait de soja concentré*). Powdered soymilk (*lait de soja en poudre*). Fermented soymilk (Kefir, yogurt, etc. are increasingly used therapeutically. One can compensate for the lack of carbohydrates in vegetable milk by the addition of lactose {or levulose for diabetics}). Tofu—which Li calls *Caséo-Sojaïne* (*fromage de soja*)—meaning “tofu or soy cheese”: Method of production, coagulants used, perfected modern production methods at Li’s factory (In this factory, tofu can be made into either non-fermented or fermented cheeses. The non-fermented cheeses {*Fromages non fermentés*} are of two types: Fresh and hard/firm. The fresh are white in color and the consistency of hard-boiled eggs. The hard/firm are of two types: In diced sheets {salted or unsalted}, and in salted, semi-dry pieces/morsels. The fermented cheeses {*Fromages fermentés*} may be of the Gruyere, Roquefort, or Camembert types), tofu yields, preservation and storage, composition of tofu (compared with 4 meats on a moisture-free basic, in bar chart form showing protein, lipids, carbohydrates, and ash), digestibility of tofu, culinary preparations based on tofu (tofu omelette with egg, smoked tofu with shoyu, tofu pâté, soy sausage—made like regular sausage except that meat and fat are replaced by fresh, hard tofu plus butter or cocoa butter). Soy casein (*Caséine de soja*; for food or industrial uses). Contains various tables and charts from other sources.

Residues of the [soy] dairy (*residus de laiterie*; okara, p. 30-31): After filtering the [soy] milk, a slightly firm, aqueous oilcake remains in the filter cloth that is still very rich in nutrients (*substances alimentaires*). According to Dr. Bloch, it does not contain any trace of starch (our tests agree with this conclusion). Consisting of torn cells emptied of the largest part of their content, it would have the following percentage composition (see Bloch 1907):

Protein 0.248, water 88.75, ash 0.36, fat .04, other 10.85.

“The oilcake (*tortéau*) obtained at the factory of ‘Soy-Casein’ (*Caséo-Sojaïne*) and analyzed at the municipal laboratory of Paris yielded:

Water 80.04, protein 33, fat 8.44, carbohydrates 22.63, mineral salts 4.24.

“This oilcake was very easily dried to 10% water. The milk can only be filtered after boiling, thus according to Prinsen [Geerligs]:

Proteins 29.38, oil 12.81, ash 4.66, carbohydrates that are convertible to sugar 26.80, fiber 11.10, cellulose 10.2.

“The oilcake can be diluted in water. The liquid thus obtained is used in grinding to make the second extraction of [soy] milk.”

Soy casein (p. 38): The casein or legumine of soymilk can be prepared by precipitation, purifying it by several

dissolutions and precipitations, and finally drying it. One obtains a yellowish powder resembling animal casein obtained by the same processes.

It is generally admitted that vegetable albumins have a coefficient of assimilation greatly inferior to those of animal albumins. But confirmation of this is far from being definitive. The experiments of Messrs. H. [Henri] Labbé and Marchoisne have showed, in effect, that vegetable albumin is as well assimilated as animal albumin.

Legumine is different from animal casein, but the differences are of the same order as those which exist between the various animal caseins. The differences existing between the caseins of the various animal milks have been noted by many chemists.

The casein extracted from soymilk can be used in the same applications as casein from cow's milk. These are of two types: food and industrial. For food uses, one can point out the manufacture of powders, of lacteal flours (*farines lactées*, perhaps wheat flour enriched with soy casein), of whole-grain bread, etc.

Note 1. This is the earliest document seen (April 2001), worldwide, that mentions a Western-style soy cheese (Gruyere, Roquefort, or Camembert types), or a tofu sausage. This is also the earliest French-language document seen that mentions soy cheese, which it calls *fromage de soja*.

Note 2.

Note: This is the earliest document seen (Jan. 2003) concerning the use of tofu in a second generation product.

Note 3. This is the earliest document seen, worldwide, that mentions powdered soymilk or dried soymilk.

Note 4. This is the earliest document seen, worldwide, that mentions soy kefir. Address: 1. Conseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

1983. Cornwell (G.G.) & Son. 1912. The chef says today: A good meal... (Ad). *Washington Post*. Feb. 27. p. 7.

• **Summary:** "... is a better meal when accompanied by the proper condiments. Cornwell's is the one store in Washington that satisfies every demand for unusual table wants of this kind.

"Chutneys: C & B [Crosse & Blackwell] Bengal Club. Cashmere. Sweet Mangoes. Major Greys. Heinz Tomato. Shrewsbury.

"Sauces: Mushroom Catsup. Escoffier English Derby... India Soy. Reading Sauce. Essence of Anchovies."

An illustration shows a smiling French chef. Address: 1415-17 H St., N.W. [Washington, DC].

1984. Nishimura, Torazô. 1912. Shôyu oyobi miso ni kansuru kenkyû seiseki hôkoku [Results of studies on shoyu and miso]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 115. p. 1-10. March 5; No. 116. p. 1-31. April 5. [Jap]

Address: Nôgaku-shi, Japan.

1985. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* 12(108):213-23. March. [7 ref. Fre]

• **Summary:** Contents (continued): Products and condiments based on fermented soybeans. 5. Condiments in paste form (*Condiments pâteux*): Miso (preparation, different varieties including white miso, Yeddo miso, Sandai [Sendai] miso or red miso, composition of miso {a table based on studies by Kellner and König}), Tao-Tjiung (Tou-chiang, doujiang) or Chinese-style miso (preparation, properties, composition {a table based on analyses by Prinsen-Geerligs}). Sauces: Shoyu (Schoyou, soyou, schoyu, or Phek-sze-You in Chinese; preparation, raw materials used and their proportions, formation of molds and koji, fermentation, perfection of the fermentation process in an aseptic environment using soymilk or soy bouillon inoculated with pure cultures), properties of shoyu, chemical composition of shoyu (tables show: (1) Composition based on analyses by Kellner, Stift, Belohoubeck, Tahara & Kitao. (2) Composition and forms of nitrogen according to Suzuki, Azo [sic, Aso], and Mitarai (3 tables)), aroma of shoyu (2 tables based on analyses by Tahara and Kitao; Belohoubeck found two types of microbes in shoyu; the *Saccharomyces* and the bacteria). *Chiang-yu (Tsiang-yeou; Chinese soy sauce)*, Ketjap (soy sauce from Java).

Note: This is the earliest French-language document seen (April 1912) that uses the word *Schoyou* or the term *Phek-sze-You* to refer to soy sauce. Address: 1. Conseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

1986. *Pure Products (New York)*. 1912. Products of the soy bean. 8(3):157-60. March.

• **Summary:** "Three very interesting food products are manufactured from the soy bean, one known as vegetable milk, another known as vegetable cheese or vegetable casein, and soy sauce." "Vegetable milk, like animal milk, may be may be homogenized; that is to say, it may be passed through an apparatus known as a 'homogenizer'..." Concentrated or "condensed vegetable milk has a characteristic odor, but this can be improved by adding a little coumarin or vanillin, which corrects the taste so as to make it more nearly resemble that of cow's milk."

Vegetable cheese is coagulated "by the addition of a white mineral powder known as tchach-kao, which consists largely of plaster of paris."

"Soy sauce, or fermented soy,... may well serve as the basis of sauces of the Worcestershire type." Address: USA.

1987. Yoshida, T. 1912. Seisei shôyu no kôbo ni tsuite oyobi sono seibun ni oyobosu sayô [On the yeast of shoyu and its influence on constituents]. *Sapporo Norin Gakkaiho (J. of*

the Society of Agriculture and Forestry, Sapporo) No. 13. p. 1-27. March. [Jap]
Address: Nôgaku-shi.

1988. Kuriyama, Masao. 1912. Shôyu oyobi mirin-chû ni ganyû suru tôbun no kenshutsu-hô [A method for the detection of sugars in shoyu and mirin]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 116. p. 25-31. April 5. [Jap]
Address: Japan.

1989. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* 12(109):302-08. April. [2 ref. Fre]
• **Summary:** Contents (continued): Products and condiments based on fermented soybeans (continued): Tuong (an Annamese condiment that can replace nuoc mam or fish sauce; preparation with rice or corn/maize as described by Bui), Tao-yu (a condiment widely used in China and Japan, as described by Prinsen Geerlig; preparation, properties, chemical composition).

6. Confectionery products (*Produits de confiserie*): Sweet soya preserves made from whole soybeans (*Confiture de soja*, such as soy-based *crème de marron*, a chestnut cream), soya powder (two types are made at Li's plant: one by drying soy pâté and one from roasted soybeans), soy chocolate. At Li's tofu factory (*l'usine de la Caséo Sojaïne*) near Paris, soy chocolate (*Chocolat de soja*) is prepared using roasted soybeans, sugar, and cocoa butter [a pale-yellow, pure edible vegetable fat extracted from the cocoa bean]. From these one is able to obtain almost the same composition, appearance, and flavor as chocolate. But this product has the advantage of containing considerably less toxic theobromine.

7. Soya used as coffee (*Le soja employé comme café*). For a very long time, soybean seeds, dried and roasted, have been used in certain parts of Europe (Switzerland) to replace coffee. By an infusion of these roasted seeds, a liquid is obtained which resembles coffee in color and flavor. Moreover, under a different name [Cole's Domestic Coffee Berry, 1892], soybeans have been launched in the United States for this usage. This very special use of the soybean will be of interest to those who are forbidden to drink coffee, for they will now be able to enjoy it in a different way. A table shows the composition of Swiss soya coffee according to Kornauth.

8. Ferments or starter cultures for fermentation: Kiu-tsee (a special ferment from Canton described by M. Daby de Thiersant), lactic ferments (fermented soymilks).

Industrial uses of soybeans: Uses of the oil to make soap, wax candles (*bougie*), paint, or artificial rubber. Uses of the protein (*caséine de soja*) to give products resembling those made from milk proteins: sojalithe or soy stone resembling lactite, insulators for electrical apparatus,

soy glues, etc. Illustrations (line drawings, p. 305) show cellular elements of different soya confections. Address: 1. Conseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

1990. Hanzawa, Jun. 1912. Ueber Pilze und Zusammensetzung des japanischen Tamari-koji [On the mold and composition of Japanese tamari-koji]. *Mycologisches Centralblatt* 1(6):163-66. June 8. [9 ref. Ger]

• **Summary:** There are three types of Tamari-Shoyu: Kibiki- (the best, made by short cooking of the soybeans), Niira- (made by long cooking of the soybeans), and Ban-Tamari-Soja (made by cooking the residue from one of the first two types in salt water).

Note: The author was in Hannover, Germany, when he finished this paper in May 1912. Address: Lab. for Applied Mycology, Agricultural Institute of the Tohoku Imperial Univ., Sapporo, Japan.

1991. *New York Times*. 1912. This is not in China, but in New York City: Farms in Steinway, near Long Island City, where natives of the Far East raise supplies for the chop suey restaurants of New York. Aug. 25. p. SM11.

• **Summary:** "Chow chop-suey is, next to rice, the Chinese national dish. Rice is, of course, on every table. The Chinese eat it instead of bread, and no one can cook rice like a Chinaman. Every grain is distinct, yet perfectly soft, and it is piled up in the bowls like mounds of snow. It is boiled, or rather steamed, without seasoning, and the condiments are supplied by the seow [Cantonese: *shi-yau* or *si-yau*, meaning "fermented black soybean sauce"], the immediate progenitor of the soy of the English East Indies and the Gastronomic father of Worcestershire sauce."

Six photos show Chinese at work on their farms on Long Island.

Note that the term "chop suey restaurants" in the title is apparently synonymous with "Chinese restaurants."

1992. **Product Name:** Shoyu.

Manufacturer's Name: America Soy Brewing Co. Ltd. (American Shoyu Jozo K.K.).

Manufacturer's Address: End of Banyan St., Honolulu, Oahu, Hawaii.

Date of Introduction: 1912. August.

New Product-Documentation: Husted's Directory of Honolulu and the Territory of Hawaii. 1912. p. 123. American Soy Brewing Co. Ltd., D. Yonekura, president; M. Kawahara, vice president; K. Iida, secretary; R. Niki, treas; George I. Enomoto, mngr; end of Banyan.

Also in 1916 Directory. American Soy Brewing Co. Ltd., Banyan. 1928-29 Directory. American Hawaiian Soy Co. Ltd. mauka end Banyan. Is this the same or a different company? Both are on Banyan St.

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-

49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." States that the company was founded in August 1912 by Mr. Danzaburo Yonekura.

F. Odo and K. Sinoto. 1985. A Pictorial History of the Japanese in Hawaii, 1885-1924. Page 166. American Shoyu Co. was established in Honolulu in 1912.

1993. Maynard, Lester. 1912. Manchurian trade and commerce: Harbin. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 15(214):1281-91. Sept. 11.

• **Summary:** This report is filed by four different U.S. consuls from Harbin, Antung, Dairen, and Newchwang—starting with Harbin. "The Harbin consular district includes all of North Manchuria north of Changchun and Kirin, and is bounded on the west by Mongolia and Siberia, on the north by the Amur River, and on the east by the Maritime Provinces of eastern Siberia. Harbin, the chief commercial center, is on the banks of the Sungari River and at the junction of the main line of the Chinese Eastern Railway with the branch running south to Changchun, which connects with the South Manchuria Railway. This location, in the center of the soya-bean area of Manchuria, accounts for its rapid growth and prosperity."

"As the customs statistics of the five customhouses of North Manchuria do not cover the entire foreign trade of this [consular] district, a careful estimate has been made of the value of the imports and exports through Changchun and Kuangchengtzu, which are the junction points of the South Manchuria and Chinese Eastern Railways." A large table (p. 1284) shows northbound and southbound movement of goods. For example, 90 tons of "Soy" [sauce] worth \$5,450 was northbound. Beancake (1,366 tons), [soya] beans (289 tons), small red beans ([azuki], 16,628 tons) were all southbound.

"By far the most important increase in the exports of this district was that of \$5,014,495 in soya beans, which was due to increased shipments as well as to a substantial increase in market value."

A table (p. 1286) shows the value in 1910 and 1911 of the principal exports of native goods to foreign countries through the customhouses of Aigun, Harbin, Manchouli, Sansing, and Suifenhoh. During these two years: Beancake decreased from \$146,371 to 124,674. [Soya] Beans increased from \$3,591,197 to \$8,965,692. Oil, [soya] bean and hempseed decreased from \$539,524 to 351,154.

The section title "Soya beans" states (p. 1286-87): "Practically the entire soya-bean crop of North Manchuria is shipped over the Chinese Eastern Railway through Suifenhoh, for exportation from Vladivostok. All the beans shipped from that port come from North Manchuria, so that the exports from Vladivostok give the most accurate figures obtainable of the foreign shipments of North Manchurian beans." "The southern movement of soya beans through Kuangchengtzu

and destined for the oil mills of South Manchuria or for exportation from Dairen or Newchwang is relatively small... To take advantage of the lower freight rates of the South Manchuria Railway, which are designed to encourage the exportation of beans through Dairen, farmers in the southern part of this consular district cart their beans to Changchun rather than ship them north to Vladivostok via Harbin."

"Scattered throughout this district are a number of small oil mills, but the methods used are very crude and the production is only sufficient for local consumption."

"The Sungari River, the largest watercourse in North Manchuria, is navigable from the southern to the northern end of this district and as a trade route ranks second to the Chinese Eastern Railway. In 1911 the total number of vessels entered and cleared at the river customhouses of Harbin, Aigun, and Sansing was 8,600 or 965,053 tons. Of these, 2,142 of 837,749 tons were Russian steamers, 46 of 11,081 tons were Chinese steamers, and 6,412 of 116,173 tons were Chinese junks." "The United States purchases a very small amount of Manchuria's exports." Address: Consul.

1994. Williamson, A.A. 1912. Manchurian trade and commerce: Antung. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 15(214):1291-95. Sept. 11.

• **Summary:** "The founding of the Chinese Republic [on 1 Jan. 1912 by Sun Yat-sen, the 1st provisional president, in Nanjing. But Yuan Shikai was head of the army, in Peking] had little direct influence upon [the port of] Antung and the Yalu River region, but a visitation of plague in the early part of 1911, the most severe in recent years, threatened the very life of the district for a time." The value (given by the United States Treasury) of the local currency, the haikwan tael, was \$0.652 in 1911 and \$0.6525 in 1910.

"Simultaneously with the opening of the bridge over the Yalu River, the South Manchuria Railway inaugurated broad gauge traffic with Mukden."

A table (p. 1292) shows the principal exports in piculs (1 picul = 133.33 lb) from Antung in 1910 and 1911. Exports of [soy] bean cake increased from 180,812 in 1910 to 497,497 in 1911. Exports of [soy] beans rose from 2,041 in 1910 to 68,872 in 1911.

The port of Antung was opened in 1906 on the Yalu River, which divides Manchuria and Korea. Since that time the river has flooded at regular two-year intervals.

A table (p. 1294) shows the principal imports in piculs into Antung during 1910 and 1911. Imports of soy [sauce] were 4,406 piculs in 1910 and 3,069 piculs in 1911.

The chief exports of Tatungchow [pinyin Dandong, W.-G. Tan-tung; also Antung, in Liaoning province, at the mouth of the Yalu River] were: Bean cake 116,494 piculs, valued at \$167,999. [Soya] beans 15,414 piculs worth \$25,125. And bean oil 1,100 piculs worth \$6,885. Address: Consul.

1995. Ito, Teiji. 1912. Shôyu jôzô oyobi seihin ni kansuru shoseibun ichiran [On the constituents of the raw materials and products of shoyu brewing]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 367. p. 934-56. Sept. [Jap]

1996. Kita, Genitsu. 1912. Haupthefte der Sojamaische [Major yeasts in soy sauce moromi (mash)]. *Eighth International Congress of Applied Chemistry, Original Communications* 14:99-106. Section VIb: Fermentation. Held 4-13 Sept. 1912 in Washington and New York, USA. [1 ref. Ger]

• **Summary:** Includes a discussion of *Saccharomyces Soja*, a yeast that forms a film on the surface of shoyu. Address: Technological Faculty, Imperial University, Tokyo [Japan].

1997. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja: Sa culture. Ses usages alimentaires, thérapeutiques, agricoles et industriels [The soybean: Its culture. Its food, therapeutic, agricultural, and industrial uses]. Paris: Augustin Challamel (Rue Jacob 17). 150 p. Illust. Index. 25 cm. Translated into French and expanded from the Chinese edition, published by la Société Biologique d'Extrême-Orient (1910). [151 ref. Fre]

• **Summary:** One of the earliest, most important, influential, creative, interesting, and carefully researched books ever written about soybeans and soyfoods. Its bibliography on soy was larger than any published prior to that time. It was first published as a series of eight articles in *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* from September 1911 to April 1912. Before being published as a book, it was revised slightly by adding a table of contents at the back, dividing the material into 5 parts with 19 chapters, and adding several photos (p. 16-17), a world map showing the distribution of soybean cultivation (p. 21), and an interesting 2-page table (p. 66-67).

Contents: The soybean: Origin and history. Part I: Soybean culture. 1. Species and varieties of soybeans: Botanical characteristics, species, varieties (Chinese, Japanese, Indian, Indochinese, Hawaiian, USA, European). 2. Needs of the soybean: Climatic, geographical area of the soybean by region worldwide, agrological/soil needs, fertilizers, soil preparation, the place of the soybean in crop rotations. 3. Soybean seeds: Study of seeds (by weight, by germination rate, selection of seeds), time of planting, plant spacing, depth of seeding, rate of seeding per hectare, method of seeding (broadcasting, in rows, in mounds). 4. The soybean during its vegetative stage: Germination, transplanting, types of care (e.g., second dressings), irrigation, flowering and fruiting, enemies of the soybean (e.g., insects). 5. Harvest of soybeans: Time for harvest (forage or grain), methods of harvesting (forage or grain; mechanical mower), threshing (use of machine), yields of soybeans (forage and grain in various countries, ratio of

seeds harvested to straw is about 1 to 2, yield of nutrients). 6. Fixation of atmospheric nitrogen by soybeans, and improvement of the soil. 7. The soybean in mixed cultures and alternate rows: With corn, cowpeas, rice, sweet sorghum, or millet.

Part II: Chemical composition of the soybean. 1. Composition of the plant: Minerals in the leaves and total plant. 2. Study of the seed: Composition, chemical composition, microscopic comparisons, table of analyses by 28 previous researchers, albumins, sugars, starch, dextrin or dextrine, diastase, lipids, ash/minerals.

Part III: The soybean as human food and animal feed. 1. The soybean as feed for animals: Green forage and hay. 2. The soybean in human feeding: From the viewpoints of physiology, economy, and gastronomy. The role of soya in special diets: Vegetarianism, remineralization, diabetic, and lactose intolerant.

Part IV: Food products based on soya. 1. Soymilk and its derivatives: Soymilk (Methods of manufacture, Chinese and modern at l'Usine de la Caséo-Sojaïne, nature and properties [physical and chemical] and composition of the milk, action of ferments and diastases (enzymes) on the milk, uses of the milk, the residue from the soy dairy [okara], condensed soymilk, powdered soymilk, fermented soymilk (kefir, yogurt, etc.)), tofu (called Caséo-Sojaïne, or fromage de soya; methods of production, coagulants, yield of tofu, storing tofu, composition and comparison with various meats, digestibility, culinary preparations made from tofu (smoked tofu, tofu pâté, tofu sausages)), Soy casein (food and industrial uses). 2. Soy flour and its derivatives: Soy flour, soy bread, wholemeal bread, other products based on soy flour (as biscuits and cakes for diabetic diets). 3. Soy oil and its by-products: Soy oil, physical and chemical properties, usage, residue of the oil mill: the cake, price, uses. 4. Use of the soybean as a legume: Whole soybeans (composition and digestibility), soy sprouts (*germes de soja*), green vegetable soybeans (*le soja frais*). 5. Fermented soy condiments: Solid condiments from Japan: Tokyo natto (*Le Tokio-Natto*) and Ping-Ming natto or tao-tche (*Le Ping-ming-Natto*; fermented black soybeans with salt, ginger, orange rind, etc. A similar product is made in China and called tao-tche). Paste condiments: Miso (four types and composition), tao-tjung (Chinese miso). Sauces: Shoyu (its production, varieties, properties, composition), chiang-yu (*tsiang-yeou*), ketjap [kechap, from Java], tuong (from Annam, with rice or corn), tao-yu (widely used in China and Japan, described by Prinsen Geerlig). 6. Confectionery products: Comparison with chestnuts, roasted soy flour to replace chocolate. 7. Soy coffee (with analysis by Kornauth). 8. Special fermented products: Kiu-tsee (a special commercial ferment from Canton described by Thiersant), fermented soymilks.

Part V: Industrial uses of soybeans. Oil based: soap, wax candles (*bougie*), and paint oils. Protein based: sojalithe or soy stone which corresponds to lactite, insulators for

electrical apparatus, glue, etc. Conclusion. Addendum (*Complément*) to Part III, Chapter 1: Soybean straw and stems. Composition of various seeds, including soybeans. Soy flour. The cakes from oil mills. Soymilk and the cake from soy dairies (*tourteau de laiterie*, okara).

A very interesting table (p. 66-67, which does not appear in the original 8 articles) shows earlier nutritional analyses of the composition of soybeans by Steuf (from Hungary, Mongolia and China), Schroeder, Caplan, Pellet (from China, Hungary, Etampes), Muntz, Nikitin (black soybeans from Russia, 2 samples), Lipski [Lipskii] (yellow, from Russia), Giljaranski (yellow from Russia, China and Japan; black from China and Japan; green), König (*Hispida platycarpa* black, Tumida yellow, brown and black), Prinsen (white from Java and China), Goessmann, Kellner, USDA, Chemiker Zeitung (white from Java and China, 29 Jan. 1896), Scuff (misomame; miso soybeans), Zulkovski (yellow from China, reddish brown from Mongolia), Institut Agr. de Vienne (Austria; yellow from Vienna, reddish brown from Tirol), Ecole Imp. et Roy d'Ag. Hong (yellow from Mongolia and China, reddish brown from China), Chez M. Olivier Lecq (from Moravia), Lechartier (Etampes and black), Joulie (yellow), Stingl and Morawski, Bloch (yellow, green, and black), Balland, Cavendish Evelyn Liardet (yellow, brown, green, black, and white), Jardin Colonial (Laos, Tonkin, China), Aufray (Tonkin, Yun-nan), Homes Laboratory (black from China, or white). Photos and illustrations are the same as those referenced in individual sections of the book, except for the following: A field of soybeans (p. 16). A soybean plant growing in Europe (p. 17). Color illustrations appear facing pages 12, 22, and 64. Address: Li is from Societe Biologique d'Extreme-Orient (Chine). Grandvoinnet is from Ingenieur Agricole (G.).

1998. Takahashi, Teizô; Yukawa, Matao. 1912. On the budding fungi of "shoju-moromi." *Eighth International Congress of Applied Chemistry, Original Communications* 14:155-71. Section VIb: Fermentation. Held 4-13 Sept. 1912 in Washington and New York, USA. [22 ref. Eng]

• **Summary:** In the title, and throughout this paper, the word "shoju" should be spelled "shoyu," meaning soy sauce. The following budding fungi were isolated from 52 samples of shoyu-moromi of different ages (2-24 months) collected from 11 different factories: 1. *Zygosaccharomyces major*, nov. spec. 2. *Zygosaccharomyces Soja*, nov. spec. 3. *Zygosaccharomyces japonicus*, Saito. 4. *Zygosaccharomyces Salsus*, nov. spec. 5. An asporogenic species of *Zygosaccharomyces* (?). 6. A species of *Mycoderma*. 7. A species of *Pichia*. 8. Several species of *Torula*. 9. A species of *Monilia*.

The following shoyu breweries granted samples to the author: Those owned by Sh. Magi [Mogi] and S. Mogi in Noda, province of Shimôsa. Those owned by Mr. Hamaguchi, G. Tanaka, and J. Iwasaki in Choshi, Shimosa

province. One owned by K. Nakamura at Gaju, Owari province. The Asahi, Maruo, and Kikuchi breweries, and that owned by Mr. Takano, all at Tatsuno, Harima province. Kagawa shoyu brewery experimental station at Shôtoshima [Shodoshima], Sanuki province.

Zygosaccharomyces species Nos. 1, 2, and 5 did not form films on shoyu, whereas Nos. 3 and 4 did form films. *Zygosaccharomyces major* was the main yeast isolated from mature samples of moromi, whereas *Zygosaccharomyces soja* was the main species isolated from young samples. There is no doubt that these two species play an important role in the ripening of shoyu. *Zygosaccharomyces japonicus* and *Zygosaccharomyces salsus* easily produce greyish-white films resembling crepe-paper on top of even concentrated shoyu. Moreover these two species easily form a large number of sporulated cells. Thus they are harmful when storing shoyu.

Note: This is the earliest English-language document seen (June 2011) with the word "moromi" in the title. Address: College of Agriculture, Imperial Univ., Tokyo [Japan].

1999. *Chemist and Druggist* (London). 1912. Trade report. 81(17):663-65. Oct. 26. Series No. 1709.

• **Summary:** In the section on "London markets" under "Oils (fixed)" we are informed (p. 664) Soya oil is 6d. cheaper at 30s. on spot (p. 664).

On page 665 we read: "Soy.—With a scarcity of Wochan, 1s. 6d. per gallon is wanted; outside brands are quoted 1s. 4d. to 1s. 4½d."

2000. Hawthorne, H.L. 1912. An official visit to the Japanese army. *J. of the Military Service Institution of the United States* 51(179):156-72. Sept/Oct.

• **Summary:** The first Appendix, titled "Schedule for carrying out theoretical and practical studies of the recruits in the first term, 1911-1912. By the 2d [2nd] Company, the 3d [3rd] Battalion, Engineers" states (p. 172) under "Bills of fare. Prepared by the 1st Battalion, the 68th Regiment, Infantry. (Extract)."

Sunday (March 10, 1912). Breakfast includes: *Moritsuki*, with Soy, 2 shaku. Tiffin includes: *Furofuki* radish [daikon] with Miso (bean paste), 13 momme. Supper includes: *Shitashi*, with Soy, 15 sai. Cost of fish and vegetables per man, Yen 0.11 7/10.

Monday (March 11, 1912). Breakfast includes: Miso soup with Fried bean-curd 1/3 piece. Bean curd 1/4 piece. Miso, 18 momme. Tiffin includes: *Nimame* with Black [soy] bean, 4 shaku. Soy, 1 shaku. Supper includes: Fresh beef, 10 momme.

"Note: Momme—about 3.8 gram. Shaku—0.004 gallon. Sai—1/10 shaku." Address: Lieut-Col., U.S. Army, Military Attache, Tokyo, Japan.

2001. Takahashi, Teizô; Yukawa, Matao. 1912. Die Pilze von "Shoju-Moromi" [The molds of "shoyu moromi"]. *Chemiker-Zeitung* 36(134):1307. Nov. 7. Summarized in *Zentralblatt fuer Bakteriologie, Series II*. 41:257 (1914). [Ger]

• **Summary:** Japanese understand the term "shoyu-moromi" to refer to a semi-solid liquid that is made from shoyu-koji, salt, and water. Shoyu koji is made from steamed soybeans and roasted wheat in much the same way that saké koji is made from rice. In the brewing (*Brauen*) of shoyu, three species of *Torula* yeasts seem to play a significant role: *Torula shujo*, *T. Shujo var. minuta*, and *T. Turbinata*. The authors have made a plate culture using shoyu-koji-agar as a culture medium after purifying the resulting colonies through the Lindner Drip Culture Method (*Tröpfchenkulturmethode*) and obtained 9 different molds, from which they isolated five *Zygosaccharomyces* (yeast) species. Address: Tokyo.

2002. *Chemist and Druggist (London)*. 1912. Trade report. 81(19):728-30. Nov. 9. Series No. 1711.

• **Summary:** In the section titled "London markets" we read (p. 730): "Soy.-For Wochan 1s. 6d. per gallon has been paid on spot, being scarce, and less esteemed brands are quoted 1s. 5d."

2003. Skinner, Robert P. 1912. Soya beans and their products in Germany. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 15(269):827. Nov. 14.

• **Summary:** "A growing business is being carried on in Hamburg in soya beans and their manufactured products, although official trade statistics are not yet available. The trade to a large extent has been built up in foreign tributary markets, because in Germany cattle are usually kept in stalls and, having little exercise, are apt to have digestive disorders when overfed with soya bean cake. In Denmark, on the other hand, where grazing is more usual, the demand for this feed has progressed steadily." Crushers use naphtha as a solvent. Prices of soya beans and products are given.

"Last year one Hamburg concern sent a shipment of beans to Houston, Texas, for planting, the results being excellent, according to reports from the importers. In England sauces [e.g., Worcestershire] are manufactured from soya beans, and in Hamburg one concern has produced a coffee substitute, or material to be added to cocoa, by roasting and grinding the beans. It is stated that this article has not met with much commercial success.

"All contracts in this country are made according to the terms of the Incorporated Oil Seed Association of London. These contracts consist of 13 lengthy articles, and provide, among other things, that all disputes arising out of contracts shall be referred to arbitration in London." Address: Consul, Hamburg.

2004. Yada, Naganosuke. 1912. Honpô shôyu shôkyô hôkoku no ken [The Japanese shoyu market in Vancouver, British Columbia, Canada]. Vancouver, BC, Canada. 10 p. Nov. 22. Handwritten unpublished manuscript. Requested by Mogi Shichirouemon of Noda, Chiba-ken. [Jap; eng]

• **Summary:** This is a market report from Mr. Yada at the Japanese consulate in Vancouver, BC, Canada, to Mr. Yasunari Uchida at the Japanese Ministry of Foreign Affairs.

There are about 9,000 Japanese living in Canada. Japanese shoyu imports were about 15,400 taru (249,500 liters) a year, and it was used almost entirely by Japanese. The best selling brand is Kikkoman. Address: Japanese Consulate, Vancouver, BC, Canada.

2005. Takahashi, Seiichi. 1912. Mogi Shichirôuemon yori Kihaku Shôyu yushutsu ni tsuki tôchi shijô toiwase no ken [Inquiry from Mr. Shichirôuemon Mogi about exporting Kihaku Shoyu to Seattle, Washington]. Seattle, Washington. 4 p. Nov. 27? Handwritten unpublished manuscript. Requested by Mogi Shichirouemon of Noda, Chiba-ken. [Jap; eng]

• **Summary:** This is a market report from Mr. Takahashi at the Japanese consulate in Seattle, to Mr. Yasunari Uchida at the Japanese Ministry of Foreign Affairs.

About 5,000 Japanese live in Seattle, 5,000 outside, and 2,000 elsewhere. Address: Japanese Consulate, Seattle, Washington.

2006. *Chemist and Druggist (London)*. 1912. Trade report. 81(22):831-33. Nov. 30. Series No. 1714.

• **Summary:** In the section titled "London markets" we read (p. 833): "Soy. A report is current that owing to the death of the proprietor of the Wochan brand there will be no more of this mark available."

2007. Kuijper, J. 1912. Soja [Soya]. *Departement van den Landbouw, Suriname, Bulletin* No. 29. p. 24-29. Nov. [Dut]

• **Summary:** In recent years, since 1908, soya has become a product of great importance on the world market. There are few products whose exports have risen so dramatically in just a few years. The reason for the great expansion of trade in soya can be found in the great demand by industry for oilseeds. For more than 30 years, experiments have been conducted on growing soybeans in Europe, but the results have not been very promising. Some people have suggested that soya might be able to be grown in Suriname. It is grown in many tropical countries, including Siam, British India, and Java. Requirements for cultivation and yields are discussed. Japan reports the highest yields, 2,500 kg/ha, compared with 1,000 to 1,400 kg/ha from the USA. Soybeans produce more protein and oil per unit area of land than any other farm crop. The seed is used mainly for human consumption but the plant also yields, fresh or dried, an excellent livestock feed, which is why so much research on it is now being conducted

in Australia and America. It is important for Suriname that soya can be used as a green fodder, for example interplanted and fed with corn.

From soya one can make numerous products such as soymilk (*soyamelk*), soy cheese (*soyakaas*, whose food value is higher than that of meat), soy flour, soy bread (*soyabrood*), oil (*olie*), various sauces (soya sauce, Worcester sauce, etc.), and various substitutes for coffee and chocolate, etc. (*surrogaten voor koffie en chocolade enz.*).

In Suriname soya is cultivated on a small scale by the Javanese, for example in Lelydorp and in the settlements of Johan and Margaretha. Many experiments with Soya have already been conducted in the experimental garden (*Cultuurtuin*). Seeds imported from America did not give good results; the plants remained small, yielded few fruits, and died quickly thereafter. It is a common occurrence that plants from temperate or subtropical regions do not grow well in the warm tropics in the rainy season. Of the seeds cultivated in Suriname, two varieties give good results. Those cultivated by the Javanese give hardy plants and a lot of seed though exact yield figures are not available; the planted area is still quite small. But the yield is about 1,000 kg/ha. Apparently the necessary bacteria are present in the soil, for the roots show nodulation.

In the experimental garden two beds of soya were planted on May 24. The first seeds ripened after 3 months and within 4 months all was harvested. Thus the plants developed during the rainy season, and they probably got too much water. The results would probably be better if this season could be avoided. Soya is sold in Suriname for hfl 30 per bag, a considerably higher price than that paid in Europe. On the plantations Peperpot and Jaglust experiments with soya have also been conducted. The European seed that was used gave very limited results. The experiments will be conducted again using Suriname seeds.

With the market price at hfl 10 per bag, it seems very unlikely that the cultivation of soya in Suriname will ever be profitable, unless high yields can be obtained. As mentioned above, this seems unlikely. Small scale cultivation for sale in Suriname, however, seems advantageous at present, while in areas where cattle are raised the use of soya as a green feed to replace more expensive secondary feeds will likely give good results.

Note 1 This is the earliest document seen (May 2009) concerning soybeans in Suriname, or the cultivation of soybeans in Suriname.

Note 2. This is the earliest Dutch-language document seen (March 2001) that uses the term *surrogaten voor koffie* to refer to soy coffee.

Note 3. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *soyamelk* to refer to soymilk. Address: Surinam.

2008. Tonnelier, Adolfo C. 1912. Soja hispida,

Moench: Metodos industriales de elaboracion de sus diversos derivados [The soybean: Industrial methods of manufacturing its various derivatives]. *Revista Industrial y Agrícola de Tucuman (Argentina)* 3(6):236-39. Nov. See also p. 396. With 5 photos of soybean plants and soybeans. [Spa]

• **Summary:** Contents: Introduction. Vegetable milk (*leche vegetal*, soymilk). Vegetable cheese (*queso vegetal*) [tofu]. Oil and casein (*aceite y caseina*, including preliminary operations of washing the seeds, extraction of the oil (*El aceite de Soja*), extraction of the vegetable casein {*caseina vegetal*} which has numerous industrial applications, as in the preparation of water-resistant paints, in the textile, paper, silk, and artificial textile industries, rubber, leather, plastic materials, films, photographic emulsions, etc.). Soy flour. Artificial rubber (*caucho artificial*). Shoyu or soy sauce (*choyou ó salsa de soja*).

"In the vicinity of Paris a factory for the production of soy-based food products has been founded. In England important manufacturers of soy flour, soybean cakes, and the extraction of the oil are in operation. Mr. Karajama [sic, Katayama (1906)], a Japanese chemist, uses soybean seeds to prepare a concentrated milk, a flour of the type that Nestlé makes, and biscuits (*biscochos*; not cookies), obtaining in this way a maximum of food and nutrition at very reduced volume.

"The experiments carried out since one year ago at this part of the Experiment Station, attached to the National School of Agriculture at Córdoba, have verified the easy acclimatization of this plant, the abundance and goodness of its products.

"It is to be hoped that its cultivation will be extensively propagated in the zones that are favorable for it. This leguminous oilseed is not only of interest to the farmer, agriculturist, and landowner, but also to the industrialist, and on no smaller scale.

"It is a new fountain / source of riches for the nation, that we must not neglect."

Note 1. This is the earliest Spanish-language document seen (Aug. 2003) that uses the term *caseina vegetal* to refer to isolated soy protein.

Note 2. This is the earliest Spanish-language document seen (Sept. 2006) that uses the term *El aceite de Soja* to refer to soy oil.

Note 3. This is the earliest Spanish-language document seen (April 2012) that uses the word *choyou* or the term *salsa de soja* to refer to soy sauce. Address: Chief of the Experiment Station, attached to the School of Agriculture, Argentina.

2009. *Christian Science Monitor*. 1912. Tried recipes. Nov. 5. p. 6.

• **Summary:** Note: These two recipes are interesting in that soy is not used as an ingredient and the word "soy" is not mentioned in the body of the recipe.

“Tomato soy: Pare four quarts of ripe tomatoes, cut up, boil four hours with eight cups of vinegar, one cup of salt, one tablespoon each of ground cloves, mustard, ginger, allspice, one teaspoon of cayenne. Add one pound of sugar, one quarter pound of mustard seed. Have as thick as catchup. Bottle.

“Indian soy: Allow to four pounds of green tomatoes one pound of onions, two pounds of cucumbers, one half pound of salt, one ounce peppercorns, two ounces of chillies, a blade or two of mace, one ounce whole cloves, two bruised ginger, two ounces of mustard seed and vinegar to cover.

“Chop the vegetables, put in a colander, sprinkle with salt and stand aside to drain over night. In the morning add the spices and vinegar. Boil slowly to a pulp, taking care not to let it scorch, then press through a sieve. Have ready small bottles, put a couple of cloves and a chilli in the bottom of each, pour in the soy [what soy?] and seal tightly. This pickle is particularly good with fish.”

2010. Gibbs, H.D.; Agcaoli, F. 1912. Some Filipino foods. *Philippine J. of Science* 7A(6):383-401. Dec. Section A. Plus 6 unnumbered pages of plates at end. See p. 398-99 + plates III, IV. [2 ref]

• **Summary:** “Toyo sauce—This condiment is made principally by Chinese from soja beans, *Glycine hispida* Maxim., imported from China. It is a Chinese sauce of the Worcestershire type.” Boiled beans and salt are placed in earthenware jars and spontaneous fermentation is allowed to go on in the sun for 2-4 months (see plate V). “The fermented mass is again boiled for another 12 hours, and the clear liquid is bottled and sold under the name of the toyo sauce. Sometimes it is boiled two or three times producing different grades of strengths of sauce. Molasses or sugar are sometimes added, and this variety is called *si yao* (Chinese).

Photos show: (1) A man in a bihon (thick rice vermicelli) factory using a push-pull apparatus, suspended by ropes from the ceiling, to rotate a traditional stone mill.

Note 1. This same kind of apparatus and mill are used in

traditional shops making tofu throughout East Asia.

(2) Soja beans fermenting in earthenware jars, covered with conical woven bamboo lids, in a courtyard, in the manufacture of toyo sauce.

“The Macao Chinese add a quantity of wheat flour to the boiled beans and dry the mixture in thin layers on trays several days before placing in jars for fermentation. This process hastens the fermentation.” Note 2. Macao [Macau] is a Portuguese overseas territory, located about 40 miles west of Hong Kong.

Table XVIII gives “Analyses of toyo sauce,” including regular toyo, toyo made with sugar, and crude molasses.

Note 3. This is the earliest document seen (April 1912) that uses the word “toyo” or the word “toyo sauce” to refer to Filipino-style soy sauce. Address: 1. Assoc. Prof. of Chemistry, Univ. of the Philippines; 2. Food and Drug Inspector, Bureau of Health. Both: From the Lab. of Organic Chemistry, Bureau of Science, Manila.

• **Summary:** Ad (full page). The top ¼ of this ad is given in English. This company sells various goods including (in Japanese) miso and shoyu [soy sauce]. The company also has a Fresno branch at 1505 Kern St., Fresno, California.

An illustration shows the face of a Tengu, a long-nosed mythological creature or goblin. Mock Joya (1960, p. 523) states: “The Tengu is the most widely feared of traditional superhuman monsters. It is known to abduct young women, kidnap little children, and do other mischief but at the same time, much superhuman power of punishing the bad and helping the good is attributed to it.” It is part bird and part human, and is able to fly at terrific speeds. “It is dressed in a costume similar to that worn by *yamabushi* or mountain Buddhist priests... All Tengu live in high wooded mountains, far from villages.”

This ad also appears in the 1913 yearbook. Address: 1122-1130 4th St., Sacramento, California (P.O. Box 258).

2022. Beltzer, Francis J.-G. 1912. Industries du lactose et de la caséine végétale du soja [Industries producing lactose and soy vegetable casein]. Paris: Librairie Bernard Tignol. 144 p. Undated. (Bibliothèque des Actualités Industrielles, No. 144). [17 ref. Fre]

• **Summary:** Contents: Preface. Part 1: The lactose industry (p. 9-95; 4 chapters). Part II: Vegetable milk, vegetable casein, and products from soybean seeds. Introduction. 1. Vegetable milk (*Le lait végétal*; soymilk), microscopic examination of vegetable milk. 2. Vegetable cheese (*Le fromage végétal*; tofu). 3. Industrial uses of vegetable casein, proximate analysis of soybean seeds, quantity and dosage determination, the price of soybeans, price of recovery of vegetable casein, industrial production of vegetable casein, cleaning the soybeans, extraction of soy oil, extraction of soy casein. 4. Plan and installation of a factory for processing (10 tons/day of) whole soybeans [to make industrial vegetable casein], estimate and specifications for special materials, general materials, the buildings, price of recovery of vegetable casein, industrial uses of vegetable casein. Illustrations (line drawings) show: (1) Microscopic view of soymilk globules. (2) Microscopic view of soya bean tegument (exterior). (3) Schematic drawings (cross section and overview) of a factory for making vegetable casein.

The Preface notes that in Indo-China, vegetable milk and vegetable cheese made from the soybean form the base of the people's nutrition. Cow's milk is largely unknown, and the people raise and nourish their children largely with soymilk. Tofu serves equally for the current nourishment of the poor (p. 6).

The Introduction (p. 101-07) notes that soy protein is a globulin, called *glycinine* or vegetable casein (*caséine végétale*). Osborne & Clapp submitted this substance to acid hydrolysis and found its composition, which is very rich in glutamic acid (p. 102). Soy flour (*farine de Soja*) contains little starch but a large amount of nitrogenous materials, similar to gluten; it is widely used in making bread for diabetics. It can also be used as the basis of foods that are rich in protein and very nutritious, as for colonial or European troops (p. 103).

Soy sauce (*Soja fermenté*) is made in Japan from a mixture of soy and wheat (*koji*). The number of brewers (*brasseurs*) of soy sauce exceeds 12,000 in the entire Japanese Empire, furnishing more than 2,500,000 hectoliters of this condiment (p. 103).

A Chinese factory has been founded on the outskirts of Paris (at Vallées, near Colombes) for the production soy-based food products (*produits alimentaires à base de soja*). This factory currently makes *Caséo-sojaïne* [tofu] and the following food products: Soy flour (*Farine de soja*), soy bread (*Pain de soja*), soy sauce (*Sauce de soja*), soymilk (*Lait de soja*), fermented soymilk (*Lait de soja fermenté*), soy cheese [tofu] (*Fromage de soja*), soy confections (*Confitures de soja*), etc. The Journal, in its issue of 9 Jan. 1911, under the title “*Une usine chinoise fonctionne dans la banlieue parisienne* [A Chinese factory is operating on the outskirts of Paris]” gives some details (p. 106).

In our colonies in Indo-China, the indigenous people have long prepared soymilk, tofu, and several other foods. Soymilk is used like regular milk for feeding babies. Soy cheese, when cooked, is analogous to gruyere cheese; fresh soy cheese resembles our goat cheese. Many Europeans are now preoccupied with making the best of the abundant nutritive principles found in the soybean. One can eat green vegetable soybeans (*Les fruits verts*) like green peas (*pois verts*). In Annam and Japan a sauce is also made from soybeans; its use has spread from East Asia just like that of tofu (*fromage végétal*) (p. 107).

The introduction into Europe and France of soyfoods (*aliments retirés du Soja*), especially soymilk and tofu, will enable us to combat periods of scarcity of animal milk and periods when the prices of certain foods are high. Will the substitution of vegetable casein for milk casein enable us to likewise conserve milk for food use instead of delivering it to industry? (p. 107).

Chapter one, “Soymilk” (p. 108-13), discusses the work of the Japanese chemist T. Katayama (1906) with soymilk and notes that it can be homogenized and condensed. Illustrations show a microscopic view of the globules of soymilk and of okara. The absence of starch in soybeans is a very positive characteristic.

Chapter two, “Tofu” (p. 114-18), notes that in Cochinchina, calcium sulfate is called *Tchack-kao*, and there are three main varieties of tofu: (1) The fermented variety, which is gray or yellow in color, has a piquant taste and resembles Roquefort cheese. (2) The white salted variety resembles goat’s cheese. (3) The baked (*cuite*) or smoked variety resembles gruyere cheese and keeps as well as the salted variety.

Chapter three, “Industrial uses of vegetable casein” (p. 119-32), observes that the oil in soybeans must first be removed by pressing or extraction. A table (p. 120) gives the chemical composition of soybeans from Laos and Cochinchina, Tonkin, and China and Manchuria. They contain

17.64 to 18.28% oil. In Indochina a food which Beltzer calls *La caséine végétale en lames* (“vegetable casein in sheets” = yuba) has a rather high oil content—about 25-28%. There follows a section (p. 126-32) which contains details on industrial production of soy casein. Chapter four, “Design and installation of a factory for processing soybeans into industrial vegetable casein,” describes each piece of equipment and its cost, itemizes the costs of general and special materials plus, buildings and working capital. Also includes a detailed schematic diagram (p. 136-37) with three production lines, and both top and side views. Finally, it lists expenses, income, and profit (p. 139). The last section, applications of industrial vegetable casein, includes paints, paper coatings, silk and artificial textiles, Galalith, and waterproofing of textiles and straw hats. The book contains no bibliography, few footnotes, and no mention of the work of Li Yu-ying—from whom the author appears to have borrowed much.

Note: Although this book is undated, all major sources (except a Seattle Public Library bibliography) give its date as 1912. Address: Ingenieur-Chemiste-Expert, Professeur de Chimie Industrielle.

2023. Bradbury, Frederick. 1912. History of Old Sheffield Plate: Being an account of the origin, growth, and decay of the industry... London: Macmillan and Co., Ltd. xiii + 539 p. See ix, p. 197, 271. Illust. General index. Index to marks. 30 cm. [25* ref]

• **Summary:** This is a very interesting and original book, with much new information about and photos of early soy cruets and soy frames. In the 1740s craftsmen in Sheffield, England (long known for its cutlery and metalwork), invented the process for making articles from silver plated on copper by fusion; this process is much older than electroplating. Before that all such articles were made from pure silver. Two early products were metal “soy frames” and cruet frames,” used for holding cruets—which are cut glass bottles that usually hold oil, vinegar, soy [sauce], liquor, etc. for use at the dining table.

The section titled “Sale room values of Old Sheffield Plate” states (p. 184) that as of 1912: “Cruet and liquor frames are not in request, but small soy frames from the Adam period [ca. 1770-1790] are much sought after.”

A complete list of Old Sheffield plated wares manufactured by the firm of Watson & Bradbury between the years 1788 and 1815, with original descriptions taken from the company’s pattern book, includes (p. 196-97): “Cruet frames”—485 different patterns. Note: this is the single most popular type of pattern / item. “Soy frames”—84 different patterns.” This one firm made a total of 570 different patterns of soy frames and glass cruets.”

The section titled “Cruet frames and soy frames” (p. 271-73), which contains various superb illustrations, states: “The soy frames and cruet frames—with their many

combinations and varieties of patterns, are sufficiently illustrated here to give a very fair general idea of the different fashions and requirements of this branch of the industry. The name soy is borrowed from the French [sic, the Japanese], and signifies sauce.” (p. 271).

Black-and-white illustrations show: (1) A punching and piercing machine, with a “soy frame base” after piercing (p. 119; various spaces were pierced on its edge).

Small 2-bottle Soy Frame, by
D. Holy, Wilkinson & Co.
Date 1787. Mr. F. Hawley, London.

(2) “Small 2-bottle Soy Frame, by D. Holy, Wilkinson & Co. Date 1787.”

(3) “Small 3-bottle Soy Frame, with green bottles ornamented with gold, by N. Smith & Co. Date 1803.” See next page.

(4) “Round 6-bottle Soy Frame, by Richard Morton. Date 1776.” Note: This is the earliest date seen (Sept. 2003) for a soy frame or soy cruets.

(5) “7-bottle Oval Soy or Cruet Frame, by T. Law & Co. Date 1792.”

(6) “3-bottle Cruet or Soy Frame Combination, with plated Mustard Pot, by N. Smith & Co. Date 1789.” (p. 271-73).

(7) “Illustrated designs [two] from catalogues, about 1778. The Soy Frames. The property of T. Bradbury & Sons” (p. 404). Address: Sheffield, England.

2024. Capus, G.; Boise, D. 1912. *Les produits coloniaux: Origine, production, commerce* [Colonial products: Origin, production, and commerce]. Paris: Librairie Armand Colin. xvi + 687 p. See p. 113-15, 340. Illust. Index. 19 cm. [193* ref. Fre]

• **Summary:** In the chapter on “Vegetables” is a section titled “Soybeans” (*Le Soya ou Soja*) (p. 113-15), which gives basic

information and contains a large (non-original) illustration of a soybean plant by Thiebault. In Japan, soybean are used to make a sauce or condiment called shoyu (*Sho-yu*).

In the chapter on “Forage plants” is a short paragraph (p. 340) on the “Soybean” (*Le Soya*) which states that it is a precious legume for subtropical regions. Its stems and leaves are very rich in nitrogenous materials, and therefore very nourishing.

Also discusses: Peanuts (*L’Arachide*, p. 115-16, 289-94, 337). Bambara groundnuts (*Le Voandzou*, p. 116). Sesame seeds (*Le Sésame*, p. 298-301). Address: 1. Doctor of Science, former Director General of Agriculture in Indochina; 2. Asst. at the Museum of Natural History, professor at the l’École coloniale. Both: Paris, France.

2025. Giles, Herbert Allen. 1912. *A Chinese-English dictionary*. 2nd ed., revised & enlarged. 2 vols. Shanghai, China: Kelly & Walsh, Ltd.; London: Bernard Quaritch. 33 x 26 cm. Reprinted in 1964, 1978. [4 ref. Eng; chi]

• **Summary:** These two massive volumes, each weighing about 9½ lb, contain more than 1,800 pages and 13,848 Chinese characters. Contents of Vol. I: Part I. By the same author (25 books). Dedication. Preface. Extracts from preface to first edition. Dialects (The romanized pronunciation of each character is given in Cantonese, Hakka, Foochow, Wenchow, Ningpo, Peking, Mid-China, Yangchow, and Ssuch’uan {Szechwan} dialects, as well as in Korean, Japanese, and Annamese, each being distinguished by its initial letter). Tables: Insignia of official rank, the family names, the Chinese dynasties, topographical, the calendar, miscellaneous (the Chinese digits, the Chinese decimal system). The 214 radicals. Radical index. Part II. *A Chinese-English dictionary* (p. 1-1711, in two volumes). Examples of soy-related characters:

Chiang (p. 149, No. 1220). “A soy made by mixing salt with bean flour. Sauce.” Fourteen compounds using this character are given, including: Bean sauce, soy. Pickled bean curd. Bean sauce. Soy is of two kinds, the clear and the thick. Dry relishes. Soy [sauce] colour—a dark reddish drab. He won’t use money for vinegar to buy soy.

Ch’ih (p. 249, No. 1996). “Salted fruits, etc., dried and used as relishes.” Four compounds incl.: Salted beans. Soy, sauce.

Fu (p. 458, No. 3686). “Rotten; putrid; worthless.” Eleven compounds and sayings include: Bean curd, see No. 11,417. Bean curd officials—a term of contempt applied to certain of the poorer classes of official servants who are compelled to feed largely on this cheap food. Also explained as flabby or unenergetic officials. A Mongol name for cheese. A kind of milk made from beans (milk + fu) [Note: Probably fermented tofu].

Huang (p. 635, No. 5124). Yellow. Compounds: Yellow beans.

Mao (p. 955, No. 7,679). “Hair, down, feather.” But the

Round 6-bottle Soy Frame, by
Richard Morton.
Date 1776. Basker, Grantham.

word *Maodou* (“Hairy beans”) = edamame does not appear here.

Ta (p. 1,294-96, No. 10,470). “Great.” But the word “Great bean” = soybean does not appear here.

Tou (p. 1,412, No. 11,417). “Beans; pulse.” See also No. 11,412. Thirty compounds, incl.: Bean-sprouts. Bean-curd. A cheap restaurant (a bean-curd restaurant). Like making bean curd—very tedious. A tongue like a knife, but a bean-curd heart (soft). Bean-cake. Bean oil. Big bean, black bean, or yellow bean = the soja or soya bean (*Glycine hispida*, Max.), used for making bean-curd, soy, oil, etc. Ground-nuts.

Yu (p. 1,661, No. 13,409). “Oil, fat, grease.” 45 compounds incl. Oil, salt, soy, and vinegar = condiments generally. Sesamum-seed oil. Linseed. Wood oil. An oil factory. Oil dregs. But “bean-oil” = soybean oil does not appear here.

Note 1 (see p. vii): Other earlier important Chinese dictionaries are: Morrison (1819, English). Medhurst (1843, English). Williams (1874, American). Giles (1892, English). Giles lived 1845-1935.

Note 2. Unfortunately, the pronunciation of the compounds is not given (as in Mandarin). Address: Prof. of Chinese, Univ. of Cambridge, Cambridge, England; and sometimes H.B.M. Consul at Ningpo.

2026. *Giornale di Farmacia, di Chimica e di Scienze Affini* (*J. of Pharmacy, Chemistry and Related Sciences*) (Torino, Italy). 1912. Sopra una reazione cromatica dell’olio di soja [On a chromatic reaction of soya oil (Abstract)]. 61:495-96. [1 ref. Ita]

• **Summary:** A summary of: Settimj, L. 1912. “Sopra una reazione cromatica caratteristica dell’olio di soja [On a chromatic or color reaction characteristic of soy oil]”. *Annali del Laboratorio Chimico Centrale delle Gabelle* (Rome) 6:461-65. Note: This summary says that the author of the original article was “L. Settimi.”

2027. Goodrich, Walter Francis. 1912. *Modern destructor practice*. London: Charles Griffin and Co., Ltd.; Philadelphia: J.B. Lippincott Co. xvi + 278 p. See p. 180. Illust. (With 116 illust. and 46 tables). 23 cm. [10+* ref]

• **Summary:** A destructor is a large incinerator or battery of incinerators designed for sanitary refuse / waste disposal and to produce low-cost power as a by-product using steam.

In the section on “The Far East” (Oriental countries), table 24 titled “Report of the Shanghai Municipal Council for year ending December 31, 1899...” (p. 180) shows the percentage composition of Shanghai garbage among 15 categories each month for a year. A footnote concerning organic matter states: “Includes cabbage leaves... putrid meat, old shoes, fish and fowl entrails, fish heads and bones, refuse from the manufacture of bean cakes [probably okara] and Chinese sauce (soy), etc.” Address: Monmouth Lodge, Watford. Associate of the Institution of Mechanical

Engineers; Fellow of the Inst. of Sanitary Engineers, and author of various books incl. *Refuse Disposal and Power Production*.

2028. Hokubei Shokai. 1912. Hokubei Shokai (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 8]. p. C-11. [Jap]

• **Summary:** Ad (½ page). This company (an original manufacturer and importer, under special contracts) imports various goods including miso and shoyu. Only the address in California (1 line) is given in English. Address: 246 Jackson St., San Jose, California.

2029. Kinokuniya Co. (The). 1912. The Kinokuniya Co. (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 8]. p. C-16. [Eng; jap]

• **Summary:** Ad (¼ page). The top ¼ of this ad is given in English. This company sells various goods including (in Japanese) miso and shoyu [soy sauce]. Address: 224 Jackson St., San Jose, California. Phone: San Jose 1276.

2030. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1912. *Nichi-Bei nenkan* [*Japanese-American yearbook*. No. 8]. 650 Ellis St., San Francisco, California. 652 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 14 parts, each numbered separately. Contents: (1) Table of contents (4 p.). (2) Ads (4 p.). (3) Maps (2 p.): Map of the United States. Map of California (1 p. each, in Japanese). (4) Graphs and charts on 4 unnumbered pages: (A) Bar chart: Population of Japanese living in the USA from 1869 to 1911 (some years missing before 1904). Three pie charts: (B) In which U.S. states do Japanese live. (C) Occupations of Japanese in USA. (D) Japanese in USA by gender. (E) Bar chart: Agricultural land use by Japanese by state. (F) Bar charts of four things for 7 years. (5) Black and white photos on 16 unnumbered pages. (6) Advertisements (A-1 to A-18). (7) Front part (p. 1-150), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (8) Ads from San Francisco. (9) Back part (p. 1-136). (10) Assorted ads (B-1 to B-66). Appendixes: (12) Table of contents of Directory of Japanese living in America (2 p.). Appendix 1. Japanese living in America, alphabetically by state, and within each state by city (p. 1-194). Appendix 2. Assorted California ads (p. C-1 to C-42).

(4A) Population of Japanese living in the USA from 1869 to 1911 (read from right to left). 40 people in 1869, 55 in 1871, 95 in 1874, 270 in 1878, 420 in 1884, 500 in 1885,

1,200 in 1887, 2,300 in 1890, 6,000 in 1895, 35,000 in 1899, 53,761 in 1904, 61,034 in 1905, 75,534 in 1906, 89,575 in 1907, peak of 103,683 in 1908, 98,718 in 1909, 93,644 in 1911.

(4B, top pie chart) In which U.S. states do Japanese live: Total Japanese population in USA: 93,359. California 56,760. Washington 16,817. Colorado, Arizona, and New Mexico combined 5,083. Rocky Mountain region (Nevada, Utah, Idaho, Wyoming, Montana?) (*Sanchubu-gun*) 4,896. Oregon 3,795. Colorado 3,731. New York 2,178. Idaho 1,168. Utah 1,472 (see also p. 79).

(4C, lower left pie chart) Occupations of Japanese in USA: Total 76,000. Farm laborers 36,000. Domestics 8,000. Merchants and hotel workers 7,500. Farm owners (*Nogyo keiei-sha*) 5,000.

(4D, lower right pie chart) Japanese in USA by gender: Total 93,359. Adult men 76,378. Adult women 9,673 (so 7.9 men for each woman). Boys—American born 3,237. Girls—American born 3,195.

(5) How Japanese worked agricultural land in the USA (3 bar charts) (5A) Far left graph: Too hard to read bottom of graph. (5B) Right graph: California. Colorado. Idaho. Texas. Washington. Utah. Oregon. Nebraska. New York. Florida. Other. (5C) 3rd graph (full page): Gives data from 1905 to 1911 for the following states: California, Colorado, Idaho, Texas, Washington, Utah, Oregon, Nebraska, New York, Florida, and Other. For each state gives the following: black bar = *genkin shakuchi* = rent the land; pay cash (most prevalent). White bar with wavy line = *buai kôzaku* = pay a percentage of the crop (#2 most prevalent). Dark diagonal lines = *ukeoi kôzaku* = a person asks you to cultivate and manage the land (#3 most prevalent). Light diagonal lines = *shoyû* = Cultivators owns the land (least prevalent).

In 1910, the value of miso and shoyu imported from Japan to San Francisco topped \$100,000. Also imports of soybean cakes (*daizu kasu*) from Manchuria increased rapidly (p. 75).

In 1910, the value of shoyu and pickles imported from Japan to Portland, Oregon, was \$11,094 (p. 77).

Basic information about how the survey was conducted, its scope, and reaction to it is given on pages 67, 73, 79-80, 90, 98-100, and 114 of this year book. The date on page 1 of the directory is Meiji 44 (1911), Oct. 1. On page 67 is a comparison of Japanese and American import and export data—this data compiled by both countries; soy is not mentioned. Pages 73 on show existing government forms that Japanese had filled out: Marriage certificate, birth certificate, divorce, military draft, type of business and business license, agricultural work details, visa, etc. These provided important basic information for the surveys of Japanese in California.

Pages 79, 80, and 90 contain data compiled by the *Nichibei* newspaper, perhaps a survey conducted by sending out forms, with follow-up by phone calls. The first Japanese

laborers came into California in Meiji 2 (1869); A Dutchman named Snail brought a group of 40 Japanese workers. In Meiji 11 (1878) a census of Japanese in California was conducted. In Meiji 37 (1904) the first detailed research on Japanese in California was conducted.

The Directory shows Japanese companies making soyfoods in California, Utah, Oregon, and Washington. Address: San Francisco, California.

2031. Okurasho Shuzeikyoku. 1912. Naikokuzei isan 55 [Domestic tax; treasure from the past 55]. Tokyo: Tokyozeimu Kantoku-kyoku. 161 p. 23 cm. [Jap]*

• **Summary:** This is a Japanese government publication. Note: This is the 4th earliest book in WorldCat / OCLC that has miso as a subject or title word. Address: Japan.

2032. Okurasho Shuzeikyoku. 1912. Naikokuzei isan 56 [Domestic tax; treasure from the past 56]. Tokyo: Tokyozeimu Kantoku-kyoku. 133 p. 23 cm. [Jap]*

2033. Ozaki Shoten (Okaki & Co.). 1912. Ozaki Shoten (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 8]. p. C-24. [Eng; jap]

• **Summary:** Ad (¼ page). The top 1/5 of this ad is given in English. This company sells various goods including (in Japanese) shoyu [soy sauce]. A similar ad also appears in the 1913 Yearbook (last block of ads, p. 23). Says it is a branch of Ozaki Shoten, a shoyu maker in Wakayama, Japan. Address: 404-406 E. First St., Los Angeles, California.

2034. Pacific Trading Co., Inc. 1912. General importers and exporters (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 8]. Unnumbered page near front. [Jap; Eng]

• **Summary:** Ad (full page). The top one-fifth of this ad is in English. This company imports various goods including (in Japanese) shoyu and miso. In English: "Rice, soy, canned goods, vegetable wax, dried vegetable, crockery, chilli pepper, dried ginger, etc." "Cable address 'PacTrad.'"

The company's full-page ad near the front of the 1914 Yearbook (p. 1) shows company trademarks / logos for Kikkoman Shoyu and Higeta Shoyu. Address: 441-443 Clay St., San Francisco, California. Phone: Kearny 1263. Douglas 170. Home C 5456.

2035. Settimj, L. 1912. Sopra una reazione cromatica caratteristica dell'olio di soja [On a chromatic reaction characteristic of soy oil]. *Annali del Laboratorio Chimico Centrale delle Gabelle (Rome)* 6:461-65. (Chem. Abst. 7:908). [Ita]

• **Summary:** The soybean seed (*semi di soja*) is furnished by the plant *Soja hispida*, which is a member of the

legume family. In Japan, since ancient times, the seeds of the soybean have been used to make a fermented paste called Miso and an oil called Shoyu (*un olio per con lire detto Shoyu*). In the United States, England, and Germany the soybean is used mostly as a source of oil, of which it contains 13-19%. During the past year, soy oil in Italy (*dell'olio di soja in Italia*) has assumed a new importance; it is coming to be used mainly for the manufacture of soaps but also for edible use, mixed with the oil of other seeds and olive oil. The Settimi Test is a color test which has been proposed for use with vegetable oils, including soy oil. On shaking together a mixture of 5 c.c. of soya bean oil, 2 c.c. of CHCl_3 , and 3 c.c. of a 1:50 aqueous solution of uranium nitrate, a distinctly yellow emulsion is obtained. This yellow color is permanent. With sesame (*sesamo*), cottonseed (*cotone*), peanut (*arachide*), rapeseed (*colza*) and maize (*maiz*) oil, a white emulsion results. Olive oil gives a greenish tint, sometimes also a yellowish tint like that of an oil mixed with a little soya oil.

Note 1. This article was summarized in *Chemische Umschau auf dem Gebiete der Fette, Oele, Wachse und Harze* (1913, p. 61), *Pharmazeutische Zentralhalle für Deutschland* (1913, vol. 54, p. 522), and *Year-Book of Pharmacy* (1913, p. 107).

Note 2. This is the earliest Italian-language document seen (Sept. 2006) that mentions soy oil, which it calls *olio di soja*.

Also discusses: Sesame oil, peanut oil, olive oil, corn oil, and colza oil. Address: Rome, Italy.

2036. Tibbles, William. 1912. Foods, their origin, composition and manufacture. London: Baillière, Tindall and Cox. viii + 950 p. See p. 532. 23 cm. *

• **Summary:** "Soy Sauce, or Shoyu, is prepared from a mixture of cooked beans, roasted wheaten flour, and salt, which are put into a cask and allowed to undergo a prolonged fermentation. The result is a thick brown liquid, of pungent and agreeable..." (p. 532).

2037. Tonnelier, Adolfo C. 1912. La Soja hispida y sus aplicaciones [The soybean and its applications]. Buenos Aires, Argentina: J. Carbone. 16 p. [Spa]

• **Summary:** Various tables give the chemical composition of soybeans based on different previous analyses (incl. moisture, ash, oils, nitrogenous substances / proteins {*materias azoadas*, *materias proteicas*}, cellulose, and carbohydrates).

"The results obtained during these last two periods in this Experimental Station permit us to predict a bright future for these industries. The soybean is adequate to use as green manure, green fodder and hay; it produces a grain with which flour is made for the maintenance of people and animals; it also produces oil which leaves a residue cake that can be fed to livestock. Besides these products, soybeans can be a

source for artificial milk (*leche artificial*; soymilk), cheese (*queso*) [tofu], and a certain sauce (*cierta salsa*; soy sauce), all of which, even if their use has not yet become part of our custom, are at least widespread in the Chinese Empire" (p. 1).

"The main center for the utilization of the soybean and for the production of flour, oil and cakes is found in Hull, England." Tables show the composition of soy flour and the soybean cake, based on analyses by Maret and Delattre (p. 8).

On page 10 is a discussion of vegetable milk or soy milk. Page 12 discusses "*queso de Soja, ó To Fou*" ("soy cheese, or tofu") and "*la famosa salsa de Soja, llamada Soyoyu ó Choyoyu*" ("the famous soy sauce, called Soyoyu or Choyoyu" [actually shoyu]). A table gives the chemical composition of fresh and dry tofu.

A full-page table (p. 13) compares the chemical composition of soybeans and soyfoods with similar foods from other sources in six categories: Seeds or grains, cakes (for feed), flour, green forage, milk (incl. soymilk), and cheese (incl. fresh and dry tofu; *Queso de To Fou, fresco*; *Queso de To Fou, seco*). The dry tofu cheese may be dry-frozen tofu.

"Experiments carried out at this Experimental Station in Cordoba during the last three years plainly confirm the favorable effects that legumes produce as green/unripe manure over other crops such as corn, flax, wheat, barley, rye and potatoes. In the period 1910-1911, as is well known, was not a very favorable one for forage production. A yield corresponding to 36,000 kg/ha of green forage was obtained [from soybeans] at this Experimental Station" (p. 15). "The experimental cultivation of the hispid/hairy soybean in the period of 1910-1911 was carried out on soil of mediocre composition, inferior to that of the average crops in the region. As I stated earlier, that year was extremely unfavorable for all vegetation. Half of the crop either failed to bloom or did not ripen. As a result, by January 19, 1911, the harvest of green forage was 36,800 kg/ha, leaving the other half for seed" (p. 16).

Photos show: (1) A field of soy bean plants (Soja hispida). (2) Close-up view of a man standing with a measuring stick in a field of soy bean plants. (3) Close-up view of leaves of a soy bean plant. (4). Close-up of soybean pods on stem. (5). Soybean pods placed next to a ruler.

Note 1. This is the earliest document seen (May 2009) concerning the cultivation of soybeans in Argentina (one of three documents).

Note 2. The last two lines of the article read: "Cordoba, July 1911. A.C. Tonnelier." Therefore this document contains the earliest clear date seen for soybeans in Argentina, or the cultivation of soybeans in Argentina (1908). The source of these soybeans is unknown.

Note 3. This is the earliest Spanish-language document seen (Aug. 2003) that uses the term *materias azoadas* or

materias proteicas to refer to nitrogenous substances or protein in connection with soybeans. Address: Jefe de la Estación Experimental, anexa á la Escuela Nacional de Agricultura y Ganadería de Córdoba (Chief of the Experiment Station, attached to the School of Agriculture and Cattle Raising of Córdoba, Argentina).

2038. Tozai Boeki Shokai (Oriental & Occidental Trading Co.). (The). 1912. General importers and exporters (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. No. 8]. p. C-36. [Eng; jap]

• **Summary:** Ad (full page). The top ¼ of this ad is given in English. This company sells various goods including (in Japanese) shoyu [soy sauce]. Address: 461 Pacific Building, Market St. at 4th, San Francisco, California. Phone: Douglas 3284.

2039. Winkler, Hubert. 1912. Botanisches Hilfsbuch fuer Pflanze, Kolonialbeamte, Tropenkaufleute und Forschungsreisende [Botanical guidebook for colonial settlers and officials, buyers of tropical goods, and explorers]. Wismar: Hinstorffsche Verlagsbuchhandlung. 322 p. See p. 240-41. [1 ref. Ger]

2040. *Chemist and Druggist (London)*. 1913. Trade report. 82(5):205-07. Feb. 1. Series No. 1723.

• **Summary:** London markets—Soy. “Seuloong brand is obtainable at 1s. 8d. per gallon, no Wochan being available” (p. 207).

2041. Cornwell (G.G.) & Son. 1913. Appetizing sauces (Ad). *Washington Post*. Feb. 27. p. 7.

• **Summary:** “Add zest to your meals and help your digestion with some of these delicious sauces which we import direct from Crosse & Blackwell, in England.

“Essence of Anchovies, ½ pts. Harvey’s Sauce, ½ pts. Walnut Catsup, ½ pts. India Soy, ½ pts. Reading Sauce, ½ pts. Importers of fine groceries.”

Note 1. This ad also appeared in the Feb. 28, March 11, and March 22 issues of this newspaper.

Note 2. The March 22 issue is the most recent English-language document seen (Oct. 2006) that uses the term “India Soy” to refer to soy sauce. Address: 1415-17 H St., N.W. [Washington, DC].

2042. Granato, L. 1913. A soja [The soybean]. *Sao Paulo Secretaria de Agricultura, Comercio e Obras Pulicas. Boletim de Agricultura, Series 14*. No. 3. p. 159-67. March. Series XIV. [Por]

• **Summary:** Contents: Names of the soybean: Scientific and in various foreign countries. Botanical characteristics. Soybean cultivation: In Russia, France, Italy, Austria.

Harvest and yield: In Italy, Hungary, France, in Brazil at the Agronomic Institute of Campinas (*instituto Agronomico de Campinas*) where Dutra reported yields of 2,200 to 2,300 liters/hectare. The soybean as a food: Nutritional composition and food value of the seeds of varieties analyzed by König, of varieties cultivated in 1899 at the Agronomic Institute of Campinas and analyzed by Mr. R. Bolliger. Soja as a forage crop. Uses of the soy bean (esp. in Japan and China): Miso, tofu (a type of cheese {*queijo*} called *To-fu*), shoyu, koji, soy flour.

Three bar charts (p. 165-66) compare the protein (*albuminoides*), oil and fat, and carbohydrate content of the soybean with those of other major foodstuffs (of both animal and vegetable origin, such as common beans {*feijao*}, beef, eggs, wheat, etc.). Soybeans have the highest content of protein, and of oil or fat, of all foods with which they are compared.

2043. Kita, Genitsu. 1913. Some properties of koji-diastrase. *J. of Industrial and Engineering Chemistry* 5(3):220-22. March. [3 ref. Eng]

• **Summary:** “I have lately been occupied in a series of investigations relative to Soya or Shoyu (Japanese [soy] sauce fermented from beans, wheat and salt) making, and incidentally cleared up certain” points about the saccharifying enzymes [enzymes] of koji.”

“Summary: I. Though koji may contain two different saccharifying enzymes, viz., amylase and glucase, the total quantity of glucose saccharified solution could not be produced from maltose by the action of glucase alone; hence, koji must contain some other kind of diastase which produces glucose directly from starch without the aid of glucase.

“II. Common salt has a protecting action on koji-diastrase under heating but not on malt-diastrase, while sodium hydrogen phosphate (Na_2HPO_4), asparagine and sulfuric acid impair its activity more quickly.

“III. The inhibitory action of salt on koji-diastrase has a certain relation to the concentration of diastase. In a dilute enzymic solution it is very strong but not in a concentrated enzymic solution. It is therefore necessary in every case to note concentration of diastase when we consider the influence of some salt upon it.

“IV. The activity of koji-diastrase is conserved in brine for a long time.” Address: Dep. of Applied Chemistry, Tokyo Imperial Univ.

2044. Takahashi, Teizô; Yamamoto, Takeharu. 1913. On the physiological difference of the varieties of *Aspergillus oryzae* employed in the three main industries in Japan, namely saké-, shôyu-, and tamari-manufacture. *J. of the College of Agriculture, Tokyo Imperial University* 5(2):153-61. March. Previously published in *Jozo Shiken-jo Hokoku* (Report of the Brewing Inst., Tokyo), March 1911. [6 ref. Eng]

• **Summary:** “The physiological differences between the fungus of saké koji, shōyu koji and tamari koji are remarkable, especially in the formation of amino-acids, sugars, esters, ammonia and the liquefaction of gelatine... The formation of sugars is more conspicuous in the varieties of the fungus customarily used in the brewing of saké than in that of the varieties of shōyu or tamari, and vice versa in regard to the peptonification on the formation of amino-acids or ammonification.

“Still further, the formation of large quantities of amino acids at the stage of the spore formation of the fungus, in spite of their being less of them at the mycelium stage, explains why we use koji at spore stage in shōyu or tamari industry, and at the mycelium stage in saké brewing.”

Contents: Introduction. Varieties [of *Aspergillus oryzae*] used in the experiments. The preparation of koji and the method of analysis. The content of sugar in the whole mass of the prepared koji, namely the growth on 100 g. of rice. The amounts of organic acids. The esters. The amino-acids and ammonia. The liquefaction of gelatine in the culture of the fungus in koji gelatine. Summary. Address: Tokyo Imperial Univ., Japan.

2045. Woodhouse, E.J.; Taylor, C. Somers. 1913. The varieties of soy beans found in Bengal, Bihar, and Orissa and their commercial possibilities. *India Department of Agriculture, Memoirs. Botanical Series* 5(3):103-76. March. Plus 4 plates on unnumbered pages Also published as a book in Calcutta by Thacker, Spink & Co. and in London by W. Thacker & Co. 28 cm. [15 ref]

• **Summary:** Contents: 1. Introductory. 2. Nomenclature. 3. Varietal characters of soy beans: Habit, foliage, pubescence, flower (morphology, pollination, extent of natural crossing), pods, seeds (morphology), seeds (composition; black, yellow, and chocolate seeded varieties grown by the authors from seed obtained in 1909; the back varieties contained significantly more nitrogen/protein and less oil), maturity, diseases. 4. Description of types: *Kala Bhetmas*, *Safed Bhetmas*, *Lal Bhetmas*, *Barmeli Bhetmas*, *Nepali Bhetmas* (obtained from Kalimpong and tested at Sabour in 1911). 5. Distribution. 6. Cultivation. 7. Yield. 8. Price. 9. Uses: Food-stuff, bean sauce (soy, or shoyu), chiang or miso, tou-fu (tofu), soy beans as a green vegetable, oil (for use in England in soap-making, or in China “as an illuminant, as a substitute for lard in cooking, though it is inferior to rapeseed and sesamum oil for this purpose, as a lubricant for greasing cart axles, or for waterproofing cloth”), cake and flour. 10. General conclusions.

“In 1909 the survey work on the crops of Bengal was commenced, and in July of that year a number of trial plots of the chief pulse crops of the Province were sown for identification and field study. Among these were three samples of *Bhetmas*, of which one sample of black-seeded *Bhetmas*, received from the Settlement Officer, Bhagalpur,

was found to be pure for seed characters... All the plots did well and were identified as varieties of the Soy Bean, but in October it became apparent that the black-seeded type differed from the other two in having darker bullate leaves and a more prostrate habit...

“In 1910 the seed of the single plants which had been analysed was sown together with some samples obtained by Mr. A.C. Ghosh from the Kurseong bazar [bazaar]... a distinctly earlier black seeded form was obtained from a plot (E256 of 1910) grown from seed collected at the Bankipur Exhibition. The trial plots of the seed from Kurseong failed.”

“In 1911... the success of the plots of the acclimatized American varieties induced us to exchange seeds of the Bengal types with Mr. Piper, of the United States Plant Industry Bureau, who kindly supplied us with seed of the varieties, Barchet, Duggar, Haberlandt, Hollybrook, Mammoth, Pekin [Peking], Pingshu. Another attempt was made to cultivate at Sabour the varieties grown in the Sikkim Himalayas, and plots of the Nepali, Barmeli, black seed, greenish yellow seed and chocolate seed varieties were obtained from Mr. Goodwin, Superintendent of the Kalimpong Homes Farm, and grown successfully at Sabour” (p. 104-05). Note 1. This is the earliest document seen (Sept. 2004) that spells the soybean variety named “Peking” as “Pekin.” This spelling also appeared in Cuba in 1920 (3 documents), in Argentina in 1922, and in the United States in 1925 (in Alaska, see Georgeson 1925).

Concerning seed morphology (p. 114-15): The weight of 100 seeds in some of the American varieties such as Barchet, Pekin and Pingshu have remained approximately constant, whereas others, such as Duggar, Hollybrook and Mammoth have decreased in weight more or less considerably during the past season. The Nepali type has decreased in weight from 24.4 grams to 12.8 grams per 100 seeds. The variation in weight per 100 seeds in the case of varieties cultivated in new localities would appear to give a good indication of the adaptability of a variety to its new environment.”

The authors record the results of a large number of selection experiments which they have carried out with a view to obtaining early-maturing types rich in oil, and also deal briefly with the cultivation and uses of soy beans.

Concerning uses (p. 138): “In Bengal, soy beans are used very little for food as they are said to be too heat producing. It is usually taken after frying over a heated sand bath as *bhunja*, but it is also heated, crushed, and then used as *dal*, and also as *larua* mixed with *gur*.” In the “Soya Bean of Manchuria” (1911), Shaw states that soy beans can also be used to make bean sauce or shoyu, chiang or miso, and tou-fu (tofu). They can also be used to make oil, cake, and flour.

“General conclusions (p. 140): At the present time, Soy Beans are grown to a slight extent only in the Darjeeling hills and to no appreciable extent elsewhere although satisfactory yields have been obtained in the experiments conducted by the Agricultural Department in both these areas. We may

ascribe the present unpopularity of the crop to the following reasons. For export the price offered in Calcutta is not yet sufficiently attractive; as a food-stuff it is more potent than the ordinary pulses to which the people are accustomed; as a crop for growth in the plains it has the disadvantage of occupying the land during two seasons, it may suffer from waterlogging during the rains, and requires plenty of moisture in October, and it harbours rats during the last two months of its growth. These objections do not appear to us by any means unsurmountable [insurmountable]... The use of Soy Beans for food could be extended if the educated classes once appreciate its value as an addition to a rice diet, and experiment with its preparation for food on the lines suggested."

"Its cultivation in the hills would probably be largely extended on the present lines as soon as the price reached a satisfactory figure. It only remains to say that our work is being continued on the lines indicated in this paper with a view to isolating early maturing types possessing a high yield of oil."

Contains many tables, mostly showing the composition of various black, yellow, and chocolate soy beans and the history of descendants of various singly selected plants. Black soy beans contain on average 6.72% nitrogen and 13.52% oil. Yellow soy beans contain 5.61% nitrogen and 16.99% oil. Note 2. Therefore black soy beans contain 19.8% more nitrogen [protein] and only 79.6% as much oil as yellow soy beans. Chocolate-colored soy beans contain 5.57% nitrogen (the least of all three types) and 17.13% oil (the most of all three types).

A table titled "Life periods of American varieties of Soy Beans grown at Sabour, 1911" (p. 124) gives information on eight varieties: Barchet, Duggar, Haberlandt, Hollybrook, Mammoth, Pekin, Pingshu, and Riceland. For example, Duggar: Origin: S.P.I. No. 17268C. Date of planting: July 12, 1911. Date of harvesting: Oct. 11. Life period at Sabour: 91 days. Life period in the U.S.A.: 110-120 days.

Another table titled "Yield of the types of soy beans found in Bengal, Bihar, and Orissa lists 8 varieties, and for each: Where grown, dates of sowing, area sown, approximate yield in lbs/acre, corresponding yield (on unmanured land) in mds., srs., and chtks. [mds. = maunds; 1 maund = 82.28 pounds or 37.32 kg; srs. = seers; 1 seer = 2.05 pounds; chtks. = chittaks or chittacks or chattaks or chattacks; 1 chittak [also chattak or chattack] = 1/16 seer = 900 grains = about 2 ounces], and remarks. Two trials gave yields of more than 2000 lb/acre (2,189 lb from the variety Nepali in Kalimpong, and 2,164 lb for a Chocolate variety at Bankipur Farm). Seven additional trials gave yields of 1,000 to 1,400 lb/acre.

Photos on unnumbered pages near the end show: 1. Type I—"Late Black-seeded" soybean variety, photographed 28 Oct. 1911. 2. Type V—Barmeli variety. 3. Type VI—Nepali variety on left, and Type IIIa—"Upright long branched greenish yellow seeded variety on right." 4. Barchet variety,

photographed 30 Oct. 1911.

Four graphs on the last page show the distribution of chocolate, black, and yellow soybeans according to both their nitrogen and oil contents.

Note 3. This is the earliest document seen (May 2004) that clearly refers to the cultivation of soybeans in Bengal (probably later Bangladesh). Address: Economic Botanist to the Government of Bihar and Orissa, India.

2046. Kita, Gen-itsu. 1913. Einige japanische Schimmelpilze [Some Japanese molds]. *Zentralblatt fuer Bakteriologie. Series 2*. 37(17/21):433-52. April 30. [7 ref. Ger]

• **Summary:** Contents: Introduction. *Aspergillus tamarii*, new species. Morphological. Physiological. Affinity. Diagnosis. Incidence of mold parts isolated from soybean koji used to make tamari soy sauce. *Aspergillus glaucus*, varieties α , Beta, gamma. For each of the three varieties the same categories of information are given as for *Aspergillus tamarii*. A new white *Aspergillus* species. Comparison with *A. Okazaki*, *A. candidus*, and *A. albus*.

Kita named the species *Aspergillus tamarii*. Twenty-one photos and illustrations show: Spores of the mold magnified $\times 370$. Sterigmata and spores. Conidio bearers and spores. Hyphae. *Aspergillus glaucus*. "The moist wind and warm climate of Japan enable the flora, and especially the microorganisms, to grow very luxuriantly." See next page.

2048. Houyet, A. 1913. La fève de soya [The soybean]. *Bulletin de la Societe Belge d'Etudes Coloniales* 20(5):367-90. May. [Fre]

• **Summary:** "The notes which follow have as their object the study of a commercial plant of East Asia which produces soybeans; it is interesting from the local point of view as a food plant and more specifically from the world viewpoint as an industrial plant.

"It appears useful to us to precede them with a geographic survey of the place of production of the plant, as well as some data on the population living there. After having studied the plant itself and the conditions of its agriculture, we will examine its uses, its commerce, and the possibilities for its development."

A. tamarii. Fig. 5.
Keimung.

This is largely a discussion of soybean production and trade in Manchuria. But pages 378-80 contain a brief discussion of the many ways of using soybeans including in soy sauce, margarine, soap, as meal for livestock feed, as flour for fortifying biscuits, as soymilk, and (in Germany) as artificial rubber. "A Chinese manufacturer [Li Yu-ying] has established a factory near Paris that makes food products from the soybean" (*produits alimentaires à base de fève de soya*).

Concerning margarine: "Refined [soybean] oil can be used for the manufacture of margarine and as a salad oil" (*L'huile raffinée peut être employée à la fabrication de la margarine et comme huile de salade*). Note: This is the earliest French-language document seen that uses the term *margarine* to refer to margarine.

2049. Holbrooks Limited. 1913. Holbrooks Worcestershire Sauce (Ad). *Toronto Daily Star (Canada)*. June 9. p. 8.

• **Summary:** "It's made in the largest Worcestershire Sauce factory. Imported—Absolutely!! Business founded 1798." Address: Birmingham and Stourport, Worcestershire, England.

2050. Pontius, Alfred W. 1913. Manchurian soya bean trade and industry. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 16(147):1560-61. June 25.

• **Summary:** "The export season of beans commences usually in October and ceases early in the May following. The present season closed rather early. A table shows exports of [soya] beans, bean cake, and bean oil in 1911-12, and 1912-13 to Japan, China, Europe, and total.

"New model bean mill—Its effect on other mills: The local bean mills, which formed a union to adjust their output to the demand in order to prevent prices from falling abnormally low, face a new danger in the chemical extraction process, whose merits will be tested thoroughly by the South Manchuria Railway, which will erect an experimental bean mill. This modern scientific process is used in the bean mill established, during the past year near Osaka, Japan, by Lever Bros., English soap manufacturers. The bean consumption of this factory is estimated to be 100 tons per day, while the new Dairen mill is designed upon a scale half as large. As previously noted the two chief advantages of this new process is that 12 to 14 per cent of oil may be extracted against only 8 to 9 per cent now obtainable. The residue suits better for fertilizing purposes and for feeding stock, as it is in meal form, thus avoiding the expense of grinding the cake.

"Local millowners have another worry. One cause of the recent depression in the South Manchurian bean-mill industry was the establishment of rival mills in Japan, which is said to be more advantageously situated."

"Soy [sauce] breweries in South Manchuria: While reliable statistics are lacking regarding the manufacture of

soy from Manchurian beans, it is claimed locally that the total output in South Manchuria has been increasing steadily year after year while imports from Japan have decreased. Annual imports from Japan and outputs in South Manchuria are estimated as follows:"

A table shows that in 1910 imports of soy sauce were 2,264 tons and total output in South Manchuria was 875 tons. Total: 3,139 tons. In 1911 imports were 1,871 tons and local output was 1,125 tons. Total: 2,996 tons. In 1912 imports were 1,683 tons and local output was 1,625 tons. Total: 3,308 tons.

"The demand for soy [sauce] has increased as the Chinese have gradually learned to like it. Of the total consumption of soy of superior and medium quality each takes up about 20 per cent, the remaining 60 per cent being of inferior quality. The steady increase of the South Manchuria output in recent years signifies that the imported product will be entirely supplanted by the local manufactured article. Japanese have \$65,000 invested in these local soy breweries, apportioned as follows: Dairen, \$30,000; Port Arthur, \$18,000; Newchwang, \$10,000; and five smaller places \$7,000. Present prices for the product are \$1.40 to \$1.80 per 50 pounds wholesale, and \$1.60 to \$2 per 50 pounds retail." Address: Consul, Dalny (Dairen), Japanese Leased Territory.

2051. *Chamber of Commerce Journal (London)*. 1913. Trade products of the British Empire. Special Supplement. Vol. 32. July. p. 1-44.

• **Summary:** The Special Supplement to the London *Chamber of Commerce Journal*, deals with the "Trade Products of the Empire: A statistical account of the resources of the British Empire as a supplier of food stuffs and of raw materials for British industries, with statistics and notes as to foreign sources of supply. It is full of useful information and statistics on British agricultural imports. The section titled "Preserved ginger, soy, tamarinds, chutney" (p. 11) states: "The value of imports of soy in 1912 was £11,729, of which £10,645 was the value of the imports from Hong Kong."

The section on "Vegetable oils and oilseeds" (p. 23-27) begins: During the last few years there has been a remarkable rise in the prices of almost all oilseeds, oils and fats. This has been due partly to a large increase in the demand for oils and fats for soap-making lubricants, etc., and partly to extending the use and manufacture of butter substitutes, cooking fats, etc., into the composition of which vegetable oils largely enter."

The section titled "Vegetable oils and oilseeds (p. 23-27) includes import statistics for and discussions of: Castor oil and castor seed, coconut oil, cotton seed and cotton seed oil (in 1912 the UK imported 630,117 tons), ground nut oil and ground nuts, linseed oil and linseed, niger seed, olive oil, palm oil, poppy seed and oil, rapeseed and rape oil (colza oil), sesamum seed and oil, shea nuts and shea butter, soya

beans, bassia fats, t'ung oil, tea seed oil, and senat seed.

The section titled "Soya beans" (p. 27) contains a table that shows the tonnage and value of soya bean imports to the United Kingdom in 1911 and 1912. The main source both years was Russia (perhaps via Vladivostok), followed by China [Manchuria], with small amounts from Japan and other countries. Total tonnage decreased from 222,157 in 1911 to 188,760 in 1912.

The section continues: "The soya bean of Manchuria has grown in "The soya bean of Manchuria has grown in commercial importance during the last few years in a remarkable manner. In the East it has long been an important article of food. In Europe the oil pressed from the bean is used by manufacturers of margarine, soap and candles, in the manufacture of varnish and printing ink, and for waterproofing umbrellas. Soya bean meal is also stated to be used in making bread on the Continent. Beancake has long been used as a fertilizer and for feeding stock.

"Experiments in growing soya beans have been made in practically every British colony, but it seems doubtful whether the product could be profitably grown for export in competition with the Manchurian beans, which are raised under ideal climactic conditions, and by the cheapest possible labour."

Abst. 8:984). Summarized in *Zentralblatt fuer Bakteriologie, Series II.* 41:257 (1914). [8 ref. Ger]

• **Summary:** An excellent and very detailed description of how shoyu is made in Japan, with many photos. Contents: Introduction. Overview of the process. The raw materials. Preparing the koji: Pre-preparation, mixing the beans with the wheat, the koji room (*muro*), handling the mass of koji, characteristics of koji. Part II: The fermentation process. Pressing. Scientific investigations of soy sauce brewing. Summary.

The author calls soy sauce *Soja* and *Sojasauce*. The two basic types of shoyu are made with soybeans and wheat, or just with soybeans. But some special sauce is also made with fish meat, such as Lintenfisch. The addition of sugar and other sweeteners, and of colorings such as molasses to low-grade shoyu is not rare.

Preparation of soy sauce: The fermentation usually takes 6 to 12 months or more. Some years ago the "quick method" was widely introduced but after several years it unfortunately fell into ruin. The shoyu process has never been developed with modern processes like the sake processes, because sake must be a certain way when finished but shoyu is acceptable in many ways. The aroma from the roasted wheat adds a special component to Japanese shoyu, not found in Chinese soy sauce. The roasted wheat is coarsely ground (using a roller miller or, earlier, a granite mill), and the meal produced thereby serves to enrobe the steamed soybeans, while the larger particles hold the beans, thus aiding aeration. So the wheat must not be ground too fine. The beans are steamed, usually at a pressure less than 2 times atmospheric pressure; higher pressure creates a bad aroma. If the beans are cooked in an open kettle, a bamboo mat is placed in the bottom to prevent the beans from browning. The liquor left after cooking is called *amé*. The beans and wheat koji are then mixed. The beans, after being removed from the kettle, are spread out on the koji floor in front of the koji room (*koji-muro*) to a depth of about 3 cm. They are stirred from time to time until cooled to about 30-35°C. The spores (*keim*) of *Aspergillus oryzae*, when they are used, are then sprinkled on. The mixture is put into wooden koji trays (*kojibuta*) each about 60 by 30 by 10 cm deep (24 by 12 by 4 inches), and holding 18 liters of raw material. In some places (such as Shozushima) a wide straw mat (80 by 180 cm) is used in place of these koji trays. The koji room is typically 10 by 3.5 by 2.2 meters high. The walls are thick. A modern room is of tiles in order to prevent changes of temperature from the outside. For cleanliness, the walls should be made of cement, with a door at one end and a window at the other. The room contains many vents to remove moisture and carbon dioxide. Steam pipes are laid in the floor, or a fire-pot is used instead. As noted above, the koji mold spores are either mixed in, or they settle from the air in the koji room, or come from the koji trays. The koji trays are stacked in a zigzag fashion to allow ventilation, which is necessary for shoyu koji but not

for sake koji. Dampness and lack of oxygen favor the growth of *Mucor* molds and undesirable bacteria. After 20 hours, the koji is mixed well in the trays, and the upper trays are placed on the bottom—and vice versa. Stir again after 7-10 hours; the temperature is now 38-40°C. After 10-15 hours conidia formation begins. The koji is usually ready in 3 days. Good koji has yellow-green conidia, very numerous on the inside. The surface is white and the mass dry. Contaminants: *Mucor*, *Rhizopus* and bacteria due to too much moisture, especially with heat. Black koji has a bad aroma from the disease *kurotoko*, which is caused mostly by excessive moisture. During fermentation about 20% of the original mass is lost; starches are changed to sugars, which are used up by the koji mold. The goal is to obtain koji which is rich in enzymes.

The brewing process: The ingredients are mixed in a vat to make the mash (moromi), which contains enzymes. The vats are made of sugi wood (*Cryptomeria japonica* Don.) with bamboo hoops. In the large shoyu factories they usually have a capacity of 4,000 to 4,500 liters (1,057–1189 gallons). The proportions of raw materials are as follows: Soybeans (2,700 liters = 1,875 kg), wheat (2,700 liters = 2,025 kg), salt (NaCl, 2,700 liters = 1,690 kg), and water (5,400 liters = 5,400 kg). The salt may be dissolved in hot or cold water, usually to 20° baume. Less salt gives better quality. The mash is mixed with a pole or with compressed air. The mash must usually ferment for a year before it can be pressed. A longer fermentation improves the color and aroma, but the flavor becomes weaker. Where a 2 or 3 year mash is used, it is mixed with 1-year mash to improve the quality. In order to shorten the fermentation time, the mash is sometimes warmed; this and other suggestions for improving the process will be discussed later. The mash contains microbes, especially yeasts and bacteria.

Pressing: The mash, after it finishes aging, is pressed in cotton bags that have been dipped in tannin from astringent persimmons (*kaki-shibu*). Each bag holds about 2 liters. More than 2 liters may cause the bag to tear in the *fune* (literally “boat”), which is about 230 by 73 by 91 cm and which holds about 800 such bags. Formerly a log was used in the form of a lever press, but now screws and hydraulic presses are widely used. The yield of shoyu is about 70-80% of the volume of the moromi. The remaining presscake still contains soluble constituents, which are extracted by mixing the presscake (*Der Presskuchen*) with water. The remaining cake is sold as fodder.

Treatment of the pressed liquid: This liquid is heated in an iron kettle in order to partially pasteurize it, separate the coagulable constituents, and darken the color. Better grades are heated at a lower temperature (never above 70-80°C), and poorer grades at a higher temperature, mainly to concentrate and darken the color. For good grades, darkening of the color is seen as a disadvantage, as is the resulting change of aroma. Kita then gives a detailed analysis of both shoyu and the second-pressed liquid. Shoyu contains 30-32% solids,

has a specific weight of 1.189 to 1.234, and contains 16.15 to 18.61% minerals.

Scientific investigations and various proposals for the shoyu brewery: Kita experimented with the use of defatted soybean meal. He notes that koji contains a powerful proteolytic enzyme. Cooking under pressure and defatting promote decomposition. Pressure cooking is more and more widely used. Defatting of the beans proved to be disadvantageous since it lowered the quality of the final shoyu, but he thinks the problem lay in the improper treatment of the beans during defatting. He proved this hypothesis with coarse beans defatted with benzine (*Benzin*) to make flawless shoyu. Sake koji has stronger diastatic and weaker proteolytic enzymes than shoyu koji. The proteolytic and diastatic power of mold enzymes are inversely related. There are different varieties of *A. oryzae* with different morphologies. Photos (p. 550-51) show equipment used in making shoyu in a factory: (1) Presses for pressing the sauce from the aged moromi. (2) Brick roaster for the wheat, with a belt-driven mechanical stirrer. (3) Wooden fermentation vat. (4) Many wooden moromi fermentation vats, held together by braided bamboo hoops, with a wooden plank across the top of each. (5) A man in a white coat, with a moromi stirrer in one hand, standing among many tall fermentation vats. Address: Technical Inst., Tokyo Imperial University.

2056. W. 1913. Die Sojabohne und ihre Verwendung in der Naehrmitelbranche [The soybean and its use in food-service departments]. *Konserven-Zeitung* 14(48):377-78. Nov. 28. [4 ref. Ger]

• **Summary:** A brief account of the history, nutritive value, and utilization of the soy bean. One of the earliest food uses of soybeans in the West was in the use of Japanese soy sauce in Worcestershire sauce, in England. The soybean was also used secretively, unbeknownst to food chemists and experts, as a popular coffee substitute until it was exposed in 1912 in Weller-Darmstadt (see *Chemiker-Zeitung*). This substitute, made from roasted soybeans, was used to extend coffee at levels of up to 33%. It was shown that this soy-extended coffee was much richer in nutrients than real coffee.

In Paris, France, Bergey roasted soybeans and added molasses or grape sugar to make a coffee substitute, or he added vanilla, sugar, and cocoa-butter (the fat in butter) to make a chocolate substitute.

“As far as we know from the literature, the soybean has been used heretofore, with the exception of Worcestershire sauce and other sauces and soup seasonings, only as coffee or chocolate substitutes. However the real superiority of this plant lies in its high nutritional value and therefore it should be used directly as a food, as it is in the countries of its origin.” Address: Germany.

2057. *San Francisco Chronicle*. 1913. Harbor news. Nov. 29. p. 16.

• **Summary:** The British steamer Nile, Captain George S. Lapraik, of the Pacific Mail Company's intermediate services, arrived in the port of San Francisco yesterday.

"Principal items in the Nile's manifest were 6,148 mats of rice, 1,802 bales of raw silk, 1,476 rolls of matting, 124 bales of jute, 3,000 tubs of shoyu, 200 bags of sugar, 361 chests of tea, 400 bales of hemp." And there were 239 bags of mail.

[12+ ref. Dut]

• **Summary:** Contains detailed information on soybeans in Indonesia, including various local names, soybean production in Indonesia by province from 1918-1925 (the top producers in 1925 were Madoera and Madioen; total production grew from 222,426 to 260,125), soybean culture, imports, exports, tempeh, tofu (tao hoe), tao koan, tao tjo (Indonesian miso), and soy sauce (ketjap). Also discusses ontjom and dagé made from peanuts.

Note 1. This is the earliest document seen (May 2010) that gives soybean production or area statistics for the Dutch East Indies (later Indonesia).

Note. This is the earliest document seen (April 2001) that contains the term *tao koan*. Address: Chef van het Museum voor economische botanie te Buitenzorg (Bogor).

2060. **Product Name:** [HVP made from hydrolyzed soybean meal. Used in Germany like Maggi seasoning cubes].

Foreign Name: Sojawurze.

Manufacturer's Name: Agumawerke. Thoerl & Co. (Thoerlschen Oelfabriken).

Manufacturer's Address: Harburg (near Hamburg), Germany.

Date of Introduction: 1913.

New Product-Documentation: Horvath. 1927. The Soybean as Human Food. p. 42-53. Extracts similar to beef extracts are used to season soups. "They are used extensively in Germany, e.g., the well-known 'Maggi' cubes, and were manufactured in large quantities in pre-War and War time from soybean flour at the Aguma factory under Ehrhorn's supervision. Ehrhorn claims that his new patent

soybean flour is very suitable for the manufacture of such 'Suppenwurze.' He calls the new product 'Sojawurze.' In appearance and taste it is very similar to a fluid meat-bouillon extract, but may also be easily obtained in a dry state. The manufacturing process takes only 10 hours. The bean flour is hydrolized in a chemical way. A hundred kilo [100 kg] of Ehrhorn's flour gives 200 kilo of such 'Wurze,' specific gravity 1.25. According to Ehrhorn, the market price for such 'Suppenwurze' in Europe is very high in comparison with the cost of its production of soybean flour."

• Summary: Ad (¼ page). The top ¼ of this ad is given in English. This Japanese company imports many items, including miso and shoyu. Ad also in the 1914 Yearbook, p. 40 in last block of ads near end of book. Address: P.O. Box 1057, Oxnard, California. Phone: Home 116. Red 322.

2072. Clark, George Harold; Malte, M. Oscar. 1913. Fodder and pasture plants. Ottawa, Canada: Minister of Agriculture. 143 p. + 27 unpaginated color plates. See p. 134-35. Illust. Index. 26 cm.

• Summary: The section titled “Soy or soja bean (*Glycine hispida* Maxim.)” (p. 134-35) has the following contents: Botanical description. Geographical description. Agricultural value. Cultural conditions. Varieties. Fodder Seed growing. Quality of seed.

The soy bean variety Medium Green, which gives a high yield of both hay and seeds, is best suited to Canada. “The plant got its name from Soy, a product obtained by a long and complicated fermentation of a mixture of cooked Soy Beans, ground wheat and steamed rice or barley, to which later is added water and salt. Soy is the principal constituent of Worcester and other sharp sauces.” Concerning fodder: “The hay is of high nutritional value if the crop is cut at the proper stage. This is when the pods begin to develop. If they are advanced, the hay will be woody and unpalatable and the leaves, which constitute the most nutritious part, will be shattered. From one and a half to two bushels of seed to the acre are required when intended for hay.”

The Preface notes that the authors are greatly indebted to Leonard S. Klinck, B.S.A., Professor of Field Husbandry at Macdonald College, Quebec, who gave valuable comments, and to C.A. Zavitz, B.S.A., Professor of Field Husbandry at the Ontario Agricultural College at Guelph, who has given the authors much valuable information on fodder and pasture plants that are of interest in Ontario province.

George Clark was born in 1872. Malte Oscar Malte lived 1880-1933. Address: 1. B.S.A.; 2. Ph.D. Both: Canada.

2073. Cooper, Lenna Frances. 1913. The new cookery: A book of recipes, most of which are in use at the Battle Creek Sanitarium. Battle Creek, Michigan: The Good Health Publishing Co. [v] + 298 p. Illust. (10 photos). Index. 20 cm.

• Summary: This Seventh-day Adventist vegetarian cookbook, the first by Lenna F. Cooper, advocates a “low-protein” diet based on the research of Prof. R.H. Chittenden, dean of physiology, Yale University [New Haven, Connecticut]. It uses dairy products and eggs, but no meat, poultry, fish, shellfish or stimulants (such as coffee or tea).

The Foreword states: “Many ‘food reformers’ and faddists have attempted to prepare wholesome foods but have neglected the almost equally important requirement—palatability. This combination of wholesomely prepared and palatable foods constitutes in a sense a New Cookery... which has for its object, efficiency of body and mind.” She thanks “Dr. and Mrs. J.H. Kellogg, who first inspired her with a love for the study of foods and their scientific preparation and who have since been constant sources of help and encouragement.” She also thanks Miss Clara B. Lambert and Mrs. Estella F. Ritter.

Recipes call for the use of Minute Brew (p. 10), cereal coffee (p. 10), Kaffir tea (p. 11), Sanitas / Health Koko (p. 11), yogurt buttermilk (p. 11-13), bran (p. 18), Graham flour (p. 20), Good Health Breakfast Food (Brose, p. 20), gluten (p. 20), granola (p. 22), fermented breads (p. 23+), Graham bread (p. 26-28), unfermented breads (p. 33+), bran and Graham biscuit (p. 41), bran gems (p. 43-44), peanut butter sandwiches (p. 49), Protose (p. 49, 71, 77, 79), cream soups made with almonds, lentils, white beans, lima beans, or split peas (p. 63-66), Savora (p. 73-74, 78-79).

Chapter 10, titled “Meat substitutes and entrees,” begins (p. 81): “In many homes, meat forms the chief part of the meals,...” but this book calls for a “meatless dietary,” which requires a “knowledge of the chemistry of foods.” Recipes (p. 81-103): Roast Protose [canned] with dressing. Boiled Protose. Protose fillet. Nut fillet (with Protose and Nuttolene). Fillet of nut meat. Panned Protose. Nut or Protose cutlets. Braised Protose. Nut and apple pie. Normandy or mock veal loaf. Chipped Protose in cream. Nut and rice croquettes. Protose hash with rice and peas. Nut sausage (p. 87; with ¼ lb Protose, seasoned with “2 tablespoons Japanese soy or 4 teaspoons Savora”). Nut and vegetable stew (with Protose). Protose steak with onions. Broiled Nuttolene. Nuttolene with mint sauce. Nuttolene cutlets. Nuttolene a la cream. Baked Nuttolene. Nuttolene fricassee. Nuttolene croquettes. Nut meat pie (with Protose). Pressed vegetable meat (with Protose). Rice a la Carolina (with Protose). Nut meat loaf (with Protose and Nuttolene). Vegetarian ham (with Nuttolene and Savora). Nut patties. Nut chops (with peanut butter). Pine nut roast. Peanut

roast (with peanut butter). Walnut roast. Cereal roast (with granola). Chestnut roast. Creamed chestnuts. Chestnuts with tomato sauce. Baked beans (with white beans). Baked lima beans. Lima bean loaf. Bean croquettes. Bean soufflé. Savory roast or mock turkey (with lentils and granola). Peas patties. Baked lentils. Lentil and potato loaf. Hominy croquettes. Corn roast. Apple fritters. Prune fritters. Banana fritters. Rice patties.

Chapter titles: 12 Eggs. 15. Salads and relishes (incl. Neufchatel or yogurt cheese, p. 168, 176. Salad dressings, p. 172+). 17. Fruits and fruit desserts (incl. Baked apples with Meltose dressing, p. 186. Vegetable gelatine desserts, p. 195+). 19. Frozen desserts (incl. Yogurt buttermilk ice cream, p. 215). 20. Pastry and pies (most desserts call for lots of white or granulated sugar). 21. Cakes. 22. Cake fillings and icings. 23. Hot puddings. 24. Sauces for puddings. 25. Canning and preserving. 26. Invalid dishes. 27. Balanced menus (breakfast, dinner, supper). Lenna F. Cooper was born in 1884.

After the Index (p. 288-98) are advertisements: Perfection Biscuit Co. The Welch Grape Juice Co. Horlick's Malted Milk Co. Winorr Canning Co. (Winorr Kerneled Corn). Acme Preserve Co. (White A Condensed Tomatoes). Garis-Cochrane Household Dish-Washing Machine (motorized). Sprague, Warner & Co. (Richlieu Food Products). A.-B. Stove Co. (gas range). Wagner Manufacturing Co. (cast aluminum ware). The Kellogg Food Co. ("Protose: A vegetable meat." Minute Brew. Colax {relief from constipation}). McGraw Mfg. Co. (Servette [Lazy Susan]). Battle Creek Sanitarium School of Home Economics. National Onion Salt Co. American Thermos Bottle Co. Seely Fasco Fireless Cooker. Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium.

2074. Friedenwald, Julius; Ruhrah, John. 1913. Diet in health and disease. 4th ed. Thoroughly revised and enlarged. Philadelphia, Pennsylvania: W.B. Saunders Co. 857 p. Illust. 24 cm. [4 soy ref]

• **Summary:** The section titled "The soy bean" (p. 124-26) states: "This bean (*glycine hispida*), sometimes called the soja bean, is an annual leguminous plant extensively used as a food in China and Japan. Until recently it has been regarded as a botanical curiosity in the Occident. It has recently been extensively used in America as a forage crop and to improve the soil if plowed under... There are a large number of different varieties, which vary in size, shape, color, and length of time they take to mature. Some are grown exclusively for the oil they contain, and it is used for culinary, illuminating, and lubricating purposes. The light-colored beans are eaten in soups, and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as appetizers; the same

varieties are often sprouted, scalded, and served with meals in winter as a green vegetable. The bean forms the basis of the so-called soy sauces, used as a condiment all over the world. The Oriental races most frequently eat the bean, in more or less cheesy-like foods, which are prepared from it. The most common of these are natto, tofu, miso, yuba, and shoyu. Natto is a sort of bean cheese made by boiling the beans until they become soft and then placing the resulting mass in a warm cellar where it ferments. Tofu is made by soaking the beans in water, crushing between millstones, and boiling in about three times their bulk of water. The protein is precipitated and the resulting cheese eaten. The white milky liquid of the above has nearly the composition of cows' milk, and tastes something like malt. It may be used in infant feeding to advantage (see same).

"Americans may eat the beans in numerous ways described under the head of soy bean cookery in the recipes at the end of this book. The bean is of particular value in diabetic diets (see same). It may be used to increase the protein of the diet.

There are variations in the composition of the different varieties." A table shows the chemical composition of yellow soy beans grown in the USA, both as is and calculated on a water-free basis. "The Cereo Company of Tappan, New York, have made a soy bean flour which is useful." Its composition is given. "The percentage of protein in this flour is almost one-third greater than the percentage of protein in the whole beans. This is caused by removing the coarse fibrous hulls which contain little protein.

"Vegetable food of such composition certainly is remarkable when compared with round beef, medium"—whose composition is given.

Soy flour can be used as a gruel, in broths, and in making biscuits. A table (p. 126) shows the "Composition of fresh and dried legumes (incl. soy beans, cow peas, chick-peas, peanuts) with that of other foods" (Based on Abel, Farmers' Bulletin No. 121 [1900, p. 17]).

The section on "vegetarianism" (p. 130-31) is the same as that in the 1909 edition (p. 113-14).

In the chapter on "Infant feeding," the section on "Other food for infants" has a subsection on "The soy bean" (p. 297-98) which begins: "In certain conditions the soy bean... is of great value. In cases when milk is badly borne, in certain forms of intestinal disorders, in diarrhea, and especially in the convalescence after diarrhea, in certain cases of marasmus and in malnutrition, the soy bean flour, properly used, is of great value. Each ounce contains 13 grams protein and 120 calories." A table shows the composition when mixed with various amounts of water. Recipes for making gruels are given.

In the chapter on "Diet in disease," in the section titled "Diseases in which diet is a primary factor," is a subsection on "The soy bean" (p. 592) states: "The bean contains about 8 per cent. of sugar and no starch, and furnishes a large

amount of available protein and fat.” “A patient on a strict diabetic diet, who is excreting a certain amount of sugar, will excrete less sugar when the soy bean is added to the diet. It seems to be of particular value in severe cases. In addition to this action, it is a very valuable food, both on account of its nutritious properties and owing to the fact that it may be prepared in a number of different ways, and so serves to vary the diet.”

In the section on “Diabetic Foods” (p. 601-02) is based on Winton (1906) and contains the same information, including that about The Health Food Company of New York.

In the chapter on “Recipes” is a section on “Bread” (p. 740-41) which includes whole-wheat bread, zwieback, and bran muffins for constipation. The same chapter has a section on “Soy bean cookery” (p. 766-69) with the following recipes: Introduction, gruels, broths, muffins, nut-cakes, soy bean cakes, breakfast food (like oatmeal), pancakes, soy bean cheese (“In Seattle, Washington, and other places in the West we are informed that tofu is made by the Japanese and sold to the Oriental residents”). Goff (1911) offers the following: Grilled soy bean [dry roasted soynuts], [whole] soy beans with butter, soy beans au gras (fried with onions and fat), bread or cakes of soy beans.

Note: Julius Friedenwald lived 1866-1941. John Ruräh lived 1872-1925. Address: 1. Prof. of Gastro-Enterology; 2. Prof. of Diseases of Children. Both: College of Physicians and Surgeons, Baltimore, Maryland.

2075. Griffis, William Elliot. 1913. *The Mikado's empire*. 2 vols. New York, NY: Harper & Brothers, Publishers. 754 p. Illust. Index. Map. 23 cm.

• **Summary:** The material in this book up to page 578 is identical (page for page) to that in the 1876 edition. Thereafter begins “Book III: Supplementary chapters, including history to the beginning of 1912”—about 129 pages of new information in the following chapters:

1. Japan in 1883. 2. Japan in 1886. 3. Japan in 1890. 4. Japan in 1894. 5. War with China (Sino-Japanese War, 1894-1895). 6. Facing the twentieth century. 7. Japan a world power (including a detailed description of the Russo-Japanese War, 1904-1905). 8. Japan on the Asian continent. A separate index covers this supplementary material; soy is not mentioned.

The author reveals his basic viewpoint on the last page of this book (p. 734) by expressing his fervent hope that all of Japan's traditional religions will be “transformed by the spirit of Christ.” Address: D.D., L.H.D., Late of the Imperial Univ. of Tokio; presently in New York.

2076. Iwakami & Co. 1913. Importers and wholesale dealers in Japanese merchandise (Ad). In: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 9]. p. 1. [Eng; jap]

• **Summary:** Ad (full page). The top and bottom 1/5 of this ad are given in English. This company imports shoyu and miso from Japan. Address: 427-435 Commercial Street, San Francisco, California. Phone: Kearny 2447. Home C 2447.

2077. Japan year book. 1913. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 702 p. See p. 163-64, 230, 351, 356, 358, 438, 654, 659, 672, 690. [Eng]*

• **Summary:** In chapter 11, “Agriculture” (p. 155-77) is a table titled “Beans, sweet potato and potato (p. 163) which gives “Soy bean” production in Japan for 1906-1910 (in *koku*).

On page 164 we read: “The three daily articles of diet for all classes, viz. soy [sauce], *miso*, and *tofu* are manufactured from this bean...”

In chapter 15, “Industry,” is a paragraph (p. 230) on the patented Suzuki process for brewing soy [sauce].

In Chapter 25, “Home trade” is a table (p. 351) titled “Prices of principal commodities in Japan,” which includes prices for 1905-1911 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In Chapter 26, “Foreign trade” is a table (p. 356-58) titled “Imports” (in 1,000 yen). Under the heading “Staples articles of over yen 1,000,000” (p. 356) is given the value of soja bean imports for 1908-1912. Under the heading “Trade with China (p. 359) is given the value of imports of “beans” and of “oil-cakes” for 1906-1911.

In chapter 30, “Finance,” is a paragraph (p. 438) titled “Tax on Japanese soy” [sauce].

In chapter 34, “Chosen (Korea),” a table (p. 654) on “Exports (in 1,000 yen), under the heading “Foreign trade” has data on beans and peas for 1906-1912. Under the heading “Agriculture” is a paragraph (p. 659) titled “Barley and soya bean,” giving acreage and yield for soya bean (no year is specified) with the value (in yen) of exports to Japan in 1909.

In Chapter 35, “Taiwan (Formosa),” under the heading “Agriculture,” a table (p. 672) titled “Agricultural products” has production data on “Beans and peas” (in 1,000 *koku*) for 1905-1909.

In Chapter 37, “South Manchuria,” is a paragraph (p. 690) titled “The soya bean” which has information on South Manchuria's soya bean yield, [soya] bean-cake output, and amount exported. Address: Japan.

2078. Jumelle, Henri L. 1913. *Les cultures coloniales: Légumes et fruits*. Deuxième édition [Crops of the colonies: Vegetables and fruits. 2nd ed]. Paris: Librairie J.-B. Baillière et Fils. 122 p. See p. 47-51. Illust. No index. 18 cm. [Fre]

• **Summary:** This is the 2nd volume of an 8-volume work. In Chapter V, “Vegetables,” the section titled *Glycine hispida* Max. discusses soybeans and soyfoods.

Henri Jumelle lived 1866-1935. Address: Prof., Faculte des Sciences de Marseille [Marseilles], France.

2079. Kin, Choshi. 1913. *Shôyu enkaku-shi*. ed. 3 [History of shoyu production. ed. 3]. Choshi, Japan. 186 p. First edition was 1909. 28 cm. [Jap]

• **Summary:** Contents: 1. Overview (p. 1): Shoyu as a special East Asian product, shoyu as superlative seasoning, relationship between shoyu and sauce, shoyu as an influence in life. 2. Origins of Japanese shoyu (p. 7): About Chinese jiang, Japanese shoyu in history, origin of the shoyu industry in Japan, trends and growth of shoyu production (output), the shoyu industry and taxation, household makers of shoyu and changes in home usage, the Japanese government's attitude toward shoyu, overseas demand for shoyu, the development of shoyu in the Kantô (Tokyo/eastern Japan) region.

3. Choshi shoyu (p. 117): Shoyu in the Kantô region, the shoyu makers guild in Choshi, the development of the shoyu-makers' union (or cartel) in Choshi and Noda, names and identification of the best quality shoyu brands, current varieties of shoyu, Choshi shoyu and raw materials (ingredients), Choshi shoyu and the local topography, Choshi shoyu and transportation, Choshi shoyu and micro-climate, Choshi shoyu's trademarks and brands. 4. Higeta shoyu (p. 151): The origins of Higeta shoyu, how to judge good-quality shoyu, the raw materials for Higeta shoyu, a chemical analysis of Higeta shoyu, the handling of Higeta shoyu, shelf life (period of freshness) of Higeta shoyu, awards received by Higeta shoyu. 5. Conclusions (p. 174). A table (p. 35-36) shows national production statistics for shoyu for the years 1885-1910, including the amount and number of makers. Appendixes: 1. The reputation and names of Japanese shoyu in Europe (in English, French, and German) according to various early documents (p. 175). Historical documents in Asian languages about raw materials (soybeans and wheat) used for shoyu (p. 182).

Notes and observations by Mark Fruin: Kin Choshi was the pen name of Genba Tanaka XIII, the head of an important shoyu brewing family in Choshi during the Tokugawa and Meiji periods. Forty percent of the book is early shoyu history and 60% is the history of Choshi Shoyu-Higeta.

Yuasa shoyu appears to be the first true shoyu in Japan; it gradually separated from miso production. Yuasa shoyu was sold throughout Japan by Osaka merchants and it benefited as well from the political protection of the Daimyo of Wakayama. The Osaka shoyu trade developed gradually and it was not important until the 17th century. Yet shoyu developed somewhat independently in Western Japan (Yuasa) and Eastern (Noda and Choshi).

The earliest record of an Osaka merchant (one Komatsuya Ibei) handling Yuasa shoyu dates from 1535; some 50 years later some Osaka merchants had certain ships earmarked for the exclusive task of carrying Yuasa shoyu to and from market, which by this time had spread from Osaka to the Inland Sea trade area.

In 1908 shoyu was the fifth most important export from Wakayama prefecture [to other parts of Japan]; there were 59

makers in a locally organized cartel producing 52,700 koku with a value of 850,000 yen.

Tatsuno shoyu began its history some 319 years ago (from the year 1913) when in 1594 a local farmer in the Tatsuno area, Yokoyama Gorobei, began to make sake as a sideline to his farming. Later he added shoyu to his household industries. In 1596 Yokoyama turned over his sake making activities to a branch household established for that purpose and concentrated his own efforts on farming and shoyu manufacture. By the late Tokugawa Period (1600-1868) the Yokoyama family sold its shoyu business to the Kataoka family and the latter merged with the Nakahara family in 1893 to form Kikuichi Shoyu.

Shodoshima shoyu began being made in the middle of the Tokugawa period. In 1882 production stood at 34,000 koku and in 1908 at 98,832 koku. In 1901 many of the various shoyu makers in numerous villages on the island amalgamated into a cartel and in 1908, the first corporation for making shoyu in Japan was formed. Later, three other forms merged to establish Marukin Shoyu. p. 35-36 gives Japanese national statistics for total shoyu production and the number of manufacturers each year from 1885 to 1910. In 1,176,535 units? were produced by 10,971 companies. In 1910 some 2,205,574 units were produced by 14,364 companies.

2080. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1913. *Nichi-Bei nenkan* [Japanese-American yearbook. No. 9]. 650 Ellis St., San Francisco, California. 716 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 13 parts, each numbered separately. Contents: (1) Front matter (incl. how this book was created) (5 p.). (2) Table of contents, general (4 p.). (3) Table of contents, ads (4 p.). (4) Photos (black and white on 12 unnumbered pages). (5) Graphs and charts on 4 unnumbered pages: Three pie charts for 1912: (A) In which U.S. states do Japanese live. (B) Occupations of Japanese in USA. (C) Japanese in USA by gender. Two pie charts (D-E). Increase and decrease of Japanese population by gender. (F) Bar chart: Agricultural land use by Japanese by state. (G) Agricultural crops grown by Japanese. (6) Photo of the site to be of the Panama-Pacific International Exposition (1915) in San Francisco. (7) Two maps: Map of the United States. Map of California (2 p.). (8) Advertisements (A-1 to A-18). (9) Front part (p. 1-152), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (10) Ads (p. 1-16). (11) Back part (p. 1-142). (12) Ads (B-1 to B-64). Appendixes: (13) Table of contents for

directory of places where Japanese live in America, by state, and within each state by city: In Japanese (2 p.). In English (2 p.). (14) Directory of Japanese living in America, interspersed with ads (p. 1-228). (15) Ads (p. 1-50). (16) Copyright page.

In a table (p. 57), one vertical line gives soybean production statistics in Japan from 1905-1909 (five year average): Area: 464,021 *cho* (1 *cho* = 2.45 acres; so 1,136,851 acres). Production: 3,766,962 *koku* (1 *koku* = 180 liters = 47.6 gallons = 308 lb = 5.13 bushels; so 1,932,452 bushels). Average yield 0.87 *koku/tan* or *tanpo*. Note: Something seems to be wrong with these soybean statistics. The yield of Japanese soybeans seems too low; only about 1-2 bushels per acre.

A table (p. 92) shows Japanese population in the top 8 U.S. states in 1912. There are 7 columns: Male adults, female adults, male children born in USA, male children born in Japan, female children born in USA, female children born in Japan, and total. The totals are: California: 58,555. Washington: 16,037. Colorado 3,556. Oregon 3,518. New York 2,002. Idaho 1,392. Utah 1,390. Montana 972.

Individual lines in various tables (p. 115-150) show tofu, miso and shoyu makers in the United States by state, and within California by city. There are 7 columns: Location, total no. of shops, no. of owners, investment (\$), sales (\$/year), workers, salary (\$/year). The number of tofu makers by state is: California 28. Utah (Ogden) 1. Idaho 2. Colorado (Denver) 2. Oregon 1. Washington 9. There are also 2 miso makers in Los Angeles and 1 shoyu maker in Oregon. Columns 1-2 are filled out for all entries, columns 3-4 for all California entries, and columns 5-6 for about half the California entries.

A table (p. 26-27) shows import tariffs on goods from Japan. These include: Soybeans \$0.45/bushel. Shoyu, miso, deep fried tofu pouches (*aburage*), dried frozen tofu (*Koyadofu*) and yuba 40% of their value, but a request is being made to change the shoyu, the two tofu products and the yuba to 20%.

The Directory shows Japanese companies making soyfoods in California, Utah, Idaho, Colorado, New York, Washington state, and Oregon. Address: San Francisco, California.

2081. Paerels, J.J. 1913. *Tweede Gewassen* [Second crops]. *Oost-Indische Cultures* (Dr. K.W. van Gorkom's) 3:276-88. [11 ref. Dut]

• **Summary:** See Prinsen Geerligs (1913, vol. 3, p. 276-88). Address: Indonesia or Netherlands.

2082. Prinsen Geerligs, H.C. ed. 1913. Dr. K.W. van Gorkom's *Oost-Indische Cultures*, opnieuw uitgegeven onder redactie van H.C. Prinsen Geerligs. Compleet in drie delen [Dr. K.W. van Gorkom's East-Indian crops. New edition. 3 vols.]. Amsterdam, Netherlands: J.H. de Bussy. See vol. 3, p.

276-88. Illust. Index. 27 cm. [7 ref. Dut]

• **Summary:** In vol. 3 is a section on "Second crops (*Tweede Gewassen*)" (p. 243-91). Chapter 4 (*Hoofdstuk IV*) of that section is titled "Soybeans (*Soja*)" (p. 276-88). Contents: Origin and native land. The soybean plant: Botanical description (flowers, seeds, fertilization, germination), types and varieties, geographical distribution. Cultivation of soybeans: General instructions for growing, planting, manuring, diseases and pests. Production, trade, and use of soybeans: Tofu (*Tao-Hoe*), Chinese soy sauce (*Tao-Yoe*), soybean paste (*Tao-Tjong*), Tempeh, composition and value as a food (*samenstelling en voedingswaarde*).

Note: This is the earliest document seen (Feb. 2009) that contains the term *Tao-Tjong*, a term, and perhaps a product, that appears to be between *doujiang* (Chinese-style miso) and *tao-tjo* (Indonesian-style miso).

Photos show: (1) A soybean plant that bears black-seeded varieties (p. 277). A soybean plant that bears white-seeded varieties (p. 278).

Also discusses (in vol. 2): Peanuts (p. 227-41). Sesame seeds (p. 247-51).

Reprinted in Van Gorkom 1918, p. 839-51. Karel Wessel van Gorkom lived 1835-1919. Address: Amsterdam, Netherlands.

2083. Singleton, Esther; Sturgis, Russell. 1913. The furniture of our forefathers, with critical descriptions of plates... complete in one volume. Garden City, New York: Doubleday, Page & Company. xii + 664 p. See p. 299. Illust. Index.

• **Summary:** Part IV, "Dutch and English periods: New York from 1615 to 1776" notes (p. 299) that in 1762, cut glass and silver ornamental cruet stands cost from 10 shillings to £1 5 each. In 1772, "ebony cruet stands, jelly glasses, soy cruets, carroffs [carafes], wine and water glasses and bottle stands" are for sale by John J. Roosevelt in Maiden Lane.

2084. Sornay, Pierre de. 1913. *Les plantes tropicales alimentaires et industrielles de la famille des légumineuses* [Edible and industrial tropical plants of the legume family]. Paris: Augustin Challamel. xii + 489 p. Illust. Index. 26 cm. [77* ref. Fre]

• **Summary:** This book is dedicated to "Mr. P. Boname, my excellent master and friend." Boname, who wrote the Preface and is now director of the agronomic station on Maurice, was the soybean pioneer in Maurice.

The section on the soybean (*Le Soja*, p. 195-205, 272, 276, 469, 471, 473, 475) is largely summarized from earlier writers, including Aiton, Bonâme, Bloch, Church, Grandeau, Joulie, Kaempfer, König, Korentschewski and Zimmermann, Lechartier, Li and Grandvoinnet, Paillieux, Paillieux and Bois, Pellet, Trimble, and Watt. Most of the section is about soybean production, but there are also subsections on soymilk, tofu (*Fromage de soja*), and shoyu (p. 204-05), plus

soy coffee, soy bread and biscuits for diabetics, and trade in soybeans and soybean products (p. 205).

Also discusses: Alfalfa or Lucerne (*Medicago sativa*, p. 309, 453-54, 471, 474). Bambarra groundnuts (*Voandzeia subterranea*, pistache voandzou, 72-75, 277-78, 469, 473, 476). Kudzu (*Pueraria Thunbergiana*, p. 429-30). Lupins (*Lupinus albus*, p. 264, 309, 453-54, 468). Peanuts (*Arachis hypogaea*, arachide p. 47-72, 270, 273, 453-54, 467, 471, 472, 474-76). Winged bean (*Psophocarpus tetragonolobus*, pois carré, p. 183-94, 273, 276, 468, 471, 473-76). Address: Asst. Director, Agronomic Station, Mauritius (Station agronomique de l'Ile Maurice).

2085. Tanaka Shoten. 1913. K. Tanaka Co. (Ad). In: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 9]. p. 43 (near end). [Eng; jap]

• **Summary:** Ad (¼ page). The top ¼ of this ad is given in English. This Japanese company imports many items, including sake, white rice, miso and shoyu. Address: 1531 Geary St., San Francisco, California. Phone: Filmore 2179. S 2947.

2086. Togano, Meiji-ro. 1913. Saishin shōyū jōzō-ron [Principles of modern shoyu brewing]. Tokyo: Nippon Takujo Co. Ltd. 1040 p. Two supplements to the first edition were published. The 7th edition, published in 1919 was 1088 pages long; the 8th edition, 1921, was 1181 pages. Illust. 23 cm. [Jap; eng+]

• **Summary:** Contents: 1. Outline (p. 1): Preface,

microbiology outline, outline for how to treat and examine microorganisms, general theory of shoyu fermentation.

2. Raw material outline (p. 85): Raw materials for shoyu, soybeans, wheat, salt, water, storing raw materials, coal. 3. Preparation of raw materials (p. 175): Making salt water, preparing raw soybeans, preparing wheat, mixing cracked wheat and cooked soybeans, koji starter (*tane koji*).

4. Making koji (p. 293): The purpose and need for making koji, how to make koji, the koji room (*koji mura*), improving the koji room, koji for shoyu. 5. Shoyu moromi or mash (p. 383): The fermentation room (*shikomi-gura*) and fermentation vats (*shikomi oke*), fermentation, shoyu moromi, chemical and physical changes in shoyu moromi, microorganisms in moromi, ripening (*jukusei*) of moromi, warm temperature-controlled fermentation (*on-jōzo*), quick fermentation (*sokujōzo*). 6. Shoyu (p. 489): Pressing the liquid sauce from moromi, heating the shoyu (*shoyu no hiire*), clarification (*seichō*), history of one generation of shoyu, components of shoyu, the flavor and fragrance of shoyu, relationship between the quality of shoyu and its components, methods of testing the quality of shoyu, the value of shoyu as a raw material for sauces, (*bansui*) and (*bankasu*), mold on shoyu, containers for shoyu.

7. The theory of marketing shoyu (p. 639): History of marketing / selling shoyu, selling shoyu, outlook for selling shoyu, precautions in selling shoyu. 8. Constructing and running a shoyu factory (p. 653): Building the plant, equipment and labor, the economics of building and running the factory. 9. The method of testing the microorganisms (p. 693): The need for testing microorganisms, the method of testing the microorganisms found in water, method of testing the microorganisms found in the air, method of testing the microorganisms found in koji starter and koji, method of testing the microorganisms found in moromi.

10. The method of analysis (p. 725): The need for analysis, general method of analysis, method of analyzing raw materials, method of analyzing koji, method of analyzing moromi, method of analyzing shoyu, method of analyzing shoyu presscake (*shoyu kasu*), method of detecting saccharin, qualitative analysis of formalin, method of qualitative analysis and measurement of salicylic acid (*sarichiru-san*, *saruchiru-san*), method of analyzing coal. 11. Conclusion (p. 809): Brewing and exporting, improvement of quality, quick fermentation of shoyu, application of machinery, the necessity of having a shoyu fermentation laboratory. Appendix (p. 825): The Togano method and equipment for moromi stirring. 12. Fifteen charts and tables concerning shoyu fermentation (mostly scientific information on physical and chemical properties). A portrait photo (located just after the title page) shows Meiji-ro Togano, formally dressed.

Note: This book was also published in 1914 by Otani Shoten in Tokyo. The same publisher republished the book in Jan. 1999 as a three-volume set. In the USA, this 1999

reprint is owned by the East Asian Library at Yale University in Connecticut.

2087. Williams, Martha McCulloch. 1913. *Dishes & beverages of the Old South*. New York, NY: McBride Nast & Company. 318 p. Illust. Index. 19 cm.

• **Summary:** This cookbook, a nostalgic look (after the Civil War) at the “good old days,” contains a recipe titled “Tomato soy” (p. 193), however no soy is used as an ingredient and soy is not even mentioned in the body of the recipe. “Take one gallon solid, ripe tomatoes, peeled and sliced, or four canfuls put up in glass, put in a preserving kettle with a quart of sliced onions, two tablespoonfuls of salt, as much moist sugar, teaspoonful black pepper, saltspoon paprika, four hearts of celery cut fine, a tablespoonful of pounded cloves, alspice [allspice], mace, grated nutmeg, and cinnamon mixed. Stir well together and cook slowly, taking care not to burn, until reduced one half. Dry mustard or mustard seed can be added, but many palates do not relish them. After boiling down add a quart of very sharp vinegar, stir well through, skim if froth rises, bottle hot, and seal. This keeps a long time in a dark cool place.”

Also contains 3 recipes in which Worcestershire sauce is used as an ingredient—surprising for a book of recipes from the “Old South”: Hams and other hams (p. 59-62, see p. 62). Leg of mutton in blanket (add “a spoonful of tart jelly, along with tabasco or Worcestershire sauce... Tomato or walnut catsup may be used for flavoring,” p. 164-65). Egg fours (“tabasco, Cayenne vinegar, walnut catsup, or Worcester can be added,” p. 182-83).

The author, christened Susan Martha Ann Collins, was the fourth daughter of Fannie Williams and William Collins. She was born and grew up near Clarksville, in Montgomery County, northwest Tennessee. She grew up in a privileged world of leisure and abundance, but after the Civil War the family fell into genteel poverty. After her parents’ death, she and a distant cousin, Thomas McCulloch Williams, left together for New York city where she created a new name (Martha McCulloch-Williams) and a new career for herself. It is unclear whether she and Thomas ever married (MSU biography). Address: [New York City].

2088. Wilson, Ernest H. 1913. *A naturalist in Western China, with vasculum, camera, and gun: Being some account of eleven years of travel, exploration, and observation in the more remote parts of the flowery kingdom*. 2 vols. London: Methuen & Co. Ltd. See vol. 2, p. 49, 54-56, 61, 87-88. Introduction by Charles Sprague Sargent, LL.D. Illust. Index. 23 cm.

• **Summary:** In volume 2, chapter VI (p. 48-63) is titled “Agriculture: The principal food-stuff crops.” “The Chinese nation is to a very large extent vegetarian, flesh being eaten only in small quantities except on festival occasions... The Chinese fry most of their vegetables, and for this purpose

a vegetable oil is nearly always used. The oils expressed from members of the Cabbage (*Brassica*) family [such as rapeseed], the Soy Bean (*Glycine hispida*), and Sesamé (*Sesamum indicum* [sesame]) being most in request” (p. 49). The seeds of ground-nut (*Arachis hypogaea*, called “Lao-hua-tsen”), opium poppy, sunflower, and cotton seed are also used as oilseeds (p. 61).

Beans are discussed on pages 55-56. “Since the Chinese are to such a large extent a vegetarian people, the various members of the pea and bean family are necessarily most important crops... The soy bean is everywhere a summer crop.” The country’s most important legume, it is “planted everywhere—in fields by itself, around rice and other fields, and as an undercrop to maize and sorghum. It yields seeds in three colours, namely yellow, green, and black. The Chinese distinguish three kinds of the yellow and two kinds each of the green and black. These varieties yield a succession of beans, the black being fully a month later than the others. The ‘Huang-tou’ [yellow soybean] is cooked and eaten as a vegetable, or ground into flour and made into vermicelli; preserved in salt it makes an excellent pickle. It is also extensively used in the manufacture of soy sauce and soy vinegar. A variety with small yellow seeds is largely employed in making bean-curd [tofu]. While in Central and Western China the soy bean is cultivated exclusively as a food-stuff, in Manchuria it is grown almost solely for the oil which is obtained from the seeds by pressure, and for the residual-cakes that remain after the oil has been expressed. From Newchwang, the port of Manchuria, there is an enormous export trade done in ‘Bean-cake,’ which is in great demand as an agricultural fertilizer in all parts of China. The soy bean has recently been exported to Europe in large quantities and the soy-bean oil is employed in soap making and for culinary purposes.

“Two kinds of Gram, *Phaseolus mungo*, ‘Lu-tou’ and *P. mungo*, var. *radiatus*, ‘Hung-tou,’ are grown as summer crops. The seeds of the ‘Lu-tou’ (green bean [= mung bean]) are especially valued for their sprouts... Of the ‘Hung-tou’ (red bean [azuki bean]) there are two or three varieties. The seeds of these are used as a vegetable or ground into flour and employed for stuffing cakes and sweetmeats.”

“Both sesamum and soy bean are cultivated extensively in Western China, but for local consumption only. The large exports of these products that pass through Hankow [located on the Yangtze River near Wuhan and Wu-ch’ang] are brought down by the Peking-Hankow railway. Szechuan is capable of growing enormous quantities of these valuable plants, but cheaper and better facilities for transport are necessary before the products can become articles of external trade. When the much-discussed Hankow-Szechuan railway is *fait accompli* the raw products of the west will be available as articles of export, and a much-needed stimulus given to the agricultural industries of the regions concerned” (p. 87-88).

Note: *Webster's Dictionary* defines *vasculum* (derived from the Latin meaning "small vessel"; the term was first used in 1844) as "a usually metal and commonly cylindrical or flattened covered box used in collecting plants." Address: V.M.H., England.

2089. Grimme, Clemens. 1914. Die Sojabohne und ihre Verarbeitung zu Nahrungs- und Genussmitteln [The soybean and its processing for food and stimulants]. *Konserven-Zeitung* 15(1):1-3, 10-11. Jan. 2. [1 ref. Ger]

• **Summary:** The author discusses the many food uses of soybeans and how they are made and used, drawing heavily on *Le Soja* by Li & Grandvoinnet (1912). He notes that there is a steadily rising interest in soyfoods in almost all branches of the German food industry [perhaps in anticipation of World War I].

Foods made from natural [unfermented] soybeans include: Soymilk (*Sojamilch*), tofu (*Sojakäse*), frozen tofu (*Kori-Tofu*), soy flour (*Sojamehl*), soy bread (*Sojabrot*), soya confections (*Sojakonfekt*), soy chocolate (*Sojaschokolade*), soy coffee (*Sojakaffee*), and green vegetable soybeans (*Soja als Gemüse*). Foods and seasonings made from fermented soybeans include: (1) Solid seasonings: Natto (Japan; Tokio Natto, Ping-Ming Natto). Tao-tche (China [fermented black soybeans]). The process for making this Chinese food is exactly the same as that used to make natto in Japan [sic, almost completely different]; (2) Seasonings in paste form: Miso (4 types), and Tao-tjiung (Doujiang, Chinese miso); (3) Liquid seasonings: Shoyu (Schoyou), Tsiang-Yeou (Chinese soy sauce), Ketjap (Javanese soy sauce), Tuong (Annamite soy sauce, made with rice or corn), Tao-Yu (soy sauce made with black soybeans in China and Japan).

Note 1. This is the earliest German-language document seen (June 2009) that mentions green vegetable soybeans, which it calls *Soja als Gemüse*.

Note 2. This is the earliest German-language document seen (Oct. 2003) that uses the term *Sojamilch* to refer to soymilk. As of Jan. 2009 *Sojamilch* is the modern German word for soymilk.

Note 3. This is the earliest German-language document seen (Jan. 2009) that uses the word *Sojaschokolade* to refer to soy chocolate. The German word for "chocolate" is *Schokolade*.

Note 3. This is the earliest German-language document seen (Dec. 2011) that mentions fermented black soybeans, which it calls *Tao-tche*. Address: Dr.

2090. Xrayser II. 1914. Observations and reflections. *Chemist and Druggist (London)* 84(2):49. Jan. 10. Series No. 1772.

• **Summary:** Under the sub-heading "Words relating to pharmacy" we read: "Soya, the name of the well-known bean is Japanese in origin, the plant yielding the bean being *Soja hispida*. Soy is the colloquial form of Japanese *sho-yu*

or *siyau-yu* [sic] the first element of which indicates salted beans [sic] (properly of the plant just named), and the second oil" (p. 49).

2091. Anderson, George E. 1914. Soya bean as food in China. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor)* 17(23):362-63. Jan. 28.

• **Summary:** "The soya bean is not generally used for food by the Chinese, though at times it is so used, and its use seems to depend largely upon whether or not supplies of the more usual food products of the people can be had at prices within their reach rather than upon any element of preference. Various other beans, notably a large flat white bean, are used extensively both in the manufacture of flour and as bean 'curd.'" Note 1. Virtually all beans used to make 'bean curd' in China and worldwide are soya beans.

"Soya bean has been raised by the Chinese chiefly for its oil and for the residue, known as 'bean cake,' for fertilizer. Its cultivation on so large a scale as that witnessed in Manchuria in recent years is a matter of development in the past five years or so and represents the response of Chinese farmers to the demand of Europe and the United States for cheap vegetable oil rather than any great Chinese production in the first place."

"The varieties of beans and their uses: There are six varieties of beans commonly grown in North China and shipped more or less extensively to this part of the country and also grown to some extent in South China as well. These varieties are distinguished among the Chinese by their colors and are known as the yellow, the green, the black, the red, the white, and the small green. Of these, the yellow, green, and black are soya beans and are distinguished from the others by their size and ovoid shape. The red bean [xiaodou, azuki] is used by the people as food in much the same shape it is used in other parts of the world, being used largely while green, the pods and all being cooked and served, chopped, with oil or other dressing.

"The white bean is used for the manufacture of a cheap meal or flour like other beans, but is used chiefly in manufacture of what is known as 'bean curd,' one of the most common food products used by the people of central and northern China and used to some extent in South China. The beans are partially cooked and are then ground in a stone mill which often is one of the picturesque features of a Chinese village picture, the mill consisting of a large millstone set in a stone cup, operated by a buffalo or donkey passing around and around the mill, turning the heavy stone directly by a beam it draws. With these beans as they are ground a considerable quantity of water is mixed and the ground product is gathered on a tray and is drained of most of the water. It partially solidifies or rather 'jellies' or 'curds.' When drained it is cut in slices and is eaten with soy sauce, which in itself is the fermented liquor of ground soya beans,

ripened for several months. This curd also is dried to a fair degree and is made into cakes, which are fancifully stamped with red or yellow designs or characters, and are sold in shops as cakes. The curd, as it is freshly made, sours in a comparatively short time, while the dried cakes keep longer.

“A substitute for flour—soy sauce: The use of the soya beans, properly so called, as human food among the Chinese is comparatively small, and is, as above indicated, more in the way of substitution. Whenever wheat flour from abroad or from north or central China itself rises in prices beyond the convenient reach of the average Chinese consumer, beans of various sorts, including the soya bean, are brought into use in the manufacture of a substitute. For such purposes the small green variety of soya beans are usually employed in South China, though apparently other varieties are also used in the north, and the small black variety is sometimes used in Canton. Considerable quantities of such flour are imported into Hongkong at times, but the Chinese of South China regard such flour as a substitution, however, and it is not popular.

“Bean oil, of course, which constitutes on an average substantially 20 per cent of the soya bean, is used for all purposes by the Chinese, both as food and as illuminant, and at times in paints. As a food it is used in substantially the same way, and with more or less interchanging with peanut oil, though the bean oil is less readily absorbed by articles cooked in it.

“Soy, the Chinese sauce which is the basis for most modern table sauces, is manufactured extensively in Hongkong from the soya bean, the process simply being that of grinding the beans and mixing the meal with water and a Chinese yeast. The mixture is then allowed to stand for from three to four months, the resulting liquor being the sauce. The United States imports about \$50,000 worth of soy [sauce] annually from Hongkong in addition to quantities imported from Japan.” Address: Consul General, Hongkong.

2092. *Queensland Agricultural Journal*. 1914. The soya bean. 1(1):7-9. Jan. [3 ref]

• **Summary:** “Much has been written in the Australian Press during late years of the Soya bean as a profitable crop for farmers, and experiments have been made with it at the State Nursery at Kamerunga, but nothing has resulted from the experiments beyond proving that the soils and climate of some parts of Queensland are well adapted for the cultivation of this crop.”

This article summarizes three articles received by the Department of Agriculture and Stock: (1) A communication from “Messrs. Thompson and Co., Dalny, South Manchuria, giving interesting information concerning the commercial possibilities of the [soy] bean, and suggesting that the Department experiment with the seed at the State Farms and in Western districts like the Marona, where the rainfall is comparatively small and uncertain, offering at the same time

to supply the necessary seed, and, if the experiments proved successful, the firm would consider the taking up of a large tract of land in Queensland and growing the bean in quantity, as there would be no difficulty in disposing of the product. The present price of the beans in Europe is £9 per ton.”

(2) “Messrs. Thompson and Co. furthermore enclosed an extract from the report (for 1912) of the Trades Commissioner for the Government of the Union of South Africa on the subject, which we summarise as follows,...” (see Turner 1914). The *Queensland Journal* then reflects: Profitability: “But the question to our mind is, whether, under our labor conditions, it would pay as well as it does in cheap-labor countries. A 1,000-lb. crop, at the highest prices for the beans, would sell for £4 10s. in Europe, and, deducting labour for production, freights, commission, &c., there would appear to be little in it to attract the attention of farmers, who can make far more [profit] out of dairying, sugar-planting, potato, onion, and maize growing. As a catch-crop amongst coconut and rubber trees, the Soya bean would doubtless prove of great value.

“As far as the feeding value of the [soy] bean is concerned, it is said to be at least twice as valuable for food as maize, as it is very rich in protein, but it is best fed in conjunction with maize. As a green manure, it is undoubtedly valuable in restoring the soil, being a leguminous plant.

“The expenses per ton for bags, railage, and freight to Harbin to Vladivostock [Vladivostok] are set down at £1 13s.; add ocean freight to England, £1 10s.—£3 3s.

“The expense of transport from South Africa to England is set down in the report we quote from at £1 9s.

“But Queensland is further from England than South Africa; and while it might pay to grow and export Soya beans thence to Europe, we cannot see that the crop could be profitably produced in this country.”

(3) “The following summary of the uses of the Soya bean and its products given by *Tropical Life* [published in England], April, 1913 [p. 71-72], is interesting:—For dynamite and high explosives, soap, linoleum, India-rubber substitute, margarine, paints and varnishes, in place of linseed oil, various edible foods, toilet powder, salad oil, vegetable cooking oil in place of lard, oil, &c., preserving sardines, lamp oil, lubricating, as food in place of peas, flour for soups, biscuits, brown bread, artificial milk and cheese [soymilk and tofu], substitute for coffee, for sauces; cake for feeding cattle, and for manure.”

Note: In this same Jan. 1914 issue (p. 3) of this journal, an article titled “*Queensland Agricultural Journal*,” states: “With this number of the Journal we commence a New Series of issue, dating practically from the 1st July 1913, on which date the Journal completed its sixteenth year of publication.” It first appeared in July 1897, and today some 60,000 copies a year [5,000 copies a month] are mailed to subscribers worldwide. From now on the Journal will accept “advertisements having reference solely to productions of the

land or to manufactured articles needed by rural occupiers, thus not interfering in any way with the general run of advertisements in the public Press.” Address: Australia.

2093. Togano, Meiji-ro. 1914. Shôyu no hiire ni kansuru kenkyû [On the pasteurization of shoyu]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 52. p. 503-27. Jan. [Jap]
Address: Jozo Shikensho, Gishi.

2094. Eddington, Jane. 1914. Economical housekeeping: More about soy beans. *Chicago Daily Tribune*. Feb. 4. p. 16.
• **Summary:** Because of its high protein content, the [whole dry] soy bean must be soaked for a long time then cooked gently for “several hours to reduce it to the required softness.

“It does not make as smooth a purée as the pea or peanut—in fact a rather granular one is obtained—but that nevertheless is palatable when dried over a hot fire, with a seasoning or butter, pepper, and salt if needed.” We should manufacture “soy sauce from this bean—that sauce without which chop suey and many other Chinese dishes would not be what they are. In a government bulletin on the legumes we have a general description of how this is made.” There follows a summary, with long quoted excerpts, of the section titled “The soy bean and its preparations” in: Oshima, Kintaro. 1905. “A digest of Japanese investigations on the nutrition of man.” *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 23 on. Shoyu, tofu, miso and natto are discussed briefly.

2095. Eddington, Jane. 1914. Economical housekeeping: Soy beans. *Chicago Daily Tribune*. Feb. 11. p. 11.
• **Summary:** It is called “the soy or soja bean.” “In an English food magazine of two years back there is an interesting and very suggestive article, ‘About the Soy Bean.’ In the first paragraph it is said that medical men have been experimenting with it and writing about it for a year or so. Then it says:

“The soja (or soy) hispida is the only representative of a genus of leguminosae or the tribe papilionaceæ, and it has been cultivated from time immemorial in Japan and China. It grows freely in tropical countries, and since 1878 it has been grown successfully in the warmer parts of Europe. There are a number of varieties of the soy bean, the difference lying in the size, shape, and color of the seeds. The Japanese is the most highly esteemed and in appearance it is a good deal like the common dwarf kidney or French bean...

“The bean, which has a most agreeable flavor, is used by the orientals in many ways. The oil is expressed, used as a food, and the residual cake, which contains 40 per cent of flesh forming material, is eaten by the poorer classes [sic]. A paste [miso] and a kind of cheese [probably tofu] are also obtained from the bean, but one of its principal uses—perhaps the best known to us—is for the manufacture of the celebrated

soy sauce, the making of which has always been surrounded by a certain amount of mystery.

“It is the chemical composition of the soy bean which has attracted so much attention of late, and it has been found to be worthy of the highest place among pulses. It is rich in albuminoid, or flesh forming constituents, also in fat or oil, and contains but a very small proportion of starch or sugar.

“The bean has been said to favor digestion, and it is a fact that the protein it contains is particularly easy of assimilation. A delicate infant, unable to digest cow’s milk, often will thrive on a gruel made of the soy bean flour and water, and during the little intestinal disturbances of summer, to which children are so liable, it is much to be recommended. Diabetic patients find it an invaluable article of diet on account of the small amount of starch and sugar which it contains.

“One might well expect that so valuable a food necessarily would be expensive, but when one learns that both bean and flour are sold for about 3d (6 cents) a pound, one feels that it is high time to give it a trial.

“It is in the form of flour that the soy bean is likely to be most popular on this side of the globe, although the beans themselves, when properly cooked, make good soups and form the basis of many of those little dishes beloved of those who prefer a meatless fare [vegetarians]...

“The soy bean thus is a cheap substitute for meat. In the dried state it looks more like a pea than a bean, but when soaked in warm water it expands and assumes its beanlike appearance...”

“The article says that these beans soaked and cooked are excellent mixed with a well flavored tomato or other sauce and made up into cutlets, croquettes, etc., to be used with cheese, etc., because its flavor is not pronounced, for which reason it is more valuable in the kitchen.

“These beans can be obtained at a seed store at just the price one pays for other sorts of beans at a grocery.”

2096. Eddington, Jane. 1914. Economical housekeeping: Chop suey. *Chicago Daily Tribune*. March 16. p. D16.

• **Summary:** Discusses the origin of Chop Suey: It “is not a recipe; it is a mixture... Here is the trick: The Chinese have taken two dishes of which the Americans have been inordinately fond for a century or so, mixed them, dressed them up a little, and made a mint of money by them, or at least enough to set up scores of restaurants over the country to sell us our fried pork and fried onion, plus some chopped celery,... and some sauce which the uninitiated could never tell from the Worcestershire sauce which is on thousands of restaurant tables of our land the whole year around.

“This sauce is flavored with Indian soy, and Indian soy and Japanese soy and Chinese or soy sauce are as nearly the same sort of thing as such things ever are when made by different manufacturers.”

There follows a recipe for “Every day chop suey.” “...

if you chose, add a tablespoon or two of soy sauce to the meat and let it simmer a few minutes in it. Combine the two mixtures,... and serve with rice and the soy sauce. The Chinese do not add the sauce in cooking always.”

Note: This is the most recent English-language document seen (Oct. 2006) that uses the term “Indian soy” to refer to soy sauce.

2097. Sahr, C.A. 1914. Report of the Assistant Agronomist. *Hawaii Agricultural Experiment Station, Annual Report*. p. 43-49. For the year 1913. March 16. [1 ref]

• **Summary:** In this report’s only section, titled “Experiments with leguminous plants,” all crops are grouped into three types based on the length of their growth period. The soy bean appears in both the first group (quick rotation, short season, 3 to 4 months) and the second group (medium time, 4½ to 6½ months). The importance of inoculation is emphasized.

The subsection on “Soy bean” (p. 46-49) states: “Soy beans were grown more or less extensively by Japanese farmers in Kona to defray expenses while their coffee trees came into bearing, finding a ready market for culinary purposes and also among local soy sauce brewers. Since the coffee orchards now demand the entire attention of the growers, the soy brewers depend upon soy beans imported from Japan for their supply.

“The brewing of Japanese soy sauce having become a well-established industry in Hawaii, a visit of inspection to several of the largest factories was made to ascertain the method of manufacture, which is given here briefly...” Equal parts of boiled soybeans and roasted California wheat are mixed, “poured into molds, and left to stand for 3 or more days, or until slightly covered by mold fungi. The molds are then emptied into large cedar vats of 500 to 800 gallons capacity. A starter made from cass [soybean presscake] and brine is then added, and the mass is left to ferment for a period ranging from 6 months to a year or 18 months, the mass being thoroughly stirred twice each day. The fermented mass is then transferred into a large press and the liquid sauce is pressed out, boiled 2 or 3 hours, and put in cedar tubs of 4½ to 6 gallons capacity... The ferment starter is made of a small quantity of soy-bean cake, or cass, sprinkled over a few handfuls of parboiled soy beans and left in a warm place for several days. The cass is sold for 20 cents per 100 pounds to rice planters as a fertilizer, and contains about 20 per cent salt. It is also fed to hogs, after soaking in water to draw out the salt. The brewers buy imported soy beans at \$72 per ton in Honolulu, wheat at \$40, and salt at \$10. The tubs in which the soy sauce is put up are made of Japanese cedar, shipped knocked down from Japan, and put together as wanted. The cost per tub is from 40 to 70 cents, according to their capacity, which ranges from 4½ to 6 gallons. Soy sauce is eaten by all classes of Japanese as a table sauce, with their rice, fish, and meats. It has the color of strong

black coffee.

“Miso, another Japanese table sauce, is brewed from soy beans and rice. The brewed liquid is clear white. The climate of Hawaii is too warm for its manufacture.”

A table (p. 48) shows five soybean varieties (each with an “Agronomy accession number, three also with an S.P.I. number—20798, 19183, and 14953) and their yields as hay, fodder and/or seed, and stages of growth in Hawaii. The only named variety, Ootootan [black seeded], was “grown from seed received from the College of Hawaii in May 1911. This variety is undoubtedly the coarsest, rankest soy bean ever grown by this station. It is also most tolerant of both dry and wet conditions, but only makes a rank growth during a cool and moist growing period.” Trials of this variety were made at the Hilo and Glenwood substations.

No. 698, a Russian soy bean, was received from S.R. Cope of London, England. Seven varieties were received from the College of Hawaii. Eight varieties were received from the Bureau of Plant Industry (USDA) under the [S.P.I.] numbers 19183, 22379, 32906, 32907, 34857, 34934, 34924, 34987, and 34123; they were planted in May. “Four varieties, said to be rich in oil content, were received from an eastern paint and oil company for trial by this station. Samples of these will be analyzed and the oil content determined.”

A photo shows two Ootootan variety soy bean plants, valuable for forage and green manuring; one is bigger than the other and both are hanging up-side down.

Other leguminous plants tested: Kulthi or horse gram, cowpeas, sunn hemp (*Crotalaria juncea*), a variety of Cuban peanut, asparagus bean (*sasagi*; probably yardlong cowpea) and sesbania.

Note 1. This is the earliest document seen (June 2009) that mentions the soybean variety Ootootan.

Note 2. This is the earliest document seen (March 2004) that mentions the asparagus bean (*Vigna sesquipedalis*). Address: Asst. in Agronomy.

2098. Nishimura, Torazô. 1914. Shôyu moromi no kaiire ni kansuru chôsa [Examination of the stirring of shoyu moromi (mash)]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 53. p. 561-71. March. [Jap] Address: Jozo Shikensho, Gishi.

• **Summary:** Similar to the plant albumins are the plant caseins, above all the casein of the one plant which is richest in this casein, the soybean (*Sojabohne*), which has been used for centuries in the form of soy cheese (*Sojakäse* or tofu), soy sauce (*Sojasauce*), etc. and is an important Japanese foodstuff. Now in recent years, the soy oil factories

of Europe have grown to large dimensions, and presently large amounts of soybean oil cake (*Sojaölkuchen*) and sold inexpensively. So it is time to recognize the value of this raw material for nutritional purposes. The extraction of casein from defatted soybean cake is simple. It dissolves in a dilute alkali solution, is filtered, washed with alkali and dried—for use as food. When we realize that 100 kg of protein contained in soybean oil cake costs less than 50 Marks and that it can be produced less expensively than milk protein, it is clear that large amounts should be used as a raw material.

2100. Eddington, Jane. 1914. The Tribune Cook Book: Lettuce. *Chicago Daily Tribune*. April 26. p. E8.

• **Summary:** Under “Lettuce a la vinaigrette” is a recipe of the old prose format. “The famous ‘salad seasoners’ have been those who have added to a French dressing the greatest variety of unique flavors, perhaps a bit of soy sauce, some anchovy, vinegars of different flavors—half a dozen to a dressing—oils flavored with fruit juice, catsup, mustard, curry, meat juice.”

2101. Douglas (J.M.) & Co. 1914. Even if you had never tasted it, you could know that Lea & Perrins’ is the best Worcestershire sauce in the world (Ad). *Toronto Daily Star (Canada)*. May 2. p. 4.

• **Summary:** The upper illustration shows a black maid looking in on a group of diners seated around a table. The lower illustration shows a bottle of Lea & Perrins’ Worcestershire Sauce. To the right of the bottle, the following is written in a rectangle: The white writing on the red label indicates the Original and Genuine Worcestershire Sauce. In the middle of the rectangle is the “Lea & Perrins” signature. Address: Canadian agents, Montreal [Quebec, Canada].

2102. Kita, Gen-itsu. 1914. Einige japanische Schimmelpilze. II. Ueber die Aspergillusarten aus “Katsuobushi” und Vergleichung von vier *A. ochraceus*artigen Pilzen [Some Japanese molds. II. On the *Aspergillus* varieties in katsuobushi and comparison with four *A. ochraceus* types of molds]. *Zentralblatt fuer Bakteriologie. Series 2*. 41(11/17):351-63. June 6. [2 ref. Ger]

• **Summary:** Katsuobushi is the dried flesh of the bonito fish. It is widely used in Japan in the preparation of soups, sauces, and in cooking together with soy sauce (*Soja*). The amount produced in Japan is enormous. The author isolated numerous *Aspergillus* molds from katsuobushi, including the following: *A. glaucus*, a white *Aspergillus* variety, *A. candidus*, *A. Wentii*, *A. sulfureus* var. *A. oryzae*, *A. tamarii*, *A. ochraceus* plus *Rhizopus* Deleamar. He grew these out on various substrates (including rice and defatted soybean meal), then measured their diastatic power. Address: Technical Inst., Tokyo Imperial Univ.

Address: Technical Inst., Tokyo Imperial Univ.

2104. *Times (London)*. 1914. Condiments. Pickles and sauces. Various aids to appetite and digestion. June 8. p. 27, cols. 4-5.

• **Summary:** The wise old proverb that “Hunger is the best sauce” still retains its ancient force. Yet inventors have flooded the world’s markets with a multitude of “ingenious appetizers and stimulants for the jaded palate.” The reproach of the insightful Frenchman [Voltaire, in 1729, after a two-year stay in London] that “England was a nation with a hundred [sic, sixty] religions but only one sauce has long since become wholly unmerited.”

“The indispensable companion of all meat meals is the homely cruet-frame, with its store of mustard, pepper, vinegar, and oil.” The most common ingredient in table sauces is some form of vinegar. High-class sauces use only the finest malt vinegar, while their low-brow relatives substitute the cheaper forms of acetic acid.

The famous Harvey Sauce [Harvey’s Sauce] is “composed of a mixture of malt vinegar, Indian soy, and mushroom or walnut vinegar [ketchup?]. To this must be added finely chopped anchovies, a clove of garlic bruised, and a seasoning of cayenne pepper.” Keep these ingredients in an earthenware jar for a month or more, stirring regularly, then strain carefully for use.

To make Worcestershire sauce, mix “Bordeaux vinegar, walnut ketchup, essence of anchovy, Indian soy, cayenne, and garlic.” Place in a large bottle, cork, and shake many times daily for several weeks, then strain and bottle for use. These two “may be regarded as typical of the thin or black sauces.”

The thick or creamy sauces include O.K. Sauce and A1 Sauce.

2105. *Times (London)*. 1914. Worcester: The making of a famous sauce. June 8. p. 22, col. 6.

• **Summary:** Located on the River Severn, Worcester is blessed with a magnificent old cathedral. “A great sauce factory: The makers of the well-known sauce, Worcestershire Sauce, are Messrs. Lea and Perrins,” one of the oldest and most progressive firms in the city. “Their factory is perhaps the largest establishment in the world wholly devoted to the manufacture of sauce: certainly there is nothing equal to it in the United Kingdom.” The company still uses the original recipe, which “remains a closely-guarded secret, and the firm exercises a strict privacy over the whole process of manufacture.”

“Before being bottled, the sauce is allowed to mature in barrels in the cellars of the factory.”

“Seventy years ago [i.e., 1844] the output of sauce was very limited and was practically all consumed locally. At that time, and for twenty years afterwards, the bottles were filled from a jug carried in the hand.” Today, bottling machines fill thousands of bottles a day.”

Another Worcester firm, Hill, Evans, and Company, has been making malt vinegar for more than 80 years, and today its works are the largest of their kind in the UK.

Note 1. This is the earliest document seen (Feb. 2012) that contains the phrase “mature in barrels in the cellars” in connection with Worcestershire sauce

Note: Vinegar is an important ingredient in Worcestershire sauce.

2106. Hanson, George C. 1914. Commerce and industries of Kwantung. *Daily Consular and Trade Reports (U.S. Bureau of Foreign and Domestic Commerce, Department of Commerce)* 17(153):7-17. July 1. See p. 11-12, 15-16.

• **Summary:** “The Dairen (Dalny) consular district embraces the Kwantung Leased Territory (Japanese), comprising the tip of the Liaotung Peninsula and the islands adjacent thereto... Its area is 1,221 square miles and its population in 1913 was 517,147, of whom 469,651 were Chinese [90.82%], 47,381 Japanese [9.16%], and 115 foreigners.”

A table (p. 8) of “Foreign trade by countries” shows that the lion’s share of its imports (71.5% of gross value) come from Japan, followed by Germany, UK, Belgium, and USA.

A table (p. 11) shows “Shipments from Manchuria into Kwantung during 1912 and 1913, including: Bean cake 103,787 / 127,690 tons. [Soy] beans 553,438 / 622,205 tons. Beans (small=azuki) 16,794 / 16,297. Sauce, bean and soy 50 / 78 pounds.

The export trade in soybeans and products expanded. A table (p. 12) shows the “native exports” (to within China; quantity and value), including bean cake, [soy] beans, and bean oil.

The section titled “Last year’s improvement in bean trade—unfavourable outlook” includes a table which shows exports (incl. reexports) of [soy] beans and bean oil “in 1913, by countries of destination. Exports of bean cake to foreign countries increased in 1913 to 527,507 short tons, of which 520,947 tons went to Japan and the remainder to Chosen [Korea]. The amount shipped to Chinese ports was 38,629 tons in 1913, as against 76,172 in 1912.” “A large proportion of the bean oil shipped to Japan is transshipped to the United States.” Address: Vice Consul, Dalny (Dairen), Japanese Leased Territory.

2107. *San Francisco Chronicle*. 1914. Harbor news. July 22. p. 16.

• **Summary:** The *Nippon* arrived in San Francisco harbor only one day behind schedule. “Principal items in the liner’s

cargo of 2613 tons measurement were:... 371 cases of cigars, 6,665 sacks of rice, 885 tubs of shoyu [soy sauce], 700 bags of shelled peanuts,....”

Note the large amount of shoyu being imported into the United States in 1914.

2108. Loomis, Henry M. 1914. Food products from the soy bean. *American Food Journal* 9(8):472-74. Aug.

• **Summary:** Loomis collected information on soybean products while stationed on the Pacific Coast. “Probably the most interesting and important of these food products is soy sauce, or shoyu, as the Japanese call it. It is the only one which is used to any extent among Occidental nations, with whom it forms the principal ingredient of Worcestershire and similar table sauces. It is also used to some extent as an ingredient of bouillon cubes. König estimates that the consumption of this product in Japan amounts to two or three fluid ounces per day for each person, which would make a total consumption for that country alone of three to four hundred million gallons. No figures are available as to the amount of this sauce which is used in China, but all except the poorest class eat it habitually on rice and fish, which form their principal articles of diet.”

Japanese soy sauce “is prepared on more scientific principles and it is considered much superior to Chinese soy. Each manufacturer of Japanese soy has special brands or trade marks under which his products are sold. Japanese soy is usually imported into this country in wooden tubs holding about three gallons each and sells at wholesale price of from 75 cents to \$1.50 per tub” [i.e. 25 to 50 cents per gallon]. A brief description of the Japanese process for making soy sauce follows; it mentions Koji.

Brief descriptions are also given of the following foods and their method of preparation: (1) “Soy bean curd, or, in Japanese, Tofu, is as its name implies prepared by coagulating or precipitating the legumin or vegetable proteid, of the soy bean by mineral salts. (2) “The frozen bean curd, or ‘Koritofu,’ ...” (3) [Yuba]. “The liquor or bean milk is the milky fluid produced in the manufacture of bean curd after straining and before coagulating. Chinese bean curd [sic], or Toufu-pi, is prepared by drying the scum produced on boiling the bean milk. It is imported in the form of vitreous, brittle, yellowish sticks in appearance like dried casein. (4) Soy bean oil. (5) “Kinako is prepared by roasting and grinding soy beans. It has a very agreeable flavor and is much used in the preparation of confections, particularly as a sort of coating powder. (6) Miso, which is made from “Koji, the same ferment as is used in the making of soy. There are two principal kinds imported into this country, the white and red Miso. They differ principally in the rapidity of fermentation and in the amount of salt used.”

“Winton and others have suggested the use of soy bean products as foods for diabetics and it appears that there are many of the foods mentioned above which would serve a

useful purpose in this regard. There are a number of firms now putting out soy bean meal or flour on a commercial scale and notices have appeared recently that soy bean curd and milk are to be manufactured on a large scale in Europe.

A large table contains nutritional analyses of four types of soy [sauce] (incl. Kikkoman, Kikkoraku, typical Japanese shoyu and Chinese soy) plus each of the foods mentioned above, including tofu (8.6% protein) made in Seattle, Washington, and "Bean milk (strained bean liquor before coagulating; 2.09% protein).

Mr. J.T. Willard notes: "I remember twenty years ago [i.e., 1894] that Prof. Georgeson of the Kansas Agricultural College had half a dozen varieties [of soy beans]. He was a teacher of agriculture in Japan and I suppose he learned as much there as he taught, and he became very enthusiastic over the soy bean. I remember there was a great difference in the different varieties of the soy bean." A portrait photo shows Mr. H.M. Loomis.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term "soy bean curd" to refer to tofu. Address: Bureau of Chemistry, USDA.

2109. Takamine, Jokichi. 1914. Enzymes of *Aspergillus oryzae* and the application of its amylolytic enzyme to the fermentation industry. *Chemical News* 110:215-18. Oct. 30. [11 ref]

• **Summary:** Originally published in *Journal of Industrial and Engineering Chemistry* 6:824-28 (Oct., 1914).

2110. Takamine, Jokichi. 1914. Enzymes of *Aspergillus oryzae* and the application of its amylolytic enzyme to the fermentation industry. *J. of Industrial and Engineering Chemistry* 6(10):824-28. Oct. [11 ref]

• **Summary:** This is the first review of the early history of the application of East Asian fungal fermentations to modern industrial processing, which began in the 1880s. A principal impetus for the development of the fungal enzyme industry was the discovery that *Aspergillus oryzae*, the fungus involved in the shoyu, miso, and saké industries, produced amylases that could be used to saccharify starch in place of barley malt in the production of distilled spirits. The first commercial enzyme was Takadiastase (a white to yellowish powder rich in amylases) produced by precipitating an aqueous extract of *Aspergillus oryzae* koji with 70% v/v ethanol. The precipitate was then dehydrated with strong alcohol and pulverized.

Though *Aspergillus oryzae* plays an important role in the national economy of Japan, "its utilization in Occidental countries is singularly lacking. Calmette and Bodin's investigation on amylomyces with a view of utilizing it in the spirit industry is an isolated instance in Europe, and their process, known as the amylo-process, has been in operation in France since 1891.

"In 1891, I made an arrangement with the Distilling

and Cattle Feeding Co. [popularly known as the "Whiskey Trust"], of Peoria, Illinois, and carried out on a practical scale the application of the *Aspergillus oryzae* to the American Distillery. My experiments, which ran for a couple of months on a 2,000 bushel scale at the Manhattan Distillery, were partially successful, but unfortunately the process did not attain general recognition of its merit..."

Aspergillus oryzae has been used in Japan for many centuries to make products such as Sake or rice beer, Soy [sauce], and Miso. In 1912 the tax on fermented sake in Japan contributed the \$41,974,630 to the national treasury. "The tax on the production of Soy (Bean sauce) amounted to \$2,048,141" [only about 5% as much as sake]. The total cost of all articles produced with the aid of the *Aspergillus oryzae* fungus is put at roughly \$200 million.

"To the growth of *Aspergillus oryzae* on wheat bran as a culture medium I gave the convenient name of Taka-Koji and have employed it for a number of years to distinguish it from that known in Japan as Koji which is a culture on steamed rice.

"Taka-Koji is designed for a substitute for malt as an amylolytic agent in varied fermentation and other allied industries. Its proposed use is encouraged by the fact that the cost of malt is subject to fluctuations according to the crop conditions of barley while bran is exempt from similar market conditions. Besides, the transformation of bran into Taka-Koji can be accomplished in 48 hours, while malting needs three or four times as long for completion of the process."

The author made his Taka-Koji in a revolving drum with up to 70 kg capacity. Then he ordered a drum of about 4,800 pounds capacity—the size of an 8-ton malt drum. The cylinder turned at 1 revolution per minute. This resulted in an 83% saving in labor costs as well as a considerable saving in space. The "process promises well for furnishing a substitute for malt in alcoholic fermentation and other industries where amylolytic enzyme is required." The process was tested by Dr. Niels Ortved, Chief Chemist of Hiram Walker & Sons of Walkerville, Ontario, Canada. In his results, which were presented in a paper at the last Congress of Applied Chemistry (held in New York), and published, he noted: "Takamine was the first to introduce the Koji process to America. As far back as 1899 he advocated the use of Koji in the distilling industry... Lately, I understand, he has succeeded in adapting a modification of the Galland-Henning malt drum system to his process. This should be a great improvement over the old floor system..."

"Taka-Diastase: An aqueous extract from the Taka-Koji can be easily made by percolation and an enzyme can be precipitated by adding alcohol to such an extent as to contain 70 per cent by volume of same in the mixture. The precipitate is dehydrated by means of strong alcohol, dried and powdered. It is a white or yellowish white powder or hygroscopic nature. It is marketed in this form for

medical use under the name Taka-Diastase. Though known as an amylolytic agent, it contains various enzymes; nevertheless, amylolytic and proteolytic enzymes predominate.” Taka-Diastase is a Koji extract whose function is to transform starch directly into glucose.

The paper closes: “The author extends his thanks to Mr. Wooyenaka for his untiring and valuable assistance and to Parke, Davis & Co. for affording every facility for carrying out the ‘Drum Experiments.’” Address: 552 West 173rd St., New York.

2111. Eddington, Jane. 1914. Economical housekeeping: Soy beans. *Chicago Daily Tribune*. Nov. 13. p. 14.

• **Summary:** “The soy bean is one of the staples with which we are not very well acquainted, but it is inexpensive and richer in protein than any of the other legumes.”

“This bean is considered of particular value in diabetes, but it is the flour that is chiefly used in dishes for the sick, a considerable number of recipes for which will be found in [the book] *Diet in Health and Disease*, by Friedenwald and Rührh. A long quoted excerpt is given.

“There is an American company in America [perhaps Waukesha Health Products Co., in Waukesha, Wisconsin] which makes the soy bean flour, the address of which will be sent on request (stamped and addressed envelope) to any one interested. There are about three pages of recipes in the book quoted from. In recommending them for diabetics it says:

“The simplest way to use the beans is to cook them like the ordinary navy bean, preparing either bean soup, boiled beans, or baked beans, the flavor being rather improved by the addition of a piece of fat salt meat.”

2112. Lea and Perrins. 1914. Variety of uses. The uses to which Lea & Perrins’ Sauce can be put are innumerable (Ad). *Times (London)*. Nov. 13. p. 13, cols. 5-6

• **Summary:** “At luncheon, dinner or supper, it is the ideal sauce for roast meats, fish, game, cheese, salad, etc. In the kitchen, it is indispensable to the cook for flavouring soups, stews, gravies, minced meat, etc. In India, a favourite ‘Pick-me-up’ is Lea & Perrins’ Sauce with soda-water. The original and genuine Worcestershire.”

Near the upper right of this display ad is an illustration of a large slice of cheese on a plate. In the lower right is the large “Lea & Perrins” signature. On each of the four sides of the ad, the words “Lea & Perrins’ Sauce” are printed inside a white oval within the decorative border. Address: [England].

jōzō yō en. Enshitsu hikaku shiken seisei [Comparative examination of the quality of salt used for making shoyu]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 9(3):24-60. [Jap]

Address: 1. Jozo Shikensho Gishi; 2-3. Senbaikyoku Gishi.

2115. **Product Name:** Shoyu.

Manufacturer’s Name: Noto (G.).

Manufacturer’s Address: Honolulu, Oahu, Hawaii.

Date of Introduction: 1914.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1914. p. 534. “Noto, G., soy, 1339 Liliha [Honolulu, Oahu, Hawaiian Islands]. Residence: Same.” Not listed in 1913.

2116. Togano, Meiji. 1914. Togano-shiki jidosei kōji sochi no kansei [Togano’s perfected automatic koji making machine]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 9(6):3-9. [Jap]

Address: Jozo Shikensho Gishi.

2117. Bosse, Sara; Watanna, Onoto. 1914. Chinese-Japanese cook book. Chicago and New York: Rand, McNally & Co. 120 p. Index. 17 cm.

• **Summary:** A remarkable and pioneering East-Asian cookbook. It may well be the earliest Japanese cookbook seen published in America. It is one of the earliest Chinese cookbooks published in America. The cover illustration shows a well dressed Japanese woman in a Japanese room kneeling and cooking over a brazier. Contents: Preface. Part I: Chinese recipes (12 sections, p. 9-64). Part II: Japanese recipes (7 sections, p. 74-110). List of Chinese and Japanese groceries.

The Preface begins (p. 1): “Chinese cooking in recent years has become very popular in America, and certain Japanese dishes are also in high favor. The restaurants are no longer the resort of curious idlers, intent upon studying types peculiar to Chinatown, for the Chinese restaurants have pushed their way out of Chinatown and are now found in all parts of the large cities of America.” “There is no reason why these same dishes should not be cooked and served in any American home.”

Concerning shoyu, or Japanese-style soy sauce (p. 2-3): “Soy, sometimes called Soye, is similar to Worcestershire and similar European sauces. In fact, the latter are all said to be adaptations of the original Chinese syou, and most of the European sauces contain syou in their makeup. It lends a flavor to any meat dish, and is greatly esteemed by the Oriental peoples.”

Note 1. This is the earliest English-language document seen (April 2012) that uses the word “syou” to refer to shoyu or soy sauce.

Syou (soy sauce) is an ingredient in at least 55 recipes in this book, both Chinese and Japanese—starting with Chinese

soups (p. 12-17). When first mentioned here it is called “syou (Chinese sauce),” but thereafter simply “syou.”

“Miso paste” appears in 5 Japanese recipes: Satsuma soup (“one quarter pound of aburage {oil-fried Tofu}; one quarter pound of miso paste {soy bean and rice cheese},” p. 71-72). Uwo shiru (Fish soup) (“one pound of miso paste {bean and rice paste}; one half cupful of syou sauce,” p. 73-74). Shika shiro (Pot-roasted venison) (“one cupful of syou sauce;... one quarter pound of miso paste,” p. 80). Tamago bolan (Peony eggs) (“finely mashed miso,” p. 91-92). Shiro uri (Stewed squash) (“syou sauce... two tablespoons of miso,” p. 95).

“Aburage (oil-fried Tofu)” and regular tofu appears in Satsuma soup (p. 71, see above). Yaki zakana (Fried fish) (with “oil-fried Tofu... Note: Tofu is made from a mixture of syou bean [soy bean] and rice. It is mashed and rolled into a thin cake, and fried in oil, very much like pancakes,” p. 77-78). Note 2. A poorer definition of tofu would be hard to find. Yaki udzura (Broiled quail or pigeons) (“aburage {bean cheese paste}” and “Tofu cakes,” p. 79). Fried squab (with “fried Tofu,” p. 81). Tamago tofu (a tofu-like custard made with eggs and syoyu sauce, but no real tofu, p. 89-90).

Bean sprouts are used in many recipes, but we are never told what type of beans are sprouted [probably mung beans]; a recipe for homemade bean sprouts (p. 109) calls for “ordinary white beans, or dried lima beans.” Other interesting ingredients include: “Adzuki (purple beans)” (mentioned once in Yohan candy). Goma seeds [sesame] or goma-seed oil (mentioned 15 times). Kudzu starch (6 times, misspelled once as “kudze”). Peanut oil (at least 10 times). Seaweed (1 can of seaweed; small piece of seaweed), seaweed jelly or gelatine, or Kanton [kanten, agar] (15 times). Sweet rice [mochigome].

The authors, “Winnifred and Sara Eaton were sisters, daughters of a Chinese-born mother and an English-born father, and grew up in a large family in Montreal, Canada. Winnifred Eaton was a very successful fiction writer who, by taking on a Japanese identity, both exploited the public’s craze for ‘Japonica’ at the time, and obscured her Chinese heritage during an age of anti-Chinese sentiment and policies. This cook book was her first collaboration with Sarah, who may have done very little of the writing. A painter, Sarah (1868-1940) lived out her life with her German artist husband, Karl Bosse, in New York. Winnifred (whose Japanese pseudonym was Onoto Watanna) lived 1879-1954, knew almost nothing about Japanese cooking. Winifred’s biographer and granddaughter, Diane Birchall, says that the authors’ claim in the Preface that the Chinese recipes are “... secret recipes handed down from Vo Ling, worthy descendant of a long line of noted Chinese cooks...” is just a hoax. “According to Birchall, Eaton was awful at cooking Chinese dishes” (MSU introduction and biography).

Note 3. This is the earliest document seen (Jan. 2009) concerning soy ingredients used in Japanese-style recipes,

food products, or dishes outside Japan.

2118. Chiappini, C. du P. 1914. The trade of the Union: Soya beans. In: W.H. Hosking, ed. 1914. South African Year-Book 1914. London: George Routledge and Sons, Ltd. New York: E.P. Dutton & Co. See p. 192-261, especially p. 247-56.

• **Summary:** “The Annual Report of the Trades Commissioner in London for the Union Government of South Africa for the year ending 31st December, 1912, and dated 16th April, 1913, was presented to both houses of Parliament by command of His Excellency the Governor-General.”

Soya Beans: Trials in connection with these beans have been, and are being, made by farmers in the Union—principally in Natal. During the past nine years many useful experiments have been made by the Agricultural Department, mainly at the Cedara, Winkle Spruit, and Weenen Government Farms (Natal), and also at Skinner’s Court, Pretoria. A great deal of knowledge has thus been gained and made known to farmers by means of bulletins, etc., issued by the Government. I am, however, informed that there has been a check in the progress of this industry, and that in some parts farmers have been disheartened by their first trials, and have dropped the matter... I submit the [following] details in the hope that they will stimulate farmers through the Union to continue their experiments and carry them to a successful issue, my object being to support Mr. Burt Davy and other officers of the Agricultural Department who are doing such good work in this direction.

“I have been fortunate in securing the valuable assistance of Mr. A. Grenville Turner, Grain and Oilseed Broker, and Assistant Secretary to the Seed, Oil, and Cake Trade Association, C 20, Exchange Buildings, Liverpool, and of Mr. Harold Beckwith, of Peter’s Buildings, II, Romford Street, Liverpool, who is a specialist on the production of vegetable oil and on oil milling plant generally...”

“During the year 1909 experiments were conducted in the Argentine Republic, Mr. A. Grenville Turner reporting that a crop of beans may be secured there in about thirteen weeks, as against six months in Manchuria, and ten weeks to five months in South Africa, according to zone and climatic conditions. Worldwide interest is now evinced in the culture of the Soya bean, and experiments are being conducted in practically every British Colony. The late Sir Alfred Jones, K.C.M.G., entrusted Mr. Turner with a mission to introduce the cultivation of the bean throughout West Africa, the result of the experiments being successful. On his return from the coast, Mr. Turner was entrusted with a mission by Messrs. Lever Brothers, Limited, to encourage the cultivation of the Soya bean throughout the Union of South Africa. The scheme was enthusiastically taken up by the farmers. Large quantities of seed (with descriptive pamphlets) were distributed by Messrs. Lever Brothers, the result of the experiments proving that South Africa can raise a crop of

Soya beans equal, if not superior, to those from Manchuria...

"At the Government Experimental Farms in South Africa, over 80 varieties have been tested, and as high as 2,000 lb. per acre was recorded, while in many instances the yield was well over 1,000 lb. per acre. In Manchuria the yield per acre is from 1,100 to 1,600 lb. per acre...

"The subject has received the hearty support of the Union Government Agricultural Department, the Agricultural Unions, and Messrs. Lever Brothers, Limited, by whose assistance, through Mr. Turner, seed for the planting of three to five acre plots was distributed to over 300 farmers in all parts of the Union, together with printed report forms and descriptive bulletins. One factor was proved—viz., the capability of the plant to resist a long sustained drought, and to grow under conditions that would probably in many instances be too severe even for maize.

A list is given of 18 products which can be obtained from the Soya bean, including "Human consumption, as a vegetable, like marrowfat peas, and in preparation of soups. As a substitute for meat, specially manufactured. Manufacture of a substitute for chocolate. Preparation of macaroni. As flour for biscuits and brown bread. As artificial cream and milk. Manufacture of cheese. As a substitute for coffee. Preparation of plastic substances and artificial horn." Diabetic foods, soy sauce, meal for feeding cattle, stallions or dairy cows, seasonings, beverages, industrial products, and livestock feeds.

The oil can be used for the manufacture of "Dynamite and high explosives. Soaps. Linoleum. India-rubber substitute. Margarine. Paints and varnishes in place of linseed oil. Edible goods and toilet powder. Waterproof cloth, paper umbrellas, and lanterns. Salad oil. Lubricating oil, in China, for greasing axles and native machinery. Lamp oil instead of kerosene oil. It is used on English railways for burning. The Soya oil is also used for preserving sardines, and in place of lard, and cotton-seed oil for cooking.

"Chemical analyses of the beans made in Europe show considerable variation in the percentages of the different constituents... of oil from 15.62 to 23.20 per cent., the latter oil content being the highest recorded, the beans being grown by Mr. Turner, at Sierra Leone (West Africa).

"At the latter end of the year 1908 the Soya beans started to be exported from Manchuria to Great Britain and Europe; the price on the London market being £4 15s. per ton, which recently rose to £9 2s. 6d. per ton in England; the value on the spot at Hull being now given as £8 7s. 6d. per ton; the value of soya oil on the spot, crushed, is £24 10s., and extracted, £23 15s. per ton, and of Soya oilcake, £6 15s. per ton."

Note: This is the earliest English-language document seen that uses the term "oilcake" or "Soya oilcake" to refer to ground, defatted soybeans. Address: Trades Commissioner, South Africa.

2119. Cooper, Lenna Frances. 1914. *The new cookery: A book of recipes, most of which are in use at the Battle Creek Sanitarium*. 2nd ed., revised. Battle Creek, Michigan: The Good Health Publishing Co. [10] + 301 p. Illust. (10 photos). 20 cm.

• **Summary:** Soy is mentioned only once in this book, in the recipe titled "Nut sausage" (p. 89); this exact same recipe was on page 87 of the 1913 1st ed.

Note: This book contains a few more pages than the 1913 edition; 5 more pages of unnumbered front matter and 3 more pages of text. The title page is identical except that the words "Second edition—Revised" have been added. The index starts on p. 291, is more than 1 page longer, and ends near the bottom of p. 301. The ads at the rear are generally on different pages; some have been added and others deleted. Lenna F. Cooper was born in 1884. Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium.

2120. Council of Jewish Women. 1914. *The neighborhood cook book: Compiled under the auspices of the Portland section in 1912*. 2nd ed. Portland, Oregon: Council of Jewish Women. 329 p. Index. 20 cm.

• **Summary:** This book contains 35 recipes in which Worcestershire sauce is used as an ingredient: The first 10 are: Chicken or goose livers (p. 12). Crab cocktail (p. 13). Okra gumbo soup (p. 49). Artichoke poulette (p. 56). Artichokes with veal (p. 56). Chicken a la King (p. 61). Tomato sauce (p. 63). Saddle bags a la Rothchild / Rothschild ("Slit a pocket in a large tenderloin steak, fill it with oysters (small ones) which have been seasoned with salt, pepper and catsup or a little Worcestershire sauce; boil or bake...", p. 67). Sweetbreads a la Newburg (p. 68). Crab a la San Francisco (p. 78). On p. 33 is a recipe for Gluten bread.

The recipe for Tomato Soy (p. 293) is interesting because soy is not used as an ingredient and the word "soy" is not mentioned in the body of the recipe. It states: "One dozen large ripe tomatoes, two large onions, four green or red peppers, one tablespoon salt, ground spices to taste, two cups vinegar, one teacup sugar. Chop vegetables fine, cook slowly until rather thick, bottle air tight."

On page 42 of this book is a half-page ad for "Albers Bros. Milling Co." They make "Albers Rolled Oats" and "Albers Flapjack Flour" for breakfast and desserts. No address is given. Note: Albers was a pioneer U.S. soybean processor.

"The Council of Jewish Women, now called the National Council of Jewish Women, was founded in 1893 by Hannah G. Solomon of Chicago [Illinois]. Solomon had been asked to encourage and organize the participation of Jewish Women in the Chicago World Parliament of Religions, but when she discovered that the women would be serving only as hostesses and pouring coffee she and other women

quickly withdrew from the fair. She then organized a Jewish Women's Congress which met at the time of the Parliament. During the Congress meeting, the Council of Jewish Women was established. Solomon served as the president of the council from 1893 until 1905. The Council of Jewish Women has a long history of community service. In the early years of the organization, the group was involved in the settlement house movement and worked with Jane Addams' Hull House" (MSU biography). Address: Portland, Oregon.

2121. Fujimoto, Taizo. 1914. The nightside of Japan. London: T. Werner Laurie, Ltd.; Philadelphia: Lippincott. xii + 233 p. Plus 40 p. plates on unnumbered pages. Illust. No index. 21 cm.

• **Summary:** "Howling of a 'oinarisan' pedlar [peddler] (oinarisan is a kind of sushi, and its pickled rice is wrapped with a piece of fried bean-curd flavoured with sugar and soy [sauce]) and flute of a Chinese buckwheat seller are faintly heard in a distant street" (p. 39).

"To classify the labourers who are staying in these lowest lodging-houses, according to the kinds of their work or business, one half of them are stall-keepers who sell... amé (wheat gluten),... *shiruko* (a dish made of rice cake [mochi] and sugared beans), *inarisushi* (another name of *oinarisan*, which is a mass of pickled rice wrapped up with a piece of fried bean curd),..." (p. 44-45).

Note: This is the earliest English-language document seen (May 2012) that contains the word *inarisushi* (one word without hyphenation).

"Consequently, every night till midnight the streets in the vicinity of these lowest inns are full of small shops and stalls of cheap food and drinks, awaiting the customers from those *kichinyado*. Stalls of hot wine and *oden*, *inarisushi*, *shiruko*, *mochi* (rice-cake), *tsukeyaki pan* (pieces of bread toasted and flavoured with soy [sauce]),..." (p. 47). Note: Mochi is also mentioned on pages 172, 173, and 202.

"In this book you read often of stalls of *odenya*, but the Marugin is a large house situated at the cross-roads of Sudachô, and though it belongs to the eating-houses of the lowest class, it may probably be the first and largest *odenya* in Tokyo. The room, lighted with electric lights, is furnished with tables and chairs, in place of mats and futon, very common in the shops of the lower rank. Oden is, as previously explained, a special kind of food boiled down with soy, its chief materials consisting of fish, bean-curd, konnyaku, and taro" (p. 63-64).

"You often find little boys of nine or ten years at the temple, and their true object of the visit seems not to be prayer to the temple, but they are ambitious to taste the sweet *amazake* (hot beverage made of fermented yeast [sic]), which the temple entertains to the visitors" (p. 153).

2122. Garner, W. E. 1914. Reliable recipes for many Chinese dishes. Long Branch, New Jersey: F.M. Taylor. 10 p. 22 x 15

cm.

• **Summary:** This booklet has ten recipes written in narrative form. The recipe for Plain Chop Suey calls for "a dessert spoonful Queow (thick black sweet sauce similar to New Orleans molasses), a dessert spoonful Seow (thin black salty sauce similar to Worcestershire sauce), a few drops of Miow (an oil something like peanut oil), all of which can be purchased at a Chinese grocery store, and without which you cannot make any Chinese dish." Address: USA.

2123. Hashimoto (E.D.) Co. 1914. Hashimoto Shokai (Ad). In: Nichibei Shinbun-sha. 1914. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 10]. Unnumbered page before last block of ads. [Eng; jap]

• **Summary:** Ad (full page). Only two lines in the text of this ad are in English: The company name and address. This Japanese company imports many food items, including miso and shoyu. A large photo shows the front of the company, with two delivery wagons parked in front. The company name is also written in English (Roman letters) on one sign above the shop and on another on the side of one wagon.

Address: 163-165 N.S. Temple St., Salt Lake City, Utah.
Phone: Was. 3442.

2124. Koenig, Franz Joseph. ed. 1914. *Chemie der menschlichen Nahrungs- und Genussmittel*. Vol 3. *Untersuchung von Nahrungs-, Genussmitteln und Gebrauchsgegenständen*. II. Teil. Die tierischen und pflanzlichen Nahrungsmittel... Ed. 4 [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 3. Investigation of foods, food adjuncts (stimulants / enjoyables), and kitchen utensils. Part II. Animal and plant foods... 4th ed.]. Berlin: Verlag von Julius Springer. xxxv + 972 p. See p. 488-89, 610. Illust. Index. 25 cm. [Ger]

• **Summary:** The section on commercial sauces (p. 149) mentions Japanese and Chinese soy sauce (*Soya oder Shoja oder Soja oder Soja* {auch das japanische Shoyuugt [Shoyu]}). The section on plant cheeses (*Pflanzenkäse*, p. 331) mentions those made from soybeans, including natto, tofu (Japan), and tao-hu (China). In Africa the seeds of *Parkia africana* are used to make products such as “Daua-Daua” of “Afiti” whose composition is similar to those made from soybeans. A table gives the composition of Daua-Daua cheese (*Daua-Daua Käse*) and *Parkia* seeds as reported by H. Fincke (1907).

The section on legumes (p. 488-89) discusses soybeans, which are best known in the form of products such as “Indian soy sauce” (*India Soja*, p. 149) or Tofu (p. 331). Recently, defatted soybean press-cake has been introduced as a feed for cattle.

The section on “Microscopic investigations of flours and starches” (p. 609-10) gives details and five cross-sectional illustrations of soybean tissue and cells. The first two, based on A.L. Winton, show: (1) A general cross section (source: Winton 1906, p. 248). 2. Surface of the cotyledons (epidermis), with palisade cells and aleurone cells. The last three, based on A. Scholl, show: (1) A tangential section. (2). Palisade cells. 3. Parenchyma under *Traegerzellen*. Address: Geh. Reg.-Rat, o. Prof. an der Kgl. Westfaelischen Wilhelms Universitaet und Vorsteher der Landw. Versuchsstation Muenster in Westphalia, Germany.

2125. Maddocks, Mildred; Wiley, Harvey Washington. 1914. *The pure food cook book: The Good Housekeeping recipes. Just how to buy—Just how to cook*. New York, NY: Hearst's International Library Co. vii + [2] + 417 p. Illust. 20 cm. Reprinted in 1915.

• **Summary:** Edited by Mildred Maddocks, with an introduction and notes on food and food values by Harvey W. Wiley, M.D. Contains over 70 black and white photos. In his introduction, Wiley praises the cooking of French peasants, bemoans the fact the young American women spend years learning how to play the piano instead of the principles of nutrition and how to cook simple, nutritious dishes. He advocates Graham flour or “entire wheat flour.”

Worcestershire sauce is called for as an ingredient in the following recipes: Crab rabbit (p. 162). English cottage pie (p. 218). Liver with bechamel sauce (p. 228-29). Jellied chicken and egg salad (p. 267). Mock beef a la mode (p. 331; made mostly with squash, onions, and carrots).

Concerning vegetarianism: A recipe for “Vegetarian rice” is given (p. 101-02).

In the chapter titled “Meat,” by Harvey W. Wiley, M.D., we read (p. 185): The number of animals in the U.S. is not keeping pace with population growth. “The natural result of this, aside from manipulation on the markets, is an increasing demand and a decreasing supply. This has worked out at the present time into a condition in which the price of meats is higher to the consumer than ever before. This, however, does not affect in any way the value of meat as a food. With all due deference to our vegetarian friends, whose opinions I respect, I am fully convinced that man is an omnivorous animal. He makes a mistake when he confines his diet to any one particular form of food. Man can thrive quite well, however, on a vegetable diet. Perhaps this should be modified by saying on what is generally called ‘a vegetable diet’ because the vegetarian as a rule eats eggs, drinks milk, and uses butter, all of which are animal products. The lean or muscular part of meat is essentially a tissue builder, while the fat is a heat and energy former.”

Surprisingly the recipes for dried beans are in the chapter titled “How to cook vegetables,” which is mostly about fresh vegetables but includes recipes for Baked lentils, Lentil and mushroom cutlets, Baked lentils and cheese, Red kidney beans with cheese in chafing dish, Roast nut and barley loaf (p. 316-23), Black bean soup, Mock beef a la mode (featuring Hubbard squash), and Mock pork (featuring white summer squash) (p. 330-33). Soy is not mentioned. “In general, vegetables need long, slow cooking” (p. 317). Address: 1. Assoc. Editor of *Good Housekeeping Magazine*. Editor of the *Family Cook Book*, *Every Day Dishes*, *Brosia Meal Cook Book*; (2) M.D.

2126. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1914. *Nichi-Bei nenkan* [Japanese-American yearbook. No. 10]. 650 Ellis St., San Francisco, California. 693 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: *Nikkei Imin Shiryôshû*. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 14 parts, each numbered separately. Contents: (1) Front matter (incl. how this book was created) (5 p.). (2) Table of contents, general (4 p.). (3) Table of contents, ads (4 p.). (4) Photos (black and white on 15 unnumbered pages). (5) Maps and charts on 3 unnumbered pages. (6) Advertisements (A-1 to A-16). (7)

Front part (p. 1-165), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (8) Ads (p. 1-13). (9) Back part (p. 1-136). (10) Ads (p. 1-66). Appendixes: (11) Table of contents for directory of places where Japanese live in America, by state, and within each state by city: In Japanese (2 p.). In English (2 p.). (12) Directory of Japanese living in America, interspersed with ads (p. 1-228). (13) Ads (2 p. + p. 1-50). (14) Copyright page.

In the front part: There is no import duty / tax on soybean oil. The value of the total amount imported was \$733,937 (p. 87). There is also no import tax on soybeans (written “sooyabinzu” in katakana for the first time in these Yearbooks) (p. 87). The total value of soybeans imported to San Francisco was \$27,867 (p. 91). There is (again) no tax on soy oil (written Soyamame Abura, in kanji). The total value of soy oil imported to Portland, Oregon was \$13,692. No tax on soy sauce pickled imported to Portland, Oregon, worth \$10,353 (p. 94).

A table (p. 97) shows the Japanese population in the USA for most years from 1860 (6 people) to 1913. For recent years: 1907–89,573. 1908–103,683 (peak). 1909–98,715. 1910–91,958. 1911–93,359. 1912–93,751. 1913–95,843.

A table (p. 98) shows Japanese population in the USA in the 8 states with the highest populations: California, Washington state, Oregon, Colorado, New York, Utah, Montana, Wyoming.

A table (p. 102) shows the number of tofu shops in the USA: Total 48. Owners 48. Workers 7. This research was conducted by Nihonsha (“Japanese Company”).

A table (p. 103) shows the total population of California from 1850 to 1919 (projected) and percentage increase during each decade: 1850–92,957 (-). 1860–379,994 (310% increase). 1870–560,247 (47%). 1880–864,694 (54%). 1890–1,213,398 (40%). 1900–1,485,053 (22%). 1919–2,377,540 (60%–projected).

Individual lines in various tables (p. 127-163) show tofu, miso and shoyu makers in the United States by state, and within California by city. There are 7 columns: Location, total no. of shops, no. of owners, investment (\$), sales (\$/year), workers, salary (\$/year). The number of tofu makers by state is: California 34. Utah (Ogden) 1. Colorado (Denver) 2. New York City 1. Oregon 1. Washington 9. There is also 1 miso maker in Los Angeles and 1 shoyu maker in Oregon. Columns 1-2 are filled out for all entries, columns 3-4 for all California entries, and columns 5-6 for about half the California entries. Note: The information on this page is not identical to that in the directory. For example, for Utah, the directory shows 3 tofu shops in Salt Lake City and one in Ogden.

A table (p. 155) shows Japanese population in the top 8 East Coast states in 1913. There are 4 columns: State, males, females, and total. The totals are (in descending order of population): New York: 2,209. New Jersey

277. Massachusetts 230. Pennsylvania 223. Florida 89. Washington, DC 54. Rhode Island 41. Maryland 29. Five other states except Vermont 89. Grand total 3,275 Japanese, including 3,108 males (95% of total) and 167 females.

Tariff (import duty) reduction on soybeans, from the old rate of \$0.45 per bushel to \$0.13 per bushel in 1913 (p. 27). Tariff reduction on Manchurian soybeans, from the old rate of \$0.45 per bushel to no tax in 1913 (p. 28).

The Directory shows Japanese companies making soyfoods in California, Utah, Colorado, Oregon. Address: San Francisco, California.

2127. Takenob, Y. 1914. Japan year book. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 740 p. See p. 334, 400, 433-34, 439-40, 442, 689, 692, 705, 718. [Eng]

• **Summary:** This annual book was first published in 1905. Facing the Preface is a table of Japanese weights, measures and moneys. In chapter 16, “Agriculture” (p. 337-57) is a table titled “Beans, sweet potato and potato (p. 345) which gives “Soy bean” production data in Japan for 1908-1912 (in *koku*). The next paragraph contains information on soy [sauce], *miso*, and *tofu* similar to that in the 1913 year book.

In chapter 20, “Industry,” is a table on soy [sauce] production in Japan from 1908-1911, and a paragraph (p. 400) on the patented Suzuki process for brewing soy [sauce].

In Chapter 22, “Trade” is a table (p. 433-34) titled “Prices of principal commodities in Japan,” which includes prices for 1907-1912 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In Chapter 23, “Foreign trade” is a table (p. 439) titled “Imports” (in 1,000 yen). Under the heading “Staples articles of over yen 1,000,000” (p. 438) is given the value of soja bean imports for 1911-1913. In a table titled “Soja bean” (p. 442), under the heading “Staple exports and destinations (in 1,000 yen)” (p. 440) is given the value of soja bean exports to China, Kwantung, India, and other places for 1911-1913.

In chapter 35, “Chosen (Korea),” under the heading “Agriculture” (p. 691) is a paragraph (p. 692) titled “Barley and soja bean,” which gives acreage and yield for soja (year not specified) with the value (in yen) of exports to Japan in 1912.

In Chapter 36, “Taiwan (Formosa),” under the heading “Agriculture,” a table (p. 705) titled “Agricultural products” has production data on “Beans and peas” (in 1,000 *koku*) for 1911-1912.

In Chapter 38, “South Manchuria,” is a paragraph (p. 718) titled “The soya bean” which has information on South Manchuria’s soya bean yield, [soya] bean-cake output, amount exported for specific years, and production of various milling centres.

In the advertisements at the rear (p. xiii) is a full page ad for Higeta Shoyu, showing many medals: “Patronized by the Imperial Household. Trade mark. The celebrated Japanese

sauce. Established in 1616. Manufactured by G. Tanaka, Chioshi [Choshi], Chiba-ken, Japan.” Address: Prof. at Waseda Univ. and Late of the *Japan Times*, Japan.

2128. Terry, Thomas Philip. 1914. *Terry’s Japanese empire: Including Korea and Formosa, with chapters on Manchuria...* A guidebook for travelers. Boston and New York: Houghton Mifflin Co.; London: Constable & Co., Ltd.; Tokyo: Kyo-Bun-Kwan, Ginza, Shichome. cclxxxiii + 799 p. See p. 515. Maps. Index. 16 cm. [75 ref]

• **Summary:** This guidebook, after its 283-page introduction, is organized geographically into: 1. Central Japan. 2. Northern Japan. 3. Yezo, the Kuriles, and Saghalien. 4. Western Japan. 5. Kyushu and the Loochoo and Goto islands. 6. Korea, Manchuria, and the Trans-Siberian Railway. 7. Formosa (Taiwan) and the Pescadores. Abbreviations (p. ix). List of maps (13).

In the Introduction: Japanese inns (p. xxxvi, xxxix-xl): The best food is not always to be had in the most pretentious places. In certain modest inns, where the rooms are as bare as a monk’s cell, and the general appearance of austerity might argue a strict economy, there will often come, as an agreeable surprise, dainty food served in dishes that delight the lover of beautiful porcelain or lacquer. Later the traveler may learn that the place enjoys fame for some savory specialty—eels boiled in soy, broiled crayfish, stewed octopus, buckwheat-macaroni, or the like.”

“Food is served in the guest’s room on a lacquered tray... One of the soups may be made of... lobster, or seaweed, in which case it is amazingly thin and unpalatable; the other of beans [miso], bean curd or something of that nature. Salt is not provided unless asked for. Many of the dishes are cooked in soy; a tiny dish of which is supplied for dipping bits into before eating them.”

Japanese food (p. xliii-xlvii): “Rice is a luxury with thousands of the peasants; it takes the place of bread with the well-conditioned; and wherever it is eaten to the exclusion of other foods it produces (because the thin phosphorous skin is polished off it) the prevalent beriberi. The proportion of animal food is small. Beans eaten in a variety of ways occupy a conspicuous place in the food of all classes and they supply the nitrogenous matter essential to those who rarely eat meat and who do not get the casein obtained by cheese-eating peoples. The soy-bean (*daizu*; *omame*) ranks first in extent, variety of use, and value among the pulse of Japan, and in point of nutriment is quite near to meat. It contains nearly two fifths of its weight in legumin, nearly one sixth in fat, and is rich in nitrogen. It is to the Nipponese what frijoles are to Mexicans and garbanzos (chick-peas) to Spaniards. Of the numerous varieties some are made into curd [tofu], and into the widely celebrated bean-sauce (the Worcestershire of Asia) called shoyu (sho, soy; yu, oil), and which is almost as indispensable as rice. It forms the daily relish of the rich man and the beggar, and is in as general use

as tea and tobacco.”

Fish (sakana)... Teriyaki: Fish in a sauce of soy, mirin, and sugar... Sashimi: raw fish cut in thin slices and eaten after being dipped in shoyu.—Kabayaki: fish which is first steamed then dipped into soy and roasted (or eels cut open on the dorsal line, covered with soy mixed with sugar, and roasted). The latter dish, usually called Unagi-no-kabayaki, is a favorite with the Japanese,...

“Rice:... Azuki-meshi: rice and red pea-beans mixed (boiled).—Mochi: small dough-cakes made of rice and sold throughout Japan.—Sushi: a general name for food of boiled rice and fish, eggs, vegetables, etc., seasoned with vinegar and soy...—Inari-zushi: fried tofu stuffed with chirashi-zushi.

Note: This is the earliest English-language document seen (May 2012) that contains the word *Inari-zushi*.

—Maki-zushi: boiled rice and other vegetables rolled and wrapped in a sheet of the sea weed called Asakusa-nori...—Kombu-zushi: fish seasoned with vinegar and wrapped in a piece of the edible seaweed known as *Laminaria japonica*. A differentiation of this popular food is the Kombumaki: baked or roasted fish wrapped in kombu, then tied, and boiled in sugar and soy.

Various:... Tsukudani: small fish boiled in soy and used as a relish or condiment (named for Tsukudajima, a place in Tokyo famous for its preparation).—Oden: a stew (greatly enjoyed by the proletariat) of fried bean-curd, lotus-roots, potatoes, etc.” Ame and midzu ame.

“Soup (shiru): Tōfu-jiru: bean-curd soup.—Miso-shiru: bean-soup with vegetables.”

Railways—Dining cars (p. lxxxiv): Discusses “The unique and not unpalatable bento,—a sort of national sandwich,—put up (usually cold) in thin, flat, twin boxes (bento-bako) of dainty white wood (1 in. high, 5-7 in. long), along with a paper napkin (kuchifuki) and a pair of chopsticks (hashi), and sold at many stations, is distinctively Japanese and widely popular... Besides the full box of plain boiled rice, the ordinary (15 sen) bento contains usually... a few boiled black beans (nimame)... seaweed (kobo)...” Rice cakes (mochi) with the kernel of yokan, or sweet [azuki] bean paste, which usually forms their center.

Buddhism (cxc): Again the rice-flour cake [mochi] is offered at the domestic altar. It now takes the form of a lotus-petal with capsule of [azuki] bean-paste.” (an).

Yokohama (p. 13): “The return gifts from the emperor and princes included...jars of soy [sauce]; coral and silver ornaments;...”

Tokyo (p. 199): “The hill beyond the intersecting roadway is called Suribachi-yama because of the similarity in shape to a suribachi—an earthenware vessel in which bean-soup [miso soup] is prepared.”

Nikko—Shops: “... the kuri-yokan (so-called from the chestnuts mixed with the sweetened bean-paste [azuki]) is good and cheap (10 sen).”

Kyoto—The Shinto Shrine of Inari. There are many local

festivals, the most important of which is the Inari-matsuri which usually falls on June 5. There are trick riders on horseback and decorated sacred cars [carts] are “placed in the procession, and the day is devoted to general jollity—and pocket-picking. On this occasion the people eat Inari-zushi, or fried tofu stuffed with boiled rice, since tofu [fried, as aburage] is the favorite food of the fox popularly believed to be the messenger of Inari (and by extension, the God of Rice).”

Kyoto—Miidera (p. 504-05): Travelers visit Benkei’s Iron Pot (*Benkei-no-shiru nabe*), a very old, rusted, and broken contraption (about 5 ft. wide and 3 deep) resembling a soap-boiler, and from which Yoshitsune’s devoted servitor (and popular hero) is supposed to have eaten his bean-soup [miso soup]—which may well be doubted.”

Kyoto to Koya-San (p. 515): For the Western traveler there is “a tiny kitchen a blessed refuge wherein, if he is making a prolonged stay, he may cook his un-Christian food without the vegetarian priests knowing (or caring) that such a sacrilege is being committed! Meals are served in one’s apartment; the food is purely vegetable, and after the second day distressfully unpalatable. Fish, flesh, fowl, butter, cheese, eggs, milk, bread, coffee, and other necessities of life are absent, and are replaced by seaweed, greens, bamboo-shoots, cabbage, daikon in various unappetizing forms, and other garden-truck which one eats as a novelty the first meal and rejects with an involuntary tightening of the throat when it is offered at the second and third. In addition there are flabby mushrooms boiled in very thin water without seasoning; the omnipresent boiled rice without sugar, milk, or salt; a bean-curd (tofu) for which one acquires a liking only after much patient effort; a yellow substance (known as yuba) made of the skin of bean-curd, and looking and tasting like thin sheet rubber;...”

Kobe excursion—The Tansan Hotel (p. 630): The strawberries and other ground fruits and vegetables, which grow nearly all the time in this favored spot, are enriched with [soy] bean-cake only [no human excrement is used] (as a precaution against typhoid).”

Korea (p. 725): “Among the dishes dear to the native heart are pounded capsicum, bean curd [tofu], various sauces of abominable odors, a species of sour kraut (kimshi [kimchi]), seaweed, salt fish, and salted seaweed fried in batter.”

Manchuria and the Trans-Siberian Railway (p. 756): “Considerable [soy] bean-cake and furs, and vast quantities of lumber, etc., come down the river from upper Manchuria and Siberia.”

Also discusses edible seaweed (p. xlv, 330): Japanese food: “Seaweed in almost endless variety enters largely into foodstuffs. Not only are the giants of the marine flora taken up and utilized in various ways, but also the more delicate red and green sorts—the use of which has been adopted by other nations. Most of the edible green and red algae bear

the generic term nori, while the words *umi-kusa*, or *kai-so* (which also means *bêche-de-mer*), are used for algae in general. Many of the weeds are eaten fresh, others in soup. Some are dried or pickled and eaten in vinegar. They usually appear in commerce in the form of little packages, to the sale of which special stores are dedicated. Certain varieties are converted into jelly.”

Yezo—fisheries: “Certain of the many varieties of edible seaweed which flourish along the Japanese coast are found in Yezo, particularly the circumpolar tangle (*Laminaria*) and seawracks (*Fucus* species), which prefer cold water and a heavy surf. For this reason sea-algae add considerably to the value of the Yezo exports.”

Note: The author resided for almost 12 years in Japan and made repeated journeys on foot (and otherwise) from one end of the country to the other. Address: F.R.G.S. [Fellow of the Royal Geographical Society, England].

2129. Thompstone, E.; Sawyer, A.M. 1914. The peas and beans of Burma. *Burma Department of Agriculture, Bulletin* No. 12. 107 p. See p. 22-26. [Eng]

• **Summary:** Contents: Names and description of the plant: Leaves, pods, seeds (yellow or black). Varieties (based on seed color, size, and shape): Yellow (3 races), greenish-yellow to yellow, dull brownish gray to olive brown shading to black around the hilum. Notes.

Tables shows that each of the soybean varieties and races has one or more local names in different parts of Burma: Local names of the yellow soybean are: Hto-khyan-pè, pè-ngapi, san-to-tep, be-hrum, pe-hlum, beir-kan, pè-bôk-san, hsan-to-nouk, to-nouk, pè-bi-zat (probably a misnomer generally applied to *Dolichos biflorus*), lazi-shaprè-tum, lasi n’loi, lasi n’hti, hto-laung, pè-ngapi. Local names of the greenish yellow variety are pè-ngapi, pè-kyat-pin, pè-bouk-si, and pè-bouk. The local name of the dull brownish gray to olive variety (which grows only in Maungoli/Kachin Hills) is ngasee.

“The Soy Bean is not extensively grown in Burma though its distribution is wide. It is more frequently sown as a subordinate crop than alone. A little is often scattered along with other peas and beans, chiefly along the banks of rivers and streams or on islands after the floods subside. In Sagaing District it is frequently grown on paddy nurseries after the young plants have been removed. In Myingyan, Minbu, Pakôkku, Lower Chindwin and Bhamo districts, it is also sown away from the rivers on high sandy soils. Sowing generally takes place about October and the crop is ripe by about February. In Kônmaht (Bhamo District) two crops are sometimes grown—a rainy season crop sown about August and reaped about November and a cold weather crop sown in November and reaped in February... Very little care is bestowed upon its cultivation; the seed is scattered at the rate of 1/8 to ¼ basket per acre after which very little attention is given to the crop. The yield is poor and varies from 4 to 12

baskets per acre.

“Pè-ngapi is issued for a variety of purposes. After being steeped in water, fermented and cured it is used under the name of ‘Kyányo,’ ‘pè-bouk-yè,’ or ‘pè-ngan-byá-yè’ as a sauce for flavouring food and takes the place of ‘ngapi’ (Burmese rotted fish) where the latter cannot be easily obtained. For this purpose, considerable quantities of the bean are utilized in the plains and the product carried to other parts, particularly to the Northern Shan States. A similar product is made by Chinamen in parts of Mandalay, but for this purpose the Manchurian Bean is frequently imported.”

A detailed description is given of the process used by Chinese for making soy sauce in Burma. Wheat flour is mixed with the beans before the mixture is spread on bamboo matting to dry and become koji. The fermentation takes place in earthenware vessels outdoors, often for as long as one year. “When fermentation has proceeded far enough, which is ascertained by tasting, the dark reddish-brown liquid is decanted off, bottled and sold. The residue is made into small flat cakes called ‘pé-bôk’ which are used for flavouring curries and soups. The whole beans are also said to be made into similar cakes, also called ‘pébôk,’ by the Shans of the Northern Shan States for sale to caravans, and it is further stated that one small cake is sufficient for a meal.

“Attempts have been made to introduce foreign Soy beans into Burma but with no success. Although they will grow, a profitable yield cannot be obtained and the oil-content rapidly decreases. The Chinese who import the bean from China state that the climate of Burma is not suitable for the production of Soy beans of good quality; hence they are forced to import them at a cost of somewhere about Rs. 20 per bag of three baskets (Burmese).” Address: 1. B.Sc., Deputy Director of Agriculture, Burma; 2. Asst. Agricultural Botanist, Burma.

2130. Togano, Meiji-ro. 1914. *Saishin shôyu jôzô-ron* [Principles of modern shoyu brewing]. Tokyo: Otani Shoten. 1040 p. Illust. 23 cm. [Jap; eng+]*

• **Summary:** This book is the same as the 1913 edition, except that the publisher is now Otani Shoten.

2131. Winkler, Gustav. 1914. *Die Sojabohne: Aus einem Vortrage... gehalten in der Hauptversammlung der Gartenbau-Gesellschaft Frankfurt a.M. am 17. April 1914* [The soybean: From a lecture... presented at the main meeting of the Gardening Society of Frankfurt am Main, on 17 April 1914]. Frankfurt am Main: Fr. Honsack & Co. 30 p. 22 cm. On title page: Als Manuskript gedruckt (Printed as a manuscript). [3 ref. Ger]

• **Summary:** On the gray cover: *Die Sojabohne der Mandschurei* [The soybean of Manchuria]. Contents: Introduction. Sir Alexander Hosie, in his books about Manchuria, counts eight types of soybeans: Yellow soybeans (3 varieties), green soybeans (2 varieties), and

black soybeans (3 varieties). The soybean plant. Condition / nature of the soil and the climate. Cultivation of soybeans. Soybeans can enrich the soil with nitrogen. Yield.

Utilization of the soybean: 1. In East-Asia. A. As foods: 1. Soy sauce. 2. The Chinese paste *Chiang* and its near relative Japanese miso. 3. Tou-fu or tofu (incl. firm tofu, tofu curds, tou-fu p'i or yuba, ch'ien-chang or pressed tofu, tung tou-fu or frozen tofu). B. Soybean meal or flour. C. Soybean meal for use as fertilizer or animal feed. D. Soybean oil. E. Lard substitute and margarine. F. Industrial uses such as lubricant and waterproofing agent. Soybean meal. 2. In Europe and the USA. Refined soybean oil used for salad oil, margarine. Utilization of soybean cake in Europe. Utilization of soybean oil in Europe (for making soap, above all). The soybean oil and cake industry in Manchuria.

This booklet begins: A year ago today I had the opportunity to speak about the soybean for the first time. What we knew and understood about it then was still very little. Except within botanical circles, even its name was completely unknown, even though in East Asia (China, Japan, India), for more than 1,000 years, the soybean has been cultivated and is near rice as the main food for more than 500 million people.

Note: Part of this lecture was based the following English-language article, translated into German by Werner Winkler (Gustav's son) in 1913: Shaw, Norman. 1911. “The soya bean of Manchuria.” *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series No. 31.* 32 p. Address: Mainkur-Fechenheim [Frankfurt am Main, Germany].

2132. Eddington, Jane. 1915. The Tribune Cook Book: Chop suey. *Chicago Daily Tribune*. Jan. 11. p. 10.

• **Summary:** “English Worcestershire sauce has probably been made for a century at least. Its basis is the shoyu sauce, a very dark, sweetish sauce made in China and Japan of the soya bean. This bean is not well known and is only imported to serve with chop suey.” There follows a recipe for Pork chop suey, which includes “two or three tablespoons of shoyu sauce.”

2133. *New York Times*. 1915. Latest customs rulings. Jan. 12. p. 14.

• **Summary:** “C.S. Bush & Co., Los Angeles [California] and other Pacific ports, were sustained in a claim that Japanese shoyu is an unenumerated article within the meaning of that term as used in the Tariff acts of 1909 and 1913... The action of Collector in assessing the shoyu at higher rates was reversed.”

2134. *USDA Bureau of Plant Industry, Inventory*. 1915. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from October 1 to December 31, 1912. Nos. 54426 to 54676. No. 33. 60 p. Jan. 23.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Moench.)

Note: This is the earliest document seen (Aug. 2011) in which the scientific name of the soybean is given as “*Soja max* (L.) Piper.” This indicates that the name “*Soja max* (L.)” was first given by Dr. Charles V. Piper of the USDA. This name continued to be used in this publication and by the USDA Bureau of Plant Introduction until at least June 1940 (Inventory No. 126, p. 18).

“34643-34654. From Kyoto [Kyoto], Japan. Presented by Miss E.R. Scidmore, Seoul, Chosen (Korea). Received November 29, 1912. Quoted notes by Miss Scidmore:

“34645. The soy bean has been listed in previous inventories as *Glycine hispida* Moench. Mr. C.V. Piper has recently shown (Journ. Amer. Soc. Agron., vol. 6, p. 75-84, 1914) that the earliest name given by Linnæus to this plant was *Phaseolus max*, that the generic name should be *Soja*, and that the correct name is therefore *Soja max* (L.) Piper.

“‘*Kuro* [meaning “black” in Japanese]. Used for making sweet paste, but more usually boiled with a pinch of salt and a pinch of sugar added when the water is poured off or shoyu poured on and kept hot until saturated. Served as a relish or accompaniment to each meal and always found in lunch boxes sold at railway stations.’

“34654. ‘*Shiroy daiozu* [*daizu*] [meaning “white soybean” in Japanese]. Used for making tofu or bean curd.’

“34700/34702. From Shantung Province, China. Grown by Dr. William R. Faries, Coachella, Cal. [California]. Received December 17, 1912. Quoted notes by Dr. Faries:

“34702. ‘The yellow bean with the hairy pods (soya) I sent to the department in December, 1894, I think, from Pacific Grove, California, as ‘Manchuria beans,’ and they were sent to Maine station. This would result in failure, I think. They did not do well in Orange County, California, but grow well here. They are fine for green shelled beans.’”

Note 2. This is the earliest English-language document seen (June 2009) that uses the term “green shelled beans” to refer to shelled green vegetable soybeans. Address: Washington, DC.

2135. Kinoshita, Asakichi. 1915. Nidan shikomi shōyu jōzō-hō yobi shiken no seiseki hōkoku [The double brewing of shoyu]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 55. p. 165-76. Jan. [Jap]
Address: Jozo Shikensho, Gishi.

2136. Togano, Meiji. 1915. Shōyu, miso, tamari sokuji-hō [The quick process for brewing shoyu, miso or tamari]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 55. p. 121-51. Jan. [Jap]
Address: Jozo Shikensho, Gishi.

2137. Fruwirth, C. 1915. Die Sojabohne [Soybeans]. *Fuehlings Landwirtschaftliche Zeitung* 64(3/4):65-96. Feb. 1

and 15. [65 ref. Ger]

• **Summary:** Contents: Introduction (work in East Asia and Europe from 1905-10). History. Botanical aspects. Varieties. Breeding. Needs of the plant (incl. “heat units,” *Wärmesumme*). Utilization (incl. in German *Tofu*, *Miso*, *Chiang*, *Schoyu* or *Sojatunke* (shoyu, p. 83), *Natto*, *vegetabilische Milch* (soymilk), soy sprouts). Measures and precautions in cultivating soybeans (incl. yields). The soybean as a crop in central Europe. Conclusion.

Note 1. On p. 83 the term “Sojas” is used to refer to soybeans

Note 2. This is the earliest German-language document seen (April 2012) that uses the term *Sojatunke* to refer to soy sauce.

In 1905 the Japanese made the first attempt to import soybeans from Manchuria to Europe, but it failed because they did not arrive in good condition. The repetition of the attempt in 1908, however, gave good results. Then imports of soybeans grew, followed by imports of soybean cake (*Sojabohnenkuchen*). Major importers today are England, France, Germany, Denmark, Italy, Belgium, Netherlands, Sweden. The high import duty hinders imports to Austria-Hungary.

Toward the end of the 1800s in Russia, Owinsky took early-ripening soybean varieties from China and Japan and requested the expansion of soybean cultivation. In 1899 in Kiev, Owinsky wrote the name of the soybean as *Soja hispida praecox* (p. 67). Owinsky in Derajne [Derazhne?] grew Podolie soybeans (p. 77). Sempolowsky in Derebzin, Russian Poland, also grew soybeans. European Russia gets soybeans overland (probably from Manchuria). Russia was one of the first countries to take an interest in growing soybeans after 1908. Russia now grows large amounts of soybeans in Podolia. In Germany, Prof. Kallo in Wiesbaden was a pioneer who recommended soybeans as an inexpensive food for the people. North America first started to import lots of soybeans as a source of oil because of a bad cottonseed harvest.

“Since the start of my teaching activities, I have had an interest in the soybean plant and have carried on my own investigations.” In 1900 the author received 7 soybean varieties from L.V. Jurdiewicz from Deraznia in Podolia; these had been imported by Owinsky. In 1901 at Hohenheim he began to study the time needed for soybeans to mature; He found it ranged from 141 to 163 days. He continued this research at Hohenheim from 1901 to 1903, getting soybean seed yields of up to 1,560 kg/ha. From 1910 to 1914 he continued at Waldhof-Amstetten, with 5 varieties. The maturity range there was 112-166 days and the yields were up to 1,500 kg/ha (about 23 bushels/acre), but the yields of many varieties were low, about 300 to 500 kg/ha (4.5 to 7.5 bu/acre). Yields of soybean straw, however, were up to 3,600 kg/ha. Fruwirth uses three terms to refer to soybeans: (1) Die Sojabohne; (2) Die Soja; and (3) Sojas, as “Zuechtung von

Sojas” or “Sojas, meist gemahlte.” There are now a proposal to establish a joint stock company for growing soybeans in central Europe (probably in Germany), using big money. But it may not succeed because soybean yields in Germany and Austria are low. Seedsmen who sell soybeans commercially in 1915 include: Haage and Schmidt (Erfurt, Germany), Vilmorin Andrieux (Paris, France), Dammann & Co. (St. Giovanni at Tedaccio, near Naples, Italy), and Wood and Son (Richmond, Virginia, USA). The main soybean varieties sold by each of these companies are described in detail (p. 73-74).

Utilization (p. 82): Since soybeans are rich in protein and fat, they can be used as a good meat substitute. In Europe the use of soybeans for food is still very small. “In Europe, the first foods from soybeans were made in France, at Vallées near Asnieres: Flour, bread, and cakes for diabetics, and cheese. In Germany not long ago the Soyama-Works at Frankfurt am Main likewise began the production of such foods. Similar foods were also made in Romania. Soybeans sprouted in the dark yield a bitter-tasting salad. Production of vegetable milk started in France at ‘Caséo Sojaïne’ at Vallées (Seine); and is now being studied by the Synthetic Milk Syndicate in England. Using the process developed by Fritz Goessel, this Syndicate made 100 liters of soymilk from 10 kg of ground soybeans at a factory at Liverpool.” “It is in no way certain that soybeans will ever be widely used in human foods.”

A fairly large amount of soybeans are ground for use as fodder. The main use is for oil extraction. Yet Haberlandt considered that since the soybean contained only about 18% fat (range: 13-22%), its use as a source of oil would not be economical. The main use of soy oil is in soaps, for which it is highly prized. It is also used in making paints as a partial substitute for linseed oil. The best quality may be used as food. In England soy oil is used for margarine production.

Conclusion: The soybean originated in central Asia and is now widely cultivated in China, Japan, Manchuria, and India. Its seeds are rich in protein and, unlike most other legumes, also rich in fat. The plant is used in its homeland mostly as a source of human foods and seasonings, made by fermentation; the oil is used mostly for industrial non-food purposes. In recent years soybean production has expanded significantly in the southern part of the United States. There it is used mainly as green fodder, hay, silage, and soil building. The main expansion of soybean cultivation in Europe has been in Italy, southern France, Hungary, and southern Russia. Good early varieties give yields of 1,100 to 1,300 kg/ha. A large expansion of soybean production in central Europe is possible only in southern Austria and Hungary, and maybe in a few other places where it is warm. But late-maturing soybeans may be grown for forage and silage in the cooler parts of Germany and Austria. Address: Prof., Dr., Wien (Vienna).

2138. *Times (London)*. 1915. High Court of Justice. Chancery

Division. The recipe for Worcestershire sauce. *Lea and Perrins v. Barnitt*. (Before Mr. Justice Eve). March 6. p. 3, col. 2.

• **Summary:** “The plaintiffs here were Messrs. Lea and Perrins, of Worcester, the manufacturers of Worcestershire sauce, and they claimed an injunction to restrain the defendant from using any recipe from which their sauce was manufactured.”

Mr. Clayton, representing the plaintiff, “said that the defendant, Mr. W.D. Barnitt was the son of an executor of a late partner in the plaintiffs’ firm. From correspondence with the defendant, the plaintiffs were led to believe that he had in his possession, and proposed to make use of, the recipe for the plaintiff’s sauce. This recipe was a valuable trade secret. A writ was issued, and subsequently the defendant denied on affidavit that he had the recipe. The plaintiffs, however, were not satisfied...”

His Lordship, the judge, dismissed the action (case) with costs from the date of the receipt of the affidavit.”

Note 1. The defendant was found not guilty. See also the court case of 26 July 1876 in which another defendant was also found not guilty.

Note 2. The late partner was Mr. Francis Barnitt, who died on 27 Feb. 1911. Address: [England].

2141. Nishimura, Torazō. 1915. Komugi, daizu ni kansuru 2, 3 no kenkyū [Several studies on wheat and soybeans for shoyu brewing]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 58. p. 425-45. March. [Jap]
Address: Jozo Shikensho, Gishi.

2142. Takahashi, Teizō; Yukawa, Matao. 1915. On the budding fungi of “shōyu-moromi” and “shōyu-koji.” *J. of the College of Agriculture, Tokyo Imperial University* 5(3):227-61. March. [10 ref. Eng]

• **Summary:** “Up to now several studies on the budding fungi of ‘shōyu-moromi’ and ‘shōyu-koji’ have been published, but with regard to the botanical classification all these studies have very little merit, as we cannot derive any systematic classification from them.”

The author gathered 52 samples of moromi, aged for 2 to 24 months, from 11 shoyu factories in various parts of Japan. The factories were: 1. Shichirouemon Mogi's shoyu brewery at Noda, Shimousa province. 2. Saheiji Mogi's shoyu brewery at Noda, Shimousa prov. 3. Hamaguchi's shoyu brewery at Choshi, Shimousa prov. 4. G. Tanaka's shoyu brewery at Choshi, Shimousa prov. 5. J. Iwasaki's shoyu brewery at Choshi, Shimousa prov. 6. K. Nakamura's shoyu brewery at Goyu, Owari prov. 7. Asai shoyu brewery at Tatsuno, Harima prov. 8. Maruo shoyu brewery company at Tatsuno, Harima prov. 9. Kikuichi shoyu brewery company at Tatsuno, Harima prov. 10. Tatsuno shoyu brewery company at Tatsuno, Harima prov. 11. Kagawa shoyu brewery experimental station at Shōtoshima, Sanuki prov.

The following budding fungi were isolated from the samples: 1. *Zygosaccharomyces major* [a yeast] nov. spec. 2. *Zygosaccharomyces soja*, nov. spec. 3. *Zygosaccharomyces japonicus*, Saito. 4. *Zygosaccharomyces salsus*, nov. spec. 5. An asporogenic species of *Zygosaccharomyces* (?). 6. Two species of *Mycoderma*. 7. *Pichia alcoholophila*, Kloecker var. 8. Several species of *Torula*. 9. A species of *Monilia* [Note 1. The mold *Monilia sitophila* is used to make onchom in Indonesia].

“General conclusions: The occurrence of *Zygosaccharomyces* in ‘shōyu’-mash furnishes us with a very interesting field for future researches in microbiology. The application of pure cultures of *Zygo. major* and *Zygo. soja* must naturally result in the future improvement of our ‘shōyu.’ The two species of *Zygosaccharomyces* i.e. *japonicus* and *salsus*, and the species of *Torula* and *Monilia* must be regarded as harmful or damaging fungi for ‘shōyu’, but their common property of decolorizing ‘shōyu’ may sometimes be utilized for the preparation of the colorless or ‘shiro-shōyu’, by taking the precaution of lessening the deteriorating effect of the fungus. The *Mycoderma* species in ‘shōyu-koji’ will be more appreciated in future on account of its energetic generation of a pleasant aroma.”

Note 2. This is the earliest document seen (June 1999) that mentions the shoyu yeasts *Zygosaccharomyces major* *Zygosaccharomyces salsus*.

Note 3. This is the earliest English-language document seen (April 2012) that uses the term “shiro-shōyu” [regardless of hyphenation or diacritics] to refer to clear shoyu, which has the lightest color of the five basic types of Japanese shoyu. Actually, the color of shiro-shoyu resembles that of honey. Address: Tokyo, Japan.

2143. Yukawa, Matao. 1915. The fate of tyrosine in “shōyu-moromi”. *J. of the College of Agriculture, Tokyo Imperial University* 5(3):291-99. March. [8 ref. Eng]

• **Summary:** When the proteins from soy beans and wheat are hydrolyzed by enzymes during the ripening process of shoyu moromi, a significant amount of tyrosine and a

number of amino acids are always obtained. “Both tyrosol and tyrosamine were isolated from ‘shōyu’ and ‘Tamari-shōyu’ [Tamari shoyu], whilst p-hydroxyphenyllactic acid was never found in them. ‘Shōyu’ contains more tyrosol and less tyrosamine compared with ‘Tamari-shōyu.’ The occurrence of tyrosol in ‘shōyu’ or ‘Tamari-shōyu’ is partly or entirely due to the decomposition of tyrosine by the budding fungi dwelling in ‘moromi.’ The experimental results, according to which the cultured budding fungi have never produced tyrosamine from tyrosine, led me to presume that tyrosamine in ‘shōyu’ or ‘Tamari’ is certainly produced from tyrosine or its decomposed products formed by *Aspergillus Oryzae* or directly from protein matters by the actions of the same bacteria in ‘moromi.’...”

“In our country ‘shōyu’ or ‘Tamari-shōyu’ are used in cookery as a necessary seasoning on account of their content of amino-acids, carbohydrates, sodium chloride, etc. Moreover, they seem to act as stimulants. The occurrence of tyrosamine in ‘shōyu’ or ‘Tamari-shōyu’ makes me easily recognize this. According to the descriptions of Barger, Dale and Dixon, and Bickel and Pawlow p-hydroxyphenylethylamine (tyrosamine) causes a contraction of the blood vessels and a rising of blood pressure. Judging from the pharmacological significance of this compound, the consumer of ‘shōyu’ or ‘Tamari-shōyu’ receives a moderate stimulation on his blood circulation.”

Note: This is the earliest English-language document seen (April 2012) that contains the term “tamari shōyu” (or “tamari shoyu”). Address: Tokyo Imperial Univ.

2144. Schieber, W. 1915. Die Sojabohne und deren volkswirtschaftliche Bedeutung als Nahrungsmittel [The soybean and its economic significance as a food]. *Oesterreichische Chemiker-Zeitung (Vienna)* 18(10):85-86. May 15. Excerpts from a lecture to the Austrian Chemical Society, 24 April 1915. [1 ref. Ger]

• **Summary:** Includes a summary of information from Li Yu-ying (1912) about foods and food adjuncts made from the soybean: Soymilk, tofu (*Sojakāse*), soy flour (*Sojamehl*), soya bread (*Sojabrot*), soya confections (*Sojakonfekt*), soy chocolate (*Sojaschokolade*), soy coffee (*Sojaskaffee*).

Japanese foods from fermented soybeans: Natto (*Feste Würzen*), miso (*Pasten*), soy sauce (*Saucen*). Plus original nutritional analyses. Address: Austria.

2145. Brewer, Lucile; Canon, Helen. 1915. Beans and similar vegetables as food. *Cornell Reading Courses (New York State College of Agriculture) Food Series* 4(89):181-200. Food Series No. 16. June 1. [20 ref]

• **Summary:** The section titled “Long and extensive use of legumes as food” states (p. 182): “The cowpea and the soy bean have only within recent years come into common use in this country.” “The first reference to the soy bean in American literature was in 1829; it had been grown in the

botanical garden at Cambridge, Massachusetts and was referred to as 'a luxury, affording the well-known sauce, soy, which at this time is only prepared in China and Japan.' About twenty-five years later [1854], seed of the soy bean, or Japan pea as it then was called, was brought from Japan to California, and thence to Illinois and Ohio. Within the last twenty-five years, it has come to be a crop of great economic importance in the United States."

"The peanut, properly classed with the nuts, is thought to be a native of tropical America. It has long been grown in Africa, the East Indies, China, and Japan. It is said that in the seventeenth century it had become so important an article of food in Africa that the slave dealers loaded their vessels with it as food for their captives. Since the Civil War, the peanut has become important in the Southern States as a human food, a forage crop, and a fertilizer."

The section titled "Digestibility" (p. 184) states: "In Japan the soy bean is grown almost entirely for human food. According to Mr. Oshima, next to rice in the Japanese diet are the legumes, which are universally used."

In the section on "The cooking of legumes" we read (p. 188) that the use of a small amount of baking soda (sodium bicarbonate; ¼ teaspoon to 1 quart of water) serves to loosen the skins of legumes, "to render their protein more digestible, and to soften water of average hardness..." "Soft water, either distilled or rain water, is the best in which to soak and cook the legumes. Hard water interferes with their becoming soft and also with their digestibility. Hardness of water caused by the carbonate of lime or magnesium, may be remedied for use in the cooking of legumes by boiling the water, pouring it from the sediment, and adding a small amount of soda; when the hardness is caused by the sulfate of lime of magnesium, boiling has no effect, but soda may improve it for this purpose."

This publication contains many recipes for "beans" but without any specific reference to soy beans in a recipe.

2146. Schieber, W. 1915. Die Sojabohne und deren volkswirtschaftliche Bedeutung als Nahrungsmittel [The soybean and its economic significance as a food]. *Seifensieder-Zeitung* 42(22):471-72. June 2. (Chem. Abst. 10:1558). [Ger]

• **Summary:** Descriptions and nutritional analyses are given of a number of different food products prepared from the unfermented and the fermented soy bean. Unfermented: soya milk, tofu (*Sojakäse*), soy flour ("because of its composition it can be recommended as a first class food for diabetics and vegetarians"), soya bread, soya confections (resembling marzipan), soya chocolate, soya coffee, soy grits, whole dry soybeans, and soy sprouts. Fermented: Solid seasonings such as Japanese natto, pastes such as Japanese miso, sauces (in Japan each year 10,000 factories make 700 million liters of soy sauce), a new German fermented soyfood product is made by a secret process; its contains 45% protein, 6%

nutritional salts, and about 2% lecithin. Address: Dr.

2147. Nishimura, Torazô. 1915. Shôyu kôji oyobi kôji-kin ni kansuru bubun-teki kenkyû [Limited research on shoyu koji and the koji mold *Aspergillus oryzae*]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 60. p. 1-9. June. [Jap]
Address: Jozo Shikensho, Gishi.

2148. *New York Times*. 1915. Latest customs rulings. July 15. p. 14.

• **Summary:** "Importers of Japanese shoyu and nigari [a traditional Japanese tofu coagulant] were sustained yesterday by the Board of General Appraisers in the claim for lower duty on these products." A list of the many protesting importers is given.

Paragraph 606 specifies the duty on "soya beans."

2149. *Chamber of Commerce Journal (London)*. 1915. Trade products of the British Empire. Special Supplement. July. p. 1-54.

• **Summary:** "The Special Supplement to the London *Chamber of Commerce Journal*, dealing with the 'Trade Products of the Empire,' is full of useful information and statistics: The section on "Oilseed cakes" (p. 7) shows the tonnage and value of imports to the United Kingdom of cotton-seed cake (mainly from the USA), linseed cake (mainly from India and Russia), and rape-seed (mainly from Russia) from various countries in 1913 and 1914. Soybean cake is not mentioned."

The section titled "Preserved ginger, soy, tamarinds, chutney" (p. 14) states: "The value of imports of soy in 1914 was £9,416, of which £8,629 was the value of the imports from Hong Kong."

The section on "Vegetable oils and oilseeds" (p. 17-22) begins: "The fact that liquid oils can now be converted, by the process known as hydrogenation, into solid fats, and used for the manufacture of butter substitute, is of great importance to the trade in vegetable oils and oil-seeds. The sales of butter substitutes, which for several years past has been very large in continental countries, has increased enormously in this country within the last year or two,..." [i.e., during Word War I].

Many oils can be used to make butter substitute including "coconut oil, cottonseed oil, palm oil, palm kernel oil, ground nut oil, sesamum seed oil, mowrah-seed fat, &c." Import statistics are also given on these and other oilseeds and oils (such as olive oil, poppy seed and oil, rapeseed and rape oil {colza oil}, shea nuts and shea butter, sunflower seed, tea seed oil {obtained from the seed of *Camellia Sasanqua*, a near relative of the tea plant}).

Ground-nut oil is largely used, especially on the Continent. Efforts are being made to establish the crushing of ground-nuts on a much larger scale, but this is being

hindered by the War.

The section titled “Soya beans” (p. 22) contains a table that shows the tonnage and value of soya bean imports to the United Kingdom in 1913 and 1914. The main source both years was Russia (perhaps via Vladivostok), followed by China, with small amounts from Japan and other countries. Total tonnage decreased from 76,452 in 1913 to 71,161 in 1914 [in part because of the war].

The section continues: “The soya bean of Manchuria has grown in commercial importance during the last few years in a remarkable manner. In the East it has long been an important article of food. In Europe the oil pressed from the bean is used by manufacturers of margarine, soap and candles, in the manufacture of varnish and printing ink, and for waterproofing umbrellas. Soya bean meal is also stated to be used in making bread on the Continent. Beancake has long been used as a fertilizer and for feeding stock.

“Experiments in growing soya beans have been made in practically every British colony, but it seems doubtful whether the product could be profitably grown for export in competition with the Manchurian beans, which are raised under ideal climactic conditions, and by the cheapest possible labour.”

2150. *Washington Post*. 1915. ‘Soy’ bean as war food: German dieticians experiment with it in many prison camps. Product used in Worcestershire sauce is declared by many to be highly nourishing. Aug. 1. p. M8.

• **Summary:** “Berlin, July 31.—Protracted experiments with the Japanese ‘soy’ or ‘soja’ bean, out of which, among other things, Worcestershire sauce is made, are being conducted with a view to determine whether this vegetable, which can be and is raised in Germany, cannot be used in the many prison camps.”

“In the Far East the soja bean is in great demand, both for human and animal food products, and also for the oil it contains. Next to rice it forms one of the principal articles of the food supply in some Eastern countries, especially when combined with cereals and salt. It also plays an important part in sauces and spices. The milk from this bean approximates ordinary milk in nutritive value, and cheese can be made from it.

“When combined with 30 or 40 per cent white flour, the meal of the soja bean lends itself to a tasty and nourishing bread which has been found to be especially good for diabetics because of the high percentage of albumen and fat contained. The roasted soja beans also make a good substitute for coffee. The soja plant forms a good fodder for cattle.”

2151. *Los Angeles Times*. 1915. Alliance—Japanese beans for Germans: The soy and soja said to be valuable foods. Experiments are to be made to determine if they can be used in the prison camps—together they yield flour, meal, milk,

cheese, coffee and fodder. Aug. 8. p. III25.

• **Summary:** This article, via A.P. [Associated Press] foreign correspondence, is very similar to one published a week earlier (Aug. 1) in the *Washington Post* titled “‘Soy’ bean as war food: German dieticians experiment with it in many prison camps.” (p. M8).

The last sentence in the article, however, is new: “Exhaustive experiments with the soja bean have already been made at the agricultural station of the University of Wisconsin, all tending to bear out, it is said, the contention of German dieticians in favor of the bean.”

2152. Arita, Hachirô. 1915. Honoruru ni okeru shôyu juyô jôkyô ni kansuru ken [The demand for Japanese shoyu in Honolulu]. Honolulu. 11 p. Aug. 12. Handwritten unpublished manuscript. [Jap; eng]

• **Summary:** This is a market report from Mr. Arita at the Japanese consulate in Honolulu, to Mr. Shigenobu Okuma at the Japanese Ministry of Foreign Affairs.

Shoyu imports from Japan are 80,807 taru (1.309 million liters). Production by 4 Japanese companies in Hawaii is about 4,200 koku (756,000 liters). Domestic production is up by 20% over last year. Address: Japanese Consulate, Honolulu, Hawaii.

2153. Eddington, Jane. 1915. The Tribune Cook Book: Perennial chop suey. *Chicago Daily Tribune*. Oct. 29. p. 14.

• **Summary:** “A chop suey is a Chinese hash which may be one of many combinations of meat and vegetables. The only certain ingredient in all of these is the soy sauce—also spelled shoyu—and rice. Expensive chop sueys are made with chicken and imported Chinese vegetables. Inexpensive chop sueys almost always have pork as a basis.”

A recipe for “Pork suey” is given. “If cooked right soy sauce not needed to color, if the flavor is not liked.”

2154. Hawaii hôjin katsuyaku-shi, Meiji 41-42 [Japanese who play an active role in Hawaii, 1908-09]. 1915. [Jap]*

• **Summary:** In the section on soy sauce brewers, it lists: 1. Fukushima Shoyu Jozo-sho. 2. Terada Shoyu Jozo-sho, founded by Tajiro Terada, as a brewer of Kikko-ki brand soy sauce, located on King St., Palawa, Honolulu. 3. Hawaii Shoyu K.K. as a soy sauce brewer on King St., Palawa, Honolulu. The ad on page 39 states that in 1915 this company produced 166,600 gallons of shoyu.

2155. Tsujimoto, Mitsumaru; Ueno, Takeo. 1915. Shôyu no abura oyobi seishû no abura ni tsuite [On “soy” and “saké” oils]. *Kogyo Kagaku Zasshi (J. of Chemical Industry, Japan)* 18(212):1072-76. Oct. [Jap]

• **Summary:** “Soy” oil is a mixture of soy bean and wheat oils obtained as a by-product in the brewing of soy (i.e. soy sauce, yield 0.25-0.3% by volume). It is a dark red to brown liquid or semi-solid mass with an aromatic odor of soy.

“Saké” oil consists chiefly of rice oil and is found floating on the surface after the fermentation of saké (yield 0.01-0.02% by volume). It is an orange-yellow liquid with an odor of saké. Samples of soy oil (2 samples) and saké oil (values in parentheses) had the following characteristics: Specific gravity at 15°C, 0.9000, 0.9835, and (0.9031); solidification point, -5°C, -13°C, and (turbid at 0°C); acid value, 59.24, 55.03, and (22.56); saponification value, 184.12, 182.81, and (179.11); iodine value (Wijs), 127.79, 133.22, and (101.56); refractive index at 20°C, 1.4650, 1.4633, and (1.4660); % unsaponifiable matter, 2.88, 2.72, and (-).

Soy oil, which is best refined by reduction with zinc dust and sulfuric acid, followed by treatment with Kambara earth, is a commercial product used in the manufacture of low-grade soaps. Saké oil is not yet a commercial article. Address: Kôgaku hakase, Japan.

2156. *USDA Bureau of Plant Industry, Inventory*. 1915. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from April 1 to June 30, 1913. Nos. 35136 to 35666. No. 35. 69 p. Nov. 9.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

“35600. Grown at the Plant Introduction Field Station, Rockville, Maryland, under Yarrow No. 288. Original seed received from Pomona College, Claremont, California, in 1911.

‘It makes a remarkable growth of vines and has extremely large root nodules. Two bushels of seed were secured last year, and this has all been planted this spring.’ (J.M. Rankin.)”

“35601/35657. Collected by Mr. Frank N. Meyer, agricultural explorer. Received June 14, 1913. Seeds of the following; quoted notes by Mr. Meyer:

“35622-28.

“35622. ‘(Tsinan, Shantung, China. No. 1822a. April 10, 1913.) A small black soy bean locally used to produce soy bean sprouts. Chinese name *Hsiao ghae doh*.’ Note: This is the earliest English-language document seen (Feb. 2000) that uses the term “soy bean sprouts” to refer to these sprouts.

“35623. ‘(Tsinan, Shantung, China. No. 1823a. April 10, 1913.) A soy bean which is black outside and green inside. Used boiled when half sprouted as a human food. Chinese name *Lu li ghae doh*.’

“35624. ‘(Tsinan, Shantung, China. No. 1824a. April 10, 1913.) A soy bean which is black outside and yellow inside. Used boiled when sprouted, also employed in soy-bean sauce production. Chinese name *Tau hsing ghae doh*.’

“35625. ‘(Tsinan, Shantung, China. No. 1825a. April 10, 1913.) A good variety of yellow soy bean used in the manufacture of sauce, bean curd, bean oil, for sprouts, etc. Chinese name *Huang doh*.’

“35626. ‘(Tsinan, Shantung, China. No. 1826a. April 10, 1913.) A large green soy bean, considered locally a fine

variety. Used like the preceding one (S.P.I. No. 35625), and besides that it is also eaten roasted and salted as an appetizer before meals. Chinese name *Tsing doh*.’

“35627. ‘(Tientsin, China. No. 1827a. April 16, 1913.)

A large green variety of soybean used like the preceding number (S.P.I. No. 35626). Chinese name *Ta tsing doh*.’

“35628. ‘(Tientsin, China. No. 1828a. April 16, 1913.) A rare variety of soy bean, being of brown color. Used boiled in soups. Chinese name *Ta tze doh*.’” Address: Washington, DC.

2157. *Christian Science Monitor*. 1915. The markets of Chinatown. Dec. 22. p. 6.

• **Summary:** “Against the wall [of Chinese food shops] there is usually an array of kegs of odd workmanship; these are to hold the Soy sauce that is used in chop suey, preserved ginger, sugared fish and other dainties.”

2158. *USDA Bureau of Plant Industry, Inventory*. 1915. Seeds and plants imported during the period from July 1 to September 30, 1913. Nos. 35667 to 36258. No. 36. 74 p. Dec. 23.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

“36073-36086. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received at the Plant Introduction Field Station, Chico, Cal., August 13, 1913. Quoted notes by Mr. Meyer, except as indicated.

“36079. ‘(No. 1864a. San Tun Ying, Chihli Province, China. May 30, 1913.) A local variety of soy bean of a dull-yellow color, used in the making of bean curd and bean sauce. Requires only a short season to mature. Chinese name *Huang tou*.’

“36107/36121. From China. Collected by Mr. Frank N. Meyer, Agricultural Explorer for the Department of Agriculture. Received September 9, 1913. Quoted notes by Mr. Meyer, except as indicated.

“36116. ‘(No. 1882. San Tung Ying, Chihli Province, China. May 31, 1913.) A rare variety of soy bean, of an olive color, found among seeds of the ordinary yellow variety. Chinese name *Ma chan tou*.’” Address: Washington, DC.

2159. Tsujimoto, M.; Ueno, T. 1915. “Soy” and “saké” oils (Abstract). *J. of the Society of Chemical Industry (London)* 34(24):1259. Dec. 31 [1 ref]

• **Summary:** An English-language summary of the following Japanese-language article: Tsujimoto, Mitsumaru; Ueno, Takeo. 1915. “Shôyu no abura oyobi seishû no abura ni tsuite [On ‘soy’ and ‘saké’ oils].” *Kogyo Kagaku Zasshi (J. of Chemical Industry, Japan)* 18(212):1072-76. • **Summary:** This exhibition was held in San Francisco, in the Marina district, to celebrate the city’s recovery from the 1906 earthquake. The grounds were built on landfill consisting of rubble from the quake. As of 1989, the only remaining building is the Palace of Fine Arts.

The section in this book titled “Vegetable food products and agricultural seeds” (p. 241) lists the name, address, and products of companies that process soybeans. Eight companies that make “Soy bean oil” or “Bean oil” as their

main product are listed. The Japanese word *daizu* / *daidzu* means “soybean(s)”: Daidzu Hyohaku K.K. (The Soybean bleaching Co., Nagoya), Hirano Daizu Kogyo K.K. (Hyogo-ken), Torajiro Inoue (Kobe), Kwanto Totoku-fu (Kwantung Government; South Manchurian Railway Co., Dairen and Port Arthur; Soy beans and soy-bean oil), Saburo Oguri (Aichi-ken), Okuda Shoten Sei-hi-jo (Fertilizer Manufactory, Aichi-ken; Soy bean oil), Suginuma Shokwai (Chita-gun, Sichi-ken), Sadajiro Yoshiwara (Okawa-machi, Higashi-ku, Osaka; Rape seed oil and bean oil). Note 1. The only other oil widely made in Japan seems to be rape seed oil.

One association involved with soybeans is the Hokkaido Nokwai (Hokkaido Agricultural Assoc.). It was established in 1900. Production of “beans” is as follows: Daifuku 11,880,000 kin, Nagauzura 9,700,000 kin, Maruzura 5,790,000, Kintoki [azuki] 2,050,000 kin, Otenashi-Kotenashi 4,000,000 kin (p. 241).

Note 2. This is the earliest English-language document seen (March 2006) that uses the word “Kintoki” to refer to a type of azuki bean.

Page 245 lists the Jozo Shiken (Brewed Products Experiment Station), Tokyo.

The section titled “Sugar and Confectionery, Condiments and Relishes; Nuts and Fruit Foods” (p. 248-54) lists 103 manufacturers of “Soy” and/or “Tamari.” These two products comprise most of the listings.

The ad section at the back has a full-page ad (p. 9) titled: “The standard of Japan shoyu: Soy sauce (see next page). Representing eight largest breweries at Choshi and Noda, Chiba-ken, the centre of the industry in the empire. The annual output is estimated at 40,000,000 gallons.” Brands with logos [name of owners in parentheses]: Yamaju (Juiro Iwazaki), Kikkoman (Saheiji Mogi), Minakami (Fusagoro Mogi), Kushigata (Shichizaemon Mogi), Jojyu (Hyozaemon Takanashi), Yamasa (Gihei Hamaguchi), Higeta (Choshi Shoyu Goshi Kaisha), and Kihaku (Shichiroemon Mogi). These eight brands are a guarantee of quality. They dominate the Shoyu Market. Do not miss seeing the exhibits (Palace of Food Products).

On the next page (p. 10) is an ad titled “Okayama-ken Shoyu (Soy Sauce)!!! The climate of Okayama-ken is best suited for the brewing of Soy of an excellent quality. The quantity produced amounts to 250,000 koku [11,900,000 gallons; there are 47.6 gallons/koku] a year. Soy is rich in nitrogenous nutriment and consequently is a table sauce par excellence. The exhibitors of the Soy produced in Okayama-Ken are as follows: Keijiro Kondo (output 16,614 koku), Entaro Oka (3,399), Kurajiro Koyama (4,938), Kanaichi Shoyu Gomei Co. (4,500), Jotaro Takimoto (8,049), Motomasu Ono (3,804), and Ihachiro Kuyama (2,859).” Address: Tokyo, Japan.

edition of *Scientific American Cyclopaedia of Receipts, Notes and Queries*. 15,000 formulas. New York, NY: Munn & Co. vii + 1077 p. See p. 752, 772, 768. Illust. Index.

• **Summary:** In Chapter 21, titled “Preserving, and canning, condiments, etc. (p. 735+) is a section on “Catsups” (p. 752) which includes: Anchovy catsup. Cucumber catsup. Horseradish catsup. Mushroom catsup. Soy, Indian. Soy, Japanese. Tomato catsup. Walnut catsup.

“Soy, Indian.—This sauce is usually bought ready prepared. It is imported from China and Japan, where it is made from a small bean, the produce of *Dolichos Soja*. Japanese soy is usually preferred to that of China, because it is free from the sweet treacly flavor which distinguishes the latter. When well made it has a good brown color, thick consistency, and is clear.

“Soy, Japanese.—An equal weight of beans, coarse barley meal and salt. Wash the beans well, boil them in water until tender, and pound them in a mortar, adding the barley meal gradually. Put the mass into an earthenware bowl, cover with a cloth, and let it stand in a warm place for several days, until it is sufficiently fermented, but not moldy. To each pound of salt add 4 pt. of water, stir until the salt is dissolved, then stir into the fermented mass. Keep the bowl or pan closely covered for 3 months, during which time it must be daily stirred for at least 1 hour. At the end of this time strain through fine cloths, pressing the insoluble portion well, in order to extract as much of the moisture as possible. Let it stand again until quite clear, then drain off and bottle for use. In making Chinese soy, the liquid extracted is boiled and reboiled with a varying amount of sugar, mace, ginger and pepper until it acquires the desired consistency.”

On pages 771-72 is a section on “Vinegars” are two formulas for “Camp vinegar.” The first calls for 3 tablespoonfuls of soy [sauce] (plus 1½ pints walnut catsup); the second calls for 4 oz. soy sauce.

On pages 767-68 is a section on “Sauces and salad dressings,” which begins with home-scale recipes for various sauces including: Anchovy butter. Anchovy essence. Anchovy paste. Anchovy sauce. Fish [sauce]. Gravies. Harvey sauce. Herb sauce. Soy [sauce]. Tomato sauce. Vegetable butters. Worcestershire sauce.

The formula for Harvey sauce begins: “Good vinegar, 1 qt.; anchovies, 3; soy, 1 tablespoonful; walnut catsup, 1 tablespoonful; finely chopped shallot,…”

The formula for “Soy” states: “Genuine soy sauce is a species of thick black sauce, imported from China, prepared with white haricots, wheat flour, salt and water; but a spurious kind is made in England as follows: Seeds of *dolichos soja* (peas or kidney beans may be used for them), 1 gal.; boil till soft; add bruised wheat, 1 gal.; keep in a warm place 24 hours; then add common salt, 1 gal.; water, 2 gal.; put the whole thing into a stone jar, bung it up for 2 or three months, shaking it very frequently; then press out the liquor; the residuum may be treated afresh with water and salt for

soy of an inferior quality.”

Likewise: “Worcestershire Sauce.—There are many concerns, we believe, who make a sauce which they call Worcestershire. That made in England by Lea & Perrin is considered the best and many have tried to imitate it, but with indifferent success. Of the many formulas appearing in print, the following will serve as an example; Vinegar, 1 qt.; powdered pimento, 2 dr.; powdered cloves, 1 dr.; powdered black pepper, 1 dr.; powdered mustard, 2 oz.; powdered Jamaica ginger, 1 dr.; common salt, 2 oz.; shallots, 2 oz.; tamarinds, 4 oz.; sherry wine, 1 pt.; curry powder, 1 oz.; capsicum, 1 dr. Mix all together, simmer for 1 hour, and strain. Let the whole stand for a week, strain it, and fill in bottles. Worcestershire sauce is never quite clear; straining to remove the coarser particles is all that is necessary.”

Note: The publication date printed on the title page is 1915, however the copyright for this edition is 1910. Address: New York, Query Editor of the “Scientific American”.

2169. *Japan Year Book*. 1915. Soy. p. 402. [Eng]

• **Summary:** “The collapse of the short-lived Nippon Soy Co., started in 1907 near Osaka with 2,500,000 yen paid up, has dampened the cause of scientific process of soy brewing.” Address: Japan.

2170. *Japan year book*. 1915. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). See p. 717. [Eng]

• **Summary:** In the chapter on “Chosen (Korea): Agriculture,” under “Barley and Soja Bean” (p. 717) it is stated that “Soja and other beans are exported chiefly to Japan for manufacturing soy [sauce]. Acreage of soja beans in Korea is 553,077 *cho* and the yield 3,345,472 *koku*.” Note: 1 *cho* = 2.45 acres and 1 *koku* = 47.6 gallons or about 6 gallons. Thus, in English units, in Korea 1,355,039 acres produce 20,072,832 bushels, for a yield of 14.8 bu/acre.

Note: This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for Korea (which has been a “province” of Japan since 1910). Address: Japan.

2171. *Japan year book*. 1915. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 789 p. See p. 349, 401-02, 436, 714, 716-17, 730, 743. [Eng]

• **Summary:** In chapter 16, “Agriculture” (p. 340-60) is a table titled “Beans, sweet potato and potato (p. 349) which gives “Soy bean” production data in Japan for 1911-1913 (in *koku*). The next paragraph contains information on soy [sauce], *miso*, and *tofu* similar to that in the 1913 and 1914 year books.

In chapter 20, “Industry,” is a paragraph (p. 402) on the patented Suzuki process for brewing soy [sauce] similar to that in the 1913 year book. Following that is a small table with production data for Soy [sauce] (in *koku*) for 1912-13, 1913-14 and 1914-15—“Year (March to Feb.).

In Chapter 22, "Trade" is a table (p. 436) titled "Prices of principal commodities in Japan," which includes prices for 1911-1913 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In chapter 35, "Chosen (Korea)," under the heading Foreign Trade," is a table (p. 714) on "Staple exports" (in 1,000 yen) which has data on "Beans and peas" for 1910-1914. Under the heading "Agriculture" (p. 716) is a paragraph (p. 717) titled "Barley and soja bean," which gives acreage and yield for soja (year not specified) with the value (in yen) of exports to Japan in 1912.

In Chapter 36, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 730) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1912-1913.

In Chapter 38, "South Manchuria," is a paragraph (p. 743) titled "The soya bean" which has information on South Manchuria's soya bean yield, [soya] bean-cake output, amount exported for specific years, and production at various milling centres (almost same wording as 1914 Year Book). Address: Japan.

2172. Lindlahr, Anna; Lindlahr, Henry. 1915. The nature cure cook book and A B C of natural dietetics. 1st ed. Chicago, Illinois: The Nature Cure Publishing Co. xii + 469 p. No index. 21 cm. On cover: Nature Cure Series, Vol. II. • **Summary:** This book is divided into two parts. Part I "Nature Cure Cook Book," is a vegetarian cookbook. Part II is "A B C of natural dietetics." Contents: Part I. Key to our system of recipe marking. Examples of Combination salad, Our health bread, Milk. What constitutes a natural diet. Diet prescriptions made easy for the doctor. A timely warning. Uncooked food vs. cooked food. Cause and cure of beri-beri. Vitamines. Dangers of extreme raw food diet. Raw foods and their medicinal properties. Medicinal vegetables. Simple vegetable salads and dressings. Soups. Salads. Croquettes (baking or roasting is better than frying). Vegetables (the recipe for "Chop Suey (2)," p. 209, calls for 1 can protose. "Add Chinese sauce (Soy) if desired"). Desserts (many recipes use 1 cup sugar). Cereal foods (incl. Graham flour, whole wheat flour, Protose). Dr. Lindlahr's health bread (p. 277-78). Leguminous foods (dangerous because they contain an abundance of "the negative, acid-forming proteid and starchy elements," p. 284). Rice, macaroni, spaghetti. Dairy products ("There is something in animal food which, we cannot secure from purely vegetable food,—and that is the animal (magnetic) life element, or, as we usually call it, the animal magnetism." Dairy products are good, but meat is bad). Eggs (use in moderation; best eaten raw, soft boiled, or poached. "Prolonged boiling or frying coagulates the albumin, making it hard and tough and therefore less digestible"). Sandwiches (incl. "Peanut butter sandwiches"). Beverages. Sample menus.

Part II, titled "A B C of Natural Dietetics," with 13

chapters, is about the benefits of a vegetarian diet and lifestyle. Chapters include: 1. Two sides to every question: Why we favor a vegetarian diet. Why we sometimes deviate from a strictly vegetarian diet. What are the indications of meat requirement? Why vegetarianism will triumph in the future. 2. Is it worth while to pay attention to diet? What is natural food? 3. For what do we eat and drink? Is vital force derived from food, medicines and tonics? "Vital force" active after death in spiritual body. 9. The magnetic properties of foods. 10. Polarity of foods and medicines. 11. Classification of foods according to the electro-magnetic qualities (animal foods are positive, legumes are very negative).

"This cookbook is based on the system of dietetics originated by the German School of Nature Cure. Drs. Lahmann, Hensel and others found a solution to the problem of scientific food selection which stands every test of theoretical inquiry and of practical application." "We have divided all food materials into the following five groups: Group I (St.) Starches. Group II (S.) Sugars, dextrine. Group III (F.) Fats, oils. Group IV (P.) Proteins, albumin, gluten, myosin, hemoglobin, etc. Group V (M.) Positive mineral elements: Potassium, sodium, iron, lime, magnesium, manganese, lithium, etc." (p. 5)

"Every recipe in this cook book, underneath its title, will be marked in such a way as to show the various food elements which it contains, in the order of their amount and importance."

A natural diet "must conform in its component elements to the chemical composition of milk or red (arterial) blood." Thus half of the food materials must be of Group V (Mineral Elements) and half from groups I through IV (p. 6).

"A timely warning:... Do not become finical or hypochondriacal over this matter of food selection and combination" (p. 9). The authors generally recommend uncooked or raw food—but not exclusively. "Nature did not create man with a cookstove by his side. Man existed on this planet for ages before he knew how to start a fire..." (p. 11).

"A mixed cooked and raw food diet, with liberal allowances of the dairy products, seems to agree best with the majority of our friends" [patients]. "We recommend, and serve in our Sanitarium regimen, one meal daily consisting of raw foods only. All the juicy fruits and vegetables that can be relished and digested in the natural state are not only excellent foods, but the best medicines for the human body" (p. 16-17).

Gluten flour and Protose are discussed on p. 272-733.

The red blood [in the arteries] carries into the body the various nutrients, and comes back laden with poisonous gases, broken down cell material, and devitalized food products (wastes). This debris is carried in the venous blood to the various organs of depuration and excreted in the form of feces, urine, mucus, perspiration, etc... The meat-eater, therefore, has to eliminate, in addition to his own morbid waste products those of the animal carcass" (p. 339). "The

American suffers from uric acid and phosphoric acid poisoning..." (p. 347).

"What is natural food? We have endeavored to define this term as follows: "Natural" for animal and man is that food which appeals to the senses of sight, taste and smell in the natural condition, as it comes from Nature's hands.' Any food which needs disguising by cooking, spicing, pickling, etc. is not 'natural'" (p. 359).

On the last pages of this book are five ads: (1) Nature cure by mail, from The Lindlahr Nature Cure Institutes, Inc., Chicago. (2) Lindlahr College of Nature Cure and Osteopathy (3 year course; also Nurses' training course, six months' condensed course, and quiz courses for State Board Health Exams), same address. (3) The Lindlahr Nature Cure Institutes, Inc.—one in Chicago and one in the country—the beautiful Elmhurst Health Resort, a 40-minute ride by Electric car from Chicago's center. Two full page photos (on unnumbered pages near rear of book) show the sanitarium in Chicago and the resort at Elmhurst. "Some of our healing factors: Pure food diet, water cure treatment, open-air, light and air baths, massage, osteopathic and magnetic treatments, mud baths for rheumatism, corrective gymnastics and breathing exercises, mental therapeutics and normal suggestion (on a common-sense, scientific basis), scientific relaxation, homeopathic and simple non-poisonous herb remedies, diagnosis from the eye [iridology]. (4) Carqué Pure Food Co., Inc., 1603 So. Magnolia Ave., Los Angeles, California. "From California's sunkissed orchards direct to your table... Black mission figs, Unsulphured white figs, Unsulphured calimyrna figs, Large prunes, Muscatel cluster raisins, Unsulphured apricots, Assorted dried fruits." 10 pounds for \$1.50 to \$2.00 postpaid. Also nuts, olive oils, honey, unfermented grape juice, and books on hygiene and dietetics. (5) *Iridology: The diagnosis from the [iris of the] eye*, a book by Henry Lindlahr. 156 pages, 70 illustrations.

Henry Lindlahr was a physician (M.D.) who lived 1862-1924. The eleventh edition of this book was published in 1918 in Chicago by the same publisher. The 15th edition, published in 1922 in Chicago by the Lindlahr Publishing Co., was titled *The Lindlahr Vegetarian Cook Book and A B C of Natural Dietetics*. The 18th edition (535 pages) was published in 1926 with the same title and publisher. Address: 1. Mrs.; 2. M.D. Both: The Lindlahr Nature Cure Institutes, Inc., 525-29 Ashland Blvd., Chicago, Illinois.

2173. Martindale, William Harrison; Westcott, W. Wynn. 1915. The extra pharmacopoeia of Martindale and Westcott. 16th ed. 2 vols. London: H.K. Lewis & Co., Ltd. See vol. I, p. 563, 849. Index. 17 cm. [14 ref]

• **Summary:** In Vol. I, the section titled "Oleum papaveris" (p. 562-63) is about "Suggested use of other oils to replace cod liver oil in malnutrition, phthisis and other forms of wasting disease." "Several nutritive oils... which rank almost as high as Cod Liver Oil in Iodine values, suggest

themselves as suitable for therapeutic use. These oils are used both medicinally and as foods..." A table shows each oil with its iodine value. Cod liver oil 126-66. Poppy seed oil 138.1. Maize oil 111. Sunflower seed oil 136.1. Soya bean oil 122. Of these, poppy seed oil seems to be suited for use as an alternative to cod liver oil. Arachis oil, sesame oil, and henbane oil are also discussed briefly.

In the chapter titled "Supplementary list of drugs" is a long section (p. 805) on "Soya Bean.—*Glycine Hispida* (*Leguminosae*). This bean is extensively cultivated in China and Japan for human consumption and laterally in America and Europe, chiefly as a forage crop, is eaten as a vegetable, in soups, sometimes picked green, boiled and served cold with a sprinkling of Soy Sauce, and sometimes as a salad. A favourite method of preparing in the East is to boil until soft and place the resulting mass in a warm cellar until it ferments,—the resulting 'cheese' being known as 'Natto.'

"Analysis of the bean calculated on water free basis, indicated 38.5% Protein and 20% fat. It is probably due to this large amount of easily assimilable Nitrogenous matter that the Chinese and other rice eating people require so little meat. It contains practically no Starch—the latter fact is said to be due to presence of a diastase in the bean capable of converting Starch formed, two-thirds into Sugar, one-third into Dextrin. Has been used as an addition to ordinary diabetic dietary,—the beans may easily replace the Gluten of bread,—causes reduction in percentage of sugar (*Lancet* 1910, p. 1844). Soy Flour is even more serviceable, containing almost 1/3 more Protein than the bean, this being due to the removal of the fibrous hulls, which contain but little Protein (*British Medical Journal Epitome* 1911, p. 80).

"The protein of the Bean is being extensively used in connection with the treatment of diabetes and malnutrition. Soya Bean Meal from which it is made must be carefully examined for the toxic *Java Bean*.—F.W. Crossley Holland (*Pharmaceutical Journal and Pharmacist* (London) 1912, p. 154). Soya Beans average 8 m.m. in length and 7 m.m. in breadth and 6 m.m. in thickness. They are roundly ovoid in shape and about 99% are pale yellow in colour—there being a few darker coloured, smaller and more elongated. Structure of the bean. Soya Bean Cake and Meal is enormously adulterated.—T.E. Wallis (*Chemist and Druggist* (London) 1913, p. 278; *Pharmaceutical Journal and Pharmacist* 1913, p. 120).

"E.S. Peck states *Glycine Hispida* has been used in clinical experiments for the splitting up of Urea into Ammonium Carbonate.

"* Sarton is a preparation of the bean for use as a diabetic food.

"Soya Oil has Iodine value 121 to 123. Cowie found 131 (*Chemist and Druggist* 1910, p. 66). For further characters see (*Pharmaceutical Journal and Pharmacist* (London) 1911, p. 407)." See also p. 563.

In Vol. II, the section titled "Lecithin" (p. 76) states

that it is a “Mono-amino Phosphatide” and contains a table listing the percentage of lecithin contained in 17 substances, including: Brain 160. Spinal cord 11.0. Nerve tissue (dry) 17.0. Kidneys 8.5. Egg yolk 12.0. Lupin seeds 2.0. Yeast (dry) 2.0. The soybean is not mentioned. A test of purity of lecithin made from fresh egg yolk, and the determination of lecithin in preparations are described.

William Martindale lived 1840-1902. Volume I also discusses Gluten (p. 546—Synonym: Vegetable Albumin), Diabetic foods (p. 546-47, incl. starchless bread; soy is not mentioned), *Oleum sesami* Sesame Oil (p. 571; also called Benné oil, gingelli oil, teal oil), *Arachis Hypogaea* (p. 805; also called Pea Nut, Ground Nut, Goober Nut, Manilla grain [Manila grain], Chinese Almond).

Volume II also discusses “glutin” (p. 86-89), proprietary medicines (incl. Ovaltine, and Pinkham’s (Mrs. Lydia E.) Vegetable Compound, p. 162-63). Address: 1. Ph.D., F.C.S.; 2. M.B.Lond., D.P.H.

2174. Morita, Sakae. 1915. *Hawai Nihonjin hatten-shi* [History of progress of Japanese in Hawaii]. Hawaii: Waipahu Shin Eikan. 866 p. See p. 260-65. Jozo-gyo (Brewing/fermentation industry) section. 23 cm. A second edition was published in 1919 under the title *Hawai gojûnen-shi*. [Jap]

• **Summary:** “The first Japanese who lived in Hawaii and brewed shoyu there was Haruhachi Shimada, who originally came from Yamaguchi-ken, Japan. He started in June 1891 and tried to make shoyu on a large scale. But bad transportation made it difficult for him to expand his market. This plus lack of capital forced him to quit.”

Note: It is not clear where the soybeans used to make this shoyu were grown. They were probably either grown in Hawaii (probably on Oahu) or imported from Japan. If they were grown in Hawaii, this document would contain the earliest date seen for soybeans in Hawaii, or the cultivation of soybeans in Hawaii (June 1891). Address: He had a photo shop in Hawaii.

2175. Neil, Marion H. comp. 1915. “Kitchen Hanger” of recipes for the numerous uses of Lea & Perrins’ Sauce. New York, NY: John Duncan’s Sons.

• **Summary:** This is a booklet of recipes that hangs on the wall like a calendar. The letter from Marion H. Neil to Lea & Perrins (New York) is dated November 11, 1914. Address: School of Cookery, 3602 Spring Garden St., West Philadelphia, Pennsylvania.

2176. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1915. *Nichi-Bei nenkan* [Japanese-American yearbook. No. 11]. 650 Ellis St., San Francisco, California. 295 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: *Nikkei Imin Shiryôshû*. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is very different from previous yearbooks in this series in that it has no directory (giving business names, address, and sometimes phone numbers) and almost no advertising. It also contains many fewer pages. It is not clear what caused these major changes.

Like its predecessors, is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into seven parts, each numbered separately. Contents: (1) Front matter (5 p.). (2) Table of contents (5 p.). (3) Ads (3 p.). (4) Photos (black and white on 14 unnumbered pages). (5) Maps and charts on 2 unnumbered pages. (6) Front part (p. 1-176), including names of Japanese people in agricultural enterprises in California, Utah, Idaho, Colorado, Nevada, Wyoming, New Mexico, Texas, Nevada, and Oregon—based on research conducted in Dec. 1914 (p. B1 to B-88). Note: Two ads appear on the bottom half of the last page of the previous section. (7) Copyright and publishing information page.

By a careful reading of part 6, we can extract the following information about business that make soyfoods. There are 45 tofu makers in California (p. 130), 1 in Ogden, Utah (p. 153), 1 in other cities in Utah, 1 in Pocatello, Idaho (in Bannock County, the southeast corner of the state), and 1 in other cities in Idaho (p. 154), 1 in New York City (p. 161), 1 in Oregon (p. 165), and 6 in Washington state (p. 169). There is also 1 shoyu maker in Oregon (probably in Portland) (p. 165). Concerning the tofu makers in California, there are 2 in Oakland and 2 in Alameda (p. 132), 1 in Berkeley, 1 in San Mateo (p. 133), 2 in Santa Clara and 1 in Kason? (p. 134), 2 in Salinas, 1 in San Benito County, 2 in Guadalupe and 1 in Lompoc (both in Santa Barbara County, in southern California) (p. 135), 1 in Sonoma County and 3 in Vacaville (p. 136), 3 in Sacramento and 3 in the Courtland, Walnut Grove, Isleton area (p. 137), 3 in the Loomis, Penryn, Newcastle, Auburn area (northeast of Sacramento), 1 in the Marysville, Colusa, Oroville, Chico, Red Bluff area, and 1 in the Florin, Woodland area (p. 138), 2 in Stockton and 1 in Lodi (p. 139), 1 in Fresno, 1 elsewhere in Fresno County (p. 140), 2 in Tulare County (p. 141), 4 in Los Angeles (p. 142), 1 in Riverside (p. 143), 2 in Ventura County, and 1 in Imperial County (in the far southeastern corner of California) (p. 144). For all of these California tofu shops is given their capital, annual sales in dollars, and number of workers. For all of the California tofu shops (total): Capital: \$23,050. Sales in 1914: \$74,400. No. of workers: 65. Salaries in 1914: \$8,260. Note that no miso makers are listed.

The total value of imports of shoyu [soy sauce] and pickles from Japan to the U.S. for the past 5 years is given (p. 86). The value of shoyu imported to San Francisco in 1914: \$133,870 (p. 102). The value of shoyu and pickles imported to Portland, Oregon in 1913: \$8,663. The value of soybeans imported to Portland, Oregon in 1913: \$2,593 (both

p. 105). The total Japanese population in the USA in 1914: 99,321 (p. 171).

The Census shows Japanese companies making soyfoods in California, Utah, Idaho, New York City, Oregon, and Washington state. Address: San Francisco, California.

2177. Porter, Robert Percival. 1915. Japan, the new world-power: Being a detailed account of the progress and rise of the Japanese empire. London, New York, Toronto, Melbourne and Bombay: Humphrey Milford, Oxford University Press. xxiv + 789 p. Illust. Seven colored maps. Index. 23 cm. [soy ref]

• **Summary:** Japan (regardless of race and colour) intervened in the Great War on the side of her ally Great Britain. They worked together successfully against Germany in the siege of Tsing-Tau in 1914 from Oct. 31 to Nov. 7.

Near the front of the book is a table of "Weights, measures and moneys, for Japan, Great Britain, and the USA."

Page 149-50: "The annual average number of immigrants from Japan is about 20,000. Roughly, half go to China and the United States of America... Since 1907 two batches of Japanese emigrants, under 2,000 in all, have gone to Brazil, the majority of which have been under contract with the Sao Paulo Government to work in the coffee plantations." There are now about 155,000 Japanese in the United States. Since a 1907 agreement between Japan and the USA, immigration of Japanese labour to the USA has been restricted. Some Japanese have tried to enter the USA by going first to Mexico. There are not more than 2,000 Japanese in Canada at present.

Page 232: In Japan: "The necessity for increased military and naval expenditure, which rose in connection with Korea in 1881, called for considerable additional revenue. Fresh military taxes were therefore levied; income-tax was introduced along with indirect imposts [taxes] on soy [sauce], tobacco, confectionery, and stamps, and the tax on *sake* was raised, augmenting the receipts to such an extent that the Government was able in 1886 to reduce the land-tax again. But following the war with China [1894-95] it became necessary to establish occupation and registration taxes, to raise again the *sake* tax, and to create a Government monopoly of leaf tobacco."

A table (p. 233) shows how the ordinary State revenue of Japan was derived in the financial years 1898-99 and 1909-10. The two main sources of revenue were: Land tax (38.4 and 85.7 million yen respectively) and liquor tax (33.0 and 91.5 million yen). By comparison, the soy tax was relatively small: 1.54 and 4.73 million yen.

Page 235-36: "The tax on liquors is levied upon (a) brewers of *shurui* (alcoholic liquor), which is divided into five classes, viz. *seishu*, or refined *sake*, *dakushu*, or unrefined *sake*, *shirozake*, or white *sake*, *mirin*, or sweet *sake*, and *shochu*, or distilled *sake*; (b) brewers of beer; and

(c) wine and alcohol and alcoholic liquors other than *sake* or beer."

"Soy tax: The soy tax is levied upon manufacturers of this sauce at the rate of about 1 3/4 yen per *koku*. A tax on soy for household use was introduced in 1900, and ranges from 50 sen to 4 yen per *koku*, according to the amount manufactured. No more than 5 *koku* of soy per annum may be made for household use."

Page 240: A full-page table shows the "Budget for financial year 1911-12." The main sources of "Ordinary revenue" are liquors tax (88.7 million yen), land tax (75.1 million), customs duties (50.5 million), and tobacco monopoly (50.5 million yen). Revenue from the soy [sauce] tax is 4.6 million yen. The sugar excise is 14.7 million yen.

Page 261-62: "The upland fields, being for all intents and purposes unirrigable, are only to a very limited extent utilized for the cultivation of rice. Rotation crops are, however, raised twice a year, usually barley, 'naked barley,' and wheat as winter crops, and soya (more properly soja), sweet potatoes, and millets as summer crops." A key unit of area in agriculture is one *tan* = 0.245 acre. On [lowland] paddy fields, nationwide over the past 10 years, the average yield per *tan* is 7.913 bushels of rice and 6.668 bushels of barley, which may be considered a representative winter crop. "Upland fields, upon the same basis, produce 6.638 bushels of barley as a summer crop and 3.756 bushels of soya bean."

Another key (larger) unit of area in agriculture is one *cho* = 2.45 acre.

A table (p. 263) shows the total area, production, and yield of 17 major crops in Japan in 1897 and in 1910. Both years, the leading crop (by far) in area was rice, followed (in 1897) by barley, naked barley, wheat, and soya bean. For 1897 the three figures for soya beans were: 1,067,000 acres under cultivation, 15,381,000 bushels total production, and 14.41 bushels per acre yield. For 1910 the three figures for soya beans were: 1,137,000 acres, 18,834,000 bushels total production, and 16.56 bushels per acre yield.

Statistics for "small red bean" [azuki] are also given: For 1897 268,000 acres under cultivation, 3,069,000 bushels total production, and 11.45 bushels per acre yield. Thus, in 1897 and 1910 the production of soybeans was roughly 5 times the production of azuki beans.

Chapter 15, "Agriculture," contains a section titled "Soya bean" (p. 264-65): The soya, or soja, bean is well enough known in England as a cattle-food, but in Japan its application is by no means limited to this use. It is the basis of the Japanese sauce, soy, of which enormous quantities are brewed; of *miso*, or bean cheese [sic], used extensively for soup and in cookery in general; and of *topu* [sic, tofu], or bean curd, a cheap, highly nutritious and very popular article of diet. The residue from these manufactures is used both as fertilizer and as cattle food, or, alternatively, an oil of some value may be obtained from it. It is the principal summer

crop of the upland fields, and its cultivation, which requires less fertilizer and less labour than other products, is general throughout Japan and particularly in Hokkaido. But the supply is far from equal to the demand, and a large quantity of beans and bean cake is imported from Chosen and Manchuria, the value of the present importation amounting to £3,000,000 annually.

“Among other beans the small red bean is largely cultivated, especially in Hokkaido, and is used for cakes and confectionery, and boiled with rice on occasions of ceremony. The Japanese are very fond of peas, horse-beans, and kidney-beans, which are grown as a stolen crop after rice in the paddies and just before it in the upland fields.”

Page 269: “A comparison of the relative positions of human and animal labour in paddy fields and upland farms for the years 1903 and 1908 (the latest year for which figures are available) shows that the area tilled exclusively by human labour still forms a very large proportion of the total, though it tends steadily to decrease.” “Manual labour is plentiful and it is chiefly by reason of its abundance that the intensive system can be carried on. Rice-growing requires, for instance, the labour of 17 men and 9 women per *cho* (2.45 acres), barley and wheat 11 men and 6 women, tobacco 25 men and 23 women, soya bean 7 men and 5 women, and so on. Farmers, in the vast majority of cases, are their own labourers, and those who may be distinguished as ‘professional labourers’ are a very small class.”

Page 292: Sea-weeds: “Chief among the sea-weeds used as food is that known as ‘Kombu’ (*Laminaria*). It grows mostly on the shores of Hokkaido and the south-east of Honshiu [Honshu], and is eaten sliced into very thin shreds. ‘Kanten’ is made by dissolving the weed *Tengusa* in water and exposing the resulting gelatinous infusion to the action of cold by night and the sun by day. Only the Chinese use it as food, however; in the West it is a substitute for gelatine, isinglass, starch, and the like. Other sea-weeds are used as paste.” Address: Queen Anne’s Mansions, London, England.

2178. Associated Press (AP). 1916. Nutrition—Find soja bean valuable food. Blockade against Germany shows its merits. Chinese have used it extensively for the last 2000 years and it possesses more universal usefulness than almost any other common article of diet. *Los Angeles Times*. Jan. 13. p. 13.

• **Summary:** London, Dec. 15.—Discussion of the food blockade against Germany has served to bring attention to the merits of the soja bean, to which is given up more than twenty-five per cent. of the cultivated area in Manchuria. Although the soja is well known and highly regarded in Germany and the Scandinavian countries and is now second on the list of China’s exports, it has hitherto achieved small general reputation in the English-speaking countries, and even the latest dictionaries dismiss it with the brief description: An Asiatic leguminous herb, *Glycine Soja*, the seeds of which are used to prepare sauce called soy.”

The “first important shipment to Europe was made in 1908 by a British firm. The Germans almost immediately began to experiment with it and five years later were using the major part of an importation estimated at over \$200,000,000 a year.

“The secret of the soja bean is its universal usefulness. A British government report gives the following list of soja products: ‘Vegetable food (like marrowfat peas); soups; meat substitutes; chocolate substitute; macaroni preparation; flour; artificial milk; cheese [tofu]; coffee substitute; artificial horn; biscuit and food for diabetic patients; sauce; meal for cattle; oils, oil cake for fodder; fertilizer; beancake.’

“The same report points out that the oil from the bean is used in the manufacture of the following articles: ‘dynamite and high explosives, soaps, linoleum, rubber substitute, margarine, paints, varnishes, toilet powder waterproof cloth, paper umbrellas and lanterns, salad oil, lubricants, lamp oil, preservative for sardines, substitute for lard.’”

“There are three principal varieties of the bean—yellow or huangtou [huangdou], green or chingtou [qingdou], and black or wutou [wudou]. The yellow contains more nutritive ingredients than the others, and this is the variety almost exclusively used for export. The quantity of oil extracted from the beans runs as high as 10 per cent. of the total weight.

“Sweden uses large quantities of the bean cake as food for milch cows; Denmark has a large pressing factory at Copenhagen; France has a factory built in Paris by a Chinese firm [Li Yu-ying]; and South Africa has recently begun to grow the bean in competition with the Manchurian Farmers. Germany in 1912 rescinded her former import duty and installed reduction plants for the far-eastern vegetable products in all her oil mills, importing the beans directly from Vladivostok by the shipload.”

2179. *Times (London)*. 1916. The grain trade: A strong opening in wheat. Government intervention. Jan. 21. p. 15.

• **Summary:** The section titled “Minor crops” notes that beans and peas are now [during World War I] quite expensive, and the imported kinds even more so. The price per qr. [quarter of a hundredweight, or 28 lb] is: “53s. for Indian chick peas, 48s. for Chinese and Manchurian [soy] beans, 105s. for Rangoon [Burma] haricot beans, and 47s. for Japanese soya beans. The last named are a good bargain, but the trade is a very wholesale one, and sellers expect the buyer as a rule to take not less than a ton, for which 10 guineas is the price, ex London warehouse.” Address: [London].

2180. Puig y Nattino, Juan. 1916. El cultivo de la soya [The cultivation of soybeans]. *Revista del Ministerio de Industrias (Montevideo, Uruguay)* 4(19):78-91. Jan. [7 ref. Spa]

• **Summary:** Describes variety trials conducted in Uruguay using seeds supplied by the USDA. The varieties harvested

in March 1915 included Peking, Arlington, Pinsu [Pingsu], Jaba, and Mammoth. A table (p. 79) shows that the yields of seed were very small, but that Mammoth gave by far the largest seed yield, 320 kg/ha. Discusses the many ways that soybeans (*las habas de soya*) are used as food in Japan, including soy sauce (*Shoryu* [sic, *shoyu*]), cooked whole soybeans, tofu or soybean cheese (*Tofú ó Queso de habas de Soya*), and soymilk. They used Mammoth variety soybeans, grown in Uruguay, to make soymilk. Seven tables (p. 84-90) give the nutritional composition of five different soybean varieties tested in Uruguay, planted in 1914 or 1915. An 8th table (p. 91) gives the nutritional composition of soymilk.

Note 1. This is the earliest document seen (May 2009) concerning soybeans in Uruguay, or the cultivation of soybeans in Uruguay.

Note 2. This journal is published in Uruguay by the *Ministerio de Industrias y Trabajo*. Address: Ing. Agrón., Director del Laboratorio Agronómico en la Inspección Nacional de Ganadería y Agricultura.

2181. *New York Times*. 1916. Latest customs rulings. Feb. 11. p. 16.

• **Summary:** “New York jobbers were sustained by Judge Brown in the entered prices put on soy sauce from Cheang Yan Chick of Canton. At the trial Assistant Attorney General Hanson argued that, following an earlier reappraisal, the advances made by the local officials should be sustained. The General Appraiser held, however, that the soy sauce involved in the present case was a different article from the commodity figuring in the case cited.” So the Custom House authorities were reversed.

2182. Suzuki, Tozaburo. 1916. Process of making foods. *U.S. Patent* 1,175,839. March 14. 1 p. Application filed 2 Sept. 1913.

• **Summary:** In the process of making soymilk, after boiling, a centrifugal machine is used to removed the lees [okara, or pulp]. Then the milky liquid [soymilk] is condensed by evaporation into a dough-like mass, which is placed on flat trays, fully dried, then powdered or molded into any desired forms.

Note: The author, a citizen of Japan, was also an inventor and innovator in the manufacture of soy sauce. Address: No. 401, Jineishinden, Sunamura, Minami-Katsushika, Japan.

Address: Jozo Shikensho, Gishi.

2186. *Washington Post*. 1916. Uses of soya bean: Merits not sufficiently appreciated, food experts point out. April 3. p. 10.

• **Summary:** “The general value of the soya bean has not attracted the general attention it deserves, according to experts who are bringing it to the attention of the American people. The Japan Society Trade Bulletin points out that the secret of the soya bean is its universal usefulness. Almost more remarkable than the rise of the bean trade itself is the number of discoveries of the uses to which it can be put. The trades commissioner for the government of South Africa gave the following list of soya bean products: Vegetable (like marrowfat peas) soups, meat substitute, chocolate substitute, macaroni preparation, flour, artificial milk, coffee substitute, cheese [tofu], biscuits, [soy] sauce, meal for cattle, oil, oilcake, fertilizer, beancake.

“The oil extracted from the soya bean, he pointed out, was used in the manufacture of the following articles: Dynamite and high explosives, soaps, linoleum, rubber substitute, margarine, paints and varnishes, toilet powder, waterproof cloth, paper umbrellas and lanterns, salad oil, lubricating oil, lamp oil, preserving sardines, lard substitute.”

2187. Beille, L. 1916. Le Soja [Soya]. *Gazette Hebdomadaire des Sciences Medicales de Bordeaux* 37(9):67-70. May 7; 37(10):73-76. May 21. [4 ref. Fre]

• **Summary:** “The question of the soybean (*haricot Soya* or *Soja*) reappears in our scientific and medical journals from time to time; the importance that this grain has acquired in the diet of the essentially vegetarian peoples of the Far East, and its richness in oil, albuminous materials, and minerals, have long called it to the attention of hygienists. Some authors have wanted to portray the soybean as an ideal food, a little jewel with a nutritive power comparable to that of eggs and meat; others have extolled the milk-like emulsion, obtained by grinding soybeans with water, as an advantageous substitute for cow’s milk.

A factory, established on the outskirts of Paris, at Vallées (Seine), was able to supply French consumers with

flour, cheeses [tofu], sauces, and many other soy-based preparations used in China and Japan.

“Leaving aside the inevitable exaggerations that accompany a product which is new to us, but which already has an established reputation elsewhere, it is necessary to recognize that the chemical composition of the soybean is of real interest. The Parisian clientele promptly abandoned the sauces, cheeses, and milk made from soya, but they appreciated the sprouts, which are still selling well as vegetables in the markets of Paris and its suburbs; soy-based flour and biscuits are very well adapted for use in diabetic diets.”

The author then gives an overview of the soybeans from a medical viewpoint, including a brief history and review of worldwide production and nutritional studies. “In 1779 this plant was introduced to France and cultivated in Paris at the Jardin du Roi. Since that period, despite the laudable efforts of the National Society for Acclimatization, the cultivation of the soybean has not gone beyond botanical gardens and some experimental fields. Nor has it had any more success in England or Italy. However in North America it is cultivated in all the southern parts of the United States, but as a forage plant.”

Through the merchant and importer Mr. A. Denis of Bordeaux, the author obtained two varieties of soybeans, one from Manchuria and one from Japan. He conducted a nutritional and microscopic analysis of these.

The author concludes that the soybean has great potential as both a food and an industrial uses, where the precipitated protein for example, can be used in place of milk casein to make Galalith, artificial ivory, glue, and paper coating.

Part II of this article discusses more about the general nutritional value of soybeans. He then discusses soy flour (*farine de soja*; he has a sample produced by the factory at Valées), soy milk (*lait de soja*), tofu (*fromage de soja*), shoyu and various soy-based sauces (such as *Tao-Tjung* of China, or *Touong* of Indo China).

“In summary the soybean is of great interest from the industrial point of view. The place that it occupies in the oil mills of Europe is already important... Its oil, for food or industrial uses, and its by-product, soy casein, are likely to receive a host of diverse applications. On the other hand, the future of the soybean as a food substance in Europe would seem to be more modest: its disagreeable taste removes it from daily consumption and enables it to be used only as an ingredient in mixtures.”

“If, in Europe, with a few reservations, we can include soya in the diet of healthy people, then there will be even stronger reasons to give it to sick people. At first glance soya, which is rich in fats and protein, with little or no carbohydrates, appears to be a food of choice for diabetics. And we must recognize that it has attained the greatest success among these sick people. But, here again, it would

be appropriate to give soya in the form of rusks/*zwieback* (*biscottes*), or mixed with vegetables or fruits; if it is not tolerated by sick people in these forms, then we should not hesitate to stop using it.” Note: In Europe, rusks are widely given to sick people, like chicken soup in the USA. Both are considered to be good medicinal foods that are easy to digest. Address: Professeur à la Faculté de médecine et de pharmacie de Bordeaux.

2188. *Washington Post*. 1916. Admiral Togo, ‘Nelson of Nippon,’ ‘simple life’ model, servants say. May 21. p. ES14.

• **Summary:** Admiral Togo, the victor of Tsushima, has never been interviewed and he never speaks about himself. Note: Tsushima Strait was the site of a naval battle in May 1905 in the Russo-Japanese War in which the Russian fleet was destroyed or captured by the Japanese fleet under Admiral Togo Heihachiro.

So the *Katei Zasshi*, a popular monthly magazine, sent reporters to “interview the count’s butcher and baker and candlestick maker, his barber and fishmonger and man at the corner.” By paying attention to his monthly housekeeping bills, they were able to conclude that the hero led a simple, frugal life—which all the tradespeople sincerely admired.

The man at the sake (spirits) shop said: “I get no orders for sake [saké] nowadays and only send in some soy (sauce) and miso (a curd [sic] made from beans and eaten for breakfast) of the commonest quality, occasionally.”

2189. Nemzek, L.P. 1916. The soya bean and soya oil. *Paint Manufacturers’ Association of the U.S., Educational Bureau, Scientific Section, Circular No. 37*. 8 p. June 10. [1 ref]

• **Summary:** This address was presented on May 18, 1916 (during World War I) at the meeting of the Mississippi Cotton Seed Crushers’ Association, New Orleans, Louisiana. Accompanied by three exhibits, it states: “As early as 1907 the Bureau interested itself in a campaign to promote the increased production of flaxseed in the United States. The rapidly increasing demand for linseed oil, by the industries in this country, indicated that we should soon face a shortage of his commodity. It remained for the 1910 flaxseed crop failure to demonstrate what a menace to the paint trade such a shortage meant. Due almost entirely to the resultant scarcity of linseed oil, the price commenced to soar during the latter part of 1910. Linseed oil reached the high price of \$1.00 per gallon during 1911 and high prices prevailed throughout most of the year 1912. This condition forcibly showed the necessity for a more profound investigation of oils which might find application as substitutes for linseed in the different industries which use the oil in large quantities. In view of the fact that the work which was done toward promoting an increased production of flaxseed had been so marvelously effective, it was decided to do work of similar magnitude with miscellaneous oils.”

“A series of practical paint exposure tests were begun on

test fences located at Washington, D.C., in connection with the Institute of Industrial Research. The paints were exposed in May, 1911. The repainting tests were made during the latter part of 1914. This series of tests is referred to in Circular No. 30, 'Repainting Tests on Paint Oils,' issued by the Educational Bureau during December, 1914.

"Soya oil was one of the oils decided upon for the experiments largely because it was already available in quantities and could readily be imported. After looking into the matter it was found that the production of it might be developed on a satisfactory basis in this country. Soya beans were already being grown in considerable quantities, but up to that time domestic oil on a commercial scale had not been produced.

"Soya oil is crushed from the bean bearing that name. The bean is commonly referred to by the agriculturists in this country as 'Soy,' but the oil, ever since it was first imported, has been known as 'Soya Bean Oil' or 'Soya Oil.' Largely for the sake of convenience the title 'Soya Oil' has been adopted and is coming into general use. The title 'Soya' was, very likely, introduced from Manchuria, where the bean is grown in enormous quantities, and is a derivation from the Japanese 'Shoyu' or 'Soja.' 'Soya' is replacing 'Soy' when used in reference to the bean as such, even in the language of the agriculturist, and it is only a question of time when the word 'Soya' will be adopted generally."

"The first step in connection with the Bureau's endeavor consisted of the importation of soya beans from Manchuria for oil-extraction tests and the distribution of this seed, together with seed from a number of varieties already grown in this country, and the soliciting of the assistance of the State Agricultural Experiment Stations and other interested persons to urge the farmer to grow more soya beans for seed. While soya beans had been grown in this country for a good many years, this was done as a forage crop and for fertilization purposes. Only enough seed was being harvested to take care of the succeeding year's planting. The far-reaching propaganda, through the active co-operation of the State Agricultural Experiment Stations and the different Bureaus of the U.S. Department of Agriculture, was solely for the purpose of inducing the farmer to increase his population."

The Bureau reached farmers through the State Agricultural Experiment Stations. "While growing tests during 1911 and 1912 were limited to North Dakota, Minnesota, Missouri, New Jersey and Kentucky, they were extended in 1913 to every State, with the exception of a few where conditions are unfavorable from an agricultural standpoint.

"The tests were also extended to the Philippine Islands and to several places in Canada. It is noteworthy in this connection that there are at least two varieties which can be successfully matured as far north as the southern portions of Quebec.

"During 1912, forty-eight varieties were experimented with, including four imported from Manchuria. This number was greatly increased in 1913, so that all available types would be included."

By 1916 the number of varieties had been reduced to about fifteen (see Exhibit No. 1), which were already popular: "Mammoth, Medium Yellow, Ito San, Holly Brooks [Hollybrook], Haberlandt, Peking, Wilson, Auburn, Black Eye Brow [Black Eyebrow], Arlington, Tokio, Mikado, Virginia, Chiquita, Sable and the Yellow Manchurian bean...

"No sooner were the farmers interested in the larger growth of soya beans than they began to ask for information as to how and where the beans could be disposed of to be converted into oil.

"It was soon evident that the cotton seed mills in the South were best situated for crushing the beans. The location of the hundreds of these mills is fortunate, inasmuch as the South is naturally adapted to become the great soya bean-producing section of the country. Definite plans have not been evolved in sections where the cotton seed mills are not located, but in the northern section of the country the linseed oil mills will, very likely, crush the beans as soon as the production is large enough to warrant their going into the matter. In some sections, notably Tennessee, it was suggested that the farmers in a certain locality club together and conduct their own mill, disposing of the oil in the regular manner, and each farmer to use the cake from his crop for feeding purposes. In this way there would be returned to the land the full fertilizing values of the crop. The promoters of successful agriculture see in this a means to increase the production of soya beans, mainly because of the value which the farmer obtains by the improvement of his soil.

"During August and September, 1913, I made a trip of nearly twenty-four thousand miles, visiting most of the Agricultural Experiment Stations, to discuss matters relating to the increased production of beans for oil-crushing purposes and to determine whether or not the cotton seed mills were in a position to handle the crop without materially altering the machinery they use for the crushing of cotton seed or going to the expense of installing new equipment. Most of my time was spent in the States growing cotton and where cotton seed mills were already established."

Also discusses the oil-bearing properties of different varieties of soya beans (the oil content averages 19% and ranges from 16 to 25%), and the drying properties (see Exhibit No. 2). "During the past six or seven months there has been produced in this country in the neighborhood of one hundred thousand gallons of soya oil. The largest part of this quantity has been produced by the Elizabeth City Oil & Fertilizer Co., Winterville Cotton Oil Co. and the New Bern Cotton Oil & Fertilizer Mills."

Discusses prices at which soybeans should be purchased for profit in the oil industry, and opportunities for disposing of the oil and meal. The author points out the limited uses

of soy bean oil in paints; in 1916 some 98,171,275 lb of soy bean oil were imported into the United States. The five samples of soybeans analyzed had an average iodine number of 125.8. But iodine value and drying power do not necessarily go hand in hand, although such is often the case.

"In those sections of the South where the cotton fields are infested by the boll weevil, the growers may find it to their advantage to produce soya beans on a large scale. The Alabama Cotton Seed Crushers' Association has the matter under careful consideration at the present time. The cotton crop of certain sections of that State has been seriously affected by the disastrous results which accompany the boll weevil.

"It is at once apparent that it is to the advantage of the cotton seed mills to take up the crushing of soya beans. In the first place it will help to give the mills a longer season and thereby shorten the period of idleness. This period generally varies from four to six months every year with different mills.

"The crushing of soya oil has advantages over cotton seed; it is a cleaner and easier material to handle preparatory to crushing, and the bean releases its oil as freely, at least, as cotton seed.

"Soya oil can be disposed of just as readily, at least, as cotton seed. The A.M. Parks Company, Philadelphia, commencing with the May issue of 'The Oil Miller,' advertise for domestic soya oil. This is the first ad to appear, and opens up what is likely to prove the most satisfactory outlet for the product of so many mills... In some cases the consumers who could handle it in tank cars would be able to deal direct with the crushers. The A.M. Parks Company was one of the first to import soya oil, and still imports it in large quantities. Two or three years ago the Company distributed an interesting pamphlet entitled 'Soya,' in which the commercial possibilities of the oil are referred to in some detail."

"While practical tests started in 1911 have not yet been completed, and the Bureau, in line with its adopted policy, does not intend to make a definite report until the investigation has been finished, the writer feels safe in stating that large quantities of soya oil will eventually be consumed in the manufacture of paint and varnish. Because of the inferior drying properties of soya oil as compared with linseed oil it cannot entirely displace linseed, and its use in connection with linseed oil will be limited to from 25 to 50 per cent., depending on the product in which it is used."

Note 1. This is the earliest English-language document seen (Nov. 1999) with the term "soya oil" in the title.

Note 2. This is the earliest document seen (Aug. 2004) that mentions the soybean variety Chiquita. Address: Special Technical Representative, Educational Bureau, Paint Manufacturers' Assoc. of the United States, Philadelphia, Pennsylvania.

2190. *Miami Daily Metropolis (Miami News)*, 1916. Some typical dishes of the Allies. July 6. p. 10.

• **Summary:** A recipe for Salmon teriyaki (Japanese) is given: "Mix well together 1-2 cupful [sic, ½ cupful] of Japanese Shoyu and 1 tablespoonful of Mirin [sweet sake]: put a salmon on the grill and when nearly done spread the sauce on the salmon with a brush freely. Then put back on the grill and cook until it browns. When that side is done, cook the other side the same way.

"Note:—Japanese Shoyu is made of wheat and beans."

Note: This is the earliest English-language document seen (April 2012) that contains a recipe for teriyaki sauce [very crude] or fish teriyaki.

2191. Johnson, Nelson Trusler. 1916. Manufacture of bean milk at Changsha. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 19(183):468-69. Aug. 5.

• **Summary:** "A firm composed of Chinese from the Province of Chekiang has recently opened a small factory at Changsha for the manufacture of milk from beans. This milk has long been known to the Chinese under the name of *to fu chiang* [soy milk] or bean-curd sauce. This is not to be confused with the product known as *chiang yu*, a fermented sauce made from beans which is well known as the soy of the Japanese and as one of the constituents of the famous sauces of Europe [such as Worcestershire sauce].

"Bean milk is made from small yellow beans, the same variety from which the Chinese bean curd [tofu] and *chiang yu* or soy [sauce] are made. The process appears to be a very simple one. The beans are soaked and then crushed between two stones. The crushed mass is allowed to run off into a tub and is then strained through cheesecloth and diluted with water and boiled. After boiling, it is again strained and the white milk run off into bottles and sold to the factory's customers." Note 1. The milk is first filtered when cold, before it is heated or boiled.

"An analysis of the bean-curd milk [soy milk] shows that it has a specific gravity of 1.020 and a fat content of 3.125 [percent], contrasted with a specific gravity of 1.029 and a fat content of 3.9 [percent] for good average cow's milk in America.

"No complicated machinery: The factory is a very small one. The proprietors informed me that they did all their work at night, in order to have fresh milk for delivery the following morning. They begin their work at about 10 o'clock. The milk is ready and bottled by daylight, when it is sent out by coolie to the various customers." Note 2. See photo in Piper & Morse 1923, p. 231.

"The room where the milk is made shows that no complicated machinery is necessary in the manufacture of the milk. At one end of the room are found two of the small stone mills in which the beans were ground. Large

numbers of bottles were arranged on a rack near the wall, clean and ready to receive the morning's supply of milk. At the opposite end of the room there were three wooden [sic, metal] vats built into a concrete foundation, which proved to be a furnace. The prepared product is poured into these vats and boiled, the furnace being supplied with fuel from a hole in the outside wall. On either side were two earthenware jars into which the boiled product is poured and through which it is allowed to run through stop cocks into the bottles.

"The manufacturers of this milk seem to be endeavoring to conduct their factory along hygienic lines. They invited inspection of their factory and expressed a desire to carry out the suggestions made by the inspecting physician. These suggestions related principally to the sterilization of the bottles before allowing the milk to run into them. The whole room was very clean.

"Possible opening for milk bottle manufacturers: The manufacture and sale of this milk appears to be a new enterprise in Changsha, although I am informed by the natives of Shanghai and its neighborhood that it is an old and well-known product in that part of the country. To the eye the product looks exactly like unskimmed cow's milk. It has an odor of raw beans and is said to be not unpleasant to the taste. I am informed that a member of the family of Li Hung Chang is now engaged in manufacturing the various products of beans in Paris, his factory turning out, among other things, this bean milk.

"The product is very cheap compared with cow's milk. The factory undertakes to supply one pint each morning for approximately 50 cents gold a month. If this industry proves a success, manufacturers of milk bottles and patent milk-bottle tops should find a market for their wares here at Changsha, if they could be brought in cheaply... The milk bottle manufacturer will, of course, have to compete with the enormous numbers of empty bottles discarded by families who use aerated waters and wines. These bottles are sold by the servants, and are purchased for use in just such factories."

Note 3. This is the earliest document seen (Dec. 2006) describing the selling of soymilk in bottles in China. Changsha is in southeastern China, far to the southwest of Shanghai. Note 4. Consul Johnson seems to be a careful and well informed observer and reporter. Address: Consulate, Changsha, China.

2192. Tanaka, Katsuhirô; Katashima, Hideo. 1916. Kabi o shôsezarû shôyu no shisei [Test production of mold-free shoyu]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 414. p. 757-58. Aug. [Jap]
Address: 1. Zeimu Kantoku Kyoku Gishi; 2. Zeimu Kantoku Kyoku Gishu.

2193. Cunningham, Edwin S. 1916. China's production of beans, bean oil, and bean cake. *Commerce Reports [USA]*

(*Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce*) 19(209):886-87. Sept. 6.

• **Summary:** "The soya or soy bean in recent years has become an important article of trade. It grows on a plant from 2 to 3 feet in height and is contained in pods about 2 inches long. The plant is cultivated everywhere, in fields by itself, around rice and similar crops, and as an undercrop to maize and sorghum. There are 25 to 50 varieties of the soya bean, but in commerce only 3 are ordinarily recognized—yellow, green, and black.

"The yellow bean, which is of greatest importance, is found generally throughout Manchuria, and it is reported that the finest crops come from the highlands to the north of Mukden. The green variety comes from the Liaotung district and the Yalu basin, and the black bean from Liaoyang and the south of Mukden. There are two other varieties, the brown bean and the mottled bean, which are grown to some extent in the Yangtze Valley, but these varieties are of little importance.

"Grown largely for its oil in Manchuria: The Soya bean is put to many uses in the Far East. It is cooked and eaten as a vegetable, made into a sauce or soy, preserved as a pickle, ground into a flour and made into vermicelli, and employed extensively in the manufacture of vinegar. One particular variety, having small yellow seeds, is used in making bean curd. In Manchuria, however, the soya bean is grown almost exclusively for its oil properties and for the residual material called bean cake.

"The soya bean contains about 18 per cent oil. When the hydraulic-press method is employed only 11 to 12 per cent of the oil can be extracted, but with the use of benzene in the chemical process 17 per cent is obtainable. This oil is used as an illuminant, a lubricant, for culinary purposes, and in the manufacture of soap. In southern China it is also used in the making of waterproof cloth, paper umbrellas and lanterns, and when mixed with lacquer is employed in the manufacture of varnish and printing ink.

"Dairen is the center for the bean-oil industry, exporting more than eight times as much as Hankow, its nearest competitor. The oil mills, which are to be found in every town throughout the bean district, are growing in numbers and becoming more modern all the time. The old crush-stone mills worked by animals are rapidly giving way to up-to-date hydraulic, steam, and oil-motor plants. Hankow has about 10 such mills. During 1914 the local exportation of bean oil was 4,714 tons, valued at \$393,759 gold, and during 1915 there were 6,882 tons, valued at \$482,694.

"Japan takes practically all bean cake exported: After the oil has been pressed from the bean, the residue is pressed into the round, flat cakes known as bean cake. The product is very valuable as a fodder for animals, and as a fertilizer... Japan takes practically all the bean cake exported, and the United States none.

“The greatest original exporting center for bean cake is Dairen; Newchwang is second, and Hankow a poor third...”
Address: Consul General, Hankow.

2194. Eddington, Jane. 1916. The Tribune Cook Book: Cheap chop suey. *Chicago Daily Tribune*. Sept. 8. p. 12.

• **Summary:** A recipe for “Chop suey with pork” says that Chinese generally use a little peanut oil to fry the pieces of pork and vegetables. “Put the two parts together in the oil in which they have cooked, add two or three tablespoons of soy sauce, and let them stand covered for a few minutes over a small amount of fire.”

In back half of journal. [Jap]

• **Summary:** This article, written in Japanese, has both a Japanese title (*Shōyū jōbokin no shinō keisei ni yōsuru kagaku-teki jōken ni tsuite (yohō)*) and a German title (shown above). This is the first of a 3-part series published in this journal. Parts 2 and 3, written in German, were published in 1918–32(373):1-13, and 32(374):15-25.

2196. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products: Soy beans in Japan, in Europe, and in the United States (Document part). *USDA Bulletin* No. 439. 20 p. Dec. 22. [2 ref]

• **Summary:** “Soy beans in Japan (p. 4):... In many districts it is cultivated not in fields by itself, but in rows along the edges of rice and wheat fields. Although not grown to any considerable extent as a main crop by the Japanese farmer, the average annual production is about 18,000,000 bushels. In quality the beans raised in Japan are said to be superior to those of Manchuria and Chosen [Korea] and are used exclusively in the manufacture of food products. The imported beans, of which very large quantities are obtained from Manchuria and other Asiatic countries, are used principally in the manufacture of bean cake and oil.”

“The soy bean forms one of the most important articles of food in Japan. It is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are also eaten as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A ‘vegetable milk’ is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh and a form of condensed milk is manufactured from it. All of these foodstuffs are used daily in Japanese homes and for the poorer classes are the principal source of protein. To

a limited extent, soy beans are used as a horse or cattle feed, being sometimes boiled and mixed with straw, barley, and bran.”

“Soy beans in Europe (p. 6): The soy bean was first introduced into Europe about 1790 and was grown for a great number of years without attracting any attention as a plant of much economic importance. In 1875 Professor Haberlandt, of Vienna, begun an extensive series of experiments with this crop and strongly urged its use as a food plant for man and animals. Although interest was increased in its cultivation during the experiments, the soy bean failed to become of any great importance in Europe. At the present time it is cultivated only to a limited extent in Germany, southern Russia, France, and Italy.”

“Soy beans in the United States (p. 7): Although the soy bean was mentioned as early as 1804 (Footnote: Willich, A.F.M. *American Encyclopedia*, 1st Amer ed., v. 5, p. 13. Philadelphia, 1804), it is only within recent years that it has become a crop of importance in the U.S. At the present time the soy bean is most largely grown for forage. In a few sections, such as eastern North Carolina, however, a very profitable industry has developed from the growing of seed... The yields of seed to the acre in various sections of the United States range from about 15 bushels in the Northern States to about 40 bushels in the northern half of the cotton belt. The average yield in eastern North Carolina is about 25 bushels, although many fields produce 35 bushels or more to the acre...” Note: This is the earliest U.S. document seen (June 2003) that cites the 1804 publication by Willich [and James Mease] concerning the soybean in Philadelphia. Note that this article appeared 112 years after 1804.

“The first extensive work in the U.S. with the soy bean as an oil seed was entered upon about 1910 by an oil mill on the Pacific coast. The beans, containing from 15-19% of oil, were imported from Manchuria, and the importations, most of which are used in the manufacture of oil and cake, have gradually increased, as shown in Table V. The oil was extracted with hydraulic presses, using the same methods employed with cottonseed and linseed. It found a ready market, as a good demand had been created for this product by soap and paint manufacturers, which up to this time had been supplied by importation from Asiatic countries and England. The soy cake, ground into meal, was placed on the market under a trade name and was soon recognized as a valuable feed by dairymen and poultrymen. The use of the cake has been confined almost wholly to the Western States, owing principally to the high cost of transportation.”

“An industry which promises to be of importance in a further utilization of the soy bean is the manufacture of ‘vegetable milk.’ At the present time a factory in New York State is being equipped for this purpose.” Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

2197. *New York Times*. 1916. Versatile red bean here. All kinds of dishes can be made from it, curbing cost of living. Dec. 27. p. 18.

• **Summary:** “Forty-nine varieties of a Titian-haired bean were exhibited yesterday at the School of Modern Cookery, 6 East Thirty-ninth Street, as an offering of the United States Department of Agriculture in reducing the high cost of living. The beans, which have as a distinguishing feature a thick red hirsute adornment, are the Soy or Soja Bean, natives of China and a prime article of the diet there a few thousand years before Boston [Massachusetts], the bean centre of the United States, was known.

“The soy bean is much used in Chinese chop-suey restaurants and forms the basis of the brown sauce [soy sauce] served on Chinese restaurant tables. Yet a whole course dinner, or the equivalent for it, can be served from the Soy bean in different forms, or the various courses can be lumped together and served with equally satisfying hygienic results in a single dish.”

2198. Norton, Jeanette Young. 1916. Chinese delicacies and how to prepare them: Recipes given by Chinese chefs will enable American housewives to duplicate at home some of the famous restaurant dishes. *New-York Tribune*. Dec. 31. p. 3.

• **Summary:** “Soye (dragon’s blood) is the Chinese Worcestershire sauce; it is imported by the barrel, and a little is used to flavor nearly all of the made dishes” (col. 3).

“Noodles are always fried in peanut oil.”

Pao ping (Thin cakes): “Chop fine vegetables and cold pork; add seasoning and a little soye” (col. 5).

Pork chop suey: Ingredients include a “tablespoon of soye” (col. 6).

Note: “Soye” refers to “soy sauce,” which does not mean “dragon’s blood” in Chinese.

2199. Williams, C.B. 1916. Soy-bean products and their uses. *North Carolina Agricultural Experiment Station, Circular No. 34*. p. 1-7. Dec.

• **Summary:** Contents: Introduction. First commercial crushing from domestic beans (started on 13 Dec. 1915 by the Elizabeth City Oil and Fertilizer Company of Elizabeth City, North Carolina). Soy-bean oil. Uses for the oil. Soy-bean meal. Composition and exchange value of the meal. Prices paid for beans by the oil mills. Soy-bean oil industry in England, Manchuria, and Japan. Importation of oil. Soy-bean meal as feed. Soy beans and products for human food.

The article begins: “In order that any people may maintain their soils in the highest state of productivity in an economical way it will be necessary that proper systems of crop rotation are used, and in these rotations it will be necessary to bring in leguminous crops at as frequent intervals as practicable. For North Carolina conditions one of the crops of this nature that may be used to good

advantage in all parts of the State is the soy bean. If properly handled, this crop may be used as the means of adding to the productivity of the soils as well as to increase the net returns from the farm. Recently there has been a marked interest throughout this State and the South in the growing of soy beans.” A “new outlet for the beans has developed from the crushing of the seed by a number of oil mills of the State...” The spread of the boll weevil should lead to increased interest in the soy bean.

“This crop was introduced into the State something like thirty-five years ago, yet very little was heard of it, outside of very limited areas, until quite recently, when a campaign was begun to induce the cotton oil mills of the State to use beans for crushing purposes in the same general way that cotton seed had been used for many years before. This campaign not only opened the eyes of the oil crushers to the possibilities of the soy bean in a commercial way, but of the farmers, also, to the great opportunities of this crop.

“During the spring of 1915 farmers, particularly in the Eastern part of the State, were casting about to find a crop or crops that might be substituted, satisfactorily, for cotton, as the price of this latter crop during the previous fall had been, in many cases, below the cost of production. Many farmers increased their acreage of soy beans, and as a result of this increase at least a million bushels or more of beans were produced last year.” Something like 80,000 to 100,000 bushels of soy beans were used by the cotton oil mills of the State during the past fall, winter, and spring.

“The first commercial manufacture of soy-bean oil and meal from domestic soy beans in the United States was started on December 13, 1915, by the Elizabeth City Oil and Fertilizer Company of Elizabeth City, North Carolina.

“From the start this mill operated night and day solely on soy beans until it had crushed its supply of about 20,000 bushels. This mill was able to crush about twenty tons during each twenty-four hours...

“It is understood that before the mill had ground a single bean they had contracted their entire output of oil to one of the leading manufacturers of the country at fairly reasonable prices. It, too, had no difficulty in selling its entire output of soy-bean meal, most of it going to a fertilizer manufacturer. From a ton of the beans this mill was able to secure something like 32 to 35 gallons of oil and about 1,650 pounds of meal... Other oil mills in North Carolina that crushed more or less soy beans during the past season were those located at New Bern, Hertford, Winterville, Washington, Wilson, Farmville, Lattimore, and at a few other places.”

“Uses for the oil: At the present time the oil is used in this country chiefly in the manufacture of soaps, varnishes, paints, enamels, linoleums, and water-proofing materials. It has entered, also, to some extent in the manufacture of edible salad oil and butter substitutes” (p. 3). “Soy-bean meal: The meal secured from crushing the beans is the most valuable

product and will have the widest usefulness. That secured from the crushing of yellow-colored beans is of a bright yellow color... Meal, too, that has been treated with ordinary solvents, employed for this purpose to remove the oil, is of a brighter color than are those meals from which the oil has been removed by heating and pressure. The oil, however, secured by a solvent process would be of a darker color... The soy-bean cake secured by expression methods, has a pleasant taste, not unlike malted milk, and when ground into meal may be used, at the present time, chiefly for feeding to livestock or for fertilizing purposes. The meal as a feed is highly concentrated and nutritious, and all kinds of stock seem to relish it when fed to them properly. It should not be fed in large quantities for any great length of time, because of its highly concentrated nature. As a fertilizer it acts satisfactorily. Much of the meal produced by the oil mills of the State during the past year seems to have been sold, without any difficulty, to manufacturers for the making of mixed fertilizers."

"... during 1913 and 1914 the British Oil Mills, located mainly at Hull, England, paid from \$1.00 to \$1.17 per bushel for Asiatic beans. During 1915 the price paid at the mills at Hull varied from \$1.04 per bushel in January to \$1.82 per bushel at the end of the year.

"In England, the oil from the soy bean is extracted largely by a secret process owned by an oil extracting company of Hull. By this process the seed are ground finely and are then treated directly by means of a solvent, which is thought to be benzine. Afterwards the oil is removed from the solvent by distilling off the latter, the solvent being used over and over again in the extractive process."

"By use of gasoline extraction the whole of the oil may be secured, the oil being of a clear, pure color, and hardly bearing any resemblance at all to the dark, muddy oil secured by the old hand-press method.

"The machinery used by the larger operators of England, Continental Europe, as well as of Japan, Korea, Manchuria, and China, is of Anglo-American manufacture, which is the kind ordinarily used in the expression of oil from cotton seed. In 1910 Stewart and Chard secured patents in England for a special machine which was particularly adapted for breaking up the beans. This machine has been very useful in solving some of the difficulties experienced in the soy-bean crushing industry in England.

"In England soy-bean oil for general purposes is not refined, as is cotton-seed oil in America, by the use of caustic soda, but by means of sulphuric acid and fuller's earth.

"Processes of refining soy-bean oil for edible purposes have been devised, but these, like those used for extracting the oil from the seed, have been kept secret; but they are thought in most cases to be by means of superheated steam."

"Importation of oil: In this connection it may be of interest to know that for the five years ending with 1916 there were imported into this country more than 174,000,000

pounds of soy-bean oil, which represented crushings amounting to more than 12,000,000 bushels. Of these, 47.6 per cent came through the port of New York; 36.1 per cent through Seattle [Washington]; 9.6 per cent through San Francisco [California]; 2.2 per cent through Philadelphia [Pennsylvania]; 1.6 per cent through Boston [Massachusetts]; 1.1 per cent through Chicago [Illinois]; and 1.3 per cent through all other ports of the United States. In 1916, 75 per cent of the importations came through the ports of Seattle and of San Francisco, the chief port of entry being Seattle, with 62.9 per cent of the total importation. During 1916 more than 98,000,000 pounds of soy-bean oil came in from other countries, 99.9 per cent of the total coming from Asia. Of the total amount imported from Asia, almost 72 per cent were shipped from Japanese ports. The total importations during 1916 were valued at little more than \$5,000,000."

"Soy beans, before crushing, and the meal secured by crushing, seem to have great possibilities in the way of different human foods. They are not only rich in food nutrients, but when properly prepared make very appetizing products..."

"In this country some enterprising manufacturers are putting out prepared pork and beans, part of all of the beans being soy beans. A regular preparation of these which the writer has tried proved to be of as high grade as could be desired..."

"Muffins made from soy-bean flour have been found to be very palatable [a recipe is included]..."

"The chief value of the flour lies in its high content of protein (muscle-forming material) and mineral matter, one pound of it containing as much protein as two pounds of meat. Bread made from the soy-bean flour in Germany, where it is being largely used at the present time, secures about the same amount of food value as six dollars spent for meat. The flour seems to have especial value in the preparation of foods for delicate infants which have difficulty with digesting cows' milk, and for persons suffering with diabetic troubles." A diagram (p. 7) shows "Products secured from the crushing of a ton of soy beans by the oil mill, and the material made from these products." One ton yields 1,650 lb of meal, 32 gallons of oil, and 120 lb of trash and moisture. From the meal one can make food (human and animal), fertilizer, and celluloid. The human food can be macaroni, flour, sauce, milk, cheese, coffee, and lard. From the oil one can make food (cooking oils, butter [margarine?]), paints, enamels, blown oil (linoleum, India rubber substitutes, varnishes), and soap stock (soaps, glycerine). Note: This is the earliest English-language document seen (August 1996) that contains a diagram of this type. Address: Chief, Div. of Agronomy, North Carolina Agric. Exp. Station.

2203. Sornay, Pierre de. 1916. Green manures and manuring in the tropics, including an account of the economic value of leguminosæ as sources of foodstuffs, vegetable oils, drugs, etc. Translated from the French by F.W. Flattely. London: John Bole, Sons and Danielson, Ltd. xvi + 466 p. Illust. 26 cm. [12 soy ref]

• **Summary:** This book is dedicated “To my esteemed Master and Friend M.P. Bonâme. A token of deep gratitude and sincere admiration.” It “was awarded a gold medal by the *Société Nationale d’Agriculture de France*.” The translator is from the International Institute of Agriculture, Rome, and the Dep. of Zoology, University College of Wales, Aberystwth. In the introduction H. Pellet states (p. viii) “M. de Sornay, who for a number of years has been a member of the Agronomic Station of Mauritius, had already published, some time ago, in the *Bulletin* of the Station, a short treatise on the Leguminosæ.” This volume is a major expansion of that work. The author was one of the first to study intercropping of sugar cane with legumes. Working in Mauritius, he found that legumes used in mixed cultivation with sugar prevented the growth of weeds and retained the soluble salts which would have been washed away by rain. A trailing variety of peanut was used. He also suggested soybean as an intercrop because “it does not interfere in any way with the small canes; the soybean may be used on a mixed cultivation and may even be sown in two rows in interspaces of canes” (p. 184). Also includes concise information about the cultivation and yield of soybeans.

Chapter 1, “General remarks” (p. 1-9) begins: “The family of the Leguminosæ, which numbers not less than 7,000 species distributed over every portion of the globe, contains, according to Van Tieghem, 430 genera.” “The Leguminosæ are generally divided into three great sub-families: Cæsalpineæ, Mimoseæ, and Papilionaceæ.” The first two sub-families prefer tropical climates, whereas the Papilionaceæ “adapt themselves to every climate and are found distributed from the Equator [Ecuador] to the Poles.” The Papilionaceæ are divided into eleven tribes; a table

shows these and the subtribes or genera they contain. The genus *Glycine* is in the tribe Phaseoleæ, subtribe Glycina.

Chapter 2 is an “Account [history] of the theories on the absorption of nitrogen from the air by the leguminosæ.” Chapter 3 (p. 9-46) is a “Description of the various leguminous plants of agricultural value.” The 37 species discussed include the peanut (p. 47-70), Bambarra ground-nut or Voandzou (p. 70-72, native of Madagascar), *pois carré* [winged bean] (*Psophocarpus tetragonolobus*), and Soja, or Soy bean (p. 182-92).

The rambling treatment of the soy bean discusses bits and pieces of its history, botany, and yields in India, South Africa, and Mauritius. Nineteen tables show its composition. Concerning uses: “The seed of the soy bean is eaten as a vegetable by the majority of Chinese and Japanese, and they make numerous other uses of it.” The chief ones are: Soy milk, soy cheese [tofu], and shoyu. “The roasted seeds of the soy bean are used in the United States and Switzerland as a substitute for coffee. Not containing any starch, these breads are used in the manufacture of breads and biscuits for people suffering from diabetes. They are found on the European market... The seeds are pressed in order to extract the oil, the oil resulting from the first expression being used in the manufacture of soap, whilst that from the second is used as machine oil. The cake is given to cattle mixed with other nutriment of lower nitrogen content. The trade in soy has increased considerably during the last five years.” Trade statistics (exports of soy beans from Manchuria and imports to Europe) and prices on the London market (of soy beans, oil, and cake) are given.

Chapter 7, “Starch in the leguminosæ” (p. 246+) discusses the “Characters of the principal starches in the Leguminosæ.” It contains an illustration (line drawing) of the starch in *Soja hispida* (Fig. 42, p. 251), and a description (p. 255) as follows: “*Soja hispida*.—Soy contains very little starch. The shape of the grains is fairly uniform, whilst their size is very variable. All the grains polarize clearly. The hilum is linear, occasionally stellate, but of rather rare occurrence. The striations are only visible at the edges and are very close together. Starch only very slightly homogeneous.” Address: Chemist, Ex-Asst. Director of the Station Agronomique of Mauritius, Laureate of the Association des Chimistes de Sucrierie et de Distillerie de France et des Colonies, Laureate of the Société Nationale d’Agriculture de France.

2204. *San Francisco Chronicle*. 1917. Gotham now has the soja bean. Jan. 12. p. 15.

• **Summary:** New York. January 11—When it comes to the matter of beans, Boston would do well to look to its laurels, because New York has welcomed into its capacious midst a rival to the famous New England Saturday night and Sunday morning food staple. And if you don’t believe it go to 6 East Thirty-ninth street, make your way into the soja bean room

of the School of Modern Cookery and gaze reverently on the soy, or soja bean, there on exhibition.

"The soy in its native haunts is said to have red hair, and somewhat of the temperament generally associated with that style of adornment.

"Forty-nine soybean specimens are on display, shorn of their hirsute appendages, the pods, leaves, and stems.

"In its original condition the bean, which is about the size and form of a green pea, is served in soup and is used in the preparation of meat sauces [such as Worcestershire sauce]. It can be found in the mysterious concoctions [soy sauce] which the adventurous eater absorbs in chop suey establishments, it is said.

"The soja bean, according to its sponsors in the bean room, forms the principal article of diet of Chinese and Japanese soldiers, and it is also popular in Germany, where it forms an auxiliary to the cow and goat in furnishing substitutes for milk. Information as to how a soja bean was milked was refused, by the way.

"It was predicted that the soja bean as a great future in this country."

2205. *Weekly News Letter (USDA)*.1917. Soy bean useful crop. May be utilized in greater number of ways than almost any other agricultural product. 4(27):3. Feb. 7. [1 ref]

• **Summary:** "The soy bean... may be utilized in a greater number and a greater variety of ways than almost any other agricultural product...

"In Japan the soybean forms one of the most important articles of food in use. It is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh, and a form of condensed milk is manufactured from it."

In several European countries and to some extent in America, soy-bean "flour enters largely as a constituent in many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties.

"Soy-bean milk... has been produced in small quantities in the United States, and recently a factory has been equipped to make this product." In Europe and America soybeans are roasted to make "an excellent substitute for coffee. In Asia the dried beans, especially the green-seeded varieties, are soaked in salt water and then roasted, this product being eaten after the manner of roasted peanuts."

Soy-bean meal (for use as a stock feed) and soy-bean oil are also discussed. "In addition to its availability as a food, soy-bean oil has found important uses in the markets of the world for making paints, varnishes, soaps, rubber substitutes,

linoleum, waterproof goods, and lubricants. It is also used in the Orient for lighting and in the manufacture of printing ink."

2209. Williams, C.G.; Park, J.B. 1917. Soybeans: Their culture and use. *Ohio Agricultural Experiment Station, Bulletin* No. 312. p. 577-600. March. [3 ref]

• **Summary:** This bulletin consists of two articles: "Soybean Culture" by Williams, and "Uses of Soybeans" by Park. The latter, which contains extensive information on soyfoods, is an extract of Park's paper titled "Soybeans as Human Food. Palatable Dishes Made from a Comparatively New Legume"; it was printed in *Ohio Agricultural Experiment Station Monthly Bulletin* 2(9, whole no. 21):299-303. Sept. 1917.

Contents: I. Soybean culture. Introduction: Production in Ohio, place. Climate and soil requirements: Climate, soil, fertilizers, inoculation. Seeding and cultivation: Seed bed, time of seeding, manner of seeding, depth seeding, rate of seeding, cultivation. Harvesting: For hay, for silage, for seed ("The best implements for cutting soybeans for seed are the mowing machine with side-delivery attachment, the self-rake reaper and the grain binder."), threshing. Varieties: For seed production, for hay. The effect of soybeans in crop rotations.

Tables show: (0) Acreage planted to five legumes in Ohio. Red and alsike clover: 880,676 acres (No. 1). Soybeans: 4,921 acres (No. 4). (1) Rate of seeding and yields of soybeans in Ohio from 1909 to 1916. Best rate—3 pecks/acre—gave 6-year average yield of 3,540 lb/acre of beans. (2) Description of 25 varieties: Amherst, Auburn, Cloud, Ebony,

Elton (Chestnut)* (* = The Elton was first sent out by the U.S. Department of Agriculture under the name of Chestnut), Habaro, Hollybrook, Ito San, Ito San 17268, Manchuria, Medium Green, Mongol, Mikado, Ohio 7491, Ohio 7496, Ohio 9001, Ohio 9016, Ohio 9035, Ohio 9100, Ohio 9110, Sable, Shingto, Taha, Wing's No. 1, Yoshio. The five highest yielders of grain are: Ohio 9016 (29.22 bu/acre, 5 year average), Ohio 7496, Elton, Ito San 17268, and Shingto.

(3) Yields of grain and straw of these 25 varieties. (4) Variety tests at the county experiment farms (yields of 8 varieties). (5) Soybean hay test (yields of 10 varieties, 1912-1916). (6) Wheat yields following crops of corn, soybeans (the highest), potatoes, or oats.

Part II. Uses of soybeans. Introduction. Use for animal food: Hay, grain, soiling crop. Special uses and products: Soybean meal, soybean oil. Use for human food: Soy sauce, soybean milk, use of the whole beans.

Concerning soymilk and tofu (p. 300): "If a small amount either of acid or of magnesium or calcium salts is added to the liquid [soybean milk], or if it is allowed to stand until sour, a curd is formed which settles out, leaving a clear, yellowish, watery liquid. The grayish white curd can be drained, pressed and eaten like cottage cheese. When salted and fried it is palatable, and can be used as a salad. This bean curd is the tofu which is so extensively eaten in the Orient. It is made fresh every day, and is as staple an article of diet of Oriental peoples as bread is of ours. As used by the Japanese these cakes contain 83 to 88 percent of water, 7 to 11 percent of protein and 4 to 5 percent of fat."

Concerning use of whole soybeans: "When properly roasted and prepared, the ripe soybean makes a good substitute for coffee, equal to many of the cereal preparations on the market" (p. 302).

Photos show: (1) A soybean plant with its leaves removed to show pods (front cover). (2) A field of soybeans, with about half the leaves fallen, ready to be cut for seed (opposite p. 581). (3) Root system of a soybean plant with "numerous nodules in which nitrogen-fixing bacteria live" (p. 583).

Tables show: (7) Percentage composition and digestibility of soybean meal (pressed, or extracted) and other foodstuffs [oil meals and feed grains] for comparison. (8) Quantity and value of imports of soybeans, soybean cake, and soybean oil into the United States, 1910-1915.

Bar charts show (p. 600): (1) Pounds of digestible protein in 100 pounds of 14 food materials; soy beans are highest at 28.3 lb. (2) Pounds of digestible protein and digestible carbohydrate that one dollar will buy in the form of the same 14 food materials; in the form of soy beans, it will buy the most digestible protein (9.43 lbs at 3 cents/pound) and the 4th most digestible carbohydrate (after corn meal, rice, and wheat flour). Address: Wooster, Ohio.

2210. Li, Yu-ying. 1917. Procédés et dispositifs pour la

transformation intégrale du soya [Processes and technology for the transformation of whole soybeans]. *Chemisch Weekblad* 14(15):348-51. April 14. Included within a longer paper in this journal by de Waal, p. 344-56. [Fre; dut]

• **Summary:** This lecture, delivered in French on 11 Nov. 1911, includes a description of and an interesting, complex diagram showing the basic processes by which the many food and industrial uses of the soybean are created. "In the soybean industry, it is not only the whole seed / bean which constitutes the usable raw material, but also its derivatives such as soy flour, milk, etc., and even the by-products (cakes), which can, themselves, serve as the basis for a large number of products." A table (p. 349) shows these raw materials in five degrees: 1st. Whole soybeans. 2nd. Dehulled soybeans, cellulose/fiber, cakes, oil-rubber, milk, cakes. 3rd. Flour, cakes, oil, milk, cakes. 4th. Flour, milk, cakes, casein (*caséine*), flour. 5th. Casein, flour. "These five groups are composed of 19 products which can be considered as the raw materials which derive from a series of transformations leading up to the complete utilization of the bean."

"The course of operations to obtain the announced products comprises the following phases which are represented in figure 1.

"Dehulling of the beans. Grinding of the dehulled product, of oilcakes (*tourteau d'huilerie*), cakes for [soy] dairy production (*tourteaux de laiterie*), of casein.

"Pressing to obtain oil, or to obtain *sojalithe* (an industrial soy casein resembling ivory or horn).

"Drying of the casein, of the soymilk cake [okara] (*tourteaux de lait*), of the powder for preserves (*confiture*) [such as chestnut cream (*crème de marron*)].

"Cooking for the production of preserves, or for making sauce.

"Roasting / grilling for the manufacture of [soy] chocolate or [soy] coffee.

"Wet-grinding to obtain milk [from soybeans], or to obtain milk from okara (*lait provenant de tourteaux*).

"Fermentation for the manufacture of sauce [jiang or soy sauce], cooked soybeans, or milk.

"Concentration for the manufacture of milk, [okara] (*tortaux de lait*), or sauce.

"Desiccation / drying to obtain powdered [soy] milk, powdered [soy] milk cake [okara] (*poudre de lait de tourteaux*), powdered soy sauce.

A chart (fig. 2, p. 350) describes the progress and combination of different necessary operations to obtain these products.

"You can see that the soybean is first dehulled so that it can be cooked or ground either dry or with the addition of water. The dry-ground products, made into flour, are used for baking, pastry-making, and the fabrication of pasta (*pâtes alimentaires*).

"Dehulled soybeans treated by wet-grinding yield

soymilk, which can itself be transformed into fermented milk, concentrated milk, powdered milk, or it can serve for the production of fresh or fermented cheeses, of [soy] sauce (by fermentation), as well as to obtain casein that can be dried or powdered; by pressing casein one obtains 'sojalithe.' The oilcakes [okara] resulting from the fabrication of milk are pressed and ground and can be used to make casein.

"Soybeans are pressed to obtain oil which can itself serve as a base to make candles, soaps, paint, artificial rubber, etc. Oilcakes remaining as by-products can be ground to make milk or pulverized to obtain flour.

"Cooked soybeans are also used to make condiments, fermented [soy] sauce, liquid sauce, solid [sauce], [sauce] concentrated into a paste or in dry powder. Cooked soybeans are also used to make pasty preserves (*confitures pâteuses*) or in powder.

"Cooked and grilled soybeans again serve to make [soy] coffee and chocolate." Address: Seine, France.

2211. Waal, A.J.C. de. 1917. Over soja-producten [On soy products]. *Chemisch Weekblad* 14(15):344-56. April 14. (Chem. Abst. 11:2001). [22 ref. Dut]

• **Summary:** Describes the work done by men in different countries on various soybean preparations and includes a paper by Li Yu Ying (cited separately) titled "Procédés et Dispositifs pour la Transformation Intégrale du Soya," including food and industrial uses of soybeans. A complex, full-page French-language diagram (p. 350) shows the basic processes by which the many food and industrial products that can be derived from the soy bean, and summarizes patents related to many of these. By milling and baking: soya meal (*soja-meel*) and soy bread (*soja brood*). Soya milk (*soja-melk*) and Western-style cheeses. Coffee and chocolate substitutes: Soy coffee (*soja-koffie*) and soy chocolate (*soja-chocolade*). Pork-butcher products, incl. soy sausages (*soja-worst*) in which one can use soy cheese (*soja-kaas*). Soy protein (*soja-eiwit*). Worcestershire sauce (*Worcestershire-saus*). Li is a resident of Seine France. This paper was presented on 11 Nov. 1911, and published on 20 Jan. 1912.

Note 1. This is the earliest Dutch-language document seen (March 2001) that used the term *soja-koffie* to refer to soy coffee.

Note 2. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *soja-melk* to refer to soymilk. Address: s' Gravenhage (The Hague), Netherlands.

2212. Eddington, Jane. 1917. The Tribune Cook Book: Chinese foods. *Chicago Daily Tribune*. April 15. p. B8.

• **Summary:** "In some recent stories with a Chinese background a poor student is described as 'the son of a man who dines on no richer dish than rice and soy gravy.' This soy or shoyu or syou sauce is procurable at almost any grocery store. It is one of the ingredients of Worcestershire sauce, which is one of the proofs that it has been used in

England for nearly a century. When the soy is not procurable a little Worcestershire may be used."

Note 1. This is the earliest English-language document seen (April 2012) that uses the term "syou sauce" to refer to shoyu or soy sauce.

"At this [Chinese food] store I might have purchased fresh pig stomachs or soy bean cheese [probably tofu, but possibly fermented tofu], both cooked and uncooked, and I did get [mung] bean sprouts (15 cents a pound), and the tiny beans from which these are grown. These beans are green of color and not half as large as the smallest peas I have seen.

A boy in a story "says that he likes iced seaweed jelly, referring probably to jelly of the agar, or what we call vegetable gelatin,..." A recipe for "Seaweed jelly" states: "One ounce of agar-agar will make a gallon of jelly, or even more."

2213. *J. of Home Economics*. 1917. The soy bean. 9:183-84. April.

• **Summary:** "The soy bean, already one of the most important crops of Asia, promises to take an important place in the agricultural industry of the United States. It is said that it may be utilized in a greater number and a greater variety of ways than almost any other agricultural product. Not only are the beans, and the oil expressed from them, available as food, but soy bean oil is used for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants, besides its use in the Orient for lighting and other purposes.

"In Japan the soy bean is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, not only forming the basis for the manufacture of the different kinds of vegetable cheese, but used fresh, while a form of condensed milk is also made from it. All of these food stuffs are used daily in Japanese homes, and for the poorer classes are the principal source of protein.

"Soy bean oil resembles that of cotton seed in many ways. The meal remaining after the oil is extracted from the beans has become important during the last few years as a food of low starch content, and so adapted to the use of diabetic patients.

"Soy bean flour enters as a constituent into many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties. The flour or meal may be used successfully in the household as a constituent of muffins, bread, and biscuits in much the way in which corn meal is used.

"An artificial milk like that manufactured in the Orient has been produced in small quantities in the United

States, and recently a factory has been equipped to make this product. Such milk may be used for cooking in the household, and by bakers, confectioners, and chocolate manufacturers. Such products must, of course, be properly labeled.

“The soy bean has also been utilized as a substitute for the coffee bean. When roasted and prepared, it makes an excellent substitute for coffee.”

2214. Yukawa, Matao. 1917. Daizu no tansuikabutsu oyobi sono shōyu jōzō to no kankei ni tsuite [Soybean carbohydrates and their relation to shoyu fermentation]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 38(4):318-58. April. [12 ref. Jap]

• **Summary:** The author found the following carbohydrates in matured soy-bean seeds: Total carbohydrates (in anhydride form): 21.69%. Cane sugar [sucrose]: 5.90%. Stachyose: 3.52%. Arabin: 3.80%. Galactan: 4.64%. Fiber (crude): 3.85%.

Note: According to Oshima (1922) an English-language translation was made by Dr. W.T. Swingle, USDA Bureau of Plant Industry.

2215. Yukawa, Matao. 1917. Shōyu moromi no jukusei ni okeru chiroshin no hen'i [Changes in tyrosine during aging of shoyu moromi]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 38(4):358-73. April. [Jap]

2216. Prinsen Geerligs, H.C. 1917. Ueber die Anwendung von Enzymwirkungen in der Ostasiatischen Hausindustrie [On the application of enzymes in East Asian cottage industries]. *Zeitschrift fuer Angewandte Chemie, Wirtschaftlicher Teil* 30(3):256-57. May 8. [Ger]

• **Summary:** Paper read before the *Niederlaendische Chemische Vereinigung* (Dutch Chemical Union), General session in Hague, December 28, 1916.

This paper is on the domestic application of enzyme actions in Eastern countries, and describes, among other things, the making of fermented and non-fermented soybean food products. “To make soymilk (*Milchersatz*), only white soybeans are used, softened in water for 3 hours until they have swollen to 3 times their original size. Then, while water is added continuously, they are milled between two hard stones and fall through a hole in the bottom stone into a pail. A very small amount of the thin soybean slurry is set aside; through the proliferation of lactic acid bacteria it quickly becomes so sour that after several hours that lactic acid content has risen to 1.5%. The above mass is cooked in a large pan. The now pasteurized liquid is filtered through a large sieve to remove the hulls and hard pieces. The filtered milk-white liquid has, in appearance and chemical composition, the greatest similarity with animal milk. A sample contains 6.9% solids, 3.13% protein, and 1.89% fat. It gives an alkaline reaction and contains a solution of

legumin bound to potassium phosphate, while the fat is emulsified in the thick protein solution. Unfortunately this soymilk (*Bohnenmilch*) tastes very much like raw French-beans (*Schneidebohnen*), so that people who are accustomed to cow's milk do not enjoy it much. But infants should be very content with it.

“If cheese is to be made from this milk, a small amount of the slurry soured with lactic acid is added to it. Thereby, the legumin (protein) is dissolved from the potassium phosphate and coagulated, then settles out with the fat with which it is emulsified. When the milk, through several hours mixing with the coagulation liquid, has become fully firm, it is packed in cloths and pressed between boards, in order to remove any excess water. Then the cakes are cut into square pieces; if they are to be eaten raw, it must be done quickly, lest they continuing souring and spoil. In order to impart a pleasant color to the cakes, they may be placed for several moments in a Curcuma [turmeric] decoction. Mostly the cakes of cheese (*Kaesekekuchen*) are dried in the sun or fried (*gebraten*). They then keep better and acquire a pleasant flavor.”

“Of much greater significance is the preparation of the most popular and prevalent soybean preparation, soy sauce (*der Soja*), which in East Asia is an indispensable seasoning for a variety of dishes, and is produced and used in unbelievably large quantities. There are various types, some of which contain wheat flour. But here we will consider only the type that is made [in the Dutch East Indies] with soybeans plus some added ingredients to improve the flavor.

Note: This is the earliest German-language document seen (April 2012) that uses the term *der Soja* to refer to soy sauce.

For the preparation of soy sauce, brown or black soybeans are cooked for several hours. After pouring off the cooking water, the beans are placed in flat pens / trays (*Hürden*) of woven bamboo and dried for half a day in the sun, then cooled in the shade. When they are cooled, the beans are covered with leaves of *Hibiscus tiliaceus*, a species of mallow, and they are soon covered with a layer of *Aspergillus* mold, which is usually found on the tiny hairs or cilia on the underside of the hibiscus leaves and so is transferred to the beans. The mold filaments or hyphae penetrate between the tough and thick cell walls, dissolve these through hydrolysis, and thus make the cell contents accessible to the influence of the molds. The mold is allowed to work until it forms spores (*Fruchtstaende*). The beans then appear to be covered with a brownish green felt. The beans are then dried in the sun and placed in a strong, cold salt solution. The mixture is placed in the sun for several days and then cooked. The brine solution, which contains the soybean extract, is poured off and the beans are cooked several more times until they have lost their salty taste. The various cooking extracts are mixed, filtered through a fine sieve, then mixed with palm sugar, aniseed

[*Pimpinella anisum*], and an herb extract, which one can buy at a druggist's shop, and finally cooked until salt crystals appear. The soy sauce (*Soja*), which is now ready to use, is a dark brown, thick, very salty liquid, in which a viscous sediment forms. By thinning with water, it becomes turbid. But the solution again becomes clear with the addition of salt. This thorough investigation has shown that the mold hyphae branch out into the cell walls, hydrolyze and dissolve the pectin substances, and likewise break down the protein content of the cells to leucine, tyrosine, asparagine, and other decomposition products of legumes.

"But this action and result is of secondary importance. The main point is the dissolution of the cell walls, whereby the protein becomes free and can be dissolved in the concentrated salt solution. The composition of soy sauce, except for the salt content, is very similar to that of meat extract, so that it can completely replace meat in the largely vegetarian diets of the people of the East.

"In a similar way, various other foods are obtained, whereby a mold dissolves the cell wall and so fulfills the function otherwise accomplished by cooking. We mention here only the bean paste (*Bohnenbrei*) [*tao-tjo*], for the preparation of which, dehulled white soybeans are cooked and then mixed with rice flour and glutinous rice flour (*Kleereismehl*). The mixture is placed in a small basket that is lined with the same hibiscus leaves mentioned above, and the *Aspergillus* molds growing on the leaves are allowed to develop. This saccharifies the rice starch flour and dissolves the bean cell walls. Thereby, the mixture becomes sticky and glutinous, and tastes sweet. It is dried and placed in a pot with saltwater. There it remains until each bean is permeated with salt and a sample tastes salty. Palm sugar is added to taste and it is ready for use without further cooking. Microscopic analysis showed that the cell walls were completely dissolved and the contents lay free, so that the mold growth had greatly improved the digestibility of the beans.

"In Java, soybeans are also cooked and made into flat cakes on a flat bamboo lattice. A small piece of an old cake is added and the mass is covered with banana leaves. One soon observes a rise in temperature and the development of moisture. The mass is penetrated by hyphae of *Rhizopus Oryzae*, which again dissolves the cell walls and frees their contents. The cake [tempeh, though the term is not mentioned] with its covering of mold, is consumed without further processing, raw or fried (*gebraten*).

Also discusses the preparation of onchom from peanut press-cake. Address: PhD, Netherlands.

2217. *New York Times Magazine*. 1917. Woman off to China as government agent to study soy bean. Dr. Kin will make report for United States on the most useful food of her native land. June 10. p. 9. (New York Times section 6).

• **Summary:** The *New York Times Magazine* is part of the

Sunday *New York Times* and may be simply cited as such. Dr. Yamei Kin is "the only Chinese woman with a physician's diploma from an American college," the Woman's Medical College of New York. "She left New York a few days ago for the orient to gather data on that humble but nutritious food [the soy bean] for the Department of Agriculture at Washington." During World War I, new demands are being placed on America to feed its citizens and allies. "The appointment of Dr. Kin marks the first time the United States Government has given so much authority to a Chinese. That it is a woman in whom such extraordinary confidence is now reposed detracts nothing from the interest of the story."

China was the first country to invent paper, printing, gunpowder, porcelain, chess, playing cards, and silk. "And now Dr. Kin is going to see if her native land can teach the United States how to develop a taste for the soy bean in its numerous disguises...

"The world is in need of tissue-building foods,' said Dr. Kin, 'and cannot very well afford to wait to grow animals in order to obtain the necessary percentage of protein. Waiting for an animal to become big enough to eat is a long proposition. First you feed grain to a cow, and, finally, you get a return in protein from milk and meat. A terribly high percentage of the energy is lost in transit from grain to cow to a human being."

"The statement is frequently made that the Orientals live almost exclusively upon rice, eating little meat. It is not generally known, perhaps, that deficiency in protein is made up by the consumption of large quantities of products of the soy bean, which take the place in our dietary of meat and other costly nitrogenous foods. They are eaten in some form by rich and poor at almost every meal. Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy bean, which is protein, meat, and milk in itself. We do not eat the plain bean in China at all. It is never eaten there as a vegetable, but in the complex food products—natto, tofu, miso, yuba, shoyu, and similar dishes.

"The chief reason why people can live so cheaply in China and yet produce for that nation a man power so tremendous that this country must pass an Exclusion act against them is that they eat beans instead of meat."

She then describes how to make tofu. "Soup noodles are made out of bean curd. Entrées made of bean curd are served with cream mushroom sauce or a hot Spanish tomato sauce. A salad of bean sprouts, accompanied by cheese—the cheese [fermented tofu] a cross between Camembert and Roquefort, and made from the soy bean—is very nutritious and palatable. Americans do not know how to use the soy bean. It must be made attractive or they will not take to it. It must taste good. That can be done. We make from it a delightful chocolate pudding. A black soy bean sauce we use as a foundation for sweetmeats in China." Note:

None of the various Chinese food experts whom we have asked can understand what Dr. Kin means by the previous sentence. None has ever heard of a “black soy bean sauce” that is used as a foundation for confections or sweets in China. The two black soy bean sauces made in China, from either soy nuggets or jiang, are both salty. (WRS Jan. 2009). Nevertheless: This is the earliest English-language document seen (Oct. 2008) that uses the term “black soy bean sauce” to refer to a kind of sauce made from soybeans.

“The soy bean contains practically no starch, which means that it is a most desirable food for diabetics, and also, of course, for vegetarians. Buddhists kill no animals—they thrive by making a specialty of the soy bean, which, by the way, is already being used in the French Army. They find there that soy bean mixed with flour makes a good cracker, more nourishing than any other cracker.”

“The Chinese do not know what worn-out soil is. Some places are so fertile and are cultivated with so much care and skill that three or four crops a year are regularly gathered... it is very common to see two crops in the same field at the same time... The Chinese have a passion for fertilizing the soil...”

“Dr. Kin is a graduate of the Woman’s Medical College of New York, and her great interests have always been domestic sanitation, civic hygiene, the conservation of life, and questions of nutrition. She is the head of the Imperial Peiyang Woman’s Medical School and Hospital, near Peking... the Imperial Infant Asylum in Tien-tsin, the Widows’ Home, and the Girls’ Refuge all come under her supervision as head of the woman’s hospital work of Northern China. She will return to this country in October, bringing to our Government the detailed results of her study of the uses of the soy bean as a foodstuff needed by this country and by the world in the campaign of food raising and conservation.” An illustration (line drawing) shows a portrait of Dr. Yamei Kin.

Note 2. This is the earliest published document seen (July 2000) that mentions Dr. Yamei Kin. Frank N. Meyer wrote letters about her in 1911 and 1916.

Note 3. This is the earliest document seen (Oct. 2001) that mentions a soy pudding (a “delightful chocolate pudding” made from bean curd).

2218. Rittenhouse, Anne, ed. 1917. The household: Soy beans, a vegetable from East. *Hartford Courant* (Connecticut). June 12. p. 8.

• **Summary:** “What do you know about soy beans? Not much, probably. The most that anybody, excepting the food experts, seems to know is that they are usually served in the way of sauce with a Chinatown table d’hôte dinner.” Some also know them as a crop that is grown for cattle feeding. “But it seems to be time that we learned more of these beans.” “The oil is not only useful for food, but it can also be used in making soap, linoleum, paints and varnishes.

“The beans are used both fresh and dried. Dried they may be used much as our army beans are used—soaked overnight, then cooked with pork for a long time in a slow oven. Green soy beans may be used in any way in which lima beans are used.”

“These beans look more like dried green or yellow peas... They need long cooking, when dried, before they can be made into soup or baked. They cost about nine cents a pound.”

2219. Prinsen Geerligs, H.C. 1917. Domestic application of enzyme actions in Eastern countries (Abstract). *J. of the Society of Chemical Industry (London)* 36(12):662-63. June 30. [1 ref]

• **Summary:** A summary of a paper read before the *Niederlaendische Chemische Vereinigung* (Dec. 28, 1916) and published in the *Zeitschrift für Angewandte Chemie, Wirtschaftlicher Teil* 30(3):256-57 (1917, May 8).

“A milk-like product produced by grinding soya beans with water contains 6.9% of total solids, 3.13% of proteins, and 1.89% of fat; this product, unless boiled, rapidly undergoes lactic acid fermentation, and a cheese may be obtained by the addition of a quantity of the fermented liquid to a larger volume of the normal liquid. To prepare an extract [soy sauce] resembling meat extract, the cooked beans are subjected to the action of fungi which are found on the leaves of a species of mallow (*Hibiscus tiliaceus*), the mass is then extracted with salt solution, spices are added to the extract, and this is then concentrated to a thick syrup. A similar product is prepared from a mixture of soya beans and rice by the action of fungi. Another food [tempeh] is obtained by submitting soya bean cakes to the action of fungi found on banana leaves, etc. The fungi found in rice meal and rice straw are utilised for converting rice meal into alcohol; rice meal may be saccharified by treatment with the fungi occurring on banana leaves and the liquid obtained is subsequently converted into rice wine. One of the most important results of enzyme action is the production of sugar in the palm; the stem of the latter is free from sugar but contains large quantities of starch; the conversion of the starch into sucrose proceeds in the tree, but laboratory experiments with the separated enzyme resulted in the formation of dextrose alone.”

Note: This early English-language document describes tempeh, although the term is not actually mentioned.

2220. *Literary Digest*. 1917. To study the soy-bean for Uncle Sam. 55(2):52-53, 55. July 14. Whole No. 1421.

• **Summary:** This is a lengthy summary of an interview with Dr. Yamei Kin, published in *The New York Times Magazine* on 10 June 1917. It includes several lengthy excerpts. “So interested has the United States become in this discovery [China’s knowledge of the soy-bean] that Dr. Yamei Kin, a Chinese woman graduate of an American college, has been

sent back home to gather for the Agricultural Department at Washington [DC] all the facts that are known in China about the soy-bean."

"Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy-bean, which is protein, milk, and meat in itself," says Dr. Kin.

"The plain bean, however, is never eaten, but it furnishes such products as natto, tofu, miso, yuba, shoya [sic, shoyu], and other dishes with queer-sounding names..."

A letter dated 26 March 1917 from Frank N. Meyer in China gives the address of Dr. Mrs. Yamei Kin as 500 W. 111th St., New York City.

2221. *Hartford Courant (Connecticut)*.1917. The case of the soy bean. July 21. p. 10.

• **Summary:** That the soy bean "will become forthwith an article of food for New England folk is very unlikely even though the National Emergency Food Garden Commission is now urging the public to can the beans.

"The strange campaign for the introduction of this new article of diet has moved W.P. Brooks of the Massachusetts Agricultural Experiment Station to publish a fairly conclusive statement upon the matter. He says the advocates of the soy bean say something like this about it: -

"The soy bean is a very rich food; it can be successfully grown in Massachusetts and will give a large yield; it is palatable prepared and served in similar ways to those employed in the cooking of ordinary field and garden beans. The last statement is, I believe, absolutely incorrect, and the others require qualification. The fact that I have had unusual opportunities of observation and experience with this crop leads me to ask space for this article since I hope it may be the means of preventing discouragement and disappointment. I lived for twelve years in Japan. In that country the soy bean has for many hundreds of years been an important crop. The Japanese made practically no use of it as a vegetable prepared by ordinary methods of cooking. They are very largely vegetarians, and if it were adapted to such use there can be no doubt they would so employ it."

"Then Mr. Brooks goes on to say that since coming to this country he has tried baking the soy bean and the members of his family were a unit in agreeing that it was nowhere near as desirable as the native varieties. He had roasted and ground the bean and used it as a substitute for coffee and found it a trifle less worse than when baked.

"He says that the bean is rich in protein and fat but he adds that it is much too rich to be palatable. While the Japanese do not use it as a cooked food they contrive to make a cheese [tofu] of it, but this they do not prepare in the family but buy it of manufacturers. They also use the bean in preparing a sauce [soy sauce] and make extensive use of it as a food for cattle. Finally he says that while he does not

wish to discourage experiments he does not think it will be regarded as useful as an article of food.

"The most productive varieties, he says, are not likely to mature in Massachusetts but several varieties will generally produce a crop. They need, he says, a season a little longer than the larger sorts of field corn and they will produce from twenty to twenty-five bushels to the acre. Do Connecticut people care to raise soy beans with this outlook, especially when it is considered desirable to inoculate the soil with a certain bacteria before attempting to get a crop?"

2222. *New York Produce Review and American Creamery*.1917. Navy bean has rival: Soybean has higher food value—Bean milk preparation. 44(14):565. Aug. 1. [1 ref]

• **Summary:** Discusses the advantages of soybeans over navy beans, based in part on *Ohio Agric. Exp. Station Bulletin* 312. "Soybeans are rapidly finding a place as human food, used as common white beans and in new preparations, but more nutritious and economical. Less risk and labor are involved in growing and harvesting soybeans as compared with navy beans.

"Boiled or baked alone, or in combination with pork, potatoes or rice, soybeans take the place of navybeans. Soaking over night in considerable water is necessary to remove the strong flavor of the beans. A little soda in the water during cooking makes them softer.

"Green soybeans cooked in the pod shell easily, and make a palatable dish when served with butter or milk. The pods are tough and seldom eaten.

"A little soybean flour added to cornmeal makes mush made from the mixture brown and quicker and increases its food value."

"Soy sauce, bean milk, bean curd and a ripened vegetable cheese called 'miso' are common foods made of soybeans in Japan and China."

Note: This is the earliest English-language document seen (Oct. 2001) that uses the term "soybean flour." Address: New York.

2223. *USDA Bureau of Plant Industry, Inventory*.1917. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1914. Nos. 36937 to 37646. No. 38. 105 p. Aug. 17.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

"37036-37058. From Chusan, Chosen (Korea). Presented by Rev. George H. Winn, Presbyterian Mission. Received Jan. 28, 1914.

"37036 and 37037. *Soja max* (L.) Piper. (*Glycine hispida* Maxim.)

"37036. 'No. 1. *Yulgochi* bean. Very hardy, will grow and produce where the ordinary beans will not amount to much.'

“37037. ‘No. 2. *Kambool*. Very commonly found in the markets.’

“37038 and 37039. *Phaseolus angularis* (Willd.) W.F. Wight. Adzuki bean.”

“37040 to 37055. Soy bean.

“37040. ‘No. 5. Brown mottled bean; carefully cultivated and given sufficient fertilizer.’

“37041. ‘No. 6. Brown. Planted around the edges of the rice fields or where there is a small corner that can be utilized, they are very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37042. ‘No. 7. Large white-eyed bean; carefully cultivated and given sufficient fertilizer.’

“37043. ‘No. 8. Large green bean. The larger beans are all carefully cultivated and given sufficient fertilizer.’

“37044. ‘No. 9. Black mottled brown bean. As a rule, the smaller beans are planted around the edges of the rice fields or where there is a small corner that can be utilized. They are very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37045. ‘No. 10. White mottled black bean; carefully cultivated and given sufficient fertilizer.’

“37046. ‘No. 11. Ordinary green bean. As a rule, these beans are planted around the edges of the rice fields or where there is a small corner that can be utilized. They are, however, often planted in fields. They are very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37047. ‘No. 12. Brown mottled bean; often planted around the edges of rice fields and where there is a small corner that can be utilized; very hardy and will grow and produce where ordinary beans will not amount to much.’

“37048. ‘No. 13. Large blue bean; carefully cultivated and given sufficient fertilizer.’

“37049. ‘No. 14. Large black bean; carefully cultivated and given sufficient fertilizer.’

“37050. ‘No. 15. Small black bean; grown around the paddy fields. It is cultivated in larger areas because it is supposed to be extra nourishing, and some seem even to suppose it has medicinal properties, but I fear there is not much to it.’

“37051., ‘No. 16. The larger beans are all carefully cultivated and given sufficient fertilizer.’

“37052. ‘No. 17. The red bean; carefully cultivated and given sufficient fertilizer.’

“37053. ‘No. 18. Black mottled yellow. Small beans which are planted around the edges of the rice fields or where there is a small corner that can be utilized; very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37054. ‘No. 19. Maroon bean. One of the larger beans, all of which are carefully cultivated and given sufficient fertilizer; but this is not very commonly found.’

“37055. ‘No. 20. Ordinary white bean. One of the larger

beans; carefully cultivated and given sufficient fertilizer.’”

“37062 and 37063. Soy bean. From Harbin, China. Presented by Mr. Southard Warner, American consul, at the request of the American consul at Newchwang. Received Feb. 5, 1914.

“See report on the ‘Soya Bean of Manchuria,’ 1911 [by Norman Shaw, Dairen].

“37062. Grown south of Harbin.

“37063. Grown north of Harbin.”

“37069 to 37083. From Tientsin, China. Presented by Dr. Yamei Kin, Peiyang Woman’s Medical School and Hospital. Received Feb. 6, 1914.

“37074 and 37075. Soy bean.

“37074. ‘*Yüeh ya tou*, literally ‘moon-tooth’ bean, so called from the edge of the green peeping outside of the black thick skin like the crescent moon in the sky. Is largely used for making bean sprouts, which they say requires a bean that is not mealy or farinaceous, as that kind becomes mushy in the process of germination and has no taste left. Also is good for feeding animals, requiring to be lightly steamed before feeding, not boiled, for then the oil escapes and the flavor is lost. This kind is valued for its oil, which it contains in a great amount, and for making bean curd. This must be grown in a well-drained clay soil; black or moist earth will not do.’

“37075. ‘*Cha tou*. Specially used for making bean curd and bean sprouts.’”

“37077. Soy bean. ‘*Huang tou*. Used for making bean curd as well as starch and vermicelli.’ Note: #37078 is Mung bean (*Phaseolus aureus* Roxb. [Roxburgh], *Lü tou*).

“37080. Soy bean. ‘*Ching tou*. Used only for the oil expressed and fodder purposes.’”

“37228 to 37325. Soy bean. From Seoul, Chosen (Korea). Presented by Mr. George H. Scidmore, American consul general. Received Feb. 17, 1914.

“I submit the following information, which has been obtained, for the most part, from the Director of the Department of Agriculture, Commerce, and Industry, of the General Government of the Chosen. The same officer has very kindly supplied samples of 98 varieties of soy beans.

“The usual period during which the seed is sown extends from the middle of May to about July 10. In case the sowing is postponed till the latter part of that period, the fields from which wheat has already been harvested are used. The soil is first prepared by plowing and is then shaped into small hemispherical hillocks about 4 ft in diameter. The seed is then planted in drill holes on the top of these hillocks, 6 or 7 inches being left between drill holes and 5 or 6 seeds being sown together in a hole. As a general rule, no manure or other fertilizer is used, but when it is desired to enrich the soil ashes are most commonly employed. After the plants have sprouted sufficiently, the shoots are thinned out so as to leave two or three only to each drill hole. This process takes place at the time of the first weeding. The ground

surrounding the plants is gone over with a hoe or other implement two or three times to turn over the soil and to weed the field. The process outlined above gives briefly the method of cultivation generally in use throughout Chosen, and is applicable whether the beans are planted in separate fields by themselves or in the same fields with other crops.

“It is used mainly for its food value, the oil, and the residue as a fertilizer after the oil has been expressed. It is valuable as a food product for both men and cattle, the latter finding it a very excellent fodder when the whole plant is used. The principal food products for human consumption derived from the soy bean are bean paste [jang, Korean miso], soy [sauce, kan jang], bean curd, meal, etc.” There follows a long list of 98 new soybean introductions from Korea, grouped by seed color; the first four are representative of the rest:

“37228. ‘A1. *Six Months*. Yellow. From South Chusei Province, Koshu district.’

“37229. ‘A2. *Widower*. Yellow. From North Heian Province, Seisen district.’

“37230. ‘A3. *Broad River*. From South Heian Province, Junan district.’

“37231. ‘A4. *White*. Yellow. From North Zenra Province, Chinan district.’

“37232. ‘A1. *Early Yellow*. Yellow. From North Heian Province, Kokai district.’

Note: This is the earliest document seen (March 2009) that mentions Korean-style soy bean paste; it is also the earliest English-language document seen (March 2009) that uses the term “bean paste” to refer to Korean soybean paste (*jang*).

Other interesting names among these 98 introductions from Korea are: *Rengyo Egg*, *Large-Grained White*, *White Rat's Eye*, *Rich and Virtuous*, *Large Date*, *Indigo*, *Bluish*, *Barbarian Blue*, *Clasped Hands*, *Clear Blue*, *Black Rat's Eye*, and *Thousand Tied*. A tally of the seeds by color shows: Yellow 35. Green 22. Gray 17. Black 16. Striped 8. Note that Yellow seeds comprise only 35.7% of the total by color. Address: Washington, DC.

2224. Park, J.B. 1917. Soybeans as human food: Palatable dishes made from a comparatively new legume. *Ohio Agricultural Experiment Station, Monthly Bulletin* 2(9):299-303. Sept. Extract from Ohio Agric. Exp. Station, Bulletin No. 312, “Soybeans: Their Culture and Use.” [2 ref]

• **Summary:** For details, see Williams and Park. 1917. “Soybeans: Their Culture and Use.” Address: Ohio.

2225. Saito, T.; Matsuyama, M. 1917. Shōyu moromi no kōso ni suite [The enzymes of shoyu moromi]. *Sapporo Norin Gakkaiho (J. of the Society of Agriculture and Forestry, Sapporo)* 9(42):291-316. Sept. [Jap] Address: 1-2. Nōgaku-shi, Japan.

2226. Stoddard, William Leavitt. 1917. Soy: The coming bean. *Good Housekeeping* 65:77, 126-28. Sept. [4 ref]

• **Summary:** “*Good Housekeeping* asked the Department of Agriculture to tell its readers the truth about the soy bean. This article is the department’s answer. In the [Good Housekeeping] Institute Kitchen new recipes and methods of using the soy bean were evolved and tested. These recipes will be found at the end of this article. A list of dealers in various sections of the country who carry a supply of soy beans will be mailed upon request accompanied by a stamped addressed envelope.

“The soy bean, also called the soja bean, is a native of southeastern Asia, and has been extensively cultivated in Japan, China, and India since ancient times... The beans are there grown almost entirely for human food, being prepared for consumption in many different ways. Their flavor, however, does not commend them to Caucasian appetites and thus far they have found but small favor as human food in either Europe or America.’ Thus declared a bulletin of the Department of Agriculture [Piper and Nielsen. 1909. Farmers’ Bulletin 372] before the war. Less than three months after our entrance into the war—and the entrance of the United States as a nation for the first time into a food moderation and conservation campaign—this same authority stated that ‘the soy bean has already reached a place of high economic importance in America and Europe as a foodstuff... During the past season the demand for seed by food manufacturers has resulted in greatly increased prices.’ The soy is a coming bean if not *the* coming bean.”

Sold in some American markets under the name Togo bean, the soy bean “now flourishes in an increasingly large acreage in Tennessee, North Carolina, Virginia, Maryland, Kentucky, and the southern parts of Illinois and Indiana. The earlier varieties even mature in Ontario [Canada] and our Northern states.”

The American housewife probably does not care “that there is a factory in New York is making a ‘vegetable milk’ of soy beans; the “flour or meal [okara] which remains after the milk is manufactured is valuable both as a stock for feed and for human consumption; that soap manufacturers and paint manufacturers are using the oil of soy beans to replace more expensive oils; and that the substitute butter makers are using the fat of the soy bean in products which thousands of consumers are using all unwitting of its true nature.

“The thing that the American housewife wants to know today is where soy beans can be bought and what are the simplest uses of them... Probably the easiest and commonest method of cooking soy beans is to use them either for soup or to bake them.”

Eight recipes are given; all but two call for “soy beans.” Soy-bean bread (containing 20% of the flour in the form of “soy-bean meal” [a full-fat soy flour]), Soy beans and rice (with “1 tablespoonful Worcestershire sauce”), Soy-bean loaf with tomato sauce, Vegetable roast (baked), Savory baked

soy beans, Soy-bean soup, Soy-bean muffins (with “1 cupful cold baked soy-bean pulp”), and Salted soy beans (deep fried).

Photos show: (1) Muffins made with soy-bean meal. (2) Soy-bean meal ground at the Good Housekeeping Institute; the hand-turned mill and two small piles of soy beans are shown. (3) A dish of soy beans and rice. (4) A soy bean plant. (5) A vegetable roast with soy beans as an ingredient.

Note 1. Theodore Hymowitz writes (12 Feb. 1990): “I have no idea if William Leavitt Stoddard was related to Illinois soybean pioneer William Hoyt Stoddard. William Hoyt had one brother named Charles Lumas Stoddard.”

Note 2. This is the 2nd earliest document seen concerning soybeans in connection with (but not yet in) Togo.

Note 3. This is the earliest English-language document seen that uses the term “Salted soy beans” to refer to soynuts. It is also the earliest document seen in any language describing the frying or deep-frying of whole soybeans to make soynuts. Previously soynuts had always been dry roasted.

Note 4. This is the earliest article on soy seen (Aug. 2002) in *Good Housekeeping* magazine.

2227. Furukawa, Seiji; Tomizawa, Zenjirô. 1917. Kôryô no shôyû bôfu sayô ni tsuite [On the action of spices/perfumes as preservatives for shoyu. I & II.]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 182. p. 708-720. Oct. 5; No. 183. p. 781-83. Nov. 5. [Jap]

• **Summary:** Some 35 different “koryo” (spices) were tested. Most of these are not commonly known substances. They include menthol, folmarin, etc. Address: Itô Kochôen Kenkyû-bu.

2228. *Hartford Courant (Connecticut)*. 1917. Every household must help in war. Oct. 12. p. 11.

• **Summary:** Under “Today’s recipes,” the first has no name but resembles chop suey. It is seasoned with ½ cupful “soy sauce.”

2229. Eddington, Jane. 1917. The Tribune Cook Book: Beans, soy special. *Chicago Daily Tribune*. Oct. 14. p. E8 (Part 6, p. 8).

• **Summary:** “We do not know enough about that most charming family of plants which furnish us the meat stuff of the vegetable kingdom, or vegetable protein.”

“‘Don’t forget the soy bean,’ was one of the commands urged on growers this year, ‘for there is sure to be a larger demand for the beans for human food.’ Last year these beans cost no more than a third as much as navy beans and only a fourth as much as limas, and more people were trying them and failing in their cooking than ever before. They really ought never to be subject to a boiling temperature. Protein of any sort is easily hardened by much heat, and these beans

have a high per cent of this food principle. With this in mind they may be baked, etc., like navy beans.

“The soy bean, though so long used in China and Japan, whence we have such products as soy sauce, was introduced many years ago into the United States as a soil renewer and fodder crop.”

Years ago, experiment station bulletins were discussing “the total digestible nutrients” of fodder crops. Yet more than 25 years were to pass “before even a few people would listen to the word ‘nutrient’ in reference to their own diet. ‘Roughage’ was a term much used that far back, as contrasted with such condensed foods as grains, while now we use the term in talking about human diets.”

“Perhaps we shall some time learn to make the bean curd of soy beans which the Chinese use so much. I am hoping to get a precise recipe. The soy bean flour came into use some time ago.”

“The medical writers, who for a considerable number of years have used this bean extensively and written much about it with recipes,” say that the “yellow soy bean” contains 35 per cent protein.

The section titled “Soy bean cheeses” contains a long excerpt from Friedenwald and Ruhrah (1913, p. 124-26), which states that the most common of these “cheeses” are natto, tofu, miso, juba [sic, yuba], and shoyu. A brief description of each is given.

The last section, titled “Home made soy bean flour,” again discusses Friedenwald and Ruhrah, “patent soy bean flour, mostly known to doctors only,” grilled soy beans, diabetics, and a recipe for home made soy flour.

2230. Frazer, Robert, Jr. 1917. Japan. Kobe. *Supplement to Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* No. 55c. Dec. 31. p. 15-40.

• **Summary:** Goods shipped from Osaka to all countries: Pea cheese (miso): In 1915 612,517 lb worth \$16,379 was exported; in 1916 this rose to 886,245 lb worth \$23,268. Soy sauce: In 1915 80,977 gallons worth \$32,157 were exported; in 1916 this decreased to 73,261 gallons worth \$29,881.

Imports at Kobe from other countries included soya beans and oil cake. Tables summarize imports to and exports from Osaka for the years 1915 and 1916. Address: Consul, Kobe, Japan.

2231. Scidmore, Geo. H. 1917. Japan. *Supplement to Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* No. 55c. 40 p. Dec. 31.

• **Summary:** One “important item of import is bean-oil cake, which comes practically all from Kwangtung Province and China. These imports were valued at \$17, 234,382 for 1916 and the quantity amounted to 1,727,079,733 pounds.” In the table of articles imported, bean-oil cake is listed under

fertilizers, and is by far the largest value. Cottonseed and rapeseed oil-cake were also imported for use as fertilizer in 1916, but the value of each was only about 4% that of bean-oil cake. Small amounts of manures and bone dust were also imported as fertilizers. Of the \$2,263,504 worth of soya bean imported, 74% came from China [including Manchuria], 19% came from Kwangtung Province [controlled by Japan], and 7% came from Asiatic Russia. But of the \$17,234,382 worth of bean-oil cake, 57% came from Kwangtung Province, 25% came from China, and 2% came from Asiatic Russia.

Exports of “soy” (soy sauce) from Japan were worth \$491,596 in 1915 and \$533,545 in 1916. Of the 1916 amount, 34% went to the United States, 26% went to Hawaii, and 13% went to Kwangtung Province. A small amount was exported to the Philippine Islands. The volume exported is not given; “soy and vinegar” are grouped together.

Within the report from Japan is a report from Kobe by Consul Robert Frazer Jr.

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in the former USSR after it was established in Nov. 1917. This document contains the earliest date seen for soybeans in the USSR (1917). Address: Consul General, Yokohama.

2240. Couling, Samuel. 1917. *Encyclopaedia Sinica: Bean, Soya*. London: Oxford University Press, Humphrey Milford; Shanghai: Kelly and Walsh. See p. 46. 28 cm. [2 ref]

• **Summary:** “*Glycine hispida*, Monch. or *Dolichos soja*, L. This bean, so valuable for the oil which is expressed from it, has come into great prominence of recent years, owing to the enormous dimensions of the export trade in it since the Russo-Japanese War... The oil-yielding variety par excellence is the yellow bean, of which nearly 15 million piculs, or not far short of one million tons, were exported in 1915, 90% of this being from Manchuria, and the balance from Chihli, Hupei and Kiangsi... For several generations beans, but more especially beancake, had been sent to South China as manure for the sugar plantations; exportation abroad was prohibited until 1869, when shipments were made to Japan, which soon became a large customer both for beans and bean oil... In the Far East soya beans are used, as human foodstuffs, for making soy [sauce], bean paste, or *chiang*, as *tou fu* or beancurd, in soups, etc.; in cooking instead of rapeseed and sesamum oil; and the cake is employed as a fertilizer and for fattening hogs... Besides the Soya Bean there are many other kinds of bean cultivated in China, and entering largely into the diet of the people. The chief of these is *Phaseolus mungo* L, the green bean Lü Tou [mung bean], which contains little oil but is used in the manufacture of vermicelli.

“The annual export of vermicelli, principally from Chefoo, is considerable—amounting in both 1913 and 1915 to nearly Hk. Tls. [Haikwan Taels] 3,000,000; it goes to Chinese emigrants abroad.” Address: M.A. (Edin.), Lately honorary secretary and editor, North China Branch, Royal

Asiatic Society.

2241. Crevost, Charles; Lemarié, Charles. 1917. Catalogue des produits de l'Indochine. 5 vols [Catalog of the products of Indochina. 5 vols.]. Hanoi: Imprimerie d'Extrême-Orient. 29 cm. Formerly published in Bulletin Economique de l'Indochine, Vols. 25 and 26. [Fre]

• **Summary:** Volume 1 (published in 1917; 175 p.), titled *Produits Alimentaires et Plantes Fourragères (Nutritious Products and Forage Plants)*, describes plants grown in Indochina and the nutritive value of each. Pages 106-09 describe "Soja-Glycine Soja," the soybean. Local names are given in Annam and Tonkin, Cambodia, China, and Japan. "The plant is widely cultivated in Indochina for its seeds, which are consumed in various forms. Soybean seeds in Indochina are typically yellowish white... It is well known that the Japanese use the soybean to prepare a sauce named *shoyu* (*teou yeou* in China), as well as a *fromage de pâte* or vegetable cheese named *to fu* [tofu], or *teou fou* in Chinese. The Annamites also prepare an analogous sauce named *tuong* and a *fromage de pâte* named *dau phu* and *dau phu-ao*. Cambodia and the Indochinese province of Châu-dôc produce significant quantities of soybeans, of which a part is sent down to Saigon to be consumed or exported. There are good varieties on the high plateaus of Tonkin, especially in the province of Lang-son, whence large amounts can be obtained for export.

"The dead leaves are ordinarily burned. However some indigenous people partially burn the stems of the soybean plants, stripped of their leaves, to obtain a very fine charcoal dust or ash, which they mix with the resinous balm of *Canarium commune*, to use in making joss sticks. These are slender incense sticks burned as offerings in the pagodas and at the altars of their ancestors in their family homes." [Note: A joss house is a Chinese temple or shrine.] A large, excellent, and very detailed illustration (p. 108) shows a soybean plant, with leaves, pods, seeds, and flowers. Nutritional analyses of soybeans from Laos, Tonkin, and Manchuria are given (from other sources).

Volume 3, titled *Matières Grasses Végétales (Fats and Vegetable Matter)*, includes analyses of Indochinese plants and their fat and oil contents. The contents of Vol. 3. was first published in the *Bulletin Économique de l'Indochine* 1922-1924. Pages 75-78 discuss "Soja-Soja Max (Lin.) Piper," the soybean. "Mr. Li Yu-ying, a member of the Biological Society of the Far East, has greatly contributed, following several attempts made for more than a century by naturalists and those who acclimatize plants, to popularize in France this plant of many uses. He introduced cultivation of the plant in the area around Paris and, in Paris itself, in 1908 he established a laboratory for the study of the soybean, since completed by a soyfoods factory (*l'usine de la caséo-sojaïne*), where all the products derived from this plant are manufactured: Soymilk (regular, concentrated,

powdered, or fermented), tofu (*fromage de soja*), soya patés (*pâtes de soja*), soya casein (*caséïne de soja*), soy flour and bread, etc." The rest of the article is concerned mostly with characteristics, uses, and trade of soybean oil.

Crevost was born in 1858. Note: The meaning of soya casein is not clear. Address: 1. Inspecteur des Services agricoles et commerciaux; Conservateur du Musée [Maurice Long] agricole et commercial de Hanoi; 2. Ingénieur-Agronome, Directeur des Services agricoles et commerciaux du Tonkin, Lauréat de la Société nationale d'acclimatation.

2242. Fuerstenberg, Maurice. 1917. Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmöglichkeiten [The soybean, a cultivated plant of the future, and possibilities for its utilization]. Berlin: Paul Parey. 40 p. [59 ref. Ger]

• **Summary:** Dedicated to the Prof. Friedrich Haberlandt, who introduced the soybean to Central Europe. Contents: Foreword. Introduction: The soybean. Ways of using the soybean in its homeland (East Asia, especially Japan and China). Shoyu or soy-sauce. Miso (vegetable cheese). Natto. Tofu of the Japanese or Tao-hu of the Chinese (bean cheese). The soybean as an oilseed. Soybean meal (and flour). Soy as a coffee substitute or extender. Soybean milk. Soy meat substitutes. Soybeans as a chocolate substitute. Soy rubber substitute. The utilization of the soybean in agriculture: As cow fodder. Summary. Bibliography.

Photos show: (1) A field of soybeans (p. 6). (2) A soybean plant with the leaves removed to show the pods (p. 12). (3) Soy beans and pods (p. 13).

Contains numerous tables, mostly from other sources: pages 11, 16-17, 19, 25, 27, 30, 35-37. Contains one of the best early European bibliographies on the soybean.

The author wrote this book during World War I. In his first book, published one year earlier in 1916 and titled "The Introduction of Soya, a Revolution in the Food of the People," he discussed what he believed to be the great agricultural and nutritional value of the soybean. He uses two terms, *Die Soja* and *Die Sojabohnen* to refer to soybeans.

Chapter 1 (p. 5-7): In 1908 England started to import large quantities of soybeans; in 1909 these increased to 400,000 tonnes and in 1910 to 800,000 tons. Also in Germany, in the years just before World War I, imports of soybeans climbed in an unexpected way, reaching 43,500 tonnes in 1910, 90,600 tonnes in 1911 and 125,200 tonnes in 1912. Note: These units are given in dz. One dz (*doppelzentner*) = 100 kg.

The first manufacture of soyfoods in Europe took place in France, at Valees near Asnieres, where they made flour, bread, cakes, cheese [tofu], and soymilk (*Mehl, Brot, Kuchen und Käse, vegetabilischer Milch*)—though only in small quantities and, above all, for diabetics. In England, soy flour has been used for a long time in the preparation of cakes (p. 5-6).

However it was in Germany that the utilization of soybeans for food took place on a large scale; this began shortly before the war. The supply of foods to Germany was almost completely cut off during the war, so general attention soon turned to the new foods prepared from soybeans and people quickly became aware of their great nutritional value. Thus, in the middle of the war, a soybean industry was built in Germany. Unfortunately this youngest twig of the food industry was left crippled due to lack of raw materials. However one can predict that this industry has a bright future because of the great encouragement given to these products in so short a time. For example, in October 1914 the *Agumawerke* (Aguma Works) located in Harburg (near Hamburg) on the Elbe, first began mass production of a soy flour according to its own process. During the next few years it made many thousands of tonnes of this meal, until the production had to be stopped for lack of raw materials (p. 6).

Equally gigantic sales of soy products were made by the *Soyamawerke* (Soyama Works) in Frankfurt am Main; this company made only soy food products. In addition to a meal (flour), it also produced a meat substitute (*Fleischersatz*), and, largely from soybeans, fresh and dried milk (*Frisch- und Trockenmilch*) as well as a fresh and dried cream preparation (*ein Frisch- und Trockenrahm-Präparat*). Likewise, this firm had to cease production of most of its soy products because of difficulties in soybean procurement, and concentrate only on the production of meat substitutes (*Fleischersatz*). These articles likewise entered all classes of the population splendidly as is seen from the large demand for them. Within 3-4 weeks this firm had orders for more than 1½ million pound cans, of which unfortunately it was able to satisfy only a small part. In addition to these two well-known firms, there are in Germany still a number others that are occupied with the production of foods from the soybean.

In Austria [the Austro-Hungarian empire], there exists a unique firm, the food factory Santosa in Prague [in the Czech Republic as of Sept. 2002], which is still processing soybeans. They introduced soy coffee into commerce. I understand that in Austria a large-scale soy processing venture is now being planned.

Certainly the soy processing industry finds itself in a beginning state and, like all young industries, in need of improvement. Remember the sugar-beet industry was also once young but it made improvements and went on to great success, as will be expected of this new twig on the food industry. In any case, the beginning of utilization of the soybean as food for the people has been made, and in the foreseeable future the soybean may, as in China and Japan, become an indispensable part of our people's food.

It is different with the introduction of the soybean as a cultivated plant in Central Europe. Forty years ago Friedrich Haberlandt showed (and after him countless others have shown) that the soybean grows well in Central Europe.

Although additional new tests verify this, there are still those who object to soybean culture. One objection is the long time required by the soybean to come to maturity; the answer is the development of new varieties. Another is the relatively low yield compared with other beans; the answer lies in the use of inoculation. The author then discusses nutrient yield per acre and per unit of money, showing both to be high for soybeans.

Pages 10-11: It is well known that legumes possess the ability to transform and fix free nitrogen from the air. In 1886 Prof. Hellriegel discovered that this capability is due to certain bacteria that live in the soil and move through the root hairs into the root, where they cause nodule formation. The nitrogen-fixing bacteria living in the nodules nourish the plant. The author then talks about inoculation using either soil from a previous planting or "Nitragin," a pure culture of root bacteria, which is well known and has recently been improved. Dr. Kuehn of Berlin-Grunewald showed that soil inoculated with Nitragin gave a 3- to 4-fold increase in yield, plus an increase in protein in the roots and leaves. He then discusses improved cultural practices. Winkler says that transplanting improves yields. Continued. Address: Frohnleiten, Steiermark [Austria].

2243. Fuerstenberg, Maurice. 1917. Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmöglichkeiten [The soybean, a cultivated plant of the future, and possibilities for its utilization. Part II (Document part)]. Berlin: Paul Parey. 40 p. 28 cm. [59 ref. Ger]

• **Summary:** Continued on p. 14. Ways of using the soybean in its homeland (East Asia, especially Japan and China): Note: In this section, starting on p. 15, the author repeatedly uses the word *Sojaspeisen* meaning "soyfoods." The soybean probably originated in India. The Chinese and Japanese used it to fortify their rice-based, protein-poor diet. The practice came before the theory. The author says (incorrectly, p. 15) that all the basic soyfoods are fermented. He then gives a long description of koji and how it is made.

Shoyu or soy sauce (*Shoju oder Soja-Sauce*) (p. 15-17): In Japan, 540-720 million liters are manufactured each year so each Japanese uses 60-100 ml/year. The fermentation time is 8 months to 5 years. The best soy sauce is fermented for 3 to 5 years. He explains how, as soy sauce is fermented, the protein is broken down into amino acids such as leucine, tyrosine, and members of the "Xanthin" group.

Miso (vegetable cheese, p. 17-18): Miso is widely used in soups. More than half of the yearly Japanese soybean harvest is used for making miso. This is 30 million kg per year. Types of miso include *shiro miso* and Sendai miso. Winkler, in his small work titled "The Soybean of Manchuria," mentions two other types of miso: Aka or red miso and nuka miso. Kellner investigated five types of miso; a table shows their composition. Loew reports that this

vegetable cheese (miso) is consumed either raw or in soups. Kellner, Nagasaka and Kurashima report that, based on their investigations, the amount of amino-nitrogen increases 3-fold and the quantity of carbohydrates is significantly diminished through lactic acid and alcoholic fermentation. The carbonic acid created thereby rises significantly during fermentation (Loew).

Natto (p. 18): Discusses the findings of Yabe.

Japanese tofu or Chinese Tao-hu (p. 18-20): This is the so-called "bean cheese" (*Bohnenkäse*). A table (p. 19, from König) shows the nutritional value of fresh tofu (84.8% moisture) and frozen tofu (17.0% moisture). E. Senft studied frozen tofu, a Japanese military preserved food (*Militärkonserve*) that is not canned; he found it had a beige color and a unique, slightly sour aroma which was at times reminiscent of dextrin. It has a uniform texture throughout, with many tiny pores. Winkler refers to five other types of soy cheese. Concerning the military preserved foods, they were highly regarded during the Russo-Japanese War and (according to Senft) played a key role in the war. (Footnote: The descriptions of the various preparations made from soya make E. Senft's treatises (1906 and 1907) valuable; in them he published his investigations of a number of Japanese vegetable foods and military preserved foods or conserves). The well-known food manufacturer Maggi in Kempttal, Switzerland, has tried for many years to introduce a commercial miso-like product, but was not successful.

The soybean as an oil plant (p. 20-26): Winkler, in his brochure, discusses the uses of soybeans in Manchuria. After 1908, soybeans were sold in Europe at incredibly low prices which resulted in the expansion of imports and production. Then tariffs were levied on soybeans. There were some major problems in the Austrian oil industry.

Soybean flour (*Sojabohnenmehl*; p. 26-28): In recent years, various processes have been patented. One manufacturer is Soyamawerke in Frankfurt am Main, which makes *Soyama Kraftmehl*. Yellow soybeans are mechanically cleaned, washed, dried, and dehulled according to the process of Dr. Fritz Goessel. Agumawerke in Harburg also makes soy flour.

The soybean as a coffee substitute and extender (p. 28-31): Coffee is known to be detrimental to good health and void of nutrients. Rye, for example, has been used since the 17th century as a coffee substitute. Barley also plays a major role, especially as malt. A table (p. 30) shows the nutritional composition of ten coffee substitutes, including chicory, figs, lupin, and carob. Soy coffee tastes remarkably similar to real coffee. In Istria (*Istrien*), in the Austrian alps, in Switzerland as well as in Alsace (*Elsass*), the soybean has been used since its introduction as a coffee substitute. Haberlandt reported in his work that a teacher from Capo d'Istria told him that the soybean was used as a coffee substitute in Istria, and a friend told him that there was no difference between the flavor of the two. The Thunschen is used to

make good soy coffee. The soybeans are mechanically cleaned, put into a trommel, agitated with water at 65-70°C, brushed and thereby freed of a large number of impurities which can leave a burned smell. The aroma of soy coffee can be improved by impregnation with an extract of largely decaffeinated coffee. It has roughly twice the nutrients of regular coffee and no harmful constituents.

Soybean milk (*Sojabohnen-Milch*, p. 32-33): The most popular vegetable milk is Dr. Lahmann's Vegetable Milk (*Lahmannsche Vegetabile Milch*), an emulsion made from almonds and nuts. In Japan, they make milk from soybeans; he describes the process, inaccurately, based on information from Winkler. This milk is also used to make cheese [tofu]. Also in Europe there have been successful attempts to make a soymilk adapted to European tastes, as in France by the Caseo-Sojaine at Vallées near Asnieres, and in England by the Synthetic Milk Syndicate. Using the process of Dr. Fritz Goessel, the latter company has a factory in Liverpool; it makes 100 liters of soymilk from: 10 kg ground soybeans plus 5 gm sodium phosphate, 2.4 kg lactose, 2 kg sesame oil, 6 gm common salt, and 60 gm sodium carbonate. Also the Soyamawerke in Frankfurt makes a soybean milk, named Soyama, as mentioned above (fresh and dried milk and cream). Recently Prof. Melhuish developed a new method using soybean, peanuts, and added coconut milk fat.

Soy meat substitutes (*Soja-Fleischersatz*; p. 33): Soyamawerke makes a product named *Soyama-Fleisch-Ersatz*.

Soybean as a chocolate substitute (p. 34): Haberlandt reports such a product.

Soya rubber substitute (p. 34): Goessel and Sauer have developed a rubber substitute made from soybean oil.

The utilization of soya in agriculture (p. 34-38): Use as fodder for cows. In 1880 Blasowicz [Blaskovics], Assistant at the Royal Hungarian Academy in Hungarian Altenburg, conducted fodder tests, whose results are given in various tables.

Conclusions (p. 38).

Note: This is the earliest document seen that uses the word *Ersatz* or the word *Fleischersatz*. They mean "artificial or inferior substitute" and "meat substitute" respectively. Though often associated with World War I, the word "ersatz" (which means simply "substitute" in German) was actually adopted into English as early as 1875, in reference to the German army's "Ersatz reserve," or second-string force, made up of men unqualified for the regular army and drawn upon only as needed to replace missing soldiers. Hence the meaning "inferior substitute." Address: Frohnleiten, Steiermark [Austria].

2244. Galster, Vernon. 1917. Chinese cook book in plain English. Morris, Illinois: Published by the author. 8 p. 22 x 14 cm.

• **Summary:** Contains 27 recipes written in various styles.

In the recipe for Chinese Chop Suey (for two portions) are included “1 tablespoonful Chinese salty sauce; 1 tablespoonful Chinese sweet sauce.” No other soyfoods are mentioned. Address: Morris, Illinois.

2245. Kinoshita, Asakichi. 1917. Shôyu seizô ni kansuru kôjô keisû [On the yield of products in the production of shoyu]. *Kogyo Kagaku Zasshi (J. of Chemical Industry, Japan)* 20(236):1124-43. [Jap]

• **Summary:** Gives figures on the amount of ingredients used in “shoyu” and the amount of finished product resulting.

The proportion of ingredients employed are as follows: Soy beans, 0.5 koku (1 koku = 180.39 liters); wheat, 0.5 koku; common salt, 0.5 koku; and water, 1.0 koku. The beans when washed, steeped, and steamed, gain about an equal amount in weight and volume compared with the original. The wheat, when parched/roasted and crushed, increases to about 1.8 times its original volume and loses about 0.16 of its original weight. The mixture of beans and wheat is transformed into “koji,” the yield of koji being about 1.6 by volume and 0.9 by weight. The koji is mixed with a salt solution (specific gravity 1.143-1.152) and stirred occasionally. When the summer comes, active fermentation sets in and after one year, finished “moromi” is obtained, its weight being 85 kwan (1 kwan = 3.75 kg). This moromi is pressed, and the liquor is pasteurized, yielding about 1 koku of Japanese soy.

2246. Lyman, Benjamin Smith. 1917. Vegetarian diet and dishes. Philadelphia, Pennsylvania: Ferris & Leach. 416 p. See p. 155-58. Index. Portrait. 21 cm. [3 ref]

• **Summary:** Discusses the physiological, economical, and ethical advantages of a vegetarian diet, with recipes and principles of preparation. The author, who wrote mostly about geology, lived 1835-1920.

A large table titled “Composition of foods” (p. 44-47) gives the percentage of protein, fat, carbohydrates, and ash (on a dry basis) for many foods, including natto, fresh tofu, soy bean-dried, Swiss miso, soy [shoyu] No. 1 and 2, and white miso (all figures from Abel 1900), plus peanuts-dried.

In the chapter titled “Foods of vegetable origin” (p. 141-267), the section on “Pulse” (p. 152-78) contains a subsection titled “Soy bean” (p. 155-58), which begins: “The soy bean of China and Japan is perhaps the most important food plant there, next to rice. The bean is eaten to a small extent boiled like other beans; but is generally elaborated into a variety of products remarkably rich in protein and fat and therefore going well with rice so deficient in those constituents.” The following soy-related subjects are discussed, based largely on the writings of others: Soy sauce (Abel), natto (Abel), miso (R. Takahashi), tofu (Abel), *aburage*, *koritofu*, substitutes for milk and cheese, and nutritional comparison with eggs, milk and cheese (Abel, Atwater).

The section titled “Substitutes for milk and cheese” states: “The Chinese in Paris [probably Li Yu-ying] have been urging the culture of the soy bean. The seeds, when boiled, mashed, and pressed, yield both milk and cheese; if thinned with water, a very good substitute for animal milk; and if coagulated with mineral salt, a cheese that is usually eaten fresh, though it may be preserved by salting or smoking, after being cooked. Three varieties of the cheese are common in the oriental markets; a fermented kind [fermented tofu], white, yellow, or gray in color, with a piquant taste, like roquefort; a salty and white kind, like goats’ milk cheese; and a third kind, smoky and resembling Gruyère. The soy cheese costs about a fiftieth as much as animal cheese; and in nutritive value, like the vegetable milk, compares very favorably with the ordinary products of the cow. (‘Phila. Ledger,’ Sept. 27, 1906).”

Note 1. No such article in the *Philadelphia Ledger* or the *Public Ledger* (Philadelphia, Pennsylvania), of this date, can be found.

Note 2. This is the earliest U.S. document seen (Dec. 2008) that mentions smoked tofu.

The section on peanuts (p. 158-62) includes roasted peanuts, peanut butter, peanut taffy, and “Terralac or peanut-milk (here first published).” Details on how to make peanut-milk at home are given, followed by many recipes for its use—each preceded by the word “Terralac.” Thus: Terralac custards, Terralac punch. Terralac cream, salad dressing, sauce, cream sauce, creams, blanc-mange [blancmange], cream pie, Bavarian cheese, Terralac in soup, “Ice-Terralac, or peanut ice-cream,” peanut soup, salted peanuts.

There are also sections on the cowpea (p. 163+), almonds (p. 263-65; incl. salted almonds, marchpane, macaroons, nougat or almond cake, almond milk, orgeat syrup, burnt almonds, replacing almonds), vegetable-gelatine (p. 384-87, incl. carrageen or carrageen [carrageenan], Irish moss, and kanten), sesame oil or gingelly oil (p. 388), peanut oil or groundnut oil (p. 388), almond oil (p. 389), and sago and sago recipes (p. 390-91, incl. three sago puddings).

Note: *Merriam-Webster’s Collegiate Dictionary* (1998) defines orgeat (a word first used in 1754) as “a sweet almond-flavored nonalcoholic syrup used as a cocktail ingredient or food flavoring.”

2247. Morse, Edward S. 1917. Japan day by day, 1877, 1878-79, 1882-83. 2 vols. Boston & New York: Houghton Mifflin Co. Vol 1, xiv + 441 p.; Vol. 2, 453 p. Illust. (Color frontispieces + sketches). Index. 22 cm. [20+* ref]

• **Summary:** These charming books, illustrated with 777 illustrations from sketches in the author’s journal, is a diary (to avoid the duplication of home letters; subjects are treated chronologically rather than topically), filled with detailed observations about most aspects of Japanese life and the author’s pioneering work there as a professor. It gives a vivid picture of daily life in Japan in the late 1870s. Morse quickly

grew to admire and love the Japanese people; his greatest problem was learning to enjoy Japanese food.

Volume 1: “Almost everything in the sea furnishes food for the masses... Seaweed, a thin green leaf, is also eaten; it is dried and put up in tin boxes,” apparently a species of *ulva*. “I have mustered courage enough to taste a few of the dishes, and have succeeded in swallowing but one of them, and that was a kind of soup... Water was boiled in a tin vessel with a sauce [shoyu or miso] made from fermented bean [sic, beans], dark in color like Worcestershire sauce; into this were put slices of what looked like a cucumber, and then followed large blocks of a substance which resembled new white cheese [tofu], fresh from the press; this was cut into triangular slices. This last substance was made from [soy] beans, strained to remove the skins, and then made into a paste-like block. This soup was certainly nourishing and with a little practice one might come to like it. Another common article of food is made from seaweed and is known as *tokoroten*” (p. 87-88).

“It was delightful... to sit down again to a dinner of rare roast beef, real butter, and good bread. It is difficult to understand a country in which there is no milk, butter, cheese, bread, or coffee, and never has been. Butter is so distasteful to the Japanese that they cannot eat cake or other article of food in which composition butter is used” (p. 120).

A famous preparation is “cold raw fish, cut in thin slices from the fish while fresh and alive. The idea of eating raw fish is particularly repulsive to our taste, though we eat raw oysters; nevertheless, foreigners soon get accustomed to it. The sauce [soy sauce] made of fermented [soy] bean, barley, and some other grain seems to have been specially created for this kind of food. I ate a great deal of it and must confess that my first experience was fairly good,... (p. 143-44).

“The tail of the fish was cut off and flung overboard... the [raw] fish was chopped into small pieces, head, eyes, bones, and all, and this hash was put into a wooden bowl... From a box was added a substance [miso] that had a very sour odor, something made of beans and allowed to ferment, a little water was added, and it was all stirred up together, and such an unsavory-looking mess I never saw before. The gusto, however, with which the man ate it to the last grain, showed that it was palatable to him at least” (p. 185).

“I have lived on rice, sweet potatoes, egg plant, and fish for two weeks. I would give all my old shoes, and new ones too, for a good slice of bread-and-butter, a bowl of bread-and-milk, or any other thing you are enjoying at home” (p. 227).

“The cakes had a stamp of the chrysanthemum on top; these were red and white and were made of [azuki] bean paste and sugar. The Japanese are very fond of them, but they are rather insipid in taste” (p. 395).

“I have finally resigned myself to the Japanese food of this region [Yezo {Hokkaido} near Hakodate]... And of all places to start such an experiment in this village! It

required some courage and a good stomach to eat for dinner the following: fish soup, very poor; bean paste [miso?], which was not so bad;... and holothurian, or sea cucumber,... by no means agreeable. It was eaten with Japanese sauce, *shoyu*, which renders everything more or less palatable... On the whole, I am keeping body and its animating principle together, but long for a cup of coffee and a slice of bread-and-butter. I am the only outside barbarian in town” (p. 440-41).

Volume 2: The New Year's food included “a bean pickle in sugar syrup and Japanese sauce” [probably black soybeans (*kuromame*)] (p. 93). A detailed description of mochi and its pounding are given, with two illustrations (p. 95).

As they left Izumi and entered the Province of Kii [today's Wakayama], “I saw the process of manufacture of a curious kind of food one often sees in certain soups. It has a bright-yellowish color, as thin as paper, and has no definite flavor. The substance is made from soya beans by a curious and simple process. The beans are boiled in a large boiler till they are very soft; they are then ground in a mill to a fine paste, and mixed with water and colored by some stuff that is imported from abroad (fig. 675). This material is then put into a shallow trough divided by square partitions, beneath which is a charcoal fire which keeps the stuff gently boiling. The surface coagulates as it does on boiled milk, or on a cup of cocoa, and the film that forms is taken off very skillfully with slender bamboo sticks and hung up to dry (fig. 676). Other films form and are promptly removed by a girl who is kept busily at work” (p. 286-88).

In Kawagoe [a city in today's Saitama prefecture, about 20 miles northwest of Tokyo]: “It is a common custom... to eat grasshoppers as a relish... The Japanese prepare them by boiling them in shoyu, sugar, and a little water, till the water has nearly all boiled away” (p. 324-25).

At New Year's “our old cook brought me a box of *yokan* (made of sugar and [azuki] beans)... (p. 393).

Edward Sylvester Morse, a marine biologist specializing in Brachiopods, lived 1838-1925. Address: Salem, Massachusetts; Former Prof. of Zoology, Imperial Univ., Tokyo.

2248. Tadokoro, Tetsutarô. 1917. *Shôyu moromi no kôso sayô ni taisuru en-rui no sokushin genshô ni tsuite* [Stimulating effect of salts on the enzyme action of shoyu moromi]. *Kogyo Kagaku Zasshi (J. of Industrial Chemistry)* 20(236):1114-24. [Jap]

• **Summary:** The enzymic activities of Japanese soy have a very important effect on the formation of its proper odor and taste during fermentation. These activities are very much checked by the presence of a large quantity of common salt, such as is usually added in the preparation of the “shoyu.” They may, however, be stimulated either by decreasing the quantity of salt or by increasing the temperature during fermentation. The author has found yet another method

whereby the inhibitive effect of the salt may be controlled, by the antagonistic action of other neutral salts. Potassium chloride, aluminum chloride, calcium chloride and magnesium chloride are good antagonistic agents; aluminum chloride and calcium chloride show a powerful stimulating effect on amylase and pepsin in "shoyu-moromi." Better results are obtained by using a mixture of 2 or more salts together than with a single salt. When the concentration of common salt is 3 normal, a beneficial result is obtained by adding 0.0001-0.002% of a mixture of antagonistic salts to the common salt, whereby the enzymic activities of the shoyu-moromi are increased by 20%. Address: Nôgaku-shi, Tohoku Teikoku Daigaku, Noga Daigaku, Nogeï Kagaku Jikkenshitsu.

2249. Yukawa, Matao. 1917. Shôyu moromi no jukusei ni okeru chiroshin no hen'i [Transformation of tyrosine during the ripening of shoyu moromi]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 38:358-73. [3 ref. Jap] Address: Nôgakushi.

2250. *Northern Territory Times and Gazette (Darwin, NT, Australia)*. 1918. Cookery: A good Worcester sauce. Jan. 5. p. 14.

• **Summary:** "Pound and mix together ½ oz. of cayenne pepper and 1-8oz. [1/8 oz.] of garlic in a mortar, and add to them gradually one quart of white vinegar. When thoroughly mixed pass all through a hair sieve. Add a gill of Indian soy, then bottle and cork securely for use."

2251. Eddington, Jane. 1918. The Tribune Cook Book. *Chicago Daily Tribune*. Jan. 13. p. B2.

• **Summary:** "Bean sprouts for chop suey: At the Chinese stores we can get a tiny round bean [mung bean], green in color, not half as large as the smallest pea, which will grow as quickly as one can grow the mustard and cress, and so raise our own beans sprouts."

"With soy sauce, rice, and chicken, these cooked sprouts are suggestive enough of fine chop suey to satisfy."

Chop sueys are made by frying separately the meat and vegetables, "then putting the two together with soy sauce and serving them with rice."

2252. Lynch, R. Irwin. 1918. On increased food production: The soy bean. *Gardeners' Chronicle (London)* 63(1622):38. Jan. 26. Third Series. [3 ref]

• **Summary:** The various food and industrial products made from soybeans are briefly mentioned. Writing in his book on Japan, after a visit to the bean centers of Manchuria, Mr. Robert P. Porter says: "Only after one has travelled through the region where the Soy Bean reigns supreme, and has seen the wharves and the warehouses, the stations and the platforms, laden with bags of Beans, and noted the thousands of queer-looking stacks with pagoda-like roofs with

which the country is dotted, and which serve as temporary storehouses for the produce while awaiting shipment, does one realise that it (the growth of the Bean trade) is not a fable, but a veritable fact in the history of international commerce... And the manifold uses, agricultural and industrial, as well as dietary, to which the Bean can be put, invest this generous vegetable with increasing importance, and the future of the Bean crop with romantic mystery.

"A peculiar point, I note, is the changing shape of these Beans. Before they were quite ripe they were kidney-shaped. When dry, black, and ripe, they became round as a Pea, and on being soaked and cooked, they again showed the kidney-like form." A photo shows a soy bean plant with pods and roots exposed. Address: Botanic Garden, Cambridge, England.

2253. *Davis County Clipper (Utah)*. 1918. Makes new kind of meat. Feb. 26. p. 7.

• **Summary:** "On the top floor of 641 Washington street, New York city, is one of the most interesting kitchens in the world, presided over by a Chinese woman doctor." Dr. Yamei Kin, who recently traveled to China for six months to study the soy bean, says that its protein is equal to that of meat. A "sort of vegetable cheese [tofu]," it is a replacer of meat and forms no acid; it is an alkaline form of protein. The salty black sauce [soy sauce] served on top of "chop suey," "chow mein" and other dishes in Chinese restaurants, is made from soy beans. Dr. Kin can make from soybeans a roquefort cheese [fermented tofu] that looks and smells like the real thing. "In all the world there is not a more misunderstood vegetable than the soy bean, says Doctor Kin." An illustration shows Dr. Yamei Kin standing, holding a plate in her left hand.

2254. Howell, E.V. 1918. Soy beans and soy bean oil. *J. of the American Pharmaceutical Association* 7(2):159-63. Feb. [14 ref]

• **Summary:** "This bean is a native of southeastern Asia. It is at present the most important legume grown in China and Japan, where it is grown almost exclusively for human food. It has been cultivated from a remote period, each district having its own distinct variety, some two hundred kinds in all... The bean was introduced into England in 1790. Apparently the first mention of soy beans in American literature was in the *New England Farmer*, October 23, 1829, in an article by Thomas Nuttall." There follows a summary of this article and several other early U.S. documents that mention the soy bean.

"Importance: I think the soy bean is the most important plant introduced into the South within a hundred years. This opinion is based on the range of the plant, the value as a soil improver, and the numerous uses of the seed and oil, together with the fact that the present cottonseed oil mills can produce the oil with practically no change in machinery and thus double their mill season. The beans can be stored,

as they are practically immune to insects. Especial emphasis is placed on this statement in the present demand for food on account of the war. In Japan the bean forms one of the most important articles of food, by nature a meat, to go with the starch of rice. The Chinese make from the beans a cheese resembling our own cheese, while the Japanese make the well-known sauce for rice or fish, soy or suey sauce. It is one of the principal ingredients in 'Tofu' (bean curd), natto (steamed beans), and white and brown miso, which is like our molasses brown bread."

"A factory for the production of this [soy] milk has recently been established in America. This can be used in cooking, by bakers, confectioners, and chocolate manufacturers. I have before me the following food articles in which soy bean meal is the principal ingredient: Egg substitute No. 1, egg substitute No. 2, colored cocoanuts, coffee substitute, cocoa substitute, roasted malted nuts, coloring curry powder, cutlet powder, soy and navy beans with pork, the equal of any pork and beans.

"The use of the soy meal for soups, for proportional use in muffins, cookies, fritters, croquettes, biscuit, and loaf bread is unlimited. Its use is checked only by our prejudice for certain customary flavors, just as northern people and Europeans do not use corn meal. In other words, North Carolina, if forced to by war conditions, could largely exist on the soy beans crushed in the State this year, including the imported and native beans crushed, the oil from which I estimate to yield this year 400,000 gallons. This oil can be used for frying, and for a salad oil in French dressing or in mayonnaise. I fried a partridge in the crude unrefined oil, and found it delicious.

"While the chief use, so far, of the oil has been for soaps and paints, the particular object of this paper has been to call attention to the use of soy oil in pharmaceutical preparations."

Tables show: (1) The specific gravity, saponification value, and iodine for three samples of Manchurian soy oil purchased in New York. (2) The chemical composition of soy bean meal (8.77% fat), compared with the meal of five other seeds (including cottonseed, linseed {old and new process}, decorticated peanut, and sunflower seed). (3) Four chemical constants of seven samples of domestic and imported soy oils (from L.P. Nemzek). (4) The food values (nutritional composition) of soy beans and six other foods, including lean beef, milk, and eggs.

Because of World War I: "During the past six or seven months there has been produced in this country in the neighborhood of one hundred thousand gallons of soy oil. The largest part of this quantity has been produced in North Carolina by the Elizabeth City Oil & Fertilizer Co., Winterville Cotton Oil Co., and the New Bern Cotton Oil & Fertilizer Mills. Samples from the different crushings have been examined in comparison with the imported oil."

"Medicinal use: In England a diabetic biscuit is

manufactured. In this country an infant's food from the soy bean is on the market. The enzyme in the bean is also attracting attention and opening a field for investigation."

Note 1. This paper was presented at the Scientific Section, American Pharmaceutical Assoc., Indianapolis meeting, 1917.

Note 2. This is the earliest English-language document seen (Oct. 2008) that contains the word "crushings."

2255. Johnson, Nelson Trusler. 1918. Process used by Chinese in making bean curd. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 21(58):926-28. March 11.

• **Summary:** This report begins: "Probably the first article of diet that attracts the attention of the foreigner coming to China is the bean curd which is served to him at the Chinese restaurant or hotel, or in the Chinese family in many ways. Bean curd is only one of a number of products derived from soya beans. Among these are bean meal, a kind of spaghetti, bean cheese, bean sauce (known as shoyu to the Japanese, chiang yu to the Chinese, and soy in commerce), bean milk, and bean oil. All of these products are used by the Chinese as foods. The shoyu is used as a foundation for a certain well-known brand of sauce." Note: Probably Lea & Perrin's Worcestershire Sauce.

The next section, titled "Product called an ideal food," is largely a summary of a 1917 article by John E.S. Han titled *The Yale-in-China Student* (Changsha, China) 1(2):8-14. Nov. Contents: Introduction. Product called an ideal food. Uniform quantities of beans used. Specific gravity near that of milk. Method of coagulating emulsion. Suggested improvements in process.

On the last point, Mr. Johnson notes that the changes Mr. Han recommends "are largely the same as those proposed by Li Yu-ying." Address: Consul, Changsha [China].

2256. Itano, Arao. 1918. Soy beans (*Glycine hispida*) as human food. *Massachusetts Agricultural Experiment Station, Bulletin* No. 182. 10 p. March. [16 ref]

• **Summary:** Contents: Introduction. Chemical composition and digestibility. Human food prepared from soy beans (practical recipes for making Japanese foods at home; names in parentheses indicate the Japanese name). Soy bean milk (*Toniu*): The ordinary method employed in Japan, toniu from soy bean meal (made by grinding soybeans in a wheat flour mill or fine coffee mill), author's method [from soy bean meal, plus inoculation with *Bacillus coli* and *B. lactis aerogenes*], synthetic toniu, condensed soy bean milk (condensed toniu). Evaporated soy bean milk (yuba). Soy bean curd (tofu): Fresh curd (tofu), frozen tofu (*kori tofu*), fried tofu (*abura-age*). Baked beans. Boiled beans. Roasted beans. Powdered beans: Roasted, or raw (soy bean meal). Green beans. Soy bean pulp (*kara*). Fermented boiled beans

(natto). Ripened vegetable cheese (miso; discusses koji). Soy bean sauce (shoyu). Vegetable butter, ice cream, oil (table use) and lard (cooking): “The manufacture of these articles from soy beans needs further investigation.”

Concerning “Baked beans” (p. 7). “1. Soak the beans, suspended in a cloth bag, in a large quantity of hot water over night. (Soaking for twenty-four hours in ice-cold water which is changed occasionally will give the same result.) 2. Change the water, when hot water is applied, in the morning and an hour or two before cooking. 3. Add 1 teaspoonful of soda [sodium bicarbonate] per quart of beans and boil until the beans become soft. 4. Bake like other beans. Note.—The characteristic strong flavor of the beans is removed by soaking before cooking; the addition of soda [sodium bicarbonate] makes the beans soft. Cooking with salt pork, potatoes, onions, molasses and other substances makes the beans more palatable to some tastes.”

Concerning the “Roasted beans” (p. 7). “1. Roasting can be done either in an oven or in an ordinary corn popper. 2. Roast until the skin of the bean is burst by popping. Note.—The beans can be kept soft by immersing them in a syrup while they are hot. Thus very wholesome candy is prepared.”

Concerning the “Powdered beans: Roasted” (p. 7). “1. Roast as in the roasted beans. 2. Let them stand until they cool to harden them. Grind them in a coffee mill or other suitable grinder. Note.—The powder can be used as a salad dressing or cooked [baked] with cookies like peanuts and other nuts, or employed as a substitute for coffee.” Note 1. This is the earliest English-language document seen (Dec. 2005) that uses the term “Powdered beans: Roasted” to refer to roasted soy flour.

Concerning “Green beans: 1. Pick them when the beans are three-fourths to full grown. Boil them in salt water. 3. Discard the pods. 4. Serve the beans with butter or milk. Note—The pods are tough and they can be removed easily on boiling.”

Concerning “Soy bean pulp (kara): 1. This is the residue after the milk is extracted in the process of preparation of soy bean milk. 2. Cooked like any other vegetable with proper seasoning. Note.—Makes a very rich dish; an addition of green onions, cabbage or parsnip may improve it.”

Tables contain chemical composition analyses.

Note 2. This is the earliest English-language document seen (March 2007) concerning soy ice cream, which it calls simply “ice cream.” This is also the earliest document seen (March 2007) concerning the etymology of soy ice cream.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the term “soy bean pulp” to refer to okara.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the word “kori tofu” to refer to dried-frozen tofu. Address: Amherst, Massachusetts.

2257. USDA Bureau of Plant Industry, Inventory. 1918. Seeds

and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1915. Nos. 39682 to 40388. No. 42. 123 p. April 17.

• **Summary:** Soy bean introductions: *Soja max* (L.) Piper. Fabaceae. (*Glycine hispida* Maxim.)

“39967-39982. From Soochow, China. Presented by Mr. N. Gist Gee, Soochow University. Received February 11, 1915. Quoted notes by Mr. Gee, except as otherwise indicated. “39967-39972.

“39967. ‘(No. 1. *Kua shu tou* (*Kwa zoh*). Melon-ripe bean.) This is so named because of its time of ripening. Seeds are sown about the first of May and cropped late in June when melons are ripe. Used only as a vegetable.’

“39968. ‘(No. 2. *Chia chia san tou* (*Kah kah sen*). Pod pod three bean.) Planted in the middle of May and reaped during September. Used as a vegetable and for manufacturing of oil.’

“39969. ‘(No. 3. *Hung hsiang chih tou* (*Ong sing sze*). Red familiar bean.) These are “Loving beans,” as the characters suggest. Planted in the middle of May and harvested about September. Used both as vegetables and in the manufacture of oil.’

“39970. ‘(No. 4. *Hei tou* (*Huk*). Black bean.) Owing to their color, these are called “Black beans.” Planted in the first part of June and reaped in the middle of October. Used as a vegetable and in the manufacture of oil.’

“39971. ‘(No. 5. *Ku li ch’ing* (*Kwa lea ching*). Bone inside green.) Planted early in June and harvested in late October. Used only in making oil.’

“39972. ‘(No. 6 *Shih tzū ho tou* (*Zee tee ‘ah*). Persimmon-seed bean.) Planted in the first part of June and cropped in the middle of September. They are largely used as vegetables.’

“39974-39977.

“39974 ‘(No. 8 *Pa yüeh pai tou* (*Gee buh*). Eight-month white bean.) The combined meaning of its color and its time of ripening indicates the name. Planted in May and harvested in September, which is the eighth month of the Chinese calendar. Used to make oil. This and No. 9 [S.P.I. No. 39975] are the best two for oil manufacture.’

“39975. ‘(No. 9. *Shui pai tou* (*Gee buh*). Water white bean.) Planted in late May and reaped in September. Used to manufacture oil; one of the best two for oil manufacture.’

“39976. ‘(No. 10. *Niu t’a pien* (*Nue duh pea*). Cow crush flat.) Its use and time of harvesting are the same as those of the *Gee buh* [S.P.I. No. 39975]. The beans are trodden out by cows; hence the name.’

“39977. ‘(No. 11. *Wu ch’iao tou* (*Oh tsah*). Sparrow’s cackling (or magpie) bean.) Planted about the last part of June and cropped in mid-October. Used largely to make oil.”

“39982. ‘(No. 16. *Lü tou* (*Loh*). Green bean [mung].) Planted in the early part of June and cropped early in September. Used the same as the *Ch’ih tou* [S.P.I. No.

39980]. Called “green bean” because of its color, probably.”

“40106/40138. From Wakamatsu, Iwashiro, Japan. Presented by Rev. Christopher Noss. Received March 8, 1915. Quoted notes by Mr. Noss. ‘From an exhibition in Kawamata, near Fukushima City.’

“40106-40127.

“40106. ‘*Mochidaizu* (*dai*, large; *zu*, bean [*daizu* = soybean]), used in *mochi* (glutinous rice boiled and pounded in a mortar).’

“40107. ‘No. 2. *Nakatedaizu* (second early), used in *miso* (beans, etc., pickled in salt and made into soup), *tofu* (bean curd).’

“40108. ‘No. 3. *Shichi-ri-korobi-daizu* (20-mile rolling), used for *tofu*, *soy*, and *miso*.’

“40109. ‘No. 4. *Yuki-no-shita-daizu* (under the snow), used for *tofu*, *soy*, and *miso*.’

“40110. ‘No. 5. *Wasedaizu* (early), used for *tofu*, *soy*, and *miso*.’

“40111. ‘No. 6. *Misodaizu*.’

“40112. No. 7. *Ko-tsubu-daizu* (small grain), used for *miso* and *natto* (buried, fermented, and eaten as a relish).’

“40113. ‘No. 8. *Kinako-daizu*, made into *kinako* (a flour used in cooking) and also *natto*. Said to have been brought by soldiers from Manchuria.’

“40114. ‘No. 9. *Tamazukuridaizu* (name of a country near Sendai), used boiled.’

“40115. ‘No. 10. *Asahidaizu* (morning sun), used for *natto*.’

“40116. ‘No. 11. *Darumadaizu* (Dharuma [Bodhidharma], whose image was a roly-poly, can not be upset), used boiled and for *tofu*.’

“40117. ‘No. 12. *Taiwandaizu* (Formosa), used boiled.’

“40118. ‘No. 13. *Hato-koroshi-daizu* (dove killer), used boiled.’

“40119. ‘No. 14. *Usu-ao-daizu* (light green), used for *kinako* and boiled.’ Note: This soybean might give naturally greenish *kinako*.

“40120. ‘No. 15. *Ao-daizu* (green), used for *kinako* and boiled.’

“40121. ‘No. 16. *Aka-kuki-daizu* (red stalk), used for *natto* and *miso*.’

“40122. ‘No. 17. *Fuku-shiro-daizu* (clothing white), used for *tofu*.’

“40123. ‘No. 18. *Hachi-ri-han-daizu* (21 miles), used boiled. The name *Hachi-ri-han-daizu* involves a curious play on words. *Hachi-ri-han-daizu* means “eight ri (a ri is 2.5 miles) and a half,” which is just a little short of *ku-ri*. Now *ku-ri* means nine ri, and *ku-ri* also means chestnut, so the expression in question means that the beans so named are almost equal to chestnuts.’

“40124-40127. ‘Beans are used boiled.’

“40124. ‘No. 19. *Yoshiwaradaizu* (harlot quarters in Tokyo).’

“40125. ‘No. 20. *Chadaizu* (tea, alluding to the color

[brown]).’

“40126. ‘No. 21. *Kichidaizu* (lucky).’

“40127. ‘No. 22. *Kurodaizu* (black).’”

“40370-76. From Wakamatsu, Iwashiro, Japan.

Presented by Rev. Christopher Noss. Received March 27, 1915. Quoted notes by Mr. Noss.

“40370. ‘No. 33. *Hikagedaizu* (shade), produces in shady places; used for *miso*.’

“40371. ‘No. 34. *Dekisugidaizu* (excessive yield); used for *miso*.’

“40372. ‘No. 35. *Kurodaizu* (black); eaten boiled and sugared.’

“40373. ‘No. 36. *Nakatedaizu* (medium early); used for *miso*.’

“40374. ‘No. 37. *Hishidaizu* (water caltrop, alluding to the flattened shape); eaten parboiled and seasoned with *shoyu* and salt.’

“40375. ‘No. 38. Name unknown, cultivated from ancient times in Soma County, Fukushima Ken; used for *miso*.’

“40376. ‘No. 39. *Hakodate-nishiki-daizu* (Hakodate brocade); used for *miso*.’” Address: Washington, DC.

2258. Dorsey, Henry. 1918. Growing soybeans. *West Virginia Univ., College of Agriculture, Extension Dept., Circular No. 204*. p. 1-8. April. [1 ref]

• **Summary:** “Within the last five years soybeans have assumed, due to their many desirable qualities, an important place in West Virginia agriculture and their importance is quite likely to increase. Less than a decade ago the crop was practically unknown. A conservative estimate derived from county agents’ annual reports indicates an acreage of more than 6,000 in 1917. This acreage is almost equal to that of clover alone according to the census figures of 1910.”

Contains sections on the importance of the crop, harvesting, yields, suitable varieties, special uses, human food, and in crop rotations.

The section on human food uses states: “The scarcity of meats will doubtless lead to a wider use of soybeans in the human dietary. For centuries they have supplied a large proportion of the nitrogenous part of the food of the Chinese and Japanese. In the Orient the whole beans are not eaten directly but soy sauce, bean milk, bean curd, and vegetable cheese are made from them. Americans would doubtless object to many of these products. The whole beans have often been used like other beans—boiled, baked, or with pork. They need to be soaked several hours to remove the strong flavor. Soybean flour has great possibilities as a substitute for part of the constituents of various breads. When Americans learn to use the products of the seed, then there will be a ready market for the crop and it will take a regular place in our cropping scheme.” Address: Asst. Prof. of Agronomy, West Virginia Univ., Morgantown.

2259. Takahashi, Teizô. 1918. Re: Design of koji trays. Letter to Dr. Charles Thom, Washington, DC, May 17. 2 p. Handwritten. [Eng]

• **Summary:** Takahashi has Dr. Thom's letter of May 18th and he is very pleased to see Miss Church working on this problem [of how to make shoyu using koji]. If Miss Church comes to visit him, she should come to Rutland, Massachusetts (c/o Mrs. Brown); he moved there from Boston a little while ago.

"I imagine that the apparatus needed for this problem is a wooden tray." He sketches a three-dimensional wooden koji tray, 1.5 feet long, by 8-9 inches wide, by 2-3 inches deep, with short legs on the bottom. "This tray is used for the preparation of 'kôji,' which is mentioned in my former letter. Other apparatus, such as steaming, roasting and crushing, I suppose are easily obtained in your Bureau." Address: 82 St. James Ave., Boston, Massachusetts.

2260. *Weekly News Letter (USDA)*. 1918. Soy beans, used like navy kind, make valuable food: Ancient China's product can be served in numerous desirable ways. 5(42):3. May 22.

• **Summary:** "While the soy bean has been grown in the United States primarily as a forage crop, its availability as a valuable food for human beings is being given increasing attention. Many schools of cookery and domestic science in this country, as well as home economics experts and home-demonstration agents of the United States Department of Agriculture, have shown that dried beans can be used successfully in the same manner as navy beans." After the beans are soaked, then boiled slowly, they "may be seasoned and used as the principal part of a meal, as they are or may be made into bean loaf, bean croquettes, or other dishes.

"When soy beans are three-fourths or more grown, the seed make a palatable and nutritious green vegetable."

Also discusses "soy-bean milk" ("a milky emulsion is obtained which is similar in appearance and properties to cow's milk"), "tofu or bean curd" (the addition of either magnesium chlorid [chloride] or calcium sulphate to soy-bean milk precipitates some of the proteid substances, forming a grayish-white curd).

"Soy or shoyu sauce is a dark-brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water, inoculated with a culture known as rice ferment and left in casks to ferment for six months to a year or longer. The liquid obtained is used in many countries, including the United States, as a sauce for meat or vegetables." Address: Washington, DC.

2261. Layosa y Makalindong, Pedro. 1918. Field tests of soy beans. *Philippine Agriculturist* 6(10):276-91. June. Based on his thesis, College of Agriculture, No. 92. [8 ref]

• **Summary:** "Of the leguminous crops in the Philippines the soy bean is the only one of which the finished products are used. These finished products, the most important of which

are the [salt pickled] soy bean curd (*tahuri*) and soy bean sauce (*toyo*) have been long known all over the islands. In spite of this evidence of its economic importance, the crop has been given but very little attention by Filipino farmers."

The field tests were carried out in the Philippines. The author mentions that soy beans are used in China, Japan, and other countries as a substitute for meat.

The author has carried on the breeding work with soybeans begun by Maceda in the Philippines to determine their commercial value and to find the varieties best suited for the rainy and the dry seasons, respectively. It was found that the selections from the variety Kedilcie Wit grown during the rainy season and strains from Ami's bean grown during the dry season produced the highest yields. Address: Philippines.

2262. *Gardens' Bulletin, Straits Settlements (The)* [Singapore]. 1918. Soy bean. 2(1):12. July 4.

• **Summary:** "The Soy bean is of enormous importance in Japan, Manchuria and China; and thence a great feature in world commerce. It is now being extensively planted in the United States. It has been said that it could not be grown in the Tropics, and some first trials of it in the Philippines a few years ago led to statements that it could not be successfully grown there. However this was merely a case of the wrong variety for the season in which the planting was done; for there are many distinct varieties of Soy of quite different possibilities; and more comprehensive trials in the Philippine islands developed the fact that certain varieties were suited only to the wet season, others only to a drier period, and some were heavier yielders of hay, others of grain, and so on, it now being recognized that soy is a practicable crop for the country.

"Three varieties were brought to Singapore from the Philippines. Two did not germinate. The third gave but few plants, but these grew well and are now setting pods. Great care should be taken to continue and develop this culture* since out of it may arise a real asset to the country. Comprehensive trials of all the plant in furnishing direct food for man and beast is but a part of its value, since its secondary products are used the world over. Vast quantities of the famous soy sauce** are consumed yearly in all parts of the world, while bean curds [probably tofu] and oil from this source are well known.

Footnotes: "* The second crop of Soy bean was for some unknown reason a complete failure. E.H.M. ** Basis also for one of the best known English [British] table sauces" [Worcestershire sauce].

Note 1. This is the earliest document seen (May 2010) concerning cultivation of soybeans in Singapore. This document contains the earliest date seen for the cultivation of soybeans in Singapore (1918). Address: Singapore.

2263. *Scientific American Supplement*. 1918. Soy beans make

valuable food (Abstract). 86(2218):8. July 6.

• **Summary:** A near reprint of: *USDA Weekly News Letter*. 1918. "Soy beans, used like navy kind, make valuable food." May 22, p. 3.

2264. Norton, Jeanette Young. 1918. National dishes the world over: Favorite foods in all the principal kitchens of the Earth,... *San Francisco Chronicle*. July 7. p. SM5.

• **Summary:** "A well known Japanese dish is gyunabe ["beef + pot"]. The dish is made with vegetables stewed in shoyu sauce and mirin, a cooking wine. Chicken or meat cut in small thin slices is cooked on top of the stew.

"Chinese chop suey served in China has soy beans and pork in it that are used in place of the more expensive chicken and mushrooms that appear in the American version."

Note: We know of no other source stating that soy beans are used in chop suey in China. Soy sauce is used, although chop suey is much better known in the USA than in China.

2265. Morse, W.J. 1918. The soy bean: Its culture and uses. *Farmers' Bulletin (USDA)* No. 973. 32 p. July. Superseded by *Farmers' Bulletin* 1520. [27 ref]

• **Summary:** Contents: Summary. Commercial importance. Climatic adaptations. Soil requirements. Preparation of the seed bed. Fertilizers. Inoculation. Time of planting. Depth of planting. Rate of seeding. Method of seeding. Cultivation. Varieties: Barchet, Biloxi, Black Eyebrow, Chiquita, Early Brown, Elton, Guelph ("also known as Medium Green, Early Green, Medium Early Green, and Large Medium"), Haberlandt, Hahto, Hollybrook, Ito San ("has been known under the names of Japan Pea, Yellow, Medium Yellow, Dwarf Yellow, Early Yellow, Early White, and Coffee Berry"), Lexington, Mammoth, Manchu, Medium Yellow ("has been grown under the names Early Yellow, Mongol, Banner, and Roosevelt"), Mikado, Peking ("In variety tests the Peking, Sable, and Royal varieties appear to be identical, and it is quite evident that the latter two are selections from the Peking."), Shanghai ("has been grown in North Carolina under the name of Tarheel Black"), Tokyo, Virginia, Wilson-Five [black seeded], Yokotenn [Yokoten].

Soy beans in rotations. Soy beans in mixtures: With cowpeas, corn, sorghums, or Sudan grass. Soy beans for seed: Yields of seed, feeding value, for human food, for oil and meal, viability of soy-bean seed, cost of production, soy-bean straw. Soy beans for hay: Time of cutting, curing soy-bean hay, feeding value of soy-bean hay, yields of soy-bean hay. Soy beans for soiling. Soy beans for pasture. Soy beans for ensilage. Soy beans for soil improvement. Enemies of the soy bean: Rabbits, root-knot caused by a nematode, cowpea wilt due to a *Fusarium*, caterpillars, and black blister beetles.

"Commercial importance: The soy bean, also called the soya bean, the soja bean, and in North Carolina the stock pea, is an annual leguminous plant, a native of southeastern

Asia. It has been cultivated in China, India, and Japan for more than 5,000 years and in extent of use and value is the most important legume now grown in these countries."

"The soy bean was introduced into the United States as early as 1804, but it is only during the last decade that it has become a crop of much importance. At the present time it is most largely grown for forage. In many sections, especially southward and in some parts of the corn belt, a very profitable industry has developed from that growing of seed. During the past few years the acreage has increased to a very considerable extent. The large yield of seed, the excellent quality of forage, the ease of growing and harvesting the crop, its freedom from insect enemies and plant diseases, and the possibilities of the seed for the production of oil and meal and as a food all tend to give this crop a high potential importance and assure its greater agricultural development in America" (p. 3).

Concerning the variety Hahto (p. 14): "This variety recently introduced from Japan is a large producer of seed and forage, and the seeds when from three-fourths to full grown make an excellent green vegetable, similar to the Lima or butter bean. Plants stout, erect, maturing in about 135 days; pubescence tawny; flowers purple; seeds olive yellow, with a black seed scar, much flattened, very large, about 75,000 to the bushel; oil, 14.8%; protein, 40.6%." Note 1. This is the earliest English-language document seen (May 2003) that uses the term "butter bean" to refer to the lima bean.

Uses for human food (p. 22-23): "Until 1916 the soy bean had been used but little in the United States for food and only as a special diet for persons [diabetics] requiring foods of a low starch content. Much interest has been shown during the last two years in the possibilities of the soy bean for food. The United States Department of Agriculture and many schools of cookery and domestic science have conducted successful experiments in utilizing the dried beans in the manner of the navy bean and the green beans when three-fourths grown to full grown as a green-vegetable bean. The variety and palatability of the forms in which the bean can be served make it a very desirable article of food, and undoubtedly it will grow in favor as it becomes better known. Soy-bean meal or flour may be used as a constituent of bread and muffins and in pastry."

Photos show: (1) A man standing in a field of soy beans (front cover). (2) A typical mature soy-bean plant (p. 4).

(3) Roots of a soy-bean plant with abundant development of nodules (p. 7).

(4) Cultivating soy beans. Cultivation should begin as soon as the seedling plants appear. Two horses pull a man on a harrow or weeder. (5) A field of the Biloxi variety of soy beans in Mississippi (p. 13). (6) A field of the Black Eyebrow variety of soy beans in South Dakota. (7) Plats of the Mammoth and Virginia varieties of soy beans at Arlington Farm, Virginia (p. 15). (8) A man standing in a field of the

Peking variety of soy beans grown in 24-inch rows. (9) A field of soy beans and corn grown for ensilage (p. 17). (10) A field of soy bean and Sudan grass grown in mixture for hay (p. 22).

(11) Opened pods of Hahto variety soy beans on a plate, showing the large seeds (p. 23). (12) Soy-bean hay on frames (p. 25).

A diagram (p. 5) shows 67 different ways in which soy bean plants and seeds are utilized. The plants are used for green manure, forage (hay, ensilage, soiling), and pasture. The seeds are used to make oil, meal, and food products. The oil is used to make various non-food industrial products (glycerin, explosives, enamels, varnish, waterproof goods, linoleum, paints, soap stock {for hard or soft soaps}, celluloid, rubber substitute, printing inks, lighting oil {illuminants}, and lubricating oil), and four food products (butter substitute, lard substitutes, edible oils, and salad oils). Food products include dried beans and green beans. From dried beans are made soy sauce, boiled beans, baked beans, soups, coffee substitute, roasted beans, breakfast foods, and vegetable milk (from which is made soy cheese {fresh, dried, smoked, or fermented}, condensed milk, fresh milk, confections, and casein). The green beans are used as green vegetables, canned, or in salads.

An outline map of the United States (p. 6) shows the areas to which the soy bean is especially adapted, as to varieties and purpose. The eastern half of the country is divided horizontally into 3 zones: Southern, for later and larger varieties for seed production; Central, for medium and medium-late varieties for seed and the same varieties and later varieties for forage; Northern (the line runs through central Ohio, Indiana, and Illinois, and southern Iowa) for very early varieties for grain production and the medium and medium-late varieties for forage and ensilage.

Note 2. This is the earliest document seen (Aug. 2004) that mentions the soybean varieties Hahto, Yokoten, or Wilson-Five.

Note 3. This is the earliest document seen (June 2009) that describes a vegetable-type soybean variety (Hahto), or says that a specific variety makes an excellent "green vegetable."

Note 4. This is the earliest English-language document seen (June 2009) that contains the term "green-vegetable bean." Address: Scientific Asst., Forage-Crop Investigations, USDA Bureau of Plant Industry, Washington, DC.

2266. Evans, W.A. 1918. How to keep well. *Chicago Daily Tribune*. Aug. 28. p. 6.

• **Summary:** "Soy beans offer large possibilities as a food. They contain 17 per cent fat, 36 per cent proteid, and 14 per cent starch. Soy bean milk has been used for feeding children for a long time. Le Wall says that soy bean cheese and soy bean croquettes resembling meat croquettes are in use. According to the same author, soy bean is the basis

of Worcestershire and other sauces. Among orientals soy bean foods are: Tashir, a bean natto and miso, also soy bean cheeses. Ordinary soy milk and Yuba or soy cream are in use. Shoyer [sic, shoyu] is an oriental sauce in making which soy beans are used." Address: Dr.

2267. *Bean-Bag (The) (St. Louis, Missouri)*. 1918. Chinese woman doctor favors soy beans. 1(3):28. Aug.

• **Summary:** "Dr. Yamei Kin, a Chinese woman doctor of New York City, recently spent six months in China, studying and analyzing the soy bean. Dr. Kin says that the protein contained in the soy bean is equal to that of meat, and is of great value to persons who cannot safely eat meat. It is a replacer of meat, a sort of vegetable cheese. It forms no acid. It is an alkaline form of protein.

"There are several varieties of soy beans, says Dr. Kin. They look like dried peas, and taste like pebbles. Combined with hash or any form of meat leavings, it forms a wonderful food for diabetics, as the curd contains no starch. When you eat 'chop suey,' 'chow mein' and other dishes in Chinese restaurants, the salty black sauce [soy sauce] served with the food is made of soy beans.

"Excellent cheese [tofu] can be made from soy beans, according to Dr. Kin. She says she can make roquefort cheese [fermented tofu] that smells and looks like the real thing. She also says that when the public becomes educated to the soy bean it will take its place at the head of the procession of American products. In all the world there is not a more misunderstood vegetable than the soy bean, says Dr. Kin."

2268. *J. of Agriculture and Horticulture (Quebec)*. 1918. Soy beans as food. 22:48. Sept. 1.

• **Summary:** "The housewife of to-day who desires to patriotically conserve needed foods for overseas and at the same time provide adequately for her own household is naturally on the lookout for new articles to add to her dietary list. Such a one which has much to recommend it is soy beans..."

"Most varieties require a longer season for maturity than our northern climate provides but there are one or two that appear to thrive in Quebec and a number of people are trying them this year. They are said to produce abundantly so it is probable that many housewives will be giving them a trial this season for the first time, and a few suggestions as to their treatment may be welcome.

"In Japan and China soy bean milk is prepared and used extensively. This milk is also sold in a condensed form and as curd [tofu]. Other preparations are vegetable butter and cheese, and the extracted oil is sold for table use and for cookery.

"The Food Preservation Demonstrations of the Canada Food Board form an interesting feature of the fall fairs this year."

Describes the preparation of: (1) Green soybeans. "If cooked when about three-fourths grown as green beans the water should be changed once during cooking". (2) Dry soybeans. Long soaking in a large quantity of water improves the flavor by assisting "in the removal of any disagreeable principle." To serve as baked beans, in a crock, add to 2 cups cooked beans, ¼ teaspoon mustard, salt, a few grains of cayenne pepper, ½ cup tomato catsup, or if desired a few drops of onion juice, or 2-3 tablespoons molasses, or a teaspoonful of Worcestershire sauce. (3) Soy flour. "The raw soy beans may be ground into meal and combined with flour for bread, biscuits, or muffins. In the bread 1/3 soy bean meal may be used, in the biscuits and muffins a larger proportion." The meal tastes best if slightly browned.

Note: This is the 2nd earliest document seen (Jan. 2010) concerning soybeans in Quebec province, Canada, or the cultivation of soybeans in Quebec province (one of two documents). Address: Canada.

2269. *Christian Science Monitor*. 1918. Welcoming the soy bean. Sept. 13. p. 10.

• **Summary:** In the section titled "Fashions and the household" we read: "The soy bean is a native of Asia; it is found in Japan, China, the Molucca Islands, and in India. It is said that the products of the bean, rather than the bean itself, are generally eaten in these countries. In China, a popular sauce [soy sauce], usually served with rice, is made from it. Here are some recipes for the use of this bean, given out by the Food Administration of the United States, with the suggestion that it may be used largely in the place of meat." Recipes are given for: Black soy bean soup (with "1 pint black soy beans"). Cream soy bean soup (with "1 cup of green or yellow soy beans... Soak the beans 12 hours, cook in water 4 hours or until tender, then rub through sieve"). Yellow soy bean soufflé (with "1 cup of yellow soy beans"). Baked soy beans. Soy bean cup cakes (with "¾ cup of soy bean meal").

2270. Jordan, Sam. 1918. Soy beans from soup to nuts: A new crop with many uses both on farms and in factories. *Country Gentleman* 83(39):7, 34. Sept. 28.

• **Summary:** Begins by discussing: The possibilities of soy beans "as a substitute for meat." The rising demand for "soy oil" which started a few years ago when the flax crop was little better than a total failure. "Industrial uses" of soy oil in soap, paint, and varnish. "Several packing houses were experimenting with the oil as a possibility in oleomargarine manufacture." "Soys fix soils for cotton." "Varieties of soy beans have been matured as far north as Quebec" [Canada]. The "development of the soy in the cotton sections will no doubt be swifter from an industrial standpoint because of the already existing facilities for oil extraction."

Concerning food uses, the author believes that "the soy bean as human food is destined to play a leading part in the

way of a substitute for meat. From studies made of soy beans as food, the use of flour seems to be one form in which their use will suit the American taste and palate best."

"I have heard that the soy-bean milkman comes around before breakfast each morning in the Orient and leaves soy-bean milk." A Chinese student recently verified this story and said that in his family's household "it was customary to drink a glass of the milk upon arising." The student added that fried bean curd was often served for breakfast, and with soy sauce for dinner. "This soy sauce is something more or less familiar to Americans, the acquaintance being contingent upon the frequency with which our Chinese restaurants are patronized. It is the dark-brown liquid usually on the tables in the vinegar bottles. It is also the base of our Worcestershire sauces.

"For supper a favorite dish is sprouted beans in salad form, mixed with small pieces of meat or egg. They usually have also some form of bean cheese or fermented boiled beans. Next to baked and boiled beans, the preparation of soy-bean milk is a thing which should be more widely known."

"The author gives a brief description of how this milk is made, noting that it can be used in "cream sauces, puddings, custards, and even ice cream when some high flavoring is added to kill the beany taste. Much of the strong taste can be eliminated by boiling the milk slowly and stirring to prevent scalding.

"The residue [okara] obtained by straining the milk makes an excellent base for muffins and even bread, when it is used in the proportion of one part to three or four parts of wheat flour."

"In regard to fresh bean curd or 'tofu,' as the Chinese call it, it is hardly probable that we shall use it generally at an early date. The process of making it will no doubt come through the activities of our increasing number of women home-demonstration agents and, also, it is being made commercially by several Chinese firms in this country. When it does become more widely known, however, it is destined to be used extensively. It has very little taste of its own, and takes the flavor of everything with which it is used, generally as a base. It is also highly nutritious.

"Soy sauce is likewise destined for greater use, but the process of its manufacture is too complicated for domestic preparation. It can be purchased at Chinese groceries in this country, and probably from the majority of Chinese restaurants.

"Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used." They are excellent because of "their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted."

"And here is one for vegetarians—a 'vegetarian roast.' This is made by using equal parts of soy beans and peanuts, with the peanuts roasted and the beans boiled until soft

before both are mixed and treated as an ordinary meat loaf. Such a roast as this is now being prepared by several food-manufacturing firms in the South, where both peanuts and soy beans are plentiful. It is being placed on the market in one and two pound containers.”

“The beans served as a green vegetable are treated after hulling in much the same manner as Lima beans or peas. To hull, however, they should be boiled in the pods for about five minutes, then dipped into cold water, after which they shell easily. They can also be canned in this way, treating them after hulling the same as Lima beans. It is often desirable to serve them with rice or potatoes.”

“So here we have a small glimpse of what their [soy beans’] future really is. A crop with a great industrial importance, a crop with known forage and manurial possibilities, and a crop holding forth a beneficent promise as an essential food, soy beans will soon be giving corn and wheat a close race for the more prominent places on our agricultural map.”

Photos show: (1) Soy beans after being soaked but before boiling. (2) Piles of hay, used for forage. (3) Side view of a soy-bean harvester (with a man on top, pulled by two horses) used in the South, showing the bags filled. (4) A rear view of the same separating and bagging soy-bean harvester.

Note 1. This is the earliest document seen (March 2012) that uses the term “from soup to nuts” in connection with soybeans. Note 2. This is the earliest English-language document seen (Feb. 2000) that uses the term “soy-bean sprouts” to refer to these sprouts. Address: Columbia, Missouri.

2271. *J. of Agriculture and Horticulture (Quebec, Canada)*. 1918. Soy beans, used like navy kind, make valuable food: Ancient China’s product can be serve in numerous ways. Oct. 1. p. 67.

• **Summary:** From Weekly News Letter, U.S. Dept. of Agriculture [22 May 1918, p. 3]: “When prepared like the ordinary field or navy beans, soy beans should be soaked for 10 or 12 hours or more, if necessary, and boiled slowly. The boiled soy beans,... may be seasoned and used as a principal part of a meal as they are or may be made into bean loaf, bean croquettes, or other dishes.

When soy beans are three-fourths or more grown, the seed make a palatable and nutritious green vegetable.

Also discusses “soy-bean milk” (“a milky emulsion is obtained which is similar in appearance and properties to cow’s milk”), “tofu or bean curd” (the addition of either magnesium chlorid [chloride] or calcium sulphate to soy-bean milk precipitates some of the proteid substances, forming a grayish-white curd).

“Soy or shoyu sauce is a dark-brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water, inoculated with a

culture known as rice ferment and left in casks to ferment for six months to a year or longer. The liquid obtained is used in many countries, including the United States, as a sauce for meat or vegetables.”

2272. *Bean-Bag (The) (St. Louis, Missouri)*. 1918. Products secured from a ton of soybeans (Diagram). 1(5):37. Oct.

• **Summary:** This diagram shows all the things that can be made from 2,000 pounds of soybeans: Meal 1,650 lb. Oil 32 gallons. Trash and moisture: 120 pounds.

From the meal: Food (animal or human), fertilizer, and cellulose. Human foods include macaroni, flour, soy sauce, milk [soymilk], cheese [tofu], coffee, lard [sic].

From the oil: Food (cooking oils, butter [substitute, lard substitute]), paints, enamels, blown oil (linoleum, varnishes, India rubber substitutes), soap stock (soaps, glycerine).

2273. Heinze, B. 1918. Einiges ueber die Oelbohne, ihren Anbau, den volkswirtschaftlichen Wert und ihre besondere Bedeutung als Heil- und Gewuerzpflanze [The soybean, its cultivation, its economic value, and special importance as a medicinal- and culinary spice plant]. *Heil- und Gewuerzpflanzen* 2(4):82-91. Oct.; 2(6):129-34. Dec. (Chem. Abst. 14:786). [22 ref. Ger]

• **Summary:** A discussion of the economic value of the “Chinese oilbean or soya bean” (*chinesische Oelbohne oder Sojabohne*), its culture, and special uses as a medicinal and aromatic plant. In the preparation of soy sauce, wheat and soy beans, after the addition of sodium chloride, are fermented by koji (rice impregnated with a culture of *Aspergillus oryzae*) for a period of 8 months to 5 years. The solid material is separated from the liquid. Vegetable cheese is prepared in a similar manner. Address: PhD, Bakteriologische Abteilung der agrikultur-chemischen Versuchstation Halle a. d. Saale [Germany].

2274. Winkler, Gustav. 1918. Die Sojabohne: Aus einem Vortrage... gehalten in der Hauptversammlung der Gartenbau-Gesellschaft Frankfurt a.M. am 17. April 1914. Zweite Auflage [The soybean: From a lecture... presented at the main meeting of the Gardening Society of Frankfurt am Main, on 17 April 1914. 2nd ed.]. Mainkur bei Frankfurt am Main, Germany: Published by the author. ii + 28 p. Illust. 22 cm. [4 ref. Ger]

• **Summary:** On the cover: “Die Sojabohne der Mandschurei [The soybean of Manchuria]. Much of this lecture (as stated on the title page) was based the following English-language article, translated into German by Werner Winkler (Gustav’s son) in 1913: Shaw, Norman. 1911. “The soya bean of Manchuria.” *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series No. 31*. 32 p.

Contents: A 2-page insert at the front. Photos show: (1) The author (with a large white beard and moustache)

with a many-branched soybean plant, stripped of its leaves, mounted on a 2 x 3 foot wooden board, from his beanfield (*Winklers Bohnenfeld*) at Mainkur. This one plant grew from May 10 to Oct. 15, 6 months, producing 242 pods containing 503 completely mature soybeans. This line was acclimatized for 6 years and cultivated in the soil for 5 years. (2) The author standing and holding (with the roots facing upward) one soybean plant in each hand. In his right hand is an acclimatized soybean which produced 58 beans in 100 days. In his left hand is a plant grown from Chinese seeds of 1912-13 which produced 224 flowers and no seeds in 100 days. (3) A many-branched soybean plant, stripped of its leaves, from Winkler's beanfield, affixed to a board. Grown from Chinese seeds harvested in 1911/12. It grew from 15 May 1917 until Oct. 1, five months. 105 pods produced about 250 completely mature soybeans. From seeds that were not yet acclimatized grown on cultivated soil. (4) A similar looking plant from Winkler's beanfield. Grown from Chinese seeds harvested in 1911/12. It grew from 15 May 1918 until Oct. 15, five months. 160 pods produced about 350 soybeans. The seeds were not yet completely ripe because of bad, raw weather in 1918.

Foreword to the 2nd edition. Introduction. Diagram in the shape of a rhombus / diamond, showing how the various colored soybeans change from one color into another (adapted from Shaw 1911, p. 2). Description of the diagram: Discusses: (1) Ball, Carleton R. 1907. "Soy bean varieties." *USDA Bureau of Plant Industry, Bulletin* No. 98. 30 p. + 5 plates. May 27. (2) Hosie, Alexander. 1910. *Manchuria: Its People, Resources, and Recent History*. London: Methuen & Co. xii + 293 p. Hosie describes 3 types of soybeans: Yellow, with 3 subvarieties. Green, with 2 subvarieties. Black, with 3 subvarieties.

The rest of the contents is fairly similar to that of the 1st edition (1914), but the details within many sections are greatly expanded. On the rear cover is a photo of two soybean plants attached to a board, one month after planting the seed, Summer 1917; 15 May to 15 June. In the Supplement (p. 26-28), the author summarizes the results of his 8 years of soybean cultivation in Frankfurt; he concludes that it can be grown with good results in southern Germany. Frankfurt am Main is about midway between the northern and southern tips of Germany. Address: Mainkur bei Frankfurt am Main, Germany.

2275. Vantine (A.A.) & Co., Inc. 1918. *Oriental delicacies: Vantine's—The Oriental store* (Ad). *New York Times*. Nov. 24. p. 38.

• **Summary:** "Toothsome tidbits from Oriental lands, for your Thanksgiving Dinner, or to send to the boys in the Service, including an almost unlimited selection of specially packed 'goodies' for Christmas gifts."

"Imported Japanese shoyu or soy sauce. A delicious sauce for flavoring gravies, meats, fish, etc.—Prices 55¢, 85¢,

\$1.35."

"Japanese 'Midzuame' or rice candy. Made from rice, barley, malt, sugar and gelatine." 4 flavors—Price 35¢.

2276. *New York Times*. 1918. Opens way for exports. War Trade Board modifying restrictions on foreign commerce. Dec. 9. p. 17.

• **Summary:** "Washington [DC], Dec. 8. Plans for a general loosening up in restrictions on both export and import trade,... especially in South America and the Orient, are being carried out by the War Trade Board." Restrictions on the importation of various items from China have been rescinded. These include "soy bean sauce."

2277. Arnold, Julean. 1918. Chinese products of interest to Americans. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 21(299):1110-19. Dec. 21.

• **Summary:** About Chinese vegetable products. Two long sections ("Chinese production of beans" and "Extensive use of bean products—Exports during 1917") contain detailed discussions of soybeans and soyfoods in China. However, the author states (p. 1112) that the "greater part of the descriptive information above is taken from:" Shaw, Norman. 1911. "The soya bean of Manchuria." *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series*. No. 31. 32 p.

The first of these sections states: "It is only within the past 10 years that the outside world has become acquainted with the soya bean of China. It is probably safe to say that the sudden rise of the soya bean from a position of comparative obscurity to a position of prominence in the world of trade, during a period of little more than a decade, constitutes one of the commercial wonders of the world."

"In the Far East soya beans are used for the following purposes: (1) For bean sauce or soy ('soya' is a corruption of the Japanese 'shoyu'), known to the Chinese as 'chiang-yu' and made... The sauce is clear, resembles Worcestershire sauce, and is used in a somewhat similar way. (2) For 'chiang' or bean paste, eaten with fish, meat, and vegetables, and made by... (3) For 'tou-fu' or bean curd [tofu], made from green or yellow beans by... (4) For a form of flour, extensively used for bean vermicelli, which is tasty and nutritious. (5) As a table vegetable [green vegetable soybeans]. (6) For soups. (7) For making confectionery (in Japan). (8) For oil, as a substitute for lard, as a lubricant, as an illuminant, and to make waterproof cloth, paper umbrellas, and lanterns."

Also discusses "Exports of peanuts" (p. 1118-19): Just before the outbreak of World War I, the peanut export industry in China reached a peak. "The annual exports then were about 70,000 tons of shelled peanuts and about 50,000 tons of oil. More than 40% of these exports went from the

port of Tsingtau [Tsingtao] as Shantung has developed into the largest peanut producing Province in China.” Address: Commercial Attaché, Peking.

2278. Bell, Archie. 1918. *Sunset Canada: British Columbia and beyond*. Boston, Massachusetts: The Page Company. xii + 320 p. Illust. Index. Series: See America First.

• **Summary:** Chapter 10, titled “The Royal City,” is about New Westminster in British Columbia, Canada. In 1859, New Westminster was selected as the first capital of the new Colony of British Columbia by Queen Victoria, who named the city after part of London. It soon became known as “The Royal City.” Located on the north bank of the Fraser River, 12 miles southeast of Vancouver City, it was the only freshwater harbor of any consequence in Western Canada.

Yet the Canadian Pacific Railroad bypassed New Westminster (a crushing disappointment to the city’s people) and went instead to Vancouver. Still its location “is strikingly similar to that of New Orleans on the Mississippi river or Shanghai above the mouth of the Yangtzu-Kiang. Both of the latter compelled the commerce of the world to come up the river to them.

Across the Fraser river one soon arrives at Steveston, which is almost an Oriental City; most of the inhabitants are Japanese fisherman, and they live much as if they were still in Japan. On Lulu Island at Steveston, “the native instinct for beauty and love for the picturesque has prompted the planting of shrubs and flowering plants. Sometimes they are in painted tin cans, in [wooden] soy kegs or in China urns; the idea is the same, the beautification of the dooryard, which is as noticeable among Nippon’s very poor, where the dooryard may not be more than two square yards in area, as among the rich and noble who can build extensive parks and landscape gardens.” Address: Author, Cleveland, Ohio.

2279. Crevost, Charles. 1918. *Plantes oléifères de l’Indochine* [Oil-bearing plants of Indochina]. In: *Congrès d’Agriculture Coloniale, Gouvernement Générale de l’Indochine*. 1918. Hanoi-Haiphong: Impr. d’Extrême-Orient. 57 p. Series: Hanoi No. 6. See p. 26-27. [100* ref. Fre]

• **Summary:** Following an overview, the various oil-bearing plants are described in detail, organized by family. The section on Soja (p. 26-27) states: Indigenous names in Cochin China, Annam and Tonkin: *Dau nanh*, *Dau tuong*. Cambodia: *Sandek sieng*. China: *Teou* [dou]. Japan: *Daizu mame*. The plant is widely cultivated in Indochina for its seeds which, although not consumed directly as food, are used nevertheless to make various other foods: cheeses (*dau phu* and *dau oc* [tofu]), and a condiment sauce [soy sauce] (*tuong*).

In Indochina there is only one variety of soybean, which has oblong yellowish-white seeds, slightly flattened, more or less large according to its place of origin, whereas in China and Japan soybeans come in various colors and colorations.

The best seed in the colony come from Cambodia and the province of Lang-son in Tonkin.

It is well known that soy protein (*graine de soja à base de caséo-sojaïne*) serves as the basis for numerous food preparations; but the seeds are now most widely used in the manufacture of an oil, used for illumination [in lamps] or food; it tends to replace cotton oil in the soap industry, whereas soybean cakes (*les tourteaux de soja*) are considered excellent for use as a fertilizer or for fattening cattle.

A table shows nutritional analyses of soybeans from three locations, conducted at the colonial garden of Nogent-sur-Marne: Laos, Tonkin, and Manchuria. For each the moisture, protein, oil, carbohydrate, and mineral content are given.

Also discusses: Peanuts (p. 25-26, with illustration facing p. 25, and 9 references), sesame (p. 29-30, with illustration facing p. 29), perilla (p. 30).

Note the interesting phrase *graine de soja à base de caséo-sojaïne*, based on the work of Li Yu-ying near Paris, France. Address: Inspecteur des Services agricoles et commerciaux; Conservateur du Musée [Maurice Long] agricole et commercial de Hanoi.

2280. Michigan Dept. of Labor, Michigan Bureau of Labor and Industrial Statistics. 1918. *Thirty-fifth annual report of the Department of Labor of the State of Michigan*. Lansing, Michigan: Wynkoop Hallenbeck Crawford Co., state printers. 686 p. See p. 332. Index.

• **Summary:** A multi-page table titled “Factory inspection.—Continued” (p. 332) has eight columns, for Wayne County: Date inspected: April 11. Names of establishments: Oriental Show-You Company. Where located: Detroit. Goods manufactured or handled: Japanese sauce [probably soy sauce imported from Japan]. Number males employed: 2. Number females employed: 3. Whole number employed: 5. Number who were under 10 years of age: -.

Note: This is the earliest document seen (April 1912) that mentions Oriental Show-You Company.

2281. Montagné, Prosper. 1918. *La bonne chère pas chère sans viande* [Good food is not expensive without meat]. Paris: Editions Pierre Lafitte. 2 + iii + 126 p. 19 cm. [Fre]

• **Summary:** This is a French vegetarian cookbook published during the period of food shortages at the end of and shortly after World War I. The author (lived 1865-1948) may also be the author of the famed French food encyclopedia *Larousse Gastronomique*.

In Chapter 6, “Complementary Recipes,” page 104 discusses soy sauce: “Formula 324.—Soya extract (*Extrait de Soja*). This extract, which is found read-made in commerce, considerably enhances the taste of dishes prepared without meat. It is made from the soybean (*le soja*; *soja hispida*)...” The composition of soy sauce is given. “Soya extract is used in very small quantities. A few drops will be enough to give

a good taste to a large bowl of water-based soup (*potage à l'eau*). You can also add it at the end of the cooking process to most recipes that call for either broth or gravy.

Formula 366 (p. 116-17) is titled "Soya or Essence of Mushrooms," but soy does not seem to be mentioned in the formula for this condiment. The recipe enables you use locally grown mushrooms to make a product resembling soy sauce during wartime scarcity when real soy sauce is not available. Address: France.

2282. Morse, W.J. 1918. The soy-bean industry in the United States. *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. See p. 101-06. Contains many photographs by Frank N. Meyer.

• **Summary:** Contents: Early history of the soy-bean industry. Soy beans in the United States. Cultural requirements. Varieties. Soy beans as forage. Soy beans for oil. Soy-bean meal. Soy beans for human food: Dried beans, green beans, soy-bean milk, soy-bean cheese, soy sauce, soy-bean sprouts. Possibilities of the soy-bean industry in the United States.

"The annals of Old China set forth the fact that the soy bean was an important food fully 5,000 years ago. When the ports of China were first opened to foreign commerce, the trade in [soy] beans and bean products was found to have been a long-established and flourishing institution. In value and in extent and in variety of uses the soy bean is the most important legume grown in Asiatic countries." Note: This is the earliest document seen (May 2003) which gives the age of the soybean as "5,000 years."

"Near the close of the eighteenth century the soy bean found its way its way to Europe, its cultivation being recorded in England in 1790. It is mentioned in the United States as early as 1804. For several decades, however, it was regarded more as a botanical curiosity than as a plant of much economic importance. In 1875, Prof. Haberlandt began an extensive series of experiments in Austria with the soy bean and strongly urged its use as a food for both man and beast. Although considerable interest was aroused during the experiments, the soy bean failed to attend the success hoped for by the experimenter.

"Previous to the Russian-Japanese war [1904-05] China and Japan were not only the greatest producers but also the greatest consumers of the soy bean and its products. During the war the production of the crop was greatly increased throughout Manchuria. After the war, however, it became necessary to find new markets for the surplus beans, and trial shipments were made to Europe. The first attempts to introduce the soy bean and its products into European markets were generally unsuccessful because of the unsatisfactory condition in which the beans and cake were received, owing to poor shipping facilities. About 1908 a large trial shipment made to the English oil mills was received in much better condition than previous shipments, and the results obtained were so satisfactory that larger

imports were made."

"Soy beans in the United States. As previously stated, the soy bean was introduced as early as 1804, but it is only within recent years that it has become a crop of much importance in the United States. Until the present season it has been grown primarily as a forage crop, though a constantly increasing demand for seed for food and planting has led to the development of a very profitable soy-bean seed industry in many sections of the South and the corn belt. The large yield of seed, the ease of growing and handling the crop, the value of the beans for both human and animal food, and the value of the oil and meal all tend to make this crop one of great potential importance and to assure its greater agricultural development in America."

"Varieties:... At the present time about 20 varieties are handled commercially by growers and seedsmen, although more than 500 distinct varieties are known and have been grown by the Department of Agriculture on its testing grounds. The yellow-seeded sorts are preferred for food and the production of oil and meal and include the following: Mammoth (late), Tokyo (late), Hollybrook (medium late), Haberlandt (medium late), Medium Yellow (medium), Mikado (medium), Ito San (early), Manchu (early), and Elton (early). For forage, the black and brown seeded varieties are most suitable and include Barchet (late), Biloxi (late), Peking (medium), Wilson-Five (medium [black seeded]), Virginia (medium late), Early Brown (early), and Black Eyebrow (early).

"Soy beans for oil: The soy bean was first utilized for the production of oil and meal in the United States about 1910 by an oil mill on the Pacific coast. The beans were imported from Manchuria, and the success of the industry is indicated by the continued production of the oil and meal and the increasing imports of soy-bean seed from Manchuria.

"American-grown seed was first crushed for oil the latter part of 1915 by a few cottonseed-oil mills in North Carolina. A shortage of cottonseed and a surplus of soy-bean seed led to a rather extensive use of domestic-grown seed for this purpose. However, during the season of 1916-17 no domestic-grown beans were utilized for oil, owing to the extremely high price of seed. The cottonseed-oil mills of the South saw the possibilities of the soy bean as an oil seed, and many mills throughout the cotton belt contracted with planters for seed of the 1917 crop. This led to a considerable increase of acreage. Large quantities of Manchurian beans have been imported during the past few months and utilized by southern mills in the production of oil and meal.

"The utilization of the soy bean as an oil seed has not required any extensive changes in the equipment of the modern oil mills. The methods are similar to those employed with other oil seeds, such as cottonseed and linseed. According to data obtained from different mills, 1 ton of soy-bean seed yields from 28 to 31 gallons of oil and about 1,600 pounds of meal.

"The oil extracted from the soy bean in many respects resembles cottonseed oil, though it dries more rapidly. This oil has a good color, has but a faint odor, and is rather palatable. New trade uses are being constantly found for soy-bean oil, and it has become an important competitor of other vegetable oils. It was first used in the United States in its crude state, principally in the manufacture of soft soaps. In the search for new oils to replace linseed oil for paint purposes, partly or wholly, soy-bean oil was found most suitable. Paint grinders are using successfully large quantities of this oil in the manufacture of certain types of paint. Manufacturers of butter and lard substitutes are using considerable amounts of soy-bean oil in their products. Other uses for which this oil is employed are in the manufacture of explosives, linoleum, varnish, and foodstuffs.

"Soy-bean oil has been studied with other oils by the Office of Home Economics and found to compare favorably with the more common table oils with respect to digestibility. In view of the rapid improvement in the process of refining this oil, there seems to be scarcely any use to which oil is put in the manufacture of foodstuffs in which soy-bean oil may not eventually be found to have an important place" (p. 104).

"Soy-bean meal:... The meal or flour produced from American-grown yellow varieties is bright yellow in color when fresh and has a sweet, nutty flavor. Samples of meal from different sources range from 46 to 52 per cent protein and from 5 to 8 per cent oil. As a human food, soy-bean flour has been used in the United States principally as a special article of diet and sold by companies manufacturing special foods of low starch content. The flour or meal can be successfully used as a constituent of bread, muffins, biscuits, or pastry. Extensive tests have been conducted by the United States Department of Agriculture with soy-bean flour in the making of bread and pastry. In these various food products about one-fourth soy flour and three-fourths wheat flour has been found to be the proper proportion. In some of the pastry products, however, as much as one-half soy flour can be used. During the past year the use of soy-bean meal has gained in popularity on account of the many palatable products that may be made from it" (p. 105). Photos are described in Part II. Continued. Address: Scientific Asst. in Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

2283. Morse, W.J. 1918. The soy-bean industry in the United States (Continued—Document part II). *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. See p. 106-10. Contains many photographs by Frank N. Meyer. • **Summary:** Continued from p. 106. "Soy beans for human food: In Asiatic countries, especially China and Japan, the soy bean and the various food products made from it are so largely consumed that it is second only to rice in importance as a food crop. The soy bean is eaten only to a very small extent like other beans, but in China and Japan

it is elaborated into a great variety of products, all having a high percentage of protein and making a well-balanced diet when eaten in connection with the staple food, rice. Some of these products are said to be eaten at every meal and by rich and poor alike. Of these numerous preparations, only one, 'shoyu,' or 'soy sauce,' has been introduced to any extent in other countries. It is quite possible that some of these products would appeal to the American taste and with proper exploitation become established on the American market.

"Although the soy beans as an article of food has attracted attention from time to time in the United States, thus far it has been used but little except as a special food for invalids. The beans contain only a trace of starch and are highly recommended as a food for persons requiring a diet of low starch content. During the past year, however, much interest has been manifested in the possibilities of the soy bean as a staple food.

"Many schools of cookery and domestic science throughout the country have conducted experiments rather successfully, utilizing the dried beans in the manner of the navy bean. As a result, the dried beans can now be purchased in the markets in nearly all of the large cities. The variety and palatability of the forms in which the bean can be served make it a very desirable article of food, and it may be expected to grow in favor as it becomes better known (p. 107)."

"Dried beans:... During the season of 1916 about 100,000 bushels of American-grown [dried] soy beans were packed as baked beans by several canning companies in the Central and Eastern States." Properly roasted, the dried beans "make a good coffee substitute. Those fond of cereal beverages pronounce it equal to many of the preparations on the market. In China, the beans are soaked in water and roasted, the product being eaten after the manner of roasted peanuts. This method of preparing the beans is improved by soaking the beans for about twelve hours in a 10 per cent salt solution, boiling slowly for about 30 minutes, and then roasting to a light-brown color. The yellow-seeded and green-seeded varieties are preferable, as they make a product of better appearance.

"Green beans: When soy beans are three-fourths or more grown, the seed makes a most palatable and nutritious green vegetable. As such it may be used much as is the green pea or the Lima bean. The pods are somewhat tough and not desirable to eat. The green beans are rather difficult to shell, but after cooking in the pods for about five minutes, they shell out very easily."

"Soy-bean milk:" If dried soy beans are soaked, crushed, and boiled "a milky emulsion is obtained which is very similar in appearance and properties to cow's milk. This liquid, separated out by means of a very fine sieve or through a cloth filter, is the soy-bean or 'vegetable' milk used so extensively in China." "Soy-bean milk has a rather strong characteristic taste and odor which may be masked

by the addition of a small quantity of coumarin or vanillin. This ‘vegetable milk’ can be used in numerous preparations, such as breads and cakes, in creaming vegetables, in milk chocolate, and in custards. If allowed to remain in a warm place the milk becomes sour, like animal milk, and in that form may be employed just like sour milk or buttermilk...

“After separating the milk from the solid material, the residue [okara] is still very rich in nutritive substances. It can be dried and used for cattle feed or possibly made into a meal or flour for human consumption.”

“Soy-bean cheese: “The addition of magnesium or calcium salts (about a 1 per cent solution) to soy-bean milk when hot precipitates some of the proteid substances, forming a grayish white curd which settles out, leaving a yellowish watery liquid. This curd, after being drained and pressed, represents the tofu, or bean curd, which is so extensively eaten and forms the basis of numerous fermented, smoked, and dried cheeses in China and Japan (Plates III and IV). Tofu is made fresh daily and is a staple article of diet of oriental peoples. In many cities of the United States having a large Asiatic population, fresh bean curd generally may be found in the Chinese markets. Although the fresh curd, or tofu, is tasteless, it is a highly nutritious food and no doubt could be elaborated by the American housewife into a variety of palatable dishes.

“Soy sauce: Soy or shoyu sauce is a dark brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat (barley is sometimes used), salt and water. This mass is inoculated with a culture known as rice ferment (*Aspergillus oryzae*) and left in casks to ferment from six months to a year and sometimes longer (Plate V)... This product may well serve as the basis of sauces of the Worcestershire type... The manufacture of soy sauce is conducted on a large scale in China and Japan, and to some extent in India. The yearly production of Japan is said to amount to nearly 2,000,000 barrels. The brewing of this sauce has also become a well established industry in Hawaii. Although there are no factories in the United States, considerable quantities of the sauce are imported annually, and it can be obtained at Chinese stores in most of our cities.”

“Soy-Bean sprouts: Several species of beans are sprouted and used as a green vegetable by the Chinese (Plate VI). Soy beans are used to a very considerable extent for this purpose, as these sprouts are larger and firmer than those of most other legumes. Bean sprouts can be used as a home winter vegetable, for the dried beans are sprouted easily in a short time under proper conditions of heat and moisture. It is quite possible that sprouted soy beans utilized in various vegetable dishes would appeal to the American taste.”

A table (p. 111) shows the “Quantity and value of soy beans, soy-bean cake, and soy-bean oil imported into the United States, 1910-1917, inclusive.

Photos on unnumbered pages show: (1) A typical soy

bean plant. (2) A field of the Biloxi soy bean grown at Biloxi, Mississippi. (3) Pods and seeds of 7 common varieties of soy beans.

(4) “Large blocks of freshly made bean curd, ‘tofu’ [on a round wooden table], ready to be cut up into squares and sold to the housewife.”*

(5) “Large bamboo tray of various kinds of soy-bean cheese of the drier type” [pressed tofu sheets].*

(6) “A dark room of even temperature where wooden trays, full of bean curd [tofu] are piled. This is another method of preparing soy-bean cheese” [fermented tofu].*

(7) “Large earthen jars full of squares of bean curd, which are covered with spiced brine and soy sauce. After several months’ curing a bean cheese [fermented tofu] is formed, which can be kept for many years.”*

(8) A “courtyard full of covered pots of fermented soy beans and brine from which soy sauce is made.”*

(9) The basket on the left contains “sprouted soy beans, which are sold and used as a green vegetable” [in China]* * = Photographed by Frank N. Meyer, Agricultural Explorer, USDA.

Note 1. This is the earliest published document seen (Jan. 2001) that contains photos of soyfoods by Frank. N. Meyer. Most of the photos appear to have been taken in China.

Note 2. This is the earliest document seen (Jan. 2001) in which William Morse describes “soy-bean sprouts” or “soy-bean cheese” (tofu).

Note 3. This is the earliest English-language document seen (Oct. 2011) that uses the term “soy-bean cheese” to refer to fermented tofu.

Note 4. This is the earliest English-language document seen (Oct. 2003) that uses the term “milky emulsion” to refer to soymilk.

Note 5. This is the earliest English-language document seen (May 2005) that uses the term “masked” (or any other form of that verb) in connection with the undesirable taste or odor of soyfoods (soy-bean milk) or soy beans. Address: Scientific Asst. in Forage-Crop Investigations, Bureau of

Plant Industry, USDA, Washington, DC.

2284. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha).

1918. Nichi-Bei nenkan [Japanese-American yearbook. No. 12]. 650 Ellis St., San Francisco, California. [20] + 432 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is somewhat similar to the 1915 yearbook but very different from previous yearbooks in this series in that it has no directory (giving business names, address, and sometimes phone numbers). It has more pages of advertisements than the 1915 edition but fewer than previous editions. Moreover the structure and contents are very different. For the first time, the pages are numbered sequentially throughout the book—except for the first 20 pages which are unnumbered. Again, it is not clear what caused these major changes. But the main message seems to be: Japanese are hard-working people adding significantly to the production and value of the United States.

Like its predecessors, it is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

Contents: Front matter (6 p.). Preface, correction notice, and full-page ad for Pacific Trading Co. (soy is not mentioned) (2 p.). Photos (black and white on 6 unnumbered pages). Maps and charts on 2 unnumbered pages: Total value of agricultural products by Japanese farmers in the USA in 1917: (1) Pie chart of value (\$) of principal crops produced. The top 5 are vegetables, beans, grapes, sugar beets, and potatoes. (2) Bar chart of percentage of principal crops produced by Japanese, showing their adaptability for intensive cultivation (average 1915-1917). Japanese produce 90% of all celery, 88% of berries, 86% of asparagus, 85% of cantaloupes, 83% of onions, 80% of tomatoes, 72% of florists' products, 53% of seeds, etc. Bar chart showing the increase in land value under the cultivation of Japanese in 12 places of California. For each place, a white bar shows land value per acre before 1913 and a black bar shows land value per acre in 1918. These places include: Imperial Valley (melon ranch). Colusa (rice field). Sonoma (vineyard & orchard), etc. On average, the land has increased in value from 4.5-fold to 6.7 fold.

Table of contents (2 p.). Map showing yearly amount of rainfall in California (1 p.).

Nichibei Nenkan No. 12—Industrial edition (p. 1-). Japanese agricultural conditions (p. 1-20, with ads on p. 16-17). Various other Japanese industries (p. 21-28). Ads (p. 29-36). Education (p. 37-64). Ads (p. 65-80). Agriculture (part 1 of 3; p. 81-209, with ads p. 204-209). How to run an agricultural business (part 2 of 3, p. 210-340, with ads p. 297-300, 341-348). Agricultural production industry (part 3 of 3, p. 349-389). Industries: Fishery (p. 389-419). Forestry

(p. 420-24). Mining (p. 425-28). Manufacturing (p. 429-31). Ad (Hinoe / The Hinoe, p. 432). Copyright and publishing information page.

Summary: Tofu makers (*tofu-ya*): In 1908 there were 20 tofu makers. This number increased to 50 in 45 locations in 1917 (p. 25). Miso makers (*miso seizô-sho*): Since 1908 there have been 12 miso makers that opened; some have closed. In 1917 the number increased to 6 due to the ban on importing Japanese miso. Among the oldest and most established in Los Angeles: Miso Seizô-sho. Their capital investment is \$12,000. They use 180,000 *kin* of soybeans (1 *kin* = 1.323 lb = 600 gm) and 240,000 *kin* of rice. Sales are \$36,000/year. Number of workers: 4 (p. 28). The only soy-related ad in this volume is for “L.A. Miso Mfg. Co., 605-7-9-N. Alameda St., Los Angeles, California.” Trade mark: Shows 3 horizontal lines in a circle, probably pronounced “marumi”—which means “flavor” in Japanese. In Japanese is written (in big, bold characters). *Rafu Shiromiso Seizô-sho*.

The Directory shows Japanese companies making soyfoods in California and other states. Address: San Francisco, California.

2285. Paerels, J.J. 1918. Soja [Soya]. In: Dr. K.W. Van Gorkom's Oost-Indische Cultures. 1918. Amsterdam: J.H. de Bussy. 2nd ed. Vol. 2. Edited by Dr. H.C. Prinsen Geerligs. See p. 839-51. Figs. 285-86. [8 ref. Dut]

• **Summary:** This is a reprint of Paerels 1913. Contents: Origin and native land. The soybean plant: Botanical description (flowers, seeds, fertilization, germination), types and varieties, geographical distribution. Cultivation of soybeans: General instructions for growing, planting, manuring, diseases and pests. Production, trade, and use: Tofu (*Tao-Hoe*), Chinese soy sauce (*Tao-Yoe*), soybean paste (*Tao-Tjong* [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso]), composition of the seeds and value as a food (*samenstelling en voedingswaarde*). Photos show: Plants of a black variety (p. 840), and a white variety of soybeans (p. 841). Address: Netherlands.

2286. Saito, Kendo. 1918. Ueber die chemischen Bedingungen der Askenbildung bei *Zygosaccharomyces major* Takahashi et Yukawa [On the chemical conditions of asci formation in *Zygosaccharomyces major* Takahashi et Yukawa]. *Botanical Magazine (Tokyo)* 32(373):1-13. Jan.; 32(374):15-25. Feb. [Ger]

• **Summary:** *Zygosaccharomyces major* (later renamed *Saccharomyces rouxii*) is an important yeast that grows in soy sauce and was later found to contribute to its flavor. Asci are small sacs which some yeasts, under certain conditions, produce to contain their sexual spores.

Contents: Introduction. Preliminary remarks concerning materials and methods (soy sauce is mentioned on p. 4). The need for a definite salt solution for ascospore formation.

Theory concerning the effect of salt. The need for a carbon source for the development of the ascospores.

Note 1. Yeasts have been defined as fungi in which the usual dominant, or conspicuous form is unicellular (single-celled). This unicellular form gives yeasts two advantages over the mycelial (multi-cellular) form of molds: (1) There is greater surface to volume ratio which allows greater metabolic activity; (2) The unicellular form is more readily distributed than the mycelial form. On the basis of their method of reproduction, the yeasts can be divided into four groups. Only two of these groups contain yeasts involved with foods. One group produces sexual ascospores in asci (small sacs) and is in the class Ascomycetes. These are the so-called true yeasts. For most yeasts, the maximum number of spores per ascus is four, but a few yeasts can produce eight. The usual form of vegetative (asexual) reproduction is by budding; all yeasts can reproduce asexually. The yeasts in the other group form no sexual spores and have no sexual life cycle; they are the false yeasts, Fungi Imperfecti, or Deuteromycetes (See Banwart, G.J. 1979. *Basic Food Microbiology*, p. 97-98).

Note 2. This yeast *Zygosaccharomyces major* was renamed *Saccharomyces rouxii* by the late 1950s (see Sakaguchi 1959). It is halotolerant (can tolerate high salt concentrations), and contributes to the flavor and aroma of soy sauce, in part by producing ethyl alcohol.

Note 3. Part 1 of this 3-part series was written in Japanese and published in this journal in 1916.

2287. Shih, Chi Yien. 1918. Beans and bean products. Shanghai, China: Soochow University Biology Dept. 13 p. 24 cm. [Eng]

• **Summary:** The author's name in pinyin is probably Shi Jiyen. At the head of each section, the name of each product or type of bean is written in Chinese characters. Contents: Introduction by N. Gist Gee of the Dept. of Biology, Soochow Univ., China.

Note 1. Soochow, also called Su-chow (formerly Wuhsien) is a city in southern Kiangsu (pinyin: Jiangsu) province, in eastern China, on the Grand Canal. Introduction and names of soy beans: Classical Chinese names, colloquial Chinese names, Latin names, and English name (Soja bean). Soy beans. The food products of soy beans. Bean curd (Cc). Tou fu koen. Po yeh. Yu tou fu [fried tofu]. Ju fu [fermented tofu]. Tsao ju fu [fried fermented tofu]. Ch'ing hsien ju fu. Tou chiang or bean sauce. Chiang yu. Bean ferment or tou huang. Bean Sprouts. Bean relish or tou shih [fermented black soybeans]. Bean oil.

Beans (Four varieties of *Phaseolus mungo* var. *radiatus*: chidou = dark-red [azuki] bean, baichidou = white dark-red bean, lüchidou = green red bean, and lüdou = green [mung] bean): The food products from the green [mung] beans (lüdou): Bean sprouts, green bean congee or lu tou chou, green bean soup or lu tou tang, green bean pudding or lu tou

kao and lu tou sha. The food products from the red [azuki] bean (quite similar to those made from the green [mung] bean): Congee, rice, pudding, tou sha.

Hyacinth beans (*Dolichos lablab*; five Chinese varieties / names: biandou, baibiandou, qingbiandou, zibiandou, longzhao biandou). Asparagus beans [cowpeas] (*Vigna catiang*; four Chinese varieties / names: jiangdou, panxiang jiangdou, manli jiangdou, baimi jiangdou). The food products from Pien Tou and Chiang Tou. Medicine. Flowers and seeds of the Pai Pien Tou, the broad bean, windsor bean, or horse bean (*Vicia faba*); In China it has two names: (1) Ts'an Tou or silkworm bean, because it is harvested at the time the silkworm is making its cocoon; (2) Han Tou or cold bean, because it grows through the winter. The food products from Ts'an tou (broad bean): Bean shoot (tou miao), Ch'ing tou (as a vegetable), Ja tou (broad bean sprouts), Shien fan and fan bee (made from broad beans and mung beans), Tou sha. The section on the names of beans (p. 1) we will give the English name, Latin name, the classical Chinese names / colloquial Chinese names, and an English translation in parentheses, as follows: (1) Soja bean, *Glycine hispida*: heidou / heidou (black [soy] bean), huangdou / huangdou (yellow bean), yangyandou / yangyandou (sheep eye bean), maliaodou / maliaodou (horse material / feed bean),-/ guguo qingdou (bone wrap green bean),-/ jiajia sandou (pod pod three bean), xiangsidou (mutually think bean) / xiaqngzhidou (fragrant branch bean),-/ bayue baidou (8th month white bean). Soja bean: *Dolichos cultratus* quedou (magpie bean) / equedou (chirp magpie bean). Soja bean: *Phaseolus vulgaris* baidou (white bean) / shui bai dou (water white bean),-/ shidou (fennel bean) (Note 3. shiluo means "fennel"),-/ guashudou (melon ripe bean),-/ maquedou (sparrow bean),-/ niuta biandou (cow tread flat bean),-/ yadou (sprout bean),-/ shijia xiangdou (ten family fragrant bean),-/ xifeng qingdou (west wind green bean),-/ shizi hedou (persimmon pit bean),-/ denglongdou (lantern bean).

Note 4. The large title "Soy Beans" at the top of this table, the right column which says that the English name of each variety is "Soja bean," and the next 8 pages which are only about soy beans, strongly indicate that all the colloquial names in this table refer to different varieties of soy beans. Moreover, all these colloquial names appear again on page 3 in a table on planting and harvest times of different varieties of [soy] beans. The bottom half of the colloquial names are probably from different parts of China, since Dr. H.T. Huang (a soybean expert) has never heard many of these colloquial names before. The most puzzling question is: What are *Dolichos cultratus* and *Phaseolus vulgaris* doing at the bottom of the "Latin name" column? *Dolichos cultratus* is not listed on either of the two comprehensive taxonomy databases (GRIN and ILDIS, which include all past Latin / scientific names). *Phaseolus vulgaris* refers to the common bean, such as the kidney bean, pinto bean, navy bean, frijole, etc.

2. Soy beans. “They were introduced into France during the reign of Ch’ien Lung about 1740 A.D. by a French Consul; into England in 1790, into Australia in 1875, into Germany 1881, and 1888 into America. They were known here from ancient times and were mentioned in the oldest books *Pên Ts’ao Kong Mu*, which were written by the Emperor Shen-nung in the year 2838 B.C., and the later Chinese Classics.”

Note 5. This is the earliest English-language document seen (Aug. 2002) that treats Shen Nung as a real, historical figure, or that says the first written record of the soybean appears in a book written by him. The information about that book is wildly inaccurate. The *Bencao gangmu* (The great pharmacopoeia), perhaps China’s most famous materia medica, was written by Li Shizhen (+1596). The above information, which is all wrong, has been cited again and again, down to the present day (2002), in connection with the supposed origin of the soybean.

“Even during the ancient times they were considered by the people to be the most important of the cultivated leguminous plants.” Note 6. This is the earliest document seen (Aug. 2002) which states, incorrectly, that the date of Emperor Shen-nung’s book is 2838 B.C.

“The methods of cultivation are as follows: In general all of the soja beans are planted in rows along the banks of canals and the boundaries of the fields, which separate the fields of one family from those of another, except those which are called oil beans or Eighth month white bean and Water white bean. These last are planted in large fields. The oil beans are planted early in June.” The method of cultivation, harvest, and threshing is then described in detail. A table gives the time of planting and harvest for 18 varieties of Chinese soybeans, grouped into 6 types by planting and harvest dates: (1) Plant in latter part of April, harvest in latter part of Sept.: *Heidou* (black [soy] bean), *huangdou* (yellow bean), *maliadou* (horse material / feed bean), *guguo qingdou* (bone wrap green bean), *jiajia sandou* (pod pod three bean), *xiangzhidou* (fragrant branch bean). (2) Plant in early part of June, harvest in middle part of Sept.: *bayue baidou* (8th month white bean), *shuibaidou* (water white bean), *maquedou* (sparrow bean). (3) Plant in early part of July, harvest in early part of Oct.: *equedou* (chirp magpie bean), *niuta biandou* (cow tread flat bean), *shijia xiandou* (ten family fragrant bean), *xifeng qingdou* (west wind green bean), *shizi hedou* (persimmon pit bean), *denglongdou* (lantern bean). (4) Plant in early part of April, harvest in early part of July: *guashudou* (melon ripe bean). (5) Plant in early part of April, harvest in latter part of July: *shidou* (fennel bean). (6) Plant in early part of April, harvest in latter part of June: *yadou* (sprout bean).

The rest of the work concerns the food products of the beans, including a detailed description of how each is made.

Note 7. This document contains the earliest date seen for soybeans in Australia or Oceania (1875). It is not clear

whether or not these soybeans were cultivated in Australia; they may well have been. The source of these soybeans is unknown, as is the author’s source of information concerning that early introduction, 43 years before Shih wrote this booklet. He is the first to give such an early date for the introduction of soybeans to Australia. Yet the date does not seem unreasonably early since there were 17,000 Chinese in Australia by 1855 (see Australian Department of Immigration and Ethnic Affairs. 1985. “A Land of Immigrants”). Address: Biology Dep., Soochow Univ., China.

2288. Shih, Chi Yien. 1918. Beans and bean products: Bean curd [tofu], to fu koen [pressed tofu], po yeh [pressed tofu sheets], and yu tou fu [deep-fried tofu] (Document part). Shanghai, China: Soochow University Biology Dept. 13 p. See p. 3-5. [Eng]

• **Summary:** (Cc) = Chinese characters inserted in text. Bean curd (Cc): “The making of bean curd had its origin in the Han dynasty (Cc), during the reign of Huai Nan Wang (Cc) (A.D. 22) at Liuan. All sorts of black beans, yellow beans, green beans, etc. can be used in its preparation; but largely we use the beans which are called Cc (Eighth Month White Bean) *Glycine Hispida* and Cc (Water White Bean or Tenth Month White Bean) *Phaseolus Vulgaris*. The other beans are not so much planted by the farmers for this purpose; they only eat them when the beans are young.

“The processes necessary to prepare Bean Curd are as follows:—(1) Soaking the beans in cold water for six or seven hours in summer time, and twenty-four hours in winter time. (2) Washing the beans thoroughly after soaking. (3) Grinding with cold water [then filtering] to form Bean Milk (Cc = *doufujiang*). (4) Pouring this into a big kettle and cooking it.

“(5) After about a quarter of an hour, there is a film or skin which floats on the surface of the bean milk. A stick is used to take this up and it is then put aside and left to dry. This film or skin is called *Tou Fu Yi* (Cc = *doufuyi* = bean + curd + clothes). From one kettle of bean milk, twenty or thirty films can be obtained. If more than this are taken off, the bean milk will become thin and will not be fit to make bean curd.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term “*Tou Fu Yi*” to refer to yuba.

“(6) After boiling the bean milk about half an hour, it is poured into a big earthenware jar and a gypsum or salt solution is added to curdle it. If 133 pounds of beans are used, 6 ounces of gypsum or salt will be required. Then it is left in the jar for about 15 minutes. The curdled material is called *Tou Fu Ho* (Cc = *doufuhua* = bean + curd + flowers).”

“(7) A piece of board, about two feet five inches long and one foot five inches wide, is used to make a bottom for a frame slightly smaller than the board and about two inches high. Then a piece of coarse cloth, twice as big as the large

piece of board, is used to fold in the frame. The curdled material is poured on the cloth and wrapped up in it. Then another piece of board, as large as the bottom one, is placed on top of the cloth and it is pressed by a heavy block of wood for about fifteen minutes. Then the top board and the frame are removed and a knife is used to divide it into small pieces which are called Bean Curd or Tou Fu.

The price is about five cash for one small piece, about three inches square and one inch thick.

“Tou Fu Koen (Cc = doufugan = tofu + dry): Tou Fu Koen is made from bean curd or Tou Fu. A small piece of coarse cloth, above five inches square, is used to wrap the small pieces of bean curd and they are pressed between two boards, which are used to press the bean curd, for about six hours, then the cloth is removed and the small pieces are cooked in [soy] sauce, or Chiang Yu (Cc = jiangyou). After cooking they are called To Fu Koen.

“Po Yeh (Cc = baiye = 100 sheets / leaves): Po Yeh is prepared from Tou Fu Ho (Cc = doufuhua). The apparatus which is used to prepare the Po Yeh is the same as that used to prepare the bean curd; but is smaller, its dimensions being only about one foot square and eight inches high. A piece of coarse cloth about twenty feet long and one foot wide is used to fold in the frame. At first, one end of the cloth is spread on the bottom of the frame and then a thin layer of Tou Fu Ho is poured on the cloth, and then the cloth is turned back on the Tou Fu Ho and another layer is added, etc., until the frame is filled with the material and it is then pressed with a heavy block of wood about six hours. Then it is brought to the market for sale. The price is about four coppers for one catty.

“When eaten, it is usually first boiled with pork or cabbage, bean curd, turnip, etc.

“Yu Tou Fu (Cc = youdoufu = oil + tofu): Yu Tou Fu is the small piece of Tou Fu which is boiled in the bean oil or rape seed oil. The oil is boiled first and then the small pieces of Tou Fu are poured into the boiling oil. After four or five minutes the small pieces usually float on the surface of the oil and they are then taken out. These are called Yu Tou Fu.

“They are used to boil with cabbage or with meat. Sometimes an opening is made on one side of the Yu Tou Fu and pork cut into very fine pieces is put into it and then it is boiled. It is sold for about twenty cents for one catty.”

Note: This is the earliest English-language document seen (May 2012) that contains the term *Yu tou fu*. Address: Biology Dep., Soochow Univ., China.

2289. Shih, Chi Yien. 1918. Beans and bean products: Ju fu [fermented tofu], tsao ju fu [redolent tofu], chiang ju fu, ham ju fu, ch'ing hsien ju fu (Document part). Shanghai, China: Soochow University Biology Dept. 13 p. See p. 5-6. [Eng]

• **Summary:** (Cc) = Chinese characters inserted in text; pinyin romanization has been added. “Ju Fu (Cc = rufu = fermented + tofu): Ju Fu is made from raw Tou Fu Koen (Cc = sheng doufugan = raw + tofu + dry), but it is less

compressed than Tou Fu Koen. The different kinds of Ju Fu are prepared by different methods.

Chiang Ju Fu is taken as our first example. A kind of whitish mold, which is called Chiang Hsi, is required to prepare Chiang Ju Fu. This mold is obtained during the middle of the summer in the following way:—(1) Wheat flour is mixed with cold water to make slipper-shaped cakes. (2) Then these are put into boiling water and cooked thoroughly. (3) After boiling, the cakes are broken into small pieces and put aside in some exposed place to allow them to mold. (4) After about one week, the small pieces are all covered with mold and then they are placed in the sunshine for two days in order to dry them. (5) Next they are ground into powder which is called Chiang Hsi (Cc = jiangxi).

“To prepare three catties of raw Tou Fu Koen requires six ounces of salt, four ounces of Chiang Hsi. These are thoroughly mixed with the Tou Fu Koen and put into an earthenware jar and one catty of rice wine, one catty of Chiang Yu [soy sauce], one catty and four ounces of sugar solution, (which contains one catty of water and four ounces of sugar), are added into the jar and it is then thoroughly sealed.

“The method of sealing the jar is interesting. First a cloth is laid across the mouth of the jar, then large bamboo leaves are placed on top of this and they are bound together around the neck of the jar with a cord. Then mouth and neck of the jar are entirely covered with a sticky clay mixed with the flowers of the reed to hold it together. The jar must be kept sealed for at least four months before its contents can be used for food, and if the vessel is opened before the end of this time the Ju Fu will spoil.

“It is used as food throughout the year and is eaten without further cooking as a vegetable with soft rice.

“It is red in color which is due to the presence of a kind of red rice. Three catties of Tou Fu Koen requires two ounces of red rice (Cc = hongqu). The price is about ten cash for a piece about two inches square and half an inch thick.

“There is another way of making Chiang Ju Fu. The Tou Fu Koen is first put on a board and allowed to mold, and then it is salted thoroughly and packed in an earthenware jar for about four or five days. The Chiang Yu [soy sauce], sugar solution, and red rice (Cc) are added. The proportions of ingredients are as follows: One catty of Tou Fu Koen, two ounces of salt, six ounces of red wine, six ounces of Chiang Yu [soy sauce] and four ounces of sugar in six ounces of water.

“After this, the jar is sealed and not opened for about four or five months. It is eaten in the same way as the other Chiang Ju Fu, and the price is approximately the same.

“Ham Ju Fu (Cc = nantui furu) is the Chiang Ju Fu which has ham mixed with it.

“Tsao Ju Fu (Cc = zaofuru): Tsao Ju Fu is made from Tou Fu Koen which is first allowed to mold, just as in the process of preparing Chiang Ju Fu in the second way. After

molding, the cakes are thoroughly salted, using about three ounces of salt to one catty of Tou Fu Koen. Then they are put in an earthenware jar for about four days and Chiu Niang (Cc = jiuniang) is added to cover all of the Tou Fu Koen.

“Chiu Niang is made from rice which is first steamed and then poured into a big earthenware jar where it is allowed to cool. After this, a kind of yeast powder is added to the rice. Sixty seven pounds of rice requires six ounces of yeast powder. The two are mixed together and cold water is added to moisten the rice. Then a hole is made in the rice at the center of the jar and the rice is pressed back against the side of the jar. A straw cover is used to cover the mouth of the jar and a straw matting is wrapped around it. This is to keep its temperature high enough to hasten fermentation of the mixture. During cold weather the jar must be kept in a warm place. After about three days the wine collects in the central cavity. The fermented rice is called Chiu Niang.

“After Chiu Niang is poured into the Tou Fu Koen, the jar is sealed in the same way as in the making of the Chiang Ju Fu. The cakes of Tsao Ju Fu can be eaten after about two months.

“The price is about ten cash for one piece which is about the same size as that of Chiang Ju Fu.

“Ch’ing Hsien Ju Fu (Cc = qingxian furu): This is made from Tou Fu which is first divided into small square cakes. These are exposed upon matting or boards to allow them to mold. After about eight or nine days a whitish mold, about half an inch long thoroughly covers the Tou Fu cakes. The cakes are first salted, using about three ounces of salt to one catty of Tou Fu. Then they are put into a big earthenware jar and covered with cold water to the depth of an inch. It is not necessary to seal the mouth of the jar, so it is only kept free from the dust by being covered with a piece of cloth. After ten or twelve the Ch’ing Hsien Ju Fu is used in the same way as the Chiang Ju Fu.

“Its price is about sixty cash for one catty.”

Note: This is the earliest English-language document seen (Oct. 2011) that uses the terms “Ju Fu” or “Tsao Ju Fu” or “Chiang Ju Fu” or “Ham Ju Fu” or “Ch’ing Hsien Ju Fu” to refer to fermented tofu. Address: Biology Dep., Soochow Univ., China.

2290. Shih, Chi Yien. 1918. Beans and bean products: Chiang yu [Chinese-style soy sauce] (Document part). Shanghai, China: Soochow University Biology Dept. 13 p. See p. 7. [Eng]

• **Summary:** (Cc) = Chinese characters inserted in text; pinyin romanization has been added. “Chiang Yu (Cc = jiangyou = soy sauce) may be obtained from Tou Chiang or Tou Pan (Cc = douban). Tou Pan is the molded bean which is mixed with salt and water. The proportion of the materials is the same as in the Tou Chiang. After it is placed in the sunshine about 2 weeks, then the Chiang Yu can be obtained.

“A small basket, the outside of which is wrapped with

coarse linen cloth is used to press down into the Tou Chiang or Chiang Pan. A stone or an iron ball, about 3 catties in weight, is used to put into the basket to force it down into the material which is contained in the jar. Then the juice seeps through the linen cloth into the basket. Next a big spoon is used to collect the Chiang Yu out of the basket and it is poured into small earthenware jars. A piece of cloth and the big leaves of bamboo are laid across the mouth of the jar and they are bound together around the neck of the jar with a cord and then the jar is placed in sunshine about 2 weeks. After this a straw cover is added on the top of the jar and it is thus kept for the future use. This method is the one largely used to prepare it for sale. Usually if it is prepared in the home it will be boiled four hours after it is collected from the basket. After boiling it is poured into small jars, kept open until it is cold and then sealed as above.

“Chiang Yu is sometimes used to boil with meats or cabbages in the same way as Tou Chiang; but it is more generally used to eat as sauce with these things after they are already cooked.” Address: Biology Dep., Soochow Univ., China.

2291. *Virginia Department of Agriculture and Immigration, Bulletin*. 1918. Soy bean useful crop. May be utilized in greater number of ways than almost any other agricultural product. No. 126. p. 174-76.

• **Summary:** “In addition to its availability as a food, soy-bean oil has found important uses in the markets of the world for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants. It is also used in the Orient for lighting and in the manufacture of printing ink. In Japan the soy bean forms one of the most important articles of food in use. It is one of the principle ingredients in the manufacture shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A ‘vegetable milk’ is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh, and a form of condensed milk is manufactured from it. All of these foodstuffs are used daily in Japanese homes, and for the poorer classes are the principle source of protein.”

“An artificial milk like that manufactured in the Orient has been produced in small quantities in the United States, and recently a factory has been equipped to make this product.” Photos show: (1) Soy beans as a forage crop, arranged in stacks. (2) Lime spreader at work. Address: Virginia.

2292. Daizu Seisan Gaisha (Soybean Food Products Co.). 1919. Save food. Dealers in soybeans and soybean products (Ad). In: Nichibei Shinbun-sha. 1919. *Japanese-American Directory (Nichibei Jushoroku)*. Page 40 near front. [Jap;

eng]

• **Summary:** Ad (full-page). The top half of this ad is in English, with large, bold letters. The company, which has a factory in Petaluma, lists the following products in Japanese characters (*kanji*): *Daizu shushi* [Soybean seeds]. *Shoyu-yo daizu* [Soybeans for use in making shoyu / soy sauce]. *Jozo-yo daizu* [Soybeans for use in making fermented products; miso and perhaps natto seem to be implied]. *Tofu-yo daizu* [Soybeans for use in making tofu]. *Tofu-ko* [Tofu powder]. Note: It is not clear what “*Tofu-ko*” is / means. *Seisei nigari* [Refined nigari (probably magnesium chloride)]. *Mamekasu* [Soybean presscake, probably left over from making soybean oil].

The following product names are written in Japanese katakana characters: Soybean oil, soybean flour, soybean table sauce, soybean butter, soybean cheese, soybean candy, soybean feed.

In the center of the ad is the company’s smaller logo, with all the text in English: Sun Brand Soy. Registered U.S. Patent Office. Above the huge “Save Food” logo near the top of the is an American flag in a circle surrounded by ears of wheat. Just above that, across the very top of the ad we read: “With patronization of U.S. Food Administration.”

Note 1. Letter (e-mail) from John Benanti, Researcher, Petaluma Museum research library collection. 2009. April 16. “The 1917 Petaluma City Directory does not mention the Soybean Production Co. The next city directory we have is 1939 and it is not mentioned there either.

“However, we have a number of Sonoma County Telephone Directories where the company is mentioned. A listing for “Soy Bean Company, Wilson” is first found in the April, 1923 directory. The same listing then appears in the April, 1924, May, 1926, May, 1927, November, 1927, and May, 1928 directories. There is no listing in any directory after that date.

“I also looked in three Sonoma County histories, 1911, 1926, and 1937. There is no mention of the company or soybean production in any of them.

“The 1919 Sanborn fire insurance map for Petaluma (p. 22) shows the Soy Bean Co. mill at a time it was located on Weller St., a few blocks from Wilson. I have gone over the 1923 Sanborn map and do not find the mill anywhere on it. I can not explain why it is not there when the directory says it was on Wilson Street in 1923.”

Note 2: This company, which existed from at least 1919 to 1928, is the earliest known company with a name and address that cultivated soybeans in California. Its only other entry in the Japanese American Directory is 1925, p. N-142.

Note 3. No address in San Francisco is given in the ad.

Note 4. World War I ended not long ago. Address: San Francisco, California.

2293. **Product Name:** Kikko San-jirushi Sweet White Miso, Shoyu, and White Koji.

Manufacturer’s Name: Hokubei Miso, Shoyu Seizo Oroshi Kouri (North American Mfg. Co.).

Manufacturer’s Address: 519 East 1st St., Los Angeles, California. Phone: 64215.

Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 368. Ad (¼ page). At the top of the ad in English: “North American Mfg. Company, 519 E. 1st St., Los Angeles, Cal.” Most of the ad is in Japanese. The three words at the end of the company’s Japanese name mean “Manufacturing, Wholesale, and Retail.” The large, central logo, a hexagon with three horizontal lines inside, is probably pronounced “Kikko San-jirushi.” The company makes high-class sweet white miso (*joto shiro miso*) and white koji (*shiro koji*) [as well as shoyu]. The owners are NISHI Isokichi and YAMASHITA Iwasuke.

The Japanese American Directory. 1920. p. 277. Ad (¼ page). This is as basically the same as the one which appeared in 1919, except it looks very different because the large logo has changed. The outside is still a hexagon (although smaller and bolder) but inside it is the number “3” but having an unusual form that makes it look like a cross between the usual Arabic numeral “3” and a Tibetan character. Apparently the previous logo either belonged to another company or looked too Japanese.

The Japanese American Directory. 1920. p. 296. Hokubei Miso, Shoyu Seizô-sho, 519 East 1st St., Los Angeles. Phone: 64215. Also in 1921, p. 288 (ad) and p. 314 (directory). The directory gives the company name as

Hokubei Miso Seizô-sho. Also in 1922, p. 315 (directory and ad (¼-page, p. 321). At the top of the ad is written in English: "N.A. Miso Mfg. Co., 519 E. First St., Los Angeles, California." In Japanese, the company's name has changed to Hokubei Miso, Koji Seizô Moto Oroshiuri [Manufacturing and wholesale]. The word "Shoyu" no longer appears in the company name or in the ad, as it did in 1919-21. Also in 1923, p. 347 (ad; In Japanese, the company's name has changed to Hokubei Miso, Koji Seizô, Tsukemono Seizô Oroshiuri. Tsukemono are Japanese-style pickles) and p. 355 (directory: Hokubei Miso Seizô-sho). Also in 1924, p. 371 (¼-page ad) and p. 394 (directory). Also in 1925, p. S-17 (½-page horizontal ad. New name in English: "North American Miso M'f'g. Co." New phone number: TUCKER 4215) and p. S-44 (directory). Also in 1926, p. S-15 (Full-page ad. Name in English is now "North American Miso Mfg. Co." An illustration shows a large box of dried koji (*hoshi koji*) near top center of ad) and p. S-33 (directory; Hokubei Miso Seizô-sho).

The Japanese American Directory. 1930. p. S-53. The company (Hokubei Miso Seizô-sho) now makes only miso. Phone: TUCKER 4215. Also in 1932, p. 346 (directory; this old company has a new name: Kikko San Miso Seizô-sho. The address, although unchanged, is now written in English: "519 E. First St." New phone: VANDIKE 5702). Also in 1934, p. 305 (directory; same company name, address and phone number).

2294. **Product Name:** Marufuku Shoyu [Soy Sauce].
Manufacturer's Name: Sacramento Shoyu Jozo Gaisha (Sacramento Sauce Brewing Co.).
Manufacturer's Address: 2116-20 Fourth St., Sacramento, California. Phone: Main 2867J.
Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 377. Ad (½ page). At the top is written

in English: "Sacramento Sauce Brewing Co., 2116-20 4th St., Sacramento, Cal." But most of the ad is in Japanese, with a huge, bold, circular Marufuku logo in the center. Saijo Marufuku shoyu (Highest-quality Marufuku shoyu). Name of company with diacritics is: Sacramento Shoyu Jôzô Gaisha.

The Japanese American Directory. 1920. p. 154.
 Company name: Sacramento [in Chinese characters–*kanji*] Shoyu Seizô-sho [Sacramento Soy Sauce Manufacturing Co.]. Address is now: 2116 Fourth St., Sacramento.

2295. Eddington, Jane. 1919. The Tribune Cook Book: Soy beans as human food. *Chicago Daily Tribune*. Jan. 12. p. B4.

• **Summary:** Miss Eddington first got interested in the use of "soy bean flour" in the human diet about 5 years ago when she "first received samples of this flour for a medical manufactory." During these five years "soy bean flour has come into wide use in hospitals and homes. From being used in the United States to renew worn out soil and then for hog feed, the soy bean has come to be used largely as a food for those who have worn out kidneys, the diabetics."

"Soy bean cookery, especially the whole bean cookery, must be good, of the variety [of] vegetable meat contained in it is ruined, becoming as indigestible as white of egg cooked to a crisp." The key is to cook the whole bean at a low temperature for a long time. "Baked soy beans must be cooked at least eight hours."

"In Washington [DC], the government experts used 30 per cent soy bean flour with 70 per cent of wheat flour and called their product 'a high powered bread.'" She then gives four wartime recipes for "Soy bean muffins." Some call for "soy bean meal." Note: This "meal" is probably soy bean flour.

"Used as a meat substitute:... The tofu, a sort of cheese which is fried in deep fat and used as a meat substitute, was exploited by the United States department of agriculture last year, along with other of the soy bean products..." She then cites (incorrectly): Morse, W.J. 1918. "The soy-bean industry in the United States." *Yearbook of the U.S. Department of Agriculture* p. 101-11. For the year 1917. Then, from the section titled "Soy beans for human food," she includes the recipes for "Soy-bean milk" and "Soy-bean cheese," and the description of soy sauce. "Soy or shoyu sauce is a dark brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water..."

2296. Takahashi, Teizô. 1919. Re: Sample of shoyu sent by his brother to Margaret Church. Letter to Margaret B. Church, Bureau of Chemistry, USDA, Washington, DC, Jan. 18. 2 p. Typed, with signature. [Eng]

• **Summary:** "Yours to hand and very much pleased to know that you received 'shoyu' from my brother [of Pacific Trading Co., in San Francisco, California]. I hope that you

will order the same to my brother at any time. An interesting news is that you have an organic chemist working on the chemistry of 'shoyu.'

"If press cake of peanut may be utilized for 'shoyu' manufacture, it is a great progress in this business. A further culture material from Dr. Thom's mycological collection is deeply appreciated. Respectfully yours,..."

On the back of the letter are 3 illustrations (his sketches) of small wooden implements, apparently related to making shoyu. One appears to be a stirrer. Address: Agricultural College, Tokyo Imperial Univ., Tokyo, Japan.

2297. Lea and Perrins. 1919. Simple fare (Ad). *Times* (London). Jan. 20. p. 4, cols. 6-7.

• **Summary:** "... does not seem insipid if you use Lea & Perrins' Sauce. A few drops of this famous sauce makes the plainest dish appetizing and enjoyable. Lea & Perrins' Sauce. The original and genuine Worcestershire." At the left of this display ad is a royal seal, and below it the words "By Appointment to H.M. The King." Address: [England].

2298. U.S. Department of Commerce, Far Eastern Div. 1919. Oil and oilseeds of the Orient. *Commerce Reports* [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce) 22(33):611-16. Feb. 8.

• **Summary:** Contents: Introduction. Method of cultivation [and harvesting] in China. Bean curd a Chinese delicacy. Domestic methods of marketing oil in China. Japanese production of vegetable oils [and exports to the United States]. China's production of oil steadily growing.

Tables show: (1) Total quantity and value of Chinese vegetable-oil exports, and the value of exports to the United States, including transshipments [from Manchuria], in 1917. Of total oil exports, coconut oil is by far the leader in quantity and value, followed by soya bean oil. But of oil exports to the USA, soya bean oil is by far the leader. Dairen exported 90% of the soya bean oil in 1917.

(2) Exports of vegetable oil from China in 1915, 1916, and 1917 (the quantities are expressed in piculs of 133.33 pounds and the values in Haikwan taels worth \$0.62 in 1915, \$0.79 in 1916, and \$1.3 in 1917). Soya bean oil was by far the largest oil export in both quantity and value all three years. The quantity increased from 1.017 million in 1915 to 1.566 million in 1916 to 1.891 million in 1917.

(3) Exports of oil-bearing seeds and beans from China in 1915, 1916, and 1917. Soya beans were by far the largest bean or seed export in both quantity and value all three years. The quantity was 10.235 million in 1915, then 6.732 million in 1916, rising to 7.927 million in 1917.

"No single vegetable product has developed such importance in the Far East as the soya bean... As a food it is the principal ingredient of soy sauce, bean curd, and steamed beans. The bean cake, containing a high percentage

of nitrogen, is a valuable fertilizer and is used extensively in Japan, and recently bean oil temporarily replaced petroleum for lighting in China when lack of shipping facilities kept that product off the market. The center of soya-bean production is Manchuria, and Japan is the chief crusher and producer of oil and cake, though the manufacture of bean oil and cake is also a very important industry of Dairen, Kwantung Leased Territory. Mukden is the center of the bean trade and the beans are there bought for cash from the farmers."

"Bean curd a Chinese delicacy: Bean curd is made mostly from the two kinds of oil beans described [Eighth Month White Bean and Water White Bean], although all varieties may be used in its preparation. As a rule, however, the other varieties of beans are not planted for oil or curd, but are eaten steamed when the bean is young and tender.

"Bean curd is prepared by first steeping the beans in cold water for 6 or 7 hours in summer or 24 hours in winter, and, after washing, grinding with cold water to form a bean milk. This milk is cooked in a large kettle and the film removed from the surface after a quarter of an hour and dried. This film or skin is known as Tou Fu Yi [doufu pi, usually called "bean curd skin" in English; yuba in Japanese] and 20 or 30 films can be obtained from a kettle without thinning the milk too much. After boiling half an hour the remaining milk is poured into a jar and a gypsum or salt solution added to curdle it. The proportion is 6 ounces of salt to 1 picul (133.33 pounds) of beans.

Note: Yuba is made as an early step in the tofu-making process. Viewed in this way, the word "bean curd skin" makes more sense.

"After standing 15 minutes a curdled substance called Tou Fun No [bean curd brain] is the result. This product is molded in wooden frames by a heavy block of wood for 15 minutes and is then cut into small pieces with a dull brass knife. A piece 2 inches square and half an inch thick retails for 5 cash (0.5 cent). This curd forms the basis for numerous Chinese articles of food and is prepared in various ways. Perhaps the most usual form of serving is to press the curd, wrapped in cloth, for six hours in a box 1 foot square and 8 inches high and then cook in oil. It is also boiled, after such preparation, with pork or cabbage."

"Japanese production of vegetable oils: The present estimated production of Japanese oil mills is 90,600 long tons of vegetable oils annually and is made up as follows: Soya-bean oil, 37,509 tons; coconut oil, 27,542 tons; rapeseed oil, 17,848 tons; cottonseed oil, 6,433 tons; and peanut oil, 1,268 tons. Seventy-five per cent of this crush is made in the Kobe district and is handled by 25 oil mills, modernly equipped." In 1917 Japan exported (including transshipments) 34,916,260 lb of coconut oil, 22,643,623 lb of soya bean oil, and 19,677,825 of rapeseed oil. He concludes that "American importers of Far Eastern products may well investigate the domestic market for Far Eastern

oilseeds with a view to supplying oil mills in the U.S. with raw material.” A table shows import and export data. Address: Asia.

2299. Eddington, Jane. 1919. Tribune Cook Book: The neck of the pig. *Chicago Daily Tribune*. Feb. 19. p. 18.

• **Summary:** “To this fried pork add the vegetables in their liquid and cook the two together for five minutes, then add a tablespoon of soy sauce. If this sauce is not somewhat sweet add about a tablespoon of molasses to your mixture.”

2300. Lea and Perrins. 1919. Vegetable dishes (Ad). *Times (London)*. March 17. p. 6, cols. 6-7.

• **Summary:** “... need never be unpalatable. A little Lea & Perrins’ Sauce makes a world of difference in the flavour—try it! Lea & Perrins’ Sauce. The original and genuine Worcestershire.” At the left of this display ad is a royal seal, and below it the words “By Appointment to H.M. The King.” Address: [England].

2301. Kita, Genitsu. 1919. Re: Okazaki fungus not suited for soy sauce production. Letter to Miss Margaret B. Church at Bureau of Chemistry, Washington, DC, March 20. 1 p. Handwritten. [2 ref. Eng]

• **Summary:** “‘Okazaki fungus’ is described under the name of *Asp. [Aspergillus] Okazaki* in the *Zentralblatt für Bakteriologie* [Series] II, Vol. 19, p. 481-85 (1907) & I have once studied it (Ibid, Vol. 37, p. 441, 1913). But now I have no culture and it is not sold as usual ‘Tanekôji.’ I think you can get [it] from Dr. K. Saito.

“I can however inform you that I have never heard of it applied in soy sauce making. According to my experience it is impossible to use for that purpose. Besides others it is difficult to get sound koji at first. Respectfully...” Address: 113 Gainsboro St., Boston, Massachusetts.

2302. Holland, J.H. 1919. Food and fodder plants. *Kew Bulletin of Miscellaneous Information* Nos. 1&2. p. 1-84. April 16. See p. 11-12. [5 ref]

• **Summary:** Great Britain imported large quantities of soy oil before World War I to make up for the shortage of cottonseed oil needed to manufacture soaps: 875,526 hundredweight from Manchuria, 816,032 hundredweight from China, and 43,209 hundredweight from Manchuria. Note: A hundredweight is 112 pounds weight.

“Considerable interest has been taken in the cultivation in England, but results of experiments made at Cambridge, Midland Agricultural College, South Eastern Agric. College, Wye, &c., go to show that no variety so far has been found that can be relied on to produce seed here.

“In Japan and China they [soy beans] are largely known in the preparation of the sauce known commercially as ‘Soy,’ and they make there a preparation used as a substitute for milk, and from this a food product call ‘Tofu,’ which in

turn forms the basis of the bean cheeses of Japan. The meal [flour] in this country is used in the manufacture of biscuits and in making a bread for special use in diabetes; but the principal use here is for the extraction of the oil of which the beans contain about 18 per cent., suitable for soap-making and in general as a substitute for cotton seed oil, the residue being a valuable cattle feed.

Also discusses the adzuki bean (*Phaseolus angularis*, Wight). “This bean appears to have been coming into the market recently in quantity. Trade samples have been submitted to Kew for name as ‘Dainagon Azuki Beans.’” They are important human food in Japan, Korea, China, and Manchuria, cultivated for the purpose.

2303. Rose, Edmond. 1919. Le nuoc-mam, condiment national indochinois [Nuoc-mam, the national condiment of Indochina]. *Annales de l’Institut Pasteur (Paris)* 33:275-81. April. [1 ref. Fre]

• **Summary:** Contents: Introduction. Preparation. Chemical composition. Differentiating between real and false nuoc-mam. Definition of nuoc-mam.

Pure nuoc-mam (Annamite for “water of salted fish”) is a “fish peptone” resulting from the auto-digestion or autolysis of the meat of certain fish. Nuoc-mam results from the maceration of fish in a concentrated solution of sea salt. It is essentially a NaCl solution of albuminous matter at a certain degree of disintegration, which should remain distinctly stationary for a certain time, at least 1 year, allowing it to be conserved. Its total content of nitrogen (amino acids) is a measure of its quality. Generally commercial samples contain 15-25 gm total nitrogen and 10-20 gm organic nitrogen per liter. Top quality nuoc-mam should contain at least 200 gm of sodium chloride per liter. But the lower quality products, which have less than 15 gm total nitrogen per liter, should contain not less than 240 gm sodium chloride per liter. Soy is not mentioned. Address: Doctor of Sciences (*Docteur ès-sciences*), Chef de laboratoire à l’Institut Pasteur, Directeur du Laboratoire officiel pour la répression des fraudes en Cochinchine, Saigon.

• **Summary:** “S.S. Tokyo Maru, from Kobe [Japan]. Agents N.Y. Kaisha.—250 cases safety match,... 10 cases Japanese miso; 23 cases Japanese soy; 71 cases window glass plain;...”

Note 1. These imports of Japanese seasonings are probably for one or more Japanese communities or stores in Bombay or western British India.

Note 2. World War II recently ended in Europe; Japan and India are at peace.

2305. *Los Angeles Times*. 1919. Questions answered. June 4. p. I12.

• **Summary:** “What is the origin of the word ‘catchup?’ B.T.U.

“A: This word which is spelled ‘catsup,’ ‘catchup,’ ‘ketchup,’ is a corruption of the Chinese word ‘kitjap,’ the name given to an inferior kind of soy [sauce] made in China.”

2306. Nakajima, Iwao. 1919. Shina shōyu no futsū seibun ni tsuite [Typical components of shina shoyu]. *Minami Manshu Tetsudo K.K., Chuo Shikenjo Hokoku (South Manchuria Railway Co., Central Experiment Station, Report)* 5:179-86. June. [Jap]

2307. *Times of India (The) (Bombay)*. 1919. Import manifests [at Bombay harbour]. July 3. p. 10.

• **Summary:** “S.S. Kifunezan Maru No. 2, from Japan ports, Agents: N.Y. Kaisha.—5 cases cotton hosiery goods,... 5 packages Japanese wine, 5 cases Japanese soy [sauce], 9 cases lead pencils,...”

2308. Oka, Takeo. 1919. Nippon in New York. *New York Times*. July 6. p. 34.

• **Summary:** An estimated 5,000 to 7,000 Japanese now live in New York City, including about 300 Japanese women. “Dr. Jokichi Takamine of the Takamine Industrial Company has broken into the company of ‘Who’s Who.’”

“The metropolis boasts no less than a dozen Japanese restaurants. Your casual visit will introduce you to fresh sliced fish taken raw [sashimi], seasoned bamboo shoots, and lotus root and pickled radish served on the same table with ‘sukiyaki,’ palatable at least to the Japanese. ‘Sukiyaki,’ a compound word still unauthorized in any standard English dictionary, is the Japanese ‘quick lunch,’ eaten while being cooked on a small charcoal table stove.

“Beef, onions, cabbage, beancurd [tofu], and other vegetable additions, not forgetting Japanese soy [sauce], sugar, and a little sake, are ready to be prepared in a shallow pan à la japonaise on the fire. The rest devolves upon you and your company, ladies not honorably excluded! A great time saving it is for the proprietor, this having his guests prepare their own meals!”

Note: This is the earliest document seen (Aug. 2010) stating correctly that the basic ingredients in sukiyaki include tofu and soy sauce.

2309. *Times of India (The) (Bombay)*. 1919. Import manifests [at Bombay harbour]. July 24. p. 14.

• **Summary:** “S.S. Kosoku Maru, from Yokohama [Japan], Agents N.Y. Kaisha.—312 cases silk goods,... 22 cases Japanese provision, 15 cks [casks] Japanese miso, 15 cks Japanese soy [sauce], 9 cases nails,...”

2310. Fairchild, David. 1919. A hunter of plants. *National Geographic Magazine* 36(1):57-77. July.

• **Summary:** The story of the life and work of Frank N. Meyer, USDA agricultural explorer, including descriptions of his four expeditions. He drowned on 2 June 1918 in the muddy waters of the Yangtze River. “His first expedition in the years 1905-1908 was into North China, Manchuria, and northern Korea; his second, in 1909-1911, through the Caucasus, Russian Turkestan, Chinese Turkestan, and Siberia; his third, in 1912-15, through northwestern China into the Kansu Province to the borders of Tibet, and his last expedition in search of plants began in 1916...”

Photos show: (1) A “courtyard filled with jars in which a mixture of soy-beans, wheat, and salt is fermenting to make soy sauce. The mixture is protected from the sun and rain by cleverly woven hoods of split bamboo. Mr. Meyer made a careful study of this great soy-bean sauce industry and introduced a large number of varieties of the bean” (p. 66). (2) Frank N. Meyer with a branch of jujube in his hand. He first saw orchards of this new fruit in China in 1906 (p. 76). Address: Agricultural Explorer, in Charge of Office of Foreign Seed and Plant Introduction, USDA.

2311. Palen, L.S. 1919. The romance of the soya bean. *Asia and the Americas* 19(1):68-74. July. Illust.

• **Summary:** The author, who begins by acknowledging his indebtedness to Dr. Yamei Kin, Dr. John Harvey Kellogg, and Mr. W.J. Morse for much of the material in this article, gives an overview of the soya bean worldwide. The article contains excellent photos (many by Adachi): (1) Stacks of soya bean cake in open storage on Dairen wharves, South Manchuria. (2) Horses plowing soybean fields in North Manchuria. (3) Modern machinery [a huge steam-powered tractor] used in bean cultivation in remote parts of Manchuria where foreign interests are involved. A Western man and woman ride horses nearby. Caption: “To the Manchurian farmer, with his laborious methods of hand cutting and hand winnowing, the introduction of modern Western farming methods would spell many-fold prosperity.” Note: This is the earliest document seen (Feb. 2003) that shows a photo of a tractor in connection with soybeans. (4) Stacks of soybeans piled high in sacks in Manchuria as far as the eye can see. (5) Soybeans stored in huge cylindrical, 20-foot-high osier bins, each covered with a conical top.

Soy oil is purified and flavored with an admixture of olive oil for use as a salad oil. It also forms the basis of some of our butter and lard substitutes. “What Mr. Li Yu-ying accomplished in Paris in the establishment of a Laboratory of Research and of a factory for the production of all the products derived from the soya has been the forerunner of activity on the part of certain independent Chinese companies in America and of government and private investigations.”

“In general the use of whole soya beans has not been attended with much success because of the ever present flavor of the oil content and because, with the ordinary

method of cooking, they remain hard and unpalatable; but it has been found that cooking at a temperature somewhat above the boiling point, say from 220 to 230 degrees, breaks up the cellulose structure and develops a richness of flavor that is not obtainable with the lower temperature."

"By far the most extensive use of the soya is in the products manufactured from it. And it is here that Dr. Yamei Kin, the talented Chinese physician, is making her chief studies under the direction of the Pure Foods Division of the Department of Agriculture, with the purpose of spreading a knowledge of the soya among Americans. For convenience of consideration the products studied may be divided into sauces, curds, cheeses and milk.

"Of the sauces the liquid form is already familiar, although unrecognized, perhaps, by a large percentage of Occidentals through the work of early English traders in bringing back the base of the now famous Lea and Perrins Worcestershire Sauce. This original Chinese *shi-yu* was highly spiced and became a well recognized adjunct to many an English meal. Following the example of Lea and Perrins, others have put out sauces with the same base without, however, attaining the same success, because the makers did not understand that there are many kinds of soya sauce. While they are all made by the same ferments and in the same general way, they differ very greatly in quality according to the locality and to the manufacturer, just as wine, though made from the identical kind of grape and by the same process of fermentation, may be a very different article from different hands. It takes several months to make this liquid form of sauce, while the best kind requires a year or more to attain the finest flavor and mellowness. The hot condiment added by Lea and Perrins is not favored by the Chinese, since according to their taste it detracts from a wide use of the soya sauce."

Tofu (spelled to-fu) is discussed in detail. "There are records to show that it has been used since at least nine hundred years B.C. *To-fu* making is a staple industry in every little community. Usually it is done at night so that the fresh curd will be ready for the morning demand in the market, or for peddling around the streets. It provides, for the fraction of a cent, the indispensable equivalent of meat and affords very often the explanation of how the Chinese laborer does so much work on what is purely vegetable diet, popularly supposed not to contain much protein. *To-fu* is made in many different forms and the bean stalls occupy quite as large and prominent places in the city market as the fish and meat stalls...

"Cheeses are also made from the growth of cheese-making moulds on *tofu*. The Chinese resident in America regularly import a certain highly flavored red bean cheese for their own use...

"Perhaps the greatest contribution of the soya to the life of the Occident will be in its form of milk. Back in the golden era of peace there had been established in London

a soya bean milk factory which was prepared to place its product regularly on the market, and there were said to be plans consummated for the erection of two others at Manchester and Liverpool; but of what the development has been we have no definite information. In Shanghai, Peking and Dalny Chinese companies are supplying hospitals and individuals with an 8 or 10 ounce bottle of concentrated milk per day at a cost of \$1.00 Mex per month.

"In its competition with the cow the legume has in its favor the following facts: Soya milk can be produced with less contamination; it is tuberculosis-free; its caseins break down much more readily than the caseins of cows' milk and do not form curds in the stomach in the same degree...

"By those who advocate and urge a vegetarian diet, a very strong bill can be drawn in favor of this oriental substitute. In these days when war has thrown new light on many of our life problems, it will be easier to secure acceptance for their contention that the world must for both economic and physiological reasons adopt the biological diet. It has been calculated that, roughly speaking, it takes 100 pounds of foodstuffs to produce 3 pounds of beef and that a given acreage of land can support five times the population if the necessary protein can be derived directly from vegetable sources rather than going through the roundabout way of an animal form, imposing upon the body the burdens incident to taking in the toxins [toxins] resultant from the catabolism of the cells of the animal, and from possible putrefaction. In China the Buddhist priests and people who enter the various temperance societies all depend on varieties of *to-fu*."

2312. Takahashi, A. 1919. Re: Response to request for sample of miso. Letter to Miss Margaret B. Church at Bureau of Chemistry, Washington, DC, Aug. 12. 1 p. Typed, with signature on letterhead. [Eng]

• **Summary:** In her letter of May 27, Miss Church asked him to please send a sample of miso. She received his sample of shoyu. "There are two or three kinds of Miso manufactured in Japan, but we usually import only one kind—*shiro miso*. *Shiro* means 'white' in English. I am sending sample bottle under separate cover, and this is the best quality of shiro miso manufactured in Japan; this is a fresh sample, only having been made four or five months, as it is a commodity that is easily manufactured."

He is also trying to find her a sample of *aka miso* or Red Miso, "which requires a considerable time to manufacture."

Note: The writer is the younger brother of Teizo Takahashi, who is a lecturer at the "Imperial University of Tokyo." Address: Pacific Trading Co., 331-343 Battery St., San Francisco, California. Phone: Sutter 270.

2313. Eddington, Jane. 1919. Tribune Cook Book: Vegetarian chop suey. *Chicago Daily Tribune*. Aug. 15. p. 20.

• **Summary:** "When served over a nice mound of boiled

rice a vegetarian chop suey... makes a satisfactory one piece meal, served with soy sauce or without it." A recipe is given.

2314. *Christian Science Monitor*. 1919. Japanese children. Aug. 28. p. 14.

• **Summary:** "The Japanese also have... wafers [rice crackers] which are made of rice paste, dipped into 'shoyu' and dried in the sun. 'Shoyu' is a sauce with a salty taste, which is the Japanese equivalent of Worcester sauce."

Also discusses a sweet called "ame," which is made from malt, and "'yokan' consisting of mashed [azuki] beans and sugar, which is made in the mountain districts of Japan. It is much nicer than it sounds and looks so attractive packed in its long, narrow, white, wooden boxes and wrapped in a single big bamboo leaf."

2315. Arnold, Julean. 1919. *Commercial handbook of China*. 2 vols. Washington, DC: Government Printing Office. 629 p. + 472 p. Dep. of Commerce, Bureau of Foreign and Domestic Commerce, Miscellaneous Series No. 84.

• **Summary:** In Vol. 1: The "Letter of submittal" from the Department of Commerce, Bureau of Foreign and Domestic Commerce, states that the Bureau "realizes keenly the desirability of an immediate, vigorous, and systematic effort to promote American trade with this great friendly nation in the east of Asia. Such an effort... must be based on the most recent and dependable economic information. To supply that information is the purpose of this handbook.

"This handbook, the most detailed publication of its kind ever issued by the Department of Commerce, will appear in two volumes." The basic organization will be by each of the 17 American consular districts.

Digital searches for "soy" or "soya" or "beans" or "bean curd" or "bean sprouts" or "bean cake" or "bean oil" will result in many hits and a vast amount of information. For example:

Pages 42, 45: A table titled "Commercial statistics for China as a whole," under "Exports, sundries" includes:

"Bean cake" (pounds). For 1913. Quantity: 1,575,792,400 pounds. Value: \$18,197,871.

"Bean cake" (pounds). For 1918. Quantity: 2,182,241,744 pounds. Value: \$35,650,215.

"Bean curd" (pounds). For 1913. Quantity: 4,846,543 pounds. Value: \$144,849.

"Bean curd" (pounds). For 1918. Quantity: 3,765,591 pounds. Value: \$265,141.

"Beans" (black, green white, yellow, other kinds) (pounds). For 1913. Quantity: 1,376,795,200 pounds. Value: \$16,983,422.

"Beans" (black, green white, yellow, other kinds) (pounds). For 1918. Quantity: Yellow (#1): 849,479,313 pounds. Value: \$17,106,454. Values are also given for Other kinds (#2), White (#3), Green (#4), and Black (#5): 13,481,033 pounds. Value: \$295,796.

"Oil, Bean" (pounds). For 1913. Quantity: 65,575,600 pounds. Value: \$2,720,637.

"Oil, Bean" (pounds). For 1918. Quantity: 393,621,508 pounds. Value: \$29,802,630.

"Soy" (pounds). For 1918. Quantity: 820,531 pounds. Value: \$45,871.

Page 115: "Canton Consular District." "Other native industries of Canton that give employment to large numbers of people in the aggregate are:... The making of a Chinese sauce called 'soy,' which is made from a certain bean which as been boiled slowly and to which wheat or barley flour is added (soy is exported for the use of Chinese living abroad and also for the making of certain foreign sauces and condiments);" [such as Worcestershire sauce?].

Page 200: "Export trade:... The leading products shipped from Hongkong to all parts of the world are:... beans,...soy, tapioca flour, tea..." Pages 202-03: Trade between Hongkong and the United States during 1918. Hongkong Consular District. Value in 1913: Soy. Shipped to the United States: \$51,595. Shipped to the Philippine Islands: \$1,430. Shipped to Hawaiian Islands: \$1,140.

Page 365-66: "Amoy Consular District." Manufacturing and other industries. The Amoy Tinning Co. (Ltd.) and The China Canning Co. (Ltd.): The output of these two factories includes "soy and soy sauce."

Page 397. Antung Consular District. Exports include soy.

Page 478: "Shantung Province is the original home of the soya bean and the bean-crushing industry in this part of the world, and until the possibilities of Manchuria were discovered and developed this Province led the industry." "Manufacture of vermicelli: The principal crude native industry is the manufacture of Chinese vermicelli from a small green bean known as the 'lu tou' [mung bean]. This vermicelli is manufactured not only in large factories but also by individual farmers and in the homes of the natives in all parts of the Province."

Page 517-18: Dairen Consular District, Agriculture. The principal crops and their yeild per acre: soya bean, 4.5 bushels. "The principal fertilizers are manures and bean cake (the residue after the oil has been pressed from soya beans)." "Soya beans, and the bean oil and bean cakes manufactured thereform are the principal agricultural products exported from this district." Address: Commercial Attaché, Peking, and various American Consular Officers, China.

2316. Arnold, Julean. 1919. *Commercial handbook of China*. 2 vols. (Continued—Document Part II). Washington, DC: Government Printing Office. 629 p. + 470 p. Dep. of Commerce, Bureau of Foreign and Domestic Commerce, Miscellaneous Series No. 84.

• **Summary:** Continued: Volume 2 of an outstanding, comprehensive book. The basic structure and content of Vol. 2 is completely different from that of Vol. 1. In Vol. 2: The

“Letter of submittal” from the Department of Commerce, Bureau of Foreign and Domestic Commerce (p. 13-14) is date Aug. 15, 1919.

Contents: Outline of Chinese system of government (p. 24+). Commercial treaty between China and United States (p. 34+). Judicial procedure in China (p. 42+). American courts in China (p. 46+). The American consulate and its relation to the public (p. 55+). Trade-marks, patents and copyrights in China (p. 61+). United States Customs requirements (p. 65+). China’s tariffs and internal taxes (p. 83+). Postal facilities in China (p. 106+). Railways in China (p. 115+). Chinese ports and shipping facilities (p. 130+). Currency, exchange, and banking (p. 158+). Chinese government finance (p. 201+). Concessions and titles in China (p. 222+). Chinese guilds and chambers of commerce (p. 245+). Position and function of the Chinese comprador (p. 254+). Chinese products of interest to Americans (p. 261+, includes [Soy] Beans {p. 282-83 with photos facing pages 282 and 283}). Animal industries in China (p. 306+). Progress of forestry in China (p. 316+). China’s commercial and industrial progress and prospects (p. 319+). Miscellaneous economic activities. Cotton goods in China (p. 329+). Suggestions to American manufacturers and merchants (p. 356+). Pertinent points for Americans seeking trade with China (p. 367+). Essentials of business practice in China (p. 370+). Advertising American goods in China (p. 387+). Training Americans to know Asia (p. 396+). Teaching the Chinese language to foreigners (p. 402+). Present conditions of government education in China (p. 406+). Chinese students in the United States (p. 420+). American missionary work in China (p. 423+). Labor and living conditions in China (p. 432+). Methods of keeping well in China (p. 439). Land values in China (p. 443+). Words and expressions in common use in foreign communications in China (p. 444+). Notes on Chinese social customs and etiquette (p. 450+). Important days in Chinese calendar (p. 454+). Chinese weights and measures (p. 455+). Lists of officials, organizations and institutions (p. 457+). Useful literature on China [Bibliography] (p. 460). Shipping Board freight rates from United States to China (p. 467+, by commodity per 100 pounds).

Words and Expressions (p. 444+). “Bean cake.—The refuse after the oil has been expressed from the beans. It is pressed into huge cakes and used very extensively as a fertilizer.”

“Bean curd.—A thick, white, cheesy substance made of beans, which may be called bean cheese. It is very nutritious and is eaten extensively throughout China.”

“Chop-suey.—In Cantonese ‘Tsap-suey,’ literally miscellaneous pieces or odds and ends,...

“Comprador.—The Chinese agent in a foreign firm, through whom the foreign firm transacts much of its business with Chinese and who often guarantees the credit of the firm’s Chinese customers.”

“Congee.—A thick rice or millet soup or gruel.”

“Coolie.—An appellation for the unskilled laborer of China.”

“Godown.—This word is always used in China in place of the word warehouse. It is a pidgin English word.”

“Haikwan.—The Maritime Customs of China...”

“Hong.—A mercantile house... or a merchandising establishment.”

“Kang.—A Chinese word meaning a brick or clay bed with an opening beneath for a fire, used all over the north of China.”

“Kin.—A catty, or 1 1/3 pounds avoirdupois.”

“Kong or kang.—A large earthenware jar used for holding water, or Chinese pickles, etc.”

“Li.—A Chinese mile, equivalent to about 3/10 of an English mile but varying in different parts of the country.”

“Liang.—A Chinese ounce, known to foreigners as a tael, or 1 1/3 ounces avoirdupois.”

“Mandarin.—A Chinese official.”

“Mandarin dialect.—The official language of China, spoken by about three-fifths of the people of the country.”

“Picul.—A measurement of weight in China, equivalent to 133 1/3 pounds avoirdupois.”

“Soy.—Bean sauce.” Address: Commercial Attaché, Peking, and various American Consular Officers, China.

2317. *Times of India (The) (Bombay)*. 1919. Import manifests [at Bombay harbour]. Sept. 2. p. 11.

• **Summary:** “S.S. Tenshin Maru, from Japan, Agents, N.Y. Kaisha.—727 bales cotton shirting,... 10 cases penholder, 40 cks [casks] Japanese soy [sauce], 20 cks Japanese miso, 5 cases watch glass,...

2318. Groff, Elizabeth H. 1919. Soy-sauce manufacturing in Kwangtung, China. *Philippine J. of Science* 15(3):307-16. Sept. [1 ref]

• **Summary:** Contents: Introduction. The equipment of a soy sauce manufacturing plant: Grounds and buildings, boiling shed, jars, racks, trays, baskets, covers, raw materials, method of mixing, boiling of beans, mixing of beans and [wheat] flour, mold, method of sunning beans and flour, first drawing, second drawing, third drawing, fourth drawing, boiling method, mixing of soy, prices of raw materials, Sainam soy, making soy from rice, soy samples and prices gathered on the Canton market (8 grades are described). 8 plates with 13 photos.

“Soy sauce, known among the Chinese as *Ch’au yau* “drawing oil,” or *pak yau*, “white oil,” is without question the best liked and most widely used [of the many sauces in China]. Kwangtung Province [in southeast China; Guangdong in pinyin] is famous all over China for the soy sauce which it produces. Canton as its capital is the naturally the center of all this trade... Each neighborhood has its peddler who goes from door to door selling soy and other

saucers. In Canton, jars of soy can always be seen in the making, as much of it is placed on the roofs to sun.

Note 1. This is the earliest English-language document seen (April 1912) with the term “soy-sauce” (regardless of hyphenation) in the title.

Note 2. This is the earliest English-language document seen (April 1912) that uses the term “Ch’au yau” or the term “pak yau” to refer to Cantonese soy sauce.”

“Sainam, a city of about 30,000 inhabitants, 50 miles southwest of Canton on the Samshui (“Three Waters”) Railway, is famous for the excellent quality of soy that it produces. The first-class shops in Canton all have signs advertising Sainam *Ch’au yau*.” The establishments in Sainam are much larger than those in Canton and they have more space for sunning jars. There are 8 factories, all of about the same capacity, doing a business of over 100,000 dollars a year.

The manager of a large sauce-manufacturing plant named On Shing Lung showed the author in detail how his soy sauce was made. The buildings surrounded the 4 sides of the plot with a large court in the center for sunning the soy sauce. A “mold room” was usually placed to the north so that the doors which control the light and ventilation, very essential to good mold growth, can be opened to the south and plenty of sunlight allowed to enter. The koji is placed in trays (typically circular bamboo trays 3 feet in diameter and 1.5 inches deep) on racks in the mold room. The brown earthenware cylindrical jars in which the soy sauce is fermented are about 18.5 inches deep, 19.5 inches in diameter, and have a capacity of 180 catties (240 lb). About 1,000 of these jars are kept in the sunning yard at one time, although at times only about two-thirds of them are in use. “The Chinese believe that the [soy sauce in the] jars are greatly improved by long sunning, and when space permits the jars are allowed to sun in the court yard for months at a time.” For the jars, “Nothing is more important than a good cover with which to protect the sauce at night and when it rains. A standard conical bamboo cover, 21 inches in diameter and 12 inches high, is used.

The raw materials used in making soy sauce are yellow soy beans (grown in Ngau Chong, Manchuria), local wheat flour, raw salt (from Tientsin), and water. Beans are measured in catties (1 catty = 1 and one-third pounds). The best soy beans have a thick and tough seed coat that does not break apart easily after the beans are boiled. “The Chinese consider this characteristic to be very important, for they wish to keep the bean as much intact as possible for the molding process.” After mid-November the soy sauce plants stop boiling soybeans and do not begin again until February.

After the beans are boiled for 3-4 hours, they are drained in bamboo baskets until they are almost cold. Then 2 baskets at a time are poured onto a mixing board and two men mix the beans and flour with their hands until each bean is covered with flour. The mixture is then placed on the circular

bamboo trays to a thickness of about 1½ inches and the hand is used to furrow them so they get proper ventilation. They trays are placed in the mold room for 1-2 weeks. Inoculation takes place naturally, probably by a yellow mold of the species *Aspergillus*. The undesirable black mold is *Mucor*. “The mold [koji] from 1,400 catties of beans and 1,200 catties of [wheat] flour is divided into 36 jars. [Note: The ratio of soybeans to wheat flour by weight is 1.17 to 1]. A salt solution, 150 catties of water to 40 catties of salt, is then poured into the jars until they are full.” The jars are then sunned for 2 to 6 months—the longer the better. Most of the shops, however, make the first drawing after 3-4 months. The sunning process results in evaporation “and three days before the drawing of the soy, salt solution is used again to fill the jars. The first drawing is made by siphon. About 60 catties of the liquid are drawn off. This liquid is allowed to settle and is again drawn off, reducing the quantity to about 50 catties. It is then placed again in clean jars and allowed to sun again for from one to six months. Some of this soy is at times allowed to sun for three years, but this is too expensive and is rarely done commercially.” The soy from the first drawing is called *teng ch’au* (“first drawing”). The material that remains in the jar is called *teng shi* (“original soy nuggets”) and is sold as a separate sauce, used as the base of a number of different sauces or as the base for a “second drawing” *i ch’au*. For the second drawing, a salt solution of 150 catties of water and 30 catties of salt is now poured on the *teng shi*, or the beans which remain in the jar from the first drawing. The jars are again placed in the sun for 1-2 months, etc. Third and fourth drawings can also be made. “The sunning methods takes so much time that many of the manufacturers boil the second, third, and fourth drawings instead of sunning them. This makes a decidedly inferior quality of soy, but it can be sold very cheaply.

“After the soy is drawn from the beans, it is placed in an iron pan and boiled from two to four hours. The longer the better, but it must be boiled at the least two hours or it will not keep... The manufacturers never boil the first drawing. They always sun this and sell it for their finest grade.

“Mixing of soy. It is interesting to note that of the four drawings of soy, the only drawing that is sold as it is drawn is the ‘first drawing.’ The others are all mixed together and sold under the names of the price they cost per catty. Candied molasses (*kat shui*) is added to the very cheapest soy as a coloring and to sweeten it.

“Many of the village people make their own soy from the rice that has stuck to the bottom of the vessel in which it is boiled.” No soybeans are used and the result is an inferior grade of sauce.

The best quality soy [sauce], called *T’in teng ch’au yau* (“best selected drawn oil”), made of the first drawing and sunned for 4 months after drawing off, retails on the Canton market for “40 cents local silver per catty.” The same soy, sunned for only 2 months after drawing off, retails for 14

cents per catty. Soy made of equal parts “first drawing” and “second drawing” retails for 11 cents. Soy made of equal parts “first drawing” and “second drawing,” but after it has been drawn off the beans it is not boiled or sunned, retails for 8 cents. This “raw drawing” is used for soups and does not keep longer than about a week. Soy made of a mixture of 25% each of “first drawing,” “second drawing,” “third drawing,” and “fourth drawing” retails for 8 cents per catty. Soy made of 50% salt solution, and 50% “third drawing” and “fourth drawing,” and colored with candied molasses retails for 6 cents per catty. Soy made of 50% salt solution, and 50% “fourth drawing,” and colored with candied molasses retails for 4 cents per catty.

Photos on unnumbered pages show: (1) The soybeans being boiled in an iron pan above a brick oven; a man is holding a strainer over the pan. (2-3) The dark mold fermentation room with its racks and trays. (4) Soy [sauce] being drawn by means of a siphon. (5) A man standing in a courtyard filled with earthenware jars, about to begin “the first drawing of soy.” (6) A light frame used to hold the koji trays. (7) Bamboo baskets in which the boiled beans are cooled and drained. (8) A courtyard filled with earthenware jars topped with conical woven bamboo covers. (9) A court yard full of uncovered soy sauce jars. (10) Whole, dry soy beans (natural size). (11) Soy beans and flour after 5 days in the mold room. (12) Circular bamboo trays. (13) Soy

sauce ready for shipment to northern China. It is placed in many sealed earthenware jars, which are incased in bamboo holders. Address: Canton, China.

• **Summary:** “Chinese Yockomay:” Use beef or chicken broth. “Add to it enough either home-made or store noodles to make it quite thick, and boil until the noodles are cooked. Season with soy sauce (Chinese sauce) to taste, also pepper and sauce, and just before serving the yockomay drop in 3 eggs and let them set for about 5 minutes... Little Sunshine.”

2322. Cromwell, Richard O. 1919. Fusarium blight of the soy bean and the relation of various factors to infection. *Nebraska Agricultural Experiment Station, Research*

Bulletin No. 14. 43 p. Nov. Based on his PhD thesis, Univ. of Nebraska. [32 ref]

• **Summary:** The blight of soy beans is due to *Fusarium tracheiphilum*. The first report of this soy bean disease appeared in a publication by the author in 1917. "The disease is characterized by a chlorosis and shedding of the leaves or leaflets, followed by the death of the plants, and is herein called 'blight.' Soy bean blight has been observed in several localities within North Carolina on soils infested with cowpea wilt..." The physical structure of soils under natural conditions is not the limiting factor in the infection of the disease, but acidity under certain conditions has some influence. The nematode (*Heterodera radiculicola*) also has some influence.

The section titled "Economic importance of the soy bean" (p. 6-7) states: "Its culture in England was begun in 1790. The plant was introduced into the United States from Japan in 1860. Since that time its cultivation as a soil-improving and a forage crop has been confined for the most part to the Southern States. North Carolina is probably foremost among these States in the production of soy beans. The yield in 1909 was only 13,313 bushels (29, p. 632), and in 1915 was estimated as approximately 1,000,000 bushels. Within the last three or four years, and especially since the war began, this crop has become increasingly important because of the large variety of products manufactured from the oil and meal and because of its introduction in the United States as a human food.

"The following is a list of the most important products obtained from soy beans or in which soy beans enter: Soy bean milk, vegetable cheese, meal or flour, macaroni preparation, soups, pork and beans, meat substitutes, toilet powder, fertilizer, and cattle feed from the meal, and high explosives, soaps, linoleum, rubber substitutes, margarine, Japanese sauce, paints, varnishes, water-proof cloth, salad oil, lubricants, and lard substitutes from the oil."

The section titled "Other soy bean diseases" (p. 7) mentions nine, including *Heterodera*, and "Chlorosis and crinkling (cause?)."

The section titled "History, occurrence and importance of the disease" (p. 8) states that in 1900 Orton conducted tests for disease caused by *Fusarium* on soy beans at Edisto Island and at Monetta, South Carolina (see Orton 1902, p. 16-19). Eight varieties of soy beans [planted on 29 May 1901 in Monetta] were tried on ten plats. "The varieties tested were Tokio, Buckshot, Yoshio, Ito San, Manhattan, Guelph, and Amherst [Footnote: The names in use for these varieties in 1890 were respectively as follows: Best Green, Early Black, Yoshoka [sic, Yoshioka], Rokugatsu, Gosha, Black Round, Green Medium, and Bakaziro]. Orton reported that at Edisto Island the soy bean made a heavy growth, 3 or 4 feet high, and was free from the wilt disease. It may be said that a very considerable proportion of the several varieties of cowpeas grown in adjacent plots succumbed to wilt. The

results of these tests accord with the observations of others who have had opportunity to observe these crops when they were grown on soil known to be infested with cowpeas wilt."

The section titled "Field experiments to determine the susceptibility of varieties" (p. 38-40) states that the following soybean varieties were planted in May 1916 in Red Springs, North Carolina: Black Eyebrow, Brown, Haberlandt, Mammoth Yellow (which suffers greatly from *Fusarium* blight), Medium Yellow, Pekin, Tar Heel Black, and Virginia. Black Eyebrow seems to show some evidence of resistance.

A larger number of varieties were tested in this field in 1917, including the following not tested in 1916: Arlington, Auburn, Austin, Barchet, Chiquita, Early Dwarf Green, Guelph, Jet, Manchu, Peking (spelled differently this time), Tokio, and Wilson Black. Again, Black Eyebrow showed resistance. "The Brown variety, altho as badly infected by the nematode and *Fusarium* as any of the other varieties, deserves special mention because of its tolerance to these parasites." Address: Extension Plant Pathologist, Iowa State College. Formerly Asst. Plant Pathologist, North Carolina Agric. Exp. Station.

2323. *Hartford Courant (Connecticut)*. 1919. The soy bean again. Dec. 4. p. 16.

• **Summary:** "Two or three years ago the department of agriculture [USDA] used tons of paper in an effort to bring the soy bean into favor and spread its propaganda across the country indifferent alike to the customs of the inhabitants and to the climate. The attempt was not successful but now we find the department using one of its publications as a vehicle for telling more of the possibilities of the legume."

Contains a somewhat sarcastic summary of: *American Food Journal*. 1919. "Eastern soy sauce mystery penetrated." 14(12):41. Dec. The *Courant's* article concludes: "The imagination is stimulated by this glorious discovery of the fermentation experts of the bureau of chemistry."

2324. *Times of India (The) (Bombay)*. 1919. Import manifests [at Bombay harbour]. Dec. 20. p. 16.

• **Summary:** "S.S. Shingo Maru, from Osaka [Japan], Agents, N.Y. Kaisha.—350 bundles, 100 bales, 25 packages and 5 cases stram board,...—12 bundles, 19 cases, 8 casks and 27 packages Japanese provision; 25 casks and 1 tub Japanese soys, 20 casks Japanese miso; 10 cases wine;..."

Note: This is the earliest document seen (Aug. 2010) that uses the word "soys" in this way—perhaps to refer to Japanese fermented soy products.

2325. *American Food Journal*. 1919. Eastern soy sauce mystery penetrated. 14(12):41. Dec.

• **Summary:** "There are mysteries of the far and ancient East that, now and then, may be penetrated by the occidental mind. Some of them have been—and one of them is soy sauce. That substance, they say, has gone into all the meat

saucers—all the good ones at least [such as Worcestershire sauce]—that the Western world has consumed through all the years. But it has been made only in the Far East—in Japan and China.

“Now, it has now been made in the United States—by the government of the United States, through its fermentation experts at the Bureau of Chemistry of the Department of Agriculture.

“The work has been going on only for about a year, and it is said to take five years to make some qualities of sauce... The work was begun with the aid of a professor from the University of Tokio, and has been carried forward by workers in the Bureau of Chemistry who worked with him.”

The process is described. Boiled soy beans and roasted wheat are inoculated with a small quantity of yellow-green *Aspergillus* mold. The brine fermentation takes from 6 weeks to 5 years, depending on the quality of sauce desired.

“The Japanese use this sauce in cooking meats, soups, rice and other dishes. Its principal use in occidental countries has been for mixing with the other ingredients of meat sauces. Its manufacture in the United States will afford an additional means of utilizing the soy bean, which recently has taken its place as one of the important leguminous crops of this country.”

Note: This is the 2nd earliest English-language document seen (April 2012) with the term “soy sauce” (regardless of hyphenation) in the title.

2326. Thom, Charles. 1919. [The *Aspergilli*]. Paper presented before the American Bacteriological Society, Dec. 1919. 9 p. Handwritten. Unpublished manuscript.

• **Summary:** The paper begins: “The specific name *Aspergillus oryzae* is generally recognized in Japan as belonging to such molds of the genus *Aspergillus* as are used for their enzymatic activity in the preparation of sake, shoyu or soy sauce, etc.” “The rice overgrown with mold and therefore fermented thru the agency of the mold activity is called a koji or more specifically sake-koji.” “The Takamine patents have incorporated in them this specific name, *A. oryzae*. Because of such current usage we wish to state emphatically before this group of scientific workers that *A. oryzae* Ahlburg having narrow and easily delineated boundaries can not be used to identify the entire group of yellow-green *Aspergilli*.”

“Our studies have proved to us that the species name, *Aspergillus oryzae* as used in Japan applies (1) to such yellow-green *Aspergilli* as come with the description *A. oryzae* Ahlburg, (2) to such green, shorter-stalked forms as we are sure justly come under the name of *A. flavus* Link in the sense of Brefeld, (3) to innumerable yellow-green forms morphologically between these two descriptions, (4) to brown *Aspergilli* as *A. tamari* Kita having spores similar to *A. niger*, and spore-bearing structures similar to the yellow-green forms and even (5) to a certain brown *Aspergillus* (*A.*

oryzae var. *fulvus*) which does not at present seem to us as belonging to the group at all.” Address: USDA.

2327. **Product Name:** Shoyu.

Manufacturer’s Name: Hilo Bussan Shokai.

Manufacturer’s Address: Hilo, Island of Hawaii.

Date of Introduction: 1919.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1919. p. 924. “Hilo Bussai Shokai, M. Ohara, manager, manufacturer and wholesale dealer in soy, app. 706, Kilauea ave., Hilo. Tel. 143, P.O. Box 174.” Not listed in 1918.

Note: On p. 1001 of the 1919 directory, M. Oara is listed as residing in Wailuku [Drive], Hilo.

2328. **Product Name:** [Josen Shoyu].

Foreign Name: Jōsen Shōyu.

Manufacturer’s Name: Sendai Miso Shoyu K.K.

Manufacturer’s Address: Furujiro 1-5-1, Sendai-shi 982, Japan.

Date of Introduction: 1919.

Ingredients: Water, wheat, soybeans, salt.

New Product–Documentation: The present owner is the ninth generation. Letter from Mitsuo Miyazawa. 1988. Jan. This company, Sendai Miso Shoyu K.K. was founded in 1919, as an amalgamation of many smaller miso and shoyu companies in the area. The first miso made was called Sendai Miso, and the first Shoyu was called Josen Shoyu. The Josen brand originated in 1919.

2329. Greenbaum, Florence Kreisler. 1919. The international Jewish cookbook: 1600 recipes according to the Jewish dietary laws with the rules for kashering... 2nd ed. New York, NY: Bloch Publishing Co. [xiv] + 438 p. Index. 21 cm.

• **Summary:** Three recipes call for the use of Worcestershire sauce as an ingredient: Sardine canapés (p. 1). Mustard sardine paste for sandwiches (p. 9). Enchiladas (p. 85).

One cup of peanut butter is used as an ingredient in Peanut and rice croquettes (p. 66). There is also a recipe for Salted peanuts. Address: New York.

2330. Hedrick, U.P. ed. 1919. Sturtevant’s notes on edible plants. Albany, New York: J.B. Lyon Co., state printers. vii + 696 p. Index. 30 cm. Series: New York, (State) Dept. of Agriculture, 27th Annual Report, 1918/19, vol. 2, part II. [9 soy ref]

• **Summary:** The 2,897 plants are arranged alphabetically by genus and species. Common names and synonyms are listed alphabetically. Contains many footnotes and a huge bibliography.

The entry for “*Glycine soja* Sieb. & Zucc.” (p. 291-92) states: Family: Leguminosae. Synonyms: Coffee bean, soja bean, soy bean. Origin: Tropical Asia. Contains a summary of information from other sources, and mentions “the sauce

known as soy,” miso, and oil.

Also discusses: *Amaranthus paniculatus* (prince’s feather, red amaranth). *Apios tuberosa* (groundnut). *Arachis hypogaea* (earth nut, earth almond, goober, grass nut, ground nut, peanut, pindar). *Cannabis sativa* (fimble, gallow grass, hemp). *Chenopodium quinoa* (petty rice, quinoa). *Coix lachryma-jobi* (Job’s tears). *Cyperus esculentus* (chufa, earth almond, zulu nuts). *Gracilaria lichenoides* (agar-agar). *Laminaria digitata* (red-ware, sea-girdles, sea-wand, sea-ware, tangle). *Laminaria esculenta* (badderlock). *Linum usitatissimum* (flax). *Lupinus albus* (field lupine, wolf-bean). *Lupinus hirsitus* (blue lupine). *Lupinus luteus* (yellow lupine). *Medicago sativa* (alfalfa, lucerne). *Porphyra laciniata* (laver, slokam, sloke). *Porphyra vulgaris* (laver). *Prunus amygdalus* (almond). *Psophocarpus tetragonolobus* (goa bean, pois carrés). *Sesamum indicum* (sesame). *Vigna catjang* (cowpea, Jerusalem pea, marble pea). *Voandzeia subterranea* (groundnut). Edward Lewis Sturtevant lived 1842-1898. A large oval portrait photo (frontispiece) shows E.L. Sturtevant. Address: Horticulturist, New York State Agric. Exp. Station.

2331. Hirtzler, Victor. 1919. The Hotel St. Francis cook book. Chicago, Illinois: The Hotel Monthly Press. 430 p. Frontispiece (portrait). Index. 27 cm.

• **Summary:** This book, which is completely different from Hirtzler’s 1910 *Hotel St. Francis* cookbook, is “organized as a year’s worth of Breakfast, Luncheon, and Dinner menus with recipes displayed next to each menu.” Thus, page 1 contains the menu, and accompanying recipes, for January 1 (MSU biography and introduction).

Worcestershire sauce is used as an ingredient in a remarkable 37 recipes in this cookbook—thus clearly showing its standing as a highly respected ingredient. Most of these recipes were served at dinner and are based on animal products (fish or shellfish, meat, poultry, eggs, cheese, or milk); some are salad dressings or sauces. The recipes using Worcestershire sauce are:

Squab pie, à l’Anglaise (p. 1, Jan. 1). Roquefort dressing, for salads (p. 19). Cocktail sauce, for oysters (1 and 2) (p. 23). Deviled crabs, p. 30. Oysters Kirkpatrick, p. 31. Ox tail, English style (p. 32). Haricot of mutton (stew) (p. 44). Aiguillettes of bass, Massena (p. 74). Crab cocktail, Victor (p. 84). Venetian eggs in chafing dish (p. 92, April 1). Curried oysters (p. 99). Deviled crab in shells (p. 108). Roast shad and roe, à la Americaine (p. 115). Angels on horseback (oysters) (p. 117). Deviled chickens’ legs (p. 121). Devil sauce (p. 121). Suprême of oysters, St. Francis (p. 124).

Lamb broth, à la Grecque (p. 127). Crab salad, Louis (p. 128). Alligator pear cocktail [avocado] (p. 136). Fillet of sole, Doria (p. 137). Lamb hash with [green] peppers (p. 139). Crab leg stock (p. 156). Broiled sirloin steak, Cliff House (p. 164). Broiled veal kidneys, English style (p. 168). Russian dressing, for salads (p. 179). Baked lobster, Lincoln

(p. 185). Crab gumbo (p. 213). Baked porterhouse [steak] (p. 301). French dressing, for salad (p. 320). Gibleet soup, à l’Anglaise (English style) (p. 323). Mayonnaise sauce (p. 325). Spring lamb Irish stew (p. 328). Cold horseradish sauce, English style (p. 329). Sauce special (p. 352). Welsh rabbit (melted cheese with sauce over toast, p. 356). Chicken okra soup (p. 367).

Neither Harvey’s Sauce nor Leicester Sauce are mentioned. Almonds are used in a surprising 162 recipes, while neither peanuts, nor peanut butter, nor almond butter, nor cashews are mentioned. Address: Chef of Hotel St. Francis, San Francisco [California].

2332. Mattei, G.E. 1919. La soja ed i suoi prodotti [The soybean and its products]. *Bollettino di Studi ed Informazioni del Regio Giardino Coloniale di Palermo* 5(1/2):1-34. [40 ref. Ita]

• **Summary:** This article contains one of the best histories seen to date of the soybean in Italy, from 1760 to 1813. Contents: Brief history of the soybean. History of its taxonomic classification. Botanical description of the wild and domestic soybean. Varieties. Introduction of the soybean to Europe (especially France and Italy). The question of the root nodule bacteria. Cultural requirements. Importance / value of the production. Utilization of the seeds. Soy flour (*farina di soja*). Soymilk (*latte di soja*). Soy cheese [tofu] (*formaggio di soja*). Soy oil (*olio di soja*). Soy cakes (*panelli di soja*). Other Japanese preparations: Miso, shoyu, koji. Opportunities for soybean cultivation in Italy. Results of cultural trials at the Colonial Garden (*Giardino Coloniale*) in Italy.

“Introduction of the soybean into Europe: The soybean (*La Soja*) was long confined to East Asia, and it is only towards the 17th century that it appears in the Indian Archipelago; in fact, if it had existed in the Pacific islands at the time of Cook’s voyage, Forster surely would have reported it. Its introduction to the East Indies is even more recent. Roxburgh mentions its cultivation in the Botanical Gardens of Calcutta from seeds acquired from the Moluccas, in 1798. On the other hand, as Alphonse de Candolle observes, if its cultivation were ages-old, it would have spread long ago toward the West to Syria and Egypt, which did not occur.

“Its introduction to France is said to date back to 1739, when certain missionaries sent soybean seeds, from China, to the *Jardin des Plantes* in Paris: the uncertainty however arises as to whether, even before this time, it was cultivated in Europe, since, as Saccardo points out, it appears that essays (*saggi*) on the plant exist in the *Herbarium* of Bartolomeo Martini of Verona, Italy, written (*composto*) in 1701.

“In any event, concerning France, the soybean is reported as being grown extensively in about 1821 at Champ-Rond near Etampes; it seems, however, that

subsequently its cultivation was nearly lost; in fact, Lachaume, in the *Revue Horticole* of 1857 [pages 568-70. Nov. 16], reports it as a new introduction, thanks to the French Consul in Shanghai, and he describes and illustrates it.

“As for Italy, Pinolini [1905] dates the soybean to 1848 [sic, 1840]. It is possible that its cultivation as an agricultural plant began to spread from that date, but the existence of the soybean in Italy antedates this date by at least a century. Saccardo says in fact: ‘cultivated since the mid-18th century, and at times extensively, as in the Treviso region.’

“With the existence, as I have stated, of essays on the soybean in the *Herbarium* of Bartolomeo Martini of Verona, an herbarium written in 1701, one might suspect that from that time the soybean was being cultivated in the Verona region; but who could have brought the seeds? And if this were the case, why do we not find any reports of it in somewhat later authors? Or was the above-mentioned essay brought directly from the Orient. It should be noted that Kaempfer’s voyage to Japan dates to 1690, and we have the first accurate reports on the soybean in 1712 with Kaempfer’s own publication. Should we perhaps believe that some study, brought back by Kaempfer, was given to Martini? He might have obtained it from Zannichelli who, as Targioni-Tozzetti relates, in the life of Micheli, carried on a correspondence with Martini himself? Assuredly Kaempfer had to regard a plant which is used for so many purposes in Japan as important and it is possible he brought back essays about it, and perhaps even seeds.

“In any event, the Jardin des Plantes in Paris, after 1739, must have distributed seeds to various botanical institutions, including Italian. In fact, from the old *Catalogs* (*Cataloghi*) of the first Italian botanical gardens and from the pertinent *Index seminum*, we see that in the second half of the 18th century, the soybean is being cultivated almost everywhere: in 1760 Allioni mentions its cultivation in the Botanical Gardens of Turin; in 1780 Abbot (*l’Abate*) Farsetti introduced it to his Santa Maria di Sala garden near Venice; in 1785 Scopoli mentions it in Pavia; in 1787 Guatteri records it in Parma; in 1790, with the Botanical Gardens barely established, Tineo was cultivating it in Palermo, as results [show] from the Catalogue published in precisely that year; in 1793 Zuccagni refers to it in Florence; in 1798 Durazzo had introduced it into his garden Dello Zerbino near Genoa; in 1801 Tilli mentions it in Pisa; in 1805 Graefer refers to it in Caserta; in 1807 Arduino introduced it to the Agricultural Gardens (*Orto Agrario*) of Padua; in 1811 Fabriani refers to it in Modena; in 1813 Tenora points it out in Naples, and the same may be said for other more recent reports. From this we see that, at the end of the 18th century, the soybean was already cultivated throughout Italy, not for agricultural but for scientific purposes, that is, in Botanical Gardens.

“Perhaps this information escaped those, like Pinolini,

who did research on the soybean as an agricultural plant because, in all works dealing with plants cultivated at that time, the soybean is found under the name of *Dolichos soja*, the generic name *Soja*, of Moench or Savi, not yet having been adopted.”

In 1918 a soybean cultural trial was conducted at the Colonial Garden, Palermo, on a plot of 350 square meters; smaller experiments had been conducted in previous years. A variety was chosen which had almost spherical seed and was greenish yellow in color. The seeds were planted on March 29, in furrows at a spacing of 30 x 40 cm.; they germinated regularly about 10 days later. The plants were hoed twice to reduce weeds and irrigated eight times from the end of May until the end of August. Flowering began in early July and the seed was harvested on Nov. 15. The entire vegetative period was, therefore, 7½ months. The plants reached an average height of 90 cm. Their growth was luxuriant and there was a normal development of nodules on the roots. From this plot of 350 square meters, 51 kg of clean seed was harvested; this corresponds to a yield of about 1,450 kg/ha, which is considered quite satisfactory and could be increased by manuring. The beans, when cooked in different ways, were found to have an agreeable taste.

Talk with Ted Hymowitz, soybean geneticist, Univ. of Illinois. 2003. Aug. 18. Caution! It is not clear whether the early dates for soybean in Italy this article are based on herbarium specimens or living plants. With herbarium specimens, it is easy to make errors.

Note 1. This document contains the earliest solid dates and the second earliest overall dates seen (Aug. 2003) for soybeans in Italy, or the cultivation of soybeans in Italy (1760). The source of these soybeans is unknown. Yet note that the earliest possible date that the soybean was cultivated in France was about 1740. Perhaps there was some connection between the earliest possible soybean cultivation in France and in Italy.

Note 2. This article was reprinted in the Nov. 1991 issue of *Il Giornale della Soia* (p. 11-16). Address: Royal Botanical Garden (R. [Regio] Orto Botanico), Palermo, Italy.

2333. Mitchell, Wesley C.; Goldsmith, Margaret I.; Middaugh, Florence K. 1919. History of prices during the war: International price comparisons. *War Industries Board, W.I.B. Price Bulletin (USA)* No. 2. xii + 395 p. See p. xii, 108, 379-81.

• **Summary:** This bulletin, “prepared in cooperation by the Department of Commerce and the War Industries Board, forms part of the History of Prices During the War [World War I, 1914-1918], planned by the latter agency” (p. 1).

A table titled “Commodities quoted for which no United States equivalents were found” (p. xii) includes the following from Japan: (1) Beans, Soja, Hokkaido, medium (p. 376). (2) Miso (sauce (soy bean, rice, water)), red, common (p. 378). (3) Soy (condiment, bean juice), Noda (p. 380).

A table titled “Wholesale prices in Japan, by months, quarters, and years, 1913-1918” in Yokohama, includes: (1) Beans, soja, Hokkaido, medium (p. 376-77, in yen per koku): Base price: 10.85. Increased from 10.5 in Jan. 1913 to 18.70 in Oct. 1918.

(2) Miso, red, common (sauce) (p. 378-79, in yen per kwan): Base price: 01.34. Increased from 0.38 in Jan. 1913 to 0.60 in Nov. 1918.

(3) Soy (condiment, bean juice), Noda (p. 380-81, in yen per koku): Base price: 18.25. Increased from 17.00 in Jan. 1913 to 44.00 in Oct. 1918.

The source of all these statistics from Japan was *Chamber of Commerce Journal, Yokohama* (p. 385, 390, 393). Address: War Industries Board.

2334. Murray, James A.H. comp. 1919. *The Oxford English dictionary: Soy and Soya*. Oxford, England: At the Clarendon Press. [30 ref]

• **Summary:** This magnificent work contains many early references concerning soy and soya in Vol. IX, Part 1, p. 494-95.

The 1,300 members of the English Philological Society were asked to read all the major English works before that time, to illustrate sources and changing definitions of words. Unpaid, they wrote citations on pieces of paper. In 1879 James Murray, an extraordinary philologist, was hired to edit these. He estimated they would fill 4 volumes, 6,400 pages, and take 10 years to compile. The 10 years actually became 49 years, and the 6,400 pages took 15,487, and the 4 volumes took $15 + 1 = 16$. Murray died in 1915. The formal title of the book is *New English dictionary on historical principles: Founded mainly on the materials collected by the Philological Society*. 10 vols. plus 2 vols. of supplements and bibliography. These 13 volumes were published between 1888 and 1933. In 1884 the first fascicle of the letter A was published. In 1928 the final section the dictionary (to the letter Z) appeared. The title “Oxford English Dictionary” first appeared in 1895 on the cover of the section containing *Deceit to Deject*—but not on the title page.

Sheehy in his fine *Guide to Reference Books* (1986) states: “The great dictionary of the language, compiled on a different plan from any of the other standard English dictionaries and serving a different purpose. It is based upon the application of the historical method to the life and use of words, and its purpose is to show the history of every word included from the date of its introduction into the language, giving differences in meaning, spelling, pronunciation, usage, etc. at different periods of the last 800 years, and supporting such information by numerous quotations from the works of more than 5,000 authors of all periods, including all writers before the 16th century and as many as possible of the important writers since then. The vocabulary is very full, and is intended to include all words now in use or known to have been in use since 1150, excluding only

words which had become obsolete by 1150... The complete work has a total vocabulary of 414,825 words and includes 1,827,306 quotations. The most important use of this dictionary is for historical information about a word...”

In 1957 Robert Birchfield was hired to add 4 new supplements, which were published in 1972-86, superlatively. Now the entire work will be put into compact disks and published electronically, being updated daily.

The fascinating story of the creation of this dictionary is told in the book “Caught in the Web of Words: James A.H. Murray and the *Oxford English Dictionary*” by Katharine Maud Elizabeth Murray (Yale Univ. Press, 1977, 386 p.). Address: England.

2335. Newland, H. Osman. 1919. *The planting, cultivation and expression of coconuts, kernels, cacao, and edible vegetable oils and seeds of commerce: A practical handbook for planters, financiers, scientists, and others*. London: Charles Griffin & Company, Ltd. 4 + 111 p. See p. 85-89. Illust. Index. 22 cm. Series: Griffin’s Technical Hand-Books.

• **Summary:** Chapter 6, titled “The soya bean, cotton seed, and sesame” contains basic information on soya beans (p. 85-89). The more than 200 varieties of Soya beans are distinguished by the color, size and shape of the seed, and by the number of days required for the plants to reach maturity. These varieties can be grouped by color into six groups: yellow, greenish-yellow, black, brown, green, and white. One of the yellow varieties, the Southern [also called Mammoth, or Mammoth Yellow], has given very good results in South Africa (in Natal and in the Northern Transvaal). The white variety grows abundantly in Darjeeling, the Himalaya mountains, and in India, where it is known as *Glycine Soja-Bhat*. The black variety is used by the Chinese and Japanese to make the popular condiment called *Shoja* [sic, shoyu] or soy sauce, which is darkish brown in color and is imported in large amounts to Europe for use in making various sauces.

Note: This is the earliest (and only) English-language document seen (April 2012) that uses the term “Shoja” (incorrectly) to refer to shoyu or soy sauce.

Tables show: (1) The average composition of the seed of the six varieties of soya beans. (2) The composition of soybean cake and soybean meal.

An appendix (p. 107) lists “Companies and associations interested in edible oils and cacao.” Most are located in England, and all in Europe. The city, and sometimes the full address, is given for each organization. For example: African Association, Liverpool. African Oil Mills, Liverpool. British West African Association, 68 Coleman St., London, E.C. Cadbury Bros., Bourneville, Birmingham. Lever Bros., Port-Sunlight. Note: The ground nut is also mentioned. Address: Captain, London.

2336. Rouest, Leon. 1919. *Étude sur le soja* [Studies on the soybean]. *Genie Rural (Le)* 11(99-100):23-26. (New Series

Nos. 39-40). Continued: See Rouest 1920. [Fre]

• **Summary:** Gives a brief overview of the history of soya in Europe and France, including Li Yu-ying, Dr. Bloch, the Soyanna [sic, Soyama] Werke near Bockenheim, Messrs. Paillieux, Sagot, Raoul, and Jumelle, and the various soyfoods from China and Japan that they describe (Miso, shoyu {*Shoyua*}, tofu {*Tofou*}, dried frozen tofu {*Kouri Tofou*}, yuba {*Uba*}), and the potential threat of soya to the French cheese industry. “Finally in 1910-11 numerous soy products were presented at the expositions in Brussels [Belgium], Turin [France], and Dresden [Germany].”

Describes work on the *Ferme Expérimentale de Néoculture du Sud-Est*, at Villardonnell, Aude. Mr. Semichon, Director of the wine station at Aude, sent this experimental farm some soybean seeds which he received from the USDA accompanied by a bulletin written by William Morse (probably “The soy bean: Its culture and uses,” 1918). Rouest translates the Bulletin into French. The most important varieties mentioned are: Mammoth, Hollybrook, Ito San, Guelph, Haberlandt, Medium Yellow, Wilson, Peking, Tokio, Manchu, Black Eyebrow, Barchet.

Rouest was born on 11 Nov. 1872 in Paris; he died on 27 Feb. 1938 in Chartres, France. Illustrations (line drawings, both non-original) show: (1) *Soja hispida* plant, with close-up of a cluster of pods. (2) *Soja Hato* soybean plant. Address: Director, *Ferme Expérimentale de Néoculture du Sud-Est*, at Villardonnell (Aude), France.

2337. Smith, Joseph Russell. 1919. The world's food resources. New York, NY: Henry Holt and Company. 634 p. See pages 326-27, 360-65. [1 ref]

• **Summary:** Contains a brief overview of the soybean, soybean production, and soybeans as a food product, with several long excerpts from Dr. J.H. Kellogg, and the *USDA Year Book of Agriculture* (about food uses, including shoyu or soy sauce).

A photo shows “Soy bean curds and cheeses in a Japanese factory,” in large earthenware containers (p. 362). Note: This photo of “curds and cheeses,” taken by Frank N. Meyer, shows the production of fermented tofu, probably in a Chinese factory (See: {1} Morse 1918. “The Soy-bean Industry in the United States.” Plate IV, fig. 2; {2} Piper & Morse. 1923. *The Soybean*. p. 242).

Concerning use of food resources, in the USA and Canada, the chief goal of agriculture is not to feed humans but to feed animals. This was true even in the food crisis of 1918 [at the end of World War I]. About 5,191 million bushels of grain are now grown in the USA; in descending order of importance (in million bushels) they are corn (2,863), oats (1,422), wheat (643), barley (195), rye (54), and buckwheat (14). Of this total of 5,191 million, the American people eat less than 550 million (14.1%). Adding the 340 million bu exported, the total amount used for human food was 900 million bu (17.3%). “The rest, 4,300 million, went

to our four-footed brethren, who outnumber us and whose food requirements, because of their greater size, are several times our own.

“In addition to the grain, they get all of the 85,360,000 tons of hay grown on 54,618,500 acres. (More than ten per cent of the half billion acres under cultivation in the United States). They also roam over millions of acres eating all the grass. It is therefore plain that more than four-fifths [80%] of the produce of American agriculture, even in 1918 [a war year], went to feed beasts.” Address: Prof. of Geography, Columbia Univ., New York.

2338. Young, W.A. 1919. The silver and Sheffield plate collector: A guide to English domestic metal work in old silver and old Sheffield plate. London: Herbert Jenkins Ltd. 320 p. Illust. (32 plates). Index. 20 cm. The collectors' series. Reprinted in 2006. [11 ref]

• **Summary:** A photo (plate No. 12, p. 160) shows: “An Old Sheffield Plate Soy Frame; four crystal cut bottles and stoppers in silver mounts and with handles on a long octagonal base, gadroon mounts; fine thread rings for bottles. Makers, Nathaniel Smith & Co., of Sheffield [England]. Date, *circa* 1790. Mr. F. Bradbury.”

The section titled “Cruets (Silver and Old Sheffield Plate)” (p. 161-64) notes that the earliest known existing silver cruet frame dates from 1713 (the time of Queen Anne) and the earliest known cruet from 1736. “There are two distinct types—the canoe or boat shape with end handles, and the frame with its central lifting handle and the cut-out plate fastened thereto for the purpose of separating and supporting the bottles.”

“The number of bottles was often eight and occasionally ten, the condiments including white and black pepper, oil, vinegar, cayenne, soy—a sauce—and one or more special flavourings.” Small frames with three or four bottles are also met with. “Small soy frames (*q.v.*) really form part of this [three bottle] group.

The section titled “Soy frames (Silver and Old Sheffield Plate)” (p. 236-37) begins: “Soy was a sauce introduced into Europe from China at the end of the sixteenth century. It was prepared from a small bean, and is first mentioned in English literature of the culinary arts in Mrs. Glass's [sic, Glasse's] ‘Book of Cookery,’ published in several editions between the years 1747 and 1796. The sauce came to be placed on the table in glass cruets, the necks of which were mounted with lipped collars of silver. Usually two were set in a frame which was quite commonly boat-shaped with end handles. In process of years cruet frames for four or more sauce bottles became known by the term soy frames, and that was particularly the case with Old Sheffield Plate, in which metal are some exceedingly dainty examples with miniature bottles, each in its own ring mounted on footed tray.

“Soy Frames (Silver).

“1784. A boat-shaped soy frame, beaded edge, four

divisions, cut glass bottles and stoppers. Maker, Thomas Daniell; weight 7 oz. 9 dwt., [pennyweight] at per ounce 40s.

1789. A similar one but with eight bottles, including a mustard with its ladle; weight 27 oz. 13 dwt., at per ounce 13s. 6d.

Late 18th century. A soy cruet, boat shaped, bead edge with centre pedestal, for an engraved pierced muffineer; on each side a cut glass cruet with a handle and lip mount of silver. Sold 'at all' for £8.

"Soy Frames (Old Sheffield Plate).

"B.S. A soy frame with two bottles; four fluted feet, the bottles mounted with handles and lids. Sold at 50s.

Note 1. We know of no evidence that soy sauce was introduced to Europe as early as the end of the 16th century = late 1500s. The earliest dates we have seen are in the late 1600s.

Note 2. A "muffineer" can be either (1) a shaker for sifting sugar on muffins, or (2) a covered dish for keeping muffins hot.

2339. Noda Shoyu. K.K. 1919? Noda Shôyu Jôzô Kumiai-shi [History of the Noda Shoyu Brewers Association]. Noda, Japan. 350 p. Undated. Handwritten unpublished manuscript. A translation of pages 5-15, Rules and Regulations of the Noda Shoyu Brewers' Association is given in W.M. Fruin, 1983, p. 309-312. [Jap]*

• **Summary:** In the 1870s a group of soy sauce manufacturers in Noda formed a cartel named Noda Shoyu Brewers' Association. In 1917 some of them formed a new company Noda Shoyu K.K., which later became Kikkoman. In about 1919 it was decided to write a history of the former association. This key early document is widely cited by Mark Fruin in his 1983 history of Kikkoman, as follows: Anonymous, Noda Shoyu Kumiaishi (n.p., 1919?).

Talk with Mark Fruin. 1991. Oct. 22. The chapters on the clan and carter business in his book on Kikkoman are largely from this rare, old, valuable manuscript. Copies of this manuscript exist at the Kikkoman archives at Noda, and with Mark Fruin in Palo Alto, California. Address: Noda, Japan.

2340. Okazaki Co. (Okazaki Shokai). 1920. General importer and exporter (Ad). In: Nichibei Shinbun-sha. 1920. *Japanese-American Directory (Nichibei Jushoroku)*. Page 57. [Jap; eng]

• **Summary:** Ad (¼ page). The top 1/5 of this ad is in English. The company specializes in selling rice, miso, shoyu, tea, canned goods, etc. Address: 545 Grant St., San Francisco, California. Phone: Douglas 1656.

2341. Sato, H. 1920. Jôzô enkaku-shi [Chronology of brewing in Japan]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 209. p. 61-107. Jan. 5; No. 210. p. 119-42. Feb. 2; No. 211. p. 189-208. March 5; No.

214. p. 469-82. June 5. [Jap]

Address: Nôgaku-shi, Japan.

2342. Itano, Arao. 1920. Re: Comments on the first batch of shoyu made by Margaret Church. Letters to Miss M.B. Church at Bureau of Chemistry, Washington, DC, Jan. 24 and Feb. 4. 1 p. Typed, with signature. [Eng]

• **Summary:** "I received your letter of Jan. 16th and also a bottle of 'Shoyu.'" He and his wife "both agree in stating that your Shoyu is very good for the first attempt... (1) It tastes like the Shoyu which is often found in the country [countryside] in Japan. (2) It lacks the ester which gives the fine flavor. (3) The flavor of Moromi is prominent. This and (2) may be due to the young age... I should be very much obliged to you if you would kindly send me your culture of *Aspergillus oryzae* at your convenience."

Miss Church sends him the desired culture and asks several questions concerning his opinions of her shoyu. He answers (Feb. 4) that she has generally interpreted his comments in his first letter correctly. Her Moromi had an immature flavor. "The common rule that the quality of fermented products improves with age, holds true with Shoyu." Address: Dep. of Microbiology, Massachusetts Agricultural College, Amherst, MA.

2343. Parry, Charles A. 1920. Travel sketches, LXXXIII—Bean that made Manchuria famous: A factory at Shimizu—The bean of many qualities. *Japan Advertiser (Tokyo)*. Jan. 25. p. 7. [Eng]

• **Summary:** Contents: Introduction. Sweet and nasty. "Not now." The tea port. History of a bean. Substitutes. Big business. Japanese place names. On 26 Nov. 1919 the author traveled by train from Tokyo to the port city of Shimizu, on Suruga Bay, in Shizuoka prefecture (about 90 miles southwest of Tokyo). "Shimizu is one of the 36 treaty ports, and it was opened along with now fewer than 26 others, in 1899. The name means 'clear water'... My chief object in coming to Shimizu is to visit the Suzuki Company's Bean Oil Factory, for which I have obtained permission by courtesy of the Japan Tourist Bureau. This consists of several large buildings, erected three years ago, including a central office and two mills which being built in a castellated Gothic style, make a picturesque adjunct to the scenery as they rise by the calm waters of Shimizu Bay. The mills deal at present with two only of the many products of the wonderful manchurian [sic] or soy bean, called in Japanese daizu (glycerine [sic, Glycine] hispida) the crushed bean and the oil." The two mills are capable of treating 300 tons of beans per day. The process is secret. "I am informed that factories for the extraction of this oil exist only in Japan and Manchuria; but the Suzuki Co. has a branch office in New York, and the business is rapidly extending."

"The oil is used for frying, for lubricating, for waterproofing clothes, for medicine, as a butter substitute, and in

the manufacture of soap, candles, guncotton, and artificial rubber; though it can hardly yet be said to be on the market.” For culinary purposes it is not as good as the ordinarily used goma (sesame) oil, being much lighter and requiring the use of a deep saucepan. Yet it costs only about 62% as much as sesame oil; the latter costs ¥1.60 per sho (1.58 quarts).

“At present its chief use is for making soap, for which it is taken at a less refined stage, of a dark brown color while the finished product is light yellow. The oil is at present little used in Japan because little known; its retail sale seems to be limited to the neighborhood of the factories. Of these there are three, the two others being at Yokohama and Kobe, both established only last year.

“One large shed is devoted to storing the crushed beans (*kasu*) after the oil has been extracted, large piles of which lie about... The chief use of this at present is for cattle-food; but it is now to be manufactured into flour, useful for mixing in various proportions with wheat flour.”

“The daizu [soy] bean has long been known in Japanese cookery in the form of ‘kiriako’ [sic, kinako] (‘yellow powder’) to make which the entire bean is slightly roasted and pulverized; then used for mixing with flour to make light cakes, for giving savor to boiled rice, etc. The prices are not yet determined, the cost of manufacture not being known; but it will be cheaper than flour, as well as more nutritious, and will help to relieve the scarcity of rice.

“Substitutes: Other products of the bean are: tofu, the white bean-curd, used universally in Japan and, until recently, almost absurdly cheap; also used in the forms of age-dofu (fried in cottonseed oil), yake-dofu (baked) [yaki-dofu (grilled)], and the curious gori-dofu [kori-dofu], ‘frozen tofu,’ also called koya-dofu (from koya-san) tofu sprinkled with hot water, frozen, dried, and cut into small cakes; miso, the cheap condiment made of daizu beans fermented with yeast and barley; and soy, Japan’s only sauce. A later addition to the list has been to-nyu, or tofu-milk [sic, “bean milk], a very passable substitute for cow’s milk at half the price; and still more recently tofu-butter. The whole bean, parched and boiled, is an excellent coffee-substitute, yielding when parched just to the right degree, much of the aroma of that fascinating drink without any of its deleterious effects.”

“The present demand for bean cake in Japan is met by the three factories of the Suzuki Co. that at Shimizu supplying central Japan, Yokohama Northern and Kobe Southern.

“There are several varieties of the bean known as white, yellow green and black, the first two being the most used. The plant is as yet little grown in Korea and Japan.

“Big Business: The Shimizu factory, which is the largest of the three, employs about 300 workpeople on day and night shifts. This new bean-industry is, however, only the latest among many activities of the Suzuki Co. which ranks among the great industrial concerns of the world, the third largest in Japan, standing next to the Mitsui and the

Mitsubishi, and employing a total of over 3,000 clerks and 100,000 workpeople. It deals also in rice, wheat flour, sugar, sake-brewing, coal, timber, metals, camphor, wool, cloth and manure besides numerous small lines. It has three dockyards, at Harima, Toba and another; a coal-mine in Kyushu; copper mines at Hibi (Okayamaken) Hiroshima (Yamaguchiken) and Dairi (Fukuoka ken) also mines of zinc and iron; while its steel works (*seikojo*) at Kobe are the largest in Japan.”

“Shimizu is well situated for growth being midway between the ports of Yokohama and Yokkaichi and serving a prosperous hinterland. Its chief exports are tea and oranges and its imports coal and timber.” Address: Japan.

2344. *Times of India (The) (Bombay)*. 1920. Import manifests [at Bombay harbour]. Jan. 26. p. 7.

• **Summary:** “S.S. Totomi Maru, from Yokkaichi [in today’s Mie Prefecture, central Japan], via Colombo [Ceylon], Agents: N.Y. Kaisha.—2,524 cases safety matches,... 7 cases pencil, 10 casks and 1 case Japanese soy [sauce], 21 cases perfumery,...”

2345. *Boston Daily Globe*. 1920. Household department. Jan. 31. p. 8.

• **Summary:** “Pepper steak: Dear Nellie—Am glad you enjoyed the Yockomay chicken chop suey I sent in some time ago... Am sending you another Chinese dish called pepper steak.” The recipe is given. “... add 1 tablespoon of soy sauce and let stand covered a couple of minutes on back of stove; then serve with Chinese cooked rice... Little Sunshine.”

2346. Oriental Show-You Co. 1920. Display ad: Have you tried it? *Chicago Daily Tribune*. Feb. 8. p. F3.

• **Summary:** This large vertical ad (see next page) shows a Japanese Geisha-like woman, with elaborate kimono and hairdo, holding a tray on which are a bowl of steaming soup or rice and a bottle of Oriental Show-You [soy sauce]. Over her head is a Japanese lantern and dark foliage.

“Oriental Show-You, now gaining wide American popularity, is an Oriental spicely relishing condiment. It imparts a very pleasing flavor to meats—hot or cold—fish, gravy and salads, enriching home cooking with a refreshing appetite appeal.”

“Recipe booklet free: Oriental delicacies—14-page booklet of useful recipes...” One bottle of Oriental Show-You at your grocer’s costs 35¢.

2347. Oriental Show-You Co. 1920. Display ad: Genuine Chop suey recipe. *Chicago Daily Tribune*. Feb. 10. p. 14.

• **Summary:** This large vertical ad shows a Japanese Geisha-like woman, with elaborate kimono and hairdo, pouring soy sauce from a bottle into a steaming dish on a table. To her left, an illustration shows a large bottle of Oriental Show-You. The recipe contains only the ingredients, not the process! “Our recipe booklet fully explains how to combine

Oriental Show-You

Have You Tried It?

ORIENTAL SHOW-YOU, now gaining wide American popularity, is an Oriental spicy relishing condiment. It imparts a very pleasing flavor to meats—hot or cold—fish, gravy and salads, enriching home cooking with a refreshing appetite-appeal.

Delicious Oriental Sauce

WITH MEATS—Broil meats over a hot fire. A few minutes before done baste a few times with ORIENTAL SHOW-YOU SAUCE. This will preserve the sweetness, intensify flavor and bring out the color of the meat.

Recipe Booklet Free

ORIENTAL DELICACIES—14-page booklet of useful recipes for tasteful and inexpensive Oriental dishes, including recipe for genuine CHOP-SUEY, free from your grocer TODAY.

Observe the full name and spelling to avoid imitations.”

2352. Adolph, W.H.; Kiang, P.C. 1920. The nutritive value of soy bean products. *National Medical J. of China (Shanghai)* 6(1):40-49. March. [15 ref. Eng]

• **Summary:** “One of the problems of science has been the search for a perfect food. Though eggs and milk are presently considered to be “perfect foods,” the authors believe that

the soy bean should also be considered. “The recent world shortage of food, and the demand for foods which are high in nutritive value has turned the attention of dietitians to the possibilities of the soy bean.” It is a distinctly well-balanced food.

“During the last few years, the soy bean has found application in the West in the infant dietary, frequently with an admixture of some cereal for additional carbohydrate (Ruhräh 1915), and in summer diarrhea (Sinclair 1916). It is one of the recognized diabetic foods. One of the most satisfactory forms of artificial milk is made from soy beans. The bread used by the French army in the recent war was made essentially from soy bean flour.”

“Soy bean products in China: History—The use of the soy bean in China dates back to the beginning of China’s agricultural age under the emperor Shen Nung. It is mentioned in the *Ben Tsao Gang Mu* [*Bencao gangmu*] written by Shen Nung in the year 2838 B.C.”

Note 1. This is the second earliest English-language seen (Aug. 2002) that treats Shen Nung as a real, historical figure, or that says the first written record of the soybean appears in a book written by him. The *Bencao Gangmu* (The great pharmacopoeia) was actually written by Li Shizhen in +1596.

“Tradition says that the manufacture of soy bean curd [tofu] originated in China in 164 B.C. during the reign of Han Wen Di, by a man named Liu An, the duke of Hwai Nan [Huai Nan]. The colloquial name for soy bean curd is *Do Fu*, and the classical name, *Li Chi*, probably meaning ‘the morning prayer.’ Its exact derivation, however, could not be traced. It is interesting to note that in China, at the present day the bean curd is made in the early hours of morning, and sold at daybreak.”

“Liu An was a great friend of the Buddhist monks, and it is quite probable that he invented this bean curd in order to provide a change or a delicacy to break the monotony of the monastic ration. As a matter of fact, the bean curd is a real delicacy if carefully made and well cooked. Chinese who are connoisseurs on the subject assert that when so prepared it has the taste of pig’s brain. The foreigners eating Chinese food often eat carefully prepared bean curd thinking it pork. With sugar it produces a dish like custard. Prepared with salt it resembles scrambled eggs.”

“Application—The Chinese people make practically no use of dairy products, and the bulk of the people consume only very meager amounts of meat. Yet in spite of this they have lived for centuries on what appears to be a remarkably well-balanced diet by use of the soy bean.”

“A number of interesting examples are found in China of the use of bean products as an agent for growth. One of us has observed in Anking that dealers in birds employ bean curd as the sole food for infant birds. The birds are robbed away from their nests immediately after they are hatched, and are then fed bean curd to tide over the infantile period till

able to feed themselves. Possibly more interesting is the case of the true Buddhist monk who from birth is consecrated to the priesthood, and is carried through the period of childhood growth on a rather heavy diet of bean curd. The apparently normal growth of these monks would seem to be paralleled by the experiments of Osborne and Mendel (1917) on the promotion of growth in rats by both the water-soluble and fat-soluble vitamins contained in the soy bean. The country monastic diet is noted for its high content of soy bean products.”

“The Chinese coolie... in spite of the scanty intake of meat and the constant exposure to overwhelming sources of infection, still does possess a wonderful resistance. The diet of the average coolie contains a surprisingly large amount of beans and bean products.”

“A common saying in some parts of China terms *bean milk the poor man's milk*, and *bean curd the poor man's meat*... It is commonly stated that a meat diet is characteristic of the most aggressive peoples of the world. Has the protein of the soy bean replaced meat in the Orient?

“Bean milk is another bean product which is in composition not far different from cow's milk. In many places in China bean milk is a food drink. It is usually drunk sweetened with sugar. Western countries employ a number of patented methods for removing the ‘beany taste’ objectionable from the point of view of the Western consumer.”

“It would be almost impossible to make a complete list of all the products manufactured from the soy bean in China. The best known and most important are the bean milk, bean curd, bean sauce (soy), and bean oil. In addition to this are the different forms of bean curd preparations, bean sprouts, and a large variety of sauces and condiments into which the soy bean enters as one of the constituents.”

Details are then given on bean milk and bean curd. In making bean milk, the “bean residue [okara] which does not pass through the sieve is used as feed for hogs. On coagulation of this solution the soy bean curd (tofu), often called Chinese cheese, separates. As far as is known to the authors there are at present four agents employed in China to effect this coagulation. These are: (1) *lu*, the residue from the crystallization of salt, (2) gypsum; (3) *swan giang*, the soured bean milk whey remaining from the previous coagulation of bean curd; and (4) vinegar.”

Table 1 gives the average chemical composition of the yellow soybean [*huangdou*] common throughout Shantung. Table 2 gives the chemical composition of two samples of soy bean curd purchased on the streets of Tsinan and made with *lu* [nigari] as a coagulating agent: The composition of the first sample is: protein 10.22%, fat 3.66%, water 80.90%, ash 1.09%, nitrogen-free extract 4.13%. This composition is compared with that of cottage cheese. Table 3 compares analyses of the ash of soy bean curd with that of soy bean. When it is made by coagulating soybean milk with bittern

(from sea salt) the curd is rich in all the inorganic essentials (especially calcium, sodium, and chlorine) missing from the soy bean itself. The authors suggest that some of the racial characteristics of the Japanese people can be traced to their dependence largely on vegetable protein.

Table 4 gives analyses of 2 samples each of [soy] bean milk, cow's milk, bean milk whey, and bean residue [okara]. The chemical composition of the first sample of bean milk is: protein 4.22%, fat 1.87%, ash 0.40%.

Note 2. This is the second earliest document seen that mentions Liu An of Huai Nan in connection with tofu.

Note 3. This is the earliest English-language document seen which states that *Li Chi* was an early or classical name of tofu.

Note 4. This is also the earliest English-language document seen (Feb. 2004) that uses the term “Chinese cheese” or the term “poor man's meat” to refer to tofu. Address: Lab. of Chemistry, Shantung Christian Univ., Tsinan, China.

2353. Kinoshita, Asakichi. 1920. *Shôyu kabi-dome ni kansuru shiken* [Studies on the prevention of mold in shoyu]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 81. p 797-827. March. [Jap]
Address: Jozo Shikensho. 1. Gishi; 2. Moto Kenshuin.

2354. Fellers, Carl R. 1920. Re: Mr. Jun, a Chinese living in America, has stopped making soy sauce. Letter to Dr. Charles Thom, Bureau of Chemistry, USDA, Washington, DC, April 5. 1 p. Typed, without signature.

• **Summary:** “Mr. Jun, a Chinese, had discontinued the manufacture of soy sauce for some months, although he operated his factory for nearly two years previous to this date. The reason he discontinued his business was the high cost of labor in this country as compared to the cheapness of same in China and Japan where most of the soy sauce is made. He told me that it could be imported to this country much cheaper than he could make it. Mr. Jun told me that in two years during which he manufactured soy sauce he made about 50 to 80 thousand pounds of the sauce, and made from this a clear profit of between five and six thousand dollars. He sold the sauce at the rate of fifteen dollars per hundred pounds.”

Note: It is not clear where Mr. Jun's soy sauce factory was located. It may have been in San Francisco, since that is the city from which Fellers is writing. Address: Bacteriologist, Bureau of Chemistry, USDA, San Francisco, California.

2355. Church, Margaret B. 1920. Re: Request for information on and samples of fermented foods in China. Summary of research on these foods in the USA. Letter to Dr. Y.S. Djang, Chichi Industrial Inst., Tientsin, China, April 6. 2 p. Typed, without signature (carbon copy).

• **Summary:** Church was given Dr. Djang's name by Carl Fellers, who is presently a member of her Bureau and stationed in San Francisco, California. "We are studying in this office food products produced from soy beans by controlled fermentation processes, and also red rice (angkak). As it happens we have studied the Japanese process of making soy sauce most specifically." Church requests samples of Chinese soy sauce not found on the U.S. market, "or sauce flavored with decoctions of such things as Perilla or Ceirela... We are interested in knowing to what extent sweetening such as molasses, caramel or sugar is used in Chinese soy sauce. Is the practice of sweetening soy sauce local, or confined to broad areas as southern China and not Central China?"

Note: This is the earliest document seen (April 1912) that contains the term "Chinese soy sauce."

"At times we have attempted to make fermented bean cheese. It would be of value to us if you could send us one or more of those little to-fu cheeses as they might be secured in the middle of the process, when they are covered with an inch or so of white mold..." Address: Microanalyst [Biological Laboratory, Bureau of Chemistry, USDA, Washington, DC].

2356. Chung, H.H. 1920. Re: Offer to gather information about fermented soy products in China for Margaret Church. Letter to Miss Margaret B. Church, Biological Laboratory, Bureau of Chemistry, USDA, Washington, DC, April 27. 1 p. Handwritten. [Eng]

• **Summary:** Chung plans to return home this coming July; his address will be Nan Kai College, Tientsin, Chihli province, China. "I shall be very glad to do my best for you in gathering information about the fermented food products of my country and securing samples of the same, whenever possible, after I have arrived at home. At present I have nothing to add to what I already told you about the making of soy sauce. The people in my province (Kiangsi) also make cheese out of tofu as you described, and we usually dye it with the powder of a kind of seeds which I think are those of *Bixa Orellana* L. [annatto]. I have never examined the mold with a microscope, so I cannot say what mold is used here. Yours truly..."

Note: At the top of the letter Miss Church has written "Chinese cheese." Address: 120A Conant Hall, Cambridge 38, Massachusetts.

2357. *Bulletin Mensuel des Renseignements Agricoles et des Maladies des Plantes (Rome)*. 1920. Fabrication de la sauce de soya dans le Kwantung, Chine [Manufacture of soy sauce in Kwantung, China (Abstract)]. 11(5):749-50. May. [1 ref. Fre]

• **Summary:** A French-language summary of the following English-language article: Groff, Elizabeth H. 1919. "Soy-sauce manufacturing in Kwantung, China." *Philippine J. of*

Science 15(3):307-16. Sept.

2358. Nishimura, Torazô; Kinoshita, A.; Kawakami, T.; Oikata, R. 1920. Mamekasu oyobi Sakuramame shiyô shiken seiseki hôkoku. I. Sakuramame oyobi mamekasu shiyô shiken [Shoyu brewing with soybean cake and Sakuramame]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 80. p. 739-95. May. [Jap]

• **Summary:** Sakuramame is a type of defatted soybean meal specially developed for use in making shoyu. Address: Jozo Shikensho. 1. Gishi; 2. Gishi; 3. Gishu; 4. Ko (Yatotta = Hired).

2359. *Japan Advertiser*. 1920. Tokyo a city of many kinds of specialty restaurants: All sorts of food can be found at all sorts of prices if one knows where to go. No. 9,307. Aug. 22. p. 5, cols. 1-3. Sunday. [Eng]

• **Summary:** This introduction to the many types of restaurants in Tokyo mentions various soyfoods. Better class houses serve beef. The centerpiece is the "nabe"—the iron skillet in which the food is cooked. The cooking is done by the customer, no skill being required as the secret of good 'nabe' is in the tenderness of the meat and in the sauce which is prepared by the house. Onions, either Bermuda or the long leek variety, tofu, konnyaku (a stringy preparation made out of a root), and sometimes cabbage leaf are the usual ingredients which are put in the nabe along with the thin slices of meat. Sake can be had if ordered. A reasonable meal at a beef house now costs about ¥1.50, although the nabe alone is probably listed at only 60 or 70 sen.

"Another name by which this dish is usually known outside of Tokyo, is sukiyaki. This is derived from *suki*, which means a spade, and *yaki*, to cook. The reason for this unusual derivation is that when meat we first introduced into Japan as food for humans, there was a very great prejudice against it. Those who wished to indulge in this 'unclean' food were forced to go into the mountains, far from any habitation and conveniences, and they made use of the farmer's broad spade on which to cook the meat. Another reason, aside from the fact that Buddhism preached abstinence from the flesh of animals, that the Japanese did not look with favor upon meat as a food was the flesh has always been eaten by the Eta, or the outcast class of the country."

"In contradistinction to meat, eels have always been looked upon as a delicacy. Eel restaurants are numerous in Tokyo, but they are not cheap... The customer is served in private rooms at these eel houses... Eels are considered very nutritious and are eaten by all classes. It is a favorite dish with coolies when they have the price... The first 'ox' day of the summer doyo, or period of greatest heat, is set aside as a special day to eat eels.

"There is not much choice in the way in which eels are prepared. Kaba-yaki is the name of one style. The bones are all removed, the eel is laid out flat and broiled over a

charcoal fire with a special shoyu sauce and served on a big flat plate. Rice is also served..." One serving typically costs 1-3 yen.

"A very cheap kind of food, yet one whose 'social standing' is as good as any, is soba or udon... Cold soba is known as mori, and is eaten by being dipped into shoyu sauce and is flavored with sea-weed." "Tempura soba is served in a bowl with a piece of tempura placed on top. This is a very nutritious dish. Soba is served in the same way with onions or a piece of abura-age or fried tofu and is known as okame soba."

"A typical Japanese restaurant where a table d'hôte is served is known as a kaiseki restaurant." One popular dish is "onuko, or fish mixed with miso and flavored with vinegar."

In Tokyo, pork "is eaten more than any other kind of meat, but as it is the cheapest it is found only in the poorest restaurants." Surprisingly large quantities of horse-meat are consumed at cheap restaurants. Tempura, which is very popular, "means a certain way of cooking—namely, dipping in this wheat-flour batter and frying in deep oil, usually goma-abura, or sesame oil, although almost any vegetable oil can be used." Also discusses sushi. Rice comes at the end of the meal. Sake is not supposed to be drunk after rice is consumed, as it produces indigestion. Address: Tokyo.

2360. Rindl, M. 1920. Vegetable fats and oils. IV-V. Semi-drying oils. Soy bean. *South African J. of Industry* 3(6):518-31. June; 3(8):742-49. Aug. [29 ref]

• **Summary:** These are 2 installments of a series of articles on vegetable fats and oils, forming a Report to the Advisory Board of Industry and Science on Vegetable Oils, Fats, and Waxes. Soybeans are considered among the semi-drying oils. Contents of Part I: Introduction. Early [soybean] experiments in South Africa. Botanical characters. Varieties. Germination. Inoculation. Technique of inoculation. Soy beans as a rotation crop for maize. Comparison of soy beans and cowpeas. Storage of seed. The soy bean as human food. Vitamines. Soy-bean [food] preparations: Soy-bean milk, soy-bean curd [tofu], the soy bean as a vegetable (baked, boiled, roasted, green beans [green vegetable soybeans], soy-bean pulp (kara)). Soy-bean meal [soy flour and its uses]. Fermented soy-bean products: Fermented boiled beans (natto), ripened vegetable cheese (miso), the Chinese paste chiang, soy-bean sauce (shoyu).

Contents of Part II: Oil content of seed produced in South Africa. Quality of oil from South African beans. Extraction of oils. Nature and composition of soy-bean oil, and methods of treatment. Uses of the oil. Soy beans as forage. Enemies of the soy bean. Method of shipment from the East.

"The first systematic trials [with soy beans] were initiated about 1903 at Skinner's Court, on the Springbok Flats, and at the Natal Experiment Farms, Cedara, Weenen, and Winkle Spruit. These latter were continued until the

season 1910-1911 when the field trials referred to above [by the Transvaal and Natal Departments of Agriculture] were carried out by the Department of Agriculture in conjunction with Messrs. Lever Bros. and a large number of farmers" (p. 519).

The best yields during the 1910-11 season at the three Natal Experiment Farms were: At Cedara: Haberlandt 2,000 lb/acre. Winkle Spruit: Mammoth Yellow 1,191 lb/acre. Weenen: Mammoth Yellow 1,400 lb/acre.

"Method of shipment from the East. The beans are shipped in bags, vessels are well dunnaged, and a large number of wooden pipe ventilators are placed in the ships' holds to keep the cargo from getting heated. The beans, on a long voyage from Eastern Asia to Europe, being liable to sweat, are sometimes dried before shipment."

Tables show experimental yields and chemical compositions of soy beans from different countries and soy-related products. A diagram (outline-form) shows the various ways in which plants and seeds of soy beans are utilized. Note: This is the earliest English-language document seen (Feb. 24) that uses the term "soy-bean curd" to refer to tofu. Address: Ing. D., Prof. of Chemistry, Grey University College, Bloemfontein [Orange Free State, South Africa].

2361. *Boston Daily Globe*. 1920. Flesh of snapping turtle makes very delicious soup. Sept. 26. p. 61.

• **Summary:** Snapping turtles are found in almost every lake and pond in New England. Yet most New England housewives have yet to learn of their food value and delicate flavor. To steamed turtle, "add black sauce (the soy-bean sauce to be found in Chinese restaurants) or Worcestershire sauce."

2362. Segawa, Rinjiro. 1920. [Estimation of total solid substance in soy-sauce by means of specific gravity]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 465. p. 940-73. Nov. (Chem. Abst. 15:1360). [Jap]

2363. **Product Name:** Soy sauce.

Manufacturer's Name: Hawn Soy Co. (A. Kanayama).

Manufacturer's Address: 1136 Pua Lane, Honolulu, Oahu, Hawaii.

Date of Introduction: 1920.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1920. p. 448. Kanayama, A. soymkr [soy maker], Hawn Soy Co. Residence, 1136 Pua Lane. Note: This entry was found completely by chance. There is no Hawn listed in the 1920 directory, and the names Kanayama or Hawn do not appear in the 1919 directory. They are also not in either year's business index under "Soy."

• **Summary:** A booklet of recipes advertising Lea & Perrins' Worcestershire Sauce. Copyright 1920 by John Duncan & Sons, Ltd., New York, NY. Contents: 1. The new dinner appetizer. Dishes improved with Lea & Perrins' Sauce on the table. Dressings and gravies. 2. How to improve dressings and gravies with Lea & Perrins' Sauce. Different kinds of dressings. How and when to season dressings with Lea & Perrins' Sauce. Brown dressings. White dressings. Drawn butter dressings. Miscellaneous dressings. 3. Chowders and soups. Garnishings for soup. 4. Croquettes, timbales, casseroles, stews and other meat dishes. Timbales. Stews and casserole dishes. 5. Eggs, omelets, souffles, Creole and rice dishes. Omelets and souffles. Creole and rice dishes. 6. Chafing dish suppers. 7. Sandwich fillings. Cheese sandwich fillings. Egg sandwich fillings. Meat sandwich fillings. Fish sandwich fillings. 8. Salad dressings. 9. Catsups, chutneys, pickles and home-made relishes.

On the cover a large color photo shows a bottle of Lea & Perrins' Worcestershire Sauce. Address: 241 West St., New York, NY.

2367. Noorden, Carl von; Salomon, Hugo. 1920. Handbuch der Ernährungslehre. Erster Band. Allgemeine Diätetik [Handbook of nutritional education. Vol. I. General dietetics]. Berlin: Verlag von Julius Springer. xxxiii+ 1237 p. [100+* ref. Ger]

• **Summary:** The section titled "Vegetable Milk and Cream" (p. 311-14) notes that the authors have had extended experience with soybean milk and soy flour made by Frankfurter Soyama-Werken in various forms. For each product the percentage protein, fat, carbohydrates, ash, and calories per 100 gm is given, based on analyses of Dr. G. Popp in Frankfurt: Soyama Flour (*Soyamamehl*; 42% protein, 18% fat), Soyama Milk (*Trink-Soyamamilch* [normal], 3.77%, 3.36%), Soyama Milk for Diabetics [low in carbohydrates] (*Trink-Soyamamilch [für Diabetiker]*, 3.77%, 3.40%), Soyama Milk for Baking (3.29%, 4.40%), Soyama Cream (*Soyamarahm* [normal], 2.93%, 11.50%), Soyama Cream for Diabetic (*Soyamarahm [für Diabetiker]*, 2.95%, 11.50%), Soyama Cream [extra rich in fat, especially for diabetics] (*Soyamarahm*, 2.50%, 30.0%). The soybean

is of special importance in diabetic diets because of its low carbohydrate content, which can be reduced even more by a special process.

When Soyama Cream is mixed with coffee, tea, or chocolate, once can scarcely tell whether or not one is using cow's milk. Pages 312-13 summarize the findings of Fischer on the ease with which plant- or vegetable milks are digested.

The section on variety breads (p. 427) notes that soybean flour is now warmly recommended in such recipes.

A section titled "Soybeans" (p. 542-43) notes that edible soy products are made by Aguma-Werken F. Thöerl in Harburg, Vaterland brand soy flour is made by E. Friedrichsen in Berlin, and an excellent soy flour is made by Soyama-Werken in Frankfurt am Main. In Japan and China countless preparations made from soybeans are on the market. Especially prized is the cheese named tofu (To-fu). Soy sauce is also known worldwide. Soy coffee (p. 694) is of much less economic importance than imitation coffees made from cereal grains or malt. Page 714 mentions tests using soybean flour to make cocoa or chocolate. Page 800 discusses soya seasonings such as shoyu fermented with koji, and miso.

Pages 887-903 discuss vegetarian cures for diseases, and ten specific diseases for which they are well suited. Some groups of German vegetarians are endeavoring to return to a more "natural way of life," and some of these eat a raw-food diet. Pages 898-99 give the protein content and calories per 100 gm of soy flour and soymilk, plus a discussion of soymilk. Page 979 gives the composition of two brands of soymilk and one of soy cream. Also contains early information on using baking soda for cooking whole soybeans. Noorden lived 1858-1944. Address: 1. Geheimer Medizinalrat und Prof., Frankfurt-am-Main, Germany; 2. Prof., Vienna, Austria.

2368. Oriental Show-You Co. 1920. Oriental "Show-You" recipes. Columbia City, Indiana: Oriental Show-You Co. 24 p. Illust. Index. 18 cm.

• **Summary:** Place of publication and publisher at foot of page 1. Page 1, titled "New dishes for American homes, states: "In addition to Show-You sauce we are marketing canned Chop-Suey, Bean Sprouts (mung beans), Chow-Mein Noodles (fried), and Mixed Vegetables." "Hints for cooking Chop-Suey: Meats, celery and onions." "Chop-suey sauce... It is absolutely necessary to use the best chop-suey sauce (soy) to get the tang of the orient. 'There are two or three qualities of soy, but the Japanese soy is reckoned as the best'—*The Century Dictionary and Cyclopaedia*. Oriental Show-You Sauce, being the purest soy brewed according to the secret Japanese formula, is considered the best by thousands of people who have used it."

Most of this publication is Oriental-style recipes, with helpful information scattered throughout. Each recipe calls

for at least one of the company's products.

Several illustrations show these products, such as a bottle of Oriental Show-You Sauce, a can of Oriental Show-You Bean Sprouts, etc. Address: Columbia City, Indiana.

2369. Ubbelohde, Leo. 1920. I. Oele und Fette aus Pflanzen. B. Schwachtrocknende Oele [I. Oils and fats from plants. B. Semi-drying oils]. In: Leo Ubbelohde & F. Goldschmidt, eds. 1920. *Handbuch der Chemie und Technologie der Oele und Fette: Chemie, Analyse, Gewinnung und Verarbeitung der Oele, Wachse und Harze. II. Band* [Handbook of the Chemistry and Technology of Oils and Fats: Chemistry, Analysis, Extraction, and Processing of Oils, Fats, Waxes, and Resins. Vol. 2]. Leipzig, Germany: Verlag von S. Hirzel. p. 137-322. See p. 282-93. Illust. Index. 25 cm. [Ger]

• **Summary:** No. 182, "Soybean oil (*Sojabohnenöl*)," has the following contents: Names: *Huile de Soja. Soja bean oil. Chinese bean oil. Olio di Soia*. Introduction: Botanical, varieties, culture, composition of the beans (2 tables), lecithin content, urease. Various preparations from soybeans: European (Sarton powder / Sartonpulver made by Bayer & Co.; Soyap made by Firma Zinnert), Asian (flour, bread, milk, cheese, canned / tinned foods, soya sauce {*Sojasauce*} and the so-called soya-quark {*Sojaquark*} [tofu, containing 72.1 to 73.0% water], natto), diabetic bread, soy sauce. Production of soybean oil. Properties of soybean oil. Use of soybean oil. Soybean cake (*Sojabohnenkuchen, Sojakuchen*). Commerce and trade.

Also discusses: Sesame oil (p. 196-206). Address: 1. Prof. Dr., Karlsruhe [Germany].

2370. U.S. Tariff Commission. 1920. Summary of tariff information, 1920; prepared for the use of the Committee on Ways and Means, House of Representatives. Washington, DC: Government Printing Office. 1004 p. See p. 320-22, 779-80, 990. [7 ref]

• **Summary:** Contains a description of the soybean, its uses, production, and quantities imported, and the tariff regulations applicable to the various soy products.

Paragraph 200, page 321: "The provision in this paragraph for 'bean stick [dried yuba sticks] or bean cake, miso, and similar products,' covers a Japanese food product made from ground soja (soya) beans and water, known as frozen tofu or koya-dofu, and fried tofu or hoshi aburage, the frozen tofu or koya-dofu being in the shape of small, porous, yellow cakes about one-half inch thick, from 1½ to 2 inches square, and the fried tofu or hoshi aburage being in thin cakes one-quarter inch thick and 2½ to 5 inches in diameter, which have been fried in some kind of oil or grease. Even if not bean cake it is dutiable as a product similar to bean cake, bean stick, and miso. (G.A. 8045, T.D. 37079, of 1917, following Abstract 29577, T.D. 32780, of 1912.) 'Amasake,' made from rice yeast (30 per cent) and boiled rice (70 per cent), used as a drink among the Japanese, was likewise

classified as a 'similar product,' apparently as similar to miso. (Abstract 31147, of 1913).

Oil cake produced from the soya bean is free of duty as oil cake provided for in paragraph 560. (Abstract 23794, T.D. 30828, of 1910)."

Paragraph 201, p. 321-22: In the Act of 1909, sauces of all kinds were subject to a 40% ad valorem duty; this decreased to 25% in the Act of 1913. Thick sauces include dressings and condiments such as chutney. "Thin *Chinese* soy made by mixing cooked soy beans with wheat flour, salt, and water and exposing to the sun for about three months, used to flavor and color soups, fish, and meats, about 80 per cent being used in the kitchen and about 20 per cent on the table, is dutiable as a sauce hereunder and not as a nonenumerated manufactured article under paragraph 385. (9 Ct. Cust. Appls., -; T.D. 37976, of 1919.) *Japanese shoyu* is also classified as a sauce under this paragraph. (T.D. 37574, of 1916; Abstract 43496, of 1919.)"

Paragraph 606, p. 779-80. A duty is first levied on soya beans in the Act of 1913.

"Description and uses.—*Soya beans* used in oil mills, the important consumers, are chiefly imported. Soya-bean cake, or meal, a by-product of oil manufacture, is a valuable cattle feed and enters extensively into international trade. (See pars. 560 and 561.) In China and Japan the beans, cake, and oil are elaborated into a large number of food products, such as milk, cheese, flour, bean cake, and soya sauce... Except by resident Asiatics there is only a limited use of soya beans for food purposes.

"Production.—*Soya-bean* culture has recently developed rapidly... Imports of *soya beans*, too small to be listed separately prior to 1914, rose from about 2,000,000 pounds in 1914 to about 32,000,000 pounds in 1918; during the same period imports of *soya bean oil* rose from 16,000,000 to nearly 337,000,000 pounds.

"*Soya beans cooked and salted*, but not enough to so change them as to prevent their identification as soya beans, and packed in tins, jars, bottles, or similar packages, do not thereby lose their status as soya beans and are free of duty under this paragraph rather than dutiable under paragraph 199. (6 Ct. Cust. Appls., 415, of 1915.) *Soya beans* in stone jars and hermetically sealed tins, invoiced as *bean sauce*, were likewise classified, and not dutiable as prepared beans under paragraph 199, nor as sauce under paragraph 201. (G.A. 8217, T.D. 37860, of 1918.) *Beans* and *bean sauce* prepared or preserved in tins, jars, bottles, or similar packages, were also held free of duty under this paragraph, analysis of the samples showing them to be soya beans, either natural or prepared. (Abstract 41021, of 1917.)... A *black bean* known to the Japanese as *Kuromame*, was held not to be free of duty under this paragraph, the evidence being insufficient to prove that the merchandise was soya beans. (Abstract 42852 of 1919)." Address: Washington, DC.

2371. Thom, C. 1920? Utilization of molds in certain foods. 9 p. Undated. Unpublished typescript.

• **Summary:** “Here is some soy sauce in a bottle—this was made between January and October 1920 in Washington, DC, by the Department of Agriculture.” Describes how soy sauce is made and its microbiology. Also discusses miso (red and white), grey-white or red Chinese cheeses based on soybean curd (made by ripening with a mold and then brining; in Foo-chow is made a red vegetable dye—made from ang-quac or red rice made with the red mold *Monascus purpureus*), katsuobushi. Address: USDA Bureau of Chemistry, Washington, DC.

2372. **Product Name:** Shoyu (Soy Sauce).

Manufacturer’s Name: Hasegawa Shoyu Hanbai-sho (Hasegawa Soy Sauce Seller).

Manufacturer’s Address: 81 N. 9th Street, Portland, Oregon. Phone: 5-2046.

Date of Introduction: 1921. January.

New Product–Documentation: The Japanese American Directory. 1921. p. 471 (directory). Note: This company is not a manufacturer. Whether they sell imported or American-made shoyu is not known. Also in 1922, p. 497.

2373. Johnson, Wynonah B. 1921. Dining ‘round the world in Los Angeles. *Los Angeles Times*. Jan. 1. p. VI9.

• **Summary:** The section titled “In Chinatown’s alleys” describes it as appealing to the tourist, inscrutable, and intriguing. “Of course the main standby of the oriental cafe is chop suey, in one of its fifty-seven disguises. Don’t ask me. I don’t know what it’s made of... I leave it to luck and the almond-eyed chef, and proceed to mix it with the mound of snowy rice in its companion dish, and drench the whole with soy-sauce, and get a firm hold on the chop-sticks—and we’re off.” “The long slender black ones [chopsticks] give a final flavor of the celestial kingdom to these mysterious dishes...”

The section titled “In Little Tokyo” begins: “... there is something very different about Chinese and Japanese eating places. Heavy carvings and somber hangings give place to lighter and more artistic furnishings, and the inscrutable waiter is replaced by a smiling boy or glossy-haired maiden who will serve you just as deftly, but somehow with a subtle difference.” Some of the delicate little confections “are made right here in the Japanese district, where they are in big demand. These centers look and taste like chocolate, but they are made, the polite clerk assures us, of [azuki] bean-paste, which also forms the foundation of many others.” Seaweed is on the menu and “each plate is a delight to the eye, at least. The surroundings are immaculate;...”

2374. **Product Name:** Shoyu.

Manufacturer’s Name: Yasuhara Shoyu Seizo-sho (Yasuhara Soy Sauce Mfg. Co.).

Manufacturer’s Address: 219 Jackson St., Los Angeles,

California. Phone: 11938.

Date of Introduction: 1921. January.

New Product–Documentation: The Japanese American Directory. 1921. p. 314. Also in 1922 directory, p. 315. Also in 1923, p. 355 (directory; new phone number: Main 5670). Also in 1924, p. 383 (1/8-page ad all in Japanese. Name is given here as Yasuhara Shoyu Jozo-sho {Brewery}. Phone: 820658. Owner: Mr. YASUHARA Kei) and p. 394 (directory; Yasuhara Shoyu Seizô-sho. Phone: 820658 and Main 5670). Also in 1925, p. S-44 (directory; new phone number: TUCKER 1458). Also in 1926, p. S-35 (directory) and p. S-71 (1/8-page ad).

Ad (1/8 page) in The Japanese American Directory. 1925. p. S-49. All in Japanese. Yasuhara Shoyu Seizôsho, 219-21 Jackson St., Los Angeles, California. Phone: TUCKER 1458. Owner: Kei Yasuhara. In addition to soy sauce (shoyu), also makes miso and koji.

Same ad in 1930. p. S-40. The directory entry (p. S-53) contains the same name, address, and phone number. Also in 1932, p. 346 (directory) and p. 347 (1/8-page ad). Also in 1934, p. 305 (directory). Also in 1936, p. 374 (directory).

The Japanese American Directory. 1940. p. 326-27. Listed in the category “Foodstuff Factory.” In characters: Yasuhara Shoyu Seizô-sho. In English: Yasuhara Shoyu Mfg. Co., 219 Jackson St., Los Angeles. Note: They were not listed in this directory in 1937, 1938, or 1939. They apparently no longer make miso or koji. Also in 1941, p. 328.

2375. Adkins, Dorothy Margaret. 1921. The soya-bean problem. *Science Progress (London)* 15(59):445-51. Jan. [9 ref]

• **Summary:** This is a popular article. Contents: Introduction. Practical applications of the bean: Food uses include Tofu, or bean cheese (Japanese), Miso similar to chiang (Chinese), Shoyu (Japanese) and chiang-yu (Chinese), Natto (Japanese), whole dry soybeans, soybeans canned as a green vegetable (see description below), vegetable milk, soya-beans roasted, ground and used as a coffee substitute in Switzerland and the USA, soya flour, soya in diabetic diets and macaroni. Utilisation of soya-bean oil: In Italy, China, Manchuria. Utilisation of soya-bean cake and meal: As fertilizer in China and Japan, for feeding stock. Food value of the bean. The cultivation of the soya bean: China, Japan, United States, Australia (New South Wales), South Africa, West Indies, British East Africa, West Africa, Burmah [Burma], England.

“In Japan beans are germinated until the sprouts are about five inches long, and eaten with vinegar; beans, germinated and treated with brine, have also been noted in Spain.” Note: It is not stated clearly that these beans in Japan or Spain are soya beans.

“Soya-beans may be cooked and used in the same way as haricot-beans, and may also be picked when young and treated like green peas, in which condition they may be

canned.”

“In South Africa success has been achieved in growing the plant; in 1910 the outlook was so hopeful that a project for constructing oil mills was suggested. Unfortunately the bean was not taken up by farmers, who preferred to cultivate maize, as it was an easier crop to produce. Thus no extensive culture of the bean was attempted, and the subject was dropped.

“In other parts of the Empire, for example the West Indies, British East Africa and West Africa, trials of soya-beans have proved successful, but in no district have promising early experiments been followed by tests on a larger scale.”

“In certain parts of India, for example Burmah, soya-beans are grown on a large scale and are consumed by the natives.”

Note: “Lower Burma is a historical region, referring to the part of Burma annexed by the British Empire after the Second Anglo-Burmese War, which took place in 1852... Lower Burma was centered at Rangoon, and composed of all of the coast of modern Burma, and also the lower basin of the Irrawaddy River, including Prome. The area was also known as British Burma” (Source: Wikipedia, Oct. 2010). Address: Royal Holloway College, London.

2376. Oshima, Kokichi. 1921. Re: Description of Japanese foods pickled in miso or shoyu, imported to New York. Letter, probably to Margaret B. Church, Bureau of Chemistry, USDA, Washington, DC, Feb. 12. 2 p. Handwritten. [Eng]

• **Summary:** Mentions daikon misozuke (white radish), taimiso (sea bream), youkizuke (Miscellaneous vegetables in shoyu).

Note: According to Dr. Charles Thom’s personal papers from about 1922-23, Kokichi Oshima spent 7-8 months at the Microbiological Laboratory of the USDA Bureau of Chemistry doing research related to food fermentation, such as quantitative determination of industrial mold enzymes. Oshima was a graduate of Hokkaido Imperial University (Sapporo, Japan). In Dec. 1922 and Feb. 1923 Oshima was back in Sapporo. Address: Apt. 42, 604 W. 139th St., New York City, NY.

2377. Carver, G.W. 1921. Prof. G.W. Carver’s lecture—Farmer’s Conference. 19+ p. See p. 18. Feb. 16.

• **Summary:** “Here is a bottle of worcestershire sauce and it is made of Peanuts. The original worcestershire is made from the soy bean but I find this is just as nice as the soy bean and therefore will be attractive in that particular. Here is a bottle of Peanut coffee...”

“Here is a bottle of tofue [tofu]. It is a Chinese preparation made from the soy bean and I find that the peanut makes it just as nice as the soy bean. The Peanut milks have just about the same quality of curds as cow’s milk. Here is a

bottle of Curds and all that is necessary is to freshen them up and you can make any of the various cheeses, or koumiss.”

Note 1. The above lends support to the theory that Carver may have been influenced in his peanut research by his knowledge of existing processes for making products from soybeans. Note 2. This lecture was presented at the Voorhees Normal and Industrial School, Denmark, South Carolina. Address: [Tuskegee, Alabama].

2378. Meekins, Lynn W. 1921. Favorable outlook for American trade in Manchuria. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 24(41):983-93. Feb. 18. See p. 989-91.

• **Summary:** “The South Manchuria Railway Co., the largest purchaser of American products, proposes to spend more than \$200,000,000 gold upon improvements and extensions of its enterprises within the next five years... In spite of Japan’s special advantages in Manchuria there is an excellent opportunity for the marketing of many lines of American goods,...” Manchuria is made up of three provinces having an area of some 365,000 square miles.

“American trade with Dairen—Dairen versus Vladivostok: The share of the United States in the trade of Dairen is much larger than that shown by the Maritime Customs statistics, owing to the extensive shipments of goods to and from the United States credited to Japan as the country of immediate destination and origin. The direct trade between Dairen and the United States exceeded \$38,000,000 in 1919, of which imports [to Dairen] comprised two thirds and exports one third.”

“As between Dairen and Vladivostok, at present a greater risk is involved in using the Vladivostok route. Costs of handling cargo at that port are higher than at Dairen; there is no market at Vladivostok itself for produce shipped there, wharves and warehouses are inadequate, and shipping services are irregular. Until these conditions are improved Dairen will probably continue to handle most of the exports of Manchurian products, as well as the imports of American goods for sale in Manchuria.

“If Vladivostok were made a free port and provided with facilities which Dairen now enjoys, full advantage could be taken of it as a real open door to Manchuria. Vladivostok, rather than Dairen, offers the more promising outlook to American firms seeking non-Japanese business in Manchuria and eastern Siberia.”

“It is estimated that 2,500,000 tons of soya beans are produced annually in the three Provinces of Manchuria. The wheat and millet crops generally approximate 1,000,000 tons each. The Japanese firm of Suzuki & Co. has sold 100,000 tons of Manchurian wheat to the United Kingdom and 50,000 tons to Italy during the last few months.”

“The products of the soya bean include bean curd [tofu], flour, milk, cheese, soy sauce, oil, and cake. The Chinese are

concerned chiefly with the food products mentioned and the Japanese use large quantities of the cake for stock feed and fertilizer. The United States is the principal purchaser of the oil, a substitute for cottonseed and linseed oil employed in the manufacture of soap and paint and also as a lubricant.”

“How bean trade is conducted: In Tiehling and Sunkiatai (Fengtien) and Kwanchengtze (Kirin) there are about 300 Chinese wholesale bean companies whose capital averages from \$100,000 to \$200,000 Mukden currency. Four Chinese banks—the Bank of China, the Bank of Communications, the Government Bank of the Three Eastern Provinces, and the Hsing Yeh Bank of Mukden—negotiate loans upon the joint guarantee of two of these companies without security; other Chinese banks require in some cases that the beans be pledged. Such loans are for three months or six months, sometimes one year, and the rate of interest has been less than 10 per cent. The Japanese banks lending money to bean dealers are the Yokohama Specie Bank and the Bank of Chosen [Korea], the former issuing Newchwang notes and the latter gold notes. It is estimated that between 60 and 70 per cent of the loans made by the Japanese banks is to Chinese and between 30 and 40 per cent to Japanese companies.

“The bean business may be said to commence in September, when buyers visit the producing districts and pay from 10 to 20 per cent of the stipulated price in advance. To the towns mentioned above, from 1,000 to 2,000 cartloads of beans are brought daily from November to January. The average price during the past two years has been \$2 Mukden currency per 27 catties (36 pounds), exclusive of the production tax and the cost of transportation to Dairen and Newchwang. Mukden currency—that is, small coin dollars—exchanges for Mexican dollars at an average value of \$1.40 to \$1. At the present rate they are equivalent to about 40 cents in United States currency.

“Owing to the lack of good roads in Manchuria the beans must be carried to the market centers during the winter months, when the fields and streams are frozen. By March the crop has been collected and stored and exports become most active.

“Through the system of mixed storage, the South Manchuria Railway Co. has effected a great improvement in the handling of beans. When brought to the railway stations the beans are examined and graded according to quality and size. A certificate issued to the depositor entitles him to draw from the mixed-storage depot at Dairen or Newchwang an equivalent amount of beans of the same quality and size. The bags used in packing are also examined, and when the grade of bags deposited and that of the bags delivered is different the loss or gain thereon is adjusted by paying to or collecting from the depositor the difference in value. The new system saves the railway the trouble of transporting and storing each consignor’s cargo separately. It also saves the shipper from the risks attending delay in transportation and from searching

for his goods after they have arrived at their destination.

“Production of oil: The 60 bean mills at Dairen produce daily nearly 400 tons of oil and 3,700 tons of cake. Newchwang and Harbin are next in importance as oil-mill centers. The most widely used method of production is the expression system, by which one picul (133.33 pounds) of beans yields about 12 pounds of oil and 122 pounds of cake (in two equal pieces of 61 pounds each). By the chemical extraction system one picul of beans yields an average of 17 pounds of oil and 116 pounds of meal. The specific gravity of the oil is from .922 to .930.

“Sapan-wood, hemp seed, sesamum, and bean oil are being used by the Manchuria Paint Factory in Dairen, organized in February, 1920, with a capital of 1,000,000 yen, to manufacture paints for the South Manchuria Railway Co. and for various markets. The daily output is about 7,000 pounds, or 250 tins containing 28 pounds each. The colors produced include white, ‘iron rust’ red, and brown.

“The Japanese initiated the export trade in soya beans from Manchuria and developed the business to its present proportions. These middlemen, conversant with oriental ways, studied occidental needs and learned enough about western business methods to deal successfully with American and European firms. Their strong position is due to their control of railways, their banking connections, their oil mills, and, in general, their special organization in South Manchuria for handling the business. Eventually it may be possible by exporting beans and oil through Vladivostok for Chinese sellers and American buyers to deal directly with each other. Meanwhile the most effective methods to be employed involve the development of selling and buying organizations able to cope with the situation now existing.”

“About two thirds of the population of Manchuria is in the Province of Fengtien, which composes, in general, South Manchuria.” Address: Trade Commissioner, Peking.

2379. Thom, Charles; Church, Margaret B. 1921. *Aspergillus flavus*, *A. oryzae*, and associated species. *American J. of Botany* 8(2):103-26. Feb. [54 ref]

• **Summary:** Introduction. “The numerous strains align themselves into groups of closely related forms which may for convenience be considered here under three series names.”

Aspergillus flavus-oryzae series. The saké industry of Japan is based upon the diastatic power of *A. oryzae* (Ahlb.) Cohn. When “numerous cultures from the soy or shoyu industry of Japan and China are brought together, a whole series of forms are found which bridge the gap morphologically between *A. oryzae* as the saké organism and *A. flavus* as described and distributed also by Wehmer. Material taken directly from fermenting vats in China by Dr. Yamei Kin, formerly of the Bureau of Chemistry, shows strains of this character. Inoculating material furnished by Dr. Teizo Takahashi for experimental work on the fermentation

of soy sauce or shoyu proved to be a member of this series. Dr. Takahashi had selected his strain for this type of fermentation from among several recognized and studied by him in Tokyo... All of these strains are regarded by him as varieties of *Aspergillus oryzae*, not *A. flavus*."

Aspergillus oryzae series. "In the Oriental industries in which it has been long used, the separateness of this form is largely lost. It becomes, therefore, a gigantic race in a group in which other members possess the same habits, the same essentials of structure, but differ slightly in color and greatly in size... *Aspergillus flavus* was first described by Link (1809) in terms vague enough to baffle any attempt at certain identification."

Aspergillus Wentii and related forms. "The Java culture originally sent by Went to Wehmer was used in rice and soy fermentation on that island by Chinese workmen."

Aspergillus tamari and allies. "A second brown series of forms is more closely associated in occurrence and in habit with *A. flavus* and its allies than is *A. Wentii*. Many cultures in this series have been obtained in forage and feeding stuffs, from the Oriental soy fermentations... In size of colony, habit, and appearance aside from color, these forms resemble *A. flavus*. In the markings of conidia they suggest *A. niger*... Kita (1913) described as *A. tamari* a culture discovered as a contamination in a Japanese fermented product, tamari-koji."

A photo (photomicrograph) shows the wide variety of heads in a species and in a strain of *Aspergillus tamari*. Includes a calyptrate head. Note: This is the second earliest study seen of a fermented food published by USDA researchers. Address: USDA Bureau of Chemistry, Washington, DC.

2380. Matsumoto, K. 1921. Shōyu seibun-chū yūki-san-rui no kenkyū. I. [On the organic acids in shoyu. I.]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 85. p. 381-412. March. [Jap]
Address: Jozo Shikensho. 1. Gishi; 2. Gishi; 3. Gishu; 4. Ko (Yatotta = Hired).

2381. Morse, W.J. 1921. La industria del "soy bean" en los Estados Unidos [The soybean industry in the United States]. *Revista de Agricultura, Comercio y Trabajo (Cuba)* 4(3):521-24. March. [1 ref. Spa]

• **Summary:** This is a translation of Morse 1918, from the USDA *Yearbook of Agriculture* (1917). Contents: Early history of the soy-bean industry. The soy bean in the United States. Cultural requirements. Varieties. Soya as forage. Soya for oil. Soy-bean meal (*Harina de "Soya"*). Soy beans for human food: Dried beans (*frijoles de soya secos*), green vegetable soybeans (*frijoles de soya verde*), soy-bean milk (*leche de frijol de soya*), soy-bean cheese (*queso de frijol de soya*), soy sauce (*salsa de soya*), soy-bean sprouts (*brotos de frijol de soya*). Possibilities of the soy-bean industry in the United States.

A table shows the quantity and value of soybeans (*Frijoles de soya*), soybean cakes (*Tortas de soya*), and soybean oil (*Aceite de soya*) imported by the United States from 1910 to 1917, inclusive.

Note 1. This is the earliest Spanish-language document seen (June 2009) that uses the term *frijoles de soya verde* to refer to green vegetable soybeans.

Note 2. This is the earliest Spanish-language document seen (April 2012) that uses the term *salsa de soya* to refer to soy sauce. Address: USDA, Washington, DC.

2382. Muhse, Effie Funk. 1921. The soy bean in Chinese cookery. *Good Health (Battle Creek, Michigan)* 56(3):108-114. March.

• **Summary:** Contents: Introduction. Sprouted seeds. Bean oil. Soy sauce. Bean curd.

Photos show: (1) Many large containers storing soy sauce, oil and wine in Shanghai; each is "made up of an outside covering of wicker, a thick body of clay, and a lining of oiled paper." (2) About 300 sixty-gallon earthenware vats with cone-shaped wicker tops containing yellow soybeans, salt, and water in the process of becoming soy sauce in the immense court of a soy sauce factory in Shanghai. (3) A man in the street end of a bean curd factory. (4) Scene from a bean curd factory, including many people. Caption: "All the products of the factory are to be seen,—fresh curd masses, a pile of wafers, and a tray of cooked bean curd. Beneath the table is a basket of the powder used to coagulate the boiled, crushed beans."

Address: Jozo Shikensho. 1. Gishi; 2. Gishi; 3. Gishu.

2384. *St. Louis Globe-Democrat (Missouri)*. 1921. Amazing food uses for the lowly peanut. April 3. p. 3. Sunday magazine section.

• **Summary:** The subtitle reads: "At a recent session of the Ways and Means Committee of the House of Representatives, Geo. W. Carver, a professor of the Tuskegee Institute, astounded both the members and spectators with visible proof that he can manufacture one hundred and forty-five different foods and useful articles, including milk and cream, from peanuts. This milk not only looks like cow's milk, but even tastes better and purer."

"My very latest work in investigation is in reference to the production of peanut milk. Like Mr. Ford I believe that the cow is the crudest milk machine in the world and may easily be abolished for the synthetic cow, which gives clean, sweet and wholesome peanut milk.

"In the milk, the cream rises exactly the same way

as in cow's milk. In many ways peanut milk is even better than cow's milk, for no chemicals are used—nothing but pure water. The milk produced from the peanut is a vegetable milk, uncontaminated with harmful bacteria.

“The peanut milk I have developed looks like cow's milk and is, if anything, more nourishing and more pleasant to the palate. It consists of a perfect emulsion of oils, fats, proteids, and carbohydrates. If you did not know one was cow's milk and the other peanut milk, the eye would never detect the difference. Peanut milk can be used for cooking just the same as cow's milk, while the rich cream may be used on fruit, in coffee, and for breakfast cereals.

“of course, you want to know how many peanuts it will take to make a pint of milk. Here is a 3½ ounce glass. When filled with shelled peanuts it will make a pint of very, very rich milk, that is, milk that is many times richer than cow's milk, about what they call cream in most city dairies.

“Here is a bottle of synthetic buttermilk made from peanuts. In this buttermilk, the whey rises exactly as it does in the cow's milk, and tastes very much like real fresh buttermilk. What's more, it is very nutritious, having a mild, pleasing acid taste.

“Here is a bottle of full peanut cream. It can be used in coffee, chocolate, cereals, fruit, and in other ways, the same as cow's product.

“Here is some peanut milk made especially for ice cream. Not long since I made a quart, gave it to a neighbor, and invited myself over to help eat it. It is not modest to say so, but I am honest when I say it was the finest I had ever tasted.

“Here is an evaporated synthetic milk, much on the order of the regular commercial evaporated cow's milk, and acting when used in the same way. An interesting thing about this and the other peanut milks is that you can use nay acid with them, and they don't curdle as cow's milk does.

“The cow is a portable milk manufacturer who grinds her food, moistens it, heats it to a proper temperature and then filters it, and the result is milk,” continued the chemist. ‘A machine or the simple utensils used here, under the direction of a man, can do the same thing that the cow does. It is the same food or the elements of the same food as cow's milk and contains all the vitamins and nutritive quantities now that it has been proved that most excellent milk can be made from peanuts. The skill and ability of the human being can perfect a machine far more economical and infinitely more convenient for milk making than the cow. Man can do more than the cow. He can produce a synthetic milk at his own convenience and protect its quality and purity. He can make milk which lacks the animal taint and the danger of disease germs.

“It takes the cow twenty-four hours to make milk. I can make from peanuts better, cleaner and more healthful milk in five minutes. The cow simply takes out of the food she eats what is soluble. Which is the cleaner process, that of

grinding, moistening, heating and filtering in a machine or pan, or passing cereals, vegetables or the vegetable matter a cow eats through her stomach?”

Dr. Carver then demonstrated how to make peanut coffee. For the best flavor, the peanuts must be roasted, allowed to cool, then roasted again; only then does it develop the coffee flavor. An illustration shows Carver turning the crank on a hand mill whose hopper is filled with peanuts. Out of it come boxes and bottles of many common products, such as dyes, sauce, coffee, breakfast food, cheese, cream, milk, oil, face cream, and flavorings.

2385. Norton, Jeanette. 1921. The home kitchen. *Washington Post*. May 24. p. 8.

• **Summary:** Yue Tong—Fish soup:... “The gravy is made of one cupful of stock, a teaspoonful of soy sauce, salt, sugar, a tablespoonful of cornstarch dissolved in cold water, and a few drops of sesamum [sesame] seed oil.” Address: Author of “Mrs. Norton's Cook Book”.

2386. Lea and Perrins. 1921. At the horse show (Ad). *Times (London)*. June 10. p. 9, cols. 1-2.

• **Summary:** “... you will find the best people and the best horses. See that you get the best sauce when you go to lunch.” Below that is a large, bold signature: “Lea & Perrins' Sauce.” Below that: “The original Worcestershire sauce.” At the left of this display ad is an illustration of the head of a horse with a bridle. Address: [England].

2387. Rodyenko, S.P.R. de. 1921. Some popular misconceptions about our resident Chinese. *New York Times*. July 31. p. 41.

• **Summary:** In the late 1800s, Chinese communities formed in New York, Baltimore [Maryland], Chicago [Illinois], and San Francisco [California]. These became known as “Chinatowns.” Discusses the purpose of tongs and the ways they help Chinese in the USA.

One “of the most popular Chinese dishes in this country, tsar-suey, the Cantonese pronunciation of which is ‘chop-suey,’” means “mixed fry” in English. A “dash of Chinese cane syrup and of soy bean sauce” are added for extra flavoring. Address: Major, Chinese Military Forces, retired.

2388. Kamper's. 1921. The choicest products of the world's harvests and some food manufacturing plants come to our store (Ad). *Atlanta Constitution (Georgia)*. Sept. 28. p. 2.

• **Summary:** Their long list of products includes: “Crosse & Blackwell China Soy Sauce—Bottle 50¢.”

Note 1. This is the most recent English-language document seen (April 2012) that uses the term “China soy” to refer to a type of soy sauce.

Note 2. This is the earliest document seen (April 2012) that contains the term “China Soy Sauce” (regardless of capitalization or hyphenation).

2389. *Light of Manchuria*. 1921. Present Manchuria and Mongolia, Series II. Oct. 1. p. 12-14, 30-31, 46-47.

• **Summary:** This article, continued from the September number, notes that one of the principal agricultural products of Manchuria and Mongolia [probably Inner Mongolia] are soya beans. “Yellow (Soya) Beans belong to the most common species. They contain a good percentage of oil and are also good as an article of food and also for the expression of oil. The Manchurian (Soya) Beans have become widely known all over the world. Hitherto they used to be used by Manchurian inhabitants as a food-stuff and for the expression of oil as a source of light. The residue left after oil was obtained served as cattle feed. Since the residue popularly known as Bean Cake came to awake demand in Japan as fertilizer, and Bean Oil began to be exported to the Western countries as industrial material, a marvellous development has been noted in the cultivation of Soya Bean. This belongs to only a recent date...”

“The Chinese not only use Beans and Bean Oil in their daily cooking, but also *tofu* (bean curd palatable also to the Western palate and pronounced by the qualified chemist as similar in its composition to cow’s milk), *miso* (an article of the staple food to both Japanese and Chinese), and soy are also made from Beans...”

“Beans put out in Manchuria and Mongolia are put at about 20,000,000 *koku* (1 *koku* being equivalent to 4.96 bushels), but the outputs are increasing rapidly year by year, and there is a vast area of territory awaiting cultivation.”

Page 30, under “Manufacturing Industry,” notes that “Bean milling ranks foremost in manufacturing industry... Bean milling is best developed at Dairen, which is now possessed of sixty mills. In the interior of the country, the old primitive system by which a few head of mules or donkeys and a few hands do the work of expressing oil from Beans is still found in vogue. Such is only a domestic bye-industry. However, such extensive mills as use steam engines and express oil by hydraulic pressure are mostly found at Dairen. The Suzuki Bean Mill at Dairen is operated on the chemical extraction system which is the latest scientific method. The round-shaped cake left after the expression of oil weighs 46 *kin* a piece, which is the standard weight for export cake. In the fiscal year 1919, 19,693,000 piculs valued at 43,029,000 *Hk. taels* [Haikwan taels] were exported to Japan. Bean Meal, which is put out at the Suzuki Mill, is good for use as it is. Bean Cake is used by the Chinese for cattle-feed, and by the Japanese as fertilizer.”

On pages 46-47 are tables giving exports and imports at Dairen. The three exports with the greatest value (in Haikwan Taels) were Bean Cake (36,851,244), Beans (Soya) (24,750,377), and Bean Oil (17,369,655). Imports included Miso and soy [sauce] (97,305).

2390. North, J.L. 1921. To solve the cost-of-living problem?

A magic bean. *Illustrated London News (The)*. Oct. 8. p. 476-77. [1 ref]

• **Summary:** “The leading article and letter in the *Times* of Sept. 28 from its Vienna correspondent about Manna flour, manna bread, and milk substances made from the Soya bean, are likely to do good if they help us to realise how much we are losing by our neglect of this, the most valuable—for the uses to which it can be put—of all legumes.

“In the letter giving the details of the researches of Dr. László Berczeller of Vienna, there is no reference to the fact that these ‘Manna’ or Soya bean products were first made in England before the war. Samples of the flour and biscuits are to be seen in the cases of the London Institute of Hygiene, and Manna milk has been for years—and, no doubt, still is—sold here under the name of ‘Solac’ at a price considerably lower than that charged for milk by dairymen. The appearance and rapid rise into importance of the Soya bean is one of the most remarkable commercial events of modern times.”

“In 1790 the [soy] bean was brought to Europe when its cultivation was first attempted by Young [Arthur Young, lived 1741-1820 in England], the father of British Agriculture, though without success. In 1878 an Austrian professor, Haberlandt, tried it, but failed [Note 1. Haberlandt did not fail; he successfully cultivated soybeans in Austria as early as 1875, and many times thereafter.] When the bean came here in 1908 there was an immediate rush to grow it both in Europe and America. Experiments were started by our Board of Agriculture, the Royal Agricultural Society, and many semi-public bodies. The early experiments failed completely, for the reason that they were made with seed whose climatic origin was unknown, as well as the orthodox Chinese methods of growing it. Later, this was remedied...”

By 1918 Europeans were aware of 500 different soybean varieties that were growing experimentally at Arlington, Virginia.

“My interest in the Soya bean began in 1913 with a visit from an agent of a German cultivator at the office of the Royal Botanical Society at Regent’s Park. He was, he said, trying to form a syndicate to grow what he called an acclimatised Soya bean, brought from China in 1910, and already in cultivation in Germany. He refused seeds for testing, but sent from Hamburg a plant which had been carefully cleared of the seed, though the *empty* pods, nearly sixty in number, were left. The syndicate never materialised, and I thought no more of the matter, until later on, whilst examining the dried plant, I noticed a tiny pod, scarcely half an inch long, which contained a seed no bigger than a pin’s head. Going over the plant I found other pods which evidently had been thought too insignificant to be of use, and from these I obtained thirteen seeds. These were sown in 1914 and resulted in thirteen plants, which produced four hundred and forty seeds. From thirty-three plants in 1915 one thousand seeds resulted, and in 1916 no less than twelve

thousand. Many experiments as to the value of different methods of growing them were made in several countries, and with no less than twenty-one different foreign varieties. One thing came clear throughout the tests, and that was that the original variety started with was by far the best. It says a good deal for German astuteness that they should have gone to Manchuria and, from hundreds of varieties, chosen the one best for them and for us.”

The future of the Soya bean in England is uncertain. “Natural selection helps the plants that mature earliest produce most seed; those that mature late die out. It is noticeable that the plants experimented with in England fruit earlier now than they did at first, and this is a very hopeful sign. Another satisfactory fact is that there is no lessening in the number of pods produced, but rather a gain. This year there are plants with three times the number of pods shown in a photograph of the best German-grown specimen of 1912.”

In China and Japan the Soya bean “enters into the composition of most dishes, and in one form or another, as Soy sauce, bean paste, bean cheese, bean curd, bean milk, bean wafers, bean cakes and confectionery, is used everywhere. For a hundred years Soy sauce has been imported—the principal ingredient in the well-known Worcester [Worcestershire] sauce.”

Apart from its value as a food, it is used in the manufacture of glycerine, explosives, enamels, varnish, varnish, waterproofs, linoleum, paints, soaps, celluloid, printing inks, and as a lubricant.”

Photos (all but #1 by Frank N. Meyer of the USDA) show: (1) A typical pod from a soya bean plant grown by Mr. J.L. North at Chiswick, England, in 1921. (2) Two large, thin “blocks of tofu (bean curd)” on a round, wooden table. “Soya bean cheese for human food... Ready to be cut up into squares for sale to the public. Tofu, or Soya bean curd, is made by adding magnesium or calcium salts (about a 1 per cent. solution) to hot Soya bean milk; the product is drained and pressed. (3) “Varieties of soya bean cheese on a bamboo tray. Tofu, or Soya bean curd, forms the basis of many fermented, smoked, and dried cheeses in China and Japan.” (4) “Soya bean cheese [fermented tofu] in preparation: A pile of wooden trays full of bean curd in a dark room of even temperature.” (5) “Used by the Chinese as a green vegetable: A basketful of sprouted soya beans.” (6) Soy bean plant with leaves, many pods and roots, grown at Chiswick.

Note 2. This is the earliest document seen (March 2002) written by Mr. J.L. North, the pioneer in cultivating soybeans in England.

Note 3. This is the earliest English-language document seen (March 2010) that uses the term “soya bean cheese” (or “soya-bean cheese”) or the term “soya bean curd” to refer to tofu.

Note 4. This is the earliest English-language document seen (July 2007) that uses the term “magic bean” or that uses

the word “magic” as an adjective to refer to the soybean.

Note 5. Concerning Arthur Young. He was the author of many books on agriculture, which were very influential in their day. He was an important advocate for the progressive agricultural practices of his time, advocating such innovations as the seed drill, improved crop rotations, the use of marl as fertilizer, and the enclosure of open fields. In 1767 he undertook the management of a farm in Essex. He conducted various experiments and published the results in *A Course of Experimental Agriculture* (1770). In 1784 he began the publication of the *Annals of Agriculture*, a periodical which was continued for 45 volumes and had many contributors. Young traveled to France during 1787-89 and in 1792 published an important book about his travels and observations there. The soybean was first grown in Paris, France, perhaps as early as 1740, definitely by 1779. So he may have learned about soybean from fellow agriculturalists in Paris while on this trip. Address: Curator of the Royal Botanic Society of London.

2391. Togano, Meiji-ro. 1921. Quick method for brewing soy. *U.S. Patent* 1,394,236. Oct. 18. 2 p. Application filed 19 Feb. 1920.

• **Summary:** Soy-bean or its cake is first soaked in water for about 8 hours and then boiled for about the same length of time. It is cooled to 30°C, then the spores of *Aspergillus oryzae* are mixed with it. If desired, about 20% of wheat or other grain may be added to this mixture. The mixture is kept for 3 days at 30°C in a warm, damp chamber. During the latter period the soy-bean becomes covered with a soft, greenish-yellow mycelium, produced by germination and development of the *Aspergillus oryzae*. The result is “soy-bean koji.” To this soy-bean koji is added an equal volume of salt water having a temperature of about 60°C and a specific gravity of 20 degrees Baumé (SG = 1.16). This mixture is then kept at a temperature of from 30 to 70°C and stirred 1-3 times a day. By this treatment, the albumin of the soy-bean “is properly decomposed in a period of less than 10 days from the time the salt water was added to the soy-bean koji, and the soy-mash will produce the particular flavor of soy. Therefore, after the albumin is decomposed, soy is squeezed out or extracted from the soy-mash and the product thus produced is heated by means employed in the ordinary process, for the purpose of preparing the soy for use and sale.” Address: No. 1686 Sugamomachi, Tokyo, Japan.

2393. Satow, Sadakichi. 1921. Researches on oil and proteids extraction from soy-bean. *Tohoku Imperial University, Technology Reports (Sendai, Japan)* 2(2):1-124 (41-164). Oct. 28 cm. [Eng]

• **Summary:** Contents: 1. General description of the soy-bean: The use of the soy-bean (as a food-stuff [shoyu, miso, tofu, natto], soy bean oil [for the manufacture of soap, hydrogenated oils, paints, varnishes, oil-cloth, and rubber substitutes], and bean cake or waste residue from the manufacture of soy-bean oil [nitrogenous fertilizer, as a cattle food, Solite—a water-based paint]). 2. Classification and analysis of soy beans and their standardization: By color, by protein / proteid content, conclusion of analysis (the best soy-beans are Tsurunoko and Kauro grown in Hokkaido): Standardization of the raw material, content of proteids, color of the raw material, moisture, regularity of the grain, specific gravity of the soy-bean, impurities. 3. Microscopical observations of soy-beans: Colour reactions of cellular substances, distribution of proteids and fatty acids, distribution of fatty oils. 4. Oil extraction (p. 17): Influence of hulls, influence of moisture, influence of oxidation, comparison of the dissolving power of various solvents, to find the best conditions for the extraction of oil by means of benzine, how to extract the oil technically without denaturing the proteids and how to remove the retained solvent, on the apparatus employed in oil extraction, working of the extracting apparatus, recovery of solvent by application of the vacuum system, separation of oil from the solvent and oil refining, reserving the oil-freed soy-bean meal.

5. Isolation of proteids out of oil-freed soy-bean (p. 35): General discussion, necessary and sufficient conditions for the extraction of proteids (on the quality of isolated proteids [plasticity, solubility, coloration], on the purity of isolated proteids, to obtain a maximum yield). 6. The extraction of proteids by means of water (p. 41): General properties of bean meal, on gummy substances and their properties (saccharo-colloids, incl. stachiose [stachyose], araban, galactan; p. 43), quantitative estimation of water-soluble proteids and carbohydrates, determination of the volume of water necessary for the extraction of soluble carbohydrates, relation of the duration of extraction to the quantity of extractable proteid and carbohydrates, effect of the process of water-extraction. 7. On the extraction of proteids by means of alkaline reagents: General properties of glycinin against alkaline reagents, classification of alkaline reagents, comparisons of dissolving power of alkaline reacting compounds, relations of the plasticity and coloration of the proteid to various kinds of extracting agents, standardization of plasticity of isolated proteid, on the relations between plasticity and chemical reagents, comparative experiments relating to the extracting process by means of sodium sulfite and sodium hydroxide.

8. The determination of the concentration, quantity, and other factors of Na_2SO_3 [sodium sulfite] in the process of extraction (p. 69): Determination of the concentration of sodium sulfite, the determination of the relation between the plasticity of the protein and the concentration of sodium sulphite, to determine the relation between the yield and the time of extraction, to find out the actual yield of proteid, as well as the volume of sodium sulfite solution provided the bean meal is previously extracted by water, then extracted with sodium sulphite, conclusion of this chapter. 9. Extraction of proteids by means of caustic alkalies [alkalis] (p. 80): To determine the concentration of the caustic soda [sodium hydroxide] solution, determination of the relation between the time of extraction and the yield of proteid, to determine the volume of caustic soda, the systematic extraction of proteids (using water, sodium sulphite, or alkali). 10. Clarification of extracted proteid solution and precipitation thereof (p. 86): Precipitation of proteids, precipitation by means of alkaline earth metals (such as magnesium sulphate), by means of colour base (such as malachite green, methyl violet, brilliant green, auramine, or new fuchin), by means of alcohol, by means of heating, by means of formaldehydes, by means of fermentation, by means of acids (choice of acid, yield of precipitated proteid, quality of proteid). 11. Quantitative investigations on the precipitation of proteids (p. 101, 11 experiments with summary of conclusions). 12. Effect of heating on the yield of proteid (p. 115). 13. Separation of excess water from the proteidal precipitate (p. 118). 13A. Process for drying the proteidal mass and for drying the residue (p. 121). 14. Pulverizing the dried proteid (p. 122). 15. Recovery of carbohydrates from waste liquid (p. 123).

World soybean production (in short tons): Manchuria 1,850,000 (25% is used in Manchuria as food; 75% is exported to all parts of the world in the form of “bean cakes or bean meal”). Japan 450,000. Korea 322,500. Kantoshu 15,400. Total of the above: 2,640,000 tons valued at more than 200 million Japanese yen (p. 2).

The author investigated the use of soy-bean proteins in plastics. There are upwards of 30 varieties of soybeans which may be classified into yellow, blue, and black. The first contain the most protein and oil, the last the least. The protein content varies from 35-40.5% and the oil content from 15.4 to 20.9%. The mean analysis of 16 different varieties was: Water 10.2%, proteins 37.8%, oil 18.9%, carbohydrates 23.5%, fiber 5.2%, and ash 4.4%. The carbohydrates consist mainly of non-reducing sugars with little or no starch. The cell membrane consists of galactan or hemicellulose, with a little free cellulose. The presence of the hulls in the crushed bean reduces the speed of extraction of the oil and the yield, and gives the oil and protein a brown color. Note: This is the earliest document seen (May 2004) containing the word “hemicellulose.” *Webster's Dictionary* defines hemicellulose, a word first used in 1891, as “any of

various plant polysaccharides less complex than cellulose and easily hydrolyzable to simple sugars and other products.” The sugar molecules in this polymer each contain 5 carbon atoms.

Oil extraction: Benzene is the most suitable commercial solvent; the solvent must not be recovered by direct steaming of the meal, but by the use of a vacuum.

Protein extraction: The soluble carbohydrates are removed from the meal by washing with very dilute acetic acid. The protein is then extracted in 3 stages, i.e. with water, with 0.2-0.4% sodium sulphite solution, and with 0.2% sodium hydroxide solution. 20-30% of the total available protein is extracted in the first stage, a further 50% in the second, and the total yield is about 95%. The protein is finally dried at the lowest temperature and highest vacuum and in as short a time as possible. The dry protein is very tenacious and can only be ground in high-speed disintegrators; it is then suitable for the manufacture of plastic materials, lacquer, enamel, or imitation leather. The soluble carbohydrates, which amount to 10-12% of the meal treated, can be worked up into syrup or converted into alcohol or lactic acid by fermentation. The bean residue consists of fiber, galactan, and protein and can be used for cattle feed or as an ingredient of linoleum-like products.

Note: This is the earliest document seen (Sept. 2010) concerning isolated soy proteins (other than simply isolation as part of nutritional research).

Continued. Address: Kôgakuhakushi.

2394. Satow, Sadakichi. 1921. Researches on oil and proteids extraction from soy-bean: Illustrations and tables (Continued). *Tohoku Imperial University, Technology Reports (Sendai, Japan)* 2(2):1-124 (41-164). Oct. 28 cm. [Eng]

• **Summary:** Continued: Illustrations show: (1) The cells of the soy-bean (after Winton, p. 55). (2) The effect of various chemicals on soy-bean cells (8 figures, after p. 16). (3) A rotary drum extractor used with solvent and a vacuum system (p. 68). (4) An endless belt system for drying proteid precipitate.

Tables show: (1) Percentage of proteids and fat found in 23 samples of beans. The varieties are: Akakiji bean, Nagaaneko bean, Kintoki bean, Shônembo bean, Biruma ingen bean, Chûnembo bean, Maru uzura bean [speckled], Naga uzura bean, Kumamoto ingen bean, Azuki, Chûnaga uzura bean, Aneko bean, Shiromarufuku bean, Green pea, Dainenbô bean, Daifuku bean, Chûfuku bean, Red pea, Black soy-bean (38.61%), Yellow soy-bean from Manchuria {2 samples, 38.65% and 39.12%}, Yellow soy-bean from Korea (41.00%, and 22.826 fat—the highest fat of any bean tested), Yellow soy-bean from Hokkaido, Japan (41.92%—the highest proteid of any bean tested) (p. 6-7). (2) Previous analyses of the chemical composition of 16 soybean samples from Manchuria, Korea, and Japan. For each, gives the

district, variety (mostly yellow but one “Blue variety”), water, proteids, fat, carbohydrate, fiber, ash, name of analyst (an organization) (p. 8). (3) Analyses by Sato of the chemical composition of 14 soybean varieties from Manchuria, Korea, and Hokkaido (Japan). For each, gives the varietal name, growing region, “moisture, total protein, soluble protease, available protein, non-proteidal nitrogenous matter, fat, nitrogen-free extract, fiber, ash, color and shape (all yellow), producing organization (Korean Central Experimental Station or Sapporo), date of production. Named varieties include: Harupin, Shoshu bean, Utsuzan bean, Ampen bean, Chogei bean, Ryusan bean, Turunoko [Tsurunoko], Kanro, Yoshioka, Otanizi [Otaniji] (41.92% total protein and 37.53% available protein, both the highest of any bean tested) (p. 11). (4) Effect of hulls on solvent extraction of soy-bean oil with 3 varieties: Kanro, Otaniji, Yoshioka (p. 18). (5) Influence of moisture on solvent extraction (ether) of soy-beans (p. 19). (6) Effect of using benzine in place of ether in solvent extraction of soy-bean oil. The best moisture content is 7.5% to 12.5% (p. 20). (7) Substitution of vacuum drying for open air drying in removing moisture. Shows that the smaller the quantity of moisture contained in the bean, the greater the yield of oil, provided that the oil is protected from oxidation (p. 22). (8) Effect of different solvents on oil extraction: Carbon bisulphide (flammable and expensive), ether (flammable and expensive), benzine (boiling point 75°C), carbon tetra chloride [tetrachloride]. (9) Separation / distillation of benzine from oil solution (p. 34).

(10) Chemical composition of “soy bean meal” from which the hull and oil have been removed (p. 42). (11) Composition of carbohydrates or saccharo-colloids, based on S. Yukawa (p. 43). (12) Composition of para-galacto-araban / gummy substances in 9 varieties (p. 44-45). (13) Percentage of water-extractable substances and reducing sugars in flattened and powdered soy-beans (p. 46-47). (14) Sugars in soy-beans (p. 48). (15) Proteids and soluble carbohydrates in soy-beans (p. 49). (16) Effect of acetic acid in retarding dissolution of the globulins (p. 50). (17-18) Dissolving power of alkaline reagents on proteids in bean meal (p. 54-56). (19) Effect of reagent on plasticity and coloration of proteids (p. 56).

(20-22) Amount of proteid extracted in 3 consecutive extractions, or with pressure (p. 63-65). (23) Effect of 4 consecutive washings in removal of ash (p. 66, 68). (24-26) Percentage of proteid extracted with sodium sulfite after 1 or 2 hours (p. 70-71). (27) Concentration of sodium sulfite, mark of plasticity [rating], and color of precipitate (p. 73). (28) Relation between time of extraction and yield of nitrogen and proteid (p. 74). (29-30). Yield of proteid with water or sodium sulfite and 5 or 6 consecutive extractions (p. 76).

(31) Test to maximize yield of proteid using sodium sulphite solvent; the weight of the solution must be 16 times that of the meal, and the yield will be 52.20 (p. 78).

(32) Effect of adding acetic acid on yield (p. 79). (32-33). Effect of caustic soda (sodium hydroxide) on percentage of proteid extracted (p. 81) (34-37) Relation between time of extraction and yield of proteid using caustic soda (p. 82-83). (38) Volume of caustic soda consumed by different volumes of bean meal solution (p. 83). (39) Volume of caustic soda solution needed in three extraction processes: water, sodium sulphite, or alkali (p. 85).

(40) Extraction with magnesium sulphate for 1, 2, or 3 hours (p. 90). (41) Percentage of proteids precipitated by different precipitants; "isolated proteid," "glutinizng chemicals" (p. 95) (42). Effects of sulphurous acid, formaldehyde, and formalin (p. 96). (43) Effect of different precipitants on quality of precipitate; "sulphurous acid gives proteid of the whitest and best quality, and most suitable for the manufacture of plastic products" (p. 100). (44) Yields of proteid with different volumes of sulphurous acid; all yields are very unsatisfactory (p. 103). (45-47) Effect of adding sulfur dioxide to sulphurous acid at various concentrations; remarkable increase in yield (p. 104-06). (48-51) Precipitation of water extracted protein using acetic acid (p. 107-10). (52-55) Effect sulphuric acid for precipitation of proteids (p. 111-14). (56-57) Effect heating on yield of proteids (p. 116-17).

Note: Horvath (1937) states: "The extraction of protein from soybean meal, its subsequent precipitation and properties, as well as its industrial applications have been extensively studied by S. Satow, and the results published (in English) in 1921-23 in two voluminous reports [*Technology Reports, Tohoku Imperial University* (Japan): 2(2) and 3(4)]. These reports continue to serve as an unsurpassed source of information on this subject, and a number of discoveries during the last 15 years can be traced to the researches of Satow." Horvath then summarizes many of Satow's key findings. Address: Kôgakuhashi.

2395. Waksman, Selman A. 1921. On the preparation of a soluble protein extract from soy beans. *Proceedings of the Society for Experimental Biology and Medicine* 18(1):219-20. Oct. (Chem. Abst. 15:3692).

• **Summary:** "This extract can be very cheaply prepared and it may take the place, when properly modified by the addition of necessary salts, of meat extract and other digested meats in infant feeding and, since the soy bean contains very little carbohydrate and even the small amounts present are used up by the fungus, in the process of development, for energy purposes, the extract is practically free from sugars and can be introduced into diabetic cookery." Address: New Jersey Agric. Exp. Station, New Brunswick, New Jersey.

2396. *San Francisco Chronicle*. 1921. Chronicle shipping news. Nov. 23. p. 20

• **Summary:** The section titled "Persia Maru here" begins: "After an uneventful voyage of thirty days from Hongkong

via Dairen, Kobe, Yokohama [Japan] and Honolulu [Hawaii], the T.K.K. liner Persia Maru, Captain K. Shinji, arrived here yesterday with 162 passengers and 1,924 tons of cargo."

"Cargo on the Persia included shipments of gunnies [gunny sacks?], matting, oil, raw silk, rice, silk goods, shoyu, tea, tin and general merchandise."

Note: The T.K.K., *Toyo Kisen Kaisha*, of Yokohama, Japan (also known as the Oriental Steamship Company and as the *Toyo Kisen Kabushiki Kaisha*) was founded in about 1896 or 1897 with the goal of entering the transpacific steamship trade. Other steamships owned at this time were the *Shinyo Maru* and *Taiyo Maru*. They carried both passenger and freight.

2400. Kellogg, John Harvey. 1921. The new dietetics: What to eat and how. A guide to scientific feeding in health and disease. Battle Creek, Michigan: The Modern Medicine Publishing Co. 933 p. Illust. Index. 24 cm.

• **Summary:** This is the first edition of this important

book; subsequent editions were published in 1923 and 1927. Contents: Foods: Food Principles. The digestive process: The liver, mastication, hunger. Metabolism: The energy of food—the calory [calorie]. The physiology of eating: The protein ration, fats, carbohydrates—starches and sugars, food salts, vitamins, cellulose, the acids of foods. Wholesome foods: Cereals (incl. wheat bran), vegetables, green vegetables, root vegetables, vegetable or garden fruits (incl. tomato, cucumber, eggplant, watermelon, muskmelon, squash, vegetable marrow, pumpkin, chayote), legumes (incl. the adsuki [azuki] bean, the Hahto bean, the soy bean, composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, soy bean sprouts), fruits, nuts (incl. the ground nut, the peanut, peanut butter, flour from the peanut, peanut milk, malted nuts). Animal foods. Condiments. Tea and coffee (They are poisonous drugs, in 1921 the U.S. per capita consumption increased to 12 lb/year, chronic caffeine [caffeine] poisoning, coffee raises blood pressure, tea, coffee and uric acid, coffee cripples the liver, other coffee poisons, some poisonous effects of tea and coffee, soda fountain drinks containing caffeine, coffee substitutes {most consist of cereals plus molasses, roasted until part of the starch and sugar are caramelized; the roasting process makes them unwholesome}), tobacco. Ptomains—Poisoned foods. Water drinking. Medical dietetics: Introduction, scientific tests of the nutritive functions, regimens and dietaries, diet in disorders of the digestive organs, diet in disorders of nutrition, diet in joint diseases (rheumatism, arthritis, gout), diet in disease of the heart and blood vessels—Cardio-vascular-renal diseases, diet in disorders of the nervous system, diet in disorders of the urinary organs, diet in diseases of women, diet in management of fevers, diet in chronic infectious diseases, diet in diseases of the skin, diet in surgical cases, diet in diseases of the eye, ear, nose, and throat, infant feeding, the rice regimen. The world's foods: Making the bill of fare.

A table (p. 138) titled “Vegetable fats” lists “The principal sources of edible vegetable fats...” including: Cocoanut meats 36%, corn 5%, hemp seed 32%, palm nut 72%, peanut 52%, sesame seed 51%, soy bean 20%

A table (p. 166-67) lists the 7 main food salts [minerals] found in various foods, including soy beans, gluten (pure, 40%, or 20%), and peanuts.

Table XII (p. 170-71) lists foods rich in iron. Columns (a) shows the grains of iron in one ounce, and column (b) shows the number of ounces required to supply one day's ration of iron. Includes (in descending order of iron content): Savora (yeast extract), Gluten—pure, gluten—40%, egg yolk, dried lentils, wheat bran, soy beans, Protose, Brose (oatmeal, corn meal, bran), Nuttolene, Graham Flour, tenderloin meat, Graham bread, Zante currants.

Table XIV (p. 182) lists foods rich in lime [calcium] in descending order of lime content, with the same two columns as table XII. Includes: Cheese, yogurt cheese, mustard

greens, linseed meal, turnip tops, soy beans.

Page 183 discusses “The acids and bases of foods—The reaction balance. As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman of Columbia University, foodstuffs differ in relation to their acid and basic contents... The waste products of the body are predominantly acid, consequently it is desirable that the foodstuffs should be predominantly basic... The predominance of acids gives rise to a condition known as acidosis (p. 719), and care must be taken to protect the body from injuries which result from this condition... Meats of all sorts, especially the lean meats, tend to acidify the tissue fluids to a marked degree. Eggs tend in the same direction, though less strongly than do meats.”

In the chapter titled “Diet in disorders of the digestive organs,” pages 654-55 discuss soy flour, yeast extract (Savita, Marmite—which is a very useful source of iron and vitamins), Malted Nuts, 20% gluten meal, and the “Gluten-feeding method.”

In the section on diabetes, page 703 gives a recipe for gluten bread. Gluten is also mentioned on p. 718. The section titled “Diet for acidosis” (p. 719) begins: “The blood and tissue fluids are slightly alkaline in reaction. This slight degree of alkalinity is essential to the maintenance of health. When, through disordered metabolism, the body becomes charged with an excess of acids, so that the alkalinity of the blood and tissues is diminished, the result is a condition known as acidosis. Among the symptoms due to acidosis may be mentioned nervousness, mental depression, mental confusion, drowsiness, convulsions, and coma. Air hunger with shortness of breath is one of the early symptoms of acidosis. This condition is most pronounced in advanced cases of diabetes and is encouraged by a meat diet, particularly by the use of an excess of fats. Fasting persons always show a condition of acidosis after fasting for a day or two. Professor Fischer believes that this preponderance of acids, or chronic acidosis, is the exciting cause of Bright's disease.”

The section on diet and heart disease notes (p. 738-39): The “great frequency with which arteriosclerosis is encountered in modern times is the result of the increase in flesh eating which in recent years has been very marked in all civilized countries.” It “has become the universal custom among practical physicians to exclude meats, meat extracts, and broths of all sorts from the diet of patients suffering from arteriosclerosis, as the most efficient means of checking the degeneration of the arteries...” Foods containing uric acid, plus coffee and tea, should be discarded. Bran, agar, paraffin oil, and an enema should be used freely. Address: M.D., LL.D., F.A.C.S., Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

• **Summary:** In the chapter on "Legumes," the section titled "The Soy Bean" (p. 315-21) has the following contents: Introduction and history (incl. a long extract from a publication by W.J. Morse (1918), and discussion of soy beans and diabetic diets). Composition of the soy bean (according to Bailey and Street 1915). Soy bean milk. To fu (tofu). Soy sauce. Soy bean sprouts. Composition of soy bean sprouts compared with mung bean sprouts.

The section begins: "The soy bean has been used in China since 2838 B.C. It was introduced into France in 1740, England 1790, and this country not until a century later. This bean requires a long season and does best in the Southern states on this account. It is quite hardy, however, and some varieties have been found which mature as far north as Canada.

"The soy is the best of all beans. It differs decidedly from other beans in its composition. It contains 40% protein, practically no starch, and nearly 20 per cent fat, giving it characteristics approaching those of the peanut more closely than those of ordinary beans.

"More than one thousand varieties have now been tested by the U.S. Department of Agriculture. Twenty varieties are at the present time being handled by growers and seedsmen in this country. The green and yellow varieties are best adapted for food. The black and brown are chiefly for forage.

"In China, the soy bean is very little used in the manner in which beans are used in this country. Instead, according to W.J. Morse [1918], of the U.S. Department of Agriculture, 'the beans are soaked in water and roasted, the product being eaten after the manner of roasted peanuts.'" Dr. Kellogg then quotes two passages from Morse; one about roasted soybeans, and the other about soy beans which, when three-fourths or more grown, can be used as "a most palatable and nutritious green vegetable."

"This bean not only contains a large amount of protein, more than is found in the same weight of beef, but its protein is of a particularly fine quality. Heretofore, the casein of milk has enjoyed a unique reputation as a protein of finest quality, but now 'the protein of the soy bean appears to be as valuable as the casein of milk.' In view of the shortage of milk, which is likely to increase, it is gratifying to know that a protein has been discovered equally valuable as casein, and one which may be produced in unlimited quantities.

"For promotion of growth, it is not only necessary for the food to contain 'complete' protein in proper amount, but it must also contain a sufficiency of the two vitamins, designated as fat-soluble A and water-soluble B. Osborne and Mendel demonstrated that the soy bean contains an adequate supply of both fat-soluble and of 'water-soluble vitamins,' in which respect it is superior to all seeds heretofore examined, with the possible exception of flaxseed and millet.

"The soy bean is destined to become one of the great food staples, not only of this country but of the world. It is capable not only of supplying the essentials for growth and maintenance, but may also act as a complement to other imperfect foods, such as corn for example, in combination with which it has shown most excellent experimental results.

Composition of the soybean: A table shows the composition of the soy bean, compiled from various sources. "The above analysis clearly shows the soy bean to be a most remarkable food product. Its composition is in some respects more like that of a nut than that of other legumes. In this respect it very much resembles the peanut. Its protein content, nearly 40 per cent, is higher than that of any other foodstuff. Even lean meat affords but half as much. Its high percentage of fat gives it a very high food value and makes it a rich source of oil for various industrial purposes as well as for food.

"The soy fills the place of meat as well as milk in the dietary of many millions of sturdy Orientals. Since the composition of the soy has been understood, it has been much used as a food for diabetics. It is evident from the above [table] that it contains little which can be objectionable in diabetes. The small amount of dextrin and sugar may be easily removed, when necessary, by parboiling.

"Experiments by Holmes [1920], of the office of Home Economics, U.S. Department of Agriculture, have shown that the well cooked soy bean (cooked for two hours under steam pressure) is very easily digestible, and is an exceptionally wholesome article of food, superior to most other legumes.

"The soy bean may not become really popular until the pressure cooker comes into general use, which may be some time. In the meantime, while the patent pressure cooker is coming, any resourceful housewife may improvise a perfectly good and satisfactory pressure cooker from inexpensive materials close at hand. Get a stone jug or jar that can be hermetically sealed. The little stone jars in which apple butter is sometimes sold are well adapted to the purpose. After soaking the beans over night put [them] in the jug with a little salt and enough water to cover, seal up tight and secure the cover well, remembering that the pressure will be from within. Set the jug in a saturated solution of common salt, place over a smart fire and boil for one to two hours. The salt solution boils at a temperature of 220°F. and so the beans are exposed to a higher temperature than in ordinary boiling... Cooking at the higher temperature not only softens the cellulose and so renders the foodstuffs tender, but greatly improves the flavor.

Note: This is the earliest document seen (Sept. 1996) that uses the term "pressure cooker" in connection with soy beans. Address: Battle Creek, Michigan.

2402. Kellogg, John Harvey. 1921. Soy sauce (Document part). In: J.H. Kellogg. 1921. *The New Dietetics: What to Eat and How...* Battle Creek, Michigan: The Modern Medicine

Publishing Co. 950 p. See p. 304. 24 cm.

• **Summary:** “Soy or shoyu sauce is a dark brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat (Barley is sometimes used), salt, and water. This mass is inoculated with a culture known as rice ferment (*Aspergillus oryzae*) and left in cakes to ferment from six months to a year, or sometimes longer.

“In odor and taste this sauce suggests a good quality of meat extract, though perhaps more salty and a trifle more pungent.” Address: Battle Creek, Michigan.

• **Summary:** Contents: Preface, by Louis Forest.

Introduction—What is soya? 1. History of the dissemination of soya: In 1712 the naturalist Kaempfer introduced soya, introduction of soya to France and Europe, soya is cultivated in Austria in 1875 by Prof. Haberlandt, soya is the object of many trials in France from 1876 to 1881, the study and acclimatization of soya becomes widespread, the causes of setbacks in the cultivation of soya.

2. Cultivation of soya: Botanical characteristics of soya, the varieties of soya, Chinese varieties and soya in China, Japanese varieties and soya in Japan, American varieties and soya in America (varieties: Mammoth, Hollybrook, Ito San, Guelph, Haberlandt, Medium Yellow, Wilson, Peking, Tokio, Mandchu [Manchu], Black Eyebrow, Barchet), soya in Europe—France and Italy, seven varieties of soya tested in France, soya in the experimental farms for new crops (*les Fermes Expérimentales de Néoculture*; Many varieties from the USA were tested, including Manchu, Wilson Five, Haberlandt, Tokio, Virginia, Hato [Hahto], Early Medium Green), the cultural and geographical appearance of soya, its production worldwide, planting soybeans, heat units (*degré thermique*) and the germination of soya, the importance of spacing between plants, number of seeds per hectare, soya during its vegetative stage, the vegetation of soya compared with that of the haricot at high altitudes, rolling the seeds and types of crop maintenance, growth of the plant, acclimatization, the enemies of soya.

3. Composition of the soybean plant. 4. Soya forage: Green soya forage, soya hay, soya as a plant for soil improvement. 5. Harvesting soybean seeds: Maturity of the seed, harvesting soya, the food value and composition of soya seeds. 6. Soya as an oil plant: Richness in oil, defatted soybean cake, imports and exports of soya cake from 1915 to 1919 (Imports to: Sweden, Canada, Korea, Japan, Formosa. Exports from: England, China, Korea), production of soya cake from 1915 to 1919 (Denmark, Great Britain and Ireland, Netherlands, Sweden, USA, Japan, Formosa, Korea, Java and Madura).

7. Soymilk: Its manufacture (in 1910-1913 Li Yu-ying installed a factory named “La Caséo-Sojaïne” at Vallées {Asnière-Seine} near Paris. Rouest visited this factory and saw them make soymilk, which was filtered using a filter-press resembling those used in sugar refineries), its properties and composition, composition compared to other types of milk, powdered soymilk, soymilk in the nursing and feeding of animals, soymilk related to tuberculosis in animals and in humans, soymilk would allow the milk and butter from animals to be reserved exclusively for human foods and could be used for raising many piglets, manufacture of non-dairy milk in Canada (a factory is now under construction). 8. Soya in Industry: Soymilk and soy casein, Sojalithe (like Galalithe).

9. Soya in human nutrition: Soy flour and its applications (incl. Li Yu-ying’s usine de la Caséo-Sojaïne, and bread made of soya and wheat), soya compared to dry legumes (such as lentils, haricots, peas, beans), soya used as a legume (whole soybeans), the food value of soy sprouts, preserves and confections made from soya, soya chocolate and coffee, the amount of nutrients produced by soya and other crops from a unit of land, a meal of soya served in France (prepared and served some years ago by Li Yu-ying’s soyfoods plant La Caséo-Sojaïne for the major print media, the medical press, the National Society for Acclimatization, etc.; it consisted of 2 soups {one with ‘soya meat’ and one with soymilk}, 2 entrees {an omelet with smoked soya ham, and fritters stuffed with soy meat}, soy [actually mung bean, *lūdou*] sprouts in a salad and sauteed, 3 desserts {soya cake, biscuits, and confection}, and soy coffee; a recipe for each is given; soya meat is smoked tofu).

10. Use of soya in East Asia: Tofu (*fromage végétal*), soy-based condiments (such as natto {Ping ming Natto and Tokio-Natto}, miso, Chinese miso or tao-tjiung [doujiang], and shoyu {Soyou or Schozou}), making soy sauce in Kwantung, China (from Groff).

11. The opinions of several authors concerning soya (from the French medical and hygienic press): Introduction—E. Maurel. Soya and soy bread in diabetic diets—Dr. Dujardin-Beaumetz, Dr. Bloch, Dr. J. Le Goff, L. Beille, M. Gautier. Soya used as a bean—M. Gautier. Soy sauce used in place of meat extracts. The state of cheese. The popularization of soya in Europe—A. Paillieux.

Conclusions: The influence of cultural technology on variation. Appendix: Advice to experimenters on the acclimatization of soya in France. Other methods of obtaining early-maturing soybeans.

The author concludes (p. 140): We must make every effort to acclimatize soya in France. We must develop the will and learn from past mistakes. Most soybean varieties now available in France are too late. We must get varieties from Manchuria, whose climate is similar to that of southeastern France, and from the northeastern USA. It is urgent that, in the near future, we start a Soybean Experiment

Station to take responsibility for this work. The setbacks since 1830 can be overcome by present science and genetics. The first step is to introduce better varieties.

On the last page is a full-page advertisement for various seeds sold by Mr. Rouest, including 30 varieties of soybeans (*Soja hispida*); the names of the individual varieties are not given.

Illustrations show: (1) A soy bean plant with many pods (title page). (2) Flowers and pods of the soy bean plant (p. 29). (3) Soy pods and beans (p. 30). (4) A soy bean plant drawn by a Chinese artist (p. 32, from Li Yu-ying). (5) Pods of the Hato [Hahto] variety of soy bean (p. 51). (6) Germinating soy bean seeds (p. 54, from Li Yu-ying). (7) Soy bean roots with nodules (from a photo by Dr. Le Goff; p. 73). (8) Soy bean pods, opened to show 3 beans in each (p. 82).

Tables show: (1) Production of soybeans by color in China in 1916 and 1917 (p. 35, in quintals, from the International Yearbook of Rome, Vol. 1, 1919): In 1917: Yellow 4,069,822. Other 953,012. Green 181,190. White 71,234. Black 40,066. Total: 5,315,324.

(2) Percentage composition of various oilseed cakes (p. 95, from Kellner). (3) Imports and exports of soybean cake, by country, from 1915 to 1919 (in quintals, p. 96). Imports are given for Sweden, Canada, Korea (from 1916), Japan, and Formosa [Taiwan]. Exports are given for England (6 quintals in 1915), China (including Manchuria, by far the biggest exporter, from 1916), and Korea (from 1916).

(4) Production of soybean cakes, by country, from 1915 to 1919 (p. 97, in quintals, based on statistics from the International Bureau of Agriculture, Rome, 1919). In descending order of production in 1915 (in quintals): Japan 5,439,337. Korea 3,209,238. Great Britain and Ireland: 1,513,059. Denmark 921,782. Java and Madura 503,025. Note that China is not listed. Netherlands 144,523. Formosa [Taiwan] 62,131. Sweden 1,733. USA 0, but 501,822 in 1916.

Note: When Alsace was occupied by the Germans during World War I, the Rouest family moved from Alsace to Paris. Mr. Rouest brought soybeans from Africa and adapted them to France. He paid for the publication of this book. Address: Directeur des Fermes Expérimentales de Néoculture, Carcassonne (Aude), France.

2404. Product Name: Shoyu.

Manufacturer's Name: Kinka Shoyu Jozo Moto (Kinka Soy Sauce Brewery).

Manufacturer's Address: 219 Jackson St., Los Angeles, California. Phone: Main 5650.
